EXECUTIVE SUMMARY

Pursuant to Section I.1 of the San Diego Municipal Storm Water Permit (Order 2000-01), the City of Poway has prepared the required Jurisdictional Urban Runoff Management Program (JURMP) Annual Report, which is presented herein. The City of Poway JURMP was submitted to the San Diego Regional Water Quality Control Board (RWQCB) in February 2002 and describes the program that the City is implementing to improve the quality of urban runoff within its jurisdiction. This Annual Report documents the activities that the City has conducted during the reporting period of July 1, 2006, through June 30, 2007.

As part of the City of Poway JURMP, the City has focused on three major phases of development in which to eliminate pollutants in urban runoff: (1) Proposed New Development and Redevelopment, (2) Construction Projects, and (3) Existing Development including municipal facilities, industrial and commercial businesses, and residential areas. The City has also implemented efforts to detect and eliminate illicit connections and illegal discharges, which include conducting compliance inspections of municipal facilities, construction sites, and industrial and commercial businesses, operating a public reporting hotline, and conducting dry weather field screening and analytical monitoring of storm drain discharges. Additionally, the City has implemented educational programs for a variety of target audiences that discuss topics related to water quality and urban runoff.

The City has developed a variety of water quality requirements consistent with the Municipal Permit that were incorporated into City ordinances. Through these ordinances, the City can legally enforce the water quality regulations.

During this reporting period, the City has accomplished the following:

- Conducted annual compliance inspections of all high-priority industrial facilities and first-time inspections of all new businesses subject to the Municipal Permit. During these inspections, each business owner/operator was informed of the storm water pollution prevention requirements, and educational information was provided. Evaluation of the facility representatives' knowledge of National Pollutant Discharge Elimination System (NPDES) issues was performed as an additional means of effectiveness assessment.

- Conducted annual storm water compliance inspections of all 9 of the City's high-priority municipal facilities as well as all 7 medium-priority facilities, and addressed any issues noted.

- Conducted preconstruction meetings with owners, developers, and contractors on all construction projects, both with and without grading activities, during which the owners, developers, and contractors were educated regarding storm water pollution prevention best management practices (BMPs).

- Conducted compliance inspections of all current construction sites and followed up with escalating enforcement actions as necessary to correct any deficiencies in BMPs. All grading sites, regardless of priority, were inspected before every predicted rain event (50% chance of rain within 48 hours).

- Collected an estimated 1,724 tons of debris from City streets, inspected 105 miles of municipal separate storm sewer system, cleaned 125 catch basins, removed over 200 bags of trash from right-of-ways and open channels, and collected 262,405 pounds of household hazardous waste.

- Conducted a variety of public participation events, which included hazardous waste collection, trash and appliance collection, and park cleanups.

- Conducted a dry weather monitoring program, which collected field analytical results from 50 sites and laboratory analytical results from 13 sites, performed follow-up studies, and made efforts to address detected exceedances.

- Demonstrated the continued effectiveness of the City's innovative regional approach to Standard Urban Storm Water Mitigation Plan (SUSMP) compliance by conducting annual inflow and outflow sampling from the detention basins modified to treat storm water runoff from new businesses and existing businesses that predate SUSMP requirements. The results of the sampling continued to show substantial reductions in pollutants.

- Inspected all permanent treatment BMPs for previously constructed projects subject to SUSMP to determine whether they are being maintained.

- Conducted a comprehensive educational program that included training of City staff, articles in the City's quarterly newsletter, distribution of educational pamphlets to all inspected industrial and commercial businesses, distribution of a BMP brochure on SUSMP requirements for owners and developers, distribution of educational materials at community events, and community presentations of storm water pollution prevention information.

- Created an Engineering Technician position that is dedicated 50% to the City's NPDES program. This position will assist with the City's inspections, enforcement, and follow-up actions, as well as maintenance and updating of databases.

The City of Poway is committed to complying with the regulations of the Municipal Permit and implementing the JURMP in an effective and progressive manner. The City actively looks for mechanisms to improve the JURMP process and reduce or eliminate pollutant discharges from urban runoff, and works in conjunction with the Copermittees to improve the quality and consistency of county-wide implementation efforts through participation in various workgroups. Implementation of the JURMP is an iterative process, and the City continuously makes strides to realize the goal of cleaner water through the NPDES Permits, RWQCB Municipal Permit, and the JURMP.

CERTIFICATION STATEMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

1 INTRODUCTION

BACKGROUND

In February 2002 the City of Poway began implementation of its Jurisdictional Urban Runoff Management Program (JURMP), as required by Order No. 2001-01 of the San Diego Regional Water Quality Control Board (RWQCB), hereafter referred to as the Municipal Permit. Within the JURMP document, the City described in detail its plan to minimize or eliminate the impact of human activities on receiving water bodies by improving the quality of urban runoff within its jurisdiction.

The JURMP focuses on three major phases of development during which pollutants can be eliminated: (1) Proposed New Development and Redevelopment, (2) Construction Projects, and (3) Existing Development, including municipal facilities, industrial and commercial businesses, and residential areas. The JURMP document describes efforts that the City is making to detect and eliminate illicit connections and illegal discharges (IC/IDs), which include conducting compliance inspections of municipal facilities, construction sites, and industrial and commercial businesses, operating a public reporting hotline, and conducting dry weather field screening and analytical monitoring of storm drain discharges. The JURMP also explains the educational efforts that the City is conducting toward a variety of target audiences, including City staff, industrial and commercial businesses, and residents.

As a requirement of the Municipal Permit, the City must produce an annual report to the RWQCB detailing the activities that have been conducted to implement the JURMP each year through the life of the permit. Pursuant to Section 1.1 of the Municipal Permit, the City of Poway has prepared the 2006/2007 JURMP Annual Report, which is presented herein. This JURMP Annual Report presents the activities that the City has conducted from July 1, 2006, through June 30, 2007.

JURMP ANNUAL REPORT 2005/2006

On April 30, 2007, the City of Poway received a letter with one comment from the RWQCB regarding the 2005/2006 JURMP Annual Report. In the letter, RWQCB staff requested that the comment be addressed in a letter to be submitted to the RWQCB. The City complied, and a letter was submitted on May 3, 2007. This letter is included as Attachment 1.1 of this document. The comment from the RWQCB did not request that any issues be addressed in this Annual Report, nor did it request any specific program changes.

SUMMARY OF ACCOMPLISHMENTS OF 2006/2007

- Conducted annual compliance inspections of all high-priority industrial facilities and first-time inspections of all new businesses subject to the Municipal Permit. During these inspections, each business owner/operator was informed of the storm water pollution prevention requirements, and educational information was provided. Evaluation of the facility representatives' knowledge of National

Pollutant Discharge Elimination System (NPDES) issues was performed as an additional means of effectiveness assessment.

- Conducted annual storm water compliance inspections of all 9 of the City's high-priority municipal facilities as well as all 7 medium-priority facilities, and addressed any issues noted.

- Conducted preconstruction meetings with owners, developers, and contractors on all construction projects, both with and without grading activities, during which the owners, developers, and contractors were educated regarding storm water pollution prevention best management practices (BMPs).

- Conducted compliance inspections of all current construction sites and followed up with escalating enforcement actions as necessary to correct any deficiencies in BMPs. All grading sites, regardless of priority, were inspected before every predicted rain event (50% chance of rain within 48 hours).

- Collected an estimated 1,724 tons of debris from City streets, inspected 105 miles of municipal separate storm sewer system, cleaned 125 catch basins, removed over 200 bags of trash from right-of-ways and open channels, and collected 262,405 pounds of household hazardous waste.

- Conducted a variety of public participation events, which included hazardous waste collection, trash and appliance collection, and park cleanups.

- Conducted a dry weather monitoring program, which collected field analytical results from 50 sites and laboratory analytical results from 13 sites, performed follow-up studies, and made efforts to address detected exceedances.

- Demonstrated the continued effectiveness of the City's innovative regional approach to Standard Urban Storm Water Mitigation Plan (SUSMP) compliance by conducting annual inflow and outflow sampling from the detention basins modified to treat storm water runoff from new businesses and existing businesses that predate SUSMP requirements. The results of the sampling continued to show substantial reductions in pollutants.

- Inspected all permanent treatment BMPs for previously constructed projects subject to SUSMP to determine whether they are being maintained.

- Conducted a comprehensive educational program that included training of City staff, articles in the City's quarterly newsletter, distribution of educational pamphlets to all inspected industrial and commercial businesses, distribution of a BMP brochure on SUSMP requirements for owners and developers, distribution of educational materials at community events, and community presentations of storm water pollution prevention information.

- Created an Engineering Technician position that is dedicated 50% to the City's NPDES program. This position will assist with the City's inspections, enforcement, and follow-up actions, as well as maintenance and updating of databases.

JURMP ANNUAL REPORT ORGANIZATION

This JURMP Annual Report is divided into the following 14 sections:

Section 1	Introduction
Section 2	Municipal
Section 3	Industrial and Commercial
Section 4	Commercial
Section 5	Residential
Section 6	Land-Use Planning
Section 7	Construction
Section 8	Illicit Discharge Detection and Elimination
Section 9	Education
Section 10	Public Participation
Section 11	Assessment of JURMP Effectiveness
Section 12	Fiscal Analysis
Section 13	Special Investigations
Section 14	Conclusions and Recommendations

2 MUNICIPAL

To maintain compliance with the Municipal Permit, the City of Poway developed and implemented a comprehensive program aimed at reducing pollutants in urban runoff from municipal areas and activities. As part of this program, pollution prevention methods are used as a primary mechanism for reducing municipal discharges of pollutants into regional municipal separate storm sewer systems (MS4s). Pollution prevention techniques often are the most cost effective and simple solution to reducing pollution at the source. In addition, BMPs are used at specific areas and activities that are considered a threat to water quality. BMPs are also implemented to reduce the potential for pollution from pesticides, herbicides and fertilizers from all municipal areas. Periodic maintenance of the MS4 is conducted to ensure proper functionality throughout the year.

The goals of the municipal component of the City of Poway's JURMP are to continue to train and develop awareness of storm water pollution prevention BMPs contained in the City's JURMP, to continue to practice and implement these BMPs on a daily basis, to assess and review BMPs to ensure they are effective in reducing and preventing storm water pollution, and to update BMPs as needed.

MUNICIPAL ACTIVITIES

The following municipal activities are conducted by the City and are further detailed below to provide a general description of the activity as well as BMP requirements and implementation:

- Municipal Vehicle Maintenance
- Roadway and Bridge Maintenance
- Streets and Drainage Maintenance
- Landscaping Maintenance
- Wastewater Operations
- Erosion and Sediment Control
- Material Management

Municipal Vehicle Maintenance

The City of Poway operates one vehicle maintenance facility. Fleet/Facilities Maintenance continually monitors and evaluates sources of pollutants from the vehicle maintenance facility that may affect the quality of storm water discharges from the facility to identify and implement site-specific BMPs to reduce or prevent pollutants from reaching the MS4.

Fleet/Facilities Maintenance continues to use a BMP advisement checklist (Attachment 2.1) to monitor physical BMPs for site-specific control at the facility. The list is checked daily and corrections are made as needed. The BMPs in place are successfully preventing any discharges into the MS4. The City has marked all storm drains and placed barriers around the storm drains. Fleet/Facilities Maintenance keeps all items with potential to pollute the MS4 under a closed canopy. Fleet/Facilities Maintenance has ensured that the lids are placed on the trash receptacles and signs have been posted to remind users to close trash

receptacles after use. Spill kits are clearly identified and placed near the fueling location to recover any spilled liquid. In addition, larger quantity spill kits are located just inside the Fleet/Facilities Maintenance building. Drip pans are placed under vehicles that may potentially leak fluid. A catch basin was mounted to the vehicle washing station to catch any soap not dispensed from the receptacle. Fleet/Facilities Maintenance has removed all non-essential materials, metals, and debris from around the facility to ensure a clean work environment.

Fleet/Facilities Maintenance has experienced no spills during this reporting period. The Fleet/Facilities Maintenance facility has an approved Storm Water Pollution Prevention Plan (SWPPP) as part of its pollution prevention program and will follow the proper procedures for cleanup in the event of any spills. There were no changes to the SWPPP during this reporting period.

Roadway and Bridge Maintenance

The City of Poway conducts street sweeping of the primary arterials and all other streets once every two weeks (See Attachment 2.2 for street sweeping schedule). All entrances and parking areas are swept once per month. A total of 11,944.4 curb miles were swept during this reporting period. The City's street sweeping contractor removed an estimated 1,724 tons from City streets during the current reporting period.

Streets and Drainage Maintenance

The City's Streets and Drainage Division is responsible for maintenance of the City's MS4. This includes the maintenance and management of 1,400 drop inlets, 105 miles of open channels, 44 box culverts, 16 detention basins, and 65 miles of underground drainage pipe 18 inches or more in diameter. The City annually inspects the 105 miles of MS4 as part of an expanded MS4 maintenance schedule. The Streets and Drainage Division continually monitors and evaluates sources of pollutants that may affect the quality of storm water discharges and continually identifies and implements site-specific BMPs to reduce or prevent pollutants from reaching the MS4.

The City has continued to employ additional staff for right-of-way trash removal and other maintenance, and has maintained three permanent drainage division employees. Crews removed over 200 bags of trash from right-of-ways and open channels. The City also continued to upgrade the drainage software and convert the storm water system maps to electronic format. This allows crews to access information in the field. The City is fully equipped with small crew dump trucks and continues to improve detention basin design. The City inspected all drop inlets, cleaned 125 catch basins, and removed approximately 75 cubic yards of debris during this reporting period.

The housekeeping practices implemented by streets and roads staff included the appointing of designated staff to maintain and monitor housekeeping efforts at the Material Handling Yard. The City also implemented storm water pollution prevention training for all streets and road maintenance staff to identify housekeeping concerns.

During this reporting period, the City of Poway, in conjunction with the Regional Channel Maintenance Workgroup, hired a consultant to create an application package template for

all jurisdictions to use for the application for a Regional General Permit for channel maintenance activities. This process began during the 2005/2006 reporting period and will conclude during the 2007/2008 reporting period.

Staff monitored, serviced, and maintained four SUSMP-compliant detention basins during every rain event or potential for any rain event during this reporting period. These basins are described further in Section 6 of this Annual Report.

Landscaping Maintenance

The objectives of the City's Parks and Trails Maintenance Division are to minimize the discharge of pesticides, herbicides, and fertilizers to the MS4, prevent the disposal of landscape waste into the MS4, minimize trash, debris, and other pollutants entering recreational water bodies, and discharge municipal swimming pool water in a manner that will not contribute pollutants to receiving waters. See the section on Management of Pesticides, Herbicides, and Fertilizers below for more information.

Wastewater Operations

The City of Poway Wastewater Operations ensures that staff who conduct wastewater operations activities are educated about the potential pollutants that may be released as a result of wastewater operations, are educated regarding procedures and specific BMPs to be implemented during wastewater operations, as well as regarding general good housekeeping practices, and know how to effectively implement all applicable procedures and BMPs while conducting wastewater operations.

The City owns and operates 180 miles of collection system. One hundred ten miles of sewers were cleaned, and 0.95 miles of sewers were repaired. The City installed two miles of new sewers. During this reporting period, the City cleaned, on average, 11,250 linear feet of pipe every week, and there were, on average, 0.48 main or lateral blockages per week. There was one spill under 1,000 gallons. The City has a Sewer Overflow Prevention Plan and a Sewer Overflow Response Plan that are triggered when a spill occurs to ensure applicable procedures are implemented. The Sewer Overflow Response Plan was followed during containment and cleanup of the one spill that occurred.

Erosion and Sediment Control

The City conducts silt and debris removal from concrete-lined channels twice a year in order to comply with the Municipal Permit. This is a total of 5,200 hours dedicated to silt and debris removal. The City has implemented erosion control BMPs for all City facilities. The City has installed gravel bags around catch basins to provide secondary containment at several City facilities. The City maintains and preserves existing vegetation.

Material Management

During the past reporting period, the City used the following practices or BMPs to manage materials and wastes associated with saw-cutting activities, paving activities, and concrete pouring activities: All saw cutting is avoided during rain events when feasible, saw-cutting materials are stored away from drainage areas, and all saw cutting debris is vacuumed and disposed of properly. Paving does not take place during rain events when feasible, paving

materials are stored away from drainage areas, and paving equipment is cleaned out off site, when feasible, or at designated areas. When working with concrete, all concrete materials are stored under cover, away from drainage areas. Removed materials from concrete and asphalt repairs are recycled. Concrete trucks are cleaned off-site or at designated areas on-site. Down drains are blocked off with gravel bags when necessary to prevent discharge of concrete wash water from entering drainage areas.

The City has full-time staff at the Material Handling Yard responsible for maintaining and monitoring good housekeeping BMPs at the facility during the week and during Saturday household hazardous waste (HHW) collection events. A checklist of housekeeping and inspection duties has been created to ensure all housekeeping BMPs are implemented. All streets and roads maintenance staff members have received storm water pollution prevention training. The Streets Division recycles waste products when possible to reduce and prevent storm water pollution. Furthermore, there has been a concerted effort to reduce the amount of stockpiling of material. The City has spill response kits on selected work trucks (approximately 17 trucks) and a large spill response kit is located in the warehouse at the City Operation Center. The City also has pallets of gravel bags in inventory to be used for storm water pollution prevention.

PRIORITY SOURCES

Potential threats to water quality at each municipal area and activity were determined by evaluating a variety of site-specific factors according to the criteria outlined in Section 2.3.1 of the JURMP. The inventory is presented in Tables 2.1 through 2.4.

POLLUTION PREVENTION

The goal of pollution prevention is to eliminate or reduce contaminants transported in storm water by implementing practices and procedures that limit and control the generation of potential pollutants and their contact with receiving water bodies. As stated in the Permit, municipalities are responsible for the implementation of appropriate control measures and pollution prevention methods and shall require that all relevant departments and personnel use proper procedures to the maximum extent practicable. Pollution prevention methods for the City are outlined in Section 2.1 of the JURMP.

INSPECTIONS

Self-assessments and periodic inspections by the Public Works Department and the City's consultant are important to the success of this program. The inspections are used to check what practices and guidelines have been adopted and implemented so that the general effectiveness of the program in instilling practices to reduce pollutants in urban runoff can be assessed. See Attachment 2.3 for inspection sheets.

During this reporting period, the City inspected all 9 high-priority facilities and all 7 medium-priority facilities. The most common problem found was good housekeeping items requiring general clean up and maintenance, such as brow ditches that needed cleaning and storm drains that needed replacement berms. Follow-up actions have been implemented at the few sites that needed additional BMPs to reduce and prevent storm water pollution.

Follow-up Activities

Follow-up activities that are conducted as a result of the City's self-inspections include preparation of an inspection memo with digital photos and a list of corrective actions. The corrective actions are then completed, and the facility is re-inspected.

Voluntary self-inspections, performed by department staff, are held as frequently as deemed necessary to assess BMP effectiveness. Occasional inspections by department staff may be made to assess facilities' compliance with Permit requirements. In addition, facilities are subject to periodic inspection by RWQCB staff and the City's storm water consultant.

MANAGEMENT OF PESTICIDES, HERBICIDES, AND FERTILIZERS

As a response to the common pollutants identified by the RWQCB and in compliance with the Permit, the City developed a comprehensive program aimed at preventing or reducing pesticides, herbicides and fertilizers from entering the storm water system. This program is summarized in the JURMP, Section 2.6.

Parks and Trails Maintenance implemented the following BMPs relating to pesticide and fertilizer management and the City's Integrated Pest Management Program, in addition to the BMPs from the City's JURMP.

- Parks and Trails Maintenance staff continues to receive training on the Storm Water Program and current BMPs.
- All "parks" pesticides are stored in fire safe, self–closing metal cabinets (weather proof).
- The City uses a slow-release fertilizer that allows more of the product to be accepted with less leaching; the reduced frequency creates less chance for the product to exit the target area.
- All pesticides, fertilizers, and grass clippings are kept within their target area.
- Good housekeeping has helped in eliminating rodent population growth, reducing the need for control.
- We contract out the majority of our vertebrate pest control, which has reduced exposure to city staff.
- Mixing of pesticides is conducted in locations where secondary containment has been established.
- Drip irrigation is being used wherever possible and some of our existing overhead irrigation has been converted to drip, eliminating both runoff and excessive weed growth.
- We store all chemicals, pesticides, and fertilizers in a dry, covered storage area.
- Pesticides are not applied prior to a rain event.
- Application rates and intervals have been minimized, but not to a point where plant health becomes a factor.
- Mulch is placed wherever possible to eliminate the need for weed abatement and to prevent sediment erosion.
- Clean, well-maintained equipment is used during all applications.

- Spill kits have been placed at main work sites, with a large mobile kit permanently located in the Parks Maintenance Supervisor's truck.

TRASH AND DEBRIS

The Parks and Trails Maintenance staff is proactive in litter removal and containment. In addition to the BMPs in the City's JURMP, the division has implemented the following BMPs:

- Training has been successful, and staff understands the litter that is picked up in the park does not enter and pollute the waterways.
- Dumpsters are kept closed at all times.
- Trash cans are not placed wherever bodies of water are a concern.
- Good housekeeping has increased in all parks facilities and vehicles.
- Litter and debris is removed from right-of-ways and open-space areas daily, or as it is observed.
- Trash enclosures are spot-cleaned, using a high-pressure washer, as opposed to being hosed down. Appropriate BMPs are always used.
- Additional recycling collection units have been purchased to saturate parks facilities.
- Refresher courses are and will continue to be conducted in order to keep up with and add to our current BMPs.
- All parks trash receptacles are washed at a certified, City-owned clarifier facility.
- Birds are deterred from dumpster areas by keeping the dumpster lids closed.
- Animal waste "doggie bag" dispensers are posted within the parks.

The Parks and Trails Maintenance staff have implemented the following BMPs:

- We have covered with plastic all piles of loose stored materials that might pose a threat of erosion.
- Gravel bags or concrete blocks are used instead of sand-filled bags.
- Silt has been removed from areas where erosion posed a threat of reaching the storm water system.
- Water bars have been installed on trails to divert water from flowing and causing erosion.
- A biodegradable soap is used in conjunction with a low-volume, high-pressure washer to remove stains from hardscapes. Appropriate BMPs are always used.
- Frequent inspections are conducted to ensure BMPs are in place and to ensure that violations are not occurring.
- Minimally erosive Recycled Base Material is now being used in place of decomposed granite for trail construction and maintenance.

City Storm Water Committee Meetings

A committee of City staff comprising members of the Public Works and Development Services Departments meets on a bimonthly basis to discuss municipal compliance issues. This committee was formed in April 2001.

ENFORCEMENT

In compliance with the Permit, the City is responsible for enforcement of local and state ordinances and applicable permits at all municipal facilities and activities. City inspectors and/or other staff with enforcement authority conduct enforcement of storm water pollution prevention requirements at municipal facilities and activities within the City. Inspectors document and record any observed violations. Enforcement can range from a verbal warning to monetary fines. The complete procedure for corrective and enforcement actions is described in detail in Section 2.8.1 of the City's JURMP. No enforcement actions for municipal facilities were required during this reporting period.

EDUCATION AND OUTREACH

City Employee Education and Training

- October 10, 2006: SUSMP training given by the City's storm water consultant, D-MAX Engineering, for 24 staff members from Land Development Engineering, Planning, the Capital Improvement Program (CIP), and Public Works.
- November 30, 2006: Two Engineers from CIP and Two Engineers from Land Development Engineering attended a seminar on Storm Water Regulation and SWPPP Preparation, Monitoring and Sampling Program organized by the Building Industry Association (BIA).
- December 5, 2006: One Engineer from CIP and one Engineer from Land Development Engineering attended a seminar on BMP Selection and Implementation Including Treatment Techniques organized by BIA.
- January 23, 2007: The City Engineer, Engineering Inspection Supervisor/NPDES Coordinator, four Engineers from CIP, one Engineer from Land Development Engineering, one Engineer from Traffic Engineering, and five Inspectors attended training on Stormwater Pollution Prevention for Construction Sites held by staff.
- April 12, 2007: Two Engineers from Land Development Engineering attended the "New" San Diego County Municipal Storm Water Permit Briefing organized by BIA.
- April 27, 2007: One Engineer from Land Development Engineering attended the "New" San Diego County Municipal Storm Water Permit Briefing organized by BIA.
- June 27, 2007: Public Works Department annual Public Works storm water training event (51 staff members in attendance).

In addition, the Public Works Department holds informal tailgate meetings each month to discuss BMPs that prevent storm water pollution. The City also had a spill response training session for the Emergency Response Technicians on May 10, 2007.

IMPLEMENTATION PLANS FOR 2007/2008

During the 2007/2008 reporting period, the City intends to continue working with the consultant for the Regional Channel Maintenance Workgroup to create an application template for a Regional General Permit. The City of Poway also intends to increase its BMPs and pollution prevention methods at the City's Vehicle Maintenance Facility.

JURMP UPDATE

The JURMP has been updated to reflect the current inventory of municipal facilities. The JURMP will be updated extensively in the next reporting period to meet the requirements of the new NPDES permit. This will include an update of the SWPPP for the City's Material Handling Yard and Municipal Yard.

3 INDUSTRIAL AND COMMERCIAL

The Municipal Permit requires each Copermittee to address, develop, and implement a program that would minimize or eliminate pollutant runoff from industrial facilities and commercial businesses. Although the Municipal Permit (Order 2001-01) distinguishes between industrial and commercial facilities, the requirements are nearly identical on an implementation basis and have been combined within this section to simplify reporting. The primary components include the following:

Pollution Prevention
Source Identification
Threat to Water Quality Prioritization
BMP Implementation
Monitoring of Industrial/Commercial Sites
Inspection of Industrial/Commercial Sites
Enforcement Measures for Industrial/Commercial Sites
Reporting of Non-Compliant Sites

Implementation of the aforementioned components is intended to eliminate the potential for industrial facilities and commercial businesses to contribute to degradation of receiving water quality. A list of the City's industrial facilities and commercial businesses was generated and presented in the City of Poway's JURMP, adopted in 2002.

Based on the inspection reports, a database of the industrial and commercial facilities was created. The goal of creating the database was to maintain a comprehensive database and living document of business and facility activities. This included updating changes to Standard Industrial Classification (SIC) codes and potential threat to water quality prioritization. Recommended corrective actions and violations are also included in the database. Updated inventories of the 25 high-priority industrial facilities, 136 medium-priority industrial facilities, 159 low-priority industrial facilities, and 315 high-priority commercial facilities are shown in Tables 3.1 to 3.4.

The City conducted its fifth round of storm water compliance inspections during this reporting period using a consultant, D-MAX. This round of inspections focused on the annual inspections of the high-priority industrial facilities and known potential polluters, as well as the inspection of 36 new industrial and commercial facilities.

PRIORITY SOURCES

During this reporting period, new industrial and commercial sites not previously included in the City's inventories were identified when new businesses applied for business certificates. City staff assigned an SIC code and priority status based on the applicant's business activities as self-described on the business certificate application. If the assigned priority was Low-, Medium-, or High-Priority Industrial or High-Priority Commercial, the business was entered into a database, and a Storm Water Inspection was conducted. The business was sent a letter with the assigned SIC code and informed that the City's

consultant would be contacting it to schedule an inspection. An educational brochure to promote storm water knowledge throughout the entire community was also enclosed. If the assigned SIC code did not warrant a JURMP priority or inspection, the business was entered into a separate database.

During the inspection process, SIC codes and priorities were evaluated for accuracy. For the 2006/2007 reporting period, there were 9 priority changes, and 8 changes in SIC code recommended as a result of site inspections. The priority and SIC code changes for industrial and commercial businesses that occurred during this reporting period are listed in Tables 3.5 and 3.6.

BMP REQUIREMENTS

There is a wide range of industrial and commercial activities throughout the City's jurisdiction. Each business or industrial facility generates activity-specific pollutants based on its primary activity. As a result, the City has taken a proactive stance in determining the appropriate BMPs for the business or facility. The City ensures that the BMPs recommended are cost effective. Activity-specific BMPs can be referenced to JURMP Sections 3.4.1 and 4.3.2 and JURMP Appendix C.3. The City continues to utilize published manuals from the California Stormwater Quality Association and Caltrans. However, the City retains the right to either partially or wholly adopt any of the approaches presented as it sees fit based on experience and the unique circumstances of each industrial or commercial facility.

BMP IMPLEMENTATION

The City of Poway selected general BMPs and Activity-Specific BMPs as presented in the above-referenced JURMP Sections. The City has conducted routine and follow-up inspections at the industrial facilities and commercial businesses to ensure compliance with the City's BMP requirements and the General Industrial Permit. Furthermore, the inspector assesses the BMPs to ensure that they are being properly implemented. Inspections of the facilities and businesses appear to be effective both in verifying whether BMPs are being implemented throughout the City and in causing additional BMPs to be implemented as necessary.

POLLUTION PREVENTION

The City of Poway requires all industrial and commercial facilities to improve pollution prevention methods as applicable to the activities of the facility. Using smaller quantities of toxic material by substituting with less toxic material, changing production processes to reduce waste, decreasing waste water flow, and recycling waste as part of the production process are just several pollution prevention methods presented in Section 3.0 and 4.0 of the JURMP. Furthermore, the City has the authority to require any industrial facility to prepare a SWPPP if deemed necessary. Educating facility managers or owners by workshops, providing pollution prevention methods through distribution of brochures, and facility inspections addressing potential pollution prevention methods have heightened pollution prevention awareness at industrial and commercial facilities. During this reporting period, the City provided outreach to educate industrial and commercial businesses using the following methods:

- Community Events
- City Website
- Interaction with City staff, including interaction with the City's consultant during inspections

Community Events

- March 22, 2007: The Redevelopment Agency provided NPDES-related handouts and giveaway items at the Poway Chamber of Commerce Business Expo. Approximately 400 attendees (residents and businesses) and 82 vendors attended.

City Website

The City posts information about storm water and urban runoff, including BMP brochures, on its website: www.poway.org.

Interaction with City Staff

As part of the JURMP, City staff (including consultants and counter staff) interacts with businesses during inspections and community events and at other opportunities. This interaction is an important opportunity for the City to increase the level of storm water awareness for industrial and commercial facilities. Staff provides educational BMP brochures geared toward specific business activities, as well as general storm water information, during these interactions. This is an important and useful way to personally explain the Storm Water Program to industrial and commercial facilities as well as the general public.

INSPECTIONS

The City continues to have a contract with a storm water consultant, D-MAX, to conduct the initial inspections of new industrial and commercial facilities and the annual inspections of high-priority industrial facilities, as well as to update the existing database. The updated inventory is based on the inspections conducted during the 2006/2007 reporting period and takes into consideration changes in SIC codes, reclassification of JURMP prioritization, businesses moving or closing, and the opening of new businesses or industrial facilities. During the current reporting period, 64 industrial and commercial businesses received annual, first-time, follow-up, or complaint-driven inspections. This can be further broken down into 25 high-priority industrial facilities, 12 medium-priority industrial facilities, 13 low-priority industrial facilities, 13 high-priority commercial facilities, and 1 low-priority commercial facility (final priority after inspection and any changes). Annual inspections are performed for all facilities listed as high-priority industrial. In addition, one high-priority commercial facility, Poway Fun Bowl, receives annual inspections because of past problems at the facility.

Inspections included an overall examination of the drainage pattern on site, review of the facility's business license, presence of SWPPP (if required), review of storm water monitoring records (if applicable), and examination of BMPs on site. Per the Permit, the City of Poway requires that a SWPPP and monitoring program be in place at all high-priority industrial facilities; information on these programs is available to the RWQCB upon written request.

Overall, the majority of sites inspected by D-MAX were clean and showed effective implementation of BMPs. The most common problem found during inspections was dumpster lids left open, missing, or pinned behind the trash receptacle. In many cases, the dumpsters were communal, shared by all the other businesses in the complex. Employees were advised to work with their neighbors in order to keep the dumpster lids closed. The City continues to work with its waste management franchisee, EDCO, to educate businesses regarding the importance of closing dumpster lids. EDCO includes educational materials regarding keeping dumpster lids closed in their mailings to businesses.

As part of the inspections, inspectors provided educational materials and suggested BMPs to the owner or facility manager. After the initial inspection, the City corresponds with facilities that have a change in SIC code that may affect their priority classification. The City also corresponds with facilities that are deemed eligible to file a Notice of Non-Applicability based on the inspection findings. If a violation or non-compliance with the General Industrial Permit is noted at a facility, the City educates, corresponds, and re-inspects to help the business achieve compliance.

As described more fully in Section 11 of this report, the City includes a brief questionnaire on storm water issues in its inspection form. This allows not only an evaluation of each business' knowledge of BMPs and other pollution prevention issues, but also an opportunity for education, as the answers are discussed with the facility representative. Review of the results of these evaluations has demonstrated that knowledge of storm water pollution prevention issues and implementation of BMPs have increased over time (see Section 11 of this report). The entire inspection form is shown in Attachment 3.1.

COMPLIANCE AND ENFORCEMENT

In addition to educating business owners and operators, the City has procedures for verifying and enforcing compliance with its storm water program requirements. This includes both routine facility inspections and response to complaints. The City continues to implement its existing regulatory program, which includes storm water compliance inspections for industrial and commercial facilities. Attachment 3.2 provides the City's procedures for compliance inspections.

As part of completing a storm water compliance inspection form, recommendations for corrective actions are presented to owners or managers of the business or facility. The City is then proactive in verifying whether the corrective actions have been implemented by reinspections. These recommendations may range from various BMP implementations to filing a Notice of Intent or completing a No Exposure Certification/Notice of Non-Applicability with the RWQCB. If a verbal warning is not sufficient, the City then sends a written warning, which can eventually lead to suspension, revocation or denial of permits if applicable, fines, and possibly civil or criminal court actions.

In addition to performing scheduled inspections, the City investigates complaints from the public regarding possible storm water violations at industrial and commercial facilities. Code Compliance officers or the City's consultant investigate each complaint to determine its validity, and the City follows up to make sure that any problem is corrected. Educational

materials are distributed to the businesses during these inspections. A log of complaints received and City follow-up is shown in Table 3.7.

The City gauges compliance effectiveness through the willingness of facilities to implement BMPs or other recommendations, and/or change their business practices. During this reporting period, most businesses that were found to have non-compliant sites were brought into compliance or onto a schedule for compliance through the City working with the business owners/managers and determining what works best for each unique site.

One business, Healthy Times at 13200 Kirkham Way #104, is technically out of compliance but has no potential for discharge. This business has filed a Notice of Intent for coverage under the General Industrial Permit but does not have a SWPPP or monitoring plan. City and RWQCB inspection staff have determined that it is questionable whether manufacturing actually occurs at this site, because the mixing operation should not be considered manufacturing. This mixing takes place entirely indoors, and there is no potential for discharge. Although a Notice of Completion filed by Healthy Times in 2006 was previously rejected, based on further review they have been directed by City and RWQCB staff to refile. This business also has plans to move out of Poway, but has not yet completed the move.

TRAINING, EDUCATION, AND OUTREACH

It is very important from a political and public information perspective to make individual contact with each facility prior to the inspection in order to facilitate compliance. Follow-up contacts also stress the importance of storm water pollution prevention and implementation of BMPs. Additional efforts put forth by the City of Poway include distribution of educational brochures geared toward industrial and commercial businesses, including brochures on BMPs for Concrete and Mortar Projects, Power Washing, Mobile Auto Detailing, and Horses & Livestock (further discussed in Section 9 of this report). These are distributed by Code Compliance officers, Building Inspectors, and Engineering Inspectors, and are available at City Hall as well as posted on the City's website. The City has distributed these educational brochures at every event possible, including inspections, presentations, community events, and displays at public counters. A brochure on proper disposal of water from 5-year testing of fire sprinkler systems was previously sent to all businesses with sprinklers and is available at a public kiosk and on the City's website (Attachment 3.3).

The City also actively participates in the Copermittees' Outreach Workgroup, which has conducted a number of education and outreach programs during this reporting period. Please see the Unified Annual Report for information on these regional programs.

IMPLEMENTATION PLANS FOR 2007/2008

The City will be updating its inventory and inspection procedure in response to the new permit requirements. Inspection priorities will include new industrial and commercial businesses, businesses deemed a high threat to water quality, and public complaints of potential IC/IDs. The City will continue to seek out business groups interested in presentations on pollution prevention issues. Inspections will continue to include the storm

water knowledge evaluation, which serves both as an effectiveness assessment tool and as a means of educating businesses.

JURMP UPDATE

The JURMP has been updated to reflect the most recent inventory of industrial and commercial businesses. The JURMP will be updated extensively in the next reporting period to meet the requirements of the new NPDES permit.

TABLE 3.7
PUBLIC COMPLAINT LOG (INDUSTRIAL/COMMERCIAL)

#	Date of Complaint	Address	Owner / Tenant	Disposition
1	01/03/07	13345 Poway Rd	Dixieline Lumber	Public Works contacted Code Compliance regarding a fuel spill in the parking lot. Staff contacted property management by voice message to clear spill ASAP. Staff also contacted Manager "Troy" from Dixeline and informed of spill.
2	02/20/07	13507 Midland Rd	Prestige Concrete (contractor)	Complaint of business releasing liquid from its trucks into an area behind the business. Staff instructed the business on proper BMPs; business cleaned up area and used proper BMPs.
3	2/27/07	13479 and 13487 Poway Rd	Ringo G's Mexican Eatery/Daphne's Greek Cafe	Public Works called in that two restaurants were not covering used grease bins. Staff inspected and referred to NPDES Supervisor for inspection. Multiple follow-up visits; all deficiencies corrected.
4	03/06/07	13536 Poway Rd	Henry's Marketplace	Code Compliance staff received a complaint that Henry's regularly washes old produce and cleaning chemicals out the back receiving bay door into the alley. An inspection revealed dried residues and rotten produce on the ground behind the building and around the dumpster enclosures. Spoke to Asst. Store Director, who will ensure the cleaning crew uses the cleanout drains in the building intended for this purpose. Gave him NPDES/Stormwater pamphlet.

TABLE 3.7 (CONTINUED)
PUBLIC COMPLAINT LOG (INDUSTRIAL/COMMERCIAL)

#	Date of Complaint	Address	Owner / Tenant	Disposition
5	06/25/07	14361 Tierra Bonita Rd	Dearborn Memorial Park	Staff received a complaint of overirrigation by the cemetery. Staff sent a letter and educational information to the cemetery.

4 COMMERCIAL

Although the Municipal Permit (Order 2001-01) distinguishes between industrial and commercial facilities, the requirements are nearly identical on an implementation basis and all information has been combined within Section 3 to simplify reporting.

5 RESIDENTIAL

The majority of the Residential Component of the JURMP is focused on providing education to the general public and promoting pollution prevention techniques and BMPs as mechanisms to reduce pollutants in urban runoff. The following sections provide the City's activities addressing the residential component during the 2006/2007 reporting period.

PRIORITY SOURCES

High-priority residential areas are determined by five primary activities. These activities include automobile repair and maintenance, automobile washing, automobile parking, home and garden care activities and product use, and disposal of pet waste. All five activities are sources of pollutants that may reach the MS4 and receiving water bodies. Based on the aforementioned activities, results from the dry weather field program, and review of complaints, violations, and investigations, the following residential areas were designated in the City's JURMP as being a high threat to water quality:

North Poway
Rattlesnake Canyon Cornerstone
South Poway Cornerstone
Areas Draining to the Blue Sky Ecological Reserve
Eden Drive Road and Surrounding Area
Country Creek Road and Surrounding Area

The above-listed residential areas are considered high priority, but the City also monitors other residential locations within the City that may be sources of pollutants. During this reporting period, no changes to the high-priority residential areas or the residential activities that determine high-priority status were made.

BMP REQUIREMENTS

The City has established minimum BMPs that are required or encouraged during performance of any high-priority residential activity within the City's jurisdiction. Individual residences and homeowners are responsible for implementation of appropriate control measures and BMPs to maintain compliance with the Permit. If particular BMPs are infeasible for any specific site or source, the City requires implementation of other equivalent BMPs. The City also requires implementation of any additional controls as necessary to comply with the Permit. For more information, please see Section 5.3 of the City's JURMP.

BMP IMPLEMENTATION

The City ensures implementation of BMPs by its residents through education and outreach programs and activities. These range from articles in the City's newsletter and posted on the City website, to recycling and clean-up events throughout the year. These activities are discussed throughout this annual report. The City also ensures BMP implementation by its

residents with City Maintenance and Code Compliance staff advising residents on proper BMPs.

POLLUTION PREVENTION

Pollution prevention comprises procedures and practices that eliminate or reduce the generation of pollutants at their sources. The City of Poway encourages individual residences to be responsible for implementation of appropriate control measures and pollution prevention methods to reduce pollutant generation. Although the strict requirement of these methods for residential areas is challenging, the City continues to educate the public about the use of pollution prevention techniques, as described in Section 5.1 of the City's JURMP.

COMPLIANCE AND ENFORCEMENT

Enforcement of storm water requirements in residential communities is conducted using three mechanisms:

- Public reporting hotline.
- Follow-up of analysis of dry weather field screening and analytical monitoring results.
- Code Compliance and City Maintenance staff.

Violations are inspected by City staff with enforcement authority within a reasonable timeframe. This is further discussed in Section 5.4 of the City's JURMP. Code Compliance staff maintains a database of all residential complaints from the public reporting hotline and the resulting enforcement (Table 5.1).

EDUCATION AND OUTREACH

The majority of the Residential Component of the JURMP is focused on providing education to the general public and promoting pollution prevention techniques and BMPs as mechanisms to reduce pollutants in urban runoff. During the 2006/2007 reporting period, the City held ongoing waste collection and disposal events, distributed a variety of educational materials, and participated in community events providing outreach and education. A summary of these accomplishments is presented below. The City also participated actively in regional educational efforts conducted by various Copermittee groups, including the Education Technical Advisory Committee, the Outreach Workgroup, and the North County Storm Water Program (now incorporated into the Regional Education Program), as described in the Copermittees' Unified Report.

Household Hazardous Waste Collection

The City of Poway has a regional Permanent HHW Collection facility where residents can recycle used oil and dispose of HHW and electronic waste. The facility accepts batteries, leftover paint, auto fluids, drain opener, and any unused products containing toxic chemicals used to maintain a home or automobile. It is open every Saturday, 9 a.m. to 3 p.m., except holiday weekends. The City's HHW facility collected 262,405 pounds of HHW during this reporting period. Ninety-eight percent of the total users, or 3,329, were Poway residents. Therefore it can be estimated that Poway residents delivered 257,157 total pounds of HHW. The City spent $216,425 for HHW disposal for its residents in FY 2006/2007.

Used Oil Recycling

There are six State-Certified Used Oil Collection Centers in the City of Poway at which residents can recycle their used oil. Each center accepts up to 20 gallons of uncontaminated used motor oil, in containers no larger than 5 gallons each, per person, per day. Certified centers will accept used motor oil at no charge and offer a recycling incentive of 16 cents per gallon. The City of Poway has contracted with I Love a Clean San Diego to provide support for the Certified Used Oil Centers and to provide educational outreach in the City's primary and secondary schools.

Printed Materials

The City has developed a number of educational brochures that are applicable to residential issues, including Horses & Livestock, Concrete and Mortar Projects, Home Repair and Remodeling, and Power Washing (see Section 9 of this Annual Report). Each brochure describes storm drain protection measures and BMPs for the specific activity and the types of pollutants that the activity may generate. These brochures are distributed by Code Compliance officers, Building Inspectors, and Engineering Inspectors, are available at all City Offices, and are posted on the City's website. The City distributes these educational brochures at every event possible, including inspections, presentations, community events, and displays at public counters. The City also continues to utilize and distribute the informational door hanger that was developed during the 2002/2003 reporting period (Attachment 5.1). The informational door hanger contains tips on how to prevent storm water pollution. This door hanger is used to educate residents and is posted, as necessary, to enforce the use of residential BMPs.

During this reporting period, the City continued to distribute a general educational brochure specifically for residents describing BMPs to prevent storm water pollution (Attachment 5.2). These brochures have been distributed at community events, at the public counters at City Hall, and through public contact with the Code Compliance Officers.

Community Events and Outreach

Staff participates in community festivals and events throughout the City to educate residents on ways they can keep our neighborhood and our creeks, lakes, and ocean environment clean. The City added one new community event to its 2006/2007 schedule, Poway Pride Day, a local cleanup event that occurred on May 19, 2007. In addition, the City participated in the following community events this reporting period:

- Community Day, September 16, 2006, Community Park
- Fall Self-Haul Cleanup, October 2006, Escondido Transfer Station
- Poway Chamber of Commerce Business Expo, March 22, 2007
- Earth Day/Arbor Day Celebration, April 14, 2007, Lake Poway Park
- Spring Self-Haul Cleanup, April 2007, Escondido Transfer Station
- Poway Dog Day, May 12, 2007, Community Park

Public Reporting

The City of Poway encourages citizens to report illicit discharges or water quality impacts associated with discharges into or from the MS4. The public reporting number is listed in all the storm water pollution prevention brochures and is posted on the City's website.

Media

The City publishes a quarterly municipal newsletter for the residents and businesses of Poway titled *Poway Today*. During this reporting period, three issues contained articles on storm water pollution prevention; these articles are further described in Section 9 of this Annual Report. This newsletter is mailed to all households and businesses in Poway and also is available at City Hall; in addition, current and past issues are posted on the City's website.

Program Giveaways

The City continues to distribute snack bag clips with the City's storm water logo and the message, "ONLY RAIN DOWN THE STORM DRAIN," pencils and sponges promoting proper disposal of used oil, and magnets promoting the City's environmental protection programs at all community events. The City also continues to distribute the Storm Water Click-Pens that display storm water messages. These items are targeted for school-age children in an attempt to educate children on storm water pollution. The City also purchased and distributed pet waste baggie dispensers for dog owners. The dispenser is a small plastic cylinder with the message, "Please Clean up After Your Pets!" and a brief explanation of how pet waste pollutes waterways. The City also purchased and distributed used motor oil containers. They were passed out at the Earth Day Celebration and Poway Community Days to residents who change their own motor oil.

City Storm Water Pollution Prevention Presentations

During the 2006/2007 reporting period, the City's environmental education consultant, I Love A Clean San Diego, conducted 12 used oil and watershed information presentations. Environmental presentation topics included storm water pollution prevention. I Love A Clean San Diego gave the following environmental presentations to elementary schools, high schools, and other organizations throughout Poway:

- November 9, 2006, Christian Family Schools
- February 9, 2007, Meadowbrook Middle School (4 presentations)
- April 17, 2007, Meadowbrook Middle School (3 presentations)
- April 14, 2007, Poway Earth/Arbor Day (2 presentations)
- June 25, 2007, Poway Summer Camps (2 presentations)

Community Newsletters

There were no requests from community groups for articles on storm water pollution prevention during this reporting period; however, the quarterly City newsletter, *Poway Today*, has storm water-related articles in at least two issues per year. The City continues to search for opportunities to educate residents on storm water pollution prevention through articles in local community group newsletters.

IMPLEMENTATION PLANS FOR 2007/2008

Household Hazardous Waste Collection

The City will continue collecting HHW at its Permanent HHW Collection Facility. The facility is open every Saturday, 9 a.m. to 3 p.m., except holiday weekends. The City will continue to educate residents regarding this facility as it has in previous reporting periods.

Used Oil Recycling

The six State-Certified Used Oil Collection Centers in the City of Poway will continue to collect used oil for recycling. Each center accepts up to 20 gallons of uncontaminated used motor oil, in containers no larger than 5 gallons each, per person, per day. The City will continue to educate residents regarding these collection centers as it has in previous reporting periods.

Printed Materials

The City of Poway will have more residential BMP brochures printed during the next reporting period, and will research target groups to determine if more specific BMP brochures are necessary.

Community Events and Outreach

Staff participates in community festivals and events throughout the City to help educate residents on ways they can keep our neighborhood and ocean environment clean. The City plans to participate in the following community events, as well as others yet to be determined, in the next reporting period:

- Community Day, September 15, 2007, Community Park
- Fall Self-Haul Cleanup, October 2007, Escondido Transfer Station
- Spring Self-Haul Cleanup, April 2008, Escondido Transfer Station
- Earth Day/Arbor Day Celebration, April 12, 2008

Community Newsletters

The City continues to search for opportunities to educate residents on storm water pollution prevention through articles in local community group newsletters.

Program Giveaways

The City will continue to distribute snack bag clips with the City's storm water logo and the message, "ONLY RAIN DOWN THE STORM DRAIN," pencils promoting proper disposal of used oil, and magnets promoting the City's environmental protection programs at all community events. The City will also continue to distribute the storm water message click-pens. These items are targeted for school-age children in an attempt to educate children on storm water pollution. The City will also continue to distribute used oil containers to those who change their own motor oil and pass out doggie waste bags to pet owners.

Media

The City will continue to publish articles on storm water pollution prevention in at least two issues of the City's quarterly municipal newsletter for the residents and businesses of Poway, *Poway Today*. The newsletter, including past issues, is posted on the City's website. When applicable, the City will also submit press releases addressing storm water pollution prevention issues to the *Poway Chieftain*, the *North County Times*, and the *San Diego Union Tribune*.

JURMP UPDATE

No updates were noted for this component during this reporting period. The JURMP will be updated extensively in the next reporting period to meet the requirements of the new NPDES permit.

TABLE 5.1
PUBLIC COMPLAINT LOG (RESIDENTIAL)
FISCAL YEAR 2006/2007

#	DATE OF COMPLAINT	ADDRESS	OWNER / TENANT	DISPOSITION
1	07/14/06	14274 Palisades Dr	Carol Joyce, owner/Executive Pressure Washing, contractor	A resident had a company power washing the roof. Slightly red colored water entered the curb line. Contractor was contacted to prevent water from entering storm drains using BMPs.
2	08/21/06	14053 Sycamore Ave	Primos Painting (contractor)	Contractor spilled a quart or less of paint off rear of truck. Contractor washed off paint from curb line. Contractor was contacted by staff and cleaned site. Contractor submitted letter to City of Poway acknowledging spill.
3	10/02/06	14129 Mazatlan Way	Erica Phillips	Resident discharged unknown sandy residue into street curb line. Courtesy Notice left; no response. Notice of Violation Letter sent on 10/4/06. 10/10/06 after no response from property owner, Public Works cleaned street.
4	11/30/06	13992 Putney Rd	Kristine Estill	Complaint received regarding large amount of water running in brow ditch and onto curb line on Edgemoor Street. Staff investigated and followed water back to property. Water main leak under driveway was discovered. Property owner called plumber to repair. Repairs made. Case closed.

TABLE 5.1 (CONTINUED)
PUBLIC COMPLAINT LOG (RESIDENTIAL)
FISCAL YEAR 2006/2007

#	DATE OF COMPLAINT	ADDRESS	OWNER / TENANT	DISPOSITION
5	02/09/07	13052 Conley St	Roberta J. Begovich	Complaint received regarding vehicle leaking oil onto street. Code Officer contacted vehicle owner to make repairs and use and maintain drip pan until repairs are made. NPDES info left. Re-inspected next day. No discharge, case closed.
6	02/21/07	13983 Hickory Ct	Lisa Minkow	Customer Services received a call regarding discharge from residential yard drains into storm water system. Complainant suspects possible chemicals involved. Customer Service worker responded, noticed foul odor and white residue. Development Services was contacted and Code Officers inspected site 24 hours after discharge. Discharge was not present. Property owner had a company clean their yard drains and City curb line. Customer has receipt of work done. NPDES pamphlets left with property owner. Public Works inspected storm drain, all clear, case closed.

TABLE 5.1 (CONTINUED)
PUBLIC COMPLAINT LOG (RESIDENTIAL)
FISCAL YEAR 2006/2007

#	DATE OF COMPLAINT	ADDRESS	OWNER / TENANT	DISPOSITION
7	02/26/07	13744 Pequot Dr	Brian Ahern, tenant/ Linda J. Leffel, owner	Staff received two phone calls (during weekend) from residents regarding soil and vegetation being hosed into curb line. Staff spoke with tenant. Tenant claims that he did not wash down dirt and vegetation but did wash down sidewalk area. Staff advised him of NPDES regulations. No soil was visible in curb line. Case closed.
8	03/13/07	14043 Powers Rd	Melba H. Schuster	Complaint received regarding paint spill on street and curb. Code Officer contacted property owner to remove small paint spill (estimated 2 quarts) from curb and street. NPDES info left. Reinspected next day. Paint removed, case closed.
9	03/16/07	15412 Via La Gitano	Mattew B. & Theresa M. Carpenter	Public Works drainage crew called in to report illegal dumping into the storm water conveyance system. Staff inspected and discovered large amount of green waste deposited into storm channel. Staff left Courtesy Notice and NPDES information at residence. Staff inspected on 3/19/07 and all debris was removed.
10	04/06/07	14057 Mazatlan Way	Lowry Family Trust	Complaint received regarding mud discharged onto street. Code Officer contacted property owner to remove mud debris from curb line and street. NPDES info left. Re-inspected next day. No discharge, case closed.

TABLE 5.1 (CONTINUED)
PUBLIC COMPLAINT LOG (RESIDENTIAL)
FISCAL YEAR 2006/2007

#	DATE OF COMPLAINT	ADDRESS	OWNER / TENANT	DISPOSITION
11	04/20/07	14333 Louetta Ln	Benjamin P. & Deeann M. Verduzco	Complaint received regarding plaster/cement discharged onto street. Code Officer contacted property owner to remove plaster/cement debris from curb line and street. NPDES info left. Re-inspected next day. No discharge, case closed.
12	04/30/07	14545 Highway 67	Eduardo Barajas	Complaint received through the Project Clean Water website of debris dumped in a creek. Inspection staff followed up on 5/2/07 and directed the owner to clean up/place BMPs.
13	05/01/07	12818 Neddick Ave	John D. & Linda L. Cooley, owners/Hanson Concrete, contractor	Public Works drainage crew emailed to report illegal dumping into the storm water conveyance system by a cement truck driver. Driver cleaned up spill and Code Compliance Officer left NPDES flyer on resident's door. Violation clear; business owner sent email regarding NPDES.

6 LAND-USE PLANNING

The City of Poway, in compliance with the Municipal Permit, must assess short- and long-term impacts on receiving waters from new development and redevelopment projects. Reassessing and amending the General Plan, environmental review, and project approval process are permit requirements for compliance. The following sections provide the compliance history and an update on activities during this reporting period.

GENERAL PLAN ASSESSMENT AND AMENDMENT

The City of Poway General Plan has historically included policies, and a number of strategies, relating to water quality preservation. These are included in the Natural Resources Element of the General Plan. The General Plan Natural Resources Element was assessed in 2002 and was amended to supplement existing policies through General Plan Amendment 02-02, which was approved by the City Council on November 16, 2002. By January 2003, the updated General Plan was in effect. The General Plan reads as follows:

> Policy B – Waterways and Water Quality
> The natural character of creeks and channels should be maintained or restored to the greatest extent possible with consideration for maintaining adequate flood protection. Development will comply with all State regulations relative to water quality protection to the maximum extent practicable.
>
> ***Strategies***
>
> 1. Development, including roads, should be set back from riparian corridors a minimum distance of 50 feet or a sufficient distance as determined by a qualified biologist to avoid damage to these areas. These riparian corridors and associated buffer areas should be designated as permanent natural open space easements and the buffer areas should be vegetated only with appropriate native species, as determined by a qualified biologist or native plant horticulturist.
>
> 2. The preservation and, where possible the creation or restoration of areas that provide important water quality benefits, such as riparian corridors, wetlands, and buffer zones, shall be encouraged.
>
> 3. No activity or development shall be permitted within the watershed or viewshed of Lake Poway which would diminish water quality of the lake or its open space and recreational value.
>
> 4. Disturbances of natural water bodies and natural drainage systems caused by development including roads, highways, and bridges shall be limited to the maximum extent practicable.

5. Natural locations and rates of discharge into creeks and channels should not be increased without sufficient mitigation to ensure that significant alteration of the natural system will not occur.

6. Avoid to the maximum extent practicable development of areas that are particularly susceptible to erosion and sediment loss, or establish development guidance that identifies these areas and protects them from erosion and sediment loss.

7. The use of rip-rap in stream channels shall be limited to the minimum area required to protect adjacent improvements and stream banks from excessive erosion.

8. Public access to creeks, via trails, paths and greenways, shall be encouraged to the extent possible without negatively impacting the riparian habitat value.

9. Coordinate with other jurisdictions to monitor and maintain acceptable water quality standards in local streams.

10. Activities within the City's natural drainage systems which would adversely affect water quality (such as pesticide use, construction of septic leach fields and underground storage of hazardous substances) shall be strictly regulated to ensure water quality is not compromised.

11. Substances such as hazardous wastes or untreated wastewater shall not be discharged into the City's natural water systems.

12. Urban runoff from impermeable surfaces, which may be contaminated with oil, grease, vehicle fuels or other toxic substances, shall have such contaminants substantially removed before discharge into the City's natural drainage systems. The City shall comply with the requirements of the National Pollution Discharge Elimination System (NPDES) permit.

13. Minimize the amount of impervious surfaces in areas of new development and redevelopment and where feasible slow runoff and maximize on-site infiltration of runoff.

14. The implementation of pollution prevention methods supplemented by pollutant source controls and treatment shall be encouraged. The use of small collection strategies located at, or as close as possible to the source (i.e., the point where water initially meets the ground) to minimize the transport of urban runoff and pollutants offsite and into the storm drain system shall be encouraged.

15. Post-development runoff from a site shall not contain pollutant loads which cause or contribute to receiving water quality objectives being exceeded or which have not been reduced as much as feasible.

16. Grading shall not increase the natural rate of erosion or cause siltation of stream channels.

17. Through the development review process for projects identified as priority projects in the City's SUSMP, methods available shall be utilized to estimate increases in pollutant loads and flows resulting from projected future development. Structural and non-structural BMPs, as required by the San Diego County Regional Water Control Board, shall be required to mitigate the projected increases in pollutant loads and flows as much as is feasible.

Development Regulations

In 2002, the City participated in the formulation of the Model SUSMP with the other Copermittees in the County, which was approved by the Regional Board in June 2002. On December 3, 2002, the City implemented the model SUSMP via an addition to the Poway Municipal Code. By January 2003, the SUSMP regulations were in effect. All projects submitted to the City are reviewed to determine whether they are subject to SUSMP requirements. As Poway is nearing build-out, most projects currently being built are single-family residences, very few of which are SUSMP priority projects. In this reporting period, 7 private projects and 3 CIP projects were approved that were judged to be priority projects, and all incorporated SUSMP requirements (see Table 6.1).

As discussed in previous JURMP Annual Reports, the City has utilized a regional approach to SUSMP compliance for certain development projects in the South Poway Business Park. The South Poway Business Park was mass graded, and streets and other necessary infrastructure were installed, in the 1980s. Included in the infrastructure are a series of detention basins situated at locations throughout the South Poway Business Park for storm water retention. Certain basins in the South Poway Business Park were identified as being appropriately situated and as having adequate capacity to accommodate and treat the storm water runoff for certain undeveloped properties. With RWQCB approval, four of these basins have been modified to meet SUSMP requirements. After the RWQCB's acceptance of these basins, two large commercial center projects and two smaller projects were approved with reliance on the basins for SUSMP compliance. In addition, the modified basins treat storm water runoff from existing businesses on more than 60 lots that were not obligated to meet SUSMP requirements.

Annual sampling and analysis of inflow and outflow is performed to demonstrate the effectiveness of these basins in treating runoff. Sampling results show significant improvements in water quality, particularly for total suspended solids, turbidity, ammonia, nitrate, orthophosphate, and total organic carbon. The improvements in total suspended solids and turbidity are of particular importance, as these basins drain to the Los Peñasquitos watershed, in which sediment is a constituent of concern. Detailed results of the analysis are shown in Section 11 of this report, Analysis of JURMP Effectiveness.

As indicated in Table 6.1, a fifth detention basin is being converted to a treatment BMP. This basin will be operated and sampled in the same manner as the four basins described above.

