Notes and Definitions

J	Estimated conc. detected <MRL and >MDL.
ND	NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then not detected at or above the MDL.
NR	Not Reportable
Dil	Dilution
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
% Rec	Percent Recovery
Sub	Subcontracted analysis, original report available upon request
MDL	Method Detection Limit
MDA	Minimum Detectable Activity
MRL	Method Reporting Limit

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

An Absence of Total Coliform meets the drinking water standards as established by the California Department of Health Services.

The Reporting Limit (RL) is referenced as the Laboratory's Practical Quantitation Limit (PQL) or the Detection Limit for Reporting Purposes (DLR).

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS002.

The results in this report apply to the samples analyzed in accordance with the Chain of Custody document. Weck Laboratories, Inc. certifies that the test results meet all NELAC requirements unless noted in the case narrative. This analytical report is confidential and is only intended for the use of Weck Laboratories, Inc. and its client. This report contains the Chain of Custody document, which is an integral part of it, and can only be reproduced in full with the authorization of Weck Laboratories, Inc.

Dear Jeremy Burns :

Enclosed are the results of analyses for samples received 03/15/ 16 11:40 with the Chain of Custody document. The samples were received in good condition, at 1.3 °C and on ice. All analysis met the method criteria except as noted below or in the report with data qualifiers.

Case Narrative:
This is a Supplement to the Certificate of Analysis previously issued 4/1/16 for the above referenced project to correct sample ID to reflect COC and to split report to separate projects.

APPENDIX D
PEBBLE COUNT PARTICLE-SIZE DISTRIBUTION ANALYSIS

This page is intentionally blank.

APPENDIX D: POST-STORM PEBBLE COUNT PARTICLE SIZE DISTRIBUTION ANALYSIS

This appendix presents the particle size distribution analysis results conducted for upper watershed sites of Carroll Canyon (Nancy Ridge, Arizona Crossing, Trap Channel and Black Mountain) and Los Peñasquitos North City using the post-storm pebble count data collected throughout the wet weather season. Note that there is no data available on 12/16/15 for Trap Channel, Black Mountain and North City.

Nancy Ridge, Arizona Crossing and North City are relatively consistent, with Arizona Crossing North City having a slight increase in sand percentage over the course of the season (10-20%). Trap Channel and Black Mountain showed marked increase in sand percentages. At Trap Channel, this was most evident at the upstream and downstream locations which showed a shift of around 60-65%. As mentioned previously, this site was impacted by a construction site which had an outflow located at the mid-stream location where pebble counts were conducted. Black Mountain had a shift of 25-50% measured at each location over the course of the season.

Complete pebble count results and particle-size distribution plots are provided below.

1.0 AERIAL DEPOSITION MONITORING OVERVIEW

This Technical Memorandum summarizes the Phase II aerial deposition monitoring conducted as part of the Los Peñasquitos Watershed Management Area (WMA) Sediment Load Special Study (Watershed Special Study) for Fiscal Year 2016 (FY16) (July 1, 2015 – June 30, 2016). Phase one occurred during FY 2015 (FY15) (July 1, 2014 – June 30, 2015).

Monitoring Schedule. In agreement with the *Los Peñasquitos Watershed Management Area Sediment Load Special Study Monitoring Plan* (Amec Foster Wheeler, 2016), ambient air quality was monitored during FY16 for particulate matter from 2.5 to 10 micrometers in diameter (PM_{10}). Monitoring was conducted at eleven monitoring locations located within and around the greater Los Peñasquitos WMA with an emphasis on the Carroll Canyon Creek subwatershed. Monitoring locations are distributed by one location in Del Mar, seven in the Carroll Canyon Creek subwatershed, two in the Los Peñasquitos Creek subwatershed, and one in the Carmel Valley Creek subwatershed. Each of the three monitored dry weather events had three discrete 24-hour sampling periods. For every sampling event, one sampling period was conducted on a weekend; the other two on weekdays.

Sampling Equipment. Aerial deposition sampling used two types of sampling equipment: (a) an optical TSI Dusttrack™ II model 8530 continuous concentration particulate size monitor (Optical), and (b) a filter-based BGI PQ100 PM_{10} Federal Reference Method sampler (FRM), designated No. RFPS-1298-124 by the U.S. Environmental Protection Agency (USEPA). Consistent with the Phase I implementation of the Watershed Special Study during FY15, Phase II continued to utilize three FRM samplers for reference at the same monitoring locations in conjunction with Optical monitors.

Comparison of Samplers. Deploying the Optical monitor and the FRM sampler synchronously provides reference data for the direct-reading Optical monitors with the USEPA-compliant ambient air monitoring filter-based FRM samplers. The FRM samples provide an air pollutant concentration in milligrams of pollutant per cubic meter at a sensed atmospheric pressure and temperature for the sampling period. The Optical monitor readings provide 5 minute interval direct-read concentrations and subsequent calculated mean concentrations using the same flow speed as the FRM. Using both sampling methods allows the potential bias of the Optical readings to be considered and potentially statistically adjusted, if needed, based off the FRM results. Relative percent difference (RPD) using the FRM as the reference value was calculated for each sampling period and shows the Optical values have a mean RPD of 108.44% compared to the FRM samples. Although the RPD is high, this is due to very low concentrations measured that are within 10 times the laboratory reporting limit and standard flow volume. RPD calculations for low concentrations such as those measured during this program mischaracterize what are actually very small differences in concentration.

Sampling Results. Findings of monitoring during FY16 indicate that the aerial contribution of sediment to the Los Peñasquitos WMA is negligible relative to sediment loads estimated during storm flows directly in the creeks, primarily associated with hydromodification and erosive characteristics of the WMA creek channels. Optical values were generally low and negligible with marginal increases around anthropogenic disturbances, particularly in the Carroll Canyon Creek subwatershed. Results from all sampling events for both the 24-hour mean Optical concentrations and the gravimetric analysis from the FRM value sampled over 24-hours were below 0.6 micrograms per cubic meter.

2.0 AERIAL DEPOSITION MONITORING

This section provides an overview of the Phase II Watershed Special Study aerial deposition monitoring and objectives, including the sampling equipment, sampling methods, and sampling locations. For a complete discussion of this monitoring program, refer to the *Los Peñasquitos Watershed Management Area Sediment Load Special Study Monitoring Plan* (Amec Foster Wheeler, 2015).

2.1 MONITORING SCHEDULE

The monitoring schedule and activities were conducted in agreement with the *Los Peñasquitos Watershed Management Area Sediment Load Special Study Monitoring Plan* (Amec Foster Wheeler, 2015). Monitoring was conducted over the course of three dry weather events at eleven monitoring locations located within and around the greater Los Peñasquitos WMA. Monitoring locations are identified within their subwatershed and include five monitoring locations from the Phase I implementation in the Carroll Canyon Creek subwatershed, and an additional six monitoring locations as part of the Phase II implementation. Total monitoring locations are distributed with one in Del Mar (the reference monitoring location), seven in the Carroll Canyon Creek subwatershed, two in the Los Peñasquitos Creek subwatershed, and one in the Carmel Valley Creek subwatershed. Each of the three dry weather events had three discrete 24-hour sampling periods. For every sampling event, one sampling period was conducted on a weekend; the other two were conducted on weekdays. This was done to capture different conditions based on anthropogenic activities. Sampling for events 5 and 6 were conducted back-to-back based on planned demolition of the Del Mar City Hall building, which was the reference monitoring location. At the time of sampling, demolition was planned for February 2016.

Table 2-1 presents the monitoring schedule for each sampling event and 24-hour period over the course of the Phase II implementation of the Watershed Special Study.

2.2 SAMPLING METHODOLOGY AND EQUIPMENT

Two types of sampling equipment were used for this study: (a) an optical TSI Dusttrack™ II model 8530 continuous concentration particulate size monitor (Optical), and (b) a filter-based BGI PQ100 PM_{10} Federal Reference Method sampler (FRM), designated No. RFPS-1298-124 by the U.S. Environmental Protection Agency. Consistent with the Phase I implementation of the Watershed Special Study during FY15, Phase II continued to utilize three FRM samplers for reference at the same monitoring locations in conjunction with Optical monitors. Optical monitors were utilized at the eleven monitoring locations.

Table 2-1.
Phase II Monitoring Schedule 2015-2016

Monitoring Schedule	
Dry Weather 4[1]	
Dry Weather 4, Day 4	Wednesday, 11/18/2015 – Thursday, 11/19/2015
Dry Weather 4, Day 5	Saturday, 11/21/2015 – Sunday, 11/22/2015
Dry Weather 4, Day 6	Monday, 11/23/2015 – Tuesday, 11/24/2015
Dry Weather 5	
Dry Weather 5, Day 1	Saturday, 1/16/2016 – Sunday, 1/17/2016
Dry Weather 5, Day 2	Monday, 1/18/2016 – Tuesday, 1/19/2016
Dry Weather 5, Day 3	Wednesday, 1/20/2016 – Thursday, 1/21/2016
Dry Weather 6	
Dry Weather 6, Day 1	Saturday, 1/23/2016 – Sunday, 1/24/2016
Dry Weather 6, Day 2	Monday, 1/25/2016 Tuesday, 1/26/2016
Dry Weather 6, Day 3	Wednesday, 1/27/2016 – Thursday, 1/28/2016

[1]Due to equipment failures on days 1, 2, and 3, sampling was required to continue. Successful sampling occurred on days 4, 5, and 6, after equipment unit changes were made.

The Optical monitors have a PM_{10} fitting over the inlet that allows sampling of aerodynamic diameters of 10 micrometers (µm) or less (PM_{10}). The instrument draws a continuous aerosol stream through the impaction inlet where particles with a greater than 10 µm are removed. The sample stream then passes through a sensing chamber where it is intersected by light emitted from a laser diode. The particles in the sample stream scatter light in all directions and a photodetector measures the proportional mass concentration by internal electronics (Chung et al., 2001). An additional autozero module was placed over the inlet that zero calibrates the meter on a 4-hour interval. This autozero module will align the zero calibration point with the calibration reference dust in order to combat the zero drift that was observed to occur periodically during the Phase I implementation, which resulted in a significant percentage of lost valid measurements during FY15. The samplers were programmed to record at 5-minute intervals within a 24 hour period for a total of 288 readings per sampling period. Recorded values are presented in a concentration versus time graphical representation and statistically summarized in Section 2.1. Statistical analysis of the Optical monitors evaluates the total number of optical measurements compared to valid optical measurements, the minimum and maximum Optical values, and the mean value over each 24-hour sampling period for each sampling event and the overall mean for the Phase II implementation of the Watershed Special Study. Non-valid optical measurements occur when the final reading is negative or there was no reading due to equipment failure.

The FRM sampler is a well impactor ninety-six (WINS impactor) followed by a Teflon® filter. Particles in the sample stream with an aerodynamic diameter greater than 10 µm are captured by the WINS impactor, while smaller particles are collected on the downstream 46-millimeter (mm) Teflon® filter. The concentration of airborne particulate matter was determined by pre- and post-weighing of the Teflon filter and then dividing the accumulated mass by the volume of air that was sampled (Chung et al., 2001).

The relative percent difference (RPD) between the two sampling methods used during this study was calculated to detect differences between their monitoring methods. Utilizing the two methods simultaneously, the monitoring program complied with the ambient monitoring standards of the U.S. Environmental Protection Agency (USEPA) and provides a reference value in conjunction with direct-read measurements.

Relative Percent Difference for this study is calculated by taking the absolute difference between the Optical monitor value and the FRM reference value divided by the value of their arithmetic mean. This is then multiplied by 100.

$$\%RPD = \left(\frac{|X1-X2|}{\bar{X}}\right) \times 100$$

X1 = (reference value), FRM sampler value

X2 = Optical Monitor value

X = Arithmetic Mean of all X values

2.2.1 Use of Optical (Continuous Concentration) Monitors

The Optical monitors were used at all eleven monitoring locations and programmed to collect readings at 5-minute intervals. These readings can be observed individually to observe trends, as well as be averaged or a 24-hour period. The meters are calibrated within the design limits (once per year) of the recommended calibration period for operation to Arizona1 test dust[1]. An additional event-specific baseline test was performed in a closed environment to assess the differences in output of the individual Optical monitors over a 24-hour period during this period. The baseline test correction was applied to each raw Optical value. Additionally, each raw Optical value was corrected utilizing the ambient aerosol density correction ratio of Optical concentrations over the Arizona1 test dust reference concentration, as established by Wallace et al (2011).

The correction factors resulting from the baseline test and Wallace et al. (2011) are presented in Table 2-2.

[1] The Arizona1 test dust provides a calibration of the sampler and the average density of ambient aerosols as presented by *Validation of Continuous Particle Monitors for Personal, Indoor and outdoor Exposures,* Lance Wallace et.al. (2011).

µg = micrograms; mg = milligrams; m^3 = cubic meter

2.2.2 Use of Federal Reference Method Samplers

The filter-based FRM samplers were used at three of the eleven monitoring locations during the Special Study. Each filter was analyzed by gravimetric analyses for PM_{10} by Title 40 Code of Federal Regulations (40 CFR) Part 50 Appendix J, was conducted by Eurofins Air Toxics, Inc., Laboratories, a laboratory certified by the International Organization for Standardization and the International Electrotechnical Commission (ISO/IEC) 17025:2005, located in Folsom, California. The final net weight of the gravimetric analysis can be calculated with the total sensed flow to produce an air pollutant concentration in parts per million by volume. Laboratory reports are presented in Appendix A.

2.3 MONITORING LOCATIONS

Details of the eleven monitoring locations are presented in Table 2-3 and include the site name, subwatershed, site ID and the approximate latitude and longitude. Figure 2-1 presents the monitoring locations throughout the WMA.

The eleven monitoring locations during Phase II are described below.

CC-CC (Carroll Canyon): This station is at an elevated location within the Carroll Canyon Creek channel, off Roselle Street near the Carroll Canyon Sediment TMDL monitoring location.

CC-DM (Reference - Del Mar): This station is on top of Del Mar City Hall near the corner of 11th Street and Camino Del Mar. This is the reference site for the aerial deposition portion of the Watershed Special Study, and was selected as a station away from anthropogenic influence during the prevalent weather patterns. This location is slightly outside of the WMA; however, it was deemed as a suitable, representative location for minimal to no anthropogenic disturbance. Furthermore, wind patterns are not bound to WMA boundaries in the same ways hydrology is bound.

CC-DW (Carroll Canyon - Downwind): This station is on top of San Diego Fire Station 44 at the intersection of Black Mountain Road and Maya Linda Road.

CC-ER (Carroll Canyon – Eco Rentals): This station is located at the northwest corner on top of the facility housing Eco Rentals Solutions and other businesses located at 7340 Trade Street and overlooks the aggregate mine and Carroll Canyon Creek to the north.

CC-MP (Carroll Canyon – Maddox Park): This station is at an elevated location at the southwest corner of Maddox Park, off Flanders Drive and northwest of Jonas Salk Elementary School.

CC-SF (Carroll Canyon – Camino Santa Fe): This station is at an elevated location to the west of the intersection of Camino Ruiz and Carroll Canyon Road, adjacent to the walking path and Carroll Canyon Creek.

CC-SR (Carroll Canyon – Scripps Ranch): This station is at an elevated location in Scripps Ranch at the northern end cul-de-sac of Rue Biarritz.

CC-UP (Carroll Canyon - Upwind): This station is located on top of San Diego Fire Station 41 near the corner where Scranton Road turns into Carroll Canyon Road.

CV-CD (Carmel Valley – Camino Del Sur): This station is at an elevated location on top of an outfall structure southwest of the intersection of Camino Del Sur and Torrey Santa Fe Road.

LP-PO (Los Peñasquitos - Poway): This station is at an elevated location in Poway at the southern end Cul-De-Sac of Bowron Road.

LP-PR (Los Peñasquitos - Preserve): This station is at an elevated location centrally located within the Los Peñasquitos Preserve, north of the waterfall site.

[1]USEPA = U.S. Environmental Protection Agency
[2]Reference – Del Mar is located in the Los Peñasquitos Lagoon subwatershed, yet uses the CC-DM nomenclature that suggests otherwise in order to be consistent with Phase I monitoring.
[3]Sites monitored during the Phase I Watershed Special Study for Aerial Deposition.
4Additional sites added to the monitoring program by the City of San Diego. Resources for these additional sites was provided by the City of San Diego, not by RA supported efforts.

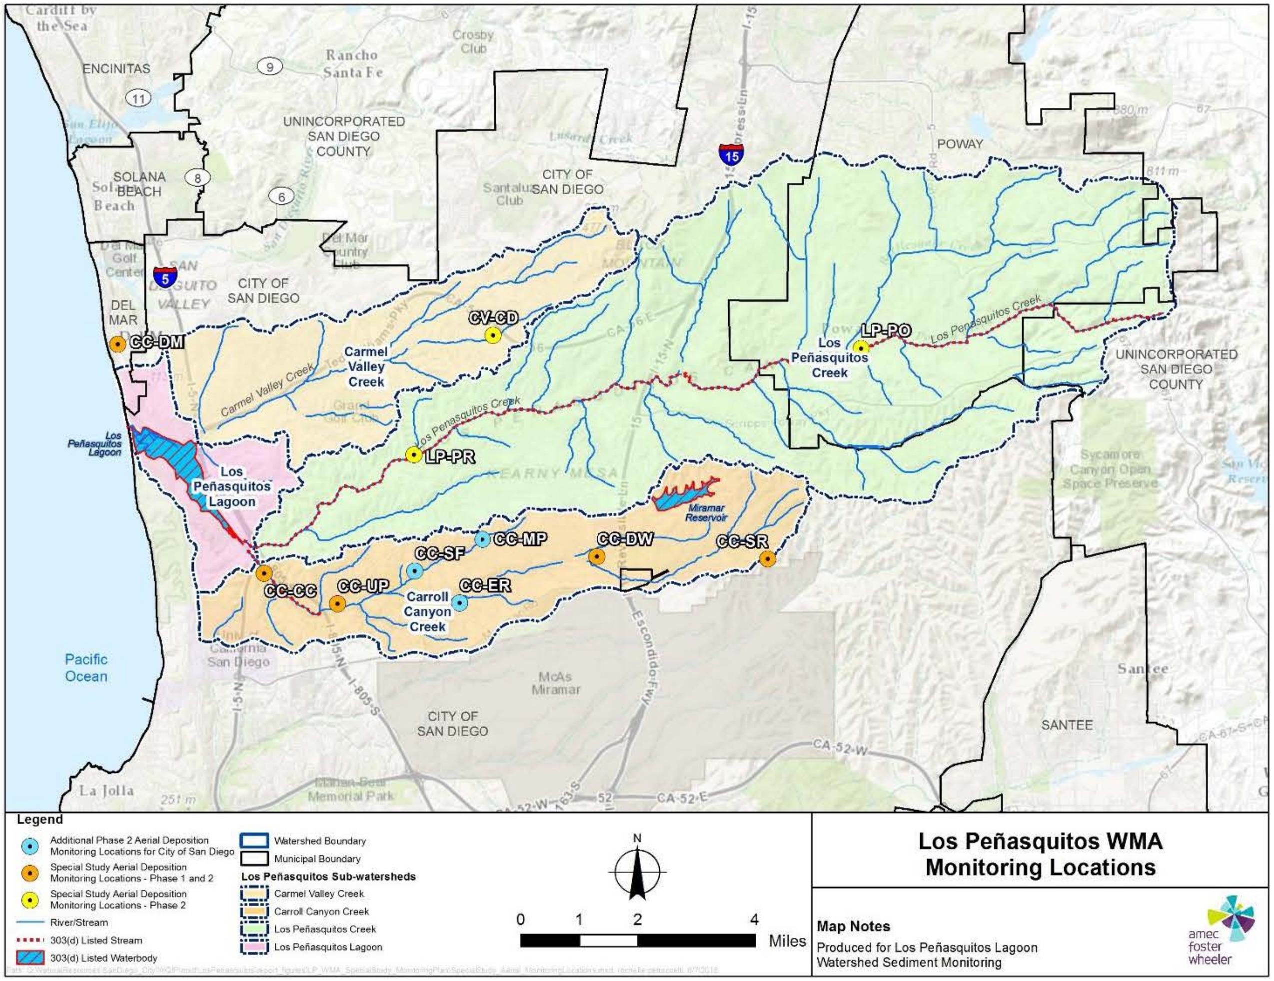

Figure 2-1.
Phase I Aerial Deposition Sampling Locations in Los Peñasquitos Watershed Management Area

3.0 MONITORING RESULTS

This section presents the results of the Phase II aerial deposition monitoring conducted as part of the Watershed Special Study. Summary tables are presented in Tables 3-1 through 3-5 and are organized by the 24-hour sampling period day, the sampling event, and the totals for each sampling event, and for the overall Phase II implementation of the Watershed Special Study.

Sampling event results presented in Section 3.2 provide the quantitative data of ambient PM_{10} using the Optical monitor and the FRM sampler methods organized by monitoring location for each sampling event. Meteorological conditions are summarized using wind roses and are presented in conjunction with graphs for Optical monitoring concentration versus time.

3.1 SUMMARY DATA

Section 3.1 presents the summary data for sampling events Dry Weather 4 through Dry Weather 6. This data is presented as mean and total values for each 24 hour sampling period, sampling event, and through the entire Watershed Special Study. Additionally, mean and total values are presented for each monitoring location.

Summary totals and mean values for each sampling event are presented in Table 3-1 through Table 3-3. Totals and mean values for the entire monitoring period are presented in Table 3-4. Totals and mean values for each monitoring location are presented in Table 3-5.

3.2 SAMPLING EVENT RESULTS

3.2.1 Dry Weather 4

3.2.1.1 CC-CC (Carroll Canyon)

CC-CC (Carroll Canyon):

CC-CC is a site monitored during the Phase I and Phase II Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 864 measurements were determined to be valid (100%).
- Mean values for PM_{10} were 0.0051 mg/m^3.
- Mean standard deviation is $\pm$0.0019 mg/m^3

Day 4 (Wednesday, 11/18/15 – Thursday, 11/19/15)

Day 4 – CC-CC Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the WNW and NW, which is the prevalent weather pattern for the region. Peak Optical monitor readings were observed close to midnight. Minimal disturbance can be observed during high traffic conditions.

Day 5 (Saturday, 11/21/15 – Sunday, 11/22/15)

Day 5 – CC-CC Optical readings were observed at the lowest mean value for this monitoring location during sampling event Dry Weather 4, and below the mean value. Wind directions were observed primarily from the WNW and NW, which is the prevalent weather pattern for the region. Peak Optical monitor readings were observed from 17:00 to close to midnight, with a sharp decline during the late morning and early afternoon.

Day 6 (Monday, 11/23/15 – Tuesday, 11/24/15)

Day 6 – CC-CC Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the NW, which is the prevalent weather pattern for the region. Peak Optical monitor readings were observed close to midnight.

Graphical representations of this data are presented in Figure 3-1 through 3-3.

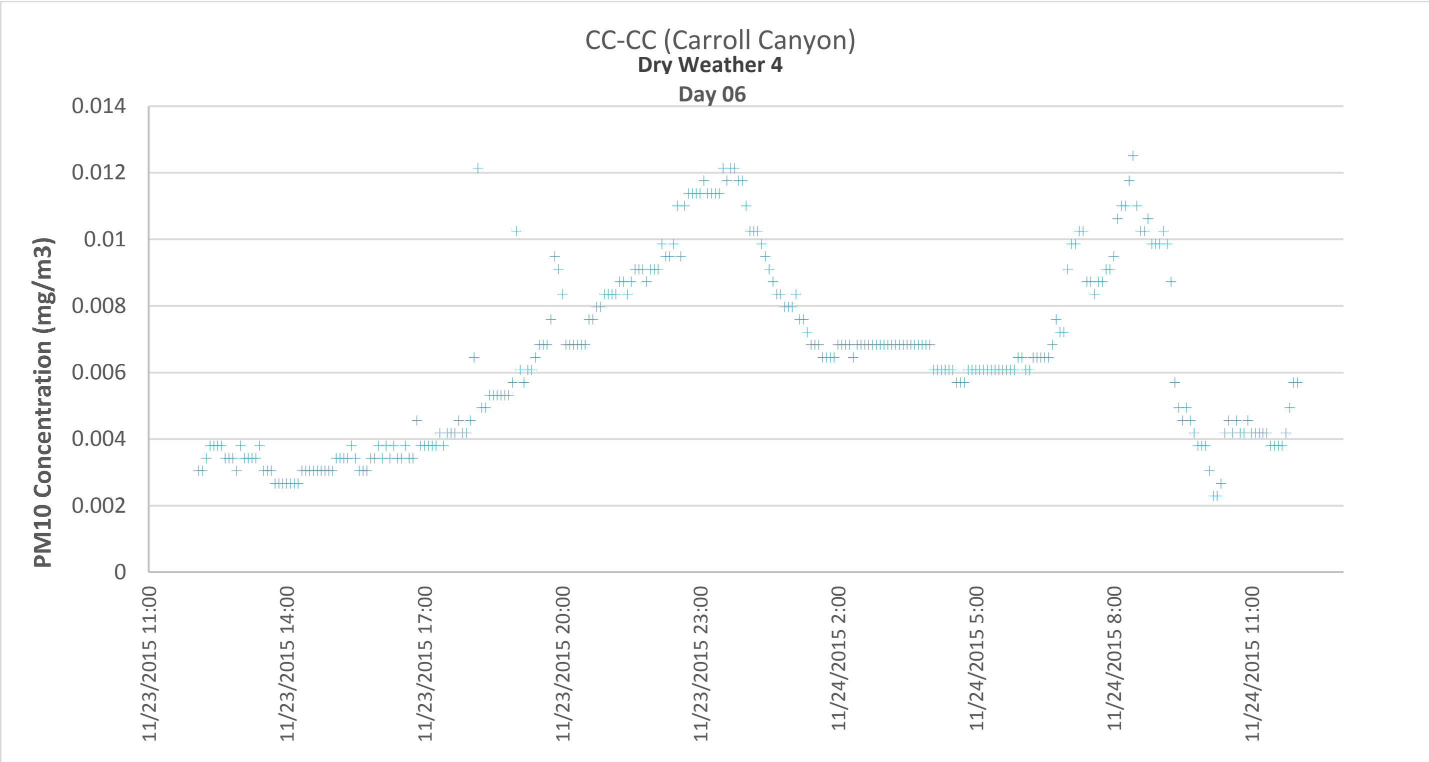

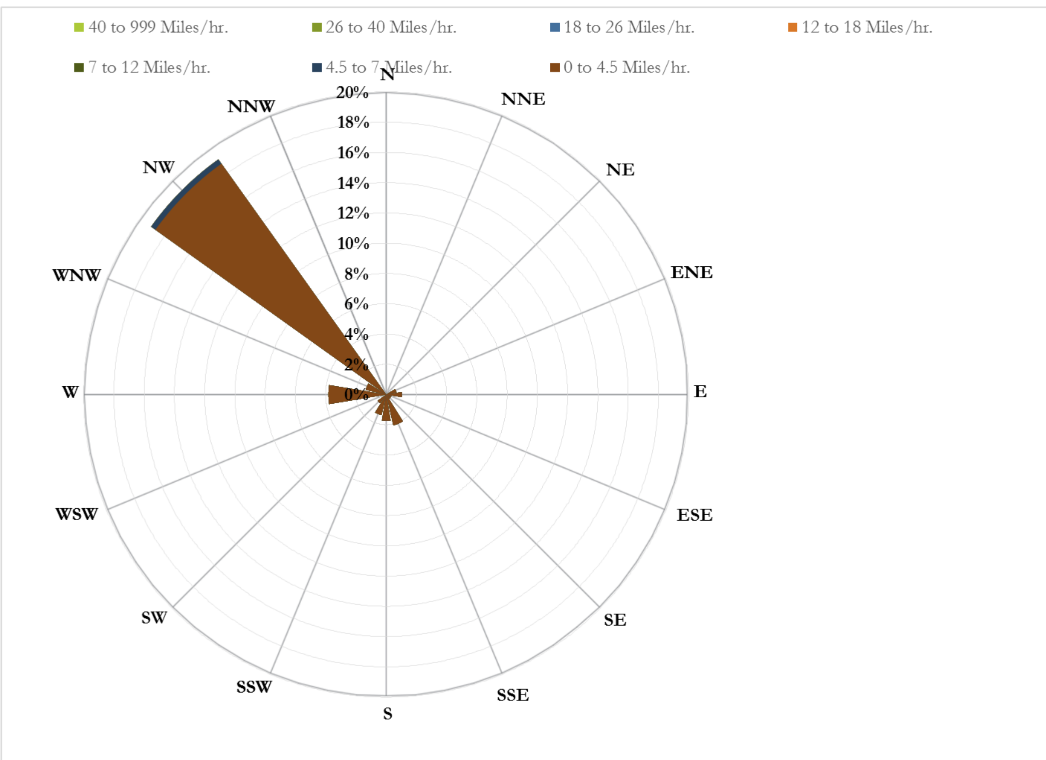

Figure 3-3.
CC-CC PM_{10} Concentrations and Wind Rose, Dry Weather 4 – Day 6

3.2.1.2 CC-DM (Reference – Del Mar)

CC-DM (Reference – Del Mar):

CC-DM is a site monitored during the Phase I and Phase II Watershed Special Study and includes an Optical monitor and an FRM sampler. This is the reference site for the aerial deposition portion of the Watershed Special Study, and was selected as a station away from anthropogenic influence during the prevalent weather patterns.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 864 measurements were determined to be valid (100%).
- Mean values for PM_{10} were 0.0058 mg/m^3.
- Mean standard deviation is $\pm$0.0034 mg/m^3

FRM Sampler (Laboratory) Results:

- Mean values for PM_{10} was 0.0241 mg/m^3.
- Mean RPD from the FRM results to the Optical monitor results was 124.36 percent.
    - Although the RPD is high, this is due to very low concentrations measured that are within 10 times the laboratory reporting limit and standard flow volume. RPD calculations for low concentrations such as those measured during this program mischaracterize what are actually very small differences in concentration.

Day 4 (Wednesday, 11/18/15 – Thursday, 11/19/15)

Day 4 – CC-DM Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the WNW, NW, and the E. Peak Optical monitor readings were observed 15:00 to 20:00.

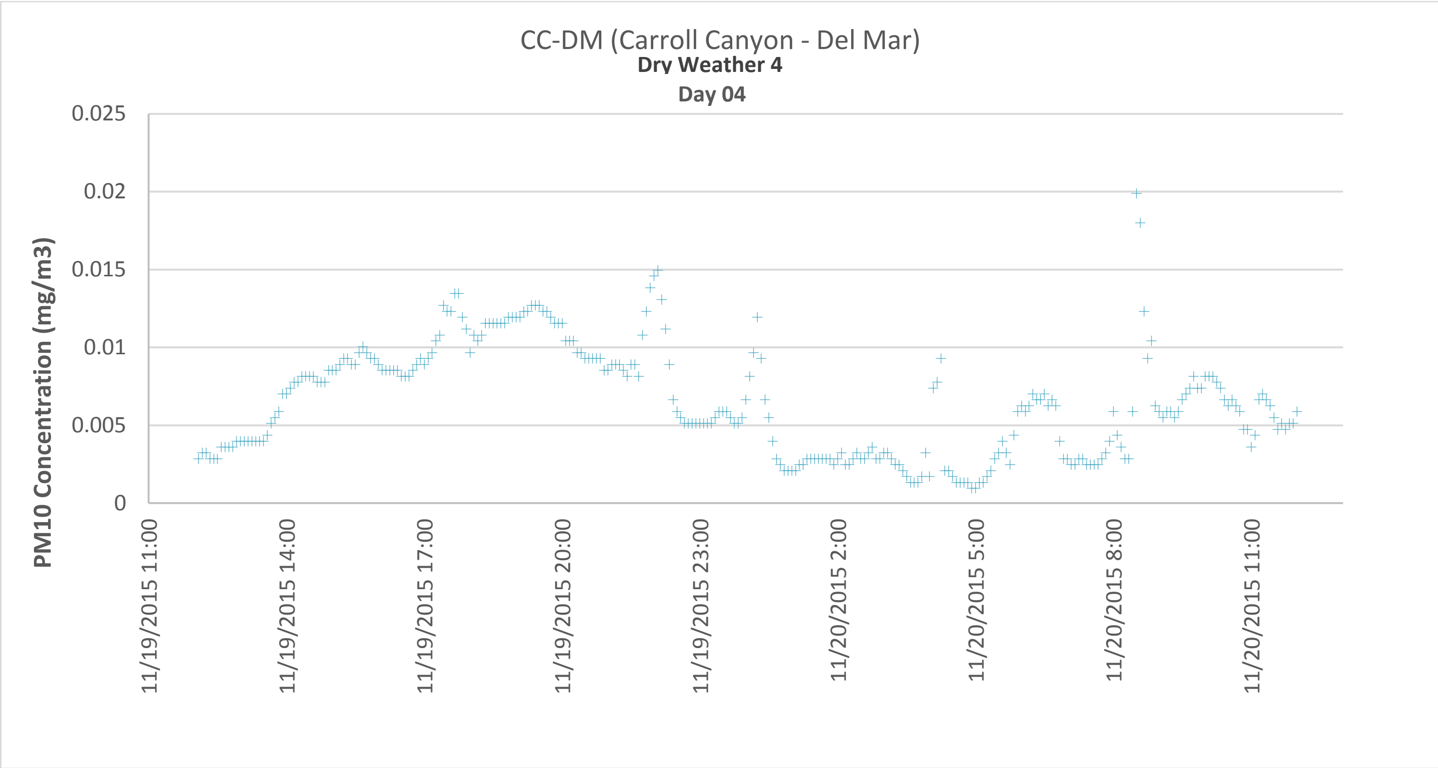
Day 5 (Saturday, 11/21/15 – Sunday, 11/22/15)

Day 5 – CC-DM Optical readings were observed at the lowest mean value for this monitoring location during sampling event Dry Weather 4, and below the mean value. Wind directions were observed primarily from the WNW, ENE and the NE, peaking at 4.5 to 7 miles per hour. Peak Optical monitor readings were observed around 15:00 and 9:00.

Day 6 (Monday, 11/23/15 – Tuesday, 11/24/15)

Day 6 – CC-DM Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the WNW, NE, and ENE. Peak Optical monitor readings were observed before midnight.

Graphical representations of this data are presented in Figure 3-4 through 3-6.



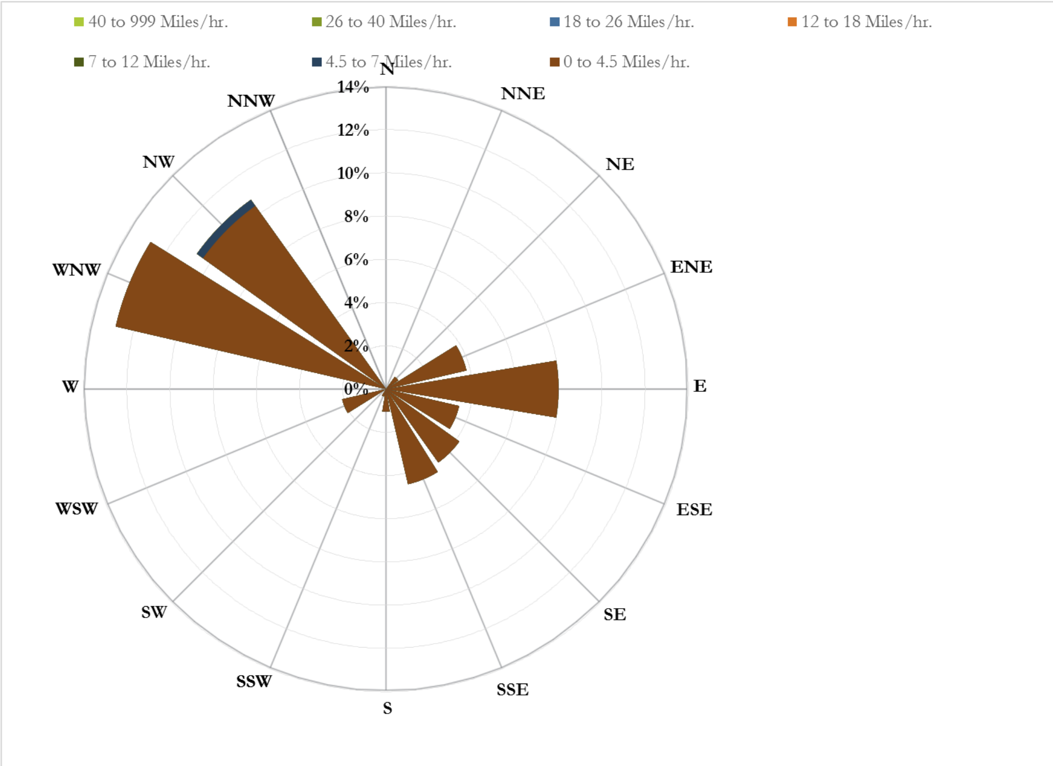


Figure 3-4.

3.2.1.3 CC-DW (Carroll Canyon – Downwind)

CC-DW (Carroll Canyon – Downwind):

CC-DW is a site monitored during the Phase I and Phase II Watershed Special Study and contains an Optical monitor and an FRM sampler.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 864 measurements were determined to be valid (100%).
- Mean values for PM_{10} were 0.0048 mg/m^3.
- Mean standard deviation is $\pm$0.0021 mg/m^3

FRM Sampler (Laboratory) Results:

- Mean value for PM_{10} was 0.0263 mg/m^3.
- Mean RPD from the FRM results to the Optical monitor results was 124.36%

Day 4 (Wednesday, 11/18/15 – Thursday, 11/19/15)

Day 4 – CC-DW Optical readings were observed at the mean value of the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the SE. Peak Optical monitor readings were observed during typical increased traffic conditions.

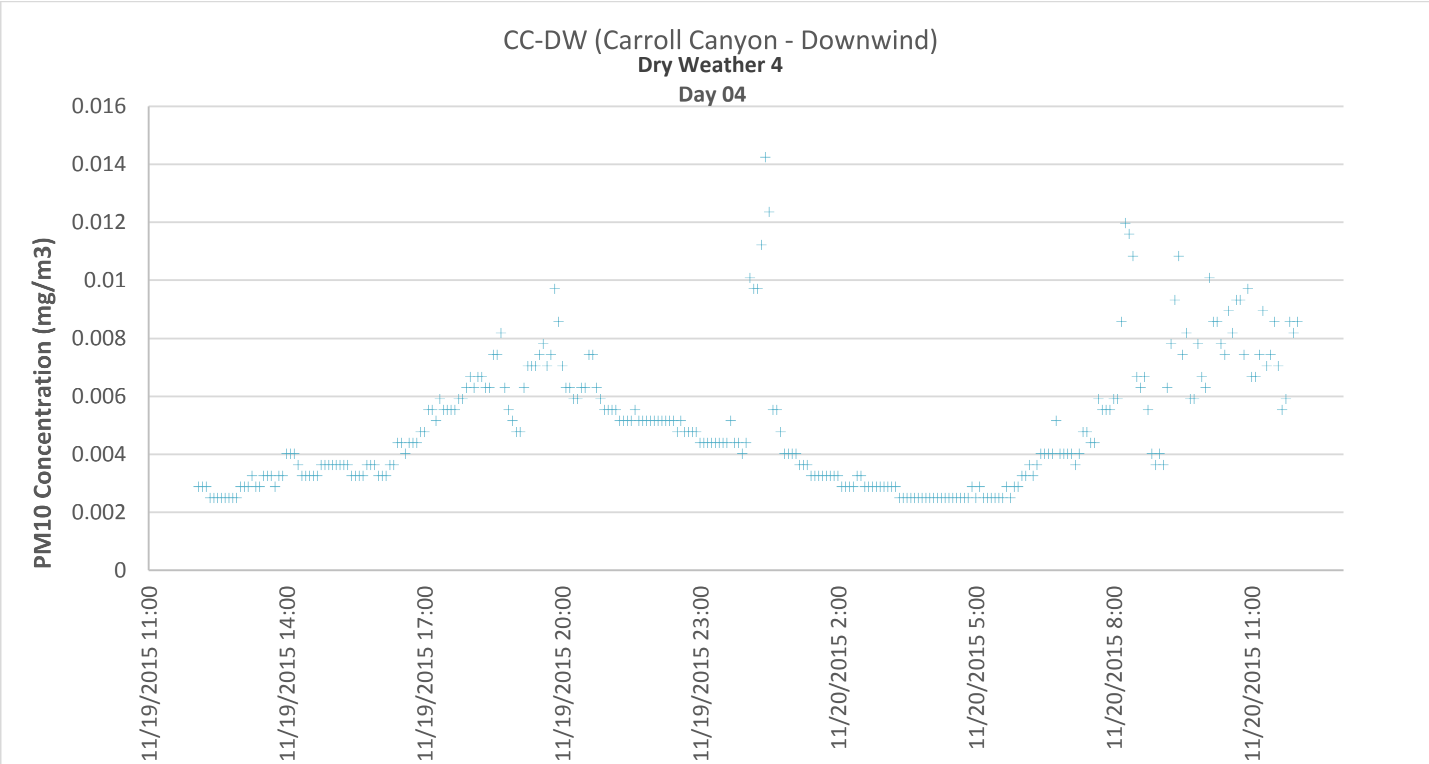
Day 5 (Saturday, 11/21/15 – Sunday, 11/22/15)

Day 5 – CC-DW Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Optical monitor readings were consistent, rising slightly during the afternoon traffic conditions.

Day 6 (Monday, 11/23/15 – Tuesday, 11/24/15)

Day 6 – CC-DW Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the SE and S. Peak Optical monitor readings were observed midday, yet were generally consistent during the 24 hour period.

Graphical representations of this data is presented in Figures 3-7 through 3-9.



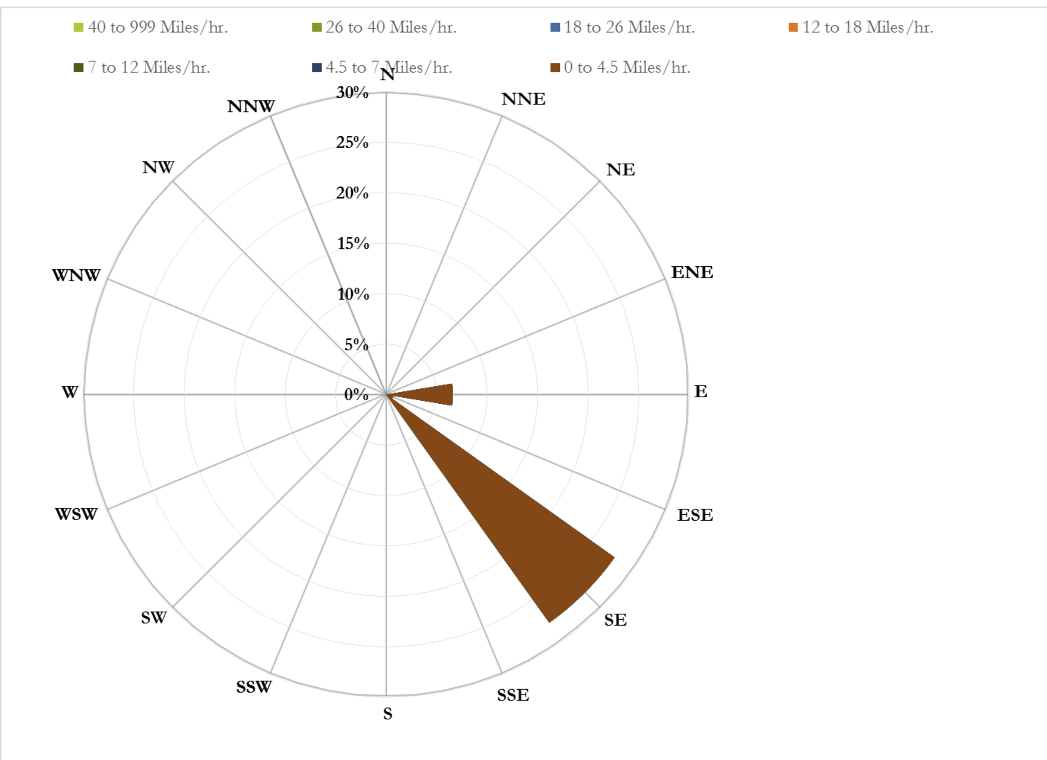


Figure 3-7.
CC-DW PM_{10} Concentrations and Wind Rose, Dry Weather 4 – Day 4

3.2.1.4 CC-ER (Carroll Canyon – Eco Rental)

CC-ER (Carroll Canyon – Eco Rental):

CC-ER is a site monitored during the Phase II Watershed Special Study that was added by the City of San Diego (i.e., not funded through the RA group) and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 821 measurements were determined to be valid (95%).
- Mean values for PM_{10} were 0.0052 mg/m^3.
- Mean standard deviation is $\pm$0.0037 mg/m^3

Day 4 (Wednesday, 11/18/15 – Thursday, 11/19/15)

Day 4 – CC-ER Optical readings were higher than the mean value of the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the WNW and NW. Peak Optical monitor readings were observed during the late evening and times of increased traffic during the morning.

Day 5 (Saturday, 11/21/15 – Sunday, 11/22/15)

Day 5 – CC-ER Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the NW. Optical monitor readings peaked during increased afternoon traffic conditions.

Day 6 (Monday, 11/23/15 – Tuesday, 11/24/15)

Day 6 – CC-ER Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed during the evening.

Graphical representations of this data is presented in Figures 3-10 through 3-12.

3.2.1.5 CC-MP (Carroll Canyon – Maddox Park)

CC-MP (Carroll Canyon – Maddox Park):

CC-MP is a site monitored during the Phase II Watershed Special Study that was added by the City of San Diego (i.e., not funded through the RA group) and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 864 measurements were determined to be valid (100%).
- Mean values for PM_{10} were 0.0053 mg/m^3.
- Mean standard deviation is $\pm$0.0036 mg/m^3

Day 4 (Wednesday, 11/18/15 – Thursday, 11/19/15)

Day 4 – CC-MP Optical readings were higher than the mean value of the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the SE. Peak Optical monitor readings were observed late evening and times of increased traffic during the morning.

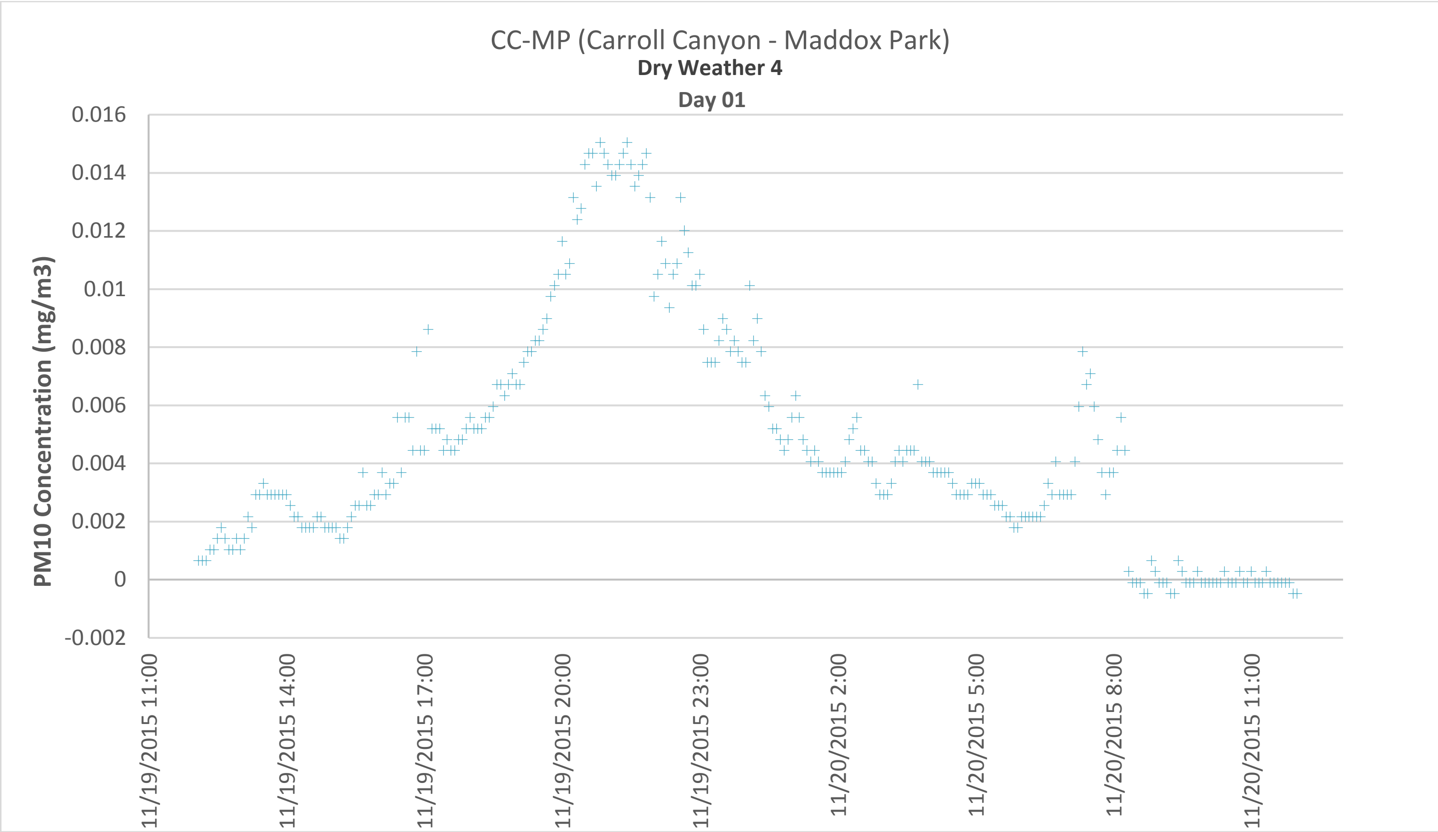
Day 5 (Saturday, 11/21/15 – Sunday, 11/22/15)

Day 5 – CC-MP Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the SW. Peak Optical monitor readings were observed late evening and times of increased traffic during the morning.

Day 6 (Monday, 11/23/15 – Tuesday, 11/24/15)

Day 6 – CC-MP Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the S and SE. Peak Optical monitor readings were observed after midnight, yet were generally consistent during the 24 hour period.

Graphical representations of this data is presented in Figures 3-13 through 3-15.



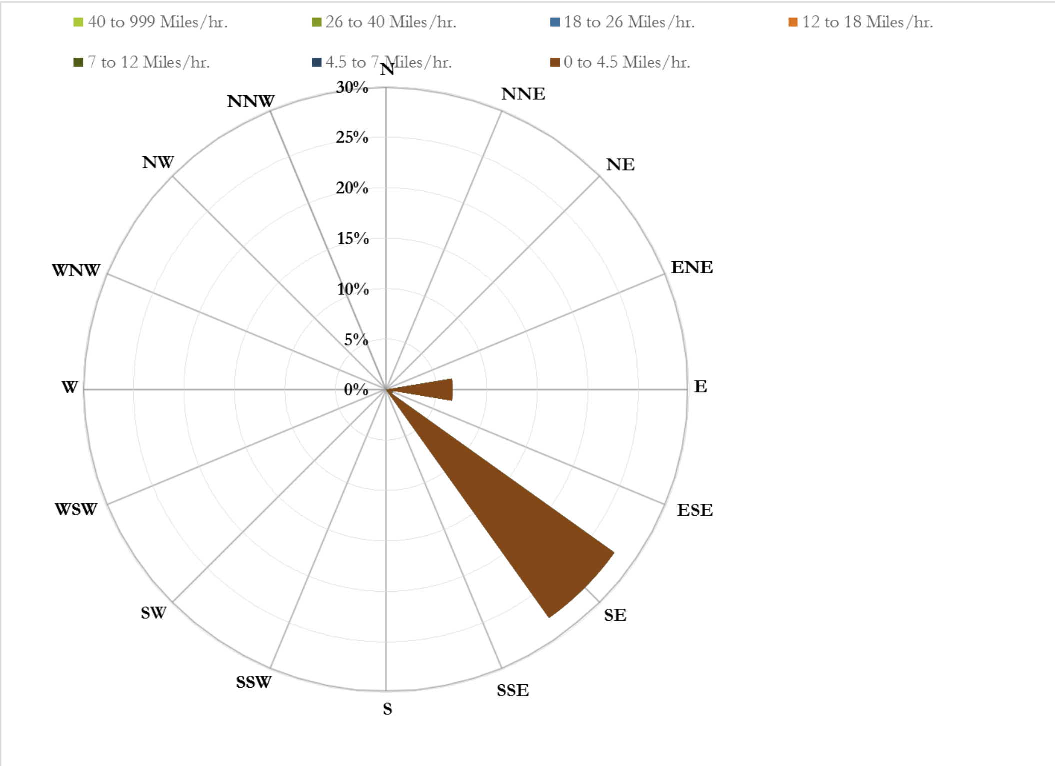


Figure 3-13.
CC-MP PM_{10} Concentrations and Wind Rose, Dry Weather 4 – Day 4

3.2.1.6 CC-SF (Carroll Canyon – Camino Santa Fe)

CC-SF (Carroll Canyon – Camino Santa Fe):

CC-MP is a site monitored during the Phase II Watershed Special Study that was added by the City of San Diego (i.e., not funded through the RA group) and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 864 measurements were determined to be valid (100%).
- Mean values for PM_{10} were 0.0066 mg/m^3.
- Mean standard deviation is $\pm$0.0031 mg/m^3

Day 4 (Wednesday, 11/18/15 – Thursday, 11/19/15)

Day 4 – CC-SF Optical readings were higher than the mean value of the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the SE. Peak Optical monitor readings were observed late evening and at times of increased traffic during the morning.

Day 5 (Saturday, 11/21/15 – Sunday, 11/22/15)

Day 5 – CC-SF Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the WSW, SW, and SSW. Optical monitor readings were consistently distributed throughout the 24 hour monitoring period.

Day 6 (Monday, 11/23/15 – Tuesday, 11/24/15)

Day 6 – CC-SF Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the S and SE. Peak Optical monitor readings were observed during sundown and at times of increased traffic during the morning

Graphical representations of this data is presented in Figure 3-16 through 3-18.

3.2.1.7 CC-SR (Carroll Canyon – Scripps Ranch)

CC-SR (Carroll Canyon – Scripps Ranch):

CC-SR is a site monitored during the Phase I and 2 Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 842 measurements were determined to be valid (97%).
- Mean values for PM_{10} were 0.0025 mg/m^3.
- Mean standard deviation is $\pm$0.0015 mg/m^3

Day 4 (Wednesday, 11/18/15 – Thursday, 11/19/15)

Day 4 – CC-SR Optical readings were lower than the mean value of the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the SE. Peak Optical monitor readings were observed during sundown and late morning.

Day 5 (Saturday, 11/21/15 – Sunday, 11/22/15)

Day 5 – CC-SR Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the WSW, SW, and SSW. Optical monitor readings peaked during the evening and sundown.

Day 6 (Monday, 11/23/15 – Tuesday, 11/24/15)

Day 6 – CC-SR Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the WNW, NE, and ENE. Peak Optical monitor readings were observed before midnight.

Graphical representations of this data is presented in Figure 3-19 through 3 -21.

3.2.1.8 CC-UP (Carroll Canyon – Upwind)

CC-UP (Carroll Canyon – Upwind):

CC-UP is a site monitored during the Phase I and 2 Watershed Special Study and contains an Optical monitor and an FRM sampler.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 812 measurements were determined to be valid (93%).
- Mean values for PM_{10} were 0.0053 mg/m^3.
- Mean standard deviation is $\pm$0.0030 mg/m^3

FRM Sampler (Laboratory) Results:

- Mean values for PM_{10} was 0.0860 mg/m^3.
- Mean RPD from the FRM results to the Optical monitor results was 144.28%

Day 4 (Wednesday, 11/18/15 – Thursday, 11/19/15)

Day 4 – CC-UP Optical readings were higher than the mean value of the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the SE. Peak Optical monitor readings were observed during sundown and late morning.

Day 5 (Saturday, 11/21/15 – Sunday, 11/22/15)

Day 5 – CC-UP Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the NW. Optical monitor readings increased during the evening and sundown.

Day 6 (Monday, 11/23/15 – Tuesday, 11/24/15)

Day 6 – CC-UP Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed before midnight and during times of increased traffic in the morning.

Graphical representations of this data is presented in Figures 3-22 through 3-24.

3.2.1.9 CV-CD (Carmel Valley – Camino Del Sur)

CV-CD (Carmel Valley – Camino Del Sur):

CV-CD is a site monitored during the Phase II Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 864 measurements were determined to be valid (100%).
- Mean values for PM_{10} were 0.0032 mg/m^3.
- Mean standard deviation is $\pm$0.0015 mg/m^3

Day 4 (Wednesday, 11/18/15 – Thursday, 11/19/15)

Day 4 – CV-CD Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 4. Wind direction were observed primarily from the WNW, NW, and the E. Peak Optical monitor readings were observed between 15:00 to 20:00.

Day 5 (Saturday, 11/21/15 – Sunday, 11/22/15)

Day 5 – CV-CD Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the WNW, NE, and ENE. Peak optical monitor readings were observed before midnight.

Day 6 (Monday, 11/23/15 – Tuesday, 11/24/15)

Day 6 – CV-CD Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the WNW, NE, and ENE. Peak Optical monitor readings were observed during sundown.

Graphical representations of this data are presented in Figures 3-25 through 3-27.

3.2.1.10 LP-PO (Los Peñasquitos – Poway)

<u>*LP-PO (Los Peñasquitos – Poway):*</u>

CV-CD is a site monitored during the Phase II Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 864 measurements were determined to be valid (100%).
- Mean values for PM_{10} were 0.0045 mg/m^3.
- Mean standard deviation is $\pm$0.0030 mg/m^3

Day 4 (Wednesday, 11/18/15 – Thursday, 11/19/15)

Day 4 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind direction were observed primarily from the SE. Optical monitor readings increased during periods of increased traffic during the afternoon and morning. Peak Optical readings occurred before midnight.

Day 5 (Saturday, 11/21/15 – Sunday, 11/22/15)

Day 5 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the SW. Peak Optical monitor readings were observed during sundown prior to midnight.

Day 6 (Monday, 11/23/15 – Tuesday, 11/24/15)

Day 6 – LP-PO Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the S and SE. Peak Optical monitor readings were observed before midnight. Higher Optical readings were observed during periods of increased traffic in the morning.

Graphical representations of this data are presented in Figures 3-28 through 3-30.

3.2.1.11 LP-PR (Los Peñasquitos – Preserve)

LP-PR (Los Peñasquitos – Preserve):

LP-PR is a site monitored during the Phase II Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 716 measurements were determined to be valid (82%).
- Mean values for PM_{10} were 0.0054 mg/m^3.
- Mean standard deviation is $\pm$0.0048 mg/m^3

Day 4 (Wednesday, 11/18/15 – Thursday, 11/19/15)

Day 4 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind direction were observed primarily from the SE. Peak Optical readings occurred before midnight and during the morning.

Day 5 (Saturday, 11/21/15 – Sunday, 11/22/15)

Day 5 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the SW. Peak Optical monitor readings were observed during sundown prior to midnight.

Day 6 (Monday, 11/23/15 – Tuesday, 11/24/15)

Day 6 – LP-PO Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 4. Wind directions were observed primarily from the S and SE. Peak Optical monitor readings were observed before midnight. Higher Optical readings were observed during periods of increased traffic in the morning.

Graphical representations of this data are presented in Figure 2-11.

3.2.2 Dry Weather 5

3.2.2.1 CC-CC (Carroll Canyon)

CC-CC (Carroll Canyon):

CC-CC is a site monitored during the Phase I and Phase II Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 788 measurements were determined to be valid (91%).
- Mean values for PM_{10} were 0.0086 mg/m^3.
- Mean standard deviation is $\pm$0.0057 mg/m^3

Day 1 (Saturday, 1/16/16 – Sunday, 1/17/16)

Day 1 – CC-CC Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed during increased traffic conditions in the morning.

Day 2 (Monday, 1/18/16 – Tuesday, 1/19/16)

Day 2 – CC-CC Optical readings were observed at a lower mean value for this monitoring location during sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed in the morning hours after sunrise.

Day 3 (Wednesday, 1/20/16 – Thursday, 1/21/16)

Day 3 – CC-CC Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed in the morning after sunrise.

Graphical representations of this data are presented in Figures 3-34 through 3-36.

3.2.2.2 CC-DM (Reference – Del Mar)

CC-DM (Reference – Del Mar):

CC-DM is a site monitored during the Phase I and Phase II Watershed Special Study and contains an Optical monitor and an FRM sampler. This is the reference site for the aerial deposition portion of the Watershed Special Study, and was selected as a station away from anthropogenic influence during the prevalent weather patterns.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 859 measurements were determined to be valid (99%).
- Mean values for PM_{10} were 0.0107 mg/m^3.
- Mean standard deviation is $\pm$0.0070 mg/m^3

FRM Sampler (Laboratory) Results:

- Mean values for PM_{10} was 0.0277 mg/m^3.
- Mean RPD from the FRM results to the Optical monitor results was 106.84%

Day 1 (Saturday, 1/16/16 – Sunday, 1/17/16)

Day 1 – CC-DM Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the W, and WSW. Peak Optical monitor readings were observed before sunrise.

Day 2 (Monday, 1/18/16 – Tuesday, 1/19/16)

Day 2 – CC-DM Optical readings were observed at a higher mean value for this monitoring location for sampling event Dry Weather 5. Wind directions were observed primarily from the NW, W, WSW, and SW. Optical monitor readings were higher late evening to midnight and in the morning after sunrise.

Day 3 (Wednesday, 1/20/16 – Thursday, 1/21/16)

Day 3 – CC-DM Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the WSW, SW, NE and ENE. High wind speeds were observed from the SW at 7 to 12 miles per hour. Peak Optical monitor readings were observed after sunrise through the morning.

Graphical representations of this data are presented in Figures 3-37 through 3-39.

3.2.2.3 CC-DW (Carroll Canyon – Downwind)

<u>*CC-DW (Carroll Canyon – Downwind)*</u>:

CC-DW is a site monitored during the Phase I and Phase II Watershed Special Study and contains an Optical monitor and an FRM sampler.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 859 measurements were determined to be valid (99%).
- Mean values for PM_{10} were 0.0168 mg/m^3.
- Mean standard deviation is $\pm$0.0070 mg/m^3

FRM Sampler (Laboratory) Results:

- Mean value for PM_{10} was 0.0.128 mg/m^3.
- Mean RPD from the FRM results to the Optical monitor results was 44.50%

Day 1 (Saturday, 1/16/16 – Sunday, 1/17/16)

Day 1 – CC-DW Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed during evening and sundown, and during increased traffic conditions in the morning.

Day 2 (Monday, 1/18/16 – Tuesday, 1/19/16)

Day 2 – CC-DW Optical readings were observed at the mean value of the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed during the times of increased traffic conditions in the morning.

Day 3 (Wednesday, 1/20/16 – Thursday, 1/21/16)

Day 3 – CC-DW Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed after sundown and during increased traffic conditions in the morning.

Graphical representations of this data is presented in Figures 3-40 through 3-42.

3.2.2.4 CC-ER (Carroll Canyon – Eco Rental)

CC-ER (Carroll Canyon – Eco Rental):

CC-ER is a site monitored during the Phase II Watershed Special Study that was added by the City of San Diego (i.e., not funded through the Responsible Agencies[2] [RA] group) and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 787 measurements were determined to be valid (91%).
- Mean values for PM_{10} were 0.0084 mg/m^3.
- Mean standard deviation is $\pm$0.0053 mg/m^3

Day 1 (Saturday, 1/16/16 – Sunday, 1/17/16)

Day 1 – CC-ER Optical readings were higher than the mean value of the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the WNW and NW. Peak Optical monitor readings were observed during the evening and sundown, and times of increased traffic during the morning.

Day 2 (Monday, 1/18/16 – Tuesday, 1/19/16)

Day 2 – CC-ER Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Optical monitor readings peaked during increased traffic conditions in the morning.

Day 3 (Wednesday, 1/20/16 – Thursday, 1/21/16)

Day 3 – CC-ER Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed during the evening and sundown, and times of increased traffic during the morning.

Graphical representations of this data is presented in Figures 3-43 through 3-45.

[2] The Responsible Agencies (RAs) are the Cities of San Diego, Poway, and Del Mar, and the County of San Diego.

3.2.2.5 CC-MP (Carroll Canyon – Maddox Park)

CC-MP (Carroll Canyon – Maddox Park):

CC-MP is a site monitored during the Phase II Watershed Special Study that was added by the City of San Diego (i.e., not funded through the RA group) and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 796 measurements were determined to be valid (91%).
- Mean values for PM_{10} were 0.0084 mg/m^3.
- Mean standard deviation is $\pm$0.0054 mg/m^3

Day 1 (Saturday, 1/16/16 – Sunday, 1/17/16)

Day 1 – CC-MP Optical readings were higher than the mean value of the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed late evening and sundown, and times of increased traffic during the morning.

Day 2 (Monday, 1/18/16 – Tuesday, 1/19/16)

Day 2 – CC-MP Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed at noon and times of increased traffic during the morning.

Day 3 (Wednesday, 1/20/16 – Thursday, 1/21/16)

Day 3 – CC-MP Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed late evening and sundown, and times of increased traffic during the morning.

Graphical representations of this data is presented in Figures 3-46 through 3-48.

3.2.2.6 CC-SF (Carroll Canyon – Camino Santa Fe)

CC-SF (Carroll Canyon – Camino Santa Fe):

CC-MP is a site monitored during the Phase II Watershed Special Study that was added by the City of San Diego (i.e., not funded through the RA group) and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 662 measurements were determined to be valid (76%).
- Mean values for PM_{10} were 0.0092 mg/m^3.
- Mean standard deviation is $\pm$0.0051 mg/m^3

Day 1 (Saturday, 1/16/16 – Sunday, 1/17/16)

Day 1 – CC-SF Optical readings were higher than the mean value of the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed late evening and sundown, at times of increased traffic during the morning.

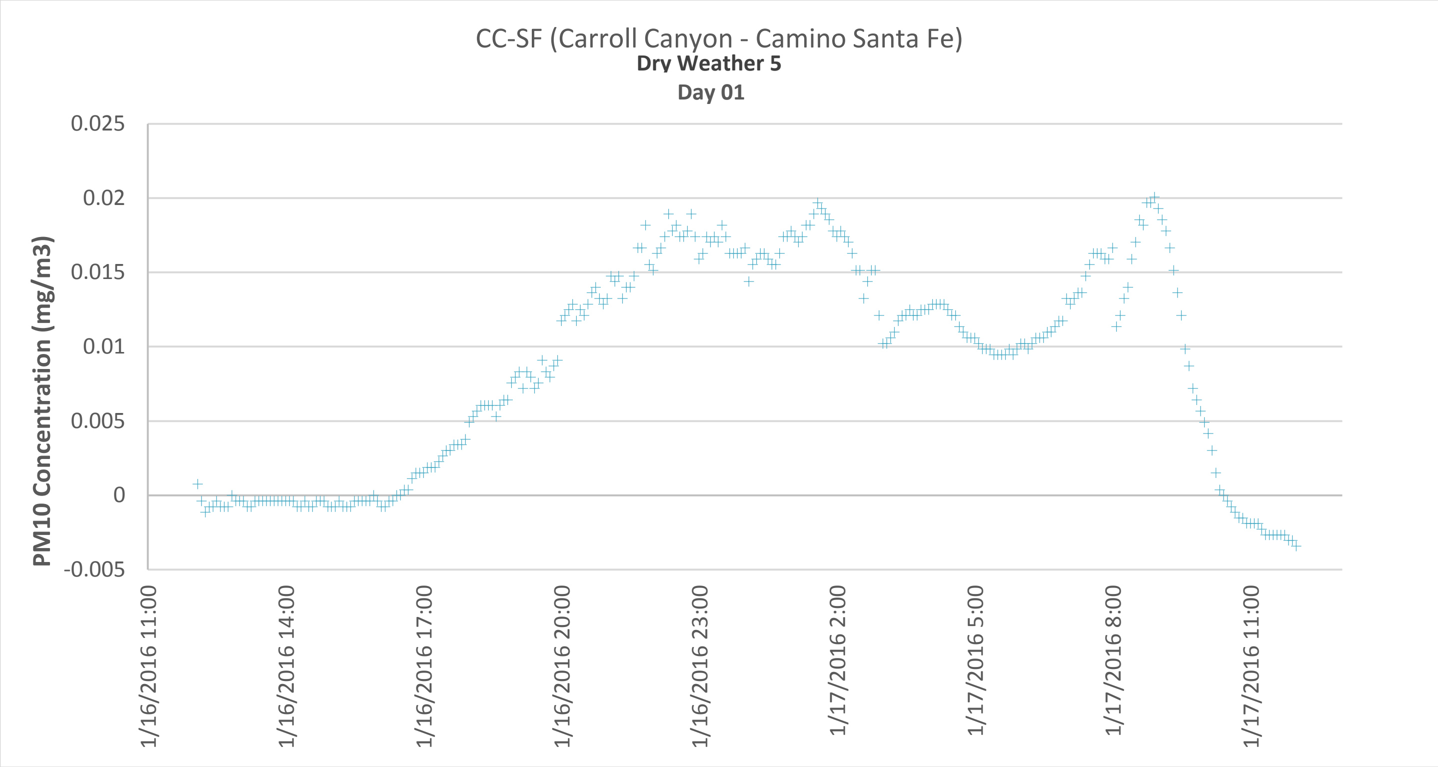
Day 2 (Monday, 1/18/16 – Tuesday, 1/19/16)

Day 2 – CC-SF Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed at noon and times of increased traffic during the morning.

Day 3 (Wednesday, 1/20/16 – Thursday, 1/21/16)

Day 3 – CC-SF Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed after sundown and at times of increased traffic during the morning.

Graphical representations of this data is presented in Figures 3-49 through 3-51.



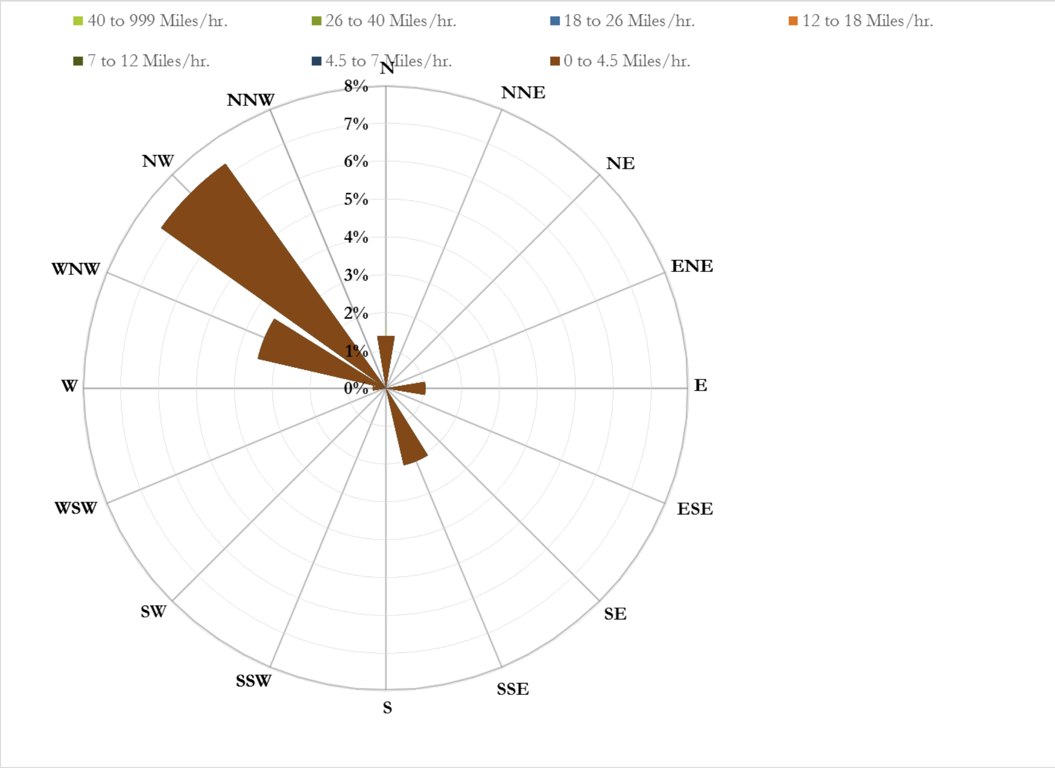


Figure 3-49.

3.2.2.7 CC-SR (Carroll Canyon – Scripps Ranch)

CC-SR (Carroll Canyon – Scripps Ranch):

CC-SR is a site monitored during the Phase I and 2 Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 864 measurements were determined to be valid (100%).
- Mean values for PM_{10} were 0.0064 mg/m^3.
- Mean standard deviation is $\pm$0.0041 mg/m^3

Day 1 (Saturday, 1/16/16 – Sunday, 1/17/16)

Day 1 – CC-SF Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed during sundown and late morning.

Day 2 (Monday, 1/18/16 – Tuesday, 1/19/16)

Day 2 – CC-SF Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Optical monitor readings peaked around noontime and during times of increased traffic conditions in the morning.

Day 3 (Wednesday, 1/20/16 – Thursday, 1/21/16)

Day 3 – CC-DM Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed around midnight.

Graphical representations of this data is presented in Figures 3-52 through 3-54.

3.2.2.8 CC-UP (Carroll Canyon – Upwind)

CC-UP (Carroll Canyon – Upwind):

CC-UP is a site monitored during the Phase I and 2 Watershed Special Study and contains an Optical monitor and an FRM sampler.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 807 measurements were determined to be valid (93%).
- Mean values for PM_{10} were 0.0055 mg/m^3.
- Mean standard deviation is $\pm$0.0074 mg/m^3

FRM Sampler (Laboratory) Results:

- Mean values for PM_{10} was 0.0111 mg/m^3.
- Mean RPD from the FRM results to the Optical monitor results was 63.73%

Day 1 (Saturday, 1/16/16 – Sunday, 1/17/16)

Day 1 – CC-UP Optical readings were lower than the mean value of the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed during sundown and morning.

Day 2 (Monday, 1/18/16 – Tuesday, 1/19/16)

Day 2 – CC-UP Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed during periods of increased traffic in the morning.

Day 3 (Wednesday, 1/20/16 – Thursday, 1/21/16)

Day 3 – CC-UP Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed during periods of increased traffic in the morning.

Graphical representations of this data is presented in Figures 3-55 through 3-57.

3.2.2.9 CV-CD (Carmel Valley – Camino Del Sur)

CV-CD (Carmel Valley – Camino Del Sur):

CV-CD is a site monitored during the Phase II Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 810 measurements were determined to be valid (94%).
- Mean values for PM_{10} were 0.0076 mg/m^3.
- Mean standard deviation is $\pm$0.0055 mg/m^3

Day 1 (Saturday, 1/16/16 – Sunday, 1/17/16)

Day 1 – CV-CD Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 5. Wind direction were observed primarily from the W and WSW. Peak Optical monitor readings were observed between around midnight and through the morning.

Day 2 (Monday, 1/18/16 – Tuesday, 1/19/16)

Day 2 – CV-CD Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW, W, WSW, and SW. Peak optical monitor readings were observed at noontime and during periods of increased traffic in the morning.

Day 3 (Wednesday, 1/20/16 – Thursday, 1/21/16)

Day 3 – CV-CD Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the WSW, SW, NE, and ENE. Peak Optical monitor readings were observed during sundown.

Graphical representations of this data are presented in Figures 3-58 through 3-60.

3.2.2.10 LP-PO (Los Peñasquitos – Poway)

LP-PO (Los Peñasquitos – Poway):

CV-CD is a site monitored during the Phase II Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 576 measurements were determined to be valid (96%).
- Mean values for PM_{10} were 0.0077 mg/m^3.
- Mean standard deviation is $\pm$0.0055 mg/m^3

Day 1 (Saturday, 1/16/16 – Sunday, 1/17/16)

Day 1 – LP-PO Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 5. Wind direction were observed primarily from the NW. Peak Optical monitor readings were observed during sundown and periods of increased traffic in the morning.

Day 2 (Monday, 1/18/16 – Tuesday, 1/19/16)

Day 2 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed at noontime and during periods of increased traffic in the morning.

Day 3 (Wednesday, 1/20/16 – Thursday, 1/21/16)

Day 3 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed at midnight.

Graphical representations of this data are presented in Figures 3-61 through 3-63.

3.2.2.11 LP-PR (Los Peñasquitos – Preserve)

LP-PR (Los Peñasquitos – Preserve):

LP-PR is a site monitored during the Phase II Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 763 measurements were determined to be valid (88%).
- Mean values for PM_{10} were 0.0039 mg/m^3.
- Mean standard deviation is $\pm$0.0029 mg/m^3

Day 1 (Saturday, 1/16/16 – Sunday, 1/17/16)

Day 4 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind direction were observed primarily from the W and WSW. Peak Optical readings occurred prior to sunrise.

Day 2 (Monday, 1/18/16 – Tuesday, 1/19/16)

Day 5 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the NW, W, WSW, and SW. Peak Optical monitor readings were observed during the late morning.

Day 3 (Wednesday, 1/20/16 – Thursday, 1/21/16)

Day 6 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 5. Wind directions were observed primarily from the WSW, SW, NE, and ENE. Peak Optical monitor readings were observed before midnight. Higher Optical readings were observed before midnight and before to sunrise.

Graphical representations of this data are presented in Figure 3-64 through 3-66.

3.2.3 Dry Weather 6

3.2.3.1 CC-CC (Carroll Canyon)

CC-CC (Carroll Canyon):

CC-CC is a site monitored during the Phase I and Phase II Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 821 measurements were determined to be valid (95%).
- Mean values for PM_{10} were 0.0047 mg/m^3.
- Mean standard deviation is $\pm$0.0029 mg/m^3

Day 1 (Saturday, 1/23/16 – Sunday, 1/24/16)

Day 1 – CC-CC Optical readings were observed at lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed at midnight and during increased traffic conditions in the morning.

Day 2 (Monday, 1/25/16 Tuesday, 1/26/16)

Day 2 – CC-CC Optical readings were observed at a higher mean value for this monitoring location during sampling event Dry Weather 6. Wind directions were observed primarily from the WNW. Peak Optical monitor readings were observed late evening through the night and during increased traffic conditions in the morning.

Day 3 (Wednesday, 1/27/16 – Thursday, 1/28/16)

Day 3 – CC-CC Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed at midnight and in the morning after sunrise.

Graphical representations of this data are presented in Figure 2-23.

CC-CC PM$_{10}$ Concentrations and Wind Rose, Dry Weather 6 – Day 3

3.2.3.2 CC-DM (Reference – Del Mar)

CC-DM (Reference – Del Mar):

CC-DM is a site monitored during the Phase I and Phase II Watershed Special Study and contains an Optical monitor and an FRM sampler. This is the reference site for the aerial deposition portion of the Watershed Special Study, and was selected as a station away from anthropogenic influence during the prevalent weather patterns.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 864 measurements were determined to be valid (100%).
- Mean values for PM_{10} were 0.0081 mg/m^3.
- Mean standard deviation is $\pm$0.0048 mg/m^3

FRM Sampler (Laboratory) Results:

- Mean values for PM_{10} was 0.0402 mg/m^3.
- Mean RPD from the FRM results to the Optical monitor results was 129.32%

Day 1 (Saturday, 1/23/16 – Sunday, 1/24/16)

Day 1 – CC-DM Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the W, WSW, NNE and NE. Peak Optical monitor readings were observed during the evening and through the night.

Day 2 (Monday, 1/25/16 Tuesday, 1/26/16)

Day 2 – CC-DM Optical readings were observed at a higher mean value for this monitoring location for sampling event Dry Weather 6. Wind directions were observed primarily from the W. Optical monitor readings were observed higher during the evening to midnight and in the morning after sunrise.

Day 3 (Wednesday, 1/27/16 – Thursday, 1/28/16)

Day 3 – CC-DM Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the WNW, NW, and NNW. Optical monitor readings were observed consistently distributed with slightly higher readings during the late evening and morning after sunrise.

Graphical representations of this data are presented in Figures 3-70 through 3-72.

3.2.3.3 CC-DW (Carroll Canyon – Downwind)

CC-DW (Carroll Canyon – Downwind):

CC-DW is a site monitored during the Phase I and Phase II Watershed Special Study and contains an Optical monitor and an FRM sampler.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 864 measurements were determined to be valid (100%).
- Mean values for PM_{10} were 0.0054 mg/m^3.
- Mean standard deviation is $\pm$0.0031 mg/m^3

FRM Sampler (Laboratory) Results:

- Mean value for PM_{10} was 0.0328 mg/m^3.
- Mean RPD from the FRM results to the Optical monitor results was 134.17%

Day 1 (Saturday, 1/23/16 – Sunday, 1/24/16)

Day 1 – CC-DW Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the WNW and NW. Peak Optical monitor readings were observed during evening and sundown, and during increased traffic conditions in the morning.

Day 2 (Monday, 1/25/16 Tuesday, 1/26/16)

Day 2 – CC-DW Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed during the afternoon and at times of increased traffic conditions in the morning.

Day 3 (Wednesday, 1/27/16 – Thursday, 1/28/16)

Day 3 – CC-DW Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed during increased traffic conditions in the morning.

Graphical representations of this data is presented in Figures 3-73 through 3-75.

3.2.3.4 CC-ER (Carroll Canyon – Eco Rentals)

CC-ER (Carroll Canyon – Eco Rental):

CC-ER is a site monitored during the Phase II Watershed Special Study that was added by the City of San Diego (i.e., not funded through the RA group) and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 845 measurements were determined to be valid (98%).
- Mean values for PM_{10} were 0.0041 mg/m^3.
- Mean standard deviation is $\pm$0.0026 mg/m^3

Day 1 (Saturday, 1/23/16 – Sunday, 1/24/16)

Day 1 – CC-ER Optical readings were lower than the mean value of the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW and WNW. Optical monitor readings were consistently distributed with slightly higher readings observed during the evening and sundown.

Day 2 (Monday, 1/25/16 Tuesday, 1/26/16)

Day 2 – CC-ER Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the WNW. Optical monitor readings peaked during increased traffic conditions in the morning.

Day 3 (Wednesday, 1/27/16 – Thursday, 1/28/16)

Day 3 – CC-ER Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed during periods of increased traffic during the morning.

Graphical representations of this data is presented in Figures 3-76 through 3-78.

3.2.3.5 CC-MP (Carroll Canyon – Maddox Park)

CC-MP (Carroll Canyon – Maddox Park):

CC-MP is a site monitored during the Phase II Watershed Special Study that was added by the City of San Diego (i.e., not funded through the RA group) and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 803 measurements were determined to be valid (93%).
- Mean values for PM_{10} were 0.0044 mg/m^3.
- Mean standard deviation is $\pm$0.0038 mg/m^3

Day 1 (Saturday, 1/23/16 – Sunday, 1/24/16)

Day 1 – CC-MP Mean Optical readings were observed at the mean value of the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed at noon and during times of increased traffic in the morning.

Day 2 (Monday, 1/25/16 Tuesday, 1/26/16)

Day 2 – CC-MP Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed late evening to midnight.

Day 3 (Wednesday, 1/27/16 – Thursday, 1/28/16)

Day 3 – CC-MP Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were consistently distributed with a slightly higher readings before midnight.

Graphical representations of this data is presented in Figures3-79 through 3-81.

3.2.3.6 CC-SF (Carroll Canyon – Camino Santa Fe)

CC-SF (Carroll Canyon – Camino Santa Fe):

CC-MP is a site monitored during the Phase II Watershed Special Study that was added by the City of San Diego (i.e., not funded through the RA group) and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 745 measurements were determined to be valid (86%).
- Mean values for PM_{10} were 0.0069 mg/m^3.
- Mean standard deviation is $\pm$0.0051 mg/m^3

Day 1 (Saturday, 1/23/16 – Sunday, 1/24/16)

Day 1 – CC-SF Optical readings were higher than the mean value of the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed late evening and sundown, at times of increased traffic during the morning.

Day 2 (Monday, 1/25/16 Tuesday, 1/26/16)

Day 2 – CC-SF Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed in the evening and at periods of increased traffic during the morning.

Day 3 (Wednesday, 1/27/16 – Thursday, 1/28/16)

Day 3 – CC-SF Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed during periods of increased traffic during the morning.

Graphical representations of this data is presented in Figures 3-82 through 3-84.

3.2.3.7 CC-SR (Carroll Canyon – Scripps Ranch)

CC-SR (Carroll Canyon – Scripps Ranch):

CC-SR is a site monitored during the Phase I and 2 Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 845 measurements were determined to be valid (98%).
- Mean values for PM_{10} were 0.0030 mg/m^3.
- Mean standard deviation is $\pm$0.0014 mg/m^3

Day 1 (Saturday, 1/23/16 – Sunday, 1/24/16)

Day 1 – CC-SF Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed at noontime and during sundown.

Day 2 (Monday, 1/25/16 Tuesday, 1/26/16)

Day 2 – CC-SF Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW. Optical monitor readings peaked around noontime and during times of increased traffic conditions in the morning.

Day 3 (Wednesday, 1/27/16 – Thursday, 1/28/16)

Day 3 – CC-DM Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed during the afternoon and evening.

Graphical representations of this data is presented in Figure 2-29.

3.2.3.8 CC-UP (Carroll Canyon – Upwind)

CC-UP (Carroll Canyon – Upwind):

CC-UP is a site monitored during the Phase I and 2 Watershed Special Study and contains an Optical monitor and an FRM sampler.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 853 measurements were determined to be valid (99%).
- Mean values for PM_{10} were 0.0050 mg/m^3.
- Mean standard deviation is $\pm$0.0024 mg/m^3

FRM Sampler (Laboratory) Results:

- Mean values for PM_{10} was 0.0152 mg/m^3.
- Mean RPD from the FRM results to the Optical monitor results was 91.48%

Day 1 (Saturday, 1/23/16 – Sunday, 1/24/16)

Day 1 – CC-UP Optical readings were lower than the mean value of the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed at midnight and during the morning after sunrise.

Day 2 (Monday, 1/25/16 Tuesday, 1/26/16)

Day 2 – CC-UP Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the WNW. Peak Optical monitor readings were observed during periods of increased traffic in the afternoon and morning.

Day 3 (Wednesday, 1/27/16 – Thursday, 1/28/16)

Day 3 – CC-UP Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed during periods of increased traffic in the morning.

Graphical representations of this data is presented in Figures 3-88 through 3-90.

3.2.3.9 CV-CD (Carmel Valley – Camino Del Sur)

CV-CD (Carmel Valley – Camino Del Sur):

CV-CD is a site monitored during the Phase II Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 778 measurements were determined to be valid (90%).
- Mean values for PM_{10} were 0.0054 mg/m^3.
- Mean standard deviation is $\pm$0.0036 mg/m^3

Day 1 (Saturday, 1/23/16 – Sunday, 1/24/16)

Day 1 – CV-CD Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 6. Wind direction were observed primarily from the W, WSW, NNE, and NE. Peak Optical monitor readings were observed between after midnight and through the morning.

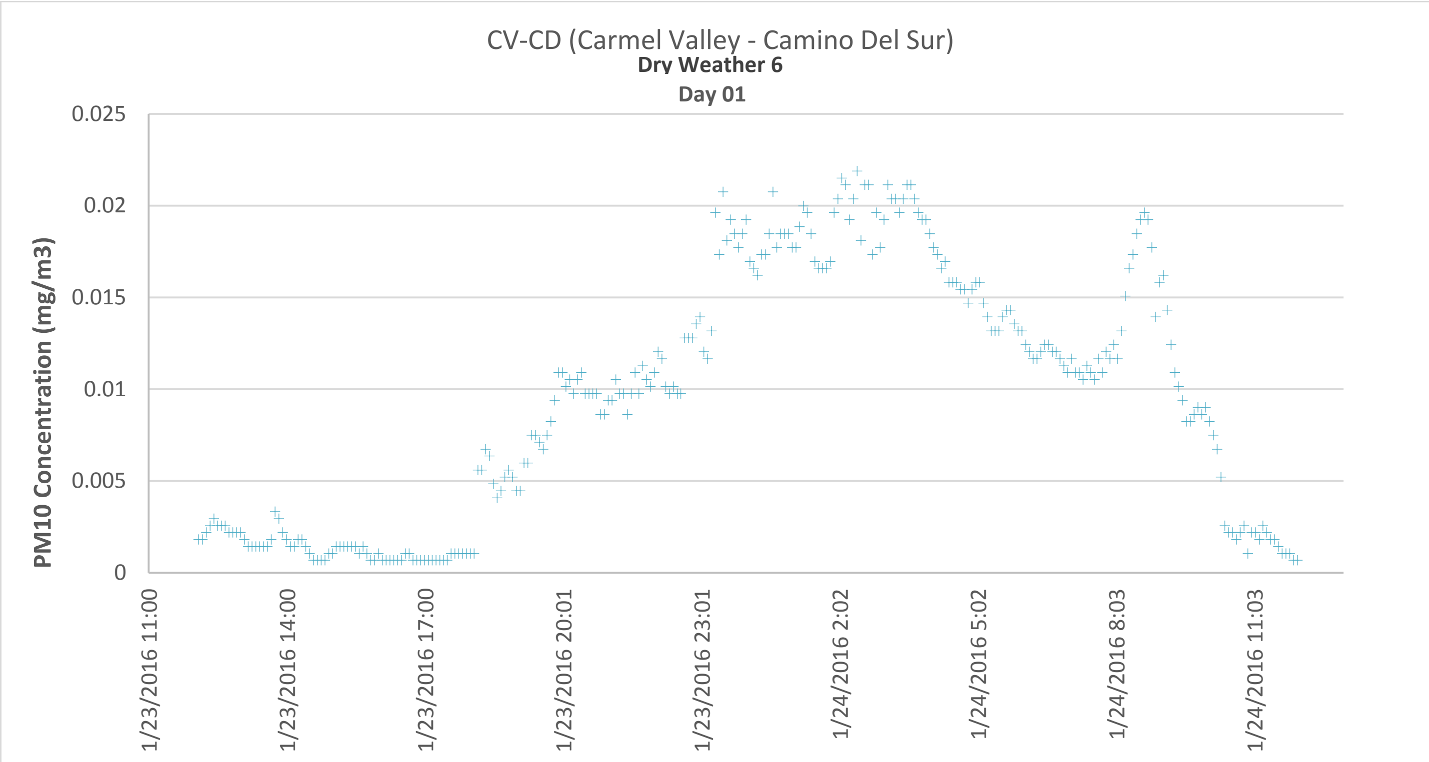
Day 2 (Monday, 1/25/16 Tuesday, 1/26/16)

Day 2 – CV-CD Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the W. Peak Optical monitor readings were observed during sundown.

Day 3 (Wednesday, 1/27/16 – Thursday, 1/28/16)

Day 3 – CV-CD Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the WNW, NE, and NNWE. Peak Optical monitor readings were observed during sundown.

Graphical representations of this data are presented in Figures 3-91 through 3-93.



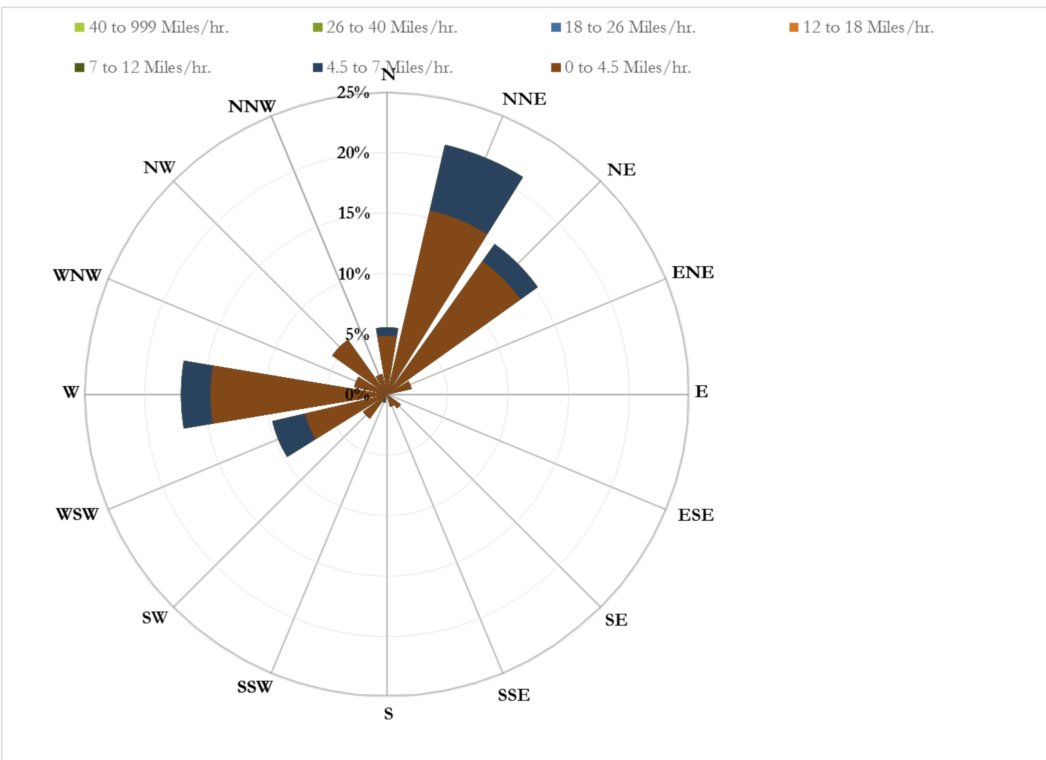


Figure 3-91.
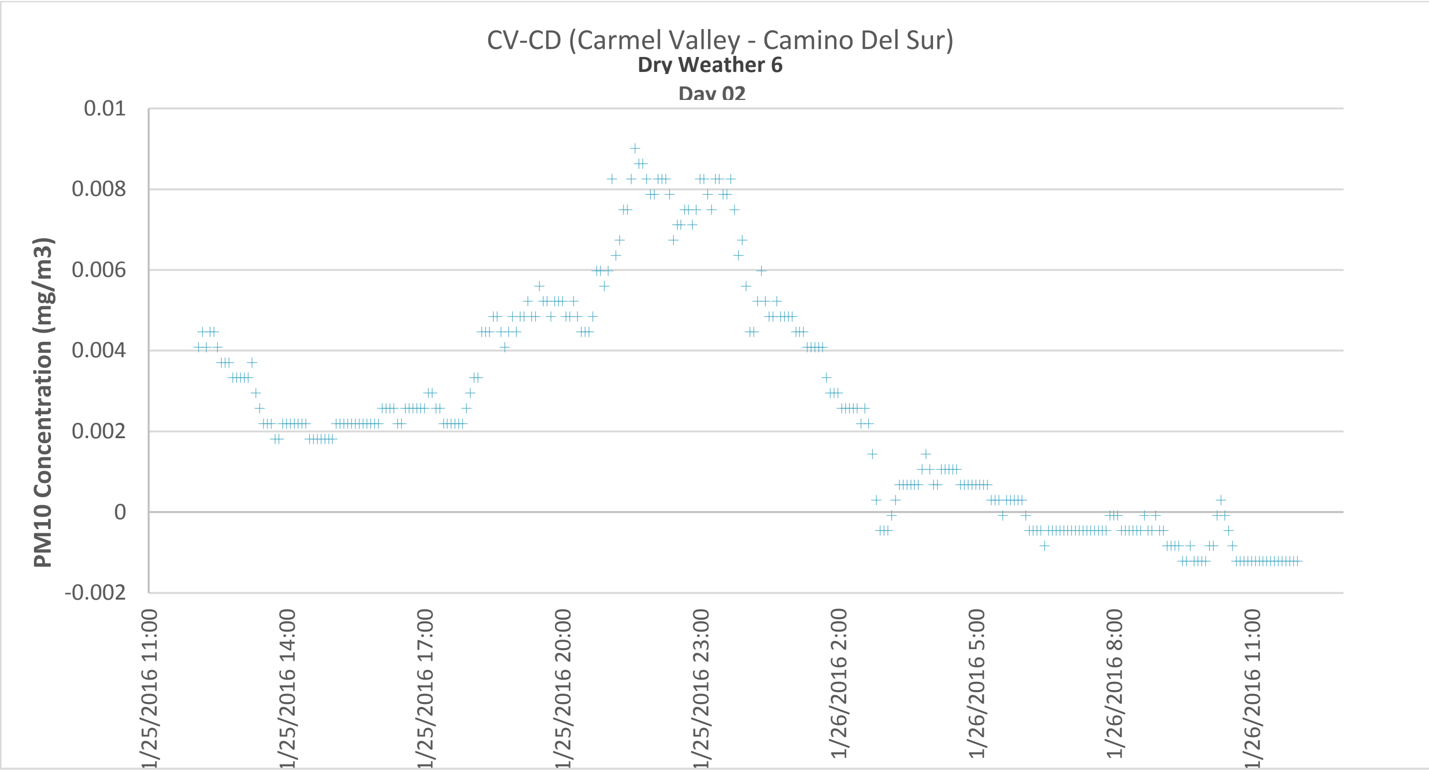
CV-CD PM_{10} Concentrations and Wind Rose, Dry Weather 6 – Day 1



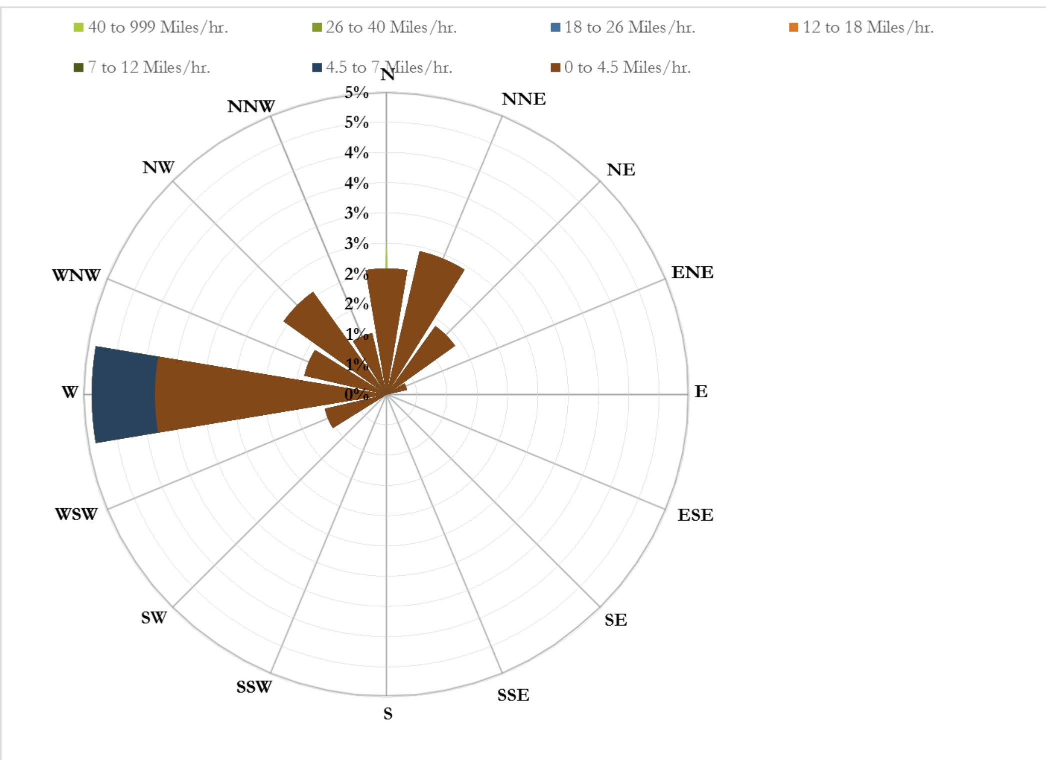


Figure 3-92.

CV-CD PM_{10} Concentrations and Wind Rose, Dry Weather 6 – Day 3

3.2.3.10 LP-PO (Los Peñasquitos – Poway)

LP-PO (Los Peñasquitos – Poway):

CV-CD is a site monitored during the Phase II Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 824 measurements were determined to be valid (95%).
- Mean values for PM_{10} were 0.0051 mg/m^3.
- Mean standard deviation is $\pm$0.0036 mg/m^3

Day 1 (Saturday, 1/23/16 – Sunday, 1/24/16)

Day 1 – LP-PO Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 6. Wind direction were observed primarily from the NW. Peak Optical monitor readings were observed during the early afternoon and periods of increased traffic in the morning.

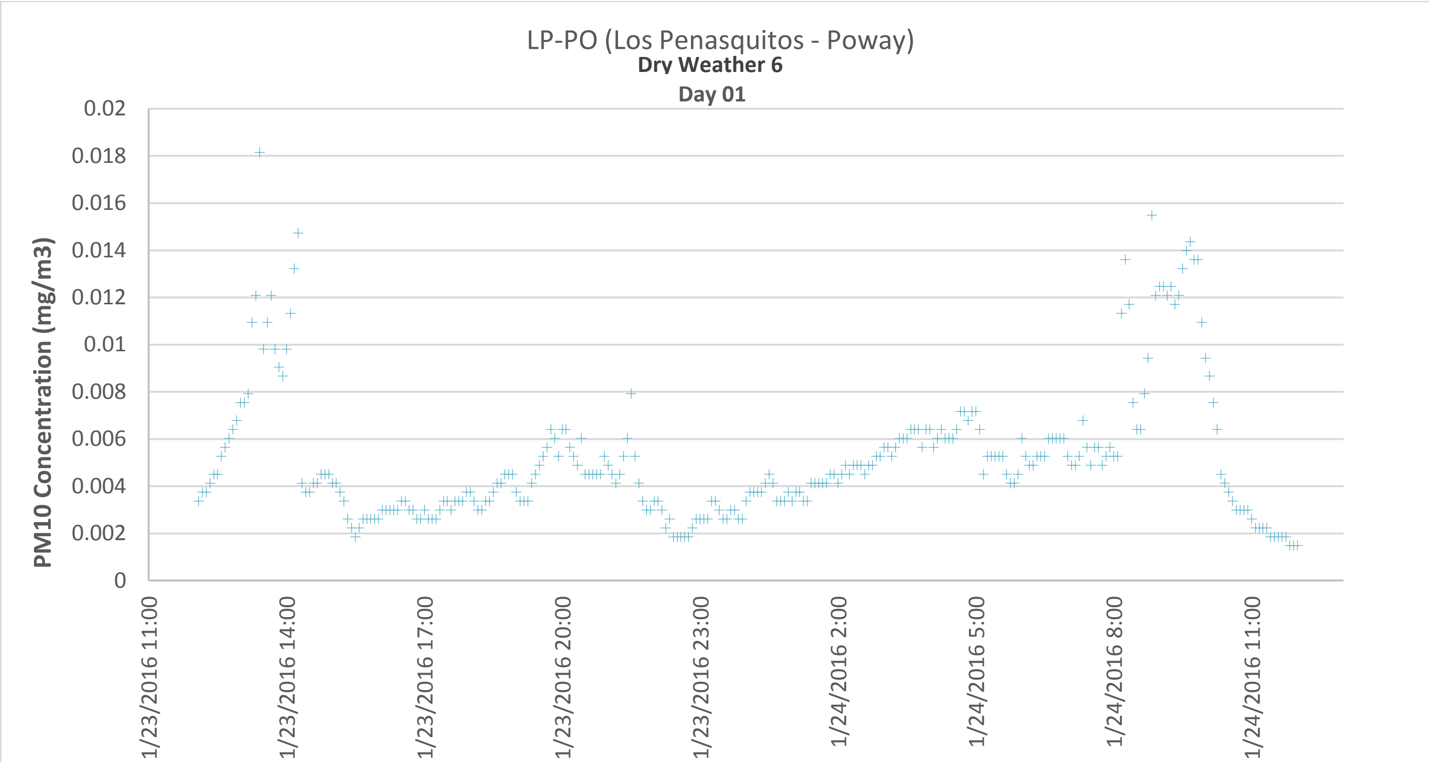
Day 2 (Monday, 1/25/16 Tuesday, 1/26/16)

Day 2 – LP-PO Optical readings were observed at a higher mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW. Peak Optical monitor readings were observed before midnight.

Day 3 (Wednesday, 1/27/16 – Thursday, 1/28/16)

Day 3 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the NW and WNW. Peak Optical monitor readings were observed before midnight.

Graphical representations of this data are presented in Figures 3-94 through 3-96.



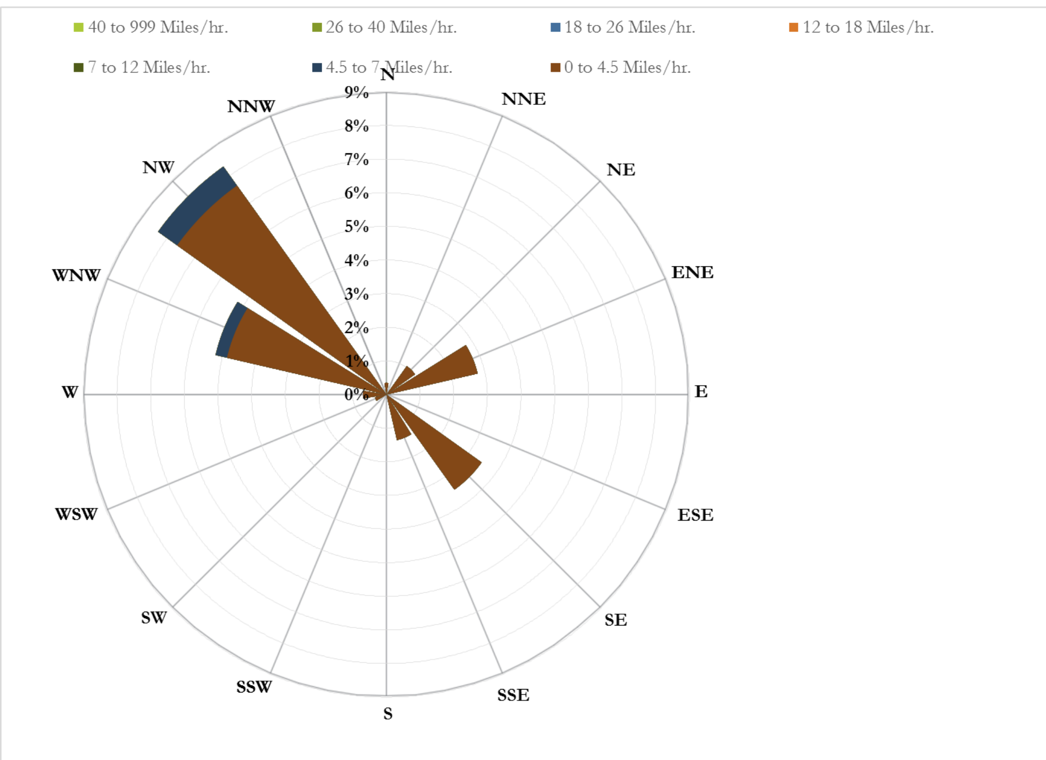


Figure 3-94.
LP-PO PM_{10} Concentrations and Wind Rose, Dry Weather 6 – Day 1

3.2.3.11 LP-PR (Los Peñasquitos – Preserve)

LP-PR (Los Peñasquitos – Preserve):

LP-PR is a site monitored during the Phase II Watershed Special Study and contains an Optical monitor only.

Optical monitor (Continuous Concentration) Results:

- 864 measurements were obtained during the reporting period.
- 853 measurements were determined to be valid (99%).
- Mean values for PM_{10} were 0.0028 mg/m^3.
- Mean standard deviation is $\pm$0.0008 mg/m^3

Day 1 (Saturday, 1/23/16 – Sunday, 1/24/16)

Day 4 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind direction were observed primarily from the W, WSW, NE and NNE. Optical readings were distributed consistently with a slight rise observed after sunrise.

Day 2 (Monday, 1/25/16 Tuesday, 1/26/16)

Day 5 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the W. Optical readings were distributed consistently with a slight rise observed around midnight.

Day 3 (Wednesday, 1/27/16 – Thursday, 1/28/16)

Day 6 – LP-PO Optical readings were observed at a lower mean value than the overall mean for sampling event Dry Weather 6. Wind directions were observed primarily from the WNW, NW and NNW. Optical readings were distributed consistently with a slight rise observed around midnight.

Graphical representations of this data are presented in Figures 3-97 through 3-99.

3.3 SAMPLING EQUIPMENT PROBLEMS AND MITIGATION

This section presents problems occurred during the monitoring effort and mitigation efforts performed to prevent future problems. To preserve the integrity of the data, the proper application, handling, calibration and use of the sampling equipment was adhered to at all times. This section describes the typical errors encountered and what solutions, as applicable, mitigated the errors.

Optical monitor

- Values were negative.

Mitigation Solution: The Optical monitor was zero-calibrated prior to every 24-hour monitoring period to curb zero drift. After zero-calibration, a short test was run to verify validity readings. If readings were still negative, additional zero-calibration and/or cleaning was performed. An additional auto-zero module was utilized to zero-calibrate the meter every four hours throughout the monitoring periods.

- A flow error was found.

Mitigation Solution: Before sampling, the filter fitting with the impactor plate and the tubing to the inlet port was checked to ensure that it was properly seated and sealed, and would not pinch or cause an obstruction of flow upon closure of the security case. Additionally, the battery leads to the meter from the power source were confirmed to be in good condition and making proper contact without slip in order to maintain the meter and pump operation.

FRM Sampler:

- Filter was mishandled or poorly protected.

Mitigation Solution: Proper gloves were worn to ensure that residual contaminants did not interact with the filter. All filters were handled as minimally as possible: either by sliding the filter from its pouch into the filter disk without any direct handling by the user, or by using decontaminated forceps. After sampling, filters were placed immediately in their original labeled pouch by the same methods and secured in a Ziplock™ bag surrounded by bubble wrap for transportation to the laboratory.

- Maximum Load Exceeded

Mitigation Solution: Prepare filter setup according to manufacturer's specifications. Make sure equipment is operable and the pump is functioning properly with test prior to execution.

- Program failure

Mitigation Solution: Double check programming and make sure battery power is sufficient for test run.

Table 3-6 describes the errors identified each monitoring location and the related weather events for this reporting period.

Table 3-6.
Sampling Equipment Errors

Site Name	Sampling Event	Day	Description
CC-DW (Carroll Canyon–Downwind)	Dry Weather 4*	Day 1	Maximum Loading Error – FRM Equipment Failure.
CC-DM (Reference–Del Mar)	Dry Weather 4*	Day 2	FRM program did not launch
CC-UP (Carroll Canyon–Upwind)	Dry Weather 4*	Day 3	Maximum Loading Error – FRM Equipment Failure.
CC-UP (Carroll Canyon–Downwind)	Dry Weather 4*	Day 3	Maximum Loading Error – FRM Equipment Failure.
CC-DM (Reference–Del Mar)	Dry Weather 4*	Day 3	Flow Error
CC-SF (Carroll Canyon – Camino Santa Fe)	Dry Weather 5	Day 1	>25% Values Negative
CC-SF (Carroll Canyon – Camino Santa Fe)	Dry Weather 5	Day 3	>25% Values Negative

*Dry Weather 4, Day 1 through 3 data was discarded and is not presented in this report due to multiple FRM equipment failures. This equipment was replaced for days 4 through 6.

This page is intentionally blank.

4.0 CONCLUSIONS

No Significant Effects. Based on the results of aerial deposition monitoring, the contribution of airborne particles to the sediment loads in the WMA subwatersheds is not significant. Optical values were generally low and negligible with marginal increases around anthropogenic disturbances, particularly in the Carroll Canyon subwatershed.

FRM and Optical Monitoring Results. For Optical monitor measurements only, higher values were observed at monitoring locations CC-DM, CC-DW, CC-ER, CC-MP, and CC-UP. All of these locations with the exception of CC-DM are located in Carroll Canyon. The highest mean Optical concentrations were observed at CC-DW and CC-DM, with mean values for total optical at 0.0090 and 0.0082 mg/m^3 respectively. High Optical monitor concentrations from the CC-DM (Del Mar) station could be the result of its proximity to the ocean, with the potential effect of higher relative humidity with low wind speeds (Zogou et al., 2012).

FRM values, when applicable, do not directly correlate with the optical values as, by example, CC-DW had the highest mean Optical value and the lowest mean FRM value through the entire study. In general, FRM mean values were similar and at very low detections based off individual monitoring locations.

Additional evaluations show that sampling event Dry Weather 5, conducted 1/18/2016 through 1/21/2016, had the highest Optical monitor values of all three sampling events. Continuing evaluation between the sampling methods, FRM values did not directly correlate with these readings as FRM values were observed at the lowest values for all three sampling events during this sampling event.

During sampling event Dry Weather 4, day 6, at CC-UP (Carroll Canyon – Upwind), FRM sampler results indicated a concentration of an order of magnitude higher than all other sampling period results at 0.2163 mg/m^3. Optical monitor measurements did not reflect any irregular concentration spikes.

FRM and Optical Monitor Comparisons. FRM samplers produce an air pollutant concentration in parts per million by volume after measuring total flow compensated by barometric pressure and temperature. Optical monitors produce instantaneous direct-read concentrations that can be averaged over time to produce 24-hour mean concentrations.

Gravimetric results from the FRM sampler were higher than the average Optical monitor concentrations, with RPDs ranging from 71.69 to 135.30 percent. On an event by event and site by site basis, RPDs were seem to be fairly consistent with each other. For all sampling events, the mean RPD was 108.44%. Sampling event Dry Weather 5 showed significantly lower FRM values than Dry Weather 4 and 6, yet had the highest standard deviation of all three sampling events.

Optical Direct-Read Concentration Trends. Typical Optical monitor data trends showed increased concentrations during hours with potentially high relative humidity (17:00 to 09:00), and with peaks consistent with increased vehicular traffic, especially during the morning commute

(06:00 to 10:00). More variability in the data trends was observed during events with increased average wind speeds relative to the typical base range of 0.0 – 4.5 miles per hour.

Table D-7 County of San Diego Jurisdictional Strategies for Los Peñasquitos WMA D-121
Table D-8 County of San Diego Optional Strategies for Los Peñasquitos WMA D-129

Jurisdictional strategies are required as part of the Water Quality Improvement Plan (WQIP), under Provision B of the San Diego Regional Water Quality Control Board (Regional Board) National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer System (MS4) Draining the Watersheds Within the San Diego Region, Order Number R9-2013-0001 (MS4 Permit). The Responsible Agencies (RAs) identified water quality improvement strategies outlined in the WQIP and implemented those strategies in fiscal year (FY) 16, the first year of WQIP implementation, to address the highest priority water quality conditions (HPWQCs). The strategies were selected on the basis of their ability to effectively and efficiently eliminate non-storm water discharges to the MS4, reduce pollutants in storm water discharges from the MS4 to the maximum extent practicable, and achieve the interim and final numeric goals identified in the Los Peñasquitos Watershed Management Area (WMA) WQIP.

STATEMENT OF CERTIFICATION

Los Peñasquitos Water Quality Improvement Plan 2015-2016 Annual Report

And

Legal Authority Establishment and Enforcement

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. (40 C.F.R. 122.22(d)).

Further, I certify under penalty of law that the City of Del Mar has taken necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements contained in section E.1 of the San Diego Regional Water Quality Control Board Order No. R9-2013-0001 as amended by Order No. R9-2015-0100 (Municipal Permit). The Del Mar Municipal Code (DMMC), including the following provisions, provides the City with full legal authority as required by the Municipal Permit as well as authorizes judicial and administrative enforcement procedures to mandate compliance:

1. Stormwater Management and Discharge Control, DMMC Section 11.30
2. Clean Water Storm Drain Program – General, DMMC Section 11.32

I. COPERMITTEE INFORMATION

Copermittee Name: City of Del Mar – Los Peñasquitos

Copermittee Primary Contact Name: Mikhail Ogawa

Copermittee Primary Contact Information:
Address: 1050 Camino Del Mar
City: Del Mar County: San Diego State: CA Zip: 92014
Telephone: (858) 755-9313 Fax: (858) 755-2794 Email: Mikhail@mogawaeng.com

II. LEGAL AUTHORITY

Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	YES NO	☒ ☐
A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	YES NO	☒ ☐

III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE

Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	YES[1] NO	☒ ☐
If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	YES NO	☒ ☐

IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	YES[2] NO	☒ ☐

Number of non-storm water discharges reported by the public	3
Number of non-storm water discharges detected by Copermittee staff or contractors	2
Number of non-storm water discharges investigated by the Copermittee	5
Number of sources of non-storm water discharges identified	5
Number of non-storm water discharges eliminated	5
Number of sources of illicit discharges or connections identified	2
Number of illicit discharges or connections eliminated	2
Number of enforcement actions issued	0
Number of escalated enforcement actions issued	0

V. DEVELOPMENT PLANNING PROGRAM

Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	YES NO	☒ ☐
Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	YES NO	☒ ☐
If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	YES NO	☒ ☐

Number of proposed development projects in review	11
Number of Priority Development Projects in review	0
Number of Priority Development Projects approved	0
Number of approved Priority Development Projects exempt from any BMP requirements	0
Number of approved Priority Development Projects allowed alternative compliance	0
Number of Priority Development Projects granted occupancy	0

Number of completed Priority Development Projects in inventory	1
Number of high priority Priority Development Project structural BMP inspections	11
Number of Priority Development Project structural BMP violations	0
Number of enforcement actions issued	0
Number of escalated enforcement actions issued	0

FY 2015-2016

VI. CONSTRUCTION MANAGEMENT PROGRAM

Has the Copermittee implemented a construction management program that complies with Order No. R9-2013-0001?	YES ☒ NO ☐

Number of construction sites in inventory	10
Number of active construction sites in inventory	6
Number of inactive construction sites in inventory	0
Number of construction sites closed/completed during reporting period	4
Number of construction site inspections	72
Number of construction site violations	4
Number of enforcement actions issued	4
Number of escalated enforcement actions issued	0

VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM

Has the Copermittee implemented an existing development management program that complies with Order No. R9-2013-0001?	YES ☒ NO ☐

	Municipal	Commercial	Industrial	Residential
Number of facilities or areas in inventory	1	1	0	12
Number of existing development inspections	11	11	0	132
Number of follow-up inspections	0	0	0	0
Number of violations	0	0	0	4
Number of enforcement actions issued	0	0	0	4
Number of escalated enforcement actions issued	0	0	0	0

VIII. PUBLIC EDUCATION AND PARTICIPATION

Has the Copermittee implemented a public education program component that complies with Order No. R9-2013-0001?	YES ☒ NO ☐
Has the Copermittee implemented a public participation program component that complies with Order No. R9-2013-0001?	YES ☒ NO ☐

IX. FISCAL ANALYSIS

Has the Copermittee attached to this form a summary of its fiscal analysis that complies with Order No. R9-2013-0001?	YES ☒ NO[2] ☐

X. CERTIFICATION

I ☒ Principal Executive Officer ☐ Ranking Elected Official ☐ Duly Authorized Representative certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

[1] The City of Del Mar was required to submit an updated JRMP with the WQIP and post it to the Regional Clearinghouse portal.

[2] The timeframe used for the Illicit Discharge Detection and Elimination component of this JRMP Annual Report matches the timeframe used in the WQIP Annual Report (10/1/15-9/30/16).

1. Fiscal Analysis

1.1 Jurisdictional Runoff Management Program Implementation

This section of the Jurisdictional Runoff Management Program (JRMP) Annual Report provides a fiscal analysis of the City's stormwater management programs. On May 8, 2013 the RWQCB adopted a revised Municipal Permit, Order No. R9-2013-0001, however, during this transitional period the City of Del Mar continued to develop its fiscal analysis according to Section G of the previous Municipal Permit, Order No. R9-2007-0001.

On January 29, 2009, the San Diego Municipal Copermittees adopted the "Standardized Fiscal Method and Format" which provides a model for the City of Del Mar and other Copermittees to perform the review and annual reporting as required in Order R9-2007-0001, Section G. This methodology and reporting format proved to be an effective model for reporting on City expenditures, and for consistency, the City of Del Mar will continue to use the format for this reporting period FY 2015-2016. The City, however, recognizes the additional elements required to be included in the fiscal analysis as specified in Order No. R9-2013-001 Section E.8, and has included those components in the year's report.

1.1.1 Clean Water Program Budget

The City of Del Mar's Clean Water Program is a multi-departmental program, funded as an enterprise fund in the City's Annual Budget. Enterprise funds account for operations that are financed and operated in a manner similar to private businesses, with the costs of providing the services recovered largely through user fees. Fund 55 ("The Clean Water Fund"), is one of three (3) enterprise funds in the City's budget, and was added to the City's budget in Fiscal Year 2004 to account for the mandated costs of the City's responsibilities in order to comply with the Municipal Permit. The budget for the City of Del Mar has the appropriate funds allocated to meet the requirements of Permit 2013-0001, including any development, implementation, and enforcement activities required.

The City of Del Mar Operating and Capital Improvement Budgets for Fiscal Years 2015-2016 and 2016-2017 were presented to the Del Mar City Council on June 1, 2015. The budget was formally adopted during the same meeting.

For the Fiscal Year 2015-2016 reporting period, the final amended budget for Fund 55 totaled $550,670. **Table 1-1** below provides a breakdown of program budget by major budget category for Fiscal Year 2015-2016.

Table 1-1: Budget Summary – Clean Water Fund 55

Fund Account		Adopted Budget Fiscal Year 2015-2016	Description/Comments
55-5530	Clean Water Planning	45,700	Active enforcement of clean water regulations including project plan review, permitting, construction monitoring and plan review of BMPs.
55-5536	Clean Water Code Enforcement	24,830	Active in-field enforcement of clean water regulations, including response to resident complaints.
55-5539	Clean Water Program Management	268,000	All clean water program management and reporting activities, fees to agencies, and interaction with regional and watershed Copermittee groups.
55-5840	Public Works (General)	212,140	Provides for administration and general support for all clean water programs for property and facilities, including supervision of maintenance staff.
Total Clean Water Program Budget – Fund 55		**$550,670**	–

1.1.2 Fiscal Analysis Methods

The City of Del Mar used the format and guidelines included in the Fiscal Analysis Method for reporting purposes; however, given the City's financial accounting methods, a few modifications were necessary. These adjustments are described below.

1.1.3 Fiscal Analysis Results

The City's Fiscal Year 2015-2016 jurisdictional, watershed, and regional projected expenditures for the implementation of the Municipal Permit requirements are summarized in **Table 1-2** below.

Table 1-2: Fiscal Year 2015-2016 Expenditure Summary by Program Component

Component Description	Fiscal Year 2015-2016 Projected Expenditures
Jurisdictional Component	
Administration	60,883
Development Planning	42,690
Construction	29,376
Municipal (Including Non-Emergency Fire Flows)	195,510
Industrial and Commercial	10,700
Residential, Education, and Public Participation	51,278
IDDE	37,066
Jurisdictional Total	**$427,503**
Watershed Component	
San Dieguito Watershed	47,975
Los Peñasquitos Watershed	37,275
Watershed Total	**$85,250**
Regional Component	
Total Copermittee Cost Share for Del Mar	37,918
Total Costs	**$550,670**

1.1.4 JRMP Expenditures

The City of Del Mar used the expenditure categories detailed in the Fiscal Analysis Method for jurisdictional reporting. However, due to the implementation overlap of some of the City's municipal permit components; it is difficult to separate out individual component costs. As a result, the expenditures for residential, education, and public participation are reported as one expenditure category. Additionally, since the City does not explicitly track expenditures by permit component for its budgeting purposes, in many cases estimated percentages were utilized to allocate expenditures into the appropriate municipal permit component categories.

A total of $550,670 was projected to be expended in Fiscal Year 2015-2016 for the implementation of JRMP activities. An overview of the expenditures reflected in JRMP activity component is described below.

Administration

Activities identified in this component represent labor and non-labor expenditures for materials, supplies, equipment, or tools that are not otherwise incorporated into other expenditure categories, general administrative functions (e.g., program planning, budgeting, staff supervision), and program assessment and reporting.

Development Planning

Activities identified in this component represent labor and non-labor expenditures related to issuance or oversight of permits or of plans (e.g., permit counter support, plan checks, permit or application processing), project planning and engineering (e.g. project design specifications, capital improvement projects).

Construction

Activities identified in this component represent labor and non-labor expenditures related to construction site inspections and enforcement.

Municipal

Activities identified in this component represent labor and non-labor expenditures related to maintenance inspections of streets, roads, catch basins and inlets, open channels, and the MS4, municipal facility inspections, street and parking lot sweeping, catch basins and inlets, open channels, and MS4 cleaning, and municipal BMP implementation. Since the City of Del Mar conducts all fire-fighting training outside of the City, and no non-emergency fire-fighting flows occurred during the reporting period, the City does not currently track expenditures relating to non-emergency fire-fighting flows. Any costs associated with preparing for these flows are included in the municipal component.

Industrial and Commercial

Activities identified in this component represent labor and non-labor expenditures related to evaluation and enforcement of program requirements at industrial and commercial sites or sources (e.g. routine inspections and complaint investigations).

Residential, Education, and Public Participation

Activities identified in these components represent labor and non-labor expenditures related to investigation and enforcement of residential areas or activities, staffing outreach events, development and production of outreach materials, and any expenditures associated with waste collection and recycling (e.g. household hazardous waste, used oil).

Illicit Discharge Detection and Elimination

Activities identified in this component represent labor and non-labor expenditures related to the identification and elimination of illicit discharges or connections, enforcing the City of Del Mar's storm water ordinance, and any expenditures related to monitoring programs (e.g. dry weather monitoring, coastal storm drain monitoring, special investigations, field or sampling equipment, materials and supplies).

1.1.5 Watershed Expenditures

The City of Del Mar used the expenditure categories (administration, watershed activities, cost share contribution, and other) detailed in the Fiscal Analysis Method for watershed reporting. The watershed expenditures included in this report only capture City of Del Mar expenditures and do not account for any expenditure disbursed by other Copermittees included in the watershed(s).

A total of $85,250 was projected to be expended in Fiscal Year 2015-2016 for the implementation of planned strategies for the San Dieguito and Los Peñasquitos Watersheds.

1.1.6 Regional Expenditures

The City of Del Mar utilized the expenditure categories (administration, cost share contribution, regional activities, and other) detailed in the Fiscal Analysis Method for regional reporting. The regional expenditures included in this report only capture City of Del Mar expenditures and do not account for any expenditure disbursed by other Copermittees in the region. A total of $37,918 was projected to be expended in Fiscal Year 2015-2016 for the implementation of regional activities and coordination.

1.1.7 Funding Sources

To ensure adequate funding for the Clean Water Program, the City uses a combination of user fees and general fund monies.

The City of Del Mar City Council created and adopted a user fee, called the Clean Water Fund Service Charge to offset the costs of the program. Initially, the rate was adopted to collect $100,000 of the estimated $300,000 for the program, with an escalator to achieve full cost recovery by 2009. Mid-way through the five-year schedule, on July 24, 2006, the California Supreme Court published a decision in the case of Bighorn-Desert View Water Agency v. Verjil (2006) 39 Cal. 4th 205, which held that consumption-based rates such as water and sewer rates are subject to the notice and hearing requirements of California Constitution, Article XIIID, Section 6 (commonly known as "Proposition 218"). Therefore, on January 22, 2007, and February 5, 2007, the Del Mar City Council held public hearings to receive written protests to comply with Proposition 218. No majority protest was received, and the Council ratified the previously approved five-year rate schedule, including the City's Clean Water Service Charge. However, the adopted rate increases did not account for the actual increases in the costs associated program requirements.

As an additional measure to obtain voter approval of the five-year rate schedule for the City's Clean Water Service Charge, the Council directed staff on April 2, 2007, to start the process to perform a mail ballot election procedure. During the process of researching the mail ballot election procedures and the current rates, it became apparent that the process would immediately need to be repeated to set the Fiscal Year 2010 rates and charges, since the current five-year rate schedule was due to expire in June of 2009. Due to the additional costs incurred in complying with the new requirements of the 2007 Permit, increases to the Clean Water Service Charge were proposed, including an annual rate escalator. All monies appropriated as part of the Clean Water Service Charge are directly identified for the Clean Water Program, and pursuant to law, may not be used by the City for any other purpose.

During the Fiscal Year 2009 reporting period, in compliance with Proposition 218, both the majority protest hearing and mail ballot process were conducted for the proposed increases. Both the ratification of the existing rate structure (required by Proposition 218), and the new rates, including the rate escalator, passed by more than 62%. As a result of the passage of the Clean Water Service Charge, the City will continue to have a secure funding source for the Clean Water Program, outside of general fund monies.

Based on current water allocations for the City of Del Mar, the projected revenues from the Clean Water Service Fee will be $482,700 (page 88 of city budget) for Fiscal Year 2015-2016.

D.1.3 City of Del Mar Strategies

City of Del Mar's strategies are detailed in Table D-1.

Table D-1
City of Del Mar Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
JRMP (E.2 – E.7) Strategies (E.3.b.(1)(a))								
E.3 Development Planning								
All Development Projects								
DM-1	For all development projects, administer a program to ensure implementation of source control BMPs to minimize pollutant generation at each project and implement LID BMPs to maintain or restore hydrology of the area, where applicable and feasible.	Refer to JRMP Section 5. As commercial/residential patrol inspections are conducted (see JRMP Section 7 – Existing Development), staff will both inspect and verify 100% of the structural BMPs within the City. These inspections occur a minimum of six times per year.	FY16	Continuous-Ongoing	Y	N	Y	-
DM-2	Train staff on LID regulatory changes during annual stormwater training	Formal staff training implemented annually during stormwater training for staff	FY16	Continuous – Ongoing	Y	N	Y	-
DM-3	Maintain existing floor area ratio requirements to limit impervious surface areas.	Incorporate into planning phase of Land Development program implementation	FY16	Continuous – Ongoing	Y	N	Y	-
DM-4	Continue retention of native vegetation - New or redevelopment projects within the Lagoon Overlay Zone shall include the retention of the maximum amount of native vegetation on the site. Revegetation or landscaping of sites within the Lagoon Overlay Zone shall include the use of non-invasive, drought tolerant species native to the San Diego coastal region and which are compatible with adjacent wetland habitat species.	Retention of native vegetation is a requirement in the City's Municipal Code	FY16	Continuous – Ongoing	Y	N	Y	-
Priority Development Projects (PDPs)								
DM-5	For PDPs, administer a program requiring implementation of on-site structural BMPs to control pollutants and manage hydromodification. Includes confirmation of design, construction, and maintenance of PDP structural BMPs.	Refer to JRMP Section 5	FY16	Continuous – Ongoing	Y	N	Y	-
DM-6	Update BMP Design Manual procedures to determine nature and extent of storm water requirements applicable to development projects and to identify conditions of concern for selecting, designing, and maintaining appropriate structural BMPs.	Refer to JRMP Section 5	FY15	Continuous – Ongoing	Y	N	Y	-

Table D-1 (continued)
City of Del Mar Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
E.4 Construction Management								
DM-7	Administer a program to oversee implementation of BMPs during the construction phase of land development. Includes inspections at an appropriate frequency and enforcement of requirements.	Refer to JRMP Section 6; Construction site inventory updated monthly and inspections of prioritized sites are conducted biweekly year round.	FY16	Continuous-Ongoing	Y	N	Y	-
E.5 Existing Development								
Commercial, Industrial, Municipal, and Residential Facilitates and Areas								
DM-8	Administer a program to require implementation of minimum BMPs for existing development (commercial, industrial, municipal, and residential) that are specific to the facility, area types, and PGAs, as appropriate. Includes inspection of existing development at appropriate frequencies and using appropriate methods.	Refer to JRMP Section 7. . All industrial, commercial, residential, and municipal areas are inspected at least once every two months. Please see Attachment 1 for details on updated minimum BMPs that will be implemented to address sources causing or contributing to the HPWQC.	FY16	Continuous-Ongoing	Y	N	Y	-
DM-8.1	Update minimum BMPs for commercial, industrial, and municipal existing development and enforce. Includes BMPs for water-using mobile businesses.	Refer to JRMP Appendix A and Attachment 1 of this WQIP for details on updated minimum BMPs that will be implemented to address sources causing or contributing to the HPWQC. .	FY16	Continuous-Ongoing; Updated as needed	Y	N	Y	-
DM-8.2	Provide BMP factsheet to water-using mobile businesses when business license is granted.	To ensure implementation of minimum BMPs for water -using mobile businesses, when a business license is granted for a water-using mobile business, a BMP factsheet is provided.	FY16	Continuous-Ongoing	Y	N	Y	
DM-8.3	Conduct property-based commercial, industrial, municipal, and residential inspections. Includes identification and addressing unmitigated incidents of power washing discharges.	Refer to JRMP Section 7. Inspections of commercial, industrial, municipal, and multifamily residential areas conducted a minimum of six times per year.	FY16	Continuous-Ongoing	Y	N	Y	-
DM-8.4	Update municipal swimming pool discharge ordinance to ensure discharges from swimming pools meet permit requirements.	Municipal Code updated; Refer to JRMP Section 3	FY15	Continuous-Ongoing	Y	N	Y	-
DM-9	Implement pet waste program.	Implement education and prevention program. Pet waste bag dispensers and trash bins provided in public areas. Pet waste removal occurs as part of Dog Beach maintenance.	FY15	Continuous-Ongoing	Y	N	Y	-

Table D-1 (continued)
City of Del Mar Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
DM-10	Promote and encourage implementation of designated BMPs at residential areas.	Implement education and prevention program. Utilize over-irrigation door hangers for education and prevention	FY15	Continuous-Ongoing	Y	N	Y	-
DM-11	Promote and encourage implementation of designated BMPs in commercial areas.	Implement education and prevention program through patrol-based program and contact with commercial area owners, tenants etc.	FY15	Continuous-Ongoing	Y	N	Y	-
MS4 Infrastructure								
DM- 12	Implementation of operation and maintenance activities (inspection and cleaning) for MS4 and related structures (catch basins, storm drain inlets, detention basins, etc.).	Refer to JRMP Section 7. The MS4 inventory is inspected by Public Works staff at least once per year. Based on the findings of the inspections, the City performs required cleanings and proper disposal of collected material. Removal of the collected trash and debris prevents the materials from being pushed through the system and into the receiving waters from runoff	FY16	Continuous-Ongoing	Y	N	Y	-
DM-12.1	Perform catch basin cleaning	Inspect and clean catch basins annually	FY16	Continuous-Ongoing	Y	N	Y	Approximately 101.5 cubic yards of material is removed as a result of catch basin cleaning in the City of Del Mar
DM-12.2	Repair and replace MS4 components as needed to provide source control from MS4 infrastructure.	In order to limit inflow of pollutants and reduce pollutant loads, the City will take proactive measures to improve, repair, and replace MS4 components.	FY16	Continuous-Ongoing	Y	N	Y	-
DM-13	Implement controls to prevent infiltration of sewage into the MS4 from leaking sanitary sewers and identify sewer leaks and areas for sewer pipe replacement.	Refer to JRMP Section 4.7 and the City's Sanitary Sewer Management Plan. The City conducts a variety of activities to effectively operate, maintain, repair and replace sewer mains, manholes, and pump stations.	FY15	Continuous - Ongoing	Y	N	Y	-

Table D-1 (continued)
City of Del Mar Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Roads, Streets, and Parking Lots								
DM-14	Implement operation and maintenance activities for public streets, unpaved roads, paved roads, and paved highways.	Refer to JRMP Section 7. The City implements the street sweeping schedule as follows: • Twice per month ○ Primary roads ○ Business district ○ Collection and bike lanes ○ Medians ○ Parking facilities • Twice per year ○ Residential areas	FY16	Continuous-Ongoing	Y	N	Y	882.92 total miles of streets are swept in the City of Del Mar on an annual basis
DM-14.1	Enhanced street sweeping by use of regenerative air vacuum sweepers.	Enhanced sweeping implemented by using regenerative air vacuum sweepers. Residential areas are swept 2x per year; primary roads (Camino Del Mar) and business district are swept 2x per month. Collection and bike lanes and medians are swept 2x per month.	FY16	Continuous-Ongoing	Y	N	Y	882.92 total miles of streets are swept in the City of Del Mar on an annual basis
DM-14.2	Perform sweeping of medians on high-volume arterial roadways.	Primary roads and business district medians are swept 2x per month.	FY16	Continuous-Ongoing	Y	N	Y	882.92 total miles of streets are swept in the City of Del Mar on an annual basis
Pesticides, Herbicides, and Fertilizer BMP Program								
DM-15	Require implementation of BMPs to address application, storage, and disposal of pesticides, herbicides, and fertilizers on commercial, industrial, and municipal properties. Includes education, permits, and certifications.	Refer to JRMP Section 7. The City of Del Mar is committed to the application of Integrated Pest Management (IPM) procedures and the use of updated BMPs to prevent or reduce the use of pesticides, fertilizers, and subsequently their discharge into the MS4.	FY16	Continuous-Ongoing	Y	N	Y	-

Table D-1 (continued)
City of Del Mar Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Retrofit and Rehabilitation in Areas of Existing Development								
DM-16	Develop and implement a strategy to identify candidate areas of existing development appropriate for retrofitting projects and facilitate the implementation of such projects.	Refer to JRMP Section 8. The process for identifying retrofits will evaluate the following considerations: • Water Quality Improvement Plan (WQIP) Priority and Highest Priority Water Quality Conditions • Likely sources of pollutants generating pollutants related to WQIP conditions • Focus areas identified in WQIP • Vintage of geographic areas of the City – time period existing development was constructed • Public retrofit opportunities through Capital Improvement Program (CIP) projects • Areas of persistent discharges • Inspection/Illicit Discharge Detection and Elimination program findings • Identified areas of hydromodification or other stream impacts Using the considerations above, the City will identify areas where opportunities could provide water quality improvement benefits. Evaluation will include layering of the findings to determine where compounding factors overlap. The City will consider the locations where overlapping occurs and significance of the factors to prioritize areas suited for retrofits and rehabilitation projects. Once specific areas within the City have been identified and prioritized for retrofits and/or rehabilitation projects, the City will perform field verifications on an as-needed basis to substantiate the: • need for retrofits or rehabilitation projects • locations of potential retrofits or rehabilitation projects • appropriate type(s) of retrofit or rehabilitation project • appropriate responsible party to implement the retrofits or rehabilitation projects Specific retrofit projects are included in the Non-JRMP, Structural Strategies categories.	FY18	Continuous-Ongoing	Y	N	Y	Project was slated to be implemented in FY18. However, project was implemented in FY16 and is ongoing

Table D-1 (continued)

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
E.2 Illicit Discharge, Detection, and Elimination (IDDE) Program								
DM-18	Implement Illicit Discharge, Detection, and Elimination (IDDE) Program per the JRMP. Requirements include: maintaining an MS4 map, using municipal personnel and contractors to identify and report illicit discharges, maintaining a hotline for public reporting of illicit discharges, monitoring MS4 outfalls, and investigating and addressing any illicit discharges.	Refer to JRMP Section 3.	Prior to FY16	Continuous-Ongoing	Y	N	Y	-
E.7 Public Education and Participation (B.3.b.(1)(a)(iii))								
DM-19	Implement a public education and participation program to promote and encourage development of programs, management practices, and behaviors that reduce the discharge of pollutants in storm water prioritized by high-risk behaviors, pollutants of concern, and target audiences.	Refer to JRMP Section 10 and 11.	Prior to FY16	Continuous-Ongoing	Y	N	Y	-
DM-19.1	Continue outreach to property managers responsible for HOAs and Maintenance Districts.	As part of the patrol-based program for the residential existing development inventory, provide frequent education and contact to HOAs and maintenance districts targeting outdoor activities and trash areas.	Prior to FY16	Continuous-Ongoing	Y	N	Y	-
DM-19.2	Continue education and outreach to reduce over-irrigation through patrol program.	Once per year outside of business hours, patrol jurisdiction for incidents of over-irrigation and leave door-hangers identifying problem areas and appropriate corrective actions.	FY16	Continuous-Ongoing	Y	N	Y	-
DM-19.3	Conduct trash cleanups through community-based organizations involving target audiences.	In partnership with I Love a Clean San Diego, host a site in Del Mar during two beach clean-ups per year.	FY16	Continuous-Ongoing	N	N	Y	1st clean up to take place 9/17/16
DM-19.4	Review City storm water website and identify and implement required updates to reflect WQIP and JRMP revisions	Update City Clean Water Program website with WQIP and JRMP information and highlight what the community can do for water quality.	FY16	Continuous-Ongoing	Y	N	Y	Currently being updated
DM-19.5	Collaborate with regional education and outreach efforts	Participate in Regional Think Blue campaign and collaborate with other regional efforts to provide consistent message or efficiency in training for targeted audiences.	FY16	Continuous-Ongoing	Y	N	Y	Participated in various outreach events

Table D-1 (continued)
City of Del Mar Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
E.6 Enforcement Response Plan								
DM-20	Implement escalating enforcement responses to compel compliance with statutes, ordinances, permits, contracts, orders, and other requirements for IDDE, development planning, construction management, and existing development in the Enforcement Response Plan.	Refer to JRMP Section 9.	Prior to FY16	Continuous-Ongoing	Y	N	Y	-
Non-JRMP Strategies (Optional Strategies, B.3.b.(1)(b))								
Nonstructural Strategies								
DM-21	Promote and collaborate with water agencies and other groups to encourage implementation of water conservation programs that improve water quality by reducing over-irrigation with smart products or turf replacement and capturing rain water in residential areas.	Collaborate with MWD and promote their SoCal Water$mart rebates and products such as weather based irrigation controllers, rotating sprinkler nozzles, soil moisture sensor system, rain barrels, and turf removal. Collaborate with San Diego County Water Authority (SDCWA) and promote their Water Smart irrigation system checkups and turf replacement incentives.	FY16	Continuous – Ongoing	Y	N	Y	Information regarding rebate opportunities are listed on the City's webpage
DM-22	Continue program to address and capture trash and debris.	Properly maintain trash guards	FY15	Continuous - Ongoing	Y	N	Y	-
DM-23	Continue participating in source reduction initiatives	Continue participating in source reduction initiatives. Continue implementation of cigarette ban on beaches, parks and in commercial areas	FY15	Continuous - Ongoing	Y	N	Y	-
DM-24	Proactively monitor for erosion and complete minor repair and slope stabilization as needed.	Post-storm monitoring is conducted to identify slope and bluff erosion in priority areas. As-needed, repairs and slope stabilization are completed	FY15	Continuous-Ongoing	Y	N	Y	-

Table D-1 (continued)
City of Del Mar Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
DM-25	Protect areas that are functioning naturally	As feasible opportunities arise, the City will protect areas that are functioning naturally. This may include avoiding hardscape development and degradation in unpaved open space areas and creating permanent open space protections to undeveloped city-owned land. This strategy will be triggered on a case by case basis. The following resources, funds, and steps are needed to implement this strategy 1) Identify project locations (3 months) 2) Secure funds in the form of general funds, bonds, or grants if necessary (2 -18 months) 3) Obtain City Council approval	Must be Triggered	Continuous-Ongoing	NA	NA	NA	Not triggered
DM-26	Reference watershed study ~~Conduct special studies~~	San Diego Regional Reference Stream Study (currently being conducted by the Southern California Coastal Water Research Project). The study will develop numeric targets that account for "natural sources" to establish the concentrations or loads from streams in a minimally disturbed or "reference" condition. Refer to Section 5.1 of the Water Quality Improvement Plan for further details. Will occur region-wide. Funding and resources were previously secured.	FY15	One Time	Y	N	Y	Language revised for accuracy

Table D-1 (continued)
City of Del Mar Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
DM-27	Los Peñasquitos Watershed Special Study ~~Reference watershed study~~	~~Assess sources of bacteria in the watersheds using the San Diego Bacteria Source Identification and Prioritization Process developed in 2012 as part of the MS4 Permit Report of Waste Discharge process. Focus is on the beach/lagoon area of the San Dieguito River WMA, with inputs from the upper watershed also considered where relevant and necessary to identify sources of bacteria to the beach/lagoon. Refer to Section 5.1 for further details.~~ The Los Peñasquitos Watershed Special Study will assess sediment loads in the watersheds upstream of the Draft Sediment TMDL compliance monitoring locations. Includes the analysis of sediment water column loads, stream bedload, and air monitoring. Implemented in a phased approach. Monitoring will occur first in the Carroll canyon subwatershed. The Los Peñasquitos Creek and Carmel Valley Creek subwatersheds will be monitored in subsequent phases. Refer to Section 5.1 of the Water Quality Improvement Plan for further details. Funding and resources have been secured for FY 2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY15	One Time	Y	N	Y	Language revised to correct an error. San Dieguito Watershed information was removed and replaced with Los Peñasquitos information. The City of Del Mar is determining additional jurisdictional monitoring to analyze sediment contributions. Updates will be included in the next WQIP Annual Report.
DM-28	Visually inspect all major and minor MS4 outfalls	All major and minor MS4 outfalls are inspected a minimum of six times per year to assist in the identification of any illegal discharges, persistently flowing outfalls or any other issues that may be identified.	FY15	Continuous – Ongoing	Y	N	Y	-

Table D-1 (continued)

(Y/N)** MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Structural Strategies								
Green Infrastructure								
DM-29	0.001 acre BMP has been identified as potential opportunities for green infrastructure implementation on public parcels to treat an impervious drainage area of 0.06 acre with a total storage volume of 0.002 acre-foot	City will assess opportunities and implement as applicable This strategy may be triggered as 1) interim goals are not met, 2) funding to address MS4 discharges is identified and secured, 3) staff resources are identified and secured, and 4) permits required by regulatory agencies are secured. Will occur in downstream reaches where persistent dry weather flows have been observed. The following resources, funds, and steps are needed to implement this strategy if the above triggers are met or at the City's discretion: 1) Identify project locations (3 months) 2) Secure funds in the form of general funds, bonds, or grants (2-18 months) 3) Obtain City Council approval 4) Initiate preliminary engineering, design and develop construction plans and cost estimates (6 months-2 Years) 5) Bid and Award process for construction phase (6 months) 6) Construct project (4 months-1 yr; project construction costs are TBD and are based on size of the project). 7) Operation and maintenance will be in perpetuity.	Must be Triggered	Continuous-Ongoing	NA	NA	NA	Not triggered

Table D-1 (continued)

(Y/N)** MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Green Streets								
DM-30[1]	0.06 acres of green streets (0.03 acres of permeable pavement and 0.03 acres of bioretention) have been identified as potential opportunities for green street projects to treat a drainage area of 2.59 acres.	City will assess opportunities and implement as applicable This strategy may be triggered as 1) interim goals are not met, 2) funding to address MS4 discharges is identified and secured, 3) staff resources are identified and secured, and 4) permits required by regulatory agencies are secured. Will occur in downstream reaches where persistent dry weather flows have been observed. The following resources, funds, and steps are needed to implement this strategy if the above triggers are met or at the City's discretion: 1) Identify project locations (3 months) 2) Secure funds in the form of general funds, bonds, or grants (2-18 months) 3) Obtain City Council approval 4) Initiate preliminary engineering, design and develop construction plans and cost estimates (6 months-2 Years) 5) Bid and Award process for construction phase (6 months) 6) Construct project (4 months-1 yr; project construction costs are TBD and are based on size of the project). 7) Operation and maintenance will be in perpetuity.	Must be Triggered	Continuous-Ongoing	NA	NA	NA	Not triggered

(Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Multiuse Treatment Area								
Other Opportunities								
DM-31[1]	Implement 0.18 acres with a total storage volume of 0.35 ac-ft. of multiuse treatment area projects on public/private parcels and/or through public-private partnerships.	City will assess opportunities and implement as applicable This strategy may be triggered as 1) interim goals are not met, 2) funding to address MS4 discharges is identified and secured, 3) staff resources are identified and secured, and 4) permits required by regulatory agencies are secured. Will occur in downstream reaches where persistent dry weather flows have been observed. The following resources, funds, and steps are needed to implement this strategy if the above triggers are met or at the City's discretion: 1) Identify project locations (3 months) 2) Secure funds in the form of general funds, bonds, or grants (2-18 months) 3) Obtain City Council approval 4) Initiate preliminary engineering, design and develop construction plans and cost estimates (6 months-2 Years) 5) Bid and Award process for construction phase (6 months) 6) Construct project (4 months-1 yr; project construction costs are TBD and are based on size of the project). 7) Operation and maintenance will be in perpetuity. (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Water Quality Improvement BMPs								
Dry Weather Flow Separation and Treatment Projects								
DM-32	If interim load reduction goals are not met, dry weather flow separation and treatment projects will be considered.	Construction of dry weather flow separation and treatment projects, where identified. This strategy may be triggered as 1) interim goals are not met, 2) funding to address MS4 discharges is identified and secured, 3) staff resources are identified and secured, and 4) permits required by regulatory agencies are secured. Will occur in downstream reaches where persistent dry weather flows have been observed. The following resources, funds, and steps are needed to implement this strategy if the above triggers are met or at the City's discretion: 1) Identify project locations (3 months) 2) Secure funds in the form of general funds, bonds, or grants (2 -18 months) 3) Obtain City Council approval 4) Initiate preliminary engineering, design and develop construction plans and cost estimates (6 months -2 Years) 5) Bid and Award process for construction phase (6 months) 6) Construct project (4 months- 1 yr; project construction costs are TBD and are based on size of the project). 7) Operation and maintenance will be in perpetuity.	Must be Triggered	Continuous-Ongoing	NA	NA	NA	Not triggered

(Y/N)** MS4 Permit Section: F.3.b.(3)(d)(ii)	**Modification for FY17 (If modified or canceled, provide rationale)** MS4 Permit Section: F.3.b.(3)(d)(iv))	**Plan to implement into next FY (FY17)? (Y/N)** MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
WMA Strategies (Optional Strategies, B.3.b.(2))								
WMA-1	Watershed Collaboration for Los Peñasquitos Lagoon Restoration	Collaborate with stakeholders to promote the restoration of salt marsh areas and overall improvements in estuarine and other beneficial uses within the Los Peñasquitos Lagoon. Benefits of this strategy include more efficient targeting and prioritization of lagoon restoration activities, increased cost-effectiveness of selected BMP strategies in the watershed, and development of partnerships across the MS4 jurisdictions and other TMDL responsible parties. These efforts will be coordinated with the Lagoon Enhancement Program currently being updated by the Los Peñasquitos Lagoon Foundation and will require that (1) funding to address MS4 discharges and dry weather input of freshwater is identified and secured, (2) staff resources are identified and secured, (3) partners are identified and formal memoranda of understanding (MOUs) are developed and executed, (4) permits required by regulatory agencies are secured, and (5) consensus and community support are achieved. Resources necessary to implement this strategy include City staff to coordinate with the regional effort. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. Implementation is in perpetuity as long as funding is available.	FY16	Continuous-Ongoing	Y	N	Y	-

Table D-1 (continued)
City of Del Mar Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
WMA-2	Los Peñasquitos Wetland Restoration Project	Collaborate with Copermittees on the region-wide North Coast Corridor (NCC) Program, led by Caltrans and SANDAG. The program is intended to improve coastal transportation (including Interstate 5 and the coastal rail and transit system) while protecting and restoring coastal habitats throughout the corridor. The 27-mile-long project stretches across the cities of Oceanside, Carlsbad, Encinitas, Solana Beach, Del Mar, and San Diego and provides improvements for six coastal lagoons, including Los Peñasquitos Lagoon. The NCC Program is implementing construction in phases from 2010 through 2040. The program is a $6.5-billion investment in the region that will be paid for through a combination of federal, state, and local funds. The NCC program is part of TransNet, the voter-approved, half-cent sales tax initiative that helps fund transportation projects in the region.	Prior to FY16	Continuous-Ongoing	Y	N	Y	-
WMA-3	Collaborative Approach to Irrigation Reduction	Responsible Agencies are collaborating with water agencies to encourage implementation of water conservation efforts. Water conservation that attempts to reduce irrigation and minimize storm water runoff can also improve water quality of receiving waterbodies. MWD's SoCal Water$mart Program supports conservation efforts by offering incentives in the form of rebates for rain barrels, rotating sprinkler nozzles, weather-based irrigation controllers, soil moisture sensor systems, and turf replacement. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council or appropriate legislative body (i.e. Board).	Prior to FY16	Continuous-Ongoing	Y	N	Y	Information regarding rebate opportunities are listed on the City's webpage

Table D-1 (continued)

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	**Implemented as planned in current FY (FY16)? (Y/N)** MS4 Permit Section: F.3.b.(3)(d)(ii)	**Modification for FY17 (If modified or canceled, provide rationale)** MS4 Permit Section: F.3.b.(3)(d)(iv))	**Plan to implement into next FY (FY17)? (Y/N)** MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
WMA-4	Offsite Alternative Compliance Option (WMAA)	The WMAA provides alternative compliance methods in lieu of meeting structural BMP design standards and/or hydromodification management criteria on the project site. The San Diego County Copermittees have collectively funded and provided guidance for development of a regional WMAA. Copermittees compiled a list of candidate projects that consider the numeric goals of the WMAs as well as projects previously identified in JRMPs and other regulatory documents. Next steps include submittal of the water quality equivalency standards final document, anticipated in September 2015. Following a public review and Executive Officer approval, anticipated by November 2015, jurisdictions can formally implement an optional Alternative Compliance Program by December 2015 (time coincident with implementation of standards set forth in the regional BMP Design Manual and local Storm Water Standards Manuals).	Prior to FY16	Continuous-Ongoing	Y	N	Y	-
WMA-5	Collaboration with the Regional Board	The Responsible Agencies will work with the Regional Board to identify solutions and address sources of potential water quality impairments. Priorities include 1) enforcement of the Industrial General Permit, 2) enforcement of other non-MS4 dischargers, and 3) Bacteria TMDL updates. Discussions with the Regional Board were initiated in FY15. Collaboration will continue in FY16 to identify an appropriate path forward, including a more detailed time line. Funding and resources have been secured for FY16. Funding for future fiscal years is contingent on annual budget approval by each Responsible Agency.	Prior to FY16	Continuous-Ongoing	Y	N	Y	-

Table D-1 (continued)
City of Del Mar Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
WMA-6	Refinement of Water Quality Regulations	The Responsible Agencies will collaborate with the Regional Board to refine the accuracy of regulations to ensure that Non-MS4 dischargers are regulated appropriately. The goal of this exercise is to begin a dialog with the Regional Board that may lead to the following outcomes: 1) Removal of Non-MS4 discharges and the associated BMPs needed to treat those discharges from the Responsible Agencies' burden, 2) amendment of current TMDLs and the MS4 Permit to correctly assign responsibilities for Non-MS4 discharges to the appropriate entities, and 3) strengthening of Non-MS4 NPDES permits that are directly tied to the requirements of existing and future TMDLs. Discussions with the Regional Board were initiated in FY15. Collaboration will continue in FY16 to identify an appropriate path forward, including a more detailed time line. Resources to implement this strategy include staff time and are currently secured.	Prior to FY16	Continuous-Ongoing	Y	N	Y	-

1. Strategy has been identified as potential based on results of a model that may not be reflective of the small drainage area that leads from Del Mar to the lagoon. The strategy is presented until further analysis (including monitoring data) can confirm or revise the needs and strategies.