Public Information

Development Services department staff have been educated regularly and will continue to be educated on water quality regulations. Weekly, at the Planning/Engineering/Public Works Division staff meeting and at the City's Development Review Committee meeting, projects are discussed and a common focus of discussion is on the project's compliance with SUSMP requirements. In addition, the checklist used by all Land Development staff to evaluate grading plans includes a section on SUSMP requirements (Attachment 6.1). On October 1, 2005, the City also began using an additional SUSMP checklist based on one provided by the RWQCB (Attachment 6.2). Each project plan, public and private, is evaluated using this checklist to ensure that all of the relevant requirements have been met. Copies of these checklists are retained on file by the City.

The development community is educated on an on-going basis through the City "pre-application" and development review process. Through the pre-application process, development projects proponents provide to staff a conceptual proposal of a project. Staff reviews the materials and comments on potential significant issues. A focus of the pre-application process has been making sure that the project will meet the SUSMP requirements. The proponent of the potential development project is provided in writing an outline of issues. Often the written pre-application response is followed up with a meeting to discuss the issues in more detail. Through the development review process, project proponents are also provided information on development requirements relative to SUSMP and are provided the information in greater detail both in writing and at follow-up meetings. This occurs on a weekly basis.

To begin educating developers and homeowners as early in the development process as possible, the City created a handout on SUSMP. The handout (Attachment 6.3) explains the reasons for the requirements, lists what types of projects are subject to SUSMP requirements, and emphasizes that owners are responsible for perpetual maintenance of postconstruction treatment BMPs. This handout is distributed to all applicants at the Planning/Engineering counter and is included in the City's informational packet.

City Employee Training

In addition to ongoing discussions of SUSMP issues during staff meetings and Development Review Committee meetings, staff training on SUSMP-related issues included attendance at the following educational events:

- October 10, 2006: SUSMP training given by D-MAX for 24 staff members from Land Development Engineering, Planning, CIP, and Public Works.
- April 12, 2007: Two Engineers from Land Development Engineering attended the "New" San Diego County Municipal Storm Water Permit Briefing organized by BIA.

- April 27, 2007: One Engineer from Land Development Engineering attended the "New" San Diego County Municipal Storm Water Permit Briefing organized by BIA.

Environmental Review Process

The City's updated environmental review process has been in effect since January 2003. The major outcome of the update was a revised Environmental Initial Study checklist. The revised Environmental Initial Study was included with the 2001/2002 Annual Report.

Inspection

All required permanent treatment BMPs are shown on construction plans and are inspected by the City's Engineering Inspectors during construction. Projects are not approved for occupancy until all required BMPs have been installed in accordance with the approved plans.

Long-Term Maintenance Tracking

All projects listed as SUSMP Priority Projects are tracked in a database. The database includes the type of project, the type of permanent BMPs, and the most recent date of inspection. In this reporting period, the City performed inspection of all permanent treatment BMPs (see Attachment 6.4 for inspection form). A total of 17 sites, 14 private and 3 public, were inspected during this reporting period. Although all public projects were in good condition, half of the private projects were in need of some type of maintenance. Because these inspections were performed in June 2007, the sites were not brought into compliance by the end of the reporting period. Further follow-up to bring all sites into compliance will be reported in the 2007/2008 Annual Report.

The regional detention basins described earlier in this section are maintained by the City's Public Works Department. Staff performs regular maintenance on all four basins, and operates the basin valves before and after every rain event or potential rain event to ensure proper retention and treatment of storm water from the more than 60 sites that drain to these basins.

IMPLEMENTATION PLANS FOR 2007/2008

Using the development regulations, SUSMP checklist, general plan amendments, and environmental review process, City staff will continue to review all proposed projects and incorporate urban runoff assessments when making land-use decisions. This will include use of the expanded checklist mentioned above.

The City will continue to provide education to project proponents through public workshops and during the pre-application and development review process. This will include continued distribution of the educational pamphlet for property owners and developers, as described above, as well as additional information to be placed on the City's web page.

The City will also continue to require maintenance agreements and will conduct inspection of completed projects that are subject to SUSMP requirements to ensure ongoing

maintenance as required by the Permit. As noted above, follow-up is ongoing in cases where additional maintenance is required, to ensure that all sites reach compliance.

JURMP UPDATE

No updates in the JURMP have occurred during this reporting period. The JURMP will be updated extensively in the next reporting period to meet the requirements of the new NPDES permit.

TABLE 6.1
SUSMP PRIORITY PROJECTS APPROVED DURING FISCAL YEAR 2006/2007

Project	Location	Type of Project	Treatment BMPs
Private

7 CONSTRUCTION

The goals of the Construction Component of the City of Poway's JURMP are to prevent or minimize the impacts of sediment and pollutants generated by construction activities within the City of Poway on the City's MS4 and ultimately on receiving water bodies and environmentally sensitive areas. To achieve this, the City has implemented or continued implementation of the following activities and program components:

- Applied pollution prevention methods.
- Prioritized all construction sites as high, medium, or low threat to water quality and used this information to compile a priority-based inventory of all construction sites within the jurisdictional boundaries.
- Required implementation of minimum BMPs at all construction sites.
- Continued the construction site inspection program to evaluate compliance with ordinances and permits.
- Continued the enforcement program to enforce compliance with City ordinances and the municipal Permit.
- Continued implementation of a reporting system of non-compliant sites.
- Continued its education program focused on construction activities.

PRIORITY SOURCES

The City of Poway maintains a database of all private and public construction projects, both active and completed. New private grading projects are entered into the database when a Request for Preconstruction Meeting is received, and Capital Improvement Projects are entered when a Notice to Proceed is issued. The appropriate department determines the priority status. Projects are never deleted from the database; their status is changed to inactive upon the completion of construction. Although this provides an accurate inventory of active construction sites at any particular moment in time, the inventory becomes out of date almost immediately when distributed because of the frequency of permit issuance, abandonment of construction projects, and completion of construction activities. The database, however, allows compilation of the list of projects that were active during the reporting period. During this reporting period, there were 124 projects (100 private development/construction projects and 24 City of Poway Capital Improvement Projects). The private projects were prioritized as follows: 22 High Priority, 12 Medium Priority, and 66 Low Priority. The Capital Improvements Projects were prioritized as follows: 3 High Priority, 5 Medium Priority, and 16 Low Priority. More detailed information is available upon written request.

BMP REQUIREMENTS

The City requires BMP implementation at all construction sites to reduce and/or eliminate the impact of discharges from construction site runoff on receiving water quality and other environmental resources.

The City has compiled an inventory of BMPs applicable to construction activities, which is contained in the City's JURMP in section 7.6.2. Many of the BMPs are from the Caltrans

Construction Site Best Management Practices Manual (November 2000) and have been modified by the City where appropriate and noted with an asterisk; these are also available for review in the JURMP in Appendix C.6.

POLLUTION PREVENTION

Construction and grading activities are a potential source of pollutants in all phases of execution. The impact from construction activities on the existing storm drain conveyance system surrounding the site can be significant and can potentially contribute to adverse environmental effects. The key to prevention is identifying sources and potential sources of pollutant materials and implementing site-specific BMPs that eliminate and control the source or the potential source. The City of Poway requires all construction projects within its jurisdiction to implement pollution prevention methods as described in further detail in the JURMP.

BMP IMPLEMENTATION

The City of Poway has established minimum BMPs that must be implemented at all construction sites regardless of the water quality threat prioritization.

Grading Ordinance

In accordance with Section F.2.b of the Permit, the City of Poway's grading ordinance was amended to require implementation of additional BMPs and other measures during all construction activities. The City of Poway Municipal Code (Title 16) was amended on January 22, 2002, adopting Ordinance No. 553, which amended and added certain sections pertaining to erosion and drainage. The amendments contained in the updated grading ordinance were written to address JURMP requirements, and they have direct implications for construction projects. The ordinance amendment is available as Attachment A.2 in the City's JURMP.

Construction and Grading Permit Approval Process

The City of Poway's construction and grading permit approval process is designed to comply with the Permit. The City requires that all individual proposed construction and grading projects implement measures to ensure that pollutants from the site will be reduced to the maximum extent practicable and will not cause or contribute to an exceedance of water quality objectives. Proponents of all construction and grading projects are required to comply with practices detailed in the JURMP and the revised Grading and Storm Water Ordinances. The grading approval process also includes the City requirement of cash securities for all grading projects and Minor Development Review Application (MDRA; non-grading) projects to ensure compliance with the JURMP requirements for erosion/sediment control.

All new development and redevelopment project proponents are required to attend a preconstruction meeting with the City of Poway. During these meetings the proponent is educated on storm water management topics including federal, state, and local regulations, implementation of a SWPPP, if required, and implementation and maintenance of BMPs. Additionally, the developer or builder is required to watch an educational video covering construction site BMPs and storm water management, after which the viewer signs an acknowledgement.

COMPLIANCE AND ENFORCEMENT

Inspection Program

The City of Poway has a construction site inspection program to evaluate compliance with federal, state, and local regulations. The City's Engineering Inspectors visit each developer, contractor, and/or owner to educate them and to assess the BMPs on each project site. The inspectors provide written BMP requirements from the JURMP and discuss deficiencies and solutions. Inspectors assure that BMPs are implemented by inspecting and re-inspecting. Building Inspectors are also empowered to enforce storm water regulations or to forward any noted violations on to the Engineering Inspectors for corrective action.

Per the JURMP, inspections of high-priority construction sites are conducted weekly, at a minimum, whereas medium- and low-priority sites are inspected at least twice during the wet season. However, the City has gone above the requirements and inspects all construction sites, regardless of priority, once a week during the rainy season. All construction sites are inspected as needed during the dry season; at a minimum, sites are inspected every other month. In addition, every grading project, whether active or inactive, is inspected before every predicted rain event, defined as a 50% chance of rain within 48 hours (see Attachment 7.1). A special pre-rain event checklist is used to ensure that the site is fully in compliance and protected against erosion or accidental discharge (Attachment 7.2).

The Inspectors discuss BMPs and monitor storm water and erosion control requirements with each site project manager, developer, or owner. The City inspects MDRA sites for compliance with erosion and sediment control as well. The City requires every construction project and MDRA to have a Weather-Triggered Action Plan for Construction Sites for rain events (Attachment 7.3).

The City sends out a yearly letter prior to the rainy season to all parties responsible for construction projects describing the enhanced construction BMP requirements and storm water management requirements during the rainy season (Attachment 7.4).

The City developed enforcement procedures that require corrective actions when non-compliance is observed. Non-compliant sites receive a Correction Notice and timeframe for compliance. The site is required to become compliant within 1 to 5 working days, unless rain is imminent, in which case a Stop Work Notice is issued immediately. Failure to comply within the appropriate timeframe results in issuance of a Stop Work Notice, and notification is sent to the RWQCB. Further steps including attaching of securities to do the work, revocation of permits, and issuance of citations also can be taken as necessary.

Inspections Conducted

The prevention of storm water pollution is an important task of the City of Poway's construction engineering inspectors. During this reporting period, all active construction projects were inspected in accordance with the schedule given above.

Enforcement Actions Taken

Inspectors keep detailed records of projects. Information is entered into a database to assist tracking. Typically, project managers, developers, owners, and employees in the construction sector have favorably received inspection results and BMP analysis. Where necessary, a series of enforcement actions can be taken as listed in Section 7.8 of the City's JURMP:

a) Verbal warnings
b) Written warnings
c) Enforcement of contracts (for municipal projects)
d) Stop work orders/notices
e) Denial or revocation of permits
f) Civil and/or criminal court actions

The City issued 53 Stop/Correct Work Notices during this reporting period (30 Correct Work Notices and 23 Stop Work Notices). Table 7.1 describes each Notice written.

A policy of enforcement escalation has been established for cases that require it. During a previous reporting period, there were instances that required the City to perform emergency erosion control work and attach project securities to pay for this work. This level of enforcement was not required during the current reporting period.

EDUCATION AND OUTREACH ON CONSTRUCTION ACTIVITIES

The City of Poway provides information regarding storm water quality to project proponents, project personnel, employees, contractors, subcontractors, and other parties involved with construction activities.

Construction Education

The following is a list of educational training regarding construction projects that the City of Poway has provided or participated in during the timeframe of this Annual Report:

- The City sponsors the seminar series organized by the BIA to inform contractors, developers, and other audiences about storm water requirements and the use of BMPs.
- November 30, 2006: Two Engineers from CIP and Two Engineers from Land Development Engineering attended a seminar on Storm Water Regulation and SWPPP Preparation, Monitoring and Sampling Program organized by BIA.
- December 5, 2006: One Engineer from CIP and one Engineer from Land Development Engineering attended a seminar on BMP Selection and Implementation Including Treatment Techniques organized by BIA.
- January 23, 2007: The City Engineer, Engineering Inspection Supervisor/NPDES Coordinator, four Engineers from CIP, one Engineer from Land Development Engineering, one Engineer from Traffic Engineering, and five Inspectors attended training on Stormwater Pollution Prevention for Construction Sites held by staff.

IMPLEMENTATION PLANS FOR 2007/2008

Using the Grading Ordinance, Storm Water Ordinance, and project approval process, City staff intends to continue reviewing construction projects as described in the JURMP; in addition, the increased inspection frequencies noted in this report will continue, above and beyond JURMP requirements. Staff will continue to provide educational materials during these inspections and to provide education during the project review process.

JURMP UPDATE

The construction project inventory is updated continuously. No other updates to this section of the JURMP occurred during this reporting period. The JURMP will be updated extensively in the next reporting period to meet the requirements of the new NPDES permit.

8 ILLICIT DISCHARGE DETECTION AND ELIMINATION

The City of Poway actively works to identify, eliminate and prevent IC/IDs. Illicit connections and illicit discharges can result in unauthorized discharges of pollutants to MS4s. Illicit discharges may be associated with activities such as vehicle washing or dewatering without appropriate BMPs. Illicit connections may include sewer pipes that have purposefully or mistakenly been configured to discharge into an MS4 pipe as well as other prohibited connections to the MS4. Unless promptly detected, contained, and captured, IC/IDs may flow untreated into receiving waters. The City works with residents and businesses so that IC/IDs can be detected more effectively and has implemented an education program to create more awareness so that IC/IDs can be reduced or eliminated. Three different mechanisms by which this can be accomplished are described in Section 8 of the City's JURMP and listed below:

- Inspecting Local Businesses, Construction Sites, and Municipal Facilities
- Conducting the Dry Weather Monitoring Program
- Operating a Public Complaint Hotline

These three mechanisms enable the City to provide a comprehensive system to better the quality of storm water and urban runoff throughout the City. A more detailed description of the inspection program and its results can be found in sections 2, 3, and 7 of this Annual Report. This section includes a detailed discussion of both the Dry Weather Monitoring Program and the Public Complaint Hotline.

DRY WEATHER MONITORING

The City has continued to conduct a Dry Weather Monitoring Program as required by the Municipal Permit to detect and eliminate IC/IDs to the storm drain system. As mentioned earlier, the City uses the Dry Weather Monitoring Program as one of its key methods to monitor for IC/IDs, as well as a method of measuring the City's progress toward improving overall water quality for the region. The dry weather season spans May 1st through September 30th. There are three components to the Dry Weather Monitoring Program:

- Field observations (site description and qualitative observations)
- Field screening monitoring (testing of sample while at site and flow estimation)
- Analytical monitoring (performing further tests of sample later at a laboratory)

The 2006 Dry Weather Field Screening and Analytical Monitoring Program Report is included as Attachment 8.1 of this report.

Numeric action levels are used as the primary approach for interpreting constituent concentrations measured in the field and the laboratory, and for determining whether there is potentially an IC/ID. The action levels were adopted in 2003 and were based on statistical analysis of previous Dry Weather Monitoring Program data. The California Toxics Rule (CTR) Criteria Maximum Concentration (CMC) is used as the action level for dissolved trace metals. Best professional judgment is used when determining whether or

not certain field parameters such as temperature or turbidity warrant upstream investigations.

The City of Poway uses a total of 50 primary monitoring stations to collect Dry Weather Monitoring Program data; these stations and their locations are listed in Table 8.1. Because in some cases a primary monitoring site may be dry or not possible to sample, the City designated alternate monitoring stations specified in the JURMP that can be used as replacements. The City of Poway's Dry Weather Monitoring Program sites are located within the following drainage basins.

- Sycamore Creek Basin
- Green Valley Creek Basin
- Stone Canyon Basin
- Pomerado Creek Basin
- Rattlesnake Creek Basin
- Silver Lake Drive Basin
- Poway Creek Basin
- Beeler Creek Basin
- San Vicente Creek Basin

2006 DRY WEATHER MONITORING

The City's storm water consultant, D-MAX, began the 2006 Dry Weather Monitoring Program in July 2006. Two of the 50 primary monitoring stations (sites 131 and 137) were dry and were substituted with alternate sites (sites 103 and 114). Of the 50 sites sampled and fully investigated, five sites were found to have ponded water. The remaining sites had flows ranging from less than one gallon per minute (gpm) to 187 gpm. All site visits included qualitative observations, flow measurement, and field water quality analyses of specific conductance, temperature, pH, turbidity, detergents (measured as Methylene Blue Active Substance, or MBAS), nitrate nitrogen, ammonia nitrogen, and orthophosphate phosphorus. Laboratory analyses were conducted for water samples from 13 sites, representing more than 25 percent of the total number of sites. Laboratory analyses were conducted for total hardness, surfactants, oil and grease, diazinon, chlorpyrifos, dissolved metals (cadmium, copper, lead, and zinc), total coliform bacteria, fecal coliform bacteria, and *Enterococcus* bacteria.

Physical parameters were measured at each site. Recorded pH values ranged from 7.0 to 8.4 pH units, temperature from 20.3 to 33.2 degrees Celsius (°C), conductivity from 1.02 to 5.03 millisiemens per centimeter (mS/cm), and turbidity from 0.03 to 60.0 nephelometric turbidity units (NTU). Best professional judgment is used when evaluating all of these physical parameters except pH, which is considered to have exceeded its action level if it falls outside the range of 6.5 to 9.0 pH units. The turbidity reading of 60.0 NTU at Site 119 was deemed abnormally high, and a follow-up investigation was initiated. That investigation is described later in this section. None of the other physical parameter measurements were considered to be abnormal or indicative of an IC/ID.

Analysis of chemical constituents during the field screening portion of the Dry Weather Monitoring Program indicated ammonia concentrations ranging from 0.1 to 2.0 mg/L NH_3-

N. The established action level of 1.0 mg/L was exceeded at two sites. Follow-up visits were made to these two locations (sites 3B and 21B), and ammonia was measured above the action level during both those visits as well. Follow-up source investigations were conducted and are described later in this section. Nitrate concentrations ranged from 1.25 to 12.5 mg/L NO_3-N, with only one site (Site 18A) exceeding the action level of 10.0 mg/L. The follow-up investigation for this site is detailed later in this section. Orthophosphate phosphorus concentrations ranged from 0.03 to 0.98 mg/L PO_4-P. Surfactants concentrations, measured in mg/L of MBAS, ranged from 0.13 to 0.75 mg/L. None of the visited sites were found to have concentrations exceeding the action levels for surfactants or orthophosphate phosphorus. All of the physical and chemical field data results are presented in Table 8.2.

Laboratory analyses of samples collected during the Dry Weather Monitoring Program showed that bacterial indicators were the only constituents to exceed their respective action levels. Surfactants, oil and grease, diazinon, chlorpyrifos, dissolved cadmium, and dissolved lead were not detected at any of the sites. Dissolved zinc was detected at seven sites and dissolved copper was detected at two sites, but none of these readings exceeded the California Toxics Rule Criteria Maximum Concentration. Bacteria action levels were exceeded at six sites of the 13 sites sampled, three fewer than in 2005. Site 36A had total coliform, fecal coliform, and *Enterococcus* bacteria counts exceeding the action level. Sites 4, 15, and 108 had only a total coliform bacteria exceedance, and sites 16 and 129 had only an *Enterococcus* exceedance. Complete laboratory results are presented in Table 8.3.

2006 FOLLOW-UP INVESTIGATIONS

Follow-up investigations are necessary to identify and eliminate pollutant sources during the Dry Weather Monitoring Program. When one or more field screening constituents were found to exceed their corresponding action levels, a follow-up visit was conducted within 24 hours or by the next business day. Upstream investigations were conducted for those sites where chemical or physical measurements remained above the action level during the follow-up visit to the site. Additionally, if one or more laboratory analytes were measured above their action levels at a sampling site, the site received a follow-up investigation. The purpose of the follow-up and upstream investigations is to further locate pollutant sources so that they can be eliminated. The follow-up (upstream) investigations for the 2006 Dry Weather Monitoring Program for the City of Poway are described below.

Follow-Up Investigations Based on Field Testing

Four sites required follow-up investigations based on results of field testing. Sites 3B and 21B had ammonia concentrations measured above the action level. Nitrate was measured above the action level at Site 18A only. In the best professional judgment of the field crew, the turbidity level initially measured at Site 119 warranted further investigation.

Return visits to sites 3B and 21B indicated ammonia concentrations had remained above the action level, so further upstream investigations were conducted. The follow-up visit and upstream investigation concluded the source of ammonia at Site 3B was most likely originating from a newsprint recycling bin; water had been added to the bin to reduce the volume of the newspaper, and liquid was leaking from the bin of decomposing papers. The responsible party for the bin was contacted when the situation was discovered, and

corrective action was taken at that time. At Site 21B the primary source of elevated ammonia appeared to be from decomposing trash and organic debris in ponded water upstream of the site.

Since 2002, nitrate readings at or just above the action level have been recorded at Site 18A. The source of the nitrate was found to be coming from water seepage through the joint of a storm water pipe on Somerset Road. The 2006 upstream investigation for Site 18A did not discover any new sources contributing flows with high nitrates to the system. Elevated nitrate levels were again attributed to water seepage into the storm water pipes.

Turbidity was measured at 60 NTU during the initial visit to Site 119. Because this level is higher than normally observed and because turbidity exceedances are often the result of brief, transient discharges, the field crew immediately began an upstream investigation in an effort to identify the source. The field crew worked its way upstream, opening manholes along the main line leading to the site. The approximately the same flow rate was observed upstream of the site in the under ground pipes, but no significant surface flow was observed contributing to the flow. The field crew continued further upstream of the site, checking all lateral braches, and found only minimal flow, with clear, colorless water. Despite the prompt upstream investigation, no source for the turbid water could be found. The field crew returned the next day to retest the turbidity and found that it has dropped significantly to 4.6 NTU. The source of the turbid water was most likely an atypical, transient discharge.

Follow-Up Investigations Based on Laboratory Testing

Laboratory analysis indicated a total of six sites (sites 4, 15, 16, 36A, 108, and 129) having at least one of the bacterial indicators measured above the applicable action levels, and upstream investigations were conducted for all six sites. Three of these sites had exceedances of total coliform but no other indicators.

An upstream investigation was conducted for Site 4 to find the source of total coliform bacteria. Laboratory analysis of the initial sample collected from the site indicated a total coliform count of 50,000 MPN/100 mL, equal to that of the established action level. The most likely source of bacteria was believed to be from animal waste observed in a storm drain pipe located close to an open area upstream of the site.

Site 15 was also measured to have a total coliform concentration above the action level. *E. coli* was only detected, and at a very low level, in one of the water samples taken during the upstream investigation. No evidence of fecal contamination was noted by visual observations. The relatively high total coliform levels originally recorded at the site were deemed to have most likely arisen from the stagnant water and decomposing organic material found at the site itself.

Site 16 had a measured *Enterococcus* concentration of 13,000 MPN/100mL, slightly above the action level of 10,000 MPN/100mL. The site is located in a portion of Pomerado Channel upstream of where it joins with Poway Creek. Site 90, where laboratory sampling was also conducted, is located further upstream of Site 16. All bacterial indicators were measured below their respective action levels for a water sample taken from Site 90 during the routine dry weather visit. Therefore, the field crew focused their efforts on the area between Site 90

and Site 16. Results of water sampling and visual observations did not indicate any fecal sources of bacteria. The source of bacteria at the site appeared to be predominantly from decomposing organic material originating from dense vegetation nearby that likely provided an environment for bacteria growth.

All three bacterial indicators were measured at levels above their respective action levels at Site 36A. Laboratory analyses from the initial investigation measured a total coliform count of 900,000 MPN/100 mL, a fecal coliform count of 50,000 MPN/100 mL, and an *Enterococcus* count of 50,000 MPN/100 mL. The majority of water at the site appeared to have originated from an outlet located on the north side of the channel in close proximity to the site. Upstream of Site 36A, the channel was dry. The greatest concentrations of bacteria were measured at the site itself and from the outlet contributing the majority of the flow to the site. No significant sources of water were observed in the residential area to the northeast of the site. A manhole opened on Tierra Bonita Road, adjacent to Twin Peaks Middle school, had ponded water with trash and debris in the manhole. Bacteria concentrations were high at this location and may have contributed to the bacteria concentrations observed downstream. The area surrounding Site 36A has several horse stables and riding trails. Horse droppings were noted in the area immediately surrounding the site as well as in the curb gutters near the middle school. Horse droppings, in combination with irrigation runoff and decomposing trash found upstream and at the site, were identified as the most likely sources of elevated bacteria concentrations at Site 36A.

Site 108 is a concrete channel located north of Gate Drive in an open area south of Woodgate Place. The channel drains the surrounding residential and rural areas as well as industrial and commercial complexes further upstream. Laboratory analysis detected a total coliform concentration of 220,000 MPN/100mL, above the action level. During both the initial and the follow-up site visits the water was clear and colorless, with normal plant and algae growth at the site. The samples from the upstream investigation indicated relatively low levels of bacterial growth in the channel, and none of the samples analyzed from Site 108 during the last four years had had bacteria action level exceedances. The high total coliform count recorded during the first site visit in 2006 was likely the result of an anomalous transient flow.

Site 129 is a corrugated metal pipe outlet that flows into a concrete channel north of the intersection of Indian Trail and Bennye Lee Drive. Laboratory analysis found that water from this outlet contained *Enterococcus* at the level of 17,000 MPN/100 mL. During the initial visit, the field crew noted the water was clear and colorless and observed significant algae and sediment deposits in the concrete channel. Similar conditions were noted during the follow-up visit. Analyses of water samples from the site and from locations farther upstream did not show evidence of fecal sources of bacteria, and visual indications of fecal sources also were not noted. This indicates that fecal sources of bacteria, which may have caused the *Enterococcus* exceedance measured from the routine site visit, were no longer present at the time of the upstream investigation. The *Enterococcus* exceedance reported from the initial site visit was deemed to likely be the result of a transient flow.

The City of Poway conducted the follow-up actions based on the recommendations from the 2006 Dry Weather Monitoring Report:

1. **Recommendation:** The illegal discharge upstream of Site 3B was eliminated during the dry weather monitoring program. As a proactive measure though, the City may consider providing educational material concerning overirrigation and IC/ID compliance to the businesses in the vicinity of Kirkham Court, Kirkham Drive, and Stowe Drive, upstream of Site 3B.

   Action: The City conducts inspections throughout the business park area as part of the industrial/commercial inspection program detailed in Section 3 of this report. These inspections include distribution of educational materials regarding BMPs, proper irrigation, prevention of discharges, and related issues.

2. **Recommendation:** Conduct regular compliance inspections in the Kirkham Road and Stowe Drive business park area upstream of sites 4 and 15. An emphasis should be placed on checking for illegal discharges and ensuring irrigation systems are properly functioning.

   Action: Public Works drainage crews inspected the sites to check for illegal discharges and over-irrigation, and returned regularly to monitor the sites throughout the year. As noted above, the City conducts inspections throughout the business park area as part of the industrial/commercial inspection program to check for illegal discharges and irrigation runoff. Code Compliance Officers and City storm water staff also respond to any reports of excessive runoff or potential illegal discharges.

3. **Recommendation:** Clean outlet upstream of Site 4 to remove animal waste from the drainage pipe.

   Action: Public Works drainage crews inspected and cleaned the site.

4. **Recommendation:** Regularly clear sediment and vegetation from the outlet at Site 15 to promote proper drainage from this outlet to the channel.

   Action: Public Works drainage crews regularly inspect the site and clear vegetation as necessary.

5. **Recommendation:** The catch basins and curb gutters upstream of Site 36A should be cleaned to remove debris, horse droppings, and trash that was observed during the dry weather monitoring program.

   Action: Public Works drainage crews regularly inspect the site and clear debris as necessary.

6. **Recommendation:** Ensure sites 2, 3, 21A, 21B, 31, 35, 36A, 91, 105, 109, 111, 124, and 136 are cleared of litter and debris and are included in any existing clean-up schedules.

Action: Public Works drainage crews regularly inspect the sites and clear the litter and debris as necessary.

COMPLAINT REPORTING OF IC/IDS, INVESTIGATIONS, AND ENFORCEMENT

The City has continued to encourage citizens and city personnel to become active participants in IC/ID elimination and storm water pollution prevention by utilizing the storm water public complaint hotline. The City's Code Compliance team is responsible for operating the hotline. After a complaint is reported, it is first logged onto a spreadsheet for documentation and tracking purposes. Each of the complaints logged is then investigated by City personnel to determine if any pollutants are in fact being discharged to the MS4. If the investigation confirms an IC/ID into the MS4 or finds evidence of a violation, City personnel take action to remedy the observed problem. The responsible parties are also educated or cited as necessary and required to cease any illegal discharges. A summary of the 18 complaints logged during the 2006/2007 reporting period is presented in Table 8.4.

PREVENTION AND RESPONSE TO SEWAGE SPILLS

The City carefully maintains its sanitary sewers to prevent spills and protect City residents and natural waterways. Routine maintenance operations performed on the sanitary sewers in 2006/2007 are described in Section 2. The City also continues to use a Sewer Overflow Prevention Plan and a Sewer Overflow Response Plan. The visual inspections and chemical testing performed during the Dry Weather Monitoring Program can also be useful methods of detecting the presence of sewage in the MS4. The City's Dry Weather Monitoring Program did not detect any evidence of sewage spills in 2006 or in 2007. If there is any indication that sewage may have spilled or seeped into the storm water conveyance system, the source of the sewage is tracked down immediately and appropriate action is taken promptly. One spill did occur during the 2006/2007 reporting period, and it was cleaned up in accordance with the Sewer Overflow Response Plan. Section 2 of this Annual Report provides more information about that incident. The public storm water complaint hotline also may handle calls pertaining to sanitary sewer spills or overflows. No calls regarding sanitary sewer spills or overflows were received in 2006/2007.

IMPLEMENTATION PLANS FOR 2007/2008

1. The City has conducted another round of dry weather sampling and monitoring during the 2007 dry weather season.
2. The results of the 2007 program will be compared to results of previous Dry Weather Monitoring Programs and to previous follow-up investigations to evaluate the overall effectiveness of the program.
3. Corrective actions will be taken by the City based on the recommendations in the dry weather report.
4. The City will continue operating the public complaint hotline and responding to water quality complaints.

JURMP UPDATE

No updates were noted for this component during this reporting period. The JURMP will be updated extensively in the next reporting period to meet the requirements of the new NPDES permit.

TABLE 8.4
2006/2007 PUBLIC COMPLAINT LOG

NO.	DATE	ADDRESS	OWNER/RESIDENT	COMPLAINT AND STATUS
1	07/14/06	14274 Palisades Dr	Carol Joyce	A resident had a company power washing the roof. Slightly red colored water entered the curb line. Contractor was contacted to prevent water from entering storm drains using BMPs.
2	08/21/06	14053 Sycamore Ave	Primos Painting (contractor)	Contractor spilled a quart or less of paint off rear of truck. Contractor washed off paint from curb line. Contractor was contacted by staff and cleaned site. Contractor submitted letter to City of Poway acknowledging spill.
3	10/02/06	14129 Mazatlan Way	Erica Phillips	Resident discharged unknown sandy residue into street curb line. Courtesy Notice left; no response. Notice of Violation Letter sent on 10/4/06. 10/10/06 after no response from property owner, Public Works cleaned street.
4	11/30/06	13992 Putney Rd	Kristine Estill	Complaint received regarding large amount of water running in brow ditch and onto curb line on Edgemoor Street. Staff investigated and followed water back to property. Water main leak under driveway was discovered. Property owner called plumber to repair. Repairs made. Case closed.
5	01/03/07	13345 Poway Rd	Dixieline Lumber	Public Works contacted Code Compliance regarding a fuel spill in the parking lot. Staff contacted property management by voice message to clear spill ASAP. Staff also contacted Manager "Troy" from Dixeline and informed of spill.

TABLE 8.4 (CONTINUED)
2006/2007 PUBLIC COMPLAINT LOG

NO.	DATE	ADDRESS	OWNER/RESIDENT	COMPLAINT AND STATUS
6	02/09/07	13052 Conley St	Roberta J. Begovich	Complaint received regarding vehicle leaking oil onto street. Code Officer contacted vehicle owner to make repairs and use and maintain drip pan until repairs are made. NPDES info left. Re-inspected next day. No discharge, case closed.
7	02/20/07	13507 Midland Rd	Prestige Concrete (contractor)	Complaint of business releasing liquid from its trucks into an area behind the business. Staff instructed the business on proper BMPs; business cleaned up area and used proper BMPs.
8	02/21/07	13983 Hickory Ct	Lisa Minkow	Customer Services received a call regarding discharge from residential yard drains into storm water system. Complainant suspects possible chemicals involved. Customer Service worker responded, noticed foul odor and white residue. Development Services was contacted and Code Officers inspected site 24 hours after discharge. Discharge was not present. Property owner had a company clean their yard drains and City curb line. Customer has receipt of work done. NPDES pamphlets left with property owner. Public Works inspected storm drain, all clear, case closed.
9	02/26/07	13744 Pequot Dr	Brian Ahern, tenant/ Linda J. Leffel, owner	Staff received two phone calls (during weekend) from residents regarding soil and vegetation being hosed into curb line. Staff spoke with tenant. Tenant claims that he did not wash down dirt and vegetation but did wash down sidewalk area. Staff advised him of NPDES regulations. No soil was visible in curb line. Case closed.

TABLE 8.4 (CONTINUED)
2006/2007 PUBLIC COMPLAINT LOG

NO.	DATE	ADDRESS	OWNER/RESIDENT	COMPLAINT AND STATUS
10	2/27/07	13479 and 13487 Poway Rd	Ringo G's Mexican Eatery/Daphne's Greek Cafe	Public Works called in that two restaurants were not covering used grease bins. Staff inspected and referred to NPDES Supervisor for inspection. Multiple follow-up visits; all deficiencies corrected.
11	03/06/07	13536 Poway Rd	Henry's Marketplace	Code Compliance staff received a complaint that Henry's regularly washes old produce and cleaning chemicals out the back receiving bay door into the alley. An inspection revealed dried residues and rotten produce on the ground behind the building and around the dumpster enclosures. Spoke to Asst. Store Director, who will ensure the cleaning crew uses the cleanout drains in the building intended for this purpose. Gave him NPDES/Stormwater pamphlet.
12	03/13/07	14043 Powers Rd	Melba H. Schuster	Complaint received regarding paint spill on street and curb. Code Officer contacted property owner to remove small paint spill (estimated 2 quarts) from curb and street. NPDES info left. Reinspected next day. Paint removed, case closed.
13	03/16/07	15412 Via La Gitano	Mattew B. & Theresa M. Carpenter	Public Works drainage crew called in to report illegal dumping into the storm water conveyance system. Staff inspected and discovered large amount of green waste deposited into storm channel. Staff left Courtesy Notice and NPDES information at residence. Staff inspected on 3/19/07 and all debris was removed.

TABLE 8.4 (CONTINUED)
2006/2007 PUBLIC COMPLAINT LOG

NO.	DATE	ADDRESS	OWNER/RESIDENT	COMPLAINT AND STATUS
14	4/6/07	14057 Mazatlan Way	Lowry Family Trust	Complaint received regarding mud discharged onto street. Code Officer contacted property owner to remove mud debris from curb line and street. NPDES info left. Re-inspected next day. No discharge, case closed.
15	04/20/07	14333 Louetta Ln	Benjamin P. & Deeann M. Verduzco	Complaint received regarding plaster/cement discharged onto street. Code Officer contacted property owner to remove plaster/cement debris from curb line and street. NPDES info left. Re-inspected next day. No discharge, case closed.
16	04/30/07	14545 Highway 67	Eduardo Barajas	Complaint received through the Project Clean Water website of debris dumped in a creek. Inspection staff followed up on 5/2/07 and directed the owner to clean up/place BMPs.
17	05/01/07	12818 Neddick Ave	John D. & Linda L. Cooley, owners/Hanson Concrete, contractor	Public Works drainage crew emailed to report illegal dumping into the storm water conveyance system by a cement truck driver. Driver cleaned up spill and Code Compliance Officer left NPDES flyer on resident's door. Violation clear; business owner sent email regarding NPDES.
18	06/25/07	14361 Tierra Bonita Rd	Dearborn Memorial Park	Staff received a complaint of overirrigation by the cemetery. Staff sent a letter and educational information to the cemetery.

9 EDUCATION

During the past year the City has continued to implement its comprehensive educational program aimed at changing the behavior of target audiences and thereby reducing pollutant releases to the storm drain system. The program has included developing and distributing educational materials, conducting educational presentations, participating in community events, and planning for future activities. Education is an important aspect of all the sections in the JURMP, and the City of Poway has provided many excellent opportunities for the general public, as well as City staff, to increase their knowledge and awareness of the JURMP and its programs.

Although this section focuses specifically on education, the municipal, industrial/commercial, residential, land-use planning, and construction sections also present information on education and outreach activities.

EDUCATION AND OUTREACH

To increase the overall knowledge of the general public regarding storm water pollution and its effects on receiving waters, the City of Poway has implemented a variety of educational programs. The major accomplishments throughout the past year are described below:

Community Events and Outreach

Staff participates in community festivals and events throughout the City to help educate residents on ways they can keep our neighborhoods and environment clean. In this reporting period, we participated in the following community events:

- Community Day, September 16, 2006, Community Park
- Fall Self-Haul Cleanup, October 2006, Escondido Transfer Station
- Earth Day/Arbor Day Celebration, April 14, 2007, Lake Poway Park
- Spring Self-Haul Cleanup, April 2007, Escondido Transfer Station
- Poway Dog Day, May 12, 2007, Community Park
- Poway Pride Day, May 19, 2007

Media

The City publishes a quarterly municipal newsletter titled *Poway Today*. This newsletter is mailed to all households and businesses in Poway. In addition, the newsletter, including past issues, is posted on the City's website. Articles related to NPDES and storm water pollution prevention appeared in 3 issues of *Poway Today* during this reporting period. The Winter 2006 *Poway Today* issue included an article entitled "Be 'Winter Wise' by Preparing for Storms." The Spring 2007 *Poway Today* issue included articles on "Only Rain Down the Storm Drains" and the Adopt-A-Park and Adopt-A-Trail clean-up programs. The Summer 2007 *Poway Today* included articles on "New Storm Water Permit Requires Community Assistance," water conservation, and the Spring Self-Haul Cleanup. See Attachment 9.1 for copies of the articles.

City Employee Training

The City conducted a training session on the Storm Water Management Program for the entire Public Works Department on June 27, 2007. This all-hands meeting was a refresher course for the department on BMPs and other important issues in storm water management. The City's Public Works Department held an Emergency Response Technician spill-response training session on May 10, 2007, which included an overview of the storm water system, spill response equipment and materials, and the proper agencies to contact during an emergency. The Public Works Department also holds informal tailgate meetings to discuss BMPs each month.

In addition to the training sessions mentioned above, City staff participated in the following educational training sessions:

- October 10, 2006: SUSMP training given by D-MAX for 24 staff members from Land Development Engineering, Planning, CIP, and Public Works.
- November 30, 2006: Two Engineers from CIP and Two Engineers from Land Development Engineering attended a seminar on Storm Water Regulation and SWPPP Preparation, Monitoring and Sampling Program organized by BIA.
- December 5, 2006: One Engineer from CIP and one Engineer from Land Development Engineering attended a seminar on BMP Selection and Implementation Including Treatment Techniques organized by BIA.
- January 23, 2007: The City Engineer, Engineering Inspection Supervisor/NPDES Coordinator, four Engineers from CIP, one Engineer from Land Development Engineering, one Engineer from Traffic Engineering, and five Inspectors attended training on Stormwater Pollution Prevention for Construction Sites held by staff.
- April 12, 2007: Two Engineers from Land Development Engineering attended the "New" San Diego County Municipal Storm Water Permit Briefing organized by BIA.
- April 27, 2007: One Engineer from Land Development Engineering attended the "New" San Diego County Municipal Storm Water Permit Briefing organized by BIA.

County Outreach Workgroup

The County Outreach Workgroup is composed of all the Copermittees. It conducts the Regional Education and Outreach Program. The City of Poway is active with the group, and has attended nearly all of the meetings and participated in the programs implemented by this group. For additional information on the Outreach Workgroup and its programs, please see the Copermittees' Unified Report.

Pet Waste Bag Dispensers

The City has posted pet waste disposal bags at the City's parks to encourage residents to pick up after their pets and to properly dispose of their waste. The City continues to ensure that a constant supply of pet waste disposal bags is available. The public appears to be utilizing the bags; thus the City continued to increase the amount of bags purchased this during reporting period. The City also gives away Bags on Board® at community events to

pet owners. Bags on Board® is a compact, refillable dispenser that houses a roll of doggie clean-up bags. The dispenser attaches easily to any kind of leash. During this reporting period, City staff gave out 500 Bags on Board® dispensers. The City's Outreach program includes an education component informing the public that pet waste contains harmful bacteria and organisms that can pollute our waterways.

Storm Water Program Logo

The City continues to utilize the Storm Water Program logo on all printed materials associated with Storm Water Pollution Prevention. It is included as Attachment 9.2.

School Education

The City's consultant conducted 12 presentations on Storm Water, Watersheds, and Used Oil Recycling to approximately 315 school-age children during this reporting period:

- November 9, 2006, Christian Family Schools
- February 9, 2007, Meadowbrook Middle School (4 presentations)
- April 17, 2007, Meadowbrook Middle School (3 presentations)
- April 14, 2007, Poway Earth/Arbor Day (2 presentations)
- June 25, 2007, Poway Summer Camps (2 presentations)

Professional Audiences

The City continues to educate contractors, developers, and businesses on storm water pollution prevention:

- The City sponsors the seminar series organized by the BIA to inform contractors, developers, and other audiences about storm water requirements and the use of BMPs.
- Owners and contractors of development projects are educated about storm water pollution prevention and BMPs during the mandatory preconstruction meeting. This education includes verbal instruction, handouts, and viewing of a video on construction site BMPs.
- The City's brochure on SUSMP requirements is distributed to all MDRA and grading plan applicants. It also is available at the Development Services counter and on the City's website.
- The City mails Industrial/Commercial BMP brochures to all businesses that receive SIC letters. These brochures are also given out during inspections.
- On March 22, 2007, Redevelopment Department staff provided NPDES-related handouts and giveaway items at the Poway Chamber of Commerce Business Expo. Approximately 400 residents and businesspeople and 82 vendors attended.

EDUCATIONAL MATERIALS

To assist with the educational efforts, the City has developed and utilized the following educational materials to help the general public, municipal staff, businesses, and contractors to become aware of urban runoff pollution and its impacts:

Printed Materials

Educational Pamphlets

During this reporting period, the City of Poway continued to distribute BMP brochures describing BMPs for Power Washers, Horses & Livestock, Concrete and Mortar Projects, Mobile Auto Detailing, Home Repair and Remodeling, and Restaurants (Attachment 9.3), as well as general information on storm water pollution prevention for residents (see Attachment 5.2).

As described in Section 6. Land-Use Planning, the City continued distribution of a handout explaining SUSMP regulations to developers and homeowners (see attachment 6.3). This brochure is given to all applicants for grading permits or Minor Development Review Applications.

The Industrial/Commercial BMP brochure is mailed to new businesses that are added to the database and is distributed to businesses receiving industrial/commercial inspections.

Brochures explaining the City's prohibition on discharging the water from 5-year flushing of sprinkler systems into the storm drain system are available in the public kiosk in City Hall, and are also mailed in response to requests for information on this topic.

Program Giveaways

The City continues to distribute various items with the City's storm water logo and the message, "ONLY RAIN DOWN THE STORM DRAIN", pencils promoting proper disposal of used oil, and magnets promoting the City's environmental protection programs at community events. The purpose of distributing these various items is to educate school-age children and other residents about storm drain pollution.

The City also purchased click-pens that display various storm water messages, and magnets that feature the 1-800-CLEANUP logo. These items are distributed along with the other program giveaways.

PowerPoint Presentations

The City's environmental education consultant, I Love A Clean San Diego, continued to use the City's PowerPoint presentation tailored to specific audiences, including elementary school and middle and high school students.

MEASURING CHANGES IN KNOWLEDGE AND BEHAVIOR

During this reporting period, the City of Poway's educational program made more than 68,800 impressions. This number includes the distribution of more than 57,100 publications, community event booths seen by more than 11,300 event attendees, approximately 100 staff training impressions, and more than 300 community presentation impressions. Not included in this number are the educational impressions made on developers and homeowners at the Building and Planning Counter, contractor/owner/developer BMP training at preconstruction meetings, and Poway's share of the regional impressions created by the City's participation in the regional programs detailed in the Unified Annual Report.

The City has seen an increase in NPDES-related complaints versus the previous reporting period. Poway residents are becoming more aware of the City's Storm Water Pollution Prevention Program, and make calls to the City when they see a violation. Please reference Section 6, Illicit Discharge Detection and Elimination, of this report for more information. The City has also seen a steady increase in HHW collected annually.

EDUCATIONAL PLANS FOR 2007/2008

The City is currently implementing and will continue implementing extensive education regarding urban runoff pollution. The City has planned 16 school and adult community presentations covering storm water, watersheds, and used oil recycling for the next reporting period. Some of the educational efforts planned for 2007/2008 and the frequencies of these efforts are discussed below.

Community Events and Outreach

Staff will continue to participate in community festivals and events throughout the City to help educate residents on ways they can keep our neighborhoods and environment clean. The City plans to participate in the following community events in 2007/2008, as well as others as available:

- Community Day, September 15, 2007, Community Park
- Fall Self-Haul Clean-up, October-December 2007, Ramona & Escondido Transfer Stations
- Earth Day/Arbor Day Celebration, April 12, 2008
- Spring Self-Haul Clean-up, April 2008, Ramona & Escondido Transfer Stations

Community Newsletters

The City plans to publish articles on storm water pollution prevention in local community group newsletters, if requested. At least two issues of the City's quarterly newsletter, *Poway Today,* will have an article devoted to storm water pollution prevention.

School Education

The City plans to continue providing watershed presentations to elementary and high school students.

City Employee Training

The City plans to continue with general training on the JURMP and Spill Response. The City also plans to continue to hold formal NPDES training for municipal staff once a year, with informal tailgate meetings to discuss BMPs once a month for 2007/2008.

The City will continue to sponsor the educational seminars on storm water pollution prevention conducted by the Building Industry Association. These seminars educate City staff, staff of other jurisdictions, contractors, consultants, and other interested individuals.

City staff in all affected departments will continue to attend relevant training events as they arise. City staff also will continue to organize internal training events as needed.

City Storm Water Pollution Prevention Presentations

The City will continue to seek out opportunities to conduct pollution prevention presentations to a variety of audiences throughout the community.

JURMP UPDATE

No updates were noted for this component during this reporting period. The JURMP will be updated extensively in the next reporting period to meet the requirements of the new NPDES permit.

10 PUBLIC PARTICIPATION

An important mechanism for achieving the goals of the JURMP involves integrating public participation to assist with the implementation of the program requirements. Incorporating the general public into the implementation process not only expands City resources and improves water quality, but can also enhance the sense of community and stewardship within the City.

PUBLIC PARTICIPATION ACCOMPLISHMENTS IN 2006/2007

After adoption of the JURMP in February of 2002, the City of Poway began actively encouraging public participation in the implementation of the JURMP. Within the past five years the City has made substantial efforts to involve the general public in cleanup events, reporting illegal discharges, and hazardous waste collection and disposal events. The public participation events that were implemented in 2006/2007 as well as the dates and amount of hours that were spent during each activity are presented in Table 10.1.

San Diego Copermittee Meetings

City of Poway staff have attended and participated in nearly all of the San Diego Copermittee meetings held during the 2006/2007 reporting period.

County Outreach Workgroup

The County Outreach Workgroup is composed of all the Copermittees to the Municipal Permit. The Outreach Workgroup conducts the Regional Education and Outreach Program. The City of Poway has been an active participant in this group since its inception. For more information on this group and its activities, please see the Copermittees' Unified Report.

Public Reporting

The City continues to encourage its citizens to report illegal discharges, illicit connections, and any other perceived threats to storm water quality. This is accomplished by raising the awareness level of the City's residents with the City's Storm Water Pollution Prevention Program, and by publishing the phone numbers to report illegal discharges and illicit connections. The phone numbers were published in eight educational brochures aimed at residents and commercial and industrial businesses in Poway. The phone numbers are also posted on the City's website. The City also gives out educational materials with the phone numbers at all of the City's community events. In addition, the City has published the phone numbers on door hangers used by the City's Code Compliance Division and the Department of Public Works to notify residents of storm water pollution prevention measures.

COMMUNITY ACTIVITIES

Park and Residential Cleanups

The City has over 300 volunteers in its Adopt-A-Park and Adopt-A-Trail programs. The volunteers in these programs regularly pick up trash and debris in the City's parks, trails,

creeks, and open space. The City also held a new community event during this reporting period: Poway Pride Day, during which more than 100 volunteers performed a variety of cleanup and maintenance tasks around the City.

The City and its waste hauler, EDCO Waste and Recycling Services, sponsor a bi-annual Self-Haul Cleanup Event for Poway residential customers. Each spring and each fall, customers are mailed a coupon for the free disposal of one load of large bulky items such as furniture, appliances, and residential yard waste at the local transfer station. The transfer stations are open 7 days per week from 7 a.m. to 4:30 p.m. In Fiscal Year 2006/2007, 1,713 residents took advantage of the Self-Haul Cleanup Events.

Household Hazardous Waste Collection and Used Oil Recycling

The City has weekly HHW collection events available to all Poway residents. The facility is open from 9:00 a.m. to 3:00 p.m. every Saturday except on holiday weekends. Residents do not need an appointment to drop off their HHW. The City also has an electronic waste collection event every Saturday from 9:00 a.m. to 3:00 p.m. Residents are encouraged to dispose of their computers, televisions, VCRs, fax machines, and stereos at the HHW Collection Facility. This is to prevent the lead found in most televisions and computer monitors from polluting our landfills and waterways. These events are advertised in the City's newsletter, *Poway Today*, as well as in the local paper of record, the *Poway News-Chieftain*, and are posted on the City's website.

The City's educational program actively encourages residents to properly dispose of HHW and recycle used oil. This program informs residents of the City's HHW Collection Facility and the location of the City's Certified Used Oil Recycling Centers. The City regularly publishes articles on HHW collection and used oil recycling in its newsletter and has information posted on its website. The City also has an information booth promoting the program at several City events throughout the year. These events include Community Day, Earth Day/Arbor Day, and events sponsored by the Poway Chamber of Commerce.

Open Space, Creek, and Waterways Cleanups

As previously stated, the City has over 300 volunteers in its Adopt-A-Park and Adopt-A-Trail programs. The volunteers in these programs regularly pick up trash and debris in the City's parks, trails and open space.

PUBLIC PARTICIPATION PLANS FOR 2007/2008

San Diego Copermittee Meetings

The City of Poway will continue to attend and participate in the San Diego Copermittee meetings held during the 2007/2008 reporting period.

County Outreach Workgroup

The City of Poway will continue to attend the County Outreach Workgroup meetings and continue to be an active contributor to this group.

Public Reporting

The City will continue to encourage its citizens to report illegal discharges, illicit connections, and any other perceived threats to storm water quality. This is accomplished by raising the awareness level of the City's residents with the City's Storm Water Pollution Prevention Program, and by publishing the phone numbers to report illegal discharges and illicit connections. The phone numbers will continue to be published in educational brochures aimed at residents and commercial and industrial businesses in Poway. The phone numbers will continue to be posted on the City's website. The City will give out educational materials with the phone numbers at all of its community events. In addition, the City will continue to publish the phone numbers on door hangers used by the City's Code Compliance Division and the Department of Public Works to notify residents of storm water pollution prevention measures.

COMMUNITY ACTIVITIES

Park and Residential Cleanups

The City holds an annual Fall Self-Haul trash collection event and an Annual Spring Cleanup. The City plans to once again promote its Storm Water Pollution Prevention Program at the Spring Cleanup event to ensure residents understand the impact of trash and storm water pollution on receiving waters.

Adopt-A-Park and Adopt-A-Trail

The City anticipates continued volunteer support in the next reporting period. As previously stated, the City has over 300 volunteers in its Adopt-A-Park and Adopt-A-Trail programs. The volunteers in these programs regularly pick up trash and debris in the City's parks, trails, and open space.

Pet Waste Bag Dispensers

The City will continue to maintain the pet waste bag dispensers and to supply pet waste disposal bags at the City's parks to encourage residents to pick up after their pets and to properly dispose of the waste. The City's Outreach program includes an education component informing the public that pet waste contains harmful bacteria and organisms that can pollute our waterways. There will continue to be information posted on the City's website about the impacts of pet waste to area receiving waters.

JURMP UPDATE

No updates were noted for this component during this reporting period. The JURMP will be updated extensively in the next reporting period to meet the requirements of the new NPDES permit.

11 ASSESSMENT OF JURMP EFFECTIVENESS

Each year the City spends considerable time, effort, and resources implementing its JURMP. In turn, the City is committed to regularly assessing the effectiveness of its program and making adjustments where necessary. This practice helps the City improve both the efficiency and efficacy of its storm water management actions. The basic foundation of the assessment procedure comprises three central components:

- Program Planning: Includes source characterization, BMP selection, targeted outcomes, and measures of indicators.
- Program Implementation: Includes implementation of selected measures.
- Effectiveness Assessment: Includes water quality assessment, program assessment, and integrated assessment. Effectiveness is evaluated on six increasingly complex levels.

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. Assessment of the planning and implementation steps provides important information that in turn can be used to improve future planning and implementation efforts. Data is collected from a number of different sources for the assessment. The following subsections present the City's approach and activities in assessing the effectiveness of the JURMP.

PROGRAM PLANNING

When designing and modifying proposed storm water program actions, the City obtains and reviews information from inspections, water quality monitoring, complaint records, and institutional knowledge. Inventories of potential pollutant sources have been compiled based on this data; the most recent versions for the 2006/2007 reporting period have been presented earlier in this annual report. The City has further related known priority sources to key constituents, as shown in Table 11.1.

City program implementation is further tailored to the specific characteristics of the community. For example, in Poway most of the industrial businesses are located in the South Poway Business Park. During the development of that area, the City retrofitted flood control detention basins to serve as regional treatment control BMPs. This effort has helped to fulfill SUSMP requirements for new industrial and commercial sites in the South Poway Business Park area, and it has also provided pollutant removal for runoff from businesses that already existed in the area.

BMP SELECTION

To reduce discharges of pollutants from identified sources, the City requires implementation of BMPs. More detail about BMPs required for all identified sources is provided in the City's JURMP. Key BMPs for selected priority sources are also shown in Table 11.2. Data from inspection and monitoring programs as well as overall land use information was used in preparing the table.

The City informs target audiences of the BMP requirements through general distribution of educational materials, focused distribution of specifically targeted materials, reviews of

submitted plans, and direct interaction with City staff. Direct interaction may take place during inspections, when discussing comments on submitted plans, and when encountering City staff in the field. Providing material to the public broadly through mailings, the City's website, and information stations in public places allows for a broader reach. The City employs a variety of methods to educate responsible parties of their responsibilities to implement BMPs. Fact sheets, brochures, and other reference materials are available at several City buildings and are periodically mailed out to members of the community.

Storm water compliance inspections and complaint investigations are regularly conducted both to provide further, more site-specific education and to help enforce BMP requirements. Direct interaction between members of the community and inspectors provides valuable opportunities for education about the storm water program and about what BMPs are best for a specific situation. Tailored BMP advice in the context of one's own home or workplace has the potential to be more meaningful than more detached instruction through print materials or presentations. In addition to visual observations of the site conditions, inspectors also take storm water monitoring results into consideration when they are available. Where ineffective BMP implementation is observed, inspectors require corrections, and enforcement actions are taken as necessary to achieve compliance.

TARGETED OUTCOMES

The City sets targets for its program each year. The actual numbers recorded during the year are then compared to the targets at the end of the year to assess progress. Typically, items mandated by the Permit, such conducting the Dry Weather Monitoring Program or investigating storm water complaints, are relatively easy to measure. Conversely, goals such as significant improvements in receiving water quality are more difficult to assess.

The effectiveness assessment approach jointly developed by the Copermittees recognizes this distinction by defining six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1:	Compliance with Activity-Based Permit Requirements
Level 2:	Changes in Knowledge/Awareness
Level 3:	Behavioral Change/BMP Implementation
Level 4:	Load Reductions
Level 5:	Changes in Discharge Quality
Level 6:	Changes in Receiving Water Quality

Level 1: Compliance with Activity-Based Permit Requirements

The Municipal Permit contains many requirements that Copermittees must meet. These include conducting inspections at certain minimum frequencies, reporting spills within given time frames, and other activities mandated in the Municipal Permit.

The City regularly inspects industrial, commercial, and construction sites, which are believed to be some of the main potential sources of pollution. The inventories of these sources are also routinely updated to ensure the City has the most accurate inventory possible.

Table 11.3 summarizes the City's efforts toward meeting activity-based Municipal Permit requirements in 2006/2007. The City has inspected all of its industrial and high-priority commercial facilities during this permit cycle. During the first year of JURMP implementation, all of the then-inventoried industrial and high-priority commercial sites were inspected. Each year since then the City has identified and inspected all new priority businesses, which are then added to the inventories. The City has also inspected its high-priority industrial facilities each year, as required by the Municipal Permit. All high-priority and medium-priority municipal sites were inspected during this reporting period. All high-priority construction sites were inspected at least weekly during the time they were active. Medium- and low-priority construction sites were inspected as needed during the dry season. All construction projects, regardless of priority, were inspected at least weekly during the rainy season; in addition, all grading projects were inspected before every predicted rain event. One hundred percent of cleanout locations in the MS4 were maintained, and City streets were swept regularly.

Level 2: Changes in Knowledge/Awareness

Heightening awareness and knowledge of storm water pollution prevention is a goal of the City's storm water program. The City employs methods such as training sessions, workshops, presentations, volunteer programs, and distribution of print materials to further this goal.

Articles on storm water pollution prevention topics were published in the City's *Poway Today* newsletter, which is distributed quarterly to over 19,000 City households and businesses. Providing this information to the public ensures exposure and some changes in knowledge and awareness. City staff also hands out educational information and interacts with residents at large community events.

The City conducts regular training meetings for staff at its Public Works Yard and its Material Handling Yard, both of which have obtained coverage under the Industrial Permit. These facilities both implement the storm water programs in their SWPPPs, and the training sessions help ensure new staff are made aware of the applicable BMPs as described in the SWPPP documents. The training sessions also serve as refresher courses for more experienced staff. To further aid in BMP implementation at these sites, the City's storm water consultant conducts annual inspections, after which any corrective actions are written down and provided to the facility management. Training sessions are also held for City staff who work at other facilities; overall, 7 training events were attended by 95 City staff during 2006/2007. Such training sessions raise the level of knowledge and awareness City staff possess about storm water BMP implementation.

Storm water compliance inspections of industrial facilities and commercial businesses have increased knowledge of storm water pollution prevention. During the inspection process, inspectors educate business owners on the difference between the storm drain system versus the sewer system, potential pollutants, pollution prevention measures, and BMP implementation, and the Municipal Permit and General Industrial Permit requirements are discussed as deemed applicable.

Recognizing the need for a tool to assess storm water knowledge for industrial and commercial businesses, the City of Poway has been using a knowledge assessment scoring system since the 2004/2005 reporting period. The level of storm water knowledge of the facility representative present during an inspection is evaluated on a scale of 1 (low) to 5 (high). The knowledge assessment scores are based on how many of the standardized questions the facility representative is able to answer correctly; a score of "1" indicates that no questions were answered correctly and a "5" indicates that all of the questions were answered correctly. Applying this standard approach helps make scores consistent and furthers more accurate assessments of changes from one inspection to the next. Each facility representative was asked the following series of questions.

- What is storm water?
- What is the difference between the storm drain system and the sanitary sewer system?
- Where does storm water flow?
- Is storm water treated prior to discharge?
- What are examples of pollutants?
- Is sediment a pollutant?
- Do you know what good housekeeping or best management practices are?
- Do you know what NPDES is or means?

After asking the above questions, inspectors also explain what the right answers are when facility representatives do not know. In some cases, the conversation leads into discussion of other important storm water concepts as well. These kinds of conversations help clarify important concepts about BMPs and about the City's program. Generally, the business representative gains a clearer picture of why storm water pollution prevention is important and what he or she needs to do to be in compliance with applicable regulations. In the 205/2007 reporting period, knowledge and BMP scores, which are discussed later in this section, were collected at 60 sites. The average knowledge score was 3.0, and the median was 3 (Figure 11.1). In 2005/2006, 78 sites were inspected, and the average of these scores was 3.2, with a median of 3. Notably, as shown in the figure, the relative frequencies of the higher knowledge scores have increased in recent years.

The average score at high-priority industrial sites was 3.4 in 2004/2005, 3.9 in 2005/2006, and 3.8 in 2006/2007 (Figure 11.2). These scores were higher than the overall average for all sites in their respective years, and the 2006/2007 average was similar to last year's average. The City inspected high-priority industrial sites each year, but the other scores generally come from sites that have never been inspected before. That there is a difference in knowledge between these two types of sites, and that the scores at the high-priority industrial sites were higher in 2005/2006 and 2006/2007 than in 2004/2005 indicates that the City's inspections are effective in increasing the level of storm water knowledge.

During preconstruction meetings, City representatives discuss general storm water pollution prevention concepts and site-specific BMP implementation with project proponents. The City also distributes a construction BMP fact sheet to all projects that will disturb soil. The City's consultant provides review comments on SWPPPs and SUSMP

reports, which serve to further educate project proponents about City storm water requirements.

In the arena of new development and redevelopment, project proponents are educated as they go through the process of obtaining permits. The process includes completing of checklists to determine requirements, receiving educational materials, and discussing storm water concepts with City staff. All project proponents must attend a preconstruction meeting with City staff. During the meeting, staff educate the project proponents on applicable regulations and BMP implementation and maintenance. Preparation and implementation of a construction SWPPP is also covered if applicable. Developers and builders also are required to watch an educational video about construction BMPs. After watching the video, the project proponents sign a document acknowledging that they have seen the video. Once projects have begun, the City inspects the projects, and additional education in the form of corrective actions or enforcement measures are provided, as needed.

Level 3: Behavioral Change/BMP Implementation

When members of the community are more knowledgeable about storm water issues, they may be more likely to implement BMPs. Such behavioral change is an important goal of the storm water program.

A BMP rating system similar to the knowledge assessment system described earlier was initiated in 2004/2005 and still continues in 2006/2007. Ratings were assigned based on a scale of 1 (worst) to 5 (best). The following standard criteria are used when assigning the BMP scores.

- Level 5: All required general and activity specific BMPs have been implemented effectively.
- Level 4: BMPs have been implemented effectively but the dumpster lid was observed open and/or oil stains were noted in the general parking lot not associated with this business's activities.
- Level 3: BMPs have been implemented with the exception of two corrective actions noted aside from dumpster lids being open or oil stains in the general parking lot.
- Level 2: Minimal BMP implementation is noted. Three or more corrective actions, with the exception of dumpster lids being open or oil stains in the general parking lot. No illegal discharge or illicit connection was noted.
- Level 1: Violation of the City's Storm Water Ordinances (illegal discharge, illicit connection, complete failure to implement BMPs, and/or significant littering).

BMP scores were assigned at the same 60 sites at which knowledge scores were gathered. The 2006/2007 average BMP implementation score was 4.1, and the median was 4. These numbers are higher than or equal to the 2005/2006 values, when the average score was 3.6 and the median was 4. The average for high-priority industrial sites was 3.8 in 2006/2007, higher than the average score of 3.7 recorded in 2005/2006. Figures 11.1 and 11.2 present the historical BMP scores for all sites and for high-priority industrial sites, respectively. In both figures an increasing trend in the relative frequency of the higher numbers is apparent,

particularly for high-priority industrial facilities, which are inspected annually. These trends in BMP scores indicate that the City's efforts are effectively increasing the level of BMP implementation at industrial and commercial businesses.

The City reviewed all project submittals during this period to determine which were Priority Projects subject to SUSMP. All projects determined to be Priority Projects were required to demonstrate compliance with SUSMP requirements. Note that the City has retrofitted four existing flood control detention basins in the South Poway Business Park area to serve as treatment control BMPs. This innovative approach has helped reduce costs to developers and has effectively removed pollutants from runoff in the upstream areas. The basins treat runoff not only from SUSMP projects, which are required to install treatment control BMPs, but also from other sites for which treatment would ordinarily not be provided. A fifth basin is being converted at this time.

The City first inspected post-construction BMPs at completed SUSMP projects in 2005/2006. These inspections were designed to assess whether post-construction BMPs were in place as required by the SUSMPs. In 2006/2007, SUSMP inspections were again conducted, this time at 17 completed projects. The inspections found that BMPs at public projects were in place and appeared to be properly maintained. Seven of the private projects, however, required some corrective actions. In 2006/2007, a database was also developed to record and manage project information, including the locations of the treatment control BMPs at each site. More information about the SUSMP inspections is provided in Section 6 of this Annual Report. The City plans to continue this program, which encourages proper operation and maintenance of post-construction BMPs.

The City continued to regularly inspect its construction sites during the reporting period. City inspectors provided corrective actions where BMP deficiencies were noted, and they took action to ensure the corrections were made. They also continued the use of a special inspection form for pre-rain inspections. The form includes a variety of key BMPs to mitigate discharges of construction-related pollutants, particularly sediment. Whenever there is a 50% chance of rain within the next 48 hours, the City inspects all sites with grading permits to ensure proper BMPs are in place, using the form to guide its efforts. Both the routine inspections and the pre-rain inspections encourage proper BMP implementation, thus reducing discharges of pollutants from construction sites.

The City inspects all its high-priority municipal sites each year. Corrective actions are given where necessary and then implemented, which helps maintain a high level of BMP implementation. The City's storm water consultant also conducts annual storm water compliance inspections of the high-priority municipal facilities that have filed for coverage under the Industrial Permit. The inspectors give written BMP recommendations to the responsible party at each of those facilities. Additional corrective actions are sometimes recommended based on the storm water monitoring conducted as required by the Industrial Permit, which is also conducted by the City's consultant. These audits by outside parties also help further municipal BMP implementation. The management at these City facilities is responsive to the recommendations received, taking action to ensure proper BMPs are in place.

Because pet waste is a potential source of pollutants, the City makes residents aware of the need to properly clean up pet waste via its educational programs. The City provides doggie bags at municipal parks, which encourages pet owners to pick up after their pets, and also distributes Bags on Board® pet waste bags that go on a leash at community events.

The trash receptacles from City parks are washed at a City-owned clarifier facility to eliminate potential discharge of pollutants. Another notable BMP in place at City recreational facilities is the installation of water bars on City trails. These devices help reduce erosion.

Level 4: Load Reductions

Determining sources of pollutants and implementing effective BMPs to eliminate sources of contaminants and improve water quality is an important first step toward load reduction. High-priority sources of pollutants located in various geographical areas within the City's jurisdiction and applicable BMPs are presented in Tables 11.1 and 11.2.

Inspection of construction sites to ensure BMPs are fully implemented results in a sediment/silt load reduction. As mentioned earlier in this section, the City provides storm water pollution prevention education to developers and contractors. The City regularly inspects active construction sites, and the City takes additional steps to further ensure BMP implementation within 48 hours of a predicted (50% probability) rain event. It can be reasonably concluded that these methods reduce pollutant loads from construction sites. Similarly, inspections of industrial and commercial sites have found higher levels of BMP implementation in 2006/2007 than in 2005/2006. Having better BMPs in place should also result in smaller loads of pollutants being discharged.

During the 2006/2007 reporting period, 1,724 tons of sediment and debris were collected from street sweeping. Storm drain cleaning removed 75 cubic yards of debris from the MS4. City crews removed an additional 200 bags of trash by hand from storm water channels and street rights of way. Pet waste cleanup bags were distributed at City parks; the bags were used to properly dispose of animal waste that might otherwise contribute to urban runoff pollution. Over 262,405 pounds of HHW were collected in 2006/2007, 30,405 pounds more than that collected in 2005/2006. All these efforts directly led to reductions in loads of pollutants that otherwise would be discharged to receiving water bodies.

Level 5: Changes in Discharge Quality

Unlike assessments of levels 1 through 4, changes in storm water discharge quality are based on direct measurement of water quality. In addition to helping locate IC/IDs, the City's Dry Weather Monitoring Program has provided useful water quality information for a rough Level 5 assessment. Figure 11.3 provides a graph with historical averages and associated action levels for several common chemical constituents, including nitrate nitrogen, orthophosphate phosphorus, ammonia nitrogen, and detergents. Note that nitrate and orthophosphate analyses were not conducted until 2002, which is why data for those parameters do not appear on the graph until 2002. Nitrate levels are generally low at most sites, with the average being raised somewhat by a few instances of influence from nitrate-rich groundwater seepage into the MS4. Data from 2006 monitoring shows that average nitrate levels are not much different from the last two years, although the average was lower

in 2002 and 2003. Orthophosphate concentrations have tended to remain well below the action level, and 2006 measurements are consistent with this pattern. Ammonia and detergents are discussed in more detail below. Dissolved metals, the pesticides diazinon and chlorpyrifos, and oil and grease have generally not been detected by dry weather monitoring, so they are not included in the figure.

Laboratory analyses for total coliforms, fecal coliforms, and enterococci are conducted at 13 of the Dry Weather Monitoring Program sites. These groups of bacteria have historically been used as indicators of pathogens. Total coliforms are often present in decomposing organic material, soil, and other non-fecal sources, so they are typically considered poor indicators of pathogens when considered alone. Enterococci and fecal coliforms are generally considered better, although not perfect, indicators of pathogens. Research indicates that enterococci are better indicators than fecal coliforms.[1] Figure 11.4 presents the percent of samples analyzed for fecal coliforms and enterococci that exceeded their respective dry weather action levels since 2002. The percent of exceedances for both indicator bacteria has been variable, but has not exceeded 23 percent (three of 13 sites sampled). In 2006, upstream source investigations were conducted for all bacteria action level exceedances. None of the exceedances were traced to sanitary sewer leaks or overflows. In some cases controllable sources, such as domestic animal waste, were thought to potentially be the source, while in other cases natural sources were thought to be the main causes of exceedances. Those investigations are discussed in more detail in Section 8 of this Annual Report.

Ammonia and detergents (measured as Methylene Blue Active Substances) are the two constituents with the longest historical monitoring records. Figures 11.5 and 11.6 present the historical average concentrations and exceedance rates for ammonia nitrogen and for detergents, respectively. The overall average values and the exceedance rates for both constituents show decreasing trends, and the 2006 values were lower than the 2005 values.

Wet weather monitoring to assess the effectiveness of the City's four detention basins retrofitted for use as SUSMP treatment control BMPs has been conducted in 2004/2005, 2005/2006, and 2006/2007. A map of the detention basin tributary areas is provided in Figure 11.7. In 2004/2005, only the Kirkham and Stowe basins were monitored. In 2005/2006, those two basins as well as the Stotler ("E") and Community ("F") basins were monitored. In 2006/2007, sampling and analysis was conducted at the Kirkham, Stowe, and Stotler basins, since no inflow was observed at the Community basin. The City of Poway currently closes the detention basin outlets for the above-mentioned detention basins prior to any storm, retains the runoff in the basins for up to three days, and then discharges it into the City drainage system. To analyze pollutant removal efficiencies of the basins, data from time-weighted composite samples of the inflow during a rain event were compared to samples of water released from the basins after being detained for two days. Even though the detention time was shorter by 24 hours than what it had been in previous years, similarly significant improvements in water quality were observed, particularly for total

[1] EPA. *Ambient Water Quality Criteria for Bacteria – 1986*. quoted in "Water Quality Standards for Coastal and Great Lakes Recreation Waters, Final Rule" Federal Register 69 (16 November 2004): 67220.

suspended solids (TSS), turbidity, ammonia, nitrate, orthophosphate, and total organic carbon. The somewhat higher inflow values of TSS and turbidity in 2006/2007 demonstrate more clearly than in the previous year the effectiveness of TSS and turbidity removal, as shown in figures 11.8 and 11.9, respectively. Note that despite the higher influent values, in most instances the effluent values were not substantially higher than what they had been in previous years. In 2006/2007, fecal indicator bacteria (total coliform, fecal coliform, and *Enterococcus* bacteria) were sampled for the first time. No definitive trend was observed. In some cases at the same basin the level of one group of indicator bacteria increased while another group decreased. These equivocal results will probably require a more adequate data set to interpret. Some possible explanations could relate to the amount of decomposing material in the basins or the exposure of the water to UV light. During 2007/2008 the City plans to continue analyzing samples taken for its detention basin monitoring project for bacterial indicators. A report describing the 2006/2007 monitoring studies in greater depth is included as Attachment 11.1.

Level 6: Changes in Receiving Water Quality

Level 6 can be translated into the overall improvement of water quality in receiving water bodies. Examples of reaching Level 6 include changes in receiving water quality with respect to regulatory benchmarks, biological integrity, and beneficial use attainment. A long-term strategy is required to collect the volume of data necessary for assessment of Level 6. The Copermittees are collaborating as a group to establish a plan for collecting water quality data from receiving water bodies throughout the County. The City recognizes the importance of protecting the water quality of receiving water bodies in and around the City, and the City contributes to regional monitoring efforts. A sufficient data set is necessary prior to conducting a trend analysis to determine changes in receiving water quality and further link those changes to activities conducted in the City. At this time such a data set is not yet available. It is therefore premature to make conclusions about the City's impact on downstream receiving water quality during this reporting period.

ASSESSMENT OF JURMP EFFECTIVENESS PLANS FOR 2007/2008

The City of Poway will continue to enhance the Program Planning, BMP Selection, and Targeted Outcomes for its program during the 2007/2008 reporting period.

TABLE 11.1
SOURCE CHARACTERIZATION
FISCAL YEAR 2006/2007

Constituent	Geographic Area	Land Use	Potential High-Priority Source	Estimated Percent (%) of Total Sources	Priority
Sediment	Jurisdictional: residential areas	Residential	Landscaping, vacant lots	20%	Low
	Industrial and commercial zones	Commercial	Landscaping, parking lots	5%	Low

BMP SELECTION
FISCAL YEAR 2006/2007

Constituent	Geographic Area	Potential High-Priority Source	Specific Activity	Potential BMP
Sediment	Jurisdictional: residential areas	Landscaping, vacant lots	Soil erosion	Street sweeping, erosion control, sediment control/perimeter protection
	Industrial and commercial zones	Landscaping, parking lots	Soil erosion	Street sweeping, erosion control, sediment control/perimeter protection
	Jurisdictional: construction sites	Construction activities	Soil erosion, sediment tracking	Erosion control, sediment control, inlet protection, tire wash, dewatering properly, structural BMPs
	Slopes around shopping centers, streets without designed curbs, and in undeveloped areas	Slopes	Soil erosion	Street sweeping, erosion control, maintaining vegetation on slopes, sediment control/perimeter protection
Nutrients (Nitrate, Phosphate)	Jurisdictional: residential areas	Landscaping	Fertilizer application, over irrigation	Minimize use of fertilizers, keep chemicals in a covered storage, irrigation control
	Jurisdictional: industrial/commercial	Landscaping	Fertilizer application, over irrigation	Minimize use of fertilizers, keep chemicals in a covered storage, irrigation control
	Golf courses	Landscaping	Fertilizer application, over irrigation	Minimize use of fertilizers, keep chemicals in a covered storage, irrigation control
	Animal facilities, particularly equestrian, in eastern and northern Poway	Stables, manure disposal	Manure disposal	Clean up manure regularly, spread in areas away from water bodies, do not spread before rain events, leave buffer areas next to water bodies or conveyances, street sweeping
	Groundwater seepage	Groundwater seepage	N/A	N/A
	City parks	Fertilizer application	Fertilizer application, over irrigation	Minimize use of fertilizers, keep chemicals in a covered storage, irrigation control

TABLE 11.2 (CONTINUED)
BMP SELECTION
FISCAL YEAR 2006/2007

Constituent	Geographic Area	Potential High-Priority Source	Specific Activity	Potential BMP
Bacteria	Animal facilities, particularly equestrian, in eastern and northern Poway	Stables, manure disposal	Manure disposal	Clean up manure regularly, spread in areas away from water bodies, do not spread before rain events, leave buffer areas next to water bodies or conveyances, street sweeping
	Commercial zones	Restaurants	Dumping, illegal discharges, improper grease bin maintenance	Keep grease bin clean, cover/contain grease bins, use only dry cleaning methods or retain and dispose of wash water properly, post signs discouraging illegal dumping
	Jurisdictional	Wildlife waste, animal waste, SSOs, decomposing organic material	Dumping, littering, improper pet waste disposal	Collecting and removing waste for proper disposal, maintain private sewer laterals and public sewer system, education and enforcement for illegal dumping and littering, street sweeping and MS4 maintenance
Oil and Grease	Jurisdictional	Roads, parking lots, vehicle maintenance, improper storage	Oil change, leaks, spills	Spill prevention and control, conduct maintenance in covered areas
Metals	Industrial zones	Industrial sites	Outdoor storage and processing	Coverage and containment, regular sweeping, potential use of treatment control devices, berm work areas, conduct
	Commercial zones	Automotive shops	Auto repair, painting, and cleaning; outdoor	Spill prevention and control, regular sweeping, conduct activities indoors, coverage and containment
	Jurisdictional	Parking Lots, Streets	Regular wear of automotive parts, atmospheric deposition	Street sweeping, MS4 cleaning
Organics (Surfactants)	Industrial area in vicinity of Kirkham Court and Stowe Drive	Washing activities	Washing vehicles or equipment	Capture and properly dispose of water, minimize use of soaps, direct runoff to landscaping, minimize water use
	Commercial zones	Car washing	Washing vehicles, driveways, and other areas	Capture and properly dispose of water, minimize use of soaps, direct runoff to landscaping, minimize water use
	Jurisdictional	Car washing (residents, mobile businesses)	Washing vehicles, driveways, and other areas	Capture and properly dispose of water, minimize use of soaps, direct runoff to landscaping, minimize water use

TABLE 11.2 (CONTINUED)
BMP SELECTION
FISCAL YEAR 2006/2007

Constituent	Geographic Area	Potential High-Priority Source	Specific Activity	Potential BMP
Pesticides	Jurisdictional	Landscaping	Pesticide application, over irrigation	Use pesticides in accordance with directions, store in covered and contained area, control irrigation
Gross Pollutants (Trash, Debris)	Commercial complexes	Dumping, litter	Dumping, litter	Post signs discouraging illegal dumping, education and enforcement for illegal dumping and littering, street sweeping and MS4 maintenance
	Jurisdictional	Litter	Litter	Education and enforcement for littering, street sweeping and MS4 maintenance
	Schools	Litter	Litter	Education for illegal dumping, regular litter cleanup
	Parks	Litter	Litter	Post signs discouraging littering, education and enforcement for littering, regular litter cleanup
Ammonia	Industrial area in vicinity of Kirkham Court and Stowe Drive	Industrial activities	Improper storage, illegal discharges	Spill containment and discharge control, secondary containment and overhead coverage for stored materials, capturing and containing wash water
	Jurisdictional	Decomposing materials, landscaping	Improper landscape maintenance, decay of natural vegetation	Street sweeping, MS4 maintenance, proper disposal of landscaping waste, proper use of fertilizers, irrigation control

TABLE 11.3
TARGETED OUTCOMES
FISCAL YEAR 2006/2007

Level 1: Compliance with Activity-Based Permit Requirements

12 FISCAL ANALYSIS

2006/2007 BUDGET

The City of Poway budgeted $1,722,210 in its Fiscal Year 2006/2007 operating budget for implementation of its storm water management program. There are 17 accounts that contribute to the NPDES program budget, with approximately 10% to 25% of those budgets devoted to NPDES and JURMP requirements. The City does have one account that has 100% of its budget going into the NPDES program. Breakdowns of the various accounts are presented in Table 12.1.

As part of the City's NPDES program, an NPDES storm water surcharge was assessed on all water users. This surcharge became effective beginning the first full billing cycle after July 1, 2002. The NPDES surcharge on residential utility bills is $8.40 bimonthly. For non-residential customers, the NPDES surcharge per bimonthly billing period ranges from $8.72 for meters less than 2 inches to $23.23 for meters 2 inches or greater.

Because the rest of the City's funding for the storm water program is derived from a variety of sources, it would be very difficult to provide itemized budgets for each year due to the complexity of the calculations. However, the City has provided a budget broken down by divisions that implement key areas of the program.

2007/2008 BUDGET

The City of Poway has budgeted $2,044,994 for Fiscal Year 2007/2008. This amount is sufficient to maintain the City's successful storm water management program and meet the goals that have been set for the coming year. The breakdown of the 2007/2008 storm water budget can be seen in Table 12.2.

One notable change to the storm water program budget is the creation of an Engineering Technician position, which occurred at the end of Fiscal Year 2007/2008. This position is dedicated 50% to the City's NPDES program and will assist with the City's inspections, enforcement, and follow-up actions, as well as maintenance and updating of databases.

The City also will be updating its Storm Water Program Fee in Fiscal Year 2007/2008 to recover more of the costs of its Storm Water Program. Information on this fee update will be included in next year's Annual Report.

TABLE 12.1
CITY OF POWAY 2006/2007
NPDES PROGRAM COSTS

Division	Name	Total Budget	NPDES Program Budget
306	Engineering Inspection	$732,460	$118,940
404	Water Transmission and Distribution	$1,081,740	$1,000
407	Street Maintenance	$3,344,610	$216,461

13 SPECIAL INVESTIGATIONS

The City takes a proactive approach to storm water management in an attempt not only to protect receiving water quality, but also to improve the quality of water that is discharged from the City's MS4. Data collected through the City's various monitoring and inspection programs are used to identify locations within the City that may be contributing to storm water contamination. Source identification investigations are then initiated to pinpoint the exact cause of detected pollution. Aside from upstream investigations conducted as part of the dry weather monitoring and sampling program (see Section 8 of this report), no special investigations were needed or conducted during this reporting period.

14 CONCLUSIONS AND RECOMMENDATIONS

The City began implementation of the JURMP in February of 2002 and has been diligently working to comply with the requirements of the Municipal Permit. Our dedication to the program is evident in the amount that we have accomplished through the various aspects of our storm water management program such as the approximately 800 municipal/industrial/commercial inspections completed; the educational components created and conducted; the design, construction, and operation of the regional SUSMP basins; tracking and inspection of permanent treatment BMPs; and the constant self checks we do to ensure we are making every effort possible to comply to the maximum extent with the Municipal Permit. We have seen improvements in many areas, particularly knowledge and implementation of BMPs.

As described earlier in this report, the JURMP focuses on three major phases of development in which to eliminate pollutants: 1) Proposed New Development and Redevelopment, 2) Construction Projects, and 3) Existing Development including municipal facilities, industrial and commercial businesses, and residential areas. Each of these areas is likely to see changes as the result of the JURMP revision currently being undertaken in response to Order No. R9-2007-0001. These changes will improve our program even further as we strive to improve water quality throughout our jurisdiction and our watersheds.

SECTION 7: ILLICIT DISCHARGE DETECTION AND ELIMINATION

DECEMBER 2008

CERTIFICATION STATEMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Robert J. Manis

Dennis Quillen
Assistant Director of Public Works

Date: December 12, 2008

Telephone Number: (858) 668-4706

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

Recognizing that illicit connections and illicit discharges can be significant sources of pollutants to the City's municipal separate storm sewer system (MS4), the City maintains several programs to prevent and to seek out and eliminate illegal connections/illicit discharges (IC/IDs). Illicit discharges may result from activities such as equipment cleaning without the use of proper BMPs. Drains in car washes connected to the MS4 are examples of illicit connections. City storm water personnel work with residents, businesses, and City staff to make them aware of best management practices (BMPs) to prevent IC/IDs and to encourage reporting of IC/IDs. The following activities are the primary components of the City's program to combat IC/IDs:

- Inspecting local businesses, construction sites, and municipal facilities
- Conducting the Dry Weather Monitoring Program
- Operating a public complaint hotline

These mechanisms enable the City to provide a comprehensive system to improve the quality of storm water and urban runoff throughout the City.

7.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

The following subsections provide more details on how the City complied with both the previous permit and the new Municipal Permit during the reporting period. Some notable achievements for the illicit discharge detection and elimination component during the reporting period are presented in the following bulleted list.

- The City continued to operate a public complaint hotline; the City received and responded to 24 complaints during the reporting period.
- The City performed recommended corrective actions proposed in the 2007 Dry Weather Field Screening and Analytical Monitoring Program Report to prevent possible pollutants from entering the storm drain system.
- The City conducted the 2008 Dry Weather Field Screening and Analytical Monitoring Program, and began implementation of corrective actions as necessary. Follow-up actions continued beyond the end of the reporting period and will be reported in next year's Annual Report.

7.2 PUBLIC REPORTING OF ILLICIT DISCHARGES AND CONNECTIONS

Public and municipal involvement is crucial to preventing and eliminating IC/IDs from the storm water conveyance system. The public complaint hotline provides an effective means

for individuals in the City to report suspected IC/IDs. The City of Poway encourages citizens to report illicit discharges or water quality impacts associated with discharges into or from the MS4 through the City's Storm Water hotlines:

- Development Services Department (858) 668-4668
- Public Works Department (858) 668-4700

Information can also be accessed and reports made via the City's website at http://poway.org. One or both of the public reporting numbers are listed in all storm water pollution prevention brochures, and the numbers are posted on the City's website.

Each complaint is investigated by City personnel for verification. Responsible parties for any confirmed IC/ID are sought out and educated and/or given a notice of violation as necessary and required to stop illegal discharges. Development Services staff maintains a database of all complaints from the public reporting hotline and the resulting enforcement.

Complaints received by the City during the 2007/2008 reporting period and the City's response to each are listed in Table 7-6. A total of 24 complaints were documented this year, an increase from the 18 that were recorded last year. Poway residents are becoming more aware of the City's Storm Water Pollution Prevention Program, and make calls to the City when they see a violation. All complaints were followed up and resulted in cessation of any illegal discharge, cleanup as needed, and education of responsible parties where known.

7.3 Spill Reporting, Response, and Prevention

The City of Poway has established protocols to prevent spills and to properly respond if a spill occurs. The City has a detailed Sanitary Sewer Overflow (SSO) Response Plan, as required by regulations. Preventive maintenance is regularly conducted on the City's sanitary sewer system, and video inspections and sewer surveys are conducted to monitor the condition of public sewer lines and to determine the necessity of maintenance. Private lateral lines do not receive preventive maintenance, but the City assists in the containment and cleanup of sewer spills if the spill could potentially reach the City's MS4. Individuals in the City are encouraged to report any SSOs to the City's Storm Water Hotline. More detail about the City's spill prevention, response, and reporting procedures for SSOs and other spills can be found in the City's Jurisdictional Urban Runoff Management Plan (JURMP).

During the 2007/2008 reporting period, one SSO was recorded. The SSO Response Plan was activated, and City staff responded with two vactor trucks to contain and clean up the spill site. All required reports to regulatory agencies were made. Follow-up video inspection revealed grease buildup in an undersized pipe. The section of pipe was upgraded in a Capital Improvement Project in May 2008.

7.4 Urban Runoff Monitoring

The City has continued to conduct a Dry Weather Monitoring Program, as required by the Municipal Permit. This program assists the City in detecting and eliminating IC/IDs to the

storm drain system. There are three major components to the Dry Weather Monitoring Program:

- Field observations, which include site descriptions and qualitative observations
- Field screening monitoring, which includes flow estimation and sample testing using meters and test kits at the site
- Analytical monitoring, which involves submittal of collected samples from selected sites to an analytical laboratory for additional testing

Numeric action levels are used as the primary approach for the interpretation of most constituent concentrations measured in the field and laboratory. The California Toxics Rule (CTR) Criteria Maximum Concentration (CMC) is used as the action level for dissolved trace metals. Temperature and turbidity parameters are evaluated using best professional judgment to determine the necessity of an upstream investigation. The action levels for all other pollutants were adopted in 2003 and were based on statistical analyses of previous Dry Weather Monitoring Program data and established water quality benchmarks from the Basin Plan and the United States Environmental Protection Agency Multi-Sector General Permit.

Per Addendum No. 2 to the Municipal Permit, the reporting period for the Dry Weather Monitoring Program was changed to May 1, 2008, through September 30, 2008, but the reporting period for all other components of the City's IC/ID program remains July 1, 2007, to June 30, 2008. Because in the past the City has conducted its Dry Weather Monitoring Program in late in the summer and reported the results in the succeeding year's Annual Report (e.g., 2006 dry season results were reported in the Fiscal Year 2006-2007 Annual Report), two seasons' worth of Dry Weather Monitoring and follow-up have not yet been reported to the Regional Water Quality Control Board (RWQCB). This report provides a brief description of the 2007 program, along with more detailed reporting of the Dry Weather Monitoring Program that was conducted within the reporting period defined in Addendum No. 2.

For both the 2007 and 2008 Dry Weather Monitoring Programs, the City visited 50 monitoring stations with ponded or flowing water to collect Dry Weather Monitoring Program data. When a primary monitoring station was found to be dry, a designated alternate monitoring station was visited for field screening.

7.4.1 2007 Dry Weather Monitoring Program

The 2007 Dry Weather Monitoring Program was completed as scheduled during the 2007 dry season. The 2007 Dry Weather Monitoring Program Report, which includes all field screening and laboratory analysis results, has been included as Attachment 7.1. For further information about how the City addressed notable findings of the 2007 Dry Weather Monitoring Program and responded to the resulting recommendations, see Section 7.5.1 of this report.

7.4.2 2008 Dry Weather Monitoring Program

The 2008 Dry Weather Monitoring Program was conducted in August of the 2008 dry season, including routine site visits at the primary monitoring stations listed in Table 7-3 at the end of this section. Also at the end of this section, Tables 7-4 and 7-5 provide the field analytical results and laboratory analytical results, respectively, from the 2008 Dry Weather Monitoring Program.

Routine visits and any necessary follow-up investigations were conducted at 50 monitoring locations for the 2008 Dry Weather Monitoring Program. Table 7-1 provides a summary of action level exceedances.

Table 7-1
Summary of 2008 Action Level Exceedances

Field Screening (50 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
pH	0	0 %	--
Conductivity	0	0 %	--
Turbidity	1	2 %	15
Surfactants	1	2 %	2
Ammonia-Nitrogen	0	0 %	--
Nitrate-Nitrogen	2	4 %	18A, 141
Orthophosphate-Phosphorus	0	0 %	--
Laboratory Analyses (14 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
Oil & Grease	0	0 %	--
Cadmium	0	0 %	--
Copper	0	0 %	--
Lead	0	0 %	--
Zinc	0	0 %	--
Diazinon	0	0 %	--
Chlorpyrifos	0	0 %	--
Total Coliforms	1	7 %	36A
Fecal Coliforms	1	7 %	36A
Enterococcus	2	14 %	15, 36A

Note: Data is from the routine (first) visit to each site only.

Upstream investigations were conducted for each site with an exceedance listed in the table above. In addition, an upstream investigation was conducted for site 124 due to a visual observation. An oily deposit was observed at that site, which was likely waste cooking grease. Follow-up investigations conducted in response to action level exceedances and visual observations are summarized in Section 7.5.2 of this report.

A formal trash assessment was performed for the first time in 2008 in accordance with the Municipal Permit requirements. The San Diego Copermittee Dry Weather Monitoring Workgroup developed five categories to describe the amount and extent of trash. The definitions are primarily qualitative, although numbers of trash pieces are also included in each category as a rough guideline. The five categories are listed below.

- *Optimal:* On first glance, no trash is visible. Little or no trash (<10 pieces) is evident when the evaluated area is closely examined for litter and debris.
- *Suboptimal:* On first glance, little or no trash is visible. After close inspection, small levels of trash (~10-50 pieces) are evident in the evaluated area.
- *Marginal:* Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing are present.
- *Submarginal:* Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing are present.
- *Poor:* Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health is assessed at each site using the following definitions:

- *Threat to Human Health* – Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris have the potential to contain chemicals that may bioaccumulate, may transmit dangerous bacteria (e.g., medical waste, diapers, human waste), or have the potential for physical harm (sharps, entanglement, nails, etc.).
- *Threat to Aquatic Health* – Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc.) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers fall in this category.

Fifty-four sites were assessed in 2008, including 4 dry sites, and 45 of the sites were scored as "optimal" or "suboptimal," having little or no trash. Six sites had "marginal" levels of trash, and three sites were considered "submarginal" due to trash consistent with human use and illegal dumping. None of the sites were considered to have "poor" levels of trash. Two evaluated sites were assessed as having the potential to pose a threat to human or aquatic health due to the presence of human waste. Actions taken by the City in response to the results of the trash assessment are addressed in Section 7.5.2 of this report.

The 2008 Dry Weather Monitoring Program Report can be found as Attachment 7.2.

7.5 Follow-up and Enforcement

7.5.1 Actions Taken in Response to the 2007 Dry Weather Monitoring Program Findings

The City performed the following actions based on the 2007 Dry Weather Monitoring Program results:

Education

- Educational activities continued to emphasize elimination of overwatering, proper disposal of pet waste, and prevention of discharges of anything other than clean water into the storm drains. These educational activities were described in detail in Section 8 of the City's JURMP Annual Report in September 2008.

Inspection and Maintenance

- The City performed a follow-up inspection of Touch of Class Auto Care, the car wash facility upstream of Site 90. Concrete berms were added to the gutters to prevent wash water from leaving the site.
- Public Works staff inspected each area considered to require maintenance and performed maintenance or cleanup as follows:
    - Trash and organic material were cleared from the storm water conveyance at Site 36A to allow proper drainage and reduce stagnation of water.
    - Animal waste was removed from the channel upstream of Site 111, which is located between Rolling Glen Road and Red Cloud Lane, in the portion of the channel bounded by Garden Road and Springvale Street.
    - Trash was removed from sites 21A, 21B, 30, 31, 35, 36A, 52, 53, 105, 106, 109, 111, 124, 128 and 132. The City also ensured that trash from evidence of human inhabitation was cleaned up at Site 109.
    - Additionally trash was removed from the following sites that had minor trash during the field screening program: sites 2, 4, 15, 16, 18A, 19, 21A, 21B, 30, 31, 34, 35, 36A, 52, 53, 54, 64A, 91, 101, 103, 105, 106, 108, 109, 111, 123, 124, 128, 130, 132, 133, 135, 136, 140, and 142.

7.5.2 2008 Dry Weather Monitoring Follow-Up Investigations

If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days. Upstream investigations are

performed when exceedances are verified during confirmation visits. See the City's JURMP for a complete discussion of upstream investigation procedures.

Table 7-2 presents conclusions based on the results of confirmation visits and, where necessary, upstream investigations conducted at six sites for the 2008 Dry Weather Monitoring Program.

Table 7-2
Summary of 2008 Follow-Up Investigations

Site	Follow-Up Investigation Target Constituent(s)		Results / Probable Sources
	Field	Laboratory	
2	Surfactants		No direct source of surfactants was observed. Surfactants level was below the action level when tested the next day. The exceedance was most likely due to a transient flow.
15	Turbidity	*Enterococcus*	No potential source of *Enterococcus* or turbidity was observed for this ponded water. Both turbidity and *Enterococcus* were below their respective action levels during confirmation visits.
18A	Nitrate-N		No direct source of nitrate-nitrogen was observed. The nitrate-nitrogen level was below the action level when tested the next day. The exceedance was most likely due to a transient flow.
36A		Total Coliforms, Fecal Coliforms, *Enterococcus*	Decaying organic material, and horse manure were noted upstream, and human waste was observed adjacent to the site.
124	Oily Deposit (Visual Observation)		No apparent source of discharge at upstream area. Potential one-time or intermittent improper disposal of cooking grease or oil in the upstream residential area.
141	Nitrate-N		No above ground source of flow or nitrate-nitrogen observed. Area is rural and has minimal storm drain infrastructure; most conveyances are natural channels. Exceedance potentially due to influence of historically agricultural soil on groundwater or interflow that surfaces just upstream of the site.

Sites that were noted to pose a potential threat to human health or aquatic life (sites 15 and 36A) were inspected and cleaned up by Public Works crews. City staff also performed a follow-up inspection of site 124; trash was picked up, but no grease or oil was noted at that time. Follow-up and maintenance of all other sites that require it extended beyond this reporting period and will be described in the 2008/2009 JURMP Annual Report.

7.5.3 IC/IDs Identified

During the reporting period, 31 potential IC/IDs were identified and eliminated based on Dry Weather Monitoring results, spill reports, and investigations of reports made to the City's public complaint hotline. Details of all complaints made to the City's public complaint hotline are included in the City's complaint log, included below as Table 7-6.

7.5.4 Enforcement

As described in Table 7-6, the City responded and followed up with all complaints made to the City's public complaint hotline and took appropriate enforcement action when deemed necessary. Similarly, enforcement action was taken against industrial and commercial businesses and construction sites found to be out of compliance during inspections as necessary. In response to reports made to the City's public complaint hotline and findings of routine inspection programs, the City issued the following enforcement actions:

- The City's first level of enforcement action is verbal and/or written warnings, which were given in all cases where the discharger or potential discharger could be identified.
- 38 Correct Work Notices, 24 Stop Work Notices, and two Notices of Violation were issued to construction sites, as described in Section 3 of the city's 2008 JURMP Annual Report.
- 16 letters requiring correction of a violation were sent to stationary industrial and commercial businesses as part of follow-up actions to reach compliance as described in Section 5 of the City's 2008 JURMP Annual Report.

As required by the Permit and the City's JURMP, copies of Stop Work Notices were sent to the RWQCB.

7.6 Illicit Discharge Detection and Elimination Component Effectiveness Assessment

The new Municipal Permit requires the City to assess the effectiveness of each significant activity for each program component, for each program component as a whole, and for the storm water program as a whole.

Assessment is performed using the six levels of targeted outcomes:

Level 1: Compliance with Activity-Based Permit Requirements

Level 2: Changes in Knowledge/Awareness

Level 3: Behavioral Change/BMP Implementation

Level 4: Load Reductions

Level 5: Changes in Discharge Quality

Level 6: Changes in Receiving Water Quality

Level 1 through Level 4 outcomes are shown in Tables 7-7 and 7-8. At this time the City is not able to assess Level 5 or Level 6 outcomes for individual program activities or individual programs. As has been noted in the recently released CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels.

Overall, the inspection and monitoring efforts that make up the City's IC/ID program continue to demonstrate good knowledge and implementation of BMPs. Where IC/IDs are detected, education and enforcement efforts are used to eliminate the IC/ID, educate the public regarding proper BMPs, increase implementation of BMPs, and reduce pollutant loads.

7.7 Program Review and Modification

The City's JURMP was updated in March 2008, as detailed in Section 14 of that document. No changes to the City's illicit discharge detection and elimination component have been made since the submittal of that document.

Table 7-3
2008 Dry Weather Monitoring Locations

Site ID	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Subarea	Latitude	Longitude

Action Levels			**15.0**	*	**CTR**	**CTR**	**CTR**	**CTR**	**0.50**	**0.50**	**50,000**	**20,000**	**10,000**

Notes

Red Bold Type = Values that exceed action levels
nd = Not detected
nt = Not tested
CTR = California Toxics Rule (based on hardness)
*** =** Total hardness is not considered a pollutant and thus has no established action level for the purposes of dry weather monitoring. Total hardness is measured because the CTR action levels for metals are dependent on the total hardness value of the water sample. Total hardness measurements are thus required to calculate action levels for dissolved metals.

Table 7-6
Summary of Documented Public Complaints

#	Date	Complaint Type	Business/ Property Owner	Location	Nature of Complaint	Investigation Results
1	6/28/2007	Industrial-Commercial	Creekside Plaza	13477 - 13495 Poway Rd	Communal dumpster area was lacking proper BMPs	Deficiencies were corrected and the property owner committed to ongoing maintenance and BMPs. * The City was still following up on this matter at the end of the initial reporting period but subsequently the issue has been resolved.
2	7/2/2007	Residential	TLC Landscaping & Pools	14069 Hermosillo	Complaint regarding evidence of potential discharge received.	Area of concern cleaned up.
3	8/21/2007	Residential	David P. & Trisha A. Ryan	14042 Twin Peaks	Complaint regarding evidence of potential discharge received.	Area of concern was cleaned up, BMP information distributed to property owner.
4	8/22/2007	Residential	Robert R. & Kathleen A. McHeffey	14341 Gaelyn Court	Complaint regarding evidence of potential discharge received.	Area of concern was cleaned up, BMP information distributed to property owner.
5	8/23/2007	Industrial-Commercial	Zip's Tummy Buster	13771 Danielson St, Suite E	A complaint was received regarding a potential illicit storm water discharge, and a follow-up inspection observed evidence of a potential discharge.	The area of concern was cleaned and an employee training was held to implement BMPs to prevent any further potential discharges.
6	9/10/2007	Residential	Balbina Carrillo	12868 Poway Oaks	Complaint regarding evidence of potential discharge from leaking vehicle received.	Property owner notified of BMP requirements and discharge potential addressed.
7	11/7/2007	Residential	Richard J. & Lisa A. Longabaugh	13217 Betty Lee Way	Complaint regarding evidence of potential discharge received.	Area of concern was cleaned up, BMP information distributed to property owner.

Table 7-6 (Continued)
Summary of Documented Public Complaints

#	Date	Complaint Type	Business/ Property Owner	Location	Nature of Complaint	Investigation Results
8	12/19/2007	Industrial-Commercial	Great American Chem Dry	12544 Kirkham Ct, Suite 19	A complaint was received regarding a potential illicit storm water discharge, yet a follow-up inspection yielded no evidence of a potential discharge.	The business was notified of the received complaint and inspection results, and BMP educational information was distributed.
9	12/19/2007	Industrial-Commercial	Teak & Deck Professionals	821 S Tremont St, Oceanside CA 92054	A complaint was received regarding a mobile business performing power washing services at a local business.	The mobile business was notified of proper BMPs required for power washing businesses.
10	12/19/2007	Industrial-Commercial	Mark & Elissa Griffith	12545 Kirkham Ct # 19	Mobile vehicle washing reported with unknown BMPs.	Code Compliance officer visited site but both the mobile business and detailed vehicle were gone. BMP information was distributed to property owner.
11	1/13/2008	Industrial-Commercial	Home Depot	12175 Tech Center Drive	Mobile vehicle washing reported with unknown BMPs.	Code Compliance officer visited site but missed the mobile business. BMP information was distributed to Home Depot and the vehicle that had been washed.
12	1/14/2008	Residential	Robert and James Rosenberg	14265 Palisades Drive	Complaint of power washing without proper BMPs.	Code compliance officer explained NPDES Ordinance, left BMP information, and had residents divert water flow into landscaped area.
13	1/15/2008	Residential	Ron and Barbara Kruger	14530 Red Hawk	Evidence of a potential discharge was observed by City crew, and code compliance contacted property owner.	Area of concern was cleaned up and evidence of potential discharges was no longer observed. BMPs distributed to property owner

Table 7-6 (Continued)
Summary of Documented Public Complaints

#	Date	Complaint Type	Business/ Property Owner	Location	Nature of Complaint	Investigation Results
14	1/23/2008	Residential	Robert F. Fischer, Jr., & Maria R. Fischer	14316 Mountain Road	Evidence of a potential discharge of chlorinated pool water was reported to code compliance.	Code compliance officer was unable to substantiate claim of chlorine present. BMPs discussed with property owners.
15	1/24/2008	Residential	Vitrano Trust	13701 Powers Road	Code officer observed residents washing down muddy water from driveway into gutter.	Code compliance officer explained NPDES Ordinance, left BMP info, and had residents divert water flow into landscaped area.
16	3/4/2008	Residential	Ms. Lafond	13455 Suttermill	Complaint regarding evidence of potential discharge from yard drain received.	Area of concern was cleaned up and evidence of potential discharges was no longer observed. BMPs discussed with property owner.
17	4/4/2008	Residential	Ray Zuchowski	17563 St. Andrews	Evidence of a potential discharge was observed by City crew, and code compliance contacted property owner.	Area of concern was cleaned up and BMPs distributed to contractor.
18	4/22/2008	Industrial-Commercial	Ozzy's Music	12222 Poway Rd, Suite 25	Evidence of a potential discharge was observed by City inspectors during the routine inspection of a neighboring business.	Area of concern was cleaned up and evidence of potential discharge was no longer observed.
19	5/5/2008	Industrial-Commercial	El Dorado Body and Paint/John J. Tyczki, Jr.	12502 Poway Road	Evidence of a potential discharge was observed by City crew, and code compliance contacted business owner.	Code compliance officer unable to identify source or location of possible discharge. Business added to annual industrial-commercial inspections.

Summary of Documented Public Complaints

#	Date	Complaint Type	Business/ Property Owner	Location	Nature of Complaint	Investigation Results
20	5/9/2008	Residential	Coe Family	15237 Hilltop Circle	Complaint regarding evidence of potential discharge received.	Area of concern was cleaned up, BMP information distributed to contractor, and resident was instructed to divert water flow into landscaped area.
21	5/13/2008	Industrial-Commercial	Poway Sportsplex/Bill Berghoff	12349 McIvers Court	Complaint regarding evidence of potential discharge received.	Area of concern was cleaned up, BMP information distributed to property owner.
22	5/21/2008	Residential	John J. Linnehan II & Lorene D. Linnehan	13421 Pequot	Complaint received regarding evidence of potential discharge from leaking vehicle.	Property owner notified of BMP requirements and discharge potential addressed.
23	5/28/2008	Residential	Richard R. & Cheryl A. Herbers	14840 Deerwood Drive	Complaint received regarding evidence of potential discharge from vehicle washing.	Area of concern was cleaned up and evidence of potential discharge was no longer observed. BMPs discussed with property owner.
24	6/17/2008	Residential	Terri L. Scolari	12867 Carriage Heights	Complaint received regarding evidence of potential discharge from vehicle washing.	Area of concern was cleaned up and evidence of potential discharge was no longer observed. BMP information distributed to property owner.

Table 7-7
Level 1 Assessment Measures

Component	Activity / Source Type	Targeted Outcome	Actual	Measures of Success	
				Actual / Target	%
IC/ID	Dry Weather Sampling	# Locations Targeted for Monitoring **50**	# Locations Monitored **50**	**50 / 50**	**100%**
	Illicit Connections	# Identified **0**	# Eliminated or on a Compliance Schedule **0**	**0 / 0**	**N/A**
	Illegal Discharges	# Identified **31**	# Eliminated or on a Compliance Schedule **31**	**31 / 31**	**100%**
	Complaints/Referrals	# Received (justified) **23**	# Resolved or on a Compliance Schedule **23**	**23/23**	**100%**

Table 7-8
IC/ID Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Inspect local businesses, construction sites, and municipal facilities	As noted in Section 8 of the Annual Report, inspections include education of the business, contractor, or staff of the facility being inspected.	BMPs seen during inspection generally meet requirements. Follow-up where needed shows improved BMP implementation.		Proper BMP implementation resulting from follow-up actions is likely to have reduced pollutant loading. Sufficient data to estimate the amount of load reduction are not available.
Conduct the Dry Weather Monitoring Program and follow-up	Follow-up actions include education where appropriate.	Percent of sites that demonstrate exceedances	See Table 7-1	Proper BMP implementation resulting from follow-up actions is likely to have reduced pollutant loading. Sufficient data to estimate the amount of load reduction are not available.
Respond to public complaints	Follow-up of complaints includes education of responsible party, where known.	Education should result in improved BMP implementation. Follow-up at specific sites		Proper BMP implementation resulting from follow-up actions is likely to have reduced pollutant loading. Sufficient data to estimate the amount of load reduction are not available.

Poway, CA 92064

Re: 2007 Dry Weather Field Screening and Analytical Monitoring Program
City of Poway, California

Dear Mr. Ryan:

Per your request D-MAX Engineering, Inc. (D-MAX) conducted the routine phase of the Dry Weather Field Screening and Analytical Monitoring Program for the City of Poway during the summer of 2007. Subsequently, we conducted follow-up investigations to identify the sources of pollutants detected during the monitoring program.

This report presents the results of the monitoring program and follow-up investigations. The contents include field screening data and analytical laboratory test results, analysis of collected data, and photographs of sampling locations. The report also presents the results of follow-up investigations and our recommendation for additional actions.

Review comments from the draft report submitted to the City have been incorporated into this final report. It has been our pleasure working with the City of Poway on this project. If you have any questions regarding this report, please call me at (858) 586-6600 ext. 22.

Sincerely,
D-MAX Engineering, Inc.

Arsalan Dadkhah, Ph.D., P.E.
Project Manager

1 INTRODUCTION

1.1 Regulatory Requirements

San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (the recently adopted Municipal Permit) requires that the Dry Weather Field Screening and Analytical Monitoring Program in 2007 be conducted in accordance with RWQCB Order 2001-01 (the previous Municipal Permit) requirement. Under Order No. 2001-01, each of the Copermittees, including the City of Poway (City), must annually conduct dry weather field screening of discharges into its storm drain system. This procedure consists of recording field observations, estimating observed flow rates, and conducting field testing at selected locations along the storm drain conveyance system during the dry weather season (May 1st through September 30th). The Municipal Permit also requires Copermittees to conduct laboratory analysis for at least 25 percent of the visited sites that have flowing or ponded water. At each sampling location that exhibits no flowing or ponded water, an alternate sampling station must be selected and sampled. If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required. The results from the current year's Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program), including both field screening and analytical monitoring, are presented herein.

1.2 Program Overview

The primary purpose of the Dry Weather Monitoring Program is to detect and eliminate illicit connections and illegal discharges (IC/ID) to the storm drain system, minimizing the negative impacts of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following three components.

- Field screening observations
- Field analytical testing
- Laboratory analytical testing

Information collected from the dry weather monitoring is also used to characterize dry weather discharges to the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up studies and source investigations were conducted as necessary to detect and eliminate the sources of these pollutants.

1.3 Hydrologic Setting

The City of Poway encompasses parts of three of San Diego County's watersheds. The northern portion of the City lies in the San Dieguito Watershed, which is designated as Hydrologic Unit (HU) 905. The southern half of the City is part of the Peñasquitos Watershed, HU 906. A very small portion of eastern Poway lies within the San Diego River Watershed, HU 907. Nine smaller drainage basins are recognized within the City of Poway; these are listed below.

- Sycamore Creek Basin
- Green Valley Creek Basin
- Stone Canyon Basin
- Pomerado Creek Basin
- Rattlesnake Creek Basin

- Silver Lake Drive Basin
- Poway Creek Basin
- Beeler Creek Basin
- San Vicente Creek Basin

Catch basins, creeks, channels, culverts, and detention basins convey runoff from small, local waterways to the larger receiving waters of the three major watersheds. Water quality in each of the three major watersheds has been evaluated yearly since 2002 to identify constituents of concern within the watershed. In addition to the City of Poway, these major watersheds drain other large portions of San Diego County and eventually terminate in the Pacific Ocean. The City of Poway shares the responsibility of addressing the constituents of concern with other cities falling within the watershed boundaries. Figure 1-1 at the end of this report presents a drainage map of the City of Poway and illustrates the locations of the drainage basins and associated water bodies.

Los Peñasquitos, Hydrologic Area 906.20

Poway Creek drains the majority of southern Poway and collects flow generated from Pomerado Creek, Silver Lake Drive, Rattlesnake Creek, and Beeler Creek, eventually converging with Los Peñasquitos Creek, and discharging into Los Peñasquitos Lagoon. The 2005-06 Peñasquitos Watershed Urban Runoff Management Plan (WURMP) Annual Report identified Constituents of Concern (COC) in this watershed as fecal coliform, total dissolved solids (TDS), turbidity, total coliform, *Enterococcus* bacteria, and nutrients, with turbidity, total coliform, and *Enterococcus* bacteria being the higher priority COCs.

San Dieguito River, Hydrologic Area 905.20

The majority of northern Poway lies in this watershed, including Green Valley Creek, Stone Canyon Creek, Sycamore Creek, Lake Poway, and Thompson Creek. These drain into Lake Hodges, which discharges to the San Dieguito River, eventually terminating in the San Dieguito Lagoon. The 2005-06 San Dieguito WURMP Annual Report identifies TDS and fecal coliform as the two highest priority COCs. Turbidity continues to be a lower priority COC.

San Diego River, Hydrologic Unit 907.00

A very small portion of eastern Poway drains into San Vicente Creek and eventually into the San Diego River watershed. Because this portion of Poway is designated as permanent open space, which is restricted from any future development, the RWQCB has indicated that the City of Poway is not included as a responsible party for the San Diego River WURMP under the recently adopted Municipal Permit.

1.4 Previous Work

The Dry Weather Monitoring Program has been implemented by the City of Poway since 1994. A total of 43 storm drain locations were sampled in 1994, 45 locations in 1995, 44 locations in 1996, 44 locations in 1997, 45 locations in 1998, 46 locations in 1999, 44 locations in 2000 and 2001, and 50 locations in 2002, 2003, 2004, 2005, and 2006. A summary of field screening and laboratory analysis results from 1994 through 2006 are presented below and in Table 1-1. Note that follow-up visits were conducted at some sites; in these cases the single higher constituent value of both the initial and follow-up visit has been given.

In 1994, seven sites had concentrations of ammonia above 0.5 milligrams per liter (mg/L). Concentrations of chlorine were high at four sites. High concentrations of copper were observed at six sites. There were also some high concentrations of surfactants observed at two sites and of phenols at three sites. Seven sites were identified as having evidence of possible illegal discharges.

In 1995, relatively low concentrations of ammonia, copper, chlorine, surfactants, and phenols were observed at the sites visited. Of all constituents tested, only chlorine had a concentration level above 0.5 mg/L (at three sites). The rest of the readings were below 0.5 mg/L. Copper and phenols were undetectable during all visits. Three sites were identified as having evidence of possible illegal discharges.

In 1996, there were three sites with ammonia concentrations greater than 1.0 mg/L. The rest of the readings for ammonia were below 0.5 mg/L. Eight sites had chlorine concentrations of greater than 0.5 mg/L. Surfactant concentrations did not exceed 0.5 mg/L. For the second consecutive year, copper and phenols were undetected during all field tests. Six sites were identified as having evidence of possible illegal discharges.

In 1997, there were three sites with ammonia concentrations exceeding 1.0 mg/L. Three sites had ammonia concentrations of 1.0 mg/L. One site had surfactants exceeding 1.0 mg/L, and one site had a surfactants concentration of 1.0 mg/L. Chlorine concentrations generally remained low with the exception of Site 15, which showed a chlorine concentration of 3.0 mg/L. Copper was mostly undetectable, with the highest level being 0.6 mg/L. Phenols remained low at all sites with the exception of Site 21, which had 0.8 mg/L.

In 1998, the City conducted two rounds of dry weather field screenings. Round one was performed in June and July, and round two was performed in September. During round one, ammonia and surfactants concentrations were generally below 1.0 mg/L. Four sites had ammonia concentrations in excess of 0.5 mg/L. Three sites had surfactants concentrations exceeding 0.5 mg/L. Copper at a concentration of 0.1 mg/L was detected at two sites. Phenols concentrations were largely undetectable; only two sites indicated a concentration of 0.1 mg/L. Chlorine concentrations were also generally low, the highest reading being 0.8 mg/L. During round two of the 1998 Dry Weather Monitoring Program, an ammonia concentration in excess of 1.0 mg/L was detected at two sites. Three more sites had an ammonia concentration in excess of 0.5 mg/L. Surfactants concentrations were generally low. Only two sites had surfactants concentrations greater than 0.5 mg/L. Copper was not detected at any of the visited sites. Chlorine concentrations were mostly undetected. A phenols concentration of 0.1 mg/L was detected at a few sites.

In 1999, two rounds of dry weather field screenings were conducted. Round one was performed in June, and round two was performed in September. During round one, two sites had ammonia concentrations in excess of 1.0 mg/L. Six sites had surfactants concentrations exceeding 1.0 mg/L. The highest surfactants concentration of 14.3 mg/L was detected at Site 3A. Copper concentrations were generally low. Two sites had copper detected at 0.1 mg/L, and one site had copper at 0.2 mg/L; laboratory analysis revealed copper at a concentration of 6.06 mg/L at one site. Phenols concentrations were detected at several sites; three sites had 0.1 mg/L, and one site indicated a concentration of 0.6 mg/L. Chlorine concentrations were generally low, with the highest reading being 1.0 mg/L at two sites.

During round two of the 1999 Dry Weather Monitoring Program, an ammonia concentration in excess of 0.5 mg/L was detected at five sites. Surfactants concentrations in excess of 0.5 mg/L were detected at three sites. Copper concentrations greater than 0.1 mg/L were detected at two sites. Four sites had chlorine concentrations greater than 0.1 mg/L (the highest was 0.9 mg/L). A phenols concentration greater than 0.1 mg/L was detected one site.

In 2000, two rounds of dry weather field screenings were conducted. Round one was performed in June, and round two was performed in September. During round one, ammonia levels ranged from 0.1 mg/L to 5.0 mg/L. One site was detected with an ammonia concentration of 5.0 mg/L, and three sites were detected at levels between 1.0 and 2.0 mg/L. Surfactants levels ranged between 0.25 and 3.0 mg/L at all sites that were sampled. Only one site had a surfactants concentration of 3.0 mg/L. Measurable copper concentrations were found in five sites. A copper level of 0.3 mg/L was found in one site, while four sites had copper levels between 0.1 and 0.2 mg/L. Phenol levels ranged between one site with 0.1 mg/L and two sites with 0.2 mg/L. Chlorine concentrations were generally low with only one site showing the maximum chlorine concentration of 0.8 mg/L. Round two testing showed low ammonia levels detected in the majority of sites with only five sites showing concentrations greater than 1.0 mg/L. Surfactants concentrations greater than 1.0 mg/L were found at six sites with a high of 3.0 mg/L found in two of those sites. Copper levels were generally low with a high of 0.1 mg/L found at two sites. Phenol levels reached a maximum at 0.2 mg/L at one site. There were no sites found with chlorine levels greater than 1.0 mg/L

In 2001, the City conducted two rounds of its Dry Weather Monitoring Program. Round one was performed in June of 2001, and round two was performed in September of the same year. Overall, there were no major non-storm water flow problems detected in the City of Poway during the two rounds of screening. During round one, none of the selected sites had ammonia concentrations greater than 1.0 mg/L, chlorine concentrations never exceeded 1.0 mg/L, surfactants concentrations never exceeded 1.0 mg/L, and copper and phenols concentrations never exceeded 0.5 mg/L.
During round two of screening, three sites (sites 21B, 36A and 51) showed ammonia concentrations greater than 1.0 mg/L. Chlorine concentrations never exceeded 1.0 mg/L. Surfactants concentrations exceeded 1.0 mg/L at four sites, sites 3, 3A, 3B and 91. Copper and phenols concentrations never exceeded 0.5 mg/L.

In 2002, the City conducted one round of dry weather monitoring in May 2002. Ammonia concentrations from field screening tests ranged from non-detect to 5.0 mg/L, with three sites greater than 1.0 mg/L (sites 3B, 53, and 137). Nitrate ranged from not detected to 10.0 mg/L, surfactants from a value below the detection limit to 1.0 mg/L, and Orthophosphate-P from a value below the detection limit to 0.98 mg/L. Laboratory analytical results for oil and grease ranged from not detected to 7.0 mg/L, organophosphate pesticides were not detected with the exception of chlorpyrifos at 0.8 micrograms per liter (µg/L) at Site 137, dissolved metals (cadmium, copper, lead, and zinc) were not detected, total coliform ranged from 900 most probable number per 100 milliliter (MPN/100 mL) to greater than or equal to 16,000 MPN/100 mL, fecal coliform from 500 MPN/100 mL to greater than or equal to 1,600 MPN/100 mL, and *Enterococcus* bacteria from 80 MPN/100 mL to 1,600 MPN/100 mL. Sites 3B, 53, 18A, 137, 30, and 108 were recommended for follow-up investigation and monitoring.