D.1.4 Modifications to the BMP Design Manual

No modifications to the BMP Design Manual have been made since the WQIP was approved in fall 2015. The current Del Mar BMP Design Manual is posted on the Del Mar's website, and the link to this page is listed on Project Clean Water.

D.1.5 Modifications to the Jurisdictional Runoff Management Plan

No modifications to the Del Mar's JRMP have been made since the WQIP was approved in fall 2015. The current Del Mar JRMP is posted on the Del Mar's website, and the link to this page is listed on Project Clean Water.

D.2 City of Poway

D.2.1 Annual Report Certifications

The City of Poway's required certifications regarding the preparation of the Water Quality Improvement Plan Annual Report, as well as the legal authorities required by the MS4 Permit are included on the following pages.

D.2.2 Annual Report Form

Poway's completed JRMP Annual Report form and fiscal analysis for FY16 are included on the following pages.

STATEMENT OF CERTIFICATION

Los Peñasquitos Watershed Management Area Water Quality Improvement Plan 2015-2016 Annual Report and JRMP Certificate of Adequate Legal Authority

I certify, under penalty of law, that this Water Quality Improvement Plan Annual Report submittal and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for known violations.

I also certify that the City of Poway has taken the necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements within Order No. R9-2013-001 as amended by Orders R9-2015-0001 and R9-2015-0100.

Executed on the 9th day of January, 2017, at the City of Poway.

Robert J. Manis
Director
Development Services Department

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM
FY 2015/2016

I. COPERMITTEE INFORMATION			
Copermittee Name: City of Poway (Los Peñasquitos Watershed)			
Copermittee Primary Contact Name: Steven Strapac			
Copermittee Primary Contact Information:			
Address: 13325 Civic Center Drive			
City: Poway, CA	County: San Diego	State: CA	Zip: 92064
Telephone: (858) 668-4653	Fax:	Email: sstrapac@poway.org	

II. LEGAL AUTHORITY		
Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	YES ☒ NO ☐	
A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	YES ☒ NO ☐	

III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE	
Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	YES ☐ NO ☒
If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	YES ☐ NO ☐

IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM	
Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	YES ☒ NO ☐
Number of non-storm water discharges reported by the public	13
Number of non-storm water discharges detected by Copermittee staff or contractors	50
Number of non-storm water discharges investigated by the Copermittee	63
Number of sources of non-storm water discharges identified	53
Number of non-storm water discharges eliminated	25
Number of sources of illicit discharges or connections identified	49
Number of illicit discharges or connections eliminated	25
Number of enforcement actions issued	47
Number of escalated enforcement actions issued	0

V. DEVELOPMENT PLANNING PROGRAM	
Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	YES ☒ NO ☐
Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	YES ☐ NO ☒
If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	YES ☐ NO ☐
Number of proposed development projects in review	40
Number of Priority Development Projects in review	12
Number of Priority Development Projects approved	3
Number of approved Priority Development Projects exempt from any BMP requirements	0
Number of approved Priority Development Projects allowed alternative compliance	0
Number of Priority Development Projects granted occupancy	0
Number of completed Priority Development Projects in inventory	57
Number of high priority Priority Development Project structural BMP inspections	15
Number of Priority Development Project structural BMP violations	0
Number of enforcement actions issued	0
Number of escalated enforcement actions issued	0

VI. CONSTRUCTION MANAGEMENT PROGRAM

Has the Copermittee implemented a construction management program that complies with Order No. R9-2013-0001? YES ☒ NO ☐

Number of construction sites in inventory	62
Number of active construction sites in inventory	62
Number of inactive construction sites in inventory	0
Number of construction sites closed/completed during reporting period	25
Number of construction site inspections	121
Number of construction site violations	19
Number of enforcement actions issued	19
Number of escalated enforcement actions issued	0

VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM

Has the Copermittee implemented an existing development management program that complies with Order No. R9-2013-0001? YES ☒ NO ☐

	Municipal	Commercial	Industrial	Residential
Number of facilities or areas in inventory	53	423	187	38
Number of existing development inspections	26	107	19	38
Number of follow-up inspections	0	39	2	0
Number of violations	0	39	2	13
Number of enforcement actions issued	0	39	2	11
Number of escalated enforcement actions issued	0	4	0	0

VIII. PUBLIC EDUCATION AND PARTICIPATION

Has the Copermittee implemented a public education program component that complies with Order No. R9-2013-0001? YES ☒ NO ☐

Has the Copermittee implemented a public participation program component that complies with Order No. R9-2013-0001? YES ☒ NO ☐

IX. FISCAL ANALYSIS

Has the Copermittee attached to this form a summary of its fiscal analysis that complies with Order No. R9-2013-0001? YES ☒ NO ☐

X. CERTIFICATION

I [☐ Principal Executive Officer ☐ Ranking Elected Official ☒ Duly Authorized Representative] certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

FISCAL ANALYSIS

Fiscal information for 2015/2016 is reported in the tables on the following page. The tables are based largely on the standard templates used by the Copermittees in previous fiscal years, but with a distinction between labor costs and other expenses (materials, contracts, etc.) as requested in the Municipal Permit (San Diego Regional Water Quality Control Board, Order No. R9-2013-0001 as amended by Order No. R9-2015-001 and Order No. R9-2015-0100).

Regional programs include Copermittee shared costs for education and other regional expenses, as well as City staff time to participate in regional meetings. Watershed costs include meeting participation, monitoring, and the City's portion of watershed cost shares.

The City anticipates using the same funding sources as shown in Table 2 for 2015/2016 program funding needs. Developer fees are contingent on the number of development projects in the City, and the fees are only used for reviews and similar services provided for those development projects.

Table 1: 2015/2016 Expenditure Summary

Jurisdictional Components	Labor	Expenses	Total
Administration and Permit Fee	$192,655	$24,220	$216,875
Development Planning	$12,120	$0	$12,120
Construction	$22,372	$0	$22,372
Municipal	$703,942	$355,244	$1,059,186
Industrial and Commercial	$27,325	$31,760	$59,085
Residential	$14,375	$176,075	$190,450
IDDE	$0	$48,500	$48,500
Education	$0	$1,000	$1,000
Public Participation	$0	$0	$0
Jurisdictional Total	**$972,789**	**$636,799**	**$1,609,588**
Watershed Programs			
Los Peñasquitos	$14,256	$145,360	$159,616
San Dieguito	$14,256	$27,301	$41,557
Watershed Programs Total	**$28,512**	**$172,660**	**$201,172**
Regional Programs	**$12,217**	**$20,500**	**$32,717**

Table 2: 2015/2016 Funding Source Summary

Funding by Source	Amount
General Fund	$1,674,987
Storm Water Fee	$0
Developer Deposits and Fees	$21,000
Registration and Inspection Fees	$4,752
Grant Funds	$13,903
Other	$175,075
Total Funding	**$1,889,717**

D.2.3 City of Poway Strategies

City of Poway's strategies are detailed in Table D-2.

Table D-2
City of Poway Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
JRMP (E.2 – E.7) Strategies (E.3.b.(1)(a))								
E.3 Development Planning								
All Development Projects								
PW-1	For all development projects, administer a program to ensure implementation of source control BMPs to minimize pollutant generation at each project and implement LID BMPs to maintain or restore hydrology of the area, where applicable and feasible.	Refer to JRMP. All high priority projects are inspected annually prior to the rainy season. 20% of all projects are inspected annually.	FY16	Continuous- Ongoing	Y	None	Y	None
Priority Development Projects (PDPs)								
PW-2	For PDPs, administer a program requiring implementation of on-site structural BMPs to control pollutants and manage hydromodification. Includes confirmation of design, construction, and maintenance of PDP structural BMPs.	Refer to JRMP. For structural BMPs, all high priority projects will be inspected prior to the start of the rainy season. Any projects that do not provide sufficient documentation to verify that appropriate maintenance work has been performed through the annual maintenance verification program will also be inspected before the end of the fiscal year.	FY16	Continuous- Ongoing	Y	None	Y	None
PW-3	Update BMP Design Manual procedures to determine nature and extent of storm water requirements applicable to development projects and to identify conditions of concern for selecting, designing, and maintaining appropriate structural BMPs.	Refer to JRMP.	FY16	Continuous- As needed	Y	None	Y	None
PW-3.1	Amend BMP Design Manual for trash areas. Require full four-sided enclosure, siting away from storm drains and cover.	Implemented through the Minor Development Review process and the plan check process.	FY16	Continuous- As needed	Y	None	Y	None
PW-4	Administer an alternative compliance program to on-site structural BMP implementation (includes identifying Watershed Management Area Analysis [WMAA] candidate projects). Refer to Section 4.2.5. and Appendix P for further details.	Refer to JRMP.	FY16	Continuous- As needed	Y	None	Y	None

Table D-2 (continued)
City of Poway Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
E.4 Construction Management								
PW-5	Administer a program to oversee implementation of BMPs during the construction phase of land development. Includes inspections at an appropriate frequency and enforcement of requirements.	Refer to JRMP; Perform daily inspections during construction. During the wet season, high priority construction sites are inspected every two weeks, medium priority are inspected monthly, and low priority sites are inspected as needed. During the dry season, all construction sites are inspected as needed.	FY16	Continuous-Ongoing	Y	None	Y	None
E.5 Existing Development								
Commercial, Industrial, Municipal, and Residential Facilities and Areas								
PW-6	Administer a program to require implementation of minimum BMPs for existing development (commercial, industrial, municipal, and residential) that are specific to the facility, area types, and PGAs, as appropriate. Includes inspection of existing development at appropriate frequencies and using appropriate methods.	Refer to JRMP; Commercial/industrial/municipal are inspected annually, with municipal receiving more frequent inspections by staff.	FY16	Continuous-Ongoing	Y	None	Y	None
PW-6.1	Review policies and procedures to ensure discharges from swimming pools meet permit requirements.	Annually review policies and procedures.	Prior to FY16	Continuous- As needed (Annually)	Y	None	Y	None
PW-6.2	Track stationary and mobile businesses through communication with Business Licensing Division.	Maintain through the City's Commercial/Industrial program.	FY16	Continuous-Ongoing	Y	None	Y	None
PW-7	Promote and encourage implementation of designated BMPs in commercial areas.	Collaborate with MWD and promote their SoCal Water$mart rebates and products such as weather based irrigation controllers, rotating sprinkler nozzles, soil moisture sensor system, rain barrels, and turf removal.	FY16	Continuous-Ongoing	Y	None	Y	The City also partnered with the San Diego County Water Authority to promote their artificial turf rebate program.

Table D-2 (continued)
City of Poway Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
PW-8	Implement program to investigate illegal grading on private property.	Program to investigate reports of illegal grading. Maintain records of reported illegal gradings and immediately investigate. If activity violates grading or stormwater regulation, issued a "Stop Work" notice and must obtain grading permit and correct stormwater violations. Reports are tracked in "Trackit" software as a code violation and bi-monthly meetings to discuss the status of reports. Grading cases are subject to a strict timeline of action, and enforcement is upped until either compliance, or a Notice of Violation is filed against the property. If it is a stormwater issue, the City's on-call stormwater contractor corrects the issue and City liens the property for payment.	FY16	Continuous-Ongoing	Y	None	Y	None
MS4 Infrastructure								
PW-9	Implementation of operation and maintenance activities (inspection and cleaning) for MS4 and related structures (catch basins, storm drain inlets, detention basins, etc.).	Refer to JRMP.	FY16	Continuous-Ongoing	Y	None	Y	None
PW-9.1	Perform catch basin cleaning.	Inspect and clean catch basins annually.	FY16	Continuous-Ongoing	Y	None	Y	None
PW-9.2	Clean open-channels to reduce pollutant loads and invasive plants and animals.	Inspect and clean open channels annually.	FY16	Continuous-Ongoing	Y	None	Y	None
PW-10	Implement controls to prevent infiltration of sewage into the MS4 from leaking sanitary sewers and identify sewer leaks and areas for sewer pipe replacement.	Program implemented through sewer maintenance and inspection program.	FY16	Continuous-Ongoing	Y	None	Y	None
Roads, Street, and Parking Lots								
PW-11	Implement operation and maintenance activities for public streets, unpaved roads, paved roads, and paved highways.	Refer to JRMP; the City of Poway is divided into 8 zones for road operation and maintenance activities; rotational cycle: one zone inspected each year	FY16	Continuous-Ongoing	Y	None	Y	None
PW-11.1	Implement street sweeping.	Refer to JRMP; all areas swept twice per month.	FY16	Continuous-Ongoing	Y	None	Y	None

Table D-2 (continued)
City of Poway Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
PW-11.2	Continue maintenance on access roads and trails by proactively monitoring for erosion and completing minor repair and slope stabilization.	Actively identify and repair eroding slopes that may be contributing to sediment loading. Prepare an inventory and assessment of eroding areas and their risk to surface waters. Follow assessment with a schedule for ongoing inspection and stabilization (potentially based on a number or percentage of sites annually). Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Y	None	Y	None
PW-12	Enhance street sweeping through route optimization.	In Los Peñasquitos River WMA, implement route optimization from results of efficiency studies.	FY18	Continuous-Ongoing	Y	None	Y	None
Pesticide, Herbicides, and Fertilizer BMP Program								
PW-13	Require implementation of BMPs to address application, storage, and disposal of pesticides, herbicides, and fertilizers on commercial, industrial, and municipal properties. Includes education, permits, and certifications.	Refer to JRMP.	FY16	Continuous-Ongoing	Y	None	Y	None
Retrofit and Rehabilitation in Areas of Existing Development								
PW-14	Develop and implement a strategy to identify candidate areas of existing development appropriate for retrofitting projects and facilitate the implementation of such projects.	The Offsite Alternative Compliance Program will include methods for identifying and assessing potential retrofit projects in existing development areas. Retrofit project selection will be based upon a variety of factors including proximity to high priority water quality conditions, potential pollutant load removal effectiveness, and feasibility of implementation. The development of such program is contingent on the completion of a current water quality equivalency study and development of a crediting system across multiple Responsible Agencies. Specific retrofit projects are included in the Non-JRMP, Structural Strategies categories.	FY18	Continuous-Ongoing	Y	None	Y	None

Table D-2 (continued)
City of Poway Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
PW-15	Develop and implement a strategy to identify candidate areas of existing development for stream, channel, or habitat rehabilitation projects and facilitate implementation of such projects.	The Offsite Alternative Compliance Program will include methods for identifying and assessing potential stream, channel, or habitat rehabilitation projects in existing development areas. Rehabilitation project selection will be based upon a variety of factors including existing stream or habitat degradation, potential future cumulative stream or habitat impacts, and feasibility of implementation. The development of such program is contingent on the completion of a current water quality equivalency study and development of a crediting system across multiple Responsible Agencies.	FY18	Continuous-Ongoing	Y	None	Y	None
E.2 Illicit Discharge, Detection, and Elimination (IDDE) Program								
PW-16	Implement Illicit Discharge, Detection, and Elimination (IDDE) Program per the JRMP. Requirements include: maintaining an MS4 map, using municipal personnel and contractors to identify and report illicit discharges, maintaining a hotline for public reporting of illicit discharges, monitoring MS4 outfalls, and investigating and addressing any illicit discharges.	Refer to JRMP. The City must visually inspect at least 80% of their outfalls two times per year during dry weather conditions.	FY16	Continuous-Ongoing	Y	None	Y	None
E.7 Public Education and Participation (B.3.b.(1)(a)(iii))								
PW-17	Implement a public education and participation program to promote and encourage development of programs, management practices, and behaviors that reduce the discharge of pollutants in storm water prioritized by high-risk behaviors, pollutants of concern, and target audiences.	Refer to JRMP.	FY16	Continuous-Ongoing	Y	None	Y	None
PW-17.1	Target school-based education and outreach.	Through "I Love a Clean San Diego," give school presentations to fourth-graders eight times per year.	FY16	Continuous-Ongoing	Y	None	Y	None
PW-17.2	Conduct education through community-based organizations.	Through "I Love a Clean San Diego," staff street fair booths twice per year. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Y	None	Y	None

Table D-2 (continued)
City of Poway Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
PW-17.3	Review City storm water website and identify and implement required updates to reflect WQIP and JRMP revisions.	Review City storm water website, identify and implement required updates to reflect WQIP and JRMP revisions.	Prior to FY16	Continuous- As needed	Y	None	Y	None
PW-17.4	Collaborate with regional education and outreach efforts.	Participate in Regional Think Blue campaign and collaborate with other regional efforts to provide consistent message or efficiency in training for targeted audiences.	FY16	Continuous- Ongoing	Y	None	Y	None
E.6 Enforcement Response Plan								
PW-18	Implement escalating enforcement responses to compel compliance with statutes, ordinances, permits, contracts, orders, and other requirements for IDDE, development planning, construction management, and existing development in the Enforcement Response Plan.	Refer to JRMP.	FY16	Continuous- Ongoing	Y	None	Y	None
Non-JRMP Strategies (Optional Strategies, B.3.b.(1)(b))								
Nonstructural Strategies								
PW-19	Require implementation of low impact development BMPs with all new construction.	The City requires LID at all sites, with an emphasis on an effective combination of both erosion control BMPs and sediment control BMPs to reduce discharges of sediment. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous- Ongoing	Y	None	Y	None
PW-20	Promote MWD and other groups to encourage implementation of water conservation programs that improve water quality by reducing over-irrigation with smart products or turf replacement and capturing rain water in residential areas.	Collaborate with MWD to promote their SoCal Water$mart rebates and products such as weather based irrigation controllers, rotating sprinkler nozzles, soil moisture sensor system, rain barrels, and turf removal. Collaborate with San Diego County Water Authority (SDCWA) to promote their Water Smart irrigation system checkups and turf replacement incentives. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous- Ongoing	Y	None	Y	None

Table D-2 (continued)
City of Poway Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
PW-21	Proactively repair and replace corrugated metal pipe (CMP) MS4 components to provide source control from MS4 infrastructure.	Implement CMP replacement program with an emphasis on pipes in open canyons.	FY16	Continuous-Ongoing	Y	None	Y	None
PW-22	Target human behavior in parks and other public areas including trash reduction or other high impact behavior to habitat, wildlife, and water quality.	Implement trash reduction programs by increasing the number of trash and recycling bins during high-traffic public events and in public parks. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Y	None	Y	None
PW-23	Los Peñasquitos Watershed Special Study	Los Peñasquitos WMA special study will assess sediment loads in the watersheds upstream of the Draft Sediment TMDL compliance monitoring locations. Includes the analysis of sediment water column loads, stream bedload, and air monitoring. Implemented in a phased approach. Monitoring will occur first in the Carroll Canyon subwatershed. The Los Peñasquitos Creek and Carmel Valley Creek subwatersheds will be monitored in subsequent phases. Refer to Section 5.1 of the Water Quality Improvement Plan for further details. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Y	None	Y	None
PW-24	Participate in Reference Watershed Study.	The San Diego Regional Reference Stream Study (currently being conducted by the Southern California Coastal Water Research Project). The study will develop numeric targets that account for “natural sources” to establish the concentrations or loads from streams in a minimally disturbed or “reference” condition. Refer to Section 5.1 of the Water Quality Improvement Plan for further details. Will occur region-wide. Funding and resources were previously secured.	Prior to FY16	One Time, With Continuous O&M	Y	None	N	None

Table D-2 (continued)
City of Poway Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
PW-25	As opportunities arise and funding sources are identified, protect areas that are functioning naturally by avoiding impervious development and degradation on unpaved open space areas, creating permanent open space protections on undeveloped city-owned land, and acquiring privately-owned undeveloped open areas.	As opportunities arise, where feasible, avoid hardscape development and degradation in unpaved open space areas, create permanent open space protections to undeveloped city-owned land, and acquire privately owned undeveloped parcels of land. This strategy may be implemented if there is interest in participation by the public or private entity with current control of the land. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) identification of partners, if needed (public, private, non-profit), 2) identification of costs and potential sources of funding, 3) final agreement by public or private entity with current control of the land, 4) final agreement by all other participating partners including acceptance by intended land- or asset-owning City department, and 5) funding in place. Resources necessary to implement this strategy include a coordinator or manager and maintenance for acquired lands. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. The time frame for implementation will vary by project. Implementation is in perpetuity as long as funding is available.	Triggered	Continuous as funding allows	Not triggered in FY16	None	If triggered	None

Table D-2 (continued)
City of Poway Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Structural Strategies								
Green Infrastructure								
PW-26	0.26 ac have been identified as potential opportunities for green infrastructure implementation on public parcels.	In the Los Peñasquitos Creek Subwatershed, construction, operation, and maintenance of 0.26 ac of bioretention and permeable pavement. The following resources, funds, and steps are needed to implement this strategy: 1) Identify project locations (3-6 months) 2) Secure funds in the form of general funds, bonds, or grants (6 months-2 yrs) 3) Obtain City Council approval of Capital Improvement Projects budget (occurs annually in May) 4) Initiate preliminary engineering to narrow project scope (6 months) 5) Hire design consultant to develop detailed construction plans and construction cost estimates (2 yrs) 6) Complete construction contractor bid and award process for construction phase (6 months) 7) Construct project (4 months-1 yr; project construction costs are TBD and are based on size of the project). 8) Operation and maintenance will be in perpetuity. Funds and staff resources for this function will be approval by City Council as part of the City's annual budget.	FY22	Continuous-Ongoing	N	None	N	Planned implementation in FY22

Table D-2 (continued)
City of Poway Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Green Streets								
PW-27	32.42 acres of permeable pavement and 32.47 acres of bioretention have been identified as potential opportunities for green street projects.	In the Los Peñasquitos Creek Subwatershed, construction, operation and maintenance of 32.42 acres of permeable pavement and 32.47 acres of bioretention for green streets. The following resources, funds, and steps are needed to implement this strategy: 1) Identify project locations (3-6 months) 2) Secure funds in the form of general funds, bonds, or grants (6 months-2 yrs) 3) Obtain City Council approval of Capital Improvement Projects budget (occurs annually in May) 4) Initiate preliminary engineering to narrow project scope (6 months) 5) Hire design consultant to develop detailed construction plans and construction cost estimates (2 yrs) 6) Complete construction contractor bid and award process for construction phase (6 months) 7) Construct project (4 months-1 yr; project construction costs are TBD and are based on size of the project). 8) Operation and maintenance will be in perpetuity. Funds and staff resources for this function will be approval by City Council as part of the City's annual budget.	FY22	Continuous-Ongoing	N	None	N	Planned implementation in FY22
Multiuse Treatment Areas								
Infiltration and Detention Basins								
PW-28	Community Detention Basin	Community Detention Basin is already in place. Funding and resources have been secured. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Y	None	Y	None
PW-29	Gate Detention Basin	Gate Detention Basin is already in place. Funding and resources have been secured. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Y	None	Y	None

Table D-2 (continued)
City of Poway Jurisdictional Strategies for Los Peñasquitos WMA

(Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
PW-30	Kirkham Detention Basin	Kirkham Detention Basin is already in place. Funding and resources have been secured. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Y	None	Y	None
PW-31	Stotler Detention Basin	Stotler Detention Basin is already in place. Funding and resources have been secured. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Y	None	Y	None
PW-32	Stowe Detention Basin	Stowe Detention Basin is already in place. Funding and resources have been secured. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Y	None	Y	None
PW-33	If interim load reduction goals are not met and additional multiuse treatment areas are required, a constructed wetland system can be implemented in the open space adjacent to Carriage Road.	Construction, operation, and maintenance of a 1.7 ac Constructed Wetland System would treat approximately 9,567 acres of drainage area (APN 3175012400). The following resources, funds, and steps are needed to implement this strategy: 1) Identify project locations (3-6 months) 2) Secure funds in the form of general funds, bonds, or grants (6 months-2 yrs) 3) Obtain City Council approval of Capital Improvement Projects budget (occurs annually in May) 4) Initiate preliminary engineering to narrow project scope (6 months) 5) Hire design consultant to develop detailed construction plans and construction cost estimates (2 yrs) 6) Complete construction contractor bid and award process for construction phase (6 months) 7) Construct project (4 months- 1 yr; project construction costs are TBD and are based on size of the project). 8) Operation and maintenance will be in perpetuity. Funds and staff resources for this function will be approval by City Council as part of the City's annual budget.	FY22	Continuous-Ongoing	N	None	N	Planned implementation in FY22

Table D-2 (continued)

						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
Additional Watershed Opportunities								
PW-35	Through adaptive management and additional analysis in the future, the City will identify and implement one or more of the following opportunities to meet numeric goals: 1) participate in restorative efforts for the Los Peñasquitos Lagoon with stakeholders, 2) MS4 outfall repair and relocation, 3) slope stabilization, 4) stream restoration, 5) implementation of sediment detention basins upstream of Los Peñasquitos Lagoon or 6) new strategies not yet identified.	Through adaptive management and additional analysis in the future, the City will identify and implement one or more of the following opportunities to meet numeric goals: 1) participate in restorative efforts for the Los Peñasquitos Lagoon with stakeholders, 2) MS4 outfall repair and relocation, 3) slope stabilization, 4) stream restoration, 5) implementation of sediment detention basins upstream of Los Peñasquitos Lagoon or 6) new strategies not yet identified. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council.	FY26	Continuous-Ongoing	N	None	N	Planned implementation in FY26
Stream, Channel, and Habitat Rehabilitation Projects								
PW-36	Rattlesnake Creek Project (stabilization of ephemeral tributary segment to Rattlesnake Creek)	This project involves the stabilization of a section of an ephemeral tributary to Rattlesnake Creek, which is located west of Midland Road, between Kentfield Drive and Norwalk Street. The project will involve grading in order to widen the channel bottom and contour the banks. It will include installation of rip rap, turf reinforcement matting, concrete pillow blocks, and a headwall, landscape removal and replacement, temporary BMPs, a temporary diversion system, and temporary irrigation. Funding and resources have been secured. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	One Time, With Continuous O&M	Y	None	Y	None

Table D-2 (continued)

(Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
WMA Strategies (Optional Strategies, B.3.b.(2))								
WMA-1	Collaborative Approach to Irrigation Reduction	Responsible Agencies are collaborating with water agencies to encourage implementation of water conservation efforts. Water conservation that attempts to reduce irrigation and minimize storm water runoff can also improve water quality of receiving waterbodies. MWD's SoCal Water$mart Program supports conservation efforts by offering incentives in the form of rebates for rain barrels, rotating sprinkler nozzles, weather-based irrigation controllers, soil moisture sensor systems, and turf replacement. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous - Ongoing	Y	None	Y	The City also partnered with the San Diego County Water Authority to promote their artificial turf rebate program.
WMA-2	Offsite Alternative Compliance Option (WMAA)	The WMAA provides alternative compliance methods in lieu of meeting structural BMP design standards and/or hydromodification management criteria on the project site. The San Diego County Copermittees have collectively funded and provided guidance for development of a regional WMAA. Copermittees compiled a list of candidate projects that consider the numeric goals of the WMAs as well as projects previously identified in JRMPs and other regulatory documents. Next steps include submittal of the water quality equivalency standards final document, anticipated in September 2015. Following a public review and Executive Officer approval, anticipated by November 2015, jurisdictions can formally implement an optional Alternative Compliance Program by December 2015 (time coincident with implementation of standards set forth in the regional BMP Design Manual and local Storm Water Standards Manuals).	Prior to FY16	Continuous - Ongoing	Y	None	Y	None

Table D-2 (continued)
City of Poway Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement into next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
WMA-3	Collaboration with the Regional Board	The Responsible Agencies will work with the Regional Board to identify solutions and address sources of potential water quality impairments. Priorities include 1) enforcement of the Industrial General Permit, 2) enforcement of other non-MS4 dischargers, and 3) Bacteria TMDL updates. Discussions with the Regional Board were initiated in FY15. Collaboration will continue in FY16 to identify an appropriate path forward, including a more detailed time line. Funding and resources have been secured for FY16. Funding for future fiscal years is contingent on annual budget approval by each Responsible Agency.	Prior to FY16	Continuous - Ongoing	Y	None	Y	None
WMA-4	Refinement of Water Quality Regulations	The Responsible Agencies will collaborate with the Regional Board to refine the accuracy of regulations to ensure that Non-MS4 dischargers are regulated appropriately. The goal of this exercise is to begin a dialog with the Regional Board that may lead to the following outcomes: 1) Removal of Non-MS4 discharges and the associated BMPs needed to treat those discharges from the Responsible Agencies' burden, 2) amendment of current TMDLs and the MS4 Permit to correctly assign responsibilities for Non-MS4 discharges to the appropriate entities, and 3) strengthening of Non-MS4 NPDES permits that are directly tied to the requirements of existing and future TMDLs. Discussions with the Regional Board were initiated in FY15. Collaboration will continue in FY16 to identify an appropriate path forward, including a more detailed time line. Resources to implement this strategy include staff time and are currently secured.	Prior to FY16	Continuous - Ongoing	Y	None	Y	None

(Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
WMA-5	Watershed Collaboration for Los Peñasquitos Lagoon Restoration	Collaborate with stakeholders to promote the restoration of salt marsh areas and overall improvements in estuarine and other beneficial uses within the Los Peñasquitos Lagoon. Benefits of this strategy include more efficient targeting and prioritization of lagoon restoration activities, increased cost-effectiveness of selected BMP strategies in the watershed, and development of partnerships across the MS4 jurisdictions and other TMDL responsible parties. These efforts will be coordinated with the Lagoon Enhancement Program currently being updated by the Los Peñasquitos Lagoon Foundation and will require that (1) funding to address MS4 discharges and dry weather input of freshwater is identified and secured, (2) staff resources are identified and secured, (3) partners are identified and formal memoranda of understanding (MOUs) are developed and executed, (4) permits required by regulatory agencies are secured, and (5) consensus and community support are achieved. Resources necessary to implement this strategy include City staff to coordinate with the regional effort. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. Implementation is in perpetuity as long as funding is available.	FY16	Continuous as funding allows	Y	None	Y	None

D.2.4 Modifications to the BMP Design Manual

No modifications to the BMP Design Manual have been made since the WQIP was approved in fall 2015. The current Poway's BMP Design Manual is posted on the Poway's website, and the link to this page is listed on Project Clean Water.

D.2.5 Modifications to the Jurisdictional Runoff Management Plan

No modifications to the Poway's JRMP have been made since the WQIP was approved in fall 2015. The current Poway JRMP is posted on the Poway's website, and the link to this page is listed on Project Clean Water.

Intentionally Left Blank

D.3 City of San Diego

The City of San Diego is proposing the following administrative changes to the Los Peñasquitos Water Quality Improvement Plan. The proposed administrative changes include clarifications, corrections to errors and typos, and other minor edits that only apply to the City of San Diego.

WQIP Section		Administrative Changes
1	Section 4.4 Alternative BMP Implementation Scenario for Refinement of Water Quality Regulations	Included the following text: "Cost comparison between the Primary and Alternative Scenario presented in this section are a snapshot in time and are based on the best information available at the time they were prepared. As program implementation progresses, updates to estimated funding needs are likely to change. For the most recent estimate of funding needs, refer to the WAMP available at the Storm Water Division website, www.sandiego.gov/stormwater/plansreports."
2	Appendix I – Jurisdictional Strategies and Schedules; Section I.4.2 Funding Needs for the City of San Diego	Included the following text: "Funding needs presented in this section are a snapshot in time and are based on the best information available at the time they were prepared. As program implementation progresses, updates to estimated funding needs are likely to change. For the most recent estimate of funding needs, refer to the WAMP available at the Storm Water Division website, www.sandiego.gov/stormwater/plansreports."
3	Appendix I – Jurisdictional Strategies and Schedules; Table I-5 City of San Diego Jurisdictional Strategies	Refined the text (shown as track changes in red text in Appendix D) to provide greater clarity and/or to correct errors and typos.
4	Appendix I – Jurisdictional Strategies and Schedules; Table I-5 City of San Diego Jurisdictional Strategies	Changed strategy identification numbering system (See Appendix D).
5	Appendix I – Jurisdictional Strategies and Schedules; Table I-5 City of San Diego Jurisdictional Strategies	Structural Strategies, Priority Development Project (PDP) BMPs: All PDP BMPs have been combined into a single strategy for ease of viewing. A table with an updated list of PDP BMPs is included in the WQIP Annual Report (See Appendix D).

6	Appendix I – Jurisdictional Strategies and Schedules; Table I-5 City of San Diego Jurisdictional Strategies	Structural Strategies, Multi Use Treatment Areas (MUTAs): Planned MUTAs that are not yet built have been combined into a single strategy for ease of viewing. The total sum of drainage area treated (level of commitment) has not changed. A table with all structural strategies (MUTAs, Green Infrastructure, Green Streets, etc.) is included in the WQIP Annual Report (See Appendix D).

D.3.1 Annual Report Certifications

The City of San Diego's required certifications regarding the preparation of the Water Quality Improvement Plan Annual Report, as well as the legal authorities required by the MS4 Permit are included on the following pages.

D.3.2 Annual Report Form

City of San Diego's completed JRMP Annual Report form and fiscal analysis for FY16 are included on the following pages.

THE CITY OF SAN DIEGO

STATEMENT OF CERTIFICATION

Los Penasquitos Watershed Management Area Water Quality Improvement Plan 2015-2016 Annual Report

I certify, under penalty of law, that this Water Quality Improvement Plan Annual Report submittal and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for known violations.

Drew Kleis

CITY OF SAN DIEGO

SCOTT CHADWICK
CHIEF OPERATING OFFICER

January 27, 2017

Mr. David W. Gibson, Executive Officer
Regional Water Quality Control Board
San Diego Region
2375 Northside Drive, Suite 100
San Diego, CA 92108

Subject: Certification of Adequate Legal Authority

Dear Mr. Gibson:

Pursuant to San Diego Regional Water Quality Control Board Order No. R9-2013-0001, as amended by Order No. R9-2015-0100 (Municipal Permit or Permit), Provision E.1.b, the City of San Diego, as a Copermittee in the above referenced permit, submits this certification of adequate legal authority with the first Water Quality Improvement Plan Annual Report. The City has adequate legal authority to implement and enforce each requirement contained in 40 C.F.R. section 122.26(d)(2)(i)(A)-(F), and the Municipal Permit (including Provision E.1.a(1)-(10)). The San Diego Municipal Code, including the following provisions, provides the City with adequate legal authority as required by the Municipal Permit:

1. Storm Water Management and Discharge Control, sections 43.0301 through 43.0312. These provisions are being amended, although the current version also complies with the requirements of the Municipal Permit.
2. General Construction Permit Authority and Procedures, sections 129.0101 through 129.0120.
3. Grading Regulations, sections 142.0101 through 142.0150.
4. Storm Water Runoff Control and Drainage Regulations, sections 142.0201 through 142.0230.

The City looks forward to working with you and the Regional Board on storm water management matters. If you have any questions, please contact Senior Planner Jim Harry at (858) 541-4353 or email JHarry@sandiego.gov.

Sincerely,

Scott Chadwick
Chief Operating Officer

I. COPERMITTEE INFORMATION			
Copermittee Name: **City of San Diego (Los Peñasquitos WMA)**			
Copermittee Primary Contact Name: **Drew Kleis, Deputy Director, Storm Water Division, Transportation & Storm Water Department**			
Copermittee Primary Contact Information:			
Address: **9370 Chesapeake Drive, Suite 100**			
City: **San Diego**	County: **San Diego**	State: **CA**	Zip: **92123**
Telephone: **858-541-4320**	Fax: **858-541-4350**	Email: **Akleis@sandiego.gov**	

II. LEGAL AUTHORITY	
Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	**YES**[1] ☒ **NO** ☐
A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	**YES** ☒ **NO** ☐
III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE	
Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	**YES**[1] ☒ **NO** ☐
If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	**YES** ☒ **NO** ☐
IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM[2]	
Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	**YES**[1] ☒ **NO** ☐
Number of non-storm water discharges reported by the public	**353**
Number of non-storm water discharges detected by Copermittee staff or contractors	**172**
Number of non-storm water discharges investigated by the Copermittee	**518**
Number of sources of non-storm water discharges identified	**442**
Number of non-storm water discharges eliminated	**434**
Number of sources of illicit discharges or connections identified	**437**
Number of illicit discharges or connections eliminated	**429**[3]
Number of enforcement actions issued	**436**[3]
Number of escalated enforcement actions issued	**197**
V. DEVELOPMENT PLANNING PROGRAM[2]	
Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	**YES**[1] ☒ **NO** ☐
Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	**YES** ☒ **NO** ☐
If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	**YES**[4] ☒ **NO** ☐
Number of proposed development projects in review	**241**[5]
Number of Priority Development Projects in review	**32**[6]
Number of Priority Development Projects approved	**110**[7]
Number of approved Priority Development Projects exempt from any BMP requirements	**0**
Number of approved Priority Development Projects allowed alternative compliance	**0**
Number of Priority Development Projects granted occupancy	**63**[8]
Number of completed Priority Development Projects in inventory	**178**[9]
Number of high priority Priority Development Project structural BMP inspections	**9**
Number of Priority Development Project structural BMP violations	**8**[10]
Number of enforcement actions issued	**15**[11]
Number of escalated enforcement actions issued	**3**

VI. CONSTRUCTION MANAGEMENT PROGRAM[2]

Has the Copermittee implemented a construction management program that complies with Order No. R9-2013-0001?	YES[1,12] ☒ NO ☐

Number of construction sites in inventory	4,300
Number of active construction sites in inventory	47
Number of inactive construction sites in inventory	112
Number of construction sites closed/completed during reporting period	169
Number of construction site inspections	27,037
Number of construction site violations	270
Number of enforcement actions issued	164
Number of escalated enforcement actions issued	91

VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM[2]

Has the Copermittee implemented an existing development management program that complies with Order No. R9-2013-0001?	YES[1] ☒ NO ☐

	Municipal	Commercial	Industrial	Residential
Number of facilities or areas in inventory	123	8,282 (includes mobile)	915	27[13]
Number of existing development inspections	117	1,533	140	4[13]
Number of follow-up inspections	0	263	13	0
Number of violations	18	388	37	375[13]
Number of enforcement actions issued	22	490	48	285[13]
Number of escalated enforcement actions issued	2	148	8	134

VIII. PUBLIC EDUCATION AND PARTICIPATION

Has the Copermittee implemented a public education program component that complies with Order No. R9-2013-0001?	YES[1] ☒ NO ☐
Has the Copermittee implemented a public participation program component that complies with Order No. R9-2013-0001?	YES[1] ☒ NO ☐

IX. FISCAL ANALYSIS

Has the Copermittee attached to this form a summary of its fiscal analysis that complies with Order No. R9-2013-0001?	YES[14] ☒ NO ☐

X. CERTIFICATION

I [☐ Principal Executive Officer ☐ Ranking Elected Official ☒ Duly Authorized Representative] certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

---

[1] The City of San Diego approved an update to the Jurisdictional Runoff Management Plan (JRMP) in FY 16. The update of the JRMP was done in compliance with Order No. R9-2013-0001.
[2] See the JRMP Annual Report FY 2016 Attachment 1 for a citywide summary of this data.
[3] The number of enforcement actions issued does not equal the number of identified illicit discharges or connections because some discharge complaints in the last quarter of FY 2016 were still under investigation at the end of FY 2016.
[4] The Storm Water Standards Manual (Part 1: BMP Design Manual, and Part 2: Construction BMP Standards) was updated in January 2016.
[5] The number of ongoing Standard and Priority Development Projects in review as of 6/30/16. The Development Services Department processes other types of permits, in addition to those included in the JRMP Annual Report, that are not subject to the requirements of the municipal permit.
[6] The number of ongoing Priority Development Projects in review as of 6/30/16. Only a portion of the projects that the Development Services Department processes qualify as a priority development project.
[7] The number of Priority Development Projects approved in FY 2016.
[8] This number includes the City's Priority Development Projects that received final inspection in FY 2016 as well as certain Priority Development buildings and grading projects that did not require a Certificate of Occupancy, that were completed in FY 2016.
[9] Represents the total number of completed Priority Development Projects in the City's inventory as of the end of FY 2016. These projects include projects entered into the inventory as complete in previous years.
[10] The number of Priority Development Project structural BMP violations included Notices of Violation, Notices of Deficient Maintenance, and Administrative Citations issued to public and private entities within the City's jurisdiction in this watershed.
[11] The number of enforcement actions included Notices of Violation and Notices of Deficient Maintenance issued to public and private entities within the City's jurisdiction in this watershed. The City has achieved compliance at 146 of the 150 sites identified in the San Diego RWQCB's Notice of Violation (Order Number R9-2014-0034). The San Diego RWQCB granted the City an extension to achieve compliance at the remaining four sites by May 26, 2017.
During the process of achieving compliance for the aforementioned 150 identified sites, the City has discovered an additional 74 sites which initially appear to be out of compliance due to varying degrees of circumstances. Each of these potential violations consist of post-construction BMP issues. Continuing the same process as outlined in our quarterly reports to the RWQCB, the City is currently researching each case. After initial research to verify non-compliance or not, we will follow our established procedures to have each site be in conformance to the MS4 permit under which it was permitted.
[12] Responses in this report are based on the City's internal data. Potential program deficiencies were identified by the Board in FY 2016, however, the City has taken steps to correct issues identified by the Board as detailed in the JRMP Annual Report FY 2016 Appendix. The City has implemented several improvements that address the Regional Board's concerns. These improvements ranged from procedural changes to creating multi-language brochures for contractors. Several operating and internal procedures have been refined to improve enforcement actions, add clarity to how sites are inspected, and to better define the staff's roles and expectations.
[13] Existing facilities for residential uses are characterized as Residential Management Areas (RMA), which could include hundreds of residences. When all of the residences in an RMA are inspected by City staff that is only counted as one inspection. However, all individual issues noted at each residence during an RMA inspection is counted as a separate violation and/or enforcement action.
[14] See the JRMP Annual Report FY 2016 Appendix for the FY 2016 Fiscal Analysis.

APPENDIX

1 OPERATIONAL ADAPTIVE MANAGEMENT

In Fiscal Year (FY) 2016 the City of San Diego (City) completed technical and non-technical monitoring, special studies, pilot studies, and various other efforts related to its Storm Water Program. The City gained valuable information that led to effective adaptation of procedures and operations, which ultimately led to more effective implementation of its Storm Water Program and the Jurisdictional Runoff Management Plan (JRMP). The following are operational adaptive management improvements that the City made during FY 2016:

- **Get it Done Application**
  In late FY 2016, the City released the Get it Done Application (App), which provides a modern, efficient method for members of the public to report issues to the City. One of the App's features allows illicit discharges to be reported by taking a photo with a phone that includes Global Positioning System (GPS) coordinates, and uploading it to the App. According to a recent City survey, 83 percent of respondents stated that they did not want to call the City government to report a problem. The new Get It Done App eliminates the need to call the City for various problems, by allowing residents to report issues online, which was the preferred method of 50 percent of survey respondents. The App also allows residents to report problems using their name or anonymously.

- **Phase V Street Sweeping Pilot**
  The City completed the fifth and final pilot study of the Targeted Aggressive Street Sweeping Pilot Program in FY 2016, which tested the effectiveness of posting limited-hour "no parking" signs on traditionally non-posted street sweeping routes. After two years of data collection on two subject routes, the study confirmed the hypothesis that a significant amount of additional debris (48% and 58% over baseline on the subject routes) can be removed from posting no parking signs on traditionally non-posted roadways. Based on this finding, the City will consider posting additional routes if supported by the community.

- **Enhanced Catch Basin Cleaning Optimization**
  Enhanced catch basin cleaning is a strategy to address pollutant removal from the Municipal Separate Storm Sewer System (MS4) in three of the City's six watersheds. While most catch basins are inspected once per year, this strategy involves inspecting catch basins within the specified watersheds between two and four times per year. The optimization study assigned priorities to individual basins and watersheds based on eight years of historic debris removal. This optimization focused efforts by reducing the number of inspections performed per year, while increasing total debris removal from those inspections. This enhancement will allow the City to target high priority drains to maximize pollutant removal while maintaining cost efficiencies. In FY 2016, approximately 2,500 additional catch basin inspections and cleanings (if necessary) were completed in the Chollas Creek area of the San Diego Bay Watershed.

- **Flood Control Pump Stations**
  To help minimize the risk of flooding in flood-prone areas during storm events, the City utilizes a number of pump stations to increase the flow of water through the conveyance network. Considering the pump stations are connected to the electric network, they only

function when power is running. In FY 2016, a 2,400 volt automatic transfer switch and generator were installed at a critical pump station that are capable of pumping 130,000 gallons of water per minute. This significantly decreases the risk of flooding in the related drainage area because the pump station will continue to operate during a storm event. The City also replaced or refurbished 11 other critical pump stations. Additionally, the City modernized operations at 14 pump stations by installing a telemetry system that remotely alerts staff of failures, allowing for a more immediate response.

- **Storm Drain Inspections**
  To help prioritize replacement of corrugated metal piping in the City's conveyance network, the City used closed-circuit televising at 62 locations in FY 2016 to assess pipe conditions. The City assessed the condition of 28,000 linear feet of corrugated metal piping in FY 2016.

- **Property-Based Inspections**
  In FY 2016, the City further committed to implementing property-based inspections to increase the business inspection program's efficiency and effectiveness. A previously conducted pilot study on inspection practices found property-based inspections more effective at identifying and resolving water quality issues (e.g., improper trash disposal practices and irrigation runoff, etc.) associated with commercial and industrial businesses. The inspections are focused on areas and activities associated with businesses that would not otherwise be inspected for storm water compliance. The inspections greatly increase the number of businesses subjected to storm water inspections while focusing on the pollution generating areas and activities without unduly increasing the inspection load of City inspectors. In FY 2016, the City performed 835 property-based inspections that accounted for over 4,700 business inspections.

- **Tiger Team**
  The Tiger Team was established in FY 2016 to identify, locate and eliminate sources of human specific bacteria sources in the MS4. The Transportation & Storm Water Department (TSW) leads this effort in partnership with the Public Utilities Department. After a specific portion of the MS4 with elevated human specific bacteria was identified, the Tiger Team performed escalated enforcement activities through TSW Code Enforcement, MS4 sampling, MS4 sanitary sewer line televising, and MS4 and sanitary sewer cleaning. Over several months during the reporting year, one problem area within the City was investigated extensively and a source of human specific bacteria in the MS4 was identified and abated.

- **Increased Non-Stormwater Discharge Investigations**
  The City received 215 more complaints of non-stormwater discharges in FY 2016. Approximately 81% of the complaints citywide were resolved. A majority of the investigations that were resolved involved irrigation runoff. Cases were unresolved either because the source could not be identified or the source was groundwater.

  The identification and elimination of irrigation efforts in FY 2016 involved the following:
  1) Special irrigation patrols were conducted on a monthly basis. All violating properties were issued notices of violation and/or a citation.
  2) TSW code compliance partnered with the Public Utilities Department. If a complaint of irrigation with runoff was received, a storm water code compliance officer would issue a notice of violation. If the property had multiple complaints,

that property would become part of an irrigation patrol and could result in a citation.

- **Waterways Maintenance Plan**
  The City began development of the Waterways Maintenance Plan in FY 2016, which will replace the Master Storm Water System Maintenance Program, which expires in 2018. The goals of the Plan are to create an overall holistic storm water management strategy with standard mitigation measures and streamlined maintenance approvals. Objectives of the Plan include flood risk reduction, infrastructure sustainability and resource protection and restoration. In addition to technical scoring criteria, the Plan also includes a unique public input metric so that public concerns are given a tangible value. Planning efforts will continue in FY 2017, with implementation beginning in FY 2019.

- **Off-Site Alternative Compliance Program**
  In FY 2016, the City implemented phase I of the Alternative Compliance Program. This gives development projects that would require on-site structural Best Management Practices (BMPs) to comply with pollutant control and hydromodification management the option to propose off-site alternative compliance projects. The development of phase II also began in FY 2016 and includes establishing an in-lieu fee structure and credit system as an alternative to installing on-site stormwater BMPs.

- **Watershed Master Planning**
  To provide the high-resolution data needed to drive systematic and cost-effective implementation of green infrastructure (GI) projects, the City has developed a comprehensive and dynamic Watershed Master Plan (WMP) in the Chollas Creek Watershed that quantifies progress towards water quality goals and incorporates synergies with other municipal programs. The WMP has the capability to dynamically assess the cost-based water quality benefits of specific GI projects against one another and incorporates a robust prioritization logic that realizes the complex nature of implementing retrofit GI facilities within a highly urbanized environment. Ultimately, the output of this project gives the City a project-by-project roadmap that is prioritized to implement high-impact and high-efficiency BMPs first, leaving less desirable projects for later implementation.

- **Bacteria Regrowth Study**
  The bacteria regrowth study currently being completed by the City includes monitoring to characterize the magnitude and extent of potential *Enterococcus* loading due to regrowth within the City's storm drain system. This study will quantify the amount of bacteria in receiving water samples that are harmless to humans and would potentially be used to refine bacteria water quality standards of the Bacteria TMDL as a part of the re-opener process.

- **Los Peñasquitos Lagoon Restoration Project**
  Modeling was completed in FY 2016 to confirm the preferred alternative for the Los Peñasquitos Lagoon Restoration project. The City was identified as the "lead" for the project. The upcoming tasks in FY 2017 include completing the concept design and starting the public outreach process. In coordination with Copermittees, Caltrans and SANDAG completed the environmental and construction phases for various rail and transit, highway, and environmental protection projects.

2 STORMWATER PROGRAM ACCOMPLISHMENTS/NOTABLE UPDATES

The City continued to implement the key elements of the JRMP. The following are stormwater accomplishments and notable updates that occurred during the FY 2016 reporting period.

- **Water Quality Improvement Plans**

  In FY 2016, the San Diego Regional Water Quality Control Board (Regional Board) accepted the six Water Quality Improvement Plans (WQIPs) that included City jurisdiction. The goal of the WQIPs is to protect, preserve, enhance, and restore the water quality of receiving water bodies. These WQIPs identify the adaptive planning and management process necessary to address the highest priority water quality conditions within a watershed. The WQIPs also identify strategies to achieve improvements in the quality of discharges from the Responsible Agencies' storm drain systems. The City is the lead on the WQIP for the San Dieguito, Los Penasquitos, and Mission Bay watersheds. The City is also a participating agency in the San Diego River, San Diego Bay, and Tijuana River watersheds.

- **JRMP Refinements**

  In FY 2016, the City identified refinements to the JRMP. These refinements were incorporated into the JRMP and will be completed in mid FY 2017. Refinements included minor changes to text to update the discussions of WQIP strategies, updates to the fiscal analysis, updates to the minimum BMPs to address pesticide applications, and updated references to the Storm Water Standards Manual that was adopted in FY 2016. The updated JRMP can be viewed at https://www.sandiego.gov/stormwater/plansreports/jrmp.

- **General Plan and Community Plan Amendments**

  Southeastern San Diego and Encanto Neighborhoods Community Plan Updates:

  The recently adopted Southeastern San Diego and Encanto Neighborhoods Community Plans incorporate language, policies and recommendations concerning the reduction of urban runoff and storm water quality. Stormwater quality plays a significant role in both of these communities since Chollas Creek is a significant feature within both plan areas lead directly to the San Diego Bay. A primary recommendation in both community plans is the restoration and enhancement of the creek, consistent with the Chollas Creek Enhancement Program, which includes the reduction of pollutants that enter the storm water system from nearby uses (see respective Conservation Elements). Specific stormwater language and policies have been adopted for the newly updated Southeastern San Diego and Encanto Neighborhoods Community Plans (adopted October 2015 by City Council).

The following policies have been adopted and will be used to implement BMPs for new development projects in Encanto as an example:

- PLU-53:
    - Facilitate urban gardening as a strategy for creating local healthy food systems and fighting chronic obesity related illnesses, contributing to stormwater retention, and fostering community interaction;
    - Figure 3-4 in the Southeastern San Diego and Encanto Neighborhoods Community Plan illustrates stormwater treatment for streets;
    - Images on page 4-15 in the Southeastern San Diego Encanto Neighborhoods Community Plan illustrate stormwater treatment images;

- P-UD-88: Utilize permeable paving, bioswales, green alleys and/or other stormwater design features that will manage rain water and irrigation runoff while supporting the heavy load vehicles that would service the loading docks and refuse containers;

- Upgrade infrastructure for water and sewer facilities and institute a program to clean the storm drain system prior to the rainy season.

- Install infrastructure that includes components to capture, minimize, and/or prevent pollutants in urban runoff from reaching San Diego Bay and Chollas Creek. (See also Urban Runoff Management in the Conservation and Sustainability Element.)

- P-RE-20: Require that all stormwater and urban runoff drainage be filtered or treated before entering into open space lands.

Draft North Park Community Plan: The draft North Park Community Plan, scheduled to be adopted by City Council in October 2016, also contains specific Stormwater and BMP language in the Conservation Element of the Community Plan as well as in the appendices. The draft North Park Community Plan incorporates language, policies and recommendations concerning the reduction of urban runoff and storm water quality specifically in relation to tree planting as well as "Green Streets". Specific policies include:

- PF-1.15 Implement water improvements programs so there are systematic improvements and gradual replacement of water and wastewater facilities throughout the community. Also see General Plan PF-F.6 PF-G.2, PFH. 3, and PF-I.1.
    - Implement Green Infrastructure strategies to address storm water runoff throughout North Park.

- SE-3.17 Encourage property owners to design or retrofit landscaped or impervious areas to better capture stormwater runoff.

Draft Uptown and Golden Hill Community Plans: Public review drafts of the community plans for Uptown and Golden Hill plan updates were made available for public review in June 2016. The Conservation Elements of the draft community plans address conservation of the natural resources in each community, including open space, natural habitats, canyon sewer maintenance, and management of water resources and

urban runoff. The Public Facilities, Services and Safety Elements also address water, sewer and stormwater infrastructure. The discussion and policies related to these topics are intended to guide sustainable development practices that will minimize ecological footprints within each community and preserve natural features and resources. The Draft Programmatic Environmental Impact Reports were released in the summer of 2016. Adoption of the community plans are anticipated at the end of 2016.

San Ysidro Community Plan Update: A comprehensive community plan update started in San Ysidro in June of 2010 and aims to reflect the current conditions, improve mobility, include the pedestrian environment, and address quality of life issues. A Community Plan Update Stakeholders Advisory Committee (Advisory Committee) was established as part of the plan update effort and consists of diverse representation from the residents, property owners, various business interests, local community organizations, and not-for-profit groups, and participating public agencies within the plan update boundary. The San Ysidro Community Planning Group, which provides City decision-makers with input and recommendations regarding land use plans and development proposals within the San Ysidro plan boundary, makes up the majority of the Advisory Committee members. The Plan update effort is informed by technical studies and the City's 2008 General Plan which promotes current storm water, urban runoff, and water conservation policies. A discussion draft of the plan was released in June 2014 and a public review draft was released in April 2015 and 2016. The plan includes a Conservation Element as well as a Public Facilities Services and Safety Element, and contains specific policies related to reducing storm water runoff in the San Ysidro Community planning area. The plan is anticipated to be adopted in fall 2016.

- **Notices of Violation**

Treatment Control BMPs Notice of Violation: The City has achieved compliance at 146 of the 150 sites identified in the Regional Board's Notice of Violation (Order Number R9-2014-0034). The Regional Board granted the City an extension to achieve compliance at the remaining four sites by May 26, 2017.

During the process of achieving compliance for the aforementioned 150 identified sites, the City has discovered an additional 74 sites which initially appear to be out of compliance due to varying degrees of circumstances. Each of these potential violations consist of post-construction BMP issues. The City is continuing the same process outlined in its quarterly reports to the Regional Board, and is researching each case. After initial research to verify non-compliance or not, the City will follow its established procedures to achieve compliance at each site as required by the MS4 permit that it was permitted.

Administrative Civil Liability Complaint: The Regional Board conducted an audit of the City's construction management program during the 2014-2015 rainy season, and issued an Administrative Civil Liability Complaint in July 2016 for several alleged violations involving the City's construction oversight and enforcement practices. The City has worked diligently to address their initial concerns, and will continue to evaluate and implement strategies to ensure long-term success.

Since 2011, there has been a steady increase in the number of construction projects citywide. This surge in activity required the City to respond in a manner that would

enable the staff to keep up with the demand and allow the managers to effectively oversee the growth.

Several substantial improvements have been made, ranging from updating our standard procedures and increasing our outreach efforts to improving the City's escalating enforcement practices and issuing Administrative Citations and Administrative Civil Penalties to repeat offenders. In addition, the City established bi-weekly coordination meetings with the Storm Water teams from Public Works, Development Services and TSW to more effectively share up-to-date project information, discuss various strategies, collaborate on solutions, and coordinate enforcement on a more routine basis so that escalated enforcement is effective.

Another significant improvement involves the development of a unified storm water enforcement database. This will ensure collaboration between Resident Engineers (RE) and storm water inspectors while in the field so they will know the full inspection and enforcement history prior to entering a site. This resource is expected to be available in FY 2017.

Updating the Storm Water Standards Manual is another milestone improvement that was completed during FY 2016. The additional clarity that's now provided in the Construction BMP Standards section (Part 2) gives the responsible party increased guidance to help prevent construction activities from adversely impacting water quality downstream.

The frequency of the citywide storm water training has increased and proven to be a key factor in equipping and empowering our staff to properly address various field challenges and confidently communicate concerns and violations to the responsible parties. Some of the trainings included mandatory annual storm water training for the REs, Inspectors and Code Enforcement Officers, as well as training for our operations staff from the Public Utilities Department and TSW Streets Division.

3 FISCAL ANALYSIS

3.1 GENERAL BUDGET INFORMATION

The Storm Water Division is responsible for reporting annually on the jurisdictional, watershed and regional fiscal analyses to the Regional Board in accordance with the regional Fiscal Analysis Method developed by the Copermittees in response to Regional Board Order No. R9-2007-0001 (2007 Permit). During the reporting period, the Storm Water Division collected and analyzed financial information from 23 City departments/divisions through its “Annual Report Form” questionnaire, as well as from within the Storm Water Division. A summary of the findings is included below.

FY 2016 fell within the transitional period, as defined under Regional Board Order No. R9-2013-0001, as amended by Order No. R9-2015-0001 (Municipal Permit). During the transitional period, most of the jurisdictional portions of the City’s program continue to follow the requirements of the 2007 Permit, while the JRMP and WQIPs were being developed in response to the current Municipal Permit. The WQIPs were approved by the Regional Board at the end of FY 2016. The expenditures described for FY 2015 therefore reflect costs to comply with the transitional period stormwater requirements in effect during FY 2015, which are a combination of 2007 Permit and current Municipal Permit standards. Since the WQIPs were approved during FY 2016, partial implementation began, but full implementation will commence in FY 2017.

It is expected that the City will begin full implementation of current Municipal Permit requirements during FY 2017. The City will implement the revised JRMP, which updates the City’s jurisdictional stormwater program to follow the current Municipal Permit requirements rather than the 2007 Permit requirements. The City’s fiscal analysis reporting structure in turn will change, reporting expenditures, and funding sources in the following three main categories: JRMP (jurisdictional), WQIP (watershed), and flood risk management. That structure is consistent with the framework described in the City’s Watershed Asset Management Plan (WAMP), the WQIPs to which the City is a party, and the JRMP. FY 2015 is the last year in which JRMP and flood risk management will be lumped together under the heading of “Jurisdictional Component” rather than reported separately.

3.2 FISCAL ANALYSIS METHODS

While the City used the format and guidelines included in the Fiscal Analysis Method for reporting purposes, a few modifications were necessary to address how the City tracks accounts internally. Modifications to the expenditure categories are described in the relevant sections below. In many cases, estimated percentages were used to allocate expenditures into the appropriate municipal permit component categories, including watershed and regional.

3.2.1 Fiscal Analysis Results

3.2.1.1 Expenditures

The City’s FY 2016 Transitional JRMP Regional Program total expenditures ($75,934,083) for implementing the Municipal Permit requirements are summarized in Table 1.

Table 1: FY 2016 Jurisdictional, Watershed, and Regional Expenditures Summary

Jurisdictional Component	
Administration	$11,179,605
Development Planning (including public and private projects)	$1,897,784
Construction (including public and private projects)	$632,646
Municipal (including Non-emergency Fire Fighting expenditures)	$30,146,109
Storm Water Division Capital Improvements Program (CIP)	$7,929,308
Industrial and Commercial	$2,001,544
Residential, Education, and Public Participation	$2,159,991
Illicit Discharge Detection and Elimination (IDDE)	$11,339,120
Jurisdictional Total	**$67,286,108**
Watershed Component[1]	
San Dieguito Watershed	$1,105,348
Los Peñasquitos Watershed	$2,061,071
Mission Bay Watershed	$1,242,769
San Diego River Watershed	$680,843
San Diego Bay Watershed	$2,165,456
Tijuana River Watershed	$686,584
Watershed Total	**$7,942,071**
Regional Component	
Total Copermittee Cost Share for the City of San Diego	$342,001
Additional Regional Costs for education efforts, monitoring, document reviews, regional meeting attendance, and special projects	$363,903
Regional Total	**$705,904**
Total Costs	**$75,934,083**

[1] Watershed Component costs do not include Capital Improvements Program (CIP) costs. CIP costs are only included in the Jurisdictional Component's Storm Water Division Capital Improvements Program Category.

Transitional JRMP Expenditures

The City's FY 2016 Citywide expenditures for implementing the jurisdictional Municipal Permit requirements are depicted in Figure 1. Expenditures were provided as actual costs in most cases, and when the actual costs could not be determined, estimates of actual costs were provided. The Storm Water Division used the expenditure categories detailed in the Fiscal Analysis Method for jurisdictional reporting. However, because of implementation overlap with the City's education, public participation, and residential Municipal Permit components, it is difficult to separate out individual component costs. Therefore, the expenditures for residential, education, and public participation are reported as one expenditure category.

A total of $67,286,108 was expended in FY 2016 to implement JRMP activities citywide. This amount includes costs paid by sewer and water rate payers (which are used for sewer and water-related services) and costs reimbursed by project applicants. An overview of the expenditures reflected in this component is described below.

Administration ($11,179,605)

Activities identified in this section represent personnel and non-personnel expenses for administration and contracts, grant management, citywide management, staff training, reporting, and assessment of the Municipal Permit.

Development Planning ($1,897,784)

Activities identified in this section represent personnel and non-personnel expenses for plan check reviews, incorporating BMPs into project designs, BMP Design Manual development, and General Plan updates. This category includes expenses for private and public projects.

Construction ($632,646)

Activities identified in this section represent personnel and non-personnel expenses for plan check review services, field inspections related to grading permits, public improvements, and building activities. This category includes expenses for private and public projects.

Municipal ($30,146,109)

Activities identified in this section represent personnel and non-personnel expenses for street sweeping, storm drain and channel maintenance, BMP implementation, and municipal facility and activity inspections. Additionally, this section includes the expenditures for Fire Department activities not related to emergency firefighting, such as facility inspections, stormwater BMPs, etc.

Capital Improvement Program ($7,929,308)

Activities identified in this section represent personnel and non-personnel expenses for implementation of new construction and planned improvements to existing facilities for storm water management. Projects may include, but are not limited to, the construction, purchase, or major renovation of buildings, utility systems, and other facilities to achieve storm water requirements. In addition, they may also include land acquisitions and roadway projects to install storm water facilities.

Industrial and Commercial ($2,001,544)

Activities identified in this section represent personnel and non-personnel expenses for inspection of industrial and commercial facilities. This also includes personnel and non-personnel expenses for the stormwater components of Food Establishment Wastewater Discharge Program (FEWD) and Industrial Wastewater Control Program (IWCP) inspections.

Residential, Education, and Public Participation ($2,159,991)

Activities identified in this section represent personnel and non-personnel expenses for educational materials, outreach efforts and events, public service announcements (PSAs), household hazardous waste (HHW) and used oil outreach, and community events.

Illicit Discharge Detection and Elimination ($11,339,120)

Activities identified in this section represent personnel and non-personnel expenses for identification and elimination of illicit discharges, enforcing the City's stormwater ordinance and implementation of the administrative civil penalties and citation process, and the urban runoff monitoring program.

Watershed Expenditures

The City's watershed expenditures during FY 2016 for the implementation of the watershed Municipal Permit requirements were provided as actual costs and when the actual costs could not be determined, estimates of actual costs were provided. The Storm Water Division used the expenditure categories (administration, watershed activities, cost share contribution, and other) detailed in the Fiscal Analysis Method for watershed reporting. The watershed expenditures included in this report only capture City expenditures and do not account for any expenditure disbursed by other Copermittees within the watershed(s).

In total, $7,942,071 was expended in FY 2016 for the implementation of citywide watershed activities. This amount includes costs for the implementation of applicable TMDLs along with special studies.

Regional Expenditures

The City's FY 2016 regional expenditures ($705,904) for the implementation of the regional Municipal Permit requirements are primarily the City's share of regional Copermittee stormwater program costs. Additional costs include estimated staff time to attend regional meetings and other related administration costs. The Storm Water Division used the expenditure categories (administration, cost share contribution, regional activities, and other) detailed in the Fiscal Analysis Method for regional reporting. The regional expenditures included in this report only capture City expenditures, and do not account for any expenditure disbursed by other Copermittees in the region.

3.2.1.2 ***Grant Funding for Special Studies***

In addition to resources identified for Municipal Permit requirements, the City actively seeks grants, and other funding sources, for special studies and Capital Improvement Projects. For the most part, funding for these projects may be limited to the projects specified and the City may restrict funding reallocation to other projects. Therefore, these resources are currently not incorporated in calculations for total Municipal Permit requirements expenditures detailed in Section 2.2.1.4 above. Table 2 lists projects that were initiated and/or in progress during FY 2016. It is important to note that the projects span multiple years and the amounts listed below are not just representative of FY 2016.

Table 2: Funding for Special Projects

Funding Source	Project	Amount	Matching Fund Amount	Total Amount[2]
San Diego County Water Authority (SDCWA)	Memorial Park Infiltration Basin Construction	$255,651.00	$295,904.00	$551,555.00
State Water Resources Control Board (SWRCB)	43rd & Logan Monitoring & Assessment	$689,300.00	$85,362.00	$774,662.00
SDCWA	Bannock Avenue Infiltration Construction	$630,500.00	$893,300.00	$1,523,800.00
SWRCB	Southcrest Park Infiltration Project	$1,880,070.00	$777,970.00	$2,658,040.00
Total Grant Funding		**$3.5 million**	**$2.0 million**	**$5.5 million**

2 Amounts span multiple years and not just FY 2016

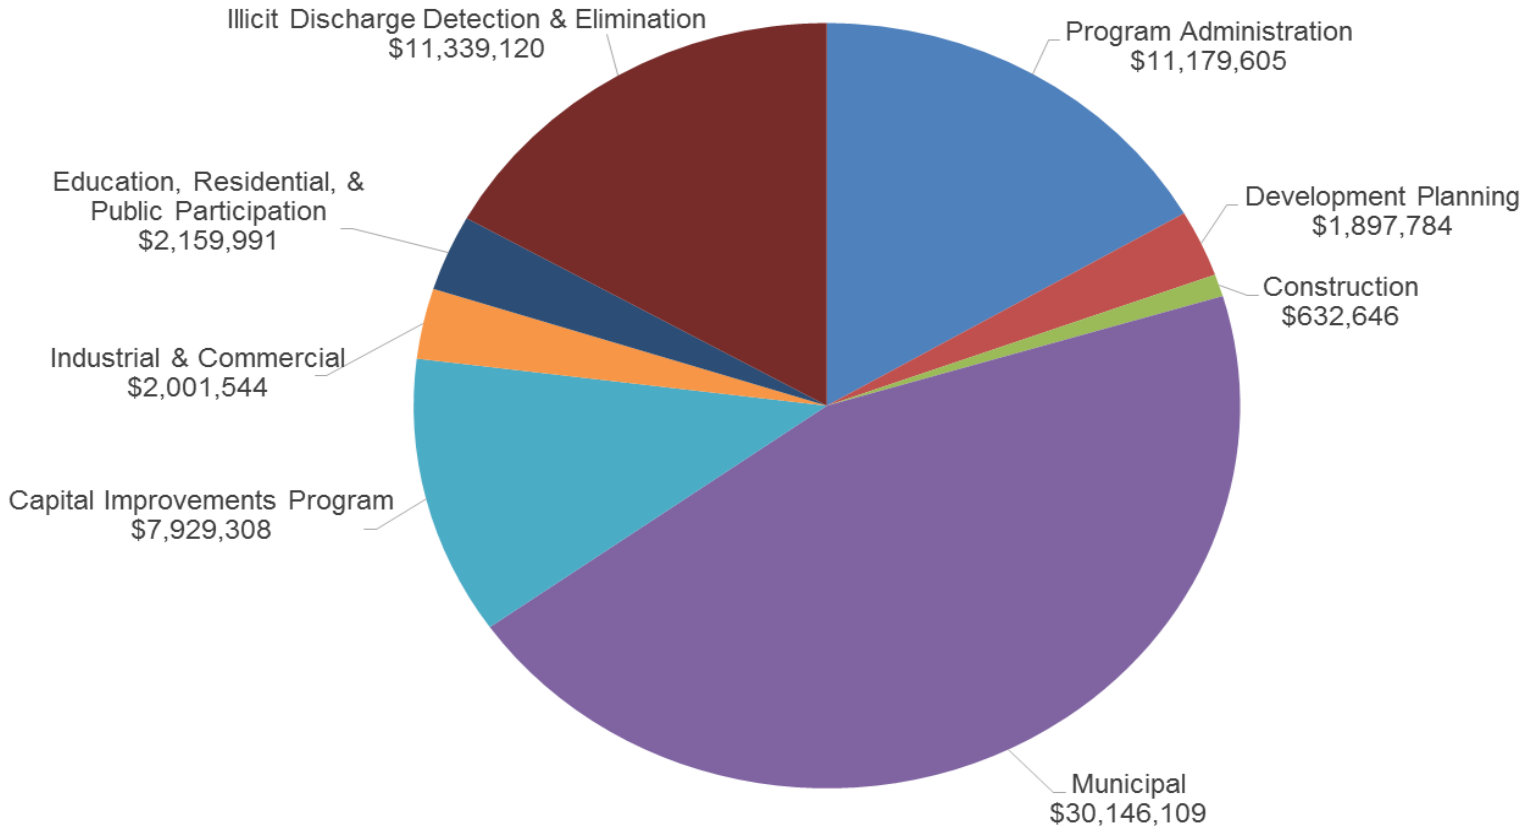

Figure 1: FY 2016 Citywide JRMP Expenditures by Permit Area

This page intentionally blank for printing purposes.

3.2.2 Funding Sources

Citywide implementation of Municipal Permit requirements is funded through four main types of governmental funds: the General Fund, Special Revenue Funds, Enterprise Funds, and Internal Service Funds.

3.2.2.1.1 General Fund

The General Fund is the main fund for the City and is supported by major revenue sources, including property tax, sales tax, transient occupancy tax, and franchise fees. Departments funded by the General Fund provide core community services.

3.2.2.1.2 Special Revenue Funds

Special Revenue Funds account for revenues received for specifically identified purposes. Some of the larger funds that fall under this category include TransNet, Gas Tax, and Special Promotion programs.

3.2.2.1.3 Enterprise Funds

Enterprise Funds are initiated for specific purposes and funded through fees for services. This funding type is designated for the operations, management, maintenance, and development of the department providing the service. For implementation of citywide JRMP activities, activities are funded through the following enterprise funds:

- Airports Fund
- Development Services Enterprise Fund
- Golf Course Enterprise Fund
- Recycling Fund
- Refuse Disposal Fund
- Sewer Revenue Funds
- Water Utility Fund

3.2.2.1.4 Internal Service Funds

Internal Service Funds are comprised of fees for services provided by one City department to another City department or division. For implementation of citywide JRMP activities, activities are funded through the following internal service funds:

- Engineering and Capital Projects Fund
- Equipment Division Funds

This page intentionally blank for printing purposes.

D.3.3 City of San Diego Strategies

City of San Diego's strategies are detailed in Tables D-3 through D-6.

Intentionally Left Blank

Table D-3
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

~~Strikeouts~~ and red text are text edits that have been made up to the current date since the WQIP September 2015 submittal.

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Jurisdictional Strategies								
Note: Strategy IDs with an asterisk indicate those strategies that are considered "jurisdictional" in the MS4 Permit, but are considered enhancements to the JRMP to target highest priority water quality conditions.								
JRMP (E.2-E.7) Strategies (E.3.b.(1)(a))								
E.3 Development Planning								
All Development Projects								
CSD-JRMP-01	Establish guidelines and standards for all development projects; provide technical support related to implementation of source control BMPs to minimize pollutant generation at each project and implement LID BMPs to maintain or restore hydrology of the area or implement easements to protect water quality, where applicable and feasible le. Includes internal coordination and collaboration between City departments (DSD, PWD, and Engineering) to improve success and long-term benefits of BMPs.	Refer to JRMP Section 4. ~~All high priority projects will be inspected annually prior to the rainy season. 20 percent of all projects will be inspected annually. Maintenance inspections include examination of all structural BMPs at a project to verify that each structural BMP is working, being maintained properly, and is in compliance with all applicable City ordinances and permits.~~ May include providing technical support and consultation for other City departments that review project submittals for compliance with Storm Water Standards Manual requirements. May also include review of City projects for compliance with Storm Water Standards Manual requirements.	Prior to FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	FY16 Notes: Revised Storm Water Standards Manual went into effect on February 16, 2016. FY17 Notes: The Storm Water Standards will be revised to include Critical Coarse Sediment Yield Area mitigation measures that were developed through a TAC process, along with other minor clarifications.
CSD-JRMP-02	Develop Design Standards for Public LID BMPs.	Improve quality of design to ensure efficiency and reliability in public designs.	FY14-FY15	Continuous-As needed	Yes	No Change	Yes	FY16 Notes: Draft Green Infrastructure standard drawings and specifications are currently in the review process. FY17 Notes: Plan to develop more standard drawings and specifications for other green infrastructure components.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-03	Outreach to impacted ~~industry~~ commercial, industrial, municipal, and residential development regarding minimum BMP requirement updates.	~~Affects commercial, industrial, and residential development.~~ May include onsite education at the time of inspections, city staff training, and mailers to business owners and prospective business owners.	FY15	Continuous-As needed	Yes	Revised to clarify strategy	Yes	FY16 Notes: Sent out monthly business Tax License renewal mass mailings, which included information about storm water BMPs. Violation location information from the Residential Patrol Program is used to target outreach.
CSD-JRMP-04*	Train staff on LID regulatory changes and LID practices.	Formal training is required for all staff involved in development plan review to increase knowledge of LID BMPs. Goal of training associated with LID practices and regulations is to promote LID implementation and to avoid adverse conditions such as trees planted within swales, or planned drainage patterns which obstruct or inhibit LID performance.	FY16	Continuous-As needed	Yes	No Change	Yes	FY16 Notes: Presented at a PWD training to discuss the revised Storm Water Standards Manual. Provided a plan to check training for plan reviewers at DSD and PWD staff in May 2016.
CSD-JRMP-05*	Amend municipal code and ordinances, including zoning ordinances, to facilitate and encourage LID opportunities to support compliance with the MS4 Permit and TMDLs in a reasonable manner. Ensure consistency with the City of San Diego's BMP Design Manual. Update the Storm Water Standards Manual accordingly.	Municipal codes and ordinances will be brought to City Council for consideration to encourage LID implementation (e.g., runoff detention and filtration using natural filters and storm water retention for reuse). LID storm water management will be encouraged in proposed codes and ordinances associated with development and redevelopment projects, which are brought to City Council for consideration.	FY15	Continuous-As needed	Yes	No Change	No	None
CSD-JRMP-06	Provide technical education and outreach to the development community on the design and implementation requirements of the MS4 Permit and Water Quality Improvement Plan requirements.	Technical education and outreach to the development community includes outreach on design standards, City design manuals, and the WMAA.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Presented the revised draft Storm Water Standards at two public workshops in September 2016.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
Priority Development Projects (PDPs)								
CSD-JRMP-07	For PDPs, administer a program and provide technical support to other City departments to ensure implementation of on-site structural BMPs to control pollutants and manage hydromodification by developing City wide storm water development standards and design guidelines.	Administer a program in coordination with other City departments to promote and confirm a thorough understanding of requirements for implementing structural BMPs that control pollutants and manage hydromodification. Includes requirements to confirm proper design and construction through processes controlled by other City departments. Please see Attachment 1 for details on PDP related BMPs that will be implemented to address sources causing or contributing to the HPWQC.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City enhanced the Storm Water Quality Management Plan (SWQMP) template that was developed as a Copermittee effort for developers to use.
CSD-JRMP-08	Institute a program to verify and enforce maintenance and performance of treatment control BMPs.	Refer to JRMP Section 4.5. The Storm Water Division is responsible for annually verifying that all structural BMPs within its inventory are being properly maintained. The Storm Water Division performs verification through an Annual Maintenance Verification mailing and a direct maintenance inspection program. Parties responsible for maintenance of structural BMPs are required to complete and sign the Annual Maintenance Verification, certifying that the structural BMPs are being properly maintained. Direct maintenance inspections will be performed at all projects for which an Annual Maintenance Verification Form was not completed. All high priority projects will be inspected annually prior to the rainy season. 20 percent of all projects will be inspected annually. Inspect additional BMPs as needed. Medium and low priority projects will not require inspection if they have completed their Annual Maintenance Verification form, unless they are part of the 20 percent of projects that are annually inspected.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	FY17 Notes: For porous pavement BMPs, staff plan to use an infiltrometer to measure BMP effectiveness.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-09	Update ~~BMP Design Manual procedures~~ Storm Water Standards Manual to determine nature and extent of storm water requirements applicable to development projects and to identify conditions of concern for selecting, designing, and maintaining appropriate structural BMPs.	Refer to JRMP Section 4. Storm Water Standards Manual will be updated in accordance with the Permit and made available on the City's website.	FY15	Continuous every 5 years/ permit cycle	Yes	Revised to clarify strategy	Yes	FY17 Notes: The Storm Water Standards will be revised to include Critical Coarse Sediment Yield Area mitigation measures that were developed through a TAC process, along with other minor clarifications.
CSD-JRMP-10*	Amend BMP Design Manual for trash areas. Require full four-sided enclosure, siting away from storm drains and cover. Consider the retrofit requirement.	Amend BMP Design Manual and zoning standards/requirements which address reduction of pollutants for common areas of trash build-up (e.g. restaurants, supermarkets, "big box" retail stores with food, pet stores). Most effective method for source control of bacteria and trash is to employ four-sized trash enclosures with a cover over trash areas.	FY15	Completed within schedule	Yes	No Change	Completed	FY16 Notes: Developed a fact sheet on trash enclosures (See Part 1, Appendix E of the Storm Water Standards).
CSD-JRMP-11*	Amend BMP Design Manual for animal-related facilities, such as such as animal shelters, "doggie day care" facilities, veterinary clinics, breeding, boarding and training facilities, groomers, and pet care stores.	Amend BMP Design Manual and zoning requirements (including retrofits) to provide supplemental standards for animal facilities (including animal shelters, dog daycares, veterinary clinics, groomers, pet car stores, and breeding, boarding, and training facilities). Supplemental standards may include requiring covered trash enclosures, identification of landscaped relief areas on site plans, ensuring drainage connections and treatment swales for areas that will not drain to the sanitary sewer, as well as inspection of grading, drainage, and landscaping for outdoor exercise areas.	FY15	Completed within schedule	Yes	No Change	Completed	FY16 Notes: Developed a fact sheet on animal facilities (See Part 1, Appendix E of the Storm Water Standards).
CSD-JRMP-12*	Amend BMP Design Manual for nurseries and garden centers.	Amend BMP Design Manual to provide supplemental standards for plant nurseries and garden centers. Standards will focus on reducing irrigation runoff, and loading of sediment, pesticides, and nutrients. Measures may include: covered outdoor storage, green waste management BMPs, improved irrigation efficiency to reduce dry-weather runoff, and containment of runoff from impervious areas where plants and materials are stored.	FY15	Completed within schedule	Yes	No Change	Completed	FY16 Notes: Developed a fact sheet on nurseries (See Part 1, Appendix E of the Storm Water Standards).

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-13*	Amend BMP Design Manual for auto-related uses.	Amend BMP Design Manual to provide supplemental standards for automotive-related uses to reduce loading of metals, oils, grease, and trash. Measures may include: four-sized covered trash enclosures, and careful review of auto-related usage areas (e.g. garage bays at repair shops) for grading, drainage, and drain connections to sanitary sewer systems.	FY15	Completed within schedule	Yes	No Change	Completed	FY16 Notes: Developed a fact sheet on auto-related facilities (See Part 1, Appendix E of the Storm Water Standards).
CSD-JRMP-14*	~~Develop and administer an alternative compliance program for on-site structural BMP implementation (includes identifying Watershed Management Area Analysis [WMAA] candidate projects). Refer to Section 4.2.5.~~ Offsite Alternative Compliance Option	Refer to JRMP Section 4.2.3.1. WMAA and Water Quality Equivalency Study completed in FY15. Phase I, applicant implemented projects, is anticipated to be in effect by the end of FY16 contingent on Regional Board's approval of the WQIPs. Phase II, the expansion of the program to include other alternative compliance options, is expected to begin in FY16.	FY15	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	FY16 Notes: Phase 1 of the Alternative Compliance Program (ACP) went into effect on 2/16/16. Development on Phase 2 of the ACP, including public involvement via Technical Advisory Committee (TAC) meetings, began during FY16. FY17 Notes: Continue developing Phase 2 of ACP. Topics to discuss include: environmental permitting, long-term facility maintenance, legal agreements and credit tracking, maintenance and permitting rules, and credit tracking and legal rules. Public involvement via TAC meetings will continue.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
E.4 Construction Management								
CSD-JRMP-15	Administer a program to oversee implementation of temporary BMPs that control sediment and other pollutants during the construction phase of projects. Includes requirements to inspect at appropriate frequencies and effectively enforce requirements through process controlled by other City departments.	Refer to JRMP Section 5. Inspections performed by the City or City staff provide verification that each site is in conformance with the Construction Storm Water BMP Performance Standards in the Storm Water Standards Manual. Inspections are tracked to ensure that they meet the minimum inspection frequencies. High priority active and inactive sites are inspected bi-weekly during the rainy season. Medium priority sites are inspected monthly during the rainy season. Low priority sites are inspected as-needed during the rainy season. All sites are inspected as-needed during the dry season. Please see Attachment 1 for details on construction BMPs that will be implemented to address sources causing or contributing to the HPWQC.	FY16	Continuous-Ongoing	Yes	No Change	Yes	None
E.5 Existing Development								
Commercial, Industrial, Municipal, and Residential Facilities and Areas								
CSD-JRMP-17	Administer a program to require implementation of minimum BMPs for existing development (commercial, industrial, municipal, and residential) that are specific to the facility, area types, and PGAs, as appropriate. Includes inspection of existing development at appropriate frequencies and using appropriate methods.	Refer to JRMP Sections 6, 7, and 8. All industrial and commercial areas are inspected once within ~~the Permit term (~~five years~~)~~. At a minimum, 20 percent of industrial and commercial areas receive onsite inspections every year. Municipal facilities are inspected twice annually, once prior to the rainy season, and once during the rainy season. Residential management areas (RMAs) within the City are to be inspected once within five years ~~the Permit term~~, at a minimum. Please see Attachment 1 for details on updated minimum BMPs that will be implemented to address sources causing or contributing to the HPWQC.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	<u>FY16 Notes:</u> The City began patrols of residential management areas in FY16. See the City's JRMP Annual Report form, also included in Appendix D, for numbers of inspections, violations, and enforcement actions for all types of existing development.
CSD-JRMP-18	Update minimum BMPs for existing residential, commercial, and industrial development. Specific updates to BMPs include required street sweeping, catch basin cleaning, and maintenance of private roads and parking lots in targeted areas.	Refer to JRMP Appendix IX. Please see Attachment 1 for details on updated minimum BMPs that will be implemented to address sources causing or contributing to the HPWQC.	FY15	Continuous every 5 years/ permit cycle	Yes	No Change	Completed	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-19	Outreach to property managers and trash haulers to elevate the emphasis of power washing as a pollutant source.	Emphasis will be placed on non-compliant washing as an enforceable violation. Will occur city-wide in residential, commercial, and industrial areas.	FY15	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: City staff utilized a new fact sheet consistent with updated permit conditions to inform non-compliant power-washing operators of BMP requirements. The fact sheet was also provided to the San Diego Downtown Partnership as part of the Division's education and outreach effort for downtown businesses. FY17 Notes: The City anticipates distributing a comprehensive BMP guidebook to businesses and business district leaders in areas with regular power-washing activities.
CSD-JRMP-20	Implement property based inspections.	Property-based inspections increase awareness and responsibility for individual properties to tackle issues associated with trash, landscapes, and parking areas. Expanding beyond the business-level inspections will achieve different and more effective opportunities for education, outreach, inspection, and enforcement to encourage water conservation strategies. Inspection frequency dependent on type of facility. See CSD-9 for inspection frequency.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Inventoried properties have been mapped in GIS. The City's inspection data management system has also been set up to track and map the properties inspected each fiscal year and over the Permit cycle.
CSD-JRMP-21	Review policies and procedures to ensure discharges from swimming pools meet permit requirements.	Verify and bring to City Council for consideration an update (as needed) for the City's Municipal Code (43.0301) to meet new permit requirements for swimming pool discharges.	FY15	Continuous-As needed	Yes	No Change	Completed	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-22*	Promote and encourage implementation of designated BMPs for residential and non-residential areas.	Landscape-based rebates are a "gateway" for adoption of other beneficial practices and are one of the nonstructural methods which address impacts from single-family residential areas (City of San Diego 2011 program development background study). Residential incentives can include: education and training ~~(neighborhood watershed field days)~~, and aggressive subsidies or rebates for grass replacement and rainwater harvesting. Existing programs will be expanded overall, and ~~also have targeted expansion within specific subwatershed, particularly with highest water quality priority conditions. W~~will occur city-wide in residential, commercial, and industrial areas.	Prior to FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	None
MS4 Infrastructure								
CSD-JRMP-23	Implementation of operation and maintenance activities (inspection and cleaning) for MS4 and related structures (catch basins, storm drain inlets, channels as allowed by resource agencies, detention basins, pump stations, etc.) for water quality improvement and for flood control risk management.	Refer to JRMP Section 7. Storm drain inlets are inspected ~~at least once per year~~ generally annually, and cleaned when accumulated materials are present. Other MS4 and related structures are inspected as needed.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	FY16 Notes: 7,087 storm drain inspections were completed in the WMA, and 386.5 tons of sediment, trash, and debris were removed during storm drain cleaning. In addition to routine maintenance of the MS4, across its entire jurisdiction the City repaired or replaced 12 pump stations and modernized another 14 pump stations, televised 28,000 linear feet of pipe in 62 locations, and began the development of the Waterways Maintenance Plan and Channel Maintenance Prioritization Plan. Removed 0.35 tons of trash from routine open channel trash cleaning.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-24*	Enhanced catch basin cleaning to increase pollutant removal (up to 4 times per year) in the rainy season.	To increase pollutant load removal, catch basins will be cleaned up to four times per year in the rainy season. The City of San Diego's pilot study found that major pollutants may vary from neighborhood to neighborhood (yard waste versus trash and sediment). Implementation may be adapted based on catch basin record keeping and cleaning optimization. Increase in frequency will be phased over 4 Fiscal Years.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Additional staff was hired to begin phased program ramp up, FY17 Notes: Begin performing enhanced catch basin cleaning.
~~CSD-JRMP-26~~	~~Increased frequency of catch basin inspection and as-needed cleaning.~~	~~For every segment of channel that is cleared, the City will conduct an inspection and as-needed cleaning of every catch basin within 100 feet of the cleared segment of channel. Additional inspection and as-needed cleaning will occur every three months for one year after the segment of channel is cleared.~~	~~FY13~~	~~Completed within schedule in 5 years (ends FY18)~~	NA	Incorporated into CSD-JRMP-27	NA	NA
CSD-JRMP-27	Implement additional BMPs in coordination with Master Maintenance Plan Enhancements.	For each channel segment, City will either 1) implement landscape retrofits on one residential property, 2) increase street sweeping frequency by prioritizing high traffic commercial routes adjacent to maintained channel, 3) construct and maintain a stormwater management BMP (e.g. biofiltration system, permeable pavement, vegetated swale, restored wetlands), or 4) increase frequency of catch basin inspection and as-needed cleaning for one year after maintenance.	FY13	Completed within schedule in 5 years (ends FY18)	NA	Strategies CSD-JRMP-26 and CSD-JRMP-36 were combined into one strategy, CSD-JRMP-27, to streamline recordkeeping	Yes	FY16 Notes: Not applicable, channel maintenance did not occur in the Los Peñasquitos WMA during FY16. FY17 Notes: If channel maintenance activities occur in this watershed during FY17, this mitigation approach may be used in FY17.
CSD-JRMP-28	Proactively repair and replace MS4 components to provide source control from MS4 infrastructure.	In order to limit inflow of pollutants and reduce pollutant loads, proactive measures will be taken to improve, repair, and replace MS4 components. The City of San Diego will start a multi-year program of repairing and replacing storm drain pipes to reduce sediment loading to the MS4. Development of an assessment management program and bond issues will be addressed. Exploration of daylighting pipes will take place where feasible and appropriate.	FY16	Continuous-Ongoing	Yes	No Change	Yes	None
CSD-JRMP-29	Replacement of hard assets.	Includes needed replacement of storm drains and structures.	FY16	Continuous-Ongoing	Yes	No Change	Yes	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-30	Coordinate with other City departments (PUD) to implement controls to prevent infiltration of sewage into the MS4 from leaking sanitary sewers.	Refer to JRMP Section 7.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The Tiger Team was established in FY16 as a joint effort between TSW & PUD to identify and eliminate exfiltration sources from the sanitary sewer system to the MS4. Since the team was created, it has successfully eliminated one major source. FY17 Notes: For FY17, the team is focusing on two sites within the City and are identifying more.
CSD-JRMP-31*	Identify sewer leaks and areas for sewer pipe replacement prioritization.	Risk assessment to include identifying targeted areas (age, location, proximity to MS4), coming up with methodology, pilot, desktop exercise/analysis.	FY16	Continuous-As needed	Yes	No Change	Yes	None
Roads, Streets, and Parking Lots								
CSD-JRMP-32	Implement operation and maintenance activities for public streets, unpaved roads, paved roads, and paved highways.	Refer to JRMP Section 7.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Approximately 21,030 curb miles of roads, streets and highways were swept in the WMA.
CSD-JRMP-33	Outreach to street sweeping enhancement-targeted areas.	Division staff will conduct a thorough education and outreach effort beginning months in advance of the expansion of sweeping routes. Staff will work with the affected Council offices, community stakeholders, non-governmental organizations and community groups to build community awareness and acceptance of the enhanced sweeping program.	FY16	Continuous-As needed	Yes	No Change	Yes	FY16 Notes: Developed targeted communication materials for lead commercial property managers that covered various topics, including enhanced street sweeping.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-34*	Enhance street sweeping through equipment replacement (replace mechanical sweepers with regenerative air sweepers) and route optimization (sweep all routes twice per month) in targeted areas.	Following outreach and posting, street sweeping efforts will be increased in target areas (those with sediment or metals as a highest priority water quality conditions). Replacement of street sweeping equipment with high-efficiency regenerative air and vacuum-assisted sweepers over time is expected to further increase load reductions (even if current routes and frequencies remain unchanged).	FY17	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: City purchased five vacuum sweepers. Existing routes in the Los Peñasquitos Watershed were identified and recommended to be swept. Also began sweeping various routes on an individual basis to assess sweeper function. FY17 Notes: The City plans to develop a route optimization process in Los Peñasquitos.
CSD-JRMP-35*	Initiate sweeping of medians on high-volume arterial roadways.	Medians of roadways are also a potential source of pollutants. Consider implementing or increasing sweeping of medians. Consider mechanical and hand sweeping techniques.	FY17	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Median sweeping began in FY16. A total of 4,315 median miles were swept in FY16 City-wide.
~~CSD-JRMP-36~~	~~Implement additional street sweeping (Settlement Agreement).~~	~~City shall increase street sweeping frequency by prioritizing high traffic commercial routes adjacent to maintained channel with vacuum-assisted sweeper for every 400 linear feet of vegetation that is removed (except for removal of invasive species, e.g., Arundo) within a drainage area. Sweeping shall be conducted in median areas that are not subject to regular sweeping routes, and shall occur at a frequency of at least once per quarter for one calendar year after maintenance. Funding and resources were secured for FY2013. Funding for future fiscal years is contingent on annual budget approval by City Council.~~	~~FY13~~	~~Completed within schedule in 5 years (ends FY18)~~	~~NA~~	~~Incorporated into CSD-JRMP-27~~	~~NA~~	~~NA~~
Pesticides, Herbicides, and Fertilizer BMP Program								
CSD-JRMP-37	Require implementation of BMPs to address application, storage, and disposal of pesticides, herbicides, and fertilizers on commercial, industrial, and municipal properties. Includes education.~~ permits, and certifications.~~	Refer to JRMP Sections 7, 8, and 9.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Retrofit and Rehabilitation in Areas of Existing Development								
CSD-JRMP-38	Development of a strategy and identification of candidate areas of existing development necessary for implementing retrofit projects and facilitate the implementation of such projects.	Refer to JRMP Appendix XIX. The Offsite Alternative Compliance Program will include methods for identifying and assessing potential retrofit projects in existing development areas. Retrofit project selection will be based upon a variety of factors including proximity to high priority water quality conditions, potential pollutant load removal effectiveness, and feasibility of implementation. The program will include protocols related to funding mechanisms for project construction and long-term maintenance, payment and credit structures, and water quality equivalency standards. Specific retrofit projects are included in the Non-JRMP, Structural Strategies categories.	FY18	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	No Change	NA, Not scheduled to be implemented in FY17	None
CSD-JRMP-39	Development of a strategy and identification of candidate areas necessary to implement stream, channel, or habitat rehabilitation projects and facilitate implementation of such projects.	Refer to JRMP Appendix XIX. The Offsite Alternative Compliance Program ~~(Section 4.2.5.4 and Appendix P)~~ will include methods for identifying and assessing potential stream, channel, or habitat rehabilitation projects in existing development areas. Rehabilitation project selection will be based upon a variety of factors including existing stream or habitat degradation, potential future cumulative stream or habitat impacts, and feasibility of implementation. The program will include protocols related to funding mechanisms for project construction and long-term maintenance, payment and credit structures, and water quality equivalency standards.	FY18	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	Revised to clarify strategy	NA, Not scheduled to be implemented in FY17	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
E.2 Illicit Discharge, Detection, and Elimination (IDDE) Program								
CSD-JRMP-40	Implement Illicit Discharge, Detection, and Elimination (IDDE) Program per the JRMP. Requirements include: maintaining an MS4 map, using municipal personnel and contractors to identify and report illicit discharges, maintaining a hotline for public reporting of illicit discharges, monitoring MS4 outfalls, and investigating and addressing any illicit discharges.	Refer to JRMP Section 3. ~~The City must visually inspect at least 500 identified and prioritized major MS4 outfalls at least annually during dry weather conditions.~~ Inspections of major MS4 outfalls conducted in response to public reports and staff or contractor reports and notifications may count toward the required visual inspections of MS4 outfall discharge monitoring stations. Please see Attachment 1 for details on how the IDDE Program will address sources causing or contributing to the HPWQC.	Prior to FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	FY16 Notes: 518 cases were investigated, including 353 reported by the public; 429 illicit discharges or illicit connections were eliminated; and 436 enforcement actions and 197 escalated enforcement actions were issued in the WMA. City-wide, the number of discharges investigated has almost tripled since FY14 (1,186 in FY14 to 3,335 in FY16). The increase is believed to be mainly due to increased reports of irrigation runoff discharges from the public and from PUD.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	**Implemented as planned in current FY (FY16)? (Y/N)** MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: **Modification for FY17 (If modified or canceled, provide rationale)** MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: **Plan to implement next FY (FY17)? (Y/N)** MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
E.7 Public Education and Participation (B.3.b(1)(a)(iii))								
CSD-JRMP-42	Implement a public education and participation program to promote and encourage development of programs, management practices, and behaviors that reduce the discharge of pollutants in storm water prioritized by high-risk behaviors, pollutants of concern, and target audiences.	Refer to JRMP Section 9.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City continued its extensive education and outreach effort across each of the six watershed areas in the City. This included regular attendance at community events in order to share education materials and the continuing sponsorship of community clean-up and pollution prevention education events with the City's Non-Governmental Organization partners, including I Love A Clean San Diego and San Diego Coastkeeper.
CSD-JRMP-43	Continue implementation of a Pet Waste Program.	Pet Waste Program includes outreach on "Scoop the poop", installation of posts for dispensers, distribution of lawn signs, and attendance at dog-related community activities.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Printed and distributed more pet waste signage. FY17 Notes: New bag dispensers will be installed and there will be outreach at community events. More signage will be installed.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-44	Promote and encourage implementation of designated BMPs in commercial and industrial areas.	Provide education and outreach on BMPs for commercial businesses and industrial facilities. Will occur city-wide in non-residential areas.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City continued its mandated commercial and industrial facility inspection effort sharing industry specific education materials with business and property owners when BMP deficiencies were discovered. FY17 Notes: The City will continue its inspection and education effort while also introducing alternative compliance strategies for new developments and sharing the updated Storm Water Standards Manual with target audiences.
CSD-JRMP-45*	Expand outreach to homeowners' association (HOA) common lands and HOA incentives.	Approaches to consider include: offering incentives to HOAs and maintenance districts to adopt water-conserving/efficiency and stormwater-reduction changes to their landscapes, irrigation, and maintenance; conducting workshops with property managers; providing supplemental standards, inspection, or enforcement for HOA-managed properties.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Finalized updated code compliance fact sheets applicable to common lands activities. Coordinated water conservation pollution prevention incentive programming with PUD.
CSD-JRMP-46*	Develop an outreach and training program for property managers responsible for HOAs and maintenance districts.	Approaches to engage HOAs and property managers include: conducting workshops with property managers, providing supplemental standards, inspections or enforcement around HOA properties, and offering incentives to HOAs and maintenance districts to adopt changes to landscapes, irrigation, or maintenance which promote water conservation or storm water reduction. Property managers are also a target for enhanced outreach.	FY16	Continuous-Ongoing	Yes	No Change	Yes	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-47	Develop a targeted education and outreach program for homeowners with orchards or other agricultural land uses on their property.	Educate residents on practices of small-scale or on-site composting to protect local water quality. May include targeted education of owners of chickens to address bacteria. Outreach can be coordinated through the San Diego County Agriculture, Weights, and Measures division.	FY16	Continuous-Ongoing	Yes	No Change	Yes	None
CSD-JRMP-48	Enhance school and recreation-based education and outreach.	Develop curriculum and establish distribution in public schools. Includes education on water conservation.	FY15	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City worked with its NGO partners to expand the number of children reached through school-aged education programs. The Division updated curriculum materials for Project Swell in conjunction with San Diego Coastkeeper and provided printed education materials to leaders with the Ocean Discovery Institute in hope of establishing new partnerships with that organization. FY17 Notes: The Division will be expanding the Blue Brigade Middle and High School program sponsored with I Love A Clean San Diego. The Division will also distribute written education materials through the newly completed Ocean Discovery Institute headquarters.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-49	Develop education and outreach to reduce irrigation runoff.	Example approaches to reduce or eliminate irrigation runoff may include: education and outreach, prohibition, enhanced enforcement of existing prohibitions, and pilot projects such as the City of Del Mar's pilot door hanger project.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The Division used communication materials designed to address potential threats from El Nino rains as a new vehicle for educating the public about the need to eliminate irrigation runoff. FY17 Notes: The Division is working with partner agencies and other City operations to develop new education and outreach efforts targeting urban runoff.
CSD-JRMP-50*	Develop and distribute regional training materials for water-using mobile businesses.	Consider development of supplemental standards for mobile businesses including: covered trash enclosures, careful review of washing areas (grading, drainage, landscaping, sanitary sewer system connectivity), and appropriate signage (either through zoning for retrofits or "best fix" approaches, or through BMP Design Manual standards). Businesses may include carpet cleaners, tile installers, plumbers, etc.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	FY16 Notes: The Division updated its suite of fact sheets related to mobile business activities to bring them up-to-date with current permit requirements.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-JRMP-51*	Enhance education and outreach based on results of effectiveness survey and changing regulatory requirements.	Use effectiveness surveys to enhance existing education and outreach programs while proactively keeping up with and incorporating changing regulatory requirements.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The Division annually conducts thousands of event-based surveys gathering information about public understanding of pollution prevention and about the City's storm water management efforts. The survey effort continued in FY16 and allowed the Division to update its education materials and strategies based on current findings about public awareness. FY17 Notes: The Division will contract with a new public opinion research firm to perform a statistically valid assessment of general public awareness. The finding from that effort will be combined with the discoveries of the ongoing event survey effort to drive future outreach priorities.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-JRMP-52	Continue to promote and encourage implementation of Integrated Pest Management (IPM) for residents and businesses.	The City will continue to provide education on IPM techniques during presentations and on the City's Think Blue website.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The Division focused its outreach and education efforts regarding IPM in the Peñasquitos Watershed given vector control concerns associated with limited water flow through the lagoon mouth. City forces addressed the water flow issues and used their time in the area as a means of education the surrounding community about vector control and pest management strategies consistent storm water controls. FY17 Notes: The Division will continue to expand its new partnership with the San Diego Native Plant Society and work with that group to develop new strategies promoting IPM.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-53*	Improve consistency and content of websites to highlight enforceable conditions and reporting methods.	Websites will be updated to provide a user-friendly format and clarity for stormwater violations, conditions which citizens can and should report, and how to make such reports. Examples of reports for common incidents will be developed and posted which may vary locally and regionally. Photographs of allowable practices as well as illegal practices should be shown for utmost clarity. Displaying hotline numbers prominently on the website and near the photographs of illegal practices will ensure that those seeking to report will be able to do so easily. Also ensure hotline number and website are searchable and can be retrieved by simple internet searches.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City completely revamped its website improving public access and availability of web-based resources including the storm water management and pollution prevention materials developed and posted by the Division. The Division also brought forward the environmental response documents associated with its channel maintenance efforts. These documents include descriptions of water quality protections undertaken by the City allowing the public to view our agency's watershed protection strategies. FY17 Notes: The Division will review and renew the entire portfolio of education materials available for public downloading from the City's website.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
E.6 Enforcement Response Plan								
CSD-JRMP-54	Continue to implement escalating enforcement responses to compel compliance with statutes, ordinances, permits, contracts, orders, and other requirements for IDDE, development planning, construction management, and existing development in the Storm Water Code Enforcement Unit's Standard Operating Procedures (SOPs) - Enforcement Response Plan.	Refer to JRMP Appendix XIII.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	None
CSD-JRMP-55*	~~Increase~~ Focused enforcement of irrigation runoff.	~~Increased~~ Focused enforcement policies against irrigation runoff will be established in tandem with the education and outreach programs on how these actions lead to pollutant loading. By shifting to property-based inspections irrigation runoff can be handled as enforceable violations once the public is well-informed.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	FY16 Notes: Performed irrigation patrols and Residential Management Area Patrols throughout FY16. Also receive referrals from Water Conservation at PUD for over irrigation cases that have runoff entering the curb and gutter.
CSD-JRMP-56*	~~Increase~~ Focused enforcement of water-using mobile businesses.	In addition to education, pollution associated with mobile business sources can be handled through policy, code development, inspections of business practices, and enforcement.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	FY16 Notes: Performed early morning patrols to find mobile sources and over-irrigation to the MS4.
CSD-JRMP-57*	~~Increase~~ Focused enforcement of all minimum BMPs for existing residential, commercial, and industrial development.	~~Increased~~ Focused enforcement of existing development minimum BMPs.	FY16	Continuous-As needed	Yes	Revised to clarify strategy	Yes	None
CSD-JRMP-58*	~~Increase~~ Focused enforcement associated with property-based inspections.	Shifting inspections from businesses-specific to property-based will increase effectiveness and sense of responsibility and ownership. Education and outreach must be followed up with inspection and enforcement of regulations to encourage proper landscape and water conservation strategies.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-59*	~~Increase~~ Focused enforcement of sweeping and maintenance of private roads and parking lots in targeted areas.	Refer to Minimum BMPs in JRMP (Appendix IX).	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	None
CSD-JRMP-60*	~~Increase~~ Focused identification and enforcement of actionable erosion and slope stabilization issues on private property and require stabilization and repair.	Eroding and unstable slope areas on private property (excluding construction sites) will be identified as potential sediment loading sources and subject to enforcement. In the short term, this will target enhanced inspection and enforcement programs to ensure inspectors address erosion and slope instability for the purpose of education.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	FY16 Notes: City staff completed patrols of construction sites that included sediment discharges. They also began the Residential Patrol Program, which notes and addresses sediment discharges in residential areas.
Non-JRMP Strategies (Optional Strategies, B.3.b(1)(b))								
Nonstructural Strategies								
CSD-NS-01	Conduct a special study on outfall repair/relocation.	Implement fourth phase of a special study which will identify priority locations for outfall repair/relocation and sediment load reductions. Funding and resources have been secured for FY2016.	FY16	One time	Yes	No Change	Yes	FY16 Notes: Completed tech memo "Sediment Load Reduction Quantification through Outfall Repair and Relocation for the Los Peñasquitos WMA. Refer to Section 5.3 in Appendix C for more information.
CSD-NS-02	Investigation and research of emerging BMP technology.	Annually the Construction & Development Standards Group identifies new tasks to conduct literature review, communication with researchers outside of the City, physical testing and experimentation of new or emerging technologies, and other research with the goal of updating tools available for reducing pollutant loads from development and redevelopment sites. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-As needed	Yes	No Change	Yes	FY16 Notes: Continued monitoring and assessment of the biofiltration basin and curbside filtration units at 43rd and Logan.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-NS-03	Approve and implement a green infrastructure policy.	The City will begin developing a policy in FY16 that will increase the green infrastructure requirements for City CIP projects. This policy will be coordinated with ongoing efforts to update City design manuals and LID design standards for public LID BMPs. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous- As needed	Yes	No Change	Yes	None
CSD-NS-04	Create a manual that outlines right-of-way design standards.	Create a manual that includes flood control performance standards, permanent BMP elements design standards, design standards for green streets and other BMPs, and maintenance access. Provides drainage and streets design standards. Opportunity to merge various existing manuals and provide consistency. Funding and resources were secured for FY2015.	FY15	Completed within schedule	Yes	No Change	Yes	FY17 Notes: Will be published in FY17.
CSD-NS-05	Create a fund that allows habitat acquisition, protection enhancement, and restoration in conjunction with other cooperating entities including community groups, academic institutions, state county, and federal agencies, etc.	This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, 3) partners have been identified and formal MOUs have been developed, and 4) consensus and community support has been achieved. Resources necessary to implement this strategy include a coordinator or manager and maintenance for acquired or restored lands. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. It is anticipated that a minimum of 1 FTE will be needed to implement the program. Once initiated, the time frame for planning to initial implementation is expected to be 3 years. Implementation is in perpetuity as long as funding is retained.	Must be triggered	Continuous as funding allows	Not Triggered	No Change	If Triggered	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-NS-06	Residential and Commercial BMP: Rain Barrel	The existing PUD rebate program will continue for residential properties and expand for commercial properties for water collection, conservation, and reuse with rain barrels. Will occur city-wide in residential areas. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Rebates for rain barrels were issued to capture 772,740 gallons of rainwater City-wide.
CSD-NS-07	Residential and Commercial BMP: Grass Replacement	The existing PUD grass replacement cash rebate program will continue and expand for residential and commercial properties. Program encourages a reduction in water use through the conversion of non-artificial grass to water wise plant material, while maintaining a high level of living landscape to benefit the environment. Program does not allow for conversion to artificial turf. Will occur city-wide in residential and commercial areas. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Rebates were issued to convert 203,599 sq. ft. of turf in the WMA.
CSD-NS-08	Residential and Commercial BMP: Downspout Disconnect	Disconnecting downspouts provide alternate runoff pathways from rooftops, sidewalks, driveways, and roads. Disconnecting downspouts from residential areas to pervious land can allow for depression storage and infiltration. Will occur city-wide in residential and commercial areas. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Completed downspout redirect guidelines in collaboration with PUD.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-09	Residential and Commercial BMP: Microirrigation	The existing PUD micro-irrigation rebate program will continue and increase for residential and commercial properties. Application of microirrigation aims to improve the efficiency of landscape irrigation through the precise application of water. Will occur city-wide in residential areas. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Rebates were issued for installing microirrigation for 29,531 sq. ft. of landscaping in the WMA.
CSD-NS-10	Provide Onsite Water Conservation Surveys.	Provide free onsite water conservation surveys to commercial and residential customers to reduce overirrigation and to encourage water conservation. Will occur city-wide in residential and commercial areas. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	None
CSD-NS-11	Enhance and expand trash cleanups through community-based organizations involving target audiences.	Increase effectiveness and reach of trash/beach cleanups and community based efforts by engaging community groups to self-define and carry-out trash clean-ups. Longstanding partnerships and sponsorships with I Love A Clean San Diego and others are recommended to be continued and enhanced. To effectively target stream clean-up efforts, focus on partnerships with community organizations which provide strong engagement with target audiences and communities. Cleanups target trash, however a reduction in trash also reduces other pollutants such as bacteria and nutrients that can attach to food waste wrappers and yard waste. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY 16 Notes: The City partnered with I Love a Clean San Diego on five clean-ups, which resulted in the removal of 5,468 pounds of trash and debris in the WMA.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-NS-16	Conduct a Comprehensive Benefits Analysis to identify benefits other than water quality that are applicable to each of the specific WQIP strategies.	The analysis identifies which other benefits apply to each strategy, and documents the assumptions making those linkages. The delineation of other benefits to strategies includes a general description of each benefit, and a listing of the assumptions that were made to link those benefits to strategies. In addition, the other benefits are characterized with respect to who is directly affected: the city, local residents, local businesses, or visitors. This analysis may be used as part of the adaptive management process to modify future strategies. Funding and resources were secured for FY2015.	FY15	Completed within schedule	Yes	No Change	No	None
CSD-NS-17	Address and clean up trash from transient encampments with collaboration from the Environmental Services Department, which consults with the Homeless Outreach Team.	Coordinate with the Environmental Services Department, in conjunction with the Homeless Outreach Team, to respond to transient encampment trash complaints. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	None
CSD-NS-18	Continue participating in source reduction initiatives.	Source reduction initiatives are ultimately the most effective measure to remove pollutants from surface waters, where feasible. Bans or progressive phase-outs that may be considered include: leaf blowers, plastic bags, architectural copper (generally a legacy issue), as well as prohibiting or more aggressively regulating vehicle washing. Additional source reduction initiatives to consider include pesticide sales at hardware stores and irrigation supply stores. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City began development of plastic bag ban ordinance. FY17 Notes: Pursuit of City-specific plastic bag ban ordinance will depend on whether Statewide plastic bag ban ballot initiative passes.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-19	Coordinate with Fleet Services to replace City-owned vehicle brake pads with copper-free brake pads as they become commercially available.	Consider legislative mandate and cooperative implementation of copper-free brake pads on city-owned vehicle to reduce pollutant deposition. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council.	FY18	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	No Change	NA, Not scheduled to be implemented in FY17	None
CSD-NS-22	~~Proactively~~ Coordinate with appropriate City Departments that monitor for erosion, and complete minor repair and slope stabilization on municipal property.	~~Actively~~ Coordinate with Streets Division and other appropriate City Departments that identify and repair eroding slopes that may be contributing to sediment loading. Prepare an inventory and assessment of eroding areas and their risk to surface waters. Follow assessment with a schedule for ongoing inspection and stabilization (potentially based on a number or percentage of sites annually). Consider Caltrans program as a template. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	None
CSD-NS-23	Conduct special studies.	Special studies will be conducted to gather data to identify pollutant sources, appropriate targets, or other information. Includes collaboration with universities. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Yes	No Change	Yes	None

Table D-3 (continued)

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-25	Los Peñasquitos Watershed Special Study	Los Peñasquitos WMA special study will assess sediment loads in the watersheds upstream of the Draft Sediment TMDL compliance monitoring locations. Includes the analysis of sediment water column loads, stream bedload, and air monitoring. Implemented in a phased approach. Monitoring will occur first in the Carroll Canyon subwatershed. The Los Peñasquitos Creek and Carmel Valley Creek subwatersheds will be monitored in subsequent phases. Refer to Section 5.1 for further details. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	One time	Yes	No Change	Completed	FY16 Notes: Completed the Los Peñasquitos Lagoon TMDL Upper Watershed Sediment Load Study. See Section 5.1 in Appendix C for more information.
CSD-NS-26	Participate in Reference Watershed Study.	The San Diego Regional Reference Stream Study (currently being conducted by the Southern California Coastal Water Research Project). The study will develop numeric targets that account for “natural sources” to establish the concentrations or loads from streams in a minimally disturbed or “reference” condition. Refer to Section 5.1 for further details. Will occur region-wide. Funding and resources were previously secured.	Prior to FY16	Completed within schedule	Yes	No Change	Completed	FY16 Notes: See Section 5.2 in Appendix C for more information.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-27	Participate in Reference Beach Study.	The San Diego Regional Reference Beach Study (currently being conducted by the Southern California Coastal Water Research Project) will develop numeric targets that account for "natural sources" to establish the concentrations or loads from the beach in a minimally disturbed or "reference" condition. The purpose of this monitoring program is to advise the public of potential health risks that could occur with water contact recreation at local beaches. DEH will post a health advisory notice or close a beach when FIB results are above REC-1 water quality standards. Will occur region-wide in the Los Peñasquitos, San Dieguito River, Mission Bay, and San Diego River WMAs. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	One time	Yes	Revised to clarify strategy	Completed	FY16 Notes: See Section 5.1 in Appendix C for more information.
CSD-NS-31	Using adaptive management, delist the beach segment from the TMDL and Attachment E of the MS4 Permit.	Using the adaptive management process outlined in Section 6, remove 303(d) delisted beach segments from the Bacteria TMDL and Attachment E of the MS4 Permit. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Working with the Regional Board on re-evaluating the bacteria TMDL.
CSD-NS-32	Conduct a Storm Water Fee Study~~Cost of Service Study~~.	Conduct a Storm Water Fee Study~~Cost of Service Study~~ that will examine the full cost of flood control and storm water strategies needed to comply with storm water regulations for the City of San Diego. The City of San Diego's Watershed Asset Management Plan will be used as the basis for the study. Funding and resources have been secured for FY2016.	FY16	Completed within schedule	Yes	No Change	Yes	FY16 Notes: Significant progress was made on the fee study; it will be finalized and posted on the City website in FY17. FY17 Notes: Study results to be posted in FY17.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-33	Conduct Sustainable Return on Investment (SROI) analysis to estimate strategies' co-benefits and impacts to the public and the private sector on a common scale.	SROI is an economics-based framework for evaluating quantitative and qualitative performance metrics and monetizing them, if possible, along a triple bottom line (i.e. financial, societal, and environmental). This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, 3) partners have been identified and formal MOUs have been developed, and 4) consensus and community support has been achieved. Resources necessary to implement this strategy include City staff or consulting team. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. The anticipated one-time cost to implement is $115,000. Once initiated, the analysis is expected to be complete in 1 year.	Must be triggered	Completed within schedule	Not Triggered	No Change	If Triggered	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	**Implemented as planned in current FY (FY16)? (Y/N)** MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-34	Collaborate with the County, if a County-led regional social services effort is established, to provide sanitation and trash management for individuals experiencing homelessness and determine if the program is suitable and appropriate for jurisdictional needs to meet goals.	Support a non-profit or consortium to provide sanitation services associated with hygiene as well as trash management for persons experiencing homelessness. Rented or purchased shower/sanitary trailers providing mobile showers may be organized at specifically scheduled locations and times. This provision has been proposed as a method for preventing surface water usage for sanitation and bathing, as well as opportunity for outreach and referral by social service agencies. The trash management services will include providing trash bags, trash collection areas, and shower/sanitary facilities at centers which provide daytime shelter to their clients, or on a mobile-basis for known transit camps. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, 3) partners have been identified and formal MOUs have been developed, and 4) consensus and community support has been achieved. Resources necessary to implement this strategy include City staff to coordinate with the regional effort. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. The anticipated cost to implement the strategy includes an initial first year planning cost of $30,000 and implementation is expected to cost $10,000 annually thereafter. Once initiated, development of the program is expected in 1 year. Implementation is in perpetuity as long as funding is available.	Must be triggered	Continuous as funding allows	Not Triggered	No Change	If Triggered	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	**Implemented as planned in current FY (FY16)? (Y/N)** MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: **Modification for FY17 (If modified or canceled, provide rationale)** MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: **Plan to implement next FY (FY17)? (Y/N)** MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-37	Participate in an assessment to determine if implementation of an urban tree canopy (UTC) program would benefit water quality and other City goals, where feasible.	Perform a feasibility study to determine if implementing an UTC program would be beneficial to the City's goals. UTC intercepts rainfall through increased coverage of leaves, branches, and stems and reduces runoff from the storm drainage system. Benefits associated with enhancing an UTC include reducing heat island effects and air pollution in addition to aesthetics and community benefits. Where feasible, native trees will be utilized to prevent invasive trees from migrating to open spaces and to conserve water. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured and 2) staff resources are identified and secured. Resources necessary to implement this strategy include City staff or consulting team. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. Once initiated, implementation and assessment is expected in 2 years.	Must be triggered	Completed within schedule	Not Triggered	No Change	If Triggered	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-38	Conduct a feasibility study to test Permeable Friction Course (PFC), a porous asphalt that overlays impermeable asphalt.	Perform an assessment to determine the feasibility of implementing PFC on City streets. PFC, an overlay of porous asphalt, is an innovative roadway material that improves driving conditions in wet weather and water quality. Placed in a layer 25-50mm thick on top of regular impermeable pavement, PFC allows rainfall to drain within the porous layer rather than on top of the pavement. PFC has also been shown to reduce concentrations of pollutants commonly observed in highway runoff. PFC incorporates stormwater treatment into the roadway surface and does not require additional right-of-way. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured and 2) staff resources are identified and secured. Resources necessary to implement this strategy include City staff or consulting team. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. The anticipated cost to implement the strategy is $50,000. Once initiated, implementation and assessment is expected in 2 years.	Must be triggered	Completed within schedule	Not Triggered	No Change	If Triggered	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-39	As opportunities arise and funding sources are identified, protect areas that are functioning naturally by avoiding impervious development and degradation on unpaved open space areas, creating permanent open space protections on undeveloped city-owned land, and accepting privately-owned undeveloped open areas.	This strategy may be implemented if there is interest in participation by the public or private entity with current control of the land. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) identification of partners, if needed (public, private, non-profit), 2) identification of costs and potential sources of funding, 3) final agreement by public or private entity with current control of the land, 4) final agreement by all other participating partners including acceptance by intended land- or asset-owning City department, and 5) funding in place. Resources necessary to implement this strategy include a coordinator or manager and maintenance for acquired lands. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. The time frame for implementation will vary by project. Implementation is in perpetuity as long as funding is available.	Must be triggered	Continuous as funding allows	Not Triggered	No Change	If Triggered	None
CSD-NS-44	Participate in a watershed council or group if one is established.	This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) partners have been identified and formal MOUs have been developed and 2) consensus and community support has been achieved. Resources necessary to implement this strategy include a coordinator or project manager. Projected funding needs may be met through award of a grant, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. Once initiated, development of the program is expected in 2 years. Implementation would be in perpetuity as long as funding is retained.	Must be triggered	Continuous as funding allows	Not Triggered	No Change	If Triggered	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-47	Coordinate with Development Services Department to ~~P~~prohibit introduction of invasive plants in new development and redevelopment projects.	Coordinate with the City's Development Services Department to continue to prohibit introduction of invasive species such as *Arundo donax* and *Cortaderia selloana* for new development or redevelopment projects as specified in the City's municipal code for landscape. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	None
CSD-NS-48	Collaborate with watershed stakeholders to plan and implement projects that will further Los Peñasquitos Lagoon restoration efforts and reduce flooding in the lower watershed.	Efforts may include 1) dredging of tidal channels and inlet area to restore and maintain tidal circulation and facilitate draw down times of floodwater in the lagoon and 2) modeling and/or studies to analyze sediment transport and flood control options. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding is identified and secured, 2) staff resources are identified and secured, 3) partners have been identified and formal MOUs are developed and executed, 4) permits required by regulatory agencies are secured, and 5) consensus and community support is achieved. Resources necessary to implement this strategy include a coordinator or project manager. Projected funding needs may be met through award of a grant, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. Once initiated, development of the program is expected in 3 years. Implementation would be in perpetuity as long as funding is retained.	Must be triggered	Continuous as funding allows	Yes	No Change	Yes	FY16 Notes: Modeling was completed in FY16 to confirm the preferred alternative for the Los Peñasquitos Lagoon Restoration project. The City of San Diego was identified as the "lead" for the project. FY17 Notes: Continue development of the concept design and starting the public outreach process. Will also coordinate with State Parks on *Arundo* removal maintenance in areas of City Right of Way in the Lagoon.

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-49	Los Peñasquitos Wetland Restoration Project	Collaborate with Copermittees on the region-wide North Coast Corridor (NCC) Program, led by Caltrans and SANDAG. The program is intended to improve coastal transportation (including Interstate 5 and the coastal rail and transit system) while protecting and restoring coastal habitats throughout the corridor. The 27-mile-long project stretches across the cities of Oceanside, Carlsbad, Encinitas, Solana Beach, Del Mar, and San Diego and provides improvements for six coastal lagoons, including Los Peñasquitos Lagoon. The NCC Program is implementing construction in phases from 2010 through 2040. The program is a $6.5-billion investment in the region that will be paid for through a combination of federal, state, and local funds. The NCC program is part of TransNet, the voter-approved, half-cent sales tax initiative that helps fund transportation projects in the region. Resources necessary to implement this strategy include City staff to coordinate with the regional effort. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	City-specific version of WMA strategy	Yes	FY16 Notes: Coordination with Copermittees, Caltrans and SANDAG completed environmental and construction phases for various rail & transit, highway, and environmental protection projects.

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-51	Collaboration with the Regional Board.	The Responsible Agencies will work with the Regional Board to identify solutions and address sources of potential water quality impairments. Priorities include 1) enforcement of the Industrial General Permit, 2) enforcement of the Ag Waiver, 3) enforcement of other non-MS4 dischargers, and 4) Bacteria TMDL updates, as appropriate for each WMA. Discussions with the Regional Board were initiated in FY15. Collaboration will continue in FY16 to identify an appropriate path forward, including a more detailed time line. Funding and resources have been secured for FY16. Funding for future fiscal years is contingent on annual budget approval by each Responsible Agency.	Prior to FY16	Continuous-Ongoing	Yes	City-specific version of WMA strategy	Yes	FY16 Notes: Provided written comments to the Regional Board, State Water Board, and US Environmental Protection Agency (EPA) regarding proposed rules and regulations.
CSD-NS-53	Refinement of Water Quality Regulations	Collaborate with other Responsible Agencies and the Regional Board to refine the accuracy of regulations to ensure that Non-MS4 dischargers are regulated appropriately. The goal of this exercise is to begin a dialog with the Regional Board that may lead to the following outcomes: 1) Removal of Non-MS4 discharges and the associated BMPs needed to treat those discharges from the Responsible Agencies' burden, 2) amendment of current TMDLs and the MS4 Permit to correctly assign responsibilities for Non-MS4 discharges to the appropriate entities, and 3) strengthening of Non-MS4 NPDES permits that are directly tied to the requirements of existing and future TMDLs. Discussions with the Regional Board were initiated in FY15. Collaboration will continue in FY16 to identify an appropriate path forward, including a more detailed time line. Resources to implement this strategy include staff time and are currently secured.	Prior to FY16	Continuous-Ongoing	Yes	City-specific version of WMA strategy	Yes	FY16 Notes: City coordinated with the Regional Board to discuss addressing non-MS4 contributions in TMDL and other water quality regulations.

Structural Strategies								
Green Infrastructure								
CSD-GI-03	0.96 acre of bioretention have been identified as potential opportunities for green infrastructure implementation on public parcels to treat an impervious drainage area of 37.86 acres (total drainage area of 274 ac) with a total storage volume of 1.69 acre-feet.	To meet the Los Peñasquitos WMA numeric goals and schedules presented in Section 4, the City of San Diego will implement the following structural strategies. In the Carmel Valley Creek Subwatershed, staggered construction, operation, and maintenance of 0.96 acres of bioretention to treat an impervious drainage area of 37.86 acres (total drainage area of 274 ac) with a total storage volume of 1.69 acre-feet. An updated inventory of green infrastructure projects will be maintained in the WQIP Annual Report. The following resources, funds, and steps are needed to implement this strategy: 1) Identify project locations (3-6 months) 2) Secure funds in the form of general funds, bonds, or grants (6 months-2 yrs) 3) Obtain City Council approval of Capital Improvement Projects budget (occurs annually in May) 4) Initiate preliminary engineering to narrow project scope (6 months; approx. $30K per CIP project) 5) Hire design consultant to develop detailed construction plans and construction cost estimates (2 yrs; approx. $500K per CIP project) 6) Complete construction contractor bid and award process for construction phase (6 months) 7) Construct project (4 months- 1 yr; project construction costs are TBD and are based on size of the project). 8) Operation and maintenance will be in perpetuity. Funds and staff resources for this function must be approved by City Council as part of the City's annual budget.	FY22	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	Revised to clarify strategy	NA, Not scheduled to be implemented in FY17	None. Future projects will be listed in Table D-4.

Green Streets								
CSD-GS-05	53.20 acres of green streets (26.6 acres of bioretention and 26.6 acres of pervious pavement) have been identified as potential opportunities for green street projects to treat a total drainage area of 1,746.8 acres with a total storage volume of 72.54 acre-feet.	To meet the Los Peñasquitos WMA numeric goals and schedules presented in Section 4, the City of San Diego will implement the following structural strategies. In the Carmel Valley Creek Subwatershed, staggered construction, operation and maintenance of 53.20 acres of green streets (26.60 acres of bioretention and 26.60 acres of pervious pavement) to treat a total drainage area of 1,746.8 acres with a total storage volume of 72.54 acre-feet. An updated inventory of green streets projects will be maintained in the WQIP Annual Report. The following resources, funds, and steps are needed to implement this strategy: 1) Identify project locations (3-6 months) 2) Secure funds in the form of general funds, bonds, or grants (6 months-2 yrs) 3) Obtain City Council approval of Capital Improvement Projects budget (occurs annually in May) 4) Initiate preliminary engineering to narrow project scope (6 months; approx. $30K per CIP project) 5) Hire design consultant to develop detailed construction plans and construction cost estimates (2 yrs; approx. $500K per CIP project) 6) Complete construction contractor bid and award process for construction phase (6 months) 7) Construct project (4 months- 1 yr; project construction costs are TBD and are based on size of the project). 8) Operation and maintenance will be in perpetuity. Funds and staff resources for this function must be approved by City Council as part of the City's annual budget.	FY26	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	Revised to clarify strategy	NA, Not scheduled to be implemented in FY17	None. Future projects will be listed in Table D-4.

Stream, Channel and Habitat Rehabilitation Projects (B.3.b.(1)(b)(iii))								
CSD-MUTA-16	El Cuervo del Norte Wetlands	In the Los Peñasquitos Creek Subwatershed, the El Cuervo Norte wetlands were built upon 23.3 acres upstream of the long-term MLS monitoring station. Flows from Los Peñasquitos Creek are diverted into the wetlands, creating the potential for solids to settle out and thus reduce the TSS measured at the MLS. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	None
CSD-MUTA-17	El Cuervo del Sur Wetlands	In the Los Peñasquitos Creek Subwatershed, on a total of 2.3 acres, the primary mitigation strategy in this plan involves the minor grading (one to three feet) of the Site to create three riparian plant zones. Maintenance activities planned during the maintenance and monitoring program revolve around the establishment of the plantings to a self-sufficient state. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Mitigation project is 66% complete. FY17 Notes: Continue with project construction.

Additional Opportunities								
CSD-AddOp-01	Participate in restorative efforts for the Los Peñasquitos Lagoon in collaboration with TMDL Responsible Parties and other stakeholders.	Collaborate with TMDL Responsible Parties and other stakeholders to promote and support the restoration of the Los Peñasquitos Lagoon. Efforts will be coordinated with the Lagoon Enhancement Program currently being updated by the Los Peñasquitos Lagoon Foundation. This effort will require that 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, 3) partners are identified and formal MOUs are developed and executed, 4) permits required by regulatory agencies are secured, and 5) consensus and community support are achieved. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council.	FY20	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	No Change	NA, Not scheduled to be implemented in FY17	None
CSD-AddOp-02	Through adaptive management and additional analysis in the future, the City will identify and implement one or more of the following opportunities to meet numeric goals: 1) MS4 outfall repair and relocation, 2) slope stabilization, 3) stream restoration, 4) implementation of sediment detention basins upstream of Los Peñasquitos Lagoon or 5) new strategies not yet identified.	Through adaptive management and additional analysis in the future, the City will identify and implement one or more of the following opportunities to meet numeric goals: 1) MS4 outfall repair and relocation, 2) slope stabilization, 3) stream restoration, 4) implementation of sediment detention basins upstream of Los Peñasquitos Lagoon or 5) new strategies not yet identified. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council.	FY28	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	No Change	NA, Not scheduled to be implemented in FY17	None

(Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
WMA Strategies (Optional Strategies, B.3.b.(2))								
WMA-1	Watershed Collaboration for Los Peñasquitos Lagoon Restoration	Collaborate with stakeholders to promote the restoration of salt marsh areas and overall improvements in estuarine and other beneficial uses within the Los Peñasquitos Lagoon. Benefits of this strategy include more efficient targeting and prioritization of lagoon restoration activities, increased cost-effectiveness of selected BMP strategies in the watershed, and development of partnerships across the MS4 jurisdictions and other TMDL responsible parties. These efforts will be coordinated with the Lagoon Enhancement Program currently being updated by the Los Peñasquitos Lagoon Foundation and will require that (1) funding to address MS4 discharges and dry weather input of freshwater is identified and secured, (2) staff resources are identified and secured, (3) partners are identified and formal memoranda of understanding (MOUs) are developed and executed, (4) permits required by regulatory agencies are secured, and (5) consensus and community support are achieved. Resources necessary to implement this strategy include City staff to coordinate with the regional effort. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. Implementation is in perpetuity as long as funding is available.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Modeling was completed in FY 2016 to confirm the preferred alternative for the Los Peñasquitos Lagoon Restoration project. The City of San Diego was identified as the "lead" for the project. FY17 Notes: Next steps for FY 2017 include completing the concept design and starting the public outreach process.

Table D-3 (continued)

WMA-2	Los Peñasquitos Wetland Restoration Project	Collaborate with Copermittees on the region-wide North Coast Corridor (NCC) Program, led by Caltrans and SANDAG. The program is intended to improve coastal transportation (including Interstate 5 and the coastal rail and transit system) while protecting and restoring coastal habitats throughout the corridor. The 27-mile-long project stretches across the cities of Oceanside, Carlsbad, Encinitas, Solana Beach, Del Mar, and San Diego and provides improvements for six coastal lagoons, including Los Peñasquitos Lagoon. The NCC Program is implementing construction in phases from 2010 through 2040. The program is a $6.5-billion investment in the region that will be paid for through a combination of federal, state, and local funds. The NCC program is part of TransNet, the voter-approved, half-cent sales tax initiative that helps fund transportation projects in the region.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: In coordination with Copermittees, Caltrans and SANDAG completed environmental and construction phases for various rail & transit, highway, and environmental protection projects.
WMA-4	Collaborative Approach to Irrigation Reduction	Responsible Agencies are collaborating with water agencies to encourage implementation of water conservation efforts. Water conservation that attempts to reduce irrigation and minimize storm water runoff can also improve water quality of receiving waterbodies. MWD's SoCal Water$mart Program supports conservation efforts by offering incentives in the form of rebates for rain barrels, rotating sprinkler nozzles, weather-based irrigation controllers, soil moisture sensor systems, and turf replacement. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council or appropriate legislative body (i.e. the Board).	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	None

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
WMA-6	Offsite Alternative Compliance Option ~~(WMAA)~~	The WMAA provides alternative compliance methods in lieu of meeting structural BMP design standards and/or hydromodification management criteria on the project site. The San Diego County Copermittees have collectively funded and provided guidance for development of a regional WMAA. Copermittees compiled a list of candidate projects that consider the numeric goals of the WMAs as well as projects previously identified in JRMPs and other regulatory documents. Next steps include submittal of the water quality equivalency standards final document, ~~anticipated in September 2015. Following a public review and Executive Officer approval, anticipated by November 2015,~~ which was submitted and approved in FY 2016. Following this approval, jurisdictions can formally implement an optional Alternative Compliance Program by ~~December 2015~~ February 2016 (time coincident with implementation of standards set forth in the regional BMP Design Manual and local Storm Water Standards Manuals).	Prior to FY16	Continuous-Ongoing	Yes	Revised to clarify strategy	Yes	FY16 Notes: Phase 1 of the Alternative Compliance Program (ACP) went into effect on 2/16/16. FY17 Notes: Proposed Water Quality Equivalency (WQE) guideline development for stream restoration.
WMA-8	Collaboration with the Regional Board.	The Responsible Agencies will work with the Regional Board to identify solutions and address sources of potential water quality impairments. Priorities include 1) enforcement of the Industrial General Permit, 2) enforcement of other non-MS4 dischargers, and 3) Bacteria TMDL updates. Discussions with the Regional Board were initiated in FY15. Collaboration will continue in FY16 to identify an appropriate path forward, including a more detailed time line. Funding and resources have been secured for FY16. Funding for future fiscal years is contingent on annual budget approval by each Responsible Agency.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Working with Regional Board to include non-Phase I MS4s in general permits, waivers, and Waste Discharge Requirements (WDRs).

Table D-3 (continued)
City of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	**Implemented as planned in current FY (FY16)? (Y/N)** MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: **Modification for FY17 (If modified or canceled, provide rationale)** MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: **Plan to implement next FY (FY17)? (Y/N)** MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
WMA-12	Refinement of Water Quality Regulations	The Responsible Agencies will collaborate with the Regional Board to refine the accuracy of regulations to ensure that Non-MS4 dischargers are regulated appropriately. The goal of this exercise is to begin a dialog with the Regional Board that may lead to the following outcomes: 1) Removal of Non-MS4 discharges and the associated BMPs needed to treat those discharges from the Responsible Agencies' burden, 2) amendment of current TMDLs and the MS4 Permit to correctly assign responsibilities for Non-MS4 discharges to the appropriate entities, and 3) strengthening of Non-MS4 NPDES permits that are directly tied to the requirements of existing and future TMDLs. Discussions with the Regional Board were initiated in FY15. Collaboration will continue in FY16 to identify an appropriate path forward, including a more detailed time line. Resources to implement this strategy include staff time and are currently secured.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	<u>FY16 Notes:</u> City coordinated with Regional Board to discuss bacteria TMDL addressing non-MS4 contributions.

* Strategy IDs with an asterisk indicate those strategies that are considered "jurisdictional" in the MS4 Permit, but are considered enhancements to the JRMP to target highest priority water quality conditions.

*For additional details, please see the schedule following the City's strategy table in the WQIP.
** Projects with a check in the "Permit Term Goal" column are counted toward the green infrastructure installation goal applicable to the current Permit term. See Table D-6 for a summary.

Table D-5
City of San Diego Priority Development Project Implementation Status for Los Peñasquitos WMA

Los Peñasquitos PDP BMP Ledger (CSD-PDP-01)					
Project Name	**Project Description**	**Total Drainage Area (Ac)**	**Implementation Year**	**Status**	**Permit Term Goal***
Del Mar Mesa Neighborhood Park (Project 985)	In the Los Peñasquitos Creek Subwatershed, this site contains small catchment basins and some impervious areas treated by landscape buffers to treat a drainage area of 3.0 acres. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	3	Prior to FY16	Completed	✓
Miramar Water Treatment Plant (Project ID 1177)	In the Los Peñasquitos Creek Subwatershed, vegetated swales (0.44 acre) are in-place to treat a drainage area of 18 acres. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	18	Prior to FY16	Completed	✓
Carroll Canyon Road Extension (Project ID 1007)	In the Carroll Canyon Creek Subwatershed, a vegetated swale will treat onsite runoff of a drainage area of 5.3 acres, in conjunction with other multiuse treatment areas. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	5.3	Prior to FY16	Completed	✓
Camino Ruiz Neighborhood Park (Project ID 140)	In the Los Peñasquitos Creek Subwatershed, a vegetated swale is in-place to treat on-site runoff of a drainage area of 1.49 acres. Two bioretention areas are proposed to provide treatment of runoff generated by the 85th percentile storm from the parking lot area. These facilities are proposed to be installed within existing landscaping areas. Additional storage is required to capture the 85th percentile runoff volume from the north side of the parking area and is proposed to be provided in permeable pavement parking stalls adjacent to the proposed bioretention area. The retrofit exceeds applicable regulatory requirements by treating runoff from impervious surfaces through bioretention to capture the 85th percentile storm runoff. Funding and resources were secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by City Council.	1.49	FY15	Completed	✓
Breen Park Site - Development (Project ID 857 & 858 & 859 & 860)	In the Los Peñasquitos Creek Subwatershed, vegetated swales are in-place to treat on-site runoff of a drainage area of 1.33 acres. Swales adjacent to the parking lot are proposed to be converted into bioretention areas to provide treatment for the runoff generated by the 85th percentile storm. The landscaped area on the north side of the park entrance is proposed to be converted to a bioretention area to provide additional treatment of existing impervious area that currently discharges from the site with no treatment. The retrofit exceeds applicable regulatory requirements by treating runoff from 50,377 more square feet of impervious surface than the initial site design and providing enhanced pollutant removal through bioretention and treatment of the 85th percentile storm. Funding and resources were secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by City Council.	1.33	FY15	Completed	✓
Rancho Peñasquitos Skate park (Project ID 866)	In the Los Peñasquitos Creek Subwatershed, two small infiltration units (basins/trenches) are used to treat on-site runoff of a drainage area of 2.08 acres. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	2.08	Prior to FY16	Completed	✓
Fire Station #47 (Project ID 992)	In the Carmel Valley Creek Subwatershed, a vegetated swale is in-place to treat on-site runoff of a drainage area of 1 acre. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	1	Prior to FY16	Completed	✓
Torrey Del Mar Neighborhood Park (Project ID 1022)	In the Carmel Valley Creek Subwatershed, two vegetated filter strips and two vegetated swales are in-place to treat on-site runoff of a drainage area of 3.68 acres. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	3.68	Prior to FY16	Completed	✓

Table D-5 (continued)
City of San Diego Priority Development Project Implementation Status for Los Peñasquitos WMA

Los Peñasquitos PDP BMP Ledger (CSD-PDP-01)					
Project Name	**Project Description**	**Total Drainage Area (Ac)**	**Implementation Year**	**Status**	**Permit Term Goal***
Hilltop Community Park- Development of bioretention areas	In the Carmel Valley Creek Subwatershed, two bioretention facilities are proposed to provide for treatment of the majority of the study area, a drainage area of 0.273 acre. An existing landscaped area near Oviedo Way is proposed to be converted to a bioretention area along with the conversion of three landscaped areas within the existing parking lot area to bioretention areas. The parking lot bioretention areas are proposed to be linked by a narrow bioswale between parking stalls. Additional treatment is proposed to be provided through the conversion of 5 parking stalls to permeable pavement. The retrofit exceeds applicable regulatory requirements by treating runoff from impervious surfaces through bioretention to treat the 85th percentile storm runoff. Funding and resources were secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by City Council.	0.273	FY15	Completed	✓
North Torrey Pines Road Bridge (Project ID 1017)	In the Carroll Canyon Creek and Los Peñasquitos Lagoon Subwatersheds, two drainage inserts are used to treat onsite runoff. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Unknown	Prior to FY16	Completed	
Scripps Ranch Boulevard Median Improvements (Project ID 901)	In the Carroll Canyon Creek and Los Peñasquitos Lagoon Subwatersheds, two bioclean drainage inserts are used to treat onsite runoff. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Unknown	Prior to FY16	Completed	
Northwest Area Police Substation (Project ID 1365)	A Hydrodynamic Separation System is used to treat onsite runoff. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Unknown	Prior to FY16	Completed	
Peñasquitos West Grading (Project ID 1051)	In the Carmel Valley Creek Subwatershed, two Hydrodynamic Separation Systems are used to treat onsite runoff. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Unknown	Prior to FY16	Completed	
Carmel Valley Road Enhancements (Project ID 860)	In the Carmel Valley Creek Subwatershed, Hydrodynamic Separation Systems are used to treat onsite runoff. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Unknown	Prior to FY16	Completed	
Genesee Widening (Project ID 900)	In the Carroll Canyon Creek Subwatershed, Hydrodynamic Separation Systems are used to treat onsite runoff. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Unknown	Prior to FY16	Completed	
Mira Sorrento Place and Vista Sorrento Parkway (Project ID 850)	In the Carroll Canyon Creek Subwatershed, Hydrodynamic Separation Systems are used to treat onsite runoff. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Unknown	Prior to FY16	Completed	
Ocean Air Park (Project ID 906)	In the Los Peñasquitos Lagoon Subwatershed, Hydrodynamic Separation Systems are used to treat onsite runoff. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Unknown	Prior to FY16	Completed	
(Additional PDPs will be added after they are completed.)					

* Projects with a check in the “Permit Term Goal” column are counted toward the green infrastructure installation goal applicable to the current Permit term. See Table D-6 for a summary.

Table D-6
Summary of City of San Diego Priority Structural BMP Implementation Status for Los Peñasquitos WMA

Permit Term Goal FY 2018	Total Drainage Area (Ac)
Structural BMP Total Acres Treated Required by FY 18	**36.00 (Required by FY 18)**
Total Completed/Planned BMPs	77
Total Completed/Planned PDP BMPs	36.15
Remaining to Goal	-77.15 **(Goal Met/Exceeded)**
Final Goals FY 2035[1]	**Total Drainage Area (Ac)**
Green Infrastructure Total Acres Treated Required	**2,588.00**
Total Completed/Planned	0.00
Remaining to Final Amount of Acres Treated	2,588.00
Green Streets Total Acres Treated Required	**8,233.27**
Total Completed/Planned	0.00
Remaining to Final Amount of Acres Treated	8,233.27
MUTA Total Acres Treated Required	**11,687.1[2]**
Total Completed/Planned	106.7
Remaining to Final Amount of Acres Treated	11,580.4

1. Based on the “MS4 Discharges: Implement Accepted WQIP” compliance pathway. Final compliance is implementation of BMPs based on modeling analysis results.
2. Total drainage area treated by CSD MUTA-05 (Los Peñasquitos Sediment Basin) was revised from 36,675 acres to 77 acres. Analysis will be completed to confirm if additional acres of drainage area are required and will be added to this number. Findings will be presented in a future WQIP Annual Report.

Intentionally Left Blank

D.3.4 Modifications to the BMP Design Manual

In FY16 the City, along with other government agencies, professional engineers and members of the local development community, developed a new Regional Best Management Practices (BMP) Design Manual that conforms to the 2013 Municipal Storm Water Permit (Order No. R9-2013-0001, as amended by R9-2015-0001 and R9-2015-0100). The Manual supersedes the San Diego County-wide Model Standard Urban Runoff Storm Water Management Plan (SUSMP) and provides technical guidance and regional standards for pollutant and flow control requirements for new development and significant redevelopment. The City of San Diego's local version of the BMP Design Manual, the Storm Water Standards Manual, became effective on February 16, 2016.

D.3.5 Modifications to the Jurisdictional Runoff Management Plan

The City of San Diego is proposing the following administrative changes to its JRMP. The updated JRMP can be viewed at https://www.sandiego.gov/stormwater/plansreports/ jrmp.

JRMP Section/Appendix		JRMP Update
1	Executive Summary	Strategy categories and definitions were modified to align with the categories and definitions in the Municipal Storm Water Permit and San Diego Water Board's approved Water Quality Improvement Plans (WQIPs).
2	Section 2.3	In accordance with the Municipal Storm Water Permit, Section 2.3 was updated to state that JRMP updates can be proposed/submitted as part of the WQIP Annual Reports.
3	Section 7.3.13-8	Updated BMP #16 to provide greater clarity.
4	Section 7.3.14	Updated section to include new BMPs for herbicide application.
5	Section 10	Strategy categories and definitions were modified to align with the categories and definitions in the Municipal Storm Water Permit and San Diego Water Board's approved WQIPs. Updated tables, graphs, charts, and text to reflect funding needs to meet the goals and schedules identified in the WQIPs. Added language stating "Estimates of funding needs presented were based on the best information available at the time they were prepared."
6	Sections 7.3.1, 7.3.2, and 7.3.4-15	Updated Minimum BMP language to reflect changes to Appendix IX.

JRMP Section/Appendix		JRMP Update
7	Section 3, Section 4, Section 5, Section 6, Section 7, Section 8, Section 9	Based on updates made to the categories and definitions of strategies noted above, the "JRMP Strategies Identified in the WQIPs" tables and "Additional Public Education and Participation Program WQIP Strategies" tables for these sections have been updated for consistency. The strategy identification numbering system and text was updated to reflect administrative changes included in the WQIP Annual Reports.
8	Appendix VI- Residential Management Areas and Patrol Protocols	Updated the residential management areas maps and included newly developed patrol protocols.
9	Appendix IX - Minimum BMPs for Residential, Industrial, Commercial, and Municipal Sites/Sources	Updated references to ordinance sections, changed the "Think Blue" references to the Storm Water Division, and made minor changes to some BMP and description wording for clarification.
10	Appendix XIV- Certificate of Adequate Legal Authority	Signed Certificate of Adequate Legal Authority was added.
11	Appendix XX- Water Quality Improvement Plan Strategies	Updated strategies to reflect the administrative changes made to strategies in the Fiscal Year 2016 WQIP Annual Reports.
12	Appendix XXII- Storm Water Division Projected Funding Needs, 2016-2035	Updated Appendix XX to reflect the funding needs to meet the goals and schedules identified in the WQIPs.

D.4 County of San Diego

D.4.1 Annual Report Certifications

The County of San Diego's required certifications regarding the preparation of the Water Quality Improvement Plan Annual Report, as well as the legal authorities required by the MS4 Permit are included on the following pages.

D.4.2 Annual Report Form

County of San Diego's completed JRMP Annual Report form and fiscal analysis for FY16 are included on the following pages.

STATEMENT OF CERTIFICATION AND LEGAL AUTHORITY ESTABLISHMENT LOS PEÑASQUITOS WATERSHED MANAGEMENT AREA, WATER QUALITY IMPROVEMENT PLAN FISCAL YEAR 2015-2016 ANNUAL REPORT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations [40 CFR 122.22(d)].

I also certify that the County of San Diego has taken the necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements within Order No. R9-2013-001 as amended by Orders R9-2015-0001 and R9-2015-0100.

Executed on the 6th day of January, 2017, at the County of San Diego.

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM
FY 2015-2016

I. COPERMITTEE INFORMATION

I.A Copermittee Name: County of San Diego (PIN 255223)

I.B Copermittee Primary Contact Name: Todd Snyder

I.C Copermittee Primary Contact Information:

Address: 5510 Overland Avenue, Suite 410
City: San Diego County: San Diego State: California Zip: 92123
Telephone: (858) 694-3672 Fax: (858) 495-5623 Email:Todd.Snyder@sdcounty.ca.gov

II. LEGAL AUTHORITY

II.A Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	YES NO	☒ ☐
II.B A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	YES NO	☒ ☐

III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE

III.A Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	YES NO	☒ ☐
III.B If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	YES NO	☒ ☐

IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

IV.A Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	YES NO	☒ ☐

IV.B.1 Number of non-storm water discharges reported by the public	286
IV.B.2 Number of non-storm water discharges detected by Copermittee staff or contractors	95
IV.B.3 Number of non-storm water discharges investigated by the Copermittee	375
IV.B.4 Number of sources of non-storm water discharges identified	115
IV.B.5 Number of non-storm water discharges eliminated	112
IV.B.6 Number of sources of illicit discharges or connections identified	85
IV.B.7 Number of illicit discharges or connections eliminated	84
IV.B.8 Number of enforcement actions issued	93
IV.B.9 Number of escalated enforcement actions issued	1

V. DEVELOPMENT PLANNING PROGRAM

V.A Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	YES NO	☒ ☐
V.B Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	YES NO	☒ ☐
V.C If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	YES NO	☒ ☐

V.D.1 Number of proposed development projects in review	925
V.D.2 Number of Priority Development Projects in review	237
V.D.3 Number of Priority Development Projects approved	96
V.D.4 Number of approved Priority Development Projects exempt from any BMP requirements	0
V.D.5 Number of approved Priority Development Projects allowed alternative compliance	0
V.D.6 Number of Priority Development Projects granted occupancy	62

V.E.1 Number of completed Priority Development Projects in inventory	410
V.E.2 Number of high priority Priority Development Project structural BMP inspections	691
V.E.3 Number of Priority Development Project structural BMP violations	170
V.E.4 Number of enforcement actions issued	170
V.E.5 Number of escalated enforcement actions issued	0

Table 1.4 – Total Estimated County Expenditures for FY 2015-16 11
Table 1.5 – Legal Restrictions on the Use of Program Funding 12

FISCAL ANALYSIS COMPONENT

1.1. Introduction

This section presents an estimated annual budget for the County's runoff management programs for FY 2015-16.

1.2. Fiscal Analysis Methods

This section continues to utilize the methodologies and standards established in *Fiscal Analysis Method* submitted by the Copermittees in January 2009.

1.3. Fiscal Analysis Results

As shown the County estimated its total FY 2015-16 expenditures at $27,414,216. This fiscal analysis addresses each of the County's Runoff Management Program elements (jurisdictional, watershed, and regional activities) for the current reporting period (FY 2015-16). Expenditures are described by department and major program area. They represent an estimate of the expenditures that the County incurred in meeting its compliance obligations for FY 2015-16. They should not be interpreted as either budgeted or actual expenditures. Because stormwater program expenditures are distributed throughout a considerable number of County programs, a single consolidated "budget" does not exist for the program as a whole. As such, these figures should be considered best estimates of stormwater-related expenditures.

1.3.1 Expenditures

1.3.1.1. Jurisdictional

Table 1.1 presents the County's estimated jurisdictional expenditures for FY 2015-16.