In 2003, the City conducted one round of dry weather monitoring. Ammonia concentrations ranged from not detected to 4.0 mg/L, exceeding 1.0 mg/L at only two sites (sites 63A and 137). The concentration of nitrate ranged from not detected to 12.0 mg/L, exceeding 10.0

mg/L at Site 18A. Orthophosphate-P concentrations ranged from not detected to 3.3 mg/L with only Site 63A testing above 2.0 mg/L. The surfactant concentration exceeded the action level at Site 91, but dropped below the action level during a follow-up visit. The conductivity, pH, temperature, and turbidity at all sites tested within acceptable ranges. Laboratory analytical results for surfactants, oil and grease, total hardness, dissolved metals (cadmium, copper, lead, and zinc), and the pesticide chlorpyrifos were all below their respective action levels at all sampling locations. For the pesticide diazinon, laboratory results indicated only Site 137 as exceeding the action level of 0.5 µg/L. Total coliform ranged from 2,200 most probable number per 100 milliliter (MPN/100 mL) to greater than or equal to 160,000 MPN/100 mL, fecal coliform from 1,300 MPN/100 mL to greater than or equal to 90,000 MPN/100 mL, and *Enterococcus* bacteria from 40 MPN/100 mL to 50,000 MPN/100 mL. Sites 15, 36A, and 137 were the only sites with coliform counts exceeding action levels. Three sites had ponded water, and Site 131 was observed dry. This site was replaced with alternate Site 103.

In 2004, the City conducted one round of dry weather field screening. Of the 50 primary sites, three were found to be dry and were replaced with alternate sites. Conductivity and pH measurements fell within the established acceptable ranges. Ammonia was detected at or over the action level of 1.0 mg/L at four sites, however at two of these sites, the concentration of ammonia dropped below the action level during the follow-up visit. As in 2003, Site 18A was the only site to have a nitrate concentration over 10 mg/L. No sites had phosphate concentrations above the action level. Two closely connected sites, sites 3A and 3B were found to have surfactant concentrations greater than the established action level. Only one site had detectable diazinon and no sites had detectable chlorpyrifos. The oil and grease concentration at the majority of the sites was below the reporting limit. Two sites had measurable dissolved metal: one with zinc and one with copper. Four sites received upstream investigations for bacterial indicator concentrations. Two sites exceeded the action level for total coliform only, and two sites exceeded the action levels for total coliform and *Enterococcus*.

In 2005, as in previous years, one round of dry weather field screening was conducted. Of the 50 primary monitoring locations, one location was dry and was replaced with an alternate location. Conductivity and pH readings were within the acceptable ranges at all sites. Ammonia concentrations exceeded the action level at six sites, however during the follow-up visits ammonia concentrations dropped below the action level at five of the sites. As in the past two years, Site 18A was the only site to exceed the action level for nitrate. One site had an orthophosphate-P concentration above the action level of 2.0 mg/L PO_4-P; however it dropped to below the action level during the follow-up visit. Surfactant (MBAS) concentrations did not exceed the action level of 1.0 mg/L at any of the monitoring location sites except temporarily at Site 106. No sites had detectable levels of oil and grease. Diazinon was detected at one site, but it was below the established action level. Chlorpyrifos was not detected at any locations. Measurable levels of copper and zinc were detected at one site, but were below the action level determined by the California Toxics Rule. Cadmium and lead were not detected at any of the sites. Nine sites received upstream investigations for bacterial indicator concentrations. All nine sites exceeded the action level for total coliform. In addition to total coliform, one site exceeded the fecal coliform action level and one site exceeded the *Enterococcus* action level. One site exceeded the action levels for all three bacterial indicators.

In 2006, all 50 primary sampling locations were visited and samples were collected when flowing or ponded water was observed. Of the 50 primary locations, two sites were observed

to be dry and were replaced with alternate locations. During the routine field screening and sampling events, four monitoring locations were determined to exhibit constituent concentrations above the action levels. Ammonia concentrations exceeded the action level of 1.0 mg/L at only two sites, down from previous years, and likely sources were found during the upstream investigations. As in the previous three years, nitrate concentrations above the action level of 10.0 mg/L were only observed at Site 18A. Only Site 119 had a high turbidity reading which was determined to potentially present a threat to water quality. An upstream investigation conducted the following day revealed that the high turbidity level was transient, because the turbidity levels had dropped significantly when retested. Conductivity, pH, orthophosphate-P, and surfactant (MBAS) concentration were within the acceptable ranges at all sites. As in the previous two years, no sites had detectable levels of oil and grease. Diazinon and chlorpyrifos were not detected at any of the sites. Low concentrations of dissolved zinc were found at seven sites, and two sites had detectable copper concentrations. Neither the dissolved zinc nor the copper were detected above their respective action levels as determined by the California Toxics Rule. Six sites had indicator bacteria concentrations which exceeded their respective action levels. Total coliform concentrations were equal to or greater than the action level at four sites. Fecal coliform levels exceeded the action level at one site. *Enterococcus* levels were above the action level at three sites.

1.5 Report Outline

This report is divided into eight sections and three appendices. The following presents the section numbers and a brief description of the section. There are also three appendices associated with this report.

Section 1 provides a regulatory background, gives an overview of the Dry Weather Monitoring Program, discusses the City of Poway's hydrologic setting, summarizes previous monitoring results, and provides an outline of the report.

Section 2 describes the sampling locations and the site selection criteria.

Section 3 describes the field screening and laboratory analytical procedures. This section also discusses quality assurance protocols used during sampling and lists follow-up investigation action levels.

Section 4 discusses the results of the field screening analyses.

Section 5 discusses the results of the laboratory analyses.

Section 6 provides a thorough analysis of the collected field and laboratory data and includes descriptions of each site with evidence of physical, chemical, or biological pollution.

Section 7 discusses follow-up investigations of each site with repeated evidence of physical, chemical, or biological pollution.

Section 8 provides a summary of the program results and recommendations for follow-up actions.

Appendix A contains photographs of each of the Dry Weather Monitoring Program locations.

Appendix B contains the laboratory analytical reports.

Appendix C contains original copies of the field data sheets.

2 SAMPLING LOCATIONS

The City of Poway has fifty primary monitoring stations within the city limits. Additionally, 26 alternate screening and sampling locations were selected and presented in the JURMP, and monitored in the event that any of the primary stations did not have ponded or flowing water. All sampling sites are located in San Diego Hydrological Units 905 and 906.

Based on D-MAX recommendations and the City's approval, the following changes of Dry Weather Monitoring Program locations were implemented during the 2007 Dry Weather Monitoring Program.

- Site 111, located north of Kennebunk Street, was converted to a "laboratory site". Samples collected from this site were sent for laboratory analyses in order to provide information about the animal facilities in the southeast of the City.

- Site 132, located on Lake Poway Road, was recommended to be changed from a laboratory site to a field sampling site. However, since laboratory sampling Site 65 was observed dry, Site 132 was used again used as a laboratory site.

- Site 133, located at Espola Road and Orchard Bend Road, was converted to a laboratory site to help monitor animal facilities in the vicinity.

During the 2007 Dry Weather Monitoring Program, primary sites 65, 131, 137, and 142 were observed to be dry, so alternate sites 1, 103, 114, and 135 were selected as locations for monitoring.

Table 2-1 provides the site number, location, conveyance configuration, primary and secondary land uses, hydrological unit, and GPS coordinates of the sampling locations that were visited. Photographs of sampling locations are included as Appendix A. A city map with sampling locations is included as Figure 2-1 and is located at the end of this report. A map of the watersheds in and around the City of Poway, broken down into HSAs, is included as Figure 2-2 and is located at the end of this report.

TABLE 2-1
2007 DRY WEATHER MONITORING STATIONS

Site ID	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Unit	Latitude	Longitude
1*	Behind no. 12371 Old Pomerado Road.	Outlet	Residential	Open	906	32.94284	-117.06485
2	Off Stowe Drive, north of business center 12300-12340.	Outlet	Commercial	Industrial	906	32.94183	-117.05915
3	Behind industrial site at the end of Kirkham Court, 150 feet into canyon.	Outlet	Commercial	Industrial	906	32.94424	-117.05537
3A	At the end of Kirkham Court across from Life Force International in the street.	Manhole	Commercial	Industrial	906	32.94327	-117.05326
3B	At the end of Kirkham Court across from Hunter Douglas Co. in the street.	Manhole	Commercial	Industrial	906	32.94318	-117.05283
4	12342 Old Pomerado Road, north of Veterans Building at Bette Bendixen Park.	Natural Creek	Residential	Open	906	32.94270	-117.06604
12	Behind 12818 Beeler Creek Trail, at merger of Poway Creek and Beeler Creek.	Natural Creek	Residential	Open	906	32.94917	-117.06958

3 FIELD AND LABORATORY ANALYTICAL METHODS

3.1 Field Screening Procedures and Methods

Field screening techniques consisted of qualitative field observations, flow measurement, and field analyses of selected water quality parameters. Information relating to weather conditions, the amount of time since last rainfall and the type of storm water conveyance was recorded. Specific observations and results of the field water quality analyses were recorded on the field data sheets, which are included in Appendix C. The data sheets also serve as a record of the field visit and were completed for every site visit regardless of whether samples were collected.

Field screening and analyses were conducted according to the following procedures and methods.

Qualitative Observations

Qualitative field observations were made during each site visit whether or not ponded or flowing water was observed. These observations were intended to provide a general assessment of the site and include variables like odor, water clarity, the presence of floatables, visible deposits, stains, and biological status. Evidence of present or past illicit connections and illegal discharges to the storm drain system may be ascertained by careful field observations. Each field screening location was photographed to provide additional information and documentation of site conditions (Appendix A).

Flow Measurement

Flow measurements can be used to estimate pollutant mass loading, prioritize storm drains for future investigation, and identify significant changes in discharge that may be indicative of an illegal release upstream. Field methods were used to estimate the discharge rate based on the velocity, depth, and width of the flowing water.

Field Water Quality Analyses

At each site with ponded or flowing water, grab samples were collected and analyzed in the field for the following constituents:

- Specific conductance
- Temperature
- pH
- Turbidity
- Surfactants (MBAS)*
- Nitrate-Nitrogen
- Ammonia-Nitrogen
- Orthophosphate-P (Reactive Phosphorus)

* Surfactants are also referred to as detergents, specifically with respect to discussion of field test kit results. Due to the importance of surfactants, the City of Poway conducted analysis for this parameter in both the field and laboratory.

The methods that were used to perform the above field analyses along with each method's detection limit, range and accuracy, are listed in Table 3-2 at the end of this section.

3.2 Laboratory Analytical Methods

Grab samples were collected at 14 sites (over 25 percent of all sites) where ponded or flowing water was observed, to fulfill the requirements of Order 2001-01. These samples were submitted to EnviroMatrix Analytical, Inc., a California Department of Health Services-certified laboratory, for analysis of the following constituents:

- Surfactants (MBAS)
- Oil and grease
- Total hardness
- Diazinon
- Chlorpyrifos
- Cadmium (Dissolved)
- Copper (Dissolved)
- Lead (Dissolved)
- Zinc (Dissolved)
- *Enterococcus* bacteria
- Total Coliform bacteria
- Fecal Coliform bacteria

The methods used to perform each of the above analyses along with method detection limits and holding times are listed in Table 3-3 at the end of this section.

3.3 Quality Assurance and Quality Control (QA/QC)

The Quality Assurance/Quality Control (QA/QC) Plan utilized for this project included the Environmental Protection Agency (EPA) approved test methods for the field and laboratory analysis of water samples, calibration of test equipment, pre- and post-rinsing of sample collection containers and test vials. Key components of the QA/QC Plan are described below.

3.3.1 Field Sampling and Analysis QA/QC

The pH meters were calibrated daily with sodium/potassium phosphate, monobasic buffer solutions with pH values equal to 4.00 ± 0.01, 7.00 ± 0.01, and 10.00 ± 0.01 units. The glass electrode tube was kept moist to preserve the meter's accuracy during fieldwork. The turbidity meter was calibrated and periodically checked for accuracy using standard solutions. The conductivity meter was checked periodically with standard solutions and calibrated as necessary.

Field sample collection containers were first rinsed with distilled water and then with the sample water before sample collection. Upon completion of sampling at each site, sample collection containers, test vials, and ion-sensitive electrodes were rinsed twice with distilled water.

The accuracy of field analytical techniques was assessed at the beginning of the sampling program by analyzing solutions of known concentrations for ammonia, surfactants, nitrate, and orthophosphate. The results of the assessment are shown in Table 3-1 below.

TABLE 3-1
FIELD ANALYSIS QA/QC RESULTS

Date	Analyte	Known Concentration	Accepted Range	Field Test Kit Results
8/27/07	Ammonia-N	1.0 mg/L	0.8 – 1.2 mg/L	1.0 mg/L
8/27/07	Surfactants	1.0 mg/L	0.75 – 1.25 mg/L	1.0 mg/L
8/27/07	Nitrate-N	10.0 mg/L	7.0 – 13.0 mg/L	10.4 mg/L
8/27/07	Orthophosphate	3.0 mg/L	2.5 – 3.5 mg/L	3.1 mg/L

Note
* Acceptable range is calculated based on the error associated with the methods as listed in Table 3-2

3.3.2 Laboratory Sampling and Analysis QA/QC

Samples for laboratory analysis were collected from some of the primary sampling locations concurrently with field samples and utilized the same sampling procedures. Pre-sterilized sample bottles were obtained from the laboratory and thus did not require rinsing with sample water prior to sample collection. After sample collection, all laboratory samples were kept in a cooler on ice until delivered to the laboratory. Chain of custody procedures were followed and samples were delivered and analyzed within the appropriate holding time listed in Table 3-3.

3.4 Follow-up Action Levels

Based on Dry Weather Monitoring Program results, immediate follow-up investigations are sometimes necessary to identify and eliminate pollutant sources. In order to determine whether an immediate source investigation was necessary, numeric action levels and best professional judgment (described below) were used to interpret the field screening results. If visual and/or analytical evidence of gross contamination was present at a site (e.g., substantial petroleum sheen, extremely high ammonia concentration, evidence of a sewage release, etc.), then an immediate source identification investigation was initiated. For sites that exceeded numeric action levels but were not perceived as an immediate threat to water quality, a re-sampling was conducted within 24 hours. A comprehensive source investigation was conducted thereafter if elevated concentrations persisted. The results of these investigations are included in Section 7 of this report. Recommendations based on these investigations are included in Section 8.

If elevated levels of pollutants were detected after laboratory analyses, a comprehensive follow-up investigation including re-sampling was conducted. The following three methods were employed to determine whether immediate or comprehensive follow-up investigations were necessary: (1) numeric action levels; (2) California Toxics Rule; and (3) best professional judgment. All three approaches are described in detail below and presented in Table 3-4.

Numeric Action Levels
Numeric action levels were used as the primary approach for interpreting pH, orthophosphate-P, nitrate, ammonia, surfactants, oil and grease, diazinon, chlorpyrifos, total coliform, fecal coliform, and *Enterococcus* analytical results (Table 3-3). If pH, orthophosphate-P, nitrate, ammonia, or surfactants were observed above the numeric action level, a follow-up investigation was conducted within 24 hours to investigate the source unless best professional judgment indicated otherwise. If oil and grease, diazinon, chlorpyrifos, total coliform, fecal coliform, or *Enterococcus* laboratory analytical results exceeded numeric action levels, then source investigations were conducted.

California Toxics Rule
The California Toxics Rule (CTR) criterion maximum concentration (CMC) was used to determine appropriate action levels for dissolved trace metals, including cadmium, copper, lead, and zinc. The CTR Tables provide benchmarks based on the total hardness of the sampled water, with the action levels increasing as hardness increases. Further details are described in Section 5.1.

Best Professional Judgment
Best professional judgment was utilized as the primary approach for interpreting turbidity, conductivity, and water temperature. Best professional judgment was also the secondary approach for interpreting the results of all other field and laboratory analyses. Best professional judgment may indicate that results which either exceed certain action levels or are statistical outliers may be the result of natural or background factors.

TABLE 3-2
FIELD ANALYTICAL METHODS

Parameter	Method	Reporting Limit	Range	Accuracy
Specific conductance	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.01 mS/cm	0 – 20 mS/cm	± 2% of functional sensitivity[1]

Notes:

[1] Functional sensitivity (FS) represents the lowest limit at which quantitative information is reliable. FS is estimated as the mean concentration for a spiked sample whose coefficient of variance (CV) is 20%. CV is the standard deviation divided by the mean.

[2] ± 0.13 for the range of 0.0 to 1.0 mg/L, ± 0.25 mg/L for the range of 1.0 to 2.0 mg/L and 0.5 mg/L for the range of 2.0 to 3.0 mg/L.

[3] This method determines the concentration of nitrate in mg/L NO_3. To determine the amount of nitrate-nitrogen, the concentration of nitrogen must be adjusted for the presence of oxygen in the NO_3 molecule. Therefore, the result is multiplied by a conversion factor of 0.226, the ratio of the molecular weight of N (14 g/mol) to NO_3 (62 g/mol). The detection limit for nitrate is 10.0 mg/L; however, the detection limit for nitrate-nitrogen is lowered due to the conversion.

[4] Practical Detection Limit (PDL) is defined as the lower limit of the stated test range.

[5] Percent error adjusts as follows: ±30% at PDL, ±20% for 25% of full range, ±10% for 75% of full range, ±10% for 120% of full range. "Full range" is equal to the upper limit of the test kit's range.

[6] This method determines the concentration of orthophosphate in mg/L PO_4. To determine the amount of orthophosphate-P, the concentration of phosphate must be adjusted for the presence of oxygen in the PO_4 molecule. Oxygen is 67.4% of phosphate by mass but is not a plant nutrient in this form. Therefore, the result is multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31 g/mol) to PO_4 (95 g/mol). The detection limit for orthophosphate is 0.75 mg/L; however, the detection limit for orthophosphate-P is lowered due to the conversion.

*Extended ranges in chemical analyses can be achieved through dilutions. Accuracies decrease proportionally with further dilutions.

** Readings below the PDL have increased percent error; measurements are reported, but are flagged as being below the PDL.

***Reporting limit, range, and accuracy information taken from Hanna Instruments and CHEMetrics manuals, available online at www.hannainst.com and www.chemetrics.com. Additional information regarding CHEMetrics accuracy was obtained from the manufacturer via email.

TABLE 3-3
LABORATORY ANALYTICAL METHODS

Analyte	Analytical Method	Method Detection Limit	Maximum Holding Time**
Surfactants (MBAS)	SM 5540 C	0.5 mg/L	48 hours
Oil and grease	EPA 1664	5 mg/L	28 days
Total Hardness	EPA 200.7	10 mg/L	14 days
Cadmium	EPA 6010, 6020, 200.8	5 µg/L	6 months
Copper	EPA 6010, 6020 200.8	5 µg/L	6 months
Lead	EPA 6010, 6020 200.8	5 µg/L	6 months
Zinc	EPA 6010, 6020, 200.8	20 µg/L	6 months
Diazinon	EPA 8141A	0.05 µg/L	7 days
Chlorpyrifos	EPA 8141A	0.05 µg/L	7 days
Total Coliform	SM 9221 B	20** – 1,600,000 MPN/100ml	6 hours
Fecal Coliform	SM 9221 E	20** – 160,000 MPN/100ml	6 hours
Enterococcus	SM 9230	20** – 160,000 MPN/100ml	6 hours

Notes:

*For the Dry Weather Monitoring Program for D-MAX Engineering, Inc., EnviroMatrix Analytical, Inc. (EMA) performs standard dilutions for total coliforms to quantify from 20-1,600,000 MPN/100 mL. For fecal coliforms and *Enterococcus*, EMA performs standard dilutions to quantify from 20-160,000 MPN/100 mL. During the analysis and interpretation of the results, the number of tubes used to quantify the sample must fit the most probable number index table (MPN) from Standard Method 9221. The dilution set used will determine the detection limit. A standard dilution analysis is set up with 15 tubes at different concentrations. The reporting limit will always be adjusted depending on the dilution factor used for quantifying the actual results based on the MPN table. If the result for the analysis was less than 16,000 MPN/100 mL, the reporting limit will always be 20 and the dilution factor will be 10. As the dilution factor goes up, the reporting limit listed in the results from EMA will also go up based on the calculation made with EMA's data system. However, the lowest quantifiable number or reporting limit would still be 20 based on how the standard tubes set up for the sample is set up.

**Maximum Holding Time values listed here apply to samples collected and preserved in accordance with the QA/QC procedures listed in Section 3.3.2.

TABLE 3-4
ACTION LEVELS FOR FIELD SCREENING AND LABORATORY PARAMETERS

Field Screening Analytes	Action Levels[1]	Source/ Notes
pH	<6.5 or >9.0	Basin Plan, w/ allowance for elevated pH due to excessive photosynthesis. Elevated pH is especially problematic in combination with high ammonia.
Orthophosphate-P (mg/L)	2.0	USEPA Multi-sector General Permit
Nitrate-N (mg/L)	10.0	Basin Plan, and drinking water standards
Ammonia-N (mg/L)	1.0	Based on Workgroup experience. May also consider unionized ammonia fraction.
Turbidity (NTU)	Best Professional Judgment	WQOs relevant to inland surface waters are not available. Base judgment on channel type and bottom, time since last rain, background levels, and most importantly visual observation (e.g. unusual colors and lack of clarity), and unusual odors.
Temperature (^{o}C)	Best Professional Judgment	Base judgment on season, air temperature, channel type, shading, etc.
Conductivity (mS/cm)	Best Professional Judgment	Values > 5 mS/cm may indicate IC/ID however; EC may be highly elevated in some regions due to high-TDS groundwater exfiltration to surface water, mineral dissolution, drought, and seawater intrusion. Normal source ID and discharge elimination work is not effective in these situations. Knowledge of area background conditions is important. Values < 0.75 mS/cm may indicate excessive potable water discharge or flushing.
Laboratory Analytes	**Action Levels**	**Source/ Notes**
MBAS (mg/L)	1.0	Basin Plan, with allowance based on Workgroup field experience and possible field reagent interferences.
Oil and Grease (mg/L)	15	USEPA Multi-sector General Permit. If petroleum sheen is observed, the sample should be collected from the water surface. Visual observations may justify immediate investigation.
Diazinon (µg/L)	0.5	Response to diazinon and chlorpyrifos levels above 0.5 µg/L should focus on education and outreach to potential dischargers in the target drainage basin. Highly elevated levels should be investigated aggressively as with other potential IC/IDs.
Chlorpyrifos (µg/L)	0.5	
Dissolved Cadmium (µg/L)	California Toxic Rule	Use California Toxics Rule Table, 1-hour criteria to determine appropriate action level for individual samples. Table provides benchmarks based on hardness and dissolved metals concentration. For example, at 300 mg/L hardness the following action levels would apply: Cd – 14 ppb; Cu – 38 ppb; Pb – 209 ppb; and Zn – 297 ppb.
Dissolved Copper (µg/L)	California Toxic Rule	
Dissolved Lead (µg/L)	California Toxic Rule	
Dissolved Zinc (µg/L)	California Toxic Rule	
Total Coliform (MPN/ 100 mL)	50,000	Bacteria levels in many storm drains are likely to exceed public health guidance criteria. Use confidence interval test and best professional judgment to identify conveyances for source ID.
Fecal Coliform (MPN/ 100 mL)	20,000	
Enterococcus (MPN/ 100 mL)	10,000	

Notes

[1]The referenced action levels should not be the sole criteria for initiating a source identification investigation. Dry Weather Monitoring Program data should be interpreted using a variety of available information. Factors that should be considered include within-site and between-site sample variability.

°C	degrees Celsius
mS/cm	milliSiemens per centimeter
mg/L	milligram per liter
IC/ID	illegal connection/illicit discharge
MBAS	methylene blue active substances
MPN/100 mL	most probable number per 100 milliliters
NTU	nephelometric turbidity unit
ppb	parts per billion
USEPA	United States Environment Protection Agency
WQO	Water Quality Objectives

4 FIELD SCREENING RESULTS

The Dry Weather Monitoring Program commenced on August 27, 2007 and was completed on September 6, 2007. Field screening was conducted at a total of 50 monitoring stations where ponded or flowing water was observed. Forty–four sites had measurable flow, and 6 sites were ponded. Four of the 50 primary monitoring stations (sites 65, 131, 137, and 142), were observed to be dry; therefore, they were substituted with alternate monitoring stations, sites 1, 103, 114, and 135. A total of fifty-eight site visits were performed, including four follow-up visits to sites where one or more constituents were found to exceed specified action levels.

The following sections present the qualitative observation summary and field analytical results.

4.1 Qualitative Observations

Qualitative observations are a routine and integral part of the field screening program. Weather conditions were recorded at each site and any observations or evidence of dry weather flows were documented. Other documented observations included the odor, color, and clarity of the sample water, floatable materials, vegetation, and biological organisms present in the sample water and in the vicinity of the sampling location. Observations are summarized below and presented in Table 4-1.

Light Conditions
A majority of the site visits were conducted during sunny weather during the 2007 Dry Weather Monitoring Program. However, seven routine visits were performed during partly cloudy or overcast weather.

Odor
Most of the visited sites had no observable odors, with the exception of a slight rotten egg odor at Site 140.

Color
Field screening samples collected from the majority of monitoring locations were colorless. Fifteen locations were observed to have yellow water, and Site 36A had water with a brownish hue.

Clarity
The majority of water samples collected from the monitoring locations were clear with negligible quantities of suspended particles observed.

Floatable Materials
Based on new Permit requirements, the field crew decided to place greater emphasis on identifying those sites with trash and other floatable materials. A total of 35 sites with ponded or flowing water were noted as having at least a minor amount of litter and debris in or around the monitoring location. At five sites, 21A, 21B, 36A, 109 and 111, sizeable accumulations of trash were observed directly in contact with water. Seven sites were observed to have bubbles and foam floating on the water, and two sites had a significant dust sheen on the surface of the water.

Vegetation
Vegetative growth ranged from no growth (usually in manholes and outfalls) to naturally vegetated riparian areas in some of the concrete and earthen channels. More than two thirds of the monitoring locations exhibited natural growth, and the rest of the sites had no vegetation with the exception of limited vegetative growth at sites 2 and 3.

Biology
Biological observations varied among sampling locations. Many of the sites exposed to sunlight had algal growth, indicating that water flow is persistent at the site. Most monitoring locations were observed to have a more extensive array of biological organisms such as insects, snails, fish, larvae, tadpoles, or crayfish. Those monitoring locations observed to have no observable biological activity were typically sites that do not receive sunlight, such as manholes.

Deposits
Sediment deposition in the sampling location was observed at most sites. Four sites had no observable deposits.

TABLE 4-1
SUMMARY OF FIELD OBSERVATIONS

Site No.	Date	Time	Light Conditions	Odor	Color	Clarity	Floatables	Deposits	Vegetation	Biology

4.2 Field Analytical Results

Field analyses were conducted at all sites with ponded or flowing water. Chemical analyses were conducted using a CHEMetrics field test kit for surfactants and CHEMetrics V-2000 Multi-Analyte LED Photometer and Vacu-vials® for nitrate, ammonia, and orthophosphate. The pH, conductivity, and temperature were measured using a Hanna Instruments Portable pH/EC/TDS/Temperature Meter (HI 991301); turbidity was measured using a Hanna Instruments Portable Turbidity Meter (HI 93203-11). A summary of the field analysis statistical results is presented in Table 4-2. The results of all field analyses conducted at the sampled sites are presented in Table 4-3. Graphs of each parameter analyzed and appropriate action levels for follow-up investigations are included at the end of this section.

TABLE 4-2
FIELD ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Average	Median
Flow Rate (gpm)	187	<1.0	17	4
Temperature (° Celsius)	34	20.8	25.6	25.4
pH	8.4	7.0	7.83	7.85
Conductivity (mS/cm)	7.19	1.19	2.28	2.19
Turbidity (NTU)	13.89	0.1	2.24	0.83
Ammonia Nitrogen (mg/L NH_3-N)	1.6	nd	0.27	0.2
Nitrate Nitrogen (mg/L NO_3-N)	9.0	0.09	1.50	0.68
Orthophosphate Phosphorus (mg/L PO_4-P)	2.22	nd	0.44	0.28
Surfactants (mg/L MBAS)	>3.0	0.13	0.45	0.25

Flow rates at sites with measurable flow ranged from less than 1.0 gallon per minute (gpm) to 187 gpm, with an average of 17 gpm and a median of 4.0 gpm as shown in Table 4-2. The highest flow rate of 187 gpm was measured at Site 16.

Water temperature is an important physical parameter because it is needed to assess the significance of other parameters such as pH and conductivity. Also, the aquatic habitat must remain within a certain temperature range in order to sustain sensitive aquatic life. Temperature was measured in the field immediately upon sample collection at each site with ponded or flowing water. Temperature readings ranged from 20.8 to 34 degrees Celsius (°C), with an average of 25.6°C and a median of 25.4°C. The maximum temperature of 34°C was recorded at Site 18A on a sunny day in the afternoon. The minimum temperature of 20.8°C was measured during an early morning visit at Site 54. Graph 4-1 presents the results of temperature readings at all sites.

The **pH** is a measure of whether a water body is acidic or basic. This is a critical factor in determining water quality, as the pH of an aquatic system will drive a multitude of chemical reactions, including the availability of nutrients or the solubility of chemical substances. The values of pH ranged from 7.0 to 8.4, with an average of 7.83 and a median of 7.85. The highest pH reading of 8.4 was observed at sites 18A and 141, while the lowest pH of 7.0 was

recorded at Site 52 with ponded water. Graph 4-2 presents the results of pH readings at all visited sites.

Specific Conductance (Conductivity) values indicate the total concentration of ions in an aquatic system and the ability of the water to conduct electricity. This parameter can be used to assess the mineral content of water or to help determine the presence of dissolved pollutants. Conductivity readings ranged from 1.19 to 7.19 mS/cm with an average of 2.28 mS/cm and a median of 2.19 mS/cm. The highest conductivity measurement of 7.19 mS/cm was recorded at Site 108, while the lowest measurement of 1.19 mS/cm was recorded at Site 21B. Graph 4-3 illustrates the results of conductivity measurements at all monitoring locations visited.

Turbidity indicates the clarity or cloudiness of a water sample, or the degree to which light is blocked by suspended material in the water. Turbid waters not only limit the amount of light that reaches submerged vegetation (thus reducing photosynthetic capacity), but excessive suspended particles can also absorb heat and elevate water temperatures. Measurements ranged from 0.1 to 13.89 nephelometric turbidity units (NTU), with an average of 2.24 NTU and a median of 0.83 NTU. The highest turbidity reading of 13.89 NTU was recorded at Site 141, and the lowest measurement of 0.1 NTU was measured at eleven sites. Graph 4-4 presents the results of turbidity measurements at all monitoring locations.

Ammonia is a common indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment; however, in higher quantities it can become toxic to fish and other organisms. Ammonia nitrogen concentrations measured in the water samples ranged from not detected to 1.6 milligrams NH_3-N per liter (mg/L), with an average of 0.27 mg/L NH_3-N and a median of 0.2 mg/L NH_3-N. The highest ammonia concentration of 1.6 mg/L NH_3-N was observed at Site 3A. Ammonia was detected at Site 19. Graph 4-5 presents the results of ammonia measurements at all monitoring locations.

Nitrate is a common indicator of nutrient pollution from agricultural or household fertilizer runoff. Nitrate pollution can cause excessive algal growth, which will later cause the suffocation of fish and other aquatic organisms by depleting oxygen from the water during decomposition. During the field analysis, nitrate was measured in mg/L NO_3 and converted into mg/L nitrate-N using a conversion factor of 0.226. This process is explained in footnote 3 of Table 3-1. Nitrate nitrogen concentrations measured in the monitoring locations ranged from 0.09 to 9.0 mg/L NO_3-N, with an average of 1.5 mg/L NO_3-N and a median of 0.68 mg/L NO_3-N. The highest nitrate concentration of 9.0 mg/L was observed at Site 18A. Graph 4-6 presents the results of nitrate analyses at all monitoring locations.

Orthophosphate Phosphorus is also a common indicator of nutrient pollution from agricultural or household fertilizer runoff. Similar to nitrate, phosphate pollution can cause nutrient enrichment (eutrophication), stimulate algal growth, and thus deplete oxygen in the water to levels that are dangerous for aquatic life. Even low levels of phosphate can cause significant algal growth, as it is commonly the limiting nutrient in plant growth. During the field analysis, orthophosphate was measured in mg/L PO_4 and converted into mg/L orthophosphate-P (measured in units of PO_4-P) using a conversion factor of 0.326. Orthophosphate-P was measured at concentrations ranging from not detected to 2.22 mg/L PO_4-P, with an average of 0.44 mg/L PO_4-P and a median of 0.28 mg/L PO_4-P. The highest concentration of orthophosphate-P was observed at Site 36A. Graph 4-7 illustrates the results of orthophosphate testing at all monitoring locations.

Surfactant concentrations in water samples indicate illegal discharge from either industrial/commercial or residential sources. Pollution resulting from surfactants alters the surface tension of water and disrupts the breathing mechanisms of fish gills and other aquatic organisms. During field analysis, surfactant concentrations ranged from 0.13 mg/L to greater than 3.0 mg/L, with an average 0.45 mg/L and a median of 0.25 mg/L. The highest concentration of surfactants was greater than 3.0 mg/L recorded at Site 36A. Graph 4-8 reflects the results of the surfactant analyses at all sampling locations.

5 LABORATORY ANALYTICAL RESULTS

5.1 Summary

In 2006, laboratory analyses were conducted at 13 sites, representing over 25 percent of the primary sites. In an attempt to asses the impact of animal facilities within the City of Poway and further characterize the overall quality of water within the City, two new primary sites were selected for laboratory analysis in 2007. Sites 111 and 133 were added as laboratory sampling sites because both were believed to be located near or downstream of animal facilities. Site 132 was eliminated as a primary laboratory sampling site since it is within same drainage area and located upstream of Site 133. However, due to Site 65 being dry, Site 132 was sampled and used as an alternate laboratory sampling site. In total, laboratory analyses were conducted at 14 sites. A summary of the laboratory analytical results is presented in Table 5-1. Table 5-2 presents the laboratory results from all samples. Laboratory reports are included as Appendix B.

TABLE 5-1
LABORATORY ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum
Total Hardness (mg/L $CaCO_3$)	2,330	487
Surfactants (mg/L MBAS)	0.9	nd
Oil and grease (mg/L)	nd	nd
Diazinon (µg/L)	0.46	nd
Chlorpyrifos (µg/L)	nd	nd
Cadmium (dissolved, mg/L)	nd	nd
Copper (dissolved, mg/L)	0.019	nd
Lead (dissolved, mg/L)	nd	nd
Zinc (dissolved, mg/L)	0.055	nd
Total Coliform (MPN/100 mL)	>1,600,000	800
Fecal Coliform (MPN/100 mL)	>160,000	nd
Enterococcus Bacteria (MPN/100 mL)	>160,000	nd

nd = not detected

Total Hardness measures the amount of calcium and magnesium ions in a water sample, with the result expressed in mg/L of $CaCO_3$. Although it is not itself considered a pollutant, total hardness is measured in order to calculate California Toxics Rule (CTR) limits for dissolved metals. Hardness affects the solubility of dissolved metals, as well as other minerals and ions. Total hardness values ranged from 487 to 2,330 mg/L $CaCO_3$. The highest total hardness value was observed at Site 108, which also had the highest total hardness during the 2005 and 2006 Dry Weather Monitoring Program. The lowest value was found at Site 15.

Surfactants (MBAS) are analyzed to detect detergent pollution from residential, commercial, or industrial washing activities. Surfactants were detected only at Site 36A with a concentration level of 0.9 mg/l which is below the action level of 1.0 mg/L.

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources, including parking lots and streets, washing activities, illegal discharges, and automobile repair facilities. Oil and grease levels were below the reporting limit for all 14 tested sites.

Diazinon and **chlorpyrifos** are organophosphate pesticides that are detrimental to birds, mammals, beneficial insects, freshwater fish, invertebrates, and other aquatic organisms. Diazinon was detected at a concentration of 0.46 µg/L at Site 36A. Chlorpyrifos was not detected at any tested sites.

Metal contamination of water can arise from a variety of sources, including automobile operation, automobile repair, vehicle washing, galvanizing of metal, and electronics manufacturing. Certain dissolved metals are toxic pollutants that are hazardous to the survival and development of aquatic organisms, including fish and waterfowl. The laboratory samples collected were analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Dissolved cadmium and lead was not detected at any of the sites visited. A dissolved copper concentration of 0.019 mg/L was detected only at Site 36A. Dissolved zinc was detected at two of the fourteen sites. The highest value was 0.055 mg/L at Site 36A.

The California Toxics Rule (CMC) for Dissolved Metals in Fresh Waters[1] defines metal toxicity as a function of water hardness, with action levels rising as hardness increases. Calculating the CTR limits using the lowest total hardness value from all the sites that had detectable levels of copper and zinc, therefore, gives the strictest action level. The appropriate total hardness value is 487 mg/L from Site 15. The action level for dissolved copper in a water sample with a hardness value of 487 mg/L is 0.059 mg/L. The action level for dissolved zinc with a hardness value of 487 mg/L is 0.448 mg/L. Therefore, since all measured copper zinc and lead concentrations were below the action level for the lowest measured hardness value, pollutant source investigations were not required.

Coliform bacteria are relatively harmless to humans and are typically present at high levels in mammalian digestive tracts, as well as naturally found in most surface waters and soils. Testing water samples for total coliform bacteria is a standard practice in public health because a high level of total coliform bacteria often, although not always, indicates the presence of other more harmful, pathogenic (disease causing) organisms, usually from fecal contamination. Total coliforms are used as a surrogate for these pathogens because the pathogens are generally present in much smaller quantities and are therefore difficult to test for directly. During the 2007 Dry Weather Monitoring Program, total coliform counts ranged from 800 to greater than 1,600,000 MPN/100 mL. The highest level of greater than 1,600,000 MPN/100 mL was found at Site 36A. Upstream investigations were conducted at all four sites exceeding or equal the action level of 50,000 MPN/100 mL; the results are detailed in Section 7 of this report.

Fecal coliforms, a subset of coliform bacteria, and ***Enterococcus*** are found primarily in the gastro-intestinal (GI) tracts of humans and animals, so they are commonly used as indicators of water contamination by fecal matter. A host of human diseases, particularly those of the GI tract, are spread through fecally contaminated water. Fecal coliform counts ranged from not detected to greater than 160,000 MPN/100mL. Sites 36A and 129 exceeded the action level of 20,000 MPN/100 mL. *Enterococcus* counts ranged from not detected to greater than 160,000 MPN/100 mL. Sites 36A, 111, and 129 exceeded the action level of 10,000 MPN/100 mL. Upstream investigations were conducted at the sites exceeding the action levels for fecal or *Enterococcus* bacteria; the results are detailed in Section 7 of this report.

6 DATA ANALYSIS

When elevated levels of contaminants were detected during field screening, upstream investigations were conducted to identify the source(s) of the contaminants. Sites with contamination detected during laboratory analyses were investigated during a later round of visits because the laboratory analyses require several days to analyze samples. Based on visual observations, field testing results, and laboratory analytical results, the following eight sites demonstrated physical and chemical evidence of possible illegal discharge and/or illicit connections.

Site 3A

Site 3A is a manhole located in the street at the end of Kirkham Court across from Life Force International. The line drains the surrounding industrial and commercial areas from the east to the west. A small flow of clear, yellow liquid was observed in the manhole. During the initial round of field testing ammonia concentrations were measured at 1.6 mg/L, above the action level of 1.0 mg/L. Surfactant levels were detected at 1.0 mg/L, equaling the action level of 1.0 mg/L. A follow-up investigation was conducted the following business day to retest for ammonia and surfactants (see Section 7 for details).

Site 3B

Site 3B is a manhole located in the street at the end of Kirkham Court across from Hunter Douglas Company. The line drains the surrounding industrial and commercial areas from the east to the west. A small flow of clear, yellow liquid was observed in the manhole. During the initial round of field testing, the surfactant concentration was measured at 1.0 mg/L, equaling the action level of 1.0 mg/L. A follow-up investigation was conducted the following business day to retest for surfactants (see Section 7 for details).

Site 36A

Site 36A is at Rattlesnake Creek located southwest of the bridge, near 14336 Tierra Bonita Road. The site had ponded clear, brown water. A small amount of trash was observed at the site. The routine field testing indicated that both phosphate and surfactant levels exceeded their respective action levels. Orthophosphate-P was measured at 2.22 mg/L, and surfactants were measured at greater than 3.0 mg/L. Laboratory analyses also detected concentrations of all three bacterial indicators (total coliform, fecal coliform, and *Enterococcus*) that exceeded their respective action levels. A follow-up investigation was conducted the following business day for retesting of orthophosphate-P and surfactants, and an upstream investigation was conducted later for bacteria (see Section 7).

Site 90

Site 90 is a concrete channel located off Pomerado Road, east of Powers Road on Vaughan Road, south of the bridge. During the initial round of field screening all constituents tested below their respective action levels. The site had a clear, colorless, odorless flow of 94 gpm. Laboratory analysis detected a total coliform concentration of 50,000 MPN/100mL, equaling the action level. Potential sources of bacteria were investigated during an upstream investigation (see Section 7).

Site 111

Site 111 is a Dry Weather Monitoring Program laboratory site that was added this year. The site is a concrete channel located north of Kennebunk Street, in Standish Drive, northeast of the bridge. Laboratory analysis detected an *Enterococcus* concentration of 30,000 MPN/100mL, above the action level of 10,000 MPN/100mL. A large amount of trash was observed both in the concrete channel and in the surrounding area. There was a very low flow of clear, colorless, odorless liquid at the site. Many insects, snails, and larvae were observed at the site. An upstream investigation was conducted to determine potential sources of bacteria.

Site 128

Site 128 is an outlet located at Midland Road, between Twin Peak Road and Orange Blossom Lane, at the west side of the channel. Surfactant levels of 1.5 mg/L exceeded the action level of 1.0 mg/L at this site during the routine sampling. There was a very low clear, colorless, odorless flow observed at the site. A moderate amount of trash was observed in the outlet. An upstream investigation was conducted in the surrounding roads to determine the potential sources of surfactants. A follow-up investigation was conducted the following business day (see Section 7).

Site 129

Site 128 is an outlet located at the intersection of Indian Trail and Bennye Lee Drive. Laboratory analysis detected exceedances of action levels for total coliform, fecal coliform, and *Enterococcus* bacteria. A very low clear, yellow, odorless flow was observed at the site. No trash was observed at the site. A resident reported that she sometimes observed a sewage odor coming from the outlet. An upstream investigation was conducted to determine potential sources of bacteria (see Section 7).

Site 133

Site 133 is a natural creek located north of Jack Rabbit Road, near Espola Road and Orchard Bend Road. During the initial round of field screening all constituents tested below their respective action levels. There was a clear, colorless, odorless flow of approximately 26 gpm observed at the site. A variety of biology was observed at the site. There was a faint smell of rotten eggs observed in the area. A small amount of trash was observed in the surrounding area. Laboratory analysis detected a total coliform concentration at 50,000 MPN/100mL, equaling the action level. Potential sources of bacteria were investigated during an upstream investigation (see Section 7).

7 UPSTREAM INVESTIGATIONS

7.1 Purpose

The purpose of a follow-up investigation is to find the source of the pollutants that were identified during initial field screening and laboratory testing.

The initial field screening performed in 2007 found elevated levels of one or more pollutants at four sites described in Section 6. When field analyses detected a pollutant in excess of the action level, the sites received a follow-up visit within one business day of the visit. At sites where field screening parameters were measured above their respective action levels during both visits, upstream investigations were conducted.

Samples were collected for laboratory analysis at 14 sites during the initial round of field screening. Complete results of these analyses showed bacteria in excess of their established action levels at five sites. Follow-up investigations were undertaken at each of these sites to identify the source(s) of the high bacteria counts.

In order to address the City's concern regarding animal facilities and potential bacterial sources associated with them, upstream investigations also focused on identifying and assessing the threat to water quality posed by such facilities. Recently added laboratory sampling sites 111 and 133 were of particular concern since the selection of these sites was based upon their location with regard to animal facilities. Also, as part of the City's wish to reduce over irrigation and excess water to the storm water conveyance system, the D-MAX field crew noted areas of the City where excessive irrigation was observed. Any additional findings from the upstream investigations are provided in Section 7.4 of this report.

7.2 Investigation Procedure

Follow-up investigations were conducted in two rounds. The first follow-up investigations were for the sites at which field tests indicated elevated constituent levels. These investigations were conducted immediately after confirming the elevated concentrations via additional field testing. The second round of follow-up investigations was carried out for the sites at which laboratory testing had found elevated constituent levels. These investigations were conducted after receiving the test results from the laboratory.

During the investigations, flow rates were measured, visual observations were recorded, and field testing was conducted. Visual observations, such as water color, clarity, odor, floatable materials, vegetation, and biology, and physical parameters, such as temperature, pH, and conductivity, were recorded on field data sheets at each official sampling site. Observations and data for locations upstream of the official sites were recorded in field notebooks. Field data sheets are included in Appendix C.

In order to determine the potential sources of bacteria to sites with high bacteria, 3M Petrifilm *E. coli* / Coliform Count plates were used as a rapid method to trace sources of both total coliform bacteria and *E. coli* bacteria in the storm water conveyance system. Because laboratory microbiological analyses take a significant amount of time, relying primarily on laboratory analyses can significantly delay an upstream investigation for bacteria. Also, due to the cost of these tests, often only a few locations can be examined, giving a less comprehensive picture. Using the Petrifilm plates allowed numerous branches or locations upstream of the sites to be sampled.

Samples were taken in the field and preserved with Butterfield's phosphate buffer to keep the pH close to 7. Sample containers were kept on ice in a cooler and then plated within 6 hours of collection to ensure proper holding times were observed. The plates were then incubated at 35°C ± 1°C. After 24 hours of incubation, total coliform bacterial concentrations were enumerated, and after an additional 24 hours (48 hours incubation total) *E. coli* levels could be read from the same plates, helping investigators identify potential bacterial sources over a large area in a timely manner.

This method is an improvement over the technique used in the past because it now also tests for *E. coli* bacteria. *E. coli* bacteria, a subset of fecal coliform bacteria, are better indicators of fecal contamination than total coliform alone. Additionally, since total coliforms and *E. coli* are enumerated on the same plate, a rough ratio of *E. coli* (more likely to be from fecal sources) to total coliforms can be ascertained. While not unequivocally conclusive, this information allows for a better determination as to whether observed high bacteria levels likely came from fecal or non-fecal sources. Note that *E. coli* are only one class of fecal coliform bacteria, and they are not enumerated for upstream analyses as an equivalent replacement for laboratory fecal coliform testing. *E. coli* do typically comprise a large portion of the fecal coliform count, typically around 85 percent, and are viewed by many as a better indicator than fecal coliforms.

It should be noted that although laboratory analyses are done for total coliform, fecal coliform, and *Enterococcus* bacteria, field bacteria analyses using Petrifilm plates are used to test only for total coliform bacteria and *E. coli*. As noted in Section 4, total coliform bacteria themselves are generally harmless to humans but are a commonly-used indicator of harmful, pathogenic organisms, especially those found in fecal matter. Because the total coliform group of bacteria includes many species of bacteria of non-fecal origin, it is not as precise an indicator of fecal contamination as fecal coliforms or enterococci. A high total coliform count does not necessarily indicate fecal contamination of water, as total coliforms can also be found in soil, grain, and water, especially stagnant water. Therefore, a water sample with a high level of total coliform bacteria does not necessarily have a correspondingly high level of pathogens. Typically, a fecal coliform to total coliform ratio of at least 0.3 indicates fecal contamination, while lower ratios point to decomposing organic matter or other non-fecal sources. Fecal coliform and *Enterococcus* counts above their respective action levels also usually indicate fecal pollution.

Fecal coliforms and enterococci are found mainly (but not solely) in the digestive tracts of humans and warm-blooded animals. With a few notable exceptions, fecal coliforms and enterococci are not themselves hazardous to humans, but their presence is usually a good indication that dangerous pathogens found in animal or human waste may be present. Fecal contamination from animal sources may be less hazardous to humans than fecal contamination from human sources; however, standard tests for fecal coliform and *Enterococcus* bacteria cannot reliably distinguish between human and animal sources.

Field bacteria tests using Petrifilm plates use Colony Forming Units per milliliter (CFU/ml) as the measurement unit, rather than the Most Probable Number (of colony forming units) per 100 milliliters (MPN/100 mL) unit used in laboratory analyses. These units are generally comparable, although the laboratory value is one hundred times greater because the volume is 100 times greater. D-MAX has created a stringent field protocol to control sample development as consistently as possible. Sterile dilution vials containing pre-measured amounts of sterile buffer solutions for dilution are used for sample collection, the diluted samples are kept on ice in a cooler while in the field, and chilled samples are collected from the field crew twice daily to be plated within the proper holding time. Plated samples are then developed in an incubator for a total of 48 hours. While this method is not conducted at a certified laboratory, it is still useful for determining which locations have relatively higher or relatively lower bacteria levels. The action

level for total coliform bacteria is 50,000 MPN/100 mL, which roughly corresponds to 500 CFU/mL. However, only about 150 or fewer colony forming units can be accurately enumerated using a Petrifilm plate. This would correspond to 15,000 MPN/100 mL. Therefore, all samples were first diluted 1:10 with sterile buffer solution before Petrifilm analysis, thus adjusting the detection limits for Petrifilm plates from the standard value of 1-150 CFU/mL to 10-1,500 CFU/mL. This adjusted range corresponds to approximately 10,000 to 150,000 MPN/100 mL, a much more useful range when dealing with total coliform bacteria levels around the action level of 50,000 MPN/mL.

Source identification investigations were done by first testing the water at the site itself; and then gradually were conducted upstream until potential pollutant sources could be identified. If follow-up field testing at a site resulted in constituent concentrations below specified action levels, it was concluded that the high pollution levels found during the initial field screening and laboratory analysis phase of the 2007 Dry Weather Monitoring Program were transient.

7.3 Investigated Sites

Eight sites were found during the Dry Weather Monitoring Program to exceed one or more constituent action levels. Four sites had field constituent exceedances. All four sites, 3A, 3B, 36A, and 128 were deemed to require upstream investigations either for immediate flow source determination or in response to repeated action level exceedances. These investigations are described below. Bacterial indicator levels were exceeded at one of the four field screening sites with constituent action level exceedances. Sites 36A, 90, 111, 129, and 133 received upstream investigations for bacteria. A brief description of each site, the field or laboratory analytical results, photographs of selected upstream locations, and the results of upstream investigations are included below.

Site 3A

During the initial round of field testing, the ammonia concentration at Site 3A was 1.6 mg/L, above the action level of 1.0 mg/L, and the surfactant concentration equaled the action level of 1.0 mg/L. The following business day, water was sampled and retested at the site for both surfactants and ammonia. Both surfactant and ammonia concentration levels had fallen below the action levels, indicating that the high levels of both constituents were transient. No upstream investigation was required.

Site 3B

During the initial round of field testing at Site 3B, the surfactant concentration was 1.0 mg/L, equaling the action level of 1.0 mg/L. A follow-up investigation was conducted the following business day to retest for surfactants, and the concentration of surfactants had dropped below the action level, indicating that the high surfactant level was transient. No upstream investigation was needed.

Site 36A

At Site 36A the routine field testing indicated that both phosphate and surfactant levels exceeded their respective action levels. Orthophosphate-P was detected at 2.22 mg/L, and surfactants were detected at greater than 3.0 mg/L. An investigation was conducted immediately, during which a wet driveway and a hose were observed, indicating vehicle washing had probably taken place. Further investigation revealed that a resident had also drained a swimming pool, introducing surface runoff into the street. In addition, over irrigation was observed on a resident's lawn, producing surface runoff that could potentially wash fertilizer

into the street and storm drain system. Since the site had ponded water, evaporation of the water could increase the concentration of phosphate measured.

A follow-up investigation was conducted the following business day to retest for surfactants and orthophosphate-P. The surfactant concentration was still observed to be high, but it was lower than the result from the initial field testing. Over irrigation was observed from sprinklers located on Tierra Bonita Road, across from the middle school. Orthophosphate-P levels had dropped below the action level on the second visit, indicating that the high orthophosphate-P level was transient.

Laboratory testing revealed that concentrations of all three bacterial indicators (total coliform, fecal coliform, and *Enterococcus*) exceeded their respective action levels. An upstream investigation was conducted for bacteria. Diazinon had also been detected in the previous sample, at a concentration of 0.46 µg/L. Since the diazinon concentration was very close to the action level, 0.5 µg/L, a follow-up sample was collected and sent for laboratory analysis during upstream investigations. The sample was tested for both diazinon and chlorpyrifos, neither of which were detected in the sample. This seems to indicate that the diazinon initially present at the site was likely transient. It should also be noted that this was the first year that diazinon was even detected at Site 36A.

When Site 36A was visited during the upstream investigations, the natural creek was mostly damp, with a small section of ponded water observed beneath the outlet originating from the north (see photo 7-1). The creek further upstream and east of the site was dry at the time of investigation. Decaying organic material and trash were observed around the site, including in the section of ponded water beneath the outlet. Since the only water present at the site was beneath this outlet, it was sampled and used as the site sample.

Photo 7-1 Ponded water and debris beneath the northern outlet at Site 36A.

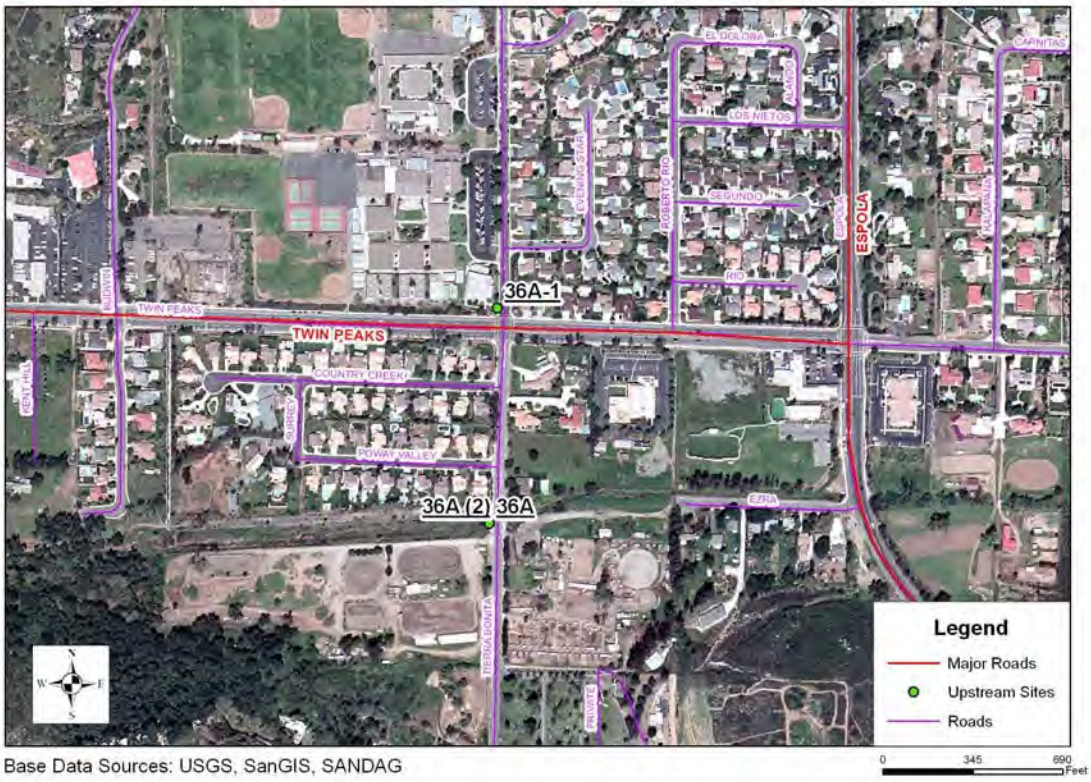
During the course of the upstream investigations, a small rain storm hit the area, producing less than 0.1 inch of rain. The field crew returned to the site the day following the small rain storm, in order to determine to what extent the rain had impacted the site. Again only a small section of ponded water was observed a the site beneath the outlet originating from the north. The eastern section of creek was damp, again with no sections that samples could be collected from. A sample was again taken from the ponded water beneath the outlet (36A(2) in the following map). The results from the two samples collected at the site were comparable, but the post rain sample show slightly less E. coli bacteria compared to the sample collected prior to the rain (see table below). The field crew investigated this line further upstream for sources of bacteria.

No surface runoff was observed entering the storm water conveyance system during the upstream investigation for the northern line. A manhole southwest of the Tierra Bonita Road and Twin Peaks Road intersection was checked. Inside the manhole was dry, but some trash and organic material (leaves and lawn clippings) were observed inside the manhole. Further north, the field crew was able to collect a sample of ponded water from within a catch basin located northwest of the Tierra Bonita Road and Twin Peaks Road intersection (36A-1). Some plastic food wrappers, plastic bottles and organic material were observed inside the catch basin. Both total coliform and E. coli counts were fairly low and comparable to what was found

downstream at Site 36A. Drainage maps appear to indicate that this site is the beginning of the northern line and therefore no further upstream samples could be collected.

Due to the limited amount of water present to the system at the time of upstream investigations, it is difficult to identify sources that may have contributed bacteria to the site earlier in the year when more water was present. Even the day after the small rain event, only ponded water was observed at the site. The eastern section of natural creek was dry, contributing no flow to Site 36A. The field crew was only able to find one upstream location with water to sample. The upstream location (36A-1) showed some decaying organic debris and trash which may partially contribute bacteria downstream to the site. It was also observed that the site is located next to horse stables. Although no direct contamination from the horse stables was observed during the upstream and site investigation, there is the potential that bacteria from horse manure could be tracked and washed to the conveyance system. Individuals were observed riding horses in the area neighboring and upstream of the site. The field crew also believes that the conditions present at the site, such as trash, decomposing organic material and ponded water, promote bacterial growth, and appear to be the most likely source of bacteria to the site. A map and table summarizing the bacterial upstream investigation for Site 36A are presented below.

Site 36A Upstream Investigation



ID	Location	Flow (gpm)	Total Coliform CFU/mL	*E. coli* CFU/mL
36A	Southwest of bridge, near 14336 Tierra Bonita Road, off Poway Valley Road	ponded	230	50
36A (2)	Site 36A, southwest of bridge, near 14336 Tierra Bonita Road, off Poway Valley Road	ponded	360	20
36A-1	Northwest of Tierra Bonita Road and Twin Peaks Road intersection, manhole in sidewalk	ponded	240	20

Site 90

Site 90 is a concrete channel located off Pomerado Road, east of Powers Road on Vaughan Road, south of the bridge. During the initial round of field screening all constituents tested below their respective action levels. A clear, odorless, colorless flow of approximately 94 gpm was observed at the site during the initial sampling. Laboratory analysis detected total coliform at 50,000 MPN/100mL, at the action level. Potential sources of bacteria were investigated during an upstream investigation conducted in mid-October.

During the upstream investigation for Site 90, a flow of 70 gpm was calculated within the concrete channel. A significant amount of bubbles and foam were observed floating on the water, possibly indicating the presence of surfactants. The sample collected was tested for surfactants, measuring a concentration of 0.5 mg/L. Even though 0.5 mg/L is below the action level for surfactants, it is still a fairly high concentration considering the volume of water flowing through the site. The field crew conducted an upstream investigation for the source of surfactants, and found the surfactants to originate from a car wash located in the commercial shopping center at the intersection of Twin Peaks Road and Pomerado Road. Runoff from the car wash had overflowed the berm designed to contain the runoff and direct it to a clarifier system. The field crew reported the situation to the manager of the car wash, who responded by using a vacuum to clean up the excess wash water. The manager reported he would build a larger berm to contain all the runoff in the future. In the mean time he reported he would continue to use the vacuum to collect any excess water that could potentially discharge to the storm water system.

Photo 7-2 Dried leave accumulation, soaking in ponded water upstream of Site 90.