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

Jurisdictional Worksheet Component			Explanation/Notes
1	**ADMINISTRATION**	**$6,840,583**	These costs correspond to the DPW WPP development, administrative oversight, and assessment of the County's stormwater programs. The WPP is responsible for the development of new and augmented County stormwater programs, regulatory reporting, and program assessment. Some administrative costs are associated with other specific functions shown below, but are included here because they could not be separated out.
2	**DEVELOPMENT PLANNING**	**$1,109,654**	
A	**Land Use Planning**	$0	Expenditures not reported for FY 2015-16; included in other elements.
B	**Environmental Review**	$0	Expenditures not reported for FY 2015-16; included in other elements.
C	**Development Project Approval and Verification**	**$1,109,654**	
C1	**Public Projects (CIP)**	$824,219	
	Project Planning and Engineering	$570,229	Costs include: preparing and reviewing plans and specifications for stormwater BMPs, and SWPPP/WPCP review. These costs apply to DPW, DPR, and DGS.
	Compliance Inspection and Enforcement	$15,000	
	BMP Implementation	$238,990	

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

	Jurisdictional Worksheet Component		Explanation/Notes
C2	**Private Projects**	$285,435	
	Permitting and Licensing	$285,435	This cost covers PDS plan reviews at permitted sites. Total costs are estimated as fixed percentages of annual plan-checking fees.
3	**CONSTRUCTION**	**$4,500,593**	
A	**Public Projects (CIP)**	$2,886,893	Costs include: BMP compliance inspections during construction, and implementation of construction phase BMPs. These costs apply to DPW, DPR, and DGS.
	Compliance Inspection and Enforcement	$1,613,880	
	BMP Implementation	$1,273,013	
B	**Private Projects**	$1,613,700	
	Compliance Inspection and Enforcement	$1,613,700	This cost primarily covers DPW and PDS construction inspections at permitted sites. Total costs are estimated as fixed percentages of inspection program fees.
4	**MUNICIPAL**	**$7,572,297**	
A	**Administration**	$267,805	Expenditures associated with the administrative oversight of the stormwater programs, regulatory reporting, and program assessment of municipal facilities by the DPW - Watershed Protection Program.
B	**Streets, Roads, and Highways Element**	$2,256,091	
	Administration	$291,160	Founded road operations activities include: culvert inspections and cleaning;

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

	Jurisdictional Worksheet Component		Explanation/Notes
	Maintenance Inspections	$1,890,813	increased culvert waste disposal costs, street sweeping, installation and maintenance of BMPs and road structures, and the placement of additional controls. 10% of the Maintenance and Inspections and BMP Implementation is reported as Administration cost.
	BMP Implementation	$74,118	
	Other	$0	
C	**MS4 Element**	$1,530,000	
	Administration	$191,000	The combined costs shown here apply across (1) DPW Flood Control -- conversion of existing concrete lined channels to natural bottom channels, updating flood control master plans, increased maintenance of flood control systems, and construction and maintenance of regional treatment BMPs; and (2) DPW Flood Control MS4 Operation & Maintenance -- maintenance on flood control facilities throughout the unincorporated areas of the County, exclusive of facilities within road rights-of-way (included in 4.B above). Other includes the cost of disposal of debris removed from MS4.
	Maintenance Inspections	$1,046,900	
	BMP Implementation	$290,500	
	Other	$2,500	
D	**Solid Waste Facilities Element**	$406,618	
	Administration	$35,047	Costs include Regional Board stormwater permit fees, consultant costs associated with stormwater upgrade and repair projects, and office staff time.
	Maintenance Inspections	$16,922	Costs include staff time to perform site inspections.
	BMP Implementation	$79,149	Costs include stormwater consultant site inspections, sampling/testing and BMP materials.
	Other (construction)	$275,500	Drainage improvement projects and BMP site maintenance projects.
E	**Wastewater Facilities Element**	$187,000	
	Administration	$10,000	This includes costs associated with JRMP report, the sanitary sewer system and facilities including: pump stations, sewage treatment plants and Spring Valley Operations facility. Also includes the cost of BMP design, acquisition,
	Maintenance Inspections	$127,000	

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

	Jurisdictional Worksheet Component		Explanation/Notes
	BMP Implementation	$50,000	maintenance and monitoring, for wastewater Capital Improvement Projects, and Major maintenance projects, and at various wastewater facilities.
	Other	$0	
F	**Road Stations Element**	$919,867	
	Administration	$83,624	This includes DPW road station operations related to Permit compliance. The Administration cost is determined as 10% of the total costs of maintenance and Inspections and BMP Implementation as reported by the DPW Roads Divisions.
	Maintenance Inspections	$799,414	
	BMP Implementation	$36,829	
	Other	$0	
G	**Fleet Maintenance Element**	$11,722	
	Administration	$1,036	This includes costs associated with operation of the County's fleet maintenance and fueling facilities.
	Maintenance Inspections	$7,392	
	BMP Implementation	$3,294	
	Other	$0	
H	**Municipal Airfields Element**	$338,110	These costs involve site inspections, annual reporting, and maintenance of BMPs at airports, including oversight of tenant operations. The BMP implementation item includes Palomar asphalt cap repairs.
	Administration	$12,737	
	Maintenance Inspections	$0	
	Compliance Inspection and Enforcement	$0	
	BMP Implementation	$300,623	
	Other (sampling and analysis)	$24,750	

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

	Jurisdictional Worksheet Component		Explanation/Notes
I	**Parks & Recreational Facilities Element**	$1,214,562	
	Administration	$121,362	This includes: coordinating all training requirements, preparing and reviewing reports, and overseeing the overall implementation of the stormwater program for DPR.
	BMP Implementation	$991,603	This includes costs associated with implementation of BMPs at County parks.
	Compliance Inspection and Enforcement	$101,597	Costs are for DPR enforcement of stormwater requirements at County parks.
	Other	$0	
J	**Office Buildings & Other Municipal Facilities Element**	$297,867	
	Administration	$0	DGS conducts a variety of storm water activities including: inspections and clean-up of County-owned, occupied, and leased facilities and vacant lands; maintenance and signage of storm drain inlet inserts and trash dumpsters; placement of inlet filters; maintenance of coverage and containment improvements for on-site supplies and materials; parking lot sweeping and controlled parking lot power washing; and application of erosion and sediment control measures. These costs are exclusive of fleet maintenance and fueling operations.
	Maintenance Inspections	$99,808	
	BMP Implementation	$198,059	
	Other	$0	
	Management of Pesticides, Herbicides, & Fertilizers	$142,656	
	Administration	$142,656	Integrated Pest Control Program within the Department of Agriculture, Weights and Measures (AWM) performs eradication and control of invasive weeds. This program also provides weed control on roadsides, airports, flood control channels,
	Maintenance Inspections	$0	

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

	Jurisdictional Worksheet Component		Explanation/Notes
	BMP Implementation	$0	sewage treatment plants and inactive landfills. It also provides structural pest control to facilities owned and operated by the county.
	Other	$0	
5	**INDUSTRIAL and COMMERCIAL**	**$1,575,635**	
	Administration	$253,047	DPW and AWM conduct inspections of a variety of businesses in the unincorporated County, provide regulatory oversight of mobile businesses, and conduct follow-up and enforcement of stormwater violations.
	Compliance Inspection and Enforcement	$1,245,279	
	Educational Outreach	$77,309	
	Other expenditures	$0	
6	**RESIDENTIAL**	**$1,205,386**	
	Compliance Inspection and Enforcement	$688,453	DPW conducts complaint investigations for residential sources in the unincorporated County, and conduct follow-up and enforcement of stormwater violations. DPW also operates a regional hotline.
	Educational Outreach	$516,933	Several County departments coordinate and provide outreach to the residential sector and schoolchildren in support of Permit Section D.5 requirements. Costs reported here correspond to DPW only. Funded activities include developing pollution prevention content and providing direct outreach to various target audiences within the general residential and schoolchildren target audiences.
7	**IDDE**	**$321,523**	

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

Jurisdictional Worksheet Component			Explanation/Notes
		$321,523	DPW conducts monitoring programs, assesses scientific data, and provides technical and scientific support to other County program staff. They also provide support for all technical and scientific aspects of JRMP development and implementation. These costs are exclusive of the regional monitoring program which is addressed separately under regional costs.
8	**EDUCATION**	**$0**	Education costs are included in other sections as applicable.
9	**PUBLIC PARTICIPATION**	**$0**	Public participation costs are included in other sections as applicable.
10	**SPECIAL INVESTIGATIONS**	**$0**	Expenditures not reported for FY 2015-16; included in other elements.
11	**NON-EMERGENCY FIREFIGHTING**	**$0**	Expenditures not reported for FY 2015-16; included in other elements.

$23,125,671

Total Estimated Watershed Costs	**$664,500**	**$383,376**	**$143,717**	**$293,560**	**$102,794**	**$299,792**	**$155,733**	**$157,955**

1.3.1.3 Regional

Table 1.3 presents the County's estimated regional expenditures for FY 2015-16. This includes only those expenditures associated with the Copermittees' adopted Regional Budget and Work Plan. Other costs associated with regional participation (meeting attendance, etc.) are included within the jurisdictional expenditures presented above.

Table 1.3 – Estimated Regional Expenditures for FY 2015-16

Regional Programs	County Costs
Administration	$0
Cost Share Contribution	$2,087,118
Regional Activities	$0
Other	$0
Total Estimated Regional Costs	**$2,087,118**

1.3.1.4 Total Expenditures

Table 1.4 presents the County's total estimated expenditures for FY 2015-16 (jurisdictional, watershed, and regional).

Table 1.4 – Total Estimated County Expenditures for FY 2015-16

Component / Sub-component	Estimated Expenditures
Jurisdictional	
Administration	$6,840,583
Development Planning	$1,109,654
Construction	$4,500,593
Municipal	$7,572,297
Industrial And Commercial	$1,575,635
Residential	$1,205,386
IDDE	$321,523
Education	$0
Public Participation	$0
Special Investigations	$0
Non-emergency Firefighting	$0
Jurisdictional Total	**$23,125,671**
Watershed	
Santa Margarita WMA	$664,500
San Luis Rey WMA	$383,376
Carlsbad WMA	$143,717
San Dieguito WMA	$293,560
Peñasquitos WMA	$102,794
San Diego River WMA	$299,792
San Diego Bay WMA	$155,733
Tijuana WMA	$157,955
Watershed Total	**$2,201,427**
Regional	**$2,087,118**

Total Estimated County Costs	***$27,414,216***

1.3.2 Funding Source

Table 1.5 shows the major sources of funding for the County's urban runoff management programs in FY 2015-16, and describes the legal restrictions applicable to the use of each.

Table 1.5 – Legal Restrictions on the Use of Program Funding

Funding Source	Legal Restrictions
General Fund	There are no restrictions on the use of general fund for County water quality programs and activities except that they must be used only for the purposes for which they are budgeted and allocated by the County Board of Supervisors.
Flood Control District Fees	Revenue generated from these fees must be expended for activities related to flood and storm management.
Developer Deposits / Permit Fees	Deposits / fees may be used only to fund activities related to the work for which the permits are issued.
Gas Tax	Gas Tax is collected by the state and allocated to local government for transportation-related work including maintenance of existing transportation systems and construction of new transportation facilities. These funds may not be used for other purposes.
Sanitary District Fees	Sanitary District Fees are used for work related to the maintenance of sewer lines, pump stations, force mains, and several treatment plants that serve the unincorporated areas. They may be used only for such maintenance-related purposes within the respective sewer district for which they are collected.
Other Funding Sources	Other funding sources collectively account for a relatively small portion of ongoing expenditures. However, all funding for the County's stormwater compliance programs is expended within applicable legal restrictions and limitations.

1.4. Conclusions and Recommendations

The figures presented here are an estimate of the expenditures that the County incurred to meet its compliance obligations for FY 2015-16. For the reasons explained above, they should be considered only best estimates of stormwater-related expenditures.

D.4.3 County of San Diego Strategies

County of San Diego's strategies are detailed in Tables D-7 and D-8.

Table D-7
County of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

Jurisdictional Runoff Management Programs (JRMP) Strategies		Implemented in FY16? *(No/Partially/Fully)*	Comments on Implementation (#events, #attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, NA)*	Planned Implementation into next FY? *(Y/N)*
Illicit Discharge, Detection, and Elimination (IDDE) Program						
1	Maintain storm water conveyance system map to facilitate IDDE program	Yes	Updated as needed.	N	NA	Y
2	Utilize municipal personnel and contractors to identify and report Illicit Connections and Discharges	Yes	IDDE Program.	N	NA	Y
3	Updated focused training for County field staff	Yes	Updated training for BMP Design Manual and Storm water Implementers.	N	NA	Y
4	Collect effluent on the ground (EOG), sanitary sewer overflow (SSO) data	Yes, fully	Approximately 87 EOG complaints related to septic systems and 14 SSO events recorded and responded to.	N	NA	Y
5	Address septic system failures where observed	Yes, fully	Suspected septic discharges are reported to DEH HIRT Response line when they occur after hours and DEH Land and Water Quality Division during normal hours. All complaints resolved during 15-16.	N	NA	Y
6	Facilitate public reporting of ICID via telephone and email	Yes	Bilingual hotline, dedicated e-mail address, and multiple online reporting tools.	N	NA	Y
7	Refer homeless issue complaints to Sheriff or appropriate jurisdictions	Yes	Collaborate with multi-departmental group to address homeless encampments.	N	NA	Y
8	Bilingual hotline answered by a live operator (I Love a Clean San Diego) to provide better customer service	Yes	Bilingual hotline operated by ILACSD.	N	NA	Y
9	Implement practices and procedures to address spills with the potential to enter the storm drain system	Yes	NOV issued by DEH for failing septic systems when effluent could reach the storm drain. Prompt follow up and mitigation is implemented. Such cases are rare; <5 in 15-16.	N	NA	Y
10	Coordinate spill response with responsible sewer agencies	Yes	Major DEH role is to inform the public of risks associated with sewer spills, conducting sampling, reporting, posting signs, etc.	N	NA	Y
11	Implement practices and procedures to prevent/limit infiltration of seepage from sanitary sewers	Yes	If illicit connections are identified as part of an IDDE investigation, investigation will be conducted to define and eliminate the source.	N	NA	Y
12	Coordinate with upstream entities to prevent illicit discharges from upstream sources entering into the storm drain system	Yes	If illicit connections are identified as part of an IDDE investigation, investigation will be conducted to define and eliminate the source. If determined to be from an upstream entity coordination will occur.	N	NA	Y
13	Utilize municipal personnel and Contractors to monitor stormwater outfalls for discharges of potential ICIDs	Yes	This is part of the IDDE Program.	N	NA	Y
14	Develop and implement a strategy for investigating and addressing ICIDs.	Yes	Focused, collaborative investigations with Planning and Science staff of high priority outfalls.	N	NA	Y

Table D-7 (continued)
County of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

Jurisdictional Runoff Management Programs (JRMP) Strategies		Implemented in FY16? *(No/Partially/Fully)*	Comments on Implementation (#events, #attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, NA)*	Planned Implementation into next FY? *(Y/N)*
Development Planning						
15	Require implementation of source control and Low Impact Development (LID) BMPs for all development projects.	Fully	The County BMP DM requires all projects regardless of size and location to implement SC and SD BMPs. These requirements are captured in the WPO and County's BMP DM.	N	NA	Y
16	Priority Development Projects: In addition to requirement for all development projects, implement or require implementation of onsite structural BMPs to control pollutants and manage hydromodification for PDPs.	Fully	The County BMP DM requires all PDPs to implement PC and HMP BMPs. These requirements are captured in the WPO and County's BMP DM.	N	NA	Y
17	Update BMP Design Manual procedures to specify stormwater requirements applicable to development and redevelopment projects, identify and design appropriate BMPs, establish maintenance criteria, and establish where implemented alternative compliance options.	Partially	Updated to reflect the Regional Model BMP DM with additional changes to incorporate County implementation practices. BMP DM became effective on February 26, 2015. Rene can provide details on the differences between CoSD BMP DM and Model BMP DM.	N	NA	N
18	Conduct internal (staff) training on the updated BMP Manual	Fully	The JRMP requires the County to conduct internal training every fiscal year and after release of new guidance documents.	N	NA	N
19	Hold external land development workshops targeting the development community	Fully	The County conducts external training regularly and after release of new guidance documents.	N	NA	N
20	Implement a program that ensures that all structural and Low Impact Development (LID) BMPs are designed, constructed and maintained on Priority Development and Redevelopment Projects.	Fully	Structural BMPs and LID BMPs are designed and constructed per the BMP Design Manual. In addition, Structural BMPs are tracked for maintenance through inspections and self verification letters. LID BMPs that are installed as a result of implementation of the BMP Design Manual are proposed to be inspected.	N	NA	Y
21	Impose legal authority to ensure all development and redevelopment projects are in compliance with all post construction requirements.	Fully	The Watershed Protection Ordinance was updated in FY16 to include modifications necessary as the result of the updated permit and the inclusion of applicant-implement offsite alternative compliance.	N	NA	Y
22	Update County codes, ordinances, and stormwater design standards consistent with the permit and the updated BMP Manual	Fully	The Watershed Protection Ordinance was updated in FY16 to include modifications necessary as the result of the updated permit and the inclusion of applicant-implement offsite alternative compliance. WPO update became effective on February 26, 2016.	N	NA	N
Construction Management						
23	Maintain, update and prioritize a watershed based inventory of all projects issued local permits that allow soil disturbing activities.	Yes	Projects that are issued local permits that allow soil disturbance activities are part of the inventory that is watershed-based.	N	NA	Y

Table D-7 (continued)
County of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

Jurisdictional Runoff Management Programs (JRMP) Strategies		Implemented in FY16? *(No/Partially/Fully)*	Comments on Implementation (#events, #attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, NA)*	Planned Implementation into next FY? *(Y/N)*
24	Require implementation of BMPs that are site specific, seasonally appropriate and appropriate to the construction phase, year round.	Yes	Every project requires implementation of site specific construction BMPs, seasonably appropriate and appropriate to the construction phase.	N	NA	Y
25	Impose legal authority to ensure inventoried construction projects are in compliance with all requirements.	Yes	The Watershed Protection Ordinance is the current legal authority to insure inventoried construction projects are in compliance with all requirements.	N	NA	Y
26	Make updates to County ordinances related to construction; reference to existing grading ordinance	Yes	County ordinances are updated with subsequent Construction General Permit updates; the Watershed Protection Ordinance will be updated as necessary as a result of the future Grading Ordinance Update.	N	NA	N
27	Provide internal staff training related to construction storm water management.	Yes	The County conducts construction stormwater training annually and it targets construction inspectors in DPW-PDCI, PDS-Building, and CIP Inspectors in DPW and DGS.	N	NA	Y
Existing Development						
28	Maintain and update a watershed-based inventory of existing development (i.e. commercial, industrial, municipal and residential areas).	Yes	Inventory is tracked in Accela Automation.	Y	Database is continually updated to increase accuracy and efficiency	Y
29	Improve the tracking of watershed based inventories via consolidated database	Yes	See 28	Y	See 28	Y
30	Designate a minimum set of BMPs required for all existing development inventories, including special event venues. The designated minimum BMPs must be specific to facility or area types and pollutant generating activities, as appropriate.	Yes	JRMP establishes minimum BMPs for all land use types.	N	NA	Y
31	Create an Equestrian BMP Handbook	No	Handbook created in FY2014-15.	Y	Handbook will be revised in FY2016-17 to encompass additional BMPs and be more user friendly.	Y
32	Require implementation of minimum BMPs for existing development (commercial, industrial, municipal, and residential) that are specific to the facility, area types and pollutant generating activities, as appropriate.	Yes	See 30	N	NA	Y

Table D-7 (continued)
County of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

Jurisdictional Runoff Management Programs (JRMP) Strategies		Implemented in FY16? *(No/Partially/Fully)*	Comments on Implementation (#events, #attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, NA)*	Planned Implementation into next FY? *(Y/N)*
33	Pet waste management and outreach in County Parks.	Yes	Mutt-mitt dispensers are installed and maintained in many County parks, providing people who are walking their dogs with waste disposal bags to use to pick up after their pets.	N	NA	Y
34	Implement a schedule or operation and maintenance activities for the stormwater conveyance system and related structures.	Yes	Stormwater maintenance is referred to appropriate departments when needed.	N	NA	Y
35	Implement a schedule of operation and maintenance for County paved and unpaved roads.	Yes	County Road Crews employ a schedule for maintenance of County Roads.	N	NA	Y
36	Require implementation of BMPs to address application, storage, and disposal of pesticides, herbicides, and fertilizers on commercial, industrial, and municipal properties. Includes education, permits, and certifications.	Yes	1. 450 Facilities received the Agricultural Water Quality Best Management Practices for Pesticides through annual registration notifications. 2. Inspections were conducted at 83 Commercial Ag Facilities.	N	NA	Y
37	Promote and encourage implementation of designated BMPs in residential areas.	Yes	Through implementation of strategies described in the JRMP the County encourages the use of BMPs in residential areas. All Residential Management Areas were inspected in FY15-16.	N	NA	Y
38	Conduct inspections of inventoried existing development to ensure compliance	Yes	Through implementation of strategies described in the JRMP the County encourages the use of BMPs in residential areas.	N	NA	Y
39	Conduct focused residential inspections based on strategic assessments.	Yes	Focused, collaborative investigations with Planning and Science staff of high priority outfalls.	N	NA	Y
40	Develop a residential inspections tracking program via mobile platform - miles, violations, etc.	Yes	In pilot testing phase.	Y	Modifications based on pilot testing phase to increase effectiveness	Y
41	Improve inspections data tracking through mobile phone applications	Yes	See 40	Y	See 40	Y
42	Enforce legal authority established for all inventoried existing development to achieve compliance	Yes	See JRMP	N	NA	Y
43	Update county ordinance related to existing development; reference to existing guidance documents	Yes	Watershed Protection Ordinance and BMP Design Manuals were updated.	N	NA	N
44	Promote incentive program for BMP retrofits (e.g. water smart irrigation controllers, turf replacements programs, residential landscape evaluation program).	Yes	The County continues to collaborate with and promote the efforts of partner agencies incentive programs.	N	NA	N

Table D-7 (continued)
County of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

Jurisdictional Runoff Management Programs (JRMP) Strategies		Implemented in FY16? *(No/Partially/Fully)*	Comments on Implementation (#events, #attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, NA)*	Planned Implementation into next FY? *(Y/N)*
45	Collaborate with partner agencies and groups to promote non-County sponsored incentive programs for BMP retrofits, including rain barrels, smart controllers, soil sensors, turf replacement, etc.	Yes	The County continues to collaborate with and promote the efforts of partner agencies incentive programs.	N	NA	Y
46	Identify candidate areas of existing development for stream, channel, and/or habitat rehabilitation projects and facilitate implementation of such projects.	No	NA	N	NA	N
Outreach and Public Participation						
47	Develop, improve, distribute outreach materials.	Yes	Improved outreach materials through a focused Community-based Social Marketing approach.	Y	Continual improvement of existing materials, including translation into Spanish	Y
48	Give outreach presentations to elementary, middle, and high school students	Yes	Offer presentations to elementary, middle, and high schools serving unincorporated communities.	N	NA	Y
49	Outreach to mobile landscaping service providers	Yes	Pesticide Regulation Program collaboration with the California Department of Pesticide Regulation on a pilot program to offer workshops for maintenance gardeners. Two workshops were held where attendees were provided training materials and concluded with a pesticide certification exam. Attendees at both workshops had high success rates for the exam.	N	NA	Y
50	Conduct large residential property pet waste management outreach	No	Unable to implement due to lack of community service organization partners.	N	NA	N
51	Conduct over irrigation outreach pilot study	Yes	Community-based Social Marketing pilot study on the effectiveness of irrigation runoff prevention materials.	Y	NA	Y
52	Conduct Homeowners Associations Outreach and Coordination Pilot Study	Partial	HOA Outreach materials in draft format. Additional development will take place in FY2016-17.	Y	NA	Y
53	Expand Homeowners Associations Outreach and Coordination based on the pilot project within San Luis Rey, San Dieguito, or San Diego River as needed and as funding is identified	No	Additional development may occur based on pilot study in FY2016-17.	N	NA	N
54	Collaborate with watershed partners to develop consistent messaging to targeted audiences such as commercial, residents to conserve water and reduce dry weather flows	Yes	Collaboration between the Regional Education Workgroup and Think Blue San Diego Region to develop and distribute educational materials such as the "Be the Solution to Pollution" booklet which includes irrigation and runoff reduction measures. Other items developed under this included posters, calendars and coloring books.	N	NA	y

Table D-7 (continued)
County of San Diego Jurisdictional Strategies for Los Peñasquitos WMA

Jurisdictional Runoff Management Programs (JRMP) Strategies		Implemented in FY16? *(No/Partially/Fully)*	Comments on Implementation (#events, #attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, NA)*	Planned Implementation into next FY? *(Y/N)*
55	Sponsor Trash Collection Events through public outreach and participation	Yes	The County sponsors ILACSD to establish cleanup sites at the Coastal Cleanup Day and Creek to Bay events.	N	NA	Y
56	Educational Workshops on Integrated Pest Management, manure management and others as needed	Yes	Various workshops presented throughout the year by County staff including UCCE, FHA and contractors.	N	NA	Y
57	Partner with Master Gardeners Programs to provide education opportunities on water use and practices for gardening	Yes	Various workshops presented throughout the year by County staff including UCCE, FHA and contractors.	N	NA	Y
58	Conduct Effectiveness Survey's on Education & Outreach programs	Yes	Surveys to determine the efficacy of watershed education to unincorporated elementary, middle, and high schools serving unincorporated communities.	N	NA	Y
Enforcement Response Plan						
59	Implement escalating enforcement responses to compel compliance with statutes, ordinances, permits, contracts, orders, and other requirements for IDDE, development planning, construction management, and existing development in the Enforcement Response Plan.	Yes	County implemented the ERP as described in the JRMP.	N	NA	Y
60	Notify the SDWB by email (Nonfilers_R9waterboards.ca.gov) within five (5) calendar days of issuing escalated enforcement to a construction site that poses a significant threat to water quality as a result of violations or other noncompliance	Yes	County implemented the ERP as described in the JRMP.	N	NA	Y
61	Notify the SDWB by email (Nonfilers_R9waterboards.ca.gov) any persons required to obtain coverage under the statewide Industrial General Permit and Construction General Permit and failing to do so, within five (5) calendar days from the time the Copermittee become aware of the circumstances.	Yes	County implemented the ERP as described in the JRMP.	N	NA	Y

Table D-7 (continued)

Public Education and Participation						
62	Implement a public education and participation program to promote and encourage development of programs, management practices and behaviors that reduce the discharge of pollutants in storm water prioritized by high risk behaviors, pollutants of concern, and target audiences.	Yes	The County completes numerous education and public participation programs for a diverse target audiences. See JRMP.	N	NA	Y

Intentionally Left Blank

Table D-8
County of San Diego Optional Strategies for Los Peñasquitos WMA

Optional Jurisdictional Runoff Management Programs (JRMP) Strategies		Implementation Timeframe	Triggers	Resources	Triggered? *(Y/N)*	Implemented in FY16? *(No/Partially/Fully)*	Comments on Implementation	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, NA)*	Planned Implementation into next FY? *(Y/N)*
Provision B.3.b.(1)(b)(i) - BMPs, incentives, or programs that may be implemented that are in addition to requirements of Provision B.3.b.(1)(a)										
1	Implement Sustainable Landscapes Program to encourage landscape retrofits.	FY 2016-17; Continuous until grant funding and incentives are depleted	Implementation of this strategy may be triggered if (1) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (2) all of the necessary resources have been secured. Continue implementation when the funding and incentives items are secured.	Staff resources, Grant funding, Incentive items, Partnerships	No	Partially	None	N	NA	Y
2	Implement an incentive program for BMP Retrofits (Public-Private Partnerships - a County sponsored program to offer incentives for rain barrel installation, downspout disconnects from the stormwater system, etc.)	FY 2015-16 Continuous, as resources allow	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) pilot program success; and (4) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Incentive items, Partnerships	No	Partially	None	N	NA	Y
3	Implement a program that provides rebates or incentives for pumping septic systems, with a focus in high risk areas adjacent to waterways (within 600 feet).	Once triggered, Pilot program 1 -2 years, as needed thereafter	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) pilot program success; and (4) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Partnerships, Incentive items	No	No	Funding source not identified. All 4 triggers have not been met.	No	NA	No
4	Identify where sewer and stormwater infrastructure are in close proximity and subsequently, confirm the absence of flow at nearby stormwater MS4 outfall during dry weather.	Once triggered, 2-3 years; one-time	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Partnerships	No	No	None	No	NA	

Table D-8 (continued)
County of San Diego Optional Strategies for Los Peñasquitos WMA

Optional Jurisdictional Runoff Management Programs (JRMP) Strategies		Implementation Timeframe	Triggers	Resources	Triggered? *(Y/N)*	Implemented in FY16? *(No/Partially/Fully)*	Comments on Implementation	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, NA)*	Planned Implementation into next FY? *(Y/N)*
5	Implement a program for on-site wastewater treatment (septic) systems. May include mapping and risk assessment, inspection, or maintenance practices.	Once triggered, 2-3 years	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) septic systems have been determined to be a pollutant sources to the MS4; and (4) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Partnerships	No	Partially	Under the Local Area Management Plan (LAMP) for onsite wastewater treatment systems the treatment systems with supplemental treatment are required to be permitted annually. The annual operating permit will define the monitoring and maintenance requirements as specified by the manufacturer and/or qualified professional who designed the system. The LAMP ordinance can be found at: http://www.sandiegocounty.gov/content/dam/sdc/deh/lwqd/RWQCB%20Approved%20LAMP%20Final%202-24-15.pdf	N	NA	Y

Table D-8 (continued)
County of San Diego Optional Strategies for Los Peñasquitos WMA

Optional Jurisdictional Runoff Management Programs (JRMP) Strategies		Implementation Timeframe	Triggers	Resources	Triggered? *(Y/N)*	Implemented in FY16? *(No/Partially/Fully)*	Comments on Implementation	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, NA)*	Planned Implementation into next FY? *(Y/N)*
6	Divert persistent dry weather flows from storm drains to sewer	Once triggered, 3-6 years per project	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) permission is granted from sewer agency; and (4) ground water or permitted discharges have been ruled out; and (5) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Engineering design, Environmental review, Permits, Ongoing funding for operation/maintenance	No	No	Diversions are a last resort strategy and will be reviewed for outfalls that are persistently flowing after all other implementation strategies have been exhausted.	N	NA	N
Provision B.3.b.(1)(b)(ii) - Incentives or programs that may be implemented to encourage or implement projects to retrofit areas of existing development										
7	Implement trash capture program (e.g., retrofit storm drain intakes with trash capture devices)	Baseline study 2-3 years; FY 15-16 implementation as needed and as resources allow	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) baseline study completion and success; and (4) focus areas identification; and (5) detailed inlet inventory of focus areas; and (6) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Equipment, Permits, Ongoing funding for operation/maintenance	No	Partially	The County of San Diego is in process of conducting several studies to develop Baseline Trash Generation Rates.	N	NA	Y

Table D-8 (continued)
County of San Diego Optional Strategies for Los Peñasquitos WMA

Optional Jurisdictional Runoff Management Programs (JRMP) Strategies		Implementation Timeframe	Triggers	Resources	Triggered? *(Y/N)*	Implemented in FY16? *(No/Partially/Fully)*	Comments on Implementation	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, NA)*	Planned Implementation into next FY? *(Y/N)*
8	Implement a Green Streets Retrofits Program	Once triggered, 3-7 years per project; ongoing operation & maintenance thereafter	Implementation of this strategy may be triggered on a project-by-project basis if (1) a specified interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) pilot program success; and (4) all of the necessary resources have been secured.	Each green street retrofit project is preliminary estimated to cost an average of $5,500,000 per linear mile of retrofit for construction. Resources include: Staff resources, Grant funding or alternative source, Contractor funding, Engineering or landscaping design, Permits, Environmental review, Right of way acquisition, Ongoing funding for operation/maintenance	No	Partially	Design standards and specifications have been developed. Green streets are now being used to meet compliance for all retrofit and/or redeveloped road projects that in the Capital Improvement Projects plan. Pursuing Grant Funding	N	NA	Y
9	Construct Treatment Control BMPs (retrofits projects)	Once triggered, 4-7 years per project; ongoing operation & maintenance thereafter	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Engineering or landscaping design, Permits, Environmental review, Ongoing funding for operation/maintenance	No	No	None	N	NA	N

Table D-8 (continued)
County of San Diego Optional Strategies for Los Peñasquitos WMA

Optional Jurisdictional Runoff Management Programs (JRMP) Strategies		Implementation Timeframe	Triggers	Resources	Triggered? *(Y/N)*	Implemented in FY16? *(No/Partially/Fully)*	Comments on Implementation	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, NA)*	Planned Implementation into next FY? *(Y/N)*
10	Implement an alternative compliance program to enable "offsite" compliance for new and redevelopment projects.	Once triggered, 3-6 years per project	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Partnerships, Engineering design , Permits, Environmental review, Right of way acquisition (if needed), Ongoing funding for operation/maintenance	No	Partially	Currently applicant implemented offsite alternative compliance is available for use by the development community. The Water Quality Equivalency (WQE) provides the currency for structural BMPs and some natural system management practices (NSMPs). Additional work on the WQE will be conducted during FY17. The County is not currently pursuing a credit system but is participating as a stakeholder on the City of San Diego TAC and as a member of the Western Riverside Coalition of Governments (WRCOG) discussion on offsite alternative compliance.	N	NA	Y

Table D-8 (continued)
County of San Diego Optional Strategies for Los Peñasquitos WMA

	Optional Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Timeframe	Triggers	Resources	Triggered? *(Y/N)*	Implemented in FY16? *(No/Partially/Fully)*	Comments on Implementation	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, NA)*	Planned Implementation into next FY? *(Y/N)*
Provision B.3.b.(1)(b)(iii) - Incentives or programs that may be implemented to encourage or implement projects that will rehabilitate the conditions of channels or habitats										
11	Flood Control Channel Rehabilitation Projects (e.g., removal of impervious lining in flood control channel and replacement with earthen or vegetated surface)	Once triggered, 4-7 years per project; ongoing operation & maintenance thereafter	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (4) engineering design, monitoring, and outreach plans are approved; and (5) all of the necessary resources have been secured.	Project costs vary by size and complexity. Resources include: Staff resources, Grant funding or alternative source, Contractor funding, Partnerships, Engineering design, Permits, Environmental review, Right of way acquisition (if needed), Ongoing funding for operation/maintenance	No	Partially	One project has been identified in SDR for retrofit/rehabilitation. Project planning, design and environmental review will begin in FY17	N	NA	Y
12	Implement a program to remove invasive non-native plants (i.e. Arundo) upstream areas rivers or tributaries.	Once triggered, 1-2 years per project	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) community support and partnerships established; and (4) it has been determined that invasive plants have been found to have an impact on water quality; and (5) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Partnerships	No	No	The County has developed several Habitat Restoration Plans and Non-Native Plant Removal Guidelines including for the Otay Valley Regional Park. Implementation of projects resulting from these guidelines requires acquisition of land and funding. No projects were completed during this reporting period.	NA	NA	N

STATEMENT OF CERTIFICATION

Los Penasquitos Watershed Management Area Water Quality Improvement Plan
2015-2016 Annual Report

I certify, under penalty of law, that this Water Quality Improvement Plan Annual Report submittal and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for known violations.

Subject: **San Diego Bay WMA-PIN No. 794855:carias**
Submittal of San Diego Bay Watershed Management Area Water Quality Improvement Plan 2015-2016 Annual Report

Dear Mr. Gibson:

On behalf of the San Diego Bay Watershed Management Area (WMA) Responsible Parties, the City of Imperial Beach is pleased to submit the San Diego Bay WMA Water Quality Improvement Plan Annual Report for the 2015-2016 reporting period. This document was prepared in accordance with Permit Order R9-2013-0001, as amended by Orders No. R9-2015-0001 and No. R9-2015-0100 (Permit). Please accept this submittal on behalf of the responsible parties in the watershed.

Enclosed is one (1) electronic copy of the San Diego Bay Watershed Management Area Water Quality Improvement Plan 2015-2016 Annual Report, including certification statements. The following are also included the Annual Report:

- Jurisdictional Runoff Management Program (JRMP) Annual Report forms (Appendix 2);
- Legal authority certifications as required by Permit Provision E.1.b (Appendix 2);
- Descriptions of JRMP and BMP Design Manual updates, as applicable (Appendix 2);
- Proposed updates to the Water Quality Improvement Plan, including administrative updates, primarily to jurisdictional strategies (Appendix 2), and a modification to the Airport Authority's airside street sweeping goal (Section 5.1);
- Proposed addition of a hydromodification exemption for the portion of the Otay River between the Lower Otay Reservoir Dam and I-805, as shown in the revised Watershed Management Area Analysis (Appendix 5) and as discussed previously during a Consultation Panel meeting; and
- Monitoring reports for the Chollas Creek TMDLs, the Shelter Island Yacht Basin TMDL, and the City of San Diego's Annual Technical Report: Addressing Trash, Debris, and Floating Material in Chollas and Paleta Creeks (Appendix 4).

In addition to the CD submittal, the Annual Report will also be uploaded to the Regional Clearinghouse hosted by the County of San Diego at: http://www.projectcleanwater.org/. It will not be submitted to the U.S. EPA, as previously directed through email by the San Diego Water Board on June 15, 2015.

If you have any questions, please give me a call at (619) 628-1370.

Sincerely,

Chris Helmer
Assistant Public Works Director, City of Imperial Beach

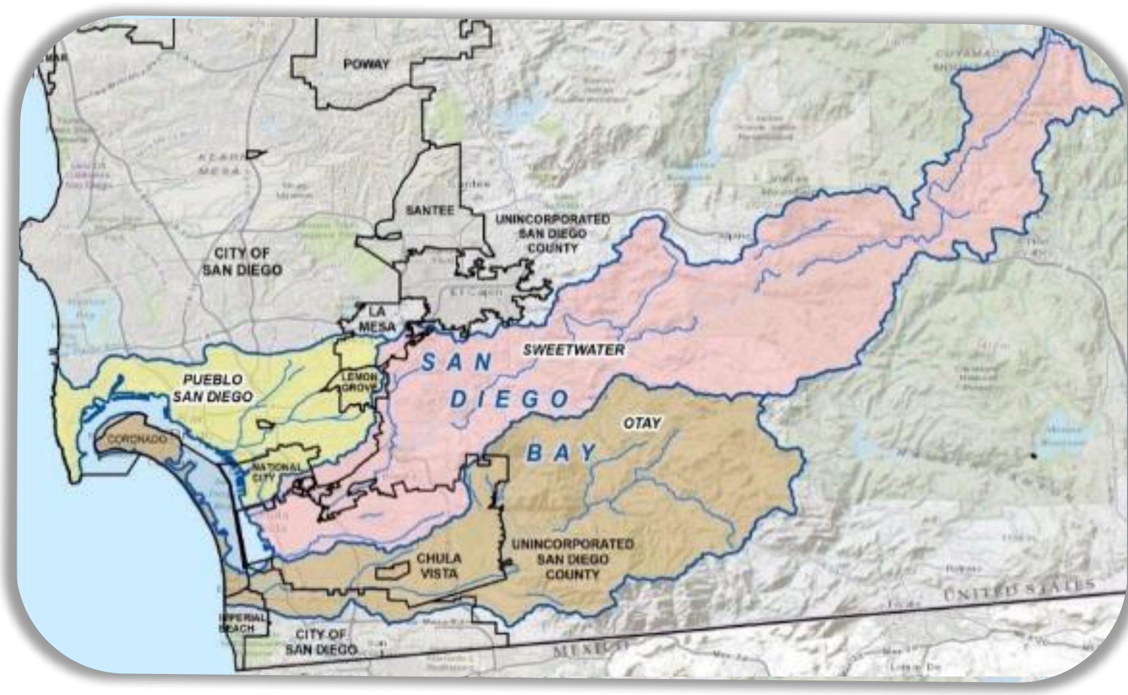
FY 2016 Annual Report

Submitted to the
San Diego Regional Water Quality Control Board
by the San Diego Bay Responsible Parties



January 2017

Responsible Party Certifications and JRMP Annual Report Forms

The San Diego Bay WMA Water Quality Improvement Plan 2015-2016 Annual Report was prepared in accordance with Permit Order No. R9-2013-0001 as amended by Orders No. R9-2015-0001 and No. R9-2015-0100 (Municipal Permit). Appendix 1 provides a crosswalk of Municipal Permit requirements and Annual Report references. The following required items are included in Appendix 2 for each of the Responsible Parties:

- Certification Statements;
- Jurisdictional Runoff Management Program Annual Report Forms; and
- Legal authority certifications as required by Permit Provision E.1.b.

Executive Summary

Background

The San Diego Bay Watershed Management Area (WMA) comprises the 444-square-mile land area in southern San Diego County that drains to San Diego Bay. Ten agencies regulated under the San Diego Regional Water Quality Control Board (Regional Board) Municipal Permit[1] for discharges from municipal separate storm sewer systems (MS4s) have jurisdictional area within this WMA. Those agencies are the cities of Chula Vista, Coronado, Imperial Beach, La Mesa, Lemon Grove, National City, and San Diego; the County of San Diego; the San Diego Unified Port District (Port of San Diego); and the San Diego Regional Airport Authority (Airport Authority). The California Department of Transportation (Caltrans) is not regulated by the Municipal Permit but has also chosen to participate in the Water Quality Improvement Plan (WQIP) process, which is described below. Collectively, these 11 agencies are referred to as Responsible Parties (RPs).

In accordance with the Municipal Permit, the RPs developed a WQIP for the San Diego Bay WMA, which was accepted by the Regional Board in February 2016. The WQIP identifies the Highest Priority Water Quality Conditions (Highest Priority Conditions) and Focused Priority Water Quality Conditions (Focused Priority Conditions) in the WMA, sets goals to address those conditions within a specified timeframe, and describes the strategies that will be used to meet the goals.

This San Diego Bay WQIP Annual Report provides information on the RPs' progress in implementing the WQIP during fiscal year (FY) 2016. The reporting period for FY 2016 consists of two components: 1) July 1, 2015 to June 30, 2016, consistent with the fiscal year, for the implementation of all program activities except monitoring and assessment, and 2) October 1, 2015 to September 30, 2016, consistent with the monitoring year for the monitoring and assessment programs. Together, these two periods constitute the reporting year (FY 2016) for the WQIP Annual Report.

San Diego Bay Water Quality Improvement Plan

The RPs evaluated available data, information, and public input and used a multi-step assessment process to identify priority water quality conditions in the San Diego Bay WMA. The WQIP further identified the Highest Priority Conditions and Focused Priority Conditions in the WMA, for which numeric goals were developed. Addressing these conditions is the focus of the WQIP, but many of the strategies implemented to address Highest and Focused Priority Conditions provide multiple benefits by also addressing other pollutants and water quality conditions. Additionally, many strategies are implemented across RPs' entire jurisdictions, providing water quality benefits in parts of

[1] Order No. R9-2013-0001, as amended by Order Nos. R9-2015-0001 and R9-2015-0100.
http://www.waterboards.ca.gov/sandiego/water_issues/programs/storm water/docs/2015-1118_AmendedOrder_R9-2013-0001_COMPLETE.pdf

the watershed outside the areas where Highest or Focused Priority Conditions have been identified. The Highest and Focused Priority Conditions are summarized in Table ES-1.

Table ES-1
San Diego Bay Watershed Management Area Summary of Highest and Focused Priority Conditions

HU	Condition	Pollutant/ Stressor	Geographic Extent (HA/HSA)	Responsible Party
Pueblo (908)	Water Quality[1]	Bacteria; Dissolved copper, lead, and zinc	Chollas Creek (908.22)	City of La Mesa City of Lemon Grove City of San Diego County of San Diego Port of San Diego Caltrans
	Water Quality	Copper and zinc (wet weather)	Airport Authority jurisdiction within HA 908.21	Airport Authority
Sweetwater (909)	Riparian Area Quality	Various	Paradise Creek—lower Sweetwater, HA 909.1[2]	City of National City
	Physical Aesthetics	Trash	The western portion of the City of Chula Vista within HA 909.1	City of Chula Vista Port of San Diego
Otay (910)	Swimmable Waters (Beaches)	Bacteria	Applicable RP jurisdiction within HA 910.1	City of Coronado Port of San Diego
	Physical Aesthetics	Trash	Applicable RP jurisdiction in HA 910.2	City of Chula Vista City of Imperial Beach Port of San Diego

Notes:
HA = hydrologic area; HU = hydrologic unit; RP = Responsible Party
1. The conditions in bold are the Highest Priority Conditions for the San Diego Bay WMA. Conditions in regular font are the Focused Priority Conditions.
2. For the purposes of the WQIP, Paradise Creek is part of the lower Sweetwater area, for which the San Diego Bay priority condition analysis has identified potential impacts to beneficial uses such as habitat and noncontact water recreation

The WQIP identifies numeric goals for each Highest Priority Condition and Focused Priority Condition, including final goals and interim goals. Many of the interim goals to be met during the current Municipal Permit term, which extends through FY 2018, are expressed in terms of performance measures, such as an amount of area treated by installation of green infrastructure. Individual schedules for each goal were established. Together, the goals and schedules define the targets for developing a program of strategies and to measure progress.

Strategies and schedules include both core Municipal Permit required compliance activities and best management practices (BMPs) that RPs have been implementing for several years, and new strategies that are not a part of explicit permit requirements (e.g., creek restoration).

The RPs developed a Monitoring and Assessment Program that is specific to the WQIP and focuses on the outcomes of program implementation. The program contains three major types of monitoring: general permit-required monitoring, Highest and Focused Priority Condition monitoring, and special studies and additional monitoring. Monitoring is intended to measure the progress that RPs make toward achieving the established goals and schedules. The program includes assessment for each of the monitoring types, as well as an integrated assessment to evaluate the overall progress in the WMA.

Water Quality Improvement Plan Implementation and Progress

The RPs implemented strategies to improve water quality and make progress toward achieving numeric goals during FY 2016. Although the WQIP was approved fairly recently (February 2016), results for FY 2016 indicate that progress toward achieving many of the numeric goals has been made within the short timeframe. Summaries of strategy implementation, monitoring, and progress toward achieving numeric goals are described below.

Strategy Implementation

The RPs implemented a variety of strategies to improve water quality in FY 2016. RPs' programs and strategies focus on the Highest and Focused Priority Conditions, as appropriate, and are described in Sections 4 through 8 of this report. Highlights of the RPs' efforts to improve water quality during the reporting year include the following:

- Green Streets: University Avenue Median Water Quality Improvement Project (City of La Mesa). This project will remove and replace impervious medians with pervious biofiltration areas that are designed to reduce pollutant discharges to receiving waters. The project is currently under construction, with an anticipated completion date of May 2017.
- Runoff Redirection (City of Lemon Grove). Lemon Grove performed initial site research to identify feasible locations for curb cuts to divert runoff from paved areas to landscaping at municipal facilities. A curb cut to direct runoff from the parking lot at City Hall to landscaping was completed in early FY 2017. The feasibility of directing downspout runoff to landscaping was also completed at municipal facilities in FY 2016.
- Storm Water BMPs (City of San Diego [City])
  - In FY 2016, more than 25 acres of drainage area were treated by green infrastructure features within the San Diego Bay WMA, and approximately 63 additional acres are expected to be treated by FY 2018.

- o To increase removal of metals and sediment, the City has started to enhance street sweeping operations in accordance with strategy CSD-JRMP-34 by sweeping a route in the Chollas Creek subwatershed with a regenerative air sweeper. The City also began sweeping routes using different sweeping technologies to determine the most effective sweeping practices for individual routes.
- o In accordance with the enhanced catch basin cleaning program identified in strategy CSD-JRMP-24, the City completed additional inspections and cleanings where necessary based on inspection results, at 2,500 catch basins in the Chollas Creek hydrologic subarea (HSA).
- o The City completed the first phase of a drainage master plan for the Chollas Creek HSA. The drainage master plan uses precise light imaging, detection, and ranging (LIDAR) data to identify a vast range of potential structural BMPs and locations. Locations are identified to maximize the efficiency of the BMP by placing the BMP in an area that will treat larger or multiple drainage areas. This planning will maximize pollutant removal from green infrastructure and reduce the number of green infrastructure projects (and associated costs) that will be needed to meet Total Maximum Daily Load (TMDL) requirements.

- <u>Dry Weather Flow Reduction and Water Conservation</u> (County of San Diego [County]): As a regional leader in water conservation, the County implements several programs and strategies, both independently and in partnership with other agencies, to help conserve local water supplies. In response to drought conditions in the region, the County developed a Drought Response Action Plan to reduce water use at its facilities, which has resulted in savings of 60 million gallons of water in County parks during FY 2015–2016. Since 2009, installation of high-efficiency irrigation heads in 20 parks county-wide, many of which are located in the San Diego Bay area, have contributed significantly to these water savings. During the fiscal year, additional efforts included two rain barrel distribution events that were facilitated by the County in partnership with other agencies. Under its WaterSmart Campaign, the County has also collaborated with the San Diego County Water Authority to help distribute water conservation educational materials. This effort included promotion of available water conservation rebates and incentives such as water efficiency audits and other tools to help save water.
- <u>Sweeping Airside Corridors</u> (Airport Authority). Aircraft and vehicle tire and brake wear is a source of copper and zinc from these locations. Under the WQIP, sweeping on the eastern end of the airfield (in particular, the runway and taxiways) will be modified and enhanced to increase the effectiveness of sweeping in FY 2017. The Airport Authority has obtained a Regen-Air vacuum sweeper, which has been shown to perform better than mechanical broom sweepers in removing fine sediments.
- <u>Restoration of Paradise Creek</u> (City of National City). National City's approach is to implement improvements directly in Paradise Creek and in areas tributary to the Creek. National City plans to restore the approximately 1,000-linear-foot reach of

Paradise Creek that runs through Kimball Park by replacing the existing concrete-bottom channel with a natural-bottom channel and replacing turf grass and invasive plant species with native plants along the banks.

- Homeless Outreach Program (City of Chula Vista). Chula Vista formed a Homeless Outreach Team during the reporting period to provide a holistic approach to addressing homelessness issues. The program targets a number of city parks, facilities, and problem areas. Staff visit these areas once per week and have been able to remove over 1,000 pounds of trash per week from the encampments.

- Municipal Solid Waste Receptacle Assessment (Port of San Diego). The Port of San Diego conducted a jurisdiction-wide evaluation of the municipal solid waste receptacles currently in use in the Port of San Diego's parks. The purpose of the assessment was to develop the information necessary to support management decisions related to (1) waste and recycling receptacle type and placement, (2) the adequacy of receptacles to prevent municipal solid waste from entering the MS4 and reduce pollution associated with municipal solid waste (i.e., lids, overhead cover, signage, etc.), and (3) recommended modifications (e.g., either by retrofitting current receptacles, replacing receptacles with more effective models, or adding receptacles/bins where needed). This assessment is scheduled to be completed in FY 2017.

- Improvement of Dirt Alleys (City of Imperial Beach). During this reporting period, Imperial Beach completed the design and construction of the first phase of alley improvements for 14 alley segments (over 1 mile of dirt alleys) in the community. The primary water quality benefit for this project is to address trash, sediment, and bacteria. This project provides a total annual storm water capture volume of 33,000 cubic feet and an annual sediment load reduction of approximately 160 pounds.

- Elimination of Groundwater Intrusion (City of Coronado). During this reporting year, Coronado initiated an MS4 capital improvement project to eliminate groundwater infiltration to the MS4. Project planning and design were completed to install a liner in the existing storm drain and to perform other repairs. Construction is scheduled to start in early 2017. Upon completion, this project will have multiple environmental benefits, including reducing potential bacteria regrowth in the MS4 from standing groundwater in the pipeline, eliminating groundwater diversion to the sanitary sewer, reducing the potential for bacteria discharge to the receiving waters, and reducing greenhouse gas emissions resulting from pump operations to dewater the MS4.

- San Diego Bay WMA Strategies (All Responsible Parties). The RPs have begun to implement wetland restoration, habitat restoration, and public access improvements to support multiple benefits in the San Diego Bay WMA through public-private partnerships and partnerships with other state, federal, and local agencies.

Monitoring

The RPs successfully completed monitoring in 2015–2016 in accordance with the Monitoring and Assessment Program Requirements (Provision D of the Municipal Permit). The monitoring completed in FY 2016 included wet and dry weather MS4 outfall monitoring and bioassessment monitoring, which was conducted in coordination with the Southern California Storm Water Monitoring Coalition (SMC). Monitoring was also conducted for the Highest and Focused Priority Conditions, which is intended to inform programs and assess progress toward the goals outlined in the WQIP. The monitoring program and results for 2015–2016 are described in Section 3 and Appendix 4. Monitoring for Highest and Focused Priority Conditions is described in Sections 4 through 8 and Appendix 4. Monitoring highlights include:

- Monitoring for the Highest Priority Condition: The Chollas Creek Bacteria, Metals, and Diazinon TMDL monitoring programs were successfully completed. Most of the samples collected from Chollas North Fork and Chollas South Fork locations had concentrations of metals that were below water quality objectives (WQOs) for metals. Pesticides, including pyrethroids and diazinon, and toxicity were not detected.
- Water Quality Due to Copper and Zinc, Airport Authority Monitoring: Extensive monitoring was conducted during storm events throughout FY 2016. Copper and zinc, the Focused Priority Condition pollutants of concern, were sampled, analyzed, and evaluated along with several other analytes to comply with the Industrial General Permit (IGP)[2]. Recordkeeping and tracking were also improved because of monitoring.
- Riparian Area Monitoring: National City initiated a special study to collect chemical testing of selenium to support the delisting of the analyte – all 48 of the 48 samples collected had concentrations of selenium that were below the WQO of 5 micrograms per liter (μg/L). Biological monitoring, including vegetation monitoring, will be conducted once restoration is completed in Paradise Creek.
- Physical Aesthetics Monitoring: 73 percent (%) of the 86 dry weather visits to major MS4 outfall locations had "optimal" levels of trash, which is defined as less than 10 pieces of trash per the monitoring methodology. Trash levels were rated on a scale previously developed by the Copermittees' Regional Monitoring Workgroup. The RPs also initiated a paired monitoring approach in which trash levels were monitored at 12 major MS4 outfall locations and adjacent receiving waters.
- Swimmable Waters Monitoring: North Beach and Tidelands Park was visited on 14 occasions and 20 samples were collected during FY 2016; monitoring will continue in FY 2017. The RPs conducted receiving water monitoring for the first time in FY 2016 and will augment their monitoring with the dry season weather data collected by the County's Department of Environmental Health (DEH)

[2] Order No. 2014-0057-DWQ, NPDES General Permit for Storm Water Discharges Associated with Industrial Activities jhttp://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2014/wqo2014_0057_dwq.pdf

(California Assembly Bill 411 [AB 411]) program. Tidelands Park was given an A grade for the summer dry season in the Heal the Bay annual report, based on the DEH AB 411 monitoring program's summer dry season results. A delisting feasibility study for Tidelands Park was also completed in FY 2016.

Monitoring and data analysis for five different special studies were performed, as described in the WQIP for Highest and Focused Priority Conditions (Sections 4 through 8; Appendix 4), and in accordance with the Monitoring and Assessment Program Requirements (Provision D of the Municipal Permit). The first year of data provides only a limited basis for conclusions and adaptations; however, the initial results described in Appendix 4 indicate progress toward improving water quality.

Progress Toward Goals

Since the acceptance of the WQIP in February 2016, the RPs have implemented strategies, as highlighted above, and have begun making progress toward achieving numeric goals. The progress toward meeting interim numeric goals, most of which are due to be achieved by FY 2018, is as follows:

- Chollas Creek Metals, Diazinon, and Bacteria:
    - La Mesa –The University Avenue Median Water Quality Improvement project, which is converting University Avenue to a green street by installing biofiltration BMPs, is on schedule to be completed in 2017.
    - Lemon Grove – Lemon Grove performed initial site research to identify feasible locations for curb cuts to divert runoff from paved areas to landscaping at municipal facilities. A curb cut to direct runoff from the parking lot at City Hall to landscaping was completed in early FY 2017.
    - City of San Diego – The City implemented green infrastructure projects that treat 25.14 acres of drainage area and is expected to achieve the 44.6-acre performance measure requirement by implementing additional projects that will treat a total of 88.24 acres by FY 2018.
    - County of San Diego – Ongoing maintenance was performed at two facilities where low-impact development (LID) BMPs were previously constructed: (1) Southeast Family Resource Center, and (2) Central Regional Public Health Center. These efforts have effectively reduced flows during storm events and reduced concentrations of key contaminants.
- Water Quality Due to Copper and Zinc (Airport Authority) – Zinc concentrations measured in MS4 discharges were lower than the current Municipal Permit term interim goal and also lower than the FY 2021 interim goal.
- Riparian Area
    - The current Municipal Permit term goal of collecting and analyzing 48 samples for selenium were achieved, with zero exceedances of the WQOs.

  - Creek restoration work for Paradise Creek to meet numeric goals for habitat restoration is underway and is on track to be completed in 2017.

- Physical Aesthetics – An optimal rating was recorded for 73% of MS4 outfall trash assessments, which exceeds the FY 2018 interim goal of 65%.
- Swimmable Waters – Tidelands Park was given an A grade for the summer dry season in the 2015–2016 Heal the Bay annual report (http://brc.healthebay.org/).

1 Introduction to San Diego Bay Watershed Management Area

The San Diego Bay Watershed Management Area (WMA) comprises the 444-square-mile land area in southern San Diego County that drains to San Diego Bay (Figure 1-1). The San Diego Regional Water Quality Control Board (Regional Board) regulates the municipal separate storm sewer systems (MS4s) in the WMA and throughout the San Diego region through the Municipal Permit.[3] The following agencies with jurisdiction in the San Diego Bay WMA are subject to the Municipal Permit: the cities of Chula Vista, Coronado, Imperial Beach, La Mesa, Lemon Grove, National City, and San Diego (City); the County of San Diego (County); the San Diego Unified Port District (Port of San Diego); and the San Diego Regional Airport Authority (Airport Authority). The California Department of Transportation (Caltrans) has its own permit issued by the State Water Resources Control Board (State Board) and is not regulated by the Municipal Permit, but Caltrans has chosen to voluntarily participate in the Water Quality Improvement Plan (WQIP) process (described below). Collectively, these 11 agencies are referred to as Responsible Parties (RPs). There are also additional jurisdictions in the WMA that have MS4 discharges, such as transit agencies, schools and community colleges, and federal lands, that have not chosen to participate in the WQIP process and over which the RPs do not have legal authority.

1.1 Water Quality Improvement Plan

In accordance with the Municipal Permit, the RPs developed a WQIP for the San Diego Bay WMA, which was approved by the Regional Board in February 2016. The WQIP identifies the Highest Priority Water Quality Conditions (Highest Priority Conditions) and Focused Priority Water Quality Conditions (Focused Priority Conditions) in the WMA, sets numeric goals to address those conditions and schedules for meeting the goals, and describes the strategies that RPs will implement to meet the goals. The RPs' strategies and associated procedures for implementing them are also described in their individual Jurisdictional Runoff Management Programs (JRMPs).[4]

The Highest Priority Conditions and Focused Priority Conditions were selected by the RPs using a process that follows the Municipal Permit requirements, as described in the WQIP. Highest Priority Conditions for the WMA were identified using this process, but some jurisdictions did not discharge or contribute to the Highest Priority Conditions. While this result is positive, these jurisdictions recognized the need to develop numeric goals, strategies, and schedules for selected conditions within their jurisdictions. Accordingly, these RPs identified Focused Priority Conditions. Numeric goals and associated schedules and strategies have been established for all Highest and Focused Priority

---

[3] Order No. R9-2013-0001, as amended by Order Nos. R9-2015-0001 and R9-2015-0100. http://www.waterboards.ca.gov/sandiego/water_issues/programs/storm water/docs/2015-1118_AmendedOrder_R9-2013-0001_COMPLETE.pdf

[4] The Water Quality Improvement Plan sets forth activities that may occur within each Responsible Party's jurisdiction to satisfy permit requirements. Responsible Parties need comply only with permit conditions relating to discharges from the MS4s for which they are operators (40 Code of Federal Regulations [CFR] 122.26(a)(3)(vi))," Order R9-2013-0001 at I.2 (emphasis added), and that each Responsible Party does not necessarily operate all portions of the MS4 within its jurisdiction.

Conditions. The Highest Priority Conditions and Focused Priority Conditions for the San Diego Bay WMA are summarized in Table 1-1. Highest Priority Conditions are indicated in bold text. Maps of Highest Priority Conditions and Focused Priority Conditions are within each respective section (Sections 4 through 8).

Table 1-1
San Diego Bay WMA Summary of Highest Priority Conditions and Focused Priority Conditions

HU	Condition	Pollutant/ Stressor	Geographic Extent (HA/HSA)	Responsible Party
Pueblo (908)	Water Quality[1]	Bacteria; Dissolved copper, lead, and zinc	Chollas Creek (908.22)	City of La Mesa City of Lemon Grove City of San Diego County of San Diego Port of San Diego Caltrans
	Water Quality	Copper and zinc (wet weather)	Airport Authority jurisdiction within HA 908.21	Airport Authority
Sweetwater (909)	Riparian Area Quality	Various	Paradise Creek—lower Sweetwater, HA 909.1[2]	City of National City
	Physical Aesthetics	Trash	The western portion of the City of Chula Vista within HA 909.1	City of Chula Vista Port of San Diego
Otay (910)	Swimmable Waters (Beaches)	Bacteria	Applicable RP jurisdiction within HA 910.1	City of Coronado Port of San Diego
	Physical Aesthetics	Trash	Applicable RP jurisdiction in HA 910.2	City of Chula Vista City of Imperial Beach Port of San Diego

Notes:
HA = hydrologic area; HU = hydrologic unit; RP = Responsible Party
1. The conditions in **bold** are the Highest Priority Conditions for the San Diego Bay WMA. Conditions in regular font are the Focused Priority Conditions.
2. For the purposes of the WQIP, Paradise Creek is part of the lower Sweetwater area, for which the San Diego Bay priority condition analysis has identified potential impacts to beneficial uses such as habitat and non-contact recreation.

1.2 Water Quality Improvement Plan Annual Report

The Municipal Permit requires the RPs within each WMA to submit an annual report to communicate the status and progress of their approaches and strategies.[5] This San Diego Bay WMA WQIP Annual Report provides information on the RPs' progress to date in implementing the WQIP during fiscal year (FY) 2016. The reporting period for FY 2016

[5] Order No. R9-2013-0001 (as amended), F.3.b.(3) (page 132-133 of 139)

consists of two components: (1) July 1, 2015, to June 30, 2016, consistent with the fiscal year, for the implementation of all program activities except monitoring and assessment, and (2) October 1, 2015, to September 30, 2016, consistent with the monitoring year for the monitoring and assessment programs. Together, these two periods constitute the reporting year (FY 2016) for the WQIP Annual Report. More information about the content and structure of the WQIP Annual Report is provided later in this section.

Table 1-2 summarizes the Municipal Permit requirements that must be addressed and their locations in this Annual Report. Appendix 1 provides additional detail in a crosswalk of the specific Municipal Permit requirements and the location(s) in the Annual Report that address each requirement.[6]

Notes:
WQIP = Water Quality Improvement Plan

This San Diego Bay WMA WQIP Annual Report for FY 2016 is structured as follows:

Section 1. Introduction – Introduces the Regional MS4 Storm Water Permit (Municipal Permit), the San Diego Bay WMA WQIP, and the Annual Reporting requirements [References Appendix 1].

Appendix 1. Crosswalk of Municipal Permit Requirements and Annual Report References

Section 2. Overview of San Diego Bay Watershed Management Area Goals and Strategies – Summarizes the strategies and numeric goals and schedules developed to measure progress in addressing the Highest and Focused Priority Conditions [References Appendices 2 and 3].

Appendix 2. Jurisdictional Strategy Implementation, JRMP Annual Report Forms, Fiscal Analysis, JRMP Updates, and Best Management Practice (BMP) Design Manual Updates

Appendix 3. Water Quality Improvement Plan Numeric Goals

Section 3. Monitoring and Assessment – Summarizes the monitoring programs and provides an assessment of the data collected [References Appendix 4].

Appendix 4. Monitoring Results and Assessments

Sections 4–8. Highest Priority Conditions and Focused Priority Conditions – Provides a detailed assessment of the progress toward achieving numeric goals for each jurisdiction, with a focus on those numeric goals occurring during the Municipal Permit term. The section also provides an overview of the strategies implemented to meet the numeric goals, the status of implementation, and plans for the coming year.

Section 9. Adaptive Management – Provides a summary of the elements of the WQIP process, which can be altered during its implementation, and any changes that were made because of new information obtained during the reporting period [References Appendix 5].

Appendix 5. Adaptive Management/Modifications

Section 10. Conclusions – Provides the conclusions based on data collected and assessments conducted during implementation of the WQIP.

Intentionally Left Blank

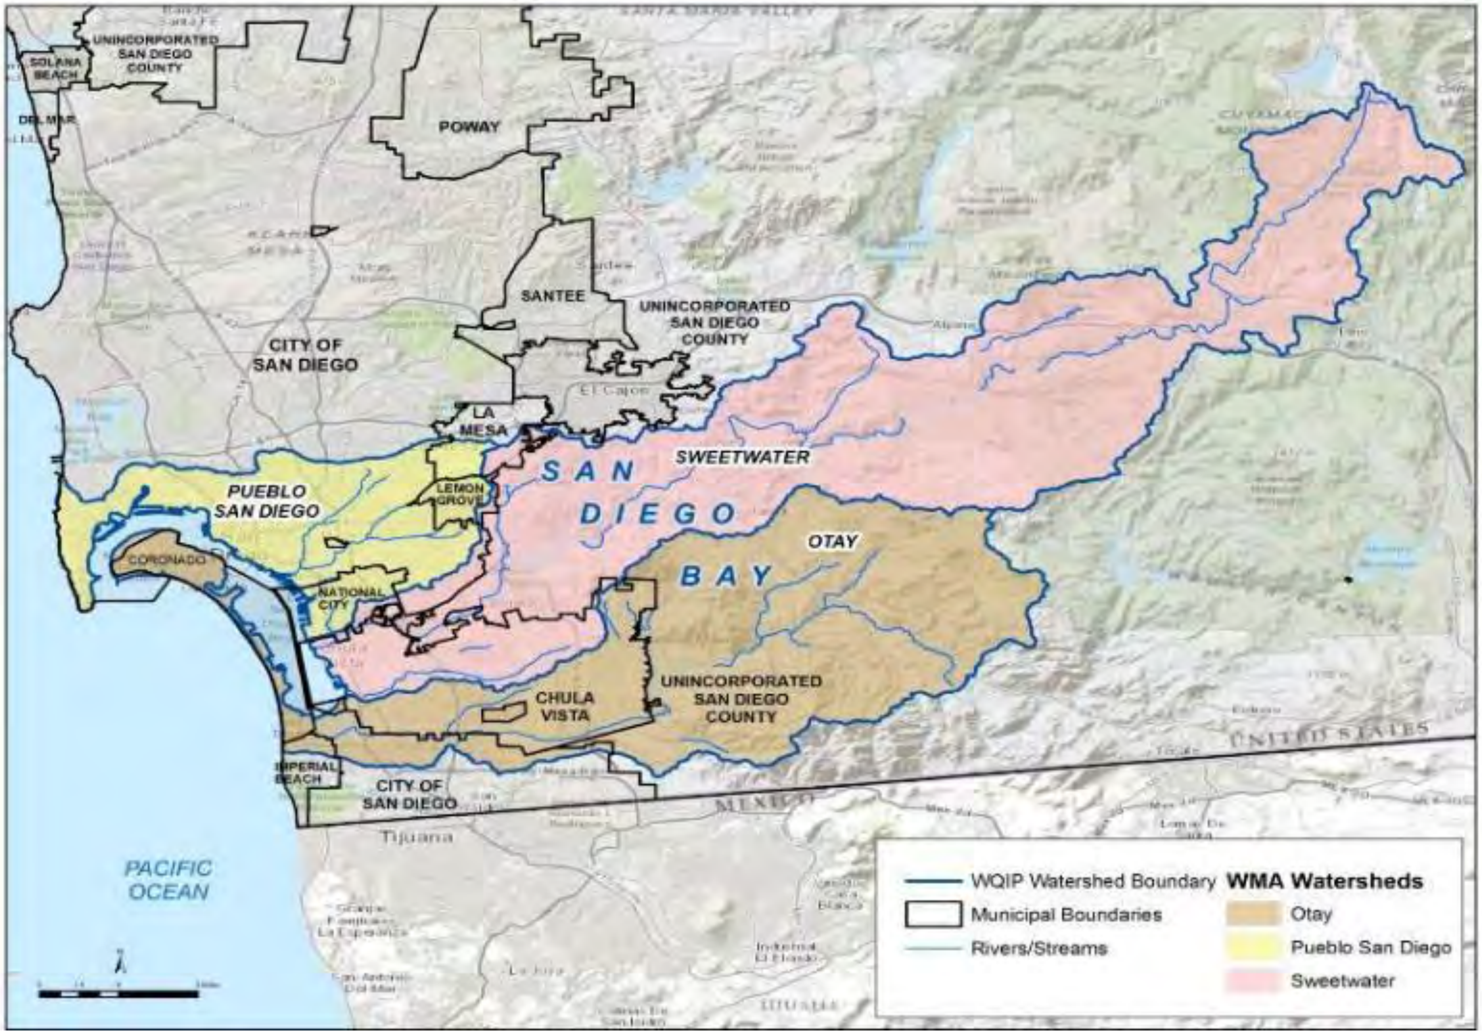

Figure 1-1
San Diego Bay Watershed Management Area

Intentionally Left Blank

2 Overview of San Diego Bay Watershed Management Area Goals and Strategies

The San Diego Bay WMA WQIP outlined the process by which the RPs within the watershed are identifying and prioritizing common water quality conditions, how they are prioritizing those water quality conditions, and how these prioritized conditions guide jurisdictional and watershed-scale programs to address the Highest and Focused Priority Conditions.

2.1 Water Quality Improvement Plan Numeric Goals

The numeric goals for the San Diego Bay WMA WQIP are designed to demonstrate improvements in water quality and progress toward preventing MS4 discharges from causing or contributing to beneficial use impairments in the San Diego Bay WMA receiving waters. The numeric goals within the WQIP are categorized into two distinct types:

(1) Interim goals – benchmarks for program performance that are intended to establish checkpoints along the path toward achieving final goals

(2) Final goals – end-points that mark achievement of desired water quality improvements

Interim and final goals may be applicable to either individual RPs or a subgroup of RPs. Interim goals have been developed for each five-year period beginning when the WQIP is approved. In some cases, interim goals consist of performance measures. Performance-based goals are numeric, requiring the completion of a certain number or geographic extent of activities, but may not directly measure water quality. The final goal is the end target goal for the Highest and Focused Priority Conditions. The numeric goals for Highest and Focused Priority Conditions in the San Diego Bay WMA are presented in Appendix 3.

2.2 Water Quality Improvement Strategies

The RPs in the San Diego Bay WMA have identified and implemented or are in the process of implementing various strategies discussed in the WQIP to help improve the quality of MS4 discharges and, in turn, receiving waters. These strategies are also designed to make progress toward achieving interim and final goals. The RPs identified approaches to implement strategies: (1) enhancements to previous JRMP activities, (2) list of potential strategies, and (3) ideas or concepts received via public input and discussion with the WQIP Consultation Panel. To meet the interim and final goals, strategies were selected for their ability to achieve the following specific objectives:

- Effectively prohibit non-storm water discharges to the MS4;
- Reduce pollutants in storm water discharges from the MS4 to the maximum extent practicable (MEP); and

- Implement programmatic or institutional best management practices.

Strategies may be either part of a core program or identified as an optional strategy. Core strategies, many of which have been in place for a decade or more, will be continued or implemented according to the schedules in the WQIP. Implementation of optional strategies depends on meeting one or more triggers identified for each individual optional strategy. For example, a structural BMP may be implemented only if monitoring indicates slower than anticipated progress to meet a specific goal.

Strategies may also be either jurisdiction-specific or collaborative. Each jurisdiction is individually implementing extensive water quality strategies to address the Highest and Focused Priority Conditions in the San Diego Bay WMA, as described in Sections 4 through 8. Individual jurisdictional strategies are described in Appendix 2. Jurisdictional strategies typically are implemented throughout the jurisdictional area, and are often emphasized within a specific area or for an activity to address a Highest or Focused Priority Condition.

Collaboration may take place among RPs at a regional, watershed, or multi-jurisdictional level and is intended to increase efficiency, streamline resources, and increase effectiveness through combined targeted implementation. Table 2-1 highlights key WMA strategies that were implemented or are on schedule to be implemented in the San Diego Bay WMA, identifies the RPs participating in each strategy, and provides detailed information on their implementation. Progress of implementation in this reporting period and planned future implementation are discussed in Appendix 2.

Table 2-1
Watershed Management Area Strategies

Strategy	Jurisdiction									
	San Diego Regional Airport Authority	City of Chula Vista	City of San Diego	City of Coronado	County of San Diego	City of Imperial Beach	City of La Mesa	City of Lemon Grove	City of National City	Port of San Diego
Implement an offsite alternative compliance option (WMAA)	✓	✓	✓	-	✓	✓	✓	✓	–	✓
Implement an incentive program for BMP retrofits	–	✓	✓	✓	✓	–	–	–	–	–
Implement sustainable landscapes program to encourage landscape retrofits	–	✓	✓	–	✓	✓	–	✓	✓	–
Implement wetland restoration, habitat restoration, and public access improvements to support multiple benefits in the San Diego Bay WMA through public-private partnerships and partnerships with other state, federal, and local agencies	✓	–	✓	–	✓	✓	–	–	✓	✓
Implement cleanup events	–	✓	✓	✓	✓	✓	✓	✓	✓	✓

Collaborate with the Regional Board	*	*	✓	✓	✓	*	*	*	✓	✓
Participate in the Reference Watershed Study or similar	✓	✓	✓	✓	**	✓	✓	✓	**	✓
Participate in the San Diego Bay Trash Study[1]	–	✓	–	–	–	✓	–	–	–	✓

Notes:

Not all strategies are planned to be completed during the 2015–2016 monitoring year.

BMP = best management practice; WMAA = Watershed Management Area Analysis; WQIP = Water Quality Improvement Plan

* Collaborating with the Regional Board is included as a part of several of the RP's JRMP strategies, such as inspections of industrial businesses and construction sites.

** The jurisdiction is participating in this study as a regional effort, but it was not included as a strategy.

– Strategy not being implemented in FY 2016 by RP.

1. The San Diego Bay Trash Study is a special study component under the Southern California Bight 2013 Regional Monitoring Program.

3 Monitoring and Assessment

The Municipal Permit supports an outcome-based approach that is implemented through the WQIP. Water quality data collection and assessment provide the vehicle for determining whether the interim or final numeric goals are being achieved, or whether RPs' programs may need to be adapted to achieve the goals.

This Annual Report assesses the data in combination with the RPs' management actions (e.g., strategies, schedules, etc.) to determine what actions are improving the quality of MS4 discharges or receiving water conditions and where additional actions may be necessary (Section 9).

The Monitoring and Assessment Program for the San Diego Bay WMA includes three primary monitoring components:

(1) Receiving water and MS4 outfall monitoring required by Municipal Permit Provision D;

(2) Highest Priority Condition and Focused Priority Condition monitoring; and

(3) Special studies, total maximum daily load (TMDL) monitoring, and additional monitoring programs.

Each program component may include various types of monitoring elements, including conducting visual observations, identifying illicit discharges, and collecting flow-weighted composite samples. Monitoring during wet and dry weather is conducted to collect observational and analytical data from the receiving water and MS4 outfalls. The RPs use the data to determine whether discharges from MS4 outfalls are influencing receiving water quality, and, if so, whether the discharges are improving or degrading receiving water conditions over time. While monitoring may include water sample collection, it may also include other types of sampling, including counting the number of trash pieces on a stream bank, collecting sediment or algae grab samples, or measuring physical changes in channel width and depth.

Figure 3-1 maps the monitoring locations for all monitoring programs and for the Highest Priority Conditions and Focused Priority Conditions. Table 3-1 is an overview of the monitoring programs described in the WQIP that have been or are planned to be implemented. Monitoring data relevant to numeric goals are presented in the discussions of Highest Priority Conditions and Focused Priority Conditions in Sections 4 through 8. The Monitoring and Assessment Report (Appendix 4) provides data and results of each of the three components.

Table 3-1 (continued)
Summary of FY 2016 Monitoring Programs

Monitoring Program	Temporal Extent	Monitoring Element[1]	Timeline (Fiscal Year)

Notes:

AB 411 = California Assembly Bill 411; Bight '13 = Southern California Bight 2013 Regional Monitoring Survey; BOD = biological oxygen demand; CRAM = California Rapid Assessment Method; FIB = fecal indicator bacteria; HMP = Hydromodification Monitoring Program; IC/ID = illicit connection and/or illicit discharge; RHMP = Regional Harbor Monitoring Program; SMC = Southern California Storm water Monitoring Coalition; TBD = to be determined; TMDL = total maximum daily load

* Dry weather metal monitoring in Chollas Creek has been completed as part of the Regional Monitoring Program.

1. Some monitoring elements may not be conducted under the entire temporal extent of the program. See Appendix K of the WQIP for details.
2. Completed under the Ambient Bay and Lagoon Monitoring (ABLM) Program, as part of Bight '13.
3. Airport monitoring for metals will be conducted as part of the Industrial General Permit (IGP) monitoring. Additional constituents are monitored under that program.
4. Monitoring is paired. Receiving Water and MS4 Outfall will be monitored the same day.
5. The AB 411 program monitoring is conducted during the dry season by the County of San Diego Department of Environmental Health (DEH) will be tracked and incorporated into bacteria-related receiving water assessments. Monitoring under AB 411 is not required under Provision D of the Municipal Permit, but bacteria monitoring is required as part of the Bacteria TMDL (Municipal Permit Attachment E.6). AB 411 monitoring may be used to augment RP monitoring and will be reviewed as part of the data assessment. RPs will be doing dry weather monitoring during wet weather season starting in fiscal year (FY) 2016.

3.1 Receiving Water Monitoring

The Long-Term Receiving Water Monitoring Program was completed during the October 2014 through September 2015 monitoring period, which fulfilled the requirements of long-term monitoring outlined in Appendix K of the WQIP. The results of this monitoring were previously presented in the Transitional Monitoring and Assessment Program Report[7] for the San Diego Bay WMA (2014–2015) (San Diego Bay Watershed Copermittees, 2015). Results reported included water quality monitoring during dry and wet weather, trash assessments, hydromodification monitoring, and bioassessment at the long-term monitoring locations. Further discussion and descriptions of the receiving water monitoring programs are in Section 1.1 of Appendix 4.

[7] Transitional Monitoring and Assessment Repot can be found on the Project Clean Water website: http://www.projectcleanwater.org/index.php?option=com_content&view=article&id=24&Itemid=64

3.2 MS4 Outfall Monitoring

The San Diego Bay WMA RPs implemented the wet and dry weather MS4 outfall monitoring program, as described in Section 5 and Appendix K of the WQIP. The dry weather MS4 monitoring program is a combination of field screening and sample collection at major persistently flowing outfalls. Field screening allows visual monitoring of all major MS4 outfalls to identify and eliminate sources of persistently flowing non-storm water discharges. This information is also used to track the progress of some of the Municipal Permit interim goals to be assessed by 2018. Water quality sample collection during dry weather provides information on the impact of MS4 outfalls on receiving water quality.

The goal of the wet weather MS4 monitoring program is to identify pollutants in storm water discharges from the MS4s and to guide pollutant source identification efforts by collecting paired water quality samples and flow data. Bacteria indicator samples are collected during both dry and wet weather MS4 analytical sampling events to assess bacteria concentration loads coming from the MS4.

Sections 1.2 and 1.3 of Appendix 4 provide more information on dry weather and wet weather MS4 monitoring programs, respectively. Attachments F and G of Appendix 4 provide detailed calculations with regard to these monitoring programs. The data collected as part of this program will be used to assess MS4 discharges and the RPs' compliance pathways in future years.

3.3 Special Study Monitoring

Special studies in the San Diego Bay WMA have been selected to further investigate the Highest Priority Conditions and Focused Priority Conditions. The RPs are participating in five different special studies: San Diego Regional Streams and Beaches Studies, San Diego Bay Debris Study, Creek Refuse Assessment Program in the Pueblo HU, Chollas Jurisdictional Boundary Study for Metals and Bacteria, and Riparian Area Selenium Study. The RPs also utilized California Assembly Bill 411 (AB 411) data obtained by the County of San Diego DEH to supplement the Swimmable Waters bacteria monitoring and the Shelter Island Shoreline Park Bacteria TMDL required monitoring. Table 3-1 summarizes the programs, including the monitoring elements addressed and the implementation timelines. Section 5 of Appendix 4 summarizes the special studies and additional program conducted in San Diego Bay WMA.

Pursuant to Section A.4 of the Municipal Storm Water Permit (Regional Board, Order No. R9-2013-0001, as amended by order nos. R9-2015-0001 and R9-2015-0100) and letter from Mr. John H. Robertus dated December 18, 2002 (Regional Board, 2002), requiring technical reports pursuant to California Water Sections 13267, 13225, and 13383 regarding exceedances of Water Quality Objectives for trash, debris, and other floating material in Chollas and Paleta Creeks, the City of San Diego was required to report twice a year on existing and planned BMPs intended to prevent or reduce trash, debris, and floating materials in Chollas and Paleta Creeks. As addressed in the WQIP, the City of San Diego agreed to incorporate the technical report addressing trash, debris, and floating material in Chollas and Paleta Creeks (annual technical report) into the January 2017 WQIP Annual Report. This change in reporting frequency was formally agreed to by the Regional Board in a letter from Mr. David W. Gibson dated February 5, 2014 (Regional Board, 2014). The annual technical report covers the activities conducted during FY 2016 (July 1, 2015, through June 30, 2016) and includes the information summarized in the semi-annual report covering the activities conducted during the first half of FY 2016 (July 1, 2015, through December 31, 2015) that was submitted to the Regional Board on March 15, 2016. The annual technical report for trash, debris, and other floating material in Chollas and Paleta Creeks is included in Appendix 4.

Intentionally Left Blank

4 Highest Priority Condition: Bacteria and Metals in Chollas Creek Hydrologic Subarea

The Chollas Creek Watershed is located within the Pueblo HU in a highly urbanized portion of central San Diego (Figure 4-1). Bacteria and dissolved copper, lead, and zinc in the Chollas Creek hydrologic subarea (HSA) have been identified as Highest Priority Conditions for the San Diego Bay WMA. TMDLs have also developed by the Regional Board for these constituents.[8]

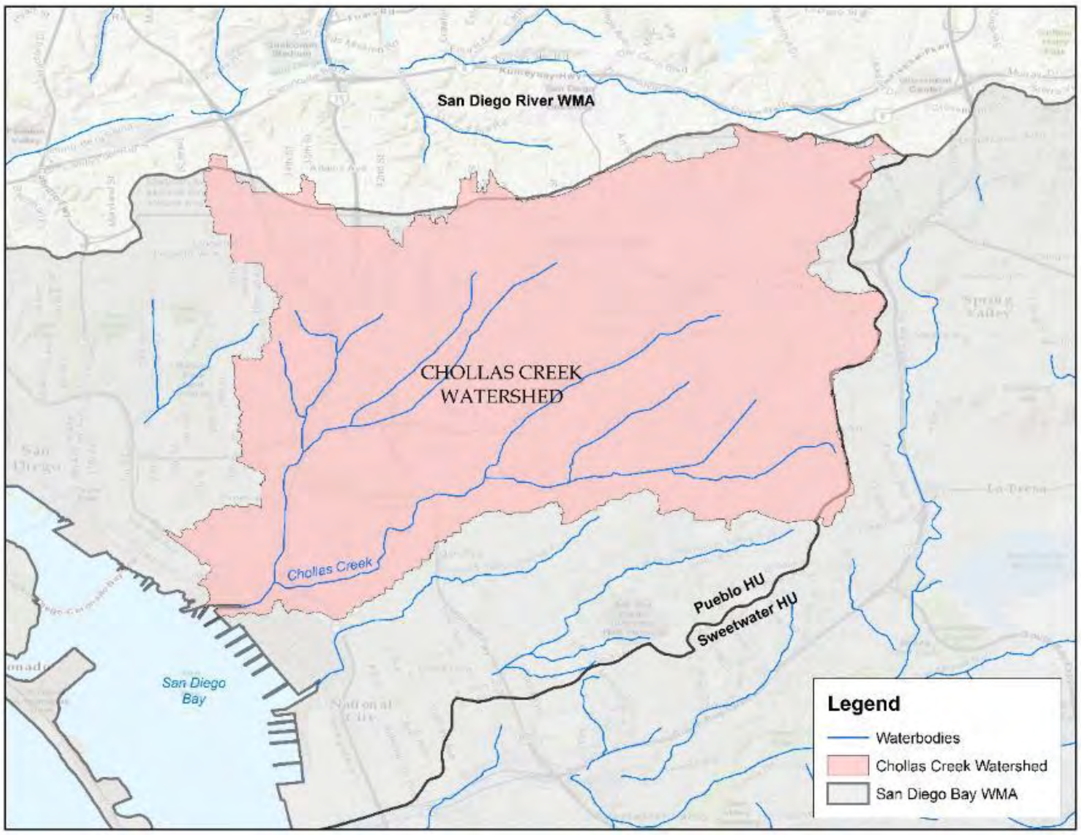

Figure 4-1
Chollas Creek Watershed

4.1 Chollas Creek TMDL Numeric Goals and Performance Measures

The WQIP identified interim and final numeric goals for the Chollas Creek Highest Priority Condition that matched the numeric standards in the TMDLs. These goals are in

[8] Region - Chollas Creek TMDL for Diazinon: adopted August 14, 2002.
http://www.waterboards.ca.gov/sandiego/water_issues/programs/tmdls/chollascreekdiazinon.shtml;
San Diego Region - Chollas Creek TMDL for Metals: adopted June 13, 2007.
http://www.waterboards.ca.gov/sandiego/water_issues/programs/tmdls/chollascreekmetals.shtml;
Revised Total Maximum Daily Loads for Indicator Bacteria, Project I – Twenty Beaches and Creeks in the San Diego Region (Including Tecolote Creek): adopted February 10, 2010. http://www.waterboards.ca.gov/sandiego/water_issues/programs/tmdls/bacteria.shtml.

Appendix 3. In the WQIP, RPs identified additional interim goals, referred to as "Performance Measures," to be achieved during the Municipal Permit term. The Performance Measures were included to measure the short-term jurisdictional progress toward achieving goals, given that sustained water quality improvement is typically demonstrated over a longer timeframe.

Performance Measures assess the outcome of a strategy or suite of strategies, and provide an interim link to demonstrate reasonable incremental progress in the quality of MS4 discharges and receiving waters.

These Performance Measures, and the RPs' progress toward achieving them, are discussed in detail for each RP in Sections 4.2 through 4.7.

The jurisdictions within the Chollas Creek HSA implement strategies to help achieve the numeric goals established for the watershed. Interim, performance-based goals are intended as milestones that help assess progress toward the longer term goals established for the Chollas Creek HSA. Monitoring programs also collect specific data for Chollas Creek to help track progress toward goals, as discussed in Section 3. The following subsections describe jurisdictional strategy implementation and progress toward interim goals. Watershed monitoring results are presented in light of the applicable numeric goals following the jurisdiction-specific discussions.

4.2 City of La Mesa (La Mesa)

The portion of the La Mesa's jurisdiction that drains to Chollas Creek is mainly south of Interstate 8. This southern half of La Mesa is the targeted area for strategies to be implemented to meet the final and interim goals. In Chollas Creek, a compliance analysis using a watershed model was conducted to identify the strategies required to be implemented. The adaptive management process provides the framework to evaluate progress toward meeting the goals and allows for modification of strategies. As strategies are modified, the compliance analysis will be updated as needed to provide assurance that numeric goals will be met. Performance-based goals are included to measure the short-term jurisdictional progress toward achieving goals, given that monitoring is required to demonstrate sustained water quality improvement over time.

4.2.1 Strategies and Schedules

During FY 2016, La Mesa implemented the strategies in the Chollas Creek HSA described in the WQIP. The implementation status of strategies listed in the San Diego Bay WMA WQIP is included in Appendix 2. La Mesa has selected jurisdictional strategies that best suit the topography and characteristics of its jurisdiction to comply with Municipal Permit requirements. The following summarizes the implementation approach and key strategies that have been identified to address the Highest Priority Condition in La Mesa's jurisdiction within the Chollas Creek HSA. Figure 4-2 shows La Mesa's jurisdiction within the Chollas Creek Highest Priority Condition.

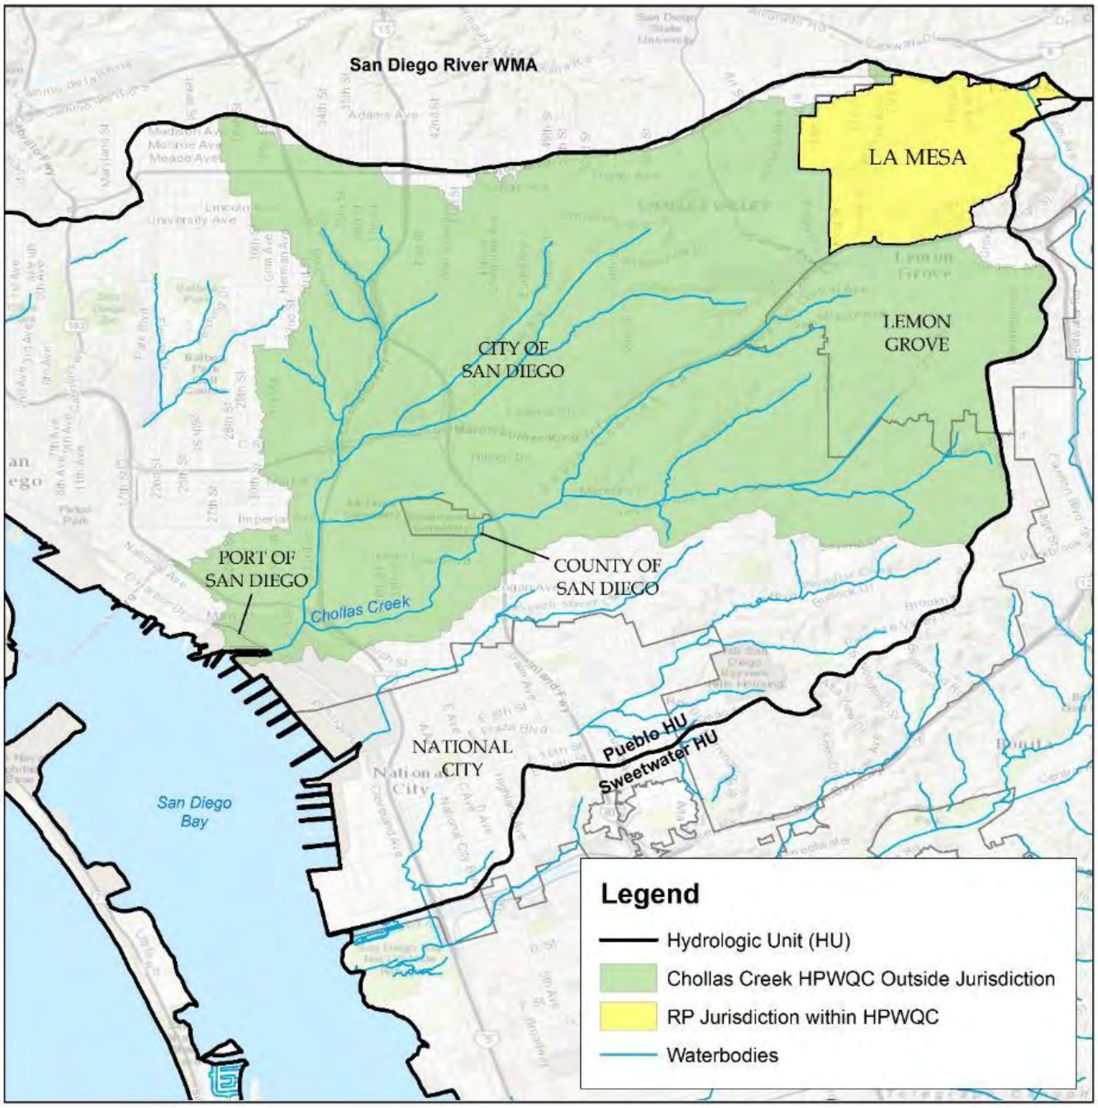

Figure 4-2
La Mesa's Jurisdiction Within the Chollas Creek Highest Priority Condition

To address bacteria, metals, and other pollutants in MS4 discharges in wet and dry weather, La Mesa plans to implement or continue public area enhancements, including low-impact development (LID) retrofit projects in roadway medians, sanitary sewer infrastructure replacement, and enhanced operation and maintenance activities for MS4 infrastructure and public roadways, such as installing trash capture devices in catch basins.

Specifically, La Mesa has been awarded a grant from the State Board Proposition 84 Storm Water Grant Program for the University Avenue Median Water Quality Improvement project to remove and replace impervious medians with pervious bioretention areas that will reduce pollutant discharges to receiving waters. The project is currently under construction, with an anticipated completion date of May 2017, and consists of the conversion of five large roadway median islands into bioretention basins with flows diverted from the outer edge of the crowned roadway. The project also includes Silva Cell type tree boxes, roadway, street light, and landscape improvements. The project will treat storm water from approximately 52 areas of residential, commercial, and transportation areas.

Replacing impervious areas with bioretention areas along University Avenue

In addition, a major effort to prevent bacteria from entering the receiving water is planned. Aging sewer infrastructure within the flood plain will be removed and relocated to reduce the potential for sewer leaks and breaks.

To reduce pollutants from private land uses, La Mesa is planning to expand the commercial facility and construction site inspection program and to increase public education and outreach. High-priority commercial businesses may be inspected twice per year, while high-priority construction sites will be inspected twice per week. La Mesa has a robust education and outreach program that includes collaboration with the Environmental Sustainability Commission, which targets residents and commercial business owners. Educational activities include supporting Boy Scouts of America groups in their efforts to build information kiosks to provide information about pet waste, trash pickup and other park rules.

Table 4-1 summarizes these strategies and schedules for La Mesa within the Chollas Creek HSA. Implementation of the optional strategies is contingent on circumstances supported by the need for the additional effort, the cost/benefit as compared with other options and strategies, and the availability of funding. The full list of optional strategies applicable to the City of La Mesa and the implementation status of each are provided in Appendix 2.

Table 4-1
Summary of Strategies for Chollas Creek—City of La Mesa

Strategy	Jurisdictional Area		Multiple Benefits				Implementation Status			
	Jurisdiction-Wide	Chollas	Trash	Bacteria[1]	Nutrients	Metals[1]	Previous Fiscal Year(s)	FY 2016	FY 2017	Future Fiscal Year(s)
University Avenue median water quality improvements		X	X	X	X	X			P	
Sanitary sewer infrastructure replacement	X	X		X	X				P	
MS4 infrastructure and outfall operation and maintenance	X	X	X	X	X	X				P
Enhanced street sweeping	X	X	X	X		X				P
Installation of trash capture devices on catch basin inlets	X	X	X						P	
Inspection programs	X	X	X	X	X	X	✓	✓	P	P
Education and outreach	X	X	X	X	X	X	✓	✓	P	P
Monitoring		X				X	✓	✓	P	P
Optional Jurisdictional Strategies										
Collaborate with homeowners' associations	X		X	X	X		Strategy was not triggered during the reporting period.			
Participate in a regional social services effort for homelessness	X		X	X			Strategy was not triggered during the reporting period.			
Implement sweeping and maintenance of private roads and parking lots in targeted areas			X	X		X	Strategy was not triggered during the reporting period.			
Replace La Mesa-owned vehicle brake pads with copper-free brake pads as they become commercially available						X	Strategy was not triggered during the reporting period.			
Implement other green infrastructure projects			X	X	X	X	Strategy was not triggered during the reporting period.			

Notes:
FY = fiscal year; MS4 = municipal separate storm sewer system
1. Highest Priority Conditions are highlighted in orange.
Implementation of strategies is dependent on approval of fiscal budgets and available resources.
✓ - Implemented, P – Planned to be implemented; X – Indicates condition benefit

4.2.2 Progress Toward Achieving Numeric Goals

Table 4-2 summarizes La Mesa's progress toward its interim goal established for the Municipal Permit term.

Intentionally Left Blank

Table 4-2
Progress Toward City of La Mesa Municipal Permit Term Numeric Goal for the Chollas Creek HSA

Planning Period			Assessment Period		
Performance Measure – Achieve by FY 2018					
Interim Goal and Progress Information	Performance Metric	Baseline Data	Data Collected/ Results	Progress	Adaptive Management Actions
Approximately 4,540 linear feet of bioretention areas will replace impervious areas along University Avenue between La Mesa Boulevard and Harbison Avenue.	Linear feet of LID installation	No LID had been installed in the target area before the WQIP was prepared.	Upon completion of construction in spring 2017, wet weather water quality data will be collected according to the monitoring plan.	The design of a large LID retrofit project was largely completed during 2015–2016. The project went out to bid in early summer 2016, and construction started in summer 2016. Construction is anticipated to be completed in spring 2017.	No modifications to the numeric goal, schedule, or supporting strategies are proposed.

Notes:
FY = fiscal year; LID = low-impact development; WQIP = Water Quality Improvement Plan

Intentionally Left Blank

4.2.3 Water Quality Strategies and Schedules Adaptations

No modifications to La Mesa's goals, strategies, and schedules presented in the San Diego Bay WMA WQIP are proposed at this time.

4.3 City of Lemon Grove (Lemon Grove)

Lemon Grove's jurisdiction within the Chollas Creek HSA is relatively small and includes a mixture of residential, light industrial, and commercial developments. Industrial and commercial development is primarily concentrated along Federal Boulevard and Broadway. Lemon Grove primarily discharges to the South Fork of Chollas Creek.

4.3.1 Strategies and Schedules

The portion of Lemon Grove located in the Chollas Creek HSA, where the Highest Priority Conditions have been identified, is shown in yellow in Figure 4-3. A small portion of Lemon Grove's jurisdiction, which is east of the yellow area in the figure, is in the Sweetwater HU. Because Lemon Grove is small, and most of the its jurisdiction is in the Chollas Creek HSA, many of Lemon Grove's strategies to address bacteria and metals in the Chollas Creek HSA, the Highest Priority Conditions, were also implemented city-wide.

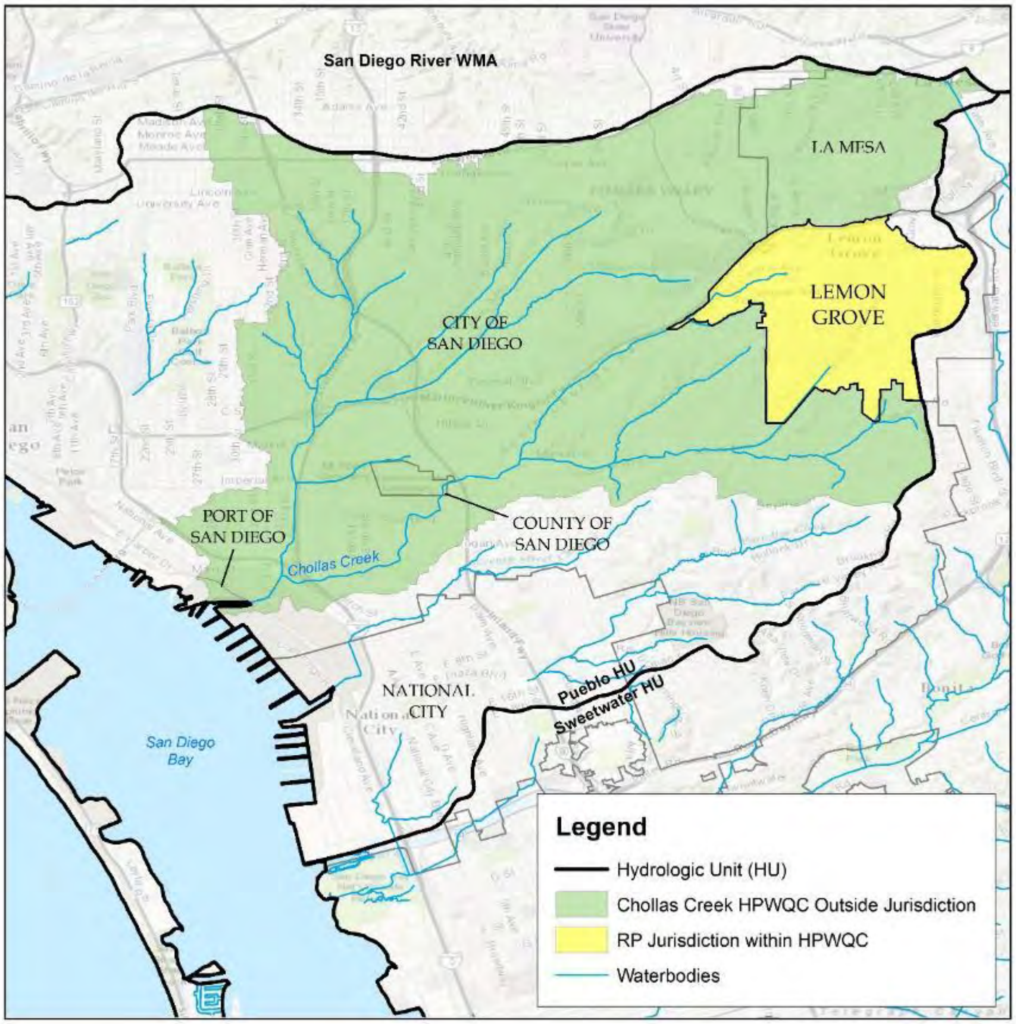

Figure 4-3
Lemon Grove's Jurisdiction Within the Chollas Creek HSA

Goals and strategies for the current Municipal Permit term focus on dry weather implementation of BMPs, specifically the reduction of irrigation runoff, beginning with municipal facilities. Goals and strategies for wet weather during the current Municipal Permit term also focus on municipal facilities and activities, including installation of downspout disconnections and enhanced street sweeping. The enhanced street sweeping program includes regular use of vacuum street sweepers, which are more effective in removing fine particles associated with metals, and higher frequency sweeping and sweeping of medians in the downtown commercial area and business areas, and along arterial streets. Lemon Grove also has implemented a robust inspection program that targets restaurants to reduce bacteria loading and that assesses the potential for implementing retrofits such as disconnecting downspouts, xeriscaping, directing runoff from paved areas to pervious areas, and installing rain barrels.

Lemon Grove downtown commercial area

Additional information on strategies that Lemon Grove implemented during FY 2016 is provided in the following areas:

- Table 4-3 highlights key strategies implemented during FY 2016.
- Appendix 2 includes a table that lists all the strategies that Lemon Grove included in the San Diego Bay WMA WQIP, including optional strategies, along with FY 2016 implementation information for each strategy.

Table 4-3
Summary of Strategies for Chollas Creek—City of Lemon Grove

Strategy[1]	Where Implemented	Multiple Benefits					Implementation Notes
		Trash	Bacteria[2]	Nutrients	Sediment	Metals[2]	
Conduct pilot projects to disconnect downspouts and direct runoff from impervious areas to pervious areas at municipal facilities (LG-41, LG-42).	Municipal Facilities	X	X	X	X	X	Performed initial site research to identify feasible locations in FY 2016. Created curb cuts to direct runoff from the City Hall parking lot to landscaping in early FY 2017.
Perform enhanced street sweeping, including sweeping medians and using vacuum street sweepers (LG-24, LG-25, LG-36).	City-wide	X	X	X	X	X	Applied median sweeping and higher sweeping frequencies to business areas and arterial streets. Alternated vacuum street sweepers with mechanical sweepers every other sweeping for all routes city-wide. Vacuum sweepers are more effective at picking up fine particles to which metals tend to adsorb, and mechanical sweepers are more effective at picking up trash.
Require BMPs to control metals and bacteria discharges from existing development (LG-11).	City-wide	X	X	X	X	X	Implemented via inspection programs.
Conduct higher frequency inspections for high-priority sources of bacteria and metals (LG-35).	Chollas Creek HSA		X			X	Targeted inspection programs at sources of bacteria and metals in Chollas Creek for inspection, and trained inspectors to focus on and identify sources of metals and bacteria.
Install municipal irrigation control system smart controllers (LG-21).	4 parks, 2 medians, and City Hall	X	X	X		X	Performed operations and maintenance on systems to ensure efficient irrigation.

Table 4-3 (continued)
Summary of Strategies for Chollas Creek—City of Lemon Grove

Strategy[1]	Where Implemented	Multiple Benefits					Implementation Notes
		Trash	Bacteria[2]	Nutrients	Sediment	Metals[2]	
Implement outreach, incentives, and increase enforcement to reduce irrigation runoff from private properties (LG-19, LG-20, LG-29, LG-34).	City-wide	X	X	X		X	Partnered with Helix Water District to publicize water conservation incentives and education; followed up on reported discharges identified via inspections and storm water hotline.
Require covered trash enclosures for development projects (LG-5).	City-wide	X	X	X	X	X	Implemented via permitting process.
Require LID at development projects (LG-1, LG-2, LG-4, LG-8).	City-wide	X	X	X	X	X	Implemented a revised project intake system to ensure that project proponents are notified of LID requirements at the initial stage of the permitting process.
Conduct construction site management (LG-10).	City-wide	X	X		X	X	Collaborated with the Regional Board on enforcement actions to address sediment discharges and BMP deficiencies at a project that discharges to Encanto Channel, a tributary of Chollas Creek.

Notes:
BMP = best management practice; FY = fiscal year; LID = low-impact development
1. Strategy identification (ID) numbers from Appendix 2 are included in parentheses at the end of each strategy description. More information about each strategy, and information about additional strategies that are not referenced in this table, is available in Appendix 2.
2. Highest Priority Conditions are highlighted in orange.

4.3.2 Progress Toward Achieving Numeric Goals

Like the other jurisdictions in the Chollas Creek HSA, Lemon Grove is subject to TMDLs for metals and bacteria, and these pollutants are also the relevant Highest Priority Conditions. Monitoring data from the previous three monitoring years at Lemon Grove's jurisdictional boundary have shown metals levels below the TMDL final targets. Lemon Grove's dry weather MS4 outfall monitoring program has determined that only one site in the city has persistent flow, and the rest of the sites are dry.

In addition to the TMDL-derived goals applicable to Lemon Grove described in Appendix 3, progress toward jurisdiction-specific interim WQIP wet and dry weather goals is presented in Table 4-4. Performance-based goals are included to measure short-term jurisdictional progress toward achieving goals.

Table 4-4
Progress Toward City of Lemon Grove Municipal Permit Term Numeric Goals for the Chollas Creek HSA

Metric	Numeric Goal	Schedule	Data Collected/Results	Progress	Adaptive Management Actions
Dry Weather Goal					
Install smart irrigation systems at municipal facilities.	8 Cal-Sense smart irrigation systems installed	Achieve by FY 2018	7 Cal-Sense systems have been installed to date.	Lemon Grove anticipates being able to install one additional Cal-Sense system by FY 2018.	None at this time.
Wet Weather Goals					
Store restaurant used cooking oil bins in covered areas and protect from run-on.	75%	Achieve by FY 2018	Data from the past two fiscal years' inspection programs have been used to develop a baseline, which has been identified as 22%.	Lemon Grove will complete targeted outreach to restaurants and inspections during FY 2017. An update on progress toward the goal after these efforts have been completed will be provided in the FY 2017 Annual Report.	None at this time.
OR					
Redirect parking lot runoff to pervious areas.	2 municipal facilities retrofitted	Achieve by FY 2018	Municipal facilities were evaluated for retrofit suitability during FY 2016.	One retrofit has been completed as of early FY 2017. Lemon Grove expects to complete an additional retrofit before the goal deadline.	None at this time.
Redirect roof downspouts to pervious areas.	2 municipal facilities retrofitted	Achieve by FY 2018	Municipal facilities were evaluated for initial retrofit suitability during FY 2016 inspections.	Potential disconnection locations have been identified at three facilities, and a more detailed assessment to determine which ones will be disconnected will be completed in FY 2017.	None at this time.

Notes:
% = percent; FY = fiscal year

Intentionally Left Blank

4.3.3 Water Quality Strategies and Schedules Adaptations

No modifications to the goals and schedules applicable to Lemon Grove that were presented in the San Diego Bay WMA WQIP are proposed at this time. One minor correction to the description of strategy LG-25, which relates to street median sweeping, is listed in Appendix 2.

4.4 City of San Diego (City)

During FY 2015–2016, the City implemented the strategies described in the WQIP. A summary of the progress made in implementing strategies to meet goals for metals and bacteria in the Chollas Creek HSA is presented in Section 4.4.1. The City's progress toward achieving jurisdiction-specific goals is presented in Section 4.4.2. A complete list of strategies planned for implementation within the WMA and the progress made on each strategy during the reporting period are provided in Appendix 2. The jurisdiction of the City o within the WMA is illustrated in Figure 4-4.

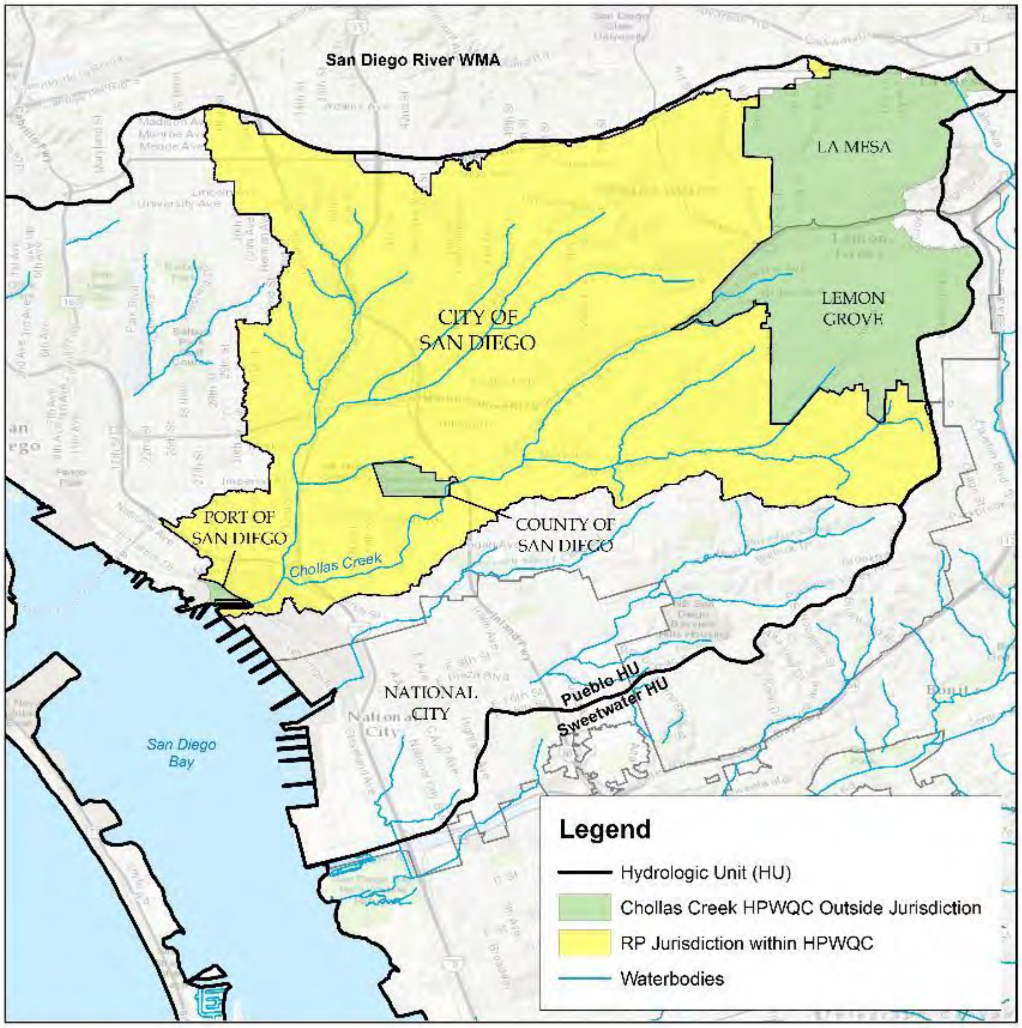

Figure 4-4
City of San Diego's Jurisdiction Within the Chollas Creek Highest Priority Condition

4.4.1 Strategies and Schedules

Highlights of strategies implemented by City to address metals and bacteria in the Chollas Creek HSA are shown in Figure 4-5. Additional strategies being implemented are listed in Table 4-5.

Chollas Creek HSA Drainage Master Plan

The City completed a drainage master plan for the Chollas Creek HSA. The drainage master plan identifies areas where structural BMPs can be completed in the future. Identification of locations is based on maximizing the efficiency of the BMP by locating the facility in an area that will treat larger and/or multiple drainage areas. This planning will maximize pollutant removal from green infrastructure and reduce the number of green infrastructure projects (and associate costs) that will be needed to meet TMDL requirements.

Structural Controls

In FY 2016, more than 25 acres of drainage area were treated by green infrastructure features within the San Diego Bay WMA, and approximately 63 additional acres are expected to be treated by FY 2018.

Enhanced Street Sweeping

To increase removal of metals and sediment, the CIty has started to enhance street sweeping operations in accordance with strategy CSD-JRMP-26 and CSD-JRMP-33 by sweeping a route in the Chollas Creek subwatershed with a regenerative air sweeper. The City also began sweeping routes with different sweeping technologies to determine the most effective sweeping practices for individual routes.

Figure 4-5
Highlights of City of San Diego Strategies

Table 4-5
Summary of Strategies for the San Diego Bay WMA—City of San Diego

Strategy	Multiple Benefits[1]						
	Bacteria[2]	Nutrients	Metals[2]	Trash	Sediment	Flow[3]	Habitat/Wildlife
Storm Drain Structure Cleaning: 11,047 storm drain structure inspections were conducted, resulting in the cleaning of 3,434 structures and removal of 842.2 tons of debris in the WMA.	X		X	X	X		
New in FY 2016: Enhanced Catch Basin Cleaning Optimization: Enhanced catch basin cleaning is a strategy to address pollutant removal by inspecting catch basins more than the JRMP-required minimum of once per year in the Tijuana River, San Diego Bay, and Los Peñasquitos WMAs to meet specific TMDL pollutant removal requirements. In an effort to further optimize its drain cleaning program, the City analyzed eight years of catch basin cleaning data and assigned priorities to individual basins based on historical debris removal. This enhancement will allow the City to target high priority drains to maximize pollutant removal while maintaining cost efficiencies.	X		X	X	X		
Street Sweeping: Approximately 36,646 curb miles of roads, streets, highways, medians, parking lots, and operations yards were swept in the WMA.	X	X	X	X	X		
New in FY 2016: Median Sweeping: 4,315 median miles were swept citywide.	X	X	X	X	X		
New in FY 2016: Targeted Aggressive Street Sweeping Pilot: The City completed a pilot study that quantified the effectiveness of posting limited-hour “no parking” signs on typically nonposted routes. The study found that posting routes resulted in an approximate 50% increase in pollutant removal because the sweeper had more access to curbs and gutters. Based on this finding, the City will consider posting additional routes if supported by the community.	X	X	X	X	X		

Table 4-5 (continued)
Summary of Strategies for the San Diego Bay WMA—City of San Diego

Strategy	Multiple Benefits[1]						
	Bacteria[2]	Nutrients	Metals[2]	Trash	Sediment	Flow[3]	Habitat/Wildlife
New in FY 2016: MS4 Maintenance: In addition to routine maintenance of the MS4, the City repaired or replaced 12 pump stations and modernized another 14 pump stations, closed-circuit television (CCTV) surveyed 28,000 linear feet of pipe in 62 locations citywide, and began developing the Waterways Maintenance Plan and Channel Maintenance Prioritization Plan. To help minimize the risk of flooding in a flood-prone drainage area, the City also installed a 2,400-volt automatic transfer switch and generator to a 130,000-gallon-per-minute pump station, allowing for sustained function in the event of a power outage.	X		X	X	X		
Illicit Discharge Detection and Elimination (IDDE) Program: 634 discharges were reported by the public, 1,021 cases were investigated, 796 discharges or illicit connections were eliminated, 819 enforcement actions were issued, and 445 escalated enforcement actions were issued in the WMA. New in FY 2016: Launch of the Get It Done App: This app allows illicit discharges to be reported quickly and accurately via any smartphone. Lastly, the Tiger Team (a proactive escalated monitoring and enforcement team that involves multiple City departments and divisions) was developed to identify, locate, and eliminate sources of human specific bacteria in the MS4. Over several months during the reporting year, one problem area within the City was investigated extensively and a source of human-specific bacteria in the MS4 was identified and abated.	X	X	X	X	X	X	X

Table 4-5 (continued)
Summary of Strategies for the San Diego Bay WMA—City of San Diego

Strategy	Multiple Benefits[1]						
	Bacteria[2]	Nutrients	Metals[2]	Trash	Sediment	Flow[3]	Habitat/Wildlife
Commercial and Industrial Business Inspections: 3,299 inspections were completed, 314 follow-up inspections were completed, 545 violations were issued, 667 enforcement actions were issued, and 228 escalated enforcement actions were issued in the WMA. In addition, the City conducted property-based inspections that focus on common areas/activities shared among multiple businesses or tenants that generate pollution. A previously conducted pilot study on inspection practices found property-based inspections to be more effective at identifying and resolving water quality issues (e.g., improper trash disposal practices and irrigation runoff, etc.) associated with commercial and industrial businesses.	X	X	X	X	X	X	X
Trash Cleanups: 4 cleanup events were sponsored through I Love a Clean San Diego that collected a total of 14,732 pounds of trash and debris in the WMA (see Appendix 2 for a list of specific projects).				X			
Rebates to Reduce Irrigation Runoff: Rebates were issued to convert 106,041 square feet of turf in the WMA and rebates for rain barrels were issued to capture 772,740 gallons of rainwater citywide.	X	X	X	X	X	X	X
New in FY 2016: Offsite Alternative Compliance Program: The City implemented Phase I of the Alternative Compliance Program to give development projects that would require onsite structural BMPs the ability to propose offsite alternative compliance projects. The development of Phase II was also initiated and will include the establishment of an in-lieu fee structure and credit system.	X	X	X	X	X	X	X
New in FY 2016: Bacteria Regrowth Study: The City completed a study to characterize the magnitude and extent of potential *Enterococcus* loading because pf regrowth within the City's storm drain system. This study quantifies the amount of bacteria in receiving water samples that are harmless to humans and would potentially be used to refine bacteria water quality standards of the Bacteria TMDL as a part of the Reopener process.	X						

1. X – Addresses the water quality conditions.

Table 4-5 (continued)
Summary of Strategies for the San Diego Bay WMA—City of San Diego

Strategy	Multiple Benefits[1]						
	Bacteria[2]	Nutrients	Metals[2]	Trash	Sediment	Flow[3]	Habitat/Wildlife

2. Highest Priority Condition is highlighted in orange.
3. Flow is defined as storm water and non-storm water discharges to receiving waters, including freshwater inputs.

% = percent; FY = fiscal year; JRMP = Jurisdictional Runoff Management Plan;
MS4 = municipal separate storm sewer system; TMDL = total maximum daily load; WMA = Watershed Management Area

4.4.2 Progress Toward Achieving Numeric Goals

The City implemented green infrastructure projects that treat 25.14 acres of drainage area and is expected to achieve the 44.6-acre FY 2018 Performance-Based Goal requirement by implementing additional projects that will treat a total of 69.74 acres by FY 2018. Details regarding achievement of the performance based goals are described further below.

In accordance with the requirements of the WQIP, baseline values were calculated for MS4 discharges in this first Annual Report. The baseline values that will be used for subsequent annual reports are summarized in Table 4-6.

Table 4-6
Baseline Values for Numeric Goals for San Diego Bay WMA—City of San Diego

Compliance Pathway	Metric	Baseline
Wet Weather Metals		
MS4 Discharges # of Direct or Indirect MS4 Discharges[1] to Receiving Water	Number of persistently flowing major storm drain outfalls	94 discharges[1]
Wet Weather Indicator Bacteria		
MS4 Discharges % Days Exceeding WQO	Fecal coliform	100%[2]
	Enterococcus	100%[2]
	Total coliform	100%[2]
MS4 Discharges # of Direct or Indirect Storm Drain Discharges[1] to Receiving Water	Number of flowing major storm drain outfalls during wet weather monitoring	94 discharges[1]
Dry Weather Metals		
MS4 Discharges Allowable % Above Effluent Limitations	Copper	TBD
	Lead	TBD
	Zinc	TBD
MS4 Discharges # of Direct or Indirect MS4 Discharges to Receiving Water	Number of persistently flowing major storm drain outfalls	94 discharges
Dry Weather Bacteria		
MS4 Discharges % Days Exceeding WQO	Fecal coliform	100%[3]
	Enterococcus	100%[3]
	Total coliform	100%[3]
MS4 Discharges # of Direct or Indirect MS4 Discharges to Receiving Water	Number of persistently flowing major storm drain outfalls	94 discharges

Table 4-6 (continued)
Baseline Values for Numeric Goals for San Diego Bay WMA—City of San Diego

Compliance Pathway	Metric	Baseline
Performance-based Goals (Wet and Dry Weather)		
Implement runoff reduction programs, including targeted education and outreach, enhanced inspections, rebates, and increased enforcement	Dry weather flow[4] measured at persistently flowing outfalls in the watershed	Average Dry Weather Flow[4]: 1.3 gallons per minute Maximum Dry Weather Flow[4]: 10.8 gallons per minute

1. Discharges are defined as the number of flowing major MS4 outfalls during wet weather monitoring.
2. Wet weather baseline exceedance rate calculated using targeted and random MS4 wet weather monitoring data from October 1, 2008, through September 30, 2013. Monitoring data were assessed similar to the method outlined in Attachment E.6 of the 2013 Municipal Permit for each monitoring year. The observed wet weather days in exceedance were summed and divided by the total wet weather days in exceedance for the historical five-year period.
3. Dry weather baseline exceedance rate calculated using targeted and random MS4 dry weather monitoring data from October 1, 2008, through September 30, 2013. Rolling five-sample-date geometric means were calculated, beginning with the 5th sample date of each monitoring year. Geometric mean WQOs were applied and the exceedance frequency extrapolated to determine baseline percent of dry weather days in exceedance for the historical five-year period.
4. Calculated using historical dry weather MS4 outfall data from 2009–2014. Calculations are described in in Appendix 3.

% = percent; MS4 = municipal separate storm sewer system; WQO = water quality objective

As discussed in Section 2, interim and final numeric goals were established for the watershed as a means of measuring reasonable progress toward addressing metals and bacteria; the goals are included in Appendix 3. Performance-based goals are included to measure short-term jurisdictional progress toward achieving these goals, given that sustained water quality improvement is typically demonstrated over a longer timeframe. Performance-based goals are intended to measure an outcome from a strategy or suite of strategies, and to provide an interim link to demonstrate reasonable incremental progress in the quality of MS4 discharges and receiving waters by FY 2018. The suite of strategies presented have been selected as goals because they are measurable and provide a direct water quality benefit in the near term.

The City's progress during FY 2015–2016 toward meeting performance-based goals is summarized in Table 4-7 and Figures 4-6 and 4-7.

Table 4-7
Progress Toward City of San Diego Municipal Permit Term Numeric Goals for the Chollas Creek HSA

Performance-Measure	Weather (Wet/Dry)	Baseline	FY 2018 Goal	FY 2016 Progress	Adaptive Management Actions
Develop a green infrastructure policy, attain City Council approval, and construct green infrastructure BMPs to improve water quality during wet and dry weather	Wet and Dry	0 acres treated in 2002, the year used as baseline in the Bacteria TMDL	Treat 44.6 acres of drainage area through construction of 6 green infrastructure BMPs	The City has made the following progress in the achievement of this performance measure. The City has begun the process for developing a green infrastructure policy. The City implemented green infrastructure projects that treat 25.14[a] acres of drainage area and is expected to exceed the performance measure by implementing additional projects that treat 63.1[b] acres of drainage area for a total of 88.24 acres treated by 2018.	No adaptive management actions are required.
Implement runoff reduction programs, including targeted education and outreach, enhanced inspections, rebates, and increased enforcement	Dry	<u>Average Dry Weather Flow[1]:</u> 1.3 gallons per minute <u>Maximum Dry Weather Flow[1]:</u> 10.8 gallons per minute	Reduce prohibited dry weather flow from baseline measured at persistently flowing outfalls in the WMA by 10%	Performance measure has been achieved. Average dry weather flow in FY 2016 was 0.9 gallons per minute, representing a 27.2% reduction from the baseline average flow.	No adaptive management actions are required.

1. Calculated using historical dry weather MS4 outfall data from 2009–2012. Calculations are described in in Appendix 3.

% = percent; BMP = best management practice; FY = fiscal year; TMDL = total maximum daily load; WMA = Watershed Management Area

a. 43rd and Logan structural BMP (6.49 acres); Memorial Park structural and priority development project (18.65 acres)

b. Southcrest Park structural BMP (36 acres), Beta Street (2.1 acres), Alamo Green Street (25 acres)

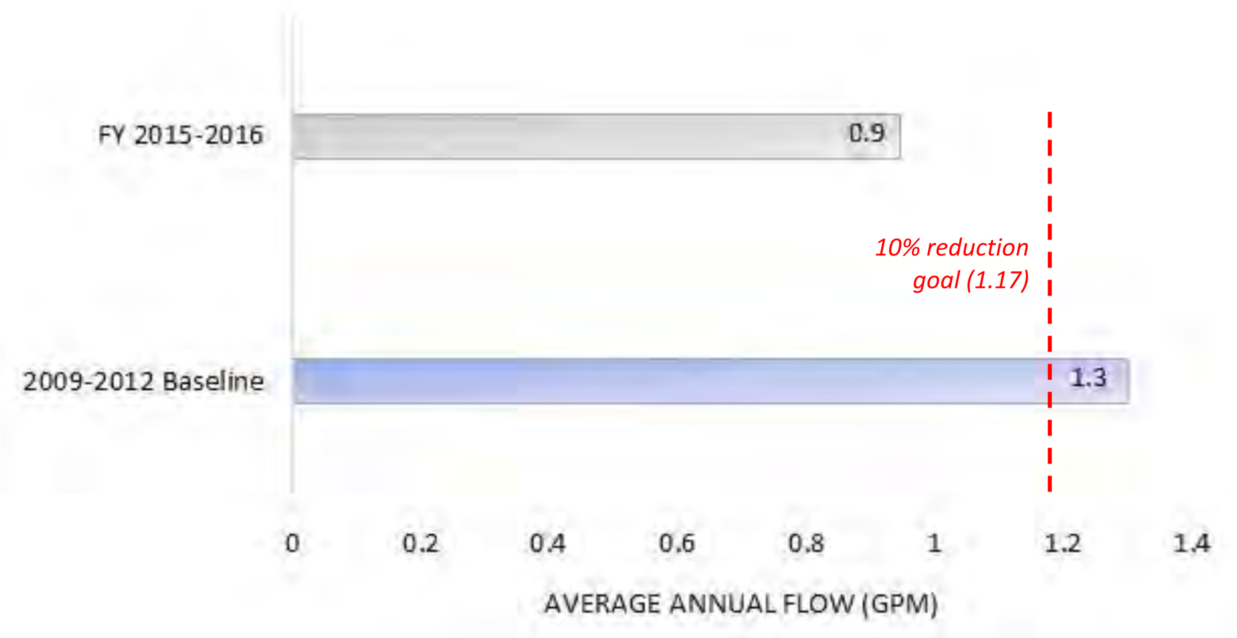

Figure 4-7
Progress Made in Reducing Anthropogenic Dry Weather Flow Relative to the Performance-based Goal for San Diego Bay

4.4.3 Water Quality Strategies and Schedules Adaptations

No modifications to the City's goals, strategies, and schedules presented in the San Diego Bay WMA WQIP are proposed at this time.

4.5 County of San Diego (County)

The key strategies identified to address the Highest Priority Conditions in the County's jurisdiction are presented in Section 4.5.1. The County's WQIP final and interim goals are presented in Appendix 3. In the Chollas Creek HSA, the County's limited jurisdiction includes a cemetery, part of one road, one residence, a YMCA facility, and part of one MS4 outfall. The outfall discharges sheet flow from the cemetery during wet weather, and is reported to be dry (i.e., no discharges) during dry weather. These runoff characteristics will be verified through increased monitoring and visual surveillance. There are no catch basins in the County's area of jurisdiction. In Chollas Creek, a compliance analysis using a watershed model was conducted to identify the strategies required to be implemented to meet final goals. The strategies and implementation schedules demonstrate that numeric goals will be met. The adaptive management process provides the framework to evaluate progress toward meeting the goals and allows for modification of strategies. As strategies are modified, the compliance analysis will be updated as needed to provide assurance that numeric goals will be met.

4.5.1 Strategies and Schedules

The County selected jurisdictional strategies that best suit the characteristics of its jurisdiction to comply with Municipal Permit requirements. A complete list of jurisdictional strategies implemented or planned for implementation within the WMA is provided in Appendix 2. The following summarizes the implementation approach and key strategies that were identified to address the Highest Priority Conditions in the County's jurisdiction within the Chollas Creek HSA. Figure 4-8 shows the County's jurisdiction within the Chollas Creek Highest Priority Condition where the strategies will be implemented.

Optional strategies that have been considered (based upon need and resource availability) are also summarized. In Chollas Creek, a compliance analysis using a watershed model was conducted to identify the strategies required to be implemented to meet final goals. The strategies and implementation schedules demonstrate that numeric goals will be met. The adaptive management process provides the framework to evaluate progress toward meeting the goals and allows for modification of strategies. As strategies are modified, the compliance analysis will be updated as needed to provide assurance that numeric goals will be met.

Figure 4-8
County's Jurisdiction Within the Chollas Creek Highest Priority Condition

Throughout its jurisdiction, the County has taken a multi-faceted approach to reduce water consumption and limit dry weather flows by promoting collaboration among departments. In response to drought conditions in the region, the County recently implemented a Water Shortage and Drought Response Plan to reduce water use at its facilities. Since 2009, the Department of Parks and Recreation has completed installation of high-efficiency irrigation heads and smart irrigation controllers in 20 parks county-wide. Many of these parks, including Sweetwater Summit Regional Park, Cottonwood Park, and Woodhaven Park (among others), lie within the San Diego Bay WMA and provide immediate water quality benefits to its receiving waters. These efforts have enabled the County to save over 60 million gallons of irrigation water in County parks during FY 2015–2016. Other measures taken include, but are not limited to, elimination of regularly scheduled exterior window washing at County facilities and identification of parks and County facilities with the potential for recycled water connections.

Furthermore, potential dry weather flows were evaluated through inspections of MS4 outfalls discharging to receiving waters. The County has shifted to a more active field program to better locate and abate dry weather flows. Staff members spend a greater amount of time in unincorporated communities to identify nuisance anthropogenic flows and to address them through appropriate education and enforcement strategies. County staff members have been trained to identify and report illicit discharges and illicit connections during required annual storm water training; this training has been updated to reflect recent Municipal Permit changes.

In an effort to spread awareness of ways to reduce over-irrigation, the Sustainable Landscapes Program (SLP) was developed by the County in collaboration with a diverse group of partners. The program is intended to integrate multiple sustainability concepts and resource benefits for residential-scale urban landscapes, reduce the amount of potable water applied to the landscape, capture and use rainwater as a resource, and reduce pollutant infiltration into local waterways. The comprehensive approach includes (1) development of landscape guidelines, (2) residential and professional landscape training courses, (3) technical landscaping assistance, including planting and irrigation plans, (4) marketing and outreach, (5) financial incentives for turf conversions, and (6) landscape materials provisions, including mulch and compost/compost tea. During FY 2015–2016, the SLP partners offered free education and training opportunities to more than 1,000 homeowners and professionals throughout the County. All training opportunities align with the San Diego SLP Guidelines, which describe best practices and recommendations for a watershed approach to landscaping, such as downspout diversion to landscaped areas, LID (Site Design BMPs), use of water efficient irrigation equipment, low water use plants, and compost and mulch to amend soils for maximum water retention. Financial incentives for turf conversions and discounts on landscape material are scheduled to commence in late 2016.

Bioretention swale on Logan Ave

The County recently undertook efforts to update its 2007 LID Handbook[9] to better align with the County's Standard Urban Storm Water Mitigation Plan (SUSMP) and Hydromodification Management Plan (HMP), and to reflect the most current data on LID approaches and their efficacy. For its efforts, the County was named the recipient of the 2015 Outstanding Innovation in Green Planning and Design Award by the San Diego Chapter of the California Association of Environmental Professionals (AEP), a nonprofit organization established in 1974 and dedicated to enforcing and supporting the California Environmental Quality Act

[9] County of San Diego Low Impact Development Handbook http://www.sandiegocounty.gov/content/sdc/dpw/watersheds/susmp/lid.html

(CEQA). Additionally, the County received a similar award in October 2016 for work during the fiscal year on development of its Guidance on Green Infrastructure[10], a document outlining tools to uniformly design, install, and maintain LID features in the public right-of-way.

The County has implemented a number of watershed strategies to reduce pollutants in storm water runoff discharges from storm drain outfalls. Within the County, a schedule was developed for operation and maintenance of the storm water conveyance system and related structures, including retrofits. To reduce metals in MS4 discharges, the County also continued to implement a road maintenance schedule for public roadways within its jurisdiction and has increased the frequency of street sweeping. In two recent examples of retrofit projects that targeted potential runoff from County facilities, LID approaches were utilized in conjunction with drainage and parking improvements at the Southeast Family Resource Center and Central Regional Public Health Center. Previously, the facilities consisted primarily of impervious areas composed of rooftops and parking lots. However, the improvements effectively reduced flows during storm events and reduced concentrations of metals. Table 4-8 lists the key strategies and schedule for the County's jurisdiction within the Chollas Creek HSA. Several optional jurisdictional strategies and their implementation status are also presented in Table 4-8. Implementation of the optional strategies has been and will continue to be contingent upon circumstances supported by the need for the additional effort, the cost/benefit as compared with other options and strategies, and the availability of funding. The full list strategies applicable to the County and the implementation status of each are provided in Appendix 2.

Optional Jurisdictional Strategies										
Implement sustainable landscapes program to encourage landscape retrofits.	X	X		X	X	X	Strategy was not triggered during the reporting period, but was partially implemented in FY 2016.			
Collaborate with partners in watershed on flood control channel rehabilitation projects.	X	X	X	X	X	X	Strategy was not triggered during the reporting period, but was partially implemented in FY 2016.			

FY = fiscal year
1. Highest Priority Conditions are highlighted in orange.
Implementation of strategies is dependent on approval of fiscal budgets and available resources.
✓ - Implemented, P – Planned to be implemented; X – Indicates condition benefit

4.5.2 Progress Toward Achieving Numeric Goals

During FY 2015–2016, the County successfully implemented strategies outlined in the WQIP and is expecting to meet interim goals. In the Chollas Creek HSA (908.22), ongoing maintenance was performed at two facilities where LID BMPs were previously implemented: (1) Southeast Family Resource Center, and (2) Central Regional Public Health Center. LID implementation and subsequent maintenance have contributed to significantly reduced flows during storm events and lower concentrations of bacteria and metals in the receiving waters.

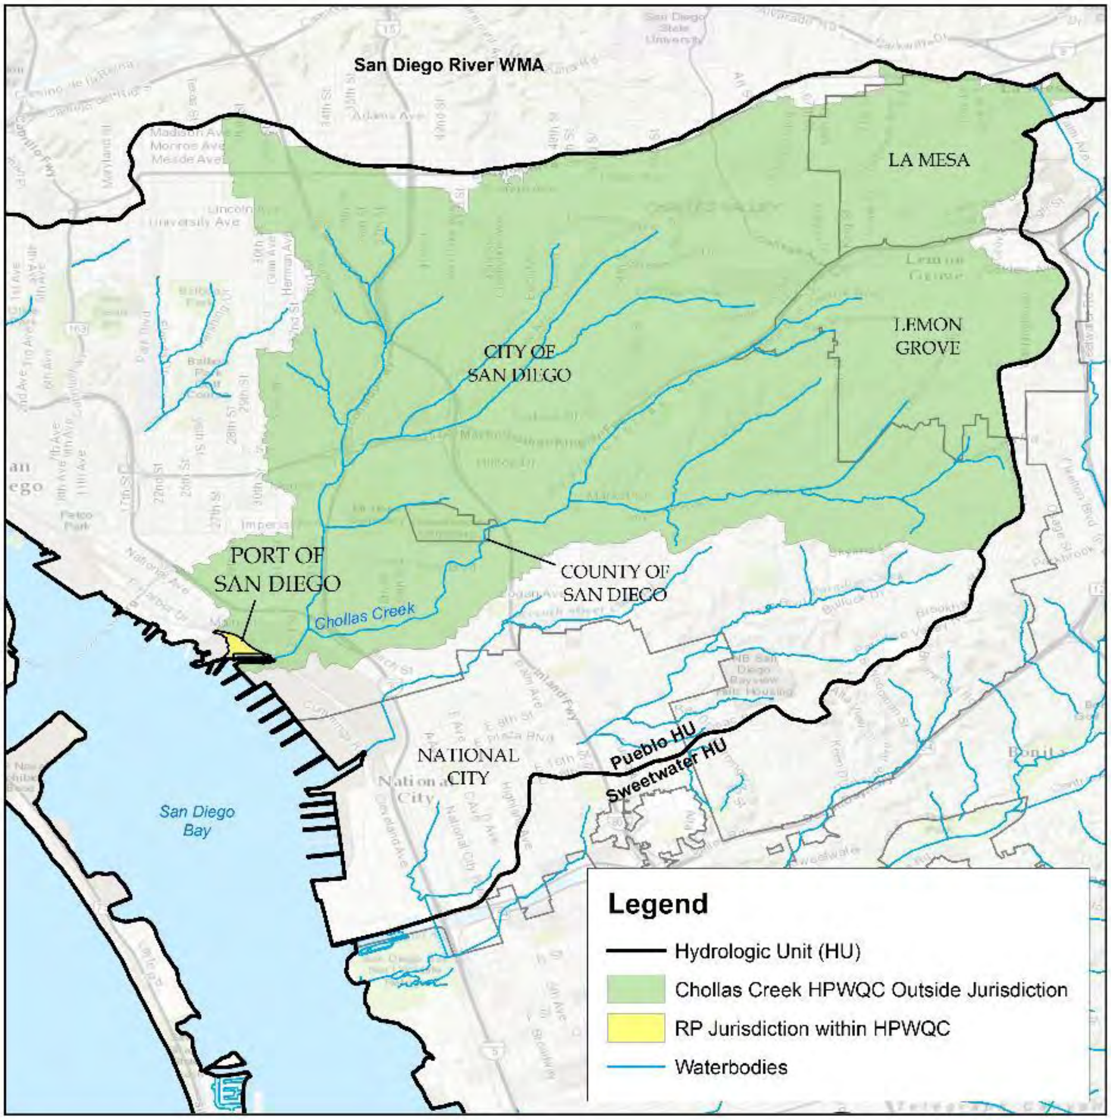
4.5.3 Water Quality Strategies and Schedules Adaptations

No modifications to the County's goals, strategies, and schedules presented in the San Diego Bay WMA WQIP are proposed at this time.

4.6 Port of San Diego

The Port of San Diego's approach to address the Highest Priority Conditions and to comply with the TMDL-derived watershed goals in Chollas Creek takes into account the nominal, if any, discharges from the Port of San Diego areas to the Chollas Creek HSA. Within the Chollas Creek drainage area, the Port of San Diego's jurisdictional authority is limited to a single tenant, General Dynamics National Steel and Shipbuilding Company (NASSCO). This facility represents less than 1 percent (%) of the Chollas Creek drainage area. The entire NASSCO facility is regulated by an individual National Pollutant Discharge Elimination System (NPDES) permit. As a result of the toxicity standards in NASSCO's NPDES permit, NASSCO elected to install a self-contained retention/treatment system that captures and treats all storm water discharges at its facility. Therefore, NASSCO has minimized potential discharges to San Diego Bay and eliminated discharges from its facility to Chollas Creek. The area highlighted in yellow in Figure 4-9 shows the Port of San Diego's boundaries within the Chollas Creek HSA.

Given the limited jurisdictional area of the Port of San Diego in the Chollas Creek HSA, its approach is to employ strategies that address the Highest Priority Conditions (trash, metals, and bacteria) by verifying that the Port of San Diego's tenant, NASSCO, is in compliance with Municipal Permit-required BMPs, providing education outreach to various audiences that live and/or work in the drainage area, participating in cleanup events within the creek. This approach will help support other water quality efforts in Chollas Creek. The FY 2016 strategies are listed in Section 4.6.1. The complete list of strategies implemented by the Port of San Diego is in Appendix 2.



Notes:
As stated above, the Port of San Diego does not operate any segment of MS4 that discharges to Chollas Creek.

Figure 4-9
Port of San Diego's Jurisdiction Within the Chollas Creek Highest Priority Condition

4.6.1 Strategies and Schedules

The Port of San Diego completed all of the strategies outlined for the Chollas Creek HSA for FY 2016. This work includes several public outreach and cleanup events. The Port of San Diego sponsored 16 cleanups overall in Port of San Diego tidelands/San Diego Bay. Two cleanup events occurred within the Chollas Creek HSA. The Port of San Diego also completed a routine MS4 permit facility inspection at the NASSCO facility. The strategies employed during FY 2016 are discussed further below and are summarized in Table 4-9.

The Port of San Diego's inspection of NASSCO on March 21, 2016, found 100% compliance with the BMP requirements of the Municipal Permit during this reporting period (PO-7). Therefore, no follow-up was required. NASSCO is also required to comply with its own individual NPDES permit reporting requirements (Order NO. R9-2009-0099) and is required to submit results annually. The individual NPDES permit reports are submitted to the Regional Board by NASSCO separately from this WQIP Annual Report.

The Port of San Diego addressed trash, metals (copper and zinc), and bacteria and increased public awareness by providing educational opportunities to various audiences throughout the reporting year, including residential communities, the general public, school children, and underserved audiences (PO-17). Four programs specifically focused on school children in the Chollas Creek HSA (Table 4-9). The programs reached approximately 2,645 students in the Chollas Creek HSA during the reporting year.

One of the Port of San Diego's optional strategies for the Chollas Creek HSA was triggered in FY 2016. Cleanup events hosted or sponsored by the Port of San Diego (PO-35 optional) also provided opportunities for the public to develop a sense of stewardship for the environment and to participate in efforts within the Chollas Creek HSA, as well as at other locations within Port of San Diego's jurisdiction.

In addition, the Port of San Diego sponsored the annual regional seminar on Integrated Pest Management (IPM) for Landscape Professionals (PO-12). Approximately 117 attendees attended the May 19, 2016, public seminar to learn more about environmentally friendly pest management methods. While the seminar was not specific to the Chollas Creek HSA, the landscape professionals in attendance may employ IPM concepts when working within the Chollas Creek HSA.

The Port of San Diego also participated in the San Diego Regional Reference Study, as discussed in Appendix 4. The study assessed the microbial water quality at reference beaches following dry and wet weather events in southern California, with a focus on the San Diego region. The goal is to be able to revise the Bacteria TMDL to base it on local conditions. The findings of the study will be submitted to the Regional Board to include in their analysis when the Bacteria TMDL is reopened.

Intentionally Left Blank

Table 4-9
Summary of Strategies for Chollas Creek – Port of San Diego

Strategy	Multiple Benefits			Implementation Status
	Trash	Bacteria[1]	Metals[1]	**FY 2016**
PO-7: Core JRMP Programs – Existing Development (Commercial/Industrial)	X		X	Annual Municipal Permit Industrial Facility Inspections: • The Port of San Diego conducted one facility inspection of National Steel and Shipbuilding Company (NASSCO) on 3/21/2016; 100% of required MS4 Permit BMP compliance was achieved during this reporting period; no follow-up required; therefore, no corrective action was necessary.
PO-17: Core JRMP Programs – Public Education and Outreach[3]	X	X	X	Many of the Port of San Diego's education activities are implemented jurisdiction or San Diego Bay watershed-wide. However, educational programs specifically occurring within the Chollas Creek HSA include: • Groundwork San Diego-Chollas Creek's *Chollas Creek to San Diego Bay Waterkeepers Initiative* – 600 third to seventh graders reached with 27% increase in knowledge • Ocean Discovery Institute – The *Wetlands Avengers* program provided 953 fourth grade students from 11 different schools in the City Heights community with field and classroom activities. • Ocean Discovery Institute – *Ocean Science Explorers: City to Bay Scientists* provided 950 fifth grade students from the City Heights community opportunities to do hands-on experiments in the classroom. • I Love A Clean San Diego, Watershed Education Presentations – Six presentations focused in Chollas Creek HSA to 142 high school students
PO-35: Cleanup and Collection Events	X	X	X	• The Port of San Diego sponsored 16 cleanups overall in Port tidelands/San Diego Bay. • Approximately 100 people collected 962 pounds of trash/debris in two Port-sponsored cleanup events within the Chollas Creek HSA during the reporting year.

Notes:
1. Highest Priority Conditions are highlighted in orange.
% = percent; BMP = best management practice; FY = fiscal year; HSA = hydrologic subarea; JRMP = Jurisdictional Runoff Management Program/Plan; MS4 = municipal separate storm sewer system

Intentionally Left Blank

4.6.2 Water Quality Strategies and Schedules Adaptations

No modifications to the Port of San Diego's goals, strategies, and schedules presented in the San Diego Bay WMA WQIP are proposed at this time.

4.7 Caltrans

Caltrans is not regulated under the Municipal Permit; however, Caltrans is subject to similar requirements through its MS4 Permit (Caltrans Permit) (Regional Board, 2012). Caltrans has voluntarily contributed to the WQIP effort to provide a consistent and watershed-wide approach to meeting applicable TMDL requirements. The baseline strategies are continuously implemented and augmented as resources become available.

Attachment IV of the Caltrans Permit outlines a methodology for prioritizing stream segments included in TMDLs to which Caltrans is subject. The Caltrans Permit establishes BMP implementation requirements, evaluated in terms of compliance units. Caltrans is expected to achieve 1,650 compliance units per year through the implementation of retrofit BMPs, cooperative implementation, and post-construction treatment beyond permit requirements.

Impaired reaches throughout the state will be prioritized on the basis of several factors, including, but not limited to, percent reduction needed, Caltrans drainage area contributing to the reach, and proximity to receiving waters. Reaches with metals TMDLs will likely be prioritized. Caltrans continued its efforts to reduce pollutant discharges to receiving waters through ongoing compliance activities and by implementing a consistent statewide approach to address Attachment IV requirements for the named pollutants.

Caltrans' jurisdiction areas include roadway, land adjacent to roadways, and facilities. Caltrans' jurisdictional strategies specifically focus on BMP implementation to reduce known pollutants within these areas. Caltrans' strategies vary from those of other RPs (in both type and name) to best address freeway characterization discharges from its Right-of-Way (ROW). Strategies include programs developed by Caltrans Headquarters for statewide execution and District 11 implementation. Caltrans' implementation of strategies with the WMA is dependent on legislative approval.

4.7.1 Strategies and Schedules

Caltrans' strategies vary from those of other RPs (in both type and name) to best address typical freeway characterization discharges from its ROW. Strategies include programs developed by Caltrans Headquarters for statewide execution and District 11 implementation. Caltrans' implementation of strategies within the WMA is dependent on legislative approval. A complete list of strategies, including optional strategies, and their anticipated implementation schedule are provided in Appendix 2. The strategies and schedules are subject to change and are contingent upon annual budget approvals and funding availability. They will be modified through the adaptive management process as needed.

Several optional jurisdictional strategies and their implementation status are presented in Table 4-8. Implementation of the optional strategies is contingent on circumstances supported by the need for the additional effort, the cost/benefit as compared with other options and strategies, and the availability of funding. The full list of optional strategies applicable to Caltrans and the implementation status of each are provided in Appendix 2.

4.7.2 Progress Toward Achieving Numeric Goals

For the Bacteria TMDL, Caltrans is expected to eliminate dry weather flows by implementing control measures to ensure effective prohibition. For wet weather flows, Caltrans is expected to implement control measures or BMPs to prevent discharge of bacteria from the ROW; these measures can include source control and pre-emptive activities such as street sweeping, cleanup of illegal dumping, and public education on littering. Implementation of these controls is in accordance with the TMDL prioritization list currently under development.

Caltrans' WQIP goals for dry and wet weather are presented in Table 4-10.

4.7.3 Water Quality Strategies and Schedules Adaptations

No modifications to Caltrans' goals, strategies, and schedules presented in the San Diego Bay WMA WQIP are proposed at this time.

4.8 Chollas Creek HSA Monitoring and Assessment

Monitoring for the Highest Priority Condition was developed to comply with the two TMDLs in effect for Chollas Creek. The subsections below provide a brief overview of the monitoring programs and results.

4.8.1 Bacteria Monitoring Results

The 2015–2016 Chollas Creek Bacteria TMDL compliance monitoring is designed to meet the requirements under Resolution No. R9-2010-0001 (Regional Board, 2010)[11], as incorporated into the Regional Board's Order Number R9-2013-0001[12] (Municipal Permit) in 2013. The Bacteria TMDL monitoring program assesses the conditions of the receiving waters and has the following objectives:

- Characterize levels of bacteria concentrations at compliance monitoring locations.
- Track progress toward meeting the Bacteria TMDL numeric targets.

Fecal indicator bacteria (FIB) sampling for the compliance monitoring season (October 2015 through September 2016) was conducted at three creek monitoring locations. Wet weather samples were collected within the first 24 hours after the end of rainfall for three wet weather events. Dry weather samples were collected at least weekly between April and October 2015, and at least monthly on dry weather days from November 2015 through March 2016.

The Chollas Creek Bacteria TMDL 2015–2016 Water Quality Compliance Monitoring Report summarizes FIB concentrations and key hydrologic data by compliance monitoring location and season for the 2015–2016 monitoring season. Compliance is assessed by comparing analytical results for *Enterococcus* and fecal coliform with applicable receiving water limitations (RWLs), in accordance with the Bacteria TMDL requirements in Attachment E of the Municipal Permit. The RWLs are a combination of numeric targets for bacteria density and allowable exceedance frequencies. The compliance schedule includes interim milestones that must be achieved to demonstrate progress prior to attaining full compliance with the TMDL.

Results for 2015–2016 are summarized in Appendix 4, and are discussed in detail in the Chollas Creek Bacteria TMDL 2015–2016 Water Quality Compliance Monitoring Report.

---

[11] A Resolution Amending the Water Quality Control Plan (Regional Board, 1994) or the San Diego Basin (9) To Incorporate Revised Total Maximum Daily Loads for Indicator Bacteria Project I—Twenty Beaches and Creeks in the San Diego Region (Including Tecolote Creek), February 10, 2010

[12] National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer System (MS4) Draining the Watersheds Within the San Diego Region, May 14, 2013.

4.8.2 Metals Monitoring Results

The Chollas Creek Diazinon and Dissolved Metals TMDLs Compliance Monitoring program is designed to meet the requirements of Order No. R9-2004-0277 (Regional Board, 2004) and State Board Resolution No. 2008-00054 (Regional Board, 2008). To determine compliance with these TMDLs, the RPs conducted wet weather water quality monitoring at two mass loading stations during three wet weather events during the 2015–2016 wet season.

Samples were analyzed for the TMDL compliance constituents: diazinon, dissolved metals (copper, lead, and zinc), total hardness, and toxicity. Additional constituent analyses were selected by the RPs fill data gaps and track potential water quality contaminants or issues in Chollas Creek.

Compliance was assessed by comparing analytical results with applicable water quality criteria set forth in the approved TMDLs for the Chollas Creek HSA, the pesticide criteria of the California Department of Fish and Wildlife (CDFW), and the Aquatic Life Benchmarks of the United States Environmental Protection Agency (USEPA) Office of Pesticide Programs (OPP) (USEPA, 2014).

Results for 2015–2016 are summarized in Appendix 4, and details are provided in the Chollas Creek Metals and Diazinon TMDL Monitoring Annual Report (Attachment C). Key findings from the report include:

- Concentrations of metals in samples at Chollas Creek South Fork did not exceed WQOs for metals.
- Copper concentrations in samples at Chollas Creek North Fork exceeded WQOs for copper in two of three samples, but did not exceed WQOs for lead or zinc.
- Diazinon was not detected in the samples.
- Toxicity was not observed in the samples.