The sample collected from Site 90 during the upstream investigation indicated minimal levels of both total coliform and E. coli bacteria were present at the site (see table below). This seems to indicate that the elevated levels of bacteria initially present at Site 90 was likely the result of a transient flow. The field crew continued upstream in order to identify any potential sources or areas likely to contribute bacteria to the site. Samples were collected from upstream laterals at sites 118 and 119 (90-1 and -90-2 respectively), and also from the main channel itself at Site 91 (90-3). All three upstream samples showed fairly low bacteria counts. Based on the upstream investigation, decaying organic debris appeared to be the most likely source of bacteria observed. Decaying organic debris accumulations (leaves, sticks, seeds, grass) were observed in several of the areas draining to Site 90 (see photo 7-2). The above photo shows one such

accumulation sitting in ponded water at the western end of Holland Road. Areas such as these provide excellent conditions for bacterial growth.

In summary, bacteria counts from Site 90 no longer indicate elevated levels of total coliform bacteria present at the site. Decomposing organic debris was observed in some of the residential areas upstream of the site, but bacteria counts from the upstream lines show low levels of total coliform bacteria. Therefore it is likely that the previous total coliform bacteria exceedance was the result of a transient flow. A map and table summarizing the bacterial upstream investigation for Site 90 are presented below.

ID	Location	Flow (gpm)	Total Coliform CFU/mL	*E. coli* CFU/mL
90	Off Pomerado Road, east of Powers Road, on Vaughn Road south of the bridge	70	120	<10
90-1	Site 118, Pomerado Road, Holland Road, west side of the channel, under the bridge	5	100	20
90-2	Site 119, Pomerado Road, Glen Oaks Road, east side of the channel, under the bridge	5	320	30
90-3	Site 91, southeast corner of Ted Williams Parkway and Pomerado Road intersection	60	190	30

Site 111

Site 111 is a site that was converted to a laboratory site this year. The site is a concrete channel located north of Kennebunk Street, in Standish Drive, northeast of the bridge. A clear, colorless, odorless flow of approximately 1 gpm was observed at the site during the initial sampling. A small amount of trash was observed in the channel and within the immediate vicinity of the site. Laboratory analysis detected an *Enterococcus* concentration of 30,000 MPN/100mL, above the action level of 10,000 MPN/100mL. An upstream investigation was conducted to determine potential sources of bacteria.

When the field crew returned to conduct the bacteria investigation, they noted that the flow to the site originated from two sources. A small flow (less than one gpm) was observed discharging from an outlet located along the northern side of the channel. There was also a small amount of flow (less than one gpm) observed within the upstream portion of channel as well. The flow in the channel appeared to originate from a crack along the south side of the concrete channel, approximately 20 feet east of the bridge. The combined flow from these two locations, still resulted in an overall flow of less than one gpm for the site. Trash including aluminum cans and plastic bottles, were observed. Algae, snails and insects were also observed at the site.

Photo 7-3 One of several animal waste accumulations observed along the concrete channel upstream of Site 111

Samples were collected from the combined flow at the site (111), the seepage section along the southern side of the channel (111-1) and from the outlet beneath the bridge (111-2). Results of the sampling (see table below) indicated only moderate levels of E. coli bacteria present at Site 111. The outlet, Site 111-2, had a substantially high E. coli bacteria count of 430 CFU/ mL. Upstream investigations were conducted for both of the lines providing flow to the site. Site 111-2 was traced upstream to an open section of concrete channel located on the north side of Garden Road, between Rolling Glen Road and Red Cloud Lane. A flow of one gpm was sampled from the open concrete channel (111-3). Several large accumulations of animal waste were observed along the banks of the channel (see photo 7-3). Four or five similar accumulations were observed along both banks of the channel. No feces were observed in contact with the flow where the sample was collected. Results of the sample collected here indicated almost no E. coli bacterial contamination (< 10 CFU/mL). However it is possible that any feces that had fallen into the channel, had already been washed further downstream.

An upstream investigation was also conducted for the concrete channel east of Site 111. Initially when the field crew first visited the site, the only source of flow in the upstream portion of the concrete channel, appeared to be from seepage from a small crack along the southern side of the channel. This line showed minimal levels of bacteria. Further upstream along the concrete channel was checked, and appeared primarily dry. A few sections of ponded water were observed, but none connecting further downstream. Animal waste was also observed in this section of the concrete channel as well (see photo 7-4). A sample was collected from one of

Photo 7-4 Animal waste within the concrete channel east of Site 111.

the ponded section of water, in order to determine the impact the eastern line would have on the site, if more water were present in the system (111-4). Both total coliform and E. coli bacteria levels were too numerous to count (TNTC) in the sample collected from this location. A horse stable is located upstream and to the east of this channel. The field crew followed this line upstream in order to determine if there possible connection between the horse stable and the concrete channel. The channel remains concrete from the site up to the end of Kennebunk Street where the channel becomes earthen. The earthen channel was observed completely dry all the way up to the horse stables. It appears that it would take a significant storm event to produce enough runoff to actually connect water from the horse stables to Site 111.

In summary, the follow-up investigation enterococcus bacteria at Site 111, showed only moderate levels of E. coli bacteria present at the site. The eastern line leading to the site was primarily dry, with only a few small sections of ponded water observed. The sample collected from some of this ponded water showed high levels of bacteria, likely the result of animal waste observed in the open section of this channel. However, this line was ponded and did not connect to the site, and therefore is not likely responsible for the bacteria present at the site. Further upstream was dry also, showing no connection between the horse stables and the site. The northern outlet, upstream of the site showed fairly high levels of E. coli bacteria (111-2). The elevated bacteria levels detected along this line, are likely the result of animal waste observed further upstream in the concrete channel between Rolling Glen Road and Red Cloud Lane. Four or five sizeable accumulations of feces (possibly of raccoon origin) were found along the banks of the concrete channel. It is likely that any of the feces falling into the channel would be transported to a further downstream section of the conveyance system. A map and table summarizing the bacterial upstream investigation for Site 111 are presented below.

Site 111 Upstream Investigation

ID	Location	Flow (gpm)	Total Coliform CFU/mL	*E. coli* CFU/mL
111	North of Kennebunk Street., on Standish Drive, northeast of the bridge	<1	170	30
111-1	Just east of Site 111, seepage from crack in the side of the channel	<1	20	<10
111-2	Outlet draining to the northern side of the channel. Just upstream of Site 111	<1	700	430
111-3	Open concrete channel, north of Garden Road, between Rolling Glen Drive and Red Cloud Lane	1	140	<10
111-4	Open section of concrete channel at the eastern end of Kennebunk Street	ponded	TNTC	TNTC

Site 128

At Site 128 a small flow of less than 1 gpm was observed at the outlet during the initial sampling. Surfactant levels of 1.5 mg/L exceeded the action level of 1.0 mg/L at this site during the routine sampling. An investigation was conducted immediately in the surrounding area, during which surface runoff was observed at a residential source. Likely vehicle washing had occurred, since a hose was observed lying in the garden, and towels and a clean car were also observed in the driveway. A follow-up investigation was conducted the next day. The flow was still observed to be less than 1 gpm, however the water sample now had a yellow color. The water sample was retested for surfactants, and the concentration had fallen to 0.25 mg/L, below the action level.

Site 129

Site 129 is an outlet located at the intersection of Indian Trail and Bennye Lee Drive. A very small (less than one gpm) flow of clear, odorless, yellow liquid was observed at the site. No trash was observed at the site. A neighbor reported that she sometimes notes a sewage odor coming from the outlet. Laboratory analysis detected exceedances of action levels for total coliform, fecal coliform, and *Enterococcus* bacteria. An upstream investigation was conducted to determine potential sources of bacteria.

When the site was visited during the upstream investigation, ponded water was observed at the site. The site was free of trash, but decaying organic material and algae were observed in the channel at the mouth of the outlet. The sample collected appeared slightly yellow in color and had a slight sheen on top. It should also be noted that a small rain event (less than 0.1 inches of total rainfall) occurred earlier day, prior to the collection of the site sample. Storm water conveyance maps show only one main line, originating from the south, extending to Site 129. This line appears to be underground from Site 129, upstream to the end of Bennye Lee Drive where the line becomes an open concrete channel. The field crew noted a couple of catch basins are located in Bennye Lee Drive between the site and open upstream section, but no surface runoff was observed entering them.

The field crew followed the line upstream to the end of Bennye Lee Drive, where it intersects with Luiseno Street. As mentioned above, this is where the line becomes an open concrete channel. Within the channel, algae, leaves and some sediment were present. Further upstream, the channel splits with a small brow ditch coming from the southeast and an earthen

channel to the southwest. The earthen channel was observed slightly damp, with no areas of ponded or flowing water to sample. The brow ditch had a flow less than one gpm. Some organic material (leaves, sticks, lawn clippings) and sediment were found within the brow ditch. The sample collected from the brow ditch (129-1) indicated only minimal bacteria levels. Further upstream the brow ditch was dry, and samples could not be collected. A small flow (less than one gpm) was found upstream of the earthen channel. A sample was collected from the channel next to 12870 Stone Canyon Road (129-2). This sample also indicated only minimal levels of bacterial contamination. It should also be noted that the water from both upstream sites 129-1 and 129-2 did not appear to reach the site.

The sample collected from Site 129 showed slightly elevated levels of E. coli bacteria (80 CFU/mL). A second sample was collected from the site, in order to confirm the high E. coli count initially measured (129(2)). Bacteria levels were again elevated, with an E. coli count of 230 CFU/mL. No evidence possibly indicating a sewage leak or connection was observed during the upstream investigation for Site 129. The area upstream of the site is almost entirely residential and open, therefore eliminating any potential commercial sources of bacteria. No animal facilities or animal waste accumulations were found in the area upstream of the site either. The field crew was unable to identify any point sources directly contributing to the elevated E. coli bacteria counts observed at the site. It is possible that the small rain event that occurred earlier in the day the first sample was collected, may have washed any bacteria present in the surrounding residential area, into the conveyance system. The ponded water and decomposing organic material present at the site, provide an excellent conditions for bacterial growth. The fist sample collected from the Site 129 resulted in bacteria counts of 200 CFU/mL for total coliform and 80 CFU/mL for E. coli. The second sample collected from the site (129(2)) approximately 18 hours later shows an increase in bacteria counts to 310 CFU/mL for total coliform bacteria and 230 CFU/mL for E. coli.

In summary, the bacteria counts at Site 129 were much higher than any of the upstream sites, likely indicating that the site and area immediately surrounding the site are likely responsible for the elevated bacteria levels. Also, the lines further upstream did not appear to contribute water to Site 129, demonstrating the residential area immediately surrounding the site was likely the source of the water. It is possible that the small rain event that occurred washed bacteria from the surrounding residential area to the site. Although no direct sources of E. coli bacteria were observed in the residential area, the presence of pets and pet waste is highly likely. The area nearby the site is also open, and could be accessed by wildlife also. Decaying organic debris algae and sediment deposits were observed at the site. The decay of this material, along with the slow flowing or ponded water observed, provide excellent conditions for promoting bacterial growth. A map and table summarizing the bacterial upstream investigation for Site 129 are presented below.

ID	Location	Flow (gpm)	Total Coliform CFU/mL	*E. coli* CFU/mL
129	Indian Trail and Bennye Lee Drive intersection	ponded	200	80
129-1	Brow ditch southeast of the intersection of Bennye Lee Drive and Luiseno Street	<1	9	<10
129-2	Open channel east of 12870 Stone Canyon Road	<1	60	<10

ID	Location	Flow (gpm)	Total Coliform CFU/mL	*E. coli* CFU/mL
129(2)	Indian Trail and Bennye Lee Drive intersection	<1	310	230

Site 133

Site 133 is a natural creek located north of Jack Rabbit Road, near Espola Road and Orchard Bend Road. During the initial round of field screening all constituents tested below their respective action levels. A clear, colorless, odorless flow of approximately 26 gpm was observed at the site. A small amount of trash was observed at the site. Laboratory analysis detected total coliform at 50,000 MPN/100mL, equal to the action level. Potential sources of bacteria were investigated during an upstream investigation.

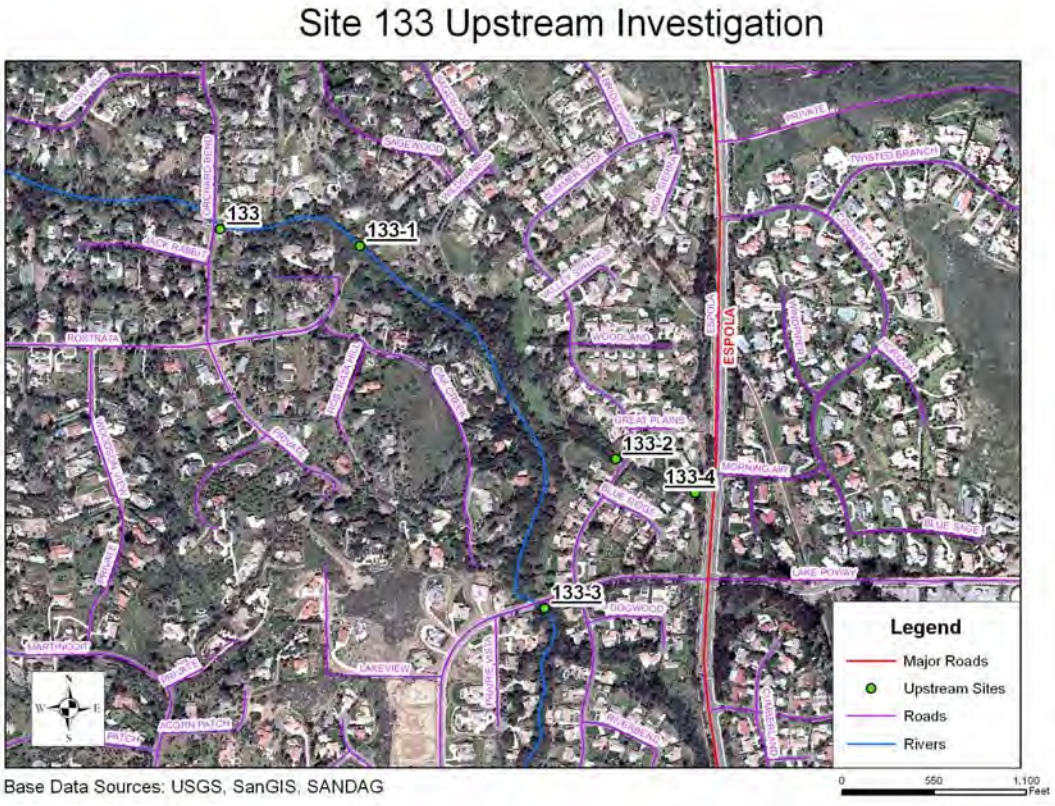
The field crew returned to Site 133 in mid October to conduct an upstream investigation for potential sources of total coliform bacteria. A flow of 47 gpm was observed at the site. The water sampled was clear, colorless and no discernable odor could be detected. Results from the sample showed only minimal levels of both total coliform and E. coli bacteria (see table below). Several upstream samples were also collected and analyzed for bacterial indicators. The first upstream sample was collected from the same natural creek, just north of the Rostrata Road and Rostrata Lane intersection (133-1). A flow of 47 gpm was observed, and counts for bacteria were again minimal (see table below). The creek was traced further upstream to where it splits into two branches, one to the east and one to the south. The southern branch was investigated where the natural creek passes Lake Poway Road, between Summer Sage Road

and Prairie Vista Road (133-3). This is the same location as laboratory sampling Site 132, which showed minimal signs of bacterial contamination when initially sample during the Dry Weather Monitoring Program. Results from the sample collected during the upstream investigation showed fairly low levels of total coliform and E. coli bacteria. This seems to confirm that the southern line is not the primary source of bacteria to Site 133.

The eastern branch was first sampled at an outlet off Summer Sage Road, located between Great Plains Road and Blue Ridge Terrace (133-2). This outlet drains an open section of natural creek to the east. A flow of five gpm was observed. No horse stables or animal facilities were observed in the area immediately upstream, but some small animal waste (likely wildlife) was observed in the open area nearby site. The sample collected here showed slightly elevated levels of E. coli bacteria (60 CFU/mL). The field crew followed the eastern branch further upstream in an attempt to identify any potential sources of bacteria. A sample was collected from dry weather sampling Site 54, located west of Espola Road, between Lake Poway Road and Morning Air Road (133-4). A flow of one gpm was measured at the site. Results from the sampled indicated high total coliform and E. coli bacteria counts. The area between sites 133-2 and 133-4 is primarily residential, with the natural creek running through a densely vegetated open area. What appeared to be wildlife waste was again observed in vegetated area surrounding Site 133-4. Further upstream from Site 133-4, the eastern branch passes underneath Espola Road. From here the rest of the line appears to be underground. The field crew investigated the residential area to the east of Espola Road, and off of Morning Air Road where the line appears to originate. No surface runoff was observed in this residential area. Also, no evidence of horse stables or animal facilities were observed. The field crew was unable to find any further locations or sources of flow to sample from this upstream area.

In summary, an upstream investigation was conducted for Site 133 for total coliform bacteria. The sample collected from the site during the upstream investigation showed almost no evidence of bacterial contamination. Site 133 receives flow from two separate branches one originating from the east and one from the south. The southern branch (~ 39 gpm) had substantially more flow than the eastern branch (~ 5 gpm). Fairly low bacteria levels were also found along the southern branch. Fairly high bacterial levels were found at upstream site 133-4 (Site 54) during the upstream investigation. The eastern branch is primarily an open natural creek, surrounded by dense vegetation and residencies between upstream sites 133-2 and 133-4. No signs of horse stables or other animal facilities were observed in any of the area upstream of Site 133. However, animal waste was observed in the open areas near the creek by sites 133-2 and 133-4. The source of the animal waste is most likely from wildlife, since the area is densely vegetated and appears to be an unlikely area for the walking of pets. It is possible that the small rain event washed bacteria from the wildlife waste to Site 133-4. The decomposing organic debris (leaves) and slow flowing water at the site, provide excellent conditions for growth for any bacteria introduce to the site. These conditions along with wildlife waste are likely responsible for the elevated bacteria levels detected along the eastern branch. However, when the two branches join, the large flow from the southern branch dilutes the bacteria concentration from the eastern branch. The speed and turbulence of the increased flow also limits the ability for bacteria to grow. As a result, the elevated bacterial levels found upstream along the eastern branch were observed to a much lesser extent as the sites further downstream with greater flow. A map and table summarizing the bacterial upstream investigation for Site 133 are presented below.

ID	Location	Flow (gpm)	Total Coliform CFU/mL	*E. coli* CFU/mL
133	Espola Road, Orchard Bend Road, north of Jack Rabbit Road at the creek	47	10	<10
133-1	Just north of the Rostrata Road and Rostrata Lane intersection	47	30	<10
133-2	Summer Sage Road, between Great Plains Road and Blue Ridge Trail	5	350	60
133-3	Site 132, Lake Poway Road between Summer Sage Road and Praire Vista Road at the creek	39	60	<10
133-4	Site 54, west of Espola Road, between Lake Poway Road and Morning Air Road	1	1,100	820



7.4 Additional Findings

This section provides a brief description of any additional findings identified during the course of upstream investigations.

7.4.1 Animal Facilities Findings

As part of the upstream investigations conducted, the field crew also attempted to identify and assess the impact that animal facilities have on storm water quality. The primary concern is that

animal facilities are a potential source of bacteria to the storm water system. Special emphasis was placed on sites 111 and 133, since these sites were recently been added to the list of laboratory sampling sites. Sites 36A, 90, 111, 129 and 133 all recorded action level exceedances for at least one of the three bacterial indicators. No signs of animal facilities were observed upstream of sites 90 and 129. Site 36A is a natural creek located adjacent to the horse stables on Tierra Bonita Road. During the upstream investigation for Site 36A, the neighboring horse stables did not appear to directly impact the water at the site. The horse stables are located to the south of the site, and the only water observed at the site was from an outlet originating from the north. Also horse stables are on pervious ground, and it appears that it would take a sizeable storm event to generate any runoff that could reach Site 36A. The most likely way that the horse stables could influence Site 36A would be if horse manure were tracked out to Tierra Bonita Road, as was observed the previous year. In this case, bacteria and manure could be washed into one of the storm drains upstream of the site on Tierra Bonita Road.

Photo 7-5 Looking downstream at the dirt channel passing through the horse stables on Sycamore Canyon Rd.

Site 111 is located downstream of a large horse stables off Sycamore Canyon Road. A dirt channel passes through the middle of the horse stables and continues east across an open field (see photo 7-5). There is approximately a half mile of open dirt channel between the horse stables and the concrete channel leading to Site 111. No water was observed within the channel and it appears that any water introduce would likely soak into the pervious ground. It seems highly unlikely that any discharge or even a typical storm event would provide enough water to generate flow within the channel. The field crew believes that the horse stables on Sycamore Canyon Road have little if any impact on Site 111.

Site 133 is located in a residential area off of Orchard Bend Road. The site is a natural creek, originating from the east. The field crew investigated the upstream area thoroughly investigated the residential area upstream of the site from Orchard Bend Road to Espola Road, and north of the intersection of Espola Road and Lake Poway Road. No signs of animal facilities were observed. There remains the possibility that animal facilities are located further east in the City, however this is a gated residential area and it appeared unlikely that any large animal facilities would exist in that area.

7.4.2 Excessive Irrigation Identification

During the upstream investigations, excessive irrigation was observed particularly in two particular areas of the City. The field crew witnessed irrigation waters discharging into the storm water conveyance system in the Old Coach residential area of the City, most notably along the residential area off Butterfield Trail between Antelope Station and Whitewood Canyon (see photo 7-6). The other area where particularly heavy irrigation was observed was in the residential area east of Sycamore Canyon Road, around Hidden Valley Drive, Spruce Lane and Quiet Hills Drive. The recommendations for these areas are presented in Section 8 of this report.

8 SUMMARY AND RECOMMENDATIONS

8.1 Summary

8.1.1 Summary of Field Screening and Laboratory Analysis Data

Fifty monitoring locations were selected for the 2007 Dry Weather Monitoring Program. Of the 50 primary monitoring locations, four monitoring locations were dry and were replaced with alternate monitoring locations. Flow ranged from ponded to 187 gpm. The following provides a summary of field analysis results.

- A pH level of less than 6.5 or greater than 9.0 was not detected at any of the monitoring location sites.
- In the best professional judgment of the field crew, none of the conductivity readings indicated an illegal discharge, illicit connection, or any other environmental hazard. Measurements ranged from 1.19 mS/cm to 7.19 mS/cm.
- Turbidity ranged from 0.1 NTU to 13.89 NTU.
- Ammonia concentrations exceeded the action level of 1.0 mg/L NH_3-N only at Site 3A during the initial field screening. An upstream investigation revealed that the high ammonia level was transient (see Section 8.1.2).
- Nitrate concentrations above the action level of 10.0 mg/L NO_3-N were not detected at any of the sites, for the first time in three years.
- The orthophosphate-P concentration only exceeded the action level of 2.0 mg/L PO_4-P at Site 36A.
- Surfactant (MBAS) concentration exceeded the action level of 1.0 mg/L at four of the monitoring location sites (sites 3A, 3B, 36A, and 128). Follow-up investigations indicated that the high levels of surfactants were transient, and likely due to resident vehicle washing and over irrigation.

Laboratory analyses were conducted at 14 monitoring sites. Water samples from five sites were reported to have concentrations of constituents above the established action levels.

- As in the previous three years, no sites had detectable levels of oil and grease.
- As in the previous year, chlorpyrifos was not detected at any locations.
- Diazinon was only detected at Site 36A (0.46 µg/L), at a concentration just below the action level of 0.5 µg/L.
- Low concentrations of dissolved zinc were found at sites 36A and 15. Only Site 36A had detectable copper concentrations. None of the measured concentrations were greater than their respective action levels as determined by the California Toxics Rule. As in previous years, lead and cadmium were not detected at any of the 14 locations.
- Indicator bacteria concentrations exceeded their respective action levels at five monitoring locations, down from six sites in 2006. The total coliform concentration was equal to or greater than the established action level of 50,000 MPN/100 mL at

sites 36A, 90, 129, and 133. Fecal coliform levels exceeded the action level of 20,000 MPN/100 mL at sites 36A and 129. *Enterococcus* counts were above the established action level of 10,000 MPN/100 mL at sites 36A, 111, and 129.

The majority of monitoring locations visited did not have significant accumulations of floatable materials (trash and debris) in the water stream. At 35 sites, at least a minor amount of trash and debris was observed around the site. Sites 21A, 21B, 30, 31, 35, 36A, 52, 53, 105, 106, 109, 111, 124, 128 and 132 had sizeable accumulations. At five of those sites, 21A, 21B, 36A, 109 and 111, the sizeable accumulations were observed directly in contact with water. Two sites were observed to have a dust sheen on the water surface, and seven sites were observed to have bubbles or foam floating on the water. Sediment deposition was noted at all but four monitoring locations.

Vegetative growth ranged from no growth to normal growth, with many of the sites located in sunny areas such as open channels having natural vegetation, and sites located in dark structures such as manholes having no vegetation. A variety of biological organisms were observed at the monitoring location sites, including algae, insects, snails, fish, larvae, tadpoles, and crayfish.

8.1.2 Summary of Upstream Investigation Data

Based on the results of the upstream investigations and follow-up actions conducted at eight sites for the 2007 Dry Weather Monitoring Program for the City of Poway, the following conclusions have been made:

- Ammonia exceeded the action level at Site 3A during the initial field screening visit. Ammonia concentration levels had fallen below the action levels during the follow-up investigation; therefore it is likely that the high ammonia level was transient. A likely source of ammonia could be from over irrigation from the landscaping of nearby industrial businesses.

- Surfactants (MBAS) were the constituents most commonly found to exceed the action level during field testing.

    - At sites 3A and 3B, the levels of surfactants had lowered during the follow-up investigation, indicating that the high levels of surfactants were transient.

    - The results from an upstream investigation at Site 36A suggested that vehicle washing was a possible reason why there were high surfactants observed in the water sample. A hose and wet driveway were observed on Evening Star Drive.

    - At Site 128, an upstream investigation indicated that a residential source was the likely cause of high levels of surfactants. A hose was lying in a resident's garden, and towels and a clean car were observed in the driveway at Helen Park Lane. During the follow-up investigation, surfactant levels had dropped below the action level, and the flow was now yellow. The likely cause of the color change from colorless to yellow was that the water from the vehicle washing diluted the water sample during the initial site visit.

Since no more vehicle washing was observed to have taken place since the initial visit, the water became more concentrated, and yellow in color.

- High orthophosphate-P levels were recorded at Site 36A. During an upstream and follow-up investigation likely sources were found to come from nearby over irrigation of lawns, and evaporation of the ponded water may have increased the concentration of orthophosphate-P observed.

- Fewer sites required upstream investigations for bacteria in 2007 than in 2006. A total of five sites were investigated for potential bacteria contamination, compared to six sites in 2006. The findings for each of the five investigated sites are briefly summarized below.

  Site 36A: All three indicators above the action level
  Sources: Decomposition of trash and organic material sitting in ponded water at the site and catch basins upstream of the site. Manure from nearby horse stable is a potential source of bacteria to the site, although direct contamination was not observed.

  Site 90: Total coliform above the action level
  Sources: Likely due to a transient flow, no sources directly contributing bacteria to the system were identified.

  Site 111: Enterococcus above the action level
  Sources: Animal waste (likely wildlife) observed in the conveyance system upstream of the site.

  Site 129: All three indicators above the action level
  Sources: Slow flowing or ponded water at the site along with decomposing organic debris provide excellent conditions for bacterial growth. No sources directly contributing bacteria to the site were identified. Runoff from the surrounding residential area is the most likely source.

  Site 133: Total coliform above the action level
  Sources: Likely due to transient flow, bacterial counts from the site and directly upstream were minimal. Wildlife waste observed in the open areas upstream of the site was identified as a potential source of bacteria to the system.

8.2 Recommendations

Based on the results of the 2007 Dry Weather Monitoring Program for the City of Poway, these follow-up actions are recommended for consideration.

8.2.1 Education

- Educational materials are recommended to be given to residents living in areas close to sites where high surfactant levels were recorded. Sites 3A, 3B (at Kirkham Court), Site 36A (near Tierra Bonita Road and Poway Valley Road), and Site 128 (at Midland Road, near Twin Peak Road and Orange Blossom Lane) had surfactant

levels that exceeded recommended action levels. Upstream investigations revealed possible vehicle washing in several instances, and residents are encouraged to use commercial vehicle washes instead of allowing rinse water to flow to surface streets.

- At Site 36A, it was noted that irrigation systems were producing surface runoff into the storm drain system. It is recommended that educational materials be given to residents and businesses located in the neighboring areas, particularly along Tierra Bonita Road. Site 3A was the only location sampled that had an ammonia concentration which exceeded the action level. It is likely that the ammonia had been washed in to the site from over irrigation of landscaping of nearby industrial businesses, therefore businesses in the area surrounding Kirkham Court are also recommended to be given educational material.
- A resident was observed discharging water from a swimming pool during an upstream investigation of Site 36A. The resident was not sure whether the water had been dechlorinated prior to discharge and was advised to ensure that the water was dechlorinated in the future.
- At sites 4 and 137, horse manure was observed nearby. Pet waste was observed at sites 105 and 130. It is recommended that residents be given educational materials encouraging them to clean up after their animals.
- Send educational material regarding storm water BMPs to the residents of the Old Coach Collection gated residential community. Educational materials should be sent to the area bound by Butterfield Trail, Antelope Station, and Whitewood Canyon. This information should focus on limiting the frequency and duration of their irrigation.
- Send educational material regarding storm water BMPs to the residents of Hidden Valley Drive, Spruce Lane and Quiet Hills Drive. Educational material should focus on limiting the frequency and duration of their irrigation.

8.2.2 Inspection and Maintenance

- Clean out trash and decaying organic material at Site 36A to allow proper drainage and reduce stagnation of water. Trash and debris observed at the site are also likely sources of bacteria.
- Ensure the car wash facility, upstream of Site 90 and within the commercial complex northeast of the Twin Peaks Road and Pomerado Road intersection, implements further best management practices (BMPs) to prevent vehicle wash waters from discharging to the storm water conveyance system.
- Remove animal waste accumulations from the open concrete channel and banks of the channel upstream of Site 111, located between Rolling Glen Drive and Red Cloud Lane. This area should be cleaned free of animal waste from Garden Road north to Springvale Street.
- Clean sites 21A, 21B, 30, 31, 35, 36A, 52, 53, 105, 106, 109, 111, 124, 128 and 132 which had accumulations of litter or debris sizeable enough to potentially impact storm water quality. Of particular importance are sites 21A, 21B, 36A, 109 and 111 were trash and debris were observed directly in contact with the water. Evidence of human inhabitance was noted at Site 109, and it is recommended that the City visits this site to ensure that the trash from the inhabitants is cleaned up.

Additionally we recommend to include the following sites that had minor trash during the field screening program in the City's existing clean up schedule: Sites 2, 4, 15, 16, 18A, 19, 21A, 21B, 30, 31, 34, 35, 36A, 52, 53, 54, 64A, 91, 101, 103, 105, 106, 108, 109, 111, 123, 124, 128, 130, 132, 133, 135, 136, 140, and 142.

8.2.3 Site Replacement

Sites 137 and 142 have been dry for the past two or three consecutive years. It is recommended that the City replaces these sites with sites that are more likely to have water flowing for future Dry Weather Monitoring Program sample analysis.

Re: 2008 Dry Weather Field Screening and Analytical Monitoring Program
City of Poway, California

Dear Mr. Bechter:

Per your request D-MAX Engineering, Inc. (D-MAX) has completed the 2008 Dry Weather Field Screening and Analytical Monitoring Program. This report presents the results of the monitoring program conducted in the City of Poway during the 2008 dry weather season. The contents include field screening data and analytical laboratory test results, trash assessment, analyses of the collected data, and photographs of sampling locations. The report also presents the results of follow-up investigations conducted to identify the sources of pollutants detected during the field screening program and our recommendations for additional actions.

It has been our pleasure working with the City of Poway on this project. If you have any questions regarding this report, please call me at (858) 586-6600 ext. 22.

Sincerely,
D-MAX Engineering, Inc.

Arsalan Dadkhah

1 INTRODUCTION

1.1 Regulatory Requirements

In accordance with San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit), each of the Copermittees, including the City of Poway, is required to annually perform dry weather field screening of discharges into its storm drain system. This procedure is comprised of recording field observations, estimating observed flow rates, and conducting field testing at selected locations along the storm drain conveyance system during the dry weather season, May 1 through September 30. The Municipal Permit also necessitates that Copermittees conduct laboratory analyses for at least 25 percent of the visited sites with flowing or ponded water. If a sampling location is dry, meaning there is no flowing or ponded water, an alternate sampling station should be visited. If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days. A more detailed trash assessment component has also been required. The Dry Weather Monitoring Program is an integral part of the City's Urban Runoff Monitoring Program.

1.2 Hydrologic Setting

The City of Poway covers parts of three watersheds in San Diego County. The northern portion of the City lies in the San Dieguito Watershed, which is designated as Hydrologic Unit (HU) 905. The southern half of the City is part of the Peñasquitos Watershed, HU 906. A very small portion of eastern Poway lies within the San Diego River Watershed, HU 907. Nine smaller drainage basins are recognized within the City of Poway; these are listed below.

- Sycamore Creek Basin
- Green Valley Creek Basin
- Stone Canyon Basin
- Pomerado Creek Basin
- Rattlesnake Creek Basin
- Silver Lake Drive Basin
- Poway Creek Basin
- Beeler Creek Basin
- San Vicente Creek Basin

Catch basins, creeks, channels, culverts, and detention basins convey runoff from small, local waterways to the larger receiving waters of the three major watersheds. Water quality in each of the three major watersheds has been evaluated yearly since 2002 to identify constituents of concern within the watershed. In addition to the City of Poway, these major watersheds drain other large portions of San Diego County and eventually discharge to the Pacific Ocean. The City of Poway shares the responsibility of addressing the constituents of concern with other cities falling within the watershed boundaries. Figure A at the end of this report presents a drainage map of the City of Poway and illustrates the locations of the drainage basins and associated water bodies.

Los Peñasquitos, Hydrologic Area 906.20

Poway Creek drains most of southern Poway and collects flow generated from Pomerado Creek, Silver Lake Drive, Rattlesnake Creek, and Beeler Creek, eventually converging with Los Peñasquitos Creek, and discharging into Los Peñasquitos

Lagoon. The 2005-06 Peñasquitos Watershed Urban Runoff Management Plan (WURMP) Annual Report identified Constituents of Concern (COC) in this watershed as fecal coliform, total dissolved solids (TDS), turbidity, total coliform, *Enterococcus* bacteria, and nutrients, with turbidity, total coliform, and *Enterococcus* bacteria being the higher priority COCs.

San Dieguito River, Hydrologic Area 905.20

The majority of northern Poway lies in this watershed, including Green Valley Creek, Stone Canyon Creek, Sycamore Creek, Lake Poway, and Thompson Creek. These drain into Lake Hodges, which discharges to the San Dieguito River, eventually terminating in the San Dieguito Lagoon. The 2005-06 San Dieguito WURMP Annual Report identifies TDS and fecal coliform as the two highest priority COCs. Turbidity continues to be a lower priority COC.

San Diego River, Hydrologic Unit 907.00

A very small portion of eastern Poway drains into San Vicente Creek and eventually into the San Diego River watershed. Because this portion of Poway is designated as permanent open space, which is restricted from any future development, the RWQCB has indicated that the City of Poway is not included as a responsible party for the San Diego River WURMP under the recently adopted Municipal Permit.

1.3 Program Overview

The primary purpose of the Dry Weather Monitoring Program is to detect and eliminate illicit connections and illegal discharges (IC/ID) to the storm drain system, minimizing the negative impacts of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following three components.

- Field screening observations
- Field analytical testing
- Laboratory analytical testing

Information collected from the dry weather monitoring is used to characterize dry weather discharges to the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up studies and source investigations were conducted as necessary to detect and eliminate the sources of these pollutants. The results from the 2008 Dry Weather Monitoring Program conducted by D-MAX Engineering, Inc., (D-MAX) are presented herein.

1.4 Previous Work

The City of Poway has conducted the Dry Weather Monitoring Program since 1994. A summary of the results of the previous years are displayed in Table 1-1. Historical dry weather monitoring data is included in Appendix A.

TABLE 1-1
SUMMARY OF HISTORICAL DRY WEATHER SITES

Year	Number of Sites Screened [1]		Number of Flowing Sites		Number of Ponded Sites		Number of Dry Sites		Number of Lab Analysis Sites [2]	
	R1	R2	R1	R2	R1	R2	R1	R2	R1	R2
1994	Data not available [4]								---	
1995									---	
1996									---	
1997	49		39		10		21		---	
1998 [3]	47	40	39	34	8	6	11	15	---	---
1999 [3]	32	28	20	23	12	5	14	19	---	---
2000 [3]	26	32	23	27	3	5	18	12	---	---
2001 [3]	31	32	26	27	5	5	13	13	---	---
2002	50		40		10		2		13	
2003	50		47		3		1		13	
2004	50		41		9		3		13	
2005	50		47		3		1		13	
2006	50		45		5		2		13	
2007	50		44		6		4		13	

Notes:

1 Number of Sites Screened = Number Flowing + Number Ponded. Field screening cannot be conducted at sites found to be dry. Dry sites are replaced by either a flowing or ponded site.
2 Laboratory analyses commenced in 2002 as required by RWQCB Order 2001-001.
3 Two rounds of dry weather monitoring were conducted for these reporting periods.
4 Available information does not distinguish between types of flow at visited sites during this period.

1.5 Report Outline

This report is divided into nine sections and four appendices. The following presents the section numbers and a brief description of the section.

Section 1 provides a regulatory background, gives an overview of the Dry Weather Monitoring Program, discusses the City of Poway's hydrologic setting, summarizes previous monitoring results, and provides an outline of the report.

Section 2 describes the sampling locations and the site selection criteria.

Section 3 describes the field screening and laboratory analytical procedures. This section also discusses quality assurance protocols used during sampling and lists follow-up investigation action levels.

Section 4 discusses the results of the field screening analyses.

Section 5 discusses the results of the trash assessment.

Section 6 discusses the results of the laboratory analyses.

Section 7 provides a thorough analysis of the collected field and laboratory data and includes descriptions of each site with evidence of physical, chemical, or biological pollution.

Section 8 discusses follow-up investigations of each site with repeated evidence of physical, chemical, or biological pollution.

Section 9 provides a summary of the program results and recommendations for follow-up actions.

Appendix A contains historical dry weather monitoring data.

Appendix B contains photographs of each of the investigated sites.

Appendix C contains the laboratory analytical reports.

Appendix D contains original copies of the field data sheet.

2 SAMPLING LOCATIONS

The City of Poway has 50 designated primary monitoring stations, as well as 26 potential alternate field screening sites to replace primary sites without flowing or ponded water. Fourteen of the 50 primary sites are also designated as sites for laboratory analysis. All sites are located in San Diego Hydrological Units 905 and 906. These sites are also presented in the City's JURMP, updated in 2007.

The sites sampled in the 2008 Dry Weather Monitoring Program were consistent with the site change recommendations from 2006 also mentioned in the City's JURMP, which was finalized in March 2008.

During the 2008 Dry Weather Monitoring Program, primary sites 35, 131, 137, and 142 were observed to be dry, so alternate sites 1, 103, 135, and 138 were selected as locations for monitoring.

Table 2-1 provides the site number, location, conveyance configuration, primary and secondary land uses, hydrological unit, and GPS coordinates of the sampling locations that were visited. Photographs of sampling locations are included as Appendix B. A map of the watersheds in and around the City of Poway, broken down into HSAs, is included as Figure B. A city map with sampling locations is included as Figure C and is located at the end of this report.

3 FIELD AND LABORATORY ANALYTICAL METHODS

3.1 Field Screening Procedures and Methods

Field screening techniques consist of flow measurement, quantitative field analyses of selected water quality parameters, and qualitative field observations. Information relating to weather conditions, the amount of time since last rainfall, and the type of storm water conveyance are recorded. Specific observations and results of the field water quality analyses are documented on field data sheets, which are included in Appendix D. The data sheets also serve as a record of the field visit and are completed for every site visit regardless of whether or not samples were collected.

For 2008, field data sheets were updated to include three categories of visits. Previously they included check boxes for either routine field screening or follow-up visits. This year there are check boxes for routine field screening, confirmation, and IC/ID follow-up visits. A confirmation visit is a revisit of the original site, whereas an IC/ID follow-up is an upstream investigation. For the purposes of this report, confirmation and IC/ID follow-up visits are both referred to as "follow-up" visits.

Field screening and analyses were conducted according to the following procedures and methods.

Qualitative Observations

Irrespective of flow, qualitative field observations are made during each site visit. These observations provide a general site assessment and describe factors like water odor, clarity, the presence of floatables, visible deposits or stains, vegetation and biological organisms. Evidence of present or past illicit connections and illegal discharges to the storm drain system may also be ascertained through careful field observations. Each field screening location is photographed to provide additional information and documentation of site conditions. Photographs are included in Appendix B.

Flow Measurement

Flow measurements can be utilized to estimate pollutant mass loading, prioritize storm drains for future investigation, and identify significant changes in discharge that may indicate an illegal discharge upstream. Various field methods are used in formulas to estimate the flow rate. These include measuring the velocity, depth and width of the flowing water; recording the amount of time required to fill a bottle of known volume with sample water; or, if measuring flow within a cylindrical pipe, measuring the pipe diameter as well as the depth and velocity of the flow. Low levels of flow may also be assessed visually.

Field Water Quality Analyses

At each site with ponded or flowing water, grab samples were collected and analyzed in the field for the following constituents:

- Specific conductance
- Temperature
- pH
- Turbidity
- Surfactants (MBAS)*
- Nitrate-Nitrogen (Nitrate-N)
- Ammonia-Nitrogen (Ammonia-N)

- Orthophosphate-Phosphorus (Orthophosphate-P)

* Surfactants are also referred to as detergents, specifically with respect to discussion of field test kit results.

The methods that were used to perform the above field analyses along with each method's detection limit, range and accuracy, are listed in Table 3-1.

3.2 Laboratory Analytical Methods

Grab samples were collected at 14 sites (over 25 percent of all sites) where ponded or flowing water was observed, to fulfill the requirements of Order R9-2007-0001. These samples were submitted to EnviroMatrix Analytical, Inc., a California Department of Health Services-certified laboratory, for analysis of the following constituents:

- Oil and grease
- Total hardness
- Diazinon
- Chlorpyrifos
- Cadmium (Dissolved)
- Copper (Dissolved)
- Lead (Dissolved)
- Zinc (Dissolved)
- *Enterococcus* bacteria
- Total Coliform bacteria
- Fecal Coliform bacteria

The methods used to perform each of the above analyses along with method detection limits and holding times are listed in Table 3-2.

TABLE 3-1
FIELD ANALYTICAL METHODS

Parameter	Method	Reporting Limit	Range	Accuracy
Specific conductance	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.01 mS/cm	0 – 20 mS/cm	± 2% of functional sensitivity[1]

Ortho-phosphate-P	CHEMetrics V-2000 Multi-Analyte LED Photometer – Phosphate 2 Vacu-vials® (K-8513) Stannous chloride chemistry[6]***	0.25 mg/L**	0.25 mg/L – 2.61 mg/L**	Varies with measured concetration[4,5]

Notes:

[1] Functional sensitivity (FS) represents the lowest limit at which quantitative information is reliable. FS is estimated as the mean concentration for a spiked sample whose coefficient of variance (CV) is 20%. CV is the standard deviation divided by the mean.

[2] ± 0.13 for the range of 0.0 to 1.0 mg/L, ± 0.25 mg/L for the range of 1.0 to 2.0 mg/L and 0.5 mg/L for the range of 2.0 to 3.0 mg/L.

[3] This method determines the concentration of nitrate in mg/L NO_3. To determine the amount of nitrate-nitrogen, the concentration of nitrogen must be adjusted for the presence of oxygen in the NO_3 molecule. Therefore, the result is multiplied by a conversion factor of 0.226, the ratio of the molecular weight of N (14 g/mol) to NO_3 (62 g/mol). The detection limit for nitrate is 10.0 mg/L; however, the detection limit for nitrate-nitrogen is lowered due to the conversion.

[4] Practical Detection Limit (PDL) is defined as the lower limit of the stated test range.

[5] Percent error adjusts as follows: ±30% at PDL, ±20% for 25% of full range, ±10% for 75% of full range, ±10% for 120% of full range. "Full range" is equal to the upper limit of the test kit's range.

[6] This method determines the concentration of orthophosphate in mg/L PO_4. To determine the amount of orthophosphate-P, the concentration of phosphate must be adjusted for the presence of oxygen in the PO_4 molecule. Oxygen is 67.4% of phosphate by mass but is not a plant nutrient in this form. Therefore, the result is multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31 g/mol) to PO_4 (95 g/mol). The detection limit for orthophosphate is 0.75 mg/L; however, the detection limit for orthophosphate-P is lowered due to the conversion.

*Extended ranges in chemical analyses can be achieved through dilutions. Accuracies decrease proportionally with further dilutions.

** Readings below the PDL have increased percent error; measurements are reported, but are flagged as being below the PDL.

***Reporting limit, range, and accuracy information taken from Hanna Instruments and CHEMetrics manuals, available online at www.hannainst.com and www.chemetrics.com. Additional information regarding CHEMetrics accuracy was obtained from the manufacturer via email.

TABLE 3-2
LABORATORY ANALYTICAL METHODS

Analyte	Analytical Method	Method Detection Limit	Maximum Holding Time [1]
Oil and Grease	USEPA 1664	5 mg/L	28 days
Total Hardness	USEPA 200.7	10 mg/L	14 days
Dissolved Cadmium	USEPA 6020	0.005 mg/L	24 hours
Dissolved Copper	USEPA 6020	0.005 mg/L	24 hours
Dissolved Lead	USEPA 6020	0.005 mg/L	24 hours
Dissolved Zinc	USEPA 6020	0.020 mg/L	24 hours
Diazinon	USEPA 8141A	0.05 µg/L	7 days
Chlorpyrifos	USEPA 8141A	0.05 µg/L	7 days
Total Coliforms	SM 9221	[2] 20 – 1,600,000 MPN/100 mL	6 hours
Fecal Coliforms	SM 9221	[2] 20 – 160,000 MPN/100 mL	6 hours
Enterococcus	SM 9230	[2] 20 – 160,000 MPN/100 mL	6 hours
Total Coliforms	SM 9223 (IDEXX Colilert) [4]	10 – 2,400,000 MPN/100 mL	6 hours
Escherichia coli (*E. coli*) [3]	SM 9223 (IDEXX Colilert) [4]	10 – 2,400,000 MPN/100 mL	6 hours
Enterococcus	IDEXX Enterolert [4]	10 – 240,000 MPN/100 mL	6 hours

Notes:

µg/L = micrograms per liter

MPN/100 mL = most probable number (of colony-forming units) per 100 milliliters

[1] Maximum Holding Time values listed here apply to samples collected and preserved in accordance with the quality assurance and quality control procedures listed in Section 3.3.2.

[2] For D-MAX's Dry Weather Monitoring Program, EnviroMatrix Analytical, Inc. (EMA) performs standard dilutions for total coliforms to quantify from 20-1,600,000 most probable number per 100 milliliters (MPN/100mL). For fecal coliforms and *Enterococci*, EMA performs standard dilutions to quantify from 20-160,000 MPN/100 mL. During the analysis and interpretation of the results, the number of tubes used to quantify the sample must fit the MPN index table from Standard Method 9221. The dilution set used will determine the detection limit. A standard dilution analysis is set up with 15 tubes at different concentrations. The reporting limit will always be adjusted depending on the dilution factor used for quantifying the actual results based on the MPN table. If the result for the analysis was less than 16,000 MPN/100 mL, the reporting limit will always be 20, and the dilution factor will be 10. As the dilution factor goes up, the reporting limit listed in the results from EMA will also go up based on the calculation made with EMA's data system. However, the lowest quantifiable number or reporting limit would still be 20 based on how the standard tubes for the sample is set up.

[3] Number of fecal coliforms is derived from number of *E. coli* through the following formula:
Fecal Coliforms = *E. coli* / 0.85. The converted fecal coliform count, not the number of *E. coli*, is reported in this report's data tables.

[4] IDEXX Colilert and Enterolert tests are performed by EnviroMatrix Analytical. This test is used during upstream investigations only.

3.3 Quality Assurance and Quality Control (QA/QC)

The QA/QC Plan utilized for this project includes the United States Environmental Protection Agency (USEPA) approved test methods for the field and laboratory analysis of water samples, calibration of test equipment, and pre- and post-rinsing of sample collection containers and test vials. Key components of the QA/QC Plan are described below.

3.3.1 Field Sampling and Analysis QA/QC

The pH meters are calibrated periodically with sodium/potassium phosphate, monobasic buffer solutions with pH values equal to 4.00 ± 0.01, 7.00 ± 0.01, and 10.00 ± 0.01 units. The glass electrode tube is kept moist to preserve the meter's accuracy during fieldwork. The turbidity meter is calibrated and periodically checked for accuracy using standard solutions. The conductivity meter is checked periodically with standard solutions and calibrated as necessary.

Field sample collection containers are first rinsed with distilled water and then with the sample water before sample collection. Upon completion of sampling at each site, sample collection containers, test vials, and ion-sensitive electrodes were rinsed twice with distilled water and dried.

The accuracy of field analytical techniques is assessed at the beginning of each sampling week by analyzing solutions of known concentrations for ammonia-nitrogen, surfactants, nitrate, and orthophosphate. The results of the assessment are shown in Table 3-3.

TABLE 3-3
FIELD ANALYSIS QA/QC RESULTS

Date	Analyte	Known Concentration (mg/L)	Acceptable Range* (mg/L)	Field Test Kit Results (mg/L)
8/11/08	Ammonia-Nitrogen	1.0	0.8 – 1.2	0.96
8/11/08	Surfactants	1.0	0.75 – 1.25	0.88
8/11/08	Nitrate *	44.3	31.0 – 57.6	53.14
8/11/08	Orthophosphate *	1.0	0.75 – 1.25	0.84
8/19/08	Ammonia-Nitrogen	1.0	0.8 – 1.2	0.89
8/19/08	Surfactants	1.0	0.75 – 1.25	1.0
8/19/08	Nitrate *	44.3	31.0 – 57.6	52.74
8/19/08	Orthophosphate *	1.0	0.75 – 1.25	0.82

Notes:

* Acceptable range is calculated based on the error associated with the methods as listed in Table 3-1.

** Nitrate and orthophosphate are converted to nitrate-nitrogen and orthophosphate-phosphorus, respectively, when conducting standard field screening. This is accomplished by multiplying the results by 0.226 for nitrate and 0.326 for orthophosphate. To simplify the calibration process, the unconverted numbers are used when calibrating the instruments.

3.3.2 Laboratory Sampling and Analysis QA/QC

Samples for laboratory analysis are collected concurrently with field samples and utilized the same sampling procedures. Pre-sterilized sample bottles are obtained from the laboratory and thus do not require rinsing with sample water prior to sample collection. After sample collection, all laboratory samples are kept in a cooler on ice until picked up by the lab. Strict chain of custody procedures are followed, and samples are delivered and analyzed within the appropriate holding times, as listed in Table 3-2. Completed chain-of-custody forms are included in Appendix C.

3.4 Follow-up Action Levels

Based on dry weather field screening results, immediate follow-up investigations are sometimes necessary to identify and eliminate pollutant sources. In order to determine whether an immediate source investigation is necessary, numeric action levels and best professional judgment are used to interpret the field screening results. If visual and/or analytical evidence of gross contamination are present at a site (e.g., substantial petroleum sheen, extremely high ammonia-nitrogen concentration, evidence of a sewage release, etc.), then an immediate source identification investigation is initiated. For sites that exceed numeric action levels but are not perceived as an immediate threat to water quality, a re-sampling is conducted within one day. An upstream pollutant source investigation is conducted thereafter if elevated concentrations persist and no sources can be identified in the immediate vicinity of the monitoring station. If elevated levels of pollutants are detected by the laboratory analyses, a comprehensive follow-up pollutant source investigation is conducted within two days of receiving the analytical reports from the lab. The results of these investigations are included in Section 8 of this report. Recommendations based on these investigations are included in Section 9.

The following three methods are employed to determine whether immediate or comprehensive follow-up investigations are necessary: (1) Numeric Action Levels; (2) California Toxics Rule (CTR); and (3) Best Professional Judgment. All three approaches are described in detail below and presented in Table 3-4.

Numeric Action Levels

Numeric action levels are used as the primary approach for interpreting pH, orthophosphate-P, nitrate-N, ammonia-N, surfactants, oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, and *Enterococcus* analytical results (see Table 3-4). Prior to the 2003 dry weather season, no standard action levels had been adopted for use throughout San Diego County. D-MAX calculated the current set of numeric action levels, which are based on county-wide sampling data and have been used by all Copermittees since the 2003 dry weather season. If pH, orthophosphate-P, nitrate-N, ammonia-N, or surfactants are observed above the numeric action level, a follow-up investigation is conducted within 24 hours to investigate the source unless best professional judgment indicated otherwise. If oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, or *Enterococcus* laboratory analytical results exceeded numeric action levels, then source investigations are conducted within two business days of receiving the test results from the lab.

California Toxics Rule

The CTR criterion maximum concentration (CMC) is used to determine appropriate action levels for dissolved trace metals, including cadmium, copper, lead, and zinc. The CTR equations, as provided in USEPA Federal Register Doc. 40 Code of Federal Regulations (CFR) Part 131, are used to calculate benchmarks based on the total

hardness of the sampled water, with the action levels increasing as hardness increases. More information on the CTR is available at http://www.epa.gov/region09/water/ctr.

Best Professional Judgment

Best professional judgment is utilized as the primary approach for interpreting turbidity, water temperature, and conductivity and as a secondary approach for interpreting the results of all other field and laboratory analyses. Under best professional judgment, the need for a follow-up investigation is left to the discretion of the D-MAX field crew due to their familiarity with the City of Poway Dry Weather Monitoring Program and their knowledge of typical levels for the tested parameters. Best professional judgment may indicate that results which either exceed certain action levels or statistical outliers may be the result of natural or background factors.

TABLE 3-4
ACTION LEVELS FOR FIELD SCREENING AND LABORATORY PARAMETERS

Field Screening Analytes	Action Levels[1]	Source/ Notes
pH	<6.5 or >9.0	Basin Plan, w/ allowance for elevated pH due to excessive photosynthesis. Elevated pH is especially problematic in combination with high ammonia-nitrogen.
Orthophosphate-P (mg/L)	2.0	USEPA Multi-sector General Permit
Nitrate-N (mg/L)	10.0	Basin Plan, and drinking water standards
Ammonia-N (mg/L)	1.0	Based on Workgroup experience. May also consider unionized ammonia fraction.
Surfactants (MBAS) (mg/L)	1.0	Basin Plan, with allowance based on Workgroup field experience and possible field reagent interferences.
Turbidity (NTU)	Best Professional Judgment	WQOs relevant to inland surface waters are not available. Base judgment on channel type and bottom, time since last rain, background levels, and most importantly visual observation (e.g. unusual colors and lack of clarity), and unusual odors.
Temperature (°C)	Best Professional Judgment	Base judgment on season, air temperature, channel type, shading, etc.
Conductivity (mS/cm)	Best Professional Judgment	Values > 5 mS/cm may indicate IC/ID however; EC may be highly elevated in some regions due to high-TDS groundwater exfiltration to surface water, mineral dissolution, drought, and seawater intrusion. Normal source ID and discharge elimination work is not effective in these situations. Knowledge of area background conditions is important. Values < 0.75 mS/cm may indicate excessive potable water discharge or flushing.
Laboratory Analytes	**Action Levels**	**Source/ Notes**
Oil and Grease (mg/L)	15	USEPA Multi-sector General Permit. If petroleum sheen is observed, the sample should be collected from the water surface. Visual observations may justify immediate investigation.
Diazinon (µg/L)	0.5	Response to diazinon and chlorpyrifos levels above 0.5 µg/L should focus on education and outreach to potential dischargers in the target drainage basin. Highly elevated levels should be investigated aggressively as with other potential IC/IDs.
Chlorpyrifos (µg/L)	0.5	
Dissolved Cadmium (µg/L)	California Toxic Rule	Use California Toxics Rule Table, 1-hour criteria to determine appropriate action level for individual samples. Table provides benchmarks based on hardness and dissolved metals concentration. For example, at 300 mg/L hardness the following action levels would apply: Cd – 14 ppb; Cu – 38 ppb; Pb – 209 ppb; and Zn – 297 ppb.
Dissolved Copper (µg/L)	California Toxic Rule	
Dissolved Lead (µg/L)	California Toxic Rule	
Dissolved Zinc (µg/L)	California Toxic Rule	
Total Coliform (MPN/ 100 mL)	50,000	Bacteria levels in many storm drains are likely to exceed public health guidance criteria. Use confidence interval test and best professional judgment to identify conveyances for source ID.
Fecal Coliform (MPN/ 100 mL)	20,000	
Enterococcus (MPN/ 100 mL)	10,000	

Notes

[1]The referenced action levels should not be the sole criteria for initiating a source identification investigation. Dry Weather Monitoring Program data should be interpreted using a variety of available information. Factors that should be considered include within-site and between-site sample variability.

°C	degrees Celsius
mS/cm	milliSiemens per centimeter
mg/L	milligram per liter
IC/ID	illegal connection/illicit discharge
MBAS	methylene blue active substances
MPN/100 mL	most probable number per 100 milliliters
NTU	nephelometric turbidity unit
ppb	parts per billion
USEPA	United States Environment Protection Agency
WQO	Water Quality Objectives

4 FIELD SCREENING RESULTS

The 2008 Dry Weather Monitoring Program began August 12, 2008, and was completed August 22, 2008. A total of 54 monitoring stations were visited. Field screening was conducted at the 50 sites where ponded or flowing water was observed. Since primary sampling sites 35, 131, 137, and 142 were dry, alternate sites 1, 103, 135, and 138 were selected as replacements. Completed field data sheets for each site visit are included in Appendix D.

4.1 Qualitative Observations

Qualitative observations, which are a routine part of the Dry Weather Monitoring Program, are summarized below and presented in Table 4-1:

Light Conditions
Light conditions were primarily sunny, but 16 samples were taken during overcast and partly cloudy weather.

Odor
Water samples from the majority of sites were odorless. Two samples had an odor like that of rotten eggs.

Color
Water samples taken from most of the sites were colorless, with the exception of six yellow and two brown water samples.

Clarity
Aside from negligible amounts of suspended particles, all but three sites had clear water samples. The others were slightly cloudy.

Floatable Materials
During routine field screening visits, trash was assessed at each site. Section 5 of this report includes the complete results of Trash Assessment. At nine of the sites trash was observed in contact with the water. Five sites had a sheen and eight sites had some bubbles on the surface of the water during the site visit.

Deposits
Sediment and fine particulates were observed at most sites. One site also had a deposit of what appeared to be cooking oil or grease (see Section 8 for the follow-up investigation).

Vegetation
Taking into account exposure to sunlight and soil, all sites displayed appropriate vegetation. Manholes lacking soil and sunlight showed no vegetation. Concrete channels displayed either limited or normal vegetation, and the natural creeks showed normal vegetative growth. No sites showed excessive vegetation that would significantly impair flow.

Biology
The presence of aquatic flora and fauna can indicate healthy water conditions. Algal growth is an indicator of persistent water flow. Many of the sampling locations were home to insects, snails, fish, crayfish, and/or tadpoles.

4.2 Field Analytical Results

Field analyses are conducted al all sites with flowing or ponded water. The measured constituents are described below.

Flow rates are the measurements of the volume of fluid passing through a given surface per unit time. Flow rate measurements are needed to calculate the load or particular amount of a pollutant discharged.

Water temperature is needed to assess the significance of other parameters, such as pH and conductivity. Also, the aquatic habitat must remain within a certain temperature range in order to sustain sensitive aquatic life. In the field, water temperature is measured immediately upon sample collection at each site with ponded or flowing water.

The **pH** is an expression of acidity or alkalinity of a water sample. The pH of an aquatic system will drive a variety of chemical reactions, including the availability of nutrients or the solubility of chemical substances, particularly heave metals.

Turbidity describes the clarity or cloudiness of a water sample, or the degree to which light is blocked by suspended material in the water. Turbid waters not only limit the amount of light that reaches submerged vegetation, thus reducing photosynthetic capacity, but excessive suspended particles can also absorb heat and increase water temperatures.

Specific Conductance (Conductivity) values indicate the total concentration of ions in an aquatic system and the ability of the water to conduct electricity. This parameter can be used to assess the mineral content of water and potentially help indicate the presence of dissolved pollutants.

Surfactant concentrations in water samples often reflect illegal discharge from industrial, commercial, or residential sources. Pollution resulting from surfactants alters the surface tension of water and disrupts the breathing mechanisms of fish gills and other aquatic organisms

Ammonia-Nitrogen (ammonia-N) is an indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia-nitrogen occurs naturally in the environment; however, in higher quantities it can become toxic to fish and other organisms.

Nitrate-Nitrogen (nitrate-N) is a common sign of nutrient pollution from agricultural or household fertilizer runoff. Nitrate pollution can cause excessive algal growth, which can deplete oxygen from the water during decomposition and eventually suffocate other aquatic life. During the field analysis, nitrate is measured in milligrams per liter (mg/L) NO_3 and converted into mg/L nitrate-N using a conversion factor of 0.226. This process is explained in Note 3 of Table 3-1.

Orthophosphate-Phosphorus (orthophosphate-P) is also an indicator of nutrient pollution from agricultural or household fertilizer runoff. Similar to nitrate-N, orthophosphate-P pollution can cause nutrient enrichment (eutrophication), stimulate algal growth, and thus deplete oxygen in the water to levels that are dangerous for aquatic life. Even low levels of orthophosphate-P can cause significant algal growth, as it is commonly the limiting nutrient in plant growth. During the field analysis, orthophosphate is measured in mg/L PO_4 and converted into mg/L orthophosphate-P using a conversion factor of 0.326. This process is explained in Note 6 of Table 3-1.

A statistical summary of the routine field analytical results is presented in Table 4-2. Table 4-3 shows the results of all field analyses conducted at the sampled sites. Graphs of the various

parameters and appropriate action levels for follow-up investigations are included at the end of this section.

TABLE 4-2
FIELD ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Average	Median	Standard Deviation	Number of Exceedances	Graph Number
Flow Rate (gpm)	134	<1.0	17.9	9.0	26.7	na	4-1

5 TRASH ASSESSMENT

5.1 Regulatory Requirements

Section II.B.3.C.(7) of the Municipal Permit's Receiving Waters and Urban Runoff Monitoring and Reporting Program requires Copermittees to assess the presence of trash in receiving waters and urban runoff at each dry weather field screening site. This trash assessment program is designed to provide information on the spatial extent and relative amount of trash present, as well at the nature and origin of the trash at the site.

5.2 Procedure and Definitions

The San Diego Copermittee Dry Weather Monitoring Workgroup developed a two-page Trash Assessment Form to document the amount and extent of trash and the threat to human and aquatic health. The first page is completed at every site. The second page, which includes information about the types, prevalence, potential routes, and sources of trash, is also completed at sites where a larger amount of trash is observed.

A qualitative estimate of the abundance of trash is made based upon a general impression of the site. The Trash Assessment Form includes five categories to describe the amount and extent of trash. The definitions are primarily qualitative, although numbers of trash pieces are also included in each category as a rough guideline. The five categories are listed below.

- *Optimal:* On first glance, no trash is visible. Little or no trash (<10 pieces) is evident when the evaluated area is closely examined for litter and debris.
- *Suboptimal:* On first glance, little or no trash is visible. After close inspection, small levels of trash (~10-50 pieces) are evident in the evaluated area.
- *Marginal:* Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing are present.
- *Submarginal:* Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing are present.
- *Poor:* Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health is assessed at each site using the following definitions:

- *Threat to Human Health* - Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris have the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g., medical waste, diapers, human waste), or have the potential for physical harm (sharps, entanglement, nails, etc.).
- *Threat to Aquatic Health* – Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc.) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and

other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category.

In the event that a site is noted as potentially posing a threat to human or aquatic health, additional descriptive comments are recorded in the "Comments" section of the Trash Assessment Forms, included in Appendix D.

If a site is labeled as submarginal or poor, it is then assessed for types of trash present (e.g., automotive, biohazard, food waste), which are ranked based on the prevalence and potential threat to water quality of the items. Lastly, the potential mechanism through which trash reached the site (e.g., dumping, littering, upstream sources) and the potential source of the trash (e.g., construction, commercial, transient) are identified.

5.3 Trash Assessment Results

Table 5-1 and Graph 5-1 summarize the trash assessment results. Figure 5-1 provides a map of sampling sites and their corresponding trash assessment.

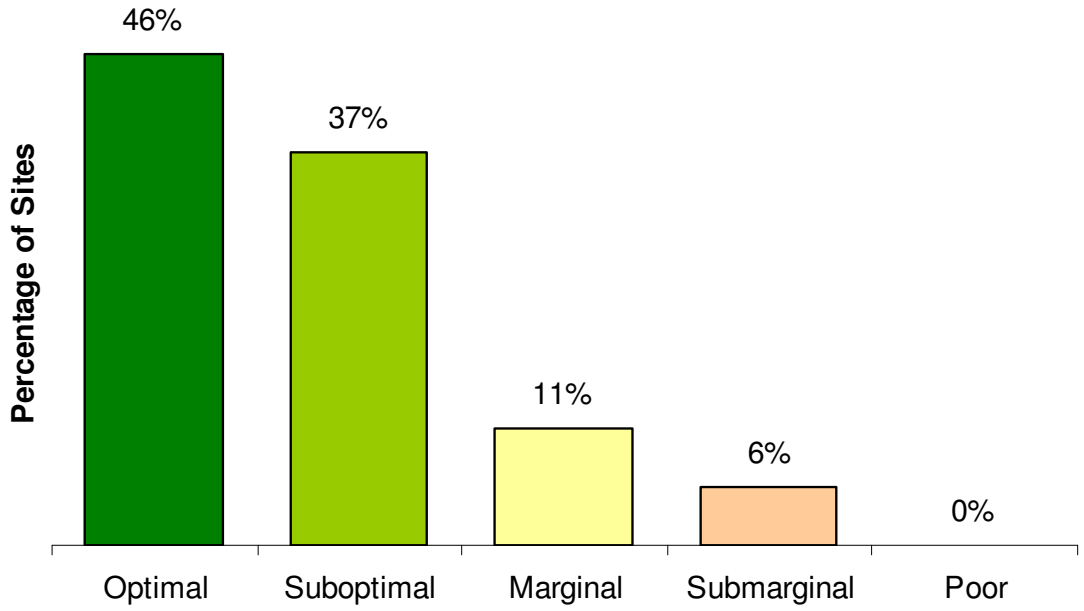
GRAPH 5-1
TRASH ASSESSMENT SUMMARY



The majority of sites sampled in the City of Poway were rated "optimal" or "suboptimal." None of the sites were considered to have "poor" trash levels. Two sites, 36A and 142, were determined to pose a threat to human or aquatic health.

5.3.1 Threat to Human or Aquatic Health

Site 36A is in a dry section of Rattlesnake Creek where the only source of water was ponded within a small outlet. During the site visit food packaging, plastic six-pack rings, toilet paper, and human waste were observed under the nearby road, where the creek was dry. The waste was likely a result of transient use of the site, especially as a small group of people was observed sitting in shade 50 feet downstream of the site in the creek bed. This site also had bacterial indicator exceedances, which may be related to the presence of human waste although it was not in contact with water.

Site 142 is in a dry segment of a natural creek, where it crosses under Range Park Road. Similar to Site 36A, toilet paper and human waste were observed under the bridge. Since the site was dry, the human waste was not in contact with water. This waste was also likely due to use of the site by transients.

5.3.2 Submarginal or Poor Sites

TABLE 5-2
BREAKDOWN OF SUBMARGINAL SITES

Site	Types of Trash	Ranking	Potential Route 1	Potential Route 2	Potential Source 1	Potential Source 2
36A	Food Packaging	1	Littering	Upstream	Transient	School
	Biohazard Waste	2	Dumping	--	Transient	--
132	Household	1	Dumping	--	Household	--
	Construction	2	Dumping	--	Household	--
	Food Packaging	3	Littering	--	Household	Transient
142	Biohazard Waste	1	Dumping	--	Transient	--
	Food Packaging	2	Littering	--	Transient	--

Site 36A is in a dry section of Rattlesnake Creek where the only source of water was ponded within a small outlet. In addition to human waste noted at the site (see above sub-section), there were a number of items of food packaging litter, including plastic six-pack rings, beer cans and bottles, and snack food wrappers. A large portion of the litter appeared likely to have been generated at the site itself due to its placement in a few locations under the bridge. Some litter may also have been brought to the site from upstream since the upstream conveyance also had some food packaging litter where observed near Twin Peaks Middle School.

Site 132 is located in a residential area off of Lake Poway Road. A number of large trash items, including plywood obstacles and a mannequin, appeared to have been brought to the site intentionally by individuals engaging in recreational activities, such as paintball. Other household items, such as a small soccer goal, bicycles, and other recreational equipment also appeared to have been dumped at the site. Food packaging litter was also observed, potentially also due to the use of the site as a recreational area.

Site 142 is in a natural creek in a residential area off of Range Park Road, east of Espola Road. The creek was dry during the site visit, but under the road food packaging litter, human waste, and toilet paper were observed. A likely explanation for this trash is use of the site by transients, since nearby areas are only residential and upstream areas are open spaces.

6 LABORATORY ANALYTICAL RESULTS

6.1 Summary

Laboratory analyses were conducted at 14 sites, representing over 25 percent of all primary sites. The laboratory constituents measured are defined below.

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources, including parking lots and streets, washing activities, illegal discharges, and automobile repair facilities.

Total hardness measures the amount of calcium and magnesium ions in a water sample, with the result expressed in mg/L of $CaCO_3$. Hardness itself is not considered a pollutant, but is measured to calculate CTR limits for dissolved metals. Hardness affects the solubility of dissolved metals as well as other minerals and ions.

Diazinon and **chlorpyrifos** are organophosphate pesticides that can be harmful to aquatic organisms if transported in urban runoff. Diazinon and chlorpyrifos are highly toxic to birds, mammals, and insects. They are also highly toxic to freshwater fish and invertebrates following acute exposure.

Metal contamination of water can arise from a variety of sources, including automobile operation, automobile repair, vehicle washing, galvanizing of metal, and electronics manufacturing. Certain dissolved metals are toxic pollutants that are hazardous to the survival and development of aquatic organisms.

The California Toxics Rule for Dissolved Metals in Fresh Waters defines metal toxicity as a function of water hardness, with toxicity decreasing as hardness increases. Therefore, each dissolved metal has a CMC for a specific total hardness. The laboratory samples are analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Table 6-1 shows the sites with detectable metal concentrations, the measured total hardness of the sample, and the associated CMC.

TABLE 6-1
CTR – CMC FOR DISSOLVED METALS

Dissolved Cadmium			
Site	**Total Hardness (mg/L)**	**CMC (mg/L)**	**Concentration (mg/L)**
65	753	0.038	0.007
Dissolved Copper			
Site	**Total Hardness (mg/L)**	**CMC (mg/L)**	**Concentration (mg/L)**
36A	473	0.058	0.007
Dissolved Zinc			
Site	**Total Hardness (mg/L)**	**CMC (mg/L)**	**Concentration (mg/L)**
36A	473	0.437	0.021

Note:
- Sites listed are those at which a particular dissolved metal was detected.
- For equations and constants used in California Toxics Rule calculations, see http://www.epa.gov/ost/standards/ctr/toxic.pdf

Coliform bacteria are relatively harmless to humans and are present in mammalian digestive tracts and are naturally found in most surface waters and soils. Testing water samples for total coliform bacteria is a standard practice in public health since a high level of total coliform bacteria often may indicate the presence of other more harmful, pathogenic organisms, sometimes of fecal origin. Total coliform is measured in lieu of these pathogens since the various pathogens are generally present in much smaller quantities and are difficult to detect.

Fecal coliform, a subset of coliform bacteria, and ***Enterococcus*** are found primarily in the gastro-intestinal tracts of humans and animals and are commonly used as indicators of water contamination by fecal matter. A host of human diseases, particularly those of the gastro-intestinal tract, are spread through water contaminated with fecal matter. Without the use of significantly more expensive methods, such as ribotyping, it is not possible to determine whether the source of fecal material was human or animal. Human fecal material is known to contain pathogens dangerous to humans, but the relationship between animal waste and threat to human health is less certain.

A summary of the laboratory analytical results is presented in Table 6-2. Table 6-3 presents the laboratory results from all samples. Laboratory reports are included in Appendix C.

TABLE 6-2
LABORATORY ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	No. of Exceedances
Total Hardness (mg/L $CaCO_3$)	2,150	451	*
Oil and Grease (mg/L)	nd	nd	0
Diazinon (µg/L)	nd	nd	0

Notes:
Red Bold Type = value exceeds action level
denotes a confirmation visit
nd = not detected; na = not analyzed
CTR = California Toxics Rule; CTR action levels for metals are calculated based upon on the total hardness value of the water sample.
* Number of fecal coliforms is derived from *E. coli* count. Number of fecal coliforms = (Number of *E. coli*) / 0.85
** Total hardness is not considered a pollutant (see section 3.4 for details), and thus has no established action level for the purposes of dry weather monitoring.

7 DATA ANALYSIS

This first part of this section provides an overall evaluation of test results obtained from the 2008 Dry Weather Monitoring Program. The second portion of this section describes historical trends for various constituent exceedances.

7.1 2008 Results

Of the 50 sites sampled, one site had an exceedance for surfactants concentration, two sites had nitrate-nitrogen exceedances, and two sites exceeded fecal indicator bacteria action levels. Specifically one site exceeded action levels for total coliforms, fecal coliforms, and *Enterococcus*, but the other had an exceedance only for *Enterococcus*.

TABLE 7-1

18A		✓			
36A			✓	✓	✓
141		✓			

Note: Table reflects exceedances occurring during routine visits only, not confirmation or follow-up visits.

7.2 Previous Results

Historical results of exceedances are presented in Table 7-2, Graph 7-1, and Graph 7-2. Table 7-2 shows the percentage of sampled sites that have had exceedances each year of the Dry Weather Monitoring Program. Graph 7-1 illustrates the percentage of exceedances for field constituents, and Graph 7-2 presents the percentage exceedances by year for laboratory analyses.

Since 2002, no exceedances were measured in water temperature, conductivity, oil and grease, cadmium, copper, lead, zinc, or chlorpyrifos. Thus, these constituents have not been included in the following graphs.

The historical data for the results of field analyses presented in Graph 7-1 indicate a decreasing trend in ammonia-nitrogen exceedances. There have been no exceedances in pH since 2002. No discernable trend is apparent for surfactants, turbidity, nitrate-nitrogen, or orthophosphate-phosphorus.

Historical data for laboratory analyses presented in Graph 7-2 indicate that fecal coliform exceedance rates have decreased somewhat over the years. There have been no diazinon exceedances since 2003.

TABLE 7-2

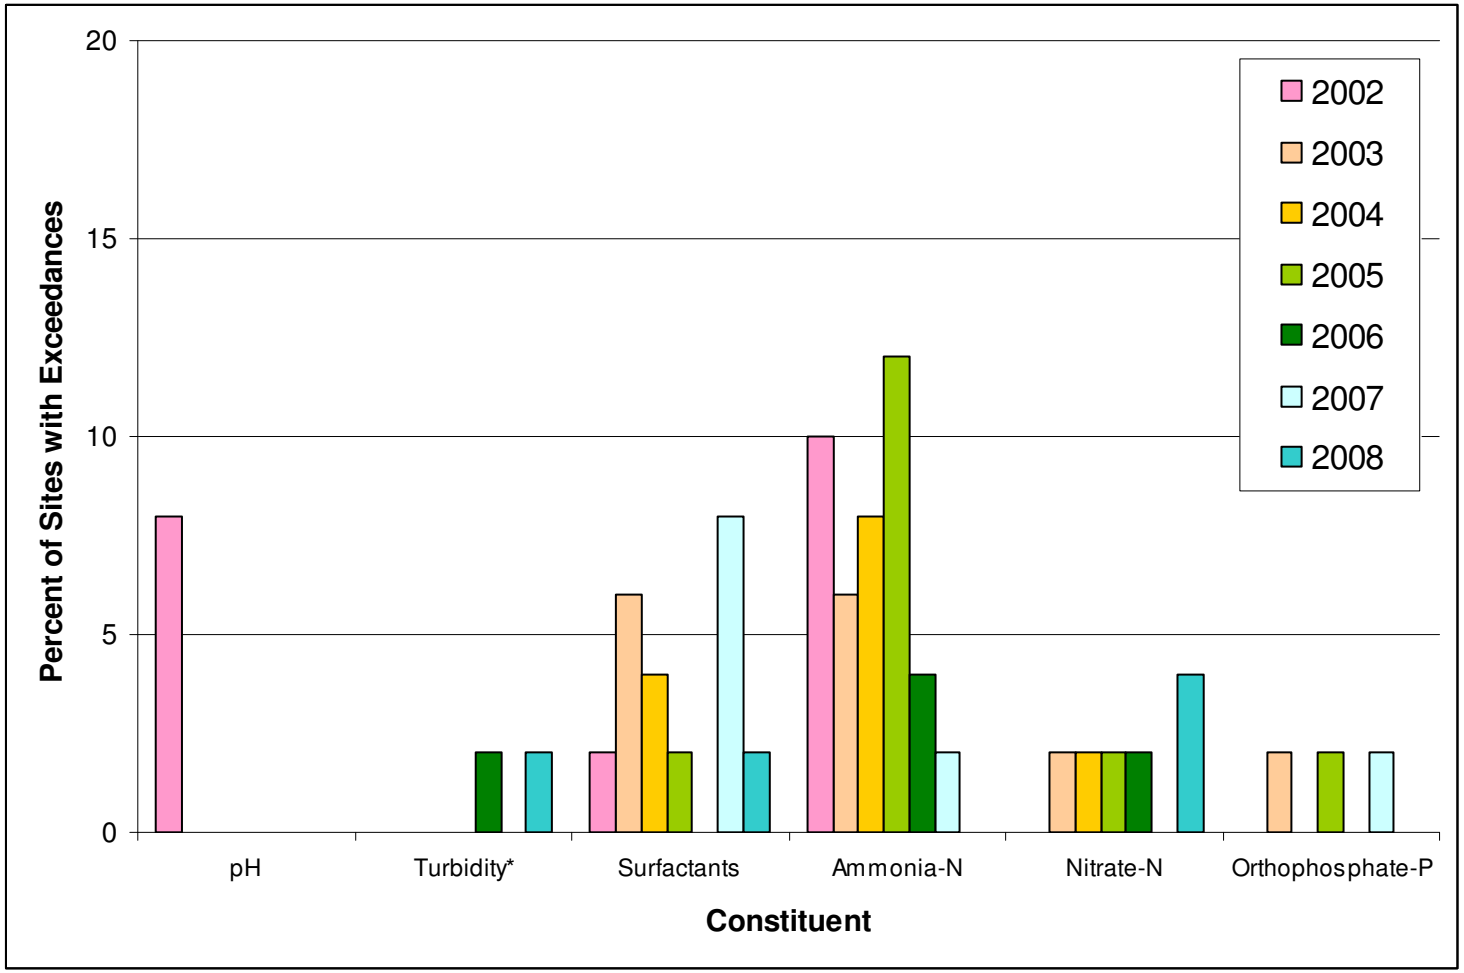
Notes:

Results based on complete routine visits only. Confirmation visits, follow-up visits, and dry sites not included.

* By regional consensus, the action level for conductivity has been changed during past years from numeric values to best professional judgment in order to account for sites in which salt water and groundwater increase conductivity. High conductivity levels at these sites are not necessarily exceedances or considered to be a water quality concern.

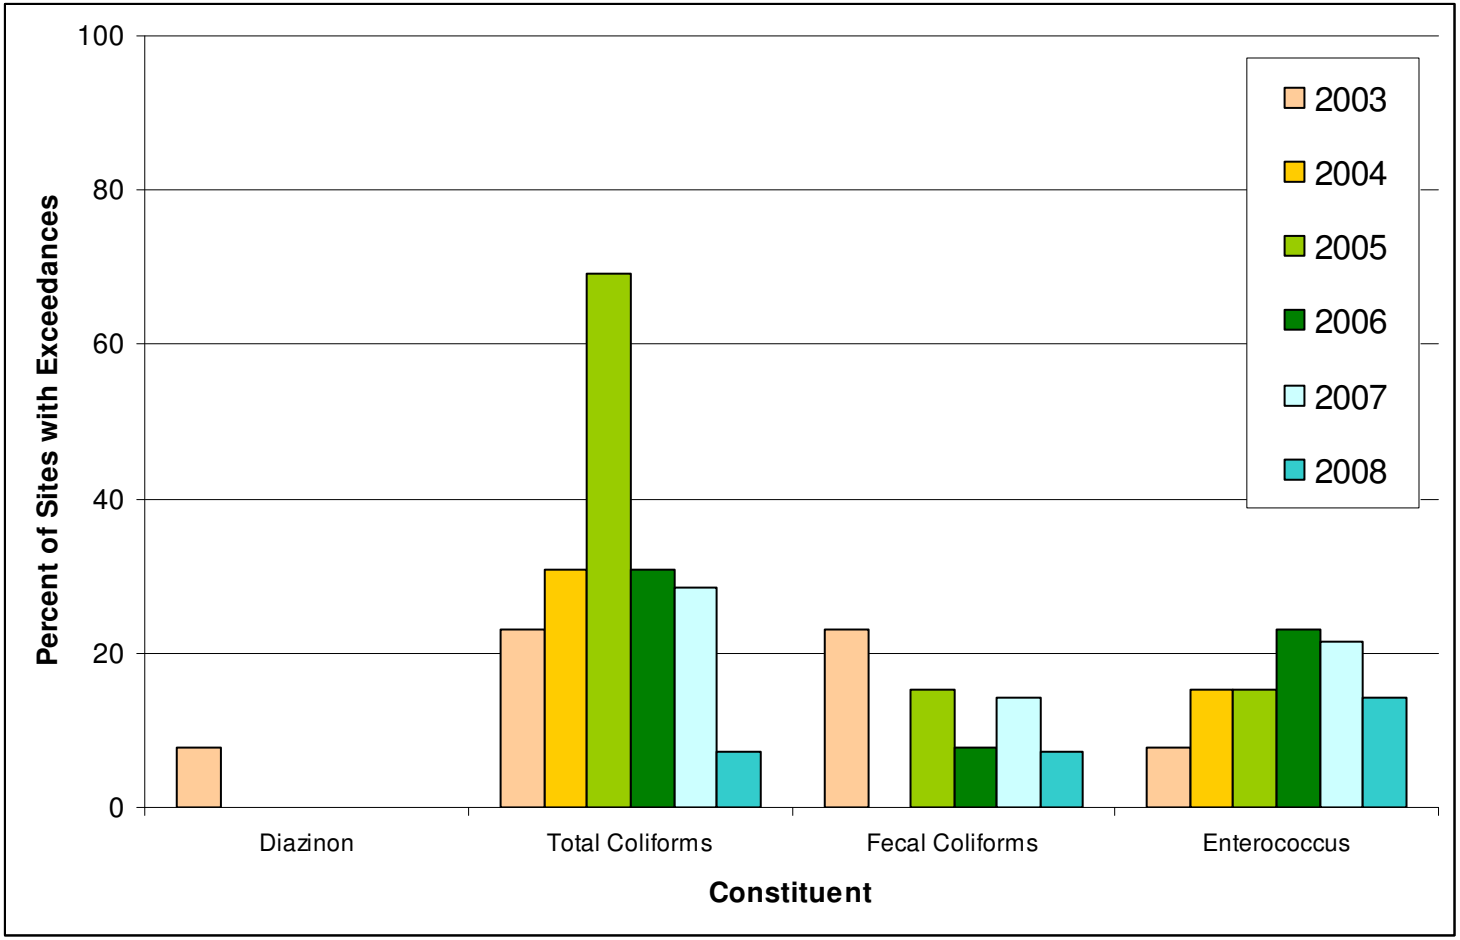
** Bacteria analytical methods in 2002 do not allow numerical comparison of results to those in subsequent years.

GRAPH 7-1
PERCENT OF SITES WITH FIELD CONSTITUENT EXCEEDANCES BY YEAR



* Action level for turbidity is best professional judgement.

GRAPH 7-2
PERCENT OF SITES WITH LABORATORY ANALYSIS EXCEEDANCES BY YEAR



8 FOLLOW-UP INVESTIGATIONS

One of the main purposes of the Dry Weather Monitoring Program is to identify IC/IDs. Both field screening and laboratory analytical results are compared to regionally developed action levels (Table 3-4). When a parameter is measured at or above its action level, it is possible that an IC/ID is present. To further investigate potential IC/IDs, additional investigation is initiated whenever action levels are exceeded. Procedures for such investigations are described below.

8.1 Investigation Procedures

When Dry Weather Monitoring Program results exceed action levels, the City either conducts an investigation to identify the source of the discharge or provides rationale for why the discharge does not pose a threat to water quality and does not need further investigation. An immediate source identification investigation is initiated if visual and/or analytical evidence of gross contamination is present at a site during a routine investigation. Examples of gross contamination include substantial petroleum sheens, constituent concentrations well above action levels, abnormal colors or odors not attributable to natural site conditions, or evidence of a sewage release; such conditions would typically be considered a threat to human health or the environment. Immediate source identification investigations are also often conducted when surfactants exceedances are noted. Past experience has shown that an immediate investigation is much more likely to identify the source of the exceedance for this particular constituent. This is because such exceedances are often related to washing activities, which are typically intermittent in nature.

When further investigation is needed but an immediate upstream investigation is not necessary, the City initially confirms the results by resampling within two business days of being informed of the exceedance. For field screening, this is within two business days of the initial test. The overall time frame for laboratory analytical results depends on the time that results are received from the lab, but investigations will be conducted within two days of receiving the data, where applicable. These investigations are labeled as “confirmation” visits in this report, and they are used to guide further upstream investigations where necessary.

When confirmation sampling confirms continued exceedance of action levels, then the City conducts further investigation to identify the source of the exceedance. This type of investigation is referred to as “follow-up” in this report. Additional investigation is not conducted when exceedances are not noted during the confirmation visit or when the exceedance is known not to be the result of IC/IDs, as without a high constituent level to track upstream, the investigation is unlikely to identify any sources. As noted earlier, when gross contamination is observed during a routine visit, an immediate upstream source investigation is initiated. Prior to beginning an upstream source investigation, field staff review previous dry weather monitoring reports and consult MS4 maps to plan the investigation.

Dry weather flows are generally traced from the site in an upstream direction along the conveyance system. Photos, narrative descriptions of relevant visual observations made, and GPS coordinates are recorded to aid in documentation and in potential enforcement procedures. Water samples are collected at upstream confluences for analyses of the constituent(s) being tracked. All samples are documented through the completion of field data sheets, which are provided in Appendix D. If the samples are being submitted for laboratory analysis, they are delivered within the appropriate holding time, and all appropriate chain-of-custody procedures are followed. Sampling and analysis methods are typically the same as those used for the routine portion of the Dry Weather Monitoring Program, with the exception of bacteria analyses. During confirmation and follow-up sampling IDEXX Colilert and Enterolert

methods are used instead of the multiple tube fermentation (MTF) methods used for routine visits. The IDEXX methods provide faster turn-around time than the MTF methods: results can be provided within 24 hours instead of several days. Shorter turn-around time allows investigators to conduct further follow-up testing sooner where necessary. The IDEXX methods are also less expensive than MTF methods, which allows field investigators to take samples from a larger number of locations.

If the results of the upstream investigation indicate that an IC/ID may be present, appropriate City personnel will be notified. Where appropriate and feasible, field staff may also contact the party responsible for the discharge directly regarding the IC/IDs and potential BMPs.

8.2 Investigated Sites

During the 2008 Dry Weather Monitoring Program additional investigations to investigat potential IC/IDs were completed at six sites. Three sites had field constituent exceedances, two sites had exceedanced for bacteria, and one site was investigated for a visual observation of an unusual oily deposit. A brief description of each site, the field and/or laboratory analytical results, photographs of selected upstream locations, and the results of upstream investigations are included below. Table 9-2 in Section 9 of this report provides a summary of the investigation results.

Site 2

Site 2 is an outlet downstream of various business parks that releases runoff to the southwest corner of the Stowe Detention Basin on Stowe Drive, east of Pomerado Road. During the initial round of field testing, the surfactants concentration at Site 2 was 1.25 mg/L, above the action level of 1.0 mg/L. The sample water was also slightly turbid (30.58 NTU), but this level of turbidity was not considered an action level exceedance. An immediate upstream investigation was conducted to look for activities that could be the source of the surfactants. While one sample taken from a manhole upstream had a slightly higher surfactants concentration (2.0 mg/L) than the site, no potential sources were observed upstream. The following business day, water was sampled and retested at Site 2 for surfactants. The surfactants concentration had fallen to 0.625 mg/L, below the action level, and the water was no longer turbid (6.31 NTU), suggesting that the high levels were transient. Per the established upstream investigation procedures, no further upstream investigation was conducted.

Site 15

Site 15 is located at a concrete pipe outlet to Poway Creek at the north end of Montauk Street (Photo 8-1). No field tested constituents exceeded action levels, but the ponded water at the outlet appeared significantly turbid (46.24 NTU), and was considered an exceedance. During a confirmation visit the following day the turbidity had decreased to 19.8 NTU, which was not deemed an action level exceedance. The high turbidity was likely the result of a transient flow.

Photo 8-1: Ponded water and dense vegetation in the outlet at Site 15.

Laboratory analysis results received later indicated that *Enterococcus* bacteria had exceeded the action level of 10,000 MPN/100mL. A confirmation visit and upstream investigation were conducted for *Enterococcus*. The area immediately upstream of the outlet is residential, but further upstream there is an earthen channel in an open area. Of seven catch basins in the residential area, only

one had any water. Upstream location 15-1 is a catch basin nearly 300 feet south of the site on Montauk Street, between Soule Street and Tustin Street. Water was ponded up to five inches deep in the catch basin, and there were deposits of leaves, sediment, and medium-sized river rock.

Samples were taken from Site 15 and upstream location 15-1 and submitted to the laboratory for analysis. Laboratory analysis results found that the *Enterococcus* levels in both samples were below the action level. It appeared that the high levels of *Enterococcus* bacteria may have been a transient condition, potentially from a recent transient flow or from wildlife activity in the nearby natural creek. Figure 8-1 and Table 8-1 present the sampling locations and monitoring results from the investigation.

FIGURE 8-1

Note: **Red Bold Type** = value exceeded action level

Site 18A

Site 18A is a concrete channel running under Hilleary Place from a residential complex, east of Community Road. Clear water was flowing in the channel at about 9 gpm at the time of the initial visit. During the site visit, the water appeared to increase in flow because some clumps of algae suddenly dislodged, and the water became slightly turbid. The sample was collected shortly after, when the water had cleared. Nitrate-nitrogen was detected at 11.65 mg/L, over the action level of 10 mg/L. A follow-up investigation was conducted the following day to retest for nitrate-nitrogen, and the concentration had dropped below the action level to 9.46 mg/L, indicating that the high nitrate-nitrogen level was transient. No further investigation was conducted. Note that for several years up to 2006, this site has had consistently elevated levels of nitrate-nitrogen. Upstream investigation in previous years had implicated a nitrate-laden groundwater seepage near Somerset Road as the source of nitrate-nitrogen and in many cases as the only source of flowing water.

Site 36A

Site 36A is in a dry section of Rattlesnake Creek where the only source of water was ponded within a small outlet on the north side, just west of Tierra Bonita Road (see Photo 8-2). This site has a varied history of field screening action level exceedances and a consistent pattern of bacterial indicator exceedances. This year, no field screening exceedances were observed. However, laboratory analysis determined that concentrations of all three bacterial indicators (total coliform, fecal coliform, and *Enterococcus*) exceeded their respective action levels, similar to last year.

Photo 8-2: Ponded water and debris within the northern outlet at Site 36A.

Conditions at the site itself appeared conducive to high levels of indicator bacteria, most conspicuously a significant amount of used toilet paper and human waste (see Photo 8-3) located under the bridge, as near as 20 feet from the ponded water. Food packaging litter and organic matter was also observed around the site and in the pipe upstream of the site. While at the site a small group of people, potentially day laborers, were observed sitting in a shady part of the creek bed. A confirmation visit to the site was performed during which conditions at the site appeared similar to the first visit, and all three bacterial indicators were still in exceedance of their respective action levels. An investigation was conducted along the line upstream of the outlet to look for other potential sources.

Photo 8-3: Human waste, toilet paper, and other litter underthe bridge at Site 36A.

Similar to last year, no surface runoff was observed entering the storm water conveyance system during the upstream investigation. A manhole southwest of the Tierra Bonita Road and Twin Peaks Road intersection was dry inside, but a small accumulation of damp leaves was observed inside the manhole. At the northwest corner of the same intersection, a sample of ponded water was collected from the more southern of two catch basins (upstream location 36A-1). A moderate amount of organic material, such as bark and

leaves, was noted covering the floor of the catch basin, along with two pieces of litter. In the water sample taken both total coliform and *Enterococcus* counts were above their respective action levels, but were not as high as what was found downstream at Site 36A. Though no other water was available to sample upstream of Site 36A, it was noted that the catch basin immediately upstream of 36A-1, 20 feet to the north, was damp and contained a significant amount of organic debris and a few items of food packaging litter. Also on the northeast corner of the same intersection, dried lawn clippings were observed in another damp catch basin, and horse droppings were noted on the sidewalk. The horse droppings, however, did not appear likely to be transported to the storm drain except in the case of rain since nearby ground was not landscaped or irrigated.

The upstream investigation identified three potential sources of high indicator bacteria levels: decaying organic material upstream of the site, human waste at the site, and horse manure in the nearby areas. All four of the locations inspected upstream had small to significant accumulations of organic debris at various stages of decomposition. The one upstream location with ponded water also had high bacteria levels. The human waste observed at the site was located just upstream of where the sample was taken for Site 36A, but the natural creek was dry, contributing no flow to Site 36A at the time of the site visits. The site is located next to horse stables, and manure was present near an upstream inlet, but no direct contact between manure and water was observed. Decomposing organic material upstream of the site is currently a likely direct contributor to the bacterial action level exceedances at the site, however human waste is also located immediately upstream of the site in the creek and would be a more serious threat once the rainy season began. A map and table summarizing the bacterial upstream investigation for Site 36A are presented below.

FIGURE 8-2
SITE 36A UPSTREAM INVESTIGATION MAP

TABLE 8-2

Note:

Red Bold Type = value exceeded action level

* Number of fecal coliforms was derived from the *E. coli* count using the following formula:
Number of fecal coliforms = (Number of *E. coli*) / 0.85.

Site 124

Site 124 is located immediately downstream of three concrete pipes that outlet into Rattlesnake Creek near the Community Road and Olive Meadows Drive intersection. During the initial site visit, water was flowing only from the middle pipe, and an unusual red deposit appeared to be caught in some aquatic vegetation at the mouth of this pipe (see Photo 8-4). When a small amount of this deposit was brought into contact with the adjacent surface of the water it produced a rainbow sheen characteristic of oil. Based on the field investigators' experience inspecting restaurants, the observed sheen, and the color and clarity of the deposit, the deposit was likely used cooking oil or grease. According the City's MS4 map, the area tributary to this outlet is entirely residential. Each of five storm drain inlets in this residential area was visually inspected for evidence of dumping, but no unusual stains or odors were observed. No apparent source was observed. Based on the upstream investigations it is possible that the source of the deposit was a one-time or intermittent discharge from improper disposal of cooking grease associated with residential activities in this area.

Photo 8-4: Red oily deposits caught in green algae at the mouth of the inlet.

Site 141

Site 141 is located where Sycamore Creek crosses under Old Coach Road, just south of the driveway for the Hidden Valley Ranch property. Runoff appears to pond east of the crossing before being restricted in low-flow conditions to passing through a smaller metal pipe within a low concrete dam. A continuous flow of 5 gpm was observed running from the pipe to a large ponded area under the bridge. During the initial round of field screening nitrate-nitrogen was measured at 11.00 mg/L, above the action level. A confirmation visit the next day also found a high nitrate-nitrogen level of 12.58 mg/L along with a similar flow rate, so an upstream investigation of Sycamore Creek commenced.

Sycamore Creek joins with an unnamed tributary approximately 800 feet upstream from the site. The unnamed tributary comes from the east on the Hidden Valley Ranch property, and the creek comes from the south along Old Coach Road. The unnamed tributary is downstream of two sequential irrigation ponds and is dry below these ponds until a point closer to where it joins with Sycamore Creek. It appeared that Sycamore Creek upstream of the unnamed tributary was dry and did not contribute runoff to the site.

Photo 8-5: Ponded area downstream of metal outlet pipe, upstream of a few ponded areas leading to Site 141.

While the pond did not appear to have discharged recently to the creek, a sample was taken from the lower irrigation pond (upstream location 141-1) to see if it had any potential to be a significant source of nitrate-nitrogen,. The sample had a low concentration of nitrate-nitrogen (2.10 mg/L) and was not a likely contributor to the downstream exceedance. Further downstream in the eastern creek branch a ponded area where a metal pipe, currently dry, was set up to outlet into the creek a sample was taken (see Photo 8-5, upstream location 141-2). Upstream location 141-2 also had a low nitrate-nitrogen concentration (1.49 mg/L). In the 800 feet between upstream location 141-2 and Site 141 there were only a few disconnected low ponded areas that may flow under the soil surface as interflow to one another. This seemed likely since the soil was sandy and uncompacted, and while all areas upstream of the site in the creek bed surface were ponded or dry, the site had a steady flow from one day to the next (see Photo 8-6).

Photo 8-6: Downstream edge of ponded area less than 200 feet upstream of Site 141, which flows continuouslv.

In summary, it appears that there are essentially no upstream surface inputs of water to the site, and the potential inputs have significantly lower nitrate-nitrogen levels than what was measured at the site. However, some water with a higher level of nitrate-nitrogen likely arising from interflow or groundwater comes to the surface just upstream of the site. It should be noted that this is one of the lowest lying areas in the surrounding hilly terrain. The water that emerges has moderately high nitrate-nitrogen concentrations, just above the action level. Therefore it is likely that the nitrate-nitrogen originates in the interflow or groundwater immediately upstream of the site, which may have been influenced by the long history of agriculture in the upstream area.

9 SUMMARY AND RECOMMENDATIONS

9.1 Summary

9.1.1 Summary of Field Screening and Laboratory Analysis Data

Fifty primary monitoring locations were selected and visited for the 2008 Dry Weather Monitoring Program. Four alternate sites were visited and sampled to replace the four primary sites that were dry. Most sites visited had clear, colorless, flowing water, with normal or limited vegetation that provided habitat for a variety of organisms, including insects, snails, fish, crayfish and frogs. Table 9-1 provides a summary of action level exceedances.

TABLE 9-1
SUMMARY OF ACTION LEVEL EXCEEDANCES

Field Screening (50 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
pH	0	0 %	--
Conductivity	0	0 %	--
Turbidity	1	2 %	15
Surfactants	1	2 %	2
Ammonia-Nitrogen	0	0 %	--
Nitrate-Nitrogen	2	4 %	18A, 141
Orthophosphate-Phosphorus	0	0 %	--
Laboratory Analyses (14 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
Oil & Grease	0	0 %	--
Cadmium	0	0 %	--
Copper	0	0 %	--
Lead	0	0 %	--
Zinc	0	0 %	--
Diazinon	0	0 %	--
Chlorpyrifos	0	0 %	--
Total Coliforms	1	7 %	36A
Fecal Coliforms	1	7 %	36A
Enterococcus	2	14 %	15, 36A

Note: Data is from the initial site visits only.

In addition to the action level exceedances listed in the table above, an upstream investigation was conducted for one site due to a visual observation. An oily deposit was observed at Site 124, which was likely waste cooking grease. Table 9-2 describes the result of the investigation.

A formal trash assessment was performed for the first time in 2008 in accordance with the Municipal Permit. Fifty-four sites, including dry sites, were assessed, and 45 of the sites were scored as optimal or suboptimal, having little or no trash. Six sites had marginal levels of trash, and three were considered submarginal due to trash consistent with human use and dumping.

9.1.2 Summary of Follow-Up Investigation Data

Table 9-2 presents the conclusions based on the results of confirmation visits and upstream investigations conducted at six sites for the 2008 Dry Weather Monitoring Program.

TABLE 9-2
SUMMARY OF UPSTREAM INVESTIGATIONS

Site	Upstream Investigation Target Constituent(s)		Results / Probable Sources
	Field	Laboratory	
2	Surfactants		No direct source of surfactants was observed. Surfactants level was below the action level when tested the next day. The exceedance was most likely due to a transient flow.
15	Turbidity	*Enterococcus*	No potential source of *Enterococcus* or turbidity was observed for this ponded water. Both turbidity and *Enterococcus* were below their respective action levels during confirmation visits.
18A	Nitrate-N		No direct source of nitrate-nitrogen was observed. The nitrate-nitrogen level was below the action level when tested the next day. The exceedance was most likely due to a transient flow.
36A		Total Coliforms, Fecal Coliforms, *Enterococcus*	Decaying organic material, and horse manure were noted upstream, and human waste was observed adjacent to the site.
124	Oily Deposit (Visual Observation)		No apparent source of discharge at upstream area. Potential one-time or intermittent improper disposal of cooking grease or oil in the upstream residential area.
141	Nitrate-N		No above ground source of flow or nitrate-nitrogen observed. Area is rural and has minimal storm drain infrastructure; most conveyances are natural channels. Exceedance potentially due to influence of historically agricultural soil on groundwater or interflow that surfaces just upstream of the site.

9.2 Recommendations

Based on the results of the 2008 Dry Weather Monitoring Program for the City of Poway, these follow-up actions are recommended for consideration.

9.2.1 Education

- Provide educational materials regarding proper disposal of cooking fats, oils, and grease (FOG) to the residents upstream of Site 124. Distribution should include, at minimum, residences from 13252 to 13360 Olive Meadows Drive, 14008 to 14050 Mazatlan Way, 14008 to 14101 Hermosillo Way, and all residences on Olive Mesa Court, Olive Mesa Place, and Olive Crest Way. Consider coordinating with existing FOG efforts conducted by the City.

9.2.2 Inspection and Maintenance

- Clean out decaying organic material and sediment in the storm water conveyance directly upstream of the outlet at Site 36A and in upstream conveyances near Twin Peaks Middle School to allow proper drainage and reduce stagnation of water. Remove horse manure from upstream areas, and encourage horse owners to clean up after their animals. Remove human waste from under the bridge by Site 36A. Work with the people who frequent the site to ensure proper disposal of litter and human waste.
- Remove human waste from under the bridge at Site 142. Work with the people who frequent the site to ensure proper disposal of litter and human waste.
- Remove trash from sites 36A, 132, 142, 2, 21A, 64A, 91, 106, and 119, which were scored as submarginal or marginal by the trash assessment during routine site visits. Additionally, prioritize removal of trash from sites 121 and 140, where the trash was also in contact with the water. Add these sites to the City's existing clean up schedule as appropriate
- The remaining sites with a suboptimal trash score should also be cleaned up and added to the City's existing clean up schedule as appropriate, including sites 15, 18A, 21B, 30, 34, 35, 90, 103, 105, 109, 111, 115, 124, 128, 130, 135, 136, and 137.

9.2.3 Site Replacement

Sites 137 and 142 have been dry for the past several years. It is recommended that these sites be replaced by alternate sites 14 and 103 for future dry weather monitoring, since these alternates have the most extensive set of available historical data.

EXECUTIVE SUMMARY

In January 2007, the Regional Water Quality Control Board (RWQCB) issued Order No. R9-2007-0001 (Municipal Permit), a National Pollution Discharge Elimination (NPDES) Permit regulating discharges to the storm drain system within 18 municipalities in San Diego County, the County of San Diego, the San Diego County Regional Airport Authority, and the San Diego Unified Port District (collectively referred to as "Copermittees"). As required by the Municipal Permit, the City of Poway (City) has created and maintains a Jurisdictional Urban Runoff Management Program (JURMP). The City's JURMP includes Best Management Practices (BMP) standards for businesses, construction and development projects, residents, and the City's own activities. The JURMP also includes programs for water quality monitoring and educational outreach.

This JURMP Annual Report presents the City's activities to implement its JURMP during the 2008/2009 fiscal year, which began on July 1, 2008, and ended on June 30, 2009. Each section of this JURMP Annual Report discusses the City's efforts during 2008/2009 and how they met the requirements of the Municipal Permit. Key actions taken for the major components of the City's storm water program are summarized below.

Development Planning Component

During 2008/2009, the City continued to oversee development activities occurring in the City to mitigate potential threats to water quality due to such activities. The City successfully obtained verification of treatment control BMP maintenance from all projects on its treatment control BMP inventory. Nine sites in the City with approved treatment control BMPs were inspected, and all high threat to water quality (TTWQ) projects were inspected prior to the start of the 2008/2009 rainy season. The City completed reviews of historical development records for all Priority Development Projects dating back to the inception of the City's Standard Urban Storm Water Mitigation Plan (SUSMP) in 2002. The City has initiated weekly SUSMP requirements coordination meetings between engineering and storm water staff, and engineering, planning, and storm water staff collaborated to develop draft revised development approval documents and routing procedures. These efforts foster good communication and clear understanding of how SUSMP requirements are being applied to development projects in the City.

During 2008/2009, the City created and filled a Storm Water Program Administrator position. The Storm Water Program Administrator is responsible for coordinating with various staff in the City who have storm water responsibilities, such as engineers, planners, and Public Works maintenance staff. The administrator was hired in late 2008/2009, and modifications have been made to improve the effectiveness of the implementation of several components of the City's storm water program, including the City's development planning component. These efforts will continue into 2009/2010.

Construction Component

During 2008/2009, the City had 209 active construction sites, prioritized as 30 High Threat to Water Quality (TTWQ), 68 TTWQ, and 88 Low TTWQ. The City conducted plan checks of erosion control plans to ensure construction projects complied with the City's minimum BMP requirements. The City conducted 1,452 inspections to verify BMP implementation, and used advanced enforcement measures in 44 cases.

Municipal Component

The City inspected all high TTWQ municipal fixed facilities and all high TTWQ municipal mobile activities. The City also continued its rigorous street sweeping and MS4 maintenance programs. A total of 860.82 tons of trash and debris was removed from street sweeping activities, and 1,312.25 cubic yards of debris was removed from standard MS4 maintenance. The City also cleaned 95 miles of sewer line and continued to maintain its sanitary sewer system to decrease the potential for a sanitary sewer overflows (SSO); there were no SSOs during the reporting period. City personnel were regularly trained regarding storm water pollution prevention concepts and practices.

Industrial and Commercial Component

During 2008/2009, the City inspected all high TTWQ sites on the City's industrial and commercial inventory and met the Municipal Permit requirement that at least 25 percent of inventoried sites in the City be inspected each year. The City conducted a total of 145 full industrial and commercial inspections. The City's watershed-based industrial and commercial inventory was updated based on information gained since the previous inventory update in 2007/2008. The City's updated industrial and commercial inventory includes 558 stationary and 37 mobile businesses. During inspections, the City notified industrial and commercial businesses of the City's BMP requirements by discussing concepts with facility personnel. The City followed up with 37 facilities at which BMP deficiencies were identified. Inspectors also assessed each facility's compliance with the General Industrial Permit (Industrial Permit).

Residential Component

A large percentage of land use in the City of Poway is residential, and the City worked to educate these residents through a variety of means. The City provided each quarterly edition of the *Poway Today* newsletter to more than 18,000 residential addresses and each issue was archived on the City's website. Each newsletter published during 2008/2009 contained a variety of storm water-related articles. During 2008/2009 the City hosted a variety of waste disposal events and encouraged residents to participate in these events. Residents disposed of 294,995 pounds of household hazardous waste (HHW), 12,215 gallons of used oil, and 1,106 used oil filters during these events. The City also responded to 12 complaints made to the City's storm water hotline regarding residential areas. The complaint investigations were used as opportunities to enforce BMP requirements and to educate residents.

Illicit Discharge Detection and Elimination Component

On September 10, 2008, the RWQCB adopted Addendum No. 2 to the Municipal Permit. This addendum requires the City to wait to submit the illicit discharge detection and

elimination (IDDE) section of its JURMP Annual Report until the report for 2009 Dry Weather Monitoring Program, which took place after July 1, 2009, is finalized. The section must be submitted to the RWQCB no later than December 15, 2009.

While the full section will not be submitted until after September 30, 2009, the City did still implement its IDDE program component during 2008/2009. During this period, the City responded to and resolved 50 complaints made to its storm water hotline and the Public Works maintenance hotline. The recommendations in the final report for the 2008 Dry Weather Monitoring Program were addressed during this reporting period. The City continued maintenance of the sanitary sewer system to prevent SSOs, and there were no SSOs during 2008/2009.

Education Component

As a means to raise storm water awareness in various communities, the City continued to conduct various education and outreach activities throughout 2008/2009. The City's efforts resulted in an estimated 254,375 impressions. City staff attended six training sessions and continued to hold weekly construction project review training sessions. The City continued to circulate the quarterly *Poway Today* newsletter to businesses and residents. Each newsletter sent during 2008/2009 included storm water-related articles aimed at both residents and businesses in the City. Industrial and Commercial businesses were also provided educational material during inspections and new businesses license applicants were mailed educational material. Additionally, the City continued working with I Love A Clean San Diego to provide educational presentations and storm water literature to the public. Approximately 45 adults and 465 school-aged children attended presentations hosted by I Love A Clean San Diego that included information about storm water issues, watersheds, and recycling used motor oil.

Public Participation Component

Public participation activities in 2008/2009 included cleanup events, which have a direct effect on water quality, and outreach activities, through which the City works to increase general knowledge and awareness regarding storm water issues. Volunteers of the City's Adopt-a-Park and Adopt-a-Trail programs logged 1,371 hours. During the 2008/2009 bi-annual self-haul waste disposal events, a total of 1,663 households participated and disposed of over 665 tons of trash. The City also maintains a permanent household hazardous waste (HHW) collection facility, which collected 294,995 pounds of HHW, over 815 gallons of used motor oil, and 333 used oil filters during the 2008/2009.

Fiscal Analysis Component

The City continued to collect a Storm Water Fee to provide a dedicated source of funds for its Storm Water Pollution Prevention Program. Portions of the Program that benefit only City-owned properties or undeveloped properties were funded by the City's General Fund.

Effectiveness Assessment Component
The City continued to evaluate the effectiveness of its JURMP implementation; some new metrics were used in 2008/2009. The City has seen some encouraging signs of the effect of its program, such as lower amounts of pollutants in its Dry Weather Monitoring Program in recent years and no SSOs reported in 2008/2009.

Special Investigations
Aside from upstream investigations conducted as part of the Dry Weather Monitoring and Sampling Program, no special investigations were needed or conducted during this reporting period.

Non-Emergency Fire Fighting
City staff continue to implement BMPs during regular maintenance of fire and emergency vehicles and equipment, training exercises, facilities maintenance, and post-emergency rehabilitation of response equipment.

JURMP Revisions
Any changes made to the JURMP since the JURMP update in the spring of 2008 are discussed throughout this JURMP Annual Report.

Conclusions and Recommendations
The City will continue to implement the programs in its JURMP during 2009/2010; it is anticipated that some program refinements will continue to be made as implementation progresses. The City will also collaborate with the other Copermittees to improve the efficiency of its program and to develop updated methods of assessing program effectiveness.

1.0 INTRODUCTION

1.1 BACKGROUND

This Jurisdictional Urban Runoff Management Program (JURMP) Annual Report presents a summary of the activities of the City of Poway (City) during the 2008/2009 fiscal year. Preparation and submittal of the JURMP Annual Report is required by San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit).

1.1.1 REGULATORY BACKGROUND

The 1987 amendments to the Federal Water Pollution Control Act (also known as the Clean Water Act, or CWA) established a framework for regulating Municipal Separate Storm Sewer System (MS4) discharges under the National Pollutant Discharge Elimination System (NPDES). The RWQCB issued the first regional NPDES permit for municipalities in the San Diego Region in 1990, followed by a revised permit in 2001. The current Municipal Permit in turn replaced the 2001 permit, RWQCB Order No. 2001-01, in 2007.

Like all the other regulated municipalities in the San Diego region, collectively referred to as Copermittees, the City developed and submitted a JURMP to the RWQCB in 2002. As required by the Municipal Permit, the City submitted an updated JURMP in March 2008. The JURMP includes management measures for a variety of different sectors and activity types such as municipal, industrial, commercial, construction, and significant development and re-development.

Annual reports on the implementation of the JURMP are required to be submitted to the RWQCB September 30 of each year. This JURMP Annual Report presents information from the 2008/2009 fiscal year, which extended from July 1, 2008, to June 30, 2009.

1.1.2 CITY SETTING

The City of Poway is located in central San Diego County, and is bordered by the City of San Diego and unincorporated portions of San Diego County. The City itself includes approximately 39 square miles and an estimated population of approximately 50,000. The City of Poway extends across three watersheds in San Diego County. The northern portion of the City lies in the San Dieguito Watershed, which is designated as Hydrologic Unit (HU) 905. The southern half of the City is part of the Los Peñasquitos Watershed, HU 906. A very small portion of eastern Poway lies in the San Diego River Watershed, HU 907. This portion of the City is designated as permanent, un-developable open space. Because the area draining to San Diego River is permanent undevelopable space, the Municipal Permit does not include City of Poway as a

responsible party for the San Diego River Watershed Urban Runoff Management Program (WURMP).

1.2 Purpose and Objectives

The City's JURMP presents a strategy to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The JURMP includes a variety of programs intended to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. This JURMP Annual Report has been prepared to document the City's implementation of its JURMP during the 2008/2009 reporting period.

1.3 Report Organization

This report follows the standard reporting outline jointly developed by the Copermittees and submitted to the RWQCB in July 2007. The following sections are included in the JURMP Annual Report.

Section 1 Introduction
Section 2 Development Planning Component
Section 3 Construction Component
Section 4 Municipal Component
Section 5 Industrial and Commercial Component
Section 6 Residential Component
Section 7 Illicit Discharge Detection and Elimination Component
Section 8 Education Component
Section 9 Public Participation Component
Section 10 Fiscal Analysis Component
Section 11 Effectiveness Assessment Component
Section 12 Special Investigations
Section 13 Non-Emergency Fire Fighting
Section 14 JURMP Revisions
Section 15 Conclusions and Recommendations
Section 16 References

Each section includes all the sections required by the standard JURMP Annual Report format. In some cases, additional subsections within the standardized sections have been added to provide a clearer explanation of the City's activities during the reporting period. For example, in this introduction section, the standard reporting format only includes subsections 1.1 and 1.2. Subsection 1.1, Background, has been divided into subsections 1.1.1, Regulatory Background, and 1.1.2, City Setting, for the sake of clarity.

2.0 DEVELOPMENT PLANNING COMPONENT

2.1 INTRODUCTION

The development planning component of the City's JURMP aims to improve overall storm water quality by reducing the discharge of pollutants from development projects to the MEP and managing increases in runoff from development projects that have the potential to negatively affect downstream water bodies.

The major components of the City's program include development project reviews to apply Standard Urban Storm Water Mitigation Plan (SUSMP) requirements, BMP inspections, and requiring parties responsible for installed BMPs to certify that appropriate maintenance has been conducted each fiscal year.

2.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the reporting period are presented in the following bulleted list. More details about the City's activities for this component of its storm water program are provided in the remainder of this section.

- Inspected BMPs at nine completed sites with approved treatment control BMPs.
- Obtained maintenance verification certifications from all inventoried projects.
- Worked with other Copermittees to develop a final, revised Model SUSMP and a draft Hydromodification Management Plan.
- Created and filled a new Storm Water Program Administrator position to centralize responsibility for coordinating among different City staff with respect to storm water program responsibilities. After the position was filled in late 2008/2009, the City began reorganizing its approach to implementing the development planning component of its JURMP. Major tasks completed are listed below.
    - Completed reviews of submitted SUSMP documents dating back to the inception of the SUSMP program in 2002.
    - Developed drafts of revised development approval documents and routing procedures. City storm water, engineering, and planning staff have all collaborated in this process.
    - Provided training about SUSMP requirements to new engineering staff and established a weekly SUSMP requirements meeting between engineering and storm water staff.

2.2 LAND USE PLANNING

2.2.1 BACKGROUND

The City's General Plan was last updated in 2002 and contains water quality and watershed protection principles in its Natural Resources Element. The principles established in 2002 provide an ample framework for implementing the development planning requirements of the Municipal Permit, and no changes to these policies were necessary during this reporting period.

2.2.2 SOURCE CHARACTERIZATION

The City's General Plan contains established restrictions on the types of new development projects based on their planned land uses to ensure public safety and limit negative impacts to the surrounding environment. No changes to the development restrictions in the City's General Plan for storm water purposes were implemented during the reporting period.

2.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

Please refer to the City's updated JURMP document for a list of the water protection policies included in the City's General Plan. These policies remained the same throughout the reporting period.

2.2.4 PROGRAM IMPLEMENTATION

The City implemented its water protection-related land use policies during the reporting period mainly through the City's Municipal Code. The City updated the SUSMP requirements in its Municipal Code as part of its JURMP update process in 2007/2008. No changes to sections of the City's Municipal Code relating to water quality protection measures for development and redevelopment projects were made during the 2008/2009 reporting period.

Details on how the City implemented its established water protection policies through its environmental review process and its development project approval and verification processes during the reporting period are provided in Sections 2.3 and 2.4 of this JURMP Annual Report.

2.3 ENVIRONMENTAL REVIEW PROCESS

The City's current environmental review process is detailed in the City's JURMP. No modifications to the City's environmental review process were made during the reporting period.

2.4 Development Project Approval and Verification Process

2.4.1 Background

During the 2008/2009 fiscal year, the City implemented the watershed protection principles in the City's General Plan through various aspects of the City's development project approval and verification process, as detailed below.

2.4.2 Source Characterization

The different priority pollutants, sources, and activities associated with development projects within the City are addressed through the implementation of the City's Municipal Code. The City's SUSMP regulations are included in Municipal Code chapters 16.100 through 16.109. Projects subject to SUSMP regulations are identified by completion of applicability checklists. More detail about this process is provided in Section 2.4.4.2.

2.4.3 Best Management Practice Requirements

The City's BMP requirements for development projects were updated in 2007/2008 as part of the process of revising the City's JURMP to meet the requirements of the current Municipal Permit. A new regional model SUSMP document was prepared by the Copermittees and approved by the RWQCB on March 25, 2009. The City will be working to incorporate the new requirements into its Municipal Code in 2009/2010, but no changes to the BMP requirements were made during 2008/2009.

2.4.4 Program Implementation

During the 2008/2009 fiscal year, the City required implementation of its BMP requirements for all development projects through education, the development project approval process, and the treatment control BMP inspection and maintenance verification program.

During the reporting period, it was also brought to the City's attention by RWQCB staff that treatment control BMPs for The Heights project, which is subject to SUSMP requirements, had not been properly sized. As a result of becoming aware of this issue, the City initiated a review of existing development review processes and also contracted with D-MAX Engineering, Inc. (D-MAX) to review submittals from previously approved projects dating back to the inception of the SUSMP in 2002.

City storm water staff has since worked closely with planning staff and engineering staff, including recently hired engineers, to develop clearly documented processes and forms for the development approval process. The documents include a procedural sheet, a flow chart outlining the major steps in the review process, a revised storm water requirements applicability checklist, guidelines for preparation of WQTRs, and a

SUSMP requirements checklist to be used in the review of WQTRs. Draft versions of these documents were presented at a meeting between RWQCB staff and City staff on June 23, 2009.

2.4.4.1 Outreach and Staff Training

As mentioned above, the engineers previously responsible for reviewing WQTRs submitted for projects subject to SUSMP left the City due to staff turnover. D-MAX was retained to assist with review of WQTRs submitted for projects subject to SUSMP during this period.

Toward the end of the 2008/2009 reporting period, the City filled several engineering vacancies. City storm water staff have since been working with new engineering staff to ensure they are familiar with the City's SUSMP regulations. A training session on treatment control BMPs for City engineers and inspectors is scheduled to be completed in early 2009/2010. The training session will include a PowerPoint presentation about common treatment control BMPs and associated maintenance measures and field visits to several installed BMPs. The field component of the training will include demonstrations of how to verify installation of BMPs prior to occupancy and to check maintenance of BMPs during routine inspections after installation has been completed.