The City has developed and submitted a Water Effects Ratio (WER) Confirmation Study (City of San Diego, 201) to the Regional Board for dissolved copper and dissolved zinc at Z Street and SD8(1). If approved, the updated WERs would provide for an alternative assessment of compliance with the TMDL waste load allocations (WLAs). The alternative WERs will assess dissolved copper and zinc specific to the ambient water chemistry within Chollas Creek rather than the default WER provided in the California Toxics Rule (CTR).

5 Focused Priority Condition: Water Quality Within Airport Authority Jurisdiction

Water quality impairment due to copper and zinc concentrations in wet weather discharges from the Airport Authority is a Focused Priority Condition in the Pueblo HU. The geographic extent of the Focused Priority Condition is the jurisdiction of the Airport Authority, which is the sole RP for the condition. The Airport Authority identified copper and zinc concentrations in wet weather discharges as a Focused Priority Condition based on a history of sampling results that show that copper and zinc concentrations consistently exceeded the 2008 USEPA NPDES Multi-Sector General Permit (MSGP) benchmark values. The Airport Authority has identified goals and strategies that will be implemented throughout its jurisdiction to address this Focused Priority Condition. In addition, three drainage areas with historically higher concentrations of dissolved copper and zinc have been identified for targeted BMP implementation. Figure 5-1 shows the Airport Authority's jurisdiction within the Water Quality Focused Priority Condition where the strategies will be implemented.

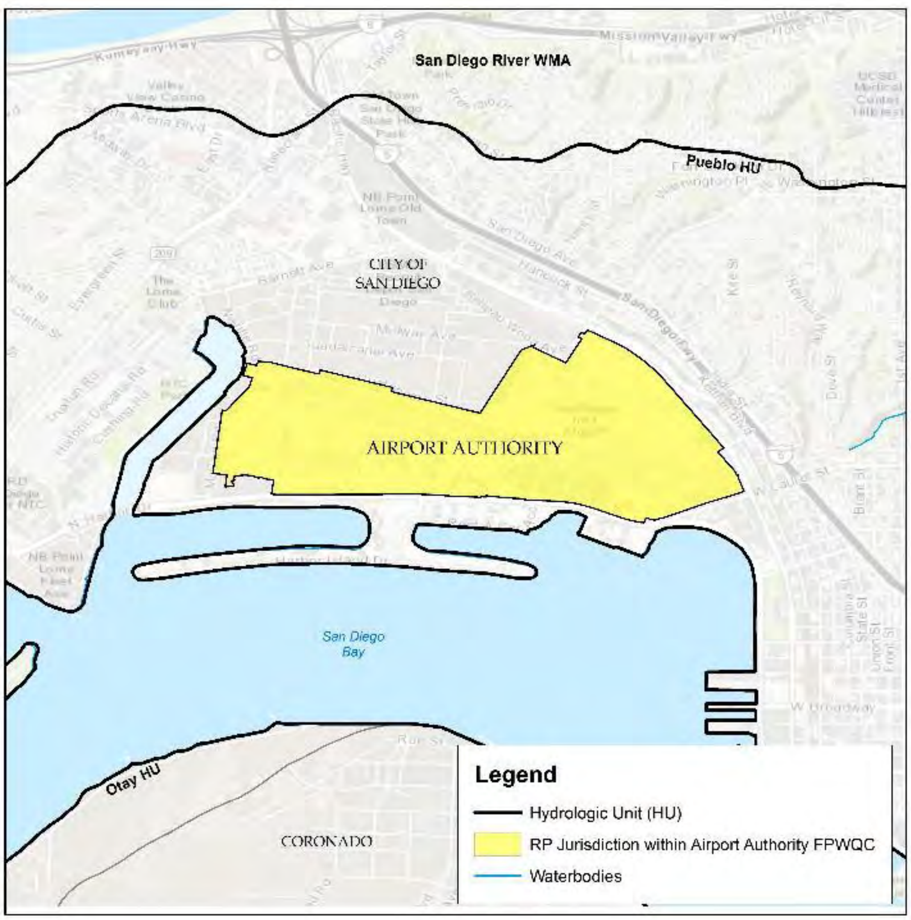

Figure 5-1
Airport Authority's Jurisdiction Within the Water Quality Focused Priority Condition

5.1 Airport Authority Jurisdiction Numeric Goals

Goals developed for the Focused Priority Condition target MS4 discharge concentrations. The goals and schedule for meeting final and interim goals for this Focused Priority Condition are listed in Appendix 3. The interim concentration goals are based on the Numeric Action Levels (NALs) for copper and zinc established in the Industrial General Permit (IGP) (NPDES Permit No. CAS000001) (with the NALs themselves based on the 2008 MSGP benchmarks) and the final concentration goals are based on the CTR criteria for copper and zinc. The interim goals are expressed as the percentage of wet weather discharge samples with concentrations of contaminants that exceed the NALs for copper and zinc (33.2 micrograms per liter [µg/L] and 260 µg/L, respectively). The final goals are expressed as the percentage of wet weather discharge samples with concentrations of contaminants that exceed the CTR values for copper and zinc in saltwater (4.8 µg/L and 90 µg/L, respectively).

The Airport Authority implements strategies designed to achieve the numeric goals established for the area. The Airport Authority has also set an interim goal to be achieved during the Municipal Permit term. Interim goals are intended as milestones that help assess progress toward the longer-term goals. A monitoring program also collects data to be used to help track progress toward goals. The following subsections describe jurisdictional strategy implementation and progress toward interim goals. Monitoring results are then presented in light of the applicable numeric goals following the strategy implementation discussion.

The WQIP numeric goals for the Focused Priority Condition are provided in Appendix 3. Interim goals for the Airport Authority are as follows:

- MS4 discharges jurisdiction-wide (70% of wet weather samples with concentrations exceeding target) for dissolved copper;
- MS4 discharges jurisdiction-wide (65% of wet weather samples with concentrations exceeding target) for dissolved zinc;

  OR

- MS4 discharges in sub-basins 1, 3, and 5 (in total) with 34 acres per week treated with street sweeping.

During FY 2016, the Facilities Management Department (FMD) and the Environmental Affairs Department (EAD) implemented more efficient methods to track the location, date, and frequency of sweeping activities. The total area of runway and taxiways that was swept in sub-basins 1, 3, and 5 combined in FY 2016 was approximately 364 acres, resulting in an average of 7 acres of runway and taxiway pavement swept weekly in these sub-basins. Given that the WQIP FY 2018 interim performance goal for street sweeping in this area was a three-fold increase amount of area currently being swept, the Airport Authority proposes to correct the FY 2016 interim performance goal to 7 acres per week, instead of 34 acres per week, and the FY 2018 interim performance goal for street sweeping to 21 acres/week instead of 100 acres per week of runway and taxiway pavement in sub-basins 1, 3, and 5 combined. The new proposed goals table is presented in Appendix 3.

This goal correction is a result of better recordkeeping, communication, and analysis by FMD and EAD. For the WQIP, the FMD and EAD incorrectly determined that 34 acres of runway and taxiway were being swept weekly in 2015 in sub-basins 1, 3 and 5. The focus of this performance goal was the eastern portion of the runway and taxiways alone (where drainage sub-basins 1, 3, and 5 are located). In addition to this goal, the Airport Authority has focused the optional strategy of an enhanced rubber removal and power-washing program (if it is implemented) on this same eastern portion of the runway for the same reason (because that end of the runway is predominantly used by landing aircraft).

The Airport Authority also proposes some minor modifications to the strategies and schedules in the San Diego Bay WMA WQIP. Those minor modifications are discussed in Appendix 2.

5.2 Strategies and Schedules

The Airport Authority's approach focuses on areas that generate the Focused Priority Condition metals, i.e., the airside impermeable surfaces (e.g., runways and taxiways) and parking lots. Removing pollutant materials from the ground surface and disposing of them properly before they are mobilized by runoff during rain events are fundamental. The Airport Authority's implementation of strategies to achieve the WQIP goals in FY 2016 included implementing enhanced source control BMPs, which were added to the Airport Authority's Storm Water Management Plan prior to the start of FY 2016; continuing the active street sweeping program on the airside to remove copper and zinc generated from aircraft and vehicle tires and brakes; and increasing the frequency of facility and operations storm water BMP inspections. The Airport Authority has also continued its program of sweeping passenger parking lots.

However, the primary method to minimize pollutants entering runoff has been use of green infrastructure and treatment systems that collect and treat parking lot runoff prior to discharge. Development projects completed in FY 2015 or FY 2016, and that became operational in FY 2016, include several projects in parking lots where new, post-construction BMPs, both proprietary and nonproprietary (such as pervious pavement, rock swales, etc.), were deployed. In addition, new treatment control BMP systems were added to the airside in FY 2016.

Catch basin cleaning is also key to addressing general areas of discharge. During FY 2016, the Airport Authority continued the frequency of basin inspection and cleaning from the previous fiscal year, and plans to optimize catch basin cleaning in FY 2017. In FY 2016, this strategy continued to help collect pollutants before they are discharged to receiving waters during rain events; for FY 2017, it is anticipated that more pollutants can be collected as this activity is optimized.

The Airport Authority's key strategies (as well as optional strategies) for FY 2016 are summarized below. A complete list of strategies implemented in FY 2016 within the WMA is provided in Appendix 2. Strategies and implementation schedules were identified during the development of the WQIP using best information available on efficiency, effectiveness, and level of effort estimated to achieve compliance with numeric goals. Proposed modifications to the Airport Authority's goals are discussed in Section 5.1. The implementation of each strategy has been and will continue to be contingent upon annual budget approvals and funding availability.

Sweeping Airside Corridors

The Airport Authority has been sweeping the runway, taxiways, ramp areas, roads, and parking lots for several years, if not decades, prior to FY 2016. Aircraft and vehicle tire and brake wear are sources of copper and zinc from these locations. Under the WQIP, sweeping on the eastern end of the airfield (in particular, the runway and taxiways) will be modified and enhanced to optimize its effectiveness in FY 2017. Modifications or enhancements are expected to result in an increase in the area swept and/or the frequency of sweeping by FY 2018, depending on available funding.

Implementation of the street sweeping program during FY 2016, along with compilation of the street sweeping tracking data, has revealed the lack of specificity in the performance metrics for this particular goal. The total airside pavement area (runway, taxiways, ramp and service roads) that was swept in FY 2016 was approximately 1,832 acres. The total area of runway and taxiways that was swept in sub-basins 1, 3, and 5 combined in FY 2016 was approximately 364 acres. As a result, an average of 35 acres of airside pavement were swept each week during FY 2016 and an average of 7 acres of runway and taxiway pavement in sub-basins 1, 3, and 5 combined were swept each week during FY 2016.

Sweeping Landside Parking Lots and Roadways

The Airport Authority has been sweeping the parking lots and roadways for many years. The following roads are swept five times per week (Monday through Friday) for three hours per day: Commuter Terminal and Terminal 1 Roadway System, Winship Lane, Stillwater Road, Airlane Road, Terminal 2 East and Terminal 2 West Roadway System, and Spruance Road. All accessible portions of the parking lots, including the Long-Term Lot, Economy Lot, Lot 6, Cell Phone Lot, Taxi Hold Lot, NTC Lot, and the Terminals 1 and 2 Lots, are swept weekly.

Green Infrastructure, Treatment Systems, and IGP Advanced BMPs

Parking lots, building roofs, and ramp areas are sources of copper and zinc at the airport. To target these areas, the Airport Authority has been focusing on green infrastructure, treatment system, and advanced BMP projects to control these sources of heavy metals in storm water runoff:

During FY 2016:

- The new Rental Car Center (RCC), opened in early 2016, incorporated 1.25 acres of bioretention swales to address heavy metals, including copper and zinc, and other pollutants.
- An overhead canopy was constructed at the FedEx facility. The canopy protects the FedEx cargo work area, reducing contact of rainwater with any potential pollutants from cargo and equipment loading/unloading activities.
- The Airport Authority constructed an enclosed storage area for hazardous waste.

- The RCC Bus Parking facility was completed. The project includes a storm drainage detention basin and two modular wetland systems, among other BMPs, to target trash, debris, sediment, and heavy metals.
- The Taxi Hold Lot was also completed. The project includes an infiltration trench and a permeable pavement bed/area.
- Four permeable pavement/stone reservoir beds were included in the Parking Lot 6 Expansion project, which was completed in March 2016.

Catch Basin Cleaning

The Airport Authority continued its current Storm Water Management Plan (SWMP)/JRMP program of quarterly cleaning of high priority catch basins at San Diego International Airport. High priority areas are typically closer to terminals. All other catch basins are inspected annually, and cleaning and maintenance are performed as necessary. The Airport Authority intends to verify the current high priority catch basins and to identify other high priority areas that may benefit from more frequent inspection and cleaning during FY 2017. The Airport Authority will also determine and implement optimal frequencies for catch basin cleaning. To increase metals removal, catch basins will be cleaned more frequently and additional high priority catch basins will be designated on the basis of the inspections.

Enhanced Tenant and Airport Operations BMP Inspections and Enforcement

The Airport Authority increased inspection and enforcement of BMPs required in tenant and airport operational areas. The required BMPs are generally source controls designed to reduce pollutants, including copper and zinc that are generated by tenant and airport operational activities. These BMPs are listed in Table I.1.2 in Appendix I of the WQIP. Several BMPs have been updated and new BMPs have been developed for:

- Electric Vehicle Maintenance;
- Erodible Areas;
- Construction and Remodeling/Repair.

To ensure compliance, the Airport Authority increased the frequency of inspection from quarterly to monthly; continued education and outreach by inspectors; provided classroom training with other tenants; and fostered a more cooperative approach through ramp walks and numerous meetings with Airport Authority employees and tenants. The increased frequency of inspections, increased visibility of issues using database tracking, and regular follow-up by inspectors all serve to encourage tenants to implement BMPs. Additionally, *ad hoc* inspections following a sampling event were added to the Airport Authority's web-based/interactive inspection response and enforcement database to ensure that action was taken on any BMP deficiencies observed during storms.

Public Education and Participation

The Airport Authority's SWMP/JRMP and WQIP include details on the Public Education and Participation Program. The following highlights some of the education and public participation activities that occurred in FY 2016:

- Classroom and on-the-job training. Over 140 Airport Authority employees and support staff received storm water training in FY 2016.
- Tours of the airport are offered twice per month for students in grades 2 through 8.
- Printed and audiovisual guidance on BMPs and storm water management procedures during storm water training provided by the Airport Authority. Topics included urban runoff concepts; impacts on receiving waters; NPDES permits; the Airport Authority SWMP/JRMP and WQIP; the Airport Authority's Focused Priority Condition; sources, goals, strategies, and Focused Priority Condition BMPs; impacts of construction and land development; inspections; and minimum and advanced BMPs. All of these topics were covered during the storm water training that was provided by the Airport Authority. Posters highlighting the proper implementation of BMPs will be displayed in various airport and tenant employee areas in FY 2017.

Source Identification Study for Highest Pollutant-Generating Areas/Activities

In 2005, the Airport Authority designed, implemented, and evaluated a source identification study to determine the highest potential pollutant-generating activities (PGAs). This "Site Audit" also doubles as the annual comprehensive facility compliance evaluation required under the IGP, and is conducted every two years. It generates a Relative Pollutant Risk Factor for each drainage basin, and tenant and Airport Authority facility, to determine the highest PGA areas and activities and to better target appropriate BMPs or improve existing BMPs for those areas or activities. The next Site Audit was conducted in fall 2016. Additionally, every year following the completion of the annual storm water sampling, a "hot spot" map for copper and zinc is developed to indicate the areas of the airport that generate higher levels of copper and zinc, and recommendations are made to reduce those levels. As part of the IGP Exceedance Response Actions, an evaluation was completed by October 1, 2016. In addition, a report that addresses BMP improvements to reduce any exceedances of benchmarks will be submitted to the State Board in compliance with the IGP by January 1, 2017.

Increased Inspections of Highest Pollutant Generating Areas/Activities

The Airport Authority will increase the inspection frequency for the highest potential PGAs in FY 2018, subject to available funding.

Key Strategies Implemented in FY 2016

The following key strategies were implemented in FY 2016 to achieve the specified goals in Table 5-1:

(1) Continued the current street sweeping program;

(2) Continued the current catch basin cleaning program;

(3) Continued to identify and target high-priority areas for enhanced inspections, increased BMP implementation and enforcement, and compliance incentives;

(4) Continued to implement green infrastructure at San Diego International Airport; and

(5) Continued the Airport Authority's public education and participation, and illicit discharge, detection, and elimination (IDDE) efforts.

Future Key Strategies To Be Implemented

The key strategies to be implemented to achieve the specified goals in Table 5-1 in future fiscal years are as follows:

(1) Determine and implement optimal street sweeping;

(2) Determine and implement optimal catch basin cleaning;

(3) Continue to identify and target high-priority areas for enhanced inspections, increased BMP implementation and enforcement, and compliance incentives;

(4) Continue to implement green infrastructure at San Diego International Airport;

(5) Continue the Airport Authority's public education and participation efforts; and

(6) Continue IDDE program efforts.

Optional Strategies

Optional strategies were implemented in FY 2016, including investigation and research of emerging BMP technologies, capture and reuse of air conditioning condensate, and development of a Draft Master Plan for Water Reuse; implementation of IGP advanced BMPs and LID or treatment control best management practices (TCBMPs); and collaboration with local agencies on habitat restoration and the Reference Watershed Study. During FY 2017 and FY 2018, other optional strategies may be implemented, if triggered, including enhanced runway rubber removal activities (described below); source reduction initiatives such as copper-free brake pads; and collaboration on regional education and outreach activities.

Rubber Removal and Power Washing

The Airport Authority identified runway rubber removal and power washing as a potential optional jurisdictional strategy. Aircraft tires and brakes, known to contain heavy metals, are considered likely to be major sources of copper and zinc on the runway. In FY 2018, if increased airside sweeping in the focused runway/taxiway areas of sub-basins 1, 3, and

5 does not result in meeting interim goals, and if funding and resources allow and consensus agreement is reached, the Airport Authority's optional strategy of determining the optimal runway rubber removal frequencies, equipment, methods, and locations to maximize pollutant removal may be triggered. Expanding rubber removal and/or power washing to a larger portion of the runway, beyond the touchdown zone, is expected to improve runoff water quality.

Collaboration with Local Agencies on Habitat Rehabilitation in San Diego Bay

The San Diego International Airport now includes properties that were once major industrial aircraft manufacturing facilities on Port of San Diego tidelands and lands that were once part of the United States Navy's Naval Training Center. The historical uses at these locations have been identified as potential sources of pollutants to San Diego Bay, and in particular, the Navy Boat Channel, Convair Lagoon, and the Laurel-Hawthorn Embayment. The Airport Authority has and will continue to work with the Port of San Diego, the United States Navy, and other local agencies to investigate these potential source areas and eliminate the sources and restore habitats as necessary and appropriate.

Summary of Strategies Within Airport Authority Jurisdiction

Table 5-1 summarizes the jurisdictional strategies implemented in FY 2016 or before for meeting final and interim goals for this Focused Priority Condition.

Several optional jurisdictional strategies that were implemented in FY 2016 are also presented in Table 5-1. Implementation of the optional strategies is contingent on circumstances supported by the need for the additional effort, the cost/benefit as compared with other options and strategies, and the availability of funding. The full list of optional strategies applicable to the Airport Authority and the implementation status of each are provided in Appendix 2.

Table 5-1
Summary of Strategies for Water Quality (Copper and Zinc) Within Airport Authority Jurisdiction

Strategy	Multiple Benefits					Implementation Status			
	Trash	Bacteria[1]	Nutrients	Sediment	Metals[1]	Previous Fiscal Year(s)	**FY 2016**	FY 2017	Future Fiscal Year(s)
Green infrastructure and treatment systems — parking lot BMPs	X	X	X	X	X	✓	✓	P	P
Green infrastructure and treatment systems —green build terminal expansion project	X	X	X	X	X	✓			
Green infrastructure and treatment systems —northside BMPs	X	X	X	X	X		✓	P	P
Enhanced tenant and airport operational area BMP inspections and enforcement, with incentives for improved BMP implementation	X	X	X	X	X	✓	✓	P	P
Catch basin cleaning	X	X	X	X	X	✓	✓	P	P
Sweeping of airside corridors[3]	X	X	X	X	X	✓	✓	P	P
Continued IDDE Program	X	X	X	X	X	✓	✓	P	P
Continued public education, participation, and staff and tenant storm water training	X	X	X	X	X	✓	✓	P	P
Continued enforcement	X	X	X	X	X	✓	✓	P	P
Optional Strategies[2]									
Investigation and research of emerging BMP technology	X			X	X		✓	P	
Phase in of advanced BMPs (as defined in the IGP) in priority areas	X	X	X	X	X		✓	P	
Collaboration with regional education and outreach activities	X	X	X	X	X		✓	P	
Collaboration on habitat rehabilitation					X		✓		
Additional green infrastructure and proprietary BMPs	X	X	X	X	X		✓		

Notes:
BMP = best management practice; FY = fiscal year; IDDE = illicit discharge, detection, and elimination; IGP = Industrial General Permit
1. Focused Priority Water Quality Conditions are highlighted in orange
2. Implementation of strategies is dependent on approval of fiscal budgets and available resources
3. Refer to Adaptive Management Section 9 or complete strategy table in Appendix 2 for more details and for a list of Optional Strategies not triggered in this reporting period.

✓ – Implemented; P – Planned to be implemented; X – Indicates condition benefit

5.3 Airport Authority Jurisdiction Monitoring and Assessment

To comply with both the Municipal Permit and the IGP, the Airport Authority conducts extensive monitoring during storm events throughout the year. Section 5.3.1 describes the wet weather monitoring program at the San Diego International Airport. Copper and zinc, the Focused Priority Condition pollutants of concern for the Airport Authority, are sampled, analyzed, and evaluated for all sites. Monitoring results are presented in Appendix 4.

5.3.1 MS4 Monitoring

Section XI of the IGP requires wet weather monitoring and assessment of storm water runoff. The major monitoring objectives, as outlined in the IGP Fact Sheet, are to:

(1) Demonstrate compliance with the IGP, per the monitoring implementation plan requirements;

(2) Help implement the Storm Water Pollution Prevention Plan (SWPPP) (which is an integral part of the Airport Authority's SWMP/JRMP); and

(3) Measure the effectiveness of BMPs in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges.

The IGP requires that oil and grease (O&G), total suspended solids (TSS), and pH must be analyzed at all sites. In addition, samples must be analyzed for analytes that are likely to be found in storm water runoff, including any related to receiving waters on the Clean Water Act Section 303(d) list of water quality limited segments (303(d) List) or any approved TMDLs. Three analytes, biochemical oxygen demand (BOD), chemical oxygen demand (COD), and ammonia (NH3), are listed specifically by the IGP for air transportation facilities. The other original analytes, total metals (aluminum, copper, iron, lead, and zinc), dissolved metals (copper and zinc), methylene blue active substances (MBAS), ethylene glycol, and total petroleum hydrocarbons (TPH), were selected on the basis of a review of historical water quality results and activities conducted within the drainage basins at the airport. The suite of analytes was expanded twice in the last few fiscal years, including at the end of FY 2015, to comply with new Municipal Permit and IGP requirements. The latest changes made in FY 2015 to meet new IGP requirements were effective from the start of FY 2016.

Sixteen sampling locations, and one alternative location, have been identified at the San Diego International Airport, pursuant to the IGP. The sampling locations were selected on the basis of a review of the potential pollutants and pollutant sources, the scope of operations within the drainage basins, and the requirements of the IGP. Sampling locations were selected as far downstream as feasible to capture as many areas as possible with industrial activities within a given drainage basin. Where sampling locations were tidally influenced or access was restricted (e.g., when they are in the aircraft movement area), sheet flow runoff was collected. As required by Section XI.B.2 of the IGP, the Airport Authority sampled two qualifying storm events (QSEs) during the first half of the reporting year (July 1 through December 31, 2015) and two QSEs during the second half (January 1 through June 30, 2016). All sites were sampled for all four storms, with the exception of one site that was under construction during the first part of FY 2016.

A hot spot map showing copper and zinc results, in terms of concentration, was developed so that future efforts can be targeted to the highest PGAs for the focused priority pollutants of concern (i.e., copper and zinc).

Wet weather compliance monitoring activities were also conducted at the airport under the San Diego Bay WMA WQIP MS4 Outfall Monitoring Program. Under the Municipal Permit, 10 outfall sites were required to be monitored during one event during the wet season, October 1 through April 30. The three storms for which the outfalls were monitored met the mobilization criteria for monitoring (i.e., greater than or equal to 0.1 inch of rainfall with a forecast of 70%, preceded by 72 hours of less than or equal to 0.1 inch rainfall), and all 10 sites were successfully monitored. The wet weather outfall station for the Airport Authority is upstream from Outfall 12, because the outfall is tidally influenced. Monitoring was conducted on April 7 and 8, 2016. The analytes monitored included turbidity, nitrate and nitrite, phosphorus, cadmium, copper, lead, and zinc.

Finally, pollutant concentrations have been measured at an airside gate area site for the previous 10 years to (1) assess trends in concentrations, and (2) determine the effectiveness of treatment control BMPs in reducing or preventing pollutants in storm water discharges. In FY 2016, the influent, effluent, and bypass of a media filter unit in a terminal parking lot were monitored during five storms.

Overall, many analytes are monitored and compared with Municipal Permit and IGP benchmarks in the Airport Authority's program. Although modifications to strategies are being proposed to target the Focused Priority Conditions (namely, copper and zinc), there are many strategies that will also contribute to reducing other pollutants at the same time (e.g., sweeping and catch basin cleaning will remove trash, sediment, debris, and metals; and green infrastructure, TCBMPs, and advanced BMPs will remove many different pollutants, depending on the type of BMP installed).

5.4 Progress Toward Achieving Numeric Goals

Table 5-2 presents the interim and final goals for the Airport Authority, as well as the goals achieved in FY 2016 in terms of percentage of IGP compliance samples with concentrations of contaminants exceeding the IGP NALs and acres of airside area swept in sub-basins 1, 3, and 5 combined. Table 5-3 shows the target concentrations for dissolved copper and zinc (i.e., the IGP NALs), the number of samples analyzed during FY 2016, the number and percentage of samples with concentrations of pollutants of concern exceeding the target, and the interim goals. Table 5-4 shows the airside street sweeping interim performance goal and the actual airside acreage of runway and taxiways in sub-basins 1, 3, and 5 combined that were swept in FY 2016.

Tables 5-2 and 5-3 compare the analytical results from FY 2016 with the interim goals, showing that the number of samples with dissolved copper concentrations that exceeded the dissolved copper benchmark in FY 2016 (i.e., 76%) has improved from the baseline 2013–2014 sampling results, when the exceedance frequency was 89%. The schedule for the first interim goal to be met is in FY 2017, so the progress toward that goal for copper is on track. FY 2018 and FY 2021 goals are 30% and 20% exceedance frequencies, respectively, with the FY 2026 goal being 0% exceedance frequency for dissolved copper.

The number of samples with dissolved zinc concentrations that exceeded the dissolved zinc benchmark in FY 2016 (i.e., 19%) has greatly improved from the baseline 2013–2014 sampling results, when the exceedance frequency was 78%. The schedule for the first interim goal is FY 2017, so the goal for zinc is ahead of schedule, because FY 2016 results have met not only the FY 2017 goal, but also the FY 2018 and FY 2021 goals (35% and 25%, respectively). The FY 2026 goal for dissolved zinc is 0% exceedance frequency.

Tables 5-2 and 5-4 compare the sweeping conducted in the focused area of the jurisdiction with the FY 2016 street sweeping goal of 34 acres of airside runway and taxiway pavement in drainage sub-basins 1, 3 and 5 combined. The goal was not met, and was missed in part because of inaccurate descriptions and information initially used to establish this performance goal. As such, the Airport Authority has used Section 5.1 and Appendix 3 of this Annual Report to correctly outline the street sweeping performance goal.

Table 5-5 shows the progress toward the numeric goals for water quality to comply with the Municipal Permit within the Airport Authority jurisdiction. The table includes information for three measures: dissolved copper, dissolved zinc, and acres swept. The table describes the interim goal and progress, the metric for progress evaluation, baseline data, data collected/results, progress toward the goal, and the adaptive management actions.

Table 5-2
Interim and Final Goals and FY 2016 Progress Toward Goals

Type	FY 2016 Goal	FY 2017 Goal	FY 2018 Goal	FY 2021 Goal	FY 2026 Goal	Achieved in FY 2016
Dissolved Copper	–	<70% of wet weather samples with concentrations exceeding target for dissolved copper	<30% of wet weather samples with concentrations exceeding target for dissolved copper	<20% of wet weather samples with concentrations exceeding target for dissolved copper	0% of wet weather samples with concentrations exceeding target for dissolved copper	76% of wet weather samples had concentrations exceeding target for dissolved copper (no goal for FY 2016, and not yet meeting FY 2017 goal)
Dissolved Zinc	–	<65% of wet weather samples with concentrations exceeding target for dissolved zinc	<35% of wet weather samples with concentrations exceeding target for dissolved zinc	<25% of wet weather samples with concentrations exceeding target for dissolved zinc	0% of wet weather samples with concentrations exceeding target for dissolved zinc	19% of wet weather samples had concentrations exceeding target for dissolved zinc. (no goal for FY 2016, but already meeting goals for FY 2017, FY 2018, and FY 2021)
Street Sweeping of the Airside Portions of Sub-basins 1, 3, and 5 (total)	34 acres per week (current frequency)	–	21 acres per week (approx. 3-fold increase in area)[1]	–	–	7 acres per week (FY 2016 goal not met)

Notes:

< = less than; FY = fiscal year

1. The original FY 2016 goal was 34 acres per week and increased three-fold by FY 2018. Based on better record keep and tracking, only 7 acres per week were swept in sub-basins 1, 3, and 5. Therefore, the new proposed goal for FY 2018 will be a three-fold increase of 21 acres per week (see Section 5.1).

Table 5-3
Comparison of FY 2016 Monitoring Season Results with FY 2017 With Numeric Goals

Pollutant	Target Concentration	Number of Samples Collected in FY 2016	Number of Samples Exceeding Target	Frequency of Samples Exceeding Target	Interim WQIP Frequency Goal (FY 2017 Goal)
Dissolved Copper	33.2	62	47	76%	< 70%
Dissolved Zinc	260	62	12	19%	< 65%

Notes:
FY = fiscal year; WQIP = Water Quality Improvement Plan

Table 5-4
Comparison of FY 2016 Sweeping Achieved With FY 2016 Interim Numeric Goal

Performance Metric	Actual Average Acres Per Week Swept	Interim WQIP Goal (total acres/week) (FY 2016 Goal)
Street Sweeping of the Airside Portions of Sub-basins 1, 3, and 5 (total)	7	34[1]

Notes:
WQIP = Water Quality Improvement Plan
1. Based on better record keeping, the new proposed FY 2016 interim goal will be 7 acres per week, and the FY 2018 interim goal will be 21 acres per week (see Section 5.1)

Table 5-5
Progress Toward Municipal Permit Term Numeric Goal for Water Quality (Copper and Zinc) Within Airport Authority Jurisdiction

Planning Period			Assessment Period		
Performance Measure – Achieve by FY 2017					
Interim Goal and Progress Information	Performance Metric	Baseline Data	Data Collected/ Results	Progress	Adaptive Management Actions
MS4 Discharges Jurisdiction-wide (<70% of Wet Weather Samples With Concentrations Exceeding Target)	Dissolved Copper	The baseline data are the Airport Authority's 2013–2014 IGP compliance sampling results' exceedance frequency for dissolved copper at 89% exceedance frequency.	Data used to support the progress evaluation toward meeting numeric goals are the Airport Authority's 2015–2016 IGP compliance sampling results' exceedance frequency for dissolved copper.	The project is progressing in accordance with a schedule that will allow completion on or before the scheduled achievement time. FY 2016 achieved 76% of samples with concentrations exceeding target for dissolved copper.	The project is progressing in accordance with a schedule that will allow completion on or before the scheduled achievement time. Some minor adjustments to the schedule are proposed.

Table 5-5 (continued)
Progress Toward Municipal Permit Term Numeric Goal for Water Quality (Copper and Zinc) Within Airport Authority Jurisdiction

Planning Period			Assessment Period		
Performance Measure – Achieve by FY 2017					
Interim Goal and Progress Information	Performance Metric	Baseline Data	Data Collected/ Results	Progress	Adaptive Management Actions
MS4 Discharges Jurisdiction-wide (<65% of Wet Weather Samples With Concentrations Exceeding Target)	Dissolved Zinc	The baseline data are the Airport Authority's 2013–2014 IGP compliance sampling results' exceedance frequency for dissolved zinc at 78% exceedance frequency.	Data used to support the progress evaluation toward meeting numeric goals are the Airport Authority's 2015–2016 IGP compliance sampling results' exceedance frequency for dissolved zinc.	The project is progressing in accordance with a schedule that will allow completion on or before the scheduled achievement time. FY 2016 achieved 19% of samples with concentrations exceeding target for dissolved zinc.	The project is progressing in accordance with a schedule that will allow completion on or before the scheduled achievement time. Some minor adjustments to the schedule are proposed.
OR					

Table 5-5 (continued)
Progress Toward Municipal Permit Term Numeric Goal for Water Quality (Copper and Zinc) Within Airport Authority Jurisdiction

Planning Period			Assessment Period		
Performance Measure – Achieve by FY 2017					
Interim Goal and Progress Information	Performance Metric	Baseline Data	Data Collected/ Results	Progress	Adaptive Management Actions
MS4 Discharges Sub-basins 1, 3, and 5 (in total) 34 Acres/Week Area Treated with Street Sweeping	Acres Swept per Week	The baseline data are the Airport Authority's 2013–2014 areas swept data (for drainage basins 1, 3, and 5). However, this goal needs to be adjusted because of inaccurate collection of baseline data, as previously discussed.	Data used to support the progress evaluation toward meeting numeric goals are the Airport Authority's 2015–2016 acres of area swept in drainage basins 1, 3, and 5. Data collection methods have been improved in FY 2016.	Given inaccuracies in the initial establishment of this goal, the project is not progressing in accordance with a schedule that will allow completion on or before the scheduled achievement time. An adjustment to the goal is proposed. FY 2016 achieved 7 acres/week treated with street sweeping.	Given inaccuracies in the initial establishment of this goal, the project is not progressing in accordance with a schedule that will allow completion on or before the scheduled achievement time. The adaptive management action needed is to adjust the goal to better reflect actual areas swept currently, and the projected areas to be swept in future fiscal years, dependent on budget.

Notes:
< = less than; FY = fiscal year; IGP = Industrial General Permit

Intentionally Left Blank

5.5 Water Quality Strategies and Schedules Adaptations

The Airport Authority proposes to modify the performance goal for airside street-sweeping, as described in Section 5.1.

Intentionally Left Blank

6 Focused Priority Condition: Riparian Area Habitat in Paradise Creek

Riparian area habitat in Paradise Creek is a Focused Priority Condition in the Lower Sweetwater HU. The geographic extent of the Focused Priority Condition is the drainage area of Paradise Creek within the jurisdiction of the City of National City (National City), which is the sole RP for the condition. National City has identified goals and strategies that will be implemented to achieve the goals.

6.1 Riparian Area Habitat in Paradise Creek Numeric Goals

Goals developed for the Focused Priority Condition target MS4 discharge concentrations and creek restoration outcomes. Paradise Creek was chosen as the focused area because it was deemed to have the greatest potential for improvements benefiting both water quality and the community. While most of the other water bodies within National City are channelized and fenced off to prevent public access, several segments of Paradise Creek are directly accessible to the public in National City parks. In Paradise Creek, impacts on riparian area quality include a concrete channel bottom and non-native bank vegetation in the Kimball Park area and occasional trash at various points along the creek.

Improving riparian area quality along Paradise Creek is part of National City's larger vision to provide residents in the central and western portions of its jurisdiction with improved access to natural environments and green spaces. National City expects that improvements to riparian area quality in Paradise Creek will positively impact the downstream Paradise Marsh portion of the Sweetwater Marsh Complex, which is part of the San Diego Bay National Wildlife Refuge. In addition, Paradise Creek is on the 303(d) List for selenium and one of National City's goals is to implement strategies that will lead to its removal from the 303(d) List. Complete goals tables, including final goals for Delisting and Habitat Restoration, are in Appendix 3. Interim goals for the Focused Priority Condition in Paradise Creek and progress made toward achieving them are described in Section 6.4 and Table 6-2.

6.2 Strategies and Schedules

National City implements water quality improvement strategies across its entire jurisdiction, such as street sweeping, inspections of businesses and construction sites, requiring LID for development projects. In addition to those city-wide strategies, National City is also implementing additional strategies to address its Focused Priority Condition, riparian area quality in Paradise Creek. Figure 6-1 shows National City's jurisdiction within the Paradise Creek drainage area.

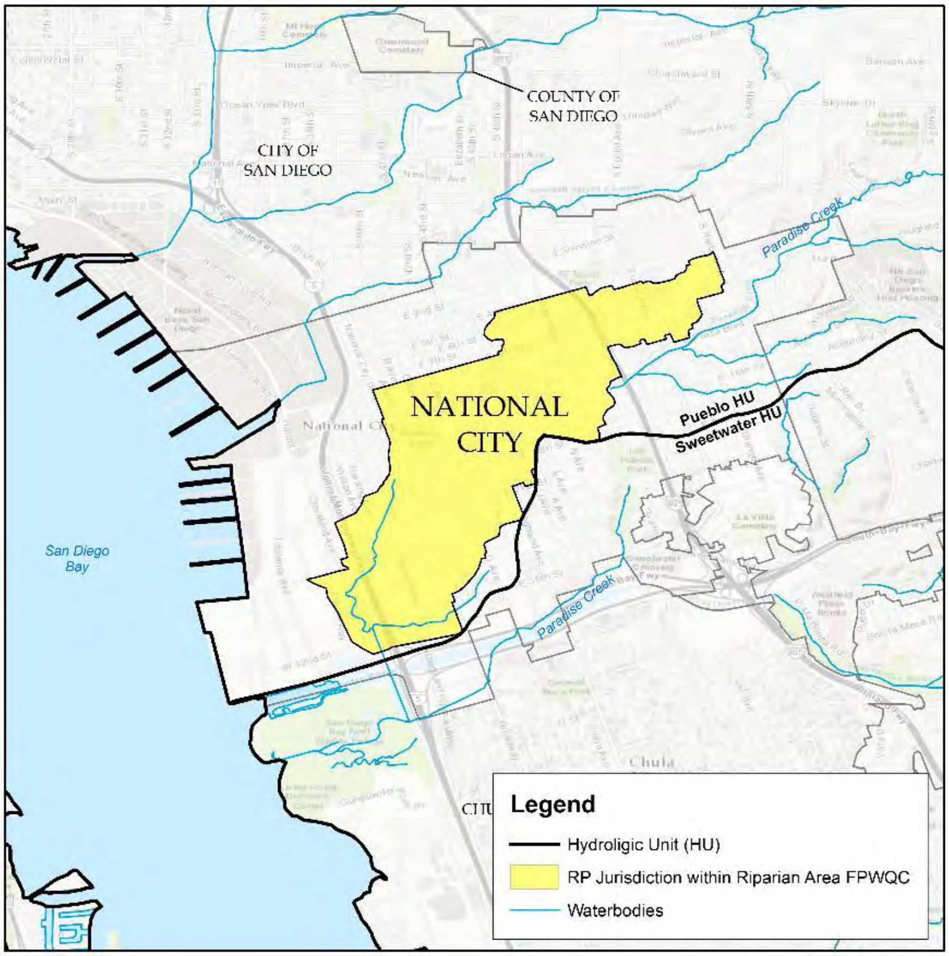

Figure 6-1
National City's Jurisdiction within the Paradise Creek Drainage Area

National City's approach is to implement improvements directly in Paradise Creek and in areas tributary to the Creek. These strategies provide improved aesthetics and better access to green space and natural habitats in a highly urbanized area, improve pedestrian access and walkability, and benefit riparian habitat and water quality. Other benefits include reducing runoff volume and levels of metals, trash, and other pollutants. Key strategies are summarized below, and a complete list of National City's strategies, including optional strategies, is included in Appendix 2.

Infiltration basin installed as part of the "A" Avenue Green Street and Pedestrian Pathway Project

National City completed the "A" Avenue Green Street and Pedestrian Pathway Project ("A" Avenue Green Street Project) in FY 2016, which treats and captures runoff from 49 acres of urban area within the Paradise Creek drainage area. The “A” Avenue Green Street Project included the installation of 10 LID BMPs—bioretention and infiltration basins—and an underground 30,000-gallon cistern with a hydrodynamic separator to remove trash and other pollutants.

The Kimball Park LID and Paradise Creek Restoration Project is currently under construction and will be completed in FY 2017. This project uses LID to improve urban runoff water quality, restores habitat in Paradise Creek, and provides an opportunity for the public to interact with the newly restored creek in a park setting. The project includes installation of multiple bioretention and infiltration areas within Kimball Park and along surrounding streets to improve water quality of runoff associated with approximately 73 acres of highly urbanized area. The project will restore approximately 1,000 linear feet of Paradise Creek by removing the concrete channel, widening the creek to maintain existing capacity, and restoring the wetland habitat. The project is also removing invasive and non-native plants along the creek banks and replacing them with native plants.

National City is also converting its existing Public Works maintenance yard, which directly borders Paradise Creek, to a transit-oriented residential housing project and a public park. In addition to converting these areas to land uses with lower pollutant discharge potential, water quality treatment measures are being incorporated into the project designs.

With the help of a community group, Paradise Creek Educational Park, Inc., National City was able to secure a grant for Paradise Creek Educational Park that provides the resources to remove existing impervious area and replace it with native vegetation. As part of the project, a bioretention area and an educational garden will also be installed at Paradise Creek Educational Park. Paradise Creek Educational Park, Inc. also maintains native vegetation along portions of Paradise Creek and completes regular creek cleanups.

During industrial and commercial facility inspections during FY 2016, shopping centers and restaurants were targeted in the Paradise Creek drainage area because they can be sources of trash. Inspections focused on requiring facilities to keep dumpster lids closed and surrounding areas clean. Through its development review process, National City also requires all newly constructed trash enclosures to have a full four-sided enclosure, be located away from storm drains, and have structural overhead cover.

To eliminate illicit discharges and connections, National City inspects its major MS4 outfalls twice per year and operates a public hotline to receive reports from the public and city staff and contractors. National City has also coordinated with the Sweetwater Authority on water conservation efforts, including reducing irrigation runoff.

Table 6-1 summarizes the key strategies identified for meeting numeric goals for this Focused Priority Condition. National City’s full list of strategies, including optional strategies and the implementation status of each, is provided in Appendix 2.

Intentionally Left Blank

Table 6-1
Summary of Strategies for Riparian Area Habitat in Paradise Creek

Strategy	Priority Condition Addressed						Implementation Schedule			
	Bacteria	Nutrients	Habitat/Wildlife[1]	Trash	Sediment	Metals	Previous Fiscal Year(s)	**FY 2016**	FY 2017	Future Fiscal Year(s)
Paradise Creek restoration in Kimball Park (NC-32)	X	X	X	X	X			X	X	X
Green infrastructure and other structural BMPs (NC-29 through 31, NC-34)	X	X	X[2]	X	X		X	X	X	X
Impervious surface reduction (NC-33)	X	X	X	X	X			X	X	X
Community partnerships to address trash (NC-35, NC-38)			X[2]	X			X	X	X	X
Catch basin cleaning (NC-14)	X	X	X[2]	X	X		X	X	X	X
Enhanced street sweeping, including using vacuum street sweepers (NC-18)	X	X	X[2]	X	X		X	X	X	X
Inspections of existing development, including higher frequency inspections for sources of trash (NC-9, NC-36)	X	X	X[2]	X	X			X	X	X
Outreach, incentives, and enforcement to reduce irrigation runoff from private properties, partnering with Sweetwater Authority (NC-23, NC-25, NC-26)	X	X	X[2]	X	X			X	X	X

Notes:

µg/L = micrograms per liter; FY = fiscal year; WQO = water quality objective

1. Focused Priority Condition is highlighted in orange.

Intentionally Left Blank

6.3 Riparian Area Habitat in Paradise Creek Monitoring and Assessment

Biological monitoring is the primary type of monitoring being completed for the riparian area quality focused priority condition. Vegetation monitoring will be completed once restoration has been completed. California Rapid Assessment Method (CRAM) assessments are also being completed before and after the creek restoration work in Paradise Creek.

In addition to biological monitoring, chemical testing for selenium is also being completed because Paradise Creek is on the 2010 303(d) List as having a selenium impairment. Because the 303(d) listing is based on a small number of samples from 2005, National City initiated a special study to collect sufficient data to support delisting of the selenium impairment. All 48 of the 48 samples collected had selenium concentrations that were below the WQO of 5 μg/L. When combined with the small number of previously collected samples that did include exceedances, the total exceedance rate is low enough to justify removal from the 303(d) List under the State Listing Policy. The study's Monitoring Plan, Quality Assurance Project Plan, and summary report with results are provided in Appendix 4.

6.4 Progress Toward Achieving Numeric Goals

During FY 2016, National City made significant progress toward achieving its interim goals. Table 6-2 summarizes results for habitat restoration goals, and Table 6-3 summarizes results for the selenium delisting interim goal. In FY 2016, laboratory data collected during the Paradise Creek Selenium Special Study were submitted to the State Board during the 2014 303(d) List public comment period. National City has requested the data to be considered during the 2014 303(d) List development; however, this period was not considered to be a data solicitation period. Depending on the State Board's response to National City's comments, the data will also be submitted during the next solicitation period determined by the State Board by FY 2018.

Progress toward meeting habitat restoration goals is presented in Table 6-3.

6.5 Water Quality Strategies and Schedules Adaptations

No modifications to National City's goals, strategies, and schedules presented in the San Diego Bay WMA WQIP are proposed at this time.

Intentionally Left Blank

Table 6-2
Progress Toward City of National City Municipal Permit Term Habitat Restoration Goals for the Riparian Area Habitat in Paradise Creek

Planning Period			Assessment Period		
Performance Measure – Achieve by FY 2017					
Interim Goal	Performance Metric	Baseline Data	Data Collected/ Results	Progress	Adaptive Management Actions
Remove concrete bottom from Paradise Creek: 1,000 linear feet	Linear feet of restored creek	Zero (0) linear feet removed.	Creek restoration that will achieve the numeric goals is under construction.	The Paradise Creek Restoration project is progressing in accordance with a schedule that will allow completion in FY 2017.	None at this time.
Wetland restoration: 6,000 square feet	Square feet of restored wetland	Zero (0) square feet of restored wetlands.			None at this time.
Total native plant restoration, including wetlands: 35,000 square feet	Square feet of native plant restoration	Zero (0) square feet of native plant restoration.			None at this time.
Provide treatment for tributary urbanized areas: 130 acres	Acres of area treated	58.7 acres of treated tributary areas.	49 acres of area treated through LID and other water quality improvement BMP implementation, principally through the “A” Avenue Green Street project.	107.7 of 130 acres treated to date (83%). Additional projects that will treat over 70 acres are currently under construction.	None at this time.

Notes:
% = percent; FY = fiscal year; LID = low-impact development

Table 6-3
Progress Toward City of National City Municipal Permit Term Delisting Goals for the Riparian Area Habitat in Paradise Creek

Planning Period			Assessment Period		
Interim Goal	Performance Metric	Baseline Data	Data Collected/ Results	Progress	Adaptive Management Actions
Performance Measure – Achieve by FY 2016					
Collect and Analyze 48 Samples for Selenium, with Zero Exceedances, to Support Removal of Paradise Creek 303(d) Selenium Listing	Data Collection	Four (4) of four (4) samples collected from Paradise Creek in 2005 exceeded the WQO of 5 µg/L.	All 48 of 48 samples collected in 2014 did not exceed the WQO of 5 µg/L.	All 48 samples were collected, with zero (0) exceedances. The goal was 100% achieved.	None at this time, interim goal has been achieved.
Performance Measure – Achieve by FY 2018					
If data support removal of segment from 303(d) List, submit data during earliest available solicitation period (1 data submission).	Data Submission	Zero (0) data submittals from National City.	Data collected in 2014 (48 samples) was submitted during the 2014 303(d) List public comment period, which occurred in 2016. The City has been informed that data from 2014 is not yet being considered, but that it is possible that the State Water Board will allow for an off cycle data submittal within the next couple years.	Data has been submitted, but it has not been formally accepted since no solicitation period for data from 2014 has occurred yet. Data has been uploaded to CEDEN and will be available for the next listing cycle.	None at this time.

Notes:
% = percent; µg/L = micrograms per liter; CEDEN = California Environmental Data Exchange Network; FY = fiscal year; WQO = water quality objective

7 Focused Priority Condition: Physical Aesthetics in Lower Sweetwater and Otay HUs

Physical aesthetics impairment due to trash is a Focused Priority Condition in the Lower Sweetwater and Otay HUs. Trash assessment data, including historical data, public input, existing management plans such as the Otay River Watershed Management Plan (ORWMP), and anticipated future development along the San Diego Bayfront, were factors that elevated physical aesthetics impairments to a Focused Priority Condition. In addition, the RPs proactively aligned their goals and strategies to address the upcoming state-led Trash Amendments. The monitoring and assessment (Section 7.3) for the physical aesthetics Focused Priority Condition will also initiate the analysis and assessment of the trash condition in the Focused Priority Area requirements in the Trash Amendments.

The geographic extent of the Focused Priority Condition in the Lower Sweetwater HU is the jurisdiction of the City of Chula Vista (Chula Vista) west of Interstate 805 and the Port of San Diego south of Sweetwater River to the northern boundary of the site of the former South Bay Power Plant. The geographic extent of the Focused Priority Condition in the Otay River HU is the jurisdiction of Chula Vista west of Interstate 805, the eastern portion of the City of Imperial Beach, and the Port of San Diego jurisdiction from the southern shoreline of the Sweetwater River channel south to Pond 20 (collectively the RPs).

Trash not only affects the physical aesthetics of an area, but also can pose a health risk to humans and wildlife and can affect the beneficial uses of waterways. By focusing on physical aesthetics, the RPs can increase public awareness and education about proper waste disposal, which will ultimately reduce amounts of trash, leading to improvements in water quality. The RPs worked collaboratively to identify final and interim goals for this Focused Priority Condition. RPs have identified strategies to reduce amounts of trash, improve water quality, and increase public awareness and education within their jurisdictions. In addition to reducing trash, implementing strategies to address trash will also address other pollutants, such as bacteria and other water quality pollutants (e.g., sediment and metals), and will protect wildlife from harmful debris, thus achieving multiple pollutant benefits.

7.1 Numeric Goals for Physical Aesthetics

The RPs have implemented strategies to achieve the numeric goals established for the area. The RPs have also set at least one interim goal to be achieved during the Municipal Permit term (see Appendix 3). Interim goals are intended to serve as milestones that help assess progress toward the longer-term goals outlined in the subsections below. A monitoring program also collects data that can be used to help track progress toward goals. The following subsections describe jurisdictional strategy implementation and progress toward interim goals. Monitoring results are then presented in light of the applicable numeric goals following the jurisdiction-specific discussions.

7.2 Strategies and Schedules for Physical Aesthetics

The RPs' approach to improving the physical aesthetics within the Focused Priority Condition during this reporting period was to identify targeted areas within their jurisdictions and implement strategies focused primarily on trash. An initial assessment is built upon available historical maintenance and monitoring to identify high trash-generating areas within the geographic extent of the Focused Priority Condition for Chula Vista, Imperial Beach, and the Port of San Diego. As part of this assessment, opportunities for retrofits or other treatment methods are being identified and prioritized. Retrofits may be structural BMPs such as trash guards or catch basin inserts within the MS4. Other structural BMP options may include requiring retrofits of trash enclosures on private and public property. The RPs have also provided targeted education and outreach within the Focused Priority Condition areas during this reporting period.

The RPs continue to implement their core JRMP requirements, including many strategies that have positive impacts on the water quality of MS4 discharges. To make progress toward their identified goals, the RPs have identified existing JRMP strategies to enhance and have also implemented optional strategies focused on the physical aesthetics Focused Priority Condition.

It is anticipated that a combination of strategies will allow the RPs to make progress toward, and ultimately achieve, the established goals for this Focused Priority Condition. Overall, the RPs have successfully implemented strategies to address the high-priority sources as well as medium-priority sources of trash in the 909.1 and 910.2 HAs during the reporting period (Table 7-1).

Table 7-1
Sources Addressed by RPs' Strategies in FY 2016

Source	Chula Vista	Port of San Diego	Imperial Beach[1]
High Priority			
General Retail/Commercial Areas, Including Eating or Drinking Establishments (or special events)	X	X	X
Medium Priority			
General Industrial Areas	X	X	
Homeless Encampments[2]	X	X	X
Illegal Dumping	X	X	X
Institutional Facilities	X	N/A	N/A
Roads and Highways[3]	X	X	X

Notes:

N/A = not applicable

1. City of Imperial Beach is only in the 910.2 HA.
2. Recognizing that homeless encampments and illegal dumping are neither fully controllable not fully uncontrollable, they have been assigned a priority of medium.
3. Roads and highways are not limited to Chula Vista and Imperial Beach, and the Port of San Diego's jurisdictions.

The RPs initiated baseline trash assessment studies in the reporting period to better understand trash sources in their respective jurisdictions, gauge the adequacy of current efforts, map out potential “hot spot” locations, and identify solutions. The assessments were considered an important first step in the RPs’ approach to meeting the interim and final goals. The findings of the assessments inform management decisions and identify appropriate strategies. Utilizing available data such as historical MS4 maintenance and monitoring data can help the RPs identify high trash generating areas, and evaluate which BMPs are most effective. The baseline assessments are anticipated to be completed in FY 2017

The RPs are participating in the ongoing San Diego Bay Debris Study, which involves collaboration with a number of local and regional governmental agencies, the United States Navy, environmental groups, and academia. The RPs are participating in this WMA optional strategy via financial support or in-kind services contributions, such as field work assistance. The study intends to provide a first-time assessment of San Diego Bay with respect to trash. Together with the jurisdictional MS4-focused baseline trash assessment, the San Diego Debris Study will help guide RP efforts to assess current efforts and also identify potential future management actions to help address land-based watershed sources of trash and debris.

A complete list of strategies, including optional strategies, to be implemented within the WMA, is provided in Appendix 2. Key strategies implemented during the reporting period are summarized in Table 7-2. Strategies and implementation schedules were identified using best information available on efficiency, effectiveness, and level of effort estimated to achieve compliance with numeric goals. The adaptive management process provides the framework to evaluate progress toward meeting the goals and allows for modification of strategies. As strategies are modified, the WQIP will be updated. The implementation of each strategy will be contingent upon annual budget approvals and funding availability.

Intentionally Left Blank

Table 7-2
Summary of Strategies for Physical Aesthetics in Sweetwater and Otay River HUs

Strategy	Jurisdiction[1]			Additional Water Quality Condition Addressed by Strategy				Highlight Summary
	Chula Vista	Port of San Diego	Imperial Beach	Bacteria	Nutrients	Sediment	Metals	
Enhanced commercial, industrial, and/or municipal inspections	CV-24	PO-9, PO-21	IB-17	X		X	X	• Chula Vista amended its inspection form (CV-24) to collect additional data about trash management from industrial and commercial facilities. Over 260 inspections were performed that included this additional data. • The Port of San Diego assessed eight special events (>500 people) at two parks (Chula Vista Bayside Park and Chula Vista Marina View Park) in the 909.1 HA. The Port of San Diego established a set of designated BMPs for all special events and conducted pre- and post-event inspections for each event (PO-9). All of the events properly implemented BMPs. • The Port of San Diego inspected five general retail or commercial facilities and six industrial facilities in the two HAs. One commercial facility and two industrial facilities were cited for unauthorized non-storm water discharges and/or for BMPs to address trash, bacteria, and/or metals and required escalated enforcement. • Imperial Beach amended its commercial inspection form (IB-17) to collect additional trash data from commercial facilities.

Table 7-2 (continued)
RP's Strategies Identified for Meeting Interim and Final Goals
Physical Aesthetics in Sweetwater and Otay River HUs

Strategy	Jurisdiction[1]			Additional Water Quality Condition Addressed by Strategy				Highlight Summary
	Chula Vista	Port of San Diego	Imperial Beach	Bacteria	Nutrients	Sediment	Metals	
Installation of structural controls (partial/full capture trash BMPs), where feasible		PO-02, PO-45	IB-63	X		X	X	• The Port of San Diego installed a fence along the southern perimeter of Pond 20 in the 910.2 HA to prevent trash and debris from entering Pond 20 starting in FY 2015 (PO-45 Optional). • All bioretention facilities and high-rate media filters were properly maintained at two Port of San Diego PDPs (PO-02) in the 909.1 HA (H Street Extension project and the South Campus Phase 4A Demolition project).
San Diego Bay Watershed education initiatives	CV-22, CV-25	PO-17	IB-43b	X	X	X	X	• Chula Vista continued to improve upon its CLEAN education campaign (CV-22, CV-25) by making significant improvements to its website, updating its residential storm water education brochures, and providing educational information in its bimonthly trash bills.

Table 7-2 (continued)
RP's Strategies Identified for Meeting Interim and Final Goals
Physical Aesthetics in Sweetwater and Otay River HUs

Strategy	Jurisdiction[1]			Additional Water Quality Condition Addressed by Strategy				Highlight Summary
	Chula Vista	Port of San Diego	Imperial Beach	Bacteria	Nutrients	Sediment	Metals	
San Diego Bay Watershed education initiatives (continued)	CV-22, CV-25	PO-17	IB-43b	X	X	X	X	• The Port of San Diego provided funding toward the Chula Vista Elementary School District Coastal Education Program through its core Public Education and Participation program (PO-17). Through classroom and hands-on activities, approximately 4,900 students learned about San Diego Bay's diverse wildlife and vegetation and environmental challenges, including storm water and trash related issues. • Port of San Diego staff created an approximately 15-minute bilingual (English and Spanish) training video "*Storm water Best Management Practices (BMP) Training for Industrial and Commercial Facilities*" in FY 2016 and showed it at a number of training events for commercial and industrial tenants and Port of San Diego staff. https://www.youtube.com/watch?v=Xytid-LlxMk • Imperial Beach amended the agreement with I Love a Clean San Diego to have additional education activities in the special events held within the city. (IB-43)

Table 7-2 (continued)
RP's Strategies Identified for Meeting Interim and Final Goals
Physical Aesthetics in Sweetwater and Otay River HUs

Strategy	Jurisdiction[1]			Additional Water Quality Condition Addressed by Strategy				Highlight Summary
	Chula Vista	Port of San Diego	Imperial Beach	Bacteria	Nutrients	Sediment	Metals	
Trash cleanups	CV-37	PO-35		X				• The Port of San Diego participated in and/or sponsored 16 cleanups overall in Port tidelands/San Diego Bay (PO-35 optional). Nine cleanup events occurred in the 909.1 and 910.2 HAs during the reporting period. A total of 2.7 tons of trash and debris were collected by approximately 398 people. • Chula Vista hosted three cleanup events (CV-37) in 910.2 that focused efforts on trash and graffiti removal within specific communities.
Regional efforts to address pollutants associated with homelessness	CV-36, CV-37	PO-35, PO-37	IB-68	X			X	• Chula Vista initiated a Homeless Outreach Team (CV-36) that coordinates weekly cleanups of trash and debris from city parks and facilities and problem areas. It is estimated that over 1,000 pounds of trash are collected each week. • The Port of San Diego coordinates, as needed, with Chula Vista to identify problem areas impacting the tidelands and to determine appropriate actions. In addition, the Port of San Diego worked with the Alpha Project (PO-37 optional) to provide referrals and/or services for approximately 465 people on tidelands between January and July 2016.

Table 7-2 (continued)
RP's Strategies Identified for Meeting Interim and Final Goals
Physical Aesthetics in Sweetwater and Otay River HUs

Strategy	Jurisdiction[1]			Additional Water Quality Condition Addressed by Strategy				Highlight Summary
	Chula Vista	Port of San Diego	Imperial Beach	Bacteria	Nutrients	Sediment	Metals	
Baseline Trash Assessments and Other Studies	CV-31, CV-33	PO-26, PO-34	IB-63, IB-66					• Baseline Trash Assessments (CV-33, IB-66, and PO-34 optional) were conducted to identify high trash generating areas and potential opportunities for retrofits, such as installation of full capture systems to capture trash in storm water. • The Port of San Diego initiated a trash receptacle assessment in 18 parks (PO-26 optional) to gain insight on existing trash measures and potential retrofit opportunities. The assessment is set to be completed early FY 2017. • Imperial Beach completed an analysis of the feasibility of a trash capture system for the drainage basin H (IB-63). • Chula Vista (CV-31), the Port of San Diego, and Imperial Beach expanded their trash monitoring programs to assess paired receiving water and MS4 outfall sites, and collect additional trash source identification information within the focused area.

Table 7-2 (continued)
RP's Strategies Identified for Meeting Interim and Final Goals
Physical Aesthetics in Sweetwater and Otay River HUs

Strategy	Jurisdiction[1]			Additional Water Quality Condition Addressed by Strategy				Highlight Summary
	Chula Vista	Port of San Diego	Imperial Beach	Bacteria	Nutrients	Sediment	Metals	
San Diego Bay Debris Study	CV-39b	PO-39	IB-66	X			X	• Chula Vista (CV-39b), Imperial Beach, and the Port of San Diego (PO-39 optional) is collaborating with a workgroup[1] led by SCCWRP and Amec Foster Wheeler to characterize and assess the trash and debris in San Diego Bay and its associated watersheds. The final report is currently scheduled to be available in FY 2017.

Notes:

BMP = best management practice; FY = fiscal year; HA = hydrologic area; PDP = priority development project; SCCWRP = Southern California Coastal Water Research Project

1. Other participants include: the San Diego Regional Water Quality Control Board, US Naval Facilities Engineering Command, San Diego Coastkeeper, Ocean Discovery Institute, California Sea Grant, WILDCOAST, Surfrider Foundation San Diego, members of the San Diego Bay Port Tenants Association, Southern California Coastal Waters Research Project, and Amec Foster Wheeler Environment & Infrastucture, Inc.

The RPs coordinated in the wet weather monitoring efforts of the San Diego Bay Monitoring and Assessment Program (MAP). During FY 2016, the RPs coordinated their field efforts for physical aesthetics MS4 outfall and receiving water monitoring at their respective monitoring locations, as described in the WQIP Monitoring and Assessment Program. Monitoring efforts are discussed further in Section 7.3 and Appendix 4, Section 5.

7.2.1 City of Chula Vista Strategies and Schedules

Chula Vista is located within the Sweetwater River and Otay River subwatersheds, as shown in Figures 7-1 and 7-2. The western portion of Chula Vista, west of Interstate 805, typically has older infrastructure and is more densely populated. The portion of Chula Vista east of Interstate 805 generally has newer development and infrastructure, consisting of more pervious area and permanent BMP implementation, because this area was developed under more the recent Municipal Permit land development requirements. Although the Focused Priority Condition area is in the western portion of Chula Vista, the majority of strategies were implemented city-wide. Jurisdictional strategies target a number of pollutants; however, the focus of most strategies is to target trash.

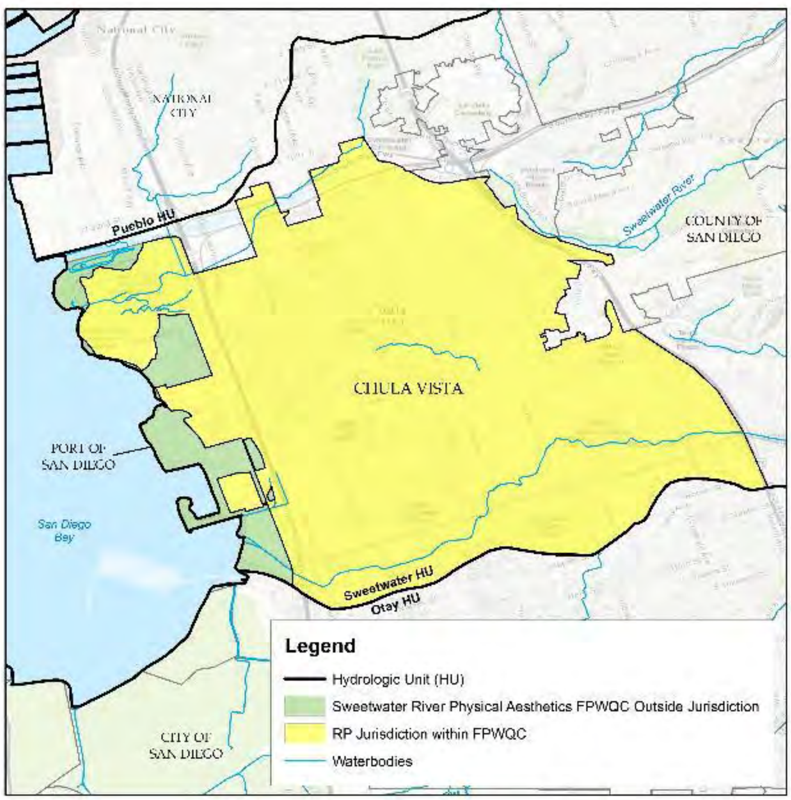

Figure 7-1
Chula Vista's Jurisdiction Within the Sweetwater Physical Aesthetics Focused Priority Area

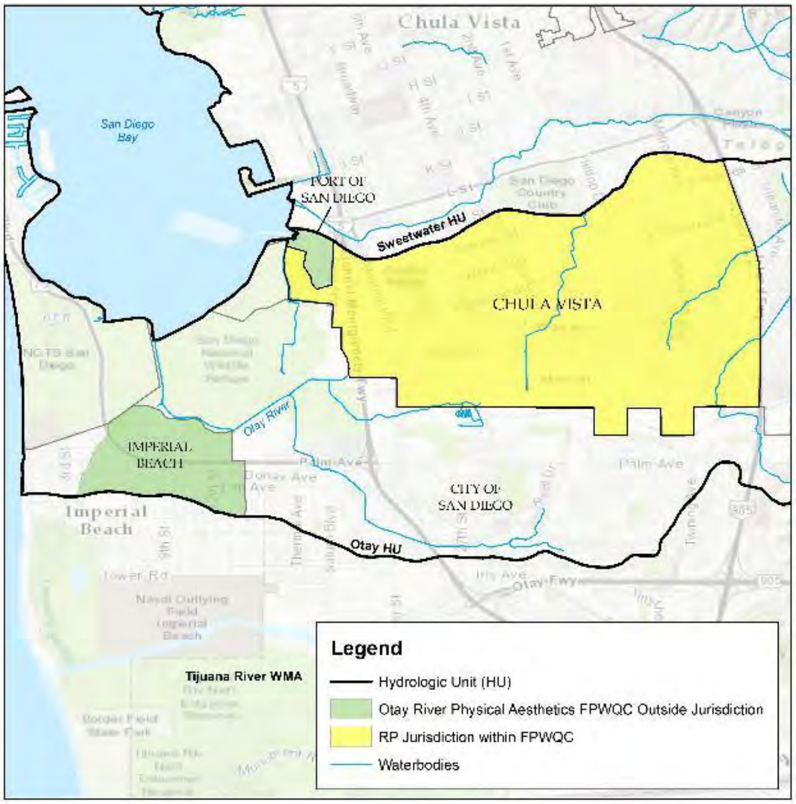

Figure 7-2
Chula Vista's Jurisdiction Within the Otay Physical Aesthetics Focused Priority Condition

Education and Outreach

Chula Vista has a well-rounded education and outreach program, which includes distribution of educational inserts in bimonthly trash bills, coordination of cleanup events with I Love a Clean San Diego, a revamped website that provides easier access to city resources, and updated residential storm water education brochures. The Chula Vista CLEAN Team, which consists of the Conservation, Environmental Services, and Storm Water Management Sections, partner together to provide residents with a cohesive environmental message. The CLEAN Team regularly collaborates on City special events, educational brochures, and environmental programs. In addition, a new City Operations Sustainability Plan, detailing water use, energy use, green purchasing, recycling and waste management, pollution prevention, transportation, green

Chula Vista community members stenciling storm drains at the Annual Beautify Chula event buildings, and green infrastructure, was adopted in June 2014. Chula Vista also participates in the Regional Think Blue San Diego educational program.

Inspections Program

The WQIP identified general retail and commercial areas, including eating and drinking establishments, as a high-priority source of trash. To address this source, Chula Vista enhanced its commercial and industrial facility inspection forms to collect additional information about the trash enclosures and trash receptacles of these facilities. FY 2016 was the first reporting period in which this additional information was collected. Chula Vista can use these data to help individual facilities improve their trash management BMP implementation, and data collected over time can help Chula Vista identify particular areas where additional efforts are needed, such as targeted education or increased inspection frequency.

Homeless Outreach Team

Notably, Chula Vista formed a Homeless Outreach Team during the reporting period, which consists of Chula Vista Parks, Police Department, Public Works staff, and a variety of nonprofit entities that help to provide a holistic approach to tackling homelessness issues. The program targets a number of city parks, facilities, and problem areas. Staff visit these areas once per week and can remove over 1,000 pounds of trash per week from the encampments. Funding for additional staff was added during the reporting period, which helps to bolster and strengthen the program.

Baseline Trash Assessment Study

An important portion of targeting trash in Chula Vista was the initiation of a Baseline Trash Assessment and BMP Feasibility Study. Planning for the study took place in the reporting period, with results of the study expected in the next fiscal year. The goal of the study is to identify the problem trash areas of Chula Vista and to determine which BMPs are the most appropriate to implement. In addition to helping Chula Vista achieve its strategies and goals to target trash, it helps to guide the city in compliance with the Statewide Trash Amendments. Results of the study are expected to help inform Chula Vista about where program improvements and adjustments are needed, where BMP retrofits and installations are feasible, and how to plan for meeting the WQIP trash goals.

Trash Monitoring and Assessment

In collaboration with the Port of San Diego and Imperial Beach, Chula Vista also expanded its trash assessment monitoring program to help assess progress in implementing strategies and meeting goals. The expanded program includes additional source identification data gathering for MS4 outfalls in the Focused Priority Condition area, as well as paired receiving water and MS4 outfall monitoring.

Although this reporting year was based on only four months of implementation of the WQIP, Chula Vista made strides in implementing several strategies that work toward achieving WQIP goals. Enhanced educational programs in collaboration with the CLEAN Team, the commencement of the Trash Study, and expanded trash inspections and monitoring are a few of the notable activities that took place during the reporting period. Strategies and implementation schedules will be adjusted as necessary over time through the adaptive management process

7.2.2 Port of San Diego Strategies and Schedules

The Port of San Diego's approach to addressing this Focused Priority Condition (physical aesthetics due to trash pollution) was to implement core JRMP and optional strategies (both jurisdictional and WMA). The approach includes implementing some strategies jurisdiction-wide, while targeting sources and collaborating with Chula Vista and Imperial Beach, when possible, in the Lower Sweetwater River (909.1 HA) and Otay River (910.2 HA). The Port of San Diego identified physical aesthetics (due to trash) because public input and the ORWMP identified trash as a priority issue in these HAs, and the recently adopted Trash Amendments. Figures 7-3 and 7-4 show the Port of San Diego's jurisdiction within the two HAs.

Lower Sweetwater (909.1 HA): The Port of San Diego's jurisdictional area in this HA is approximately 347 acres of the tidelands overlaying portions of Chula Vista. Existing facilities or land uses that may be potential sources of trash in this area include four commercial facilities, 6 industrial facilities, 12 municipal facilities, and 3 parks (Chula Vista Bayside Park, Chula Vista Bayfront Park, and Chula Vista Marina View Park). In addition to identifying strategies to address the current sources, the Port of San Diego is also identifying methods to address trash in the future development of the Chula Vista Bayfront area as part of the Port's Chula Vista Bayfront Master Plan.

Otay River (910.2 HA): The Port of San Diego's jurisdictional area in this HA is approximately 241 acres. Although current use of the property within the Port of San Diego in this area is limited, the future Chula Vista Bayfront development will likely require a variety of strategies to be implemented to address trash from both development and commercial and industrial sources. Existing facilities or land uses that may be potential sources of trash in this area of the Port of San Diego's boundaries include one commercial facility and the site of the former South Bay Power Plant. To effectively target potential problem areas, address the potential sources identified above, and prioritize efforts to address trash, the Port of San Diego has used the same approach used in the Lower Sweetwater River HA.

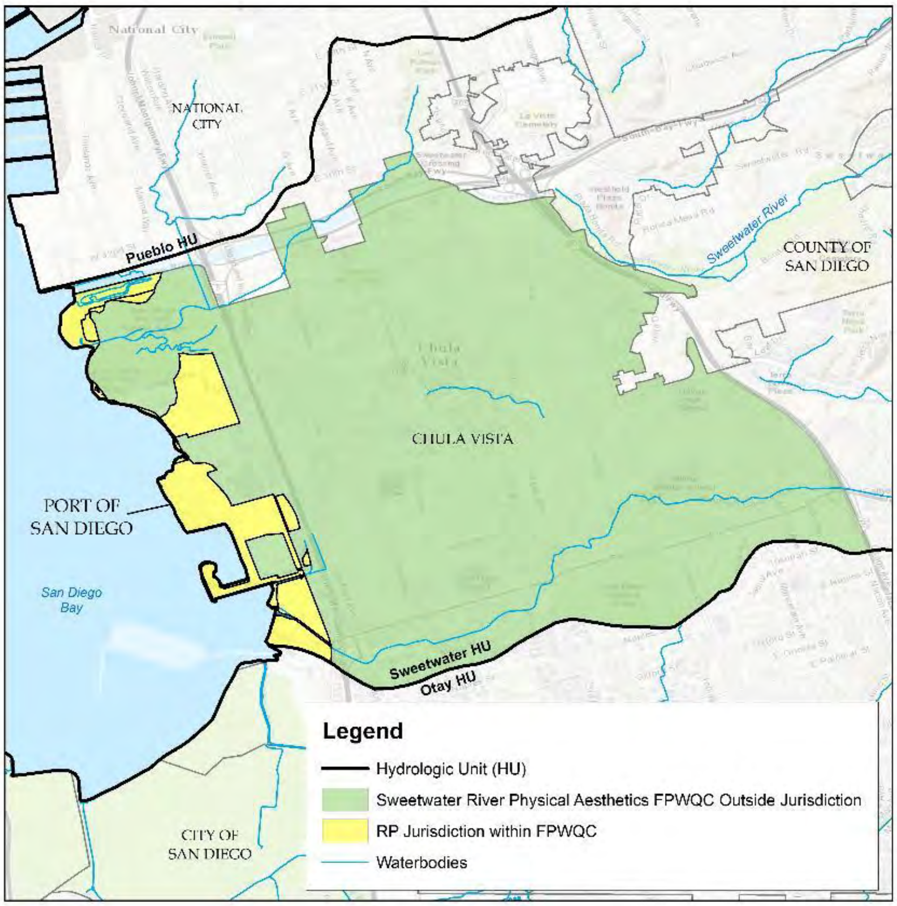

Figure 7-3
Port of San Diego's Jurisdiction within the Lower Sweetwater HA Physical Aesthetics Focused Priority Condition

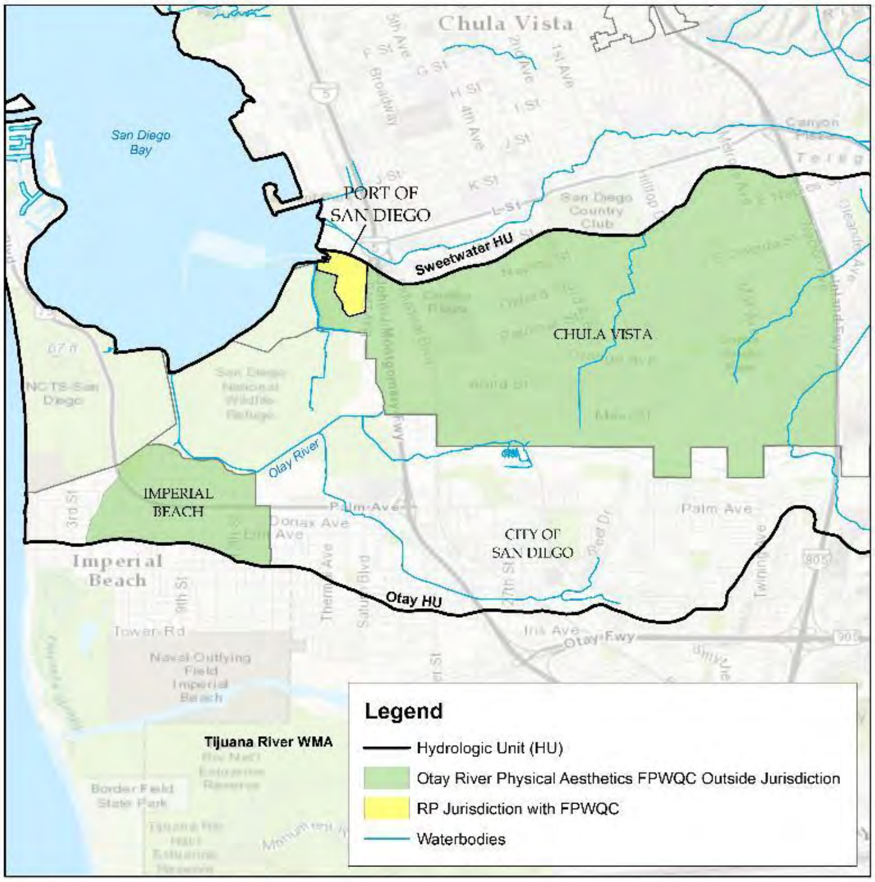

Figure 7-4
Port of San Diego's Jurisdiction Within the Otay River HA Physical Aesthetics Focused Priority Condition

Strategies and implementation schedules focused on high and medium sources of trash and were chosen on the basis of the best information available on efficiency, effectiveness, and level of effort estimated to achieve compliance with numeric goals. Source control strategies targeting trash include education and outreach, and a review of existing municipal trash and waste diversion measures (i.e., strategies to reduce the amount of waste going to local landfills or contributing to littering) to identify potential need for structural or source control improvements at high-volume trash-generating areas. A total of 24 strategies, including core jurisdictional and optional strategies, were implemented as planned in the reporting year. To expand on strategies highlighted in Table 7-1, a brief summary of jurisdictional strategies results for this reporting year is provided below. Additional information on all of the Port of San Diego's strategies implemented in FY 2016 are in Appendix 2.

Development Projects

One PDP project occurred in this area of the Port of San Diego tidelands (PO-2). The Port carried out an annual project inspection at the H Street Extension Project that required a follow-up to verify all required post-construction BMPs (i.e., bioretention facilities and high-rate media filters) were installed and maintained as required. The follow-up inspection found no citations or escalated enforcement was required. To ensure the new Municipal Permit and WQIP requirements were understood and followed, Port of San Diego staff also provided outreach and training to applicable internal departments and to the development community throughout the reporting year (PO-3 and PO-4).

Bioretention facility at H Street Extension

Construction Activities

No escalated enforcement measures were required on any project within the Port's jurisdiction during the 2015-16 year. The Minor Maintenance and Construction Activities BMP Guidance document was developed in this reporting period (PO-24 optional). The guidance document was designed to help General Services staff be aware of and to implement necessary BMP procedures to mitigate the discharge of trash, contaminated debris, and other pollutants when engaged in minor maintenance and construction activities at municipal facilities and parks such as Chula Vista Bayside Park and Chula Vista Marina View Park. One training events were provided for 88 staff on the use of the guidance document to select, implement, and monitor the BMPs (PO-25 optional).

Commercial and Industrial Activities

A highlight of the Port of San Diego's commercial and industrial program was a training video created in-house by staff to provide facilities information on storm water management concepts and on the new Municipal Permit requirements. The training video, entitled "*Port of San Diego's Storm water Best Management Practices (BMP) Training for Industrial and Commercial Facilities,*" is approximately 15 minutes long and is in English and Spanish. The video was made available to commercial and industrial tenants to be shown at training events. The training video has been viewed 1,191 times since it was published in November 2015 (https://www.youtube.com/watch?v=Xytid-LIxMk).

The Port of San Diego inspected five commercial facilities and six industrial facilities (PO-7) in the two HAs during the reporting year. Overall, the commercial facilities were successfully implementing BMPs; however, one facility was cited for unauthorized non-storm water discharges and for waste handling BMPs and required escalated enforcement.

Inspections of the six industrial facilities in the 909.1 HA found two facilities that were correctly implementing the BMPs, as described in their respective SWPPPs. Of the remaining four industrial facilities where enforcement was necessary, two were cited for unauthorized non-storm water discharges and/or for BMPs to address trash, bacteria, and/or metals and required escalated enforcement. All commercial and industrial non-compliance issues requiring corrective enforcement actions were resolved and closed.

Municipal Activities

Strategies that are also core JRMP municipal activities that effectively reduced trash and, to a lesser extent, bacteria include, but are not limited to, MS4 infrastructure cleaning (PO-10), street sweeping (PO-11), and municipal facility inspections (PO-8). Five years of Port of San Diego-wide MS4 monitoring data were assessed (PO-30 optional) in FY 2016 to identify MS4 structures with trash and debris levels that would trigger an adjustment to their cleaning frequencies. The analysis found the current cleaning frequency appears adequate for all MS4 structures in the 909.1 or 910.2 HAs, with no adjustments needed for the MS4 structures in those areas. The Port of San Diego also purchased a regenerative air street sweeper (PO-28 optional) in FY 2015 to improve sweeping effectiveness of the roads and parking lots it maintains. The Port of San Diego began to use the street sweeper in FY 2016. An assessment of the effectiveness of the new sweeper after the first year of use will likely occur in FY 2017.

Municipal inspections found that BMPs to minimize trash were successfully implemented in the Port's municipal parks located in these HAs (PO-8). Any issues identified in the initial inspection of municipal facilities such as parks in these HAs were subsequently addressed by Port of San Diego staff. Special events (for more than 500 people) are held periodically through each fiscal year at the Port of San Diego's various parks. The Port of San Diego established a set of designated BMPs, including those for trash, and conducts pre- and post-event inspections for each event (PO-9). Special events at two parks (Chula Vista Bayside Park and Chula Vista Marina View Park) in these HAs often include eating and drinking activities that generate trash. Pre and post-event inspections found all eight special events in the two HAs have been successful in implementing BMPs to address trash and bacteria.

The Port of San Diego-wide trash receptacle assessment (PO-26 optional) initiated in FY 2016 included the three parks in this area. The information gained from the study upon its completion in the next reporting period will improve trash management in the parks with the goal of reducing littering or illegal dumping and promoting proper waste disposal. The Port of San Diego will continue to implement its core program for publicly maintained facilities such as MS4 infrastructure, roadways, and parks.

Installation of Structural Controls

The Port of San Diego installed a 950-foot custom fence that replaced a chain-link fence along the southern perimeter of the 95 acre Pond 20 site at 1400 Palm Avenue. The Port of San Diego funded the project through its Capital Improvement Program. The new fence was designed with significant public input and incorporates local flora, fauna, and surfboards to enhance the site's unique, panoramic bay view. The fence also helps protect the Pond 20 area from trash and debris.

Baseline Trash Assessment

To gain insight of the current trash conditions and to be able to help guide future management actions that may be needed, the Port of San Diego initiated an assessment of available trash data to identify high-volume trash-generating areas and locations where implementation of Trash BMP retrofits may be feasible (PO-34 optional). Data assessed were from previous JRMP activities (i.e., dry weather monitoring, street sweeping, MS4 maintenance, and park maintenance), cleanup events, and other data sources relevant to this portion of the Port of San Diego’s jurisdiction. The assessment will be completed in FY 2017, and will help prioritize land uses or areas, and identify where full capture systems or partial capture devices may potentially be implemented to meet the WQIP goals and comply with the Trash Amendments. The information will be integrated into the Port of San Diego-wide approach to address trash and will be used to select strategies to be used, ranging from source control activities and retrofitting opportunities to installation of full capture systems.

The full list of optional strategies applicable to the Port of San Diego and the implementation status of each are provided in Appendix 2.

7.2.3 City of Imperial Beach Strategies and Schedules

Imperial Beach’s approach to improving the physical aesthetics within the Otay River HA is to identify targeted areas within its jurisdiction and to implement strategies focused primarily on trash. Imperial Beach maintains two major outfalls (H-line and K-line) in the Otay River HA that have known sources of trash from commercial areas, Highway 75, and illegal dumping. Figure 7-5 shows Imperial Beach’s jurisdiction within the Otay Focused Priority Condition, where the strategies will be implemented.

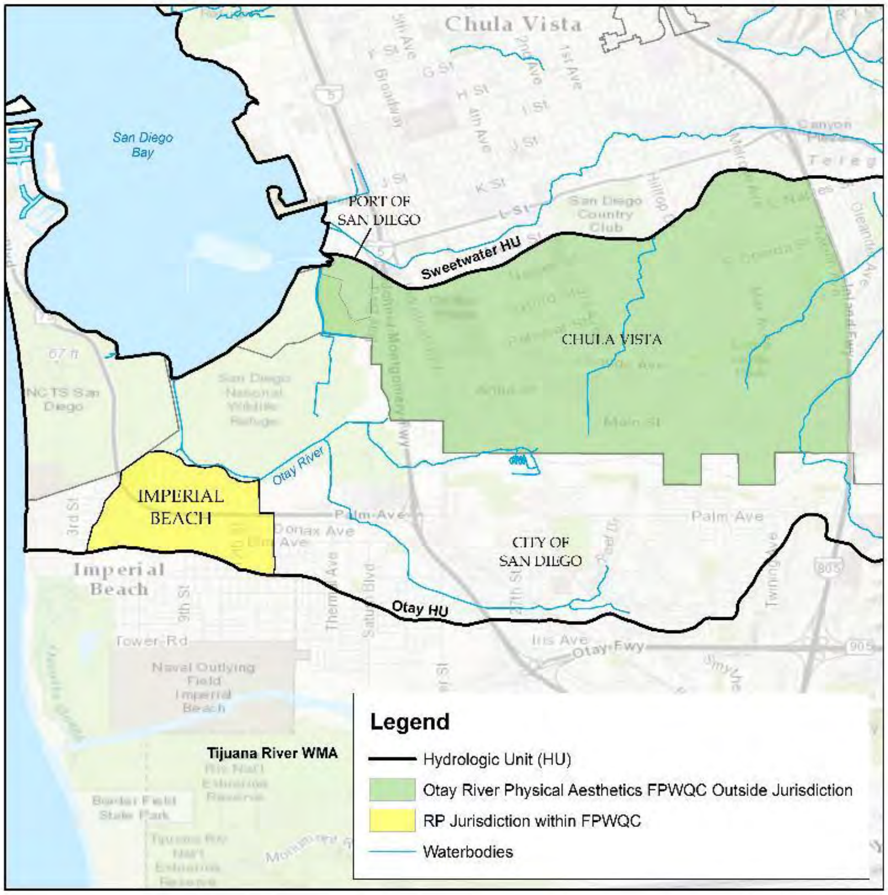

Figure 7-5
Imperial Beach's Jurisdiction Within the Otay River HU Physical Aesthetics Focused Priority Condition

To provide details of the strategies implemented in this reporting period (FY 2016) as summarized in Appendix 2, a synopsis of implemented jurisdictional strategies is provided below.

Improvement of Dirt Alleys (IB-53)

During this reporting period, Imperial Beach completed design and construction of the first phase of alley improvements for 14 alley segments (over 1 mile of dirt alleys) in the community. This first phase of alley improvements specifically targets alleys in the Tijuana River watershed and implements a green streets design that involves permeable concrete, storm water retention, and dry wells. (See the Tijuana River WQIP Annual Report for project details.)

Because of the success of and significant community support for the first phase of alley improvements, on November 18, 2016, the Imperial Beach City Council authorized the accelerated design and construction of the second phase of alley improvements for the eight remaining unimproved alley segments in the city. The alleys included in this second project phase will provide a multi-pollutant water quality benefit and will add another 0.53 mile of green alleys in Imperial Beach. The alleys that are included for the second phase are all located in the San Diego Bay WMA and are designed to specifically target the priority pollutants for trash and sediment.

Street Sweeping

Imperial Beach provides street sweeping service around the high priority areas to target trash, sediment, and debris collected on the street. A total of 130 curb miles are swept per month, including weekly sweeping of commercial areas such as open stripped and raised curb medians on Palm Avenue, Highway 75, 13th Street, Seacoast Drive, and Ocean Lane.

10th St Bikeway Access Project (IB-34b) and Habitat Restoration (IB-54)

In February 2014, Imperial Beach completed the 10th Street Bikeway Access project that includes a storm water bioswale to treat urban runoff from the Public Works facility and flow from the surrounding residential neighborhood. Trash is captured in the energy dissipation system and in the detention pond during storm events and is cleaned up by Imperial Beach maintenance crews on a routine basis. The bioswale provides storm water capture and retention of 33,300 cubic feet. During this reporting period, Imperial Beach provided regular maintenance of the bioswale and over 1 acre of native plant restoration onsite. In addition, Imperial Beach supported an Eagle Scout Project by Troop 53 in North Park to provide continuing maintenance for the native habitat on the site.

Imperial Beach's Bikeway Access Project is also part of the larger United States Fish and Wildlife Service Birder's Point Project (IB-54) to complete a walking trail and series of overlook observation decks along southern San Diego Bay. During the reporting period, the Fish and Wildlife Service completed construction on the walking path and two of the overlook observation decks. This project includes native plant restoration and various interpretive elements to engage the public. Imperial Beach will continue to coordinate restoration efforts and shared maintenance responsibilities with the Fish and Wildlife Service along the city's boundary with San Diego Bay.

El Niño impacts of flooding on the Bayshore Bike Path in Imperial Beach

Bikeway Village Redevelopment Project (IB-58)

The Bikeway Village Project is a public private partnership to redevelop the northern end of 13th Street and to refurbish old industrial buildings into new commercial uses. This project supports Imperial Beach's eco-tourism vision and multiple storm water benefits that include improving a blighted area of the community where illegal dumping is a known issue and creating new storm water retention basins. The Port of San Diego is also partnering in this project and is constructing a new decorative wrought iron fence along the eastern perimeter of 13th Street. During this reporting period, the developer received permit approval and started construction on the project. The developer, Imperial Beach, and Port of San Diego will continue construction over the next reporting period.

Trash Capture H-Outfall Drainage Basin (IB-63)

Imperial Beach's primary outfall into San Diego Bay WMA is the H-line outfall. The city completed multiple studies during the reporting period to investigate options for installing a full trash capture system for this drainage basin, including:

- Bayside Drainage Feasibility Analysis
- Imperial Beach Sea Level Rise and Adaptation Study
- Imperial Beach Drainage Basin H Trash Capture Feasibility Study

These studies identified very serious flooding concerns from impacts of sea level rise on the existing undersized H storm drain line. Even the warm water associated with the El Niño during this reporting period resulted in record sea level heights for San Diego Bay and street flooding through the H storm drain line during high tides. Full trash capture is feasible on the H-line, but it will need to be done as part of a project to increase the drainage capacity for the H-line and part of an overall adaptation plan for sea level rise.

Collaboration with other watershed stakeholders is integral to Imperial Beach's approach to water quality improvement. Imperial Beach is bordered to the north by the South San Diego Bay Unit of the National Wildlife Refuge, which includes 2,620 acres of important intertidal mudflats, eel grass beds, salt marshes, and submerged tidelands. Imperial Beach partners with the Fish and Wildlife Service and other agencies to protect and enhance wildlife habitat in and around South San Diego Bay, which also serves to provide water quality benefits to the upper watershed. There are several ongoing or planned restoration projects for the South San Diego Bay tidelands and Otay River flood plain that Imperial Beach supports through WMA strategies.

In addition to supporting WMA strategies, Imperial Beach implements a green streets program that incorporates LID and storm water treatment facilities where feasible into capital improvement program projects. Numerous projects are currently being implemented or are under design in the Otay River HA section of Imperial Beach and will provide addition storm water treatment and retention opportunities before discharging into San Diego Bay.

Imperial Beach also implements an effective source control program to maintain MS4 infrastructure and public roadways, and to address discharges from existing development to reduce bacteria, trash, and other pollutants from MS4s to meet the physical aesthetics goals. Effective jurisdictional strategies for trash include street sweeping, annual MS4 operations and maintenance, and targeted cleanup activities. Imperial Beach also maintains numerous trash capture devices throughout the city and is investigating expansion of the program. For the Otay River HA, Imperial Beach is investigating the feasibility of a new trash capture system for the H-outfall drainage basin. The careful consideration of the appropriate trash capture device for any location in Imperial Beach is a necessity because the flat grade and proximity to sea level can result in the flooding of public and private property. Imperial Beach plans to add additional structural treatment controls for trash where feasible.

7.3 Monitoring and Assessment for Physical Aesthetics

Physical aesthetics monitoring was a collaborative effort by the Port of San Diego, Chula Vista, and Imperial Beach. To assess progress toward meeting the interim goal, a total of 64 MS4 outfall locations in the Focused Priority Condition area were visited at least once and up to three times, depending on the RP, as part of the dry weather major MS4 outfall monitoring program.

In FY 2016, the RPs also began a paired monitoring approach at 12 MS4 outfalls. The RPs selected nine sites in the Sweetwater HU and three sites in the Otay HU, where the RPs assessed trash in the receiving water adjacent to the major MS4 outfall. Paired monitoring was conducted during two dry weather events (one dry season [May to September] and one wet season [October to April]) and one wet weather event (event within three days following a storm event with at least 0.2 inch of precipitation) annually.

The RPs collaborated on development of a field monitoring sheet to capture an extensive description of the trash conditions at the MS4 outfalls and adjacent receiving water areas that were monitored by each jurisdiction. On November 12, 2015, a calibration field training session was conducted by the participating RPs at two of the paired monitoring locations. The goal of the calibration and training was to standardize the monitoring and observational procedures for all events.

A total of 64 major MS4 outfalls were visited a combined total of 86 times during dry weather within Chula Vista (68 visits), Port of San Diego (16 visits), and Imperial Beach (2 visits). Assessments were conducted by calculating the percentage of visits observed as having “optimal” trash scores or better of the total number of visits. Optimal is defined as less than 10 pieces of trash observed at a site, as set forth by the Trash Assessment form from the Regional Copermittee Monitoring Workgroup.

Of the 86 visits to major MS4 outfall locations, 73% of the visits had “optimal” levels of trash. The most common trash type found at the MS4 sites was categorized as general packaging or plastic bags, with potential source identifications (IDs) noted as littering or household waste. At the receiving water sites, the most prevalent trash was categorized as general packaging with source IDs as transient, household waste, dumping, or littering.

The site visits and the monitoring results, including trash types, potential trash sources, and routes, are further detailed in Appendix 4 and Attachment E.1 of Appendix 4.

7.4 Progress Toward Achieving Numeric Goals

The RPs initiated the water quality data collection for the physical aesthetics Focused Priority Condition during this reporting period that will allow them to report progress toward achieving numeric goals.

Overall, the initial trash assessment results from the MS4 outfall dry weather monitoring results (86 visits) in the combined Sweetwater and Otay HUs showed an optimal (or greater) trash percentage significantly above the baseline percentage of 60%. In addition, the three RPs initiated baseline trash assessment studies in their respective jurisdictions that will also help assess the percentage of drainage area treated by BMPs to be implemented in the future. The trash assessment results will be available in FY 2017. Table 7-3 summarizes the RPs’ progress toward interim goals established for the Municipal Permit term in the Sweetwater and Otay HUs.

Table 7-3
Progress Toward Municipal Permit Term Numeric Goal for Physical Aesthetics in Lower Sweetwater HU and Otay River HU

Planning Period			Assessment Period		
Performance Measure – Achieve by FY 2018					
Interim Goal and Progress Information	Performance Metric	Interim Goal[1]	Data Collected/ Results	Progress	Adaptive Management Actions
MS4 Discharges % Optimal[2] Trash Assessment Scores	MS4 Outfalls Assessed for Trash	65% Optimal Trash Assessment scores	Visual trash assessment data was collected from 86 visits to major outfall sites.	73% optimal scores were achieved.[3]	No modifications to the numeric goal, schedule, or supporting strategies are proposed.
OR					
MS4 Discharges % of High Volume Trash Drainage Area Treated for Trash within HSAs 909.1 and 910.2[4]	% Drainage Area Feasible for BMP retrofit	10% High Volume Trash Drainage Area Treated	Data were collected in early FY 2016. Results will be available in the report in FY 2017	Studies were implemented in reporting period and will be completed in FY 2017	No modifications to the numeric goal, schedule, or supporting strategies are proposed.

Notes:
% = percent; FY = fiscal year; MS4 = municipal separate storm sewer system
1. Baseline for % Optimal Trash Assessment Scores is 60% and is based on the RPs' cumulative number of site visits of major MS4 outfalls in the Focused Priority Condition area for dry weather and MS4 outfall monitoring during FY 2012 through FY 2014. Baseline for % of High Volume Trash Drainage Area Treated is based on historical trash assessment data. An assessment is needed and will incorporate review of all available trash and source assessment data, drainage areas, and potential locations in high-volume trash-generating areas to feasibly implement structural control BMPs to identify or verify high-volume trash areas and percentage of area feasible to retrofit with trash BMPs. The goals may be updated accordingly and provided in a future annual report.
2. Based on the RPs' cumulative number of site visits of major MS4 outfalls in the Focused Priority Condition area for dry weather and MS4 outfall monitoring during FY 2012 through FY 2014.
3. 76% of 58 outfall visits in 909.1 had optimal or better trash ratings; 68% of 28 outfall visits in 910.2 had optimal trash ratings or better. Trash ratings in both HAs were above the baseline of 60%.
4. These values are based on best available information and current jurisdictional knowledge. A feasibility study is required to determine where BMP retrofits can be implemented. The interim goals may be adapted if needed.

Intentionally Left Blank

7.5 Adaptations to Water Quality Strategies and Schedules

No modifications to the goals, strategies, and schedules presented in the San Diego Bay WMA WQIP for Chula Vista, the Port of San Diego, or Imperial Beach are proposed at this time.

Intentionally Left Blank

8 Focused Priority Condition: Swimmable Waters (Beaches) in the Coronado HA

Swimmable water at beaches is a Focused Priority Condition within the Coronado HA of the Otay HU. For the purposes of the WQIP, the term swimmable waters relate to use of the receiving water for recreational activities involving body contact with water where ingestion of water is reasonably possible. These beneficial uses include, but are not limited to, swimming, wading, water-skiing, skin and scuba diving, surfing, and fishing. Bacteria typically are the pollutant of concern for protecting public health during recreational activities; however, the RPs will adapt this Focused Priority Condition to address other pollutants of concern as they are identified in the future.

The geographic extent of the Focused Priority Condition is the jurisdictional boundaries of the City of Coronado (Coronado) and the Port of San Diego (collectively, RPs) within the Coronado HA of the Otay HU. Swimmable waters (beaches) strategies apply only to the areas within the RPs' jurisdictions and exclude federal properties (e.g., United States Navy facilities).

Progress toward implementing various strategies and monitoring related to these goals is presented in the sections below. This is the first annual report related to this Focused Priority Condition for swimmable waters and because of the timing of the completion of the San Diego Bay WMA WQIP, the programs have been in place and implemented only since February 2016. The relatively short implementation time limits assessment of the program's effectiveness.

8.1 Swimmable Waters in the Coronado HA Numeric Goals

The WQIP interim (FY 2018) and final numeric goals for the Focused Priority Condition are provided in Table 8-1. The RPs identified at least one interim goal to be achieved during the Municipal Permit term. Interim goals during the current permit term are intended to serve as milestones to help assess progress toward the long-term goals to be achieved at the end of FYs 2021 and 2023, as described in Appendix 3.

The RPs implemented a monitoring program to collect data to help track progress toward the goals. The following subsections summarize jurisdictional strategy implementation, assessment of RPs' progress toward interim goals, and monitoring programs.

Public perception of water quality will also be assessed as a strategy starting in FY 2017, following the development of a survey. The public's perception of water quality is equally as important to the RPs within the Coronado HA as is the impairment assessment. Monitoring data alone may not identify the areas of public concern or perception. Survey results will be used within the adaptive management framework to assess the effectiveness of current strategies and to determine changes that may be needed.

8.2 Strategies and Schedules for Swimmable Waters in the Coronado HA

The RPs' approach to improving swimmable beaches is to implement strategies designed to reduce sources of bacteria.

Intentionally Left Blank

Table 8-1
Summary of Strategies for Swimmable Waters in the Coronado HA

Strategies	Additional Water Quality Conditions Addressed by Strategy[1]				Summary
	Trash	Nutrients	Sediment	Metals	
Development/redevelopment (residential, commercial)	X	X	X	X	Coronado (CO-4) amended its BMP Design Manual for trash areas to require full four-sided and/or covered enclosures, away from storm drains. The BMP Design Manual was amended for animal-related facilities such as shelters, "doggie day care" facilities, veterinary clinics, breeding, boarding and training facilities, and pet care stores to address sources in outdoor, storage, and other areas as applicable. Coronado's Municipal Code was amended to support additional requirements in the BMP Design Manual that target Focused Priority Conditions identified through plan review and field inspections.
Existing development (commercial/industrial)	X	X	X	X	Coronado (CO-7) and the Port of San Diego (PO-7) coordinated commercial inspection schedules during the reporting year so that the inspections occurred simultaneously at bayside facilities.
Existing development (municipal)	X	X	X		• Coronado (CO-13.1 and 13.3) implemented enhanced beach patrols, beach maintenance activities for trash and debris, additional trash can placement during peak periods, and replenishment of dog bag dispensers. • The Port of San Diego continued to provide public pet waste bags by maintaining bag dispensers at the park and beach (PO 22 optional).

Table 8-1 (continued)
Summary of Strategies for Swimmable Waters in Coronado HA

Strategies	Additional Water Quality Conditions Addressed by Strategy[1]				Summary
	Trash	Nutrients	Sediment	Metals	
MS4 infrastructure			X	X	Coronado (CO-15.3) prepared a Capital Improvement Program to line storm drain segment to prevent groundwater intrusion.
Enhanced existing development inspections	X	X	X	X	• Coronado (CO-12) coordinated with the Port of San Diego on commercial inspection schedules in during the reporting year so the inspections occurred simultaneously. • The Port of San Diego also assessed three special events (for more than 500 people) at Tidelands Park (PO-9) and completed inspections at the all of the events to ensure compliance with Municipal Permit requirements. Of the three special events in the 910.1 HA, all were properly implementing BMPs.
Inspection and/or preventive maintenance program to prevent sewer system backups in public restrooms		X		X	The Port of San Diego effectively implemented the preventative maintenance program for public restrooms at Tidelands Park (PO-23 optional) to prevent sewer discharges from reaching the MS4. In addition, there was no evidence of bathroom cleaning activities being tracked outdoors at the time of the municipal inspection (PO-8) at Tidelands Park in June 2016. Coronado implements a similar inspection, maintenance, and cleaning program at all public restrooms located near beaches and at parks (CO-6 and CO-13.2) to prevent sewer back-ups and spills.

Table 8-1 (continued)
Summary of Strategies for Swimmable Waters in Coronado HA

Strategies	Additional Water Quality Conditions Addressed by Strategy[1]				Summary
	Trash	Nutrients	Sediment	Metals	
Trash and waste measures	X	X			The Port of San Diego initiated an optional strategy for trash and waste in the 910.1 HA in FY 2016. The assessment of trash receptacle assessments in parks (PO-26 optional) was initiated and is scheduled to be completed in FY 2017.

Notes:
BMP = best management practice; FY = fiscal year; HA = hydrologic area
1. High and medium sources identified in Appendix I of the WQIP. *The RPs complete of strategies are located in Appendix 2.
X – Indicates condition benefit

Intentionally Left Blank

The RPs have continued to implement their core JRMP requirements, including many strategies that have positive impacts on the water quality of MS4 discharges. To make progress toward their identified goals, the RPs have identified existing JRMP (core) strategies to enhance and have also implemented optional strategies focused on this Focused Priority Condition.

Overall, Coronado and the Port of San Diego successfully implemented strategies to address the high priority sources as well as medium priority sources of bacteria in the 910.1 HA during the reporting period. Table 8-2 highlights a subset of the RPs' strategies identified to meet interim and final goals for this Focused Priority Condition.

It is anticipated that a combination of strategies will allow the RPs to make progress toward, and ultimately achieve, the established goals for this Focused Priority Condition. All strategies were implemented as scheduled in the reporting period. Additional information on Coronado's and the Port of San Diego's approach and strategies is provided in Sections 8.2.1 and 8.2.2, respectively. RPs' complete lists of strategies are provided in Appendix 2.

Table 8-2
Sources Addressed by RPs' Strategies in FY 2016

Source	City of Coronado	Port of San Diego
High Priority		
Animal facilities	X	N/A
Eating or drinking establishments or special events	X	X
Pet waste	X	X
Sewage Infrastructure and activities	X	X
Medium Priority		
Residential Areas[1]	X	N/A
Groundwater	X	N/A
Over-irrigation	X	X

Notes:
N/A = not applicable
1. The Port of San Diego does not have residential land uses.

Strategies and implementation schedules were identified using best information available on efficiency, effectiveness, and level of effort estimated to achieve compliance with numeric goals. The adaptive management process provides the framework to evaluate progress toward meeting the goals and allows for modification of strategies. The modifications of core JRMP strategies or optional strategies, or the addition of new strategies, may also be needed to adequately address MS4 sources so that Tidelands Beach can be delisted from the 303(d) List in the future. As strategies are modified, the WQIP will be updated. The implementation of each strategy will be contingent upon annual budget approvals and funding availability.

Implementation of the optional strategies is contingent on circumstances supported by the need for the additional effort, the cost/benefit as compared with other options and strategies, and the availability of funding.

8.2.1 City of Coronado Strategies and Schedules

Coronado's approach to improve swimmable beaches is to implement strategies focused on sources of bacteria and trash, and to obtain a better understanding of the public's perception of water quality conditions. Figure 8-1 shows Coronado's jurisdiction within the Coronado HA Focused Priority Condition, where the strategies are being implemented.

Figure 8-1
Coronado's Jurisdiction Within the Coronado HA Swimmable Beaches Focused Priority Condition

Medium-ranked sources that are non-existent in Coronado include nurseries/greenhouses. Coronado may collaborate or confer with the Port of San Diego about potential non-MS4 sources from boat waste, homeless encampments, and groundwater contribution if suspected or believed to be a potential source depending on jurisdictional authority or boundaries. Coronado may consider low-ranking sources as part of its strategies at its discretion and may add them as part of its adaptive management approach to achieve interim or final goal metrics for swimmable waters.

Core jurisdictional strategies and BMPs listed in Appendix 2 were implemented as planned for the reporting year. Some examples include performing frequent maintenance of public areas, including parks, beaches, and special events, and engaging the public to implement best practices and desirable behaviors (e.g., pet waste collection and disposal). Specifically, jurisdictional strategies underway include daily beach patrols for trash and debris removal and weekly street sweeping and hardscape cleaning in the commercial corridor where eating and drinking establishments are primarily located. In Coronado, most of the MS4 outfalls, including major outfalls, within the Focused Priority Condition area, have low-flow and first-flush diversions to the sanitary sewer to prevent bacteria from entering the receiving waters during dry weather and during the initial portions of storms. There are 13 low-flow and first-flush diversions from the MS4 to the sanitary sewer throughout Coronado that are proactively inspected bimonthly. Coronado has an extensive, comprehensive operation and maintenance program of its storm drain (or MS4) and sewage infrastructure that is instrumental to achieving and maintaining swimmable beaches. Examples include daily restroom inspections/cleaning and twice-per-week inspections at pump stations at beach restrooms. Staff activities in terms of operation and maintenance, and response to incidents focus on health and safety of employees, the public, and the environment with emphasis on preserving beach water quality.

Coronado’s North Beach (Dog Beach)

The continuous maintenance of public areas and facilities reduces the amounts of trash, bacteria, sediment, and other pollutants on beaches and in receiving waters. In addition, Coronado administers surveys to collect data to inform targeted education and outreach campaigns and to evaluate municipal services. Collaboration with the other RPs to assess public perception will build upon historical data to guide adaptive management for Coronado. The assessments are planned for next fiscal year as originally scheduled.

To expand on examples provided in Table 8-1, jurisdictional strategies that were implemented this reporting year include the following.

Development Planning Component

Jurisdictional strategy CO-4: Coronado’s BMP Design Manual and Municipal Code were amended to address potential sources of bacteria through BMP requirements. Coronado enhanced the Model BMP Design Manual to include additional BMPs and requirements for potential sources of bacteria from specific types of development (for example, trash enclosure types and design requirements for restaurants identified through inspections that have persistent problems with trash management). To support the enhanced BMP Design Manual, Coronado's Municipal Code was updated to provide the required legal authority.

Existing Development (Commercial/Industrial) Component

Jurisdictional strategy CO-7: High-priority commercial facilities were inspected. Several facilities located along the bay's waterfront were jointly inspected by Coronado and the Port of San Diego to ensure that potential sources of bacteria are inspected, identified, and addressed, if needed. Some of these facilities may have operations in only one of the RP's jurisdictions or in both. By conducting joint inspections, RPs ensure that each facility receives a thorough inspection and that all BMPs are properly implemented. These joint inspections also provide for more uniform requirements and enforcement, when needed.

MS4 Infrastructure

Jurisdictional strategy CO-15.3: Coronado is proactively repairing/replacing MS4 infrastructure for proper operation and function. During this reporting year, Coronado initiated an MS4 capital improvement project to eliminate groundwater infiltration to the MS4 in the Country Club/Parker drainage basin on the northwestern end of the city's village area. Project planning and design to install a liner in the existing storm drain and perform other repairs were completed. The Public Services and Engineering Department prepared bid documents and initiated regulatory permitting just as the fiscal year ended. The project is scheduled to start construction in early 2017. Upon completion, this project will have multiple environmental benefits, including reducing potential bacteria regrowth in the MS4 from standing groundwater in the pipeline, eliminating groundwater diversion to the sanitary sewer (which in turn reduces the risk of sewer system overflows and strain on the system), reducing the potential for bacteria to the receiving waters, and reducing greenhouse gases from pump operations to dewater the MS4.

Enhanced existing development inspections

Jurisdictional strategy CO-12: Coronado and the Port of San Diego are implementing enhanced inspections in marina areas. As noted earlier, joint inspections were conducted by Coronado and the Port of San Diego. Joint inspection of the Glorietta Bay boat launch areas was conducted as part of this new enhanced oversight related to swimmable waters. Although this strategy is listed as optional and would normally be triggered by an assessment of the goal, it was conducted this reporting year.

Generally, implementation of the optional strategies is contingent on circumstances supported by the need for the additional effort, the cost/benefit as compared with other options and strategies, and the availability of funding. The full list of optional strategies applicable to Coronado and the implementation status of each are provided in Appendix 2.

8.2.2 Port of San Diego Strategies and Schedules

The Port of San Diego's approach to address this Focused Priority Condition and to comply with the WMA goals involved implementing core JRMP and optional strategies, as applicable, to reduce or eliminate sources of bacteria within its MS4. The Port of San

Diego's jurisdictional area in the Coronado HA is approximately 242 acres. There are 32 commercial facilities (including eating and drinking establishments, marinas, general retail, and hotels) and three parks in the Port's jurisdiction in the HA.

While the majority of the Port of San Diego's strategies to address sources of bacteria apply throughout its jurisdiction, the Port of San Diego implemented a targeted effort to address potential sources of bacteria to Tidelands Park. Tidelands Park is a 22-acre waterfront park that offers a small beach, recreational fields, picnic areas, and open space for a variety of outdoor activities. The park is currently on the 303(d) List for *Enterococcus*. Figure 8-2 shows the Port of San Diego's jurisdiction within the Coronado HA Focused Priority Condition, where the strategies are being implemented.

Port of San Diego Tidelands Park

Figure 8-2
Port of San Diego's Jurisdiction Within the Coronado HA Swimmable Beaches Focused Priority Condition

Core jurisdictional strategies and BMPs listed in Appendix 2 were implemented as planned for the reporting year. The Port of San Diego's strategies in Tidelands Park focused on reducing bacteria and trash from sources such as sewage infrastructure and activities from public facilities, pet waste, special events, eating and drinking establishments, and recreational land uses. The Port of San Diego effectively implemented both core and optional strategies in FY 2016 in Tidelands Park. Core JRMP strategies impacting the park included frequent maintenance and inspections (PO-8) of municipal areas (including parks, beaches, and special events (PO-9), MS4 inspection and cleaning (PO-10), and maintenance of streets and parking lots (PO-11). In addition, nine of the Port of San Diego's optional strategies impacting Tidelands Park were triggered for implementation in FY 2016.

Table 8-1 highlights a subset of the Port of San Diego's strategies directly impacting Tidelands Park that will help it meet interim and final goals for this Focused Priority Condition. The full list of strategies applicable to the Port of San Diego and the implementation status of each are provided in Appendix 2.

To expand on strategies highlighted in Table 8-1, jurisdictional strategies that were implemented this reporting year in Tidelands Park include the following.

Enhanced Existing Development Inspections

As stated earlier, the Port of San Diego's approach was to implement a targeted effort to address potential sources of bacteria to Tidelands Park. The Port of San Diego inspected three special events (for more than 500 people) at Tidelands Park to ensure compliance with Municipal Permit requirements. Event organizers were provided a list of BMPs (PO-9) to ensure that the event organizer was knowledgeable about the BMP requirements and was implementing them. Of the three special events in the 910.1 HA, all were found to be properly implementing BMPs. In addition, the Port of San Diego began to coordinate with Coronado on joint inspections of existing development facilities in this HA. Although this strategy was initially implemented in the Glorietta Bay boat launch area, the effort represents a new management approach to implement greater oversight of potential sources of bacteria that may exist in this HA. There were also no new development or construction activities in Coronado HA during FY 2016.

Preventive Maintenance of Public Bathrooms at Tidelands Park

The Port of San Diego's updated Storm Water Ordinance requirements were incorporated into the new janitorial services contract requiring implementation of measures to prevent the discharge of waste material generated from public restroom facilities at parks (PO-23 optional). These preventive maintenance measures help to minimize or prevent discharges from the sewer system or other public bathroom facilities at Tidelands Park. Findings of the June 2016 municipal inspection (PO-8) at Tidelands Park support that these measures have been effective (i.e., no evidence of bathroom activities being tracked outdoors).

Port of San Diego-Wide Park Municipal Solid Waste Receptacle Assessment

One optional strategy initiated in FY 2016 addresses trash management at Tidelands Park. A Port of San Diego-wide park municipal solid waste receptacle assessment was initiated in this reporting period to evaluate the waste receptacles currently in use in the Port of San Diego's parks (PO-26 optional),including Tidelands Park. The purpose of the study is to develop the information necessary to support management decisions related to waste and recycling receptacle type and placement, which will support compliance with California waste diversion mandates, upcoming Trash Amendments requirements, and the San Diego Bay WMA WQIP Focused Priority Conditions. The study is scheduled to be complete in FY 2017. The findings will be used to guide management actions and potential future retrofits to trash enclosures in municipal areas, specifically parks (optional PO-46 optional).

Municipal Guidance Documents and Training

The Minor Maintenance and Construction Activities BMP Guidance document was developed in this reporting period (PO-24 optional). The guidance document was designed to help General Services staff be aware of and to implement necessary BMP procedures to mitigate the discharge of trash, contaminated debris, and other pollutants when doing minor maintenance and construction activities at municipal facilities and parks such as Chula Vista Bayside Park and Chula Vista Marina View Park. One training event was provided to 88 staff on the use of the guidance document to select, implement, and monitor the BMPs (PO-25 optional).

Public education and outreach (PO-17) also continues to be a key component of the Port of San Diego's approach jurisdiction-wide. Engaging the public encourages them to implement best practices and desirable behaviors (e.g., pet waste collection and disposal (optional PO-22 optional), proper trash disposal, and trash cleanups).

8.3 Swimmable Waters in the Coronado HA Monitoring and Assessment

The RPs initiated data collection for the swimmable waters Focused Priority Condition in November 2015 following completion of the final WQIP. The Swimmable Waters monitoring program was implemented in Coronado HA, as detailed in Appendix K of the San Diego Bay WMA WQIP. Data collection for bacterial indicators has proceeded as planned and includes year-round (wet and dry weather) sampling to augment existing data sets, such as the dry weather data collected by the County of San Diego Department of Environmental Health (DEH) for the AB 411 program. The RPs initiated wet weather sampling at two beaches (Tidelands Park and North Beach) in the Coronado HA and sampled three storm events: November 2, 2015, January 5, 2016, and March 8, 2016.

Dry weather site visits were conducted on 14 occasions from November 2015 through September 2016 to inspect the MS4 outfalls and to evaluate conditions for sampling the receiving water and/or MS4 outfalls. The data collected during this reporting period, when combined with data planned for FY 2017, will allow the RPs to begin assessing water quality and progress toward meeting the swimmable waters goals. Further discussion and description of monitoring efforts and monitoring results for Swimmable Waters Focused Priority Condition, is presented Appendix 4. The complete set of monitoring data collected during this reporting year is presented in Attachment E.1.

8.3.1 Receiving Water Monitoring

Receiving water monitoring related to swimmable waters includes bacterial indicators at two sites, one on San Diego Bay at Tidelands Park managed by the Port of San Diego and one on the Pacific Ocean at North Beach in Coronado. Receiving water monitoring for wet season was initiated at both locations in November 2015. Both dry and wet weather monitoring are slated to continue in the coming reporting year.

During the reporting period, the Port of San Diego initiated a monitoring approach to assess Tidelands Park year-round. In addition to assessing dry weather monitoring data from the DEH AB 411 program, the Port of San Diego began to assess the receiving water during dry weather and wet weather in the wet season period. A total of 35 receiving water samples were collected during dry and wet seasons at Tidelands Park. Four, or 12.5%, of the 32 dry weather samples collected overall (six samples by the Port of San Diego and 26 samples by the DEH) at Tidelands Park beach had concentrations of *Enterococcus* that exceeded the WQO. For the wet season/wet weather receiving water monitoring, *Enterococcus* concentrations exceeded the WQO during one of the three rain events.

Receiving water monitoring at North Beach was initiated in FY 2016 and is being conducted year-round. For North Beach, there are limited receiving waters (beach/ocean) monitoring data points for the site in the previous few years, because the site is no longer monitored by the DEH under the AB 411 program. At North Beach, Coronado collected 14 receiving water samples in the Pacific Ocean surf during the reporting year.

The wet weather receiving water monitoring data set is limited at both locations because this was the first year in which the monitoring was conducted. As planned, receiving water samples will continue to be collected during dry and wet weather over the next two years so that the RPs can obtain a more robust dataset to adequately assess the 2018 interim goals at Tidelands Park and North Beach. A full description and a complete set of receiving water monitoring data collected during this reporting year is presented in Appendix 4.

8.3.2 MS4 Monitoring

MS4 outfall monitoring related to swimmable waters includes bacterial indicators at two locations, at North Beach (Coronado) and one at Tidelands Park (Port of San Diego). MS4 outfall monitoring is performed when flow or standing water is detected at the outfall. The MS4 monitoring related to the Focused Priority Monitoring was initiated in November 2015 and is slated to continue in the coming reporting year. The additional MS4 outfall data collected by RPs will be used to support any future BMP decisions and assess effectiveness, should they be necessary, to meet the interim and final goals.

At Tidelands Park, 14 site visits were conducted during the reporting year resulting in collection of seven MS4 outfall samples (at one outfall site during the dry season/dry weather and at all three outfalls on two of the wet season/wet weather monitoring events). At North Beach, 14 site visits were conducted during the reporting year, resulting in collection of six MS4 outfall samples. Monitoring efforts and monitoring data collected during this reporting year are presented in Appendix 4. The RPs will continue to collect additional MS4 outfall data to support any future BMP decisions and assess effectiveness, should they be necessary, to meet the interim and final goals.

8.4 Progress Toward Achieving Numeric Goals

The RPs' water quality monitoring program was initiated in November 2015 upon approval of the WQIP and the Monitoring and Assessment Program and the program continued through September 2016. The monitoring program will allow the RPs gain data to report progress toward achieving swimmable waters numeric goals.

The dry weather monitoring results for *Enterococcus* at Tidelands Park indicates that the receiving water quality continued to maintain the current or baseline dry weather exceedance rate at this location. Although, wet weather sampling was initiated in this reporting period, the data set is limited to one year and additional monitoring data will be beneficial in understanding what the exceedance rate of wet weather samples may be and if it may be decreasing. The RPs anticipate having a more robust data set at the end of FY 2017. Table 8-3 summarizes the RPs' progress toward interim goals established for the Municipal Permit term.

In addition, recent Heal the Bay Report Card results indicate that Tidelands Park continued to meet baseline conditions in the receiving water during summer dry season. Tidelands Park was given an A grade for the summer dry season/dry weather in the 2015–2016 Heal the Bay Report[13], using data collected by the DEH in 2014–2015. North Beach was not evaluated by Heal the Bay. Additional data were collected at both sites starting in November 2015 and these data will help track progress toward the goals related to water quality and future report cards assessments (i.e., Heal the Bay).

Progress Toward Municipal Permit Term Numeric Goal for Swimmable Waters in the Coronado HA

Planning Period			Assessment Period		
Performance Measure – Achieve by FY 2018					
Interim Goal and Progress Information	Performance Metric	Baseline Data	Data Collected/ Results	Progress	Adaptive Management Actions
Receiving Water Removal from the 303(d) List for Recreation Water Contact (REC-1 Beneficial Use)	% of samples exceeding single-sample *Enterococcus* WQO[1]	Below 15% for dry weather monitoring[2] 44% for wet weather monitoring[3]	12.5% of the dry weather receiving water samples collected at Tidelands Park exceeded single sample *Enterococcus* WQO in this reporting period. Initial wet weather data collection began in November 2015, and a more robust data set is anticipated by the end of FY 2017. During this reporting year, both wet and dry weather data were collected and will be continued as planned. Data collected are presented in Appendix 4.	Data collection is progressing in accordance with a schedule that will allow completion on or before the scheduled completion period.	No adaptive management actions identified or required during this reporting period.

Planning Period			Assessment Period		
Performance Measure – Achieve by FY 2018					
Interim Goal and Progress Information	Performance Metric	Baseline Data	Data Collected/ Results	Progress	Adaptive Management Actions

Notes:

% = percent; CEDEN = California Environmental Data Exchange Network; FY = fiscal year; REC-1 = water contact recreation beneficial use; WQO = water quality objective

1. To include wet weather and wet season (November–March) data in the assessment, which are not collected frequently enough for a geometric mean calculation, single sample WQOs for *Enterococcus* will be used for assessment purposes.
2. Cumulative data from 1999–2014 showed a dry weather exceedance rate below the allowable threshold for 303(d) delisting consideration. Because of this finding, the interim and final goals are focused on maintaining the current dry weather exceedance rate, while simultaneously lowering the exceedance rate of wet weather samples.
3. Baseline determined from line of evidence 27343 in the Final California 2010 Integrated Report 303(d) List/305(b) Report), which found 4 out of 9 wet weather receiving water samples exceeded the *Enterococcus* WQO. At the time the baseline was established, no other wet weather data was available to the RPs.
4. The Water Quality Control Policy for Developing California's Clean Water Act Section 303(d) list states that WQOs for bacteria are not exceeded using a binomial distribution methodology. The Policy also allows use of a reference beach to compare results. The binomial distribution allows approximately 15% of samples to exceed WQO.
5. Percentage of beaches will be calculated using a five-year rolling average of two beaches, Tidelands Park and North Beach within in the Coronado HA (910.1), using the report card methodology from Heal the Bay. Data will be collected as planned and will continue to feed into future reports.
6. Baseline for dry weather was calculated using a five-year rolling average (2010–2011 through 2014–2015) for Tidelands Park from the Heal the Bay report cards. Results: Four As all years except for one B in 2012–2013 yield the 80% baseline. Data will be collected for North Beach starting in FY 2016. Interim and final targets are based on the five-year rolling average grade card scores received for Tidelands Park and North Beach locations using the Heal the Bay methodology.
7. Using the Heal the Bay Annual Reports, the baseline for wet weather was calculated using a five-year rolling average for approximately 40 San Diego County Beaches. However, the five-year rolling average scores include data collected drought conditions as noted in the Heal the Bay Report for 2014–2015. Using a five-year rolling average is anticipated to attenuate variability between drought and normal/high rainfall years. Wet weather data to be collected to determine percentage of years the beaches (Tidelands and North Beach) achieve water quality report grade of A.

Intentionally Left Blank

8.5 Water Quality Strategies and Schedules Adaptations

Coronado identified one modification to its strategies and schedules. Further evaluation of the MS4 inventory revealed that there are no remaining corrugated metal pipe (CMP) components in the system. Therefore, a Capital Improvement Plan specifically targeting MS4 improvements to replace CMP to mitigate infiltration and reduce diversion flows to the sewer system was not necessary. Jurisdictional strategy CO-15.5 for a CMP Capital Improvement Plan of the MS4 will be deleted because it is no longer relevant. Other types of jurisdictional strategies to improve the MS4 infrastructure and operation will continue in place to prevent infiltration (CO-17), repair and replacement (CO-15.3), etc.

There were no modifications or additions to the Port of San Diego’s strategies and schedules.

Intentionally Left Blank

9 Adaptive Management

Adaptive management uses an iterative approach to re-evaluate major components of the WQIP based on the requirements of the Municipal Permit. The WQIP details how the RPs use new data and information to improve it through updates to priorities, assessments of and adjustments to goals, updates to strategies to meet the latest goals, and updates to the monitoring and assessment program to provide the necessary data to support the process.

The adaptive management process is used in conjunction with water quality and programmatic data to evaluate whether modifications to numeric goals, schedules, or strategies are necessary to achieve compliance with the interim and final numeric goals. The timing of the adaptive management process may be applied annually but is more likely to be completed at the end of the Municipal Permit term.

9.1 Potential Triggers for Adaptation

The adaptive management process may be triggered when new information becomes available. New information to be considered includes results of routine monitoring and special studies, new regulatory drivers, results of program effectiveness assessments and progress towards numeric goals, and recommendations from the public or Regional Board. The Municipal Permit describes various triggers that may warrant program adaptation, including exceedances of water quality standards in receiving waters, new information, Regional Board recommendations, and input by the public. Effectiveness assessments of JRMP programs and strategies may also trigger adaptations to the Water Quality Improvement Plan.

Modifications may be made to the priority water quality conditions, goals, strategies, schedules, or the Monitoring and Assessment Program. The potential triggers for adaptation that must be considered annually are summarized in Table 9-1; however, no triggers for adapting or modifying the WQIP for this monitoring period were met.

Intentionally Left Blank

Table 9-1
Causes for Adaptive Management Within the Water Quality Improvement Plan

Trigger	Frequency for Assessment	Potential Area(s) for Adaptation				Adaptive Management Action for FY 2017?
		Priority Water Quality Conditions	Goals and Schedules	Strategies and Schedules	Monitoring and Assessment	
Exceedances of Receiving Water Limitations	Annual	—	—	X	X	No
Exceedances of Non-Storm Water Action Levels or Storm Water Action Levels	Annual	—	—	X	X	No
Special Studies Results	Annual, as results are available	—	X	X	X	No
New Regulatory Actions	Annual, as applicable	X	X	X	X	No
Regional Board Recommendations	Annual, as applicable	X	X	X	X	No
Program Effectiveness Assessments/ Progress Toward Goals	Annual	—	—	X	X	No[1]

Notes:

FY = fiscal year

1. Minor changes to strategies of multiple jurisdictions are provided in Appendix 2.

Intentionally Left Blank

9.2 Water Quality Improvement Plan Elements for Adaptation

The San Diego Bay WMA WQIP was approved by the Regional Board in February 2016. As a result, the RPs have implemented the WQIP and their jurisdictional programs and strategies for approximately a five-month period. Therefore, no adaptations have been made to the Highest Priority Conditions and Focused Priority Conditions. One interim goal was modified after the FY 2016 monitoring year: the Airport Authority has adapted one performance goal, as further discussed in Section 9.2.1. Since the implementation of strategies, multiple jurisdictions have made minor changes to their strategies; all strategy modifications are in Appendix 2 including any new strategies added by jurisdictions. The modifications are summarized in Table 9-2 and details are in Appendix 5.

Table 9-2
FY 2016 Water Quality Improvement Plan Annual Report Adaptations

Elements for Adaptation	FY 2016 Annual Report Adaptation
Highest and Focused Priority Water Quality Conditions	There are no adaptations to the Highest and Focused Priority Water Quality conditions during this reporting period. No new regulations, policies, or recommendations from the Regional Board have triggered adaption of this Water Quality Improvement Plan Element.
Goals and Schedules	The Responsible Parties are on track to meet their 2018 interim Water Quality Improvement Plan goals and do not propose any adaptations to their goals or the related schedules for this reporting period. In addition, the Airport Authority has modified one performance-based goal.
Strategies and Schedules	The Responsible Parties have just begun implementation of their Water Quality Improvement Plan strategies. They plan to continue implementing the strategies with minor modifications, if needed, with the goal of obtaining pollutant reduction benefits.[1]

Notes:
1. Proposed minor administrative changes to select strategies completed by various jurisdictions in FY 2016 do not qualify as an update to the WQIP.

9.2.1 Airport Authority Goal Adaptation

The Airport Authority proposes to modify the performance goal for airside street sweeping in sub-basins 1, 3, and 5 combined as a result of better recordkeeping, communication, and analysis. During FY 2016, the FMD and EAD implemented more efficient methods to track the location, date, and frequency of sweeping activities. The total area of runway and taxiways that was swept in sub-basins 1, 3, and 5 combined in FY 2016 was approximately 364 acres, resulting in an average of 7 acres of runway and taxiway pavement swept weekly. The Airport Authority proposes to modify the FY 2018 interim performance goal for street sweeping to 21 acres/week of runway and taxiway pavement in sub-basins 1, 3, and 5 combined. The Airport Authority's FY 2018 current interim performance goal for street sweeping in this area, as listed in the WQIP, was a three-fold increase amount of area currently being swept. The modification also increases specificity in the performance goal and focuses street sweeping to the eastern portion of the runway and taxiways alone.

Further details and progress towards goals are provided in Section 5.

9.3 Otay Hydromodification Exemption

A technical study, including hydrologic modeling and an erosion potential analysis supporting a proposed hydromodification management requirements exemption for a portion of the Otay River, was prepared and submitted to the RPs on behalf of developers. The specific portion of the Otay River that the study considered is between Lower Otay Lakes and I-805; the RPs with jurisdictional area that drains to this reach are Chula Vista, the City of San Diego, and the County of San Diego. Figure 9-1 shows the USEPA Storm Water Management Model (SWMM) study areas used in the erosion potential analysis study. These three agencies commissioned a third-party review of the submitted study, which indicated that the study appeared to meet the relevant Municipal Permit requirements for a hydromodification management exemption. The study prepared by developers and the third-party review of the study were provided to the Consultation Panel for review and comment. A public Consultation Panel meeting was also held on August 23, 2016, to discuss comments on the study. No comments objecting to the proposed exemption from hydromodification requirements were submitted by the Consultation Panel. Accordingly, the exemption has been incorporated into the WQIP by modifying the Watershed Management Area Analysis (WMAA), included at Attachment A of Appendix 5. The updated WMAA is considered acceptable for inclusion into the WQIP ninety days after submission, unless the RPs are otherwise notified by the Regional Board.

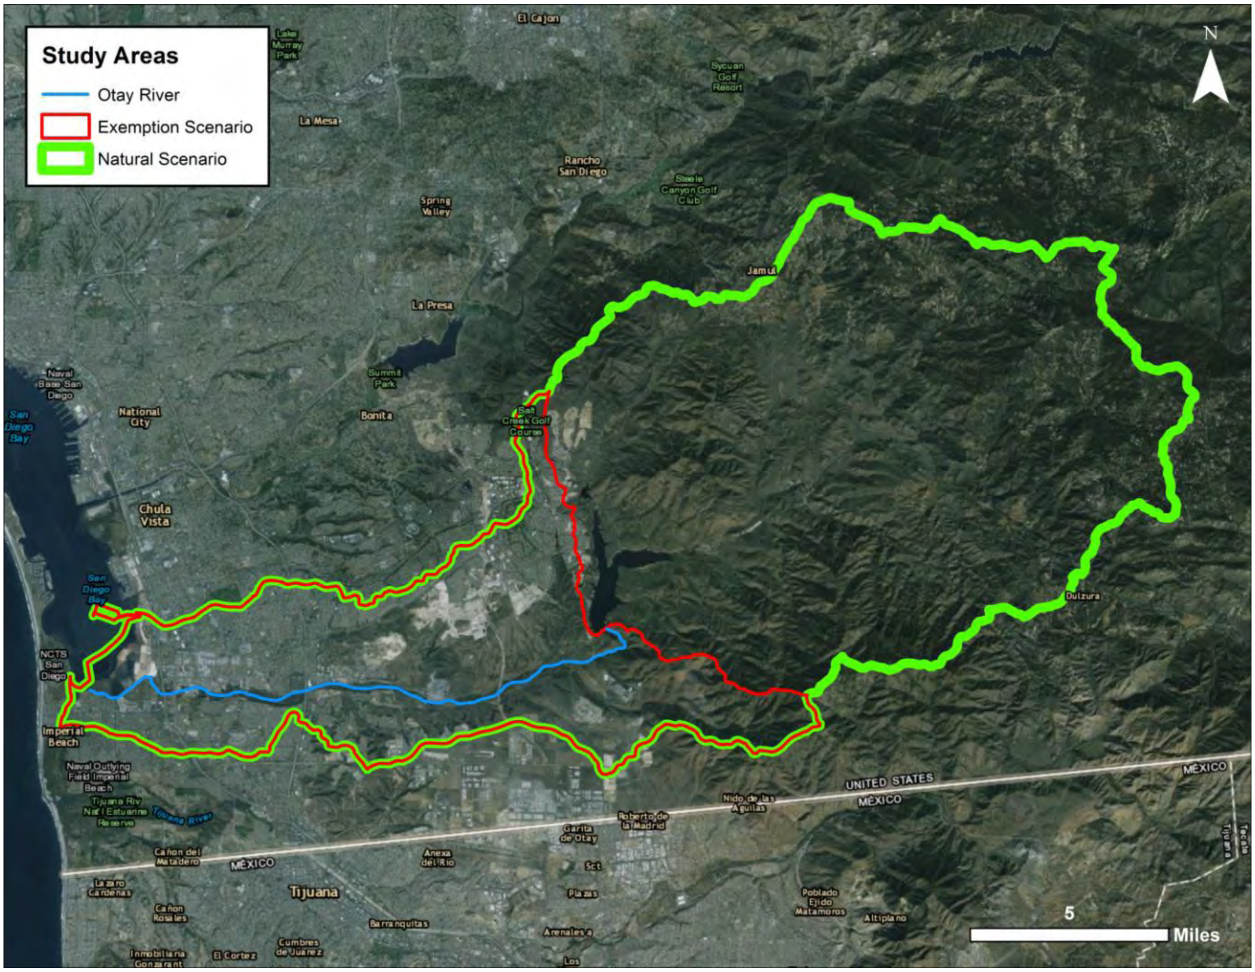

Figure 9-1
Storm Water Management Model Study Areas

9.4 Summary of Previous Adaptation and Implementation

The 2015–2016 San Diego Bay WMA WQIP Annual Report is the first Annual Report submitted by the RPs under the 2013 Municipal Permit. However, in 2016, RPs updated their 2007 permit-based JRMPs, and modified their programs to comply with the 2013 Municipal Permit's WQIP and JRMP requirements. The updated JRMPs are available on each RP's website.

Intentionally Left Blank

10 Conclusions

The RPs successfully implemented the FY 2016 program set forth in the WQIP. Although the WQIP has only just begun to be implemented—implementation began after Regional Board acceptance in February 2016—results for FY 2016 indicate significant progress toward achieving numeric goals. Highlights of strategies implemented during FY 2016 and progress toward numeric goals are provided below.

Strategy Implementation

RPs' programs and strategies target the applicable Highest or Focused Priority Conditions but also often provide additional water quality benefits, as described in Sections 4 through Section 8. For example, installing green streets or green infrastructure reduces a wide range of pollutants. Highlights of the RPs' strategy implementation to improve water quality during the reporting year include the following:

- Green Streets: University Avenue Median Water Quality Improvement Project (La Mesa). This project will remove and replace impervious medians with pervious bioretention areas that are designed to reduce pollutant discharges to receiving waters. The project is currently under construction, with an anticipated completion date of May 2017.
- Runoff Redirection (Lemon Grove). Lemon Grove performed initial site research to identify feasible locations for curb cuts to divert runoff from paved areas to landscaping at municipal facilities. A curb cut to direct runoff from the parking lot at City Hall to landscaping was completed in early FY 2017. Feasibility of directing downspout runoff to landscaping was also completed at municipal facilities in FY 2016.
- Storm Water BMPs (City of San Diego [City])
    - In FY 2016, more than 25 acres of drainage area were treated by green infrastructure features within the San Diego Bay WMA, and approximately 63 additional acres are expected to be treated by FY 2018.
    - To increase removal of metals and sediment, the City has started to enhance street sweeping operations in accordance with strategy CSD-JRMP-34 by sweeping a route in the Chollas Creek subwatershed with a regenerative air sweeper. The City also began sweeping routes with different sweeping technologies to determine the most effective sweeping practices for individual routes.
    - In accordance with the enhanced catch basin cleaning program identified in strategy CSD-JRMP-24, the City completed additional inspections, and cleanings where necessary, based on inspection results, at 2,500 catch basins in the Chollas Creek HSA.
    - The City completed the first phase of a drainage master plan for the Chollas Creek HSA. The drainage master plan uses precise light imaging, detection

and ranging (LIDAR) data to identify a vast range of potential structural BMPs and locations. Locations are identified to maximize the efficiency of the BMP by locating the facility in an area that will treat larger and/or multiple drainage areas. This planning will maximize pollutant removal from green infrastructure and reduce the number of green infrastructure projects (and associated costs) that will be needed to meet TMDL requirements.

- Dry Weather Flow Reduction and Water Conservation (County of San Diego [County]). As a regional leader in water conservation, the County implements several programs and strategies, both independently and in partnership with other agencies to help conserve local water supplies. In response to drought conditions in the region, the County developed a Drought Response Action Plan to reduce water use at its facilities, which has resulted in savings of 60 million gallons of water in County parks during FY 2015–2016. Since 2009, the installation of high-efficiency irrigation heads in 20 parks county-wide, many of which are located in the San Diego Bay area, have contributed significantly to these water savings. During the fiscal year, additional efforts included two rain barrel distribution events that were facilitated by the County in partnership with other agencies. Under its WaterSmart Campaign, the County has also collaborated with the San Diego County Water Authority to help distribute water conservation educational materials. This effort has included promotion of available water conservation rebates and incentives such as water efficiency audits and other tools to help save water.

- Sweeping Airside Corridors (Airport Authority). Aircraft and vehicle tire and brake wear are sources of copper and zinc from these locations. Under the WQIP, sweeping on the eastern end of the airfield (in particular, the runway and taxiways) will be modified and enhanced to increase the effectiveness of sweeping in FY 2017. The Airport Authority has obtained a Regen-Air vacuum sweeper, which has been shown to perform better than mechanical broom sweepers in removing fine sediments.

- Restoration of Paradise Creek (National City). National City's approach is to implement improvements directly in Paradise Creek and in areas tributary to the creek. During FY 2016 the City began a project to restore the approximately 1,000-linear-foot reach of Paradise Creek that runs through Kimball Park by replacing the existing concrete-bottom channel with a natural-bottom channel and replacing turf grass and invasive plant species with native plants along the banks.

- Homeless Outreach Program (Chula Vista). Chula Vista formed a Homeless Outreach Team during the reporting period to provide a holistic approach to addressing homelessness issues. The program targets a number of city parks, facilities, and problem areas. Staff visit these areas once per week and have been able to remove over 1,000 pounds of trash per week from the encampments.

- Municipal Solid Waste Receptacle Assessment (Port of San Diego). The Port of San Diego conducted a jurisdiction-wide evaluation of the municipal solid waste receptacles currently in use in the Port of San Diego's parks. The purpose of the assessment was to develop the information necessary to support management decisions related to (1) waste and recycling receptacle type and placement, (2) the adequacy of receptacles to prevent municipal solid waste from entering the MS4 and reduce pollution associated with municipal solid waste (i.e., lids, overhead cover, signage, etc.), and (3) recommended modifications (e.g., either by retrofitting current receptacles, replacing receptacles with more effective models, or adding receptacles/bins where needed). This assessment is scheduled to be completed in FY 2017.

- <u>Improvement of Dirt Alleys</u> (Imperial Beach). During this reporting period, Imperial Beach completed the design and construction of the first phase of alley improvements for 14 alley segments (over 1 mile of dirt alleys) in the community. The primary water quality benefit for this project is to address the pollutants for trash, sediment, and bacteria. This project provides a total annual storm water capture volume of 33,000 cubic feet and an annual sediment load reduction of approximately 160 pounds.
- <u>Elimination of Groundwater Intrusion</u> (Coronado). During the reporting period, Coronado initiated an MS4 capital improvement project to eliminate groundwater infiltration to the MS4. Project planning and design were completed to install a liner in the existing storm drain and perform other repairs. The project is scheduled to start construction in early 2017. Upon completion, this project will have multiple environmental benefits, including reducing potential bacteria regrowth in the MS4 from standing groundwater in the pipeline, eliminating groundwater diversion to the sanitary sewer, reducing the potential for bacteria to enter the receiving waters, and reducing greenhouse gases from pump operations to dewater the MS4.
- <u>San Diego Bay WMA Strategies (All Responsible Parties)</u>: The RPs have begun to implement wetland restoration, habitat restoration, and public access improvements to support multiple benefits in the San Diego Bay WMA through current public-private partnerships and partnerships with other state, federal, and local agencies.

Progress Toward Goals

The RPs have demonstrated achievement of the performance measures planned for 2015–2016, and have either met, surpassed, or demonstrated progress toward achieving the interim numeric goals set for the term of the current Municipal Permit. Goals and examples of performance measures achieved include:

- Chollas Creek Metals, Diazinon, and Bacteria:
  - La Mesa – The University Avenue Median Water Quality Improvement project, which is converting University Avenue to a green street by installing biofiltration BMPs, is on schedule to be completed in 2017.

- Lemon Grove – Lemon Grove performed initial site research to identify feasible locations for curb cuts to divert runoff from paved areas to landscaping at municipal facilities. A curb cut to direct runoff from the parking lot at City Hall to landscaping was completed in early FY 2017.
- City of San Diego – The City implemented green infrastructure projects that treat 25.14 acres of drainage area and is expected to achieve the 44.6-acre performance measure requirement by implementing additional projects that will treat a total of 88.24 acres by FY 2018.
- County of San Diego – Ongoing maintenance was performed at two facilities where LID BMPs were previously constructed: (1) Southeast Family Resource Center, and (2) Central Regional Public Health Center. These efforts have effectively reduced flows during storm events and reduced concentrations of key contaminants.

- Water Quality Due to Copper and Zinc (Airport Authority) – Zinc concentrations measured in MS4 discharges were lower than the FY 2021 goal.
- Riparian Area (National City)
    - The current Municipal Permit term goals of collecting and analyzing 48 samples for selenium were achieved, with zero exceedances of the WQO.
    - Creek restoration work for Paradise Creek is underway and is on track to be completed in 2017.
- Physical Aesthetics (Chula Vista, Imperial Beach, and Port of San Diego) – An optimal rating was recorded for 73% of MS4 outfall trash assessments, which exceeds the 2018 interim goal of 65%.
- Swimmable Waters (Coronado and Port of San Diego) – Tidelands Park was given an A grade for the summer dry season in the 2015–2016 Heal the Bay report (http://brc.healthebay.org/).