Project proponents are made aware of SUSMP requirements through the development review process. Distribution of maintenance verification letters to parties responsible for maintenance of treatment control BMPs at completed projects has also increased the level of knowledge of regulated parties. Beginning in 2009/2010, the City also now conducts weekly meetings to discuss SUSMP requirements and status of SUSMP projects. The meetings include the City's land development engineers, Principal Engineer, and Storm Water Program Administrator.

2.4.4.2 Urban Runoff Approval Process for Development Projects

All development projects that required City permits were required to undergo the City's urban runoff approval process as detailed in the City's JURMP. Checklists were completed to determine storm water requirements for each project, including whether SUSMP requirements applied. The City records this information for each project in a spreadsheet continuously throughout the year. A summary of the projects submitted during 2008/2009 and whether each was subject to SUSMP requirements is presented in Table 2-1 at the end of this section.

Of the submitted projects, nine were determined to be subject to SUSMP requirements. These nine projects are listed in Table 2-1, and a more detailed description of them, including types of treatment control BMPs proposed, is presented in Table 2-2, also located at the end of this section. During 2008/2009 all SUSMP projects approved by the City proposed high or medium removal efficiency treatment control BMPs, so no

feasibility analyses justifying the use of lower efficiency BMPs were necessary. During the reporting period, no projects received a SUSMP waiver for implementation of treatment control BMPs, and at this time the City has no plans to develop a SUSMP waiver mitigation program.

The City continued to work with developers to retrofit existing flood control detention basins for use as regional treatment control BMPs. The most recently retrofitted basin is the Gate Drive detention basin, located off Gate Drive, northeast of the South Poway Business Park area. The retrofitting of this basin allows it to provide treatment for the Hampton Inn and Business Park Hotel/Restaurant Site projects, as well as many other previously developed properties within South Poway Business Park that would otherwise not have treatment for their runoff. The basin was operational prior to the completion of the Hampton Inn and Business Park Hotel/Restaurant Site projects, and it was included in the City's annual water quality monitoring study that provides data about detention basin effectiveness. More information about that study is presented in Section 11 of this JURMP Annual Report. Figure 2-1 shows the locations of the retrofitted detention basins and their respective drainage areas treated.

Hydromodification Management Plan

During the reporting period the Copermittee Land Development Workgroup met regularly to discuss key Hydromodification Management Plan (HMP) development issues and provide updates on the status of consultant work products. City staff regularly participated in the workgroup meetings. A draft HMP was submitted to the RWQCB for review in May 2009.

The City's current Municipal Code contains detailed Interim Hydromodification Criteria (IHC) which the City will continue to implement until the HMP is finalized and adopted. One development project undergoing the City's review process during the previous reporting period, Hidden Valley Ranch, was subject to the IHC since it is larger than 50 acres. Several proposed plans were presented in 2006/2007 and rejected by the City. Additional submittals were prepared in 2007/2008, but the project has since gone inactive, and it is unclear if and when the project may resume the process of obtaining necessary permits and approvals. Because the project is currently inactive, it is not included in the list of projects presented in Table 2-1.

BMP Installation Verification

City inspectors check to see that proposed BMPs have been implemented prior to granting occupancy for development projects subject to SUSMP. Through its inspection and maintenance verification program, which is described in more detail in Section 2.4.4.3 below, the City has become aware of some situations where proposed BMPs could not be located. It is unclear whether this is because BMPs were not present at the time occupancy was granted or because BMPs were later removed. The City is taking steps to ensure that the presence of all proposed BMPs is verified during inspections prior to granting occupancy. Training for inspectors responsible for pre-occupancy inspections is being provided in early 2009/2010, as discussed above in Section 2.4.4.1

2.4.4.3 TREATMENT CONTROL BMP INSPECTION AND MAINTENANCE VERIFICATION PROGRAM

Each fiscal year the City updates its inventory of completed projects with approved treatment control BMPs prior to mailing out operation and maintenance verification letters. The list of projects compiled during this process in 2008/2009 is presented in Appendix A.1. Several notable updates to the inventory were made in 2008/2009.

- Projects that have not yet completed construction were removed from the inventory to clarify which projects are subject to inspections and the maintenance verification requirements.
- Costco and Costco Car Wash, which had been listed as two different projects since they were completed as two phases of development, were consolidated into one listing. This is because they are on the same piece of property and share the same responsible party and treatment control BMPs.
- Breathe Fitness was identified as a duplicate of Poway Hyundai/Mitsubishi and was removed from the inventory. Poway Hyundai/Mitsubishi occupies the property formerly identified as Breathe Fitness.
- Midland Elementary School, which is part of the Poway Unified School District, a Phase II entity not under the City's jurisdiction for NPDES permitting purposes, was removed from the inventory.
- Lucidi Farms was removed from the inventory because it was found not to be a Priority Development Project during the City's review of historical SUSMP records in June 2009.
- The City's regional detention basins were removed because they are not themselves Priority Development Projects. The regional detention basins are still inspected and maintained each year by City Public Works staff, and the recorded list of inspection and maintenance activities done each year is provided to City storm water staff prior to the beginning of each wet season. The regional detention basins are listed in Table 2-3 and shown on Figure 2-1.

Maintenance verification letters were mailed to the responsible parties for each of the sites listed in Appendix A.1 prior to the beginning of the 2008/2009 wet season. City Public Works staff provided documentation of maintenance for all City-maintained BMPs in September 2008. While not all private parties responded to the first mailing, the City was able to obtain completed verification forms from all of the sites listed in Appendix A.1 during the reporting period.

During the course of 2008/2009, some additional projects were completed. The City's procedure for sites completed after the inventory is established for the fiscal year is to complete the check for BMPs prior to occupancy, record the site information and assign it a TTWQ priority, and then add them to the inventory of projects subject to the City's inspection and annual maintenance verification program the following fiscal year. This

process helps the City focus its inspection resources on sites more likely to have maintenance deficiencies, as maintenance deficiencies are generally less likely at sites with recently installed BMPs. A table of the projects completed after the establishment of the inventory presented in Appendix A.1 is presented in Table 2-4.

The City contracted with D-MAX to complete inspections of sites from its list of inventoried projects with approved treatment control BMPs. Table 2-5 lists a summary of how inspections conducted corresponded with the relevant Municipal Permit requirements.

Table 2-5
Assessment of Compliance with Required Inspection Frequencies

Class	Number of Sites	Inspections	Percent Inspected	Permit Requirement	Requirement Met
All Inventoried Sites	19	9	47%	20%	**Yes**
Sites with Drainage Inserts	15	9	60%	50%	**Yes**
High Priority Sites	4	4	100%	100%	**Yes**

During inspections the maintenance statuses of BMPs were assessed. In some cases, corrective actions were necessary. Table 2-6 at the end of this section presents a list of the inspections completed during the reporting period, whether issues requiring significant corrective actions were discovered, and the resolution status for instances where corrections were necessary.

Other Follow-Up and Enforcement Actions

In addition to sites inspected during the fiscal year, the City's review of previously approved SUSMP projects, described in Section 2.4.4 above, found several issues requiring action by the City. Four sites, General Atomics (formerly Slough Estates/Slough Parkway Business Center), 13795 Blaisdell Pl, Olhausen, and Anytime Towing Expansion, were found to have design deficiencies. A note has been added to the Assessor's Parcel Number (APN) file for each of these projects so that BMP design requirements can be revisited when future permits are applied for at these properties. Due to a referral from the RWQCB, the Heights project was also found to be proposing inadequately sized detention basins as its post-construction BMPs. The City contacted the project engineer and developer regarding this issue, and the design was revised to include properly-sized high-rate media filters as treatment control BMPs instead of the detention basins.

BMP installation issues were also identified for two sites: Pomerado Properties and Temple Adat Shalom. Pomerado Properties was inspected during 2008/2009, and the follow-up status for that site is shown in Table 2-6. The City has informed Temple Adat Shalom that the BMPs proposed on the plans were found not to be present at the site

and are required to be installed. The City continues to work with Temple Adat Shalom to address this issue in 2009/2010. The City is providing additional training for inspectors responsible for verifying the presence of BMPs prior to occupancy, as discussed in Section 2.4.4.2 above.

2.5 Development Planning Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

2.6 Program Review and Modification

The inspection frequency for treatment control BMPs has been revised to match the Municipal Permit language more closely. Table 4-2 of the JURMP has been revised to read as follows:

Table 4-2
Treatment Control BMP Inspection Frequencies

Site Type	Inspection Frequency
High Priority	Annual, Completed Prior to Wet Season
Contains Drainage Inserts	50 Percent of All Sites with Drainage Inserts Per Year
All Other Sites	As Needed

Table 2-6
2008/2009 Treatment Control BMP Inspections and Follow-Up Actions

No.	Project	Inspection Date	Inspection Findings	Follow-Up	Resolution Status
1	Kirkham Ridge	9/29/2008	No significant corrections needed.	NA	NA
2	Kohl's/Staples	9/29/2008	All drainage inserts overfull with sediment and debris. Maintenance is needed.	Received confirmation from responsible party that maintenance had been completed on 12/1/08. Follow up inspection completed 6/17/09. All filters confirmed to be maintained in satisfactory condition.	Resolved
3	Pomerado Properties	9/29/2008	Drainage inserts not present. Sand filter operational.	Property owner was contacted, and drainage insert installation confirmed on 7/10/09. A second catch basin that is downstream of the sand filter may have required a drainage insert as well. The City is investigating whether this second insert needs to be installed.	In progress
4	Poway Corporate Lot 9	9/29/2008	Most BMPs properly maintained. One BMP needed maintenance, and one large catch basin required two drainage inserts instead of one.	Follow up inspection completed 6/8/09. BMP maintenance deficiencies resolved. Large catch basin still needed a second drainage insert. The property owner has been contacted and instructed to install the insert.	In progress
5	Poway Hyundai/Mitsubishi	9/29/2008	No significant corrections needed.	NA	NA
6	Midland Animal Clinic	6/17/2009	No significant corrections needed.	NA	NA
7	Pomerado Lot 92	6/17/2009	No significant corrections needed.	NA	NA
8	San Diego County Credit Union	6/17/2009	No significant corrections needed.	NA	NA
9	Hennes Dental Office	6/18/2009	No significant corrections needed.	NA	NA

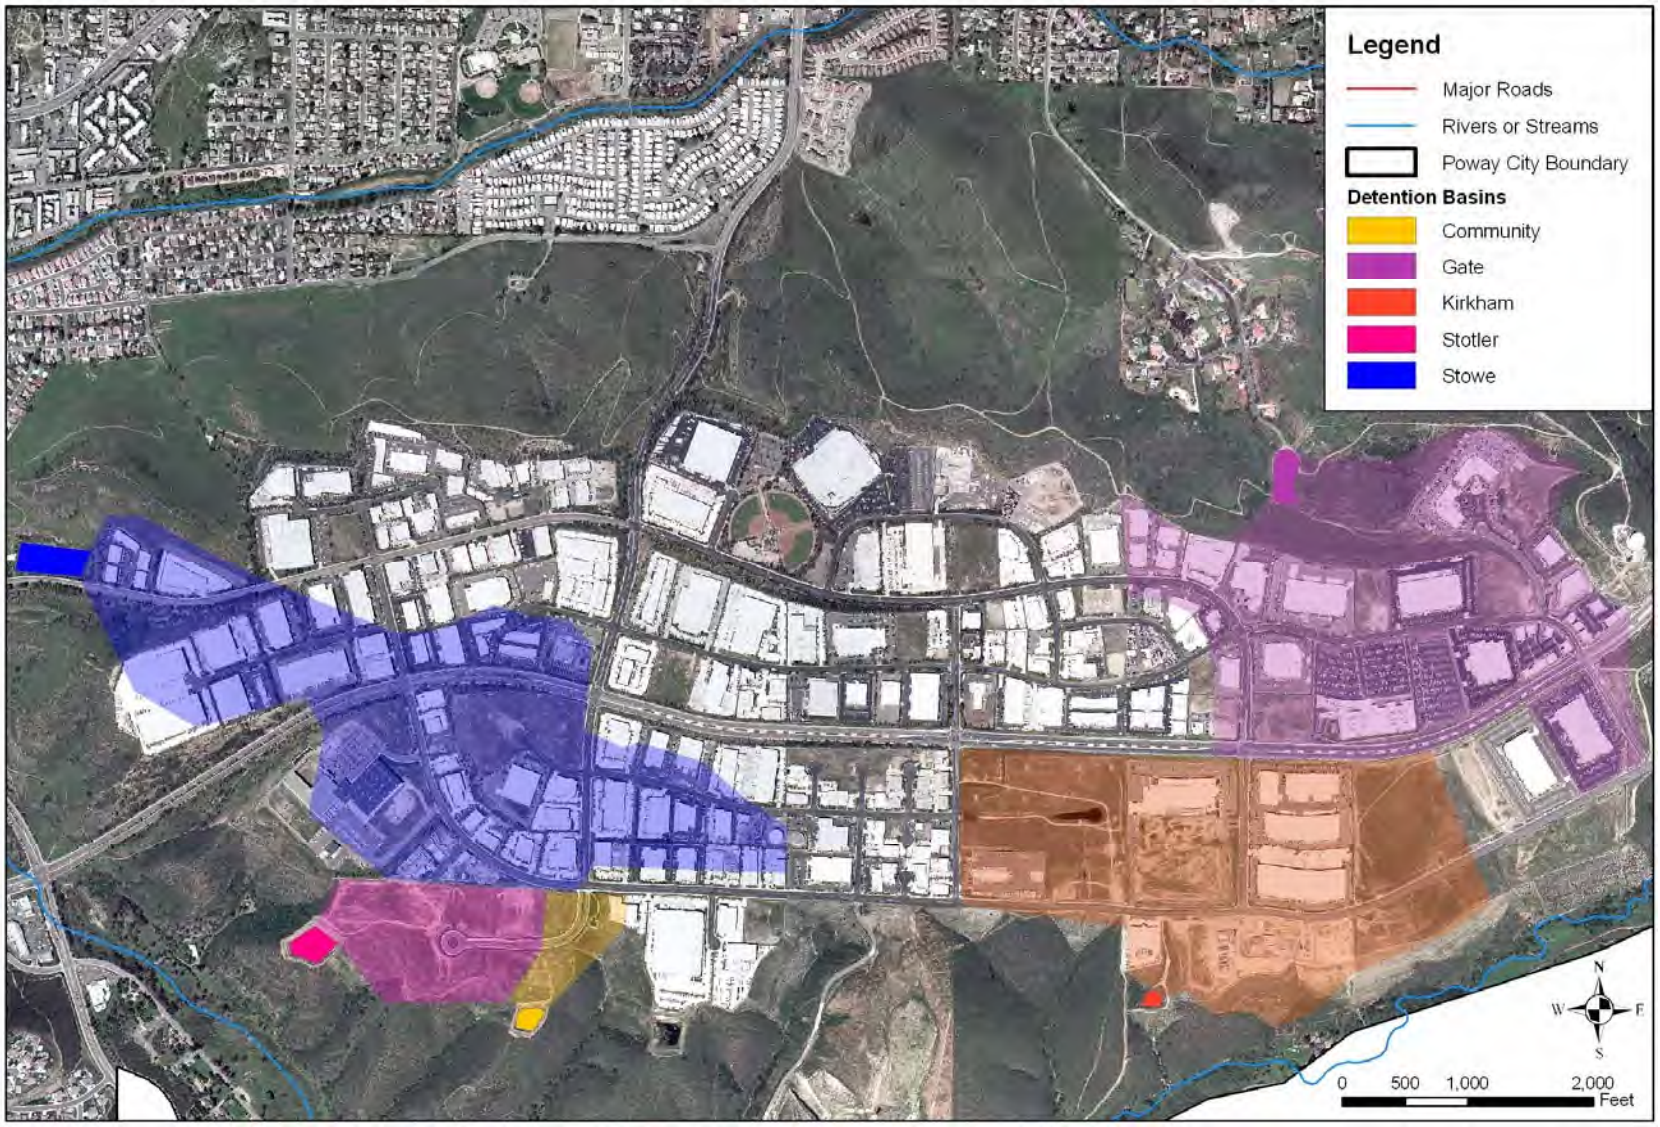
South Poway Retrofitted Detention Basins and Corresponding Drainage Areas Treated



3.0 CONSTRUCTION

3.1 INTRODUCTION

The goals of the Construction Component of the City of Poway's JURMP are to prevent or minimize the impacts of sediment and other pollutants generated by construction activities within the City of Poway on the City's municipal separate storm sewer system (MS4), receiving water bodies, and environmentally sensitive areas. To achieve this, the City continues to implement the following activities and program components:

- Prioritize all construction sites as high, medium, or low threat to water quality (TTWQ).
- Compile a priority-based and watershed-based inventory of all construction sites within the jurisdictional boundaries.
- Require implementation of the City's minimum BMPs at all construction sites.
- Inspect construction sites to evaluate compliance with ordinances and permits.
- Implement the enforcement program to ensure compliance with the City's stormwater and grading ordinances.
- Implement the City's education program focused on construction activities.

3.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the Construction component during the 2008-2009 reporting period are presented in the following bulleted list.

- Conducted plan checks of erosion control plans to ensure construction projects comply with the City's minimum BMP requirements.
- Educated all project proponents and contractors on stormwater pollution prevention requirements at a preconstruction meeting.
- Conducted training for applicable City staff regarding the construction requirements in the City's updated JURMP.
- Conducted 1,452 inspections at 209 sites.
- Issued 52 Correct Work and 14 Stop Work Notices to 44 construction sites in response to violations of the City's minimum BMP requirements.
- Followed up on all Correct Work and Stop Work Notices to bring 35 sites into compliance and the remaining nine sites onto a schedule for compliance.

3.2 SOURCE CHARACTERIZATION

The City of Poway maintains a watershed-based inventory of all private and public construction projects, both active and completed. The inventory database is updated

daily. New private development projects are entered into the database when a Request for Preconstruction Meeting is received. Capital Improvement Projects are entered when a Notice to Proceed is issued. The appropriate division determines the priority status. Projects are never deleted from the database; their status is changed to inactive upon the completion of construction. During this reporting period, there were 209 active construction projects (186 private development/construction projects and 23 City of Poway CIP Projects). The private projects were prioritized as follows: 30 High TTWQ, 68 Medium TTWQ, and 88 Low TTWQ. The Capital Improvements Projects were prioritized as follows: 4 High TTWQ, 5 Medium TTWQ, and 14 Low TTWQ. The project inventory is shown in Table 3-1.

3.3 Updates to Ordinances and Approval Process

3.3.1 Ordinances

The City of Poway addresses water pollution through implementation of its Municipal Code, in particular Chapters 13.09, Storm Water Management and Discharge Control (Storm Water Ordinance), Chapters 16.40 through 16.50, Excavation and Grading (Grading Ordinance), and Chapters 16.100 through 16.109, Standard Urban Stormwater Mitigation Plan (SUSMP Ordinance). These Municipal Code sections were updated by Ordinance in 2008 to meet the requirements of Order No. R9-2007-0001.

3.3.2 Construction and Grading Permit Approval Process

The City requires that all proposed construction and grading projects implement measures to ensure that pollutants from the site will be reduced to the maximum extent practicable and will not cause or contribute to an exceedance of water quality objectives. Proponents of all construction and grading projects are required to comply with practices detailed in the JURMP and the revised Grading and Storm Water Ordinances. The grading approval process also includes the City requirement of cash securities for all grading projects and Minor Development Review Application (MDRA; non-grading) projects to ensure compliance with the City's stormwater and grading ordinances.

All new development and redevelopment project proponents are required to attend a preconstruction meeting with the City of Poway. During these meetings, the project proponent is educated on storm water management topics including federal, state, and local regulations, implementation of a Storm Water Pollution Prevention Plan (SWPPP), if required, and implementation and maintenance of BMPs. Additionally, the developer, owner, and contractor are required to watch an educational video covering construction site BMPs and storm water management, after which the viewer signs an acknowledgement.

3.4 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City requires BMP implementation at all construction sites to reduce and/or eliminate the impact of discharges from construction site runoff on receiving water quality and other environmental resources and ordinances.

The City has developed a set of minimum BMPs that must be implemented at all construction sites. Every construction site within the City's jurisdiction is required to implement and maintain general site management BMPs and erosion and sediment control BMPs to reduce, retain, and manage pollutant discharges to the MEP. Section 5.4 of the 2008 JURMP outlines the minimum construction BMPs required by the City. Many of these BMPs are based on current fact sheets obtained from the Caltrans Storm Water Quality Handbooks Construction Site BMP Manual. Some of the Caltrans BMP factsheets have been altered by the City to meet City-specific requirements.

The City is required to implement the same minimum construction BMPs for CIP projects as private projects, and all public projects are subject to the same review process. All contractors involved with CIP projects are educated about storm water requirements through the same approach used for proponents of private development projects.

3.5 PROGRAM IMPLEMENTATION

3.5.1 EDUCATION AND STAFF TRAINING

The City of Poway provides information regarding storm water quality to project proponents, project personnel, employees, contractors, subcontractors, and other parties involved with construction activities.

The following is a list of educational training regarding construction projects that the City of Poway has provided or participated in during the timeframe of this Annual Report:

- As noted above, all new development and redevelopment project proponents are required to attend a preconstruction meeting that includes education on storm water management topics including federal, state, and local regulations, implementation of a SWPPP, if required, and implementation and maintenance of BMPs.
- The City sends out an annual announcement prior to the rainy season to all parties responsible for construction projects describing the enhanced construction BMP requirements and storm water management requirements during the rainy season (Attachment 3.1).
- Engineering Inspectors meet weekly for project review and training conducted by the Engineering Inspection Supervisor.

3.5.2 Construction and Grading Approval Process

All construction projects were required to undergo the approval process described above. These requirements are tracked by the Land Development and CIP Divisions as part of their routing and record-keeping database.

As noted above, the City of Poway has established minimum BMPs that must be implemented at all construction sites, public and private, regardless of the water quality threat prioritization. The inspection and enforcement procedures described below were used to ensure that all sites used appropriate and effective BMPs. Cases in which BMPs were observed to be insufficient and required correction are described in Section 3.5.5 below. The process described in Section 3.5.5 was used to bring these sites into compliance.

In its 2008 JURMP and updated Ordinances, the City adopted a maximum disturbed area for grading of 17 acres. During this reporting period, there were no active construction sites with 17 or more acres of disturbance at any given time.

The City's 2008 JURMP and Ordinance updates require advanced treatment for any construction sites that is considered an exceptional TTWQ according to the following criteria:

- Located within, adjacent to, or a portion of the site is within 200 feet of waters listed on the CWA Section 303(d) list of Water Quality Limited Segments as impaired for sedimentation and turbidity;
- Disturbance is greater than five acres, including all phases of the development;
- Disturbed slopes are steeper than 4:1 (horizontal: vertical) and higher than 10 feet and drain toward the 303(d) listed receiving water;
- Contains a predominance of soils with USDA-NRCS erosion factors (kf) greater than or equal to 0.4.

No site met all four of these criteria during this reporting period; therefore, no sites were required to implement advanced treatment.

3.5.3 Inspection of Construction Sites

The City of Poway has a construction site inspection program to evaluate compliance with federal, state, and local regulations. The City's Engineering Inspectors visit each developer, contractor, and/or owner to educate them and to assess the BMPs on each project site. The inspectors provide written BMP requirements from the JURMP and discuss deficiencies and solutions. Inspectors assure that BMPs are implemented by inspecting and re-inspecting the construction site. Building Inspectors are also empowered to enforce storm water regulations or to forward any noted violations on to the Engineering Inspectors for corrective action.

The Inspectors discuss BMPs and monitor storm water and erosion control requirements with each site project manager, developer, or owner. The City also inspects MDRA sites

for compliance with BMP implementation requirements, including erosion and sediment control. The City requires every construction project and MDRA to have a Weather-Triggered Action Plan for Construction Sites for rain events (Attachment 3.2). This Weather-Triggered Action Plan details the site's preparation for rain events and the additional BMPs to be implemented in the case of rain.

Under the Municipal Permit, sites categorized as a high TTWQ must be inspected at least once every two weeks during the rainy season. Sites that have over an acre of soil disturbance but do not meet the above criteria are considered medium TTWQ and must be inspected at least monthly during the rainy season. All other sites are considered low TTWQ and must be inspected as needed during the rainy season. During the dry season, all TTWQ categories must be inspected as needed.

The inspection counts are shown in Table 3-1. During this reporting period, the City conducted 1,452 inspections at 209 sites. Although Table 3-1 demonstrates that the majority of sites were inspected at the required frequency, in a number of cases the City was unable to document the required number of inspections. Because many of the unreported inspections did in fact occur, the City continues to believe that its inspection program has been effective. The City is undertaking additional improvements to its reporting and record-keeping procedures to ensure compliance with Permit requirements. A formal BMP inspection form has been created for use in the field. These inspection reports will be tracked by stormwater staff in addition to construction inspection staff. Additional staff training has emphasized the importance of not only performing but documenting all required inspections to demonstrate compliance.

In addition, in late 2009 the City will begin using a comprehensive permit tracking software package for all projects. Once in place, this system will allow automatic reminders to be sent to the inspector when any inspection is due, and will also store the actual inspection records for easy retrieval and data analysis.

3.5.4 Enforcement Measures

The City's enforcement procedures require corrective actions when non-compliance is observed. Non-compliant sites receive a Correct Work Notice and timeframe for compliance. The site is required to become compliant within 1 to 5 working days, unless rain is imminent, in which case a Stop Work Notice is issued immediately and only correction of BMPs can be performed. Failure to install BMPs indicated in a Correct Work Notice within the appropriate timeframe results in issuance of a Stop Work Notice, and notification is sent to the RWQCB. Further steps including revocation of permits and issuance of citations can be taken as necessary. The City also has the ability to install necessary BMPs and place a lien on the subject property to recover the cost.

The City issued 66 Stop/Correct Work Notices (52 Correct Work Notices and 14 Stop Work Notices) to 44 projects for storm water BMP deficiencies during this reporting period. Table 3-2 describes each Notice written, along with the follow-up actions taken to correct the deficiency. By the end of the reporting period, 35 projects had been

brought into compliance and nine projects were on a schedule for compliance. Two additional projects were brought into compliance between the end of the reporting period and the writing of this annual report.

A policy of enforcement escalation has been established for cases that require it. During this reporting period, two cases described in the 2008 Annual Report continued to require escalated enforcement measures.

As noted in the 2008 Annual Report, illegal grading at 14272 Jerome Drive resulted in a series of Stop Work Notices and the issuance of two Notices of Violation from the City, as well as a Cleanup and Abatement Notice from the Regional Board. During the current reporting period, the City hired a contractor to perform emergency erosion control on an adjacent property threatened by potential runoff from the subject property. The cost of this repair has been placed as a lien on the property. The property owner has not yet obtained the required permits, and the City has proceeded with legal action against the property owner. This situation was not resolved by the end of the current reporting period, but the City continues to pursue legal action against the property owner and is working closely with RWQCB staff to ensure consistency of enforcement actions between the two agencies.

As noted in the 2008 Annual Report, illegal grading at 17215 Iron Mountain resulted in a series of Stop Work Notices and ultimately required placement of emergency erosion control by a contractor hired by the City. During the current reporting period, the property owner received a grading permit and began corrective work and implementation of BMPs. One additional Correct Work Notice for insufficient BMPs was issued on April 4, 2009. The City inspected this project throughout the 2008-2009 reporting period, and will continue to inspect it until its completion to ensure that it meets all requirements.

No additional projects required escalating enforcement actions beyond Correct Work and Stop Work Notices during this reporting period.

3.6 Construction Activities Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

3.7 Program Review and Modification

As noted above, substantial improvements have been made in the internal procedures of the Engineering Division to increase the accuracy of record-keeping and ensure that documented inspection frequencies meet all Permit requirements. These procedural changes did not require JURMP revision. The Correct Work Notice will be modified and a new inspection form will be developed in fiscal year 2009/2010. The construction project inventory is updated daily. No other updates to the Construction Component presented in the City's March 2008 JURMP have been made since the submittal of that document.

4.0 MUNICIPAL COMPONENT

4.1 INTRODUCTION

Throughout 2008/2009, the City of Poway continued to manage municipal areas and activities to reduce municipal discharges of pollutants to the MS4 to the MEP. As discussed in detail in the City's JURMP, the City owns and operates a variety of municipal facilities and activities. Public parks and recreation facilities, administrative buildings, fire stations, and public works facilities make up the bulk of the municipal areas in the City. Municipal activities conducted by the City include power washing, landscaping activities, street sweeping, street and sidewalk repair, and MS4 and sanitary sewer system maintenance. Information about the City's prioritized street sweeping program can be found in Table 4-1, and information about the City's MS4 maintenance program can be found in Table 4-2. The City's municipal inspection results can be found in Table 4-3. The City continued to respond to complaints made to the City's storm water hotline. All complaints made to the hotline are included in Appendix B; enforcement actions taken in response to complaint investigations are discussed in section 4.9.

4.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the municipal component during the 2008/2009 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the municipal component of its storm water program during the reporting period are provided in the remainder of Section 4.

- The City inspected all high TTWQ fixed municipal facilities.
- The City inspected all high TTWQ mobile activities.
- The City hosted several training events/meetings for municipal personnel; over 100 City personnel participated in these training sessions.
- The City administered a pre-test and post-test quiz to all staff undergoing training to assess knowledge and the effectiveness of the training.
- The City removed over 860 tons of debris through street sweeping activities.
- The City removed over 1,249 cubic yards of debris through standard MS4 cleaning activities.
- The City repaired 1.5 miles of sanitary sewer line and cleaned 95 miles of sewer line during 2008/2009.

4.2 FIXED FACILITIES

4.2.1 BACKGROUND

The City owns and operates a variety of municipal fixed facilities. As mentioned in the City's JURMP, municipal fixed facilities have been grouped under one category, fixed facilities. This is because these facilities receive routine inspections as part of the City's municipal program, making program implementation generally similar.

4.2.2 SOURCE CHARACTERIZATION

All fixed facilities are included in the City's municipal inventory, which can be found in Appendix A. Additional descriptions of the facilities and activities conducted at them can be found in the City's JURMP. During 2008/2009, the City updated the municipal inventory to account for some changes in priority to several fixed facilities. These changes are discussed in Section 4.13. There were no updates to the descriptions of any fixed municipal facilities as provided in the City's JURMP. The City's inventory is included in this JURMP Annual Report as Appendix A.3.

4.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City continues to implement and assess the effectiveness of BMPs for fixed municipal facilities set forth in the City's JURMP. City staff are trained to recognize the need for additional BMPs and implement them as necessary. Strict BMPs remain in place for the management of pesticides, herbicides, and fertilizers; these BMPs, as described in the City's JURMP, have not changed. City public works employees, fire station employees, and employees at other fixed facilities in the City continue to implement BMPs appropriate to the facility type as described in the City's JURMP. Parking lots at fixed facilities are swept during regular maintenance activities at the respective municipal facility. City fire response personnel continue to be trained in implementing BMPs for non-emergency fire fighting activities as described in Section 3 of the City's JURMP. There have been no changes in BMP requirements for any fixed municipal facilities.

4.2.4 PROGRAM IMPLEMENTATION

Parks and Trails

During 2008/2009, the City's Parks and Trails Maintenance Division continued to implement the BMPs described in its JURMP for the management and use of pesticides, herbicides, and fertilizers, including the City's Integrated Pest Management (IPM) Program. City Parks and Trails staff implemented BMPs to control landscaping waste from parks and to keep City parks and trails free of trash and other debris. The City continued to work with local residents through the Adopt-a-Park Program, which is discussed in Section 9 of this Annual Report.

Public Works Facilities, Fire Stations, Other Fixed Facilities

As previously mentioned, City personnel continued to implement appropriate BMPs for municipal fixed facilities as described in the City's JURMP. BMPs are also implemented during regular maintenance, such as landscaping and building maintenance, as necessary.

As discussed in the City's JURMP, four public operations facilities are covered under The State of California General Industrial Permit (General Industrial Permit). Three of these facilities, the City Operations Center, the Lester J. Berglund Treatment Plant, and the Vehicle Maintenance Facility, are located adjacent to each other and share General Industrial Permit coverage (WDID# 9 37I001092). The Material Handling Yard is in a different area of the City and is covered separately under the General Industrial Permit (WDID# 9 37I015616). These facilities maintain site-specific Storm Water Pollution Prevention Plans (SWPPPs) and conduct monitoring in accordance with the requirements of the General Industrial Permit. The SWPPP documents and the records of monitoring are kept on-site and can be accessed during inspections.

Fleet/Facility Maintenance staff continued to use a BMP advisement checklist to check on the status of BMP implementation at the City's Vehicle Maintenance Facility on a weekly basis. The BMP advisement checklist was updated during 2008/2009 to include additional BMPs and is included as Attachment 4.1. City staff clean the City's Material Handling Yard on a weekly basis and also use a BMP checklist. During this reporting period, staff evaluated and improved its processes and the BMP checklist for better results. City staff inspect the yard twice a month to ensure compliance with the minimum BMPs and the facility's SWPPP. These facilities are also included in the Industrial/Commercial inventory because they are covered by the General Industrial Permit. In addition to the regular inspections by Public Works staff described above, these facilities receive annual inspection by storm water staff as part of the City's industrial and commercial inspection program.

Municipal Inspections

All high TTWQ fixed municipal facilities received a routine annual inspection in 2008/2009. The City's inspection approach, as described in the JURMP, was implemented for all municipal inspections conducted in 2008/2009. Inspected facilities and their associated corrective actions are included in Table 4-3. No significant BMP deficiencies were noted during the inspections. The City provided copies of completed inspection forms to Public Works staff so corrective actions could be implemented. Currently, City staff is on track to finish implementing all corrective actions observed during routine municipal inspections before the beginning of 2009/2010 wet season. The City's municipal inspection form is included as Attachment 4.2.

4.3 ROADS, STREETS, HIGHWAYS, AND PARKING FACILITIES

4.3.1 BACKGROUND

The City conducts regular maintenance of roads, streets, highways, and parking facilities in the City to control pollutants such as sediment, metals, and litter and debris.

4.3.2 SOURCE CHARACTERIZATION

The City maintains 505 curb miles of roads, streets, and highways. Roads, streets, and highways are included as one entity on the City's municipal inventory, which is included in Appendix A.3.

4.3.3 BEST MANAGEMENT PRACTICES

The City's primary BMP for roads, streets, highways, and parking facilities is street sweeping. Other BMPs are outlined in the JURMP; there were no changes to the BMPs implemented for roads, streets, highways, and parking facilities in 2008/2009.

4.3.4 PROGRAM IMPLEMENTATION

During 2008/2009, the City completed over 12,000 curb miles of sweeping, removing over 860 tons of debris. Table 4-1, below, describes the areas assigned high, medium, and low sweeping priorities and the associated sweeping frequency. As discussed in the City's JURMP, the City sweeps all streets at least every two weeks. Although parking facilities that are associated with municipal facilities are considered part of the municipal facility on the inventory, the sweeping frequency is included in the table.

Table 4-1
Street Sweeping Prioritization and Frequency

Category	Description	Approximate Mileage of Route (curb miles)	Sweeping Frequency
High	Main arterials	153 miles	Once every two weeks
Medium	Business Park areas	20 miles	Once every two weeks
Low	Residential areas	332 miles	Once every two weeks
Parking Lots at Fixed Facilities	Parking lots associated with fixed municipal facilities	N/A*	Once every two weeks
Material Handling Yard	Material Handling Yard	N/A*	Once per week

* A separate measurement of mileage data is not available for the swept area of parking lots associated with municipal facilities, and the Material Handling Yard. Mileage accrued while sweeping these facilities is included in the total mileage.

Inspections
Trash, debris, and sediment that has accumulated on City streets is identified and cleaned up via street sweeping, so additional inspections beyond this effort are not necessary.

4.4 MS4

4.4.1 BACKGROUND

The City's storm water conveyance system is designed to collect and convey surface runoff to receiving waters to prevent flooding during rain events.

4.4.2 SOURCE CHARACTERIZATION

The City's MS4 as one complete entity is included in the City's high TTWQ municipal inventory. The City's MS4 consists of over 1,400 drop inlets, 44 box culverts, 65 miles of underground drainage pipe 18 inches or more in diameter, approximately 11 miles of open channels, and 12 detention basins, five of which have been retrofitted as regional treatment control BMPs.

4.4.3 BEST MANAGEMENT PRACTICES

The City maintained an MS4 inspection, maintenance, and cleaning schedule throughout the reporting period. Maintenance and cleaning are conducted to keep the MS4 in good operating condition and remove any trash or debris that may otherwise be carried to receiving waters. BMPs for MS4 maintenance activities, as described in the City's JURMP, have not changed during 2008/2009.

4.4.4 PROGRAM IMPLEMENTATION

The City's MS4 inspection and cleaning schedule for 2008/2009 is shown in Table 4-2. All MS4 facilities were visited at least once during the fiscal year and all inspections were conducted between May 1 and September 30. City personnel have identified a segment of open channel that requires increased maintenance activities. This area is located near a large movie theater complex and several convenience stores; patrons to these businesses have been identified as a contributing factor to the trash in this area. The City routinely inspects this area and cleans observed anthropogenic litter.

The City has approximately 11 miles of concrete and earthen channels within urban areas of the City that undergo routine maintenance as part of the City's MS4 maintenance program. All of these channels were inspected and cleared of trash where appropriate during the reporting period. The City has also obtained appropriate regulatory permits for the maintenance of these areas. An additional 94 miles of conveyances are located in open, undeveloped space, or on private property. Channel-like conveyances in open spaces are not considered to be part of the MS4 channel system, and the City does not maintain channels located on private property without

dedicated easements. If maintenance of private channels is needed, the City requires the property owner to complete the maintenance.

Table 4-2
MS4 Maintenance Data

	Percent Inspected and/or Cleaned*	Percent of Open Channels Found with Anthropogenic Litter	Amount of Debris Removed from Cleaning Activities
Catch Basins/Self Cleaning MS4 Facilities	100%	N/A	55.25 cubic yards
Detention Basins	100%	N/A	3 cubic yards
Open Channels	100%	100%	1,191 cubic yards
Total Debris Removed From MS4 Maintenance Activities: 1,249.25 cubic yards			

* The City cleans out all structures, including self-cleaning structures, in which trash and debris is observed prior to the rainy season. Six drop inlets were observed at least 33% of capacity during the reporting period, and the debris was removed. Thus far maintenance staff have not identified any structures that repeatedly have higher than average accumulations of trash and debris.

As described in Table 4-2, 1,249.25 cubic yards of debris was removed during MS4 maintenance activities. An overall estimation of the composition of debris removed from MS4 maintenance activities is 60 percent sediment/silt and 40 percent vegetation, trash, and debris. The volumes were converted to estimated weights using the percent composition estimates from City maintenance staff and conversion factors of 2,300 pounds per cubic yard of sediment/silt and 400 pounds per cubic yard of vegetation, trash, and debris. The total weight of material removed was estimated at 962 tons.

4.5 SANITARY SEWER SYSTEM

4.5.1 BACKGROUND

To reduce the possibility of a spill or leak caused by a malfunction of a component of the City's sanitary sewer system, the City conducts routine maintenance of the system. A spill that introduces untreated sewage to receiving waters can contain high concentrations of bacteria, viruses, and even hazardous chemicals. Routine inspection and maintenance of the sanitary sewer system works to reduce the potential for a spill or SSO and also helps prevent the infiltration of seepage from the sanitary sewer system to the City's MS4.

4.5.2 SOURCE CHARACTERIZATION

The City maintains a system of public sanitary sewer facilities to convey wastewater from the City to be treated. The City's sanitary sewer system includes 181 miles of collection system and several pump/lift stations.

4.5.3 BEST MANAGEMENT PRACTICES

The City implements BMPs for the sanitary sewer system as described in Appendix C of the City's JURMP. There have been no changes to these BMPs during 2008/2009. The City inspects and maintains the sanitary sewer system as part of regular wastewater activities and clears blockages and repairs leaks as needed.

4.5.4 PROGRAM IMPLEMENTATION

The City continually inspects and maintains various aspects of the City's sanitary sewer system. The City cleans out or repairs any identified problem areas as necessary. During 2008/2009 the City cleaned 95 miles of sewer line and repaired 1.5 miles of sewer line. The City purchased a new video van to help locate blockages requiring repair and to identify any illegal connections. Identifying areas of the sewer system that require repair and making prompt repairs prevents those areas from becoming future seepage points or point of origin of an SSO.

During 2008/2009, the City implemented a Fats, Oils, and Grease (FOG) program that targets grease-producing facilities, such as eating establishments. The goal of the program is to reduce grease buildup in the sanitary sewer system, which can cause or contribute to SSOs. The City conducted FOG evaluations at several eating establishments during 2008/2009.

In case of an SSO, the City maintains a spill response plan that establishes procedures for responding to an SSO. Detailed information about the City's SSO spill response plan is included in the City's JURMP. There were no SSOs during 2008/2009.

4.6 MOBILE MUNICIPAL ACTIVITIES, INCLUDING POWER WASHING

4.6.1 BACKGROUND

The City conducts a variety of different mobile municipal activities, typically involving vehicle maintenance, landscape maintenance, street and sidewalk repair, and power washing. These activities are not confined to a specific location, so BMPs must be implemented wherever one of these activities is taking place. During this reporting period, the City purchased and began using a new pressure-washing unit with a vacuum and debris boom to prevent discharge during pressure-washing operations.

4.6.2 SOURCE CHARACTERIZATION

Emergency vehicle maintenance, landscape maintenance, power washing, and street and sidewalk repair are listed on the City's high TTWQ municipal inventory as mobile activities.

4.6.3 BEST MANAGEMENT PRACTICES

The City implements BMPs for mobile activities as described in the City's JURMP and as applicable to the activity. City personnel are trained to implement BMPs for the specific activity in which they are involved. For example, City personnel performing power washing are trained to collect all waste water, and City personnel conducting emergency vehicle maintenance activities are trained to use drip pans and other spill containment during emergency vehicle maintenance.

4.6.4 PROGRAM IMPLEMENTATION

City staff conducted inspections of each mobile activity included on the City's high TTWQ municipal inventory: emergency vehicle maintenance, landscape maintenance, power washing, and street and sidewalk repair. Appropriate BMPs were implemented during each activity and there were no corrective actions provided to City staff conducting the mobile activities. Inspection results are listed in Table 4-3 at the end of this section. City staff will continue to be trained on appropriate BMPs for mobile activities.

4.7 SPECIAL EVENTS

4.7.1 BACKGROUND

As discussed in the City's JURMP, special events have the potential to generate trash and litter as a result of the patrons and activities of the special event. The City hosts several special events throughout the year. These events include festivals, fairs, and other events for various causes and occasions.

4.7.2 SOURCE CHARACTERIZATION

As required by the Municipal Permit, special events are included on the City's high TTWQ municipal inventory.

4.7.3 BEST MANAGEMENT PRACTICES

As detailed in the City's JURMP, the City has selected BMPs for special events hosted in the City. In general, the goals of the City's special event BMPs are to properly manage trash and litter generated by the event, keep catch basins and other nearby MS4 facilities free of litter/debris from the event, and raise storm water awareness among the vendors and patrons of the event, as applicable.

4.7.4 PROGRAM IMPLEMENTATION

The City's minimum BMPs were in place for each special event in the City during 2008/2009. Additionally, City staff were available throughout the duration of each event to address any immediate issues and notify other City staff of an issue if necessary. Individuals applying for a permit to hold an event on City property are notified that approval of the activity does not excuse compliance with City ordinances, including the City's municipal storm water ordinance.

During 2008/2009, the City conducted an inspection at the annual Poway Days Parade at Community Park, which occurred on September 13, 2008. The event includes a parade, food vendors, live music, and other activities. Additional trash and recycling centers beyond the receptacles already in place at the park were set up, and any uncontained trash or debris was removed by City staff throughout the course of the event. Post-event clean-up was also conducted by City staff.

4.8 WITCH CREEK FIRE WATER PROTECTION MEASURES

In October 2007, the Witch Creek Fire burned more than 7,000 acres of land in Poway, including the area around Lake Poway. Most of the area around Lake Poway is undeveloped and is dedicated natural habitat. The City recognized the need for BMPs to control ash, silt, and debris from the burned hillsides. Details about the immediate BMP implementation and effectiveness were included in the 2007/2008 JURMP Annual Report.

During 2008/2009, the City continued to maintain the BMPs installed during 2007/2008. This included removing silt, ash, and debris from check dams, adjusting the turbidity curtain in the lake, and checking the overall status of the burned areas surrounding Lake Poway. BMPs were removed when it was determined that their presence was no longer necessary. During 2008/2009, considerable progress was made in restoring the area, and all follow-up actions are complete.

4.9 PUBLIC REPORTING OF ILLICIT DISCHARGES AND CONNECTIONS

Reporting and Response

Public and municipal involvement are crucial to preventing and eliminating illicit connections and illegal discharges (IC/IDs) from the storm water conveyance system. The Storm Water Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The hotline number is provided on the City's website, in distributed storm water educational material, and in storm water articles in *Poway Today*. All complaints received through the hotline and website are logged onto a spreadsheet for documentation and tracking. Each logged complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop or

clean up any and all illegal discharges. The Public Works Department also receives complaints regarding storm water, often due to infrastructure concerns. Complaints to the Public Works Department are also tracked and investigated.

Complaints received by the City during the 2008/2009 reporting period and the City's response to each are listed in Appendix B. Fifty complaints were documented this year.

Enforcement

As previously stated, complaints received via the storm water hotline, City website, and Public Works hotline are included in a table in Appendix B. The table also includes a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included clean-up, providing educational material and discussing storm water concepts with individuals involved in the complaint, and in some cases issuing courtesy notices. The City issued five courtesy notices in response to complaints received by the City's storm water hotline.

4.10 Spill Reporting, Response, and Prevention

The City has documented procedures for preventing and responding to sanitary sewer overflows. Preventive maintenance is regularly conducted on the City's sanitary sewer system, and inspections are regularly conducted to monitor the condition of the public sewer lines and to determine the necessity of maintenance. Private lateral lines do not receive preventive maintenance, but the City assists in the containment and cleanup of sewer spills if the spill could potentially reach the City's MS4.

Individuals in the City are encouraged to report any SSOs to the City's Storm Water Hotline. During the 2008/2009 reporting period, there were no SSOs or significant spills.

4.11 Education and Outreach

During 2008/2009, the City continued to educate municipal personnel regarding proper BMP implementation and other storm water and watershed concepts. The City held a variety of training sessions for City personnel. Detailed information regarding the education and outreach conducted for City personnel is described in detail in Section 8 of this Annual Report.

4.12 Municipal Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

4.13 Program Modification and Review

Several updates were made to the municipal component of the City's JURMP during 2008/2009.

Fixed Facilities (Section 6.2 in the City's JURMP)
Several facilities included on the City's municipal inventory are trail heads, wilderness areas, and open space. These facilities do not have any landscaping that requires the use of fertilizers, herbicides, or pesticides, nor do they have impervious parking areas. Since open, natural space is a low TTWQ, the City has re-categorized these facilities as "Open Space" and moved them to the City's low TTWQ municipal inventory. All facilities that are trail heads, wilderness areas, and open space, including a brief description of the area, are included below:

- Clyde Rexrode Wilderness Area – Open space area with trails, a small archery range and a small dirt parking lot.
- Iron Mountain Wilderness Area – Trailhead, City plans to construct a gravel parking lot.
- Mount Woodson Wilderness Area – Trailheads that lead to Mount Woodson.
- Old Coach Trail Open Space Preserve – Trailhead with small dirt parking lot.
- Panorama Hills Park – Short trail off the end of a cul-de-sac.
- South Poway Open Space Area – Trailhead only.
- The Pond – Open space area.

The main BMPs applicable to these types of sites include trash management and erosion and sediment control. Inspections were conducted at each of these facilities during 2008/2009, and no significant BMP deficiencies were observed at any of the facilities. Changing the TTWQ of these facilities does not affect BMP implementation; the City will continue to implement BMPs applicable to each site.

Roads, Streets, and Highways (Section 6.3 in the City's JURMP)
In the City's JURMP, the City chose not to prioritize roads, streets, and highways in the City because the City's street sweeping frequency met the requirement of the highest frequency in the Municipal Permit. There have been no changes to the City's street sweeping frequency during 2008/2009; all roads, streets, and highways in the City are still swept once every two weeks. However, based on insight from City maintenance staff, the City has now chosen to prioritize roads streets and highways in the City into high, medium, and low categories that include streets generating high, moderate, and low volumes of trash, respectively. These categories, and the areas included within each category, are described in Table 4-1.

MS4 (Section 6.4 in the City's JURMP)
The City's JURMP incorrectly noted that MS4 facilities were inspected four times per year. In fact, MS4 facilities are inspected at least once per year between May 1 and September 30 as required by the Municipal Permit. The City has modified its JURMP to reflect the correct inspection and maintenance schedule.

Another modification to the MS4 section in the City's JURMP was the update to the number of miles of open channels within the City to exclude conveyances not

considered part of the City's MS4, as described in Section 4.4 of this report. The total number of miles of MS4 channels in the City is 11 miles. A detailed description of the City's MS4 is included Section 4.4 of this report.

Sanitary Sewer System (Section 6.5 in the City's JURMP)

In the City's JURMP, the City's municipal inventory included each sewer pump station as a separate entry. Since sewer pump stations are part of the City's sanitary sewer system and are included in continuing maintenance and inspection efforts, the City has consolidated the sewer pump stations and the sanitary sewer system into one item in the City's inventory.

Table 4-3
Municipal Inspection Results

#	Facility Name	Facility Address	TTWQ	Facility Category	Inspection Date	Corrective Actions
1	Adobe Ridge Mini Park	12244 Adobe Ridge Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/24/09	No corrective actions noted.
2	Arbolitos Park	Pomerado Road & Ted Williams Parkway	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/24/09	Clean the inlets around the sports field.
3	Aubrey Park	13544 Aubrey Street	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/24/09	Ensure all appropriate BMPs are utilized when cleaning the mowers.
4	Bendixon Neighborhood Park	12342 Old Pomerado Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/24/09	No corrective actions noted.
5	Blue Sky Ecological Reserve	Located in Northeast Poway	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/24/09	Ensure slopes along parking lot are evaluated prior to the rainy season to ensure continued erosion control is in place. Clean and remove broken gravel bags.
6	City Operations Center*	14445 Lake Poway Road	High	Public Works Operations Facilities	6/8/09	Keep discharge locations free of sediment and debris. Ensure adequate BMPs are being implemented for construction/repair activities.
7	Clyde Rexrode Wilderness Area**	Located in Northeast Poway	Low	Open Space	6/25/09	No corrective actions noted.

Table 4-3 (Continued)
Municipal Inspection Results

#	Facility Name	Facility Address	TTWQ	Facility Category	Inspection Date	Corrective Actions
8	Community Park	13094 Civic Center Drive	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/19/09	Ensure trash cans have lids. Ensure dumpster lids are closed. Remove or cover stock piled dirt and grass pile. Place mulch on bare soil south and west perimeter. Clean incidental pet waste at dog park. Remove gravel bags south perimeter inlet. Clean inlet south end near bathroom. Replace tarps on equipment and materials in maintenance yard.
9	Emergency Vehicle Maintenance	Throughout City	High	Mobile Municipal Activities, Including Power Washing	1/14/09	No corrective actions noted.
10	Fire Station No. 1	13050 Community Road	High	Fire Stations	6/24/09	Clean out the storm drain inlet in the southwest corner of property (next to hose drying area). Clean out the dumpster area.
11	Fire Station No. 2	16912 Old Coach Road	High	Fire Stations	6/25/09	Clean out storm drain inlet near front door of station. Mulch needed on front slope and back slope.
12	Fire Station No. 3	14322 Pomerado Road	High	Fire Stations	6/25/09	No corrective actions noted.
13	Fire Training Tower	12325 Crosthwaite Circle	High	Fire Training Tower	6/25/09	No corrective actions noted.
14	Garden Road Park	14820 Garden Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/26/09	No corrective actions noted.
15	Hilleary Park	13500 Community Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/25/09	No corrective actions noted.

35	The Pond**	1106 Old Pomerado Drive	Low	Open Space	6/26/09	Remove pallets from pond.
36	Valle Verde Park	16899 St. Andrews Drive	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/26/09	No corrective actions noted.
37	Vehicle Maintenance Facility*	14415 Lake Poway Road	High	Public Works Operations Facilities	6/8/09	Keep site and parking areas free of sediment, debris and spills. Prevent erosion of landscaped areas. Keep stored equipment free of material residue. Keep discharge locations free of sediment and debris.

* These facilities are covered by the General Industrial Permit and are inspected as part of the industrial and commercial inspection program.
** Please note that these facilities were originally listed as high TTWQ but were changed to low TTWQ as discussed in Section 4.13 of this report.

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

5.1 INTRODUCTION

During the 2008/2009 reporting period, the City continued to implement its program to mitigate urban runoff pollution from the areas and activities of industrial and commercial businesses. The City aims to reduce the amount of pollutants discharged from industrial and commercial facilities through various aspects of the industrial and commercial program.

5.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Notable achievements for the industrial and commercial component during the 2008/2009 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the industrial and commercial component of its storm water program during the reporting period are provided in the remainder of Section 5.

- The City met the Municipal Permit requirement of inspecting at least 25 percent of its stationary industrial and commercial inventory.
- The City inspected all high TTWQ industrial and commercial facilities.
- The City provided 225 Industrial and Commercial Preventing Urban Runoff Pollution brochures to new business license applicants.

5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES / SOURCES ELEMENT

5.2.1 BACKGROUND

The City's updated industrial and commercial inventory (Appendix A.4) includes all stationary facilities known to be operating in the City that are required to be included on the City's inventories. Stationary facilities in the City include, but are not limited to, manufacturing facilities, wholesalers, auto dealerships, auto repair shops, and restaurants. The City requires industrial and commercial businesses to implement pollution prevention measures and activity-specific minimum BMPs to mitigate the impacts of business activities on water quality.

5.2.2 SOURCE CHARACTERIZATION

As previously mentioned, the City's inventories include stationary industrial and commercial businesses, as required by the Municipal Permit. Information on how the City prioritizes the industrial and commercial inventories based on TTWQ is discussed in detail in the City's JURMP. The City considers factors including those listed below when prioritizing the inventories:

- Industrial Permit subjectivity
- Consideration of downstream waterbody and whether the business is likely to discharge pollutants for which the waterbody is impaired
- Results from previous inspections and institutional knowledge
- Proximity to the receiving waterbody

During 2008/2009, the City updated its industrial and commercial inventory. Using data from the City's business license records, City staff compared the list of businesses with active businesses certificates to the City's industrial and commercial inventory. Active businesses with appropriate categories for inclusion in the City's inventory that were not included on the City's inventory were added. Businesses that were on the City's inventory but were not listed as active businesses in the business license records were investigated to determine if they were still active in the City. If City staff determined these businesses were no longer active in the City they were removed from the City's inventory. The City's updated inventory includes 539 stationary industrial and commercial facilities.

5.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

Industrial and commercial businesses in the City are required to implement pollution prevention methods and other BMPs to reduce or potentially eliminate the generation of pollutants from business areas/activities. The City has established a set of minimum BMPs based on the CASQA Industrial and Commercial Handbook and the Caltrans Manual. The requirements include BMPs applicable to all facilities as well as activity-specific BMPs. The City's BMP requirements are included in Appendix C of the City's JURMP and have not changed since the adoption of the City's JURMP in March 2008.

5.2.4 PROGRAM IMPLEMENTATION

Industrial and Commercial Inspections

During 2008/2009, the City conducted storm water compliance inspections at selected stationary industrial and commercial facilities. The inspected facilities were selected by using the following criteria:

- All high TTWQ facilities
- All new businesses added to the inventory
- Additional businesses selected based on time since last inspection.

Table 5-1, on the following page, provides a summary of industrial and commercial site visits that occurred during 2008/2009. The purpose of the City's inspection program is to confirm that the City's minimum BMPs are being implemented at stationary industrial and commercial facilities.

Table 5-1
Summary of Industrial and Commercial Inspections

Facility Category	Inventoried Stationary Sites	Full Inspections	Percentage of Total Inventory
High TTWQ Sites	62	62	12%
Additional Sites	477	83	15%
Totals	**539**	**145**	**27%**

Facility inspections were conducted in accordance with the protocol set in the City's JURMP. Inspections involved a thorough examination of the facility and all outdoor activities. BMP deficiencies and corrective actions were recorded on the City's industrial and commercial inspection form, which is included in the City's JURMP, and discussed with facility personnel present during the inspection. The City's industrial/commercial inspection form is included as Attachment 5.1.

During the inspection process, the City also checked Industrial Permit compliance status when applicable. The City also reviewed storm water pollution prevention plans (SWPPP) and monitoring results when applicable. Businesses observed to be in violation of the Industrial Permit are included in Table 5-2.

Table 5-2 provides a list of all facilities visited as part of the routine inspection program. The City selected for inspection and visited 157 facilities. Twelve of the sites visited were found to have moved, be duplicates of other businesses, or not be conducting activities for which inclusion on the City's inventory is necessary. A total of 145 full inspections were completed.

The City did not rely on third-party inspections to satisfy its industrial and commercial inspection requirements during the reporting period. The City does not presently maintain a third-party inspection program.

General Industrial Permit

As previously mentioned, Industrial Permit compliance status was evaluated during the inspection process. If the business was new and had not previously been inspected, or if the business had recently changed activities, the inspector gathered information about the business activities that occur on site and assigned or reassigned the business' standard industrial classification (SIC) code(s). The inspector then evaluated Industrial Permit subjectivity based on SIC code. Violations of any aspect of Industrial Permit requirements were recorded on the standard industrial and commercial inspection form and are presented in Table 5-3. The table includes businesses directed to file a Notice of Intent (NOI) and develop a SWPPP and monitoring program, as well as businesses that had filed an NOI but had failed to develop a SWPPP and monitoring program. The table also includes facilities that could potentially gain exemption from Industrial Permit requirements by completing Notice of Non-Applicability/No Exposure Certification (NONA/NEC) paperwork. Each business was notified of any Industrial Permit-related non-compliance by the inspector.

Education and Outreach

In addition to checking for compliance with the City's requirements and the Industrial Permit, inspections provide a venue to provide site-specific one-on-one education regarding storm water concepts and BMPs. Inspectors discussed a variety of topics such as watershed concepts, San Diego County Water Authority (SDCWA) water conservation efforts, and the City's BMP requirements. Inspectors distributed 125 Industrial and Commercial BMP brochures, 28 restaurant brochures, three BMPs for horses and livestock brochures, and one brochure for mobile detailing activities. The City also mailed 225 Industrial and Commercial BMP brochures to 225 businesses that applied for business licenses during 2008/2009. Educational materials distributed during the 2008/2009 industrial and commercial storm water compliance inspections are included as Attachment 5.2 and are discussed further in Section 8 of this report. Attachment 5.2 also includes other industrial and commercial outreach material that was used during 2008/2009. Section 8 provides a discussion of other educational efforts directed toward industrial and commercial businesses during 2008/2009.

Each inspected business was mailed a copy of the inspection form as written record of the need for corrective actions observed at the time of inspection. Most sites that required corrective actions had minor issues such as open dumpster lids or housekeeping issues. Facilities with more significant issues were recommended for follow-up and were provided a letter in addition to the inspection form highlighting the actions needed to obtain compliance with the City's minimum BMP requirements. More information about these facilities is provided in the discussion below.

Enforcement

During 2008/2009, several industrial and commercial facilities were recommended for follow-up. Facilities recommended for follow-up are included in Table 5-4. Follow-up status and whether or not there was a resolution to the reason for follow-up are also included in the table. Routine inspections were conducted throughout the 2008/2009 reporting period, and several follow-ups were resolved during 2008/2009. The City will work with facilities that have not achieved resolutions to the issues observed at the facility into the 2009/2010 reporting period.

In addition to the industrial and commercial storm water compliance inspection program, the City regulates industrial and commercial facilities through complaints received by City's storm water hotline. A total of seven complaints regarding industrial and commercial facilities were received by the City's storm water hotline. Based on the results of investigations into these complaints, the City took enforcement actions for stationary commercial and industrial facilities. Details of the industrial and commercial complaint investigations are included in the complaint log (Appendix B) and Section 4 of this Annual Report. The City distributed several Industrial and Commercial BMP brochures (Attachment 5.2) and issued one Courtesy Notice to industrial and commercial businesses in response to complaints reported to the storm water hotline.