Crosswalk of Municipal Permit Requirements and Annual Report References

Municipal Permit Provisions	Permit Language	WQIP Annual Report Sections	WQIP Appendices: Appendix 2: WQIP Numeric Goals	Appendix 3: Jurisdictional Information	Appendix 4: Monitoring & Assessments	Appendix 5: Adaptive Management	Appendix 6: GIS Shapefiles
Provision A							
A.4.a.(2)	If ***exceedance(s) of water quality standards persist in receiving waters*** notwithstanding implementation of this Order, the Copermittees must comply with the following procedures: (2) Upon a **determination** by either the Copermittees or the San Diego Water Board that discharges from the MS4 are **causing or contributing to a new exceedance** of an applicable water quality standard **not addressed** by the Water Quality Improvement Plan, the Copermittees must submit the following updates to the Water Quality Improvement Plan pursuant to Provision F.2.c ***or as part of the Water Quality Improvement Plan Annual Report*** required under Provision F.3.b, unless the San Diego Water Board directs an earlier submittal:	Section 9		X	X	X	X
	(a) The water quality improvement ***strategies being implemented that are effective and will continue to be implemented***,	Section 9		X			
	(b) ***Water quality improvement strategies (i.e. BMPs, retrofitting projects, stream and/or habitat rehabilitation projects, adjustments to jurisdictional runoff management programs, etc.) that will be implemented*** to reduce or eliminate any pollutants or conditions that are causing or contributing to the exceedance of water quality standards,	Section 9		X		X	
	(c) ***Updates to the schedule for implementation*** of the existing and additional water quality improvement strategies, and	Section 9		X		X	
	(d) ***Updates to the monitoring and assessment program*** to track progress toward achieving compliance with Provisions A.1.a, A.1.c and A.2.a of this Order;	Section 9		X		X	X
Provision B							
B.5.a.	a. The **priority water quality conditions** and potential **water quality improvement strategie**s included in the Water Quality Improvement Plan pursuant to Provisions B.2.c and B.2.e ***may be re-evaluated by the Copermittees as needed during the term of this Order as part of the Water Quality Improvement Plan Annual Report***. Re-evaluation and recommendations for modifications to the priority water quality conditions and potential water quality improvement strategies **must be provided in the Report of Waste Discharge**, and must consider the following: (1) Achieving the outcome of improved water quality in MS4 discharges and receiving waters through implementation of the water quality improvement strategies identified in the Water Quality Improvement Plan; (2) New information developed when the requirements of Provisions B.2.a-c have been re-evaluated; (3) Spatial and temporal accuracy of monitoring data collected to inform prioritization of water quality conditions and implementation strategies to address the highest priority water quality conditions; (4) Availability of new information and data from sources other than the jurisdictional runoff management programs within the Watershed Management Area that informs the effectiveness of the actions implemented by the Copermittees; (5) San Diego Water Board recommendations; and (6) Recommendations for modifications solicited through a public participation process.	Section 9			X	X

B.5.b.	b. The water quality improvement goals, strategies and schedules, included in the Water Quality Improvement Plan pursuant to Provisions B.3, ***must be reevaluated and adapted as new information becomes available*** to result in more effective and efficient measures to address the highest priority water quality conditions identified pursuant to Provision B.2.c. ***Re-evaluation of and modifications to the water quality improvement goals, strategies and schedules must be provided in the Water Quality Improvement Plan Annual Report***, and must consider the following:	Section 9	X			X	
	(1) Modifications to the **priority water quality conditions** based on Provision B.5.a;	Section 9				X	X
	(2) Progress toward **achieving interim and final numeric goals** in receiving waters and MS4 discharges for the highest priority water quality conditions in the Watershed Management Area,	Sections 4-8	X				
	(3) Progress toward achieving outcomes according to established schedules;	Sections 4-8		X			
	(4) New policies or regulations that may affect identified numeric goals;	Section 9				X	
	(5) Measurable or demonstrable reductions of non-storm water discharges to and from each Copermittee's MS4;	Section 3			X		
	(6) Measurable or demonstrable reductions of pollutants in storm water discharges from each Copermittee's MS4 to the MEP;	Sections 4-8			X		
	(7) New information developed when the requirements of Provisions B.2.b and B.2.d have been re-evaluated;	Section 9			X	X	X
	(8) Efficiency in implementing the Water Quality Improvement Plan;	Section 9		X		X	
	(9) San Diego Water Board recommendations; and	Section 9				X	
	(10) Recommendations for modifications solicited through a public participation process.	Section 9				X	
B.5.c.	c. The water quality improvement monitoring and assessment program, included in the Water Quality Improvement Plan pursuant to Provision B.4, ***must be reevaluated and adapted when new information becomes available***. Re-evaluation and recommendations for modifications to the monitoring and assessment program, pursuant to the requirements of Provision D, ***may be provided in the Water Quality Improvement Plan Annual Report***, but must be provided in the Report of Waste Discharge.	Section 9			X	X	X

Provision D							
D.1.e.(2)(c)	**Sediment Quality Monitoring** (c) The Copermittees must incorporate a ***Sediment Monitoring Report as part of the Water Quality Improvement Plan Annual Report*** in accordance with the schedule contained in the Sediment Monitoring Plan, unless otherwise directed in writing by the San Diego Water Board Executive Officer. The Sediment Monitoring Report must contain the following information: (i) Analysis: An evaluation, interpretation and tabulation of the water and sediment monitoring data, including interpretations and conclusions as to whether applicable Receiving Water Limitations in this Order have been attained at each sample station; (ii) Sample Location Map: The locations, type, and number of samples must be identified and shown on a site map; and (iii) California Environmental Data Exchange Network: A statement certifying that the monitoring data and results have been uploaded into the California Environmental Data Exchange Network (CEDEN).	Section 3			X		
D.2.b.(iv)	**Dry Weather MS4 Outfall Discharge Monitoring** (iv) Each Copermittee must document ***removal or re-prioritization of the highest priority persistent flow MS4 outfall monitoring stations identified under Provision D.2.b.(2)(a) in the Water Quality Improvement Plan Annual Report***. Persistent flow MS4 outfall monitoring stations that have been removed must be replaced with the next highest prioritized major MS4 outfall in the Watershed Management Area within its jurisdiction, unless there are no remaining qualifying major MS4 outfalls within the Copermittee's jurisdiction in the Watershed Management Area.	Section 3			X		
D.4.b.(1)(a)(ii)	**Non-Storm Water Dischargers Reduction Assessments** (a) Each Copermittee must assess and report the ***progress of its illicit discharge detection and elimination program***, required to be implemented pursuant to Provision E.2, toward effectively prohibiting non-storm water and illicit discharges into the MS4 within its jurisdiction as follows: (ii) Based on the data collected pursuant to Provisions D.2.b, the ***assessments required under <u>Provision D.4.b.(1)(c)</u> must be included in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3).***	Section 3			X		
D.4.b.(1)(b)	(b) Based on the transitional dry weather MS4 outfall discharge field screening monitoring required pursuant to Provision D.2.a.(2), each Copermittee must assess and report the following: (i) Identify the known and suspected controllable sources (e.g. facilities, areas, land uses, pollutant generating activities) of transient and persistent flows within the Copermittee's jurisdiction in the Watershed Management Area; (ii) Identify sources of transient and persistent flows within the Copermittee's jurisdiction in the Watershed Management Area that have been reduced or eliminated; and (iii) Identify modifications to the field screening monitoring locations and frequencies for the MS4 outfalls in its inventory necessary to identify and eliminate sources of persistent flow non-storm water discharges pursuant to Provision D.2.b.	Section 3			X	X	

Table 1-1 (continued)
Crosswalk of Municipal Permit Requirements and Annual Report References

Municipal Permit Provisions	Permit Language	WQIP Annual Report Sections	WQIP Appendices: Appendix 2: WQIP Numeric Goals	WQIP Appendices: Appendix 3: Jurisdictional Information	WQIP Appendices: Appendix 4: Monitoring & Assessments	WQIP Appendices: Appendix 5: Adaptive Management	WQIP Appendices: Appendix 6: GIS Shapefiles
D.4.b.(1)(c)	(c) Based on the ***dry weather MS4 outfall discharge field screening monitoring*** required pursuant to Provision D.2.b.(1), each Copermittee must assess and report the following: (i) The assessments required pursuant to Provision D.4.b.(1)(b); (ii) Based on the data collected and applicable NALs in the Water Quality Improvement Plan, rank the MS4 outfalls in the Copermittee's jurisdiction according to potential threat to receiving water quality, and produce a prioritized list of major MS4 outfalls for follow-up action to update the Water Quality Improvement Plan, with the goal of eliminating persistent flow non-storm water discharges and/or pollutant loads in order of the ranked priority list through targeted programmatic actions and source investigations; (iii) For the highest priority major MS4 outfalls with persistent flows that are in exceedance of NALs, identify the known and suspected sources within the Copermittee's jurisdiction in the Watershed Management Area that may cause or contribute to the NAL exceedances; (iv) Each Copermittee must analyze the data collected pursuant to Provision D.2.b, and utilize a model or other method, to calculate or estimate the non-storm water volumes and pollutant loads collectively discharged from all the major MS4s outfalls in its jurisdiction identified as having persistent dry weather flows during the monitoring year. These calculations or estimates must be updated annually. [a] Each Copermittee must calculate or estimate the annual non-storm water volumes and pollutant loads collectively discharged from the Copermittee's major MS4 outfalls to receiving waters within the Copermittee's jurisdiction, with an estimate of the percent contribution from each known source for each MS4 outfall; [b] Each Copermittee must annually identify and quantify (i.e. volume and pollutant loads) sources of non-storm water not subject to the Copermittee's legal authority that are discharged from the Copermittee's major MS4 outfalls to downstream receiving waters.	Section 3			X		
	(v) Each Copermittee must review the data collected pursuant to Provision D.2.b and findings from the assessments required pursuant to Provision D.4.b.(1)(c)(i)-(iv) at least once during the term of this Order to: [a] Identify reductions and progress in achieving reductions in non-storm water and illicit discharges to the Copermittee's MS4 in the Watershed Management Area; [b] Assess the effectiveness of water quality improvement strategies being implemented by the Copermittees within the Watershed Management Area toward reducing or eliminating non-storm water and pollutant loads discharging from the MS4 to receiving waters within its jurisdiction, with an estimate, if possible, of the non-storm water volume and/or pollutant load reductions attributable to specific water quality strategies implemented by the Copermittee; and [c] Identify modifications necessary to increase the effectiveness of the water quality improvement strategies implemented by the Copermittee in the Watershed Management Area toward reducing or eliminating non-storm water and pollutant loads discharging from the MS4 to receiving waters within its jurisdiction. (vi) Identify data gaps in the monitoring data necessary to assess Provisions D.4.b.(1)(c)(i)-(v).	Section 3			X		X

Table 1-1 (continued)

			Appendix 2: WQIP Numeric Goals	Appendix 3: Jurisdictional Information	Appendix 4: Monitoring & Assessments	Appendix 5: Adaptive Management	Appendix 6: GIS Shapefiles
D.4.b.(2)(a)	**Storm Water Pollutant Discharge Reduction Assessments** (a) The Copermittees must assess and report the ***progress of the water quality improvement strategies, required to be implemented pursuant to Provisions B and E, toward reducing pollutants in storm water discharges*** from the MS4s within the Watershed Management Area as follows: (ii) Based on the data collected pursuant to Provisions D.2.c, the ***assessments required under Provision D.4.b.(2)(c) must be included in the Water Quality Improvement Plan Annual Reports*** required pursuant to Provision F.3.b.(3).	Section 3			X		
D.4.b.(2)(b)	(b) Based on the transitional wet weather MS4 outfall discharge monitoring required pursuant to Provision D.2.a.(3) the Copermittees must assess and report the following: (i) The Copermittees must analyze the monitoring data collected pursuant to Provision D.2.a.(3), and utilize a watershed model or other method, to calculate or estimate the following for each monitoring year: [a] The average storm water runoff coefficient for each land use type within the Watershed Management Area; [b] The volume of storm water and pollutant loads discharged from each of the Copermittee's monitored MS4 outfalls in its jurisdiction to receiving waters within the Watershed Management Area for each storm event with measurable rainfall greater than 0.1 inch; [c] The total flow volume and pollutant loadings discharged from the Copermittee's jurisdiction within the Watershed Management Area over the course of the wet season, extrapolated from the data produced from the monitored MS4 outfalls; and [d] The percent contribution of storm water volumes and pollutant loads discharged from each land use type within each hydrologic subarea with a major MS4 outfall to receiving waters or within each major MS4 outfall to receiving waters in the Copermittee's jurisdiction within the Watershed Management Area for each storm event with measurable rainfall greater than 0.1 inch.(ii) Identify modifications to the wet weather MS4 outfall discharge monitoring locations and frequencies necessary to identify pollutants in storm water discharges from the MS4s in the Watershed Management Area pursuant to Provision D.2.c.(1).	Section 3			X		
D.4.b.(2)(c)	(c) Based on the wet weather MS4 outfall discharge monitoring required pursuant to Provision D.2.c the Copermittees must assess and report the following: (i) The assessments required pursuant to Provision D.4.b.(2)(b); (ii) Based on the data collected and applicable SALs in the Water Quality Improvement Plan, analyze and compare the monitoring data to the analyses and assumptions used to develop the Water Quality Improvement Plans, including strategies developed pursuant to Provision B.3, and evaluate whether those analyses and assumptions should be updated as a component of the adaptive management efforts pursuant to Provision B.5 for follow-up action to update the Water Quality Improvement Plan; (iii) The Copermittees must review the data collected pursuant to Provision D.2.c and findings from the assessments required pursuant to Provisions D.4.b.(2)(c)(i)-(ii) at least once during the term of this Order to: [a] Identify reductions or progress in achieving reductions in pollutant concentrations and/or pollutant loads from different land uses and/or drainage areas discharging from the Copermittees' MS4s in the Watershed Management Area; [b] Assess the effectiveness of water quality improvement strategies being implemented by the Copermittees within the Watershed Management Area toward reducing pollutants in storm water discharges from the MS4s to receiving waters within the Watershed Management Area to the MEP, with an estimate, if possible, of the pollutant load reductions attributable to specific water quality strategies implemented by the Copermittees; and [c] Identify modifications necessary to increase the effectiveness of the water quality improvement strategies implemented by the Copermittees in the Watershed Management Area toward reducing pollutants in storm water discharges from the MS4s to receiving waters in the Watershed Management Area to the MEP. (iv) Identify data gaps in the monitoring data necessary to assess Provisions D.4.b.(2)(c)(i)-(iii).	Section 3			X		
D.4.b.(2)(d)	(d) The Copermittees must evaluate all the data collected pursuant to Provision D.2.c, and incorporate new outfall monitoring data into time series plots for each long-term monitoring constituent for the Watershed Management Area, and perform statistical trends analysis on the cumulative long-term wet weather MS4 outfall discharge water quality data set.	Section 4			X		

Table 1-1 (continued)

			Appendix 2: WQIP Numeric Goals	Appendix 3: Jurisdictional Information	Appendix 4: Monitoring & Assessments	Appendix 5: Adaptive Management	Appendix 6: GIS Shapefiles
D.4.c.	**Special Studies Assessments** c. The Copermittees must ***annually evaluate the results and findings from the special studies developed and implemented pursuant to Provision D.3***, and assess their relevance to the Copermittees' efforts to characterize receiving water conditions, understand sources of pollutants and/or stressors, and control and reduce the discharges of pollutants from the MS4 outfalls to receiving waters in the Watershed Management Area. The Copermittees must ***report the results of the special studies assessments applicable to the Watershed Management Area, and identify any necessary modifications or updates to the Water Quality Improvement Plan based on the results in the Water Quality Improvement Plan Annual Reports*** required pursuant to Provision F.3.b.(3).	Section 2, Section 7, Section 9			X	X	X
D.4.d.	Integrated Assessment of Water Quality Improvement Plan d. As part of the ***iterative approach and adaptive management process*** required for the Water Quality Improvement Plan pursuant to Provision B.5, the Copermittees in each Watershed Management Area must integrate the data collected pursuant to Provisions D.1-D.3, the findings from the assessments required pursuant to Provisions D.4.a-c, and information collected during the implementation of the jurisdictional runoff management programs required pursuant to Provision E to assess the effectiveness of, and identify necessary modifications to, the Water Quality Improvement Plan as follows:	Section 9			X	X	
D.4.d.(1)	(1) The Copermittees ***must re-evaluate the priority water quality conditions and numeric goals for the Watershed Management Area, as needed, during the term of this Order pursuant to Provision B.5.a.*** The re-evaluation and recommendations for modifications to the priority water quality conditions, and/or numeric goals and corresponding schedules ***may be provided in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3)***, but must at least be provided in the Report of Waste Discharge pursuant to Provision F.5.b. The priority water quality conditions and numeric goals for the Watershed Management Area must be reevaluated as follows: (a) Re-evaluate the receiving water conditions in the Watershed Management Area in accordance with Provision B.2.a; (b) Re-evaluate the impacts on receiving waters in the Watershed Management Area from MS4 discharges in accordance with Provision B.2.b; (c) Re-evaluate the identification of MS4 sources of pollutants and/or stressors in accordance with Provision B.2.d; (d) Identify beneficial uses of the receiving waters that are protected in accordance with Provision D.4.a; (e) Evaluate the progress toward achieving the interim and final numeric goals for protecting impacted beneficial uses in the receiving waters.	Section 9			X	X	X

Table 1-1 (continued)

Municipal Permit Provisions	Permit Language	WQIP Annual Report Sections	WQIP Appendices				
			Appendix 2: WQIP Numeric Goals	Appendix 3: Jurisdictional Information	Appendix 4: Monitoring & Assessments	Appendix 5: Adaptive Management	Appendix 6: GIS Shapefiles
D.4.d.(2)	(2) The Copermittees ***must re-evaluate the water quality improvement strategies for the Watershed Management Area during the term of this Order pursuant to Provision B.5.b.*** The re-evaluation and recommendations for modifications to the water quality improvement strategies and schedules ***may be provided in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3)***, but must at least be provided in the Report of Waste Discharge pursuant to Provision F.5.b. The water quality improvement strategies for the Watershed Management Area must be re-evaluated as follows: (a) Identify the non-storm water and storm water pollutant loads from the Copermittees' MS4 outfalls in the Watershed Management Area, calculated or estimated pursuant to Provisions D.4.b; (b) Identify the non-storm water and storm water pollutant load reductions, or other improvements to receiving water or water quality conditions, that are necessary to attain the interim and final numeric goals identified in the Water Quality Improvement Plan for protecting beneficial uses in the receiving waters; (c) Identify the non-storm water and storm water pollutant load reductions, or other improvements to the quality of MS4 discharges, that are necessary for the Copermittees to demonstrate that non-storm water and storm water discharges from their MS4s are not causing or contributing to exceedances of receiving water limitations; (d) Evaluate the progress of the water quality improvement strategies toward achieving the interim and final numeric goals identified in the Water Quality Improvement Plan for protecting beneficial uses in the receiving waters.	Section 9		X		X	
D.4.d.(3)	(3) The Copermittees ***must re-evaluate and adapt the water quality monitoring and assessment program for the Watershed Management Area when new information becomes available to improve the monitoring and assessment program pursuant to Provision B.5.c.*** The re-evaluation and recommendations for modifications to the monitoring and assessment program ***may be provided in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3)***, but must at least be provided in the Report of Waste Discharge pursuant to Provision F.5.b. Modifications to the water quality monitoring and assessment program must be consistent with the requirements of Provision D.1-D.3. The re-evaluation of the water quality monitoring and assessment program for the Watershed Management Area must consider the data gaps identified by the assessments required pursuant to Provisions D.4.a-b, and results of the special studies implemented pursuant to Provision D.4.c	Section 9			X	X	X
Provision E							
E.1.b.	b. With the first ***Water Quality Improvement Plan Annual Report*** *required pursuant to Provision F.3.b.(3),* ***each Copermittee must submit a statement certified by its Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative that the Copermittee has taken the necessary steps to obtain and maintain full legal authority*** within its jurisdiction to implement and enforce each of the requirements contained in this Order.	Certification Statement		X

F.3.b.(3)(a-f)	(3) Water Quality Improvement Plan Annual Reports - The Copermittees for each Watershed Management Area must ***submit a Water Quality Improvement Plan Annual Report for each reporting period no later than January 31*** of the following year. The annual reporting period consists of two different periods: 1) July 1 to June 30 of the following year for the jurisdictional runoff management programs, 2) October 1 to September 30 of the following year for the monitoring and assessment programs. The Water Quality Improvement Plan Annual Reports must be made available on the Regional Clearinghouse required pursuant to Provision F.4. Each ***Annual Report must include the following***:	-					
	(a) The receiving water and MS4 outfall discharge monitoring data collected pursuant to Provisions D.1 and D.2, summarized and presented in tabular and graphical form;	Section 3			X		
	(b) The progress of the special studies required pursuant to Provision D.3, and the findings, interpretations and conclusions of a special study, or each phase of a special study, upon its completion;	Section 3			X		
	(c) The findings, interpretations and conclusions from the assessments required pursuant to Provision D.4;	Section 3			X		
	(d) The progress of implementing the Water Quality Improvement Plan, including, but not limited to, the following: (i) The ***progress toward achieving the interim and final numeric goals*** for the highest water quality priorities for the Watershed Management Area;	Sections 4-8					
	(ii) The water quality improvement ***strategies that were implemented and/or no longer implemented by each of the Copermittees during the reporting period and previous reporting periods***;	Sections 4-8		X		X	
	(iii) The water quality improvement strategies planned for implementation during the next reporting period;	Sections 4-8		X		X	
	(iv) Proposed modifications to the water quality improvement strategies, the public comments received and the supporting rationale for the proposed modifications;	Section 9		X		X	X
	(v) Previous modifications or updates incorporated into the Water Quality Improvement Plan and/or each Copermittee's jurisdictional runoff management program document and implemented by the Copermittees in the Watershed Management Area; and	Section 9		X		X	
	(vi) Proposed modifications or updates to the Water Quality Improvement Plan and/or each Copermittee's jurisdictional runoff management program document;	Section 9		X		X	X
	(e) A completed Jurisdictional Runoff Management Program Annual Report Form (contained in Attachment D to this Order or a revised form accepted by the San Diego Water Board) for each Copermittee in the Watershed Management Area, certified by a Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative; and	JRMP Forms		X			
	(f) Each Copermittee must provide any data or documentation utilized in developing the Water Quality Improvement Plan Annual Report upon request by the San Diego Water Board. Any Copermittee monitoring data utilized in developing the Water Quality Improvement Plan Annual Report must be uploaded to the California Environmental Data Exchange Network (CEDEN). Any Copermittee monitoring and assessment data utilized in developing the Water Quality Improvement Plan Annual Report must be available for access on the Regional Clearinghouse required pursuant to Provision F.4.	CEDEN Upload Certifications			X		X
F.6	Each Copermittee must comply with all the reporting and recordkeeping provisions of the Standard Permit Provisions and General Provisions contained in Attachment B to this Order.	Section 9		X			X
Attachment E							
Attachment E	Specific Monitoring and Assessment Requirements for each TMDL.TMDL monitoring and assessment results must be submitted as part of Water Quality Improvement Plan Annual Reports required under Provision F.3.b	Section 3			X

Provision A						
A.4.a.(2)	If *exceedance(s) of water quality standards persist in receiving waters* notwithstanding implementation of this Order, the Copermittees must comply with the following procedures: (2) Upon a determination by either the Copermittees or the San Diego Water Board that discharges from the MS4 are causing or contributing to a new exceedance of an applicable water quality standard not addressed by the Water Quality Improvement Plan, the Copermittees must submit the following updates to the Water Quality Improvement Plan pursuant to Provision F.2.c *or as part of the Water Quality Improvement Plan Annual Report* required under Provision F.3.b, unless the San Diego Water Board directs an earlier submittal:	Section 9	X		X	X
	(a) The water quality improvement *strategies being implemented that are effective and will continue to be implemented*,	Section 9.2	X			
	(b) *Water quality improvement strategies (i.e. BMPs, retrofitting projects, stream and/or habitat rehabilitation projects, adjustments to jurisdictional runoff management programs, etc.) that will be implemented* to reduce or eliminate any pollutants or conditions that are causing or contributing to the exceedance of water quality standards,	Section 9.2	X			X
	(c) *Updates to the schedule for implementation* of the existing and additional water quality improvement strategies, and	Section 9.2	X			X
	(d) *Updates to the monitoring and assessment program* to track progress toward achieving compliance with Provisions A.1.a, A.1.c and A.2.a of this Order;	Section 9	X			X
Provision B						
B.5.a.	a. The priority water quality conditions and potential water quality improvement strategies included in the Water Quality Improvement Plan pursuant to Provisions B.2.c and B.2.e *may be re-evaluated by the Copermittees as needed during the term of this Order as part of the Water Quality Improvement Plan Annual Report*. Re-evaluation and recommendations for modifications to the priority water quality conditions and potential water quality improvement strategies must be provided in the Report of Waste Discharge, and must consider the following: (1) Achieving the outcome of improved water quality in MS4 discharges and receiving waters through implementation of the water quality improvement strategies identified in the Water Quality Improvement Plan; (2) New information developed when the requirements of Provisions B.2.a-c have been re-evaluated; (3) Spatial and temporal accuracy of monitoring data collected to inform prioritization of water quality conditions and implementation strategies to address the highest priority water quality conditions; (4) Availability of new information and data from sources other than the jurisdictional runoff management programs within the Watershed Management Area that informs the effectiveness of the actions implemented by the Copermittees; (5) San Diego Water Board recommendations; and (6) Recommendations for modifications solicited through a public participation process.	Section 9			X	X

B.5.b.	b. The water quality improvement goals, strategies and schedules, included in the Water Quality Improvement Plan pursuant to Provisions B.3, *must be reevaluated and adapted as new information becomes available* to result in more effective and efficient measures to address the highest priority water quality conditions identified pursuant to Provision B.2.c. *Re-evaluation of and modifications to the water quality improvement goals, strategies and schedules must be provided in the Water Quality Improvement Plan Annual Report*, and must consider the following:	Section 9		X		X
	(1) Modifications to the priority water quality conditions based on Provision B.5.a;	Section 9				X
	(2) Progress toward achieving interim and final numeric goals in receiving waters and MS4 discharges for the highest priority water quality conditions in the Watershed Management Area,	Sections 4-8		X		
	(3) Progress toward achieving outcomes according to established schedules;	Sections 4-8	X			X
	(4) New policies or regulations that may affect identified numeric goals;	Section 9				X
	(5) Measurable or demonstrable reductions of non-storm water discharges to and from each Copermittee's MS4;	Section 3			X	
	(6) Measurable or demonstrable reductions of pollutants in storm water discharges from each Copermittee's MS4 to the MEP;	Sections 4-8			X	
	(7) New information developed when the requirements of Provisions B.2.b and B.2.d have been re-evaluated;	Section 9			X	X
	(8) Efficiency in implementing the Water Quality Improvement Plan;	Section 9	X			X
	(9) San Diego Water Board recommendations; and	Section 9				X
	(10) Recommendations for modifications solicited through a public participation process.	Section 9				X
B.5.c.	c. The water quality improvement monitoring and assessment program, included in the Water Quality Improvement Plan pursuant to Provision B.4, *must be reevaluated and adapted when new information becomes available*. Re-evaluation and recommendations for modifications to the monitoring and assessment program, pursuant to the requirements of Provision D, *may be provided in the Water Quality Improvement Plan Annual Report*, but must be provided in the Report of Waste Discharge.	Section 9			X	X

			Appendix 2: Jurisdictional Information	Appendix 3: Numeric Goals	Appendix 4: Monitoring & Assessments	Appendix 5: Adaptive Management
Provision D						
D.1.e.(2)(c)	Sediment Quality Monitoring (c) The Copermittees must incorporate a *Sediment Monitoring Report as part of the Water Quality Improvement Plan Annual Report* in accordance with the schedule contained in the Sediment Monitoring Plan, unless otherwise directed in writing by the San Diego Water Board Executive Officer. The Sediment Monitoring Report must contain the following information: (i) Analysis: An evaluation, interpretation and tabulation of the water and sediment monitoring data, including interpretations and conclusions as to whether applicable Receiving Water Limitations in this Order have been attained at each sample station; (ii) Sample Location Map: The locations, type, and number of samples must be identified and shown on a site map; and (iii) California Environmental Data Exchange Network: A statement certifying that the monitoring data and results have been uploaded into the California Environmental Data Exchange Network (CEDEN).	Section 3			X	
D.2.b.(iv)	Dry Weather MS4 Outfall Discharge Monitoring (iv) Each Copermittee must document *removal or re-prioritization of the highest priority persistent flow MS4 outfall monitoring stations identified under Provision D.2.b.(2)(a) in the Water Quality Improvement Plan Annual Report*. Persistent flow MS4 outfall monitoring stations that have been removed must be replaced with the next highest prioritized major MS4 outfall in the Watershed Management Area within its jurisdiction, unless there are no remaining qualifying major MS4 outfalls within the Copermittee's jurisdiction in the Watershed Management Area.	Section 3			X	
D.4.b.(1)(a)(ii)	Non-Storm Water Dischargers Reduction Assessments (a) Each Copermittee must assess and report the *progress of its illicit discharge detection and elimination program*, required to be implemented pursuant to Provision E.2, toward effectively prohibiting non-storm water and illicit discharges into the MS4 within its jurisdiction as follows: (ii) Based on the data collected pursuant to Provisions D.2.b, the *assessments required under* <u>*Provision D.4.b.(1)(c)*</u> *must be included in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3).*	Section 3			X	
D.4.b.(1)(b)	(b) Based on the transitional dry weather MS4 outfall discharge field screening monitoring required pursuant to Provision D.2.a.(2), each Copermittee must assess and report the following: (i) Identify the known and suspected controllable sources (e.g. facilities, areas, land uses, pollutant generating activities) of transient and persistent flows within the Copermittee's jurisdiction in the Watershed Management Area; (ii) Identify sources of transient and persistent flows within the Copermittee's jurisdiction in the Watershed Management Area that have been reduced or eliminated; and (iii) Identify modifications to the field screening monitoring locations and frequencies for the MS4 outfalls in its inventory necessary to identify and eliminate sources of persistent flow non-storm water discharges pursuant to Provision D.2.b.	Section 3			X	X

Table 1-1 (continued)

Municipal Permit Provisions	Permit Language	WQIP Annual Report Sections	WQIP Appendices: Appendix 2: Jurisdictional Information	WQIP Appendices: Appendix 3: Numeric Goals	WQIP Appendices: Appendix 4: Monitoring & Assessments	WQIP Appendices: Appendix 5: Adaptive Management
D.4.b.(1)(c)	(c) Based on the dry weather MS4 outfall discharge field screening monitoring required pursuant to Provision D.2.b.(1), each Copermittee must assess and report the following: (i) The assessments required pursuant to Provision D.4.b.(1)(b); (ii) Based on the data collected and applicable NALs in the Water Quality Improvement Plan, rank the MS4 outfalls in the Copermittee's jurisdiction according to potential threat to receiving water quality, and produce a prioritized list of major MS4 outfalls for follow-up action to update the Water Quality Improvement Plan, with the goal of eliminating persistent flow non-storm water discharges and/or pollutant loads in order of the ranked priority list through targeted programmatic actions and source investigations; (iii) For the highest priority major MS4 outfalls with persistent flows that are in exceedance of NALs, identify the known and suspected sources within the Copermittee's jurisdiction in the Watershed Management Area that may cause or contribute to the NAL exceedances; (iv) Each Copermittee must analyze the data collected pursuant to Provision D.2.b, and utilize a model or other method, to calculate or estimate the non-storm water volumes and pollutant loads collectively discharged from all the major MS4s outfalls in its jurisdiction identified as having persistent dry weather flows during the monitoring year. These calculations or estimates must be updated annually. [a] Each Copermittee must calculate or estimate the annual non-storm water volumes and pollutant loads collectively discharged from the Copermittee's major MS4 outfalls to receiving waters within the Copermittee's jurisdiction, with an estimate of the percent contribution from each known source for each MS4 outfall; [b] Each Copermittee must annually identify and quantify (i.e. volume and pollutant loads) sources of non-storm water not subject to the Copermittee's legal authority that are discharged from the Copermittee's major MS4 outfalls to downstream receiving waters.	Section 3			X	
	(v) Each Copermittee must review the data collected pursuant to Provision D.2.b and findings from the assessments required pursuant to Provision D.4.b.(1)(c)(i)-(iv) at least once during the term of this Order to: [a] Identify reductions and progress in achieving reductions in non-storm water and illicit discharges to the Copermittee's MS4 in the Watershed Management Area; [b] Assess the effectiveness of water quality improvement strategies being implemented by the Copermittees within the Watershed Management Area toward reducing or eliminating non-storm water and pollutant loads discharging from the MS4 to receiving waters within its jurisdiction, with an estimate, if possible, of the non-storm water volume and/or pollutant load reductions attributable to specific water quality strategies implemented by the Copermittee; and [c] Identify modifications necessary to increase the effectiveness of the water quality improvement strategies implemented by the Copermittee in the Watershed Management Area toward reducing or eliminating non-storm water and pollutant loads discharging from the MS4 to receiving waters within its jurisdiction. (vi) Identify data gaps in the monitoring data necessary to assess Provisions D.4.b.(1)(c)(i)-(v).	Section 3			X

			Appendix 2: Jurisdictional Information	Appendix 3: Numeric Goals	Appendix 4: Monitoring & Assessments	Appendix 5: Adaptive Management
D.4.b.(2)(a)	Storm Water Pollutant Discharge Reduction Assessments (a) The Copermittees must assess and report the *progress of the water quality improvement strategies, required to be implemented pursuant to Provisions B and E, toward reducing pollutants in storm water discharges* from the MS4s within the Watershed Management Area as follows: (ii) Based on the data collected pursuant to Provisions D.2.c, the *assessments required under <u>Provision D.4.b.(2)(c)</u> must be included in the Water Quality Improvement Plan Annual Reports* required pursuant to Provision F.3.b.(3).	Section 3			X	
D.4.b.(2)(b)	(b) Based on the transitional wet weather MS4 outfall discharge monitoring required pursuant to Provision D.2.a.(3) the Copermittees must assess and report the following: (i) The Copermittees must analyze the monitoring data collected pursuant to Provision D.2.a.(3), and utilize a watershed model or other method, to calculate or estimate the following for each monitoring year: [a] The average storm water runoff coefficient for each land use type within the Watershed Management Area; [b] The volume of storm water and pollutant loads discharged from each of the Copermittee's monitored MS4 outfalls in its jurisdiction to receiving waters within the Watershed Management Area for each storm event with measurable rainfall greater than 0.1 inch; [c] The total flow volume and pollutant loadings discharged from the Copermittee's jurisdiction within the Watershed Management Area over the course of the wet season, extrapolated from the data produced from the monitored MS4 outfalls; and [d] The percent contribution of storm water volumes and pollutant loads discharged from each land use type within each hydrologic subarea with a major MS4 outfall to receiving waters or within each major MS4 outfall to receiving waters in the Copermittee's jurisdiction within the Watershed Management Area for each storm event with measurable rainfall greater than 0.1 inch.(ii) Identify modifications to the wet weather MS4 outfall discharge monitoring locations and frequencies necessary to identify pollutants in storm water discharges from the MS4s in the Watershed Management Area pursuant to Provision D.2.c.(1).	Section 3			X	
D.4.b.(2)(c)	(c) Based on the wet weather MS4 outfall discharge monitoring required pursuant to Provision D.2.c the Copermittees must assess and report the following: (i) The assessments required pursuant to Provision D.4.b.(2)(b); (ii) Based on the data collected and applicable SALs in the Water Quality Improvement Plan, analyze and compare the monitoring data to the analyses and assumptions used to develop the Water Quality Improvement Plans, including strategies developed pursuant to Provision B.3, and evaluate whether those analyses and assumptions should be updated as a component of the adaptive management efforts pursuant to Provision B.5 for follow-up action to update the Water Quality Improvement Plan; (iii) The Copermittees must review the data collected pursuant to Provision D.2.c and findings from the assessments required pursuant to Provisions D.4.b.(2)(c)(i)-(ii) at least once during the term of this Order to: [a] Identify reductions or progress in achieving reductions in pollutant concentrations and/or pollutant loads from different land uses and/or drainage areas discharging from the Copermittees' MS4s in the Watershed Management Area; [b] Assess the effectiveness of water quality improvement strategies being implemented by the Copermittees within the Watershed Management Area toward reducing pollutants in storm water discharges from the MS4s to receiving waters within the Watershed Management Area to the MEP, with an estimate, if possible, of the pollutant load reductions attributable to specific water quality strategies implemented by the Copermittees; and [c] Identify modifications necessary to increase the effectiveness of the water quality improvement strategies implemented by the Copermittees in the Watershed Management Area toward reducing pollutants in storm water discharges from the MS4s to receiving waters in the Watershed Management Area to the MEP. (iv) Identify data gaps in the monitoring data necessary to assess Provisions D.4.b.(2)(c)(i)-(iii).	Section 3			X

			Appendix 2: Jurisdictional Information	Appendix 3: Numeric Goals	Appendix 4: Monitoring & Assessments	Appendix 5: Adaptive Management
D.4.b.(2)(d)*	(d) The Copermittees must evaluate all the data collected pursuant to Provision D.2.c, and incorporate new outfall monitoring data into time series plots for each long-term monitoring constituent for the Watershed Management Area, and perform statistical trends analysis on the cumulative long-term wet weather MS4 outfall discharge water quality data set.	--	--	--	--	--
D.4.c.	Special Studies Assessments c. The Copermittees must *annually evaluate the results and findings from the special studies developed and implemented pursuant to Provision D.3*, and assess their relevance to the Copermittees' efforts to characterize receiving water conditions, understand sources of pollutants and/or stressors, and control and reduce the discharges of pollutants from the MS4 outfalls to receiving waters in the Watershed Management Area. The Copermittees must *report the results of the special studies assessments applicable to the Watershed Management Area, and identify any necessary modifications or updates to the Water Quality Improvement Plan based on the results in the Water Quality Improvement Plan Annual Reports* required pursuant to Provision F.3.b.(3).	Section 2			X	X
D.4.d.	Integrated Assessment of Water Quality Improvement Plan d. As part of the *iterative approach and adaptive management process* required for the Water Quality Improvement Plan pursuant to Provision B.5, the Copermittees in each Watershed Management Area must integrate the data collected pursuant to Provisions D.1-D.3, the findings from the assessments required pursuant to Provisions D.4.a-c, and information collected during the implementation of the jurisdictional runoff management programs required pursuant to Provision E to assess the effectiveness of, and identify necessary modifications to, the Water Quality Improvement Plan as follows:	Section 9			X	X
D.4.d.(1)	(1) The Copermittees *must re-evaluate the priority water quality conditions and numeric goals for the Watershed Management Area, as needed, during the term of this Order pursuant to Provision B.5.a.* The re-evaluation and recommendations for modifications to the priority water quality conditions, and/or numeric goals and corresponding schedules *may be provided in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3)*, but must at least be provided in the Report of Waste Discharge pursuant to Provision F.5.b. The priority water quality conditions and numeric goals for the Watershed Management Area must be reevaluated as follows: (a) Re-evaluate the receiving water conditions in the Watershed Management Area in accordance with Provision B.2.a; (b) Re-evaluate the impacts on receiving waters in the Watershed Management Area from MS4 discharges in accordance with Provision B.2.b; (c) Re-evaluate the identification of MS4 sources of pollutants and/or stressors in accordance with Provision B.2.d; (d) Identify beneficial uses of the receiving waters that are protected in accordance with Provision D.4.a; (e) Evaluate the progress toward achieving the interim and final numeric goals for protecting impacted beneficial uses in the receiving waters.	Section 9			X	X

D.4.d.(2)	(2) The Copermittees *must re-evaluate the water quality improvement strategies for the Watershed Management Area during the term of this Order pursuant to Provision B.5.b.* The re-evaluation and recommendations for modifications to the water quality improvement strategies and schedules *may be provided in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3)*, but must at least be provided in the Report of Waste Discharge pursuant to Provision F.5.b. The water quality improvement strategies for the Watershed Management Area must be re-evaluated as follows: (a) Identify the non-storm water and storm water pollutant loads from the Copermittees' MS4 outfalls in the Watershed Management Area, calculated or estimated pursuant to Provisions D.4.b; (b) Identify the non-storm water and storm water pollutant load reductions, or other improvements to receiving water or water quality conditions, that are necessary to attain the interim and final numeric goals identified in the Water Quality Improvement Plan for protecting beneficial uses in the receiving waters; (c) Identify the non-storm water and storm water pollutant load reductions, or other improvements to the quality of MS4 discharges, that are necessary for the Copermittees to demonstrate that non-storm water and storm water discharges from their MS4s are not causing or contributing to exceedances of receiving water limitations; (d) Evaluate the progress of the water quality improvement strategies toward achieving the interim and final numeric goals identified in the Water Quality Improvement Plan for protecting beneficial uses in the receiving waters.	Section 9	X			X
D.4.d.(3)	(3) The Copermittees *must re-evaluate and adapt the water quality monitoring and assessment program for the Watershed Management Area when new information becomes available to improve the monitoring and assessment program pursuant to Provision B.5.c.* The re-evaluation and recommendations for modifications to the monitoring and assessment program *may be provided in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3)*, but must at least be provided in the Report of Waste Discharge pursuant to Provision F.5.b. Modifications to the water quality monitoring and assessment program must be consistent with the requirements of Provision D.1-D.3. The re-evaluation of the water quality monitoring and assessment program for the Watershed Management Area must consider the data gaps identified by the assessments required pursuant to Provisions D.4.a-b, and results of the special studies implemented pursuant to Provision D.4.c	Section 9			X	X
Provision E						
E.1.b.	b. With the first *Water Quality Improvement Plan Annual Report required pursuant to Provision F.3.b.(3), each Copermittee must submit a statement certified by its Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative that the Copermittee has taken the necessary steps to obtain and maintain full legal authority* within its jurisdiction to implement and enforce each of the requirements contained in this Order.	Cert Statement	X

F.3.b.(3)(a-f)	(3) Water Quality Improvement Plan Annual Reports - The Copermittees for each Watershed Management Area must *submit a Water Quality Improvement Plan Annual Report for each reporting period no later than January 31* of the following year. The annual reporting period consists of two different periods: 1) July 1 to June 30 of the following year for the jurisdictional runoff management programs, 2) October 1 to September 30 of the following year for the monitoring and assessment programs. The Water Quality Improvement Plan Annual Reports must be made available on the Regional Clearinghouse required pursuant to Provision F.4. Each *Annual Report must include the following*:	-				
	(a) The receiving water and MS4 outfall discharge monitoring data collected pursuant to Provisions D.1 and D.2, summarized and presented in tabular and graphical form;	Section 3			X	
	(b) The progress of the special studies required pursuant to Provision D.3, and the findings, interpretations and conclusions of a special study, or each phase of a special study, upon its completion;	Section 3			X	
	(c) The findings, interpretations and conclusions from the assessments required pursuant to Provision D.4;	Section 3			X	
	(d) The progress of implementing the Water Quality Improvement Plan, including, but not limited to, the following: (i) The progress toward achieving the interim and final numeric goals for the highest water quality priorities for the Watershed Management Area;	Sections 4-8				
	(ii) The water quality improvement strategies that were implemented and/or no longer implemented by each of the Copermittees during the reporting period and previous reporting periods;	Sections 4-8	X			X
	(iii) The water quality improvement strategies planned for implementation during the next reporting period;	Sections 4-8	X			X
	(iv) Proposed modifications to the water quality improvement strategies, the public comments received and the supporting rationale for the proposed modifications;	Section 9	X			X
	(v) Previous modifications or updates incorporated into the Water Quality Improvement Plan and/or each Copermittee's jurisdictional runoff management program document and implemented by the Copermittees in the Watershed Management Area; and	Section 9	X			X
	(vi) Proposed modifications or updates to the Water Quality Improvement Plan and/or each Copermittee's jurisdictional runoff management program document;	Section 9	X			X
	(e) A completed Jurisdictional Runoff Management Program Annual Report Form (contained in Attachment D to this Order or a revised form accepted by the San Diego Water Board) for each Copermittee in the Watershed Management Area, certified by a Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative; and	JRMP Forms	X			
	(f) Each Copermittee must provide any data or documentation utilized in developing the Water Quality Improvement Plan Annual Report upon request by the San Diego Water Board. Any Copermittee monitoring data utilized in developing the Water Quality Improvement Plan Annual Report must be uploaded to the California Environmental Data Exchange Network (CEDEN). Any Copermittee monitoring and assessment data utilized in developing the Water Quality Improvement Plan Annual Report must be available for access on the Regional Clearinghouse required pursuant to Provision F.4.	CEDEN Upload Certifications			X	
F.6	Each Copermittee must comply with all the reporting and recordkeeping provisions of the Standard Permit Provisions and General Provisions contained in Attachment B to this Order.	Section 9	X			X
Attachment E

1 JURISDICTIONAL ANNUAL REPORTS AND STRATEGIES

1.1 JURISDICTIONAL ANNUAL REPORTS

This WQIP annual report includes each of the Copermittee's Jurisdictional Runoff Management Plan (JRMP) annual report for fiscal year (FY) 16. The FY 16 JRMP annual reports include the legal authority certification, annual report certification page, the JRMP annual report form; annual report form supplemental information, as applicable; and the fiscal analysis review summary. As required by the Municipal Permit, each Copermittee has included information on any modifications to their BMP Design Manual and JRMP document as part of the annual report.

1.2 JURISDICTIONAL STRATEGIES

Jurisdictional strategies are required as part of the Water Quality Improvement Plan (WQIP), under Provision B of the San Diego Regional Water Quality Control Board (Regional Board) National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer System (MS4) Draining the Watersheds Within the San Diego Region, Order Number R9-2013-0001(Municipal Permit). The Responsible Parties (RPs) identified water quality improvement strategies outlined in the WQIP and implemented those strategies in FY 2016, the first year of WQIP implementation, to address the Highest Priority Conditions or Focused Priority Conditions. Nonstructural and structural strategies selected by each RP to address Priority Conditions are presented in this document. RP-specific tables for implementation of the selected strategies that outline the method, cost, and additional stakeholder participation are presented in the sections below. The strategies were selected on the basis of their ability to effectively and efficiently eliminate non-storm water discharges to the MS4, reduce pollutants in storm water discharges from the MS4 to the maximum extent practicable (MEP), and achieve the interim and final numeric goals identified in the San Diego Bay Watershed Management Area (WMA) WQIP.

In addition to the strategies and schedules presented in this Appendix, the jurisdictions implemented baseline jurisdictional programs as summarized in the jurisdictional annual reports.

2 SAN DIEGO COUNTY REGIONAL AIRPORT AUTHORITY

2.1 ANNUAL REPORT CERTIFICATION

The San Diego Airport Authority's signed Statement of Certification for the San Diego Bay WMA Water Quality Improvement Plan 2015-2016 Annual Report is included on the following page.

SAN DIEGO
INTERNATIONAL AIRPORT
LET'S GO.

STATEMENT OF CERTIFICATION

San Diego Bay Watershed Management Area, Water Quality Improvement Plan Fiscal Year 2015-2016 Annual Report

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted.

Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations [40 CFR 122.22(d)].

I also certify that the San Diego County Regional Airport Authority has taken the necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements within Order No. R9-2013-001 as amended by Orders R9-2015-0001 and R9-2015-0100.

2.2 ANNUAL REPORT FORM

The Airport Authority's completed JRMP Annual Report form for FY16 is included on the following pages.

Intentionally Left Blank

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM ANNUAL REPORT FORM

FY 2015-2016

I. COPERMITTEE INFORMATION

Copermittee Name: San Diego County Regional Airport Authority

Copermittee Primary Contact Name: Richard Gilb

Copermittee Primary Contact Information:
Address: PO Box 82776
City: San Diego County: San Diego State: CA Zip: 92138
Telephone: (619) 400-2790 Fax: (619)-400-2784 Email: rgilb@san.org

II. LEGAL AUTHORITY

Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	YES	☒
	NO	☐
A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	YES	☒
	NO	☐

III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE

Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	YES	☒
	NO	☐
If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	YES	☒
	NO	☐

IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	YES	☒
	NO	☐

Number of non-storm water discharges reported by the public	0
Number of non-storm water discharges detected by Copermittee staff or contractors	4
Number of non-storm water discharges investigated by the Copermittee	4
Number of sources of non-storm water discharges identified	4
Number of non-storm water discharges eliminated	4
Number of sources of illicit discharges or connections identified	1
Number of illicit discharges or connections eliminated	1
Number of enforcement actions issued	1
Number of escalated enforcement actions issued	0

V. DEVELOPMENT PLANNING PROGRAM

Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	YES	☒
	NO	☐
Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	YES	☒
	NO	☐
If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	YES	☒
	NO	☐

Number of proposed development projects in review	7
Number of Priority Development Projects in review	4
Number of Priority Development Projects approved	3
Number of approved Priority Development Projects exempt from any BMP requirements	0
Number of approved Priority Development Projects allowed alternative compliance	0
Number of Priority Development Projects granted occupancy	2

Number of completed Priority Development Projects in inventory	19
Number of high priority Priority Development Project structural BMP inspections	19
Number of Priority Development Project structural BMP violations	0
Number of enforcement actions issued	0
Number of escalated enforcement actions issued	0

FY 2015-2016

VI. CONSTRUCTION MANAGEMENT PROGRAM	
Has the Copermittee implemented a construction management program that complies with Order No. R9-2013-0001?	YES ☒ NO ☐
Number of construction sites in inventory	12
Number of active construction sites in inventory	4
Number of inactive construction sites in inventory	0
Number of construction sites closed/completed during reporting period	8
Number of construction site inspections	198
Number of construction site violations	2
Number of enforcement actions issued	2
Number of escalated enforcement actions issued	0

VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM

Has the Copermittee implemented an existing development management program that complies with Order No. R9-2013-0001? YES ☒ NO ☐

	Municipal	Commercial	Industrial	Residential
Number of facilities or areas in inventory	44	6	33	0
Number of existing development inspections	44	6	30	0
Number of follow-up inspections	0	0	0	0
Number of violations	25	14	60	0
Number of enforcement actions issued	25	14	60	0
Number of escalated enforcement actions issued	0	0	0	0

VIII. PUBLIC EDUCATION AND PARTICIPATION

Has the Copermittee implemented a public education program component that complies with Order No. R9-2013-0001? YES ☒ NO ☐

Has the Copermittee implemented a public participation program component that complies with Order No. R9-2013-0001? YES ☒ NO ☐

IX. FISCAL ANALYSIS

Has the Copermittee attached to this form a summary of its fiscal analysis that complies with Order No. R9-2013-0001? YES ☒ NO ☐

X. CERTIFICATION

I ☐ Principal Executive Officer ☐ Ranking Elected Official ☒ Duly Authorized Representative certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

2.3 SAN DIEGO REGIONAL AIRPORT AUTHORITY STRATEGIES

The San Diego County Regional Airport Authority (Airport Authority) has selected strategies to meet the water quality goals for copper and zinc in wet weather discharges to best suit the unique characteristics of the Airport Authority's jurisdiction, namely, the San Diego International Airport (SDIA). For example, the airport is almost entirely paved, and the space required for many traditional structural BMPs is severely limited. The Airport Authority has continued to implement its core Jurisdictional Runoff Management Plan (JRMP) in FY16, which includes many strategies that have positive impacts on the water quality of MS4 discharges. To make progress toward its identified goals, the Airport Authority enhanced some existing JRMP strategies and also implemented new strategies that concentrate on the Focused Priority Conditions.

In 2013, the Airport Authority completed a major expansion of the airport facilities at a cost of nearly $1B. The new terminal portion of the project was awarded Leadership in Energy and Environmental Design (LEED) Platinum certification from the U.S. Green Building Council. The project included BMPs such as permeable pavement, bioretention swales, and modular wetland treatment units. During FY16, other development projects were completed or initiated, incorporating various structural BMPs, as outlined in Table 2-1. Future projects will continue to consider storm water and water quality improvements during design and implementation, where feasible.

The Airport Authority's FY16 implementation of its jurisdictional strategies to meet WQIP goals is presented in Table 2-1. Any modifications to strategies and implementation schedules have been incorporated based on information gathered on the level of effort and further detail gained during the FY16 WQIP implementation. The adaptive management process provides the framework to evaluate progress toward meeting the goals and allowed for these modifications of original strategies. As strategies are modified, the WQIP will be updated. The implementation of each strategy was contingent upon annual budget approvals and funding availability.

Intentionally Left Blank

Table 2-1
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
JRMP (E.2 – E.7) Strategies (E.3.b.(1)(a))									
E.3 Development Planning									
All Development Projects									
AA-1	For all development projects, administer a program to ensure implementation of source control BMPs to minimize pollutant generation at each project and implement Low Impact Development (LID) BMPs to maintain or restore hydrology of the area, where applicable and feasible.	Refer to SWMP/JRMP Sections 4, 6 & 7 and Appendix B, Sustainability Policy, and LEED. All development projects, once complete, will be inspected monthly. Annual inspections include examination of all structural BMPs at a project to verify that each structural BMP is working, being maintained properly, and is in compliance with all applicable Authority codes, plans and permits. Funding mechanisms for project construction and long-term maintenance include the rolling five year capital improvement program and tenant leases.	Fiscal Year (FY)16	Yes	Yes	Treatment Control (TC) BMP Inventory updated and all TCBMPs/LID BMPs inspected and maintenance requirements identified.	Clarified funding mechanisms to include tenant leases.	Clarification	Yes
Priority Development Projects (PDPs)									
AA-2	For PDPs, administer a program requiring implementation of structural BMPs to control pollutants. Includes confirmation of design, construction, and maintenance of PDP structural BMPs.	Refer to SWMP/JRMP Sections 4, 6 & 7 and Appendix B, Sustainability Policy, and LEED. Annual inspections include examination of all structural BMPs at a project to verify that each structural BMP is working, being maintained properly, and is in compliance with all applicable Authority codes, plans and permits. Funding mechanisms for project construction and long-term maintenance include the rolling five year capital improvement program and tenant leases.	FY16	Yes	Yes	SWMP was updated with BMP Design Manual to replace SUSMP in February 2016. Four (4) PDPs submitted either an Urban Storm Water Mitigation Plan (USMP) to comply with SUSMP or a Storm Water Quality Management Plan (SWQMP) to comply with BMP Design Manual	Clarified funding mechanisms to include tenant leases.	Clarification	Yes

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
E.4 Construction Management									
AA-3	Administer a program to oversee implementation of BMPs during the construction phase of land development. Includes inspections at an appropriate frequency and enforcement of requirements.	Refer to SWMP/JRMP Section 5. Inspections performed by the Authority provide verification that each site is in conformance with the SWMP/JRMP. All inspections are performed weekly. Please see Table I.1.2 in the WQIP for details on updated minimum BMPs that will be implemented to address sources causing or contributing to the FPWQC. Funding is from the EAD budget.	Prior to FY16	Yes	Yes	198 construction inspections were conducted in FY 16	Clarified source of budget.	Clarification	Yes
E.5 Existing Development									
Commercial, Industrial, and Municipal Facilities and Areas									
AA-4	Administer and enforce a program to require implementation of minimum BMPs for existing development (commercial, industrial, and municipal) that are specific to the facility, pollutant-generating activities (PGAs), and areas, as appropriate. Includes inspection of existing development at appropriate frequencies and using appropriate methods.	Refer to SWMP/JRMP Sections 6 and 7. All industrial, municipal, and commercial areas are inspected monthly. Please see Table I.1.2 of the WQIP for details on updated minimum BMPs that will be implemented to address sources causing or contributing to the FPWQC. Funding is from the EAD budget.	FY16	Yes	Yes	408 inspections were conducted in FY 16			Yes
AA-4	1. Update minimum BMPs for existing commercial and industrial development.	Refer to SWMP/JRMP Appendix B. Please see Table I.1.2 of the WQIP for details on updated minimum BMPs that will be implemented to address sources causing or contributing to the FPWQC. Funding is from the EAD budget.	FY16	Yes	Yes	Added the following BMPs during the SWMP update: SC02C – Electric Vehicle Maintenance SC20 – Erodible Areas SC21 – Construction and Remodeling/Repair			Yes
AA-4	2. Design, implement, and enforce pollutant-generating-area-based and PGA-based inspections.	Refer to SWMP/JRMP Sections 6 and 7. Please see Table I.1.2 of the WQIP for details on updated minimum BMPs that will be implemented to address sources causing or contributing to the FPWQC. Funding is from the EAD budget.	FY16	Yes	Yes	SWMP updated prior to start of FY16, which included updating the PGAs and pollutants generated, and implementation of updated SWMP began in FY16			Yes

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
AA-4 (cont)	3. Increased inspection frequency for highest potential pollutant generating areas and PGAs.	Funding will be from the EAD budget.	FY18	Not triggered during FY 16					
MS4 Infrastructure									
AA-5	Implement operation and maintenance activities (inspection and cleaning) for MS4 and related structures (catch basins, storm drain inlets, detention basins, etc.) for water quality improvement.	Refer to SWMP/JRMP Section 6. In order to limit inflow of pollutants and reduce pollutant loads, inspection and maintenance of the MS4 is conducted quarterly. Funding is from the EAD, Facilities Management Department (FMD), and FDD budgets.	FY16	Yes	Yes	Annual inspections of catch basins were conducted airport-wide in July 2015, and catch basin cleaning was conducted in July and October/November 2015 and April 2016, airport-wide. Drain inlet insert BMPs were inspected prior to storms, when ≥ 50% chance of rain, and, when needed, after storms. Maintenance was conducted on an as-needed basis. T2 Airside StormFilter unit was maintained (sediment removed).			Yes
	1. Determine and implement optimal catch basin cleaning locations and frequencies to maximize pollutant removal.		FY17	Not triggered during FY 16					

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Hardscapes (Runway, Taxiways, Ramps, Roads, Streets, and Parking Lots)									
AA-6	Implement operation and maintenance activities for runway, taxiways, ramp areas, roadways, and parking lots.	Refer to SWMP/JRMP Sections 6 and 7, and Appendix B. Please see Table I.1.2 for details on updated minimum BMPs that will be implemented to address sources causing or contributing to the FPWQC. Funding is from the FMD and EAD budgets.	FY16	Yes	Yes	Approximately 1,832 acres were swept during FY 16 on the airside of the Airport's property. This resulted in 35 acres of total airside pavement swept per week. Runway rubber removal is conducted every 6-8 weeks depending on the skidometer testing results. The following roads are swept 5 times per week (Monday through Friday) for three hours per day: Commuter Terminal and Terminal 1 Roadway System, Winship Lane, Stillwater Road, Airlane Road, Terminal 2 East and Terminal 2 West Roadway System, and Spruance Road. All of the parking lots, which include the Long Term Lot, Economy Lot, Lot 6, Cell Phone Lot, Taxi Hold Lot, NTC, and Terminal 1 & 2, are swept weekly.	Modification required. Airside sweeping performance goal for FY16 in sub-basins 1, 3, and 5 was not met. Information used to establish this goal was misinterpreted.	Improve sweeping data collection and analysis methods and correction to sweeping goals	Yes
	1. Determine and implement optimal street sweeping locations and frequencies on runway, taxiways, ramp areas, roads, and parking lots to maximize pollutant removal.	Refer to SWMP/JRMP Sections 6 and 7. The Authority will increase sweeping in sub-basins 1, 3, and 5, to address apparent sources of higher concentrations of copper and zinc (the FPWQC).	FY17	Not triggered during FY 16					

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Pesticides, Herbicides, and Fertilizer BMP Program									
AA-7	Require implementation of BMPs in an integrated pest management (IPM) program to address application, storage, and disposal of pesticides, herbicides, and fertilizers in commercial, industrial, and municipal areas. Includes education, permits, and certifications.	Refer to SWMP/JRMP Sections 6, 7 and 9, and Appendix B. All storage and disposal areas are inspected monthly. Funding is from the FMD and EAD budgets.	FY16	Yes	Yes	• FMD is in charge of the herbicides, fertilizer and landscaping • EAD is in charge of the pesticides • 133 gallons and 494.15 grams of pesticides were used in FY 16 • IPM program transferred from FMD to EAD's control. • Areas are inspected at a minimum of twice per month. • SAN was nominated for an IPM Achievement Award from the California Department of Pesticide Regulation. The recipient of the award has not been selected as of 8/29/2016.			Yes

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Retrofit and Rehabilitation in Areas of Existing Development									
AA-8	Identify candidate areas of existing development appropriate for retrofitting projects and facilitate the implementation of such projects.	Refer to SWMP/JRMP Sections 4 and 6 and Appendix C. The Authority will identify those areas of existing development that are candidates for retrofitting where feasible, to reduce pollutants and/or stressors that contribute to the FPWQC. If retrofitting projects are deemed infeasible, the Authority will collaborate and cooperate with other Responsible Parties in the WMA to identify, develop, and implement regional retrofitting projects adjacent to and/or downstream from the Authority's areas of existing development. Funding mechanisms for project construction and long-term maintenance include the rolling five year capital improvement program and tenant leases.	FY16	Yes	Yes	Areas including the 90 Day Facility and FedEx Overhead Canopy were retrofitted. Both projects are located on the North Ramp of the Airport. The 90 Day Facility is the designated storage for hazardous materials before they are taken off site for proper disposal. The FedEx Overhead Canopy extends over a 700 ft^2 area and was installed to protect the FedEx cargo work area.	Clarified funding mechanisms to include tenant leases.	Clarification	Yes

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
E.2 Illicit Discharge, Detection, and Elimination (IDDE) Program									
AA-9	Implement Illicit Discharge, Detection, and Elimination (IDDE) Program per the SWMP/JRMP. Requirements include: maintaining an MS4 map, using municipal personnel, tenants, contractors, and vendors to identify and report illicit discharges, maintaining a hotline for public reporting of illicit discharges, monitoring MS4 outfalls, and investigating and addressing any illicit discharges.	Refer to SWMP/JRMP Sections 3 and 7, and Appendix D. The Authority visually inspects 2 major MS4 outfalls and all sampling locations twice a year during dry weather conditions, as well as inspecting all drainage basins monthly for authorized and unauthorized non-storm water discharges. Please see Table I.1.2 for details on updated minimum BMPs that will be implemented to address sources causing or contributing to the FPWQC.	Prior to FY16	Yes	Yes	Thirty (30) Hotline entries are documented for fiscal year 2016. Only 4 spills/leaks (1 fuel, 3 water) reached the storm drain and were immediately cleaned or eliminated. Another fuel spill was captured in the oil water separator at the fuel loading islands, and again was cleaned. MS4 map was updated in March 2016. Airport's 2 major MS4 outfalls and industrial permit sampling locations throughout the airport were inspected in May and June of 2016 during the dry weather inspections, and all areas were inspected monthly for any authorized and unauthorized non-storm water discharges. The only unauthorized discharge observed was eliminated.			Yes

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
E.7 Public Education and Participation (B.3.b.(1)(a)(iii))									
AA-10	Implement a public education and participation program to promote and encourage development of programs, management practices, and behaviors that reduce the discharge of pollutants in storm water prioritized by high-risk behaviors, pollutants of concern, and target audiences.	Refer to WQIP Section 4.4.2 and SWMP/JRMP Section 9.	Prior to FY16	Yes	Yes	The 3 outreach events that the Airport has promoted include the 31st Annual California Coastal Cleanup Day, the 14th Annual Creek to Bay Cleanup, and the EarthFair in Balboa Park. Tours are available for students in grades 2 through 8 and are offered twice a month. Additional public participation opportunities include, Airport Authority Board Meetings, Lindbergh Airport Managers Committee Meetings, Tenant Safety Committee Meetings, the Authority Webpage, Project Clean Water Webpage, THINK BLUE Webpage, THINK BLUE Hotline, and the Authority 24-Hour Airport Hotline.			Yes
AA-11	Provide municipal staff and tenant training. Highlight goals and strategies of WQIP, in particular copper and zinc as FPWQC for the Authority, sources and BMPs.	Refer to SWMP/JRMP Section 9.	Prior to FY16	Yes	Yes	Authority and tenant employees training was conducted November-January. Over 140 individuals were trained. Storm Water BMP posters are being finalized and will be displayed in various airport and tenant employee areas in FY17			Yes

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
E.6 Enforcement Response Plan									
AA-12	Implement escalating enforcement responses to compel compliance with statutes, ordinances, permits, contracts, orders, and other requirements for illicit discharge detection and elimination (IDDE), development planning, construction management, and existing development in the Enforcement Response Plan.	Refer to SWMP/JRMP Sections 2, 3, 4, 5, 6, and 7. Escalated enforcement will include, when applicable, highlighting sources of any copper and zinc issues during inspections and during enforcement actions, as a reminder of the Authority's FPWQC, and the requirement, where appropriate, to undergo additional training on copper and zinc as water quality issues.	Prior to FY16	Yes	Yes	Two NOVs were issued by Environmental Affairs Dept. for construction projects during the fiscal year. Every BMP deficiency observed during industrial, municipal, commercial and construction site inspections was brought to the attention of the responsible party and resolved. Education and outreach with tenants and employees was performed throughout the fiscal year.			Yes
Non-JRMP Strategies (Optional Strategies, B.3.b.(1)(b))									
Nonstructural									
AA-13	Determine and implement optimal runway rubber removal locations and frequencies to maximize pollutant removal in Drainage Basins 1, 3 and 5.	This strategy may be implemented at any time at the Authority's discretion if the following triggers are met: 1) increased street sweeping in ramp/runway areas does not result in lower concentrations and loads of the FPWQC, 2) funding to address MS4 discharges is identified and secured, 3) staff resources are identified and secured, and 4) consensus and community support has been achieved. All budgets are contingent upon approval by the Authority Board.	FY17	Not triggered during FY 16				FY 18	No
AA-14	Determine and implement potential enhancements to runway rubber removal operations and equipment.	This strategy may be implemented at any time at the Authority's discretion if the following triggers are met: 1) increased street sweeping in ramp/runway areas does not result in lower concentrations and loads of the FPWQC, 2) funding to address MS4 discharges is identified and secured, 3) staff resources are identified and secured, and 4) consensus and community support has been achieved. All budgets are contingent upon approval by the Authority Board.	FY18	Not triggered during FY 16					

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
AA-15	Investigation and research of emerging BMP technology.	The Authority periodically conducts literature reviews, communication with other municipalities, researchers and vendors outside of the Authority, and pilot studies of new or emerging BMP technologies, with the goal of updating BMPs available and feasible for reducing pollutant loads from development and redevelopment sites. Funding and resources will be sought for FY2016. Funding for future fiscal years is contingent on annual budget approval by Authority Board.	Prior to FY16	Yes	Yes	Implemented pervious pavement, bioswales, and bioretention. Researched novel treatment control BMPs such as alternative filter media and filter media enhancements (e.g., biochar as filter media for tree boxes, latest developments in downspout filters, and inlet filter socks) to address zinc and copper.			Yes
AA-16	As opportunities arise and funding sources are identified, protect areas that are functioning naturally by avoiding impervious development and degradation on unpaved open space areas.	This strategy may be implemented at any time at the Authority's discretion if the following triggers are met: 1) proposed project includes naturally functioning area, 2) funding to address MS4 discharges is identified and secured, 3) staff resources are identified and secured, and 4) consensus and community support has been achieved. All budgets are contingent upon approval by the Authority Board.	FY17	Not triggered during FY16.				FY17	Yes
AA-17	Industrial BMP: Capture and Reuse of Air Conditioning Condensate	The existing Capture and Reuse of Air Conditioning Condensate program will continue for industrial facilities for water collection, conservation, and reuse using drums to collect the condensate, and final use of the water for power washing of sidewalks.	Prior to FY16	Yes	Yes	70,700 gallons of condensate water were collected and reused during FY16.			Yes

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
AA-18	Implement source reduction initiatives.	Reduce FPWQC concentrations and loads by requiring Authority departments and tenants to replace vehicle and aircraft brake pads with copper-free brake pads. This strategy may be implemented at any time at the Authority's discretion if the following triggers are met: 1) funding is identified and secured, 2) technology is available and cost-effective, 3) consensus and community support has been achieved, and 4) interim and/or final goals have not been met. All Authority budgets are contingent upon approval by the Authority Board.	FY18+	Not triggered during FY 16					
	1. Replace Authority-owned vehicle brake pads with copper-free brake pads as they become commercially available.		FY18+	Not triggered during FY 16					
	2. Require replacement of tenant-owned vehicle brake pads with copper-free brake pads as they become commercially available.		FY18+	Not triggered during FY 16					
	3. Require use of maintenance-free, leak-proof batteries for electric vehicles as available.		FY18+	Not triggered during FY 16					
Structural									
Green Infrastructure									
AA-19	Since 2013, approximately 6 acres of permeable surface have been installed at the airport.	Funding is from the rolling five-year capital improvement program, which is contingent on budget approval by Authority Board.	Prior to FY16	Yes	Yes	Permeable pavement installations have continued. Total acreage of permeable pavement currently installed at airport (by end of FY16) is approximately 8.9 acres.			Yes

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
AA-20	Implement runoff water capture and reuse projects and facilitate the implementation of such projects.	Refer to Sustainability Policy and Draft Master Drainage Plan/Water Reuse Plan. Currently, the Authority is conducting workshops to investigate water capture and reuse opportunities.	FY18	In planning phase	No - ongoing	Draft Master Drainage Plan/Water Reuse Plan is being developed			Yes
AA-21	Phase in advanced BMPs (as defined in Industrial General Permit (IGP) i.e., shelters/structures, LID BMPs, TCBMPs and other BMPs) in high priority areas (e.g., runway, taxiways, ramps: sub basins 1, 3, and 5).	Reduce FPWQC concentrations and loads by requiring Authority departments and tenants to phase in advanced BMPs. This strategy may be implemented at any time at the Authority's discretion if the following triggers are met: 1) funding is identified and secured, 2) technology is available and cost-effective, 3) consensus and community support has been achieved, and 4) interim and/or final goals have not been met. All Authority budgets are contingent upon approval by the Authority Board.	FY17 or Trigger	Yes	Yes	Advanced BMPs that were installed were the 90 Day Facility, 1 Overhead Canopy and 1 Clearwater inlet BMP at FedEx, 7 Clearwater inlet BMPs, 1 detention basin, and 2 modular wetland systems at RCC Bus Parking, 1 Clearwater inlet BMP, 1 infiltration trench and 1 permeable pavement area at Taxi Hold Lot, 7 Clearwater inlet BMPs and 1 BioClean inlet skimmer box at Terminal Link Rd, 1 Contech StormFilter and 0.5 acres of permeable pavement at FBO, 4 permeable pavement/stone reservoir beds in Parking Lot 6, and 6 bioretention swales at RCC.		FY 16	Yes

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Multiuse Treatment Area									
Infiltration and Detention Basins									
AA-22	Since 2013, approximately 2 acres of bioswales have been installed as part of the airport Terminal 2 Expansion Project and other improvement projects.	Future developments will consider bioswales and other LID BMPs per final adopted BMP Design Manual and Authority codes and rules/regulations. This strategy may be implemented at any time at the Authority's discretion if the following triggers are met: 1) funding is identified and secured, 2) consensus and community support has been achieved, and 3) interim and/or final goals have not been met. All Authority budgets are contingent upon approval by the Authority Board.	Prior to FY16			.			No
AA-23	Bioretention swales being constructed as part of the Rental Car Center.	Future developments will consider bioretention and LID BMPs per final adopted BMP Design Manual and Authority codes and rules/regulations. This strategy may be implemented at any time at the Authority's discretion if the following triggers are met: 1) funding is identified and secured, 2) consensus and community support has been achieved, and 3) interim and/or final goals have not been met. All Authority budgets are contingent upon approval by the Authority Board.	FY17	Yes	Yes	6 bioretention swales totaling 2.8 acres were installed at RCC.		FY 16	No

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Stream, Channel and Habitat Rehabilitation Projects (B.3.b.(1)(b)(iii))									
AA-24	Habitat rehabilitation projects, as necessary and appropriate, in the Navy Boat Channel, Convair Lagoon, or Laurel-Hawthorne Embayment portions of San Diego Bay	This strategy may be triggered as 1) Investigative Orders or other regulatory orders/permits are issued, 2) partners have been identified and collaborative agreements have been developed, 3) funding to address MS4 discharges is identified and secured, 4) habitat rehabilitation is required and projects have been identified and designed, 5) staff resources are identified and secured, and 6) permits required by regulatory agencies are secured. The following resources, funds, and steps are needed to implement this strategy if the above triggers are met or at the Authority's discretion: 1) Obtain Authority Board approval of Capital Improvement Projects budget 2) Assign budget 3) Initiate preliminary engineering to narrow project scope 4) Hire design consultant to develop detailed construction plans and construction cost estimates 5) Complete construction contractor bid and award process for construction phase 6) Construct project (project timing and construction costs are TBD and are based on size of the project). 7) Operation and maintenance will be in perpetuity. Funds and staff resources for this function will be approved by Authority Board.	Triggered	Yes	Yes	Public meeting for the Navy Boat Channel was held on March 3, 2016.			TBD

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Water Quality Improvement BMPs									
Proprietary BMPs									
AA-25	SANPark PacHwy paid public parking lot; North Side Interior Road; Terminal Link Road; Rental Car Center (RCC); RCC Bus Parking Facility; Employee Parking Lot 6 Expansion; Taxicab Hold Lot; Terminal 2 Parking Plaza.	Since 2013, the following proprietary TC BMPs have been installed at the airport: 12 modular wetland treatment units, 6 high-rate media filters, and 4 hydrodynamic separators. Proprietary TC BMPs are currently included in the construction plans for the facilities approved for construction in 2015 and 2016.	Prior to FY16	Yes	Yes	TCBMPs that have been installed in FY16 are 1 Clearwater inlet BMP at FedEx, 7 Clearwater inlet BMPs, 1 detention basin, and 2 modular wetland systems at RCC Bus Parking, 1 Clearwater inlet BMP, 1 infiltration trench and 1 permeable pavement area at Taxi Hold Lot, 7 Clearwater inlet BMPs and 1 BioClean inlet skimmer box at Terminal Link Rd, 1 Contech StormFilter at FBO, 4 permeable pavement/stone reservoir beds in Parking Lot 6, and 6 bioretention swales at RCC.		FY 17	Yes

Table 2-1 (continued)
Airport Authority Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
WMA Strategies (Optional Strategies, B.3.b.(2))									
AA-26	Offsite Alternative Compliance Option (WMAA)	The WMAA provides alternative compliance methods in lieu of meeting structural BMP design standards on the project site. The San Diego County Copermittees have collectively funded and provided guidance for development of a regional WMAA. Copermittees compiled a list of candidate projects that consider the numeric goals of the WMAs as well as projects previously identified in JRMPs and other regulatory documents. This strategy may be implemented at the Authority's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, 3) consensus and community support has been achieved, and 4) interim/final goals are not met. Funding for future fiscal years is contingent on budget approval by Authority Board.	Must be Triggered	Not triggered during FY 16					
AA-27	Participate in Reference Watershed Study	The San Diego Regional Reference Stream Study as currently being conducted by the Southern California Coastal Water Research Project. The study will develop numeric targets that account for “natural sources” to establish the concentrations or loads from streams in a minimally disturbed or “reference” condition.	Prior to FY16	Yes	Yes	The Airport helped fund the San Diego Regional Reference Stream Study as part of the Storm Water Copermittees’ FY16 Regional Shared Costs Budget		FY 17	Yes

Notes:
1. Metals, and in particular, copper and zinc, are the Airport Authority’s Focused Priority Water Quality Condition (FPWQC).

2.4 MODIFICATIONS TO THE BMP DESIGN MANUAL

The Airport Authority BMP Design Manual provides guidance for land development and public improvement projects to comply with relevant development planning requirements in the Municipal Permit. The Airport Authority updated its BMP Design Manual in accordance with Municipal Permit requirements during FY16; the BMP Design Manual replaced the Standard Urban Storm Water Mitigation Plan (SUSMP). No additional changes to the BMP Design Manual have been made since it went into effect. The Airport Authority BMP Design Manual can be accessed via the Project Clean Water website at: http://www.projectcleanwater.org/index.php?option=com_content&view=article&id=244&Itemid=212.

2.5 MODIFICATION PROGRAM

No modifications to the Airport Authority's JRMP have been made since the WQIP was approved in spring 2016. The current Airport Authority JRMP is posted on the Airport Authority's website, and the link to this page is listed on Project Clean Water.

STATEMENT OF CERTIFICATION

San Diego Bay Watershed Management Area Water Quality Improvement Plan 2015-2016 Annual Report

I certify, under penalty of law, that this Water Quality Improvement Plan Annual Report submittal and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for known violations.

BRUCE L. APRIL
Deputy District Director, Environmental

1/6/17
Date

3.2 CALTRANS AUTHORITY STRATEGIES

The jurisdiction areas of Caltrans include roadways, land adjacent to roadways, and facilities; Caltrans' jurisdictional strategies specifically focus on BMP implementation to reduce known pollutants within these areas. Caltrans is not permitted within the Municipal Permit; however, Caltrans is subject to similar requirements through its MS4 Permit (SWRCB, 2013). Though not permitted within the MS4 Permit, Caltrans has voluntarily contributed to the Water Quality Improvement Plan Annual Report effort to provide a consistent and subwatershed-wide approach to meeting applicable TMDL requirements. Caltrans voluntary contributions include a detailed list of strategies developed and provided in Table 2-3-1. The strategies and schedules presented in Table 2-3-1 are subject to change and are contingent upon annual budget approvals and funding availability. They are modified through the adaptive management process as needed.

Intentionally Left Blank

Table 3-1
Caltrans Jurisdictional Strategies

ID	Strategy	Implementation Approach/ Level of Effort	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as Planned in Current FY (FY 16)?	Completed in Current FY (FY 16)?	Notes	Modification (if modified or cancelled, provide rationale)	Modification Type (schedule, approach, new)	Planned Implementation into the Next FY? (Y/N)
Jurisdictional Strategies									
Design Storm Water Program									
CT-1	Update and implement design BMPs.	The Office of Storm Water Management Design (OSWMD) develops, evaluates, and enhances guidance documents and tools.	FY16	Yes	Yes				Yes
	1. Update and implement Landscape Architecture Program (LAP).	The OSWMD provides technical assistance on new and ongoing research related to permanent erosion control and permanent BMPs. In addition, the LAP develops methods to enhance roadside vegetation, which protects slopes from erosion and sediment loss, and may remove pollutants from storm water runoff.	FY16	Yes	Yes				Yes
	2. Implement native landscape/LID Design Guide Strategy.	Require native landscaping/LID in project plan design guide. The Project Planning and Design Guide (PPDG) includes an online training program.	FY16	Yes	Yes				Yes
CT-2	Train staff on Design Storm Water Program.	Train staff on Design Storm Water Program. Curriculum updated to reflect the latest strategies.	FY16	Yes	Yes				Yes
CT-3	Plan and implement treatment BMPs as appropriate.	Treatment BMPs are planned and implemented to comply with Caltrans NPDES Permit project development requirements, TMDL waste load allocations, location specific requirements, and the requirements in the Project Planning and Design Guide (PPDG) according to the Targeted Design Constituent (TDC) approach.	FY16	Yes	Yes				Yes
CT-4	Develop procedures to encourage mitigation for projects within the same watershed.	Caltrans will investigate procedures to mitigate within the same watershed as new projects.	FY16	Yes	Yes				Yes
CT-5	Implement a self-audit program to ensure BMPs are designed, implemented, and maintained.	Design Compliance Monitoring Program is a self-audit program that uses various tools for documenting compliance with the design pollution prevention and treatment BMP requirements of the 2013 NPDES Permit and the Caltrans Statewide SWMP. The Project Designs are reviewed to ensure that BMPs are being considered and appropriately incorporated into Caltrans' projects. This review also ensures storm water compliance throughout the project planning and design phases.	FY16	Yes	Yes				Yes

Table 3-1 (continued)
Caltrans Jurisdictional Strategies

ID	Strategy	Implementation Approach/ Level of Effort	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as Planned in Current FY (FY 16)?	Completed in Current FY (FY 16)?	Notes	Modification (if modified or cancelled, provide rationale)	Modification Type (schedule, approach, new)	Planned Implementation into the Next FY? (Y/N)
Construction Management									
CT-6	Administer a program to oversee implementation of BMPs during the construction phase of Caltrans projects. Includes inspections at an appropriate frequency and enforcement of requirements.	Caltrans complies with the statewide Construction General Permit. The district holds pre-construction meetings for all projects that require a SWPPP.	FY16	Yes	Yes				Yes
CT-7	Provide construction storm water training for District staff.	Continue implementation of the construction storm water classes offered throughout the Caltrans districts by the Division of Construction. Classes updated to reflect latest permit requirements.	FY16	Yes	Yes				Yes
CT-8	Implement a self-audit program to ensure compliance with water quality requirements.	Continue implementation of the Construction Compliance Evaluation Plan. Evaluates contractor's Storm Water Pollution Prevention Plan (SWPPP) or WPCP implementation and assesses compliance with water quality requirements, evaluates storm water contract administration, and incorporates quality control, quality assurance.	FY16	Yes	Yes				Yes
CT-9	Provide maintenance training for employees.	The Division of Maintenance has formal storm water management training sessions for new employees and refresher training for existing staff.	FY16	Yes	Yes				Yes
Maintenance									
Facilities and Areas									
CT-10	Administer a program to require implementation of minimum BMPs for facilities and leased space (air space leases).	Refer to SWMP; Leased space is required to meet current storm water regulations.	FY16	Yes	Yes				Yes
CT-11	Inspection of facilities and leased areas.	The Department will continue to reduce the potential for storm water pollution by the development and implementation of Facility Pollution Prevention Plans (FPPPs).	FY16	Yes	Yes				Yes
CT-12	Implement BMPs targeting reduction of over-irrigation.	Reduce over irrigation by requiring native, drought-tolerant plants and irrigation system improvements.	FY16	Yes	Yes				Yes
CT-13	Proactively monitor for erosion, and complete repair and slope stabilization.	Division of Maintenance conduct inspections on a five-year cycle. Program includes self-imposed goal to annually inspect slopes in each District and includes investigating public complaints and widely understood problem areas (WUPAs).	FY16	Yes	Yes				Yes

Table 3-1 (continued)
Caltrans Jurisdictional Strategies

ID	Strategy	Implementation Approach/ Level of Effort	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as Planned in Current FY (FY 16)?	Completed in Current FY (FY 16)?	Notes	Modification (if modified or cancelled, provide rationale)	Modification Type (schedule, approach, new)	Planned Implementation into the Next FY? (Y/N)
MS4 Infrastructure									
CT-14	Inspect and clean catch basins and conduct source investigations to identify upstream source of materials.	Inspect catch basins annually. If needed, catch basins are cleaned. If a catch basin is cleaned, a source inspection is conducted to identify source of sediment or other material.	FY16	Yes	Yes				Yes
CT-15	Proactively repair and replace MS4 components to provide source control from MS4 infrastructure.	Prioritize MS4 repairs. Funding for repairs based on size of project. Districts are able to conduct small repairs immediately, while larger projects are prioritized for repair out of annual budget.	FY16	Yes	Yes				Yes
Roads and Streets									
CT-16	Implement operation and maintenance activities on streets and roadways.	Refer to Work Plan.	FY16	Yes	Yes				Yes
	1. Implement street sweeping.	Refer to Work Plan.	FY16	Yes	Yes				Yes
	2. Perform sweeping of medians on high-volume arterial roadways.	Refer to Work Plan.	FY16	Yes	Yes				Yes
Pesticide, Herbicides, and Fertilizer BMP Program									
CT-17	Implement BMPs to address application, storage, and disposal of pesticides, herbicides, and fertilizers.	Refer to Vegetation Control Plan. Caltrans is actively reducing fertilizer/pesticide application and only applies to targeted areas. All pesticide use is reported to the California Department of Pesticide Regulation.	FY16	Yes	Yes				Yes
Illicit Connections/Illegal Discharges									
CT-18	Identify and resolve potential illicit connections/illegal discharges (IC/IDs).	Continue maintaining a hotline for reporting of illicit discharges. Majority of calls come from contractors and construction and maintenance staff. Continue coordination with other jurisdictions to address IC/IDs and provide written notification of potential IC/IDs associated with a municipality's jurisdiction.	FY16	Yes	Yes				Yes
CT-19	Identify erosion and slope stabilization issues on private or municipal property and inform the source for repair.	When Caltrans staff or contractors identify erosion or slopes in need of repair, it is treated as an IC/ID and the property owner is notified.	FY16	Yes	Yes				Yes

Table 3-1 (continued)
Caltrans Jurisdictional Strategies

ID	Strategy	Implementation Approach/ Level of Effort	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as Planned in Current FY (FY 16)?	Completed in Current FY (FY 16)?	Notes	Modification (if modified or cancelled, provide rationale)	Modification Type (schedule, approach, new)	Planned Implementation into the Next FY? (Y/N)
Public Education and Participation									
CT-20	Implement a public education and participation program to raise awareness of storm water pollution and prevention on California's freeways and highways.	Continue to implement the "Don't Trash California" Campaign, Adopt-A-Highway program, and the Protect Every Drop program, and partner with local organizations.	FY16	Yes	Yes				Yes
	1. Conduct trash cleanups.	Conduct trash cleanups through local probation and adopt-a-highway programs. Encourage prevention through "Don't Trash California" campaign.	FY16	Yes	Yes				Yes
	2. Target public education and outreach.	Provide outreach to public raising awareness of storm water pollution. Hold bring-your-child-to-work days with watershed model.	FY16	Yes	Yes				Yes
Other Nonstructural Strategies									
CT-21	Provide sanitation and trash management, implement access control in targeted areas.	As necessary, implement methods such as rip-rap, chain link fences, and remove low-lying brush to discourage use of right-of-way areas.	FY16	Yes	Yes				Yes
CT-22	Continue participating in source reduction initiatives.	Continue participation in Brake Pad Partnership through work with California Storm Water Quality Association.	FY16	Yes	Yes				Yes
CT-23	Remove invasive plants.	Remove invasive plants through maintenance and construction programs.	FY16	Yes	Yes				Yes
CT-24	Protect areas that are functioning naturally.	Required as part of the Project Planning and Design Guide (PPDG) and the Natural Environment as Treatment (NEAT) programs, Caltrans minimizes disturbance of exiting vegetation.	TBD	Yes	Yes				Yes
CT-25	Collaborate with RPs on WQIPs.	Voluntarily participate in the development of the WQIP and continue to collaborate with RAs on water quality planning and implementation projects.	FY16	Yes	Yes				Yes
Multiuse Treatment Areas									
Infiltration and Detention Basins									
CT-26	BMP Retrofit (#282401)	Chollas Creek BMP Retrofit Project; Interstate 15 and 94. There are 4 modified infiltration trenches, 1 austin vault sand filter, and 3 biofiltration swales.	2014	Yes	Yes				
CT-27	Construct Lanes and Transit Station) (#2T1301)	Construct BRT Lanes and Transit Station on Interstate 15. Install 2 bioswales and 1 media filter to treat approximately 18 acres.	2014	Yes	Yes				

3.3 MODIFICATIONS TO THE BMP DESIGN MANUAL

The Caltrans BMP Design Manual provides guidance for land development and public improvement projects to comply with relevant development planning requirements in the Municipal Permit. The Caltrans updated its BMP Design Manual in accordance with Municipal Permit requirements during FY16; the BMP Design Manual replaced the Standard Urban Storm Water Mitigation Plan (SUSMP). No additional changes to the BMP Design Manual have been made since it went into effect. The Caltrans BMP Design Manual can be accessed via the Project Clean Water website at: http://www.projectcleanwater.org/index.php?option=com_content&view=article&id=244&Itemid=212.

4 CITY OF CHULA VISTA

4.1 ANNUAL REPORT CERTIFICATIONS

City of Chula Vista's signed Statement of Certification and Legal Authority Establishment for the San Diego Bay WMA Water Quality Improvement Plan 2015-2016 Annual Report is included on the following page.

STATEMENT OF CERTIFICATION

SAN DIEGO BAY WATERSHED MANAGEMENT AREA WATER QUALITY IMPROVEMENT PLAN FISCAL YEAR 2015-2016 ANNUAL REPORT

AND

LEGAL AUTHORITY ESTABLISHMENT

I certify under penalty of law that this Water Quality Improvement Plan Annual Report and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations [40 CFR 122.22(d)].

I also certify that the City of Chula Vista has taken the necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements contained in Section E.1 of the San Diego Regional Water Quality Control Board Order No. R9-2013-001 as amended by Orders R9-2015-0001 and R9-2015-0100.

William S. Valle
Assistant Director of Engineering/ City Engineer

Date

4.2 ANNUAL REPORT FORM

The City of Chula Vista's completed JRMP Annual Report form and fiscal analysis for FY16 are included on the following pages.

Intentionally Left Blank

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM ANNUAL REPORT FORM
FY 2015-2016

I. COPERMITTEE INFORMATION		
Copermittee Name: City of Chula Vista		
Copermittee Primary Contact Name: Boushra Salem		
Copermittee Primary Contact Information: Address: 1800 Maxwell Road City: Chula Vista County: San Diego State: CA Zip: 91911 Telephone: 619-397-6111 Fax: 619-397-6259 Email: bsalem@chulavistaca.gov		
II. LEGAL AUTHORITY		
Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	**YES** [X] **NO** [ ]	
A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	**YES** [X] **NO** [ ]	
III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE		
Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	**YES** [X] **NO** [ ]	
If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	**YES** [X] **NO** [ ]	
IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM		
Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	**YES** [X] **NO** [ ]	
Number of non-storm water discharges reported by the public	66	*
Number of non-storm water discharges detected by Copermittee staff or contractors	123	
Number of non-storm water discharges investigated by the Copermittee	188	
Number of sources of non-storm water discharges identified	114	
Number of non-storm water discharges eliminated	64	
Number of sources of illicit discharges or connections identified	79	
Number of illicit discharges or connections eliminated	61	
Number of enforcement actions issued	27	
Number of escalated enforcement actions issued	11	
V. DEVELOPMENT PLANNING PROGRAM		
Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	**YES** [X] **NO** [ ]	
Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	**YES** [X] **NO** [ ]	
If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	**YES** [X] **NO** [ ]	
Number of proposed development projects in review	48	
Number of Priority Development Projects in review	10	
Number of Priority Development Projects approved	26	
Number of approved Priority Development Projects exempt from any BMP requirements	1	
Number of approved Priority Development Projects allowed alternative compliance	0	
Number of Priority Development Projects granted occupancy	651	*
Number of completed Priority Development Projects in inventory	250	
Number of high priority Priority Development Project structural BMP inspections	171	
Number of Priority Development Project structural BMP violations	2	
Number of enforcement actions issued	2	
Number of escalated enforcement actions issued	0	

* Please see Attachment 1

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM
FY 2015-2016

VI. CONSTRUCTION MANAGEMENT PROGRAM

Has the Copermittee implemented a construction management program that complies with Order No. R9-2013-0001?	YES [X] NO [ ]

Number of construction sites in inventory	60
Number of active construction sites in inventory	28
Number of inactive construction sites in inventory	2
Number of construction sites closed/completed during reporting period	30
Number of construction site inspections	465
Number of construction site violations	159
Number of enforcement actions issued	6
Number of escalated enforcement actions issued	5

VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM

Has the Copermittee implemented an existing development management program that complies with Order No. R9-2013-0001?	YES [X] NO [ ]

	Municipal	Commercial	Industrial	Residential
Number of facilities or areas in inventory	87	2,522	125	19
Number of existing development inspections	73	217	45	107
Number of follow-up inspections	4	43	18	2
Number of violations	2	7	5	6
Number of enforcement actions issued	1	7	5	6
Number of escalated enforcement actions issued	0	1	5	0

VIII. PUBLIC EDUCATION AND PARTICIPATION

Has the Copermittee implemented a public education program component that complies with Order No. R9-2013-0001?	YES [X] NO [ ]
Has the Copermittee implemented a public participation program component that complies with Order No. R9-2013-0001?	YES [X] NO [ ]

IX. FISCAL ANALYSIS

Has the Copermittee attached to this form a summary of its fiscal analysis that complies with Order No. R9-2013-0001?	YES [X] NO [ ] **

X. CERTIFICATION

I [☐ Principal Executive Officer ☐ Ranking Elected Official ☒ Duly Authorized Representative] certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

CITY OF CHULA VISTA
JRMP ANNUAL REPORT FY 2015-2016
ATTACHMENT 1 TO ANNUAL REPORT FORM

The following explanations are intended to provide clarification on sections of the JRMP Annual Report as noted by an asterisk (*) on the report form.

IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

The City proactively seeks to identify sources of non-storm water discharges and when anthropogenic non-storm water discharges are identified, action is taken immediately to address such discharges. Since July 1, 2013, the City has implemented its new field screening program to comply with the requirements of the Municipal Permit.

Number of non-storm water discharges reported by the public:
This is the number of reported potential non-storm water discharges to the City's storm water hotline by citizens (66).

Number of non-storm water discharges detected by Copermittee staff or contractors:
This is the number of reported potential non-storm water discharges to the City's storm water hotline by City employees (23) or the consultant performing MS4 outfall monitoring for the City (100).

Number of non-storm water discharges investigated by the Copermittee:
This is the number of non-storm water discharges that City staff investigated based on reports from the hotline (89 total, 1 cancelled) and by the MS4 outfall monitoring consultant for the City (100).

Number of sources of non-storm water discharges identified:
This is the number of sources of non-storm water discharges investigated where a source was found (60 via hotline calls and 54 via MS4 outfall monitoring).

Number of non-storm water discharges eliminated:
This is the number of non-storm water discharges eliminated based on hotline calls (61) and the consultant's investigation (3).

Number of sources of illicit discharges or connections identified:
This is the number sources of illicit discharges or connections identified based on the investigation of hotline calls (58) and MS4 outfall monitoring (21).

Number of illicit discharges or connections eliminated:
This is the number of illicit discharges or connections eliminated based on hotline calls (58) or MS4 outfall monitoring (3). All illicit discharges or connections were eliminated via the storm drain vactor crew, clean up by the responsible party, enforcement action, or were determined to be transient flow. Minor irrigation runoff was addressed via education. Gross overwaterers receive a letter from the City, and are also reported to the appropriate water district.

V. DEVELOPMENT PLANNING PROGRAM

Number of Priority Development Projects granted occupancy:
The number indicated on the Annual Report Form (651) consists of 637 residential units and 14 non-residential buildings.

Attachment 2

FY 2015-2016 Fiscal Analysis Summary

Jurisdictional Component		Multiple Program	Prior Programs
Administration	$191,586.97		
Development Planning	$62,472.44		
Construction Management	$198,948.22		
Municipal Areas	$1,108,091.28		
Industrial and Commercial Areas	$37,872.04		
Residential Areas	$29,142.76		
Illicit Discharge Detection & Elimination (IDDE)	$403,498.47		
Education	$45,261.96		
Public Participation	$0.00		
Special Studies (Investigations)	$5,592.70		
Non-Emergency Firefighting	$0.00		
Jurisdictional TOTAL	**$2,082,466.82**		

Jurisdictional Component Shared Programs		Multiple Program	Prior Programs
Used Oil Recycling	$11,277.60	x	x
Household Hazardous Waste Management	$277,033.12	x	x
Wastewater Collection Systems Maintenance	$6,372,216.00	x	x
Flood Management Projects and Flood Control Devices	$1,958,329.58	x	x
Jurisdictional Shared Programs Total	**$8,618,856.30**		

Jurisdictional Component Shared Programs For Which Costs Can Not Be Readily Calculated	Multiple Program	Prior Programs
Land Use Planning	x	x
Environmental Review	x	x
Development Project Approval and Verification	x	x
Management of Pesticides, Herbicides, and Fertilizers	x	x
Roads, Streets, Highways, and Parking Facilities	x	x
Parks and Recreational Facilities	x	x

Regional Component Shared Programs		Multiple Program	Prior Programs
Regional Component TOTAL	**$141,137.64**	x	x

Watershed Component Shared Programs		Multiple Program	Prior Programs
Watershed Component TOTAL	**$252,970.42**	x	x

Attachment 2
FY 2015-2016 Fiscal Analysis Summary

Funding Source	Program Element
General Fund	Storm Water Management
	Storm Drain Maintenance
Storm Drain Fee	Storm Water Management
Wastewater Fee	Wastewater Collection System Maintenance
Special Assessment Districts	Storm Drain Maintenance
	Wastewater Collection System Maintenance
Grant Funds	Used Oil Recycling
	Drainage Capital Improvement Projects
Solid Waste Fee	Household Hazardous Waste Management
Developer Deposits and Fees	Environmental Reviews
Transnet	Drainage Capital Improvement Projects

Note: The above fiscal analysis is intended to provide an approximate estimate of program elements costs related to the City's storm water management program. It is not intended to provide a fiscally auditable report of the City's expenditures.

4.3 CITY OF CHULA VISTA STRATEGIES

The City of Chula Vista (Chula Vista) is located within the Sweetwater River and Otay River subwatersheds. The western portion of the City, west of Interstate 805, is characterized by having older infrastructure and is more densely populated. The portion of the City east of Interstate 805, generally has newer development and infrastructure, consisting of more pervious area and permanent BMP implementation, due to this area being developed under more the recent MS4 Permit land development requirements. Although the Focused Priority area is in the western portion of the City, the majority of strategies were implemented City-wide. Jurisdictional strategies target a number of pollutants, however, the focus of most strategies is to target trash.

Chula Vista has a well-rounded education and outreach program, which includes distribution of educational inserts in bimonthly trash bills, coordination of cleanup events with I Love a Clean San Diego, a revamped website that provide easier access to City resources, and updated residential storm water education brochures. The Chula Vista CLEAN Team, which consists of the Conservation, Environmental Services, and Storm Water Management Sections, partner together to provide residents with a cohesive environmental message. The CLEAN Team regularly collaborates on City special events, educational brochures, and environmental programs. In addition, a new City Operations Sustainability Plan, detailing water use, energy use, green purchasing, recycling and waste management, pollution prevention, transportation, green buildings, and green infrastructure, was adopted in June 2014. The City also participates in the Regional Think Blue San Diego educational program.

The WQIP identified general retail and commercial areas, including eating and drinking establishments as a high priority source of trash. In order to address this source, the City enhanced its commercial and industrial facility inspections and updated its inspection forms to collect additional information about the trash enclosures and trash receptacles of these facilities. FY 2016 was the first reporting period that this addition information was collected. The City can use this data to help individual facilities improve on their trash management BMP implementation, and as data is collected over time, it can help the City to identify particular areas where additional efforts are needed, such as targeted education or increased inspection frequency.

Notably, Chula Vista formed a Homeless Outreach Team during the reporting period, which consists of Chula Vista Parks, Police Department, Public Works staff, as well as a variety of non-profit entities that help to provide a holistic approach to tackling homeless issues. The program targets a number of City parks, facilities, and problem areas of the City. Staff visits these areas once per week and can remove over 1,000 pounds of trash per week from the encampments. Funding for additional staff was added during the reporting period, which helps to bolster and strengthen the program.

An important portion of targeting trash in Chula Vista was the initiation of a Baseline Trash Assessment and BMP Feasibility Study. Planning for the study took place in the reporting period, with results of the study coming in the next fiscal year. The goal of the study is to identify the problem trash areas of the City and determine which BMPs are the most appropriate to implement. In addition to aiding the City in achieving its strategies and goals to target trash, it helps to guide the City in compliance with the Statewide Trash Amendments. Results of the study are expected to help inform the City on where program improvements and adjustments are needed, where BMP retrofits and installations are feasible, and how to plan for meeting the WQIP trash goals.

In collaboration with the Port and Imperial Beach, the City also expanded its trash assessment monitoring program to help inform the City in its progress in implementing strategies and meeting goals. The expanded program includes additional source identification data gathering for MS4 Outfalls in the Focused Priority area, as well as paired receiving water and MS4 outfall monitoring.

Although this reporting year was based on only four months of implementation of the WQIP, Chula Vista made several strides in implementing strategies that works towards achieving WQIP goals. Enhanced educational programs in collaboration with the CLEAN Team, the commencement of the Trash Study, and expanded trash inspections and monitoring are a few of the notable activities that took place during the reporting period. Strategies and implementation schedules will be adjusted as necessary over time through the adaptive management process.

Table 4-1
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Core JRMP Strategies (Provisions E.2 – E.7)								
E.2 Illicit Discharge, Detection, and Elimination (IDDE) Program								
CV-1	Implement Illicit Discharge, Detection, and Elimination (IDDE) Program. Requirements include: maintaining an MS4 map, using municipal personnel and contractors to identify and report illicit discharges, maintaining a hotline for public reporting of illicit discharges, monitoring MS4 outfalls, and investigating and addressing any illicit discharges.	The City contracts out outfall monitoring for more than 125 major outfalls in the City, receives hotline and email complaints, and works to eliminate illegal discharges. Refer to JRMP Section 3.	Prior to FY16	Yes – Continuous-Ongoing	During FY15-16, the City responded to 7 hotline calls about trash or illegal dumping.	NA		Yes
CV-2	Implement program for employee reporting of potential illicit discharges.	Chula Vista NPDES staff trains City employees to report illegal discharges. Refer to JRMP Section 3.	Prior to FY16	Yes – Continuous- As needed	During FY15-16, City staff reported 2 cases regarding trash or illegal dumping.	NA		Yes
CV-3	Utilize "Act Chula Vista" smartphone application and *website notification* to encourage residents to report potential illicit discharges or other storm water violations.	"Act Chula Vista" smartphone application is currently in use. There is also a hotline for employees and the general public.	Prior to FY16	Yes – Continuous-Ongoing	During FY15-16, there were 5 reports to the City's website about trash or illegal dumping.	Yes – to update the strategy	Approach – Residents have additional ability to report storm water violations via the City's website.	Yes
E.3 Development Planning								
All Development Projects								
CV-4	For all development projects, administer a program to ensure implementation of source control BMPs to minimize pollutant generation at each project and implement LID BMPs to maintain or restore hydrology of the area, where applicable and feasible.	All development projects are required to implement minimum BMPs. Refer to Jurisdictional Runoff Management Program (JRMP) Section 4 and the BMP Design Manual.	FY15-16	Yes – Continuous – Ongoing	BMP Manual was updated accordingly.	NA		Yes
CV-5	Amend municipal code and ordinances to facilitate and encourage LID opportunities.	Appropriate City Ordinances have been amended with the JRMP update. Refer to JRMP Appendix A – Chula Vista Municipal Code Chapter 14.20 – Storm Water Management and Discharge Control.	FY15-16	Yes	Municipal code Chapter 14.20 was updated.	NA		No

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CV-6	Train staff on LID regulatory changes and BMP Design Manual.	Storm water staff are in regular contact with Development Services staff regarding development projects. Training is provided as changes occur. Refer to JRMP Sections 4 and 8.	FY15-16	Yes – Continuous – As needed	Staff received training on LID BMPs, hydrology modeling, and model BMP design manual updates.	NA		Yes
Priority Development Projects (PDPs)								
CV-7	For PDPs, administer a program requiring implementation of structural BMPs to control pollutants and manage hydromodification. Includes confirmation of design, construction, and maintenance of PDP structural BMPs.	All PDPs are required to implement and maintain post construction BMPs. Refer to JRMP Section 4.	FY15-16	Yes – Continuous – Ongoing	City intake forms were revised to include new requirements for PDPs.	NA		Yes
	a. Administer self-certification program for treatment control BMP compliance.	Self-certification program and corresponding form are already being utilized by applicable projects. Refer to JRMP Section 4.	Prior to FY16	Yes – Continuous – Ongoing	The City implemented a self-certification program for PDPs.	NA		Yes
CV-8	Amend BMP Design Manual for trash areas. Require the design of trash enclosures to prevent run-on and runoff, away from storm drains, and to provide cover.	Trash enclosure details are included in Chula Vista Municipal Code Chapter 19.58.340, the City's Recycling and Solid Waste Planning Manual, and the BMP Design Manual.	FY15-16	Yes	BMP Manual Section 4 was updated to require that trash enclosures be designed to prevent runon/off and have a solid rooftop enclosure.	NA		Yes – if changes are needed
E.4 Construction Management								
CV-9	Administer a program to oversee implementation of BMPs during the construction phase of land development. Includes inspections at an appropriate frequency and enforcement of requirements.	All construction sites are required to implement minimum BMPs. High priority sites are inspected 2x per month during the rainy season, monthly during the dry season; low priority and inactive sites are inspected monthly during the rainy season, as needed during the dry season. Refer to JRMP Section 5. All Construction projects are required to implement minimum BMPs.	Prior to FY16	Yes – Continuous – Ongoing	Program implemented as scheduled. Over 400 inspections were performed by Construction Inspections staff, with 11 trash BMP corrective actions noted. Storm Water staff provide education and support for projects where escalated enforcement is required.	NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
E.5 Existing Development								
Commercial, Industrial, Municipal, and Residential Facilitates and Areas								
CV-10	Administer a program to require implementation of minimum BMPs for existing development (commercial, industrial, municipal, and residential) that are specific to the facility, area types, and pollutants generated, as appropriate. Includes inspection of existing development at appropriate frequencies and using appropriate methods.	Current inspection program is facilities-based. High priority areas are inspected once per year, and low priority areas are inspected once every five years. Refer to JRMP Section 6 and Appendix C. Staff has been dedicated to complete this task.	FY15-16	Yes – Continuous - Ongoing	Storm water staff completed 217 commercial inspections, 45 industrial, 73 municipal inspections of existing development during the reporting period. Of the commercial inspections, 61 trash BMP corrective actions were noted.	NA		Yes
	a. Update minimum BMPs for existing residential, commercial, and industrial development.	General minimum BMPs for trash include good housekeeping and proper waste disposal, cleaning of storm drains, stenciling and signage, maintenance of trash receptacle areas. Refer to JRMP Appendix C.	FY15-16	Yes – Continuous - Ongoing	BMPs were updated for existing development which included BMPs specific to trash and waste management.	NA		Yes
	b. Design, implement, and enforce mobile business program.	Chula Vista has a mobile business program in effect. Business License Department administers storm water information packet and questionnaire, and businesses must agree to not discharge pollutants into storm drains. Storm Water Section has final approval. Mobile businesses are inspected as needed.	Prior to FY16	Yes – Continuous - Ongoing	Storm water staff approved 135 mobile businesses during the reporting period.	NA		Yes
CV-11	Implement pet waste program. May include installation and maintenance of pet waste bag dispensers and trash bins, and signage and education.	Pet waste bag stations are in available in the majority of City parks. Pet waste stations are maintained by parks staff and/or citizens and volunteer groups.	Prior to FY16	Yes – Continuous - Ongoing	Existing pet waste station were maintained during the reporting period.	NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CV-12	Promote and encourage implementation of minimum BMPs at residential areas.	The City's CLEAN education program is geared towards residents and common pollutant generating activities that residents perform such as home and garden maintenance, pool cleaning, and auto maintenance.	FY15-16	Yes – Continuous – Ongoing	Residential minimum BMPs were updated in the JRMP document. Educational brochures for residents were updated to reflect updated BMP requirements and changes to the storm water ordinance.	NA		Yes
	a. Encourage use of compost/soil amendments as opposed to fertilizer to decrease runoff.	The City has classes at the Living Coast Discovery Center to provide information to residents about composting.	FY15-16	Yes – Continuous – Ongoing	Compost education classes were available to residents through the Living Coast Discovery Center. Residents can choose between general composting classes, or take additional courses to become a Master Composter.	NA		Yes
	b. Promote and collaborate with water agencies and other groups to encourage implementation of water conservation programs that improve water quality by reducing over-irrigation with smart products or turf replacement and capturing rain water in residential areas.	Chula Vista works with the San Diego County Water Authority, Otay Water District, and Sweetwater Water Authority to provide classes to residents that encourage water smart landscaping and gardening. Funding secure for FY16.	FY15-16	Yes – Continuous – Ongoing	Efficient landscaping classes offered to residents in partnership with Sweetwater Authority and Otay Water District. A free Garden and Water Friendly Plant Fair sponsored by the SD County Water Authority was hosted in the City during the reporting period.	NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CV-13	Prohibit and discourage illegal dumping.	Storm Water staff respond to reports of illegal dumping via hotline calls and inspections programs and enforces property owners and/or businesses to clean up their sites and maintain them clean. Environmental services works with Chula Vista Code Enforcement and the Police Department to discourage illegal dumping in and around trash dumpsters, alley ways, open fields by providing signage, fines, and education. As an additional effort to discourage illegal dumping, Republic Services (the City's franchise waste hauler) provides for bulky item pick up and landfill passes to single and multi-family residents, which is included in their collection service rate. A Household Hazardous Waste Facility is also available on Wednesday and Fridays from 9am to 1pm for residents and businesses of Chula Vista, Imperial Beach, and National City to promote proper disposal of hazardous materials. One-day collection events are also offered twice a year in convenient locations throughout the City.	Prior to FY16	Yes – Continuous – Ongoing	The City continued to implement its various programs and efforts to prohibit and discourage illegal dumping. Environmental Services provided outreach letters that educate residents or businesses that live or operate near areas where illegal dumping occurs. The letters explain the incident and include proper disposal information and program pamphlets.	NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
MS4 Infrastructure								
CV-14	Implement operation and maintenance activities (inspection and cleaning) for MS4 and related structures (catch basins, storm drain inlets, detention basins, etc.) for water quality improvement.	Chula Vista has an MS4 inspection and maintenance program in place. Storm drain structures are inspected once a year and cleaned where necessary based on inspection results. Storm drain pipes are designed to be self-cleaning and do not typically required scheduled cleaning. Storm drain pipes are video surveyed on an as needed basis. Structures and pipes are repaired as needed based on the results of inspections. Open-channel cleaning is completed on an as needed basis.	Prior to FY16	Yes – Continuous – Ongoing	MS4 cleaning proceeded as scheduled.	NA		Yes
	a. Optimize catch basin cleaning to maximize pollutant removal (prioritize catch basin cleaning based on collected data).	Current catch basin inspection (and cleaning is needed) is once per year. Cleanings are prioritized by amount of trash.	Prior to FY16	Yes – Continuous – Ongoing	Catch basins that are characterized as 'high volume trash' are inspected and cleaned more frequently.	NA		Yes
	b. Proactively repair and replace MS4 components to provide source control from MS4 infrastructure.	Chula Vista has an MS4 inspection and maintenance program in place and provides surveys and performs repairs as needed.	Prior to FY16	Yes – Continuous – Ongoing		NA		Yes
CV-15	Implement controls to prevent infiltration of sewage into the MS4 from leaking sanitary sewers.	The City inspects, cleans, and maintains a total of 498 miles of sewer main. This includes critical maintenance areas, which are cleaned more than once per year. Chula Vista has a monitoring survey and SSO plan.	Prior to FY16	Yes - Continuous – Ongoing	Sewer system maintenance proceeded as scheduled.	NA		Yes
	a. Identify sewer leaks and areas for sewer pipe replacement prioritization.	Wastewater Section performs repairs.	Prior to FY16	Yes – Continuous – Ongoing		NA		Yes
Roads, Streets, and Parking Lots								
CV-16	Implement operation and maintenance activities for public streets, unpaved roads, paved roads, and paved highways	Street sweeping is contracted out. Commercial, industrial, and business street segments are swept once per two weeks. Residential, center islands, medians, and center lines street segments and public parking lots are swept once per two months. Republic manages Main Street and areas near landfill. Refer to JRMP Section 6.	Prior to FY16	Yes – Continuous – Ongoing	Streets maintenance activities proceeded as scheduled.	NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Pesticides, Herbicides, and Fertilizer BMP Program								
CV-17	Require implementation of BMPs to address application, storage, and disposal of pesticides, herbicides, and fertilizers on commercial, industrial, and municipal properties. Includes education, permits, and certifications.	The City has developed a comprehensive program aimed at preventing or reducing pesticides, herbicides, and fertilizers from entering the storm water system and causing direct or indirect harm on non-target flora and fauna and receiving waters for municipal facilities. Whenever practicable, integrated pest management techniques that rely on nonchemical solutions are implemented. Refer to JRMP Section 6 and Appendix C.	FY16	Yes – Continuous – Ongoing	The City continued to implement its pesticides, herbicides, and fertilizers program.	NA		Yes
Retrofit and Rehabilitation in Areas of Existing Development								
CV-18	Develop and implement a strategy to identify candidate areas of existing development appropriate for retrofitting projects and facilitate the implementation of such projects.	The City will conduct a Baseline Trash Assessment Study to determine where high volume trash areas are located and if their respective drainage areas can be retrofitted with BMPs, especially those for trash. Retrofits pending study results.	FY16	Yes – Continuous – Ongoing	Planning for the Baseline Trash Assessment Study began in FY16, however identification of these areas for retrofit is not expected until the next FY.	NA		Yes
CV-19	Identify candidate areas of existing development for stream, channel, or habitat rehabilitation projects and facilitate implementation of such projects.	The City's JRMP Appendix F describes the methods used for identifying and assessing potential stream, channel, or habitat rehabilitation projects in existing development areas and facilitating such projects. Rehabilitation project selection will be based upon a variety of factors including addressing the FPWQC of trash, existing stream or habitat degradation, multiple benefits of the project, and feasibility of implementation. Projects can arise as part of the Offsite Alternative Compliance Program. The program will include protocols related to funding mechanisms for project construction and long-term maintenance, payment and credit structures, and water quality equivalency standards. Grant funding can be utilized as available.	FY17	NA		NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
E.6 Enforcement Response Plan								
CV-20	Implement escalating enforcement responses to compel compliance with statutes, ordinances, permits, contracts, orders, and other requirements for IDDE, development planning, construction management, and existing development in the Enforcement Response Plan.	The City has an enforcement program in place, which provides for escalating enforcement. Escalated enforcement actions include issuances of Notices of Violation, Civil Penalties, Notices to Clean and Abate, Notices to Cease and Desist. Refer to the Enforcement Response Plan in the JRMP.	FY15-16	Yes – Continuous – Ongoing	The City continued with implementation of IDDE and enforcement response during the reporting period.	NA		Yes
	a. Increased enforcement on businesses that do not implement trash BMPs.	Based on inspection program and additional information collected based on strategy CV-33. Efforts will rely on education program as well.	FY15-16	Yes – Continuous – Ongoing	The City collected additional trash management BMP information during inspections of industrial and commercial businesses. Trash issues were noted on the inspection form and corrections were brought to the business's attention with a timeframe to complete corrective actions as needed.	NA		Yes
	b. Provide education and enforcement of water-using mobile businesses.	The mobile business program and Enforcement Response Plan are used.	Prior to FY16	Yes – Continuous – Ongoing	The City approved 138 mobile businesses.	NA		Yes
CV-21	Enforce minimum BMPs for existing residential, commercial, and industrial development. Includes power washing at non-residential sites.	Minimum BMPs are required for existing development. Refer to JRMP Section 5 and Appendix C.	FY15-16	Yes – Continuous – Ongoing	The City updated its minimum BMPs for existing development.	NA		Yes
	a. Increased education and enforcement for existing development with trash issues.	Facilities with an identified trash problem will be targeted for increased inspections, education, and enforcement.	FY17	NA	City staff is in the process of collecting additional data from industrial and commercial facilities regarding trash management. This was first year of data collection.	NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
E.7 Public Education and Participation (B.3.b.(1)(a)(iii))								
CV-22	Implement a public education and participation program to promote and encourage development of programs, management practices, and behaviors that reduce the discharge of pollutants in storm water prioritized by high-risk behaviors, pollutants of concern, and target audiences.	The CLEAN Team (NPDES, Environmental Services Section, and Conservation Section) works together on public outreach programs. Refer to JRMP Section 8.	Prior to FY16	Yes – Continuous –Ongoing		NA		Yes
	a. Improve consistency and content of websites to highlight updated storm water regulations.	The Chula Vista website is currently being updated and will include information for the public on environmental programs. Information can also be sent out in bimonthly trash bill inserts.	Prior to FY16	Yes – Continuous – Ongoing	Storm water pollution prevention information was updated to include additional information about the City's mobile business program, residential BMPs, an online reporting form, and provide access to storm water documents.	NA		Yes
	b. Promote community events and CLEAN Business Program.	The CLEAN team has booths at public festivals and provides information. The CLEAN business program, led by the Environmental Services Section, verifies business as CLEAN via a checklist process, which includes provisions for pollution prevention and storm water BMPs.	Prior to FY16	Yes – Continuous – Ongoing	CLEAN Team had a booth at all major City events during the reporting period; a total of 8 CLEAN businesses were approved during the reporting period, bringing the total to 180 CLEAN businesses.	NA		Yes
CV-23	Provide municipal staff training.	The City primarily educates its municipal staff through workshop training, refresher sessions, staff meetings, and on the job training. Training for municipal personnel is focused on maintenance crews, land development staff, planners, landscape architects, and staff from other departments. Municipal personnel are also notified of regional workshops, and are encouraged to participate in workshops and seminars relevant to their type of work. Refer to JRMP Section 8.	Prior to FY16	Yes – Continuous – As Needed	Staff received training on various topics such as the Statewide Trash Amendments, hydrology modeling, LID BMPs, construction inspection requirements, and model BMP design manual requirements.	NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Non-JRMP Strategies (Optional Strategies, Provision B.3.b.(1)(b))								
Nonstructural								
CV-24	Enhance commercial and industrial facility inspections to focus on trash.	Current inspection program is facilities-based and will also inspect per high volume trash areas determined in Baseline Assessment Study (CV-33). High priority areas are inspected once per year, and low priority areas are inspected once every five years. Inspection form was revised to further evaluate trash areas. Refer to JRMP Section 6 and Appendix C. Staff secured for FY16.	FY15-16	Yes – Continuous – Ongoing	Inspection form amended to include additional data collection regarding waste handling/disposal BMPs. As more data is collected through both the Trash Assessment Study and through inspections, the inspection program can be tailored to focus on problem areas.	NA		Yes
CV-25	Continue participating in trash source reduction activities and initiatives.	Participate in initiatives as applicable to FPWQC. Triggers include ability to make City ordinance changes, partnering with applicable stakeholders, funding for staff, budget to obtain a consultant or contractor to assist with enhancements to the existing education program.	Prior to FY16	Yes – Continuous – Ongoing	Environmental Services mails an educational insert in the bi-monthly trash bills (6X per year) to approximately 51,000 single family residences. Topics include: HHW, E-waste, recycling tips, composting information, bulky item pickup.	NA		Yes
	a. Continue implementation of smoking ban.	Smoking is banned at City of Chula Vista parks and in all outdoor dining areas. The smoking ban prevents the littering of these areas with cigarette butts.	Prior to FY16	Yes – Continuous – Ongoing	City maintained no-smoking signage in all City parks.	NA		Yes
	b. Continue and enhance education programs to prevent littering.	The City will implement enhancements to existing programs where possible to improve trash education. This activity will be based on the baseline trash assessment study and identification of high volume trash areas, especially from sources such as commercial areas. Funding is secured for FY16.	FY16-17	NA		NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CV-25 (cont)	c. Expand educational outreach to multi-unit family complexes.	Provide educational outreach to HOAs. Mailers with trash information are sent out twice a year via Environmental Services Section, and information on over irrigation, BMPs, and general storm water education with a focus on trash can be included. Triggers based on completion of baseline trash assessment study to determine applicable multi-unit family complexes.	FY16-17	NA		NA		Yes
	d. Develop an outreach and training program for residential property managers responsible for HOAs.	The program will target trash and irrigation reduction. Triggers based on results of baseline trash assessment study, budget approval, and staff to implement.	FY16-17	NA		NA		Yes
	e. Enhance education and outreach based on results of effectiveness survey and changing regulatory requirements.	Chula Vista plans to conduct surveys and will collaborate with CLEAN team to improve outreach based on survey results. Trigger based on results of baseline trash study and survey data.	*FY 16-17*	No – Planned for next FY		Yes – pending results of Baseline Trash Assessment Study	Schedule – changed to begin in FY16-17	Yes
CV-26	Storm Drain Stenciling	In collaboration with citizen and/or volunteer groups, install storm drain stencils on storm drains within high volume trash areas as needed. Triggers include completion of baseline trash assessment study, and partnerships with volunteer groups.	FY16-17	NA		NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CV-27	Enhance and expand trash cleanups and educational events through community-based organizations involving target audiences.	Increase effectiveness and reach of trash/beach cleanups, educational opportunities, and community based efforts. Partnerships and sponsorships with I Love A Clean San Diego and others are recommended to be continued and enhanced. To effectively target stream clean-up efforts, focus on partnerships with community organizations which provide strong engagement with target audiences and communities. Triggers include obtaining data from the baseline trash assessment study and budget availability to contract out enhanced educational activities.	FY15-16	Yes	The City had its annual Beautify Chula Vista event that engaged volunteers to participate in trash pick-up, storm drain stenciling, graffiti removal, and tree planting. The Alliance of Californians for Community Empowerment (ACCE) sponsored two neighborhood clean-up events that engaged volunteers in trash pick-up and graffiti removal.	NA		Yes
CV-28	Enhance street sweeping program based on high volume trash area assessment study.	Increase street sweeping in high volume trash areas, as needed. Funding dependent on results of baseline trash assessment study, established hot spot areas, and budget availability.	FY16-17	NA		NA		Yes
CV-29	Develop and implement a strategy to identify candidate areas of existing development appropriate for retrofitting projects and facilitate the implementation of such projects.	The City will perform a Baseline Trash Assessment Study (CV-33) to determine where high volume trash areas are located and if their respective drainage areas can be retrofitted with BMPs, especially those for trash. Retrofits pending study results.	FY16+	Yes – ongoing through FY17		NA		Yes
	a. Implement program to retrofit trash enclosures of municipal facilities with an established trash problem. Use as a pilot program to expand to existing commercial areas, with the use of an incentive program.	City's Recycling & Solid Waste Planning Manual and CVMC 19.58.340 requires newly constructed trash enclosures to be designed to exclude rain. Trigger for existing trash retrofits dependent upon funding, Baseline Trash Assessment Study, interim goals being met, and ordinance/policy changes. Consider partnerships with waste hauler and other stakeholders to develop incentive program, if feasible.	FY17-18	NA		NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CV-30	Implement stream, channel, and habitat rehabilitation projects as needed.	This strategy may be triggered if 1) Interim goals are not met, 2) Stream or habitat rehabilitation is determined to be a more effective pathway, relative to additional structural or non-structural BMPs to meeting trash goals, 3) Funding and staffing has been secured, 4) Partners, MOUs, and permits required by regulatory agencies are secured, and 5) Recommendations from the community are identified and consensus and community support has been achieved. Will occur in areas identified during feasibility studies. The following resources, funds, and steps are needed to implement this strategy if the above triggers are met or at the City's discretion: 1) Identify project locations, 2) Secure funds in the form of general funds, bonds, or grants, 3) Obtain City Council approval of Capital Improvement Projects budget, 4) Initiate preliminary engineering to narrow project scope, 5) Hire design consultant to develop detailed construction plans and construction cost estimates, 6) Complete construction contractor bid and award process for construction phase, 7) Construct project, 8) Operation and maintenance into perpetuity.	Trigger	NA		NA		Yes, as triggered
CV-31	Conduct additional trash monitoring to target high volume trash areas and determine if BMPs are effective.	Chula Vista will develop a trash monitoring program to increase visual trash monitoring, increase inspections of facilities as needed, and collect additional trash data from commercial/industrial facilities. Funding secured for FY16.	FY15-16	Yes – Continuous- As needed	Trash monitoring program was expanded to collect additional data from the focused priority area as well as paired outfall and receiving water monitoring.	NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status: Implemented as planned in current FY (FY16)?	Implementation Status: Additional Information (as needed)	Proposed Modifications: Modification (If modified or canceled, provide rationale)	Proposed Modifications: Modification Type (Schedule, Approach, New)	Proposed Modifications: Planned Implementation into the next FY? (Y/N)
Structural								
CV-32	Install and maintain partial or full capture treatment control BMPs in high volume trash areas as needed.	City will complete Baseline Trash Study to determine where BMP retrofits can occur. Funding for retrofits is based on interim goals and installed in conjunction with Trash Amendment timeline. 1) Identify project locations 2) Secure funds in the form of general funds, bonds, or grants 3) Obtain City Council approval 4) Initiate preliminary engineering 5) Hire design consultant to develop detailed construction plans and construction cost estimates 6) Complete construction contractor bid and award process for construction phase 7) Construct project 8) Operation and maintenance will be in perpetuity. Funds and staff resources for this function will be approval by City Council as part of the City's annual budget. This strategy may be triggered as 1) interim goals are not met, 2) funding to address MS4 discharges is identified and secured, 3) staff resources are identified and secured, and 4) permits required by regulatory agencies are secured.	FY17+	NA		NA		Yes
WMA Strategies (Optional Strategies, B.3.b.(2))								
CV-33	Baseline Trash Assessment Study	The City is participating in a Baseline Trash Assessment Study with WMA Copermittees within the Focused Priority Area. The study will assess targeted geographic areas and include elements such as (1) an assessment of current conditions to provide a baseline to demonstrate progress, (2) identify high-priority areas for targeted strategy implementation, and (3) identification of potentially collaborative efforts with different jurisdictions. Implementation of additional strategies will be based on the results of this study and will be updated in the Annual Report.	FY16+	Yes – Continuous through FY17	The City was in the planning process during the reporting period to get a consultant on board to begin the Baseline Trash Assessment Study. Study will begin in FY16-17.	NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CV-34	Promote and collaborate with water agencies and other groups to encourage implementation of water conservation programs that improve water quality by reducing over-irrigation with smart products or turf replacement and capturing rain water in residential areas.	Chula Vista works with the San Diego County Water Authority, Otay Water District, and Sweetwater Water Authority to provide classes to residents that encourage water smart landscaping and gardening. Funding secure for FY16.	Prior to FY16	Yes – Continuous – Ongoing	The City provides water-saving information and giveaways at community events and farmers markets; the Naturescape Program helps residents implement sustainable landscaping practices through community workshops; and there are partnerships with water districts to help residents implement affordable water saving improvements.	NA		Yes
CV-35	Offsite Alternative Compliance Option (WMAA)	The WMAA provides alternative compliance methods in lieu of meeting structural BMP design standards and/or hydromodification management criteria on the project site. The San Diego County Copermittees have collectively funded and provided guidance for development of a regional WMAA. Copermittees compiled a list of candidate projects that consider the numeric goals of the WMAs as well as projects previously identified in JRMPs and other regulatory documents. Funding for future fiscal years is contingent on annual budget approval by City Council.	Planning prior to FY16	TBD - As needed		NA		TBD

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CV-36	Address and clean up pollutants from homeless encampments through *City of Chula Vista* Homeless Outreach Team. ~~If a regional social services effort is established, support workgroup to provide sanitation and trash management for person experiencing homelessness and determine if the program is suitable and appropriate for jurisdictional needs to meet goals.~~	~~The~~ *A* City *Homeless Outreach Team was formed during the reporting period that* ~~may participates jointly~~ *collaborates* with other agencies as part of a ~~regional~~ *City-wide* program. ~~Support a non-profit or consortium to provide sanitation services associated with hygiene as well as trash management for persons experiencing homelessness.~~ This *strategy serves as* ~~provision has been proposed as~~ a method for preventing surface water usage for sanitation and bathing, *trash reduction and cleanup,* as well as opportunity for outreach and referral by social service agencies. ~~Trash management services will include providing trash bags, trash collection areas, and shower/sanitary facilities at centers which provide daytime shelter or on a mobile-basis for known transit camps. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, 3) partners have been identified and formal MOUs have been developed, and 4) consensus and community support has been achieved. Resources necessary to implement this strategy include City staff to coordinate with the regional effort.~~	*FY 15-16*	Yes – City program implemented in FY15-16 – Continuous, ongoing	A City Homeless Outreach Team was formed during the reporting period that consists of City Parks staff, Chula Vista Police Department, Streets staff, and other entities. The team performs clean ups every week in known homeless encampment areas within the City, which includes City parks and facilities. Trash is removed from these encampments as a part of this effort. It is estimated that approximately 1,100-1,400 pounds of trash is picked up per week. New staff was budgeted for the next FY to support this program.	Yes – update to program	Approach and Schedule – this became a City program that was implemented in FY15-16	Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CV-37	Enhance and expand trash cleanups through community-based organizations involving target audiences.	Chula Vista partners with "I Love a Clean San Diego" on cleanup events, such as Creek to Bay, Coastal Cleanup, and Adopt a Canyon. Chula Vista also has its own cleanup event called Beautify CV Day. Funding secured for FY16. Dependent on budget availability.	Prior to FY16	Yes	The City continued to support the Creek to Bay Cleanup, Coastal Cleanup Day, and Beautify Chula Vista Day. There were also additional community cleanup events sponsored by the Alliance of Californians for Community Empowerment that targeted neighborhoods in need of graffiti removal and trash cleanup.	NA		Yes
CV-38	Enhance school and recreation-based education and outreach.	Chula Vista works with "I Love a Clean San Diego" on a variety of community events a year for the Boys and Girls Club, schools, high school environment clubs, and adult organizations. Triggers include available budget and obtaining a contract to aid in enhancing education programs.	FY16-17	NA		NA		Yes

Table 4-1 (continued)
City of Chula Vista Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))[1]	Implementation or Construction Year	Implementation Status		Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Additional Information (as needed)	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CV-39	Conduct and/or participate in special studies							
	a. Reference watershed study	The San Diego Regional Reference Stream Study (currently being conducted by the Southern California Coastal Water Research Project). The study will develop numeric targets that account for "natural sources" to establish the concentrations or loads from streams in a minimally disturbed or "reference" condition. Occurs region-wide. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval.	FY15-16	Yes – Completed		NA		No
	b. San Diego Bay Debris Study	The Trash Study is a comprehensive bay-wide study to help managers understand the current extent and magnitude of plastic-based debris accumulation and takes into account seasonal changes to better understand the plastic debris conditions throughout San Diego Bay and its upland contributing areas. Funding and resources were secured for FY2015.	Prior to FY16	Yes – Report will be available FY16-17.		NA		Yes
CV-40	Collaborate with regional education and outreach efforts.	Participate in regional education and outreach program along with other Copermittees. Triggers include opportunities and funding to participate in activities at a regional level.	FY15-16	Yes – Continuous, ongoing	The City participated in numerous Think Blue Events throughout the reporting year. Staff distributed reusable bags, doggie bones, and educational coloring books.	NA		Yes

4.4 MODIFICATIONS TO THE BMP DESIGN MANUAL

The Chula Vista BMP Design Manual provides guidance for land development and public improvement projects to comply with relevant development planning requirements in the Municipal Permit. Chula Vista updated its BMP Design Manual in accordance with Municipal Permit requirements during FY16; the BMP Design Manual replaced the Chula Vista Storm Water Manual (2011). No additional changes to the BMP Design Manual have been made since it went into effect. The updated Chula Vista BMP Design Manual can be accessed via the Project Clean Water website at: http://www.projectcleanwater.org/index.php?option=com_content&view=article&id=244&Itemid=212.

4.5 MODIFICATIONS TO THE JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM

The current Chula Vista JRMP is posted on the City's website, and the link to this page is listed on Project Clean Water. Modification to the City of Chula Vista's JRMP are as proposed in Table 4-2.

Table 4-2
City of Chula Vista Proposed JRMP Updates January 2017

Section No.	Proposed Changes
Acronym/ Abbreviation	added to the end of the definition the following: & Order No. R9-2015-0100
2.1	Revised Paragraph 4 (page 4) as follows: The City updated its BMP Design Manual (formerly known as the Development Storm Water Manual) which contains the City's regulations and requirements for development and redevelopment projects ~~by~~ on ~~December 2015~~ January 2016
2.1	Reformatted the entire section and added the following after the City Attorney Office paragraph: o City Clerk's Office • Maintain records of Ordinances and Resolutions approved by the City Council and oversee the Ordinances incorporation into the Chula Vista Municipal Code. • Process public records request related to the Municipal Permit and storm water. • Advises and assists Storm Water Management Section with Cease and Desist Orders, Administrative Hearings, and other escalated enforcement action.

Table 4-2 (continued)
City of Chula Vista Proposed JRMP Updates January 2017

Section No.	Proposed Changes
3.2.3	Revised Bullet 4. As follows: Discharges of non-storm water to the MS4 from the following categories are allowed on the condition that the discharge is addressed by the following BMPs, which are also discussed in the City's Minimum BMPs for Residential, Industrial, Commercial, and Municipal Sites/Sources in Appendix C; otherwise, they will be addressed as illicit discharge. ~~must be controlled by the requirements provided below. If the City determines that adequate control measures are not implemented for any of the following categories, then the City may prohibit such discharge on a case by case basis~~.
3.5.1.1	Deleted Table 3-1, it is duplicate of Appendix B.1 Attached to JRMP. Replace table 3-1 reference with Appendix B.1 in said section.
3.5.1.1	Added the following paragraphs to the end of the section: Paired receiving water monitoring sites that will be monitored concurrently with MS4 major outfall monitoring locations in the Focused Priority Condition area locations are presented in Table A3-2 of Attachment A3 of Appendix K of the San Diego Bay WQIP. City continues to assess trash as part of the MS4 Outfall Monitoring Program requirements at other major outfall locations in the Focused Priority Condition area, as presented in Table A3-3.
5.0	Replaced the word CSWMP with CSWPCP throughout the Section
5.2	Revised paragraph 3, page 5-1 as follows: Project applicants whose project disturbs less than one acre of land are required to submit a Construction Storm Water Pollution Control Plan (CSWPCP) or Construction Storm Water Certification Statement (both included in Appendix K of the BMP Design Manual) ~~Management Plan (CSWMP or Form 5504 included in Section 2 of the BMP Design Manual)~~ with their project submittals. The ~~CSWMP~~ CSWPCP is a simplified version of the SWPPP and covers a comprehensive list of BMPs applicable to smaller construction sites. The applicants select from the list all those BMPs that are applicable to their project and sign and certify the form. City staff reviews and approves the completed form before issuing any ~~construction~~ permits
5.2	*Use the paragraph from the BMP manual Appendix K*

Table 4-2 (continued)
City of Chula Vista Proposed JRMP Updates January 2017

Section No.	Proposed Changes
5.6.3	Revised the section as follows: The City requires that temporary or permanent erosion controls be implemented before a construction site has disturbed a total of 50 acres or more. ~~This 50 acre maximum is the current County of San Diego soil disturbance limitation~~. If the site is in compliance with applicable storm water regulations and has adequate control practices implemented to prevent storm water pollution, the City has the option to give the site written authorization to disturb beyond the 50 acre maximum up to 100 acres maximum. The City will require, as necessary, additional controls for construction sites allowed to disturb more than 50 acres, which could include additional BMPs, increased inspection frequency, and/or stronger penalties for non-compliance.
Appendix B.1	Updated Appendix B.1 - Major Outfall Inventory

5 CITY OF SAN DIEGO

5.1 ANNUAL REPORT CERTIFICATIONS

City of San Diego's signed Statement of Certification and Certification of Adequate Legal Authority for the San Diego Bay WMA Water Quality Improvement Plan 2015-2016 Annual Report are included on the following pages.

STATEMENT OF CERTIFICATION

San Diego Bay Watershed Management Area Water Quality Improvement Plan

2015-2016 Annual Report

I certify, under penalty of law, that this Water Quality Improvement Plan Annual Report submittal and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for known violations.

Drew Kleis
Deputy Director
Transportation & Storm Water Department

CITY OF SAN DIEGO

SCOTT CHADWICK
CHIEF OPERATING OFFICER

January 27, 2017

Mr. David W. Gibson, Executive Officer
Regional Water Quality Control Board
San Diego Region
2375 Northside Drive, Suite 100
San Diego, CA 92108

Subject: Certification of Adequate Legal Authority

Dear Mr. Gibson:

Pursuant to San Diego Regional Water Quality Control Board Order No. R9-2013-0001, as amended by Order No. R9-2015-0100 (Municipal Permit or Permit), Provision E.1.b, the City of San Diego, as a Copermittee in the above referenced permit, submits this certification of adequate legal authority with the first Water Quality Improvement Plan Annual Report. The City has adequate legal authority to implement and enforce each requirement contained in 40 C.F.R. section 122.26(d)(2)(i)(A)-(F), and the Municipal Permit (including Provision E.1.a(1)-(10)). The San Diego Municipal Code, including the following provisions, provides the City with adequate legal authority as required by the Municipal Permit:

1. Storm Water Management and Discharge Control, sections 43.0301 through 43.0312. These provisions are being amended, although the current version also complies with the requirements of the Municipal Permit.
2. General Construction Permit Authority and Procedures, sections 129.0101 through 129.0120.
3. Grading Regulations, sections 142.0101 through 142.0150.
4. Storm Water Runoff Control and Drainage Regulations, sections 142.0201 through 142.0230.

The City looks forward to working with you and the Regional Board on storm water management matters. If you have any questions, please contact Senior Planner Jim Harry at (858) 541-4353 or email JHarry@sandiego.gov.

Sincerely,

Scott Chadwick
Chief Operating Officer

5.2 ANNUAL REPORT FORM

The City of San Diego's completed JRMP Annual Report form and fiscal analysis for FY16 are included on the following pages.

Intentionally Left Blank

I. COPERMITTEE INFORMATION			
Copermittee Name: **City of San Diego (San Diego Bay WMA)**			
Copermittee Primary Contact Name: **Drew Kleis, Deputy Director, Storm Water Division, Transportation & Storm Water Department**			
Copermittee Primary Contact Information: Address: **9370 Chesapeake Drive, Suite 100**			
City: **San Diego**	County: **San Diego**	State: **CA**	Zip: **92123**
Telephone: **858-541-4320**	Fax: **858-541-4350**	Email: **Akleis@sandiego.gov**	

II. LEGAL AUTHORITY	
Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	**YES**[1] ☒ **NO** ☐
A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	**YES** ☒ **NO** ☐
III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE	
Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	**YES**[1] ☒ **NO** ☐
If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	**YES** ☒ **NO** ☐
IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM[2]	
Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	**YES**[1] ☒ **NO** ☐
Number of non-storm water discharges reported by the public	**634**
Number of non-storm water discharges detected by Copermittee staff or contractors	**393**
Number of non-storm water discharges investigated by the Copermittee	**1,021**
Number of sources of non-storm water discharges identified	**828**
Number of non-storm water discharges eliminated	**819**
Number of sources of illicit discharges or connections identified	**805**
Number of illicit discharges or connections eliminated	**796**[3]
Number of enforcement actions issued	**819**[3]
Number of escalated enforcement actions issued	**445**
V. DEVELOPMENT PLANNING PROGRAM[2]	
Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	**YES**[1] ☒ **NO** ☐
Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	**YES** ☒ **NO** ☐
If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	**YES**[4] ☒ **NO** ☐
Number of proposed development projects in review	**561**[5]
Number of Priority Development Projects in review	**38**[6]
Number of Priority Development Projects approved	**138**[7]
Number of approved Priority Development Projects exempt from any BMP requirements	**0**
Number of approved Priority Development Projects allowed alternative compliance	**0**
Number of Priority Development Projects granted occupancy	**37**[8]
Number of completed Priority Development Projects in inventory	**213**[9]
Number of high priority Priority Development Project structural BMP inspections	**1**
Number of Priority Development Project structural BMP violations	**1**[10]
Number of enforcement actions issued	**4**[11]
Number of escalated enforcement actions issued	**1**

VI. CONSTRUCTION MANAGEMENT PROGRAM[2]	
Has the Copermittee implemented a construction management program that complies with Order No. R9-2013-0001?	YES[1,12] ☒ NO ☐
Number of construction sites in inventory	3,870
Number of active construction sites in inventory	51
Number of inactive construction sites in inventory	425
Number of construction sites closed/completed during reporting period	518
Number of construction site inspections	18,737
Number of construction site violations	211
Number of enforcement actions issued	187
Number of escalated enforcement actions issued	32

VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM[2]				
Has the Copermittee implemented an existing development management program that complies with Order No. R9-2013-0001?				YES[1] ☒ NO ☐
	Municipal	Commercial	Industrial	Residential
Number of facilities or areas in inventory	197	14,085 (includes mobile)	690	70[13]
Number of existing development inspections	195	3,179	102	5[13]
Number of follow-up inspections	0	270	44	4
Number of violations	23	511	34	709[13]
Number of enforcement actions issued	41	623	44	543[13]
Number of escalated enforcement actions issued	6	217	11	291

VIII. PUBLIC EDUCATION AND PARTICIPATION	
Has the Copermittee implemented a public education program component that complies with Order No. R9-2013-0001?	YES[1] ☒ NO ☐
Has the Copermittee implemented a public participation program component that complies with Order No. R9-2013-0001?	YES[1] ☒ NO ☐

IX. FISCAL ANALYSIS	
Has the Copermittee attached to this form a summary of its fiscal analysis that complies with Order No. R9-2013-0001?	YES[1,14] ☒ NO ☐

X. CERTIFICATION

I [☐ Principal Executive Officer ☐ Ranking Elected Official ☒ Duly Authorized Representative] certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

[signature]	1/12/17
Signature	Date
Drew Kleis	Deputy Director
Print Name	Title
(858) 541-4320	Akleis@sandiego.gov
Telephone Number	Email

[1] The City of San Diego approved an update to the Jurisdictional Runoff Management Plan (JRMP) in FY 16. The update of the JRMP was done in compliance with Order No. R9-2013-0001.

[2] See the JRMP Annual Report FY 2016 Attachment 1 for a citywide summary of this data.

[3] The number of enforcement actions issued does not equal the number of identified illicit discharges or connections because some discharge complaints in the last quarter of FY 2016 were still under investigation at the end of FY 2016.

[4] The Storm Water Standards Manual (Part 1: BMP Design Manual, and Part 2: Construction BMP Standards) was updated in January 2016.

[5] The number of ongoing Standard and Priority Development Projects in review as of 6/30/16. The Development Services Department processes other types of permits, in addition to those included in the JRMP Annual Report, that are not subject to the requirements of the municipal permit.

[6] The number of ongoing Priority Development Projects in review as of 6/30/16. Only a portion of the projects that the Development Services Department processes qualify as a priority development project.

[7] The number of Priority Development Projects approved in FY 2016.

[8] This number includes the City's Priority Development Projects that received final inspection in FY 2016 as well as certain Priority Development buildings and grading projects that did not require a Certificate of Occupancy, that were completed in FY 2016.

[9] Represents the total number of completed Priority Development Projects in the City's inventory as of the end of FY 2016. These projects include completed projects entered into the inventory in previous years.

[10] The number of Priority Development Project structural BMP violations included Notices of Violation, Notices of Deficient Maintenance, and Administrative Citations issued to public and private entities within the City's jurisdiction in this watershed.

[11] The number of enforcement actions included Notices of Violation and Notices of Deficient Maintenance issued to public and private entities within the City's jurisdiction in this watershed. The City has achieved compliance at 146 of the 150 sites identified in the San Diego RWQCB's Notice of Violation (Order Number R9-2014-0034). The San Diego RWQCB granted the City an extension to achieve compliance at the remaining four sites by May 26, 2017.
During the process of achieving compliance for the aforementioned 150 identified sites, the City has discovered an additional 74 sites which initially appear to be out of compliance due to varying degrees of circumstances. Each of these potential violations consist of post-construction BMP issues. Continuing the same process as outlined in our quarterly reports to the RWQCB, the City is currently researching each case. After initial research to verify non-compliance or not, we will follow our established procedures to have each site be in conformance to the MS4 permit under which it was permitted.

[12] Responses in this report are based on the City's internal data. Potential program deficiencies were identified by the Board in FY 2016, however, the City has taken steps to correct issues identified by the Board as detailed in the JRMP Annual Report FY 2016 Appendix. The City has implemented several improvements that address the Regional Board's concerns. These improvements ranged from procedural changes to creating multi-language brochures for contractors. Several operating and internal procedures have been refined to improve enforcement actions, add clarity to how sites are inspected, and to better define the staff's roles and expectations.

[13] Existing facilities for residential uses are characterized as Residential Management Areas (RMA), which could include hundreds of residences. When all of the residences in an RMA are inspected by City staff that is only counted as one inspection. However, all individual issues noted at each residence during an RMA inspection is counted as a separate violation and/or enforcement action.

[14] See the JRMP Annual Report FY 2016 Appendix for the FY 2016 Fiscal Analysis.

APPENDIX

1 OPERATIONAL ADAPTIVE MANAGEMENT

In Fiscal Year (FY) 2016 the City of San Diego (City) completed technical and non-technical monitoring, special studies, pilot studies, and various other efforts related to its Storm Water Program. The City gained valuable information that led to effective adaptation of procedures and operations, which ultimately led to more effective implementation of its Storm Water Program and the Jurisdictional Runoff Management Plan (JRMP). The following are operational adaptive management improvements that the City made during FY 2016:

- **Get it Done Application**
  In late FY 2016, the City released the Get it Done Application (App), which provides a modern, efficient method for members of the public to report issues to the City. One of the App's features allows illicit discharges to be reported by taking a photo with a phone that includes Global Positioning System (GPS) coordinates, and uploading it to the App. According to a recent City survey, 83 percent of respondents stated that they did not want to call the City government to report a problem. The new Get It Done App eliminates the need to call the City for various problems, by allowing residents to report issues online, which was the preferred method of 50 percent of survey respondents. The App also allows residents to report problems using their name or anonymously.

- **Phase V Street Sweeping Pilot**
  The City completed the fifth and final pilot study of the Targeted Aggressive Street Sweeping Pilot Program in FY 2016, which tested the effectiveness of posting limited-hour "no parking" signs on traditionally non-posted street sweeping routes. After two years of data collection on two subject routes, the study confirmed the hypothesis that a significant amount of additional debris (48% and 58% over baseline on the subject routes) can be removed from posting no parking signs on traditionally non-posted roadways. Based on this finding, the City will consider posting additional routes if supported by the community.

- **Enhanced Catch Basin Cleaning Optimization**
  Enhanced catch basin cleaning is a strategy to address pollutant removal from the Municipal Separate Storm Sewer System (MS4) in three of the City's six watersheds. While most catch basins are inspected once per year, this strategy involves inspecting catch basins within the specified watersheds between two and four times per year. The optimization study assigned priorities to individual basins and watersheds based on eight years of historic debris removal. This optimization focused efforts by reducing the number of inspections performed per year, while increasing total debris removal from those inspections. This enhancement will allow the City to target high priority drains to maximize pollutant removal while maintaining cost efficiencies. In FY 2016, approximately 2,500 additional catch basin inspections and cleanings (if necessary) were completed in the Chollas Creek area of the San Diego Bay Watershed.

- **Flood Control Pump Stations**
  To help minimize the risk of flooding in flood-prone areas during storm events, the City utilizes a number of pump stations to increase the flow of water through the conveyance network. Considering the pump stations are connected to the electric network, they only

function when power is running. In FY 2016, a 2,400 volt automatic transfer switch and generator were installed at a critical pump station that are capable of pumping 130,000 gallons of water per minute. This significantly decreases the risk of flooding in the related drainage area because the pump station will continue to operate during a storm event. The City also replaced or refurbished 11 other critical pump stations. Additionally, the City modernized operations at 14 pump stations by installing a telemetry system that remotely alerts staff of failures, allowing for a more immediate response.

- **Storm Drain Inspections**
  To help prioritize replacement of corrugated metal piping in the City's conveyance network, the City used closed-circuit televising at 62 locations in FY 2016 to assess pipe conditions. The City assessed the condition of 28,000 linear feet of corrugated metal piping in FY 2016.

- **Property-Based Inspections**
  In FY 2016, the City further committed to implementing property-based inspections to increase the business inspection program's efficiency and effectiveness. A previously conducted pilot study on inspection practices found property-based inspections more effective at identifying and resolving water quality issues (e.g., improper trash disposal practices and irrigation runoff, etc.) associated with commercial and industrial businesses. The inspections are focused on areas and activities associated with businesses that would not otherwise be inspected for storm water compliance. The inspections greatly increase the number of businesses subjected to storm water inspections while focusing on the pollution generating areas and activities without unduly increasing the inspection load of City inspectors. In FY 2016, the City performed 835 property-based inspections that accounted for over 4,700 business inspections.

- **Tiger Team**
  The Tiger Team was established in FY 2016 to identify, locate and eliminate sources of human specific bacteria sources in the MS4. The Transportation & Storm Water Department (TSW) leads this effort in partnership with the Public Utilities Department. After a specific portion of the MS4 with elevated human specific bacteria was identified, the Tiger Team performed escalated enforcement activities through TSW Code Enforcement, MS4 sampling, MS4 sanitary sewer line televising, and MS4 and sanitary sewer cleaning. Over several months during the reporting year, one problem area within the City was investigated extensively and a source of human specific bacteria in the MS4 was identified and abated.

- **Increased Non-Stormwater Discharge Investigations**
  The City received 215 more complaints of non-stormwater discharges in FY 2016. Approximately 81% of the complaints citywide were resolved. A majority of the investigations that were resolved involved irrigation runoff. Cases were unresolved either because the source could not be identified or the source was groundwater.

  The identification and elimination of irrigation efforts in FY 2016 involved the following:
  1) Special irrigation patrols were conducted on a monthly basis. All violating properties were issued notices of violation and/or a citation.
  2) TSW code compliance partnered with the Public Utilities Department. If a complaint of irrigation with runoff was received, a storm water code compliance officer would issue a notice of violation. If the property had multiple complaints,

that property would become part of an irrigation patrol and could result in a citation.

- **Waterways Maintenance Plan**
  The City began development of the Waterways Maintenance Plan in FY 2016, which will replace the Master Storm Water System Maintenance Program, which expires in 2018. The goals of the Plan are to create an overall holistic storm water management strategy with standard mitigation measures and streamlined maintenance approvals. Objectives of the Plan include flood risk reduction, infrastructure sustainability and resource protection and restoration. In addition to technical scoring criteria, the Plan also includes a unique public input metric so that public concerns are given a tangible value. Planning efforts will continue in FY 2017, with implementation beginning in FY 2019.

- **Off-Site Alternative Compliance Program**
  In FY 2016, the City implemented phase I of the Alternative Compliance Program. This gives development projects that would require on-site structural Best Management Practices (BMPs) to comply with pollutant control and hydromodification management the option to propose off-site alternative compliance projects. The development of phase II also began in FY 2016 and includes establishing an in-lieu fee structure and credit system as an alternative to installing on-site stormwater BMPs.

- **Watershed Master Planning**
  To provide the high-resolution data needed to drive systematic and cost-effective implementation of green infrastructure (GI) projects, the City has developed a comprehensive and dynamic Watershed Master Plan (WMP) in the Chollas Creek Watershed that quantifies progress towards water quality goals and incorporates synergies with other municipal programs. The WMP has the capability to dynamically assess the cost-based water quality benefits of specific GI projects against one another and incorporates a robust prioritization logic that realizes the complex nature of implementing retrofit GI facilities within a highly urbanized environment. Ultimately, the output of this project gives the City a project-by-project roadmap that is prioritized to implement high-impact and high-efficiency BMPs first, leaving less desirable projects for later implementation.

- **Bacteria Regrowth Study**
  The bacteria regrowth study currently being completed by the City includes monitoring to characterize the magnitude and extent of potential *Enterococcus* loading due to regrowth within the City's storm drain system. This study will quantify the amount of bacteria in receiving water samples that are harmless to humans and would potentially be used to refine bacteria water quality standards of the Bacteria TMDL as a part of the re-opener process.

- **Los Peñasquitos Lagoon Restoration Project**
  Modeling was completed in FY 2016 to confirm the preferred alternative for the Los Peñasquitos Lagoon Restoration project. The City was identified as the "lead" for the project. The upcoming tasks in FY 2017 include completing the concept design and starting the public outreach process. In coordination with Copermittees, Caltrans and SANDAG completed the environmental and construction phases for various rail and transit, highway, and environmental protection projects.

2 STORMWATER PROGRAM ACCOMPLISHMENTS/NOTABLE UPDATES

The City continued to implement the key elements of the JRMP. The following are stormwater accomplishments and notable updates that occurred during the FY 2016 reporting period.

- ## Water Quality Improvement Plans

In FY 2016, the San Diego Regional Water Quality Control Board (Regional Board) accepted the six Water Quality Improvement Plans (WQIPs) that included City jurisdiction. The goal of the WQIPs is to protect, preserve, enhance, and restore the water quality of receiving water bodies. These WQIPs identify the adaptive planning and management process necessary to address the highest priority water quality conditions within a watershed. The WQIPs also identify strategies to achieve improvements in the quality of discharges from the Responsible Agencies' storm drain systems. The City is the lead on the WQIP for the San Dieguito, Los Penasquitos, and Mission Bay watersheds. The City is also a participating agency in the San Diego River, San Diego Bay, and Tijuana River watersheds.

- ## JRMP Refinements

In FY 2016, the City identified refinements to the JRMP. These refinements were incorporated into the JRMP and will be completed in mid FY 2017. Refinements included minor changes to text to update the discussions of WQIP strategies, updates to the fiscal analysis, updates to the minimum BMPs to address pesticide applications, and updated references to the Storm Water Standards Manual that was adopted in FY 2016. The updated JRMP can be viewed at https://www.sandiego.gov/stormwater/plansreports/jrmp.

- ## General Plan and Community Plan Amendments

Southeastern San Diego and Encanto Neighborhoods Community Plan Updates:

The recently adopted Southeastern San Diego and Encanto Neighborhoods Community Plans incorporate language, policies and recommendations concerning the reduction of urban runoff and storm water quality. Stormwater quality plays a significant role in both of these communities since Chollas Creek is a significant feature within both plan areas lead directly to the San Diego Bay. A primary recommendation in both community plans is the restoration and enhancement of the creek, consistent with the Chollas Creek Enhancement Program, which includes the reduction of pollutants that enter the storm water system from nearby uses (see respective Conservation Elements). Specific stormwater language and policies have been adopted for the newly updated Southeastern San Diego and Encanto Neighborhoods Community Plans (adopted October 2015 by City Council).

The following policies have been adopted and will be used to implement BMPs for new development projects in Encanto as an example:

- PLU-53:
  - Facilitate urban gardening as a strategy for creating local healthy food systems and fighting chronic obesity related illnesses, contributing to stormwater retention, and fostering community interaction;
  - Figure 3-4 in the Southeastern San Diego and Encanto Neighborhoods Community Plan illustrates stormwater treatment for streets;
  - Images on page 4-15 in the Southeastern San Diego Encanto Neighborhoods Community Plan illustrate stormwater treatment images;

- P-UD-88: Utilize permeable paving, bioswales, green alleys and/or other stormwater design features that will manage rain water and irrigation runoff while supporting the heavy load vehicles that would service the loading docks and refuse containers;

- Upgrade infrastructure for water and sewer facilities and institute a program to clean the storm drain system prior to the rainy season.

- Install infrastructure that includes components to capture, minimize, and/or prevent pollutants in urban runoff from reaching San Diego Bay and Chollas Creek. (See also Urban Runoff Management in the Conservation and Sustainability Element.)

- P-RE-20: Require that all stormwater and urban runoff drainage be filtered or treated before entering into open space lands.

Draft North Park Community Plan: The draft North Park Community Plan, scheduled to be adopted by City Council in October 2016, also contains specific Stormwater and BMP language in the Conservation Element of the Community Plan as well as in the appendices. The draft North Park Community Plan incorporates language, policies and recommendations concerning the reduction of urban runoff and storm water quality specifically in relation to tree planting as well as "Green Streets". Specific policies include:

- PF-1.15 Implement water improvements programs so there are systematic improvements and gradual replacement of water and wastewater facilities throughout the community. Also see General Plan PF-F.6 PF-G.2, PFH. 3, and PF-I.1.
  - Implement Green Infrastructure strategies to address storm water runoff throughout North Park.

- SE-3.17 Encourage property owners to design or retrofit landscaped or impervious areas to better capture stormwater runoff.

Draft Uptown and Golden Hill Community Plans: Public review drafts of the community plans for Uptown and Golden Hill plan updates were made available for public review in June 2016. The Conservation Elements of the draft community plans address conservation of the natural resources in each community, including open space, natural habitats, canyon sewer maintenance, and management of water resources and

urban runoff. The Public Facilities, Services and Safety Elements also address water, sewer and stormwater infrastructure. The discussion and policies related to these topics are intended to guide sustainable development practices that will minimize ecological footprints within each community and preserve natural features and resources. The Draft Programmatic Environmental Impact Reports were released in the summer of 2016. Adoption of the community plans are anticipated at the end of 2016.

San Ysidro Community Plan Update: A comprehensive community plan update started in San Ysidro in June of 2010 and aims to reflect the current conditions, improve mobility, include the pedestrian environment, and address quality of life issues. A Community Plan Update Stakeholders Advisory Committee (Advisory Committee) was established as part of the plan update effort and consists of diverse representation from the residents, property owners, various business interests, local community organizations, and not-for-profit groups, and participating public agencies within the plan update boundary. The San Ysidro Community Planning Group, which provides City decision-makers with input and recommendations regarding land use plans and development proposals within the San Ysidro plan boundary, makes up the majority of the Advisory Committee members. The Plan update effort is informed by technical studies and the City's 2008 General Plan which promotes current storm water, urban runoff, and water conservation policies. A discussion draft of the plan was released in June 2014 and a public review draft was released in April 2015 and 2016. The plan includes a Conservation Element as well as a Public Facilities Services and Safety Element, and contains specific policies related to reducing storm water runoff in the San Ysidro Community planning area. The plan is anticipated to be adopted in fall 2016.

- Notices of Violation

Treatment Control BMPs Notice of Violation: The City has achieved compliance at 146 of the 150 sites identified in the Regional Board's Notice of Violation (Order Number R9-2014-0034). The Regional Board granted the City an extension to achieve compliance at the remaining four sites by May 26, 2017.

During the process of achieving compliance for the aforementioned 150 identified sites, the City has discovered an additional 74 sites which initially appear to be out of compliance due to varying degrees of circumstances. Each of these potential violations consist of post-construction BMP issues. The City is continuing the same process outlined in its quarterly reports to the Regional Board, and is researching each case. After initial research to verify non-compliance or not, the City will follow its established procedures to achieve compliance at each site as required by the MS4 permit that it was permitted.

Administrative Civil Liability Complaint: The Regional Board conducted an audit of the City's construction management program during the 2014-2015 rainy season, and issued an Administrative Civil Liability Complaint in July 2016 for several alleged violations involving the City's construction oversight and enforcement practices. The City has worked diligently to address their initial concerns, and will continue to evaluate and implement strategies to ensure long-term success.

Since 2011, there has been a steady increase in the number of construction projects citywide. This surge in activity required the City to respond in a manner that would

enable the staff to keep up with the demand and allow the managers to effectively oversee the growth.

Several substantial improvements have been made, ranging from updating our standard procedures and increasing our outreach efforts to improving the City's escalating enforcement practices and issuing Administrative Citations and Administrative Civil Penalties to repeat offenders. In addition, the City established bi-weekly coordination meetings with the Storm Water teams from Public Works, Development Services and TSW to more effectively share up-to-date project information, discuss various strategies, collaborate on solutions, and coordinate enforcement on a more routine basis so that escalated enforcement is effective.

Another significant improvement involves the development of a unified storm water enforcement database. This will ensure collaboration between Resident Engineers (RE) and storm water inspectors while in the field so they will know the full inspection and enforcement history prior to entering a site. This resource is expected to be available in FY 2017.

Updating the Storm Water Standards Manual is another milestone improvement that was completed during FY 2016. The additional clarity that's now provided in the Construction BMP Standards section (Part 2) gives the responsible party increased guidance to help prevent construction activities from adversely impacting water quality downstream.

The frequency of the citywide storm water training has increased and proven to be a key factor in equipping and empowering our staff to properly address various field challenges and confidently communicate concerns and violations to the responsible parties. Some of the trainings included mandatory annual storm water training for the REs, Inspectors and Code Enforcement Officers, as well as training for our operations staff from the Public Utilities Department and TSW Streets Division.

3 Fiscal Analysis

3.1 General Budget Information

The Storm Water Division is responsible for reporting annually on the jurisdictional, watershed and regional fiscal analyses to the Regional Board in accordance with the regional Fiscal Analysis Method developed by the Copermittees in response to Regional Board Order No. R9-2007-0001 (2007 Permit). During the reporting period, the Storm Water Division collected and analyzed financial information from 23 City departments/divisions through its "Annual Report Form" questionnaire, as well as from within the Storm Water Division. A summary of the findings is included below.

FY 2016 fell within the transitional period, as defined under Regional Board Order No. R9-2013-0001, as amended by Order No. R9-2015-0001 (Municipal Permit). During the transitional period, most of the jurisdictional portions of the City's program continue to follow the requirements of the 2007 Permit, while the JRMP and WQIPs were being developed in response to the current Municipal Permit. The WQIPs were approved by the Regional Board at the end of FY 2016. The expenditures described for FY 2015 therefore reflect costs to comply with the transitional period stormwater requirements in effect during FY 2015, which are a combination of 2007 Permit and current Municipal Permit standards. Since the WQIPs were approved during FY 2016, partial implementation began, but full implementation will commence in FY 2017.

It is expected that the City will begin full implementation of current Municipal Permit requirements during FY 2017. The City will implement the revised JRMP, which updates the City's jurisdictional stormwater program to follow the current Municipal Permit requirements rather than the 2007 Permit requirements. The City's fiscal analysis reporting structure in turn will change, reporting expenditures, and funding sources in the following three main categories: JRMP (jurisdictional), WQIP (watershed), and flood risk management. That structure is consistent with the framework described in the City's Watershed Asset Management Plan (WAMP), the WQIPs to which the City is a party, and the JRMP. FY 2015 is the last year in which JRMP and flood risk management will be lumped together under the heading of "Jurisdictional Component" rather than reported separately.

3.2 Fiscal Analysis Methods

While the City used the format and guidelines included in the Fiscal Analysis Method for reporting purposes, a few modifications were necessary to address how the City tracks accounts internally. Modifications to the expenditure categories are described in the relevant sections below. In many cases, estimated percentages were used to allocate expenditures into the appropriate municipal permit component categories, including watershed and regional.

3.2.1 Fiscal Analysis Results

3.2.1.1 Expenditures

The City's FY 2016 Transitional JRMP Regional Program total expenditures ($75,934,083) for implementing the Municipal Permit requirements are summarized in Table 1.

Table 1: FY 2016 Jurisdictional, Watershed, and Regional Expenditures Summary

Jurisdictional Component	
Administration	$11,179,605
Development Planning (including public and private projects)	$1,897,784
Construction (including public and private projects)	$632,646
Municipal (including Non-emergency Fire Fighting expenditures)	$30,146,109
Storm Water Division Capital Improvements Program (CIP)	$7,929,308
Industrial and Commercial	$2,001,544
Residential, Education, and Public Participation	$2,159,991
Illicit Discharge Detection and Elimination (IDDE)	$11,339,120
Jurisdictional Total	$67,286,108
Watershed Component[1]	
San Dieguito Watershed	$1,105,348
Los Peñasquitos Watershed	$2,061,071
Mission Bay Watershed	$1,242,769
San Diego River Watershed	$680,843
San Diego Bay Watershed	$2,165,456
Tijuana River Watershed	$686,584
Watershed Total	$7,942,071
Regional Component	
Total Copermittee Cost Share for the City of San Diego	$342,001
Additional Regional Costs for education efforts, monitoring, document reviews, regional meeting attendance, and special projects	$363,903
Regional Total	$705,904
Total Costs	$75,934,083

[1] Watershed Component costs do not include Capital Improvements Program (CIP) costs. CIP costs are only included in the Jurisdictional Component's Storm Water Division Capital Improvements Program Category.

Transitional JRMP Expenditures

The City's FY 2016 Citywide expenditures for implementing the jurisdictional Municipal Permit requirements are depicted in Figure 1. Expenditures were provided as actual costs in most cases, and when the actual costs could not be determined, estimates of actual costs were provided. The Storm Water Division used the expenditure categories detailed in the Fiscal Analysis Method for jurisdictional reporting. However, because of implementation overlap with the City's education, public participation, and residential Municipal Permit components, it is difficult to separate out individual component costs. Therefore, the expenditures for residential, education, and public participation are reported as one expenditure category.

A total of $67,286,108 was expended in FY 2016 to implement JRMP activities citywide. This amount includes costs paid by sewer and water rate payers (which are used for sewer and water-related services) and costs reimbursed by project applicants. An overview of the expenditures reflected in this component is described below.

Administration ($11,179,605)

Activities identified in this section represent personnel and non-personnel expenses for administration and contracts, grant management, citywide management, staff training, reporting, and assessment of the Municipal Permit.

Development Planning ($1,897,784)

Activities identified in this section represent personnel and non-personnel expenses for plan check reviews, incorporating BMPs into project designs, BMP Design Manual development, and General Plan updates. This category includes expenses for private and public projects.

Construction ($632,646)

Activities identified in this section represent personnel and non-personnel expenses for plan check review services, field inspections related to grading permits, public improvements, and building activities. This category includes expenses for private and public projects.

Municipal ($30,146,109)

Activities identified in this section represent personnel and non-personnel expenses for street sweeping, storm drain and channel maintenance, BMP implementation, and municipal facility and activity inspections. Additionally, this section includes the expenditures for Fire Department activities not related to emergency firefighting, such as facility inspections, stormwater BMPs, etc.

Capital Improvement Program ($7,929,308)

Activities identified in this section represent personnel and non-personnel expenses for implementation of new construction and planned improvements to existing facilities for storm water management. Projects may include, but are not limited to, the construction, purchase, or major renovation of buildings, utility systems, and other facilities to achieve storm water requirements. In addition, they may also include land acquisitions and roadway projects to install storm water facilities.

Industrial and Commercial ($2,001,544)

Activities identified in this section represent personnel and non-personnel expenses for inspection of industrial and commercial facilities. This also includes personnel and non-personnel expenses for the stormwater components of Food Establishment Wastewater Discharge Program (FEWD) and Industrial Wastewater Control Program (IWCP) inspections.

Residential, Education, and Public Participation ($2,159,991)

Activities identified in this section represent personnel and non-personnel expenses for educational materials, outreach efforts and events, public service announcements (PSAs), household hazardous waste (HHW) and used oil outreach, and community events.

Illicit Discharge Detection and Elimination ($11,339,120)

Activities identified in this section represent personnel and non-personnel expenses for identification and elimination of illicit discharges, enforcing the City's stormwater ordinance and implementation of the administrative civil penalties and citation process, and the urban runoff monitoring program.

Watershed Expenditures

The City's watershed expenditures during FY 2016 for the implementation of the watershed Municipal Permit requirements were provided as actual costs and when the actual costs could not be determined, estimates of actual costs were provided. The Storm Water Division used the expenditure categories (administration, watershed activities, cost share contribution, and other) detailed in the Fiscal Analysis Method for watershed reporting. The watershed expenditures included in this report only capture City expenditures and do not account for any expenditure disbursed by other Copermittees within the watershed(s).

In total, $7,942,071 was expended in FY 2016 for the implementation of citywide watershed activities. This amount includes costs for the implementation of applicable TMDLs along with special studies.

Regional Expenditures

The City's FY 2016 regional expenditures ($705,904) for the implementation of the regional Municipal Permit requirements are primarily the City's share of regional Copermittee stormwater program costs. Additional costs include estimated staff time to attend regional meetings and other related administration costs. The Storm Water Division used the expenditure categories (administration, cost share contribution, regional activities, and other) detailed in the Fiscal Analysis Method for regional reporting. The regional expenditures included in this report only capture City expenditures, and do not account for any expenditure disbursed by other Copermittees in the region.

3.2.1.2 Grant Funding for Special Studies

In addition to resources identified for Municipal Permit requirements, the City actively seeks grants, and other funding sources, for special studies and Capital Improvement Projects. For the most part, funding for these projects may be limited to the projects specified and the City may restrict funding reallocation to other projects. Therefore, these resources are currently not incorporated in calculations for total Municipal Permit requirements expenditures detailed in Section 2.2.1.4 above. Table 2 lists projects that were initiated and/or in progress during FY 2016. It is important to note that the projects span multiple years and the amounts listed below are not just representative of FY 2016.

Table 2: Funding for Special Projects

Funding Source	Project	Amount	Matching Fund Amount	Total Amount[2]
San Diego County Water Authority (SDCWA)	Memorial Park Infiltration Basin Construction	$255,651.00	$295,904.00	$551,555.00
State Water Resources Control Board (SWRCB)	43rd & Logan Monitoring & Assessment	$689,300.00	$85,362.00	$774,662.00
SDCWA	Bannock Avenue Infiltration Construction	$630,500.00	$893,300.00	$1,523,800.00
SWRCB	Southcrest Park Infiltration Project	$1,880,070.00	$777,970.00	$2,658,040.00
Total Grant Funding		$3.5 million	$2.0 million	$5.5 million

2 Amounts span multiple years and not just FY 2016

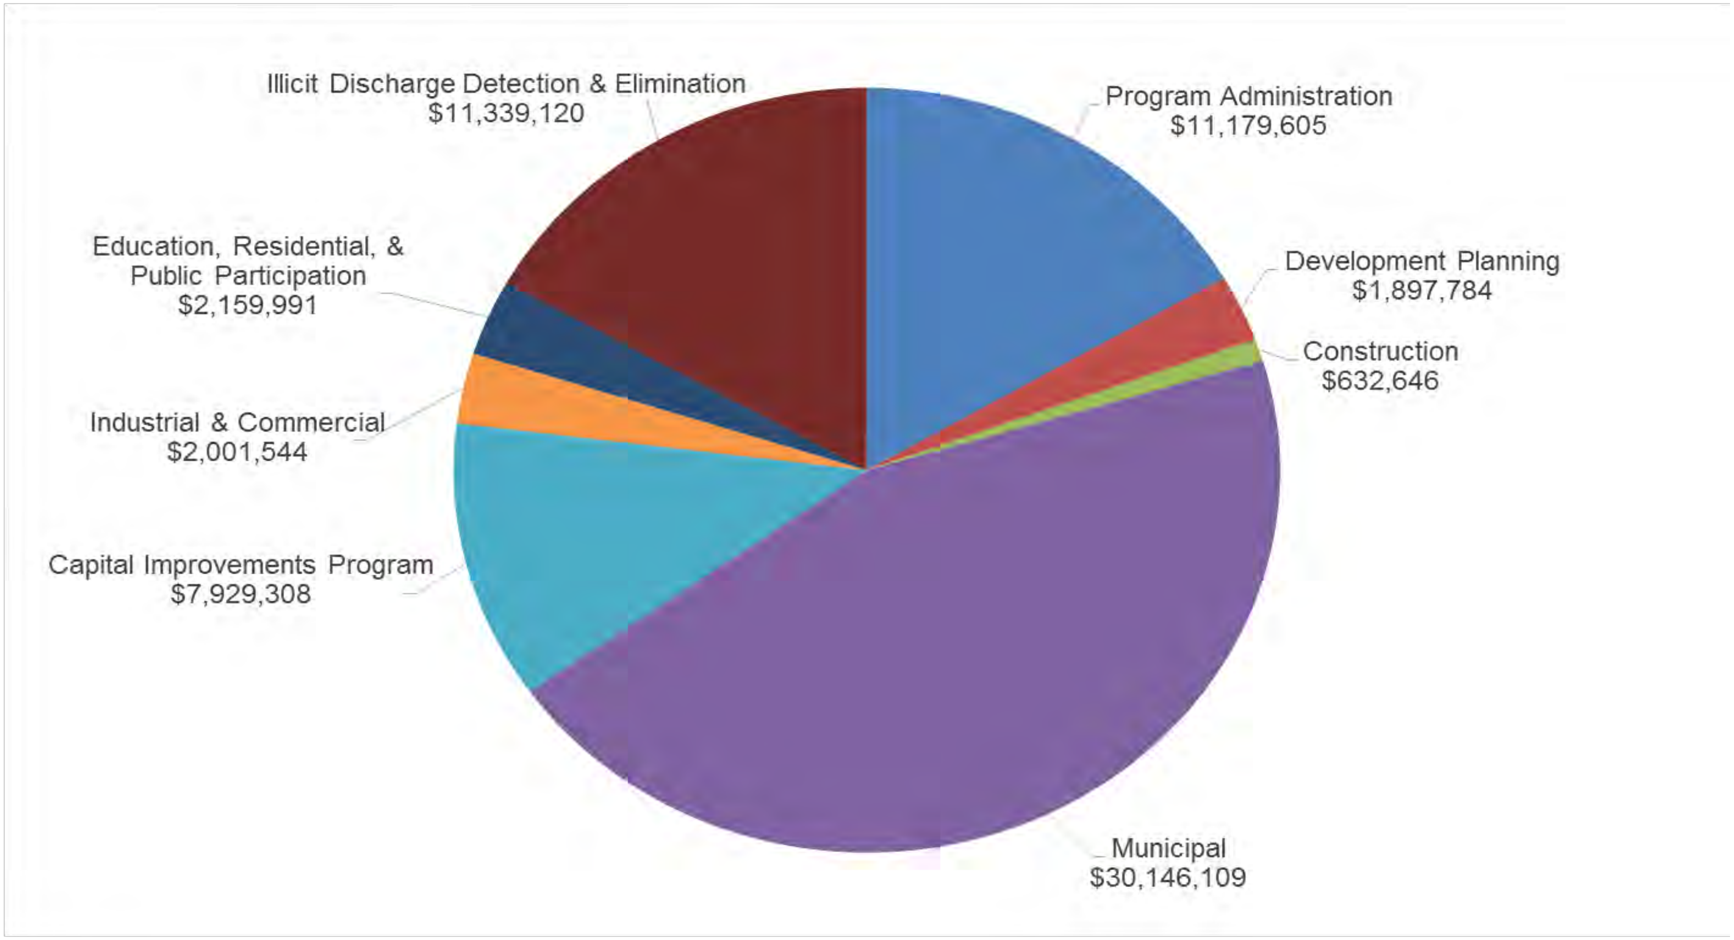

Figure 1: FY 2016 Citywide JRMP Expenditures by Permit Area

This page intentionally blank for printing purposes.

3.2.2 Funding Sources

Citywide implementation of Municipal Permit requirements is funded through four main types of governmental funds: the General Fund, Special Revenue Funds, Enterprise Funds, and Internal Service Funds.

3.2.2.1.1 General Fund

The General Fund is the main fund for the City and is supported by major revenue sources, including property tax, sales tax, transient occupancy tax, and franchise fees. Departments funded by the General Fund provide core community services.

3.2.2.1.2 Special Revenue Funds

Special Revenue Funds account for revenues received for specifically identified purposes. Some of the larger funds that fall under this category include TransNet, Gas Tax, and Special Promotion programs.

3.2.2.1.3 Enterprise Funds

Enterprise Funds are initiated for specific purposes and funded through fees for services. This funding type is designated for the operations, management, maintenance, and development of the department providing the service. For implementation of citywide JRMP activities, activities are funded through the following enterprise funds:

- Airports Fund
- Development Services Enterprise Fund
- Golf Course Enterprise Fund
- Recycling Fund
- Refuse Disposal Fund
- Sewer Revenue Funds
- Water Utility Fund

3.2.2.1.4 Internal Service Funds

Internal Service Funds are comprised of fees for services provided by one City department to another City department or division. For implementation of citywide JRMP activities, activities are funded through the following internal service funds:

- Engineering and Capital Projects Fund
- Equipment Division Funds

This page intentionally blank for printing purposes.

5.3 CITY OF SAN DIEGO STRATEGIES

The City of San Diego is proposing the following administrative changes to the San Diego Bay Quality Improvement Plan outlined in Table 5-1. The proposed administrative changes include clarifications, corrections to errors and typos, and other minor edits that only apply to the City of San Diego. Changes to individual strategies, with respect to the WQIP September 2015 submittal, are shown in ~~strikeouts~~ and red text in the City's strategy reporting table later in this section (Table 5-2 to 5-5).

Table 5-1
Administrative Changes to the WQIP – City of San Diego

	WQIP Section	Administrative Changes
1	Section 4.3.3.2.3 Alternative BMP Implementation Scenario for Refinement of Water Quality Regulations	Included the following text: "Cost comparison between the Primary and Alternative Scenario presented in this section are a snapshot in time and are based on the best information available at the time they were prepared. As program implementation progresses, updates to estimated funding needs are likely to change. For the most recent estimate of funding needs, refer to the WAMP available at the Storm Water Division website, www.sandiego.gov/storm water/plansreports.
2	Appendix I – Jurisdictional Strategies and Schedules; Section I.4.2 Funding Needs for the City of San Diego	Included the following text: "Funding needs presented in this section are a snapshot in time and are based on the best information available at the time they were prepared. As program implementation progresses, updates to estimated funding needs are likely to change. For the most recent estimate of funding needs, refer to the WAMP available at the Storm Water Division website, www.sandiego.gov/storm water/plansreports.
3	Appendix I – Jurisdictional Strategies and Schedules; Table I-4-2 City of San Diego Jurisdictional Strategies	Refined the text (shown as track changes in red text in Appendix 2) to provide greater clarity and/or to correct errors and typos.
4	Appendix I – Jurisdictional Strategies and Schedules; Table I-4-2 City of San Diego Jurisdictional Strategies	Changed strategy identification numbering system (See Appendix 2).

5	Appendix I – Jurisdictional Strategies and Schedules; Table I-4-2 City of San Diego Jurisdictional Strategies	Structural Strategies, Priority Development Project (PDP) BMPs: All PDP BMPs have been combined into a single strategy for ease of viewing. A table with an updated list of PDP BMPs is included in the WQIP Annual Report (See Appendix 2).
6	Appendix I – Jurisdictional Strategies and Schedules; Table I-4-2 City of San Diego Jurisdictional Strategies	Structural Strategies, Multi Use Treatment Areas (MUTAs): Planned MUTAs that are not yet built have been combined into a single strategy for ease of viewing. The total sum of drainage area treated (level of commitment) has not changed. A table with all structural strategies (MUTAs, Green Infrastructure, Green Streets, etc.) is included in the WQIP Annual Report (See Appendix 2).

Table 5-2
City of San Diego Jurisdictional Strategies for San Diego Bay WMA

~~Strikeouts~~ and red text are text edits that have been made up to the current date since the WQIP September 2015 submittal.

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Jurisdictional Strategies								
Note: Strategy IDs with an asterisk indicate those strategies that are considered "jurisdictional" in the MS4 Permit, but are considered enhancements to the JRMP to target highest priority water quality conditions.								
JRMP (E.2-E.7) Strategies (E.3.b.(1)(a))								
E.3 Development Planning								
All Development Projects								
CSD-JRMP-01	Establish guidelines and standards for all development projects; provide technical support related to implementation of source control BMPs to minimize pollutant generation at each project and implement LID BMPs to maintain or restore hydrology of the area or implement easements to protect water quality, where applicable and feasible le. Includes internal coordination and collaboration between City departments (DSD, PWD, and Engineering) to improve success and long-term benefits of BMPs.	Refer to JRMP Section 4. ~~All high priority projects will be inspected annually prior to the rainy season. 20 percent of all projects will be inspected annually. Maintenance inspections include examination of all structural BMPs at a project to verify that each structural BMP is working, being maintained properly, and is in compliance with all applicable City ordinances and permits.~~ May include providing technical support and consultation for other City departments that review project submittals for compliance with Storm Water Standards Manual requirements. May also include review of City projects for compliance with Storm Water Standards Manual requirements.	Prior to FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	FY16 Notes: Revised Storm Water Standards Manual went into effect on February 16, 2016. FY17 Notes: The Storm Water Standards will be revised to include Critical Coarse Sediment Yield Area mitigation measures that were developed through a TAC process, along with other minor clarifications.
CSD-JRMP-02	Develop Design Standards for Public LID BMPs.	Improve quality of design to ensure efficiency and reliability in public designs.	FY14-FY15	Continuous- As needed	Yes	No Change	Yes	FY16 Notes: Draft Green Infrastructure standard drawings and specifications are currently in the review process. FY17 Notes: Plan to develop more standard drawings and specifications for other green infrastructure components.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-JRMP-03	Outreach to impacted ~~industry~~ commercial, industrial, municipal, and residential development regarding minimum BMP requirement updates.	~~Affects commercial, industrial, and residential development.~~ May include onsite education at the time of inspections, city staff training, and mailers to business owners and prospective business owners.	FY15	Continuous- As needed	Yes	Revised to clarify strategy.	Yes	FY16 Notes: Sent out monthly business Tax License renewal mass mailings, which included information about storm water BMPs. Violation location information from the Residential Patrol Program is used to target outreach.
CSD-JRMP-04*	Train staff on LID regulatory changes and LID practices.	Formal training is required for all staff involved in development plan review to increase knowledge of LID BMPs. Goal of training associated with LID practices and regulations is to promote LID implementation and to avoid adverse conditions such as trees planted within swales, or planned drainage patterns which obstruct or inhibit LID performance.	FY16	Continuous- As needed	Yes	No Change	Yes	FY16 Notes: Presented at a PWD training to discuss the revised Storm Water Standards Manual. Provided a plan check training for plan reviewers at DSD and PWD staff in May 2016.
CSD-JRMP-05*	Amend municipal code and ordinances, including zoning ordinances, to facilitate and encourage LID opportunities to support compliance with the MS4 Permit and TMDLs in a reasonable manner. Ensure consistency with the City of San Diego's BMP Design Manual. Update the Storm Water Standards Manual accordingly.	Municipal codes and ordinances will be brought to City Council for consideration to encourage LID implementation (e.g., runoff detention and filtration using natural filters and storm water retention for reuse). LID storm water management will be encouraged in proposed codes and ordinances associated with development and redevelopment projects, which are brought to City Council for consideration.	FY15	Continuous- As needed	Yes	No Change	No	None
CSD-JRMP-06	Provide technical education and outreach to the development community on the design and implementation requirements of the MS4 Permit and Water Quality Improvement Plan requirements.	Technical education and outreach to the development community includes outreach on design standards, City design manuals, and the WMAA.	Prior to FY16	Continuous- Ongoing	Yes	No Change	Yes	FY16 Notes: Presented the revised draft Storm Water Standards at two public workshops in September 2016.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Priority Development Projects (PDPs)								
CSD-JRMP-07	For PDPs, administer a program and provide technical support to other City departments to ensure implementation of on-site structural BMPs to control pollutants and manage hydromodification by developing City wide storm water development standards and design guidelines.	Administer a program in coordination with other City departments to promote and confirm a thorough understanding of requirements for implementing structural BMPs that control pollutants and manage hydromodification. Includes requirements to confirm proper design and construction through processes controlled by other City departments. Please see Attachment 1 for details on PDP related BMPs that will be implemented to address sources causing or contributing to the HPWQC.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City enhanced the Storm Water Quality Management Plan (SWQMP) template that was developed as a Copermittee effort for developers to use.
CSD-JRMP-08	Institute a program to verify and enforce maintenance and performance of treatment control BMPs.	Refer to JRMP Section 4.5. The Storm Water Division is responsible for annually verifying that all structural BMPs within its inventory are being properly maintained. The Storm Water Division performs verification through an Annual Maintenance Verification mailing and a direct maintenance inspection program. Parties responsible for maintenance of structural BMPs are required to complete and sign the Annual Maintenance Verification, certifying that the structural BMPs are being properly maintained. Direct maintenance inspections will be performed at all projects for which an Annual Maintenance Verification Form was not completed. All high priority projects will be inspected annually prior to the rainy season. 20 percent of all projects will be inspected annually. Inspect additional BMPs as needed. Medium and low priority projects will not require inspection if they have completed their Annual Maintenance Verification form, unless they are part of the 20 percent of projects that are annually inspected.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	FY17 Notes: For porous pavement BMPs, staff plan to use an infiltrometer to measure BMP effectiveness.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-09	Update ~~BMP Design Manual procedures~~ Storm Water Standards Manual to determine nature and extent of storm water requirements applicable to development projects and to identify conditions of concern for selecting, designing, and maintaining appropriate structural BMPs.	Refer to JRMP Section 4. Storm Water Standards Manual will be updated in accordance with the Permit and made available on the City's website.	FY15	Continuous every 5 years/ permit cycle	Yes	Revised to clarify strategy.	Yes	FY17 Notes: The Storm Water Standards will be revised to include Critical Coarse Sediment Yield Area mitigation measures that were developed through a TAC process, along with other minor clarifications.
CSD-JRMP-10*	Amend BMP Design Manual for trash areas. Require full four-sided enclosure, siting away from storm drains and cover. Consider the retrofit requirement.	Amend BMP Design Manual and zoning standards/requirements which address reduction of pollutants for common areas of trash build-up (e.g. restaurants, supermarkets, "big box" retail stores with food, pet stores). Most effective method for source control of bacteria and trash is to employ four-sized trash enclosures with a cover over trash areas.	FY15	Completed within schedule	Yes	No Change	Completed	FY16 Notes: Developed a fact sheet on trash enclosures (See Part 1, Appendix E of the Storm Water Standards).
CSD-JRMP-11*	Amend BMP Design Manual for animal-related facilities, such as such as animal shelters, "doggie day care" facilities, veterinary clinics, breeding, boarding and training facilities, groomers, and pet care stores.	Amend BMP Design Manual and zoning requirements (including retrofits) to provide supplemental standards for animal facilities (including animal shelters, dog daycares, veterinary clinics, groomers, pet car stores, and breeding, boarding, and training facilities). Supplemental standards may include requiring covered trash enclosures, identification of landscaped relief areas on site plans, ensuring drainage connections and treatment swales for areas that will not drain to the sanitary sewer, as well as inspection of grading, drainage, and landscaping for outdoor exercise areas.	FY15	Completed within schedule	Yes	No Change	Completed	FY16 Notes: Developed a fact sheet on animal facilities (See Part 1, Appendix E of the Storm Water Standards).
CSD-JRMP-12*	Amend BMP Design Manual for nurseries and garden centers.	Amend BMP Design Manual to provide supplemental standards for plant nurseries and garden centers. Standards will focus on reducing irrigation runoff, and loading of sediment, pesticides, and nutrients. Measures may include: covered outdoor storage, green waste management BMPs, improved irrigation efficiency to reduce dry-weather runoff, and containment of runoff from impervious areas where plants and materials are stored.	FY15	Completed within schedule	Yes	No Change	Completed	FY16 Notes: Developed a fact sheet on nurseries (See Part 1, Appendix E of the Storm Water Standards).

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-13*	Amend BMP Design Manual for auto-related uses.	Amend BMP Design Manual to provide supplemental standards for automotive-related uses to reduce loading of metals, oils, grease, and trash. Measures may include: four-sized covered trash enclosures, and careful review of auto-related usage areas (e.g. garage bays at repair shops) for grading, drainage, and drain connections to sanitary sewer systems.	FY15	Completed within schedule	Yes	No Change	Completed	FY16 Notes: Developed a fact sheet on auto-related facilities (See Part 1, Appendix E of the Storm Water Standards).
CSD-JRMP-14*	~~Develop and administer an alternative compliance program for on-site structural BMP implementation (includes identifying Watershed Management Area Analysis [WMAA] candidate projects). Refer to Section 4.2.5.~~ Offsite Alternative Compliance Option	Refer to JRMP Section 4.2.3.1. WMAA and Water Quality Equivalency Study completed in FY15. Phase I, applicant implemented projects, is anticipated to be in effect by the end of FY16 contingent on Regional Board's approval of the WQIPs. Phase II, the expansion of the program to include other alternative compliance options, is expected to begin in FY16.	FY15	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	FY16 Notes: Phase 1 of the Alternative Compliance Program (ACP) went into effect on 2/16/16. Development on Phase 2 of the ACP, including public involvement via Technical Advisory Committee (TAC) meetings, began during FY16. FY17 Notes: Continue developing Phase 2 of ACP. Topics to discuss include: environmental permitting, long-term facility maintenance, legal agreements and credit tracking, maintenance and permitting rules, and credit tracking and legal rules. Public involvement via TAC meetings will continue.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
E.4 Construction Management								
CSD-JRMP-15	Administer a program to oversee implementation of temporary BMPs that control sediment and other pollutants during the construction phase of projects. Includes requirements to inspect at appropriate frequencies and effectively enforce requirements through process controlled by other City departments.	Refer to JRMP Section 5. Inspections performed by the City or City staff provide verification that each site is in conformance with the Construction Storm Water BMP Performance Standards in the Storm Water Standards Manual. Inspections are tracked to ensure that they meet the minimum inspection frequencies. High priority active and inactive sites are inspected bi-weekly during the rainy season. Medium priority sites are inspected monthly during the rainy season. Low priority sites are inspected as-needed during the rainy season. All sites are inspected as-needed during the dry season. Please see Attachment 1 for details on construction BMPs that will be implemented to address sources causing or contributing to the HPWQC.	FY16	Continuous-Ongoing	Yes	No Change	Yes	None
E.5 Existing Development								
Commercial, Industrial, Municipal, and Residential Facilities and Areas								
CSD-JRMP-17	Administer a program to require implementation of minimum BMPs for existing development (commercial, industrial, municipal, and residential) that are specific to the facility, area types, and PGAs, as appropriate. Includes inspection of existing development at appropriate frequencies and using appropriate methods.	Refer to JRMP Sections 6, 7, and 8. All industrial and commercial areas are inspected once within ~~the Permit term~~ ~~(~~five years~~)~~. At a minimum, 20 percent of industrial and commercial areas receive onsite inspections every year. Municipal facilities are inspected twice annually, once prior to the rainy season, and once during the rainy season. Residential management areas (RMAs) within the City are to be inspected once within five years ~~the Permit term~~, at a minimum. Please see Attachment 1 for details on updated minimum BMPs that will be implemented to address sources causing or contributing to the HPWQC.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	FY16 Notes: The City began patrols of residential management areas in FY16. See the City's JRMP Annual Report form, also included in Appendix 2, for numbers of inspections, violations, and enforcement actions for all types of existing development.
CSD-JRMP-18	Update minimum BMPs for existing residential, commercial, and industrial development. Specific updates to BMPs include required street sweeping, catch basin cleaning, and maintenance of private roads and parking lots in targeted areas.	Refer to JRMP Appendix IX. Please see Attachment 1 for details on updated minimum BMPs that will be implemented to address sources causing or contributing to the HPWQC.	FY15	Continuous every 5 years/ permit cycle	Yes	No Change	Completed	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-19	Outreach to property managers and trash haulers to elevate the emphasis of power washing as a pollutant source.	Emphasis will be placed on non-compliant washing as an enforceable violation. Will occur city-wide in residential, commercial, and industrial areas.	FY15	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: City staff utilized a new fact sheet consistent with updated permit conditions to inform non-compliant power-washing operators of BMP requirements. The fact sheet was also provided to the San Diego Downtown Partnership as part of the City's education and outreach effort for downtown businesses. FY17 Notes: The City anticipates distributing a comprehensive BMP guidebook to businesses and business district leaders in areas with regular power-washing activities
CSD-JRMP-20	Implement property based inspections.	Property-based inspections increase awareness and responsibility for individual properties to tackle issues associated with trash, landscapes, and parking areas. Expanding beyond the business-level inspections will achieve different and more effective opportunities for education, outreach, inspection, and enforcement to encourage water conservation strategies. Inspection frequency dependent on type of facility. See CSD-9 for inspection frequency.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Inventoried properties have been mapped in GIS. The City's inspection data management system has also been set up to track and map the properties inspected each fiscal year and over the Permit cycle.
CSD-JRMP-21	Review policies and procedures to ensure discharges from swimming pools meet permit requirements.	Verify and bring to City Council for consideration an update (as needed) for the City's Municipal Code (43.0301) to meet new permit requirements for swimming pool discharges.	FY15	Continuous- As needed	Yes	No Change	Completed	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-22*	Promote and encourage implementation of designated BMPs for residential and non-residential areas.	Landscape-based rebates are a "gateway" for adoption of other beneficial practices and are one of the nonstructural methods which address impacts from single-family residential areas (City of San Diego 2011 program development background study). Residential incentives can include: education and training ~~(neighborhood watershed field days)~~, and aggressive subsidies or rebates for grass replacement and rainwater harvesting. Existing programs will be expanded overall, and ~~also have targeted expansion within specific subwatershed, particularly with highest water quality priority conditions. W~~will occur city-wide in residential, commercial, and industrial areas.	Prior to FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
MS4 Infrastructure								
CSD-JRMP-23	Implementation of operation and maintenance activities (inspection and cleaning) for MS4 and related structures (catch basins, storm drain inlets, channels as allowed by resource agencies, detention basins, pump stations, etc.) for water quality improvement and for flood control risk management.	Refer to JRMP Section 7. Storm drain inlets are inspected ~~at least once a year~~ generally annually, and cleaned when accumulated materials are present. Other MS4 and related structures are inspected as needed.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	FY16 Notes: 11,047 storm drain inspections were completed in the WMA, and 842.2 tons of sediment, trash, and debris were removed during storm drain cleaning. In addition to routine maintenance of the MS4, across its entire jurisdiction the City repaired or replaced 12 pump stations and modernized another 14 pump stations, televised 28,000 linear feet of pipe in 62 locations, and began the development of the Waterways Maintenance Plan and Channel Maintenance Prioritization Plan. Removed 7.55 tons of trash from routine open channel trash cleaning and approximately 725 tons each of sediment and trash from channel maintenance activities that required resource agency permits.
CSD-JRMP-24*	Enhanced catch basin cleaning to increase pollutant removal (up to 4 times per year) in the rainy season.	To increase pollutant load removal, catch basins will be cleaned up to four times per year in the rainy season. The City of San Diego's pilot study found that major pollutants may vary from neighborhood to neighborhood (yard waste versus trash and sediment). Implementation may be adapted based on catch basin record keeping and cleaning optimization. Increase in frequency will be phased over 4 Fiscal Years.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: In FY16 a total of 2,856 enhanced catch basin inspections and cleanings were performed in the Chollas Watershed

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
~~CSD-JRMP-26~~	~~Increased frequency of catch basin inspection and as-needed cleaning.~~	~~For every segment of channel that is cleared, the City will conduct an inspection and as-needed cleaning of every catch basin within 100 feet of the cleared segment of channel. Additional inspection and as-needed cleaning will occur every three months for one year after the segment of channel is cleared.~~	~~FY13~~	~~Completed within schedule in 5 years (ends FY18)~~	NA	Incorporated into CSD-JRMP-27	NA	NA
CSD-JRMP-27	Implement additional BMPs in coordination with Master Maintenance Plan Enhancements	For each channel segment, City will either 1) implement landscape retrofits on one residential property, 2) increase street sweeping frequency by prioritizing high traffic commercial routes adjacent to maintained channel, 3) construct and maintain a storm water management BMP (e.g. biofiltration system, permeable pavement, vegetated swale, restored wetlands), or 4) increase frequency of catch basin inspection and as-needed cleaning for one year after maintenance.	FY13	Completed within schedule in 5 years (ends FY18)	Yes	Strategies CSD-JRMP-26 and CSD-JRMP-36 were combined into one strategy, CSD-JRMP-27, to streamline recordkeeping.	Yes	FY16 Notes: Quarterly catch basin inspections were performed for channel clearing performed in the Chollas Watershed FY17 Notes: If channel maintenance activities occur in this watershed during FY17, this mitigation approach may be used in FY17.
CSD-JRMP-28	Proactively repair and replace MS4 components to provide source control from MS4 infrastructure.	In order to limit inflow of pollutants and reduce pollutant loads, proactive measures will be taken to improve, repair, and replace MS4 components. The City of San Diego will start a multi-year program of repairing and replacing storm drain pipes to reduce sediment loading to the MS4. Development of an assessment management program and bond issues will be addressed. Exploration of daylighting pipes will take place where feasible and appropriate.	FY16	Continuous-Ongoing	Yes	No Change	Yes	None
CSD-JRMP-29	Replacement of hard assets.	Includes needed replacement of storm drains and structures.	FY16	Continuous-Ongoing	Yes	No Change	Yes	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-30	Coordinate with other City departments (PUD) to implement controls to prevent infiltration of sewage into the MS4 from leaking sanitary sewers.	Refer to JRMP Section 7.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The Tiger Team was established in FY16 as a joint effort between TSW & PUD to identify and eliminate exfiltration sources from the sanitary sewer system to the MS4. Since the team was created, it has successfully eliminated one major source. FY17 Notes: For FY17, the team is focusing on two sites within the City and are identifying more.
CSD-JRMP-31*	Identify sewer leaks and areas for sewer pipe replacement prioritization.	Risk assessment to include identifying targeted areas (age, location, proximity to MS4), coming up with methodology, pilot, desktop exercise/analysis.	FY16	Continuous- As needed	Yes	No Change	Yes	None
Roads, Streets, and Parking Lots								
CSD-JRMP-32	Implement operation and maintenance activities for public streets, unpaved roads, paved roads, and paved highways.	Refer to JRMP Section 7.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: 26,974 curb miles were swept in the San Diego Bay watershed management area.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-JRMP-33	Outreach to street sweeping enhancement-targeted areas.	Division staff will conduct a thorough education and outreach effort beginning months in advance of the expansion of sweeping routes. Staff will work with the affected Council offices, community stakeholders, non-governmental organizations and community groups to build community awareness and acceptance of the enhanced sweeping program.	FY16	Continuous- As needed	Yes	No Change	Yes	FY16 Notes: Developed targeted communication materials for lead commercial property managers that covered various topics, including enhanced street sweeping
CSD-JRMP-34*	Enhance street sweeping through equipment replacement (replace mechanical sweepers with regenerative air sweepers) and route optimization (sweep all routes twice per month) in targeted areas.	Following outreach and posting, street sweeping efforts will be increased in target areas (those with sediment or metals as a highest priority water quality conditions). Replacement of street sweeping equipment with high-efficiency regenerative air and vacuum-assisted sweepers over time is expected to further increase load reductions (even if current routes and frequencies remain unchanged).	FY17	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: City purchased five vacuum sweepers. Began sweeping a route in Chollas with regenerative air sweeper. Also began sweeping various routes on an individual basis to assess sweeper function.
CSD-JRMP-35*	Initiate sweeping of medians on high-volume arterial roadways.	Medians of roadways are also a potential source of pollutants. Consider implementing or increasing sweeping of medians. Consider mechanical and hand sweeping techniques.	FY17	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Median sweeping began in FY16. A total of 4,315 median miles were swept in FY16 City-wide.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
~~CSD-JRMP-36~~	~~Implement additional street sweeping (Settlement Agreement).~~	~~City shall increase street sweeping frequency by prioritizing high traffic commercial routes adjacent to maintained channel with vacuum-assisted sweeper for every 400 linear feet of vegetation that is removed (except for removal of invasive species, e.g., Arundo) within a drainage area. Sweeping shall be conducted in median areas that are not subject to regular sweeping routes, and shall occur at a frequency of at least once per quarter for one calendar year after maintenance. Funding and resources were secured for FY2013. Funding for future fiscal years is contingent on annual budget approval by City Council.~~	~~FY13~~	~~Completed within schedule in 5 years (ends FY18)~~	NA	Incorporated into CSD-JRMP-27	NA	NA
Pesticides, Herbicides, and Fertilizer BMP Program								
CSD-JRMP-37	Require implementation of BMPs to address application, storage, and disposal of pesticides, herbicides, and fertilizers on commercial, industrial, and municipal properties. Includes education.~~ permits, and certifications.~~	Refer to JRMP Sections 7, 8, and 9.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	None
Retrofit and Rehabilitation in Areas of Existing Development								
CSD-JRMP-38	Development of a strategy and identification of candidate areas of existing development necessary for implementing retrofit projects and facilitate the implementation of such projects.	Refer to JRMP Appendix XIX. The Offsite Alternative Compliance Program will include methods for identifying and assessing potential retrofit projects in existing development areas. Retrofit project selection will be based upon a variety of factors including proximity to high priority water quality conditions, potential pollutant load removal effectiveness, and feasibility of implementation. The program will include protocols related to funding mechanisms for project construction and long-term maintenance, payment and credit structures, and water quality equivalency standards. Specific retrofit projects are included in the Non-JRMP, Structural Strategies categories.	FY18	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	No Change	NA, Not scheduled to be implemented in FY17	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-39	Development of a strategy and identification of candidate areas necessary to implement stream, channel, or habitat rehabilitation projects and facilitate implementation of such projects.	Refer to JRMP Appendix XIX. The Offsite Alternative Compliance Program ~~(Section 4.2.5.4 and Appendix P)~~ will include methods for identifying and assessing potential stream, channel, or habitat rehabilitation projects in existing development areas. Rehabilitation project selection will be based upon a variety of factors including existing stream or habitat degradation, potential future cumulative stream or habitat impacts, and feasibility of implementation. The program will include protocols related to funding mechanisms for project construction and long-term maintenance, payment and credit structures, and water quality equivalency standards.	FY18	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	Revised to clarify strategy.	NA, Not scheduled to be implemented in FY17	None
E.2 Illicit Discharge, Detection, and Elimination (IDDE) Program								
CSD-JRMP-40	Implement Illicit Discharge, Detection, and Elimination (IDDE) Program per the JRMP. Requirements include: maintaining an MS4 map, using municipal personnel and contractors to identify and report illicit discharges, maintaining a hotline for public reporting of illicit discharges, monitoring MS4 outfalls, and investigating and addressing any illicit discharges.	Refer to JRMP Section 3. ~~The City must visually inspect at least 500 identified and prioritized major MS4 outfalls at least annually during dry weather conditions.~~ Inspections of major MS4 outfalls conducted in response to public reports and staff or contractor reports and notifications may count toward the required visual inspections of MS4 outfall discharge monitoring stations. Please see Attachment 1 for details on how the IDDE Program will address sources causing or contributing to the HPWQC.	Prior to FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	FY16 Notes: 1,021 cases were investigated, including 634 reported by the public; 819 illicit discharges or illicit connections were eliminated; and 819 enforcement actions and 445 escalated enforcement actions were issued in the WMA. City-wide, the number of discharges investigated has almost tripled since FY14 (1,186 in FY14 to 3,335 in FY16). The increase is believed to be mainly due to increased reports of irrigation runoff discharges from the public and from PUD.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
E.7 Public Education and Participation (B.3.b(1)(a)(iii))								
CSD-JRMP-42	Implement a public education and participation program to promote and encourage development of programs, management practices, and behaviors that reduce the discharge of pollutants in storm water prioritized by high-risk behaviors, pollutants of concern, and target audiences.	Refer to JRMP Section 9.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City continued its extensive education and outreach effort across each of the six watershed areas in the City. This included regular attendance at community events in order to share education materials and the continuing sponsorship of community clean-up and pollution prevention education events with the City's Non-Governmental Organization partners, including I Love A Clean San Diego and San Diego Coastkeeper.
CSD-JRMP-43	Continue implementation of a Pet Waste Program.	Pet Waste Program includes outreach on "Scoop the poop", installation of posts for dispensers, distribution of lawn signs, and attendance at dog-related community activities.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Printed and distributed more pet waste signage. FY17 Notes: New bag dispensers will be installed and there will be outreach at community events. More signage will be installed.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-44	Promote and encourage implementation of designated BMPs in commercial and industrial areas.	Provide education and outreach on BMPs for commercial businesses and industrial facilities. Will occur city-wide in non-residential areas.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City continued its mandated commercial and industrial facility inspection effort sharing industry specific education materials with business and property owners when BMP deficiencies were discovered. FY17 Notes: The City will continue its inspection and education effort while also introducing alternative compliance strategies for new developments and sharing the updated Storm Water Standards Manual with target audiences.
CSD-JRMP-45*	Expand outreach to homeowners' association (HOA) common lands and HOA incentives.	Approaches to consider include: offering incentives to HOAs and maintenance districts to adopt water-conserving/efficiency and storm water-reduction changes to their landscapes, irrigation, and maintenance; conducting workshops with property managers; providing supplemental standards, inspection, or enforcement for HOA-managed properties.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Finalized updated code compliance fact sheets applicable to common lands activities. Coordinated water conservation pollution prevention incentive programming with PUD.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-JRMP-46*	Develop an outreach and training program for property managers responsible for HOAs and maintenance districts.	Approaches to engage HOAs and property managers include: conducting workshops with property managers, providing supplemental standards, inspections or enforcement around HOA properties, and offering incentives to HOAs and maintenance districts to adopt changes to landscapes, irrigation, or maintenance which promote water conservation or storm water reduction. Property managers are also a target for enhanced outreach.	FY16	Continuous-Ongoing	Yes	No Change	Yes	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-JRMP-48	Enhance school and recreation-based education and outreach.	Develop curriculum and establish distribution in public schools. Includes education on water conservation.	FY15	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City worked with its NGO partners to expand the number of children reached through school-aged education programs. The City updated curriculum materials for Project Swell in conjunction with San Diego Coastkeeper and provided printed education materials to leaders with the Ocean Discovery Institute in hope of establishing new partnerships with that organization. FY17 Notes: The City will be expanding the Blue Brigade Middle and High School program sponsored with I Love A Clean San Diego. The City will also distribute written education materials through the newly completed Ocean Discovery Institute headquarters.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-49	Develop education and outreach to reduce irrigation runoff.	Example approaches to reduce or eliminate irrigation runoff may include: education and outreach, prohibition, enhanced enforcement of existing prohibitions, and pilot projects such as the City of Del Mar's pilot door hanger project.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City used communication materials designed to address potential threats from El Nino rains as a new vehicle for educating the public about the need to eliminate irrigation runoff. FY17 Notes: The City is working with partner agencies and other City operations to develop new education and outreach efforts targeting urban runoff.
CSD-JRMP-50*	Develop and distribute regional training materials for water-using mobile businesses.	Consider development of supplemental standards for mobile businesses including: covered trash enclosures, careful review of washing areas (grading, drainage, landscaping, sanitary sewer system connectivity), and appropriate signage (either through zoning for retrofits or "best fix" approaches, or through BMP Design Manual standards). Businesses may include carpet cleaners, tile installers, plumbers, etc.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	FY16 Notes: The City updated its suite of fact sheets related to mobile business activities to bring them up-to-date with current permit requirements.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-JRMP-51*	Enhance education and outreach based on results of effectiveness survey and changing regulatory requirements.	Use effectiveness surveys to enhance existing education and outreach programs while proactively keeping up with and incorporating changing regulatory requirements.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City annually conducts thousands or event-based surveys gathering information about public understanding of pollution prevention and about the City's storm water management efforts. The survey effort continued in FY16 and allowed the City to update its education materials and strategies based on current findings about public awareness. FY17 Notes: The City will contract with a new public opinion research firm to perform a statistically valid assessment of general public awareness. The finding from that effort will be combined with the discoveries of the ongoing event survey effort to drive future outreach priorities.
CSD-JRMP-52	Continue to promote and encourage implementation of Integrated Pest Management (IPM) for residents and businesses.	The City will continue to provide education on IPM techniques during presentations and on the City's Think Blue website.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-JRMP-53*	Improve consistency and content of websites to highlight enforceable conditions and reporting methods.	Websites will be updated to provide a user-friendly format and clarity for storm water violations, conditions which citizens can and should report, and how to make such reports. Examples of reports for common incidents will be developed and posted which may vary locally and regionally. Photographs of allowable practices as well as illegal practices should be shown for utmost clarity. Displaying hotline numbers prominently on the website and near the photographs of illegal practices will ensure that those seeking to report will be able to do so easily. Also ensure hotline number and website are searchable and can be retrieved by simple internet searches.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: The City completely revamped its website improving public access and availability of web-based resources including the storm water management and pollution prevention materials developed and posted by the City. The City also brought forward the environmental response documents associated with its channel maintenance efforts. These documents include descriptions of water quality protections undertaken by the City allowing the public to view our agency's watershed protection strategies. FY17 Notes: The City will review and renew the entire portfolio of education materials available for public downloading from the City's website.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
E.6 Enforcement Response Plan								
CSD-JRMP-54	Continue to implement escalating enforcement responses to compel compliance with statutes, ordinances, permits, contracts, orders, and other requirements for IDDE, development planning, construction management, and existing development in the Storm Water Code Enforcement Unit's Standard Operating Procedures (SOPs) - Enforcement Response Plan.	Refer to JRMP Appendix XIII.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	None
CSD-JRMP-55*	~~Increase~~ Focused enforcement of irrigation runoff.	~~Increased~~ Focused enforcement policies against irrigation runoff will be established in tandem with the education and outreach programs on how these actions lead to pollutant loading. By shifting to property-based inspections irrigation runoff can be handled as enforceable violations once the public is well-informed.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	FY16 Notes: Performed irrigation patrols and Residential Management Area Patrols throughout FY16. Also receive referrals from Water Conservation at PUD for over irrigation cases that have runoff entering the curb and gutter.
CSD-JRMP-56*	~~Increase~~ Focused enforcement of water-using mobile businesses.	In addition to education, pollution associated with mobile business sources can be handled through policy, code development, inspections of business practices, and enforcement.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	FY16 Notes: Performed early morning patrols to find mobile sources and over-irrigation to the MS4.
CSD-JRMP-57*	~~Increase~~ Focused enforcement of all minimum BMPs for existing residential, commercial, and industrial development.	~~Increased~~ Focused enforcement of existing development minimum BMPs.	FY16	Continuous- As needed	Yes	Revised to clarify strategy.	Yes	None
CSD-JRMP-58*	~~Increase~~ Focused enforcement associated with property-based inspections.	Shifting inspections from businesses-specific to property-based will increase effectiveness and sense of responsibility and ownership. Education and outreach must be followed up with inspection and enforcement of regulations to encourage proper landscape and water conservation strategies.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-JRMP-59*	~~Increase~~ Focused enforcement of sweeping and maintenance of private roads and parking lots in targeted areas.	Refer to Minimum BMPs in JRMP (Appendix IX).	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	None
CSD-JRMP-60*	~~Increase~~ Focused identification and enforcement of actionable erosion and slope stabilization issues on private property and require stabilization and repair.	Eroding and unstable slope areas on private property (excluding construction sites) will be identified as potential sediment loading sources and subject to enforcement. In the short term, this will target enhanced inspection and enforcement programs to ensure inspectors address erosion and slope instability for the purpose of education.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	FY16 Notes: City staff completed patrols of construction sites that included sediment discharges. They also began the Residential Patrol Program, which notes and addresses sediment discharges in residential areas.
Non-JRMP Strategies (Optional Strategies, B.3.b(1)(b))								
Nonstructural Strategies								
CSD-NS-02	Investigation and research of emerging BMP technology.	Annually the Construction & Development Standards Group identifies new tasks to conduct literature review, communication with researchers outside of the City, physical testing and experimentation of new or emerging technologies, and other research with the goal of updating tools available for reducing pollutant loads from development and redevelopment sites. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous- As needed	Yes	No Change	Yes	FY16 Notes: Continued monitoring and assessment of the biofiltration basin and curbside filtration units at 43rd and Logan.
CSD-NS-03	Approve and implement a green infrastructure policy.	The City will begin developing a policy in FY16 that will increase the green infrastructure requirements for City CIP projects. This policy will be coordinated with ongoing efforts to update City design manuals and LID design standards for public LID BMPs. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous- As needed	Yes	No Change	Yes	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-04	Create a manual that outlines right-of-way design standards.	Create a manual that includes flood control performance standards, permanent BMP elements design standards, design standards for green streets and other BMPs, and maintenance access. Provides drainage and streets design standards. Opportunity to merge various existing manuals and provide consistency. Funding and resources were secured for FY2015.	FY15	Completed within schedule	Yes	No Change	Yes	FY17 Notes: Will be published in FY17.
CSD-NS-05	Create a fund that allows habitat acquisition, protection enhancement, and restoration in conjunction with other cooperating entities including community groups, academic institutions, state county, and federal agencies, etc.	This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, 3) partners have been identified and formal MOUs have been developed, and 4) consensus and community support has been achieved. Resources necessary to implement this strategy include a coordinator or manager and maintenance for acquired or restored lands. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. It is anticipated that a minimum of 1 FTE will be needed to implement the program. Once initiated, the time frame for planning to initial implementation is expected to be 3 years. Implementation is in perpetuity as long as funding is retained.	Must be triggered	Continuous as funding allows	Not Triggered	No Change	If Triggered	None
CSD-NS-06	Residential and Commercial BMP: Rain Barrel	The existing PUD rebate program will continue for residential properties and expand for commercial properties for water collection, conservation, and reuse with rain barrels. Will occur city-wide in residential areas. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Rebates for rain barrels were issued to capture 772,740 gallons of rainwater City-wide

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-07	Residential and Commercial BMP: Grass Replacement	The existing PUD grass replacement cash rebate program will continue and expand for residential and commercial properties. Program encourages a reduction in water use through the conversion of non-artificial grass to water wise plant material, while maintaining a high level of living landscape to benefit the environment. Program does not allow for conversion to artificial turf. Will occur city-wide in residential and commercial areas. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Rebates were issued to convert 106,041 sq. ft. of turf in the WMA.
CSD-NS-08	Residential and Commercial BMP: Downspout Disconnect	Disconnecting downspouts provide alternate runoff pathways from rooftops, sidewalks, driveways, and roads. Disconnecting downspouts from residential areas to pervious land can allow for depression storage and infiltration. Will occur city-wide in residential and commercial areas. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Completed downspout redirect guidelines in collaboration with PUD.
CSD-NS-09	Residential and Commercial BMP: Microirrigation	The existing PUD micro-irrigation rebate program will continue and increase for residential and commercial properties. Application of microirrigation aims to improve the efficiency of landscape irrigation through the precise application of water. Will occur city-wide in residential areas. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Rebates were issued for installing microirrigation for 5,160 sq. ft. of landscaping in the WMA.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-NS-10	Provide Onsite Water Conservation Surveys.	Provide free onsite water conservation surveys to commercial and residential customers to reduce overirrigation and to encourage water conservation. Will occur city-wide in residential and commercial areas. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	None
CSD-NS-11	Enhance and expand trash cleanups through community-based organizations involving target audiences.	Increase effectiveness and reach of trash/beach cleanups and community based efforts by engaging community groups to self-define and carry-out trash clean-ups. Longstanding partnerships and sponsorships with I Love A Clean San Diego and others are recommended to be continued and enhanced. To effectively target stream clean-up efforts, focus on partnerships with community organizations which provide strong engagement with target audiences and communities. Cleanups target trash, however a reduction in trash also reduces other pollutants such as bacteria and nutrients that can attach to food waste wrappers and yard waste. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Yes	No Change	Yes	<u>FY 16 Notes:</u> The City partnered with I Love a Clean San Diego on four clean-ups, which resulted in the removal of 14,732 pounds of trash and debris.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-NS-13	Coordinate with Parks and Recreation Department on ~~T~~trash mitigation in the western portion of the Otay River HU.	Longstanding partnerships and sponsorships with I Love A Clean San Diego and Otay Valley Regional Park (OVRP) will be continued and enhanced. The City of San Diego has a Joint Exercise Powers Agreement with the City of Chula Vista and the County of San Diego to manage the OVRP. City of San Diego park rangers perform regular maintenance of the Western OVRP including, but not limited to: overseeing all contract services; patrolling the Park and keeping it as clean and safe as possible; providing educational opportunities for visitors; providing consistent public outreach; maintaining the grounds and facilities; and coordinating with various agencies, public utilities, and other organizations. The park rangers work with WildCoast to educate the local community, and WildCoast supports OVRP's educational programs, such as brochure development and public outreach events like OVRP Day, I Love A Clean San Diego cleanups, and various other events throughout the year. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	FY16 Notes: One clean up event with I Love A Clean San Diego and WildCoast which was on April 16, 2016 at the Saturn Blvd. Staging Area in the Otay Valley Regional Park (OVRP). There were 30 volunteers who helped clean up 600 lbs. of trash and 200 lbs. of recyclables. Also coordinated with WildCoast on two other clean-up events also held at the western portion of OVRP on May 9 and June 18, 2016. Hosted over 40 volunteers who cleaned up approximately 500 lbs. of trash and debris and 150 lbs. of recyclables for those two days.
CSD-NS-16	Conduct a Comprehensive Benefits Analysis to identify benefits other than water quality that are applicable to each of the specific WQIP strategies.	The analysis identifies which other benefits apply to each strategy, and documents the assumptions making those linkages. The delineation of other benefits to strategies includes a general description of each benefit, and a listing of the assumptions that were made to link those benefits to strategies. In addition, the other benefits are characterized with respect to who is directly affected: the city, local residents, local businesses, or visitors. This analysis may be used as part of the adaptive management process to modify future strategies. Funding and resources were secured for FY2015.	FY15	Completed within schedule	Yes	No Change	No	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-17	Address and clean up trash from transient encampments with collaboration from the Environmental Services Department, which consults with the Homeless Outreach Team.	Coordinate with the Environmental Services Department, in conjunction with the Homeless Outreach Team, to respond to transient encampment trash complaints. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	None
CSD-NS-18	Continue participating in source reduction initiatives.	Source reduction initiatives are ultimately the most effective measure to remove pollutants from surface waters, where feasible. Bans or progressive phase-outs that may be considered include: leaf blowers, plastic bags, architectural copper (generally a legacy issue), as well as prohibiting or more aggressively regulating vehicle washing. Additional source reduction initiatives to consider include pesticide sales at hardware stores and irrigation supply stores. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	<u>FY16 Notes:</u> The City began development of plastic bag ban ordinance. <u>FY17 Notes:</u> Pursuit of City-specific plastic bag ban ordinance will depend on whether Statewide plastic bag ban ballot initiative passes.
CSD-NS-19	Coordinate with Fleet Services to replace City-owned vehicle brake pads with copper-free brake pads as they become commercially available.	Consider legislative mandate and cooperative implementation of copper-free brake pads on city-owned vehicle to reduce pollutant deposition. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council.	FY18	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	No Change	NA, Not scheduled to be implemented in FY17	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-NS-20	Develop and implement a Zinc Reduction Program.	Develop and implement zinc reduction program. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured and 2) staff resources are identified and secured. Resources necessary to implement this strategy include a coordinator or project manager. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. Once initiated, the time frame for planning, implementation, and assessment is expected to be 7 years. If effective, continued implementation will be considered.	Must be triggered	Continuous if effective and as funding allows	Not Triggered	No Change	If Triggered	None
CSD-NS-21	Develop and implement targeted roof replacement incentive program for Chollas Creek Watershed.	If determined feasible and effective upon completion of development of Zinc Reduction Program, rebates or other incentive programs to replace metal roofs will be considered. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured and 2) staff resources are identified and secured. Resources necessary to implement this strategy include City staff or consulting team. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. Once initiated, implementation and assessment is expected in 7 years. If effective, continued implementation will be considered.	Must be triggered	Continuous if effective and as funding allows	Not Triggered	No Change	If Triggered	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-22	~~Proactively~~ Coordinate with appropriate City Departments that monitor for erosion, and complete minor repair and slope stabilization on municipal property.	~~Actively~~ Coordinate with Streets Division and other appropriate City Departments that identify and repair eroding slopes that may be contributing to sediment loading. Prepare an inventory and assessment of eroding areas and their risk to surface waters. Follow assessment with a schedule for ongoing inspection and stabilization (potentially based on a number or percentage of sites annually). Consider Caltrans program as a template. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	None
CSD-NS-23	Conduct special studies.	Special studies will be conducted to gather data to identify pollutant sources, appropriate targets, or other information. Includes collaboration with universities. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: San Diego Regional Reference Streams and Beaches, San Diego Bay Debris Study, Pueblo HU Refuse Assessment Program, Chollas Jurisdictional Boundary Study, Regional Beach Water Quality (AB411), Riparian Area Selenium Study
CSD-NS-26	Participate in Reference Watershed Study.	The San Diego Regional Reference Stream Study (currently being conducted by the Southern California Coastal Water Research Project). The study will develop numeric targets that account for "natural sources" to establish the concentrations or loads from streams in a minimally disturbed or "reference" condition. Refer to Section 5.1 for further details. Will occur region-wide. Funding and resources were previously secured.	Prior to FY16	Completed within schedule	Yes	No Change	Completed	FY16 Notes: See Section 5.2 in Appendix C for more information

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-32	Conduct a Storm Water Fee Study~~Cost of Service Study~~.	Conduct a Storm Water Fee Study~~Cost of Service Study~~ that will examine the full cost of flood control and storm water strategies needed to comply with storm water regulations for the City of San Diego. The City of San Diego's Watershed Asset Management Plan will be used as the basis for the study. Funding and resources have been secured for FY2016.	FY16	Completed within schedule	Yes	No Change	Yes	FY16 Notes: Significant progress was made on the fee study; it will be finalized and posted on the City website in FY17. FY17 Notes: Study results to be posted in FY17
CSD-NS-33	Conduct Sustainable Return on Investment (SROI) analysis to estimate strategies' co-benefits and impacts to the public and the private sector on a common scale.	SROI is an economics-based framework for evaluating quantitative and qualitative performance metrics and monetizing them, if possible, along a triple bottom line (i.e. financial, societal, and environmental). This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, 3) partners have been identified and formal MOUs have been developed, and 4) consensus and community support has been achieved. Resources necessary to implement this strategy include City staff or consulting team. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. The anticipated one-time cost to implement is $115,000. Once initiated, the analysis is expected to be complete in 1 year.	Must be triggered	Completed within schedule	Not Triggered	No Change	If Triggered	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-NS-34	Collaborate with the County, if a County-led regional social services effort is established, to provide sanitation and trash management for individuals experiencing homelessness and determine if the program is suitable and appropriate for jurisdictional needs to meet goals.	Support a non-profit or consortium to provide sanitation services associated with hygiene as well as trash management for persons experiencing homelessness. Rented or purchased shower/sanitary trailers providing mobile showers may be organized at specifically scheduled locations and times. This provision has been proposed as a method for preventing surface water usage for sanitation and bathing, as well as opportunity for outreach and referral by social service agencies. The trash management services will include providing trash bags, trash collection areas, and shower/sanitary facilities at centers which provide daytime shelter to their clients, or on a mobile-basis for known transit camps. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, 3) partners have been identified and formal MOUs have been developed, and 4) consensus and community support has been achieved. Resources necessary to implement this strategy include City staff to coordinate with the regional effort. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. The anticipated cost to implement the strategy includes an initial first year planning cost of $30,000 and implementation is expected to cost $10,000 annually thereafter. Once initiated, development of the program is expected in 1 year. Implementation is in perpetuity as long as funding is available.	Must be triggered	Continuous as funding allows	Not Triggered	No Change	If Triggered	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-37	Participate in an assessment to determine if implementation of an urban tree canopy (UTC) program would benefit water quality and other City goals, where feasible.	Perform a feasibility study to determine if implementing an UTC program would be beneficial to the City's goals. UTC intercepts rainfall through increased coverage of leaves, branches, and stems and reduces runoff from the storm drainage system. Benefits associated with enhancing an UTC include reducing heat island effects and air pollution in addition to aesthetics and community benefits. Where feasible, native trees will be utilized to prevent invasive trees from migrating to open spaces and to conserve water. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured and 2) staff resources are identified and secured. Resources necessary to implement this strategy include City staff or consulting team. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. Once initiated, implementation and assessment is expected in 2 years.	Must be triggered	Completed within schedule	Not Triggered	No Change	If Triggered	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-NS-38	Conduct a feasibility study to test Permeable Friction Course (PFC), a porous asphalt that overlays impermeable asphalt.	Perform an assessment to determine the feasibility of implementing PFC on City streets. PFC, an overlay of porous asphalt, is an innovative roadway material that improves driving conditions in wet weather and water quality. Placed in a layer 25-50mm thick on top of regular impermeable pavement, PFC allows rainfall to drain within the porous layer rather than on top of the pavement. PFC has also been shown to reduce concentrations of pollutants commonly observed in highway runoff. PFC incorporates storm water treatment into the roadway surface and does not require additional right-of-way. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured and 2) staff resources are identified and secured. Resources necessary to implement this strategy include City staff or consulting team. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. The anticipated cost to implement the strategy is $50,000. Once initiated, implementation and assessment is expected in 2 years.	Must be triggered	Completed within schedule	Not Triggered	No Change	If Triggered	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-NS-39	As opportunities arise and funding sources are identified, protect areas that are functioning naturally by avoiding impervious development and degradation on unpaved open space areas, creating permanent open space protections on undeveloped city-owned land, and accepting privately-owned undeveloped open areas.	This strategy may be implemented if there is interest in participation by the public or private entity with current control of the land. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) identification of partners, if needed (public, private, non-profit), 2) identification of costs and potential sources of funding, 3) final agreement by public or private entity with current control of the land, 4) final agreement by all other participating partners including acceptance by intended land- or asset-owning City department, and 5) funding in place. Resources necessary to implement this strategy include a coordinator or manager and maintenance for acquired lands. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. The time frame for implementation will vary by project. Implementation is in perpetuity as long as funding is available.	Must be triggered	Continuous as funding allows	Not Triggered	No Change	If Triggered	None
CSD-NS-44	Participate in a watershed council or group if one is established.	This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) partners have been identified and formal MOUs have been developed and 2) consensus and community support has been achieved. Resources necessary to implement this strategy include a coordinator or project manager. Projected funding needs may be met through award of a grant, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. Once initiated, development of the program is expected in 2 years. Implementation would be in perpetuity as long as funding is retained.	Must be triggered	Continuous as funding allows	Not Triggered	No Change	If Triggered	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-NS-47	Coordinate with Development Services Department to ~~P~~prohibit introduction of invasive plants in new development and redevelopment projects.	Coordinate with the City's Development Services Department to continue to prohibit introduction of invasive species such as *Arundo donax* and *Cortaderia selloana* for new development or redevelopment projects as specified in the City's municipal code for landscape. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	None
CSD-NS-51	Collaboration with the Regional Board.	The Responsible Agencies will work with the Regional Board to identify solutions and address sources of potential water quality impairments. Priorities include 1) enforcement of the Industrial General Permit, 2) enforcement of the Ag Waiver, 3) enforcement of other non-MS4 dischargers, and 4) Bacteria TMDL updates, as appropriate for each WMA. Discussions with the Regional Board were initiated in FY15. Collaboration will continue in FY16 to identify an appropriate path forward, including a more detailed time line. Funding and resources have been secured for FY16. Funding for future fiscal years is contingent on annual budget approval by each Responsible Agency.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	<u>FY16 Notes:</u> Provided written comments to the Regional Board, State Water Board, and US Environmental Protection Agency (EPA) regarding proposed rules and regulations.
CSD-NS-52	Collaborate with Metals TMDL RPs and the Regional Board to Adopt Site Specific Objectives	Collaborate with the Metals TMDL RPs, the Regional Board, and water stakeholders to determine site-specific water-effect ratios (WERs) for copper and zinc. The collaborative effort will continue through adoption of the site-specific WERs for Chollas Creek. Funding and resources have been secured for FY16. Funding for future fiscal years is contingent on annual budget approval by each Responsible Agency.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	<u>FY16 Notes:</u> Coordinated with the Regional Board to initiate Basin Plan amendment and peer review for basin plan update. <u>FY17 Notes:</u> Will continue.
Structural Strategies								
CSD-STRUCT-01	Restoration of natural areas to allow water percolation, and installation of site appropriate drainage devices to protect Sunset Cliffs Natural Park from soil erosion	A feasibility study is being conducted to assess the potential to restore natural areas in Sunset Cliffs Natural Park from erosion. I	FY22	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	No Change	NA, Not scheduled to be implemented in FY17	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Green Infrastructure								
CSD-GI-10	43rd and Logan Roadway Improvement - Project ID 1387 (bioretention to treat a drainage area of 0.73 acre)	The City has implemented a bioretention BMP on the northeast corner of the intersection of 43rd and Logan Avenue to treat storm water runoff from the northerly half of Logan Avenue from Dominion Street to 43rd Street (drainage area of about 0.73 acre). In addition, there are three sets of curbside filters installed along the southeast corner of 43rd Street and Logan Avenue. Storm water from Logan Avenue flows through a curb opening into a pretreatment device to filter out gross solids and some sediment, and then flows into 12 filtration units connected in series. The curbside filtration units treat 5.76 acres (See Proprietary BMP Strategies). The City has received grant funding to conduct BMP effectiveness monitoring for hydrologic performance and pollutant removal over a two-year period.	FY14	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Construction has been completed; BMP is maintained on a regular schedule. FY17 Notes: The installed BMP will continue to be maintained. See Table 5-3 for a current list of completed and planned Structural Projects.
CSD-GI-11	Green lot in Southcrest Park.	Green lot on Newton Ave. west of 43rd to treat a drainage area of 36 acres. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	See Table 5-3 for a current list of completed and planned Structural Projects.
CSD-GI-12	Central Region Public Health Center replacement of impervious pavement with rubberized porous asphalt.	Central Region Public Health Center replaced 6,250 square feet of impervious pavement with rubberized porous asphalt. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Completed	FY16 Notes: Completed County project; City not responsible for maintenance
CSD-GI-13	Southeast Family Resource Center bio-filtration planters	Southeast Family Resource Center constructed four bio-filtration planters in the parking lot and adjacent to the building to filter runoff from the roof and parking surface. They also installed porous pavers at the entrance and exit of the parking lot. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Completed	FY16 Notes: Completed County project; City not responsible for maintenance

City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
CSD-GI-16	~~10.31~~ 8.3 acres of bioretention and 2 acres of permeable pavement have been identified as potential opportunities for green infrastructure implementation on public parcels to treat an impervious drainage area of 298.12 acres (total drainage area of 462 ac) with a total storage volume with 13.56 acre-feet.	To meet the Chollas watershed numeric goals and schedules presented in Section 4, the City of San Diego will implement the following structural strategies. Staggered construction, operation, and maintenance of ~~10.31~~ 8.3 acres of bioretention and 2 acres of permeable pavement to treat an impervious drainage area of 298.12 acres (total drainage area of 462 ac) with a total storage volume of 13.56 acre-feet. An updated inventory of green infrastructure projects will be maintained in the WQIP Annual Report 1) Identify project locations (3-6 months) 2) Secure funds in the form of general funds, bonds, or grants (6 months-2 yrs) 3) Obtain City Council approval of Capital Improvement Projects budget (occurs annually in May) 4) Initiate preliminary engineering to narrow project scope (6 months; approx $30K per CIP project) 5) Hire design consultant to develop detailed construction plans and construction cost estimates (2 yrs; approx $500K per CIP project) 6) Complete construction contractor bid and award process for construction phase (6 months) 7) Construct project (4 months- 1 yr; project construction costs are TBD and are based on size of the project). 8) Operation and maintenance will be in perpetuity. Funds and staff resources for this function must be approved by City Council as part of the City's annual budget.	FY18	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	Revised to clarify strategy.	NA, Not scheduled to be implemented in FY17	See Table 5-3 for a current list of completed and planned Structural Projects.

Table 5-2 (continued)

(Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Green Streets								
CSD-GS-04	Beta Street	Operation and maintenance of a 0.063 acre (footprint) green street project at Beta Street and 37th to treat a drainage area of 2.1 acres. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY17	Continuous-Ongoing	Yes	No Change	Yes	FY17 Notes: Construction starting in FY17. See Table 5-3 for a current list of completed and planned Structural Projects.
CSD-GS-09	25.52 acres of green streets (12.76 acres of bioretention and 12.76 acres of permeable pavement) have been identified as potential opportunities for green street projects to treat a total drainage area of 7,260.34 acres with a total storage volume of 39.66 acre-feet.	To meet the Chollas watershed numeric goals and schedules presented in Section 4, the City of San Diego will implement the following structural strategies. Staggered construction, operation and maintenance of 25.52 acres of green streets (12.76 acres of bioretention and 12.76 acres of permeable pavement) to treat a total drainage area of 7,260.34 acres with a total storage volume of 39.66 acre-feet. An updated inventory of green streets projects will be maintained in the WQIP Annual Report. 1) Identify project locations (3-6 months) 2) Secure funds in the form of general funds, bonds, or grants (6 months-2 yrs) 3) Obtain City Council approval of Capital Improvement Projects budget (occurs annually in May) 4) Initiate preliminary engineering to narrow project scope (6 months; approx $30K per CIP project) 5) Hire design consultant to develop detailed construction plans and construction cost estimates (2 yrs; approx $500K per CIP project) 6) Complete construction contractor bid and award process for construction phase (6 months) 7) Construct project (4 months- 1 yr; project construction costs are TBD and are based on size of the project). 8) Operation and maintenance will be in perpetuity. Funds and staff resources for this function must be approved by City Council as part of the City's annual budget.	FY18	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	Revised to clarify strategy.	NA, Not scheduled to be implemented in FY17	See Table 5-3 for a current list of completed and planned Structural Projects.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Multiuse Treatment Areas								
Infiltration and Detention Basins								
CSD-MUTA-06	Multiuse Treatment Area BMPs in the Chollas Watershed.	To meet the Chollas watershed numeric goals and schedules presented in Section 4, the City of San Diego will implement the following structural strategies. Modeled MUTA BMPs with a total footprint of 6.2 acres to treat a total drainage area of 441 acres. These can be wetland, infiltration, retention and/or detentions systems. An updated inventory of MUTA projects will be maintained in the WQIP Annual Report. The following resources, funds, and steps are needed to implement this strategy: 1) Identify project locations (3-6 months) 2) Secure funds in the form of general funds, bonds, or grants (6 months-2 yrs) 3) Obtain City Council approval of Capital Improvement Projects budget (occurs annually in May) 4) Initiate preliminary engineering to narrow project scope (6 months; approx $30K per CIP project) 5) Hire design consultant to develop detailed construction plans and construction cost estimates (2 yrs; approx $500K per CIP project) 6) Complete construction contractor bid and award process for construction phase (6 months) 7) Construct project (4 months- 1 yr; project construction costs are TBD and are based on size of the project). 8) Operation and maintenance will be in perpetuity. Funds and staff resources for this function must be approved by City Council as part of the City's annual budget.	FY18	Continuous-Ongoing	NA, Not scheduled to be implemented in FY16	Multiple similar strategies were compiled into this new strategy listing to simplify recordkeeping and reporting.	NA, Not scheduled to be implemented in FY17	None. Future projects will be listed in Table 5-3.

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach	Implementation or Construction Year	Implementation Schedule	Implemented as planned in current FY (FY16)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications		Notes
						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
CSD-MUTA-07	Memorial Park: An infiltration basin has been constructed from the parking on the west side of Memorial Park to treat a drainage area of 1.4 acres.	A 0.10 acre infiltration basin has been constructed to treat runoff from the parking on the west side of Memorial Park that has been diverted from the existing storm drain system (drainage area of 1.4 acres) . Before entering the basin, the runoff passes through a hydrodynamic separator that removes pollutants that settle out or float. Runoff then enters the basin where it infiltrates into the underlying soils. Runoff in excess of the 5-year storm bypasses the BMP via an overflow pipe and returns to the regular storm drain system. Funding and resources were secured for FY2014. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY14	Continuous-Ongoing	Yes	No Change	Yes	FY17 Notes: Increase inspection & cleaning to a minimum of 2 annually. See Table 5-3 for a current list of completed and planned Structural Projects.
CSD-MUTA-15	If interim load reduction goals are not met and additional multiuse treatment areas are required, an infiltration basin(s) may be considered on publicly owned open spaces in canyon areas on a case-by-case basis when no other opportunities for load reductions exist.	Construction, operation, and maintenance of infiltration basin(s) in canyon areas. Nine potential canyon sites, owned by City of San Diego, have been identified in Chollas watershed that provide up to 30 acres of available space (83 total parcel acreage). This strategy may be triggered as 1) interim goals are not met, 2) funding to address MS4 discharges is identified and secured, 3) staff resources are identified and secured, 4) partners have been identified and formal MOUs have been developed, and 5) permits required by regulatory agencies are secured.	Must be triggered	Continuous-Ongoing	Not Triggered	No Change	If Triggered	None
Stream, Channel and Habitat Rehabilitation Projects (B.3.b.(1)(b)(iii))								
CSD-MUTA-20	If interim load reduction goals are not met and additional stream, channel, and habitat rehabilitation projects are required, implement as needed.	This strategy may be triggered as 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, 3) partners have been identified and formal MOUs have been developed, 4) permits required by regulatory agencies are secured, and 5) recommendations from the community are identified and consensus and community support has been achieved. Will occur in areas identified during feasibility studies.	Must be triggered	Continuous-Ongoing	Not Triggered	No Change	If Triggered	None

(Y/N) MS4 Permit Section: F.3.b.(3)(d)(ii)	Proposed Modifications: Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Proposed Modifications: Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	Notes
Water Quality Improvement BMPs								
Priority Development Projects (PDPs)								
CSD-PDP-03	Priority Development Project BMPs in San Diego Bay WMA.	Per the Storm Water Standards Manual, all non-exempt public PDPs are subject to requirements to construct and maintain permanent BMPs. See WQIP Annual Report for updated PDP BMP Inventory. Funding and resources have been secured for PDPs implemented prior to FY16. Funding for PDP BMPs constructed in future fiscal years is contingent on annual budget approval by City Council.	Prior to FY16	Continuous-Ongoing	Yes	Multiple similar strategies were compiled into this new strategy listing to simplify recordkeeping and reporting.	Yes	See Table 5-4 for a current list of PDP BMPs.
Proprietary BMPs								
CSD-WQBMP-02	43rd and Logan Roadway Improvement - Project ID 1387 (filtration units treat 5.76 acres)	Three curbside filtration units were installed along S 43rd street and Logan Avenue The curbside filtration units treat a total of 5.76 acres. Funding and resources were secured for FY2014. Funding for future fiscal years is contingent on annual budget approval by City Council. A bioretention BMP is also implemented on this site (See GI strategies).	FY14	Continuous-Ongoing	Yes	No Change	Yes	<u>FY17 Notes:</u> Increase inspection & cleaning to a minimum of 4 annually. See Table 5-3 for a current list of completed and planned Structural Projects.
Dry Weather Flow Separation and Treatment Projects								
CSD-WQBMP-09	If interim load reduction goals are not met and additional dry weather flow separation and treatment projects are required, implement as needed.	Construction of dry weather flow separation and treatment projects, where identified. This strategy may be triggered as 1) interim goals are not met, 2) funding to address MS4 discharges is identified and secured, 3) staff resources are identified and secured, and 4) permits required by regulatory agencies are secured. Will occur in downstream reaches where persistent dry weather flows have been observed.	Must be triggered	Continuous-Ongoing	Not Triggered	No Change	If Triggered	None

Table 5-2 (continued)
City of San Diego Jurisdictional Strategies

						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
Trash Segregation								
CSD-WQBMP-10	If interim load reduction goals are not met and additional trash segregation projects are required, implement as needed.	Construction of trash segregation (Trash Guards, etc.) projects, where identified. This strategy may be triggered as 1) interim goals are not met, 2) funding to address MS4 discharges is identified and secured, 3) staff resources are identified and secured, and 4) permits required by regulatory agencies are secured. Will occur in high loading areas city-wide.	Must be triggered	Continuous-Ongoing	Not Triggered	No Change	If Triggered	None
WMA Strategies (Optional Strategies, B.3.b.(2))								
WMA-5	Collaboration with the Regional Board.	The Responsible Agencies will work with the Regional Board to identify solutions and address sources of potential water quality impairments. Priorities include 1) enforcement of the Industrial General Permit and 2) enforcement of other non-MS4 dischargers. Discussions with the Regional Board were initiated in FY15. Collaboration will continue in FY16 to identify an appropriate path forward, including a more detailed time line. Funding and resources have been secured for FY16. Funding for future fiscal years is contingent on annual budget approval by each Responsible Agency.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Working with Regional Board to include non-Phase I MS4s in general permits, waivers, and Waste Discharge Requirements (WDRs).

						Modification for FY17 (If modified or canceled, provide rationale) MS4 Permit Section: F.3.b.(3)(d)(iv))	Plan to implement next FY (FY17)? (Y/N) MS4 Permit Section: F.3.b.(3)(d)(iii))	
WMA-6	Offsite Alternative Compliance Option ~~(WMAA)~~	The WMAA provides alternative compliance methods in lieu of meeting structural BMP design standards and/or hydromodification management criteria on the project site. The San Diego County Copermittees have collectively funded and provided guidance for development of a regional WMAA. Copermittees compiled a list of candidate projects that consider the numeric goals of the WMAs as well as projects previously identified in JRMPs and other regulatory documents. Next steps include submittal of the water quality equivalency standards final document, ~~anticipated in September 2015. Following a public review and Executive Officer approval, anticipated by November 2015,~~ which was submitted and approved in FY 2016. Following this approval, jurisdictions can formally implement an optional Alternative Compliance Program by ~~December 2015~~ February 2016 (time coincident with implementation of standards set forth in the regional BMP Design Manual and local Storm Water Standards Manuals).	Prior to FY16	Continuous-Ongoing	Yes	Revised to clarify strategy.	Yes	FY16 Notes: Phase 1 of the Alternative Compliance Program (ACP) went into effect on 2/16/16. FY17 Notes: Proposed Water Quality Equivalency (WQE) guideline development for stream restoration.
WMA-11	Collaborate with Metals TMDL RPs and the Regional Board to Adopt Site Specific Objectives	Studies to develop site-specific water quality objectives (SSOs) for Chollas Creek in accordance with the Metals TMDL are currently underway. The TMDL RPs will continue to work collaboratively with the Regional Board and watershed stakeholders to determine site-specific water-effect ratios (WERs) for copper and zinc. The collaborative effort will continue through adoption of the site-specific WERs for Chollas Creek. Funding and resources have been secured for FY16. Funding for future fiscal years is contingent on annual budget approval by each Responsible Agency.	Prior to FY16	Continuous-Ongoing	Yes	No Change	Yes	FY16 Notes: Coordinated with the Regional Board to initiate Basin Plan amendment and peer review for basin plan update providing a site specific objective for dissolved copper and zinc. FY17 Notes: Will continue working with the Regional Board for the adoption of a Basin Plan amendment.

* Strategy IDs with an asterisk indicate those strategies that are considered "jurisdictional" in the MS4 Permit, but are considered enhancements to the JRMP to target highest priority water quality conditions.

Table 5-3
City of San Diego Structural BMP Implementation Status for San Diego Bay WMA

Strategy Number	Strategy	Implementation Approach	Total Drainage Area (Ac)	Implementation Year*	Status	Permit Term Goal**
Green Infrastructure		Total Acres Treated Required for Green Infrastructure:	498.73			
CSD-GI-10	43rd and Logan Roadway Improvement - Project ID 1387 (bioretention to treat a drainage area of 0.73 acre)	The City has implemented a bioretention BMP on the northeast corner of the intersection of 43rd and Logan Avenue to treat storm water runoff form the northerly half of Logan Avenue from Dominion Street to 43rd Street (drainage area of about 0.73 acre). In addition, there are three sets of curbside filters installed along the southeast corner of 43rd Street and Logan Avenue. Storm water from Logan Avenue flows through a curb opening into a pretreatment device to filter out gross solids and some sediment, and then flows into 12 filtration units connected in series. The curbside filtration units treat 5.76 acres (See Proprietary BMP Strategies). The City has received grant funding to conduct BMP effectiveness monitoring for hydrologic performance and pollutant removal over a two-year period.	0.73	FY14	Completed	✓
CSD-GI-11	Green lot in Southcrest Park.	Green lot on Newton Ave. west of 43rd to treat a drainage area of 36 acres. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	36	Prior to FY16	Design	✓
CSD-GI-16	8.3 acres of bioretention and 2 acres of permeable pavement have been identified as potential opportunities for green infrastructure implementation on public parcels to treat an impervious drainage area of 298.12 acres (total drainage area of 462 ac) with a total storage volume with 13.56 acre-feet.	To meet the Chollas watershed numeric goals and schedules presented in Section 4, the City of San Diego will implement the following structural strategies. Staggered construction, operation, and maintenance of 8.3 acres of bioretention and 2 acres of permeable pavement to treat an impervious drainage area of 298.12 acres (total drainage area of 462 ac) with a total storage volume of 13.56 acre-feet. An updated inventory of green infrastructure projects will be maintained in the WQIP Annual Report.	462	FY18	Varies, see below	Varies, see below

Multiuse Treatment Areas		Total Acres Treated Required for MUTAs:	442.4			
CSD-MUTA-07	Memorial Park: An infiltration basin has been constructed from the parking on the west side of Memorial Park to treat a drainage area of 1.4 acres.	A 0.10 acre infiltration basin has been constructed to treat runoff from the parking on the west side of Memorial Park that has been diverted from the existing storm drain system (drainage area of 1.4 acres) . Before entering the basin, the runoff passes through a hydrodynamic separator that removes pollutants that settle out or float. Runoff then enters the basin where it infiltrates into the underlying soils. Runoff in excess of the 5-year storm bypasses the BMP via an overflow pipe and returns to the regular storm drain system. Funding and resources were secured for FY2014. Funding for future fiscal years is contingent on annual budget approval by City Council.	1.4	FY14	Completed	✓
CSD-MUTA-06	Multiuse Treatment Area BMPs in the Chollas Watershed.	To meet the Chollas watershed numeric goals and schedules presented in Section 4, the City of San Diego will implement the following structural strategies. Modeled MUTA BMPs with a total footprint of 6.2 acres to treat a total drainage area of 441 acres. These can be wetland, infiltration, retention and/or detentions systems. An updated inventory of MUTA projects will be maintained in the WQIP Annual Report.	441	FY18	*(Overall amounts of projects have been determined through modeling or similar means. Details of specific projects initiated as part of this strategy are entered below once they enter the design stage.)*	
	Project Name	Project Description	Total Drainage Area (Ac)	Implementation Year	Status	Permit Term Goal
	(Projects will be added as they reach the design stage)					
Water Quality Improvement BMPs		Total Acres Treated Required for WQI BMPs:	5.76			
CSD-WQBMP-02	43rd and Logan Roadway Improvement - Project ID 1387 (filtration units treat 5.76 acres)	Three curbside filtration units were installed along S 43rd street and Logan Avenue The curbside filtration units treat a total of 5.76 acres. Funding and resources were secured for FY2014. Funding for future fiscal years is contingent on annual budget approval by City Council. A bioretention BMP is also implemented on this site (See GI strategies).	5.76	FY14	Completed	✓

*For additional details, please see the schedule following the City's strategy table in the WQIP.
** Projects with a check in the "Permit Term Goal" column are counted toward the green infrastructure installation goal applicable to the current Permit term. See Table 5-5 for a summary.

Table 5-4
City of San Diego Priority Development Project Implementation Status for San Diego Bay WMA

San Diego Bay PDP BMP Ledger (CSD-PDP-03)					
Project Name	Project Description	Total Drainage Area (Ac)	Implementation Year	Status	Permit Term Goal*
North 252 Corridor Park Phase I (Dorothy Petway Park) - Project ID 1002	2 vegetated filter strips and one vegetated swale was implemented at I-5 and Rigel Street. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	unknown	Prior to FY16	Completed	
Memorial Skateboard Park- Addition of detention vault to treat a drainage area of 0.69 acre.	A subsurface detention vault is proposed to be installed in line with the existing 12-inch PVC pipe to capture the runoff generated by the 85th percentile storm. Detained runoff is proposed to be reused to irrigate the athletic fields at Memorial Park. Runoff volume in excess of the detention vault capacity is proposed to overflow into an adjacent subsurface infiltration gallery for additional volume reduction and treatment. This project was initially constructed prior to the 2007 Municipal Storm Water Permit, so implementation of the BMP retrofit recommendations exceeds applicable treatment requirements by treating runoff from 0.69 acre of impervious surface to the 85th percentile storm. Funding and resources were secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by City Council.	17.25	FY15	Completed	✓
N Chollas Community Park Phase 1B - Project ID 855	4 drainage inserts were installed in Chollas Lake Park near College Grove Drive and Caminito Chollas. Funding and resources were secured for FY2014. Funding for future fiscal years is contingent on annual budget approval by City Council.	unknown	Prior to FY14	Completed	
Lisbon Street Roadway and Utility Improvements - Project ID 858	2 drainage inserts were installed at Imperial Avenue and Lisbon Street. Funding and resources were secured for FY2014. Funding for future fiscal years is contingent on annual budget approval by City Council.	unknown	Prior to FY14	Completed	
Fire Station #12 - Project ID 989	1 downspout filter and 10 drainage inserts were installed at Willie James Jones Avenue and Imperial Avenue. Funding and resources were secured for FY2014. Funding for future fiscal years is contingent on annual budget approval by City Council.	unknown	Prior to FY14	Completed	
Rigel St Bridge Replacement - Project ID 1008	5 drainage inserts were installed at Rigel Street and Main Street. Funding and resources were secured for FY2014. Funding for future fiscal years is contingent on annual budget approval by City Council.	unknown	Prior to FY14	Completed	
1 Priority Development Project BMP at Otay Mesa/ Nestor Library in Otay River HU.	Because of the limited space available at the site and geotechnical issues associated with the proximity to steep slopes, it is recommended that a Filterra type or approved equivalent treatment unit be retrofitted to treat flows from the 85th percentile storm. The retrofit exceeds applicable regulatory requirements by treating runoff from 11,800 more square feet of impervious surface than the initial site design and by treating flows from the 85th percentile storm. Funding and resources were secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by City Council.	unknown	FY15	Completed	
Charles Lewis III Memorial Park	Public PDP project that included a TCBMP	unknown	FY16	Completed	

* Projects with a check in the "Permit Term Goal" column are counted toward the green infrastructure installation goal applicable to the current Permit term. See Table 5-5 for a summary.

Table 5-5
Summary of City of San Diego Priority Structural BMP Implementation Status for San Diego Bay WMA

Permit Term Goal FY2018	Total Drainage Area (Ac)
Structural BMP Total Acres Treated Required by FY 18	44.60 (Required by FY 18)
Total Completed/Planned BMPs	70.99
Total Completed/Planned PDP BMPs	17.25
Remaining to Goal	-43.64 (Goal Met/Exceeded)
Final Goals FY2031*	**Total Drainage Area (Ac)**
Green Infrastructure Total Acres Treated Required	498.73
Total Completed/Planned	424.73
Remaining to Final Amount of Acres Treated	74.00
Green Streets Total Acres Treated Required	7,263.04
Total Completed/Planned	235.10
Remaining to Final Amount of Acres Treated	7,027.94
MUTA Total Acres Treated Required	442.40
Total Completed/Planned	1.40
Remaining to Final Amount of Acres Treated	441.00
WQI BMP Total Acres Treated Required	5.76
Total Completed/Planned	5.76
Remaining to Final Amount of Acres Treated	0.00

*Based on the “MS4 Discharges: Implement Accepted WQIP” compliance pathway. Final compliance is implementation of BMPs based on modeling analysis results. Strategies within the Chollas subwatershed will be implemented on a schedule designed to meet the metals final Goal of FY 29

5.4 MODIFICATIONS TO THE BMP DESIGN MANUAL

In FY16 the City, along with other government agencies, professional engineers and members of the local development community, developed a new Regional Best Management Practices (BMP) Design Manual that conforms to the 2013 Municipal Storm Water Permit (Order No. R9-2013-0001, as amended by R9-2015-0001 and R9-2015-0100). The Manual supersedes the San Diego County-wide Model Standard Urban Runoff Storm Water Management Plan (SUSMP) and provides technical guidance and regional standards for pollutant and flow control requirements for new development and significant redevelopment. The City of San Diego's local version of the BMP Design Manual, the Storm Water Standards Manual, became effective on February 16, 2016.

5.5 MODIFICATIONS TO THE JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM

The City of San Diego is proposing the following administrative changes to its JRMP. The updated JRMP can be viewed at:

https://www.sandiego.gov/stormwater/plansreports/jrmp.

Table 5-6
Proposed Administrative Changes to City of San Diego's JRMP

	JRMP Section / Appendix	JRMP Update
1	Executive Summary	Strategy categories and definitions were modified to align with the categories and definitions in the Municipal Storm Water Permit and San Diego Water Board's approved Water Quality Improvement Plans (WQIPs).
2	Section 2.3	In accordance with the Municipal Storm Water Permit, Section 2.3 was updated to state that JRMP updates can be proposed/submitted as part of the WQIP Annual Reports.
3	Section 7.3.13-8	Updated BMP #16 to provide greater clarity.
4	Section 7.3.14	Updated section to include new BMPs for herbicide application.

Table 5-6 (continued)
Proposed Administrative Changes to City of San Diego's JRMP

	JRMP Section / Appendix	JRMP Update
5	Section 10	Strategy categories and definitions were modified to align with the categories and definitions in the Municipal Storm Water Permit and San Diego Water Board's approved WQIPs. Updated tables, graphs, charts, and text to reflect funding needs to meet the goals and schedules identified in the WQIPs. Added language stating "Estimates of funding needs presented were based on the best information available at the time they were prepared."
6	Sections 7.3.1, 7.3.2, and 7.3.4-15	Updated Minimum BMP language to reflect changes to Appendix IX.
7	Section 3, Section 4, Section 5, Section 6, Section 7, Section 8, Section 9	Based on updates made to the categories and definitions of strategies noted above, the "JRMP Strategies Identified in the WQIPs" tables and "Additional Public Education and Participation Program WQIP Strategies" tables for these sections have been updated for consistency. The strategy identification numbering system and text was updated to reflect administrative changes included in the WQIP Annual Reports.
8	Appendix VI- Residential Management Areas and Patrol Protocols	Updated the residential management areas maps and included newly developed patrol protocols.
9	Appendix IX - Minimum BMPs for Residential, Industrial, Commercial, and Municipal Sites/Sources	Updated references to ordinance sections, changed the "Think Blue" references to the Storm Water Division, and made minor changes to some BMP and description wording for clarification.
10	Appendix XIV- Certificate of Adequate Legal Authority	Signed Certificate of Adequate Legal Authority was added.

Table 5-6 (continued)
Proposed Administrative Changes to City of San Diego's JRMP

	JRMP Section / Appendix	JRMP Update
11	Appendix XX- Water Quality Improvement Plan Strategies	Updated strategies to reflect the administrative changes made to strategies in the Fiscal Year 2016 WQIP Annual Reports.
12	Appendix XXII- Storm Water Division Projected Funding Needs, 2016-2035	Updated Appendix XX to reflect the funding needs to meet the goals and schedules identified in the WQIPs.

SAN DIEGO BAY WATERSHED MANAGEMENT AREA, WATER QUALITY IMPROVEMENT PLAN FISCAL YEAR 2015-2016 ANNUAL REPORT

STATEMENT OF CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted.

Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations [40 CFR 122.22(d)].

Executed on the 24TH day of January, 2017, at the City of Coronado.

Clifford M. Maurer, PE, CEM
Director of Public Services & Engineering

CITY OF CORONADO
PUBLIC SERVICES & ENGINEERING

1825 STRAND WAY
CORONADO, CA 92118-3005

TEL: (619) 522-7383
FAX: (619) 522-2408

I certify that the City of Coronado has taken the necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements within Order No. R9-2013-0001 as amended by Orders R9-2015-0001 and R9-2015-0100. Legal authority is established and maintained as authorized by City Council on February 2, 2016 with the following:

- Updated Coronado Municipal Code (CMC) 61.04 Storm Water and Runoff Management Program
- Updated CMC 61.08 Discharge Regulations and Requirements
- Updated CMC 61.12 Inspection and Enforcement

In addition, the following CMC Chapters support implementation and enforcement activities:

- CMC 1.08 – Enforcement of Provisions of Municipal Code
- CMC 1.10 – Code Enforcement Administrative Fines
- CMC 1.12 – Appeal Hearings

Signed: ______________________ Date: 12-12-2016

Clifford M. Maurer, PE, CEM
Director of Public Services and Engineering

6.2 ANNUAL REPORT FORM

The City of Coronado's JRMP under the Municipal Permit per Order No. R9-2013-0001 was first prepared in June 2015. Subsequent amendments to the Municipal Permit by Orders No. R9-2015-0001 and R9-2015-0100 included modifications that made necessary some updates to the JRMP to provide accurate references (e.g., order sections and page numbers, definitions, additional information). None of the modifications to the Municipal Permit required modifications to the City of Coronado's programs or overall compliance plans.

The updates to the City of Coronado's JRMP were completed in June 2016 and a new version published and made available on the City's website in July 2016.

The City Council approved revisions to the Coronado Municipal Code relevant to storm water management on February 2, 2016, providing the revisions necessary to update the codes and requirements and provide the updated legal authority to implement the JRMP and Municipal Permit requirements. The City of Coronado's completed JRMP Annual Report form and fiscal analysis for FY16 are included on the following pages.

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM

FY 2015-16

I. COPERMITTEE INFORMATION

Copermittee Name: CITY OF CORONADO

Copermittee Primary Contact Name: KIM GODBY

Copermittee Primary Contact Information:
Address: 101 B Avenue
City: Coronado County: San Diego State: CA Zip: 92118
Telephone: 619-522-7387 Fax: 619-435-4479 Email: kgodby@coronado.ca.us

II. LEGAL AUTHORITY

Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	YES NO	X 	1
A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	YES NO	X 	

III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE

Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	YES NO	X 	2
If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	YES NO	X 	

IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	YES NO	X 	

Number of non-storm water discharges reported by the public	40	
Number of non-storm water discharges detected by Copermittee staff or contractors	9	
Number of non-storm water discharges investigated by the Copermittee	48	
Number of sources of non-storm water discharges identified	48	
Number of non-storm water discharges eliminated	48	
Number of sources of illicit discharges or connections identified	15	
Number of illicit discharges or connections eliminated	14	
Number of enforcement actions issued	1	3
Number of escalated enforcement actions issued	1	

V. DEVELOPMENT PLANNING PROGRAM

Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	YES NO	X 	
Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	YES NO	X 	4
If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	YES NO	X 	

Number of proposed development projects in review	59	
Number of Priority Development Projects in review	2	
Number of Priority Development Projects approved	3	
Number of approved Priority Development Projects exempt from any BMP requirements	0	
Number of approved Priority Development Projects allowed alternative compliance	0	
Number of Priority Development Projects granted occupancy	3	

Number of completed Priority Development Projects in inventory	19	
Number of high priority Priority Development Project structural BMP inspections	1	5
Number of Priority Development Project structural BMP violations	0	
Number of enforcement actions issued	0	
Number of escalated enforcement actions issued	0	

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM
FY 2015-16

VI. CONSTRUCTION MANAGEMENT PROGRAM

Has the Copermittee implemented a construction management program that complies with Order No. R9-2013-0001?	YES	[x]
	NO	[ ]

Number of construction sites in inventory	184
Number of active construction sites in inventory	119
Number of inactive construction sites in inventory	2
Number of construction sites closed/completed during reporting period	63
Number of construction site inspections	302
Number of construction site violations	0
Number of enforcement actions issued	0
Number of escalated enforcement actions issued	0

VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM

Has the Copermittee implemented an existing development management program that complies with Order No. R9-2013-0001?	YES	[x]
	NO	[ ]

	Municipal	Commercial	Industrial	Residential	
Number of facilities or areas in inventory	91	100	0	3	6
Number of existing development inspections	2054	85	NA	22	7
Number of follow-up inspections	4	0	NA	5	
Number of violations	0	0	NA	0	
Number of enforcement actions issued	0	0	NA	0	
Number of escalated enforcement actions issued	0	0	NA	0	

VIII. PUBLIC EDUCATION AND PARTICIPATION

Has the Copermittee implemented a public education program component that complies with Order No. R9-2013-0001?	YES	[x]
	NO	[ ]
Has the Copermittee implemented a public participation program component that complies with Order No. R9-2013-0001?	YES	[x]
	NO	[ ]

IX. FISCAL ANALYSIS

Has the Copermittee attached to this form a summary of its fiscal analysis that complies with Order No. R9-2013-0001?	YES	[x]
	NO	[ ]

X. CERTIFICATION

I [☐ Principal Executive Officer ☐ Ranking Elected Official ■ Duly Authorized Representative] certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM - SUPPLEMENT
FY 2015-16

Entry No.	Comments or Explanation
1	The City's revised ordinances were adopted by the City Council on February 2, 2016. The legal authority certification required by the Permit is provided with this annual report.
2	The City completed minor revisions to the JRMP at the end of June 2016 to include revised Permit page numbers and other references as result of amendments R9-2015-0001 and R9-2015-0100, refined procedures, and jurisdictional strategies finalized in the San Diego Bay WQIP.
3	The illicit discharge not eliminated is for a permanent groundwater dewatering operation identified to have been in existence since the early 1990s. The City has referred this case for permitting to the San Diego RWQCB that has jurisdiction over discharges to San Diego Bay and an existing general permit for groundwater NPDES No. CAG929003, Order No. R9-2015-0013. The site was issued City permits in the early 1980's and may be grandfathered into the general permit pursuant to Order 90-31.
4	The City's BMP Design Manual was adapted to meet the final requirements and recommendations issued by the San Diego Water Board for the Copermittee's Regional or Model BMP Design Manual. The modification where completed and implemented during the FY as required.
5	The City conducted inspections in the winter of 2014 and has scheduled conducting them in the fall for FY 2016-17. Therefore, inspections are not logged for this reporting year. For consistency, inspections will be conducted late summer to early fall every year.
6	The City's municipal facility inspection program as noted in the City's JRMP has a goal of annual inspection of the facilities in the inventory. The Permit requires a minimum of once every five years and 20% of the facilities every year.
7	The City's commercial facility inspection program as noted in the City's JRMP has a goal of annual inspection of the facilities in the inventory. In addition, thirteen facilities were inspected between July 1-12, 2016 and will be included in the FY 2016-17 annual report. The Permit requires inspections at a minimum of once every five years and 20% of the facilities every year. Municipal facility inspections include MS4 operation and maintenance inspections.

Date: 10/25/2016

<tr><td>Have any of the identified expenditures categories listed in JRMP Section 8.3.2 changed?</td><td>Has the comparison yielded any changes in the expenditure categories when compared to the current budget?</td><td>Check:
☐ Yes
√ No</td><td>If no, status quo. Go to Part C.

If yes, provide explanation below</td></tr>
<tr><td colspan="4">a) List any new or revised expenditure categories and provide an explanation of the changes:</td></tr>
<tr><td>Part C</td><td colspan="3">Permit Provision E.8.b.(2)</td></tr>
<tr><td>Does the City have the staff resources[2] necessary to meet the requirements of the Permit?</td><td>Were all requirement for each JRMP component met as shown in the JRMP Annual Report Form?</td><td>Check:
√ Yes
☐ No</td><td>If yes, City has necessary staff resources.
Go to Part D and E.

If no, provide explanation below</td></tr>
<tr><td colspan="4">a) Were staff resources temporarily not available? Check: ☐ Yes √No
Explain: Not applicable</td></tr>
<tr><td colspan="4">b) Are staff resources adequate for next fiscal year? Check: √ Yes ☐ No</td></tr>
</table>

[1] Resources are considered to be the total budget needed to cover planned expenditures to comply with the Permit.
[2] Staff resources are considered to be the total labor and contract personnel needed to comply with the Permit.

If no, explain:	

Part D	Permit Provision E.8.b.(3)
Provide an estimate of the expenditures for current fiscal year[3] in the categories listed	
Expenditures by Category for all departments - Storm Water Program (JRMP Section 8.3.2.2)	**FY 2015-16**
Personnel Services	$ 254,263
Services and Supplies	$ 451,990
Property (vehicle)	$ 10,907
Contingency	$ 0
Debt Service	$ 301,476
Other: CIP Projects (various)	$ 61,060
Other:	$ 0
Total:	**$1,079,696**

Part E	Permit Provision E.8.b.(4)		
Have the source(s) of funds listed in JRMP Section 8.3.2.5 significantly changed and how do they affect planned expenditures?	Has the comparison yielded any significant changes in funding sources that affected the expenditures listed in Part D? Will the changes affect expenditures planned for next fiscal year?	Check: ☐ Yes √ No ☐ Yes √ No	If no, status quo. Go to next question. If yes, provide explanation below
a) List any new or revised funds or funding sources and provide an explanation of the changes:			
Have the legal restrictions on the source(s) of funds as noted in JRMP Section 8.3.2.5 significantly changed?	Has the comparison yielded any significant changes in funding sources restrictions?	Check: ☐ Yes √ No	If no, status quo. Annual fiscal analysis is complete. If yes, provide explanation below
a) List any new or revised legal restrictions on the funds or funding sources and provide an explanation of the changes: Not applicable.			

[3] The Permit lists "current fiscal year" interpreted to mean the reporting year corresponding to the annual report being submitted. The "next fiscal year" is interpreted to mean the year already underway when the report is being prepared.

Additional Notes or Comments:

6.3 CITY OF CORONADO STRATEGIES

The City of Coronado (Coronado) is a small beach community located on an island connected to the mainland via a tombolo, the Silver Strand. Coronado has identified strategies to address the Focused Priority Condition for swimmable waters and implement jurisdictional programs citywide. Maintaining Coronado's streets, sanitary sewer system, storm drain system, and other infrastructure is a high priority for the City. All streets in Coronado are swept once a week, regardless of type. Special events are highly scrutinized, permitted, and conditioned, and Coronado provides extra trash receptacles and traffic control. Since 2005, all newly constructed municipal buildings have been certified LEED Silver. Coronado has also implemented permeable paving, downspout disconnects, and other BMPs on City projects. Coronado also coordinates with the Navy for beach cleanups on the Silver Strand. Strategies and implementation schedules, presented in Table 2-6, were including in the 2016 San Diego Bay WQIP and identified using best information available on efficiency, effectiveness, and level of effort estimated to achieve compliance with numeric goals. The adaptive management process provides the framework to evaluate progress toward meeting the goals and allows for modification of these (jurisdictional) strategies as conditions, opportunities or constraints are identified. As strategies are modified, the San Diego Bay WQIP is updated. The implementation of each strategy is contingent upon annual budget approvals and funding availability

Intentionally Left Blank

Table 6-1
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
JRMP (E.2 – E.7) Strategies (E.3.b.(1)(a))									
E.3 Development Planning									
All Development Projects									
CO-1	Review projects for potential sources of bacteria and require additional source control BMPs as applicable for persistent problems or areas. Also see Public Education and Participation (CO-27).	-	-	-	-	-	-	-	-
	1. Commercial projects. Require additional source control BMPs as applicable for persistent problem or areas. BMPs may address trash enclosures, outdoor areas/facilities/uses, cleaning SOPs, employee training, and others as identified or applicable.	As projects are submitted for permitting. Funding: Storm Drain Enterprise (fees).	FY15-16	Yes	Continuous	None	NA	NA	Yes
	2. Residential and medium risk sources: Review projects for potential sources of bacteria and require additional source control BMPs as applicable. BMPs may include landscaping modifications, impervious area maintenance, and trash storage areas design/location.	As projects are submitted for permitting. May be initiated per findings or in conjunction with CO-4 and CO-39. Funding: Storm Drain Enterprise (fees). Optional strategy trigger: interim or final goal not being met or at risk of not being met as determined by assessment plan.	Triggered by Goal Assessment	Not Triggered	NA	First year of implementation and assessment of goal to trigger implementation would be in FY17	NA	NA	Yes
CO-2	Implement additional requirements for development projects, as specified in the City's version of the BMP Design Manual and JRMP, to target sources of bacteria.	As projects are submitted for permitting. Funding: Storm Drain Enterprise (fees).	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-3	Require projects within the WQSA to implement LID and source control BMPs with focus on potential bacteria sources. BMP examples include: source locations away from water's edge, pervious areas enhanced, design features for sources (e.g., trash enclosures, landscaping)	As projects are submitted for permitting. Funding: Storm Drain Enterprise (fees).	FY15-16	Yes	Continuous	None	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Priority Development Projects (PDPs)									
CO-4	Include in the BMP Design Manual BMP requirements for development projects that have a higher potential to contribute to the Priority Conditions (bacteria).	-	-	-	-	-	-	-	-
	1. Amend BMP Design Manual for trash areas. Require full four-sided and/or covered enclosure, away from storm drains.	As projects are submitted for permitting. Funding: Storm Drain Enterprise (fees).	FY15-16	Yes	Yes	Modifications to BMP Design Manual completed and now being implemented	NA	NA	Yes
	2. Amend BMP Design Manual for animal-related facilities, such as such as animal shelters, "doggie day care" facilities, veterinary clinics, breeding, boarding and training facilities, and pet care stores to address sources in outdoor areas, activities, storage, and other as applicable.	As projects are submitted for permitting. Funding: Storm Drain Enterprise (fees).	FY15-16	Yes	Yes	Modifications to BMP Design Manual completed and now being implemented	NA	NA	Yes
	3. Amend Coronado Municipal Code (CMC) to support additional requirements in the BMP Design Manual targeting Priority Conditions as identified through plan review and field inspections.	As projects are submitted for permitting. Funding: Storm Drain Enterprise. Optional strategy trigger: interim or final goal not being met or at risk of not being met as determined by assessment plan.	Triggered by Goal Assessment	Not Triggered	NA	First year of implementation and assessment of goal to trigger implementation would be in FY17. Note: CMC was modified in FY16 to update it to the 2013 Municipal Permit	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Construction Management									
CO-5	Target permitting and inspection program to identify bacteria sources, and require construction projects within the WQSA to be identified as High Threat to water quality and implement appropriate BMPs for bacteria sources (e.g. location of portable toilets). Note: majority of construction in WQSA is residential or eating and drinking establishments. See Attachment 1 for minimum BMPs.	As projects are submitted for permitting and inspected. Funding: Storm Drain Enterprise.	FY15-16	Yes	Continuous	None	NA	NA	Yes
Existing Development									
Commercial and Residential Facilities and Areas									
CO-7	Implement inspections for identified high priority sources of bacteria (compared to annual inspection core program frequency) within specific drainage basins (e.g., Tidelands), as applicable. Require implementation of BMPs in Attachment 1 as applicable.	Additional targeted, biannual inspections for specific sources and drainage basins as identified through routine annual inspections Funding: Storm Drain Enterprise	FY15-16	Yes	Continuous	The City conducted core inspections with the Port of San Diego as a new activity for commercial facilities. Tidelands Basin inspections were planned and implementation initiated this FY. The program continues into FY17.	NA	NA	Yes
CO-8	Evaluate sweeping and maintenance of private roads and parking lots in targeted areas to identify and require additional BMPs (case-by-case basis): sweeping frequency, type of sweeper, inlet protection. Consider adding private roads to City sweeping program, based on funding availability.	Based on residential inspection results assessment. Funding: Storm Drain Enterprise, if available may require City Council approval. Optional Triggers: 1) residential inspection results; 2) interim or final goal not being met or at risk of not being met as determined by assessment plan.	Triggered by inspection results and goal assessment	Not Triggered	NA	First year of implementation and assessment of goal to trigger implementation would be in FY17.	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CO-9	Implement program that will require sources to retrofit trash enclosures when identified to be persistent and problematic sources through annual or complaint inspections (when public education, employee training, etc. are insufficient solutions) Also see CO-37.	As needed, through annual, routine inspections Funding: Storm Drain Enterprise.	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-10	1. Maintain existing pet waste program. Including new installation and maintenance of pet waste bag dispensers and trash bins (as BMPs) to enhance legal disposal in targeted areas based on inspection results. Also see CO-36.2.	Continuous. Funding: Storm Drain Enterprise. Triggers: based on park and beach facility inspection results and continued non-compliance or new areas/sources.	FY15-16	Yes	Continuous	None	NA	NA	Yes
	2. Enhanced or new signage and education (see CO-27 and CO-29), promoting physical removal of pet waste by pet owners.	Based on inspection assessment. Funding: Storm Drain Enterprise (fees). Optional Triggers: 1) park and beach facility inspection results and continued non-compliance; 2) interim or final goal not being met or at risk of not being met as determined by assessment plan.	Triggered by inspection results and goal assessment	Not Triggered	NA	First year of implementation and assessment of goal to trigger implementation would be in FY17.	NA	NA	Yes
CO-11	Promote with water purveyor, as available, residential source control program [BMPs for over-irrigation (smart controllers), rainwater harvesting, and turf conversion] that may include a rebate programs in target areas. Also see CO-43.	As needed and available. Funding: Storm Drain Enterprise and General Fund	FY15-16	Yes	Continuous	Program implemented to replace landscaping at entrance and medians in the Cays with drought tolerant plants, upgraded drip irrigation system.	NA	NA	Yes
CO-12	Implement inspections of City Marina land based areas under City jurisdiction - inlets, pump station and trash areas. Require BMPs as applicable per Attachment 1.	Additional targeted, bi-annual inspections for specific sources as identified. Funding: Storm Drain Enterprise	FY15-16	Yes	Continuous	Some inspections conducted jointly with the Port of San Diego.	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Municipal Facilities and Areas									
CO-13	1. Conduct enhanced beach maintenance activities to remove trash and debris, additional trash cans during peak periods, and replenish dog bag dispensers.	Continuous with daily patrols Funding: Storm Drain Enterprise and General Fund	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-13	2. Implement inspection and preventative maintenance (PM) program to prevent sewer system backups and spills in from municipal/public restrooms.	Continuous with inspections twice weekly. Funding: Storm Drain Enterprise, Wastewater Enterprise Fund, and General Fund	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-13	3. Implement beach patrols for trash, debris, and pet waste removal.	Continuous with daily patrols Funding: General Fund	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-14	Identify Focused Priority Conditions in municipal facilities and areas to identified specific BMPs to reduce sources (e.g., special events). BMPs included in Attachment 1.	Based on pre-planning/permitting meeting and municipal inspection assessment during each event. Funding: Storm Drain Enterprise (fees). Optional Triggers: 1) park and beach facility inspection results and continued non-compliance, other municipal facilities and operations, special events; 2) interim or final goal not being met or at risk of not being met as determined by assessment plan.	Triggered by inspection results and goal assessment	Not Triggered	NA	First year of implementation and assessment of goal to trigger implementation would be in FY17.	NA	NA	Yes
CO-6	Implement park restroom inspection and cleaning to prevent sewer spill discharges to the MS4 and remove trash/waste.	Continuous with daily inspections and cleaning. Funding: General Fund	FY15-16	Yes	Continuous	None	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
MS4 Infrastructure									
CO-15	Implement operation and maintenance activities (inspection and cleaning) for MS4 and related structures (catch basins, storm drain inlets, diversion structures, etc.) for optimum water quality. BMPs in Attachment 1 implemented as applicable.	Jurisdictional programs are for City staff and include SOPs, forms, schedules found in JRMP Section 6.5.6 and the Storm Water Standards Manual Sections 6-A and 6-B.	-	-	-	-	-	-	-
	1. Perform MS4 inspection and cleaning at higher frequency (instead of annually) for high debris areas.	Continuous with monthly inspections Funding: Storm Drain Enterprise.	FY15-16	Yes	Continuous	None	NA	NA	Yes
	2. Evaluate MS4 inspection and cleaning locations and adjust high frequency to target new/modified high debris areas.	Continuous, at minimum biannually. Funding: Storm Drain Enterprise.	FY15-16	Yes	Continuous	None	NA	NA	Yes
	3. Proactively repair and replace MS4 components to maintain proper operation and function.	Continuous. Funding: Storm Drain Enterprise.	FY15-16	Yes	Continuous	MS4 infiltration elimination project (lining) was initiated this reporting year. Design and bid docs completed. Project construction slated to start Jan. 2017.	NA	NA	Yes
	4. Proactively operate, maintain, repair, and replace urban runoff diverters to sanitary sewer.	Continuous. Funding: Storm Drain Enterprise and/or Wastewater Enterprise Fund	FY15-16	Yes	Continuous	None	NA	NA	Yes
	5. Proactively repair and replace corrugated metal pipe (CMP) MS4 components to provide source control from MS4 infrastructure (mitigate groundwater infiltration and reduce diversion flow to sewer system).	Continuous. Funding: Storm Drain Enterprise.	FY15-16	No	No	Evaluation of the MS4 inventory revealed that there are no remaining corrugated CMP components in the system. Eliminating the need for a CIP specifically targeting MS4 improvements to replace CMP.	Yes. Deleted in June 2016.	Others in place	No
CO-16	Implement operation and maintenance activities (inspection and cleaning) for Sanitary Sewer System and related structures for optimum operation.	Continuous. Monthly in priority areas and entire system annually (phased). Funding: Wastewater Enterprise Fund	FY15-16	Yes	Continuous	None	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CO-17	Implement controls to prevent infiltration of sewage into the MS4 from leaking sanitary sewers.	Continuous. Funding: Wastewater Enterprise Fund	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-18	Identify sewer leaks and areas for sewer pipe replacement prioritization and timely repair. Sewerage infrastructure overflow prevention.	Continuous. Funding: Wastewater Enterprise Fund	FY15-16	Yes	Continuous	None	NA	NA	Yes
Roads, Streets, Parking Lots									
CO-19	Perform sweeping of high-volume streets and hardscape cleaning at enhanced frequency. Indirect, positive impact in commercial area including eating and drinking establishments. See Attachment 1 for BMPs.	Continuous with weekly frequency in high volume areas. Funding: Storm Drain Enterprise.	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-21	Implement maintenance of bike lanes by proactively monitoring for erosion and completing minor repair and slope stabilization. See Attachment 1 for BMPs.	Continuous. Funding: General Fund	FY15-16	Yes	Continuous	None	NA	NA	Yes
Illicit Discharge, Detection, and Elimination (IDDE) Program									
CO-23	Conduct inspections in targeted areas designated as high priority for IDDEs. Follow-up with outreach/education (see CO-22, CO-25 and CO-26) as applicable. Also see CO-37. BMPs listed in Attachment 1.	Continuous. IDDE summer-dry weather residential and commercial inspections. Funding: Storm Drain Enterprise.	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-24	Conduct "off-hours" inspections to identify and eliminate illicit discharges. See BMPs in Attachment 1.	Continuous. Summer-dry weather residential and commercial inspections/patrols twice during the period. Funding: Storm Drain Enterprise.	FY15-16	Yes	Continuous	None	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Public Education and Participation									
CO-20	Implement street sweeping public education, temporary posting, and towing as needed to accomplish sweeping goals. Also see CO-37.	Continuous. Funding: Storm Drain Enterprise.	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-22	Promote and maintain website to encourage residents to report potential illicit discharges, overirrigation/runoff or other storm water violations.	Continuous. Funding: General Fund and Storm Drain Enterprise Fund	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-25	Implement targeted public education and participation program to promote existing and new programs, BMPs (see Attachment 1), and behaviors that reduce the discharge of pollutants in storm water from high-risk behaviors, pollutants of concern, and target audiences.	Based on inspection assessment. Funding: Storm Drain Enterprise (fees). Optional Triggers: 1) commercial facility and residential areas inspection results and continued non-compliance; 2) interim or final goal not being met or at risk of not being met as determined by assessment plan.	Triggered by inspection results and goal assessment	Not Triggered	NA	First year of implementation and assessment of goal to trigger implementation would be in FY17.	NA	NA	Yes
CO-26	Develop an outreach and training program for property managers responsible for HOAs targeting sources of bacteria and illegal discharges (e.g., impervious area wash down, trash management, pet waste, over-irrigation runoff) through specific BMPs (Attachment 1) for site conditions, design, etc. Assess "turnover" of property managers.	Continuous. Initial outreach (one-time), repeat as needed based on residential area inspection/drive-by results in following years. Funding source: Storm Drain Enterprise	FY16-17	NA	NA	Scheduled for FY17	NA	NA	Yes
CO-27	Support trash and pet waste cleanups through community-based organizations involving target audiences. North Beach (Dog Beach) location.	Continuous. Funding source: General Fund	FY16-17	Yes	Continuous	Implemented in FY16 although originally not planned until FY17. A grant was secured to fund daily clean-up of beach areas.	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CO-2.1	Include staff training to target identification of bacteria pollutant sources during development and building project permitting. Staff training will be conducted, tailored to job duties. See BMP Design Manual.	Training will occur prior to BMP Design Manual implementation, within 3 months of the start of implementation if needed, and annually thereafter. Funding: Storm Drain Enterprise.	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-28	Improve consistency and content of Coronado HA websites to highlight enforceable conditions and reporting methods for source of bacteria.	Continuous. Initial effort (one-time) Funding source: Storm Drain Enterprise Trigger for as needed: interim or final goal not being met or at risk of not being met as determined by assessment plan.	FY16-17	NA	NA	Scheduled for FY17	NA	NA	Yes
CO-29	Target education toward activities and human behavior (e.g. signage) in beaches/parks and other public areas including trash reduction, bacteria sources (pet waste removal) or other high impact behavior to habitat, wildlife, and water quality (e.g., no feeding of wildlife).	Continuous. Initial effort (one-time) Funding source: Storm Drain Enterprise, General Fund Trigger for as needed: interim or final goal not being met or at risk of not being met as determined by assessment plan.	FY16-17	NA	NA	Scheduled for FY17	NA	NA	Yes
CO-30	Engage with the Main Street Association to promote BMPs - activities and good housekeeping practices -associated with bacteria sources (impervious area cleaning SOPs, outdoor dining areas, trash areas). See Attachment 1 for BMPs.	Continuous. Initial effort (one-time) Funding source: Storm Drain Enterprise, General Fund Trigger for as needed: interim or final goal not being met or at risk of not being met as determined by assessment plan.	FY16-17	NA	NA	Scheduled for FY17	NA	NA	Yes
CO-31	Collaborate with regional, watershed or sub-watershed education and outreach efforts that targets bacteria, including educational/outreach opportunities associated with regional efforts for bacteria TMDL, as applicable.	Funding source: Storm Drain Enterprise Trigger for optional: interim or final goal not being met or at risk of not being met as determined by assessment plan.	Triggered by goal assessment	Not Triggered	NA	First year of implementation and assessment of goal to trigger implementation would be in FY17.	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CO-32	Develop and/or distribute existing materials (from other agencies/groups) education and outreach to reduce over-irrigation/runoff. Assess effectiveness in pilot/target area(s).	Continuous. Initial outreach (one-time), repeat as needed based on residential area inspection/drive-by results in following years. Funding source: Storm Drain Enterprise	FY15-16	Yes	Continuous	Example: City website updates on drought conditions posted and street median signage promoting water conservation by City.	NA	NA	Yes
CO-33	Provide municipal staff training to select groups based on job duties and activities with emphasis on Focused Priority Conditions (bacteria).	Continuous. Initial outreach (one-time), repeat as needed based on municipal facility and other inspections in following years. Funding source: Storm Drain Enterprise	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-34	Conduct public surveys related to swimmable waters. Tailor education and outreach based on results of surveys.	Continuous. Initial survey (one-time), repeat as needed based on need. Tailor outreach as needed. Funding source: Storm Drain Enterprise	FY17-18	NA	NA	Scheduled for FY18	NA	NA	NA
CO-35	Provide technical education and outreach to the development community on the design and implementation requirements with an emphasis on Focused Priority Conditions (bacteria).	Continuous. Initial outreach (one-time), repeat as needed based on development permit submittal and inspections in following years. Funding source: Storm Drain Enterprise	FY15-16	Yes	Continuous	None	NA	NA	Yes
Incentive Programs									
CO-43	Incentive programs or opportunities. Includes programs with water purveyor for water conservation/over-irrigation, runoff (see CO-11). Other incentive programs as they become available.	As needed and available. Funding: Storm Drain Enterprise, General Fund	FY15-16	Yes	Continuous	Program implemented to replace landscaping at entrance and medians in the Cays with drought tolerant plants, upgraded drip irrigation system.	NA	NA	Yes
CO-44	Provide pet waste bags to owners at dog-friendly facilities (dog beach and dog runs).	As needed. Continuous. Funding: General Fund	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-46	Evaluate street infrastructure replacement or repairs for retrofit opportunities	Projects may include green streets and similar retrofit opportunities (e.g., porous pavement), as capital improvement plans are updated and implemented. Funding: General Fund, Grants and Others	FY16-17	NA	NA	Scheduled for FY17. May include in list for Prop. 1 Grant Funding.	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CO-47	Implement a strategy to include incentives or programs to retrofit existing development, and identify candidate areas or projects	Offsite Alternative Compliance Program, when available, will include incentives and projects to encourage or implement projects to retrofit existing development sites in the City. Incentives may include public and/or private projects or sites. Existing development retrofit project selection will be based upon a variety of factors including project size, project location, pollutant reduction potential (compared to existing conditions), cost, funding, cost-benefit analysis, public perception and acceptance (especially for public sites/projects) and feasibility of implementation. The program will include protocols related to funding mechanisms for project construction and long-term maintenance, payment and credit structures, and water quality equivalency standards. Refer to JRMP Storm Water Standards Manual, Section 4.D Funding: Storm Drain Enterprise and General Fund	Project List FY16-17. Policy and Procedures FYs 16-17 and 17-18 (upon availability of regional guidance)	NA	NA	Scheduled for FY17. May include in list for Prop. 1 Grant Funding.	NA	NA	Yes
CO-48	Proactively repair, replace, and retrofit MS4 components to maintain proper operation and function for reduction of infiltration.	As needed and available. Funding: Storm Drain Enterprise and General Fund	Triggered by infrastructure assessment or other determination	Yes	Continuous	A CIP project to line several sections of the MS4 to reduce groundwater infiltration was designed and bid preparation initiated. Project construction slated for FY17	NA	NA	Yes
CO-49	Promote with water purveyor, as available, residential retrofit to reduce irrigation and over-irrigation runoff (smart controllers), rainwater harvesting, and turf conversion that may include a rebate programs in target areas.	As needed and available. Funding: Storm Drain Enterprise and General Fund	FY15-16	Yes	Continuous	Installation of drip irrigation and improved system at the Cays at entrance and medians.	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CO-50	Implement program that will require sources to retrofit trash enclosures when identified to be persistent and problematic sources through annual or complaint inspections (when public education, employee training, etc. are insufficient solutions)	As needed, through annual, routine inspections Funding: Storm Drain Enterprise.	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-51	Commercial redevelopment projects. Require additional source control BMPs as applicable for persistent problem or areas. May include retrofit of trash enclosures, outdoor areas/facilities/uses to address pollutants of concern (including bacteria).	As projects are submitted for permitting. Funding: Storm Drain Enterprise (fees).	FY 15-16	Yes	Continuous	None	NA	NA	Yes
CO-52	Residential and medium risk sources: Review projects for potential sources of bacteria and require retrofit of areas, if appropriate, Retrofits may include landscaping modifications, impervious area retrofit, trash storage areas design/location or retrofit.	As projects are submitted for permitting or identified through inspection as persistent and problematic. Funding: Storm Drain Enterprise (fees). Optional strategy trigger: interim or final goal not being met or at risk of not being met as determined by assessment plan.	Triggered by Goal Assessment	NA	NA	First year of implementation and assessment of goal to trigger implementation would be in FY17.	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Enforcement Response Plan									
CO-36	Implement escalating enforcement responses to compel compliance with statutes, ordinances, permits, contracts, orders, and other requirements for IDDE, development planning, construction management, and existing development in the Enforcement Response Plan. Implement additional strategies such as:	As needed. Continuous. Funding: General Fund, Storm Drain Enterprise Fund	FY 15-16	Yes	Continuous	None	NA	NA	Yes
	1. Increase enforcement and patrols of over-irrigation/runoff.	Continuous. Summer-dry weather residential and commercial inspections/patrols twice during period. Funding: Storm Drain Enterprise Funding: General Fund, Storm Drain Enterprise Fund	FY 15-16	Yes	Continuous	None	NA	NA	Yes
	2. Focus locally on patrols and enforcement of water-using mobile businesses.	Continuous. Summer-dry weather residential and commercial inspections/patrols twice monthly. Funding: Storm Drain Enterprise Funding: General Fund, Storm Drain Enterprise Fund	FY 15-16	Yes	Continuous	None	NA	NA	Yes
	3. Issue NOVs for private property sanitary sewer overflows.	As applicable. Continuous. Funding: General Fund, Storm Drain Enterprise Fund	FY 15-16	Yes	Continuous	None	NA	NA	Yes
	4. Police patrols (code enforcement) targeting dog owners using unauthorized parks for pets as approved by City (signage posted and no dog waste dispersers are available).	As needed. Continuous. Funding: General Fund, Storm Drain Enterprise Fund	FY 15-16	Yes	Continuous	None	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CO-37	Enforce minimum BMPs for existing residential and commercial development as identified in strategies and JRMP. Includes retrofit of trash enclosures (CO-9), no parking on street sweeping days (CO-20), IDDE summer-dry weather inspections (CO-23), eating and drinking establishments (dry sweeping/mop impervious areas/spills within right of way). See BMPs in Attach.1.	Continuous. Funding: Storm Drain Enterprise.	FY15-16	Yes	Continuous	None	NA	NA	Yes
Additional Nonstructural Strategies									
CO-38	Address and clean up homeless encampments to eliminate bacteria sources.	Continuous. Funding: General Fund, Storm Drain Enterprise	FY15-16	Yes	Continuous	None	NA	NA	Yes
CO-39	Conduct special studies related to bacteria sources and reduction measures, as applicable.	-	-	-	-	-	-	-	-
	1. Conduct a reference watershed study.	Funding: Storm Drain Enterprise Trigger for optional: interim or final goal not being met or at risk of not being met as determined by assessment plan.	TBD-Optional	Yes	No. Continues next FY	Regional Trash Generation Rate for Priority Land Use Study was organized and funded. Implementation in FY 16-17.	NA	NA	Yes
	2. Evaluate Tidelands Park data and delisting.	Continuous. Funding: Storm Drain Enterprise	FY15-16	Yes	Continuous	In collaboration with Port of San Diego, in progress	NA	NA	Yes
	3. Evaluate Tidelands Park outfall drainage basin for sources of bacteria, IDDE (including over irrigation), animal waste (birds, pets).	Continuous. Funding: Storm Drain Enterprise	FY15-16	Yes	Continuous	In collaboration with Port of San Diego, in progress	NA	NA	Yes
	4. Evaluate drainage system including condition of MS4 pipes draining to Tidelands Park outfall.	Continuous. Funding: Storm Drain Enterprise	FY15-16	Yes	Continuous	In collaboration with Port of San Diego, in progress	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
CO-39 (cont)	5. Develop work plan and/or revised strategies to address sources and conditions at Tidelands Park outfall based on finding (2-4 above).	Continuous. Funding: Storm Drain Enterprise	FY15-16	No	Continuous	In collaboration with Port of San Diego, in progress. To be implemented when 2-4 are completed.	NA	NA	Yes
CO-39	6. Evaluate with POSD conditions and sources in the drainage basin to Tidelands Park outfall, as applicable.	Continuous. Funding: Storm Drain Enterprise	FY15-16	No	Continuous	In collaboration with Port of San Diego, in progress. To be implemented when 2-4 are completed.	NA	NA	Yes
	7. Evaluate data gaps and monitoring plan options for delisting of Tidelands Park.	Continuous. Funding: Storm Drain Enterprise	FY15-16	No	Continuous	In collaboration with Port of San Diego, in progress. To be implemented when 2-4 are completed.	NA	NA	Yes
CO-40	Implement, as applicable, programs or BMPs with the Navy on water quality-related issues to benefit targeted sources, including bacteria. See Attachment 1 for BMPs.	Continuous. Funding: Storm Drain Enterprise	FY15-16	NA	Continuous	No opportunities arose and no issues were identified during the reporting year.			
CO-41	Implement, as applicable, with the Caltrans on water quality-related issues to benefit water quality, including bacteria.	Continuous. Funding: Storm Drain Enterprise	FY15-16	NA	Continuous	No opportunities arose and no issues were identified during the reporting year.			
CO-42	If invasive plant and pest removal is necessary in key locations, implement remedial measures.	Continuous. Funding: Storm Drain Enterprise	FY15-16	Yes	Continuous	Bark beetle infestation along Margarita Ave. mitigated with the removal of 11 trees to prevent further spread and disease of other trees. Funding for this project was from Parks Budget			
CO-45	Collaborate, as applicable, with the Regional Board on water quality-related issues to benefit water quality, including bacteria.	Continuous. Funding: Storm Drain Enterprise	FY15-16	Yes	Continuous	None	NA	NA	Yes

Table 6-1 (continued)
City of Coronado Jurisdictional Strategies

ID	Strategy and BMPs (B.3.b(1)(a)(ii))	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Non-JRMP Strategies (Optional Strategies, Provision B.3.b.(1)(b)									
CO-53	Implement stream, channel, and habitat rehabilitation projects as needed.	This strategy may be triggered if: 1) Interim goals are not met, 2) Stream or habitat rehabilitation is determined to be a more effective pathway, relative to additional structural or non-structural BMPs to meeting bacterial indicator goals, 3) Funding and staffing has been secured, 4) Partners, MOUs, and permits required by regulatory agencies are secured, and 5) Recommendations from the community are identified and consensus and community support has been achieved. Will occur in areas identified during feasibility studies. The following resources, funds, and steps are needed to implement this strategy if the above triggers are met or at the City's discretion: 1) Identify project locations and feasibility of property or land acquisition, 2) Secure funds in the form of general funds, bonds, or grants, 3) Obtain City Council approval of Capital Improvement Project budget, 4) Initiate preliminary engineering to narrow project scope and demonstrate effectiveness and feasibility, 5) Hire design consultant to develop detailed construction plans and construction cost estimates, including land acquisition, if applicable, 6) Complete construction contractor bid and award process for construction phase, 7) Construct project, 8) Operation and maintenance into perpetuity.	Triggered as noted in Implementation Approach	NA	NA	First year of implementation and assessment of goal to trigger implementation would be in FY17.	NA	NA	Yes

6.4 MODIFICATIONS TO THE BMP DESIGN MANUAL

The City of Coronado BMP Design Manual provides guidance for land development and public improvement projects to comply with relevant development planning requirements in the Municipal Permit. The City of Coronado updated its BMP Design Manual in accordance with Municipal Permit requirements during FY16; the BMP Design Manual replaced the Standard Urban Stormwater Mitigation Plan (SUSMP). No additional changes to the BMP Design Manual have been made since it went into effect. The City of Coronado BMP Design Manual can be accessed via the Project Clean Water website or at the City of Coronado's Main website located at: https://www.coronado.ca.us/government/departments_divisions/public_services_and_engineering/storm_water_operations/

6.5 MODIFICATIONS TO THE JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM

The City of Coronado completed minor revisions and updates to the Construction Management component in Section 5 of the JRMP. The updates were completed per Municipal Permit section F.2.a.(3). The updates include:

1. Provide criteria that allow for modifications in inspection frequency based on site conditions, BMPs, and compliance status and history of the project site.
2. Clarification that the default inspection frequency for sites determine to be a high threat is biweekly.
3. Updates required inspection content.
4. Clarifies information managed in the TrackIt system used for permitting and inspection management by the City.

The revised JRMP will be posted on the City's website, and may also be accessed through the Copermittee's Regional Clearinghouse on the Project Clean Water website.

STATEMENT OF CERTIFICATION AND LEGAL AUTHORITY ESTABLISHMENT SAN DIEGO BAY WATERSHED MANAGEMENT AREA, WATER QUALITY IMPROVEMENT PLAN FISCAL YEAR 2015-2016 ANNUAL REPORT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations [40 CFR 122.22(d)].

I also certify that the County of San Diego has taken the necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements within Order No. R9-2013-001 as amended by Orders R9-2015-0001 and R9-2015-0100.

Executed on the 6th day of January, 2017, at the County of San Diego.

7.2 ANNUAL REPORT FORM

The County of San Diego's completed JRMP Annual Report form and fiscal analysis for FY16 are included on the following pages.

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM ANNUAL REPORT FORM

FY 2015-2016

I. COPERMITTEE INFORMATION		
I.A Copermittee Name: County of San Diego (PIN 255223)		
I.B Copermittee Primary Contact Name: Todd Snyder		
I.C Copermittee Primary Contact Information: Address: 5510 Overland Avenue, Suite 410 City: San Diego County: San Diego State: California Zip: 92123 Telephone: (858) 694-3672 Fax: (858) 495-5623 Email: Todd.Snyder@sdcounty.ca.gov		
II. LEGAL AUTHORITY		
II.A Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	YES NO	☒ ☐
II.B A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	YES NO	☒ ☐
III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE		
III.A Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	YES NO	☒ ☐
III.B If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	YES NO	☒ ☐
IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM		
IV.A Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	YES NO	☒ ☐
IV.B.1 Number of non-storm water discharges reported by the public		286
IV.B.2 Number of non-storm water discharges detected by Copermittee staff or contractors		95
IV.B.3 Number of non-storm water discharges investigated by the Copermittee		375
IV.B.4 Number of sources of non-storm water discharges identified		115
IV.B.5 Number of non-storm water discharges eliminated		112
IV.B.6 Number of sources of illicit discharges or connections identified		85
IV.B.7 Number of illicit discharges or connections eliminated		84
IV.B.8 Number of enforcement actions issued		93
IV.B.9 Number of escalated enforcement actions issued		1
V. DEVELOPMENT PLANNING PROGRAM		
V.A Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	YES NO	☒ ☐
V.B Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	YES NO	☒ ☐
V.C If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	YES NO	☒ ☐
V.D.1 Number of proposed development projects in review		925
V.D.2 Number of Priority Development Projects in review		237
V.D.3 Number of Priority Development Projects approved		96
V.D.4 Number of approved Priority Development Projects exempt from any BMP requirements		0
V.D.5 Number of approved Priority Development Projects allowed alternative compliance		0
V.D.6 Number of Priority Development Projects granted occupancy		62
V.E.1 Number of completed Priority Development Projects in inventory		410
V.E.2 Number of high priority Priority Development Project structural BMP inspections		691
V.E.3 Number of Priority Development Project structural BMP violations		170
V.E.4 Number of enforcement actions issued		170
V.E.5 Number of escalated enforcement actions issued		0

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM
FY 2015-2016

VI. CONSTRUCTION MANAGEMENT PROGRAM

VI. A Has the Copermittee implemented a construction management program that complies with Order No. R9-2013-0001?	YES ☒	NO ☐

VI.B.1 Number of construction sites in inventory	2,748
VI.B.2 Number of active construction sites in inventory	2,684
VI.B.3 Number of inactive construction sites in inventory	0
VI.B.4 Number of construction sites closed/completed during reporting period	1,124
VI.B.5 Number of construction site inspections	18,858
VI.B.6 Number of construction site violations	416
VI.B.7 Number of enforcement actions issued	590
VI.B.8 Number of escalated enforcement actions issued	38

VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM

VII.A Has the Copermittee implemented an existing development management program that complies with Order No. R9-2013-0001?	YES ☒	NO ☐

	Municipal	Commercial	Industrial	Residential
VII.B.1 Number of facilities or areas in inventory	a. 263	b. 1,779	c. 150	d.110
VII.B.2 Number of existing development inspections	a. 1,885	b. 974	c. 38	d.468
VII.B.3 Number of follow-up inspections	a. 23	b. 131	c. 12	d.165
VII.B.4 Number of violations	a. 46	b. 279	c. 31	d.346
VII.B.5 Number of enforcement actions issued	a. 28	b. 130	c. 10	d.0
VII.B.6 Number of escalated enforcement actions issued	a.0	b.1	c.0	d.0

VIII. PUBLIC EDUCATION AND PARTICIPATION

VIII.A Has the Copermittee implemented a public education program component that complies with Order No. R9-2013-0001?	YES ☒	NO ☐
VIII.B Has the Copermittee implemented a public participation program component that complies with Order No. R9-2013-0001?	YES ☒	NO ☐

IX. FISCAL ANALYSIS

Has the Copermittee attached to this form a summary of its fiscal analysis that complies with Order No. R9-2013-0001?	YES ☒	NO ☐

X. CERTIFICATION

I [☐ Principal Executive Officer ☐ Ranking Elected Official ☒ Duly Authorized Representative] certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

FISCAL ANALYSIS COMPONENT

1.1. Introduction

This section presents an estimated annual budget for the County's runoff management programs for FY 2015-16.

1.2. Fiscal Analysis Methods

This section continues to utilize the methodologies and standards established in *Fiscal Analysis Method* submitted by the Copermittees in January 2009.

1.3. Fiscal Analysis Results

As shown the County estimated its total FY 2015-16 expenditures at $27,414,216. This fiscal analysis addresses each of the County's Runoff Management Program elements (jurisdictional, watershed, and regional activities) for the current reporting period (FY 2015-16). Expenditures are described by department and major program area. They represent an estimate of the expenditures that the County incurred in meeting its compliance obligations for FY 2015-16. They should not be interpreted as either budgeted or actual expenditures. Because stormwater program expenditures are distributed throughout a considerable number of County programs, a single consolidated "budget" does not exist for the program as a whole. As such, these figures should be considered best estimates of stormwater-related expenditures.

1.3.1 Expenditures

1.3.1.1. Jurisdictional

Table 1.1 presents the County's estimated jurisdictional expenditures for FY 2015-16.

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

	Jurisdictional Worksheet Component		Explanation/Notes
1	**ADMINISTRATION**	**$6,840,583**	These costs correspond to the DPW WPP development, administrative oversight, and assessment of the County's stormwater programs. The WPP is responsible for the development of new and augmented County stormwater programs, regulatory reporting, and program assessment. Some administrative costs are associated with other specific functions shown below, but are included here because they could not be separated out.
2	**DEVELOPMENT PLANNING**	**$1,109,654**	
A	**Land Use Planning**	$0	Expenditures not reported for FY 2015-16; included in other elements.
B	**Environmental Review**	$0	Expenditures not reported for FY 2015-16; included in other elements.
C	**Development Project Approval and Verification**	**$1,109,654**	
C1	**Public Projects (CIP)**	$824,219	
	Project Planning and Engineering	$570,229	Costs include: preparing and reviewing plans and specifications for stormwater BMPs, and SWPPP/WPCP review. These costs apply to DPW, DPR, and DGS.
	Compliance Inspection and Enforcement	$15,000	
	BMP Implementation	$238,990	

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

	Jurisdictional Worksheet Component		Explanation/Notes
C2	**Private Projects**	$285,435	
	Permitting and Licensing	$285,435	This cost covers PDS plan reviews at permitted sites. Total costs are estimated as fixed percentages of annual plan-checking fees.
3	**CONSTRUCTION**	**$4,500,593**	
A	**Public Projects (CIP)**	$2,886,893	Costs include: BMP compliance inspections during construction, and implementation of construction phase BMPs. These costs apply to DPW, DPR, and DGS.
	Compliance Inspection and Enforcement	$1,613,880	
	BMP Implementation	$1,273,013	
B	**Private Projects**	$1,613,700	
	Compliance Inspection and Enforcement	$1,613,700	This cost primarily covers DPW and PDS construction inspections at permitted sites. Total costs are estimated as fixed percentages of inspection program fees.
4	**MUNICIPAL**	**$7,572,297**	
A	**Administration**	$267,805	Expenditures associated with the administrative oversight of the stormwater programs, regulatory reporting, and program assessment of municipal facilities by the DPW - Watershed Protection Program.
B	**Streets, Roads, and Highways Element**	$2,256,091	
	Administration	$291,160	Founded road operations activities include: culvert inspections and cleaning;

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

Jurisdictional Worksheet Component			Explanation/Notes
	Maintenance Inspections	$1,890,813	increased culvert waste disposal costs, street sweeping, installation and maintenance of BMPs and road structures, and the placement of additional controls. 10% of the Maintenance and Inspections and BMP Implementation is reported as Administration cost.
	BMP Implementation	$74,118	
	Other	$0	
C	**MS4 Element**	<u>$1,530,000</u>	
	Administration	$191,000	The combined costs shown here apply across (1) DPW Flood Control -- conversion of existing concrete lined channels to natural bottom channels, updating flood control master plans, increased maintenance of flood control systems, and construction and maintenance of regional treatment BMPs; and (2) DPW Flood Control MS4 Operation & Maintenance -- maintenance on flood control facilities throughout the unincorporated areas of the County, exclusive of facilities within road rights-of-way (included in 4.B above). Other includes the cost of disposal of debris removed from MS4.
	Maintenance Inspections	$1,046,900	
	BMP Implementation	$290,500	
	Other	$2,500	
D	**Solid Waste Facilities Element**	<u>$406,618</u>	
	Administration	$35,047	Costs include Regional Board stormwater permit fees, consultant costs associated with stormwater upgrade and repair projects, and office staff time.
	Maintenance Inspections	$16,922	Costs include staff time to perform site inspections.
	BMP Implementation	$79,149	Costs include stormwater consultant site inspections, sampling/testing and BMP materials.
	Other (construction)	$275,500	Drainage improvement projects and BMP site maintenance projects.
E	**Wastewater Facilities Element**	<u>$187,000</u>	
	Administration	$10,000	This includes costs associated with JRMP report, the sanitary sewer system and facilities including: pump stations, sewage treatment plants and Spring Valley Operations facility. Also includes the cost of BMP design, acquisition,
	Maintenance Inspections	$127,000	

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

	Jurisdictional Worksheet Component		Explanation/Notes
	BMP Implementation	$50,000	maintenance and monitoring, for wastewater Capital Improvement Projects, and Major maintenance projects, and at various wastewater facilities.
	Other	$0	
F	**Road Stations Element**	$919,867	
	Administration	$83,624	This includes DPW road station operations related to Permit compliance. The Administration cost is determined as 10% of the total costs of maintenance and Inspections and BMP Implementation as reported by the DPW Roads Divisions.
	Maintenance Inspections	$799,414	
	BMP Implementation	$36,829	
	Other	$0	
G	**Fleet Maintenance Element**	$11,722	
	Administration	$1,036	This includes costs associated with operation of the County's fleet maintenance and fueling facilities.
	Maintenance Inspections	$7,392	
	BMP Implementation	$3,294	
	Other	$0	
H	**Municipal Airfields Element**	$338,110	These costs involve site inspections, annual reporting, and maintenance of BMPs at airports, including oversight of tenant operations. The BMP implementation item includes Palomar asphalt cap repairs.
	Administration	$12,737	
	Maintenance Inspections	$0	
	Compliance Inspection and Enforcement	$0	
	BMP Implementation	$300,623	
	Other (sampling and analysis)	$24,750	

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

	Jurisdictional Worksheet Component		Explanation/Notes
I	**Parks & Recreational Facilities Element**	$1,214,562	
	Administration	$121,362	This includes: coordinating all training requirements, preparing and reviewing reports, and overseeing the overall implementation of the stormwater program for DPR.
	BMP Implementation	$991,603	This includes costs associated with implementation of BMPs at County parks.
	Compliance Inspection and Enforcement	$101,597	Costs are for DPR enforcement of stormwater requirements at County parks.
	Other	$0	
J	**Office Buildings & Other Municipal Facilities Element**	$297,867	
	Administration	$0	DGS conducts a variety of storm water activities including: inspections and clean-up of County-owned, occupied, and leased facilities and vacant lands; maintenance and signage of storm drain inlet inserts and trash dumpsters; placement of inlet filters; maintenance of coverage and containment improvements for on-site supplies and materials; parking lot sweeping and controlled parking lot power washing; and application of erosion and sediment control measures. These costs are exclusive of fleet maintenance and fueling operations.
	Maintenance Inspections	$99,808	
	BMP Implementation	$198,059	
	Other	$0	
	Management of Pesticides, Herbicides, & Fertilizers	$142,656	
	Administration	$142,656	Integrated Pest Control Program within the Department of Agriculture, Weights and Measures (AWM) performs eradication and control of invasive weeds. This program also provides weed control on roadsides, airports, flood control channels,
	Maintenance Inspections	$0	

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

	Jurisdictional Worksheet Component		Explanation/Notes
	BMP Implementation	$0	sewage treatment plants and inactive landfills. It also provides structural pest control to facilities owned and operated by the county.
	Other	$0	
5	**INDUSTRIAL and COMMERCIAL**	**$1,575,635**	
	Administration	$253,047	DPW and AWM conduct inspections of a variety of businesses in the unincorporated County, provide regulatory oversight of mobile businesses, and conduct follow-up and enforcement of stormwater violations.
	Compliance Inspection and Enforcement	$1,245,279	
	Educational Outreach	$77,309	
	Other expenditures	$0	
6	**RESIDENTIAL**	**$1,205,386**	
	Compliance Inspection and Enforcement	$688,453	DPW conducts complaint investigations for residential sources in the unincorporated County, and conduct follow-up and enforcement of stormwater violations. DPW also operates a regional hotline.
	Educational Outreach	$516,933	Several County departments coordinate and provide outreach to the residential sector and schoolchildren in support of Permit Section D.5 requirements. Costs reported here correspond to DPW only. Funded activities include developing pollution prevention content and providing direct outreach to various target audiences within the general residential and schoolchildren target audiences.
7	**IDDE**	**$321,523**	

Table 1.1 – Estimated Jurisdictional Expenditures for FY 2015-16

Jurisdictional Worksheet Component			Explanation/Notes
		$321,523	DPW conducts monitoring programs, assesses scientific data, and provides technical and scientific support to other County program staff. They also provide support for all technical and scientific aspects of JRMP development and implementation. These costs are exclusive of the regional monitoring program which is addressed separately under regional costs.
8	**EDUCATION**	**$0**	Education costs are included in other sections as applicable.
9	**PUBLIC PARTICIPATION**	**$0**	Public participation costs are included in other sections as applicable.
10	**SPECIAL INVESTIGATIONS**	**$0**	Expenditures not reported for FY 2015-16; included in other elements.
11	**NON-EMERGENCY FIREFIGHTING**	**$0**	Expenditures not reported for FY 2015-16; included in other elements.
		$23,125,671	

1.3.1.2 Watershed

Table 1.2 presents the County's estimated watershed expenditures for FY 2015-16.

Table 1.2 – Estimated Watershed Expenditures for FY 2015-16

	Santa Margarita WMA	San Luis Rey WMA	Carlsbad WMA	San Dieguito WMA	Peñasquitos WMA	San Diego River WMA	San Diego Bay WMA	Tijuana WMA

1.3.1.3 Regional

Table 1.3 presents the County's estimated regional expenditures for FY 2015-16. This includes only those expenditures associated with the Copermittees' adopted Regional Budget and Work Plan. Other costs associated with regional participation (meeting attendance, etc.) are included within the jurisdictional expenditures presented above.

Table 1.3 – Estimated Regional Expenditures for FY 2015-16

Regional	**$2,087,118**

Total Estimated County Costs ***$27,414,216***

1.3.2 Funding Source

Table 1.5 shows the major sources of funding for the County's urban runoff management programs in FY 2015-16, and describes the legal restrictions applicable to the use of each.

Table 1.5 – Legal Restrictions on the Use of Program Funding

Funding Source	Legal Restrictions
General Fund	There are no restrictions on the use of general fund for County water quality programs and activities except that they must be used only for the purposes for which they are budgeted and allocated by the County Board of Supervisors.
Flood Control District Fees	Revenue generated from these fees must be expended for activities related to flood and storm management.
Developer Deposits / Permit Fees	Deposits / fees may be used only to fund activities related to the work for which the permits are issued.
Gas Tax	Gas Tax is collected by the state and allocated to local government for transportation-related work including maintenance of existing transportation systems and construction of new transportation facilities. These funds may not be used for other purposes.
Sanitary District Fees	Sanitary District Fees are used for work related to the maintenance of sewer lines, pump stations, force mains, and several treatment plants that serve the unincorporated areas. They may be used only for such maintenance-related purposes within the respective sewer district for which they are collected.
Other Funding Sources	Other funding sources collectively account for a relatively small portion of ongoing expenditures. However, all funding for the County's stormwater compliance programs is expended within applicable legal restrictions and limitations.

1.4. Conclusions and Recommendations

The figures presented here are an estimate of the expenditures that the County incurred to meet its compliance obligations for FY 2015-16. For the reasons explained above, they should be considered only best estimates of stormwater-related expenditures.

7.3 COUNTY OF SAN DIEGO STRATEGIES

The County of San Diego's (County's) jurisdictional strategies, found in Table 7-1, and optional strategies, found in Table 7-2, were chosen because they best suit the characteristics of its jurisdiction within the Chollas Creek HA. WMA strategies are presented in Table 7-3. Potential dry weather flows are evaluated through inspection of MS4 outfalls and education and outreach. To treat potential runoff from County facilities, retrofit projects utilizing LID approaches in conjunction with drainage and parking improvements were completed at the Southeast Family Resource Center and Central Regional Public Health Center. In Chollas Creek, a compliance analysis using a watershed model was conducted to identify the strategies required to be implemented to meet final goals. The strategies and implementation schedules identified provide that numeric goals are met. The adaptive management process provides the framework to evaluate progress toward meeting the goals and allows for modification of strategies. As strategies are modified, the compliance analysis is updated as needed to provide assurance that numeric goals are met.

Intentionally Left Blank

Table 7-1
County of San Diego Jurisdictional Strategies

ID	Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Status		Proposed Modifications		
		Implemented in FY16? *(No/Partially/Yes)*	Comments on Implementation (# events, # attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, N/A)*	Planned Implementation into next FY? *(Y/N)*
Illicit Discharge, Detection, and Elimination (IDDE) Program						
CoSD-34	Maintain storm water conveyance system map to facilitate IDDE program	Yes	Updated as needed	N	N/A	Y
CoSD-35	Utilize municipal personnel and contractors to identify and report Illicit Connections and Discharges	Yes	IDDE Program	N	N/A	Y
CoSD-36	*Updated focused training for County field staff*	Yes	Updated training for BMP Design Manual and Storm Water Implementers	N	N/A	Y
CoSD-37	Collect effluent on the ground (EOG), sanitary sewer overflow (SSO) data	Yes	Approximately 87 EOG complaints related to septic systems and 14 SSO events recorded and responded to.	N	N/A	Y
CoSD-38	*Address septic system failures where observed*	Yes	Suspected septic discharges are reported to DEH HIRT Response line when they occur after hours and DEH Land and Water Quality Division during normal hours. All complaints resolved during 15-16	N	N/A	Y
CoSD-39	Facilitate public reporting of ICID via telephone and email	Yes	Bilingual hotline, dedicated e-mail address, and multiple online reporting tools	N	N/A	Y
CoSD-40	*Refer homeless issue complaints to Sheriff or appropriate jurisdictions*	Yes	Collaborate with multi-departmental group to address homeless encampments	N	N/A	Y
CoSD-41	*Bilingual hotline answered by a live operator (I Love a Clean San Diego) to provide better customer service*	Yes	Bilingual hotline operated by ILACSD	N	N/A	Y
CoSD-42	Implement practices and procedures to address spills with the potential to enter the storm drain system	Yes	NOV issued by DEH for failing septic systems when effluent could reach the storm drain. Prompt follow up and mitigation is implemented. Such cases are rare; <5 in 15-16	N	N/A	Y
CoSD-43	*Coordinate spill response with responsible sewer agencies*	Yes	Major DEH role is to inform the public of risks associated with sewer spills, conducting sampling, reporting, posting signs, etc.	N	N/A	Y
CoSD-44	Implement practices and procedures to prevent/limit infiltration of seepage from sanitary sewers	Yes	If illicit connections are identified as part of an IDDE investigation, investigation will be conducted to define and eliminate the source.	N	N/A	Y

Table 7-1 (continued)
County of San Diego Jurisdictional Strategies

ID	Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Status		Proposed Modifications		
		Implemented in FY16? *(No/Partially/Yes)*	Comments on Implementation (# events, # attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, N/A)*	Planned Implementation into next FY? *(Y/N)*
CoSD-45	Coordinate with upstream entities to prevent illicit discharges from upstream sources entering into the storm drain system	Yes	If illicit connections are identified as part of an IDDE investigation, investigation will be conducted to define and eliminate the source. If determined to be from an upstream entity coordination will occur	N	N/A	Y
CoSD-46	Utilize municipal personnel and Contractors to monitor storm water outfalls for discharges of potential ICIDs	Yes	This is part of the IDDE Program	N	N/A	Y
CoSD-47	Develop and implement a strategy for investigating and addressing ICIDs.	Yes	Focused, collaborative investigations with Planning and Science staff of high priority outfalls.	N	N/A	Y
Development Planning						
CoSD-1	Require implementation of source control and Low Impact Development (LID) BMPs for all development projects.	Yes	The County BMP DM requires all projects regardless of size and location to implement SC and SD BMPs. These requirements are captured in the WPO and County's BMP DM.	N	N/A	Y
CoSD-2	Update BMP Design Manual procedures to specify storm water requirements applicable to development and redevelopment projects, identify and design appropriate BMPs, establish maintenance criteria, and establish where implemented alternative compliance options.	Yes, Partially	Updated to reflect the Regional Model BMP DM with additional changes to incorporate County implementation practices. BMP DM became effective on February 26, 2015. Rene can provide details on the differences between CoSD BMP DM and Model BMP DM.	N	N/A	N
CoSD-3	*Conduct internal (staff) training on the updated BMP Manual*	Yes	The JRMP requires the County to conduct internal training every fiscal year and after release of new guidance documents	N	N/A	N
CoSD-4	*Hold external land development workshops targeting the development community*	Yes	The County conducts external training regularly and after release of new guidance documents	N	N/A	N

Table 7-1 (continued)
County of San Diego Jurisdictional Strategies

ID	Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Status		Proposed Modifications		
		Implemented in FY16? *(No/Partially/Yes)*	Comments on Implementation (# events, # attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, N/A)*	Planned Implementation into next FY? *(Y/N)*
CoSD-5	Implement a program that ensures that all structural and Low Impact Development (LID) BMPs are designed, constructed and maintained on Priority Development and Redevelopment Projects.	Yes	Structural BMPs and LID BMPs are designed and constructed per the BMP Design Manual. In addition, Structural BMPs are tracked for maintenance through inspections and self-verification letters. LID BMPs that are installed as a result of implementation of the BMP Design Manual are proposed to be inspected	N	N/A	Y
CoSD-7	Impose legal authority to ensure all development and redevelopment projects are in compliance with all post construction requirements.	Yes	The Watershed Protection Ordinance was updated in FY16 to include modifications necessary as the result of the updated permit and the inclusion of applicant-implement offsite alternative compliance.	N	N/A	Y
CoSD-8	*Update County codes, ordinances, and storm water design standards consistent with the permit and the updated BMP Manual*	Yes	The Watershed Protection Ordinance was updated in FY16 to include modifications necessary as the result of the updated permit and the inclusion of applicant-implement offsite alternative compliance. WPO update became effective on February 26, 2016.	N	N/A	N
CoSD-9	Priority Development Projects: In addition to requirement for all development projects, implement or require implementation of onsite structural BMPs to control pollutants and manage hydromodification for PDPs.	Yes	The County BMP DM requires all PDPs to implement PC and HMP BMPs. These requirements are captured in the WPO and County's BMP DM.	N	N/A	Y
Construction Management						
CoSD-10	Maintain, update and prioritize a watershed based inventory of all projects issued local permits that allow soil disturbing activities.	Yes	Projects that are issued local permits that allow soil disturbance activities are part of the inventory that is watershed-based.	N	N/A	Y
CoSD-11	Require implementation of BMPs that are site specific, seasonally appropriate and appropriate to the construction phase, year round.	Yes	Every project requires implementation of site specific construction BMPs, seasonably appropriate and appropriate to the construction phase.	N	N/A	Y

Table 7-1 (continued)
County of San Diego Jurisdictional Strategies

ID	Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Status		Proposed Modifications		
		Implemented in FY16? *(No/Partially/Yes)*	Comments on Implementation (# events, # attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, N/A)*	Planned Implementation into next FY? *(Y/N)*
CoSD-12	Impose legal authority to ensure inventoried construction projects are in compliance with all requirements.	Yes	The Watershed Protection Ordinance is the current legal authority to insure inventoried construction projects are in compliance with all requirements.	N	N/A	Y
CoSD-13	*Make updates to County ordinances related to construction; reference to existing grading ordinance*	Yes	County ordinances are updated with subsequent Construction General Permit updates; the Watershed Protection Ordinance will be updated as necessary as a result of the future Grading Ordinance Update.	N	N/A	N
CoSD-14	Provide internal staff training related to construction storm water management.	Yes	The County conducts construction storm water training annually and it targets construction inspectors in DPW-PDCI, PDS-Building, and CIP Inspectors in DPW and DGS.	N	N/A	Y
Existing Development						
CoSD-15	Maintain and update a watershed-based inventory of existing development (i.e. commercial, industrial, municipal and residential areas).	Yes	Inventory is tracked in Accela Automation	Y	Database is continually updated to increase accuracy and efficiency	Y
CoSD-16	*Improve the tracking of watershed based inventories via consolidated database*	Yes	Inventory is tracked in Accela Automation	Y	Database is continually updated to increase accuracy and efficiency	Y
CoSD-17	Designate a minimum set of BMPs required for all existing development inventories, including special event venues. The designated minimum BMPs must be specific to facility or area types and pollutant generating activities, as appropriate.	Yes	JRMP establishes minimum BMPs for all land use types.	N	N/A	Y
CoSD-18	*Create an Equestrian BMP Handbook*	No	Handbook created in FY2014-15	Y	Handbook will be revised in FY2016-17 to encompass additional BMPs and be more user friendly.	Y

Table 7-1 (continued)
County of San Diego Jurisdictional Strategies

ID	Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Status		Proposed Modifications		
		Implemented in FY16? *(No/Partially/Yes)*	Comments on Implementation (# events, # attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, N/A)*	Planned Implementation into next FY? *(Y/N)*
CoSD-19	Require implementation of minimum BMPs for existing development (commercial, industrial, municipal, and residential) that are specific to the facility, area types and pollutant generating activities, as appropriate.	Yes	JRMP establishes minimum BMPs for all land use types.	N	N/A	Y
CoSD-20	*Pet waste management and outreach in County Parks.*	Yes	Mutt-mitt dispensers are installed and maintained in many County parks, providing people who are walking their dogs with waste disposal bags to use to pick up after their pets.	N	N/A	Y
CoSD-21	Promote and encourage implementation of designated BMPs in residential areas.	Yes	Through implementation of strategies described in the JRMP the County encourages the use of BMPs in residential areas. All Residential Management Areas were inspected in FY15-16	N	N/A	Y
CoSD-22	Conduct inspections of inventoried existing development to ensure compliance	Yes	Through implementation of strategies described in the JRMP the County encourages the use of BMPs in residential areas.	N	N/A	Y
CoSD-23	*Conduct focused residential inspections based on strategic assessments.*	Yes	Focused, collaborative investigations with Planning and Science staff of high priority outfalls.	N	N/A	Y
CoSD-24	*Develop a residential inspections tracking program via mobile platform - miles, violations, etc.*	Yes	In pilot testing phase	Y	Modifications based on pilot testing phase to increase effectiveness	Y
CoSD-25	*Improve inspections data tracking through mobile phone applications*	Yes	In pilot testing phase	Y	Modifications based on pilot testing phase to increase effectiveness	Y
CoSD-26	Enforce legal authority established for all inventoried existing development to achieve compliance	Yes	see JRMP	N	N/A	Y
CoSD-27	*Update county ordinance related to existing development; reference to existing guidance documents*	Yes	Watershed Protection Ordinance and BMP Design Manuals were updated.	N	N/A	N

Table 7-1 (continued)
County of San Diego Jurisdictional Strategies

ID	Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Status		Proposed Modifications		
		Implemented in FY16? *(No/Partially/Yes)*	Comments on Implementation (# events, # attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, N/A)*	Planned Implementation into next FY? *(Y/N)*
CoSD-28	Implement a schedule or operation and maintenance activities for the storm water conveyance system and related structures.	Yes	Storm Water maintenance is referred to appropriate departments when needed.	N	N/A	Y
CoSD-29	Implement a schedule of operation and maintenance for County paved and unpaved roads.	Yes	County Road Crews employ a schedule for maintenance of County Roads.	N	N/A	Y
CoSD-30	Require implementation of BMPs to address application, storage, and disposal of pesticides, herbicides, and fertilizers on commercial, industrial, and municipal properties. Includes education, permits, and certifications.	Yes	1. 450 Facilities received the Agricultural Water Quality Best Management Practices for Pesticides through annual registration notifications. 2. Inspections were conducted at 83 Commercial Ag Facilities	N	N/A	Y
CoSD-31	Promote incentive program for BMP retrofits (e.g. water smart irrigation controllers, turf replacements programs, residential landscape evaluation program).	Yes	The County continues to collaborate with and promote the efforts of partner agencies incentive programs.	N	N/A	N
CoSD-32	*Collaborate with partner agencies and groups to promote non-County sponsored incentive programs for BMP retrofits, including rain barrels, smart controllers, soil sensors, turf replacement, etc.*	Yes	The County continues to collaborate with and promote the efforts of partner agencies incentive programs.	N	N/A	Y
CoSD-33	Identify candidate areas of existing development for stream, channel, and/or habitat rehabilitation projects and facilitate implementation of such projects.	No	N/A	N	N/A	N

Table 7-1 (continued)
County of San Diego Jurisdictional Strategies

ID	Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Status		Proposed Modifications		
		Implemented in FY16? *(No/Partially/Yes)*	Comments on Implementation (# events, # attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, N/A)*	Planned Implementation into next FY? *(Y/N)*
Outreach and Public Participation						
CoSD-48	Implement a public education and participation program to promote and encourage development of programs, management practices and behaviors that reduce the discharge of pollutants in storm water prioritized by high risk behaviors, pollutants of concern, and target audiences.	Yes	The County completes numerous education and public participation programs for a diverse target audiences. See JRMP.	N	N/A	Y
CoSD-49	*Develop, improve, and distribute outreach materials.*	Yes	Improved outreach materials through a focused Community-based Social Marketing approach.	Y	Continual improvement of existing materials, including translation into Spanish	Y
CoSD-50	*Give outreach presentations to elementary, middle, and high school students*	Yes	Offer presentations to elementary, middle, and high schools serving unincorporated communities.	N	N/A	Y
CoSD-53	*Outreach to mobile landscaping service providers*	Yes	Pesticide Regulation Program collaboration with the California Department of Pesticide Regulation on a pilot program to offer workshops for maintenance gardeners. Two workshops were held where attendees were provided training materials and concluded with a pesticide certification exam. Attendees at both workshops had high success rates for the exam.	N	N/A	Y
CoSD-55	*Expand Homeowners Associations Outreach and Coordination based on the pilot project within San Luis Rey, San Dieguito, or San Diego River as needed and as funding is identified*	No	Additional development may occur based on pilot study in FY2016-17	N	N/A	N
CoSD-56	Collaborate with watershed partners to develop consistent messaging to targeted audiences such as commercial, residents to conserve water and reduce dry weather flows	Yes	Collaboration between the Regional Education Workgroup and Think Blue San Diego Region to develop and distribute educational materials such as the "Be the Solution to Pollution" booklet which includes irrigation and runoff reduction measures. Other items developed under this included posters, calendars and coloring books	N	N/A	y

Table 7-1 (continued)

		Implemented in FY16? *(No/Partially/Yes)*	Comments on Implementation (# events, # attendees, miles swept etc.)	Proposed Modifications? *(Y/N)*	Modification Type & Rationale *(if none, N/A)*	Planned Implementation into next FY? *(Y/N)*
CoSD-57	*Sponsor Trash Collection Events through public outreach and participation*	Yes	The County sponsors ILACSD to establish cleanup sites at the Coastal Cleanup Day and Creek to Bay events.	N	N/A	Y
CoSD-58	*Educational Workshops on Integrated Pest Management, manure management and others as needed*	Yes	Various workshops presented throughout the year by County staff including UCCE, FHA and contractors.	N	N/A	Y
CoSD-59	Partner with Master Gardeners Programs to provide education opportunities on water use and practices for gardening	Yes	Various workshops presented throughout the year by County staff including UCCE, FHA and contractors.	N	N/A	Y
CoSD-60	*Conduct Effectiveness Survey's on Education & Outreach programs*	Yes	Surveys to determine the efficacy of watershed education to unincorporated elementary, middle, and high schools serving unincorporated communities	N	N/A	Y
Enforcement Response Plan						
CoSD-61	Implement escalating enforcement responses to compel compliance with statutes, ordinances, permits, contracts, orders, and other requirements for IDDE, development planning, construction management, and existing development in the Enforcement Response Plan.	Yes	County implemented the ERP as described in the JRMP.	N	N/A	Y
CoSD-62	Notify the SDWB by email (Nonfilers_R9waterboards.ca.gov) within five (5) calendar days of issuing escalated enforcement to a construction site that poses a significant threat to water quality as a result of violations or other noncompliance	Yes	County implemented the ERP as described in the JRMP.	N	N/A	Y

Table 7-2
County of San Diego Optional Strategies

ID	Optional Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Timeframe	Triggers	Resources	Implementation Status			Proposed Modifications		
					Triggered?	Implemented in FY16?	Comments on Implementation	Proposed Modifications?	Modification Type & Rationale	Planned Implementation into next FY?
CoSD-Opt1	Implement Sustainable Landscapes Program to encourage landscape retrofits.	FY 2016-17; Continuous until grant funding and incentives are depleted	Implementation of this strategy may be triggered if (1) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (2) all of the necessary resources have been secured. Continue implementation when the funding and incentives items are secured.	Staff resources, Grant funding, Incentive items, Partnerships	No	Partially	N/A	N	N/A	Y
CoSD-Opt 2	Implement an incentive program for BMP Retrofits (Public-Private Partnerships - a County sponsored program to offer incentives for rain barrel installation, downspout disconnects from the storm water system, etc.)	FY 2015-16 Continuous, as resources allow	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) pilot program success; and (4) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Incentive items, Partnerships	No	Partially	N/A	N	N/A	Y
CoSD-Opt 3	Implement a program that provides rebates or incentives for pumping septic systems, with a focus in high risk areas adjacent to waterways (within 600 feet).	Once triggered, Pilot program 1 -2 years, as needed thereafter	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) pilot program success; and (4) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Partnerships, Incentive items	No	No	Funding source not identified. All 4 triggers have not been met.	No	N/A	No

Table 7-2 (continued)
County of San Diego Optional Strategies

ID	Optional Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Timeframe	Triggers	Resources	Implementation Status			Proposed Modifications		
					Triggered?	Implemented in FY16?	Comments on Implementation	Proposed Modifications?	Modification Type & Rationale	Planned Implementation into next FY?
CoSD-Opt 4	Identify where sewer and storm water infrastructure are in close proximity and subsequently, confirm the absence of flow at nearby storm water MS4 outfall during dry weather.	Once triggered, 2-3 years; one-time	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Partnerships	No	No	N/A	No	N/A	N
CoSD-Opt 5	Implement a program for on-site wastewater treatment (septic) systems. May include mapping and risk assessment, inspection, or maintenance practices.	Once triggered, 2-3 years	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) septic systems have been determined to be a pollutant sources to the MS4; and (4) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Partnerships	No	Partially	Under the Local Area Management Plan (LAMP) for onsite wastewater treatment systems the treatment systems with supplemental treatment are required to be permitted annually. The annual operating permit will define the monitoring and maintenance requirements as specified by the manufacturer and/or qualified professional who designed the system. The LAMP ordinance can be found at: http://www.sandiegocounty.gov/content/dam/sdc/deh/lwqd/RWQCB%20Approved%20LAMP%20Final%202-24-15.pdf	N	N/A	Y

Table 7-2 (continued)
County of San Diego Optional Strategies

ID	Optional Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Timeframe	Triggers	Resources	Implementation Status			Proposed Modifications		
					Triggered?	Implemented in FY16?	Comments on Implementation	Proposed Modifications?	Modification Type & Rationale	Planned Implementation into next FY?
CoSD-Opt 6	Divert persistent dry weather flows from storm drains to sewer	Once triggered, 3-6 years per project	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) permission is granted from sewer agency; and (4) ground water or permitted discharges have been ruled out; and (5) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Engineering design, Environmental review, Permits, Ongoing funding for operation/maintenance	No	No	Diversions are a last resort strategy and will be reviewed for outfalls that are persistently flowing after all other implementation strategies have been exhausted.	N	N/A	N
CoSD-Opt 7	Implement trash capture program (e.g., retrofit storm drain intakes with trash capture devices)	Baseline study 2-3 years; FY 15-16 implementation as needed and as resources allow	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) baseline study completion and success; and (4) focus areas identification; and (5) detailed inlet inventory of focus areas; and (6) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Equipment, Permits, Ongoing funding for operation/maintenance	No	Partially	The County of San Diego is in process of conducting several studies to develop Baseline Trash Generation Rates.	N	N/A	Y

Table 7-2 (continued)
County of San Diego Optional Strategies

ID	Optional Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Timeframe	Triggers	Resources	Implementation Status			Proposed Modifications		
					Triggered?	Implemented in FY16?	Comments on Implementation	Proposed Modifications?	Modification Type & Rationale	Planned Implementation into next FY?
CoSD-Opt 8	Implement a Green Streets Retrofits Program	Once triggered, 3-7 years per project; ongoing operation & maintenance thereafter	Implementation of this strategy may be triggered on a project-by-project basis if (1) a specified interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) pilot program success; and (4) all of the necessary resources have been secured.	Each green street retrofit project is preliminary estimated to cost an average of $5,500,000 per linear mile of retrofit for construction. Resources include: Staff resources, Grant funding or alternative source, Contractor funding, Engineering or landscaping design, Permits, Environmental review, Right of way acquisition, Ongoing funding for operation/maintenance	No	Partially	Design standards and specifications have been developed. Green streets are now being used to meet compliance for all retrofit and/or redeveloped road projects that in the Capital Improvement Projects plan. Pursuing Grant Funding	N	N/A	Y
CoSD-Opt 9	Construct Treatment Control BMPs (retrofits projects)	Once triggered, 4-7 years per project; ongoing operation & maintenance thereafter	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Engineering or landscaping design, Permits, Environmental review, Ongoing funding for operation/maintenance	No	No	N/A	N	N/A	N

Table 7-2 (continued)
County of San Diego Optional Strategies

ID	Optional Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Timeframe	Triggers	Resources	Implementation Status			Proposed Modifications		
					Triggered?	Implemented in FY16?	Comments on Implementation	Proposed Modifications?	Modification Type & Rationale	Planned Implementation into next FY?
CoSD-Opt 10	Implement an alternative compliance program to enable "offsite" compliance for new and redevelopment projects.	Once triggered, 3-6 years per project	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Partnerships, Engineering design , Permits, Environmental review, Right of way acquisition (if needed), Ongoing funding for operation/maintenance	No	Partially	Currently applicant implemented offsite alternative compliance is available for use by the development community. The Water Quality Equivalency (WQE) provides the currency for structural BMPs and some natural system management practices (NSMPs). Additional work on the WQE will be conducted during FY17. The County is not currently pursuing a credit system but is participating as a stakeholder on the City of San Diego TAC and as a member of the Western Riverside Coalition of Governments (WRCOG) discussion on offsite alternative compliance.	N	N/A	Y
CoSD-Opt 11	Flood Control Channel Rehabilitation Projects (e.g., removal of impervious lining in flood control channel and replacement with earthen or vegetated surface)	Once triggered, 4-7 years per project; ongoing operation & maintenance thereafter	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (4) engineering design, monitoring, and outreach plans are approved; and (5) all of the necessary resources have been secured.	Project costs vary by size and complexity. Resources include: Staff resources, Grant funding or alternative source, Contractor funding, Partnerships, Engineering design, Permits, Environmental review, Right of way acquisition (if needed), Ongoing funding for operation/maintenance	No	Partially	N/A	N	N/A	Y

Table 7-2 (continued)
County of San Diego Optional Strategies

ID	Optional Jurisdictional Runoff Management Programs (JRMP) Strategies	Implementation Timeframe	Triggers	Resources	Implementation Status			Proposed Modifications		
					Triggered?	Implemented in FY16?	Comments on Implementation	Proposed Modifications?	Modification Type & Rationale	Planned Implementation into next FY?
CoSD-Opt 12	Implement a program to remove invasive non-native plants (i.e. Arundo) upstream areas rivers or tributaries.	Once triggered, 1-2 years per project	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) community support and partnerships established; and (4) it has been determined that invasive plants have been found to have an impact on water quality; and (5) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Partnerships	No	No	The County has developed several Habitat Restoration Plans and Non-Native Plant Removal Guidelines including for the Otay Valley Regional Park. Implementation of projects resulting from these guidelines requires acquisition of land and funding. No projects were completed during this reporting period.	N	N/A	N
CoSD-Opt 13	Habitat Restoration and rehabilitation projects in County Parks	Once triggered, 4-7 years per project; ongoing operation & maintenance thereafter	Implementation of this strategy may be triggered if (1) an interim goal has not been met; and (2) it has been determined by the County of San Diego through adaptive management that implementation is necessary; and (3) all of the necessary resources have been secured.	Staff resources, Grant funding or alternative source, Contractor funding, Partnerships, Restoration / Rehabilitation Designs Approved, Environmental Permits issued, CEQA / NEPA Environmental review, Ongoing funding for maintenance and monitoring	No	Partially	Habitat restoration and rehabilitation has occurred in the Tijuana River Valley Regional Park and will continue for an additional 3-5 years. Additionally habitat restoration and rehabilitation has been initiated for the Sweetwater Loop Trail Phase I and Phase III however additional funding is necessary to complete Phase I. Phase III will beginning in Fall 2016.	N	N/A	Y

Table 7-3
County of San Diego WMA Strategies

ID	WMA Strategy	Implementation Timeframe	Triggers	Resources	Implementation Status		
					Pollutants Addressed/Physical and Biological Benefits	Responsible Groups/Collaborating Entities	Comments
San Diego Bay							
SDB1	Offsite Alternative Compliance Option (WMAA)	Prior to FY 2016; Continuous - ongoing	This strategy may be implemented at the Authority's discretion if the following triggers are met: 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, 3) consensus and community support has been achieved, and 4) interim/final goals are not met. Funding for future fiscal years is contingent on budget approval by Authority Board.		Bacteria, Nutrients, Metals, Trash, Sediment, Flow, Habitat/Wildlife	EAD/FDD, Copermittees	
SDB2	Participate in Reference Watershed Study	Prior to FY 2016; Continuous - ongoing			Bacteria, Nutrients, Metals, Trash, Sediment, Flow, Habitat/Wildlife	EAD, Copermittees

7.4 MODIFICATIONS TO THE BMP DESIGN MANUAL

The County BMP Design Manual provides guidance for land development and public improvement projects to comply with the 2013 Municipal Separate Storm Sewer System (MS4) Permit (Order No. R9-2013-0001 as amended by R9-2015-0001 and R9-2015-0100). This Manual replaces County Standard Urban Storm Water Mitigation Plan (SUSMP). It is focused on project design requirements and related post-construction requirements, not on the construction process itself. No modifications to the BMP DM have been made since its publication on February 2016. The BMP DM is available online on the County of San Diego's website: http://www.sandiegocounty.gov/content/sdc/dpw/watersheds/DevelopmentandConstruction/BMP_Design_Manual.html.

7.5 MODIFICATIONS TO THE JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM

No modifications to the County of San Diego JRMP have been made since the WQIP was approved. The current County of San Diego JRMP is posted on the County website, and the link to this page is listed on Project Clean Water.

January 9, 2017

SAN DIEGO BAY WATERSHED MANAGEMENT AREA, WATER QUALITY IMPROVEMENT PLAN FISCAL YEAR 2015-2016 ANNUAL REPORT

STATEMENT OF CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted.

Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations [40 CFR 122.22(d)].

OFFICE OF THE CITY MANAGER

825 Imperial Beach Blvd., Imperial Beach, CA 91932 Tel: (619) 423-8303 Fax: (619) 628-1395

I certify that the City of Imperial Beach has taken the necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements within Order No. R9-2013-0001 as amended by Orders R9-2015-0001 and R9-2015-0100. Legal authority is established and maintained by the following:

- Updated BMC Chapter 8.30 for Urban Runoff Management and Discharge Control, Ordinance Number 2016-1158 authorized by City Council on November 2, 2016
- Imperial Beach Jurisdictional Runoff Management Plan authorized through Resolution 2015-7588, authorized by City Council on June 3, 2015
- San Diego Bay Water Quality Improvement Plan authorized through Resolution 2015-7589, authorized by City Council on June 3, 2015
- Tijuana River Water Quality Improvement Plan authorized through Resolution 2015-7590, authorized by City Council on June 3, 2015
- Imperial Beach BMP Design Manual authorized through Resolution 2015-7636, authorized by City Council on October 21, 2015

Signed: Andy Hall 11-16-16

Andy Hall Date

SAN DIEGO BAY WATERSHED
JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM

FY 2015-16

I. COPERMITTEE INFORMATION

Copermittee Name: Imperial Beach

Copermittee Primary Contact Name: Chris Helmer

Copermittee Primary Contact Information:
Address: 825 Imperial Beach Blvd
City: Imperial Beach County: San Diego State: CA Zip: 91932
Telephone: 619-628-1370 Fax: 619-429-4861 Email: chelmer@imperialbeachca.gov

II. LEGAL AUTHORITY

Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	YES ☒ NO ☐	
A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	YES ☒ NO ☐	

III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE

Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	YES ☐ NO ☒
If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	YES ☐ NO ☐

IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	YES ☒ NO ☐

Number of non-storm water discharges reported by the public	14
Number of non-storm water discharges detected by Copermittee staff or contractors	53
Number of non-storm water discharges investigated by the Copermittee	67
Number of sources of non-storm water discharges identified	53
Number of non-storm water discharges eliminated	53
Number of sources of illicit discharges or connections identified	53
Number of illicit discharges or connections eliminated	53
Number of enforcement actions issued	47
Number of escalated enforcement actions issued	10

V. DEVELOPMENT PLANNING PROGRAM

Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	YES ☒ NO ☐
Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	YES ☒ NO ☐
If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	YES ☒ NO ☐

Number of proposed development projects in review	16
Number of Priority Development Projects in review	1
Number of Priority Development Projects approved	0
Number of approved Priority Development Projects exempt from any BMP requirements	0
Number of approved Priority Development Projects allowed alternative compliance	0
Number of Priority Development Projects granted occupancy	0

Number of completed Priority Development Projects in inventory	5
Number of priority Priority Development Project structural BMP inspections	5
Number of Priority Development Project structural BMP violations	0
Number of enforcement actions issued	0
Number of escalated enforcement actions issued	0

FY 2015-16

VI. CONSTRUCTION MANAGEMENT PROGRAM

Has the Copermittee implemented a construction management program that complies with Order No. R9-2013-0001? YES ☒ NO ☐

Number of construction sites in inventory	42
Number of active construction sites in inventory	25
Number of inactive construction sites in inventory	0
Number of construction sites closed/completed during reporting period	17
Number of construction site inspections (includes CIP Projects)	301
Number of construction site violations	4
Number of enforcement actions issued	4
Number of escalated enforcement actions issued	4

VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM

Has the Copermittee implemented an existing development management program that complies with Order No. R9-2013-0001? YES ☒ NO ☐

	Municipal*	Commercial	Industrial	Residential*
Number of facilities or areas in inventory	26	52	0	6
Number of existing development inspections	26	76	0	12
Number of follow-up inspections	0	24	0	0
Number of violations	0	0	0	0
Number of enforcement actions issued	0	0	0	0
Number of escalated enforcement actions issued	0	0	0	0

VIII. PUBLIC EDUCATION AND PARTICIPATION

Has the Copermittee implemented a public education program component that complies with Order No. R9-2013-0001? YES ☒ NO ☐

Has the Copermittee implemented a public participation program component that complies with Order No. R9-2013-0001? YES ☒ NO ☐

IX. FISCAL ANALYSIS

Has the Copermittee attached to this form a summary of its fiscal analysis that complies with Order No. R9-2013-0001? YES ☒ NO ☐

X. CERTIFICATION

I [☐ Principal Executive Officer ☐ Ranking Elected Official ☒ Duly Authorized Representative] certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

*Municipal and *Residential inventories include both San Diego Bay and Tijuana River watersheds because many facilities cross watershed boundaries.

Fiscal Analysis Report

During this past fiscal year the City continued to implement its Jurisdictional Runoff Management Program (JRMP) that is available on the City's website (www.imperialbeachca.gov/environment). Part of the City's JRMP includes a storm water cost analysis study with Mikhail Engineer to establish a consistent methodology for calculating storm water program costs (Appendix E of JRMP). The Mikhail fiscal analysis study identifies the various categories of expenditures necessary to implement the requirements of the Storm Water Permit and includes a description of expenditures, staff resources, and funding sources.

The Environmental Programs Division of the Department of Public Works and the Finance Deportment is responsible for compiling the annual fiscal analysis of the storm water program. This current fiscal analysis represents the best estimate for the costs and effort required by the City of Imperial Beach to implement the storm water management program under Permit R9-2013-0001. Implementation expenditures for the JRMP were approximately $1,354,408 during the FY 2015-16 reporting period and primarily funded through the general fund sources. In addition, during the reporting period the City was the lead agency on the San Diego Bay and Tijuana River Water Quality Improvement Plans and managed the implementation of these consultant contracts in the amount of $420,000.

The expenditures for implementation of capital improvement program (CIP) projects get accounted separately. The City had 27 CIP projects either under design or construction during FY 2016 with expenditures made towards the project. All CIP projects include some element of storm water work for the design, construction, and construction management. In addition, the City implemented seven specific CIP projects that had approximately $1,700,000 in expenditures directly related to storm water.

Category of Expenditures

The expenditures for FY 2016 are summarized below in Table 1. The fiscal analysis method does not exactly correspond to the line item budget maintained by the City. The expenditures are therefore an extrapolation that best correspond to the itemized categories as outlined in the Permit. The expenditures for the Tijuana River and San Diego Bay WQIP costs and CIP projects are called out separately. Supporting documentation is also provided in Attachment 1 and Attachment 2.

Table 1 Expenditures on JRMP for FY 2015-16

Administration Tasks	$ 121,342
Development Planning and Construction Management	$ 73,152
Existing Development Management and O&M	$ 1,144,913
Public Education and Participation	$ 15,000
Total	**$ 1,354,408**

*** CIP Expenditures tracked separately from storm water budget.**
FY 2016 expenditures was $1,716,753

- (P15402) Sports Park Tot-Lot (Design): **$1,295**
  The City is including a storm water dry well in the design for the replacement of the Sports Park tot-lot. The rubber playground matting and surface material will drain to a storm water infiltration drywell and infiltrate all storm water onsite. (Funding source from Parks budget)
- (S11106) Bikeway Village Project: **$206,142**
  Public private partnership to rehabilitate old industrial buildings for visitor serving accommodations. Is considered a priority development project and Includes new storm water bioswale. (Funding source from CIP 2010 Bond and ATP Grant)
- (S13309) Elm Ave Street Improvements: **$60,740**
  Street and sidewalk improvements for Mar Vista High School and IB Elementary. Includes a green street element that infiltrates storm water with the use of drywells that capture street runoff from the curb and gutter. (Funding source includes Gas Tax, ATP Grant, transnet, and Sewer Enterprise)
- (S14104) Alley Paving Project Phase 1 and (S16901) Alley Paving Project Phase 2: **$1,375,830**
  The City completed construction of the first phase of dirt alley improvements of over 1 mile of green alleys and initiated the design of the second phase of the project to improve the remaining dirt alleys in the City. (Funding source CIP 2010 Bond)
- (P16302) Bicentennial Triangle Xeriscape: **$4,482**
  Incentive program with Cal American Water for turf removal. (Funding sources include CalAmerican grant and RTCIP)
- (SP1408) Imperial Beach Sea Level Rise Study: **$68,266**
  Completed a Sea Level Rise and adaptation study for the City that includes a hydrologic assessment of the City's storm drain infrastructure and its vulnerability to sea level changes. (Funding sources includes Coastal Conservancy, San Diego Foundation, and General Fund)

FY 2016 Water Quality Improvement Plan Expenditures

- (SP1503) San Diego Bay WQIP: **$131,550**
- (SP1503) Tijuana River WQIP: **$288,283**

Attachment 1
Expenditures by Division for FY 2016

City of Imperial Beach

Storm Water Actual (FY2016)

	Factor	Actual	Budget
Public Works Administration	5%	$ 14,135	$ 14,245
Streets	24%	$ 191,439	$ 197,774
Tidelands	34%	$ 296,204	$ 296,636
Parks	14%	$ 48,378	$ 49,363
Facilities	2%	$ 5,871	$ 6,393
Solid Waste	50%	$ 23,676	$ 24,001
Storm Water	100%	$ 209,211	$ 213,569
Wastewater	10%	$ 379,139	$ 397,433
		$ 1,168,053	$ 1,199,414
Council/Mayor	6%	$ 7,275	$ 7,227
City Manager	6%	$ 27,508	$ 27,917
City Clerk	6%	$ 18,725	$ 19,743
Human Resources	5%	$ 12,541	$ 12,747
City Attorney	6%	$ 8,334	$ 8,309
		$ 74,382	$ 75,943
Planning & Building	10%	$ 73,152	$ 75,945
Code Enforcement	5%	$ 5,995	$ 6,053
City Engineering	included		
		$ 79,147	$ 81,998
Finance	5%	$ 32,825	$ 32,858
		$ 1,354,408	$ 1,390,213

Attachment 2
CIP Project Expenditures for FY 2016

FY2016 CIP Projects Storm Water	Budget	Actual	Storm Water Factor	Total
P15402 : SPORTS PARK TOT-LOT	$ 12,852	$ 12,952	0.1	$ 1,295.19
P16302 : TRIANGLE PARK XERISCAPE L	$ 8,964	$ 8,965	0.5	$ 4,482.38

SP1404 : TIJUANA RIVER WQIP	$ 344,350	$ 339,008	1	$ 288,283.00
SP1503 : SD BAY WQIP FY 16	$ 278,834	$ 131,551	1	$ 131,550.74
				$ 419,833.74

8.3 CITY OF IMPERIAL BEACH STRATEGIES

The City of Imperial Beach (Imperial Beach) is the southernmost jurisdiction in the San Diego Bay WMA. Long term planning for Imperial Beach includes integration of LID and green street concepts into capital improvement projects (CIPs) and other opportunities as they become available. In addition, Imperial Beach requires source control and LID BMPs as conditions on standard development projects greater than $50,000.

Low flow and first flush diversions have been installed within Imperial Beach's MS4 that capture trash and dry weather flows. Imperial Beach's Environmental Division incorporates the underserved community in most education activities, which is particularly important to the City because of the large Spanish-speaking community. Imperial Beach maintains ongoing collaboration with the Fish and Wildlife Service on the cleaning and maintenance of MS4 outfall locations along San Diego Bay. In addition, Imperial Beach collaborates with the Navy on annual inspections and operation and maintenance for the portion of the City's MS4 that drains to a detention basin on Navy property. Imperial Beach also actively participates and partners with multiple agencies and stakeholders in the restoration of South San Diego Bay.

Strategies and implementation schedules, presented in Table 2-8-1, were identified using best information available on efficiency, effectiveness, and level of effort estimated to achieve compliance with numeric goals. The adaptive management process provides the framework to evaluate progress toward meeting the goals and allows for modification of strategies. As strategies are modified, the WQIP is updated. The implementation of each strategy is contingent upon annual budget approvals and funding availability.

Intentionally Left Blank

Table 8-1
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
JRMP Strategies (E.3.b.(1)(a))								
E.2 Illicit Discharge, Detection, and Elimination (IDDE) Program								
IB-01	Imperial Beach Illicit Discharge Detection and Elimination Program	Refer to JRMP Section 4. This is an ongoing and budgeted JRMP activity. Frequency of implementation is continuous with initial response time by City staff under 1 hour for most IDDE cases. Investigate and eliminate dry weather discharges and illegal connections to the MS4 as reported to the City or identified by staff. Utilize appropriate enforcement actions to achieve compliance. Minimum BMPs provided in Attachment 1 and Attachment 3.	Prior to FY16	YES		NO		YES
IB-04	Dry weather field screening of major MS4 outfalls	Refer to JRMP Section 4. This is an ongoing and budgeted JRMP activity. Perform visual assessment of major MS4 outfalls twice per year to support IDDE efforts and to identify maintenance needs. Minimum BMPs include cleanup of any trash and debris at outfall location post field screening. The TRNERR performs annual maintenance and cleanup at the City's major outfall at 5th and Grove.	Prior to FY16	YES	An additional form was added in FY 15-16 to indicate information addressing the trash data collected at the different outfalls	NO		YES
IB-04a	Persistent dry weather flow monitoring	Refer to JRMP Section 4. This is a new and ongoing budgeted JRMP activity. The Env Division will perform dry weather field screening monitoring at major outfalls with persistent dry weather flows, which is defined as 3 consecutive non-storm water discharges as observed through IB-04. Monitoring results will support IDDE efforts and WQIP priorities.	FY16	YES	No persistent flows in our City	NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
E.3 Development Planning								
Non-Priority Development Projects								
IB-05	Provide storm water BMP conditions during the development review phase for non-Priority Development Projects	Refer to JRMP Section 5. This is an ongoing and budgeted JRMP activity. Administer a program to ensure implementation of source control BMPs to minimize pollutant generation through project design and implement LID BMPs to maintain or restore hydrology of the area, where applicable and feasible and in accordance to the Imperial Beach BMP Design Manual (IB-07). BMPs are required as conditions of project approval. BMPs include the protection of trash storage areas. Enhanced BMPs are also conditioned through IB-05a for medium sized projects.	FY16	YES		NO		YES
Priority Development Projects (PDPs)								
IB-06	Provide storm water BMP conditions during the development review phase for Priority Development Projects.	Refer to JRMP Section 5. This is an ongoing and budgeted JRMP activity. Priority Development Projects as defined by IBMC requires BMP certification by the City Engineer to meet treatment and retention standards in the Imperial Beach BMP Design Manual (IB-07). Structural BMPs are required as conditions of project approval.	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-07	City of Imperial Beach BMP Design Manual	Refer to JRMP Section 5 and IBMC. This is an update to an ongoing JRMP activity. Implement the new BMP design standards applicable to all development and redevelopment projects. PDPs must meet updated treatment and retention standards. The effective date for the new minimum BMP standards for development planning projects is currently scheduled for 12/24/15 and requires an update to the IBMC. Effective date may change pending approval of RWQCB Tentative Order R9-2015-0100. The Imperial Beach BMP Design Manual will be the guiding policy document for minimum BMPs for development and redevelopment projects.	FY16	YES		NO		YES
IB-08	Long-term Structural BMP Maintenance Agreement	Refer to JRMP Section 5. This is an ongoing and budgeted JRMP activity. Frequency is continuous for each applicable development project. Implement a legal agreement, covenant, CEQA mitigation requirement, and/or conditional use permit to ensure long-term maintenance of structural BMPs.	Prior to FY16	YES		NO		YES
IB-10	Structural BMP Maintenance Verification, Database Management, and Inspection	Refer to JRMP Section 5. This is an ongoing and budgeted JRMP activity. The Environmental Division verifies through inspections the long-term maintenance of structural treatment control BMPs at completed PDPs. Frequency of inspections is once per year for BMPs designated as high priority and no less than once per permit cycle for all inventoried BMPs. BMPs are verified for continues operation and maintenance and site inspection include verification of appropriate source control BMPs, which help address the property pollutants of trash and sediment.	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
E.4 Construction Management								
IB-14	Approval of a Storm Water Management Plan or equivalent plan for private development projects	Refer to JRMP Section 6. This is an ongoing and budgeted JRMP activity. Private development project applicants must submit and receive approval of a Storm Water Management Plan (or for Construction General Permit a Storm Water Pollution Prevention Plan) prior to receiving a building, grading, or demolition permit. The plan must demonstrate how each project will implement minimum BMPs for the following categories: project planning; housekeeping; non-storm water management; erosion control; sediment control; run-on and run-off control; and active or passive sediment treatment systems. Minimum BMPs provided in Attachment 3.	FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-14a	Inspect and verify implementation of construction management BMPs and maintain a continuous inventory of construction sites and enforcement actions for private development projects	Refer to JRMP Section 6. This is an ongoing and budgeted JRMP activity. The City considers all construction activity a potential high threat to water quality and verifies implementation of minimum BMPs through inspections for the following categories: project planning; housekeeping; non-storm water management; erosion control; sediment control; run-on and run-off control; and active or passive sediment treatment systems. Minimum BMPs provided in Attachment 3. The frequency of inspections at a minimum includes one monthly site inspection. Inspection frequencies also include one initial site inspection at the start of grading or construction activities, drive-by inspections of all active construction sites prior to forecast rain events, and verification of site BMPs during any subsequent building inspection at the project site. The Community Development Department maintains a continuous inventory on the City's HTE database system of active construction sites and notes on enforcement actions.	FY16	YES		NO		YES
IB-15	Approval of a Storm Water Management Plan or equivalent plan for public capital projects	Refer to JRMP Section 6. This is an ongoing and budgeted JRMP activity. Contractors for public development (CIP) projects must submit and receive approval of a Storm Water Management Plan (or for Construction General Permit a Storm Water Pollution Prevention Plan) prior to receiving a notice to proceed. The plan must demonstrate how each project will implement minimum BMPs for the following categories: project planning; housekeeping; non-storm water management; erosion control; sediment control; run-on and run-off control; and active or passive sediment treatment systems. Minimum BMPs provided in Attachment 3.	FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-15a	Inspect and verify implementation of construction management BMPs and maintain a continuous inventory of construction sites and enforcement actions for public development (CIP) projects	Refer to JRMP Section 6. This is an ongoing and budgeted JRMP activity. The City considers all construction activity a potential high threat to water quality and verifies implementation of minimum BMPs through inspections for the following categories: project planning; housekeeping; non-storm water management; erosion control; sediment control; run-on and run-off control; and active or passive sediment treatment systems. Minimum BMPs provided in Attachment 3. The frequency of inspections for implementation occurs daily by the Public Works Inspector that is designated to each project. The Public Works Inspector maintains a continuous inventory of active construction activity and maintains Daily Inspection Reports of enforcement actions.	FY16	YES	City staff performs daily inspections on every active construction sites and a database is maintained for record keeping	NO		YES
E.5 Existing Development								
Commercial, Industrial, Municipal, and Residential Facilitates and Areas								
IB-17	Administer a program that requires implementation of minimum BMPs at existing development that covers pollutant generating activities from commercial, residential, and municipal areas (no industrial areas in the City).	Refer to JRMP Section 7. This is an ongoing and budgeted JRMP activity. Frequency of inspections is described below for each category of development. The City currently does not have any industrial areas. The Environmental Division administers this JRMP activity and maintains an annual watershed based inventory of existing development and inspections. Minimum BMPs provided in Attachment 1 and Attachment 2.	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-19	Inspect and verify implementation of minimum BMPs for municipal areas and activities	Refer to JRMP Section 7. This is an ongoing and budgeted JRMP activity. The responsibility to implement and maintain various municipal BMPs is a task shared by every employee in the Public Works Department. The Environmental Division performs annual training to review minimum BMPs and verifies the implementation of BMPs through an onsite annual inspection at every City owned facility or park. Minimum BMPs provided in Attachment 1.	Prior to FY16	YES		NO		YES
IB-20	Inspect and verify implementation of minimum BMPs for residential areas and commercial facilities	Refer to JRMP Section 7. This is an ongoing and budgeted JRMP activity. The Environmental Division performs at a minimum one onsite inspection of each commercial business at least once per permit cycle with no less than 20% of inventoried sites inspected each year. Residential areas receive ongoing JRMP baseline inspections through the IDDE program. Residential and commercial areas also benefit from the enhanced targeted Neighborhood Inspection Program (IB-21), weekly illegal dumping collection (IB-25), annual home front cleanup event (IB-26), and pet waste bag program (IB-27). Minimum BMPs provided in Attachment 2.	Prior to FY16	YES		NO		YES
IB-29	Sewer System Management Program (SSMP)	Refer to JRMP Section 7. This is an ongoing and budgeted JRMP activity. The operation and maintenance of the sewer collection system is a top priority and managed in accordance with the City's SSMP. The City jets 100% of its entire sewer collection system annual and inspects and maintains 11 sewer pump stations daily. The City budgets on average $400,000 in sewer CIPs a year. All Public Works staff receives annual training on how to identify and respond to a SSO.	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-30	Special Events Permit	Refer to JRMP Section 7. This is an ongoing and budgeted JRMP activity. The City provides storm water BMP conditions on every special event permit or conditional use permit. Applicable special event BMPs are the same as Commercial BMPs provided in Attachment 2 and evaluated for each event separately. Examples of special event BMP conditions include prevention of illegal discharges, protection of cooking area, trash and recycling containers, and proper waste management and disposal.	Prior to FY16	YES		NO		YES
IB-31	Residential household hazardous waste program (Incentive Program and Multi-Jurisdiction Program)	Refer to JRMP Section 7. This is an ongoing and budgeted JRMP activity. The City partners with the City of Chula Vista and other cities in South Bay to offer free disposal options of HHW for residents. Options include convenient drop off locations, special event drop off, and disabled resident home collection. By incentivizing easy collection of HHW then less material ends up being illegally discharged.	Prior to FY16	YES		NO		YES
MS4 Infrastructure								
IB-32	Catch basin, MS4 line, open channels, and outfalls operation and maintenance	Refer to JRMP Section 7. This is an ongoing and budgeted JRMP activity. The City at a minimum inspects and cleans 100% of the City's 92 catch basins, 5-miles of MS4 lines, open channels, and outfalls with a frequency of at least once per year prior to the start of the rainy season. Post rain event inspections may require more frequent cleaning at known areas in the system. Preventative maintenance prevents debris from reaching the receiving waters and ensures full conveyance of storm water system during storm events.	Prior to FY16	YES		NO		YES

City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Roads, Streets, and Parking Lots								
IB-24	Street sweeping program	Refer to JRMP Section 7. This is an ongoing and budgeted JRMP activity. The City implements an aggressive street sweeping program to target trash, sediment, and debris that collects on the street. The City sweeps a total of 130 curb miles per month, which provides 100% coverage of the entire City at the following sweeping frequencies: Weekly: Commercial areas including open stripped and raised curb medians, Ocean Lane, and parking lots; Twice per month: Beachfront posted residential areas; Monthly: Non-beachfront residential areas and paved alleys;	Prior to FY16	YES		NO		YES
Pesticides, Herbicides, and Fertilizer BMP Program								
IB-28	Pesticide, herbicide, and fertilizer management	Refer to JRMP Section 7. This is an ongoing and budgeted JRMP activity. The City and its contractors are required to implement an integrated pest management (IPM) program to address application, storage, disposal, and use of chemical applications. City Council Policy 611 minimizes the use of chemical treatment through IPM strategies. The City also maintains a Unified Program Facility Permit through the County of San Diego. Minimum BMPs provided in Attachment 1.	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Retrofit and Rehabilitation in Areas of Existing Development								
IB-34	Perform inspections and provide maintenance to LID BMP facilities installed throughout the City	This is an ongoing and budgeted JRMP activity to maintain various LID BMPs installed by the City. The City or its contractors provide annual maintenance of municipal areas that get retrofit with LID facilities to treat or infiltrate storm water runoff. Maintenance varies according to the select BMP. The following include the list of major retrofit projects in the City: • Bikeway Access Bioswale (February 2014) • Sports Park Crosswalk LID (August 2014) • Palm Ave Eco Bikeway LIDs (December 2013) • Skate Park Bioswale and Infiltration Trench (January 2011) • Alley Infiltration Area (800 block between 10th and 11th) (May 2007) • Emory and Essex storm water retention basin (September 2006) • Beachfront Sidewalk and Street End Permeable Pavers (Multiple) • Baseball Field Permeable Concrete (2003)	Prior to FY16	YES		NO		YES
IB-34b	10th Street Bikeway Access Project (Storm water bioswale and habitat restoration)	The City completed the Bikeway Access project in February 2014 that converted 2.86 acres storage yard for the Public Works Department to a bikeway access spur and trail staging areas to the Bay Shore Bikeway. The project included a bioswale to treat storm water from the Public Works facility and treat flow from the surrounding residential neighborhood. The project also included over 1 acre of native habitat restoration. The City will continue to maintain this new facility in partnership with the FWS who are also completing the adjacent Birder's Point project (IB-54).	Prior to FY16	YES	Provided maintenance to bioswale and native habitat. FWS completed construction on the Birder's Point project.	NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-35	Perform inspections and provide maintenance for storm drain inlet filters	This is an ongoing and budgeted JRMP activity to maintain 10 storm drain inlet filters at municipal locations and high trash generating areas. The filters receive quarterly maintenance by a contract company.	Prior to FY16	YES		NO		YES
IB-37	Perform inspection and provide maintenance for the low flow and first flush storm water diverters at Palm Ave and Date Ave and vehicle and equipment washing diverters	This is an ongoing and budgeted JRMP activity. The City maintains 2 major storm water diverters along the beachfront at Palm Ave (installed January 2009) and Date Ave (installed 2004 and refurbished October 2014) that captures and diverts 137 acres of low flow and first flush storm water. The City also maintains 3 vehicle and equipment washing areas (Public Works, Fire Station, and Lifeguards) that are connected to the sanitary sewer. Maintenance frequency is monthly.	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-38	Integrate LID retrofits where feasible into CIP rehabilitation projects and partner with local, state and federal agencies to retrofit non-jurisdictional areas	Refer to JRMP Section 7. This is an ongoing and budgeted JRMP activity. The City integrates LIDs into the design phase of CIP projects as discussed in optional strategy IB-13. The City also has a strong working relationship with the US Fish and Wildlife (FWS), Naval Base Coronado, Tijuana River National Estuarine Research Reserve, CA State Parks, Port of San Diego, County of San Diego, South Bay Union School District, and Sweetwater School District, all of which who share jurisdictional authority within the City limit. Successful partnerships among these agencies have resulted in both major and minor retrofit projects that provide significant water quality benefit and enhance wildlife habitat. These projects include: • Napalitano property restoration IB-34a (2002) • 220 acre salt pond restoration in south San Diego Bay (2011) • Mar Vista High School drainage enhancement by Public Works to disconnect impervious drainage channel (2009) • TRNERR bioswale at 3rd and Caspian (2014) • Designation of Pond 20 as mitigation bank (2015) • 55 acre Otay River Flood Plan restoration with River Partners (underway) • 70 acres Otay River Estuary Restoration project (underway)	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-40	Implement LID retrofits in residential and commercial areas where feasible for non-PDP redevelopment projects	Refer to JRMP Section 7 and Section 5. This is an ongoing and budgeted JRMP activity. During the plan check phase the City evaluates non-PDP redevelopment projects for public improvement enhancements, which includes conditions to treat storm water. See strategy IB-05a.	Prior to FY16	YES		NO		YES
E.6 Enforcement Response Plan								
IB-42	Storm water code enforcement	Refer to JRMP Section 8 Enforcement Response Plan. This is an ongoing and budgeted JRMP activity. The City continues to implement escalating enforcement responses to compel with statutes, ordinances, permits, contracts, orders, and other requirements for IDDE, development planning, construction management, and existing development in accordance with the City's Enforcement Response Plan. The City implements a three level approach for escalating enforcement of storm water violations that include Level 1: Verbal or Written Warnings; Level 2: Administrative Citations; and Level 3: Civil or Criminal Prosecutions.	FY16	YES		NO		YES
E.7 Public Education and Participation (B.3.b.(1)(a)(iii))								
IB-43	Implement a public education and participation program.	Refer to JRMP Section 9. This is an ongoing and budgeted JRMP activity that implements a public education and participation program to promote and encourage development of programs, management practices, and behaviors that reduce the discharge of pollutants in storm water prioritized by high-risk behaviors, pollutants of concern, and targeted audiences. Specific targeted education BMP activities are described below and in detail in JRMP Section 9.	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-44	Provide education opportunities to development community	Refer to JRMP Section 9. This is an ongoing and budgeted JRMP activity that targets the development community. Contractors and developers receive multiple opportunities on storm water education through face-to-face meetings with the Community Development and Public Works Departments during the permitting process, through onsite inspections, and through investigations of illegal discharges. Education brochures are used during the permitting process and during enforcement actions, and web resources are available. The use of LID features in the design of projects is a key water quality improvement strategy that the City encourages for every project. Contracts are also constantly reminded of their responsibility to provide erosion and sediment control on the project site and preventing the discharge of any liquid or material.	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-45	Provide education opportunities to municipal departments and personnel	Refer to JRMP Section 9. This is an ongoing and budgeted JRMP activity that targets education of City staff. The Environmental Division provides multiple education opportunities to train municipal staff on the various elements of the storm water management program. Every City employee is trained to identify and report illegal storm water discharges and to implement the proper storm water BMPs during work activities. City staff is also expected to provide superior customer service to the public, which includes providing education on storm water issues. Annual training is provided to the Public Works department to review BMPs and changes to the storm water management program. Storm water management is also a standing issue that gets discussed through multiple interdepartmental meetings which include: monthly code enforcement meetings, weekly development planning meetings, weekly staff meetings, and part of every new employee orientation program.	Prior to FY16	YES		NO		YES
IB-46	Provide education opportunities to commercial businesses	Refer to JRMP Section 9. This is an ongoing and budgeted JRMP activity to target the Imperial Beach businesses community on storm water management. The City provides multiple education opportunities to the local business community which includes: providing a commercial business BMP education brochures during the business license application and annual license renewal, providing education through onsite commercial inspections (IB-20), providing education through IDDE enforcement cases (IB-42), and proving storm water presentations to community groups that include Kiwanis Club and Imperial Beach Chamber of Commerce.	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-47	Provide education opportunities to residents, general public, and school children	Refer to JRMP Section 9. This is an ongoing and budgeted JRMP activity to provide storm water education to residents, general public, and school children. Educational information on storm water BMPs is provided on the City's website, through the EDCO quarterly newsletter mailed to residents, printed materials provided at City offices, through community presentations, community events, regional events, through partnerships with NGOs, and various other methods.	Prior to FY16	YES		NO		YES
IB-47a	Support ILACSD watershed presentations to school children as part of the San Diego Bay WMA educational activity	This is a new and ongoing activity that the City is participating in with the San Diego Bay Copermittees in partnership with ILACSD to target annual storm water education presentations to school children. Educational messaging is reviewed annually with ILACSD and customized for the target age group and priority condition and pollutant.	FY16	YES	Amendments were made to the agreement to include database updates of WasteFreeSD.org	NO		YES
IB-47c	Support public participation through community cleanup events	This is a new and ongoing activity to partner in region wide cleanup events to support WMA collaboration. The City supports the annual Creek to Bay and Coastal Cleanup Day. The City also hosts the annual Home Front Cleanup event (IB-26) for Imperial Beach residents. These events raise public awareness on watershed issues and help activate the public to cleanup illegally dumped trash.	FY16	YES		NO		YES
IB-47d	Support the Education and Residential Sources workgroup activities with the San Diego Copermittees	This is an ongoing activity with the San Diego Copermittees to implement a regional education program to more effectively provide regional messaging on priority pollutants. Efforts include community based social marking surveys, targeted messaging through various media, and storm water education at community events. Bacteria, trash, and eliminating dry weather flow are the priority target pollutants.	FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-48	Provide education opportunities to the underserved community	Refer to JRMP Section 9. This is an ongoing and budgeted JRMP activity that ensures educational opportunities are available for both Spanish speaking and lower income residents. The Environmental Division incorporates the underserved community in most educational activities, which is particularly important to the lower income and Spanish speaking community in Imperial Beach. Preventing the discharge of trash and sediment and eliminating dry weather flows are important messages that are shared to the underserved community through community events, in partnerships with NGOs, through school presentations, and a focus of enforcement actions.	Prior to FY16	YES		NO		YES
Non-JRMP Strategies (Optional Strategies, B.3.b.(1)(b))								
Nonstructural								
IB-02	Proactive enforcement of storm water violations and WQIP priority pollutants that enhance baseline IDDE Program efforts	This is a new and budgeted JRMP activity to target WQIP priorities. This activity involves the proactive identification of storm water violations with an emphasis on WQIP priorities of sediment and trash through targeted monthly neighborhood inspections outlined in IB-21. Frequency includes once per week dry-by inspections that cover all sources in each neighborhood section. Minimum BMPs are provided in Attachment 2 and Attachment 3 with specific attention made to priority sources.	FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-04b	MS4 outfall inspection and maintenance program (non-major non-jurisdictional outfalls)	This is a new and budgeted JRMP activity to visually inspect all MS4 outfalls annually (including non-major MS4 outfalls, Caltrans, Navy, and TRNERR) to support IDDE efforts and to identify maintenance needs. Frequency of inspection and any maintenance work is once per year for each outfall. Minimum BMPs include cleanup of any trash and debris at outfall locations post field screening and schedule appropriate follow up maintenance for any scour pond, sedimentation, or vegetation removal. All maintenance activities adjacent to TJ Estuary or SD Bay must be coordinated with FWS and/or TRNERR and performed outside of bird nesting season. Inspections and maintenance activity on Navy property must be coordinated through Navy Public Affairs Liaison.	FY16	YES		NO		YES
IB-13	Implement retrofit of impervious areas, LIDs, and EPA Green Streets guidance in the design phase for Capital Improvement Projects	This is a new and budgeted JRMP activity to consider the retrofit of imperious areas during the initial design phase of CIPs. The City will consider retrofit of impervious areas, LIDs, and EPA Green Streets guidance with the City Engineer in the design phase for all CIPs where feasible, supported by City Council, or required by Priority Development status.	FY16	YES	Completed phase 1 of Green Alleys (IB-53) and received authorization from Council to design Phase 2.	NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-21	Neighborhood inspection program	This is a new and budgeted JRMP activity to that allows for focused and targeted inspections by the Environmental Division that are informed by WQIP priorities. Frequency includes once per week dry-by inspections that cover all sources in each neighborhood (residential areas, commercial facilities, and active construction). The City is divided into 6 neighborhoods areas that rotate in priority each month as identified in JRMP Section 7. Minimum BMPs are provided in Attachment 2 and Attachment 3 with specific attention made to the highest priority pollutant of trash and sediment. Program will be evaluated at the end of Permit term for effectiveness.	FY16	YES	Weekly inspections through all the City	NO		YES
IB-25	Collection of illegally dumped material in alleys and public right-of-way	This is an enhanced and budgeted JRMP activity that allows for focused and targeted collection of trash generated by illegal dumping in the public right-of-way and City alleys. Illegally dumped materials observed by City staff or reported by the public in City alleys get inventoried and cleaned up weekly every Thursday by EDCO. Illegally dumped material observed or reported in the public right-of-way get collected at the end of the day by Public Works crew.	FY16	YES	A weekly list is sent out to EDCO to remove illegally dump items in the alleys	NO		YES
IB-26	Home front cleanup event (Incentive Program)	This is an ongoing and budgeted JRMP activity. This free event is an incentive for IB residents and provides a convenient opportunity to dispose or recycle large bulky items or green waste. The City partners with EDCO for this important community activity that also provides an opportunity to dispose e-waste, shred important documents, pickup free mulch for ground cover, and provide education materials. The event occurs annually on the first Saturday in May.	Prior to FY16	YES	159.48 Total Tons collected and 42.91Total Tons diverted	NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-27	Pet waste bag program (Incentive Program)	This is an ongoing and budgeted JRMP activity. The City currently maintains 10 pet waste bag dispensers twice per week. The City would like a local community group or non-profit to manage the pet waste bag program, which was previously run by a local group form 1999-2013 and supported through the City's community grant program. The City will continue to implement the pet waste bag program until a community group is identified to take back over the program. The pet waste bag program is important to residents and also helps control a known bacterial source.	Prior to FY16	YES	One pet waste bag dispenser added during FY 15-16 on Seacoast Drive. Also, a second location will be added at Teeple Park on Florida St.	NO		YES
IB-62	EDCO Community Grant Program (Incentive Program)	This is an ongoing and budgeted activity. The City partners with EDCO to provide $5,000 in local community grants per year to local organizations to help improve the community. Examples of include support for a community let pet waste bag program, support for education and outreach through local NGOs, and programs that encourage community involvement. City Council review grant applications and present the grant awards.	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-64	Cal American Water Rebate Programs (Incentive Program)	Cal American provides drinking water to the City and also offers rebate programs for water conservation efforts including turf replacements and LID gardens for residents. The City also partners with Cal American and independently funds local community groups (Boy Scouts Eagle Projects) to install local turf replacement projects on City property. Recent projects include: • City Hall xeriscape (2010) • Marina Vista Center (2010) • Sewer Pump Station 8 (2011) • Elm Ave Planters (2013) • Safety Center Planters (2013) • Public Works xeriscape (2015) • Sports Park planters (2015) • Sheriff's Station City Hall (2015) • Triangle Park (2015- under design)	Prior to FY16	YES	Triangle Park (Bicentennial Triangle) project completed concept designs and received Council approval to complete engineering and landscape plans.	NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Structural								
Green Infrastructure								
IB-53	Implement improvements to dirt alleys in the City	This is a new and partially budgeted activity to make improvements to the approximate 2 miles of unimproved dirt alleys in the City that contribute sediment and other storm water pollutants during rain events. The City budgeted for FY 16 to complete the design and construction for the first phase of alley improvements for 14 alley segments (over 1 mile of dirt alleys) that target the highest priority areas in the City. These new alleys will include permeable pavers and storm water retention to provide additional water quality benefit. The second phase of the alley improvements to pave the last remaining dirt alleys is unfunded but is considered a priority by the community. The availability of future grant funds, the establishment of an assessment district, or similar funding mechanisms could trigger the second phase of this project to occur sooner. Otherwise the improvement of the remaining dirt alleys will be improved incrementally over time as funding becomes available. This activity specifically targets the highest priority pollutant of sediment during wet weather in the Tijuana River WMA. This project also targets trash in the San Diego Bay WMA because the City takes over ownership and maintenance of the alleys (IB-24, IB-25) once an alley is improved.	FY16-FY28	YES	Phase one of the project started during FY15-16 with a retrofit of 1 mile of green alleys. The retrofit includes permeable concrete, storm water retention, and dry wells that provide multiple water quality benefits.	NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-58	Implement the Bikeway Village redevelopment project on 13th Street and Bayshore Bikeway	This is a new and budgeted public private partnership to redevelop existing industrial warehouses adjacent to the Bayshore Bikeway on 13th Street. This project includes a new storm water bioswale and wildlife habitat restoration as part of the new development. In addition, the City is providing bikeway and pedestrian improvements along 13th Street. The City is providing funds towards biking and pedestrian improvements and supporting the Bikeway Village redevelopment project. The project is already designed and the City has dedicated funding for its share of the project. Triggers include meeting Coastal Commission conditions, securing permitting for project, implementing a successful partnership with the developer, and phasing of multiple elements of this project. The benefits of the project include increasing public access to the Bayshore Bikeway, enhanced wildlife viewing of south San Diego Bay, improved storm water treatment from older industrial warehouses, and improved biking and pedestrian safety on 13th Street.	FY16 – FY22	YES	Construction on the Bikeway Village Redevelopment project started during FY 15-16.	NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-61	Palm Ave (Hwy 75) Master Plan	This is a new and partially budgeted activity to redevelop the Hwy 75 commercial corridor along Palm Ave. The City has funded with the support of a grant the first phase of the project to hold a series of community and city council workshops and develop design options. The grant includes preliminary designs sufficient for environmental review. Goals of the project are to enhance safety and to encourage new commercial redevelopment in the area. The project also proposes LID facilities similar to the Eco Bike Route. Potential triggers on the project include design limitations from Caltrans and the possible relinquishment of Hwy 75, community and council support, availability of grant funds for the next project phase, and regional support for the project. If successful, the project will implement green streets along Palm Ave and provide a water quality benefit to the San Diego Bay WMA. A secondary benefit would also come from the redevelopment of the older commercial buildings along Hwy 75.	FY16 – FY26+	YES	City completed the 30% designs for the Palm Ave Master Plan Project with grant support through SANDAG Smart Growth Incentive Program. The City also received a second Smart Growth Incentive grant to complete the 100% designs for the western section of the Palm Ave Master Plan project, which will include significant green street elements in the design.	NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-65	Imperial Beach Green Streets Program	This is a new and budgeted activity in the City's JRMP program to implement EPA Green Streets guidance and LIDs into the design of CIP projects where feasible. See Strategy IB-13. The City Engineer will consider the retrofit of existing impervious areas through the CIP program and consider options to include LIDs and EPA Green Street guidance into the initial design of projects. Green streets and pollutant source control measures will be included into new CIP projects where feasible given the following triggers: the availability of funds, support from the community, support from City council, where it fits within the scope of the CIP project, and where otherwise required to meet WQIP goals. The City is committed to implementing water quality improvement BMPs for CIP projects that achieve multiple benefits.	FY16-FY28+	YES	Green street elements were included in the Palm Ave Master Plan (IB-61) and Alley Improvements Phase 1 (IB-53)	NO		YES
Multiuse Treatment Area								
Stream, Channel and Habitat Rehabilitation Projects (B.3.b.(1)(b)(iii))								
IB-69	Implementation of stream channel and habitat rehabilitation projects	This is an ongoing and budgeted activity for the following strategies: IB-12, IB-34b, IB-38, IB-54, and IB-58. The City actively seeks projects to retrofit the MS4 system to provide natural treatment of storm water and provide rehabilitation of native habitat. Additional stream channel and habitat restoration projects are contingent upon existing partnerships in the watershed moving specific projects forward based on priorities in the region including triggers for not meeting WQIP priority conditions. The City also partners with local, state, and federal agencies on wetland restoration projects for south San Diego Bay.	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Water Quality Improvement BMPs								
Source Control and LID BMPs								
IB-05a	Provide enhanced storm water BMP conditions for non-PDP (Standard Development Projects) with improvement valuation greater than $50,000	This is an ongoing and budgeted activity that provides a 2-step review process to provide enhanced storm water BMP conditions for Standard Development Projects with an improvement valuation greater than $50,000. Applicable projects require an additional review by the Public Works Department for public improvements that include specific project conditions for storm water. BMP conditions typically include at a minimum the disconnection of impervious areas, 12-inches of loamy soil improvement for landscaped areas, designated trash storage area, and LIDs where feasible.	Prior to FY16	YES		NO		YES
IB-39	Eliminate residential and commercial curb cuts	This is an ongoing and budgeted JRMP activity to eliminate curb cuts from residential and commercial areas from older development projects. Curb cuts are eliminated through either permit conditions on new development or when the City has a designated street improvement CIP adjacent to the property. Storm water is required to be directed to landscaped areas.	Prior to FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-63	Implement full trash capture or equivalent for H-outfall drainage basin	This is an ongoing and partially budgeted activity to provide full trash capture for the H-outfall drainage basin that discharges to the San Diego Bay WMA. H-outfall is the City's primary drainage basin to the San Diego Bay WMA and includes commercial areas, residential land uses, and runoff from Hwy 75. Triggers include completion of a Trash Capture Study to determine the most effective BMPs to implement that both prevents the discharge of trash and mitigates flooding issues for low laying areas. Funds are budgeted for FY16 to complete an initial feasibility study.	FY16 – FY28	YES	Multiple studies were completed to evaluate options for full trash capture.	NO		YES (If funds are available)
WMA Strategies (Optional Strategies, B.3.b.(2))								
IB-12	Offsite Alternative Compliance Program and Watershed Management Area Analysis (WMAA)	This is a new and ongoing activity that the City is participating in with the Regional Copermittees and in each WMA. Funding and resources are budgeted to develop of a regional WMAA and an alternative compliance program framework that needs to be approved by the RWQCB. The implantation of an offsite alternative compliance program at a jurisdictional, watershed, or regional level will be evaluated as the program develops and supported by City Council. The WMAA provides alternative compliance methods in lieu of meeting structural BMP design standards and hydromodification management criteria for new development projects.	FY16	YES		NO		YES
IB-43b	San Diego Bay Watershed Education Programs	This is an ongoing collaborative activity that the City is participating with other Copermittees to support the efforts to address trash, sediment, and water quality issues in the San Diego Bay WMA through education activities. See strategies IB-47a, IB-47c, and IB-47d.	FY16	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-54	Implement wetland restoration, habitat restoration, and public access improvements along San Diego Bay to support multiple benefits in the San Diego Bay WMA through public private-partnerships and partnerships with other state, federal, and local agencies	This is an ongoing and partially budgeted activity that includes multiple development projects and restoration projects along San Diego Bay. The City's Bikeway Access Project (IB-34b) is the City's portion of the larger FWS Birder's Point project to build a walking trail and overlook observation decks to view the recently completed Salt Pond wetland restoration projects. The City is also supportive of the ongoing and planned restoration projects in San Diego Bay and the Otay River flood channel (IB-38). The City's public-private partnership with the Bikeway Village Project at the end of 13th Street (IB-58) also builds upon the successful restoration efforts along San Diego Bay for eco-tourism. The Port of San Diego's recent decision in 2015 to turn Pond 20 into a new wetland mitigation bank also provides a new opportunity for collaborate that will evolve over the Permit term. The successful implementation of projects from partnerships in San Diego Bay WMA will likely result in additional water quality improvement strategies being added to this list.	FY16	YES	FWS Birder's Point started construction	NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-56	Update the SCCOOS Tijuana River Plume Tracking model	This is an ongoing collaborative activity that the City is partnering with Scripps and other agencies to better understand the science on how pollution transport from Mexico is impacting beach water quality from Imperial Beach to Coronado. Scripps will be performing a pollution transport study in Fall 2015 to track the northward mixing of near shore and offshore currents that can then be used to update the existing SCCOOS plume tracking model currently used by the IB Lifeguards and County DEH to protect public health. Funding is still needed to update the plume tracking model with the pending results of the 2015 Scripps study. Understanding the transport of pollution from the known point sources of the Tijuana River, IBWC ocean outfall, Punta Bandera, and other sources in Mexico will allow the County DEH to more effectively respond to water quality conditions and help prioritize actions that will support the collaborative efforts in IB-55.	FY16	YES	Scripps successfully completed 3 dye release events. Preliminary results highlight the need to update the Plume Tracking Model. The City met with RWQCB, EPA, and IBWC to seek funding to update the plume tracker. Funding is still needed.	NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-60	Support development of rapid bacteria testing for beach water quality monitoring	This is a new and ongoing collaborative activity in the region to develop rapid beach water quality testing to allow for more accurate and effective response to protect beach water quality. The development of rapid monitoring methods are currently being developed by SCCWRP and evaluated by the County DEH for implementation along San Diego County beaches. Imperial Beach is an ideal location to test pilot rapid qPCR bacteria monitoring if the method proves successful. Triggers include development of qPCR method, availability of funding, and support form County DEH. Rapid response to beach water quality could allow for quicker response to water quality issues along imperial Beach and also raise public awareness on the complex cross border water quality issues.	FY16	YES	County DEH completed an assessment of qPCR along the Imperial Beach shoreline. The City and IB Lifeguards continue to work closely with County DEH on the use of qPCR. More funding is necessary for the County DEH to fully implement qPCR.	NO		YES
IB-66	San Diego Bay Trash Study	The City of Imperial Beach is participating in the San Diego Bay Trash Study with WMA Copermittees. The study will assess targeted geographic areas and include (1) an assessment of current conditions to provide a baseline to demonstrate progress, (2) identify high-priority areas for targeted strategy implementation, and (3) identification of potentially collaborative efforts with different jurisdictions.	Prior to FY16 – FY19	YES		NO		YES
IB-67	Special Study: Participation in the San Diego Regional Reference Stream Study	This is an ongoing and budgeted collaborative activity with the San Diego Copermittees to develop numeric targets for minimally disturbed or "reference" condition for bacteria and other pollutants.	Prior to FY16 – FY17	YES		NO		YES

Table 8-1 (continued)
City of Imperial Beach's Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Proposed Modifications				
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
IB-68	Support regional effort to address trash and other water quality issues from homeless encampments	This activity is currently not developed or funded. If a regional social services effort is established then the City will support the effort to provide sanitation and trash management for persons experiencing homelessness and determine if the program is suitable and appropriate for Imperial Beach. Triggers include the establishment of a regional effort to address homelessness, city council support, availability of funds or staff resources, and community support.	Must be Triggered	Not triggered during current FY		NO		Must be triggered

Intentionally Left Blank

8.4 MODIFICATIONS TO THE BMP DESIGN MANUAL

The Imperial Beach BMP Design Manual provides guidance for land development and public improvement projects to comply with relevant development planning requirements in the Municipal Permit. The Imperial Beach updated its BMP Design Manual in accordance with Municipal Permit requirements during FY16; the BMP Design Manual replaced the Standard Urban Storm Water Mitigation Plan (SUSMP). No additional changes to the BMP Design Manual have been made since it went into effect. The Imperial Beach BMP Design Manual can be accessed via the Project Clean Water website at: http://www.projectcleanwater.org/index.php?option=com_content&view=article&id=244&Itemid=212.

8.5 MODIFICATIONS TO THE JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM

No modifications to the Imperial Beach JRMP have been made since the WQIP was approved in spring 2016. The current City of Imperial Beach JRMP is posted on the City's website, and the link to this page is listed on Project Clean Water.

9 CITY OF LA MESA

9.1 ANNUAL REPORT CERTIFICATIONS

The City of La Mesa's signed Statement of Certification and Legal Authority Establishment for the San Diego Bay WMA Water Quality Improvement Plan 2015-2016 Annual Report is included on the following page.

CITY OF
LA MESA
JEWEL of the HILLS

PUBLIC WORKS DEPARTMENT

SAN DIEGO BAY WATERSHED MANAGEMENT AREA, WATER QUALITY IMPROVEMENT PLAN FISCAL YEAR 2015-2016 ANNUAL REPORT STATEMENT OF CERTIFICATION AND LEGAL AUTHORITY ESTABLISHMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted.

Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations [40 CFR 122.22(d)].

I also certify that the City of La Mesa has taken the necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements within Order No. R9-2013-001 as amended by Orders R9-2015-0001 and R9-2015-0100.

Executed on the 3rd day of January 2017, at the City of La Mesa.

Leon Firsht
Acting Director of Public Works/City Engineer
City of La Mesa

1/3/17
Date

9.2 ANNUAL REPORT FORM

The City of La Mesa has modified the industrial commercial inspection program in order to increase efficiency and maximize the number of businesses inspected during the program year. The new format allows inspectors to conduct more inspections in a faster manner, resulting in more frequent compliance checks.

The City's BMP Manual and municipal code have been updated to reflect the required changes in development regulations as related to storm water.

The City of Imperial Beach's completed JRMP Annual Report form and fiscal analysis for FY16 are included on the following pages.

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM
FY 2015-2016 SAN DIEGO BAY WATERSHED

I. COPERMITTEE INFORMATION			
Copermittee Name: City of La Mesa			
Copermittee Primary Contact Name: Joe Kuhn, Storm Water Program Manager			
Copermittee Primary Contact Information:			
Address: 8130 Allison Ave.			
City: La Mesa	County: San Diego	State: CA	Zip: 91942
Telephone: 619.667.1340	Fax: 619.667.1380	Email: jkuhn@ci.la-mesa.ca.us	

II. LEGAL AUTHORITY		
Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	YES	[X]
	NO	[ ]
A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	YES	[X]
	NO	[ ]
III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE		
Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	YES	[X]
	NO	[ ]
If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	YES	[X]
	NO	[ ]
IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM		
Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	YES	[X]
	NO	[ ]

Number of non-storm water discharges reported by the public	9
Number of non-storm water discharges detected by Copermittee staff or contractors	4
Number of non-storm water discharges investigated by the Copermittee	12
Number of sources of non-storm water discharges identified	12
Number of non-storm water discharges eliminated	7
Number of sources of illicit discharges or connections identified	4
Number of illicit discharges or connections eliminated	3
Number of enforcement actions issued	3
Number of escalated enforcement actions issued	0

V. DEVELOPMENT PLANNING PROGRAM		
Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	YES	[X]
	NO	[ ]
Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	YES	[X]
	NO	[ ]
If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	YES	[X]
	NO	[ ]

Number of proposed development projects in review	4
Number of Priority Development Projects in review	4
Number of Priority Development Projects approved	1
Number of approved Priority Development Projects exempt from any BMP requirements	0
Number of approved Priority Development Projects allowed alternative compliance	0
Number of Priority Development Projects granted occupancy	1

Number of completed Priority Development Projects in inventory	14
Number of high priority Priority Development Project structural BMP inspections	14
Number of Priority Development Project structural BMP violations	0
Number of enforcement actions issued (For not returning form by deadline)	4
Number of escalated enforcement actions issued	0

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM
FY 2014-2015

VI. CONSTRUCTION MANAGEMENT PROGRAM

Has the Copermittee implemented a construction management program that complies with Order No. R9-2013-0001? YES [X] NO [ ]

Number of construction sites in inventory	15
Number of active construction sites in inventory	15
Number of inactive construction sites in inventory	0
Number of construction sites closed/completed during reporting period	6
Number of construction site inspections	28
Number of construction site violations	4
Number of enforcement actions issued	4
Number of escalated enforcement actions issued	0

VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM

Has the Copermittee implemented an existing development management program that complies with Order No. R9-2013-0001? YES [X] NO [ ]

	Municipal	Commercial	Industrial	Residential
Number of facilities or areas in inventory	32	133	1	0
Number of existing development inspections	9	133	1	0
Number of follow-up inspections	0	5	0	0
Number of violations *Includes corrective actions	0	2	0	0
Number of enforcement actions issued	0	2	0	0
Number of escalated enforcement actions issued	0	0	0	0

VIII. PUBLIC EDUCATION AND PARTICIPATION

Has the Copermittee implemented a public education program component that complies with Order No. R9-2013-0001? YES [X] NO [ ]

Has the Copermittee implemented a public participation program component that complies with Order No. R9-2013-0001? YES [X] NO [ ]

IX. FISCAL ANALYSIS

Has the Copermittee attached to this form a summary of its fiscal analysis that complies with Order No. R9-2013-0001? YES [X] NO [ ]

X. CERTIFICATION

I [[ ] Principal Executive Officer [ ] Ranking Elected Official [X] Duly Authorized Representative] certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

Signature: [signature]　　Date: 10/5/16

Print Name: Gregory P. Humora　　Title: Director of Public Works/City Engineer

Telephone Number: 619.667.1146　　Email: ghumora@ci.la-mesa.ca.us

FISCAL ANALYSIS

The City's Sanitation Fund provides most of the funding for the Storm Water Program. There have not been any changes to this funding mechanism during this reporting period. During 2009/2010, a fiscal analysis reporting template was developed collectively by the Copermittees. The City has used this template to report the 2015/2016 expenditures and funding sources in this JURMP Annual Report.

San Diego County Copermittees Fiscal Analysis Report
for Urban Runoff Management Programs

EXPENDITURE SUMMARY

JURISDICTIONAL COMPONENTS	
Administration	$64,159
Development Planning	$14,393
Construction	$30,342
Municipal	$3,892
Industrial and Commercial	$71,155
Residential	$957
IDDE	$45,038
Education/Public Participation	$8,793
Special Investigations	$0
Non-Emergency Firefighting	$0
Jurisdictional Total	**$238,733**

WATERSHED	
Watershed 1 – San Diego River	$52.533
Watershed 2 – San Diego Bay	$49,171
Watershed Total	**$101,705**

REGIONAL	
Annual Permit Fee to Regional Board	$17,171
Copermittee Cost Share of Regional Budget	$29,308
Regional Total	**$46,479**

TOTAL COSTS	$386,917

FUND SUMMARY

FUNDING BY SOURCE	
General Fund	$7,474
Storm Water Fee	$0
Permit Fees	$0
Developer Deposits and Fees	$23,285
Registration and Inspection Fees	$18,550
Flood Control Fees	$0
Franchise Fees	$0
Gas Tax	$0
Utility Tax	$0
Road Fund	$0
Enterprise Funds	$252,308
Trust Funds	$0
Special Assessment Districts	$0
State Appropriated Funds	$0
Grant Funds	$0
Other	$0
Total	**$301,617**

ONE-TIME FUNDING	
Grants	$0
Donations	$0
Total	**$0**

TOTAL FUNDING	$301,617

Watershed Program

	Watershed 1 – San Diego River	Watershed 2 – San Diego Bay
Administration (1)	$4,786	$14,358
Cost Share	$47,947	$34,813
Watershed Activities	$0	$0
Other	$0	$0
TOTAL	$52,733	$49,171

(1) Administration – includes Watershed strategic planning, management, mapping, assessment, and reporting

Permit Requirements for Fiscal Analysis

1. Identification of the various categories of expenditures necessary to implement the requirements of this Order; including a description of the specific capital, operation and maintenance, and other expenditures items to be accounted for in each category of expenditures.

See page 1 of fiscal analysis. Watershed costs include costs for development of required submittal.

2. The staff resources needed and allocated to meet the requirements of this Order, including any development, implementation, and enforcement activities required.

Staff resources include:

(1) Storm Water Program Manager and (1) Engineering Technician II dedicated to the storm water protection program. These two employees complete the vast majority of the work associated with the Order. The City also has two local consulting firms who specialize in storm water management under As-Needed contract.

The City also has (1) Engineering Project Manager, and (1) Public Works Inspector II who is part time desiccated to storm water protection. Other City staff including (1) Associate Engineers, (1) Engineering Technician II, (1) Code Compliance Officer and several field public works operation staff may be utilized on an as needed basis for storm water tasks.

3. The estimated expenditures for Provisions E.8.b (1) and E.8.b (2) for the current fiscal year,

See expenditure summary on Page 1. Costs are anticipated to increase over the future fiscal years, and funding estimates will coincide with the development of the WQIP for the City's Watersheds, and the development of the City's new JURMP.

4. The sources of funds that are provided to meet the necessary expenditures described in Provisions E.8.b.(1) and E.8.b.(2), including legal restrictions on the use of such funds, for the current fiscal year and next fiscal year.

See funding summary on Page 2. Funding source is projected to remain similar next fiscal year.

9.3 CITY OF LA MESA STRATEGIES

The City of La Mesa (La Mesa) is located in the hills of San Diego County with walkable, tree-lined neighborhoods and retail and commercial areas. La Mesa has received funding to implement green infrastructure along a busy corridor of University Avenue. Other strategies to improve water quality include enhancing MS4 infrastructure maintenance and promoting water efficient landscape BMPs. Strategies and implementation schedules, presented in Table 2-9-1, were identified using best information available on efficiency, effectiveness, and level of effort estimated to achieve compliance with numeric goals. In Chollas Creek, a compliance analysis using a watershed model was conducted to identify the strategies required to be implemented to meet final goals. The strategies and implementation schedules identified demonstrate that numeric goals are met. The adaptive management process provides the framework to evaluate progress toward meeting the goals and allows for modification of strategies. As strategies are modified, the compliance analysis is updated as needed to provide assurance that numeric goals are met.

Intentionally Left Blank

Table 9-1
City of La Mesa Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Jurisdictional Strategies									
Development Planning									
All Development Projects									
LM-1	For all development projects, administer a program to ensure implementation of source control BMPs to minimize pollutant generation at each project and implement LID BMPs to maintain or restore hydrology of the area, where applicable and feasible.	Triggered upon pulling of building permit.	Prior to FY16	Yes	Yes	Completed within 2016 La Mesa BMP Manual Update	None	N/A	Yes
LM-2	Amend municipal code and ordinances to require LID implementation.	La Mesa has amended ordinances for dry weather component and per new BMP Manual.	FY15	Yes	Yes	Code Updated, Ord. 2015-2840	None	N/A	Yes
LM-3	Train staff on LID regulatory changes and LID Design Manual.	The City shall perform training related to water quality design for CIPs in Q4 2015.	FY15	Yes	Yes	Training Event Completed March 4, 2016	None	N/A	Yes
Priority Development Projects (PDPs)									
LM-4	For PDPs, administer a program requiring implementation of structural BMPs to control pollutants and manage hydromodification. Includes confirmation of design, construction, and maintenance of PDP structural BMPs.	Trigger is private project application and PDP status.	Prior to FY16	Yes	Yes	Completed within 2016 La Mesa BMP Manual Update	None	N/A	Yes
	1. Administer self-certification program for treatment control BMP compliance.	La Mesa has a program in place. Continue to add projects as they are constructed.	Prior to FY16	Yes	Yes	Program continues to add projects each year.	None	N/A	Yes
LM-5	Update BMP Design Manual procedures to determine nature and extent of storm water requirements applicable to development projects and to identify conditions of concern for selecting, designing, and maintaining appropriate structural BMPs.	The City will update its BMP Design Manual to comply with approved Regional Manual, and MS4 Permit.	Prior to FY16	Yes	Yes	Completed, with Ord. Update 2015-2840	None	N/A	Yes
	1. Amend BMP Design Manual for trash areas. Require full four-sided enclosure, siting away from storm drains and cover. Consider the retrofit requirement.	La Mesa will amend the BMP Design Manual for trash areas, and implement where feasible.	FY16	Yes	Yes	Amended within 2016 BMP Manual Update	None	N/A	Yes

Table 9-1 (continued)

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
LM-5 (cont)	2. Amend BMP Design Manual for mobile businesses.	Businesses are required to read and sign a storm water affidavit and comply with rules in order to receive a permit.	Prior to FY16	Yes	Yes	Any mobile detailing business which wants to obtain a business license shall complete the storm water affidavit.	No	N/A	Yes
LM-6	Administer an alternative compliance program to on-site structural BMP implementation (includes identifying Watershed Management Area Analysis [WMAA] candidate projects).	The City will implement an alternative compliance program to meet City and Developer needs and to fund city CIP restoration style/LID projects.	FY18	N/A	N/A	N/A	No	N/A	N/A
Construction Management									
LM-7	Administer a program to oversee implementation of BMPs during the construction phase of land development. Includes inspections at an appropriate frequency and enforcement of requirements.	The City currently implements this program. During wet season, high priority areas are inspected every two weeks, medium areas are inspected monthly, and low priority areas are inspected once per rainy season.	Prior to FY16	Yes	Yes	The construction inspection program is ongoing and is outlined in the City's JURMP.	No	N/A	Yes
Existing Development									
Commercial, Industrial, Municipal, and Residential Facilities and Areas									
LM-8	Administer a program to require implementation of minimum BMPs for existing development (commercial, industrial, municipal, and residential) that are specific to the facility, area types, and PGAs, as appropriate. Includes inspection of existing development at appropriate frequencies and using appropriate methods.	All facilities are inspected at least annually. Many areas are inspected several times per year.	Prior to FY16	Yes	Yes	Commercial/Industrial, Municipal, and Industrial program was developed and is administered per the City's JURMP.	No	N/A	Yes
	1. Update minimum BMPs for existing residential, commercial, and industrial development.	The City will update minimum BMPs during JRMP update to include a new residential program. In addition, outdoor exposure will trigger action for BMPs.	Prior to FY16	Yes	Yes	BMPs were updated as part of Ordinance Revision 2015-2840	No	N/A	Yes
	2. Design, implement, and enforce property based inspections.	La Mesa has implemented property based inspections. Each business will be inspected at least once a year, and high priority areas will be inspected more than once.	FY15	Yes	Yes	Property based inspections were implemented as part of the City's JURMP Update in 2015.	No	N/A	Yes

Table 9-1 (continued)
City of La Mesa Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
LM-8 (cont)	3. Increase inspection for highest pollutant potential businesses.	The City will increase inspections based on effectiveness of new program. It currently has FOG inspections for restaurants and will prioritize auto-related facilities within Chollas. Every business is inspected every year.	FY15	Yes	Yes	No update.	No	N/A	Yes
	4. Provide BMP factsheet to water-using mobile businesses when business license is granted, and require minimum BMPs for mobile businesses.	Trigger is the application for a business license.	Prior to FY16	Yes	Yes	Any mobile detailing business which wants to obtain a business license shall complete the storm water affidavit, and will receive factsheet.	No	N/A	Yes
	5. Review policies and procedures to ensure discharges from swimming pools meet permit requirements.	La Mesa will update swimming pool items per changes in code.	FY15						
	6. Require sweeping and maintenance of private roads and parking lots in targeted areas based on inspection results and follow up.	Optional.	Trigger (upon need)	No	No		Yes. Re-worded strategy to clarify that this pertains to the inspection process.	No	No
	7. Implement Water Efficient Landscape Ordinance.	The City already has a State mandated landscape ordinance.	Prior to FY16	Yes	Yes	Completed prior to 2015.	No	N/A	Yes
LM-9	Implement pet waste program. May include installation and maintenance of pet waste bag dispensers and trash bins, signage and education, and physical removal of pet waste.	La Mesa has a preexisting pet waste program.	Prior to FY16	Yes	Yes	Pet waste bags are stationed in La Mesa Parks	No	N/A	Yes

Table 9-1 (continued)
City of La Mesa Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
LM-10	Promote and encourage implementation of designated BMPs at residential areas.		Prior to FY16						
	1. Expand residential BMP programs to multi-family housing in target areas.	La Mesa will potentially collaborate with HOAs for rebates, inspection reduction programs, and more.	Prior to FY16	No	No	Not administered in FY 16.	Yes. Re-worded.	None	Unknown
	2. Promote and collaborate with water agencies and other groups to encourage implementation of water conservation programs that improve water quality by reducing over-irrigation with smart products or turf replacement and capturing rain water in residential areas.	La Mesa will collaborate with Helix Water District on rebate programs, via promotion on website.	Prior to FY16	Yes	Yes	Helix water coordinates the programs.	No	N/A	Yes
	3. Implement Residential BMP: Rain Barrel	The City already has been implementing rain barrels via Helix Water.	Prior to FY16	Yes	Yes	The work is done by Helix Water.	No	N/A	Yes
LM-11	Promote and encourage implementation of designated BMPs in non-residential areas.	La Mesa will work with Helix Water District. There will be dry weather benefits.	Prior to FY16	Yes	Yes	City promotes BMPs during the development process for non-residential areas.	No	N/A	Yes
LM-12	Implement program to investigate illegal grading on private property.	The City investigates illegal grading based on reports to code compliance and Public Works.	Prior to FY16	Yes	Yes	The City's Public Works Dept. actively investigated illegal grading consistently throughout the City.	No	N/A	Yes

Table 9-1 (continued)
City of La Mesa Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
MS4 Infrastructure									
LM-13	Implement operation and maintenance activities (inspection and cleaning) for MS4 and related structures (catch basins, storm drain inlets, detention basins, etc.) for water quality improvement and flood control.	At least once annually, and high priority areas with added frequency.	Prior to FY16	Yes	Yes	Maintained at least annually.	No	N/A	Yes
	1. Optimize catch basin cleaning to maximize pollutant removal.	La Mesa has 455 catch basins in the Chollas Creek watershed. Current frequency is at least once per year per year. The City is transitioning to Cartagraph Software to optimize the cleaning schedules.	FY18	Yes	Yes		Yes. Approach re-worded.	No	No
	2. Repair MS4 components to provide source control from MS4 infrastructure.	The City repairs MS4 components as needed based on condition assessment and prioritization process.	Prior to FY16	Yes	Yes	The City continuously programs CIP projects to repair storm drain infrastructure.	No	N/A	Yes
LM-14	Identify sewer leaks and areas for sewer pipe replacement prioritization.	La Mesa replaces as needed based on sewer condition assessment and long-term prioritization.	Prior to FY16	Yes	Yes	The City continuously programs CIP projects to repair wastewater infrastructure.	No	N/A	Yes
	1. Replace pipes as needed in Chollas watershed.	La Mesa currently is performing trunk main pipe replacements. One project is occurring at University and Massachusetts Avenues.	FY17	Yes	No	The project has completed the design/permitting phase and is slated for completion in FY 2016-2017.	No	No	Yes

Table 9-1 (continued)
City of La Mesa Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Roads, Street, and Parking Lots									
LM-15	Implement operation and maintenance activities for public streets, unpaved roads, paved roads, and paved highways	The City has a preexisting street sweeping schedule that is prioritized by area.	Prior to FY16	Yes	Yes	Ongoing	No	N/A	Yes
	1. Perform street sweeping in roads, parking lots, and medians on high-volume arterial roadways.	High traffic and arterial areas are swept once a week, other arterial areas are swept every other week, and residential areas are swept once a month. Parking lots and medians are included in street sweeping program.	Prior to FY16	Yes	Yes	Ongoing	No	N/A	Yes
	2. Enhance street sweeping through equipment replacement (replace every 4 years) and route optimization (sweep commercial routes bi-weekly and residential every other month)	Street sweeping is contracted out, and the contractor uses Regen Air sweepers. The City plans to increase frequency in high traffic areas in Chollas to two times a week.	FY18	N/A	N/A	N/A	No	N/A	No
Pesticide, Herbicides, and Fertilizer BMP Program									
LM-16	Require implementation of BMPs to address application, storage, and disposal of pesticides, herbicides, and fertilizers on commercial, and municipal properties. Includes education, permits, and certifications.	The City does not have authority over application of pesticides but will implement BMPs. Industrial and commercial inspections cover requirement, and Parks and Rec implement municipal program.	Prior to FY16	Yes	Yes	Ongoing Program	No	N/A	Yes
Retrofit and Rehabilitation in Areas of Existing Development									
LM-17	Develop and implement a strategy to identify candidate areas of existing development appropriate for retrofitting projects and facilitate the implementation of such projects.	La Mesa will target municipal areas.	FY16	Yes	Yes	Areas have been identified for retrofit, and projects are in construction.	No	N/A	Yes

Table 9-1 (continued)
City of La Mesa Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
LM-18	Develop and implement a strategy to identify candidate areas of existing development for stream, channel, or habitat rehabilitation projects and facilitate implementation of such projects.	Potential stream, channel, or habitat rehabilitation projects will be selected based upon a variety of factors including the reasonable access of a project (right of way, hydrologic factors), areas existing stream or habitat degradation, multiple benefits of the project, and feasibility of implementation. Projects can arise as part of the Offsite Alternative Compliance Program. The program will include protocols related to funding mechanisms for project construction and long-term maintenance, payment and credit structures, and water quality equivalency standards. Grant funding can be utilized as available.	Various	Continuous – Ongoing	Yes	Ongoing	No	N/A	Yes
Illicit Discharge, Detection, and Elimination (IDDE) Program									
LM-19	Implement Illicit Discharge, Detection, and Elimination (IDDE) Program per the JRMP. Requirements include: maintaining an MS4 map, using municipal personnel and contractors to identify and report illicit discharges, maintaining a hotline for public reporting of illicit discharges, monitoring MS4 outfalls, and investigating and addressing any illicit discharges.		Prior to FY16	Yes	Yes	Ongoing	No	N/A	Yes
	1. Develop and implement approaches to address the impacts of septic systems within the watershed	City shall maintain a map of septic locations, and forward all concerns to the appropriate agency.	FY 16	No	No		Yes. Re-warded for clarity.	Unknown	Unknown
	2. Develop and implement approaches to address the impacts of homeless activities within the watershed.	Addresses Bacteria caused by homeless.	FY 17	N/A	N/A	Not addressed yet.	No	N/A	Unknown

Table 9-1 (continued)
City of La Mesa Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Public Education and Participation									
LM-20	Implement a public education and participation program to promote and encourage development of programs, management practices, and behaviors that reduce the discharge of pollutants in storm water prioritized by high-risk behaviors, pollutants of concern, and target audiences.		Prior to FY16	Yes	Yes	Ongoing	No	N/A	Yes
	1. Conduct trash cleanups through community-based organizations involving target audiences.	La Mesa works with "I Love a Clean San Diego" and holds two major cleanups in each watershed per year. The City will possibly work with Groundworks Chollas or other NGOs. Private cleanups are conducted through code enforcement.	Prior to FY16	Yes	Yes	City conducts cleanups at least biannually.	No	N/A	Yes
	2. Review City storm water website and identify and implement required updates to reflect WQIP and JRMP revisions.	The City will update the website to include new permit information, such as for irrigation.	FY15	Yes	Yes	The City has updated the website with new JURMP and BMP information.	No	N/A	Yes
	3. Target human behavior in parks and other public areas including trash reduction or other high impact behavior to habitat, wildlife, and water quality.	Six kiosks have been built in parks in collaboration with Eagle Scouts and other community groups. Information on trash and other public issues can be included in these kiosks. La Mesa plans to build more storm water kiosks as partners are available.	Prior to FY16	Yes	Yes	Kiosks are maintained periodically.	No	N/A	Yes
	4. Enhance school and recreation-based education and outreach.	"I Love a Clean San Diego" presents in schools.	Prior to FY16	Yes	Yes	City contracts high school presentations every year through Helix High School.	No	N/A	Yes

Table 9-1 (continued)
City of La Mesa Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
LM-20 (cont)	5. Continue to support the Environmental Sustainability Commission (ESC), a committee of local residents and business owners working to preserve La Mesa's environment.	The ESC manages the Environmental Awareness Festival, serves as an advisory body to the City Council on how actions and policies of the City may preserve and enhance the quality of La Mesa's environment, and addresses the effects of climate change and assists in the identification of measures that will improve environmental sustainability in La Mesa and the region.	Prior to FY16	Yes	Yes		No	N/A	Yes
	6. Collaborate with regional education and outreach efforts.	La Mesa collaborates on regional efforts conducted by the Education Workgroup.	Prior to FY16	Yes	Yes	City continuously collaborates with other jurisdictions on regional outreach efforts.	No	N/A	Yes
	7. Develop education and outreach to reduce over-irrigation.	If over irrigation is reported, contact is made via a compliance letter.	FY16	Yes	Yes	Done through Helix Water District	No	N/A	Yes
LM-21	Provide technical education and outreach to the development community on the design and implementation requirements of the Municipal Permit and WQIP requirements.	This will be done regionally and as needed or requested within the City.	FY14	Yes	Yes	Completed.	No	N/A	N/A
Enforcement Response Plan									
LM-22	Implement escalating enforcement responses to compel compliance with statutes, ordinances, permits, contracts, orders, and other requirements for IDDE, development planning, construction management, and existing development in the Enforcement Response Plan.	Enforcement program consists of warning, NOV, and citation.	Prior to FY16	Yes	Yes	Enforcement plan is complete.	No	N/A	Yes

Table 9-1 (continued)
City of La Mesa Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Additional Nonstructural Strategies									
LM-23	Continue participating in source reduction initiatives.	La Mesa will continue to participate in source reduction initiatives.	Prior to FY16	Yes	Yes	City continues to participate in source reduction activities.	No	N/A	Yes
	1. Replace City-owned vehicle brake pads with copper-free brake pads as they become commercially available.	Optional. Upon availability.	Trigger (upon availability of technology)	No	No	City shall replace upon availability.	No	N/A	Yes
	2. Continue implementation of cigarette ban in parks and commercial areas.	La Mesa will continue the cigarette ban and maintain existing cigarette ash cans.	Prior to FY16	Yes	Yes	Implementation continues	No	N/A	Yes
	3. Enhance program to address and capture trash and debris.	The City will install additional capture/trash guards.	FY18	No	No	Future	No	N/A	Unknown
LM-24	Proactively monitor for erosion, and complete minor repair and slope stabilization on municipal property.	Upon report and funding allocation for the project.	FY16	Yes	No	No work in FY 2015-2016 required	No	N/A	Yes
LM-25	Conduct special studies.								
	1. Reference watershed study.	The City will continue to contribute to the study.	Prior to FY16	Yes	Yes	Study completed.	No	N/A	No
LM-26	Proactively repair and replace corrugated metal pipe (CMP) MS4 components to provide source control from MS4 infrastructure.	La Mesa is trying to get rid of CMP as part of the prioritized replacement program.	Prior to FY16	Yes	Yes	The City continuously programs capital projects to address CMP failure.	No	N/A	Yes
LM-27	If a regional social services effort is established, support workgroup to provide sanitation and trash management for person experiencing homelessness and determine if the program is suitable and appropriate for jurisdictional needs to meet goals.	La Mesa does not have a homeless outreach team. Police and property owners enforce cleanups of encampments. If there is a regional effort, La Mesa will participate.	Trigger (upon regional effort)	No	No	Not established	N/A	N/A	N/A

City of La Mesa Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year	Implementation Status			Proposed Modifications		
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Green Infrastructure									
LM-28	Implement stream, channel, and habitat rehabilitation projects as needed.	This strategy may be triggered if 1) Interim goals are not met, 2) Stream or habitat rehabilitation is determined to be a more effective pathway, relative to additional structural or non-structural BMPs to meeting goals, 3) Funding and staffing has been secured, 4) Partners, MOUs, and permits required by regulatory agencies are secured, and 5) Recommendations from the community are identified and consensus and community support has been achieved. Will occur in areas identified during feasibility studies. The following resources, funds, and steps are needed to implement this strategy if the above triggers are met or at the City's discretion: 1) Identify project locations, 2) Secure funds in the form of general funds, bonds, or grants, 3) Obtain City Council approval of Capital Improvement Projects budget, 4) Initiate preliminary engineering to narrow project scope, 5) Hire design consultant to develop detailed construction plans and construction cost estimates, 6) Complete construction contractor bid and award process for construction phase, 7) Construct project, 8) Operation and maintenance into perpetuity.	Various	No	No	Not completed in FY 15-16.	No	N/A	Unknown
LM-29	Identify any planned or potential green infrastructure projects to be constructed.	The City is still considering GI and multi-use project opportunities.	FY25	Yes	Yes	University Ave. Water Quality Medians Project In Construction	No	N/A	Yes

Table 9-1 (continued)
City of La Mesa Jurisdictional Strategies

Water Quality Improvement BMPs									
Proprietary BMPs									
LM-30	Identify any planned or potential proprietary BMP projects to be constructed.		FY18-20	N/A	No	Not completed in FY 15-16.			
	1. Planned- A city park is proposed to be built in a parcel of barren land along Waite Drive. This area can be included for long-term centralized planning.	City Council funding and final design for the project.	FY 18-20	No	No	No progress	No	N/A	Unknown
	2. Planned- A BMP is proposed to be installed in the Future Rehabilitation Project of Vista La Mesa Park.	City Council funding and final design for the project.	FY 18-20	No	No	No progress	No	N/A	Unknown
	3. University Ave. Median Improvement Project.	Water quality median project within existing arterial roadway.	FY 16	Yes	Ongoing	In Construction	Added	N/A	Yes

9.4 MODIFICATIONS TO THE BMP DESIGN MANUAL

La Mesa BMP Design Manual provides guidance for land development and public improvement projects to comply with relevant development planning requirements in the Municipal Permit. La Mesa updated its BMP Design Manual in accordance with Municipal Permit requirements in February 2016; the BMP Design Manual replaced the Standard Urban Storm Water Mitigation Plan (SUSMP). No additional changes to the BMP Design Manual have been made since it went into effect in February 2016. La Mesa BMP Design Manual can be accessed at www.cityoflamesa.com/index.aspx?NID=988.

9.5 MODIFICATIONS TO THE JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM

No changes were made to the City's JRMP during FY 2016.

Intentionally Left Blank

10 CITY OF LEMON GROVE

10.1 ANNUAL REPORT CERTIFICATIONS

The City of Lemon Grove's signed Statement of Certification and Legal Authority Establishment for the San Diego Bay WMA Water Quality Improvement Plan 2015-2016 Annual Report is included on the following page.

SAN DIEGO BAY WATERSHED MANAGEMENT AREA, WATER QUALITY IMPROVEMENT PLAN FISCAL YEAR 2015-2016 ANNUAL REPORT

STATEMENT OF CERTIFICATION AND LEGAL AUTHORITY ESTABLISHMENT

I certify under penalty of law that this document and all attachments, EXCEPT REPORTS FOR STUDIES PREPARED FOR OTHER AGENCIES AND TO WHICH THE CITY WAS NOT A PARTY, were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted.

Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations [40 CFR 122.22(d)].

I also certify that the City of Lemon Grove has taken the necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements within Order No. R9-2013-001 as amended by Orders R9-2015-0001 and R9-2015-0100.

Executed on the 10th day of January, 2017 at the City of Lemon Grove.

Lydia Romero
City Manager

10.2 ANNUAL REPORT FORM

The City of Lemon Grove's completed JRMP Annual Report form and fiscal analysis for FY 2016 are included on the following pages.

Intentionally Left Blank

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM
FY 2015/2016

I. COPERMITTEE INFORMATION			
Copermittee Name: City of Lemon Grove			
Copermittee Primary Contact Name: Malik Tamimi			
Copermittee Primary Contact Information: Address: 3232 Main Street			
City: Lemon Grove	County: San Diego	State: CA	Zip: 91945
Telephone: (619) 825-3827	Fax: (619) 825-3818	Email: mtamimi@lemongrove.ca.gov	

II. LEGAL AUTHORITY		
Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	YES NO	☒ ☐
A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	YES NO	☒ ☐

III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE		
Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	YES NO	☐ ☒
If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	YES NO	☐ ☐

IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM		
Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	YES NO	☒ ☐

Number of non-storm water discharges reported by the public	2
Number of non-storm water discharges detected by Copermittee staff or contractors	7
Number of non-storm water discharges investigated by the Copermittee	9
Number of sources of non-storm water discharges identified	7
Number of non-storm water discharges eliminated	7
Number of sources of illicit discharges or connections identified	8
Number of illicit discharges or connections eliminated	8
Number of enforcement actions issued	7
Number of escalated enforcement actions issued	1

V. DEVELOPMENT PLANNING PROGRAM		
Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	YES NO	☒ ☐
Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	YES NO	☒ ☐
If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	YES NO	☒ ☐

Number of proposed development projects in review	30
Number of Priority Development Projects in review	13
Number of Priority Development Projects approved	7
Number of approved Priority Development Projects exempt from any BMP requirements	0
Number of approved Priority Development Projects allowed alternative compliance	0
Number of Priority Development Projects granted occupancy	2

Number of completed Priority Development Projects in inventory	13
Number of high priority Priority Development Project structural BMP inspections	5
Number of Priority Development Project structural BMP violations	3
Number of enforcement actions issued	3
Number of escalated enforcement actions issued	0

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM
FY 2015/2016

VI. CONSTRUCTION MANAGEMENT PROGRAM

Has the Copermittee implemented a construction management program that complies with Order No. R9-2013-0001? YES ☒ NO ☐

Number of construction sites in inventory	9
Number of active construction sites in inventory	9
Number of inactive construction sites in inventory	0
Number of construction sites closed/completed during reporting period	3
Number of construction site inspections	108
Number of construction site violations	53
Number of enforcement actions issued	64
Number of escalated enforcement actions issued	4

VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM

Has the Copermittee implemented an existing development management program that complies with Order No. R9-2013-0001? YES ☒ NO ☐

	Municipal	Commercial	Industrial	Residential
Number of facilities or areas in inventory	13	309	29	9
Number of existing development inspections	3	110	28	4
Number of follow-up inspections	0	16	2	0
Number of violations	0	38	5	0
Number of enforcement actions issued	0	43	5	0
Number of escalated enforcement actions issued	0	1	0	0

VIII. PUBLIC EDUCATION AND PARTICIPATION

Has the Copermittee implemented a public education program component that complies with Order No. R9-2013-0001? YES ☒ NO ☐

Has the Copermittee implemented a public participation program component that complies with Order No. R9-2013-0001? YES ☒ NO ☐

IX. FISCAL ANALYSIS

Has the Copermittee attached to this form a summary of its fiscal analysis that complies with Order No. R9-2013-0001? YES ☒ NO ☐

X. CERTIFICATION

I [☑ Principal Executive Officer ☐ Ranking Elected Official ☐ Duly Authorized Representative] certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

FISCAL ANALYSIS

Fiscal information for 2015/2016 is reported in the tables on the following page. The tables are based largely on the standard templates used by the Copermittees in previous fiscal years, but with a distinction between routine operations, including operation and maintenance, and capital expenditures.

Municipal Permit (Order No. R9-2013-0001 as amended by Order Nos. R9-2015-0001 and R9-2015-0100) Section E.8.b.(1) discusses capital, operation and maintenance, and other expenditures. Most of the total for the municipal component of the 2015/2016 costs is devoted to operation and maintenance expenses, both done by City staff and through outside contracts. The City's costs for 2015/2016 do not include significant capital expenditures. The remainder of the expenditures listed in Table 1 are comprised of staff and contract staff resources, as discussed in Municipal Permit Section E.8.b.(2).

Regional programs include Copermittee shared costs for education, preparing regional model requirements for development projects, and other regional expenses, as well as City staff time to participate in regional meetings. Watershed costs include meeting participation and the City's portion of the San Diego Bay watershed cost share, including water quality monitoring and reporting.

The City anticipates using the same funding sources as shown in Table 2 for 2015/2016 program funding needs. Permit fees are contingent on the number of development projects in the City, and the fees are used for reviews and similar services provided for those development projects. The City also seeks grant funding where feasible to augment standard funding sources shown in Table 2.

Table 1: Program Implementation Expenditures, 2015/2016

Expenditure Type[1]	Day to Day Operations[2]	CIP[3]	Total
Annual Municipal Permit Fee to RWQCB	$11,448.00	--	$11,448.00
Administration	$103,556.55	--	$103,556.55
Development Planning	$48,928.08	--	$48,928.08
Construction	$40,507.49	--	$40,507.49
Municipal	$131,356.26	--	$131,356.26
Industrial and Commercial	$31,860.40	--	$31,860.40
Residential	$6,776.50	--	$6,776.50
IDDE	$5,806.35	--	$5,806.35
Education	$8,501.46	--	$8,501.46
Public Participation	$1,348.12	--	$1,348.12
Special Investigations	$0.00	--	$0.00
Non-Emergency Firefighting	$0.00	--	$0.00
Activities Implemented through Cost Share Agreements with Other Agencies			
San Diego Bay Watershed WQIP Cost Share & Admin	$14,216.18	--	$14,216.18
Chollas Creek TMDL Cost Share & Admin	$23,644.90	--	$23,644.90
Regional Stormwater Program Cost Share & Admin	$17,450.71	--	$17,450.71
Total Expenditures	**$445,401.00**	--	**$445,401.00**

Notes

CIP - Capital Improvement Project, RWQCB - Regional Water Quality Control Board, IDDE - Illicit Discharge Detection and Elimination, WQIP - Water Quality Improvement Plan, TMDL - Total Maximum Daily Load

1. Expenditures include implementation of WQIP strategies, where applicable.
2. Day to day operations mainly relate to day to day program activities, such as storm drain cleaning, reviewing plan submittals for development projects, and enforcing compliance with the stormwater requirements in the Municipal Code. This category incudes expenditures for staffing, contracts other than CIP contracts, and operation and maintenance.
3. CIP expenditures include construction of stormwater specific projects, such as BMP retrofits or stream rehabilitation. No stormwater CIPs were initiated during the fiscal year, although the City did pursue grant funding for such projects.

Table 2: Program Funding Summary by Source, 2015/2016

Funding Source	Amount
General Fund	$219,701.05
Commercial Fee	$49,713.25
Building Permit Cost Recovery	$20,810.59
Engineering Permits	$77,540.07
Used Oil Payment Program	$7,201.68
AB 939 Fee	$9,230.36
TransNet	$61,204.00
Total Funding	**$445,401.00**

10.3 CITY OF LEMON GROVE STRATEGIES

The strategies that the City of Lemon Grove included in the final San Diego Bay WQIP are included in Table 2-10-1. The implementation status of each strategy during FY 16 and plans for implementation in FY17 are included in the table. Modifications to strategies, where applicable, are also noted and explained in the table.

Intentionally Left Blank

Table 10-1
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
JRMP (Provisions E.2-E.7) Strategies (B.3.b.(1)(a))							
Development Planning (Provision E.3)							
All Development Projects							
LG-1	For all development projects, administer a program to ensure implementation of source control BMPs to minimize pollutant generation at each project and implement LID BMPs to maintain or restore hydrology of the area, where applicable and feasible.	BMPs are required through the permitting process. Examples of BMPs that may be implemented include directing runoff to pervious areas and protecting trash and material storage areas from rain. Additional BMPs are required for Priority Development Projects (PDPs), as described in the PDP strategies below. For more detail on the City's storm water requirements for development projects, see Section 4 of the City's JRMP.	FY16	Yes	None		Yes
LG-2	Update BMP Design Manual and municipal code to require LID site design and source control BMPs.	A new BMP Design Manual is scheduled to go into effect in FY 16. The BMP Design Manual requires development projects to implement LID site design BMPs, which reduce runoff, and source control BMPs, which prevent pollutants from being introduced to runoff.	FY16	Yes	Implemented updated BMP Design Manual		If changes to the regional model BMP Design Manual are made, the City will make those updates in its local manual.
LG-3	Develop and distribute brochure to encourage downspout disconnection in residential areas.	Lemon Grove will develop and distribute informational brochures to project proponents who come to City Hall to apply for permits.	FY16	Yes	None		Yes
LG-4	Require downspout disconnection and/or other runoff reduction measures, where feasible, for non-Priority Projects.	Required through the building permitting process. Downspout disconnection reduces runoff volumes.	FY16	Yes	Incorporated into required plan notes for standard (non-Priority) projects.		Yes
LG-5	Trash area standards for new development and redevelopment projects with trash enclosures: require full four-sided enclosure, siting away from storm drains, and structural overhead cover.	Required through the permitting process for new development and redevelopment.	FY16	Yes	Incorporated into required plan notes for standard projects; also required for Priority Projects.		Yes

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
LG-6	Implement Water Efficient Landscape Ordinance.	Lemon Grove will implement through the permitting process for development projects. These requirements include using efficient irrigation systems and lower water use plants. This strategy helps prevent irrigation runoff.	FY16	Yes	Ordinance also includes language about downspout disconnects.		Yes
LG-7	Train staff on new BMP Design Manual requirements for development projects.	Staff will be trained on new requirements that apply to development projects, including PDPs, as a result of adopting the new BMP Design Manual. The goal of the training is to result in more effective implementation of the new requirements, including LID implementation.	FY16	Yes	Training focused on counter staff and use of intake form to determine requirements. Plan reviews are completed by a consultant.		Yes, as needed
Priority Development Projects (PDPs)							
LG-8	For PDPs, administer a program requiring implementation of structural BMPs to control pollutants and manage hydromodification. Includes confirmation of design, construction, and maintenance of PDP structural BMPs.	Structural BMPs that reduce pollutants and manage hydromodification are required. These BMPs reduce pollutants from sources of bacteria, like trash areas or animal facilities, and metals, like auto repair facilities, industrial businesses, and parking lots. BMPs are required through the permitting process and are required to be shown on the project's plans. Installation is verified in the field prior to project completion. Refer to JRMP Section 4 for additional details.	FY16	Yes	None		Yes
LG-8.1	Administer a program to require structural BMP maintenance.	Parties responsible for maintenance of structural BMPs at completed PDPs are required to complete and sign a form certifying that the structural BMPs are being properly maintained. Direct maintenance inspections will be performed at all high priority projects annually prior to the rainy season. All other projects that do not return a completed annual maintenance verification form will also be inspected.	FY16	Yes	None		Yes
LG-9	As part of the BMP Design Manual update, update procedures to determine nature and extent of storm water requirements applicable to development projects and to identify conditions of concern for selecting, designing, and maintaining appropriate structural BMPs.	As part of the BMP Design Manual update, the City will require source control BMPs, such as overhead coverage, to reduce the potential for pollutant transport from trash enclosures at businesses and residential developments and from material storage and work areas at animal facilities, nurseries and garden centers, industrial businesses, and auto-related facilities. BMPs to prevent dry weather discharges from activities such as car washing and landscape irrigation will also be required. These areas or activities have been identified as sources of bacteria and/or metals.	FY16	Yes	None		No, completed as part of BMP Design Manual update

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Construction (Provision E.4)							
LG-10	Administer a program to oversee implementation of BMPs during the construction phase of land development. Includes inspections at an appropriate frequency and enforcement of requirements.	Prior to beginning work, projects are required to document proposed BMPs through erosion control plans. Grading permits are not issued and work cannot begin until the submitted grading plan, which includes the erosion control plan, is approved. The City inspects projects during construction to verify that each site is in conformance with the required BMPs. Where deficiencies are noted, the City requires corrections in accordance with its Enforcement Response Plan (See Provision E.6 strategies). During the rainy season, high priority sites are inspected twice per month, medium priority sites are inspected monthly, and low priority sites are inspected as needed. During the dry season, all sites are inspected as needed. All construction sites are required to implement erosion control and sediment control BMPs, which reduce discharges of sediment. Construction sites are also required to properly dispose of trash and debris, which reduces discharges of trash and bacteria, and to maintain secondary containment for portable toilets, which reduces discharges of bacteria. Metal materials are required to be covered and protected from run-on. Refer to JRMP Section 5 and the Storm Water BMP Manual for additional information about the City's construction management program.	FY16	Yes	None		Yes
Existing Development (Provision E.5)							
Commercial, Industrial, Municipal, and Residential Facilities and Areas							
LG-11	Administer a program to require implementation of minimum BMPs for existing development (commercial, industrial, municipal, and residential) that are specific to the facility, area types, and PGAs, as appropriate. Includes inspection of existing development.	20 percent of industrial and commercial facilities are inspected each year, and all industrial and commercial facilities are inspected at least once every five years. Municipal facility inspection frequencies are the same as the industrial and commercial frequency. Residential management areas are inspected at least once every five years. BMP deficiencies discovered during any of these inspection programs are required to be corrected, in accordance with the procedures in the City's enforcement response plan. BMPs targeted at HPWQCs include waste management (trash, animal waste, used cooking oil, etc.), preventing irrigation runoff, catch basin cleaning, and proper storage of materials containing metals (e.g., at industrial sites and auto shops).	FY16	Yes	None		Yes

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
LG-12	Update minimum BMPs for existing residential, commercial, and industrial development.	Revised BMP requirements are included in the City's Storm Water BMP Manual (JRMP Appendix B). BMPs targeted at HPWQCs include waste management (trash, animal waste, used cooking oil, etc.), preventing irrigation runoff, and proper storage of materials containing metals (e.g., at industrial sites and auto shops).	FY16	Yes	Completed as part of JRMP update		No, completed
LG-13	Analyze and encourage sweeping of parking lots.	The City will gather more information about existing sweeping frequency for larger commercial parking lots and contact property owners or managers to determine existing sweeping frequencies. If investigation determines that parking lots and private roads are not swept, the City may require sweeping, likely through conditional use permits.	FY16	Yes	Based on the analysis, almost all of the largest parking lots in the City (shopping centers, auto dealers, and EDCO) are swept daily. Of the two that are not swept daily, one is swept four times a week and the other is swept three times a week.		No, completed; sweeping frequencies are high enough that the City will not need to require additional sweeping.
LG-14	Require cooking oil storage BMPs for food service establishments.	Lemon Grove will work with grease rendering services to educate businesses on availability and benefits of indoor grease storage containers. Used cooking oil will be required to be stored indoors or in covered, contained areas for businesses for which outreach efforts were not successful in achieving outcome of having used cooking oil stored in a covered, contained area and at which poor used cooking oil storage BMPs have been observed.	FY16	Yes	None		Yes
LG-15	Residential shared outdoor trash storage areas: require full four-sided enclosure, siting away from storm drains, and structural overhead cover when triggered by a building permit application.	Lemon Grove will require retrofit of trash areas at existing multi-family facilities when a building permit is applied for at the same property.	FY16	Yes	None		Yes
LG-16	Industrial and commercial outdoor trash storage areas: require full four-sided enclosure, siting away from storm drains, and structural overhead cover when triggered by a building permit application.	Lemon Grove will require retrofit of trash areas at existing facilities when a building permit is applied for at the same property.	FY16	Yes	None		Yes

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
LG-17	Work with Regional Board to ensure industrial businesses subject to the Industrial General Permit obtain coverage and implement BMPs to address discharges of pollutants associated with TMDLs.	The City will share inspection results with Regional Board staff and notify of non-filers or potential non-compliance with other IGP requirements, especially requirements specifically related to discharges of HPWQCs.	FY16	Yes	Non-filers reported to Regional Board		Yes
LG-18	Pet waste control program.	Lemon Grove will provide pet waste bags via dispensers in City parks.	FY16	Yes	None		Yes
LG-19	Work with water utility (Helix) to publicize incentives for rain barrel installation and turf conversion and/or sprinkler system upgrades (e.g., rain shutoff systems) in residential areas.	The City will collaborate with Helix Water District to educate the public about the requirement to eliminate irrigation runoff and to promote incentives and rebates for landscape or irrigation system retrofits. Preventing irrigation runoff also can prevent the transport of metals and trash deposited along curb gutters and in storm drains, allowing those pollutants to be removed by routine sweeping and catch basin cleaning.	FY16	Yes	None		Yes
LG-20	Publicize and market any existing outreach and training programs that the water utility (Helix) provides for property managers responsible for homeowner associations (HOAs), multi-family housing developments, and commercial properties. Main focus would be on irrigation runoff reduction.	The City will collaborate with Helix Water District to educate property managers about the requirement to eliminate irrigation runoff and to promote incentives and rebates for landscape or irrigation system retrofits. Preventing irrigation runoff also can prevent the transport of metals and trash deposited along curb gutters and in storm drains, allowing those pollutants to be removed by routine sweeping and catch basin cleaning.	FY16	Yes	None		Yes
LG-21	Install smart irrigation controllers at City facilities and convert median landscaping to drip irrigation.	The City has installed 7 Cal-Sense irrigation control systems Citywide and continues to make the transition from area sprinklers to drip irrigation along its medians. The City anticipates installing at least one Cal-Sense system more by 2018. The current locations of the systems are Berry Street Park, Lemon Grove Park, Civic Center Park, City Hall, Kunkel Park, Lemon Grove Avenue median (near Mt. Vernon), and Lemon Grove Avenue median (near Broadway). Preventing irrigation runoff also can prevent the transport of metals and trash deposited along curb gutters and in storm drains, allowing those pollutants to be removed by routine sweeping and catch basin cleaning.	FY18	Yes	Current systems maintained		Yes

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
MS4 Infrastructure							
LG-22	Implement operation and maintenance activities for MS4 and related structures for water quality improvement: perform catch basin cleaning.	Catch basins and inlets are inspected at least annually and cleaned if accumulated debris is found. Open channels are also inspected, and trash is removed from open channels where necessary. The City also responds to reports by citizens or municipal staff regarding MS4 facilities that require inspection/cleaning that is beyond regular maintenance activities.	FY16	Yes	None		Yes
LG-23	Implement controls to prevent infiltration of sewage into the MS4 from leaking sanitary sewers: identify sewer leaks and areas for sewer pipe replacement prioritization.	The City will repair and replace per standard maintenance schedule and where leaks are identified. In addition to routine maintenance, capital projects to replace or upgrade infrastructure are undertaken. The City's Sewer System Management Plan contains more details on these programs and procedures.	FY16	Yes	None		Yes
Roads, Street, and Parking Lots							
LG-24	Enhance street sweeping through alternating mechanical and vacuum sweepers and route optimization	The City sweeps downtown commercial areas once a week, main arterials and business areas once every two weeks, and residential areas once every four weeks. Sweeping is completed by City contractor (note that only streets with curb and gutter can be swept in the City).	FY16	Yes	None		Yes
LG-25	Sweep medians in downtown commercial areas, main arterials, and business areas.	Downtown commercial medians ~~are swept once a week,~~ and medians along main arterials and in business areas are swept once every two weeks. Sweeping is completed by City contractor.	FY16	Yes, with modification (see modification note)	None	Strategy description was not completely accurate due to internal miscommunication. While downtown commercial streets are swept every week, the medians are swept once every two weeks. This is due to slower accumulation of material on medians than on the streets themselves.	Yes

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Pesticide, Herbicides, and Fertilizer BMP Program							
LG-26	Require implementation of BMPs to address application, storage, and disposal of pesticides, herbicides, and fertilizers on commercial, industrial, and municipal properties. Includes education, permits, and certifications.	Pesticide application and storage requirements are described in the Storm Water BMP Manual. Pesticide applicators are also subject to a State certification process, and all municipal pesticide application is done by certified individuals.	FY16	Yes	None		Yes
Retrofit and Rehabilitation in Areas of Existing Development							
LG-27	Develop and implement a strategy to identify candidate areas of existing development appropriate for retrofitting projects and facilitate the implementation of such projects.	The retrofit and rehabilitation appendix to the City's JRMP (Appendix E) describes methods for identifying and assessing potential retrofit projects in existing development areas. Retrofit project selection will be based upon a variety of factors including proximity to high priority water quality conditions, potential pollutant load removal effectiveness, and feasibility of implementation. Grants are the most likely funding mechanism. It is also possible that projects could be built as part of an alternative compliance program.	FY16	Yes	Retrofit and channel rehabilitation projects along Main Street have been identified. Also see project list added for strategy LG-47.		Yes
LG-28	Develop and implement a strategy to identify candidate areas of existing development for stream, channel, or habitat rehabilitation projects and facilitate implementation of such projects.	The retrofit and rehabilitation appendix to the City's JRMP (Appendix E) describes methods for identifying and assessing potential stream, channel, or habitat rehabilitation projects in existing development areas. Rehabilitation project selection will be based upon a variety of factors including existing stream or habitat degradation, potential future cumulative stream or habitat impacts, and feasibility of implementation. Grants are the most likely funding mechanism. It is also possible that projects could be built as part of an alternative compliance program.	FY16	Yes	See note for strategy LG-27 and project list added for strategy LG-46.		Yes

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Illicit Discharge, Detection, and Elimination (IDDE) Program (Provision E.2)							
LG-29	Implement Illicit Discharge, Detection, and Elimination (IDDE) Program per the JRMP. Requirements include: maintaining an MS4 map, using municipal personnel and contractors to identify and report illicit discharges, maintaining a hotline for public reporting of illicit discharges, monitoring MS4 outfalls, and investigating and addressing any illicit discharges.	The City's Municipal Code prohibits illicit discharges and illicit connections (IC/ID). All IC/IDs are sources of non-storm water flow and can serve as transport mechanisms for pollutants, including bacteria. IC/IDs can also be direct sources of pollutants. Examples of IC/IDs include the following types of discharges to the MS4: irrigation runoff, power washing, commercial vehicle washing, mop water, wet cleaning of trash enclosures or dumpsters, washing activities as animal facilities, washing off construction equipment, and indoor drains connected to the storm drain system. To identify IC/IDs, the City inspects all its major MS4 outfalls twice per year and operates a public hotline to receive reports from the public and City staff and contractors. The City also identifies IC/IDs during its inspections of existing development (see Provision E.5 strategies) and construction sites (see Provision E.4 strategies). IC/IDs identified through any of these pathways are required to be eliminated per the City's Enforcement Response Plan (see Provision E.6 strategies). Trash accumulation in the MS4 discovered through these programs is removed through infrastructure cleaning (see Provision E.4 strategies). Refer to JRMP Section 3 for additional information about the City's IDDE program.	FY16	Yes	None		Yes

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Public Education and Participation (Provisions E.7, B.3.b(1)(a)(iii))							
LG-30	Implement a public education and participation program to promote and encourage development of programs, management practices, and behaviors that reduce the discharge of pollutants in storm water prioritized by high-risk behaviors, pollutants of concern, and target audiences.	Direct education is provided through interaction with the public through inspections, hotline call response investigations, and plan review comments. Educational materials on a variety of storm water topics are also made available on the City's website. Targeted educational content on HPWQCs, such as messages about used cooking oil storage for eating and drinking establishments (bacteria), is provided. The City also educates residents and businesses about sources of HPWQCs, including waste management, metals storage, and discharge prevention, during inspections (see Provision E.5 strategies) and hotline call response investigations (see Provision E.2 strategy).	FY16	Yes	None		Yes
LG-31	Conduct trash cleanups through community-based organizations involving target audiences.	Lemon Grove collaborates with I Love a Clean San Diego (ILACSD) on trash cleanups.	FY16	Yes	Creek to Bay Cleanup		Yes
LG-32	Collaborate with regional education and outreach efforts.	The City contributes to regional education programs run collectively by the Copermittees through a cost-share agreement.	FY16	Yes	None		Yes
LG-33	Municipal staff training.	Staff are trained on BMP requirements and implementation. Key internal target audiences include Public Works field staff, construction inspectors, and plan reviewers. Training covers BMPs to reduce discharges of HPWQCs, such as proper material storage for metals, waste management BMPs for trash, pet waste management, and catch basin cleaning. Plan review training emphasizes the importance of LID, which is effective for all pollutants.	FY16	Yes	Public Works staff trained on BMP implementation and discharge elimination. The City has transitioned to using a consultant for construction inspections and storm water (construction and post-construction BMPs) plan review.		Yes

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status: Implemented as planned in current FY (FY16)?	Implementation Status: Notes	Proposed Modifications: Modification (If modified or canceled, provide rationale)	Proposed Modifications: Planned Implementation into the next FY? (Y/N)
Enforcement Response Plan (Provision E.6)							
LG-34	Implement escalating enforcement responses to compel compliance with statutes, ordinances, permits, contracts, orders, and other requirements for IDDE, development planning, construction management, and existing development in the Enforcement Response Plan.	The City has established the legal authority to require BMP implementation, including preventing illicit discharges, through the Municipal Code. Examples of how enforcement is used to bring about compliance with BMPs that reduce discharges of HPWQCs include preventing illicit discharges (metals, bacteria), requiring proper management of trash areas (bacteria), requiring proper management of metals stored in areas potential exposed to runoff (metals), and requiring maintenance to ensure proper functioning of structural BMPs (bacteria, metals). When noncompliance is noted, the City follows an escalated enforcement process to bring about correction. For example, the City has the authority to issue fines and stop work orders. More details about the City's enforcement process are provided in the enforcement response plan section of the City's Storm Water BMP Manual (JRMP Appendix B).	FY16	Yes	None		Yes
Non-JRMP Strategies (Optional Strategies, B.3.b(1)(b))							
Nonstructural							
LG-35	Increase inspection frequency for highest pollutant potential businesses.	High priority facilities are inspected more than once every five years. The typical inspection frequency is annual. High priority facilities are sites that have been identified as having the potential to be significant sources of HPWQCs (bacteria and/or metals) based on past inspections. Prioritization is based on site-specific evaluation of pollutant discharge potential. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Yes	High priority businesses were all inspected in FY16.		Yes
LG-36	Enhance street sweeping through use of vacuum street sweeping equipment.	Vacuum street sweepers are used every other sweeping to enhance removal of fine particulates and associated metals and bacteria. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Yes	None		Yes
LG-37	Participate in regional bacteria reference study.	The San Diego Regional Reference Stream Study is currently being conducted by the Southern California Coastal Water Research Project and is funded by all Copermittees, including the City of Lemon Grove. The study is designed to develop numeric targets that account for natural sources to establish the concentrations or loads from streams in a minimally disturbed or “reference” condition. This special study is	FY16	Yes	None		Yes, until study completion

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
		discussed in more detail in the Monitoring and Assessment Plan. Funding and resources have been secured.					
LG-38	Support partnership effort by social service providers to provide sanitation and trash management for homeless persons.	Support a non-profit or consortium to provide sanitation services associated with hygiene as well as trash management for persons experiencing homelessness. Rented or purchased shower/sanitary trailers providing mobile showers may be organized at specifically scheduled locations and times. This provision has been proposed as a method for preventing surface water usage for sanitation and bathing, as well as opportunity for outreach and referral by social service agencies. The trash management services will include providing trash bags, trash collection areas, and shower/sanitary facilities at centers which provide daytime shelter to their clients, or on a mobile-basis for known transit camps. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) homeless communities are identified as sources of bacteria to the City's MS4 2) funding to address MS4 discharges is identified and secured through a public process, 3) staff resources necessary to coordinate with a regional group are identified and secured, and 4) partners have been identified and formal MOUs have been developed. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. The anticipated cost to implement the strategy is approximately $10,000 to $50,000 per year. Once initiated, program development is expected to take at least one year, with implementation following development on a continuous basis as long as funding is available.	If Triggered	Not triggered during current FY	None		If triggered

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Structural							
LG-39	Develop and administer an alternative compliance program to onsite structural BMP implementation.	An alternative compliance program allows development projects to use offsite BMPs or rehabilitation projects to comply with storm water requirements. The City, along with other Copermittees, has funded a Watershed Management Area Analysis and a water quality equivalency standards development process, which are necessary initial steps if an alternative compliance program is to be developed. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) The Copermittees finalize water quality equivalency standards and submit it to the Regional Board for approval, 2) the Regional Board approves the water quality equivalency standards, 3) an acceptable framework for allocating credits for offsite BMPs is developed by the Copermittees and approved by the City, 4) the program does not require the City to take on unfunded long-term maintenance responsibility for BMPs used as a means of compliance by private projects, and 5) adequate staffing resources have been obtained. Staffing resources are needed to develop and administer the program. The level of staff administration needed will depend on the number of projects that propose to comply via offsite alternative compliance and the complexity of tracking offsite BMP maintenance. Staffing resources to develop the program are estimated at 0.5 to 1.0 FTE to develop the program initially and 0.25 FTE to administer the program on an ongoing basis. Following the finalization of water quality equivalency and crediting systems on a regional basis, it is anticipated that another one to two years would be needed to develop and implement the program within the City of Lemon Grove.	If Triggered	Not triggered during current FY	None		If triggered

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
LG-40	Industrial and commercial outdoor trash storage areas retrofits within the Chollas Creek hydrologic area	Trash area retrofits, which typically include installing overhead coverage and a four-sided enclosure or other mechanism to prevent run-on, are intended to prevent trash, bacteria, and other pollutants from being transported by runoff. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) the facility has shown a history of consistent non-compliance for trash area management BMPs and has failed to take appropriate corrective actions, 2) the trash area can be retrofitted in a manner that complies with other requirements (building, planning, fire, etc.), and 3) jurisdictional boundary monitoring shows bacteria exceedances. Resources to complete this strategy include staff time to work with the responsible property owner or manager to see that the additional BMPs are implemented. Once triggered, this strategy could be implemented within approximately one year.	If Triggered	Not triggered during current FY	None		If triggered
LG-41	Develop pilot project to identify and carry out directing runoff from existing parking lots or other hardscape to landscaping.	Lemon Grove will complete field work to identify where existing grades would allow parking lots to be directed to landscaping, and the most suitable site(s) will be selected for retrofit. This program focuses on sites in the Chollas Creek hydrologic area. Resources to evaluate sites have been secured based on a preliminary assessment of level of effort needed. It is expected Public Works staff will be able to complete retrofit of suitable site(s) no later than FY17.	FY16	Yes	Identified a suitable location in part of City Hall parking lot. Will complete retrofit in FY17.		Yes
LG-42	Develop pilot project to identify and carry out site downspout disconnections for targeted City facilities.	Lemon Grove will complete field work to identify where downspouts exist and could be directed to landscaping. The most suitable site(s) will be selected for retrofit. This program focuses on sites in the Chollas Creek hydrologic area. Resources to evaluate sites have been secured based on a preliminary assessment of level of effort needed. It is expected Public Works staff will be able to complete retrofit of suitable site(s) no later than FY17.	FY16	Yes	Initial analysis completed as part of municipal inspections, which include a component to evaluate potential for downspout disconnects.		Yes

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
LG-43	Retrofit curb and gutter in selected portions of City to capture and infiltrate or evapotranspire small dry weather flows within the Chollas Creek hydrologic area.	Curb and gutter retrofits, such as curb cuts that allow flows to be directed to landscaping, can help reduce dry weather flows. Preventing irrigation runoff also can prevent the transport of metals and trash deposited along curb gutters and in storm drains, allowing those pollutants to be removed by routine sweeping and catch basin cleaning. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) persistent flows are observed at outfalls downstream of the potential retrofit location(s), 2) regular dry weather flow has also been observed at the potential retrofit location(s) and is believed to contribute to the persistent flow at the downstream outfall, 3) enforcement has not been successful at eliminating the source(s) of flow, 4) retrofit is technically feasible at the potential location(s), and 5) funding has been identified to complete the retrofit(s). Each retrofit is expected to cost $15,000 to $100,000, depending on the size and technical specifications. Potential funding sources include grants and the City's General Fund. Once triggered, this strategy could be implemented within approximately one year.	If Triggered	Not triggered during current FY	None		If triggered
LG-44	Require material storage retrofits/stricter operational controls for sources of metals (copper or zinc) within the Chollas Creek hydrologic area.	Additional BMPs, such as building berms around storage areas and implementing overhead coverage, will be required. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) the facility has shown a history of consistent non-compliance with metal storage BMPs and has failed to take appropriate corrective actions, 2) metals stored are likely to be sources of copper or zinc (e.g., galvanized metal), 3) the metals storage area can be retrofitted in a manner that complies with other requirements (building, planning, fire, etc.), and 4) jurisdictional boundary monitoring shows repeated copper or zinc exceedances. City resources to complete this strategy include staff time to work with the responsible property owner or manager to see that the additional BMPs are implemented. Once triggered, this strategy could be implemented within approximately one year.	If Triggered	Not triggered during current FY	None		If triggered

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
LG-45	Require parking lot retrofits/stricter operational controls at industrial, commercial, or multi-family residential properties within the Chollas Creek hydrologic area.	Additional BMPs, such as directing runoff to landscaping or filtration systems or using higher efficiency sweeping equipment, will be required for large parking lots. The City has identified the largest parking lots in the City, which are believed to have the highest potential to be sources of metals if BMPs are not implemented. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) the facility's parking lot has been identified as a significant source of copper or zinc, despite implementing frequent sweeping (at least twice per month during the wet season) with standard (not vacuum) sweeping equipment, and 2) jurisdictional boundary monitoring shows repeated copper or zinc exceedances. City resources to complete this strategy include staff time to work with the responsible property owner or manager to see that the additional BMPs are implemented. Sampling to assess whether the site is a significant source of copper or zinc may also be necessary. This would require staff time to collect samples and approximately $50-$100 per sample for laboratory analyses. Once triggered, this strategy could be implemented within approximately one year.	If Triggered	Not triggered during current FY	None		If triggered

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
LG-46	Implement stream, channel, or habitat rehabilitation projects	This strategy may be triggered if 1) interim goals are not met, 2) stream or habitat rehabilitation is determined to be a more effective pathway, relative to additional structural or non-structural BMPs, to meeting the applicable numeric goals, 3) funding and staff resources for the rehabilitation project has been identified and secured, 4) partners have been identified and formal MOUs have been executed, if necessary, 5) permits required by regulatory agencies have been secured, and 6) recommendations from the community have been identified and consensus and community support has been achieved. Will occur in areas identified by local stakeholders or City staff and found to be feasible rehabilitation locations. This could include multi-jurisdictional efforts, such as Chollas Creek Regional Park. Potential projects identified to date include the following: Bakersfield Street and San Altos Channel Restoration, Federal Boulevard Channel Restoration, Main Street Promenade Extension. The following resources, funds, and steps are needed to implement this strategy if the above triggers are met or at the City's discretion: 1) identify project locations (3-6 months), 2) secure funds in the form of general funds, bonds, and/or grants (6 months-2 years), 3) obtain City Council approval of project budget (occurs annually), 4) initiate preliminary engineering to narrow project scope (6 months; approximately $30,000 per CIP project), 5) hire design consultant to develop detailed construction plans and construction cost estimates (2 years; approximately $500,000 per CIP project), 6) complete construction contractor bid and award process for construction phase (6 months), 7) Construct project (4 months-1 year; project construction costs are TBD and are based on size of the project), 8) secure resources and funding for long-term operation and maintenance costs (ongoing, continuous; cost TBD based on size and nature of the project). Funds and staff resources for this strategy require approval by City Council as part of the City's annual budget.	If Triggered	Not triggered during current FY	Identified a list of potential projects and entered the projects into the San Diego Region IRWM online database.	Added a list of potential projects that have been identified to date.	If triggered

Table 10-1 (continued)
City of Lemon Grove Jurisdictional Strategies

ID	Strategy	Implementation Approach *Frequency of Inspections*, B.3.b.(1)(a)(iv) *Funds/Resources*, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii) *Triggers*, B.3.b.(1)(b)(v) *Inventory BMPs*, B.3.b.(1)(a)(ii)	Implementation or Construction Year B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii	Implementation Status		Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
LG-47	Implement green streets projects	This strategy may be triggered if 1) interim goals are not met, 2) green streets are determined to be a more effective pathway, relative to additional structural or non-structural BMPs, to meeting the applicable numeric goals, 3) funding and staff resources for the rehabilitation project has been identified and secured, 4) partners have been identified and formal MOUs have been executed, if necessary, 5) permits required by regulatory agencies have been secured, and 6) recommendations from the community have been identified and consensus and community support has been achieved. Will occur in areas identified by local stakeholders or City staff and found to be feasible green street locations. Potential projects identified to date include the following: Main Street Promenade Extension, 69th Street Green Street, Broadway/Federal Boulevard Green Street, Canton Drive Green Street, Central Avenue Green Street, Golden Avenue Green Street, Lemon Grove Avenue Green Street, Lincoln Street Green Street, Madera Street Green Street, Massachusetts Boulevard Green Street, Mt. Vernon Street Green Street, North Avenue and Grove Street Green Street, Palm Street Green Street, San Miguel Green Street, Skyline Drive/Kempf Street Green Street, Sweetwater Road Green Street The following resources, funds, and steps are needed to implement this strategy: 1) Secure funds for the project; grants are the most likely funding source. 2) Obtain City Council approval of project budgets 3) Initiate preliminary engineering to narrow project scope (6 months; approximately $30K per CIP project) 4) Hire design consultant to develop detailed construction plans and construction cost estimates (2 years; approximately $500K per CIP project) 5) Complete construction contractor bid and award process for construction phase (6 months) 6) Construct project (4 months- 1 year; project construction costs are TBD and are based on size of the project). 7) Operation and maintenance will be in perpetuity. Funds and staff resources for this function must be approved by City Council as part of the City's annual budget.	If Triggered	Not triggered during current FY	Identified a list of potential projects and entered the projects into the San Diego Region IRWM online database.	New strategy added; green streets have been identified as a potential strategy to meet TMDL requirements for Chollas Creek.	If triggered

10.4 MODIFICATIONS TO THE BMP DESIGN MANUAL

The Lemon Grove BMP Design Manual provides guidance for land development and public improvement projects to comply with relevant development planning requirements in the Municipal Permit. The BMP Design Manual became effective in January 2016 and replaced the City's Standard Urban Storm Water Mitigation Plan (SUSMP). No modifications to the City's BMP Design Manual have been made since February 2016. The BMP Design Manual, applicability checklists for project applicants, and a City-specific Storm Water Quality Management Plan template are available on the City's website: http://www.lemongrove.ca.gov/departments/development-services/storm water/2015-model-bmp-design-manual

10.5 MODIFICATIONS TO THE JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM

No modifications to the Lemon Grove JRMP have been made since the WQIP was approved in spring 2016. The current Lemon Grove JRMP is posted on the City's website, and the link to this page is listed on Project Clean Water.

11 CITY OF NATIONAL CITY

11.1 ANNUAL REPORT CERTIFICATIONS

The City of National City's signed Statement of Certification and Legal Authority Establishment for the San Diego Bay WMA Water Quality Improvement Plan 2015-2016 Annual Report is included on the following page.

SAN DIEGO BAY WATERSHED MANAGEMENT AREA, WATER QUALITY IMPROVEMENT PLAN FISCAL YEAR 2015-2016 ANNUAL REPORT

STATEMENT OF CERTIFICATION AND LEGAL AUTHORITY ESTABLISHMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted.

Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations [40 CFR 122.22(d)].

I also certify that the City of National City has taken the necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements within Order No. R9-2013-001 as amended by Orders R9-2015-0001 and R9-2015-0100.

Executed on the 9th day of January, 2017, at the City of National City.

Kuna Muthusamy, P.E.
Asst. Director of Engineering & Public Works
City of National City

11.2 ANNUAL REPORT FORM

The City of National City's completed JRMP Annual Report form and fiscal analysis for FY16 are included on the following pages.

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM ANNUAL REPORT FORM

FY 2015-2016

I. COPERMITTEE INFORMATION			
Copermittee Name: **City of National City**			
Copermittee Primary Contact Name: **Kuna Muthusamy**			
Copermittee Primary Contact Information: Address: **1243 National City Boulevard**			
City: **National City**	County: **San Diego**	State: **CA**	Zip: **91950**
Telephone: **(619) 336-4383**	Fax: **(619) 336-4397**	Email:**kmuthusamy@nationalcityca.gov**	

II. LEGAL AUTHORITY		
Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	**YES** **NO**	☒ ☐
A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	**YES** **NO**	☒ ☐

III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE		
Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	**YES** **NO**	☐ ☒
If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	**YES** **NO**	☐ ☐

IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM		
Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	**YES** **NO**	☒ ☐

Number of non-storm water discharges reported by the public	**3**
Number of non-storm water discharges detected by Copermittee staff or contractors	**38**
Number of non-storm water discharges investigated by the Copermittee	**41**
Number of sources of non-storm water discharges identified	**39**
Number of non-storm water discharges eliminated	**39**
Number of sources of illicit discharges or connections identified	**33**
Number of illicit discharges or connections eliminated	**31**
Number of enforcement actions issued	**37**
Number of escalated enforcement actions issued	**5**

V. DEVELOPMENT PLANNING PROGRAM		
Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	**YES** **NO**	☒ ☐
Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	**YES** **NO**	☐ ☒
If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	**YES** **NO**	☐ ☐

Number of proposed development projects in review	**51**
Number of Priority Development Projects in review	**12**
Number of Priority Development Projects approved	**8**
Number of approved Priority Development Projects exempt from any BMP requirements	**0**
Number of approved Priority Development Projects allowed alternative compliance	**0**
Number of Priority Development Projects granted occupancy	**3**

Number of completed Priority Development Projects in inventory	**48**
Number of high priority Priority Development Project structural BMP inspections	**12**
Number of Priority Development Project structural BMP violations	**9**
Number of enforcement actions issued	**7**
Number of escalated enforcement actions issued	**0**

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM
FY 2015-2016

VI. CONSTRUCTION MANAGEMENT PROGRAM

Has the Copermittee implemented a construction management program that complies with Order No. R9-2013-0001?	YES	☒
	NO	☐

Number of construction sites in inventory	30
Number of active construction sites in inventory	30
Number of inactive construction sites in inventory	0
Number of construction sites closed/completed during reporting period	19
Number of construction site inspections	63
Number of construction site violations	54
Number of enforcement actions issued	54
Number of escalated enforcement actions issued	0

VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM

Has the Copermittee implemented an existing development management program that complies with Order No. R9-2013-0001?	YES	☒
	NO	☐

	Municipal	Commercial	Industrial	Residential
Number of facilities or areas in inventory	29	714	141	34
Number of existing development inspections	11	192	13	17
Number of follow-up inspections	0	1	0	0
Number of violations	1	100	3	3
Number of enforcement actions issued	1	109	3	3
Number of escalated enforcement actions issued	0	3	0	0

VIII. PUBLIC EDUCATION AND PARTICIPATION

Has the Copermittee implemented a public education program component that complies with Order No. R9-2013-0001?	YES	☒
	NO	☐
Has the Copermittee implemented a public participation program component that complies with Order No. R9-2013-0001?	YES	☒
	NO	☐

IX. FISCAL ANALYSIS

Has the Copermittee attached to this form a summary of its fiscal analysis that complies with Order No. R9-2013-0001?	YES	☒
	NO	☐

JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
ANNUAL REPORT FORM
FY 2015-2016

X. CERTIFICATION

I [☐ Principal Executive Officer ☐ Ranking Elected Official ☒ Duly Authorized Representative] certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

FISCAL ANALYSIS

Fiscal information for 2015/2016 is reported in the tables below. The tables are based largely on the standard templates used by the Copermittees in previous fiscal years, but with a distinction between labor costs and other expenses (materials, contracts, etc.) as requested in the current Municipal Permit (Order No. R9-2013-0001 as amended by R9-2015-0001).

With respect to costs discussed in Municipal Permit Section E.8.b.(1), less than half of the total for the municipal component of the 2015/2016 costs is devoted to labor costs for City staff. The City's costs for 2015/2016 included significant capital expenditures for equipment. The remainder of the expenditures listed in Table 1 are comprised of staff and contract staff resources, as discussed in Municipal Permit Section E.8.b.(2).

Watershed costs include San Diego Bay Water Quality Improvement Plan development and implementation costs, additional park cleaning, and additional street sweeping. Approximately ninety percent of the operation and maintenance costs for street sweeping activities have been included as expenses in the watershed programs total.

In 2015/2016, the City continued construction of the A Avenue Green Street project which is funded by Proposition 84, as well as the Proposition 84 Kimball Park LID/Paradise Creek Restoration project. The development expenses for these two projects are also included in the Watershed costs.

Regional program costs include Copermittee shared costs for monitoring, education, and other regional expenses, as well as the SWRCB annual permit fee.

All program costs are funded by the City's General Fund.

Table 1: 2015/2016 Expenditure Summary

Jurisdictional Components	Labor	Expenses	Total
Administration and Permit Fee	$4,102	$12,095	$16,197
Development Planning	$16,881	$36,615	$53,496
Construction	$10,451	$52,441	$62,892
Municipal	$347,187	$584,818	$932,005
Industrial and Commercial	$2,492	$43,249	$45,741
Residential	$1,912	$7,460	$9,371
IDDE	$2,202	$24,864	$27,066
Education	$1,785	$11,946	$13,731
Public Participation	$1,494	$11,946	$13,441
Special Investigations	$417	$4,100	$4,517
Jurisdictional Total	**$388,925**	**$789,534**	**$1,178,458**
Watershed Programs	**$34,051**	**$1,646,423**	**$1,680,474**
Regional Programs	**$1,658**	**$119,966**	**$121,624**
Total Costs	**$424,634**	**$2,555,923**	**$2,980,557**

Table 2: 2014/2015 Funding Source Summary

Funding by Source	Amount
General Fund	$1,598,597
Proposition 84 Grant	$1,381,960
Total Funding	**$2,980,557**

11.3 CITY OF NATIONAL CITY STRATEGIES

The City of National City (National City) is the second oldest city within San Diego County. National City includes diverse land uses from the San Diego Bay inland. Core jurisdictional programs target the entire National City jurisdiction. National City continues to focus on restoration activities within the small Paradise Creek drainage area to improve water quality. A section of the concrete lined channel in Paradise Creek is to be removed and a buffer area around the channel restored to improve riparian habitat. Additionally, upstream of the targeted area, storm water treatment BMPs are intended to improve and sustain improvement of water and riparian habitat quality. Strategies and implementation schedules, presented in Table 11-1, were identified using best information available on efficiency, effectiveness, and level of effort estimated to achieve compliance with numeric goals. The adaptive management process provides the framework to evaluate progress toward meeting the goals and allows for modification of strategies. As strategies are modified, the WQIP is updated. The implementation of each strategy is contingent upon annual budget approvals and funding availability.

Table 11-1
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
JRMP (Provisions E.2-E.7) Strategies (B.3.b.(1)(a))								
Development Planning (Provision E.3)								
All Development Projects								
NC-1	For all development projects, administer a program to ensure implementation of source control BMPs to minimize pollutant generation at each project and implement LID BMPs to maintain or restore hydrology of the area, where applicable and feasible.	BMPs are required through the permitting process. Examples of BMPs that may be implemented include directing runoff to pervious areas and protecting trash areas from rain. Additional BMPs are required for Priority Development Projects (PDPs), as described in the PDP strategies below. For more detail on the City's storm water requirements for development projects, see Section 4 of the City's JRMP.	FY16	Yes	Yes	Implemented updated BMP Design Manual		Yes
NC-2	Implement Water Efficient Landscape Ordinance.	The City will implement through permitting process for development projects.	FY15	Yes	Yes	None		Yes
NC-3	Trash area standards for new development and redevelopment: require full four-sided enclosure, siting away from storm drains, and structural overhead cover.	New development and redevelopment projects will be required to provide protection for trash areas through the permitting process. Protection of trash areas will minimize the exposure of trash, debris, and leaks (trash, bacteria). Trash enclosures will be inspected upon project development completion and during routine compliance inspections.	FY16	Yes	Yes	None		Yes
NC-4	Train staff on LID regulatory changes and LID Design Manual.	Staff are trained on BMP requirements and implementation. Key internal target audiences include Public Works field staff, construction inspectors, and plan reviewers. Training covers BMPs to reduce pollutants, such as proper material storage, waste management BMPs for trash, pet waste management, and catch basin cleaning. Plan review training emphasizes the importance of LID, which is effective for all pollutants. An initial staff training will take place in FY16. Additional refresher trainings will be provided as needed.	FY16	Yes	Yes	None		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Priority Development Projects (PDPs)								
NC-5	For PDPs, administer a program requiring implementation of structural BMPs to control pollutants and manage hydromodification. Includes confirmation of design, construction, and maintenance of PDP structural BMPs.	Structural BMPs that reduce pollutants and manage hydromodification are required. These BMPs reduce pollutants from sources of bacteria, like trash areas or animal facilities, and trash, like commercial businesses or parking lots. BMPs are required through the permitting process and are required to be shown on the project's plans. Structural BMPs using LID techniques like bioretention, infiltration, and rainwater harvesting will be required of PDPs. Installation is verified in the field prior to project completion. Refer to JRMP Section 4 for additional details.	FY16	Yes	Yes	None		Yes
NC-6	Administer self-certification program for treatment control BMP compliance.	Responsible parties are annually required to submit verification that BMPs have been maintained. Inspections are completed at high priority projects and projects that do not return proof of maintenance. When deficiencies are noted, corrective maintenance is required. See JRMP Section 4 for more details.	FY16	Yes	Yes	None		Yes
NC-7	Update BMP Design Manual procedures to determine nature and extent of storm water requirements applicable to development projects and to identify conditions of concern for selecting, designing, and maintaining appropriate structural BMPs.	As part of the BMP Design Manual update, the City will require source control BMPs, such as overhead coverage, to reduce the potential for pollutant transport from trash enclosures at businesses and residential developments. BMPs to prevent dry weather discharges from activities such as landscape irrigation will also be required. These areas or activities have been identified as pollutant sources of bacteria, trash, and sediment.	FY16	Yes	Yes	None		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Construction Management (Provision E.4)								
NC-8	Administer a program to require implementation of BMPs during the construction phase of land development. Includes inspections at an appropriate frequency and enforcement of requirements.	Prior to beginning work, projects are required to document proposed BMPs through erosion control plans. Grading permits are not issued and work cannot begin until the submitted grading plan, which includes the erosion control plan, is approved. The City inspects projects during construction to verify that each site is in conformance with the required BMPs. Where deficiencies are noted, the City requires corrections in accordance with its Enforcement Response Plan (See Provision E.6 strategies). During the rainy season, high priority sites are inspected twice per month, medium priority sites are inspected monthly, and low priority sites are inspected as needed. During the dry season, all sites are inspected as needed. All construction sites are required to implement erosion control and sediment control BMPs, which reduce discharges of sediment. Construction sites are also required to properly dispose of trash and debris, which reduces discharges of trash and bacteria, and to maintain secondary containment for portable toilets, which reduces discharges of bacteria. Refer to JRMP Section 5 and the Storm Water BMP Manual for additional information about the City's construction management program.	FY16	Yes	Yes	None		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Existing Development (Provision E.5)								
Commercial, Industrial, Municipal, and Residential Facilities and Areas								
NC-9	Administer a program to require implementation of minimum BMPs for existing development (commercial, industrial, municipal, and residential) that are specific to the facility, area types, and PGAs, as appropriate. Includes inspection of existing development at appropriate frequencies and using appropriate methods.	20 percent of industrial and commercial facilities are inspected each year, and all industrial and commercial facilities are inspected at least once every five years. Municipal facility inspection frequencies are the same as the industrial and commercial frequency. Residential management areas are inspected at least once every five years. BMP deficiencies discovered during any of these inspection programs are required to be corrected, in accordance with the procedures in the City's Enforcement Response Plan. BMPs targeted at FPWQCs include waste management (trash, animal waste, used cooking oil, etc.), preventing irrigation runoff, and catch basin cleaning. For example, all businesses and municipal facilities will be required to clean their disposal areas as necessary to prevent trash and debris from entering the storm drain system. Additionally, stored trash and other wastes must be protected from contact with storm water. Parking lots will be required to be swept. Residents will also be required to cover their trash bins and keep their areas free of trash and debris.	FY16	Yes	Yes	None		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
NC-10	Require minimum BMPs for mobile businesses.	Mobile businesses are subject to the same prohibitions and enforcement mechanisms as stationary industrial and commercial facilities. Mobile businesses will be inspected on an as-needed basis and will be in response to incident reports received via the Storm Water Hotline and direct visual observations by City staff. The City will be able to identify "mobile water users" such as mobile detailers, power washers, window cleaners, or similar businesses that use water in their regular business activities who have the potential of discharging pollutants to the storm drain system. Typical activities performed by mobile water users are power washing of trash enclosures, detailing vehicles, and rinsing surfaces of accumulated dirt, which are potential sources of bacteria and sediment. All wash water from these activities will be required to be contained, captured and reused, or disposed of to the sanitary sewer, an appropriate waste hauler, or to landscaping or other pervious surfaces.	FY16	Yes	Yes	None		Yes
NC-11	Implement pet waste program.	The City will provide pet waste bags via dispensers in City parks.	FY15	Yes	Yes	None		Yes
NC-12	Require used cooking oil to be either stored indoors or under a structural canopy.	The City's minimum BMPs for industrial and commercial businesses (JRMP Appendix B) requires that food service establishments must store their used cooking oil containers in a manner that prevents any discharge of fats, oils, or grease. National City also will educate businesses on availability and benefits of indoor grease storage containers. This will reduce the potential of bacteria discharges to the storm drain system.	FY16	Yes	Yes	None		Yes

**Table 11-1 (continued)
City of National City Jurisdictional Strategies**

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
NC-13	Notify Regional Board of industrial businesses subject to the Industrial General Permit so that the businesses may obtain coverage as required.	National City will share inspection results with Regional Board staff and notify of non-filers or potential non-compliance with other IGP requirements, especially requirements specifically related to discharges of bacteria, nutrients, trash, and sediment.	FY15	Yes	Yes	None		Yes
NC-14	Implement operation and maintenance activities (inspection and cleaning) for MS4 and related structures (catch basins, storm drain inlets, channels, detention basins, etc.) for water quality improvement.	Channels and creeks will be cleaned once per month. Trash will be removed from channels by hand. Catch basins will be cleaned to remove trash and debris once per year. Drains with filter inserts (19th Street & Harding, 12th Street & A Avenue, R Avenue between 7th Street & 8th Street, National City Library, Bay Marina Way & Marina Way north & south of the street) will be cleaned four times per year. The City also responds to reports by citizens or municipal staff regarding MS4 facilities that require inspection/cleaning that is beyond regular maintenance activities.	FY16	Yes	Yes	Additional MS4 cleaning was completed in preparation for El Niño conditions.		Yes
NC-15	Install structural BMPs to prevent unauthorized persons from entering the MS4 and to control trash.	Grates will be placed over the entrances to six box culvert locations along Lower Paradise Creek to prevent unauthorized persons from entering and occupying the drainage ways; these grates will also help trap trash. Inspection and maintenance will be conducted by City staff and will be ongoing once installed.	FY16	Yes	Yes	None		Yes
NC-16	Implement controls to prevent infiltration of sewage into the MS4 from leaking sanitary sewers.	The City will repair and replace per standard maintenance schedule and where leaks are identified. In addition to routine maintenance, capital projects to replace or upgrade infrastructure are undertaken. The City's Sewer System Management Plan contains more details on these programs and procedures.	FY15	Yes	Yes	None		Yes
NC-17	Identify sewer leaks and areas for sewer pipe replacement prioritization.	National City will repair and replace per standard maintenance schedule and where leaks are identified. The City's Sewer System Management Plan contains more details on these programs and procedures.	FY15	Yes	Yes	None		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Roads, Street, and Parking Lots								
NC-18	Sweep City streets.	Major arterials are swept daily during the work week. All other streets are swept once per week. The City uses both mechanical and vacuum sweepers. Street sweeping personnel are also trained to report and identify obvious illegal connections/discharges to the storm drain system and provides the City with further means to observe, respond to, and potentially prevent illegal connections/discharges.	FY15	Yes	Yes	None		Yes
Pesticide, Herbicides, and Fertilizer BMP Program								
NC-19	Require implementation of BMPs to address application, storage, and disposal of pesticides, herbicides, and fertilizers on commercial, industrial, and municipal properties. Includes education, permits, and certifications.	Commercial and industrial businesses and residents are subject to application and storage requirements as described in the City's Storm Water BMP Manual (see JRMP Appendix B). These are required through inspections, as described in JRMP Section 6. Municipal BMPs (JRMP Appendix B) are implemented directly by City staff, while pesticide application is done by certified individuals, as described in JRMP Section 8. Users shall apply pesticides and fertilizers in strict accordance with the manufacturer's label, as authorized by the U.S. EPA to minimize the introduction of pollutants to the storm drain system. Chemicals will also be required to be stored in covered and contained areas.	FY16	Yes	Yes	None		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Retrofit and Rehabilitation in Areas of Existing Development								
NC-20	Develop and implement a strategy to identify candidate areas of existing development appropriate for retrofitting projects and facilitate the implementation of such projects.	See multiple retrofit projects described later on down in this list. The retrofit and rehabilitation appendix to the City's JRMP (Appendix E) describes methods for identifying and assessing potential retrofit projects in existing development areas. Retrofit project selection will be based upon a variety of factors including those projects that make progress towards the FPWQCs and WQIP numeric goals, feasibility of the project, total project area of high threat to water quality properties, land use and availability, amount of impervious area, cost effectiveness, and opportunities for infiltration or retention. Grants are the most likely funding mechanism. It is also possible that projects could be built as part of an alternative compliance program.	FY16	Yes	Yes	None		Yes
NC-21	Develop and implement a strategy to identify candidate areas of existing development for stream, channel, or habitat rehabilitation projects and facilitate implementation of such projects.	See creek restoration project described later on down in this list. Also refer to JRMP Appendix E which describes the factors in identifying candidate projects. Candidate selection will be based upon a variety of factors including those projects that make progress towards the FPWQCs and WQIP numeric goals, feasibility of the project, multiple benefits of a project, land use and availability, and amount of impervious area. Grants are the most likely funding mechanism. It is also possible that projects could be built as part of an alternative compliance program.	FY16	Yes	Yes	The Prop 84-funded Kimball Park LID and Paradise Creek Restoration Project will be completed during FY17 (as summarized in NC-32)		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Illicit Discharge, Detection, and Elimination (IDDE) Program (Provision E.2)								
NC-22	Implement Illicit Discharge, Detection, and Elimination (IDDE) Program per the JRMP.	The City's Municipal Code prohibits illicit discharges and illicit connections (IC/ID). All IC/IDs are sources of non-storm water flow and can serve as transport mechanisms for pollutants, including bacteria. IC/IDs can also be direct sources of pollutants. Examples of IC/IDs include the following types of discharges to the MS4: irrigation runoff, power washing, commercial vehicle washing, mop water, wet cleaning of trash enclosures or dumpsters, washing activities as animal facilities, washing off construction equipment, and indoor drains connected to the storm drain system. To identify IC/IDs, the City inspects all its major MS4 outfalls twice per year and operates a public hotline to receive reports from the public and City staff and contractors. The City also identifies IC/IDs during its inspections of existing development (see Provision E.5 strategies) and construction sites (see Provision E.4 strategies). IC/IDs identified through any of these pathways are required to be eliminated per the City's Enforcement Response Plan (see Provision E.6 strategies). Trash accumulation in the MS4 discovered through these programs is removed through infrastructure cleaning (see Provision E.4 strategies). Refer to JRMP Section 3 for additional information about the City's IDDE program.	FY16	Yes	Yes	None		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Public Education and Participation (Provisions E.7, B.3.b(1)(a)(iii))								
NC-23	Implement a public education and participation program to promote and encourage development of programs, management practices, and behaviors that reduce the discharge of pollutants in storm water prioritized by high-risk behaviors, pollutants of concern, and target audiences.	Direct education is provided through interaction with the public through inspections, hotline call response investigations, and plan review comments. Educational materials on a variety of storm water topics are also made available on the City's website. Targeted educational content on pollutants, such as messages about used cooking oil storage for eating and drinking establishments (bacteria), is provided. The City also educates residents and businesses about sources of pollutants, including waste management (trash), erosion prevention (sediment), proper fertilizer use (nutrients), and discharge prevention, during inspections (see Provision E.5 strategies) and hotline call response investigations (see Provision E.2 strategy).	FY16	Yes	Yes	None		Yes
NC-24	Review City storm water website and identify and implement required updates to reflect WQIP and JRMP revisions.	Website will be updated to inform the public of new and existing requirements for commercial and industrial businesses, residents, and development/redevelopment projects. Educational content will include practices and information that will benefit habitat/wildlife and trash goals.	FY16	Yes	Yes	None		Yes
NC-25	Collaborate with regional education and outreach efforts.	The City contributes to regional outreach efforts done collectively by all Copermittees.	FY16	Yes	Yes	None		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
NC-26	Collaborate with local water authority to promote and encourage water conservation and irrigation runoff reduction programs, including utility-funded rebate or other incentive programs.	National City will collaborate with Sweetwater Water Authority to educate the public about the requirement to eliminate irrigation runoff and to promote incentives and rebates for landscape or irrigation system retrofits. Collaborative educational material will be distributed to residents and properties as needed.	FY15	Yes	Yes	City staff worked closely with Sweetwater Authority staff to reduce water use during FY16, in accordance with drought requirements.		Yes
NC-27	Provide municipal staff training.	Staff are trained on BMP requirements and implementation. Key internal target audiences include Public Works field staff, construction inspectors, and plan reviewers. Training covers BMPs to reduce discharges of pollutants, such as proper material storage, waste management BMPs for trash, pet waste management, erosion control BMPs, and catch basin cleaning. Plan review training emphasizes the importance of LID, which is effective for all pollutants	FY16	Yes	Yes	None		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Enforcement Response Plan (Provision E.6)								
NC-28	Implement escalating enforcement responses to compel compliance with statutes, ordinances, permits, contracts, orders, and other requirements for IDDE, development planning, construction management, and existing development in the Enforcement Response Plan.	The City has established the legal authority to require BMP implementation, including preventing illicit discharges, through the Municipal Code. Examples of how enforcement is used to bring about compliance with BMPs that reduce discharges of pollutants include preventing illicit discharges (bacteria, trash), requiring proper management of trash areas (bacteria, trash), requiring proper erosion controls for landscaped areas (sediment), and requiring maintenance to ensure proper functioning of structural BMPs (bacteria, trash, sediment). When noncompliance is noted, the City follows an escalated enforcement process to bring about correction. For example, the City has the authority to issue fines and stop work orders. More details about the City's enforcement process are provided in the enforcement response plan section of the City's Storm Water BMP Manual (JRMP Appendix B).	FY16	Yes	Yes	None		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Non-JRMP Strategies (Optional Strategies, B.3.b(1)(b))								
Structural								
Green Infrastructure								
Green Streets								
NC-29	8th Street Smart Growth.	Bioretention areas along 8th Street from approximately Highland Avenue to National City Boulevard. Funding and resources have been secured. Implementation of structural BMP maintenance will be ongoing.	FY14	Yes	Yes	None		Yes
NC-30	4th Street Corridor.	Infiltration areas along 4th Street at Clairemont Drive and Belmont Drive. Funding and resources have been secured. Implementation of structural BMP maintenance will be ongoing.	FY14	Yes	Yes	None		Yes
NC-31	"A" Avenue Green Street and Pedestrian Pathway project.	National City is performing green street retrofits for a 49 acre drainage area. Bioretention, infiltration, water harvesting/reuse for irrigation in Kimball Park, and a trash removal device will be installed. This project is funded by Proposition 84 grants awarded to the City and has been a collaboration with the SWRCB. Implementation of structural BMP maintenance will be ongoing upon project completion.	FY15	Yes	Yes	The project will be completed in FY17.		Yes
Green Infrastructure								
NC-40	Sweetwater River Park Bioretention	Regional BMP (approximately 18,500 ft^2 bioretention area) treating a large area east of and north of Plaza Bonita Mall. The project would also include trails in an open space park around the bioretention area that connect to the adjacent Sweetwater River Bikeway. This project will proceed if (1) grant funding or other funding is secured and approved by City Council and (2) appropriate environmental approvals and resource agency permits are obtained.	If Triggered	NA, Not Triggered in FY16	NA, Not Triggered in FY16	The City submitted an application for funding under Round 1 of the Prop 1 Storm Water Grant Program. The project will proceed if requested funds are awarded.	Additional potential strategy added as a part of the City's overall retrofit and rehabilitation program.	If Triggered

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Multiuse Treatment Areas								
Stream, Channel and Habitat Rehabilitation Projects								
NC-32	Kimball Park LID and Paradise Creek Restoration project.	The City will restore approximately 1,000 linear feet of channelized stream with concrete bottom. The concrete bottom will be removed to restore wetland habitat. Approximately 30,000 sq. ft. of native vegetation will be planted along the Creek. The project will also include LID features along streets in the neighborhood to the south of the park and within the park. These LID features will treat an approximately 73 acre tributary drainage area. This project is funded by Proposition 84 grants awarded to the City and has been a collaboration with the SWRCB. Implementation of LID feature maintenance will be ongoing upon project completion.	~~Optional~~ FY17	Yes	Yes	Project is under construction and is scheduled to be completed in FY17.	Revised to clarify when the project will be completed.	Yes, once construction is completed the City will continue to maintain the project
NC-33	Paradise Creek Educational Park.	Paradise Creek Educational Park is located along Hoover Avenue south of 18th Street and continues south along Paradise Creek to 22nd Street. The project includes removing impervious area, constructing LID, and establishing native vegetation along Paradise Creek. This project will be funded by grants awarded to the City. Construction anticipated to be completed in ~~FY 16~~ FY17 and maintenance would be ongoing after the project has been completed.	~~FY15~~ FY17	Yes	No	Project design occurred during FY16. The project was put out for bid and awarded in FY17 and is scheduled to begin construction in November 2016.	The schedule was revised due to the grant process and coordination with stakeholders, including utilities and National School District.	Yes, once construction is completed the City will continue to maintain the project

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
Water Quality Improvement BMPs								
Proprietary BMPs								
NC-34	Coolidge Avenue Pedestrian Improvements.	High-rate biofilters (Filterra or equivalent) were installed at Civic Center & Harding, 14th Street & Wilson, and 18th Street & Hoover. Funds and resources have been secured. Construction completed in FY14 and maintenance would be ongoing after the project has been completed.	FY14	Yes	Yes	BMP maintenance is ongoing.		Yes
Non-Structural								
NC-35	Enhance school and recreation-based education and outreach.	The City partners with National School District to put on a storm water quality themed art contest for elementary students. Teachers encourage students to incorporate native plants, animals, and City landmarks, such as Paradise Creek and Sweetwater River. The themes of the calendar, which have included "Keeping the Community Clean" and "A Clean City Starts With you and Me," concentrates on proper trash disposal. Winners' artwork is displayed in a storm water educational calendar distributed throughout the City. Winners are also recognized by the City Council.	FY15	Yes	Yes	None		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
NC-36	Increase inspection for highest pollutant potential businesses within the Paradise Creek drainage area	Prioritization is based on site-specific evaluation of pollutant discharge potential. If a site has been identified as having the potential to be significant sources of trash to Paradise Creek and do not drain to structural trash control BMPs, it will be considered high threat to water quality. High threat to water quality facilities are inspected more than once every five years, while the typical inspection frequency is annual. Minimum BMPs that will be assessed include waste management and parking lot and outdoor area housekeeping. City resources to complete the strategy include staff time to implement additional inspections and to work with the responsible property owner or manager to see that the additional BMPs are implemented. Funding and resources have been secured through the industrial and commercial inspection program, which is funded through the City's General Plan.	FY16	Yes	Yes	Food service establishments were targeted for inspections in FY16. Inspections emphasized storm water pollution prevention and fats, oils, and grease BMPs, which help prevent sanitary sewer overflows.		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
NC-37	Collaborate with Urban Corps of San Diego or other nonprofit groups to remove invasive species.	Significant populations of invasive species are identified in one or more locations in the City. The Urban Corps or other nonprofit groups are equipped to remove the type(s) of invasives discovered. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) a project area has been identified, including public input as applicable 2) project scope has been prepared and approved 3) staff resources necessary to coordinate with Urban Corps of San Diego are identified and secured, 4) funds have been secured through grants or City Council approval, 5) funds for any future maintenance of the area are secured, and 6) permits required by regulatory agencies have been secured. The duration of each project depends on the specific scope of each project. Potential funding may be through a grant or departmental maintenance budget.	If Triggered	NA, Not Triggered in FY16	NA, Not Triggered in FY16	None		If Triggered
NC-38	Conduct trash cleanups through community-based organizations involving target audiences.	Local organizations regularly conduct cleanups, both on their own and in direct partnership with the City. Paradise Creek Educational Park, Inc. (PCEPI) completes regular cleanups in Paradise Creek. The City also regularly works with "I Love a Clean San Diego" to complete creek cleanup near Sweetwater River, which removes accumulated trash from homeless encampments. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by City Council.	FY16	Yes	Yes	Cleanups were completed along Paradise Creek and by the Sweetwater River, adjacent to Plaza Bonita Mall.		Yes

Table 11-1 (continued)
City of National City Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v)) (Inventory BMPs, B.3.b.(1)(a)(ii))	Implementation or Construction Year (B.3.b.(3)(a)(i); B.3.b.(3)(a)(ii))	Implementation Status			Proposed Modifications	
				Implemented as planned in current FY (FY16)?	Completed in current FY (FY16)?	Notes	Modification (If modified or canceled, provide rationale)	Planned Implementation into the next FY? (Y/N)
~~NC-38~~ NC-39	Contribute to regional effort to provide sanitation and trash management for persons experiencing homelessness.	Support a non-profit or consortium to provide sanitation services associated with hygiene as well as trash management for persons experiencing homelessness. Rented or purchased shower/sanitary trailers providing mobile showers may be organized at specifically scheduled locations and times. This provision has been proposed as a method for preventing surface water usage for sanitation and bathing, as well as opportunity for outreach and referral by social service agencies. The trash management services will include providing trash bags, trash collection areas, and shower/sanitary facilities at centers that provide daytime shelter to their clients, or on a mobile-basis for known transit camps. This strategy may be implemented at any time at the City's discretion if the following triggers are met: 1) homeless communities are identified as sources of bacteria to the City's MS4 2) funding to address MS4 discharges is identified and secured through a public process, 3) staff resources necessary to coordinate with a regional group are identified and secured, and 4) partners have been identified and formal MOUs have been developed. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the City's General Fund. All General Funds are secured on an annual basis and are contingent upon annual budget approval by City Council. The anticipated cost to implement the strategy is approximately $10,000 to $50,000 per year. Once initiated, program development is expected to take at least one year, with implementation following development on a continuous basis as long as funding is available.	If Triggered	NA, Not Triggered in FY16	NA, Not Triggered in FY16	None	Revised strategy number; no change to strategy implementation approach or schedule.	If Triggered

11.4 MODIFICATIONS TO THE BMP DESIGN MANUAL

No modifications to the BMP Design Manual have been made since the WQIP was The National City BMP Design Manual provides guidance for land development and public improvement projects to comply with relevant development planning requirements in the Municipal Permit. The BMP Design Manual became effective in February 2016 and replaced the City's Standard Urban Storm Water Mitigation Plan (SUSMP). No modifications to the City's BMP Design Manual have been made since February 2016. The BMP Design Manual, an applicability checklist for project applicants, a City-specific Storm Water Quality Management Plan template, and answers to common developer questions are available on the City's website: http://www.nationalcityca.gov/city-government/engineering-public-works/engineering-division/storm-water-program/development-redevelopment-requirements.

11.5 MODIFICATIONS TO THE JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM

Modifications to National City's JRMP have been made since the WQIP was approved in spring 2016. Changes include clarifications in language, revisions to program procedures, and updates based on FY 16 data. Table 11-2 summarizes these changes, including the portions of the JRMP that were modified and the rationale for each change. The current National City JRMP is posted on the City's website, and the link to this page is listed on Project Clean Water.

Table 11-2
City of National City JRMP Modifications

Update Description	JRMP Section(s)	Rationale
Removed redundant text that is included in the Enforcement Response Plan (Appendix C) and provided a reference to Appendix C.	3.3.2, 4.6, 5.6 6.5, 7.5, 9.5	Removed redundant text that is included in the Enforcement Response Plan (Appendix C) and provided a reference to Appendix C to streamline future JRMP updates.
Included text that references the completed BMP Design Manual. The BMP Design Manual is now included as an attachment to Appendix B.	4.1, 4.2, 4.3, 4.4, Appendix B	The BMP Design Manual was completed during FY 2016 and has been in effect since February 16, 2016, replacing the SUSMP.
Updated the prioritization process for projects with structural BMPs.	5.5	Based on the City's inspection history, the updated prioritization is more representative of determining high threat to water quality facilities.

Table 11-2 (continued)
City of National City JRMP Modifications

Update Description	JRMP Section(s)	Rationale
Updated text to explain that City inspectors will conduct post-event BMP inspections for special events instead of the special event applicant.	7.3.2	The decision was made to have City inspectors conduct Post-Event BMP inspections for special events instead having the applicant conduct the inspection. This will allow the City to directly evaluate the effectiveness of the BMPs implemented during the special event.
Updates to WQIP Jurisdictional Strategies	Appendix A	Updates were made to Appendix A to reflect changes made to the City's jurisdictional strategies in the San Diego Bay WQIP Annual Report.
Updated the Enforcement Response Plan.	Appendix C	Added text to provide additional information on what is considered an escalated enforcement action and criteria for determining when escalated enforcement is necessary.
Updated the major outfall locations and major outfall drainage area layers of the map (Attachment 1).	Appendix D, Attachment 1	The major outfall drainage areas and the status of major MS4 outfalls as having persistent flow, transient flow, or being dry was updated with the collection of more data from the Dry Weather Major MS4 Outfall Discharge Monitoring Program. Updates to the status of major MS4 outfalls as having persistent flow, transient flow, or being dry will also be provided through the Water Quality Improvement Plan annual reporting process.

12 PORT OF SAN DIEGO

12.1 ANNUAL REPORT CERTIFICATIONS

The Port of San Diego's signed Statement of Certification and Legal Authority Establishment for the San Diego Bay WMA Water Quality Improvement Plan 2015-2016 Annual Report is included on the following page.

Unified Port of San Diego

3165 Pacific Highway, San Diego CA 92101
P.O. Box 120488, San Diego CA 92112-0488
619.686.6200 · www.portofsandiego.org

SAN DIEGO BAY WATERSHED MANAGEMENT AREA, WATER QUALITY IMPROVEMENT PLAN FISCAL YEAR 2015-2016 ANNUAL REPORT

STATEMENT OF CERTIFICATION AND LEGAL AUTHORITY ESTABLISHMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted.

Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations [40 CFR 122.22(d)].

I also certify that the San Diego Unified Port District has taken the necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements within Order No. R9-2013-001 as amended by Orders R9-2015-0001 and R9-2015-0100.

Jason H. Giffen
Assistant Vice President, Operations
San Diego Unified Port District

Date

12.2 ANNUAL REPORT FORM

The Port of San Diego's completed JRMP Annual Report form and supplemental Tables 12-1 through 12-12 are provided below.

Intentionally Left Blank

Table 12-1. Illicit Connections and Illicit Discharges Investigations During 2015-2016.

Location	Watershed	Inspection Date	Reporting Source[1]	Source of Discharge[2]	Pollutant	Response[3]	Type[4]	Discharge Eliminated	General Description
N Harbor Drive San Diego, CA	908.21	8/3/2015	Other Jurisdiction	Municipal	None	Closed - No Further Action	N/A	N/A	Port staff investigated report of power washing occurring on airport property. Upon investigation, Port staff determined that Port General Services had power washed sidewalk on Harbor Dr. However, per General Services power washing policy, water was directed to the landscape.
937 Harbor Dr San Diego, CA 92101	908.21	8/6/2015	Harbor Police Department	Other	Sediment and Oil and Grease	Contact Outside Jurisdiction	Non-Stormwater Discharge	Yes	Port staff received report of sediment discharge in the street as a result of a water main break in parking lot of Navy complex near USS Midway. Upon investigation, it was determined that a previous water main break had occurred within the City of San Diego. Incident was referred to the City of San Diego.
Dole Fruit at Tenth Avenue Marine Terminal (TAMT)	908.22	8/13/2015	Contractor	Contractor	Sediment, Metals	Applied Enforcement	Non-Stormwater Discharge	Yes	Port staff was notified of sediment discharge at Dole Fruit leasehold on TAMT. The on-site contractor responsible was required to clean impacted storm drain line and surrounding area.
Cabrillo Isle Marina 1450 Harbor Island Drive San Diego, CA, 92101	908.21	8/20/2015	Harbor Police Department	Citizen	Oil & Grease	Closed - No Further Action	Non-Stormwater Discharge	Yes	Staff responded to report of a fuel line break at Cabrillo Isle Marina. The marina manager had deployed booms around a boat that was leaking the fuel, and boarded the vessel to shut off the bilge power (the source of the discharge). Absorbent pads were placed in water to soak up spill material, and waste remediation contractor was called by boat owner to remove remaining material built up in bilge.
Costerra 880 Harbor Island Drive San Diego, CA, 92101	908.21	9/8/2015	Harbor Police Department	Port Tenant	Oil & Grease, Bacteria	Closed - No Further Action	Non-Stormwater Discharge	Yes	Port staff responded to grease trap spill as a result of plumbing activity at Costerra restaurant. An unknown amount of grease entered parking lot. Additionally, electricity to facility's sump pump malfunctioned and approx. 2 gallons of water discharged into the storm drain equipped with a filtration BMP. The presence of BMP prevented grease from discharging. Plumbing service cleaned up storm drain inlet and BMP where grease and water had entered. No evidence of grease remained after cleaning. No Further Action.
Best Western Posada At The Yacht Harbor 5005 North Harbor Drive San Diego, CA, 92106	908.10	8/12/2015	Port Department	Port Tenant	None	Ongoing	Illicit discharge/connection	No	Port staff received report of discharge from the Best Western Posada Inn to the curb line along N. Harbor Drive. Based on the Port's interview with the site facility general manager, the pool filtration system located in the parking area (below street grade) malfunctioned and the pool water leaked out into the parking lot and into a catch basin on site. Inside the catch basin is a sump pump that pumps the water from the garage (flood mitigation) to the street where it discharges from a small pipe in the curb. This system was installed when the hotel was built in the 1960's-1970's. The Port is investigating this issue to understand the prior permits of the sump pump and the discharges to determine additional enforcement actions. No additional discharges from the pipe have been observed or reported.
Port District Administration Building and Annex 3165 Pacific Highway San Diego, CA, 92101	908.21	10/21/2015	Port Department	Municipal	Gross Pollutants, Oil & Grease	Closed - No Further Action	Non-Stormwater Discharge	Yes	Staff observed wash water on pedestrian bridge at Port administration building, and observed inadequate BMPs implemented next to stair case to try to contain wash water. Absorbent socks were placed near storm drain, but were inadequately placed. General Services staff were contacted to resolve the issue and ensure that proper BMPs for pressure washing are used in the future.

Table 12-1. Illicit Connections and Illicit Discharges Investigations During 2015-2016.

Location	Watershed	Inspection Date	Reporting Source[1]	Source of Discharge[2]	Pollutant	Response[3]	Type[4]	Discharge Eliminated	General Description
G Street Mole Tuna Lane at the Foot of G Street San Diego, CA, 92101	908.21	11/2/2015	Port Department	Citizen	Oil & Grease, Organics	Closed- No Further Action	N/A	N/A	Staff received a complaint of an oil spill and absorbent material left on the pier. No discharge to MS4 was observed. General Services staff was contacted to clean the area. Area was cleaned. No further action.
TAMT 687 Switzer Street San Diego, CA, 92101	908.22	11/5/2015	Port Department	Unknown	Oil & Grease, Organics	Contact Outside Jurisdiction	Non-Stormwater Discharge	Yes	Port staff received report of sheen coming from Switzer creek area discharging into the Bay. Staff checked each Port-owned MS4 that discharges into Switzer Creek. All MS4 lines discharging into the creek were dry, ponded or damp and with no evidence of overland flow. Based on observations, it appeared that discharge was originating from the City of San Diego, therefore the incident was referred to the City for follow-up.
Coronado Yacht Club 1631 Strand Way Coronado, CA, 92118	910.10	11/9/2015	Port Department	Contractor	Gross Pollutants	Closed - Unjustified Complaint	N/A	N/A	Port staff responded to report of concrete discharge to bay at Coronado Yacht Club as a result of construction activity. Staff observed no discharge of concrete-laden water upon arrival, however, approved concrete work was observed with appropriate BMPs. No further action is required.
1360 N. Harbor Drive San Diego, CA 92101 Sewer line located under wharf structure	908.2	12/3/2015	Port Department	Port Tenant	Bacteria	Applied Enforcement	Illicit discharge/connection	Yes	Administrative Citation issued to both Anthony's Fish Market and SD Maritime Museum for leaking sewage pipe. Leak was stopped by responsible party by within approximately 1 hour of detection on 12/3/2015. Corrective actions beyond stopping the leak immediately included (1) a summary report w/photographic documentation regarding the permanent fix of the cause of the leak, and (2) measures/actions to be taken to prevent further discharges and to detect possible leaks. Regional Board was notified of the incident via email on 12/3/2016.
Outfall CSD145 at end of Talbot and Anchorage Lane (Shelter Island)	908.1	1/19/2016	Port Department	Municipal	None	Contact Outside Jurisdiction	Non-stormwater discharge	Yes	Port staff observed non storm water discharge from outfall at end of Anchorage Lane near Shelter Island. The outfall drains a City of San Diego line with no Port influence. City of San Diego staff were notified of the incident, who sampled water and obtained non-detect results for metals, bacteria, nutrients, and sediment. Follow-up revealed no additional outfall discharge.
Derelict Vessel Lot 891 G St. Chula Vista, CA, 91910	909.12	5/10/2016	Port Department	Municipal	None	Closed - Unjustified Complaint	N/A	N/A	Port staff received complaint of possible oil spill within the Derelict Vessel lot. Staff received subsequent notification from General Services that reported spill was in fact was just rain water that collected on a nearby tarp that leaked on the ground. No further action is required.
California Yacht Marina 640 Marina Parkway Chula Vista, CA, 91910	909.12	5/19/2016	Citizen	Unknown	Oil & Grease	Closed - Unjustified Complaint	N/A	N/A	Staff received report of sheen on water in California Yacht Marina. Staff arrived on site and questioned both the California Yacht Marina and Chula Vista marina staff about incident and they both informed staff that they were not notified of fuel in the water. No sheen was observed by staff and marina staff were not aware of incident. No further action.
Cruise Ship Terminal (B St.) 1150 North Harbor Drive San Diego, CA, 92101	908.21	6/20/2016	Port Department	Unknown	None	Closed - Unjustified Complaint	N/A	N/A	Port staff received complaint of possible discharge at B Street cruise ship terminal. Staff observed trash, foam and bubbles near outfall at the terminal. Wind and prevailing current appeared to be the cause of the material arriving on-shore (the material was windblown and likely not discharging from storm drain).

Table 12-1. Illicit Connections and Illicit Discharges Investigations During 2015-2016.

Location	Watershed	Inspection Date	Reporting Source[1]	Source of Discharge[2]	Pollutant	Response[3]	Type[4]	Discharge Eliminated	General Description
Storm Drain inlet 1277 (across the street from Solar Turbines) San Diego, CA, 92101	908.1	6/23/2016	Port Department	Municipal	None	Closed- No Further Action	Illicit discharge/connection	Yes	Irrigation discharge was detected by Port staff while in the field. Port General Services was contacted to correct a leaking sprinkler head which was causing the discharge. Upon follow-up inspection, sprinkler was repaired and discharge was eliminated.
Best Western Island Palms Hotel 2051 Shelter Island Drive San Diego, CA, 92106	908.10	1/6/2016	Port Department	Port Tenant	Organics, Trash/Debris	Closed - No Further Action	N/A	N/A	Port staff observed an uncovered dumpster at the Best Western Island Palms hotel that was leaking a white substance that was later identified as paint. Best Western management was quickly alerted and their staff was directed to cover and contain the dumpster unit and clean the affected area. No discharge to MS4 was observed.
Tuna Harbor	908.21	6/14/2016	Citizen	Port Tenant	None	Closed - Unjustified Complaint	N/A	N/A	Staff received citizen complaint regarding vessel maintenance in Tuna Harbor leading to discharge into the Bay. Upon arrival, Port staff observed on-deck boat maintenance onboard the Trailblazer vessel. The work appeared to be confined to the deck and no discharge to the bay was observed. Staff reminded vessel owner of his responsibilities to keep vessel maintenance from releasing pollutants into the bay. No further action.
3165 Pacific Highway San Diego, CA 92101	908.21	1/27/2016	Port Department	Municipal	Oil & Grease, Gross Pollutants	Closed - No Further Action	Illicit discharge/connection	Yes	Port staff received complaint of coolant leak from broken generator in Port Administration building parking lot. However, upon arrival staff observed General Services staff applying absorbent pads to the spill. Port staff traveled down gradient and observed what appeared to the coolant at the bottom of the storm drain inlet downstream along the north bound land on Pacific Coast Highway. Port cleaned the coolant from the inlet. The coolant did not reach the MS4 across the street along the south bound land of Pacific Highway.
Bali Hai Restaurant 2230 Shelter Island Drive San Diego, CA, 92106	908.10	2/17/2016	Tenant	Municipal	Sediment	Closed - No Further Action	Illicit discharge/connection	Yes	Port staff received notification of water discharge into storm drain in front of Bali Hai. Upon arrival, staff observed water discharging from a sewer manhole and running down the street and discharging into a nearby storm drain. Based on further investigation, it was determined that the water was coming from the Port's irrigation line. General Services was contacted to repair the irrigation line. No further action.
Hilton - San Diego Bayfront 1 Park Boulevard San Diego, CA, 92101	908.21	4/4/2016	Citizen	Unknown	Nutrients, Oil & Grease	Closed - No Further Action	N/A	N/A	Port staff responded to report of irrigation discharge near Hilton San Diego Hilton Hotel. Upon arrival, no evidence of irrigation runoff was observed. Investigation indicated that discharge was unlikely to be the result of irrigation runoff from the Bayfront Hotel. Staff conducted follow-up meeting with hotel staff to reinforce prohibition of irrigation runoff.
Tenth Avenue Marine Terminal 687 Switzer Street San Diego, CA, 92101	908.22	5/3/2016	Port Department	Municipal	Sediment, Gross Pollutants	Closed - No Further Action	Non-stormwater discharge	Yes	Port staff responded to a report of discharge to the Bay. Upon arrival, observed a leaky water pipe on the Crosby street pier. A work order was submitted to General Services to repair. Follow-up investigation indicated that water line had been repaired.

Table 12-1. Illicit Connections and Illicit Discharges Investigations During 2015-2016.

Location	Watershed	Inspection Date	Reporting Source[1]	Source of Discharge[2]	Pollutant	Response[3]	Type[4]	Discharge Eliminated	General Description
Inlet upstream of outfall C3-2.1 Coronado, CA	910.1	5/12/2016	Port Department	Unknown	Metals	Contact Outside Jurisdiction	Illicit discharge/connection	No	During Persistent Outfall Monitoring, Port staff observed a non-storm water discharge upstream of outfall C3-2.1 (outfall is tidally inundated). Salinity test showed 10 ppt water, indicating freshwater influence. Staff conducting sampling for all pollutants outlined in the San Diego Bay WQIP Monitoring and Assessment Program. The discharge was reported to the City of Coronado. Results of the sampling analysis showed a dissolved copper concentration of 7.6 ppb, which is above the non-storm water action level outlined in the municipal permit (all other pollutants tested were below NALs)
Shelter Island Shoreline Park Southerly of Shelter Island Drive San Diego, CA, 92106	908.10	6/30/2016	Citizen	Municipal	Oil & Grease, Sediment	Closed - No Further Action	Non-stormwater discharge	Yes	Port staff received report of discharge to MS4 at Shoreline Park. Upon arrival, staff observed significant over-irrigation and the water was discharging into the MS4. PGP Staff contacted General Services and a work order was submitted to have the water shut off. Follow-up investigation revealed no further irrigation discharge to the MS4.

TABLE KEY

MS4: Municipal Separate Storm Sewer System

[1] **Reporting Source Party:**
Public: A member of the public not associated with the Port
Contractor: A business operating within the Port's jurisdiction on behalf of the Port of San Diego or a Port Tenant.
Harbor Police Department: An employee of the Harbor Police Department (HPD).
Port Department: Port staff not associated with the Port's Environmental and Land Use Management Department (ELUM).
Port Stormwater Monitoring: Port ELUM staff conducting water quality monitoring or inspection activities.
Port Tenant: A Port of San Diego tenant or subtenant operating within the Port's jurisdiction.
Other Jurisdiction: A staff person from another jurisdiction.

[2] **Source of discharge:**
Port Tenant: Incident is the result of activities by a Port of San Diego tenant within the Port's jurisdiction.
Municipal: Incident is the result of Port of San Diego staff or municipal operations.
Contractor: Incident is the result of a contractor operating within the Port's jurisdiction on behalf of the Port of San Diego or a Port Tenant.
Public: Incident is the result of a person or persons not involved in business activities within the Port's jurisdiction.
Mobile Business: Incident is the result of a mobile business operating within the Port's jurisdiction.
Special Event: Incident is the result of a permitted event in a park or other public area within the Port's jurisdiction.
Unknown: Incident is the result of an unidentifiable responsible party.
Other: Incident may be the result of an identifiable source which cannot be characterized otherwise.

[3] **Response:**
Applied Enforcement: Incident involves a spill or release of pollutants from a known source which have the ability to enter the MS4 and/or threaten receiving water quality and requires Port enforcement procedures to resolve the complaint. Where incidents involve Port -maintained facilities, an enforceable work order is issued to resolve the issue.
Closed – No Further Action: Incident may involve the release of pollutants which do not enter the MS4 or threaten receiving water quality and are cleaned properly by a responsible party or may not have the ability to require enforcement actions due to a lack of an identifiable source.
Referred to Other Jurisdiction: Incident occurred outside of Port jurisdictional boundaries or authority and is forwarded to another agency for proper resolution
Closed – Unjustified Complaint: Investigation reveals that the complaint does not involve a spill or release of pollutants which have the ability to reach the MS4 or threaten receiving water quality.
Ongoing: Investigation and/or enforcement actions are ongoing as of the time of this report.

[4] **Type:**
Non-Stormwater Discharge: A discharge of non-stormwater to the MS4, or the receiving water due to failure of appropriate BMPs and/or infrastructure; includes NPDES permitted discharges.
Illicit Discharge or Connection: A non-permitted, intentional release of non-stormwater to the MS4 and/or receiving water as a result of illegal dumping and/or connection.

Table 12-2. Inventory Summary: Treatment Control BMPs, Inspections, and Verification of Maintenance Results 2015-2016.

Project Name	Watershed	Treatment Control BMP	Required BMPs	Port Inspection Date	Port BMP Inspection Results	Operation and Maintenance Verification Results	Follow-up Action
Anchorage Lane (Point Loma Pavement Maintenance)	908.1	Infiltration practices, Darin inlet inserts (2)	3	4/25/2016	Drain inlet #1149 and associated insert need to be cleaned.	Annual verification of maintenance completed by Port Staff as part of annual inspection on 4/25/2016	BMP was cleaned on 6/23/2016.
Cabrillo Isle Marina	908.2	Inlet filters (4), porous pavement strips (5)	9	5/26/2016	BMPs appeared properly maintained	Annual verification of maintenance dated 7/30/2016 indicates BMPs were inspected monthly and appear present and clean. Maintenance was performed monthly and includes cleaning filters, removing debris and securing BMPs.	No corrective action required
Continental Maritime	908.2	Inlet filters	7	5/25/2016	BMPs appeared properly maintained	Annual verification of maintenance dated 3/14/2016 indicates BMPs were inspected 3/11/2016 and no maintenance was required.	No corrective action required
Coronado Cays Yacht Club	910.1	Infiltration strip	1	5/19/2016	BMPs appeared properly maintained	Annual verification of maintenance form dated 3/18/2016 indicates BMPs were inspected 3/12/2016 and are in good working condition, no maintenance required.	No corrective action required
Fisherman's Landing	908.1	Pervious pavement	2	5/18/2016	BMPs appeared properly maintained	Annual verification of maintenance dated 7/4/2016 indicates BMPs were inspected 7/1/2016 and were found to be clean and not requiring maintenance.	No corrective action required
H Street Extension	909.1	Bio retention facility (15), high rate media filter (2)	17	6/8/2016	Media filter BMP #129 appeared to be near capacity, all bio retention facilities appeared to be properly maintained	Annual verification of maintenance completed by Port Staff as part of annual inspection on 6/8/2016	Media filters were cleaned on 9/30/2016
Harbor Drive Improvements @8th Street	908.2	Landscaping, inlet filters (5)	6	5/18/2016	Three inserts were near capacity and required cleaning.	Annual verification of maintenance completed by Port Staff as part of annual inspection on 5/18/2016	BMP inserts were cleaned on 6/23/2016
Hertz Dollar Thrifty Rental Car Temporary Relocation	908.2	Media Filter	7	5/25/2016	Two storm drain inlets located in the parking lot were observed to be missing inlet inserts.	Port inspection on May 25, 2016 indicated two storm drain inlets were missing inlet inserts per the project USMP.	Escalated Enforcement Action taken. Port issued an administrative citation on 6/15/2016 for failing to inspect, maintain and repair treatment control BMPs. Hertz submitted documentation on 7/14/2016 showing corrective action had been addressed and missing BMP inserts were replaced.
Hilton Garden Inn (Island Palms Best Western Hotel)	908.1	Stormceptor, pervious pavement	3	5/26/2016	BMPs appeared properly maintained	Annual verification of maintenance dated 6/24/2016 indicates an inspection occurred 6/24/2016 and BMPs were vacuumed and cleaned monthly.	No corrective action required
Hilton San Diego Bayfront Hotel	908.2	Inlet filters (2), CDS (1), landscaping (1)	4	5/11/2016	A steel plate was installed blocking the majority of flow to one inlet.	Annual verification of maintenance form dated 5/10/2016 indicates inspections occurred on 5/5/2016 and all BMPs were clean and in good working condition.	Escalated Enforcement Action taken. Port issued an administrative citation on May 11, 2016 for the steel plate blocking one storm drain inlet. Port required Hilton remove the plate to inspect and clean the drain filter. Hilton submitted photo documentation on June 28, 2016 indicating the steel plate had been removed as required.
Holiday Inn San Diego Bayside	908.1	Bio retention (1), porous pavement (2), hydrodynamic separators (1), inlet filter (5)	9	5/24/2016	BMPs appeared properly maintained.	Annual verification of maintenance indicates an inspection occurred on 1/11/2016 and 5/03/2016 and all BMPs requiring maintenance were cleaned on 1/13/2016 and 5/06/2016.	No corrective action required
Island Palms Best Western Hotel - parking lot repavement	908.1	Pervious pavement	2	5/26/2016	BMPs appeared properly maintained	Annual verification of maintenance dated 6/24/2016 indicates an inspection occurred 6/24/2016 and BMPs were vacuumed and cleaned monthly.	No corrective action required
Koehler Kraft	908.1	Closed loop water evaporation system, landscaping	2	6/21/2016	BMPs appeared properly maintained	Annual verification of maintenance dated 8/15/2016 indicates BMPs are inspected daily and are maintained weekly. Maintenance includes cleaning and clearing leaves and debris from BMPs. This is a boatyard that is covered under a boatyard NPDES permit. The facility is designed to retain runoff onsite using an evaporation system.	No corrective action required
Kona Kai Resort	908.1	High rate media filter	1	5/17/2016	Filter inserts appeared properly maintained. Downspout media filters were not installed per the approved USMP.	Annual verification of maintenance dated 7/28/2016 indicates inspections and maintenance cleaning occurred 7/24/2015, 11/3/2015, 1/6/2016, 4/8/2016 and 7/7/2016. All BMPwere present and working, with the exception of downspout filters.	Escalated Enforcement Action taken. Port issued an administrative citation on 5/17/2016 for failure to install two downspout media filters per the approved USMP design. In a 10/18/2016 response, Kona Kai sent photographic documentation showing that the downspout media filters had been installed.

Table 12-2. Inventory Summary: Treatment Control BMPs, Inspections, and Verification of Maintenance Results 2015-2016.

Project Name	Watershed	Treatment Control BMP	Required BMPs	Port Inspection Date	Port BMP Inspection Results	Operation and Maintenance Verification Results	Follow-up Action
Marriott Pool/Hall Renovations	908.2	Landscaping	10	5/31/2016	Landscaping in-place and appeared to be maintained	Operation and Maintenance of the landscaping strips were verified by Port staff during 5/31/2016 inspection. A second phase of this project including the installation of additional treatment control BMPs is undergoing construction.	No corrective action required
National City Marine Terminal (SW Perimeter)	908.3	Pervious pavement	1	5/24/2016	BMP requires cleaning. Cleaning scheduled for August 22, 2016	Annual verification of maintenance completed by Port Staff as part of annual inspection on 5/24/2016.	BMP cleaning completed 09/23/2016
North Embarcadero Visionary Plan (NEVP)	908.2	Bio retention facility	1	6/16/2016	The NEVP project site includes portions of Broadway and Harbor Drive. The Port is responsible for the Harbor Drive portion of the project, and the City of San Diego is responsible for the Broadway portion of the project site. The Harbor Drive BMPs have been inspected and appear to be maintained and not requrie replacement at this time.	Annual verification of maintenance completed by Port Staff as part of annual inspection on 6/16/2016.	No corrective action required
Pier 32 Marina	908.3	CDS, landscaping	2	5/19/2016	BMPs appeared properly maintained	Annual verification of maintenance dated 5/20/2016 indicates BMPs were inspected and maintained routinely throughout the year, ranging from weekly to monthly.	No corrective actions required
Point Loma Marina	908.1	Pervious pavement, CDS within landscaping	2	5/25/2016	BMPs appeared properly maintained	Annual verification of maintenance form dated 5/28/2016 indicates weekly and monthly inspections occurred for porous pavement and drains, and an annual inspection of the CDS unit occurred on 5/18/2016. All BMPs were found to be in good working condition and required no maintenance.	No corrective action required
Point Loma Seafood's Remodel	908.1	Landscaping (2), pervious pavement (2)	4	5/11/2016	BMPs appeared properly maintained	Annual verification of maintenance dated 3/16/2016 indicates BMPs were inspected monthly and were found to be in working condition requiring no maintenance.	No corrective action required
Red Sails Inn	908.1	Inlet filters	1	5/20/2016	BMPs appeared properly maintained	Annual verification of maintenance form dated 7/20/2016 indicates BMPs were inspected and cleaned every other week and the filter is replaced every other month.	No corrective action required
Ruocco Park	908.2	Inlet filters (3), landscaping	4	5/2/2016	BMPs appeared properly maintained. Accumulation of debris in the filter is at about 20%	Annual verification of maintenance completed by Port staff as part of annual inspection on 5/2/2016	No corrective action required
San Diego Yacht Club	908.1	Contech media filter, porous pavement, inlet filter	3	5/19/2016	BMPs appeared properly maintained	Annual verification of maintenance dated 6/15/2016 indicates visual inspections occurred monthly and the annual inspection and maintenance for the Contech filter occurred on 6/10/2016.	No corrective action required
Seaport Village/Old Police Headquarters	908.2	Inlet filters (3), pervious pavers	5	5/24/2016	BMPs appeared properly maintained	Annual verification of maintenance dated 8/3/2016 indicates four of five BMPs were in need of maintenance. Maintenance was performed on 5/18/2016. All inserts were inspected, cleaned and filter media was replaced.	No corrective action required
Shelter Island Drive Pavement Repairs	908.1	Inlet filters	9	5/16/2016	Six storm drain inlets appeared to be near capacity and were in need of cleaning/maintenance.	Annual verification of maintenance completed by Port Staff as part of annual inspection on 5/16/2016	BMP inserts were cleaned on 6/23/2016
Shelter Pointe Hotel and Marina (Kona Kai)	908.1	Inlet filters	2	5/1/2015	BMPs appeared properly maintained	Annual verification of maintenance dated 7/28/2016 indicates inspections and maintenance cleaning occurred 7/24/2015, 11/3/2015, 1/6/2016, 4/8/2016 and 7/7/2016. All BMPs were present and working.	No corrective actions required
Sheraton Harbor Island - Temporary Parking	908.2	Gravel lot for infiltration, inlet filters (2)	3	5/17/2016	BMPs appeared properly maintained	Annual verification of maintenance form dated 6/23/2016 indicates an inspection occurred 6/23/2016 and BMPs were found in working condition with no maintenance required.	No corrective action required
Silver Gate Yacht Club	908.1	infiltration basin, drain basket	2	5/12/2016	BMPs appeared properly maintained	Annual verification of maintenance form dated 8/12/2016 indicates BMPs were inspected on 6/23/2016. Waste receptacle was not enclosed and a lid was purchased on the same day. FloGuard filters were present and inspected monthly with cleaning as necessary.	No corrective action required
Solar Turbines Parking Lot Expansion	908.2	Infiltration strips	2	5/10/2016	BMPs appeared properly maintained	Annual verification of maintenance form dated 3/17/2016 indicates the BMP was inspected 3/15/2016 and is on a quarterly inspection schedule. No maintenance was required and the BMP was in good working condition.	No corrective action required

Table 12-2. Inventory Summary: Treatment Control BMPs, Inspections, and Verification of Maintenance Results 2015-2016.

Project Name	Watershed	Treatment Control BMP	Required BMPs	Port Inspection Date	Port BMP Inspection Results	Operation and Maintenance Verification Results	Follow-up Action
Southwestern Yacht Club	908.1	Pervious pavement	1	5/24/2016	BMPs appeared properly maintained	Annual verification of maintenance dated 3/18/2016 indicates the BMP is inspected and swept daily and in good condition. Street sweeping was performed twice, on 7/7/2015 and 2/17/2016.	No corrective action required
Spiro's Gyros (inspected under Coronado Ferry Landing)	910.1	Vegetated swales	1	6/21/2016	BMPs appeared properly maintained	Annual verification of maintenance form submitted 6/22/2016 indicates BMPs were inspected and maintained as necessary in December 2015 and January 2016.	No corrective action required
Sun Harbor Marina	908.1	Inlet filters	4	5/19/2016	BMPs appeared properly maintained. One storm drain inlet BMP was removed as part of the stormwater design for the newly- completed adjacent North Harbor Drive Realignment project. All drainage previously treated by the removed BMP is now treated by a treatment control BMP associated with the new project.	Annual verification of maintenance dated 6/12/2016 indicates BMPs were inspected and cleaned on 8/25/2015, 2/6/2016, and 5/3/2016, including replacement of gasket and replacement of pouches as needed.	No corrective actions required
TAMT North Gate Improvements	908.2	Porous Asphalt	1	5/26/2016	Sediment, oil and asphalt particles accumulated on permeable pavement, cleaning required	Verification of maintenance completed by Port staff as part of annual inspection on 5/26/2016.	Permeable pavement maintenance and cleaning completed on 6/29-30/2016
TAMT Railroad Pavement and Track Improvements	908.2	CDS, inlet filters (2), infiltration strip	4	5/26/2016	BMPs appeared properly maintained	Verification of maintenance completed by Port staff as part of annual inspection 5/26/2016	No corrective action required
TAMT Transit Shed 1, Bay D	908.2	high rate media filter	1	5/26/2016	BMPs appeared properly maintained	Verification of maintenance completed by Port staff as part of annual inspection 5/26/2016	No corrective action required
Tom Ham's Lighthouse Renovations	908.2	Vegetated Bioswale	1	5/18/2016	BMPs appeared properly maintained	Annual verification of maintenance form dated 5/18/2016 indicates BMP is inspected weekly and cleaned as needed, including removal of litter and debris, and managing plants.	No corrective action required
Water Transportation Center (Fifth Avenue Landing)	908.2	Vegetated swale, CDS	2	5/11/2016	BMPs appeared properly maintained	Annual verification of maintenance dated 3/22/2016 indicates the CDS was inspected on 2/11/2016 and no maintenance was required. Floating debris was removed during the inspection.	No corrective action required
Water Street Pavement Repair	908.2	Permeable Pavers (2)	2	5/24/2016	BMPs appeared properly maintained	Annual verification of maintenance completed by Port staff as part of annual inspection 5/24/2016	No corrective action required

[1] No escalated enforcement measures were required on any project during the 2015-16 year. Noted in bold in the above table, Administrative Citations were issued by the Port to the following sites:

1) Kona Kai Resort-Renovations 2014. On June 16, 2016, an Administrative Citation was issued to Kona Kai Resort for failing to provide perimeter sediment control BMPs around a portion of the working area observed during the May 27, 2016 inspection. A follow-up inspection conducted on June 3, 2016 confirmed perimeter protection had been put in place and no further action was required.

2) NCMT Berth 24-10 Structural and Mooring Repairs. On June 11, 2016 an Administrative Citation was issued to the contractor for failing to provide perimeter sediment control BMPs around a portion of the working area observed during the May 24, 2016 inspection. A follow-up inspection conducted on May 26, 2016 confirmed perimeter protection had been put in place and no further action was required.

[2] Follow-up inspections were conducted to ensure corrective actions that were identified during an initial inspection are adequately addressed. Corrective actions are relayed to the contractor through inspection reports that also serve as written warnings to the contractor regarding stormwater compliance.

Total Commercial Facilities initial and follow-up inspections:				76	32	2	15

[1] Follow-up inspections were conducted to ensure corrective actions, such as BMP maintenance, that were identified during an initial inspection are adequately addressed. Corrective actions are relayed to the facility through inspection reports that also serve as written warnings to the facility regarding stormwater compliance.

[2] Municipal facilities: Where corrective actions or discharges were observed at Port maintained facilities, Port stormwater staff submited a compliance work request to the General Services's Department to make corrective actions immediately or as soon as feasible.

[3] All non-compliance issues requiring corrective enforcement actions were resolved and closed.

[4] Escalated enforcement: Any enforcement scenario where a violation or other non-compliance is determined to cause or contribute to the highest or focused priority conditions identified in the San Diego Bay WQIP. The Port's priorities are trash, bacteria, and metals. Of the facility inspections requiring enforcement, 10 out of 15 commercial facility violations and three out of eight industrial facility violations were due to missing stormwater training documentation.

[5]Two facilities in the Port's inventory were not inspected in FY 2016. Shelter Island Fuel Dock does not exist and JJ's Sunset Deli was not in operation. One facility in the inventory, San Diego Sports Fishing Association, is a sub-tenant of a master leaseholder facility and inspected with that facility's inspection.

Table 12-5. Summary of Municipal - Special Event Inspections During 2015-2016.

Watershed	Park Facility Name	Event Name	Pre-Event Inspection Date	Post-Event Inspection Date	Follow-up Required (Y/N)	Follow-up Inspection[1]	Escalated Enforcement[2]

Total Special Event Inspections and follow-up inspections:			**70**	**72**	**10**	**-**	**2**

[1]The need for a follow-up inspections is based on the post-event inspection results.

[2]Escalated enforcement: Any enforcement scenario where a violation or other non-compliance is determined to cause or contribute to the highest or focused priority conditions identified in the San Diego Bay WQIP. The Port's priorities are trash, bacteria, and metals. Of the 72 Special Events that occurred on Port tidelands, **two** required escalated enforcement. Corrective actions were taken by both event organizers and the items were closed.

*Pre-event inspection was not completed due to availability of Port staff

BMPs	26		14	53%
MS4s	48		18	38%

1. The 2015 JRMP update indicates 816 total municipal MS4 structures and 810 total high priority municipal MS4 structures in the inventory; however, there were a total of 95 structures confirmed abandoned or removed based on 2015-2016 MS4 inspections. The numbers in the "Revised" column reflect the new MS4 inventory numbers based on the removal of these 95 structures.
2. Percentages are based on 15-16 original inventory numbers (inventory numbers prior to removal of abandoned or removed structures).
3. A total of 5 catch basins were inaccessible and 2 catch basins were located in construction areas with BMPs on them and were not inspected.

4. One manhole was not inspected for traffic safety reasons.
5. All 21 uninspected outfalls were either tidally inundated or inaccessible. In each of these instances, at least one MS4 feature on the outfall's line was inspected.
6. Approximately 2 miles of stormwater conveyance line was confirmed abandoned or removed as a result of construction.
7. BMPs and MS4s were cleaned if inspections indicated >33% accumulation of debris in the structure.
8. Top 2 debris categories accumulated in MS4 and/or BMP structure are recorded during inspections (grass, leaves, sediment, vegetation, debris, or trash). This column denotes MS4 and BMP structures with > 33% accumulation of debris and trash as one of the top 2 observed debris categories.

[1]A training video created by the Port, entitled *"Port of San Diego's Storm water Best Management Practices (BMP) Training for Industrial and Commercial Facilities,"* was made available to commercial and industrial tenants to be shown at training events in FY 2016. The training video has been viewed 1,191 times since it was published in November 2015 (https://www.portofsandiego.org/environment/stormwater/302-stormwater-management-program.html).

[2] Residential Community and General Public activities include: 16 cleanups (1,748 people), 12 public seminars or outreach events (105,694 people), and sponsorship of Think Blue San Diego PSA announcements (26,550 people).

Table 12-8. Education Activities Reaching Underserved Audiences During 2015-2016

Activity	Completion Date	Description of Underserved Audience Reached	Number Reached
Chula Vista Elementary School District Education Program at the Living Coast Discovery Center	May-16	At least 50% of the schools are Title 1	4,919
Groundworks San Diego Chollas Creek - Chollas Creek to SD Bay Waterkeepers Initiative[1]	May-16	All participating schools are Title 1	600
I Love a Clean San Diego - Kicking Trash, Connecting Kids to Conservation	Feb-16	Title 1 schools reached	934
Living Coast Discovery Center Educational Program	May-16	At least 50% of the schools are Title 1	2,173
Maritime Museum of San Diego Educational Outreach	May-16	At least 50% of the schools are Title 1	790
Ocean Discovery Insitute - Wetland Avengers Field Trips[1]	May-16	At least 50% of the schools are Title 1	953
Ocean Discovery Institute - Ocean Science Explorers, City to Bay Scientists[1]	Feb-16	All participating schools are Title 1	950
Resource Conservation District– Watershed Education Program	May-16	At least 50% of the schools are Title 1	2,460
San Diego Coastkeeper San Diego Bay Environmental Education Kit	May-16	At least 50% of the schools are Title 1	806
The Green Machine	May-16	Title 1 schools reached	1,505
The Ocean Foundation/ The Ocean Connectors - Sea Turtle Education Services	May-16	All participating schools are Title 1	605
The Ocean Foundation/ The Ocean Connectors - Whale Exploration Foundation	May-16	At least 50% of the schools are Title 1	590
Wildcoast - Sea Turtle Education Program	May-16	At least 50% of the schools are Title 1	525
		TOTAL	17,810

[1]Educational programs specifically occurring within the Chollas Creek HSA (908.22). In addition,six watershed education presentations to 142 high school studentsby I Love A Clean San Diego also occured in Chollas Creek.

Table 12-9. Public Participation Opportunities During 2015-2016			
Opportunity	**Target**	**Target Reached?**	**Summary**
Port Environmental Committee	Collaborate	Yes	Collaboration was successfully achieved during the reporting period. At the 3 meetings held, an average of 25 stakeholders attended at each meeting. They represented non-profit groups, Port Tenants, academia, consultants and government agencies. Tehse stakeholders were given the opportunities to review documents, make comments on presentations, and provide input on the selection of enviromental projects benefitting San Diego Bay. Specific projects with opportunity for collaboratoin and relevance to the JRMP included presentations on the California Energy Commission/ Port Collaboarative, native oyster reefs, Climate Action Plan, aquaculture, the Regional Harbor Monitoring Program, mitigation banking and Port Environmental Fund sponsored projects.
Board of Port Commissioner (BPC) Meetings	Consult	Yes	Consultation was successfully achieved during the reporting period. At the BPC meetings held, a told of 92 public comments were made on environmental issues from stakeholders representing non-profit groups, private industry, and Port tenants. All of the comments were taken into consideration during the decision-making process by the Board of Port Commissioners.
Copper Reduction Program	Involve	Yes	Involvement was successfully achieved during the reporting period. Several stakeholders attended the Port's Clean and Green Boating Expo a key outreach event for the Copper Reduction Program. They represented nonprofit groups, Port tenants, local boating public and businesses, and the public. The Port also interacted with stakeholders through their participation in 4 other local boating-related community events: Day at the Docks, Earth Day at the Bay, San Diego Boat Show and the Sunroad Boat Show.
Integrated Pest Management (IPM) Committee	Collaborate	Yes	Collaboration was successfully achieved during the reporting period. On May 19, 2016, the Port sponsored IPM for Landscape Professionals seminar was attended by **117** gardening and landscape professionals. The participants learned about activity-specific BMPs, laws and regulations applicable to pesticide use. The seminar also highlighted the connection between water quality impacts and pesticide use throughout the tideland.

Table 12-11. 2015-2016 Port Staffing Expenditures by Program Component & Activity.

Category	Category Description	Total Spent
MUNICIPAL		
Administration	Administration includes general administrative activities, meetings, general reporting, and PGP staffing for the implementation of the Municipal Stormwater Permit.	$193,485
Municipal Inspections	Includes PGP staffing for storm drain inspections, site inspections (parks, Port facilities, etc.), special event inspections, departmental meetings, storm drain markers/GPS efforts, and BMP studies.	$37,618
Waste Management	PGP staffing to begin development of Waste Program	$7,388
BMP Implementation	General Services dept. staffing for street sweeping.	$198,782
BMP Implementation	General Services dept. staffing for bay debris.	$24,966
BMP Implementation	General Services dept. staffing for trash collection.	$776,882
Other expenditures	Includes PGP staffing for GIS and database management and GIS/Mapping/data utilization.	$2,370
CONSTRUCTION & PLANNING		
Compliance Inspections & Enforcement	Construction activities include meetings with contractors, Port engineers and construction staff, site inspections, follow-ups, and written correspondence.	$65,023
Project Planning & Engineering	Environmental project and proposal review, SUSMP applicability and the review of SWPPP and SUSMP documents.	$22,991
INDUSTRIAL / COMMERCIAL		
Industrial Compliance	Industrial compliance includes staff time for the implementation of the Industrial Permit for the TAMT, NCMT, and Cruise Ship Terminal.	$69,379
IGP Program Update	SWPPP template updates for marine terminals and facilities	$1,590
Compliance Inspections & Enforcement	Tenant compliance includes industrial and commercial inspections (including all follow-ups, written correspondence, meetings, etc.), and ICID tenant issues.	$33,115
EDUCATION		
Education & Outreach	Education includes Port staff training, adult education, children (school) education, regional education meetings, regional outreach efforts, internal and external outreach events, clean-up events, brochure development and website development.	$28,797
WATERSHED		
Administration	Watershed management includes staff time for meetings and report preparation, GIS/Mapping, WQIP strategies (PO-19, PO-20, PO-30, PO-43, PO-44, PO-46, PO-47) watershed education, watershed cleanup events (PO-39), MS4 Permit, etc.	$38,761

Table 12-11. 2015-2016 Port Staffing Expenditures by Program Component & Activity.

TMDL		
SIYB TMDL Implementation	SIYB TMDL for Dissolved Copper /Copper Reduction Program.	$136,936
SISP TMDL	TMDL bacteria sampling, meetings, reporting	$23,117
Chollas TMDL Collaboration	Chollas Creek TMDL for Diazinon, Dissolved Metals and Bacteria.	$4,581
URBAN RUNOFF & RECEIVING WATER MONITORING		
Regional Harbor Monitoring	Regional Harbor Monitoring includes staff time for meetings report preparation and review, coordination and planning.	$9,125
MS4 Permit Required Monitoring	Monitoring includes field work for dry weather monitoring and coastal monitoring, report preparation, ICID response to incoming calls and investigations resulting from complaints.	$7,900
Other Monitoring Programs	Monitoring includes participation in RWQCB San Diego Bay Strategy and San Diego Bay Debris Study	$2,075
	2015-2016 Total Staffing Expenditures	**$1,684,881**

Table 12-12. 2015-2016 Port External Expenditures by Program Component & Activity.

Component	Program Description	Total Spent
PERMITS & FEES		
Copermittee Regional Cost Share	Regional MOU cost share, Wet Weather Copermittee Mass Loading Station Monitoring Program and cost share for Bacterial Reference study.	$25,204
SD Bay Watershed Collaboration Cost Share	Watershed consultant support forcompleting and implementing San Diego Bay WQIP (Port portion of cost-share only)	$8,017
Permits	Fees for municipal, industrial and construction permits.	$8,425
EDUCATION		
Outreach/Education Support	Consultant support for staffing education & outreach efforts for the stormwater program.	$9,552
Ocean Discovery Institute (formerly Aquatic Adventures)	Fourth graders within the Port School Partnerships Program participate in "Wetland Avengers", a program that teaches students about wetlands in south San Diego Bay .	$37,032
I Love a Clean San Diego	"Kicking Trash: Connecting kids to conservation" program and watershed presentation to students	$22,284
Living Coast Discovery Center	Provides 40 classrooms teacher training and docent-lead tours of the Nature Center.	$67,800
The Ocean Foundation	Elementary school education program	$11,000
Green Machine Outreach Van	Mobile agriculture education program featuring I.P.M. & water cycle demonstrations to 43 schools along Chollas Creek.	$9,370
Groundwork SD - Chollas	Educational outreach program.	$9,793
I.P.M. Training Seminars	Coordinates and funds annual seminars for San Diego County pest controllers on Integrated Pest Management methods and pollution reduction.	$9,000
Maritime Museum Association of San Diego	Educational outreach program.	$20,000
Resource Conservation District	Brings interactive watershed model to classrooms for watershed and storm water demonstrations.	$14,593
Pro Peninsula/ Ocean Foundation	Sea turtle education program.	$7,584
San Diego Coastkeeper		$1,106
Chula Vista School District	Environmental Education Program	$12,400
WiLDCOAST	Provides sea turtle education to students in San Diego County.	$4,500
CONSTRUCTION SUPPORT		
Tenant Projects - Inspections & Support		$104,469
Capital Projects - Inspections & Support		$24,505
USMP and SWPPP Review	Review of SUSMP and SWPPP Documents, consultant support w/JRMP Report, Alternative Compliance Program (PO-42) and template development, and SWQMP Development.	$64,710
INDUSTRIAL COMMERCIAL SUPPORT		
Commercial/Industrial facilities inspection	Contracted services for assistance with conducting inspections of commercial and industrial facilities.	$29,012

Table 12-12. 2015-2016 Port External Expenditures by Program Component & Activity.

TMDL SUPPORT		
SIYB TMDL Implementation	Contracted services for implementation plan, compliance monitoring, reporting, and education efforts.	$196,428
Other TMDL related studies	Contracted services for review, implementation, and monitoring of existing or draft TMDLs (i.e., Shelter Island Shoreline Park).	$7,127
Chollas Creek TMDL Implementation	Port cost-share for Chollas Creek TMDL Compliance.	$4,394
SPECIAL STUDIES & INVESTIGATIONS		
Regional Harbor Monitoring	Compliance with RWQCB directive issued in July 2003.	$64,129
STORMWATER PERMIT MONITORING		
Outfall Monitoring	Includes coastal and targeted MS4 outfall monitoring and transitional monitoring.	$2,090
Industrial Monitoring and Review	Wet weather monitoring at Port Industrial Facilities also includes update to Industrial Stormwater permit (IGP) program and SWPPP review.	$122,158
WATERSHED & OTHER COLLABORATIVE EFFORTS		
SD Bay Watershed	Consultant support for Focused Priority Condition monitoring, and implementing watershed strategies (PO-23 and PO-47)	$65,814
Watershed group-related clean up events	A watershed-based activity sponsored and conducted by the Port as one if the San Diego Bay Watershed Copermittees.	$1,000
MUNICIPAL ACTIVITIES OPERATIONS & MAINTENANCE		
Stormwater Data Management	Contracted services for development and implementation of stormwater database.	$10,788
Trash Collection	Contracted services for waste pick-up, removal, and disposal.	$209,464
Recycling	Paper, glass, plastic, and aluminum recycling for Port facilities.	$16,290
Waste Collection	Baywide debris removal and clean-up programs - Operation Clean Sweep.	$20,000
Stormwater Training, Equipment & Supplies	Provides training for staff, equipment for monitoring projects, special studies, and ICID investigations. (analyte kits, field computers, Arc-pad, etc.), printed materials, meeting supplies, etc.	$4,468
MS4 Maintenance	Contracted services for inspections, maintenance, repair/replacement and cleaning of MS4 and Port owned BMPs.	$49,637
TOTAL		**$1,274,143**

12.3 PORT OF SAN DIEGO STRATEGIES

In FY 2016, the Port implemented strategies as identified in the San Diego Bay Watershed WQIP to address the watershed's Highest Priority and Focused Priority Conditions. In order to capture the benefits and efficiencies of standardized routines and requirements, a majority of the Port's strategies were implemented jurisdiction-wide; such as requiring the same minimum best management practices (BMPs) for construction sites regardless of location. The Port also identified targeted strategies focused on specific priority condition areas. Overall, the Port's strategies targeted trash, bacteria, and metals as the primary pollutants to address the WQIP's Highest and Focused Priority Conditions.

In June 2015, the Port updated its JRMP and incorporated the WQIP strategies thereby meeting the requirements of the Municipal Permit. All of the seventeen (17) strategies identified for FY 2016 were implemented along with eighteen additional (18) optional strategies. The two-page JRMP annual report form with supplemental Tables 12-1 through 12-12 and WQIP Strategies in Table 12-13 provide more information on the Port's activities in FY 2016.

<u>JRMP Implementation</u>

The Port's JRMP program was implemented in accordance with the Municipal Permit requirements. The Regional Board JRMP Annual Report Form and supplemental tables in Section 12.2 contain a more detailed account of the activities conducted and the programs implemented to address the inspection, monitoring, investigation, education, and enforcement requirements of the Municipal Permit.

Several notable accomplishments occurred during the FY 2016 reporting period. Collectively, 681 initial and follow-up inspections of 178 municipal, commercial/industrial facilities and 51 construction sites were completed. The Port inspected 97% of the entire municipal, commercial, and industrial facility inventory, including all of the high priority facilities identified in the inventory. Another 142 initial and close-out inspections were completed for special events. Six new priority development projects were completed within the reporting year resulting in an additional 12 acres of treated area.

In FY 2016, the Port continued to educate the public about pollution prevention and BMP implementation reaching over 153,283 people through 924 education activities. The Port also funded or hosted 16 cleanup events jurisdiction-wide, in which 1,748 people participated overall and approximately 16.5 tons of trash was removed. The municipal component resulted in an additional 1,168 tons of trash and debris being removed from tidelands and the bay.

The Port also conducted an internal audit of its storm water program in June 2016. Specifically, special events, construction, industrial/commercial and illicit discharge inspection processes were reviewed for compliance with the Port 2015 JRMP and internal standard operating procedures (SOP). Overall, the audit indicated that the inspections, notices, follow-up, and enforcement were processed in accordance with the Port SOPs and the 2015 JRMP. Recommendations were made to further refine the special events inspection process and refine the communication of corrective actions to inspected parties. The audit also recommended an additional quality check process to provide additional verification of the Port's facility inventory. All of these recommendations have been incorporated into the Port's SOP process.

Implementation of the updated JRMP posed several challenges that the Port is continuing to address. First, implementation of the revised JRMP program and incorporation of the finalized WQIP and BMP Design Manual that occurred mid-year required revised SOPs and additional education outreach both internally and with the regulated public. Updates to the storm water database to effectively track all the JRMP program elements, escalated enforcement versus routine enforcement, and WQIP strategies continues to be a challenge the Port is addressing. The Port worked on updates to its storm water database through FY 2016 and will continue through the next FY 2017 to address these issues.

In FY 2016, the Port issued 51 Administrative Citations and Work Orders which is a greater number of enforcement actions than in previous years. This is in part a result of the incorporation of the Enforcement Response Plan in the 2015 JRMP. Escalated enforcement at the municipal facilities was generally a result of greater attention to the presence of trash and debris at Port parks and parking lots. Routine cleaning of all the Port areas and facilities is already in practice however, the Port has also been ramping up its waste management program to address those issues and increasing the inspection frequency in those areas.

A majority of the escalated enforcement citations issued to commercial and industrial facilities in FY 2016 were mainly a result of missing employee storm water training documentation. In the past, this BMP would have triggered a (required corrective action) written warning to complete within a specified timeframe. In the 2015 JRMP, employee storm water training was identified as a minimum required BMP that triggers escalated enforcement. Although the Port sent out notifications to all the facilities in the inventory regarding required BMPs and employee storm water training requirements, and posted a bilingual storm water BMP training video on the Port website, however employee storm water training was still found to be the most frequently deficient BMP and resulted in escalated enforcement actions. It is notable however, that in most of the instances where employee training was deficient or missing, other BMPs were not. For this reason, in FY 2017, the Port has modified the employee storm water training to be a required minimum BMP but it will not be identified as a BMP that will trigger escalated enforcement. Instead, where employee storm water training is found to be deficient or missing, the Port will identify it as a required corrective action that will need to be completed within a specified timeframe in order for the facility to avoid further enforcement action.

Targeted Approach

The Port's approach to address the Highest or Focused Priority Conditions and their sources includes employing targeted efforts focused on specific priority condition areas along with the core (or optional) JRMP strategies. The following three strategies focused specifically on segments of the Port tidelands within the Physical Aesthetics Focused Priority Condition areas.

- PO-34. Baseline Trash Assessment and BMP Feasibility Pilot Study: This optional study was initiated in FY 2016 to identify potential need for structural or source control improvements at high-volume trash-generating areas within the 909.1 and 910.2 HAs. Results of the study are expected to inform the Port on potential program improvements and adjustments identify where BMP retrofits and installations are feasible, and plan for meeting the WQIP trash goals. In addition, the study serves as a template that could be applied jurisdiction-wide. The study is scheduled to be completed in FY 2017.
- PO-30. Program Assessment: The MS4 inspection and cleaning data from the past five years was evaluated to identify whether modifications to inspection and/or cleaning activities were needed to effectively address higher trash generating areas. This optional assessment was done in a phased approach by first assessing the Focused Priority Condition Areas, then evaluating jurisdiction-wide. Of the 780 MS4 components assessed jurisdiction-wide, thirty-one (31) met the prioritization criteria for increased inspection frequency (two times per year) and will be inspected at the higher frequency in FY 2017. However, none of the MS4 components meeting the criteria were located in the Physical Aesthetics Focused Priority Condition areas.
- PO-41. Structural Control: The Port installed a 950-foot custom fence that replaced a chain-link fence along the southern perimeter of the 95-acre Pond 20 site at 1400 Palm Avenue. The fence helps protect the Pond 20 area by preventing trash and debris from entering the area. The Port funded the project through its Capital Improvement Program. The new fence was designed with significant public input and incorporates local flora, fauna, and surfboards to enhance the site's unique, panoramic bay view.

In addition, while the majority of the strategies were implemented jurisdiction-wide, the Port was often able to track results by HA. This provided a more holistic evaluation of the Port's overall implementation efforts to specifically address each of the Priority Conditions in FY 2016. Additional information on the Port's efforts to address the Highest and Focused Priority Conditions is provided in Section 4.6 (Chollas Creek), Section 7 (Physical Aesthetics), and Section 8 (Swimmable Waters) of the San Diego Bay WQIP annual report.

Fiscal Analysis

The Port's overall expenditures for the FY2016 reporting period totaled approximately $3 million dollars. Municipal services, activities and operations comprised the bulk of the program, accounting for over 53% of overall expenditures. TMDL and special investigation efforts accounted for another 15%. Education, industrial and commercial program, and construction each comprised 9% of the overall expenditures. Over half of the fiscal expenditures went toward staffing (57%), with the remaining 43% going to pay for external consultant or contracted services for specialized program assistance.

In summary, it appears that the Port's JRMP program, as a whole, has been effective in addressing the Highest and Focused Priority Conditions and other priority water quality conditions during FY 2016. The Port's JRMP continues to evolve with time and staff continues to make improvements to processes, programs and assessments. As characteristics, policies, and procedures continue to change in the Port's tidelands jurisdiction, so will the Port JRMP program.

Table 12-13
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
JRMP (E.2-E.7) Strategies (E.3.b.(1)(a))								
Development Projects (including Priority Development Projects)								
PO-1	Implement Core JRMP Program for all development projects to ensure implementation of source control BMPs to minimize pollutant generation at each project and implement LID BMPs to maintain or restore hydrology of the area, where applicable and feasible.	For proposed development projects, the Port prescribed source control and LID BMP requirements during the project planning process and prior to project approval consistent with the Port BMP Design Manual. Implementation of BMPs will be incorporated into project approvals. Verification of BMP installation was conducted by Port staff. Refer to JRMP Section 4 and JRMP Appendix D Port BMP Design Manual. Optional strategies relating to Development include PO-18, PO-19, PO-20, and PO-47. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by the Port's Board of Commissioners (BPC). Permit-required strategy to be implemented jurisdiction-wide and continuously throughout permit term.	FY16	Implemented as planned, On-going	• 5 USMP (Urban Storm Water Mitigation Plan) documents approved (1 of the 5 was actually a SWQMP [Storm Water Quality Management Plan], under the new permit language) • One USMP document approved in 910.1 HA - Coronado Ferry Landing Restaurant SWQMP (construction has not started on this) • 115 acres treated by BMPs (12 acres of treated area added in 2015-2016)	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-2	For PDPs, administer a program requiring implementation of structural BMPs to control pollutants and manage hydromodification. Includes confirmation of design, construction, and maintenance of PDP structural BMPs.	For all PDPs, the Port prescribed treatment control BMP requirements as applicable and feasible during the project planning process and prior to project approval consistent with the Port BMP Design Manual. Implementation of BMPs will be incorporated into project approvals. Verification of BMP installation was conducted by Port staff. Refer to JRMP Section 4 and JRMP Appendix D Port BMP Design Manual. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit-required strategy to be implemented jurisdiction-wide and continuously throughout permit term.	FY16	Implemented as planned, Ongoing	The Port implemented the program as scheduled. The FY 2016 jurisdiction-wide construction inspection program results (Treatment Control BMPs, Inspections, and Verification of Maintenance) are provided in the Port's JRMP annual report form and supplemental Table 12-3. • 909.1 HA: Annual inspections to verify maintenance of BMPs occurred at one PDP project in this HA during the reporting period. The Port carried out an annual project inspection at the H Street Extension Project that required a follow-up to verify all required post-construction BMPs were installed. A follow-up inspection found no citations or escalated enforcement was required. • 910.1 HA: Inspections at two PDP projects occurred in this HA during the reporting period. The projects required annual verification of maintenance of BMPs. The BMPs were inspected and found to be maintained as necessary, and did not require corrective actions.	N/A	N/A	Yes
PO-3	Train all applicable departments annually on storm water requirements for all development projects	The Port conducted education efforts focusing on new development and redevelopment projects and their relationship to urban runoff impacts on water quality. See JRMP Sections 4.7.1 and 9.3.1. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit-required strategy to be implemented jurisdiction-wide and on an annual basis throughout the permit term.	FY15	Implemented as planned, On-going	The Port held seven trainings to a total of 102 staff during the reporting year. In addition to new development and redevelopment project information, topics also included a discussion on WQIP priority conditions and pollutants (trash, metals, and bacteria).	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-4	Conduct project closeout inspection for all development projects to verify that Trash, Metals, and Bacteria BMPs are properly implemented	Permit-required strategy to be implemented jurisdiction-wide and will be conducted on a continuous basis as part of the PDP project closeout inspection. Post construction inspections will be conducted at PDP sites to verify that any and all approved structural BMPs have been installed as approved by the Port. The close-out inspection will also verify that trash, metals, and bacteria BMPs are installed and functioning correctly where applicable. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by BPC.	FY16	Implemented as planned, On-going	The BMP Design Manual became effective in February 2016. Five projects were completed between February and June 2016. However, those projects were reviewed, approved and commenced prior to the BMP Design Manual effective date.	N/A	N/A	Yes
PO-5	Provide technical education and outreach to the development community on the design and implementation of the MS4 permit and WQIP requirements	Technical education and outreach to the development community was conducted and included outreach on design standards, Port BMP design manual, and WMAA. See JRMP sections 4.7.1, 9.3.11, and 9.3.2.1. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit-required strategy to be implemented jurisdiction-wide at least annually.	FY16	Implemented as planned, On-going	The Port held or sponsored five trainings for a total of 708 people during the reporting year.	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Construction Program								
PO-6	Implement Core JRMP Program to require and to oversee implementation of BMPs during the construction phase of land development. Includes inspections at an appropriate frequency and enforcement of requirements. [SWPPP Review, inspections, BMP Implementation]	Prior to the approval of a construction project, the Port requires that all applicable minimum and seasonally appropriate BMPs have been identified and the proposed methods of implementation are appropriate to the project site. The review also confirms that minimum BMPs that address WQIP priorities are included. Construction inspections are conducted at a minimum of monthly basis based on assessed threat to water quality. Inspection frequency may increase based on issues of non-compliance with respect to trash, metals, bacteria BMPs. ~~See Supplemental Attachment 1 for details on construction-related BMPs that will be implemented to address sources causing or contributing to the Highest or Focused Priority Conditions~~. See JRMP Section 5.5 and 5.6, and JRMP Appendix C- Enforcement Response Plan. Optional strategies relating to Construction include PO-18 and PO-20. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit-required strategy to be implemented jurisdiction-wide and on a continuous basis.	FY15	Implemented as planned, On-going	The Port implemented the Construction Program as scheduled. Overall, 349 construction inspections/69 follow-up inspections required (total of 418 inspections including follow-ups). No escalated enforcement measures were required on any project during FY 2015-2016.	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Existing Development								
Commercial / Industrial Facilities								
PO-7	Implement Core JRMP Program for existing development (commercial and industrial facilities) to require implementation of minimum BMPs that are specific to the facility, area types, and PGAs, as appropriate. Includes inspection of existing development at appropriate frequencies and using appropriate methods, maintenance of an existing development inventory, and enforcement.	The strategy involves implementing the existing development core program, and identifies the minimum BMPs and pollution prevention practices that the Port will require for existing facilities as well as the Port inspection and verification process. For facilities that are not considered a higher priority based upon the WQIP pollutants, inspections will occur at least once during the Permit cycle and at least 20% of the inventoried facilities inspected each year. See JRMP Section 7.5.1 and 7.6.1. Annual inspections were performed at facilities that are determined to be higher sources of trash, metals, and bacteria. See PO-21 for additional information. Other optional strategies relating to Construction include PO-18, PO-21, 44, 45, 47, and 48. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit-required strategy to be implemented jurisdiction-wide and on a continuous basis.	FY15	Implemented as planned, On-going	• Jurisdiction-wide: BMPs inspected at all commercial and/or industrial facilities jurisdiction-wide (76 commercial and 23 industrial) in reporting period. 93.5% BMPs properly implemented. Commercial • 909.1 HA: Of the three commercial facilities inspected, one facility required escalated enforcement. • 910.1 HA: Three of four commercial facilities are properly implementing BMPs to address trash, metals, and bacteria. One facility did require escalated enforcement. • 910.2 HA: One commercial facility was properly implementing MS4 Permit required BMPs Industrial • 908.22 HA: Within Chollas Creek HSA, one industrial facility was properly implementing MS4 Permit required BMPs • 909.1 HA: Two of six industrial facilities are properly implementing BMPs to address trash, metals, and bacteria. Of the four facilities needing follow-ups, only two required escalated enforcement. *Jurisdiction-wide commercial and industrial facilities inspection information is located in the Port of San Diego's JRMP annual report form and supplemental Table 12-4. All non-compliance issues requiring corrective enforcement actions were resolved and closed.	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Municipal Areas & Facilities								
PO-8	Implement Core JRMP Program for existing development (municipal facilities) to require implementation of minimum BMPs for municipal facilities that are specific to the facility, area types, and PGAs, as appropriate. Includes inspection of the municipal facilities at appropriate frequencies and using appropriate methods, maintenance of a facility inventory and enforcement.	The strategy involved implementing the existing development core program, and identified the minimum BMPs and pollution prevention practices that the Port will require for existing facilities as well as the Port inspection and verification process. For facilities that are not considered a higher priority based upon the WQIP pollutants, inspections will occur at least once during the Permit cycle and at least 20% of the inventoried facilities inspected each year. See JRMP Section 6.5 and 6.6. ~~Please see Supplemental Attachment 1 for details on minimum BMPs that will be implemented to address sources causing or contributing to the Highest or Focused Priority Conditions.~~ Annual inspections will be performed at facilities that are determined to be higher sources of trash, metals, and bacteria. Those facilities are designated as “high priority” in the facility inventory. See PO-21 for additional information. In addition, Optional strategies relating to municipal facilities include PO-22, PO-23, PO-24, PO-25, PO-26, PO-28, PO-31, PO-32, PO-46, and PO-47. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit-required strategy to be implemented jurisdiction-wide and will be on a continuous basis.	FY15	Implemented as planned, On-going	• Jurisdiction-wide: BMPs inspected at 63 facilities and 18 parks. 92% of the municipal facility inventory was inspected in FY 2016. • 909.1 HA: Nine of 15 facilities are properly implementing BMPs to address trash, metals, and bacteria. All three parks properly implemented BMPs to address trash, metals, and bacteria • 910.1 HA: Nine of 10 facilities are properly implementing BMPs to address trash, metals, and bacteria. All four parks properly implemented BMPs to address trash, metals, and bacteria *Jurisdiction-wide commercial and industrial facilities inspection information is located in the Port of San Diego’s JRMP annual report form and supplemental Table 12-4.	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-9	Provide List of BMPs for Special Events with requirements for trash, metals, and bacteria, and ensure compliance thru inspections	The strategy involved reducing and/or preventing the discharge of high priority pollutants from special events of 500 or more people on Port Tidelands. The strategy involved establishing a set of designated BMPs and conducting inspections to verify compliance. See JRMP Section 6.3.6 and 6.5.1. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit-required strategy to be implemented jurisdiction-wide and on a continuous basis.	FY15	Implemented as planned, On-going	• BMP list was developed and distributed to special events coordinators • Jurisdiction-wide: A total of 72 special events were held at ten parks and two parking lot/street locations during FY 2016. • 908.2 HA: Of the 58 special events in 908.21 HA, nine special events required follow-up. Seven of the follow-up inspections were for trash and bacteria related issues. Two special events were also issued a citation. • 909.1 HA: Of the eight special events in 909.1 HA, none of the events required follow-up inspections. However, four events were out of compliance for not submitting training and BMP implementation records. • 910.1 HA: Of the three special events in 910.1 HA, none required follow-up inspections. However, two of the three events were out of compliance for not submitting training and BMP implementation records. *Jurisdiction-wide special events inspection information is located in the Port of San Diego's JRMP annual report form and supplemental Table 12-5. All non-compliance issues requiring corrective enforcement actions were resolved and closed.	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
MS4 Infrastructure								
PO-10	Implement Core JRMP Program for MS4 infrastructure (inspection and cleaning) for water quality improvement.	The core program involves the inspection and cleaning of the MS4 and associated BMPs that the Port owns and operates. It also includes record keeping and tracking of those activities for MS4 infrastructure. See JRMP Section 6.3.5, 6.5.1, and 6.6.4. In addition, optional strategies relating to the MS4 infrastructure include PO-30, PO-45, and PO-47. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit-required strategy to be implemented jurisdiction-wide and on a continuous basis.	FY15	Implemented as planned, On-going	• 780 High priority MS4 structures inspected • 2.2 miles of MS4 conveyance cleaned • 31 MS4 and BMPs inspected found with accumulated trash exceeding cleaning criteria • MS4 data assessment (PO-30 optional) found the cleaning frequency appears adequate for all current MS4 and BMP structures in the 909.1 or 910.2 HAs. *Jurisdiction-wide MS4 infrastructure information is located in the Port of San Diego's JRMP annual report form and supplemental Table 12-6.	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Roads, Streets, and Parking Lots								
PO-11	Implement Core JRMP Program for Street and Parking Lot Maintenance. Includes inspection and cleaning of public streets, paved roads, and parking lots.	The Port has identified minimum BMPs for streets and parking lot maintenance as well as an inspection process to verify compliance. The Port conducted annual drive-by inspections of the streets, roads, and parking lots that are owned and operated by the Port. Although roads and streets will receive an annual drive-by inspection, Port staff or contractors performed street sweeping on a weekly basis. The Port tracked the areas in which the street sweepers operate and tabulates the number of curb miles swept. See JRMP Sections 6.5.1, 6.6.2, and 6.5.11. ~~See Supplemental Attachment1 for details on BMPs that will be implemented to address sources causing or contributing to the Highest or Focused Priority Conditions~~. In addition, optional strategies relating to the MS4 infrastructure include PO-24, PO-25, PO-28, and PO-29. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit-required strategy to be implemented jurisdiction-wide and on a continuous basis.	FY15	Implemented as planned, On-going	• 17,892 total curb-miles swept • 860 parking lots swept; • 133.5 tons of waste and litter removed	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Pesticide, Herbicides, and Fertilizers BMP Program								
PO-12	Implement Core JRMP Program requiring implementation of BMPs to address application, storage, and disposal of pesticides, herbicides, and fertilizers on commercial, industrial, and municipal properties. Includes education, permits, and certifications.	The Port has an Integrated Pest Management policy to limit and/or eliminate the use of toxic substances and has developed minimum BMPs to implement to address potential discharges of pesticides, herbicides, and fertilizers. See JRMP Sections 6.5.1 and 6.5.14. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit-required strategy to be implemented jurisdiction-wide and on a continuous basis.	FY15	Implemented as planned, On-going	On May 19, 2016, the Port sponsored IPM for Landscape Professionals seminar was attended by 117 gardening and landscape professionals. The participants learned about activity-specific BMPs, laws, and regulations applicable to pesticide use. The seminar also highlighted the connection between water quality impacts and pesticide use throughout the tidelands.	N/A	N/A	Yes
Retrofit and Rehabilitation in Areas of Existing Development								
PO-13	Develop and implement a strategy that identifies candidate areas of existing development for retrofit and rehabilitation opportunities to address trash, bacteria, and metals	The retrofit and rehabilitation strategy includes methods for identifying and assessing potential retrofit projects in existing development areas. Retrofit project selection will be based upon a variety of factors including proximity to highest or focused priority conditions, potential pollutant load removal effectiveness, and feasibility of implementation. See JRMP Section 6.8, 7.8, and JRMP Appendix H. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit required administrative update to be implemented jurisdiction-wide and on a continuous basis.	FY15	Implemented as planned, On-going	• Completed development of program and submitted June 2015 with Port of San Diego JRMP Update in Appendix H. • Ordered inlet BMPs at Tenth Avenue Marine Terminal.	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Illicit Discharge, Detection, and Elimination (IDDE) Program								
PO-14	Implement Core JRMP Program for IDDE program. Requirements include: maintain MS4 map, identify and report illicit discharges, maintain a hotline for public reporting of illicit discharges, monitor MS4 outfalls, and investigate and address any illicit discharges. When sewage is detected, identify source and implement measures to eliminate sources.	Investigate and eliminate dry weather discharges and illegal connections to the MS4 as reported to the Port or identified by Port staff. The Port utilizes appropriate enforcement actions to achieve compliance such as Administrative Citations with or without fines and corrective actions. See JRMP Chapter 3 and JRMP Appendix C. IDDE related BMPs are also included in the Construction, Development, and Existing Development components of the JRMP. This strategy also relates to PO-15 and PO-16. See Supplemental Attachment 1 for IDDE related BMPs that will address sources causing or contributing to the Highest or Focused Priority Conditions. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit-required strategy to be implemented jurisdiction-wide and on a continuous basis.	FY15	Implemented as planned, On-going	The Port implemented the IDDE Program as scheduled. There were 24 IDDE investigations in FY 2016. The FY 2016 jurisdiction-wide IDDE program results are provided in the Port's JRMP annual report form and supplemental Table 12-1. 909.1 HA: The Port was notified two times of discharges at facilities in this HA during the reporting period. The incidents were investigated and found to be either unjustified or did not require further action. 910.1 HA: The Port was notified once in this HA during the reporting period of an incident at a construction site was investigated and found unjustified and did not require further action. A second incident was observed during the Persistent Outfall Monitoring Program by Port staff and reported to the City of Coronado.	N/A	N/A	Yes
Enforcement Response Plan								
PO-15	Develop and implement the Enforcement Response Plan [escalating enforcement responses; statutes, ordinances, permits, contracts, orders, and other requirements].	The Plan includes escalated enforcement process for violations from sources related to bacteria, metals, and trash. The strategy also includes an update. See JRMP Appendix G. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit required administrative update to be implemented jurisdiction-wide and implemented on a continuous basis.	FY15	Completed, and implemented as planned, On-going	Completed development of plan	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-16	Update Port's Storm Water Ordinance	The Port's storm water ordinance was updated to provide Port legal authority to enforce the JRMP and the requirements of the Permit. See JRMP Section 2.2 and JRMP Appendix B. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit required administrative update to be implemented jurisdiction-wide and completed prior to JRMP submittal.	FY15	Completed as planned.	Completed update	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Public Education and Participation								
PO-17	Implement Core JRMP Program for Education and Outreach program to promote and encourage development of programs, management practices, and behaviors that reduce the discharge of pollutants in storm water prioritized by high-risk behaviors, pollutants of concern, and target audiences. ~~Staff training:~~ Municipal Training: ~~Development Planning, Municipal Construction Activities, Municipal Industrial/Commercial Activities, Municipal Other Activities~~ Educational Outreach: Industrial & Commercial Owners & Operators; Residential Community & General Public; School Children; Underserved Audiences	Program will promote public support of the Port's water quality protection efforts through outreach and education as they conduct Port employee-specific training, and promote participation of the public. The education program is tailored towards specific target audiences. Topics also include a discussion on WQIP priority conditions (trash, metals, and bacteria). The strategies include core jurisdictional programs that meet baseline permit requirements which will be implemented throughout the permit term and strategies that enhance the program or focused efforts. See JRMP Chapter 9. Optional public education and participation strategies include PO-24, PO-25, PO-27, PO-33, PO-35, PO-36, and PO-37. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Permit-required strategy to be implemented jurisdiction-wide and on a continuous basis.	FY15	Implemented as planned, On-going	*Jurisdiction-wide public education and outreach FY 2016 information is located on the Port of San Diego's JRMP annual report form and in supplemental Tables 12-7, 12-8, and 12-9. Jurisdiction-wide overall education activities total: • 92 education efforts annually; • 153,283 people reached • Port staff created an approximately 15 minute bi-lingual (English and Spanish) training video "*Stormwater Best Management Practices (BMP) Training for Industrial and Commercial Facilities*" in FY 2016 and has shown it at a number of training events for commercial and industrial tenants and Port staff. https://www.portofsandiego.org/environment/stormwater/302-stormwater-management-program.html or at https://www.youtube.com/watch?v=Xytid-LlxMk	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Non-JRMP Strategies (Optional Strategies, B.3.b(1)(b))								
Non-structural								
PO-18	Add BMP to construction BMPs that requires covering material stockpiles of treated wood during wet weather	Where material stockpiles include treated wood, the concentrated discharge of metals that may be leached from the wood will be minimized by covering the stockpile. See JRMP Section 5.6. ~~Refer to Supplemental Attachment 1 for details on construction-related BMPs that will be implemented to address sources causing or contributing to the Highest or Focused Priority Conditions.~~ This strategy is planned for implementation so no trigger is needed. Funding and resources have been secured for FY2015. Funding for future fiscal years is contingent on annual budget approval by BPC. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide and on a continuous basis.	FY15	Completed as planned.	Completed addition to construction BMPs	N/A	N/A	No
PO-19	Require install shutoff irrigation sensors (e.g., Cal-Sense) for MM/CIP development projects. [CAP Water Conservation Measure (WC 1.3)][1]	This strategy will assist in eliminating non-storm water discharge by requiring the irrigation sensors, where applicable, to development plans. This strategy will be triggered upon identification of new landscape area in Port sponsored major maintenance or capital improvement projects. Funding and resources required include cost for equipment, design, installation, and routine maintenance. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide and as-needed.	FY17	N/A	N/A	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-20	Adopt Construction and Demolition Recycling Ordinance or include language into general requirements for all projects [CAP Waste Reduction and Recycling Measure (SW2)][1]	This strategy will focus on providing direction to development and construction projects regarding how to manage waste and recyclable materials. This strategy will be triggered following an evaluation of potential conflicts with member cities. If member cities have existing ordinances, the Port may elect to follow the corresponding city's ordinance. Funding and resources have been secured for FY2016 and will be requested for FY2017. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide and one-time.	FY17	N/A	N/A	N/A	N/A	Yes
PO-21	Perform annual inspection of commercial, industrial, and municipal facilities that are higher sources of trash, metals, and bacteria	The frequency of inspections will be expanded from the baseline frequency (at least once during the permit cycle) to annually for higher sources of trash, metals, and bacteria. Facilities that may have higher sources of trash, metals, and/or bacteria were identified through standard operating procedures developed by Port staff. The strategy includes ensuring proper implementation of minimum BMPs that are specific to the facility, area types, and Pollutant Generating Areas (PGAs), and, as appropriate; enforcement of violations; and providing education as-needed. This strategy is planned for implementation, so no trigger is needed. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide.	FY16	Implemented as planned, On-going	• Of the 184 facilities in the Port's inventory, 178 were inspected. All high priority facilities (those that may have higher sources trash, metals, and/or bacteria) were inspected in FY 2016. • 92.9% facilities inspected had properly implemented BMPs to address trash, metals, and bacteria • Port staff is currently analyzing inspection data and the priority levels associated with the facilities within the tidelands to determine how many facilities will be inspected in FY 2017. Efforts are also underway to determine any changes to the Ports facility inventory which will also determine the number of inspections that will take place in FY 2017.	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-22	Continue pet waste bag dispensers in parks	The strategy addresses pet waste in municipal areas and includes ensuring proper installation, maintenance, and restocking of dispensers. Port staff periodically reevaluates the locations of dispensers and where new dispensers may be needed in the future. This strategy has been planned for implementation, so no trigger is needed. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide.	FY15	Implemented as planned, On-going	• 74 cases of pet waste bags were purchased in FY16 • 444,000 bags were dispensed in public parks within Port tidelands.	N/A	N/A	Yes
PO-23	Implement Preventative Maintenance (PM) Plan to prevent backups in Municipal public restrooms	The strategy includes implementing a janitorial and preventative maintenance services plan for public restrooms on Port Tidelands to prevent waste material generated from public restroom facilities from entering into storm water conveyance system. This strategy has been implemented, so no trigger is needed. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, jurisdictional Non-Permit Required JRMP Strategy to be implemented jurisdiction-wide.	FY15	Implemented as planned, On-going	• New janitorial contract (three year term) started in FY 2016. The new Scope of Services for janitorial services has Environmental Requirements section (Section C – Article 10 requirements and environmentally preferred products), and includes implementing measures to prevent waste material generated from restroom facilities at the 18 public parks maintained by the Port of San Diego from entering the storm drains. The company maintains the restrooms three times daily between May 1through September 30. The rest of the year, the cleaning frequency is two times per day and trash enclosures will be maintained three times per week. • Eight work orders were issued for sewer line clean outs jurisdiction-wide. All issues were resolved.	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-24	Development of BMP guidance document for general services staff conducting minor maintenance operations	This strategy involved the development of a guidance document to help guide General Services staff in implementing the necessary BMPs procedures to mitigate the discharge of contaminated debris, trash, and potential chemicals during minor maintenance and construction activities. The document will provide guidance on selecting the appropriate BMPs, as well as proper BMP implementation, operation, and maintenance This strategy is planned for implementation, so no trigger is needed. Funding and resources have been secured for FY2016. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide.	FY16	Completed as planned.	Completed	N/A	N/A	No
PO-25	Train general services staff on proper BMP implementation during minor maintenance operations	This strategy involved training General Services staff on the implementation of a BMP guidance document to use as a guide for selecting, implementing, and monitoring BMPs. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide.	FY16	Implemented as planned, On-going	The Port held one training event to 88 staff in the reporting period. The training included guidance on identifying the BMPs to implement to address specific sources of metals, bacteria, and trash associated for each minor maintenance activity.	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-26	Conduct Trash Receptacle Assessment in municipal areas	This strategy will identify the current waste management practices in municipal facilities and areas (i.e., parks) and determine whether the size, number, and location of the receptacles provided are adequate. Where improvements are required, the assessment will identify potential options to address deficiencies. This strategy is planned for implementation, so no trigger is needed. Funding and resources have been secured for FY2016. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide.	FY16	Implemented as planned, Scheduled to be complete in FY 2017	The assessment was initiated in FY 2016. • Assessment scope of work developed spring 2016 • Consultant tasked with project and initiated assessment in May 2016	N/A	N/A	Yes
PO-27	Develop a process to improve data management for tracking waste and materials diverted from waste stream and landfills [CAP Waste Reduction and Recycling Measure (SW)][1]	The strategy includes identifying effective and efficient use of trash receptacles that are specific to the area types, pollutant generating activities (PGAs), and/or event, as appropriate. The goal of this strategy is to provide recommendations to be implemented to address the WQIP Focused Priority Conditions (Physical Aesthetics and Swimmable Waters (bacteria)) and the State-led Trash Amendments. This strategy is planned for implementation, so no trigger is needed. Funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide.	FY17	N/A	N/A	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-28	Replace/upgrade current maintenance equipment, such as street sweeper or power washer, to new, more efficient and effective options	This strategy involves the acquisition of maintenance equipment that is more efficient and effective than the equipment currently in use by Port's General Services Department (GSD). Equipment acquisition will be based on the GSD's equipment replacement schedule and the BPC approval of funds. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide.	FY16	Implemented as planned, On-going	The Port purchased (1) Side-Loader Refuse Truck in FY 2016. The vehicle provides multiple benefits for other programs, such as the Port's Climate Action Plan (CAP). The vehicle is fueled by a cleaner alternative fuel (CNG) which contributes to the CAP's Green House Gas (GHG) emissions reduction goals. In FY 2015, the Port also purchased a new regenerative air street sweeper.	N/A	N/A	Yes
PO-29	Replace all Port owned/leased vehicle brake pads with copper-free brake pads	As copper-free brake pads become commercially available, implement installation of copper-free brake pads on Port owned or leased vehicles to reduce pollution deposition. This strategy will be triggered based on availability of effective copper-free brake pads and equipment replacement schedule. Funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide.	FY17	N/A	N/A	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-30	Evaluate MS4 inspection and cleaning locations and adjust as-needed for higher trash generating areas	This strategy will enhance the current program through an annual jurisdiction-wide evaluation of the inspection and maintenance activities for catch basins, storm water inlets, and other storm water conveyance structures the Port of San Diego owns and operates within the Tideland boundary. The annual evaluation of the MS4 program data will enable the Port to identify whether modifications to inspection and/or cleaning activities are needed and to be implemented (i.e., change in frequency or location) to effectively address higher trash generating areas. This strategy is planned for implementation, so no trigger is needed. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, jurisdictional program enhancement to be implemented in a phased approach, targeted areas then jurisdiction-wide.	FY16	Implemented as planned, On-going	31 MS4 and/or BMP structures were identified for increased inspection frequency (two times per year), based on analysis of past five years of MS4 monitoring data. Structures that had greater than 50% accumulation for at least two of the five years, or structures that required cleaning three or more times in five years, were determined to require increased inspection frequencies (none of these structures were located in HSAs 909.1, 910.1, or 910.2).This analysis was performed for all municipal MS4s on Port of San Diego Tidelands.	N/A	N/A	Yes
PO-31	Update Power-washing Standard Operating Procedure Manual	This strategy will provide updates to the Port's General Services Department on new requirements and restrictions on power-washing operations. This strategy is planned for implementation, so no trigger is needed. Funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide.	FY17	N/A	N/A	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-32	Create Standard Operating Procedure for proper washout procedures in public restrooms	This strategy will create a standard operating procedure, or SOP, for General Services staff and contractors to follow when maintaining public restrooms. This strategy is planned for implementation, so no trigger is needed. Funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, additional Non-Permit Required Jurisdictional Strategy to be implemented jurisdiction-wide.	FY17	N/A	N/A	N/A	N/A	Yes
PO-33	Improve consistency and content of websites to highlight permit requirements and facilitate public reporting	Port staff regularly evaluates the website content and provide updates to ensure that the information on the website remains current and easy to find. In addition, staff collaborates with other Copermittees to improve the consistency in messaging and content on agency websites on a watershed and regional level as part of this ongoing activity. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide.	FY16	Implemented as planned, On-going	• The Port participated in the watershed workgroup to provide updates for the public on San Diego Bay WMA WQIP on the Project Clean Water website. • A new Port website is under development. The new website will be designed to improve the public's ability to find information quickly and facilitate public reporting.	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-34	Site/Area prioritization study to identify high volume trash areas	This study will assist the Port to prioritize areas under its jurisdictional authority that are high volume trash areas to help focus resources and potentially install structural controls, where feasible. This strategy is planned for implementation, so no trigger is needed. Funding and resources have been secured for FY2016. Optional, jurisdictional program enhancement to be implemented in a phased, targeted approach then jurisdiction-wide.	FY16	Implemented as planned, Scheduled to be complete in FY 2017	Study was initiated in FY 2016: • Study scope of work developed December 2015 • Consultant tasked with project and initiated study in February 2016. • Field work completed in FY 2016, but final report available in first quarter of FY 2017	N/A	N/A	Yes
PO-35	Sponsor, conduct, and host cleanup activities (Operation Clean Sweep, Coastal Cleanup Day, Creek to Bay, etc.). Sponsor regional/watershed collection events for large items or items that may otherwise be illegally dumped.	The Port provided funding to sponsor various cleanup events and/or participate by soliciting volunteers, working as site captains, and participating in the cleanup events. Collection events collect large, unwanted household items (e.g., refrigerators, mattresses, etc.), vegetation, and other debris with the intent of preventing illegal dumping of these items in the San Diego Bay WMA. This strategy may be implemented if the following triggers are met: 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, and 3) partners have been identified and formal MOUs have been developed, as-needed. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by Port BPC. WMA (Multi-jurisdictional) Optional Program Enhancement to be implemented jurisdiction-wide.	FY16	Implemented as planned, On-going	• Jurisdiction-wide: 16 cleanup and/or collection events on Port Tidelands, 1,748 number of people reached/participated, Approximately 16.5 tons of trash collected jurisdiction-wide (includes recycled waste) • 908.22 HSA: Approximately 962 lbs. of trash in 2 events were collected by an estimated 100 people in Chollas Creek • 909.1 and 910.2 HA: Approximately 2.7 tons of trash in nine events were collected by an estimated 398 people • 910.1 HA: Trash was collected by an estimated 60 people at one event in 910.1 HA	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-36	Develop and conduct public perception survey on Physical Aesthetics and Swimmable Waters Conditions	This strategy will be implemented to understand public opinions about the current status of the focused priority conditions and to help the RPs identify how they may adapt their programs to improve both water quality and public perception. This strategy will be triggered upon final approval on a MOU by all RPs involved, the consultant selection and contract(s), and scope of work. Funds/resources needed for this strategy include staff time and/or consultant expenses to develop and implement the survey. WMA (Multi-jurisdictional) Optional, Additional Non-Permit Required Strategy to be implemented in targeted drainage areas.	FY17	N/A	N/A	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-37	Support organizations to address homelessness and to provide resources and educational materials to address trash and bacteria	This strategy involved efforts to research and implement outreach and intervention services through near, medium, and long term strategies to assist the homeless population along the Tidelands, while coordinating efforts at a regional level. This strategy may be implemented if the following triggers are met: 1) funding to address MS4 discharges is identified and secured, 2) staff resources are identified and secured, 3) partners have been identified and formal MOUs have been developed, and 4) consensus and community support has been achieved. Resources necessary to implement this strategy include Port staff to coordinate with the regional effort and consultant or third party assistance to implement projects. Projected funding needs may be met through grant funding, support from community groups or other institutions, or the Port's annual budget. Funding is secured on an annual basis and is contingent on annual budget approval by Port BPC. WMA (Regional) Optional, Additional Non-Permit Required Strategy to be implemented jurisdiction-wide.	FY16	Implemented as planned, On-going	Since 2014, the Port has sponsored Alpha Project's efforts to provide outreach and intervention services to the homeless on Port tidelands. Alpha Project provides services through their Outreach Team at various hours during the day to capture the most accurate statistics possible. The Port's sponsorship supports Alpha Project programs to provide the homeless with food/water, hygiene supplies, blankets, clothing, housing, work placement, medical and mental health referrals. In addition to the humanitarian aspects of providing these services, MS4 and receiving water quality may be improved due to reduced trash or waste as a result of these efforts.	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-38	Participation in the San Diego Regional Reference Stream Study	WMA (Regional) Optional, project that focuses on collecting data necessary to derive reasonable and accurate numeric targets for bacteria, nutrients, and heavy metals by referencing natural, local conditions. This study will provide a scientific basis for evaluating bacteria compliance levels in the Bacteria TMDL. The results of this study are used to support the forthcoming reopener of the recently adopted Bacteria TMDL and to support numeric targets in future TMDLs for bacteria, nutrients, and metals. This strategy has been planned for implementation, so no trigger is needed. Funding and resources have been secured for FY2016.	FY15/16	Implemented as planned, Completed in FY 2016	The Port collaborated with other Copermittees in the San Diego region in a workgroup and cost share for the Reference Stream Study. The Reference Stream Study report was completed in June 2016. Results of the Reference Stream Study are discussed in Appendix 4, Section 7.1.	N/A	N/A	No

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-39	Participation in the Southern California Coastal Water Research Project's (SCCWRP) San Diego Bay Trash Study.	The Trash Study is a comprehensive bay-wide study to help managers understand the current extent and magnitude of plastic-based debris accumulation and takes into account seasonal changes to better understand the plastic debris conditions throughout San Diego Bay and its upland contributing areas. SCCWRP will initially assess targeted geographic areas and may include (1) assessment of current conditions to provide a baseline to demonstrate progress in the future, (2) identification of high-priority areas for targeted strategy implementation, and (3) identification of commonalities among jurisdictions for potential collaborative outreach opportunities. This strategy has been planned for implementation, so no trigger is needed. Funding and resources were secured for FY2015. WMA (Multi-jurisdictional) Optional, Program Enhancement to be implemented jurisdiction-wide.	FY15	Implemented as planned, Not completed in FY 2016	• Data collection completed in FY 2016 and data analysis initiated • Analysis completed and final report to be available in FY 2017	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-40	Delisting feasibility study for Tidelands Park, Coronado	WMA (Multi-jurisdictional) Optional, Non-Permit Required Strategy to be implemented in targeted drainage areas (Tidelands Park, Coronado). The study will assess available historical AB411 monitoring data from the County of San Diego's Department of Environmental Health to determine the number of exceedances of *Enterococcus* WQOs that have occurred at EH-070 and to identify whether the results warrant consideration of removal of the water body from the SWRCB 303(d) List (i.e., de-listing). This strategy has been planned for implementation, so no trigger is needed. Resources necessary to implement this strategy include Port staff or consulting team. Funding and resources have been secured for FY2016.	FY16	Implemented as planned, Not completed in FY 2016	Dry Weather: Based on the results of this assessment of *Enterococcus* data using three methods from the SWRCB de-listing policy (SWRCB, 2004), the site is below allowable exceedances for single-sample, rolling 30-day geometric mean, and monthly geometric mean. This indicates the section of Tidelands Park on the 303(d) list could be eligible for de-listing in dry weather for *Enterococcus* indicator bacteria. Wet Weather: Limited wet weather monitoring data existed prior to FY 2016. The San Diego Bay WQIP Monitoring and Assessment Plan provided information on the wet weather monitoring approach, which was initiated in FY 2016. The results of the FY2016 monitoring are discussed in Appendix 4, Section 6.	N/A	N/A	Yes
Structural								
PO-41	Install fence along southern parameter of Pond 20 to capture trash and debris	The Port of San Diego installed a custom fence to improve the South San Diego site known as Pond 20. This strategy has been implemented, so no trigger is needed. Funding and resources were secured for FY2015. Optional, jurisdictional program, to be implemented in a Specific drainage area (Otay Sub-watershed).	FY15	Completed as planned.	Installation completed. • The 950-foot fence replaced a chain-link fence and runs within Caltrans' right-of-way along the southern perimeter of the site at 1400 Palm Avenue. • Grates were also installed at stormdrain inlets to capture trash and debris.	N/A	N/A	No

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-42	Develop an alternative compliance program framework that provides options for PDPs	The WMAA provides alternative compliance methods in lieu of meeting structural BMP design standards and/or hydromodification management criteria on the project site. The San Diego County Copermittees have collectively funded and provided guidance for development of a regional WMAA. This strategy is planned for implementation, so no trigger is needed. Funding and resources have been secured for FY2016. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide.	FY16	Completed as planned.	Completed	N/A	N/A	No
PO-43	Implement an alternative compliance program providing options for PDPs	Administer an alternative compliance program for on-site structural BMP implementation (includes identifying WMAA candidate projects). This strategy is planned for implementation, so no trigger is needed. Funding for future FY 2017 is contingent on annual budget approval by Port BPC. Optional, jurisdictional program enhancement to be implemented jurisdiction-wide.	FY17	N/A	N/A	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-44	Develop and implement a retrofit program to encourage installation of water conservation measures in existing businesses (e.g. xeriscaping, irrigation sensors, etc.) [CAP Water Conservation Measure (WC 1.3)][1]	This strategy involves the development and implementation of the retrofit program to promote water conservation and source abatement. Once the program is developed, Port staff will coordinate with industrial and commercial tenants to voluntarily installing water conservation measures. This strategy will be triggered either by identification of grant funding or may be included as a corrective action for facilities that have repeat violations related to irrigation runoff BMPs. Projected funding needs may be met through grant funding, support from community groups or other institutions, or PGP's annual budget. All Port funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, jurisdictional program enhancement to be implemented in phased, targeted areas then jurisdiction-wide.	FY17	N/A	N/A	N/A	N/A	Yes

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-45	Installation of structural treatment control BMPs in storm drains in high priority areas to address trash, metals, and bacteria	The strategy will address industrial and commercial facilities that have repeat violations for discharges, specifically metals, and bacteria. The facility may be required to install structural treatment control BMPs to reduce or eliminate discharges of pollutants to the MS4 causing or contributing to an impairment of water quality standards. This strategy will be triggered based on facility inspections history, repeat violations and site location and conditions. The industrial or commercial facility tenant will be responsible for providing the necessary funding to implement required systems. Optional, jurisdictional program to be implemented in phased, targeted areas then jurisdiction-wide.	FY16	Implemented as planned, On-going	No facilities triggered this requirement in the reporting period.	N/A	N/A	Yes
PO-46	Retrofit trash enclosures, where applicable, in municipal areas	This strategy will be triggered according to results of PO-26 and PO-34 and identification of the appropriate action to be taken as result of retrofit program. Projected funding needs may be met through grant funding, or PGP or GS annual budget. Resource needs to implement the project include equipment (i.e., trash receptacles) and staff or contract resources to install and maintain. All Port funding for future fiscal years is contingent on annual budget approval by the BPC. Optional, jurisdictional program enhancement to be implemented in phased, targeted areas then jurisdiction-wide.	FY18	N/A	N/A	N/A	N/A	No

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-47	Installation of inlet inserts in storm drains in high priority areas	Trigger is based on results of PO-34 and availability of funding. Projected funding needs may be met through grant funding, or PGP or GS annual budget. Resource needs to implement the project include equipment (i.e., inlet inserts) and staff or contract resources to install and maintain. All Port funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, additional non-permit required to be implemented in phased, targeted areas then jurisdiction-wide.	FY18	N/A	N/A	N/A	N/A	No
PO-48	Installation of trash skimmers in marina basins	Optional, non-permit required to be implemented in a phased approach, implemented first in marinas in areas of the Port specified under the Physical Aesthetics Focused Priority Condition, then will assess application jurisdiction-wide. The trash skimmers will help to collect trash and debris found within marina basins. This strategy will be triggered if marinas are identified as high trash generating area in assessment Projected funding needs may be met through grant funding, or PGP or GS annual budget. All Port funding for future fiscal years is contingent on annual budget approval by Port BPC.	FY18	N/A	N/A	N/A	N/A	No

				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
Restoration								
PO-49	Otay District Habitat Improvement (Former South Bay Power Plant)	Decommission the South Bay Power Plant (completed) in a manner that allows habitat improvements to be performed at the site. Buffer area (25 acres) for habitat enhancements and/or mitigation purposes and will create additional upland transition, intertidal and subtidal habitat. This strategy will be triggered upon completion of the following: 1) Multi-jurisdictional approval of development plans; 2) CEQA review process has been completed; and 3) Approval by California Coastal Commission. Projected funding needs may be met through grant funding, support from community groups or other institutions, or as a potential alternative compliance program candidate project. All Port funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, non-permit required strategy involving multiple agencies and third parties.	FY 2025	N/A	N/A	N/A	N/A	No

Table 12-13 (continued)
Port of San Diego Jurisdictional Strategies

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-50	Enhance wetland and connections to F and G St marsh and J Street marsh.	Habitat enhancement of marsh, and associated mudflats and low-lying salt marsh and upland transition areas. Enhance through improved flushing of saltwater marsh currently serviced by a small, ineffective culvert. Enhancement potential: An additional channel, refuge islands, secondary tidal channels, and bay-ward expansion of the marsh. This strategy will be triggered upon completion of the following: 1) Multi-jurisdictional approval of development plans; 2) CEQA review process has been completed; and 3) Approval by California Coastal Commission. Projected funding needs may be met through grant funding, support from community groups or other institutions, or as potential alternative compliance program candidate projects. All Port funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional, non-permit required strategy involving multiple agencies and third parties.	FY 2020	N/A	N/A	N/A	N/A	No

ID	Strategy	Implementation Approach (Frequency of Inspections, B.3.b.(1)(a)(iv)) (Inventory BMPs, B.3.b.(1)(a)(ii)) (Funds/Resources, B.3.b.(1)(b)(iv), B.3.b.(3)(a)(iii)) (Triggers, B.3.b.(1)(b)(v))	Planned Implementation or Construction Year	Implementation		Proposed Modifications		
				Implemented as planned in current FY? Completed in current FY?	Strategy Information	Modification (If modified or canceled, provide rationale)	Modification Type (Schedule, Approach, New)	Planned Implementation into the next FY? (Y/N)
PO-51	Pond 20 – Site Development Mitigation Banking	The strategy will include the establishment of a mitigation bank while entitling certain parcels for future commercial development. This includes a Port Master Plan Amendment to bring the site into the Port's Coastal Permitting jurisdiction, and setting aside parcels for future commercial development. The strategy involves two different objectives for site development-mitigation banking that focus on habitat conservation and developing the site for commercial purposes. This strategy will be triggered upon completion of the following: 1) the necessary entitlement process is completed; 2) CEQA review process has been completed; and 3) Approval by California Coastal Commission. Any proposed method for moving forward with a mitigation bank would require future approvals from the BPC. Funding and resources have been secured for FY2016. Funding for future fiscal years is contingent on annual budget approval by Port BPC. Optional WMA -Multi-jurisdictional, non-permit required strategy.	FY 2020	N/A	N/A	N/A	N/A	No

12.4 MODIFICATIONS TO THE BMP DESIGN MANUAL

No modifications to the BMP Design Manual have been made since the WQIP was approved in spring 2016. The current Port of San Diego BMP Design Manual is posted on the Port's website, and the link to this page is listed on Project Clean Water.

12.5 MODIFICATIONS TO THE JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM

Table 12-14 describes modifications to the Port's JRMP have been made since the WQIP was approved in February 2016. The updated Port of San Diego JRMP is posted on the Port's website, and the link to this page is listed on Project Clean Water.

Table 12-14
Port of San Diego JRMP Updates

Update Number	JRMP Section	Description of Change	Rationale for Change
1	Universal	Update name of department from "Environmental and Land Use Management (ELUM)" to "Planning and Green Port (PGP)"	Change due to Port internal restructuring in FY 2016.
2	Universal	Changes to WQIP strategy numbers	Since the JRMP document was submitted in June 2015, the Port's WQIP strategies table was reorganized and/or WQIP strategies modified prior to final submittal of the WQIP in September 2015. Therefore, some of the individual strategy numbers have changed.
3	1.4.2	Remove the following language: "In fiscal year 2016, the Port will be developing individual strategy "cut sheets" that will include a more detailed description of the strategy, the strategy approach, applicability, and the effectiveness assessment methods the Port will use to determine if the strategy needs to be modified, removed or continue to be implemented as written. Once completed, the cut sheets will be included as part of the JRMP update and added to Appendix A."	The development of individual strategy cutsheets required more resources than anticipated and were not completed in FY 2016. The development of the individual strategy cutsheets will be pursued at a later date.

Table 12-14
Port of San Diego JRMP Updates (continued)

Update Number	JRMP Section	Description of Change	Rationale for Change
4	2.1	Update Port organizational charts (Figure 2-1 and Figure 2-2) to reflect current Port structure	Change due to Port internal restructuring in FY 2016.
5	2.2.3	Modification to fourth sentence in paragraph to read "Consistent with the Port BMP Design Manual, projects are required to implement low impact development (LID) BMPs as well as source control and site design BMPs applicable to the project."	Clarification that the projects, not the BMPs, are required to meet these requirements.
6	2.2.3	Replace last sentence of paragraph with the following: "Additionally, new development and redevelopment are required to submit a storm water quality management plan (SWQMP) identifying post-construction BMPs for the project."	Clarification
7	2.2.6	Change statement to read that the certified statement regarding legal authority was submitted with the first San Diego Bay WQIP annual report.	Clarification
8	3.2, 4.2, 5.2, 6.2, 7.2, 9.2	Modify language to differentiate between core and optional strategies and update to state the strategies will address highest and focused priority conditions.	Clarification
9	3.2, 4.2, 5.2, 6.2, 7.2, 9.2	Updated the WQIP strategies in each program component's table (Tables 3-1, 4-2, 5-2, 6-2, 7-2, and 9-2).	The Port's WQIP strategies table was reorganized since the JRMP document was submitted in June 2015. In addition, some of the WQIP strategies were also modified and/or incorporated into other strategies.
10	3.5	Update second paragraph to reflect Regional Board's acceptance of the WQIP and post-transitional period.	Revised to reflect current Municipal Permit requirements.

Table 12-14
Port of San Diego JRMP Updates (continued)

Update Number	JRMP Section	Description of Change	Rationale for Change
11	3.5.2	Update language to reflect post-transitional period.	Clarification
12	4.4	Updated reference to implementation date of BMP Design Manual	The implementation date was previously listed as December 24, 2015. The date was updated to reflect the February 16, 2016 effective date per the Municipal Permit requirements.
13	4.3, 4.4, and 4.5.1	Deleted reference to two WQIP strategies that removed from the Port's strategies list in the JRMP Update that was submitted in June 2015: • Update Stormwater Requirements Checklist to identify whether a project has a high potential to generate trash, metals, and bacteria (original PO-3) Update BMP Design Manual to include enhancements for projects (both non-PDP and PDP projects) having a high potential to generate trash, metals, and bacteria (original PO-4).	Reference to the two strategies was removed because the Port's WQIP strategies table was reorganized and/or WQIP strategies were modified since the JRMP document was submitted in June 2015. These two strategies were incorporated into the core JRMP strategy (PO-1) and are no longer stand-alone strategies.
14	4.4	Modified language to reflect updates to the Storm Water Requirements Applicability checklist, the Port's BMP Design Manual, and the Storm Water Quality Management Plan (SWQMP) templates.	Ensure section reflects updates to the templates comply with the Municipal Permit requirements that were submitted by the February 16, 2016 effective date.
15	4.5.2	Added Table 4-5 regarding Priority Development categories	The section referred to a table that was inadvertently not included.
16	4.6.3	Added information stating the Port's Alternative Compliance Program was developed in FY 2016 and incorporated into the Port's BMP	Update status of the Alternative Compliance Program

Table 12-14
Port of San Diego JRMP Updates (continued)

Update Number	JRMP Section	Description of Change	Rationale for Change
		Design Manual to be implemented in FY 2017.	
17	5.3	Updated language to reflect updates to the Construction BMP plan template in FY 2016	Ensure section reflects updates to the template.
18	5.7.2	Added a new procedure to the inspection programs that will be initiated in FY 2017. Following all inspections, the Port will email the inspection report with findings and corrective actions to the responsible parties.	The modification was incorporated based on recommendation from an internal audit of the Port's Storm Water Program in June 2016. These new procedures will help improve communications and assist in obtaining timely and complete corrective actions.
19	7.6.2	Added a new procedure to the inspection programs that will be initiated in FY 2017. The Port now requires acknowledgement of inspection results and corrective actions from responsible parties in the form of a signature on hardcopy inspection form or via certified mail.	The modification was incorporated based on recommendation from an internal audit of the Port's Storm Water Program in June 2016. These new procedures will help improve communications and assist in obtaining timely and complete corrective actions.
20	6.3 and 7.4.2	The Port added a new quality assurance process to verify the accuracy of all inventories (i.e., commercial, industrial, and municipal) to ensure all activities are accurately represented and accounted for in the Port's storm water database.	The new quality assurance process will be implemented as a result of the recommendations from an internal audit of the Port's Storm Water Program in June 2016.
21	6	Added new section for Special Events (new Section 6.7). Narrative added to discuss the Special Event BMP requirements and inspection process, inspection frequency, inspection type and content, and tracking and record keeping	The Special Event Section was created since the inspection component has a number of elements specific to this type of activity which were not explicitly discussed in Section 6 previously. In addition, the modification to the inspection process was based on

Table 12-14
Port of San Diego JRMP Updates (continued)

Update Number	JRMP Section	Description of Change	Rationale for Change
		(previous Section 6.7 will now be Section 6.8). In addition, the inspection process was modified to include processes to obtain acknowledgement by event organizer that they have received written BMP guidance prior to the event.	recommendations from an internal audit of the Port's Storm Water Program in June 2016.
22	6.6.4	Updated discussion regarding the review of MS4 inspection results to focus on MS4 structures and BMPs that require more frequent cleaning	In FY 2016, the Port completed the evaluation of the results of MS4 inspections (PO-30). Modifications to the MS4 inspection program were identified based on this analysis.
23	6.8	Added reference to PO-13	Clarification
24	10.3	Updates to Tables 10-2 and 10-3 to reorganize the categories	The modifications were done to improve table organization and reporting.

Table 3-2 (continued)
Wet Weather Numeric Goals for Chollas Creek

Compliance Pathways	Baseline	Assessment Period and Fiscal Year				
		Current Permit Term	FY 16–20	FY 21–25	FY 26–30	FY 31–36

Notes:
1. Denotes TMDL final and interim target. Alternative interim compliance dates are presented.
2. The County of San Diego has selected alternative interim schedules and goals for compliance with the Bacteria TMDL. The County will meet the goal in FY 29. See Section 4.3.4.1 for County of San Diego final and interim goals.
3. Denotes existing wet weather frequency as modeled in the Bacteria TMDL. With limited baseline monitoring data available, this goal reflects a reasonable estimate considering the difficulty in demonstrating progress within the receiving water during wet weather in a short amount of time. Furthermore, development and redevelopment of the urban environment has occurred since the Bacteria TMDL baseline loads were calculated in 2001. As such, this goal demonstrates that progress has been made by the RAs by maintaining the existing wet weather exceedance frequency.
4. Total coliform effluent limitations only apply to MS4 outfalls that discharge to the Chollas Creek mouth.
5. Demonstration of exceedances due to natural sources includes demonstration that pollutant loads from MS4s are not causing or contributing to exceedances.

% = percent; FY = fiscal year; WER = Water-Effect Ratio; WQO = Water Quality Objective

Chollas Creek TMDL

Bacteria Baseline Exceedance Rate

Table 3-3
Chollas Creek (908.22) MS4 Bacteria Baseline Exceedance Rate

Parameter	Dry Weather Percent Days Exceeding[a]	Wet Weather Percent Days Exceeding[b]
Enterococcus	100%	100%
Fecal Coliform	100%	100%
Total Coliform	100%	100%

Notes:

a. Dry weather baseline exceedance rate calculated using targeted and random MS4 dry weather monitoring data from October 1, 2008 through September 30, 21013. Rolling 5-sample-date geometric means were calculated, beginning with the 5th sample date of each monitoring year. Geometric mean WQOs were applied and the exceedance frequency extrapolated to determine baseline percent of dry weather days in exceedance for the historical 5-year period.

b. Wet weather baseline exceedance rate calculated using targeted and random MS4 wet weather monitoring data from October 1, 2008 through September 30, 2013. Monitoring data were assessed similar to the method outlined in Attachment E.5 of the 2013 mS4 Permit for each monitoring year for which data were available. The observed wet weather days in exceedance for monitored years were summed and divided by the total wet weather days in exceedance for the historical 5-year period.

Chollas Creek TMDL

Bacteria and Metals

City of La Mesa Numeric Goals

Table 3-4
Goals for Chollas Creek – City of La Mesa

Performance Measure for Key First Permit Term Strategies		**Assessment Period and Fiscal Year**
		Current Permit Term
Performance Measure—Wet and Dry Weather		
Performance Metrics		FY 18
Design, Construct, and Maintain Low-Impact Development (LID) Retrofits	Linear feet	Approximately 4,540 linear feet of bioretention areas will replace impervious asphalt along University Avenue between La Mesa Boulevard and Harbison Avenue.

Chollas Creek TMDL

Bacteria and Metals

City of Lemon Grove Numeric Goals

Table 3-5
Dry and Wet Weather Numeric Goals for Chollas Creek – City of Lemon Grove

Performance Measures for Key First Permit Term Strategies		Current Permit Term (FY 14–FY 18)
		FY 18
Performance Measures—Wet Weather		
Reduction in Bacteria	Restaurant used cooking oil bins stored in covered areas and protected from run-on.	75 percent (%)[1]
Or		
Municipal Facility Retrofits for Reduction of Bacteria and Metals	Redirect parking lot runoff to pervious area.	2 municipal facilities retrofitted (drainage area/facility to be determined (TBD) during site selection in FY 16)
	Redirect roof downspouts to pervious area.	2 municipal facilities retrofitted (drainage area/facility TBD during site selection in FY 16)
Performance Measures—Dry Weather		
Non-Storm Water Flow Reduction Programs	Install smart irrigation systems at municipal facilities.	8 Cal-Sense smart irrigation systems installed

Note:
1. These data have not been directly recorded in past inspection programs. The City's current BMP requirements state that bins must be kept clean but do not always require coverage. Based on discussion with inspection staff, it is estimated that about 20-30% of used oil cooking bins are stored in covered areas protected from run-on.

Dry and Wet Weather Numeric Goals for Chollas Creek – City of San Diego

Suite of Strategies to Measure Performance during First Permit Term	Baseline	Assessment Period Current Permit Term (FY 14–FY 18) FY 18
Develop a green infrastructure policy, attain City Council approval, and construct green infrastructure BMPs to improve water quality during wet and dry weather	0 acres treated in 2002, the year used as baseline in the Bacteria TMDL.	44.6 acres of drainage area treated through construction of 6 green infrastructure BMPs[1]
Implement runoff reduction programs that include targeted education and outreach efforts, enhanced inspections, additional rebate programs[2], and increased enforcement	Historical dry weather monitoring data will be used to establish a baseline in the first Water Quality Improvement Plan annual report.	10% prohibited[3] dry weather reduction in flow from baseline measured at persistently flowing outfalls in the WMA

	Enterococcus				
Or					
Implement Accepted Water Quality Improvement Plan	Metric for compliance analysis is MS4 discharge % load reduction. Interim compliance is implementation of strategies and schedule based on analysis results (Appendix I). Final compliance is implementation of BMPs based on analysis results and demonstration of compliance with any of the compliance pathways through monitoring and assessment.[6]				

Notes:
1. Denotes TMDL final and interim target.
2. The existing exceedance frequency was calculated on the basis of available monitoring data between 1996 and 2002 per Municipal Permit requirements and presented in more detail in Appendix H.
3. The County of San Diego has selected alternate interim schedules and goals for compliance with the Bacteria TMDL; alternative dry weather compliance in FY 20 and wet weather compliance in FY 28.
4. Total coliform effluent limitations only apply to MS4 outfalls that discharge to the Chollas Creek mouth.
5. Demonstration of exceedances due to natural sources includes demonstration that pollutant loads from MS4s are not causing or contributing to exceedances.
6. The County of San Diego is concerned that a long-term funding source is not identified for constructing and maintaining structural BMPs, if structural BMPs are needed to meet compliance.

	Enterococcus		100%	100%	100%	100%	100%
Or							
Implement Accepted Water Quality Improvement Plan	Metric for compliance analysis is MS4 discharge % load reduction. Interim compliance is implementation of strategies and schedule based on analysis results (Appendix I). Final compliance is implementation of BMPs based on analysis results and demonstration of compliance with any of the compliance pathways through monitoring and assessment.[5]						

Notes:
1. Denotes TMDL final and interim target.
2. Denotes existing wet weather frequency as modeled in the Bacteria TMDL. With limited baseline monitoring data available, this goal reflects a reasonable estimate considering the difficulty in demonstrating progress within the receiving water during wet weather in a short amount of time. Furthermore, development and redevelopment of the urban environment has occurred since the Bacteria TMDL baseline loads were calculated in 2001. As such, this goal demonstrates that progress has been made by the RPs by maintaining the existing wet weather exceedance frequency.
3. The County of San Diego has selected alternate interim schedules and goals for compliance with the Bacteria TMDL; alternative dry weather compliance in FY 20 and wet weather compliance in FY 28.
4. Demonstration of exceedances due to natural sources includes demonstration that pollutant loads from MS4s are not causing or contributing to exceedances.
5. The County of San Diego is concerned that a long-term funding source is not identified for constructing and maintaining structural BMPs, if structural BMPs are needed to meet compliance.

Intentionally Left Blank

Water Quality Within Caltrans Jurisdiction

Dry and Wet Weather Numeric Goals

Table 3-9
Goals for Chollas Creek (Wet Weather)—Caltrans

Goals	Unit of Measure	Assessment Metric
MS4 Discharges	Cooperative implementation agreement	Achieve compliance units by contributing funds to a cooperative implementation agreement or grant program.
	Or	
MS4 Discharges	Implement nonstructural BMPs.	Continued implementation of wet weather nonstructural BMP activities within the watershed
	Or	
MS4 Discharges	Implement structural BMPs.	Continued implementation of wet weather structural BMP activities for proposed projects within the watershed

Table 3-10
Goals for Chollas Creek (Dry Weather)—Caltrans

Goals	Unit of Measure	Assessment Metric
MS4 Discharges	Reduce dry weather flow.	Eliminate dry weather flows by implementing control measure to ensure effective prohibition.
	Or	
MS4 Discharges	Implement dry weather BMPs.	Implement drought-tolerant landscaping and conversion to smart irrigation controllers within the watershed.

Water Quality Within Airport Authority Jurisdiction

Copper and Zinc Concentrations

Dry and Wet Weather Numeric Goals

Table 3-11
Goals for Water Quality (Copper and Zinc)
Within Airport Authority Jurisdiction (908.21)

WATER QUALITY						
Numeric Goals		Assessment Period and Fiscal Year				
		Current Permit Term	FY 16-20	FY 21-25	FY 26-30
		FY 17	FY 18	FY 21	FY 26
		Interim Goal[1]			Final Goal[2]
MS4 Discharges Jurisdiction-wide % of Wet Weather Samples With Concentrations Exceeding Target)	Dissolved Copper	70%	30%	20%	0%
	Dissolved Zinc	65%	35%	25%	0%
OR					
Performance Metrics		FY 16	FY 18	FY 21	FY26
MS4 Discharges Sub-basins 1, 3, and 5 (in total) Area Treated with Street Sweeping	Acres/ Week	7 Acres/ Week (Current Frequency)	21 Acres/ Week (3-fold increase in area)		

Notes:
1. Interim Goals are based on State Industrial General Permit (IGP) Numeric Action Levels (NALs), which are based on the 2008 USEPA NPDES Multi-Sector General Permit benchmark values. Benchmark values for copper and zinc are 33.2 ug/L and 260 ug/L, respectively, and were calculated based on the highest hardness as CaCO3 value in the 2008 MSGP hardness table.
2. Final Goals are based on the 1-hour average concentration for dissolved solids from the USEPA California Toxics Rule Criteria for Enclosed Bays and Estuaries. Criteria values for copper and zinc are 4.8 ug/L and 90 ug/L, respectively.

Riparian Area Habitat in Paradise Creek

Dry and Wet Weather Numeric Goals

Table 3-12
Delisting Goals for Riparian Area Habitat in Paradise Creek (909.1)

Riparian Area Quality				
Goal Type/Performance Metrics		Assessment Period and Fiscal Year		
		Current Permit Term (FY 14 – FY 18)	FY 16 – FY 20	FY 21 – FY 25
		FY 16	FY 18	FY 22
Water Body Delisting	Removal of Paradise Creek 303(d) Selenium Listing	Collect and analyze 48 samples for selenium, with 0 exceedances of the water quality objective.[1]	If data support removal of segment from 303(d) List, submit data during earliest available solicitation period (1 data submission).	Removal of Paradise Creek from 303(d) List for selenium (1 delisting)

- Note:
  1. These numbers are designed such that the when analyzed together with the historical data upon which the current 303(d) Listing is based, the entire data set (current study data plus historical data) will meet the delisting criteria in the State listing policy (State Board, 2004).

Table 3-13
Habitat Restoration Goals for Riparian Area Habitat in Paradise Creek (909.1)

<table>
<tr><th colspan="8">Riparian Area Quality</th></tr>
<tr><th rowspan="3">Goal Type</th><th colspan="2">Create Restored Areas</th><th colspan="5">Establish and Maintain Restored Areas[1]</th></tr>

</table>

- Notes:

1. These success criteria are taken from the Wetland and Riparian Habitat Restoration, Maintenance, and Monitoring Plan submitted as part of the resource agency permitting process for the Paradise Creek restoration project.
2. Monitoring will also be completed to confirm continued attainment of the final (FY 20) goals in FY 21 and FY 22. The City of National City owns the property where the creek restoration is being completed and will protect the restored area in perpetuity.
3. Denotes container planted species, with percentage based upon original planting quantities.
4. Percentages based upon absolute cover values from transect data collected in year 3 after restoration completion (anticipated to be FY 20), visual estimates only in years 1 and 2 (FY 18 and FY 19).
5. Percentages are for annual weed species. The site shall also remain free of invasive exotic/noxious weed species as identified by the California Invasive Plant Pest Council (Cal IPPC), and shall have 0% cover of noxious species by the end of year 3 after restoration completion (anticipated to be FY 20).

Intentionally Left Blank

Physical Aesthetics

Dry and Wet Weather Numeric Goals

Table 3-14
Goals for Physical Aesthetics in Lower Sweetwater HA (909.1) and Otay HA (910.2)

PHYSICAL AESTHETICS						
Numeric Goal	Unit of Measure	Baseline	Assessment Period and Fiscal Year			
			Current Permit Term (FY 14 – FY 18)	FY 16–20	FY 21–25	FY26–30
			FY 18	FY 20	FY 24	FY 28
MS4 Discharges % Optimal[1] Trash Assessment Scores	MS4 Outfalls Assessed for Trash	60%[2]	65%	75%	85%	95%
Or						
MS4 Discharges % of High Volume Trash Drainage Area Treated for Trash within 910.2[3]	% Drainage Area Feasible for BMP retrofit	Historical trash assessment data[4]	10%	20%	50%	100%[5]

Notes:
1. Historically, an optimal score was given to sites meeting the following requirements: “On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.” This definition may change in the future and will be noted in Water Quality Improvement Plan updates.
2. Based on the RPs’ cumulative number of site visits of major MS4 outfalls in the Focused Priority Condition area for dry weather and MS4 outfall monitoring during FY 12 through FY 14
3. These values are based on best available information and current jurisdictional knowledge. A feasibility study is required to determine where BMP retrofits can be implemented. The interim goals may be adapted if needed.
4. An assessment is needed and will incorporate review of all available trash and source assessment data, drainage areas, and potential locations in high volume trash generating areas to feasibly implement structural control BMPs to identify or verify High Volume Trash Areas and % area feasible to retrofit with trash BMPs. The goals may be updated accordingly and provided in a future annual report.
5. The final numeric goal is in line with the State Trash Amendments compliance tracks and time schedule requirements to demonstrate compliance ten years after the trash amendments are incorporated into the next Municipal Permit.

<tr><th rowspan="2">Baseline</th><th>Current Permit Term (FY 16 – FY 18)</th><th>FY 19–23</th></tr>
<tr><th>FY 18</th><th>FY 21</th></tr>
</table>

<u>Notes:</u>

1. In order to include wet weather and wet season (November-March) data in the assessment, which are not collected frequently enough for a geometric mean calculation, single sample WQOs for *Enterococcus* will be used for assessment purposes.
2. Cumulative data from 1999-2014 showed a dry weather exceedance rate below the allowable threshold for 303(d) de-listing consideration. Due to this finding, the interim and final goals are focused on maintaining the current dry weather exceedance rate, while simultaneously lowering the exceedance rate of wet weather samples.
3. Baseline determined from line of evidence 27343 in the Final California 2010 Integrated Report 303(d) List/305(b) Report), which found 4 out of 9 wet weather receiving water samples exceeded the *Enterococcus* WQO. At the time the baseline was established, no other wet weather data was available to the RPs.
4. The Water Quality Control Policy for Developing California's Clean Water Act Section 303(d) List states that WQOs for bacteria are not exceeded using a binomial distribution methodology. The Policy also allows use of a reference beach to compare results. The binomial distribution allows approximately 15% of samples to exceed WQO.
5. Final wet weather exceedance rate is based on the use of a Reference System Approach (Resolution No. R9-2008-0028) for impaired segments included in the Beach and Creeks Bacteria TMDL (RWQCB, 2012) and provided as a final TMDL target in Attachment E to the MS4 Permit. This approach authorizes allowable exceedances of REC-1 WQOs based on the exceedance frequencies observed in reference systems.
6. The goal reflects the RPs actions to submit a scientifically sound delisting that fully meets the delisting policy *Water Quality Control Policy, for Developing California's Clean Water Act Section 303(d) List (2004)*. In requesting the re-evaluation, the RPs will state the reason(s) the listing is no longer appropriate; and will provide valid data and information necessary to enable the Regional Board and State Water Resources Control Board to conduct the review. It should be noted that compliance with this goal is not dependent on the Regional Board's final adoption or delisting since that decision is fully dependent on Regional Board staff and funding responsibilities.
7. Percentage of beaches will be calculated using a five-year rolling average of two beaches, Tidelands Park and North Beach within in the Coronado HA (910.1), using the report card methodology from Heal the Bay.
8. Baseline for dry weather was calculated using a five-year rolling average (Years 10-11 through 14-15) for Tidelands Park from the Heal the Bay report cards. Results: Four As all years except for one B in 2012-13 yield the 80% baseline. Data will be collected for North Beach starting in 2015-16. Interim and final targets are based on the five-year rolling average grade card scores received for Tidelands Park and North Beach locations using the Heal the Bay methodology.
9. Using the Heal the Bay Annual Reports, the baseline for wet weather was calculated using a five-year rolling average for approximately 40 San Diego County Beaches in the Heal the Bay reports. However, the five-year rolling average scores include data collected during drought conditions as noted in the Heal the Bay Report for 2014-15. Using a five-year rolling average is anticipated to attenuate variability between drought and normal/high rainfall years. Wet weather data to be collected to determine percentage of years the beaches (Tidelands and North Beach) achieve water quality report grade of A.

WQO	water quality objective

1 Introduction – Monitoring and Assessment Program

The Monitoring and Assessment Program (MAP) for the San Diego Bay Watershed Management Area (WMA) is discussed in Section 5 and detailed in Appendix K of the Water Quality Improvement Plan (WQIP). The MAP incorporates requirements of Provision B and Provision D of the Municipal Permit,[1] along with the specific monitoring and assessment requirements for the Dissolved Copper Total Maximum Daily Load (TMDL) in the Shelter Island Yacht Basin and the Bacteria TMDL for Shelter Island Shoreline Park listed in Attachment E of the Municipal Permit.

The Monitoring Program includes three major components: (1) the receiving water monitoring program, which measures the long-term health of the watershed; (2) the municipal separate storm sewer system (MS4) outfall monitoring program, which investigates the elimination of dry weather flows from MS4 outfalls and improvement to the quality of the flows that exit the MS4 outfalls during rain events; and (3) special studies. Figure 1-1 shows the locations of the monitoring stations that are a part of the San Diego Bay WMA MAP.

This report summarizes the monitoring data collected from October 1, 2015, through September 30, 2016, as well as data that were not summarized in the 2013–2014 and 2014–2015 Transitional Monitoring and Assessment Program Reports for the San Diego Bay WMA. Reported data include both receiving water and MS4 outfall monitoring data for dry and wet weather events. Monitoring methodologies were summarized in Section 5 of the San Diego Bay WMA WQIP and were specified in the associated Appendix K Monitoring Plans component (Project Clean Water, 2016). These documents provide detailed information regarding monitoring locations, monitoring techniques, analytes sampled, and quality assurance/quality control (QA/QC) requirements.

The Responsible Parties (RPs) have established interim and final goals for the Highest Priority Water Quality Conditions (Highest Priority Conditions) and Focused Priority Water Quality Conditions (Focused Priority Conditions), as appropriate, during this Municipal Permit term to demonstrate progress toward compliance with the Municipal Permit and applicable TMDL requirements. Generally, RPs have identified near-term goals to address potential pollutant sources, reduce non-storm water dry weather flow in MS4 outfalls, and implement best management practices (BMPs).

The MAP includes an annual analysis of the data collected for the monitoring year as well as a time series analysis of all data collected over the entirety of the permit cycle. This appendix details the MS4 Outfall Discharge Assessments, which evaluate the dry weather information associated with the Illicit Discharge, Detection, and Elimination (IDDE) program collected as part of the Jurisdictional Urban Runoff Management Program (JRMP) along with the dry and wet weather MS4 monitoring data collected by the RPs. The results of the special studies are also assessed in this appendix. The Receiving

[1] San Diego Regional Water Quality Control Board Order Number R9-2013-0001, National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer System (MS4) Draining the Watersheds Within the San Diego Region

Water Assessment and the Integrated Assessments will be summarized in the Regional Monitoring and Assessment Report that will be submitted with Report of Waste Discharge in December 2017.

Table 1-1 provides an overview of the WQIP for the San Diego Bay WMA.

Table 1-1
Water Quality Improvement Plan Monitoring Overview

Monitoring Program	Temporal Extent	Monitoring Element[1]	Timeline (Fiscal Year)
Receiving Water Monitoring			
Long-Term Receiving Water Monitoring	Wet and dry weather	Chemistry/FIB Toxicity Trash assessment Bioassessment Hydromodification	2013–2014
Southern California Bight Regional Monitoring (Bight '13)	Dry weather	Chemistry Toxicity Bioassessment	2013–2014
Regional Storm water Monitoring Coalition (SMC)	Dry weather	To be determined (TBD) (bioassessment)	2013–TBD
Regional Hydromodification Monitoring Program	Wet weather	Rain gauge analysis Stream gauge analysis Channel assessment Flow Sediment transport	2013–2015 (TBD)
Sediment Quality	Dry weather	Chemistry Toxicity Bioassessment Trash assessment	2013[2] –2018
Regional Harbor Monitoring Program (RHMP)	Dry weather	Chemistry Bioassessment Trash assessment	2013–2014
MS4 Monitoring			
MS4 Field Screening	Dry weather	Flow Trash IC/ID Condition	2013–2018
MS4 Outfall Monitoring	Wet and dry weather	Chemistry/FIB Visual observations *In-situ* measurements	2013–2018

Water Quality Improvement Plan Monitoring Overview

Monitoring Program	Temporal Extent	Monitoring Element[1]	Timeline (Fiscal Year)
Riparian Area Selenium Study	Wet and Dry Weather	Chemistry (selenium)	2013–2015 (TBD)
Regional Beach Water Quality (AB 411)[5]	Dry Weather	FIB	1999–2018

Notes:

AB 411 = California Assembly Bill 411; BOD = biological oxygen demand; CRAM = California Rapid Assessment Method; FIB = fecal indicator bacteria; HMP = Hydromodification Monitoring Program; HU = hydrologic unit; IC/ID = illicit connection and/or illicit discharge; RHMP = Regional Harbor Monitoring Program; SMC = Southern California Storm Water Monitoring Coalition; TBD = to be determined

* Dry weather metal monitoring in Chollas Creek has been completed as part of the Regional Monitoring Program.

1. Some monitoring elements may not be conducted under the entire temporal extent of the program. See Appendix K of the WQIP for details.