During 2008/2009, one industrial or commercial IC/ID was discovered through a complaint to the storm water hotline. A description of the complaint and the City's action is included below:

- On 5/20/2009, the City received a complaint that paint was being washed into a storm drain at 12345 Crosthwaite Circle. City Code Compliance Officers inspected the site and found a milky substance flowing across the property from an area that appeared to be a cleaning and painting area for seatainers. Code Compliance advised the branch manager of the company to discontinue uncontained cleaning and painting activities, and to prevent any additional fluid from entering the storm drain system. The discharge was stopped, and Public Works cleaned up any discharge that reached the City's drainage system.

There were no instances of noncompliance at stationary businesses found to present a significant threat to human health or the environment observed during 2008/2009. Other than facilities observed to be out of compliance with the General Industrial Permit, discussed earlier in this section, no other businesses were reported to the RWQCB.

5.3 MOBILE SOURCES

5.3.1 BACKGROUND

Due to the nature of activities of most mobile businesses, a major area of concern tends to be the potential for illegal discharges. In general, mobile businesses can be hard to identify, as many may not have City business licenses. Additionally, because many mobile businesses may be home based and activities do not occur in one fixed location, inspections of such facilities are impractical.

5.3.2 SOURCE CHARACTERIZATION

Known mobile industrial and commercial businesses, as described in the City's JURMP, are included on the City's inventory and are marked as mobile. Toward the end of the fiscal year, the Regional Industrial and Commercial Workgroup also developed a web-based mobile business database for use by all Copermittees. The goal of developing this database is to allow Copermittees to share information about mobile businesses, which may be active in more than one jurisdiction. The City contributed its mobile business inventory for upload to the regional database.

5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

BMPs for stationary industrial and commercial facilities, as discussed earlier in this section, are required to be implemented for mobile activities, as applicable. BMPs for mobile businesses, including key principles such as proper collection and disposal of any discharge, are discussed in the City's JURMP.

During 2008/2009, the Regional Industrial and Commercial Workgroup, in which the City was an active participant, developed regional mobile business BMP standards.

These standards were devised to create a uniform set of minimum BMPs for mobile businesses operating within the region. The regional mobile business BMP standards were completed by the Workgroup at the end of June 2009 and will be presented to the Copermittee Management Group with a recommendation of adoption by all Copermittees.

5.3.4 PROGRAM IMPLEMENTATION

The City continues to use business license records to identify mobile businesses located in or performing services within the City. Complaints received by the City's storm water hotline regarding mobile business activities also help the City identify mobile businesses. Complaints received by the storm water hotline regarding insufficient BMP implementation by mobile businesses are responded to by Code Compliance Officers or other City staff; educational materials are distributed as applicable. During 2008/2009, the City received three mobile business complaints, all of which were resolved or noted to be unfounded.

In addition to the regional effort to standardize mobile business BMPs, the Regional Industrial and Commercial Workgroup worked to develop a regional mobile business database. The database is designed to store information regarding mobile businesses operating within the region and facilitate communication regarding mobile business activities and enforcement actions between Copermittees.

Education and Outreach and Enforcement

For each investigated mobile complaint, City personnel discussed the BMP requirements of mobile businesses with business personnel and provided educational material such as the Industrial and Commercial BMP brochure (Attachment 5.2). As previously stated, only three mobile business complaints were reported to the storm water hotline during this reporting period.

There were no instances of noncompliance of mobile businesses that were believed to present potential threats to human health or the environment observed during 2008/2009, so none were reported to the RWQCB.

5.4 INDUSTRIAL AND COMMERCIAL COMPONENT EFFECTIVENESS ASSESSMENT

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

5.5 PROGRAM REVIEW AND MODIFICATION

During 2008/2009, the City made some minor changes to its industrial and commercial inspection form to clarify the meaning of some questions and streamline data management. The updated inspection form is included as Attachment 5.1. No other changes to the City's industrial and commercial component have been made since that time.

36	5/9/2009	WALTER ANDERSON NURSERY	12755 DANIELSON CT	Missing inlet filters, runoff from retail area into parking lot and algae growth in drainage channel	All filters replaced, BMPs implemented to prevent runoff and proper BMPs utilized to clean drainage channel.
37	1/21/2009	WILD GINGER	13429 COMMUNITY RD	Grease bin spill throughout parking lot	Proper BMPs utilized to clean parking lot.

6.0 RESIDENTIAL COMPONENT

6.1 INTRODUCTION

Thirty-six percent of land use in the City of Poway is residential, a large part of which is multi- or single-family residences. Due to the large residential area, activities that take place in residential areas have the potential to affect the quality of receiving waters. Residential activities such as vehicle washing, over-irrigation, and home maintenance can potentially contribute pollutants to the City's MS4 if BMPs are not implemented. Additionally, improper disposal of household hazardous waste (HHW) can also contribute pollutants to the City's MS4. The City has worked to implement a range of programs to address these high TTWQ residential activities with the goal of reducing pollutant loads associated with such activities. Pollutants of concern for Poway's watersheds include bacteria, sediment, and nutrients.

6.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the residential component during the 2008/2009 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the residential component of its storm water program during the reporting period are provided in the remainder of Section 6.

- The City has a permanent HHW collection facility; participants disposed of 294,995 pounds of HHW, 815 gallons of used motor oil, and 333 used oil filters. Door-to-door pick up service was available for the disabled and elderly communities.
- The City's Used Oil Recycling Program collection centers reported that 11,400 gallons of used motor oil and 773 used oil filters were collected.
- The City continued to distribute issues of the quarterly *Poway Today* newsletter to all residential addresses in the City (more than 18,000 households).
- In response to the 2008 Dry Weather Monitoring Program recommendations, a follow-up letter and the Residential BMP Brochure were mailed to 99 residents located around and upstream of Rattlesnake Creek.
- I Love A Clean San Diego (ILACSD) conducted several presentations for adults and youth about storm water pollution prevention, watersheds, and used oil recycling.
- The City continued to promote the use of the storm water hotline for residents to call in potential violations of the City's municipal storm water ordinance.

6.2 SOURCE CHARACTERIZATION

The City has identified high TTWQ residential areas within its jurisdiction and has designated various high TTWQ residential activities, which are discussed in the following subsections.

6.2.1 HIGH THREAT TO WATER QUALITY ACTIVITIES

During the 2008/2009 reporting period the City continued to identify the following residential activities as high TTWQ:

- Automobile repair and maintenance
- Automobile washing
- Automobile parking
- Home and garden care activities and product use
- Disposal of trash and pet waste

6.2.2 HIGH THREAT TO WATER QUALITY AREAS

In addition to high TTWQ activities, the City has identified several residential areas that pose a high TTWQ. High TTWQ residential areas are designated by considering complaint investigations, institutional knowledge, data from the City's Dry Weather Monitoring Program, and criteria as defined in the Municipal Permit. Residential areas that have not been designated as high TTWQ but may be sources of pollutants are also monitored by the City.

The City has mapped out areas identified as high TTWQ. The maps delineate the residential areas described below, and a series of smaller maps provide more detail about each individual area. The maps were printed and distributed to Public Works personnel and large copies were posted in the Public Works office so staff can become familiar with high TTWQ areas and be vigilant to storm water issues that may arise in these areas. The maps are included as Attachment 6.1.

North Poway Residential Areas

North Poway includes a large part of the Multi Species Conservation Program and Biological Core and Linkage Area (BCLA). Sections of the Sycamore and Thompson Creeks fall within these areas. Runoff from residential streets bordering the BCLA eventually discharges at an outlet within the corridor at the northern end of Glen Arven Lane. Additionally, some rural roads located within the BCLA may discharge directly to the creeks. Potential runoff sources include residences located on Saint Andrews Drive, Glen Arven Lane, Del Paso Drive, Villamoura Drive, Indian Canyon Lane, Highlands Ranch Road, East Old Winery Road, and Old Coach Road and all of its associated side roads.

Rattlesnake Canyon Cornerstone
This region is located approximately one mile east of the intersection of Twin Peaks Road and Espola Road, and is within a designated BCLA. Rattlesnake Creek flows from Rock Haven Cornerstone, down through Rattlesnake Canyon Cornerstone, and eventually to Poway Creek. Sparsely populated residential areas on Ridgecrest Road, Clearview Road, Mina De Oro Road, Tooth Rock Road, and Westview Road may generate runoff that discharges to Rattlesnake Creek.

Rattlesnake Basin
This area includes the residential area south of Twin Peaks Road and West of Espola Road. Past Dry Weather Monitoring Program results have indicated the presence of elevated levels of bacteria at Tierra Bonita Road and Poway Valley Road. High counts of total coliform, fecal coliform, and Enterococcus were detected during an upstream investigation in this area. Fecal matter and an oily sheen on the water's surface were observed at a sample site during an upstream investigation.

South Poway Cornerstone
South Poway Cornerstone consists of BCLA land that encompasses southern portions of the City south of Poway Creek and along the north side of Beeler Canyon Creek. Los Peñasquitos Creek passes through the east portion of the South Poway Cornerstone and joins Poway Creek. Small communities on the south end of Gate Drive, Calle Seco, Paseo Bonita, Welton Lane, and Shirra Avenue are potential contributors of runoff in this area. The previous Dry Weather Monitoring Program indicated elevated nitrate-nitrogen levels at Hilleary Place. One residential storm water complaint was recorded for this area.

Residential Areas Draining to the Blue Sky Ecological Reserve
This area is designated as an Environmentally Sensitive Area (ESA) and includes a portion of Sycamore Creek north of Lake Poway. The residential region in the vicinity of the Blue Sky Ecological Reserve is fairly low density, and the population is relatively small. Potential runoff sources may include residences located on Twisted Branch Road, Country Day Road, High Sierra Road, and Espola Road. There was one reported complaint to the storm water hotline for this residential area.

6.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City has continued to provide information regarding the implementation of pollution prevention measures, such as good housekeeping practices, for residential areas and activities. Section 8.3 of the City's JURMP includes the City's minimum BMP requirements for specific residential activities. General residential BMPs include conscientious automotive maintenance and care, erosion control, and good housekeeping measures, such as sweeping rather than hosing off driveways and sidewalks. Other residential BMPs include non-storm water discharge management, including elimination of IC/IDs. There have been no changes to the City's residential BMP requirements as discussed in Appendix C of the City's JURMP.

6.4 PROGRAM IMPLEMENTATION

The City's residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting are conducted. This ensures that pollutants associated with residential activities and areas are minimized. The residential program has an education component so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities.

6.4.1 TRAINING, EDUCATION, AND OUTREACH

The City has continued to conduct training, education, and outreach activities for residents, which are described below.

***Poway Today* Newsletter Articles**

The City publishes storm water-related articles in the quarterly *Poway Today* newsletter. Four newsletters were printed during the reporting period. A copy of each edition was mailed to more than 18,000 residential addresses within the City. Each issue was also archived on the City's website. The storm water-related articles published in 2008/2009 are summarized below. All newsletters published during the 2008/2009 reporting period are included as Attachment 6.2.

The Fall 2008 newsletter contained the following storm water-related articles and announcements:

- "'NATURAL' POLLUTANTS: BACTERIA AND SEDIMENTS" explained why it is important to keep sediment and bacteria from entering the waterways and how to minimize discharges of these constituents of concern. Information about the Development Services Department and the City's website were also provided as additional resources.
- "OVER WATERING YOUR YARD?" included an informational blurb on water restrictions, and reminded residents to minimize over-irrigation and water use activities.

The Winter 2008 newsletter contained the following storm water-related articles and announcements:

- "WATER CONSERVATION RESIDENTIAL SURVEYS" provided information on how residents may reduce indoor and outdoor water consumption by meeting with San Diego Country Water Authority personnel who would assess areas of household water use.
- "A FOCUS ON SUSTAINABILITY" informed the public of specific areas that Poway has improved upon to reduce the City's water consumption and energy use. It also encouraged residents to make additional changes, such as reducing water consumption by planting drought-tolerant plants.

- "EMPLOYEE SPOTLIGHT – MEET YOUR POWAY CODE COMPLIANCE OFFICERS" introduced Poway residents to the code compliance officers who investigate various complaints and potential ordinance violations throughout the City.
- "BE 'WINTER WISE' PREPARE NOW FOR FUTURE STORMS" warned property owners of the threats of flooding and provided tips to reduce soil erosion and keeping gutters and storm drains free of debris to decrease the chance of flood damage.
- "LET'S WORK TOGETHER TO PREVENT POLLUTION!" provided information on how the City's Storm Water Pollution Prevention Program keeps local waterways clean. The article also provided specific BMPs that residents can implement to minimize pollutant discharges. The City's contact number and website were provided as an additional resource.
- "RECYCLE YOUR CHRISTMAS TREE!" provided information on proper Christmas tree recycling through EDCO's waste disposal services.
- "JUNK YOUR CAR FREE OF CHARGE" informed residents of a program for free pickup and disposal of inoperative vehicles. This article further discussed how keeping wrecked vehicles on one's property is a violation of Poway Municipal Code Section 10.52.040.
- "OVER WATERING YOUR YARD?" was an informational blurb on water restrictions, reminding residents to minimize over-irrigation and water use activities.

The Spring 2009 newsletter contained the following storm water-related articles and announcements:

- "WATER: A RESOURCE WE CAN'T LIVE WITHOUT" informed residents of the mandatory water cuts and provided several ways to decrease water consumption. The City's hotline number for reporting waste of water and the City's website were provided for additional information.
- "SAFE DISPOSAL OF HOUSEHOLD HAZARDOUS WASTE" identified different types of HHW and notified residents and businesses of the ongoing free drop-off center's location in South Poway Business Park. The article further highlighted ways to reduce the amount HHW generated by businesses and residents.
- "LOOKING TO VOLUNTEER? YOU'RE ON THE RIGHT TRAIL," called for volunteers to join the City's Adopt-a-Park and Adopt-a-Trail programs. This was an informational article about the programs and provided contact numbers to join.
- "IT'S SPRING CLEANUP TIME" informed residents of the upcoming cleanup coupons that were being mailed out to residents. The collection was performed

through EDCO and allowed residents to dispose of large items or unwanted household materials (not including HHW) free of charge.

The Summer 2009 newsletter contained the following storm water-related article:

- "POWAY'S WATER SUPPLY TO BE CUT JULY 1" reminded City residents of the mandatory water cuts and discussed the City's plans to meet water reduction regulations. The article also provided an itemized checkbox to assist residents and businesses with ideas for reducing water consumption.

Other Educational Outreach Materials and Activities

In response to the 2008 Dry Weather Monitoring Program recommendations, a follow-up letter and the Residential BMP Brochure were mailed to 99 residents around and upstream of the Rattlesnake Creek. This literature announced the observed presence of oil or grease in Rattlesnake Creek. The letter and brochure included minimum BMPs for reducing oil discharges and information about the importance of decreasing residential urban runoff pollutants. The letter is included as Attachment 6.3 and the Residential BMP brochure is included as Attachment 6.4.

Additionally, if Public Works crews noticed storm water-related issues such as trash or animal waste in the vicinity of clean-out location, informational door hangers were distributed to residences in close proximity to the issue. The door hangers can be found as Attachment 6.5.

Educational materials were also distributed during community events to further encourage pollution prevention measures and to increase knowledge about storm water. Efforts further included adult and youth presentations on watershed issues, storm water pollution prevention, and recycling of used motor oil. Additionally, the City has continued to provide storm water information and contacts on their website (http://www.ci.poway.ca.us/). The City's storm water hotline also provides a medium for City residents and business owners to obtain storm water information and file storm water related complaints. More detailed information about the City's residential education program is included in Section 8 of this report.

During 2008/2009 the City continued to participate in the Regional Residential Education Program.

6.4.1.1 PUBLIC EVENTS

HHW Events

The City maintains a permanent collection facility for HHW and electronic waste. The facility is open every Saturday from 9 a.m. to 3 p.m., with the exception of holiday weekends. A total of 294,995 pounds of HHW, 815 gallons of used motor oil, and 333 used oil filters were collected at this facility. For disabled residents or residents over 65, door-to-door pickup services were provided. The City's five Used Oil Recycling Program collection centers reported that 11,400 gallons of used motor oil and 773 used oil filters were collected during the 2008/2009 reporting year.

Other Events/Activities

Residents were also encouraged to participate in local activities to improve water quality such as clean-up events. Several California-Friendly Landscape classes were offered to residents during 2008/2009. These workshops were designed to teach residents about choosing a water-smart landscape. More detailed information about the public participation events in which residents participated is included in Section 9 of this report.

6.4.2 Compliance and Enforcement

The City continues to implement compliance and enforcement measures by identifying potential sources of pollutants in residential areas from Dry Weather Monitoring Program data, complaints received by the storm water hotline, and observations made by the City's municipal personnel. If a potential to affect water quality is present, the City can provide a verbal warning, written warning, order to abate or correct, or monetary fines as applicable. If there was no active discharge seen during the complaint investigation, a courtesy notice along with educational material was left with the resident.

The City received 12 residential-related complaints during this reporting period. Five verbal warnings and four courtesy notices were issued to residents and/or landlords in response to these complaints. Many of the complaints verified involved residents who were unaware of residential BMPs. City personnel distributed the Residential BMP Brochure (Attachment 6.4) during complaint investigations. City personnel also cleaned areas in the public right of way as necessary to resolve complaints received by the City's Public Works Department. All residential complaints were resolved, and no further actions, such as fines or reports to the RWQCB aside from this JURMP Annual Report, were deemed necessary.

6.5 Residential Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

6.6 Program Review and Modification

The City's JURMP was updated in March 2008. No significant changes to the City's residential component have been made since that time.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

In accordance with the September 10, 2008, RWQCB adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the 2008/2009 illicit discharge detection and elimination section and attachments to the RWQCB no later than December 15, 2008.

8.0 EDUCATION COMPONENT

8.1 INTRODUCTION

During 2008/2009, the City continued to provide education and outreach to a variety of audiences within the City. The City's education program targets municipal personnel, industrial and commercial businesses, construction site owners and operators, and residents. The City aims to reduce storm water pollution by increasing awareness about the storm water conveyance system and promoting the implementation of BMPs. Through education and outreach, the City works to foster change in both the attitude and behaviors of the regulated community.

8.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the education component during the 2008/2009 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the education component of its storm water program during the reporting period are provided in the remainder of Section 8.

- The City has hosted six training sessions for municipal personnel; 126 municipal personnel participated in these training sessions.
- Four Engineering staff participated in weekly training and review of construction projects.
- During 2008/2009, the City's quarterly newsletter, *Poway Today*, featured several articles highlighting storm water topics. These newsletters were distributed to several thousand businesses and residents in the City.
- Various educational materials targeting high TTWQ mobile activities, such as mobile auto detailing, were made available on the City's website during 2008/2009.
- Several California-friendly landscaping classes for English and Spanish speaking professionals regarding water conservation were provided during 2008/2009. California-friendly landscaping classes were also offered for residents.
- ILACSD provided several storm water presentations for adults and school-aged children.

8.2 STAFF TRAINING ELEMENT

The City has provided extensive training and educational outreach to its municipal personnel. Many municipal personnel are out in the field on a daily basis, so it is important that they understand the importance of implementing BMPs. Additionally, municipal personnel are encouraged to report any IC/IDs observed to the appropriate City staff and to educate other municipal personnel and the general public about storm

water pollution prevention. Table 8-1, below, includes all training sessions that were provided for various municipal staff and departments during 2008/2009.

Table 8-1
Municipal Training Sessions

#	Date	Event	Topic(s)	Participants
1	2/24/2009	Pesticide Handling Training	Training on proper handling of pesticides	30 Parks and Landscape Division Employees
2	April 2009	Spill Response Training	Discussion of appropriate spill response and procedures	7 Emergency Response Technicians
3	6/1/2009	Model SUSMP Training	County training session on model SUSMPs	4 municipal staff members
4	6/16/2009	Industrial Site Inspections and SWPPP Review Training	Training on industrial/commercial inspections and SWPPP component review performed by a City consultant	1 Engineering Technician
5	6/25/2009	Municipal Inspection Training	Municipal inspection training session conducted by the Storm Water Program Administrator	1 Engineering Technician and 1 Public Works Employee
6	6/30/2009	BMP Meeting and Pre and Post Storm Water Exam	Video presentation of BMPs and Pre and Post NPDES Storm Water Exam	84 Public Works Employees
7	Weekly Occurrence	Project and Construction Inspections Review	Weekly review and trainings on construction projects performed by the Engineering Supervisor	4 Engineering Inspectors

During the training session on 6/30/2009, 84 Public Works Employees watched an informational storm water video. To evaluate the effectiveness of the video and quantify an increase in knowledge of individuals that watched the video, pre and post tests were administered. A copy of the test is included as Attachment 8.1. This exam included a series of ten true or false questions pertaining to storm drain connections, responsibility for protecting the storm drain system, illicit connections, watershed identification, and proper implementation of BMPs. Thirteen employees answered all ten pre and post test exam questions correctly. Of the remaining tests, one quarter had higher post test scores than pre test scores.

In addition to the training sessions discussed above, Public Works staff were provided maps of the high TTWQ residential areas, as discussed in Section 6 of this JURMP Annual Report. Larger versions of the maps are also posted in the Public Works office. These maps were distributed and displayed so staff can become familiar with high

TTWQ areas and be vigilant to storm water issues that may arise in these areas. The maps are included as Attachment 6.1.

8.3 EDUCATIONAL OUTREACH ELEMENT

In addition to municipal staff, the City has continued to provide education and outreach to industrial and commercial businesses, construction site owners and developers, and residential areas. These efforts promote storm water awareness and BMP implementation and are discussed in the following subsections.

8.3.1 INDUSTRIAL AND COMMERCIAL BUSINESSES

As required by the Municipal Permit, the City inspects its inventoried businesses to evaluate compliance with the City's BMP requirements and provides site-specific education outreach to business owners and operators. Results of the inspections conducted in 2008/2009 are discussed in Section 5 of this report. Each facility inspected received verbal education on storm water issues and received inspection results by mail. Brochures including BMPs for general industrial/commercial activities, vehicle washing, horses and livestock, and restaurants were distributed during inspections as applicable. During 2008/2009, the City distributed 315 industrial and commercial Preventing Urban Runoff Pollution brochures to businesses who submitted a new business license application. Additionally, facilities selected for an initial FOG inspection received a FOG program manual. Educational materials distributed during inspections are included as Attachment 5.2.

During the 2008/2009 reporting period, the City's quarterly *Poway Today* newsletter featured several articles highlighting storm water topics that were aimed at businesses and residents in the City. Examples of such articles include "'Natural' Pollutants: Bacteria and Sediments," "Let's Work Together to Prevent Pollution!," "Safe Disposal of Household Hazardous Waste," and "Be 'Winter Wise' Prepare Now For Future Storms." These articles, which are described in detail in Section 6, were meant to alert residents and business owners of storm water issues, water restrictions, proper disposal of HHW, and the concept of BMPs to reduce urban runoff pollution. These newsletters are included as Attachment 6.2. The total numbers of educational materials distributed to industrial and commercial are included in Table 8-2, below.

Table 8-2
Educational Materials Distributed to Industrial and Commercial Businesses

Type of Educational Material Distributed	Number Distributed
Industrial and Commercial Preventing Urban Runoff Pollution Brochure	437
Horse and Livestock BMPs Brochure	3
Restaurant BMP Brochure	28
Mobile Auto Detailing BMPs Brochure	1
FOG Inspection Manual	10
Poway Today (4 issues)	7,648

8.3.1.1 MOBILE BUSINESSES

Mobile businesses, specifically mobile car detailers or power washers, are considered a high TTWQ due to the nature of the business activities and the likelihood of prohibited non-storm water discharges. Mobile businesses are not confined to a single area and many do not have City business licenses, making them difficult to identify. The City keeps track of mobile businesses that are discovered through business licenses and during field inspections. In order to ensure that these mobile businesses are implementing appropriate BMPs, BMP handouts for power washers, concrete and mortar projects, and mobile auto detailing are distributed as necessary. These brochures are included with other media targeted at industrial and commercial businesses in Attachment 5.2. This literature may also be accessed on the City's website.

As previously mentioned, the *Poway Today* newsletter also provides storm water-related information to businesses in the City, including mobile businesses. Several California-friendly landscaping classes were hosted by the City's Water Conservation Department for landscape professionals. These classes were hosted in both English and Spanish; a total of 77 individuals attended these classes, which were advertised in the *Poway Today* newsletter. The classes focused on choosing low water use/drought resistant plants to help conserve water, and thus avoid issues with over-irrigation.

8.3.2 CONSTRUCTION SITE OWNERS AND DEVELOPERS

Due to the nature of activities, construction sites have the potential to discharge various types of pollutants to receiving waters if not managed properly. To ensure that construction site owners, contractors, and developers are abiding by regional and federal regulation, new development and redevelopment project proponents are required to attend a preconstruction meeting that includes education on storm water

management topics. These meetings include federal, state, and local regulations, implementation of a SWPPP, and if required, implementation and maintenance of BMPs. Project proponents view a video on proper BMP implementation for construction sites and sign an acknowledgement that they have received this information. Prior to the rainy season, the City also sends out a yearly letter to all parties responsible for construction projects which describes enhanced construction BMP requirements and storm water management requirements during the rainy season. Additionally, a total of 100 SUSMP handouts were distributed to project proponents during 2008/2009. SUSMP regulations and BMP information included in the City's JURMP are also made available on the City's website.

8.3.3 RESIDENTIAL AREAS

Distribution of Educational Material

Since residential areas make up a large portion of Poway, the City understands the importance of reaching this particular audience through educational outreach programs. The City continued to send the *Poway Today* newsletter (Attachment 6.2) to the more than 18,000 residential addresses in the City. As previously mentioned, several storm water articles were included in the newsletters distributed in 2008/2009.

The City website, www.poway.org, is another way in which City residents can become familiar with the design and intended use of the storm drain system, minimum BMP for various high TTWQ activities, information regarding volunteer opportunities, information about integrated pest management (IPM), and City contact information.

As mentioned in Section 6 of this report, if Public Works crews noticed storm water-related issues such as trash or animal waste during normal maintenance activities, informational door hangers were distributed to residences in close proximity to the issue. During 2008/2009, 50 door hangers were distributed. The door hangers can be found as Attachment 6.5.

Training Events

Several water-wise landscaping workshops for residents were provided by the City's Water Conservation Department in 2008/2009. A total of 312 Poway residents attended the Residential Landscape class series. The classes focused on choosing low water use/drought resistant plants to help conserve water, and thus avoid issues with over-irrigation.

During 2008/2009, ILACSD provided 16 presentations to various audiences in Poway. These presentations included a discussion of watersheds, storm water issues, pollution prevention measures, and appropriate ways to recycle used motor oil. A total of 465 school-aged children attended these presentations. Two additional presentations were given for adults on the same storm water related issues. Twenty five adults attended a presentation at the Poway Kiwanis building and 20 adults attended a second presentation at the Poway Library. Table 8-3 below includes the locations and number of presentations delivered to the select school-aged groups and adults.

Table 8-3
ILACSD Storm Water Presentations

Location	Description
Tierra Bonita Elementary	5 presentations for 3rd graders
Tierra Bonita Elementary	3 presentations for 5th graders
Abraxas High School	1 presentation for 12th graders
Meadowbrook Middle School	2 presentations for 7th and 8th graders
Poway Library	2 presentations for 1st graders
Midland Elementary	3 presentations for 4th graders
Poway Kiwanis	1 presentation for 25 Adults
Poway Library	1 presentation for 20 Adults

The City also distributed educational material to residents through public events such as Earth Day and Community Day. The City distributed Residential BMP Brochures (Attachment 6.4), pet waste bag dispensers, and other storm water-related material during these events. A detailed description of public participation events that took place in the City during 2008/2009 is provided in Section 9.

8.3.4 UNDERSERVED COMMUNITIES

The City of Poway has not identified any underserved communities within City boundaries. There is no inner-city area within the City's jurisdiction, and the non-English speaking populations are very small in size.

8.3.5 COMPLAINT INVESTIGATIONS

To further aid the process of identifying illicit discharges, the City encourages the public and City staff to report IC/IDs to the City's storm water hotline. All complaints are investigated by City staff. If a representative for the reported business, residential address, or construction site is present, the inspector will provide educational materials on pollution prevention runoff as applicable. In instances where no active discharge was observed, but evidence of a potential IC/ID was present, City personnel distribute educational materials and follow-up letters explaining appropriate storm water practices. During 2008/2009, four Industrial and Commercial Preventing Urban Runoff Pollution brochures (Attachment 5.2) were distributed to commercial and industrial sites reported to the storm water hotline. Eight Residential BMP Brochures (Attachment 6.5) were distributed to residential addresses reported to the storm water hotline.

8.4 OUTREACH COMPONENT EFFECTIVENESS ASSESSMENT

The estimated number of impressions made by the City's education and outreach efforts during 2008/2009 is presented and described below. Please refer to Section 11 of this JURMP Annual Report for the remainder of the effectiveness assessment for this program component.

Impressions Made

As discussed in this section, the City has continued to provide storm water-related education to different audiences in the City storm water-related education through inspections, distribution and mailing of educational materials, and during various events throughout the year. The City calculates an estimate of impressions based on the number and type of educational materials distributed. Estimates of the numbers of impressions generated by the City's efforts allow for a more realistic evaluation of the effectiveness of the NPDES storm water program.

The estimated number of impressions was generated by multiplying each effort by the number of impressions thought to be generated by that particular effort. For example, inspections have been presumed to generate three impressions, with the exception of municipal inspections. Municipal inspections generally involve more people and are assumed to generate five impressions. Training sessions and cleanup events have been assumed to generate a number of impressions equal to four times the number of attendees because it is likely that the attendees will discuss the content with others after the training session or event. Printed educational materials distributed are assumed to generate three impressions each. Table 8-4, below, details the number of impressions made by the City during this reporting year.

Table 8-4
Impressions Made by the City

Impression Type	Count	Unit	Estimated Impressions
Municipal Inspections	33	Inspections	165
Industrial/Commercial Inspections	145	Inspections	435
Storm Water Door Hangers	50	Door Hangers	150
Inspection notification letter – "Re: Storm Water Compliance Inspections"	160	Letters	480
Dry Weather Monitoring Follow-Up letter "Re: Storm Water Pollution Prevention"	99	Letters	297
Residential BMP Brochure	107	Brochures	321
Industrial/Commercial Preventing Urban Runoff Pollution	350	Brochures	1050
Horse and Livestock BMPs Brochure	3	Brochures	9
Restaurant BMP Trifold	28	Brochures	84
Mobile Auto Detailing BMPs Brochure	1	Brochures	3
FOG Inspection Manual	10	Brochures	30
SUSMP Handouts	100	Brochures	300
Bags on Board® Pet Waste Bag Dispensers	300	Bag Dispensers	300
NOI Paperwork	4	Brochures	12
NONA/NEC Paperwork	7	Brochures	21
Poway Today Newsletter	79,650	Newsletters	238,950
Training Session/Activities and Events	2,892	Attendees	11,568
Complaint Investigations	50	Investigations	200
Total City Impressions			***254,375***

8.5 PROGRAM REVIEW AND MODIFICATION

The City's JURMP was updated in March 2008. No significant changes to the City's education component have been made since that time.

9.0 PUBLIC PARTICIPATION COMPONENT

9.1 INTRODUCTION

The City encourages public participation in the City's JURMP as a means to foster storm water awareness and improve water quality. Public participation includes, but is not limited to, clean-up events, special community projects, reporting observed IC/IDs, and participating in City-hosted waste disposal and collection events. Collaboration between the City and the community should help encourage a sense of shared responsibility in protecting water quality both locally and regionally. The City has encouraged public participation through the programs discussed in this section.

9.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the public participation component during the 2008/2009 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the public participation component of its storm water program during the reporting period are provided in the remainder of Section 9.

- Volunteers for the City's Adopt-a-Park and Adopt-a-Trail programs, which involve residents in keeping local parks and open spaces free of litter, logged a total of 1,371 hours.
- The City's year-round HHW collection facility received 294,995 pounds of HHW from approximately 4,040 City residents. The HHW collection center also received 815 gallons of used motor oil and 333 used oil filters.
- The City's five Used Oil Recycling Program centers collected approximately 11,400 gallons of used oil and 773 used oil filters.
- Bi-annual self-haul clean-up events were hosted by the City in conjunction with EDCO. The events allowed residents to dispose of large items, unwanted household materials (not including HHW), and green waste free of charge. A total of 1,663 households participated in these events and over 665 tons of trash were collected.

9.2 PUBLIC PARTICIPATION ACTIVITIES

Clean-up Events and Programs

During 2008/2009, the City hosted various clean-up events and activities at various locations in the City. Clean-up events provide a direct benefit to water quality and provide an opportunity for the City to distribute educational materials and information to the event's volunteers.

Adopt-a-Park

The City's Adopt-a-Park Program has continued to involve local businesses, schools, service organizations, families and other individuals in keeping the City's parks free of trash. Volunteers involved in this program are encouraged to remove trash on a regular basis from City parks and open spaces. Volunteers spent over 963 hours removing trash from various parks throughout the City.

Adopt-a-Trail

Similarly, the City's Adopt-a-Trail Program promotes cleanliness in the City by encouraging City residents to keep hiking trails, creeks, and open space safe and free of trash. Volunteers pick up trash and debris during activities such as daily walks. During this reporting period, 46 participants spent 408 hours removing trash from open space and trails.

Hazardous Waste Collection and Used Oil Recycling Program

The City's Community Hazardous Waste Collection and Electronic Waste Collection Programs encourage City residents and business owners to properly dispose of HHW and miscellaneous electronic waste. As discussed in Section 6 of this report, the City has a year-round HHW collection center. This facility was advertised in the City's *Poway Today* newsletter (Attachment 6.2), which was circulated to several thousand residential and business addresses in the City. Door-to-door pickup service was also provided for seniors over 65 and disabled communities.

The City's Used Oil Recycling Program involves five certified used oil centers within the City. In the 2008/2009, the collection centers reported that 11,400 gallons of used motor oil and 773 used oil filters were collected. Information about the used motor oil, HHW, and electronic waste collection facilities was advertised in *Poway Today* and on the City's website.

Other Waste Disposal

The City hosts bi-annual self-haul cleanup events from October to December and April to June to encourage proper disposal of unwanted bulk items and other refuse. The City's waste hauler, EDCO Waste and Recycling Services, distributes coupons for disposal of large items, appliances, and yard waste to residents of Poway. These coupons allow residents to drop off any unwanted trash and debris, excluding HHW, free of charge. During these events, the transfer station remains open from 7 a.m. to 4:30 p.m. seven days a week. There were approximately 705 participants during the fall event and 958 participants during the spring collection event. During the fall and spring events 564,000 and 766,400 pounds of waste, respectively, were delivered to the collection facility. These two events were advertised in the *Poway Today* newsletter (Attachment 6.2).

Public Reporting

As discussed in Section 4, complaints are received through the City's storm water hotline and through the City's Public Works Department. The number for the hotline is advertised in articles published in the *Poway Today* newsletter, on various educational

materials given out at public outreach events, and on the City's website. The residential, industrial and commercial, construction, and municipal communities are encouraged to use the hotline to report IC/IDs. The City investigates each complaint and tracks the complaint and follow-up actions, as applicable. A total of 50 complaints were made and responded to during 2008/2009.

9.3 OUTREACH EVENTS

The City has continued to provide educational outreach programs for a variety of different communities in the City. Since it is an effective way of reaching large numbers of individuals, educational outreach is typically associated with an event. Other outreach events in the City include distributing educational materials to commercial businesses and the City's participation in regional meetings and events.

Earth Day

On 4/18/2009, the City of Poway hosted an environmental awareness event held at the Blue Sky Ecological Reserve. Approximately 150 people attended the event. ILACSD displayed the Enviroscape watershed model to explain storm water pollution concepts, emphasizing the importance of keeping waterways clean to promote a healthy environment. Various educational materials and literature pertaining to storm water issues and proper pet waste disposal were available to patrons of this event. The date, time, and location of this event were advertised in the *Poway Today* newsletter (Attachment 6.2) and on the City's website.

Community Day Celebration

The Community Day Celebration is a free event with entertainment and booths of local businesses and activities. Over 7,500 people attended the event, which was held on 9/13/2008 in Poway Community Park. A booth was set up in which educational materials and storm water-related items, such as Bags on Board®, were circulated. Approximately 300 refillable pet waste disposal bag dispensers were distributed to pet owners during this event. The text on the dispensers alerted pet owners to proper waste disposal BMPs and the threats that animal waste bacteria can pose to storm water. Information on this event was advertised in the *Poway Today* newsletter (Attachment 6.2) and on the City's website.

Storm Water Copermittee Meetings and Other City Participation

City personnel attended, and were active in, various storm water Copermittee workgroups during 2008/2009. The workgroups provide a forum for representatives from various jurisdictions within San Diego County and other interested parties, including the general public, to exchange information and ideas regarding the management of storm water programs. The City participated in nearly all Copermittee meetings and several Copermittee workgroups. These meetings will continue to be attended by City personnel during 2009/2010 reporting period.

9.4 Public Participation Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

9.5 Program Review and Modification

The City's JURMP was updated in March 2008. No significant changes to the City's public participation component have been made since that time.

10.0 FISCAL ANALYSIS

10.1 INTRODUCTION

In fiscal year 2007/2008, the City adopted a stormwater fee. This user fee is assessed on both residences and businesses. Funds from this fee are legally restricted to use for components of the City's Storm Water Pollution Prevention Program that benefit residences and businesses. Portions of the City's Storm Water Pollution Prevention considered to benefit only City-owned properties or undeveloped properties in the City are funded by the City's General Fund, as there is no nexus for cost recovery from residential or commercial customers.

Program expenditures for fiscal year 2008/2009 and projected expenditures for fiscal year 2009/2010 are shown in Table 10-1. As required by the Permit, expenditures that contribute to Permit compliance but were in existence prior to implementation of the JURMP are identified.

Table 10-1
Itemized Expenditures and Budget For
Fiscal Years 2008/2009 and 2009/2010

Storm Water Program Fiscal Analysis	Expenditures FY 08/09	Budget FY 09/10	Prior to JURMP?
Stormwater Division			
Personnel	$248,713	$369,020	No
Special Studies	$0	$10,000	No
Reimbursed Mileage	$14	$2,000	No
Vehicle Maintenance and Operation	$19,667	$21,500	No
Travel and Meetings	$40	$1,250	No
Cellphones and Pagers	$0	$1,200	No
Consultant Services	$277,308	$388,836	No
Radios Repair and Maintenance	$0	$600	No
Small Tools	$624	$1,600	No
Office and Stationery Supplies	$326	$220	No
Safety Supplies	$502	$770	No
Operating Supplies	$14,374	$15,000	No
Community Relations	$0	$3,500	No
Education and Training	$519	$2,550	No
Medical Exams	$476	$740	No
Printing	$22	$4,900	No
Publications and Dues	$255	$280	No
Uniforms and Laundry	$947	$1,480	No
Rental - Equipment	$7,564	$8,000	No
Capital Outlay Rental – Vehicles	$5,600	$5,600	No
Stormwater Administration	$187,626	$366,290	No
Intergovernmental Fees	$76,596	$80,000	No
Construction/Street Maintenance Equip.	$1,481	$2,200	No
Photographic Equipment	$0	$250	No
Other Equipment	$21,790	$5,000	No
Public Street/Parking Lot Sweeping	$225,027	$257,070	Yes
Litter/Pollutant Removal	$247,161	$245,340	Yes
Storm Drain Cleaning/Light Maintenance			
Basins, Inlets, Outlets, Culverts, Channels	$32,868	$33,594	Yes
Equipment and Supplies	$25,814	$27,642	No
Storm Water Activities in Landscape Maintenance Districts	$37,261	$50,555	No
Erosion/Sediment and Pollution Control	$26,487	$28,616	No
Enforcement – Code Compliance Officers	$17,077	$17,563	No
TOTAL	**$1,476,139**	**$1,953,166**	

11.0 EFFECTIVENESS ASSESSMENT

11.1 INTRODUCTION

Implementation of the City's JURMP is intended to reduce discharges of urban runoff related pollution to the MEP. The City regularly evaluates its program to make it as effective as possible. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes. Next, the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique.

Based on participation in regional efforts and its experience implementing its JURMP, the City has identified a variety of metrics to assess progress toward targeted outcomes. At the end of each reporting year, the City uses selected metrics to assess the effectiveness of its program implementation. Example metrics were provided in Section 13 of the City's 2008 JURMP. Some new metrics have been introduced during this reporting period to help assess new programs created in response to the 2007 Municipal Permit.

The effectiveness assessment approach developed by the Copermittees during the last permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

11.2 EFFECTIVENESS ASSESSMENT RESULTS

The Municipal Permit requires the City to assess the effectiveness of each significant activity for each program component, for each program component as a whole, and for the storm water program as a whole. Level 1, Level 5, and Level 6 outcomes are discussed in the text below. At this time the City is not able to assess Level 5 or Level 6 outcomes for individual program activities or individual programs. As has been noted in CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

11.2.1 OUTCOME LEVEL ASSESSMENTS

Level 1

Level 1 outcomes essentially are measures of permit compliance. The component-specific sections in this JURMP Annual Report provide details of programmatic actions taken to comply with the applicable Municipal Permit requirements. Appendix C of this JURMP Annual Report also includes a checklist that matches the Municipal Permit's annual reporting requirements with the section(s) or appendix of this report that addresses each requirement.

The City also created and filled a Storm Water Program Administrator position in 2008/2009. The Storm Water Program Administrator is responsible for coordinating with various staff in the City who have storm water responsibilities, such as engineers, planners, and Public Works maintenance staff. Since the administrator was hired in late 2008/2009, modifications have been made to improve the effectiveness of the implementation of several components of the City's storm water program.

Levels 2 and 3

See Tables 11-1 through 11-8 at the end of this section for discussions of Level 2 and Level 3 outcomes for significant activities within each program component. Please note that only a Level 1 assessment applies to fiscal analysis, so no table for fiscal analysis is included.

Level 4

The tables at the end of this section provide information for Level 4 assessments where feasible. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning. For most other programs, reliable load estimation methods have not yet been developed.

Level 5

The Dry Weather Monitoring Program is the City's primary mechanism of measuring the quality of discharges. Figure 11-3 presents historical averages values from field tests. Trends in ammonia-nitrogen concentrations are shown in Figure 11-4. Ammonia-nitrogen is one of the constituents with the longest historical data record and has shown a general decreasing trend over the course of the program. Results for fecal coliform

bacteria and *Enterococcus* bacteria analyses are displayed in Figure 11-5. Fecal coliform levels show a declining trend over time. Heavy metals and organophosphate pesticides have rarely been detected since testing for them began in 2002.

The City has also completed several years of inflow and outflow monitoring of its retrofitted detention basins to assess their effectiveness. The studies have indicated the basins have a significant positive effect on water quality. See Attachment 11.1 for details.

Level 6

The City recognizes the importance of protecting water quality of receiving water bodies in and around the City, and continues to participate in regional monitoring efforts. The long-term trend monitoring station in the Peñasquitos Watershed, referred to as a mass loading station (MLS), is well downstream of the City, and the MLS in the San Dieguito Watershed is downstream of Lake Hodges. Lake Hodges typically retains runoff from areas upstream of it, including the City of Poway, so results from the downstream MLS are unlikely to be representative of runoff from areas upstream of Lake Hodges. In 2007/2008, the Regional Monitoring Program located one temporary watershed assessment station (TWAS) farther upstream in each of these two watersheds, closer to the City of Poway. One is located on Los Peñasquitos Creek west of the City, and one is located in Green Valley Creek northwest of the City. Only one year of data is available for these stations. Application of the Numeric Nutrient Endpoint (NNE) criteria to data collected at the Peñasquitos TWAS location during ambient conditions yielded an output of presumptive unimpaired for all assessment categories. Application of the same criteria at the San Dieguito TWAS gave a result of presumptive unimpaired for two assessment categories, with a more equivocal result in a third category (Weston, 2009). Wet weather data was collected in 2007/2008 relatively soon after the large wildfires of 2007, which likely affected the data collected, especially sediment and turbidity values. As more data becomes available in the future, more valuable conclusions may be able to be drawn.

11.2.2 Overall Component Assessments

Development Planning

When initially contacted to verify BMP maintenance, private responsible parties were often relatively unfamiliar with the requirements. In some cases this was due to recent changes in property ownership or management. Through proactive follow-up efforts, the City obtained verification of BMP maintenance from the responsible parties for all inventoried treatment control BMP projects. This process, along with site inspections, has increased the responsible parties' understanding of the requirements and appears to have resulted in increased BMP maintenance.

All projects approved during the reporting period proposed high or medium removal efficiency BMPs. The City has now retrofitted five detention basins for use as regional treatment control BMPs, which provides effective treatment to SUSMP projects that drain to the basins and non-SUSMP projects that are also in the basins' drainage areas.

Based on a historical review of SUSMP projects approved in previous reporting periods, the City did identify some areas for improvement within its development review process. The City's planners, engineers, and storm water staff are working collaboratively to clarify responsibilities and steps to be taken along the process. A draft revised process and associated forms have been created, and the City anticipates the approach will be finalized in 2009/2010. The City has also contracted with an outside consultant to provide training for its engineers and the inspectors responsible for pre-occupancy BMP verification inspections in early 2009/2010.

Construction

The available data indicate that on the whole the City's construction program effectively requires BMP implementation. Any BMP deficiencies noted are typically remedied promptly. Reporting and record-keeping procedures have been improved to increase their effectiveness. The City received no hotline calls about poor BMP implementation during construction activities, but the City will continue its efforts to notify project proponents and homeowners of the City's BMP requirements.

Municipal

The City's municipal activities effectively implement BMPs and reduce pollutant loading. The City's municipal staff are regularly trained on storm water issues, and the City's MS4 cleaning and street sweeping programs meet or exceed minimum Municipal Permit frequency requirements. The City also continues to repair and clean sewer lines in an effort to prevent SSOs. Beginning in 2009/2010, municipal staff is now meeting weekly with the Storm Water Program Administrator.

Industrial and Commercial

The City has a comprehensive inspection program and tracks inspection results using a Microsoft Access Database. The City continued to utilize BMP and knowledge scores to assess the level of BMP implementation and level of knowledge at inspected facilities. Overall trends for both BMP implementation and knowledge scores over the past several years show fewer low scores of 1s and 2s and more high scores of 4s and 5s, which indicates improvement in both BMP implementation and levels of knowledge at industrial and commercial facilities.

Residential

The City's residential component achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. City staff that conduct routine maintenance in residential areas are trained to observe and respond to potential storm water issues such as pet waste and minor trash and debris with educational material. During 2008/2009 City staff distributed 50 educational door hangers to residents. Internal distribution of maps showing high TTWQ residential areas to Public Works staff has increased staff awareness of the location and sensitivity of these areas.

Illicit Discharge Detection and Elimination

The City's IDDE program has effectively responded to complaints. No IC/IDs were identified during the 2009 Dry Weather Monitoring Program. There were no SSOs

during the reporting period, indicating sanitary sewer system maintenance efforts were effective. The City will continue to take action to prevent and eliminate IC/IDs.

Education
The City has continued its successful education program. Impressions made during 2008/2009 were similar to those seen in previous years.

Public Participation
The City will continue looking for new opportunities for public involvement. Attendance at public events was similar to that of previous years.

11.3 Program Review and Modification

No significant changes to the effectiveness assessment approach presented in the City's March 2008 JURMP have been made since the submittal of that document.

Table 11-1
Development Planning Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review and approve project plans	External A relatively small number of projects submitted reports during 2008/2009. Based on meetings with applicants and BMPs proposed, it appears that the level of knowledge is increasing. Internal City storm water staff provided training for engineers and planners on SUSMP requirements. Storm water staff and engineers now have weekly SUSMP requirements coordination meetings. City personnel also attended training sessions—see Section 8. City engineering was short-staffed during 2008/2009 and contracted with D-MAX for WQTR reviews.	Percent of approved projects implementing BMPs with high or medium removal efficiencies for key pollutants of concern	100%	N/A, addressed through other significant activities for this component
Verify proposed BMPs are implemented	External N/A, knowledge is evaluated by appropriate implementation of BMPs as shown in Level 3 Internal The City contracts with a qualified consultant to perform treatment control BMP inspections.	Percent of inspected projects requiring follow-up	33%	BMP implementation is likely to have reduced pollutant loads.
		Resolution status of enforcement actions	See Section 2	
Verify BMPs are properly maintained	External Contacting responsible parties increased their awareness of the need for BMP maintenance. Internal N/A, City staff are aware of the need for BMP maintenance.	Percent of sites returning verification forms	100%	Additional load reduction could be achieved through improved BMP maintenance.
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-2
Construction Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review proposed plans and BMPs	External Projects submit plans for construction BMP implementation for their projects; the level of awareness of construction BMP requirements is fairly high. Internal Training for City staff is described in Section 8. City staff are familiar with relevant construction BMPs.	BMPs proposed for construction projects generally meet requirements; no significant problems have been noted.		Proper pre-project planning is likely to have reduced pollutant loading.
Verify proposed BMPs are implemented	External Grading projects implement BMPs as required by their permits, and contractors are familiar with the City's requirements. Internal Training for City staff is described in Section 8. City inspectors are familiar with relevant construction BMPs.	Percent of projects implementing required BMPs by end of reporting period	96%	Proper BMP implementation is likely to have reduced pollutant loading.
		Percent of projects in compliance with BMP requirements during all inspections	79%	
		Resolution status of enforcement actions	See Section 3	
		Number of dry weather monitoring exceedances traced to construction sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-3
Municipal Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Verify proposed BMPs are implemented at facilities	City staff are regularly trained on BMP implementation; see sections 4 and 8. Public Works staff took a pre-test and a post-test after a training session in June 2009. The average pre-test score was 8.8, and the average post-test score was 9.1 out of 10 questions correct. These results indicate that Public Works staff have a high level of storm water knowledge.	Percent of inspected facilities/activities in compliance with BMP requirements	100%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of sites requiring follow-up inspections	See Section 4	Number of pet waste bags distributed	4,500
		Number of dry weather monitoring exceedances traced to municipal sites	0		
Sweep streets and parking facilities		N/A, streets and parking facilities are swept as often as directed by management.		Amount of sediment and debris removed (weight or volume)	860.82 tons
				Amount of sediment and debris removed per length of street swept (weight or volume per curb mile)	0.07 tons/ curb mile
Maintain and clean out MS4		N/A, MS4 structures are maintained as often as directed by management.		Amount of sediment and debris removed (weight or volume)	1,249.25 cubic yards
Maintain sanitary sewer system		N/A, the sanitary sewer system is maintained as often as directed by management.		Total volume of SSO discharge to MS4 (gallons)	0
Maintain municipal treatment control BMPs		N/A, treatment control BMPs are maintained as often as directed by management.		Amount of sediment and debris removed from treatment BMPs	9 cubic yards
				BMP effectiveness studies	Attachment 11.1
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-4
Industrial and Commercial Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Require BMP implementation	External Knowledge assessment scores indicated a slightly low level of understanding of relevant storm water concepts. See Figure 11-1 on the following page for a score distribution. See Section 8 for more detail on educational materials and other outreach efforts. Internal The City contracts with a qualified consultant to perform industrial and commercial inspections.	Percent of inspected sites requiring follow-up	26%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of enforcement actions	See Section 5		
		Number of dry weather monitoring exceedances traced to industrial or commercial sources	1	Number of IC/IDs eliminated (inspections and complaint investigations)	8
		The distribution of BMP assessment scores continues to improve over time. See Figure 11-2 on the following page for a score distribution.			
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Figure 11-1
Knowledge Assessment Scores

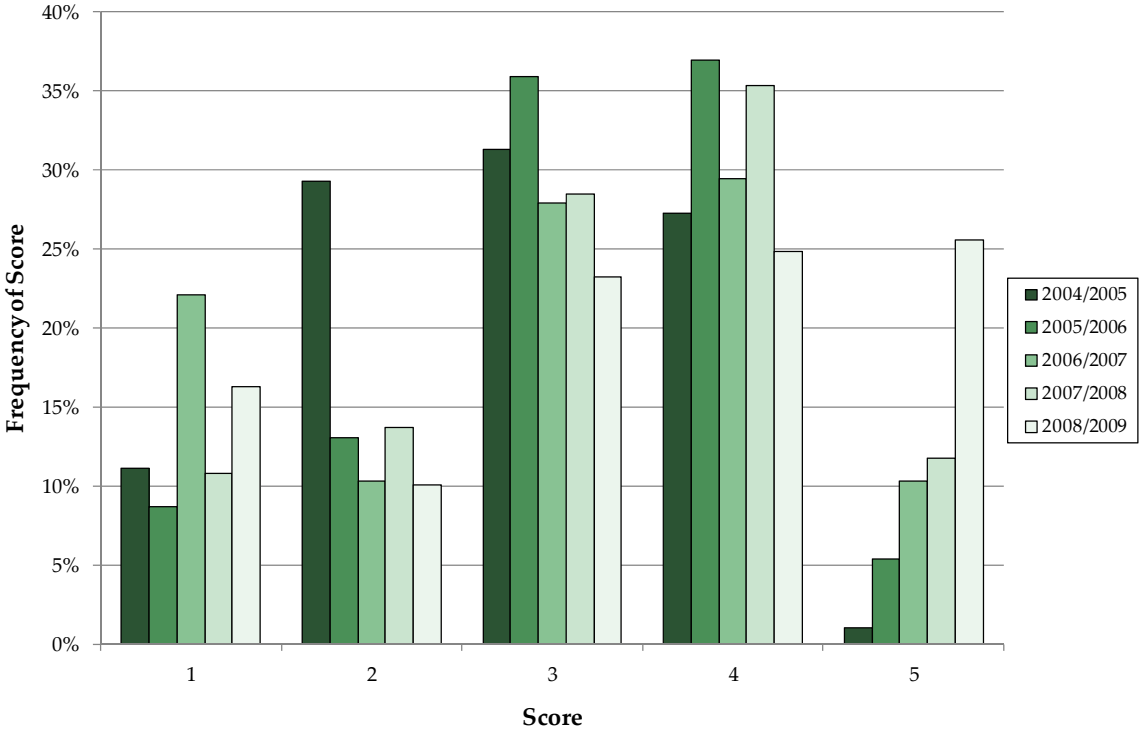

Figure 11-2
BMP Assessment Scores

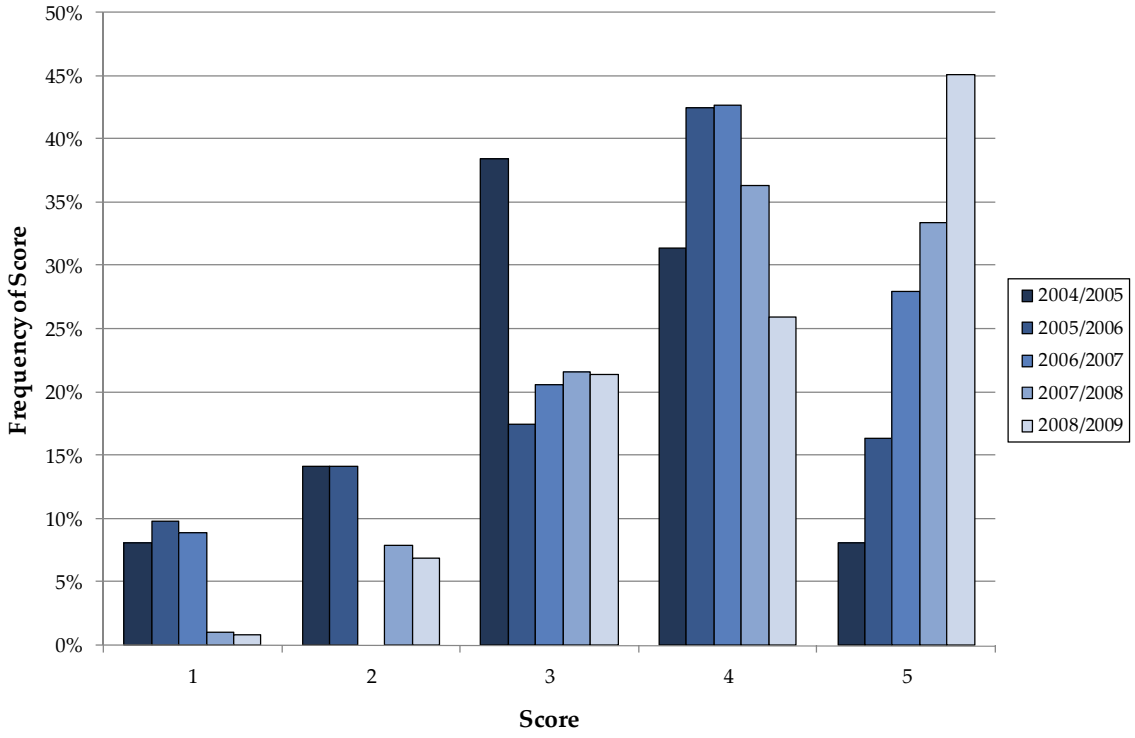

Table 11-5: Residential Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Require BMP implementation	External Residents were educated in variety of ways in 2008/2009; see sections 6 and 8 for details. Internal Maps of high TTWQ residential areas were created and distributed to Public Works staff to increase their awareness of the location and sensitivity of these areas. The City's Storm Water Program Administrator is heavily involved in the implementation of the residential component.	Number of residential incidents reported to storm water hotline	12	Resolution of residential incidents reported to the hotline likely resulted in a decrease in pollutant loading through improved BMP implementation.
		Resolution of enforcement actions	See Section 6	
		Number of dry weather monitoring exceedances traced to residential sources	1	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-6: Illicit Discharge Detection and Elimination Component Assessment Measures

Significant Activity	Level 2	Level 3	Level 4
Conduct Dry Weather Monitoring Program	The City contracts with a qualified consultant to perform its Dry Weather Monitoring Program.	N/A, personnel conduct monitoring as directed by management.	No significant, long-term IC/IDs were eliminated, so a reliable estimate of load reduction cannot be made.
Respond to incidents reported to storm water hotline	The City's Stormwater Program Administrator trains City staff as needed. See sections 4 and 8. City staff were responsible for many of the reports made to the hotline, as shown in Appendix B.	N/A, personnel respond to incidents as directed by management.	Resolution of the incidents reported to the hotline and listed in Appendix B are likely to have resulted a pollutant loading reduction.
Respond to and clean up SSOs	City staff are thoroughly trained on how to respond to SSOs.	The City conducts additional preventive inspections and maintenance in areas with a higher history of problems. See Section 4 for details.	There were no SSOs during the reporting period.

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-7: Education Component Assessment Measures

Significant Activity	Level 2		Level 3	Level 4
Provide storm water education to the public	External The City actively educates the various audiences in its jurisdiction. See Section 8 for details.		See Level 3 outcomes for other program components for information about behavior change.	Sufficient data to estimate load reductions due to educational efforts is not available for 2008/2009.
	Estimated number of impressions made	254,275		

Notes
Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-8: Public Participation Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Involve the public in activities that relate to storm water protection	External The City and City partners put on a number of opportunities for the public to participate. See section 9 for details.	Number of attendees at events	2,892	Amount of trash and debris collected at cleanup events	475 lbs.
		Number of calls received to the storm water hotline	50	Amount of HHW collected	294,995 pounds of HHW, 12,215 gallons of used oil

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

12.0 SPECIAL INVESTIGATIONS

The City takes a proactive approach to storm water management in an attempt not only to protect receiving water quality, but also to improve the quality of water that is discharged from the City's MS4. Data collected through the City's various monitoring and inspection programs are used to identify locations within the City that may be contributing to storm water contamination. Source identification investigations are then initiated to pinpoint the exact cause of detected pollution. Aside from upstream investigations conducted as part of the dry weather monitoring and sampling program (to be reported as part of the Illicit Discharge Detection and Elimination Component in December), no special investigations were needed or conducted during this reporting period.

13.0 NON-EMERGENCY FIRE FIGHTING

A program of BMPs for non-emergency fire fighting flows was adopted in March 2008 as Section 3.4 of the City's JURMP. These BMPs are implemented during regular maintenance of fire and emergency vehicles and equipment, training exercises, facilities maintenance, and post-emergency rehabilitation of response equipment. No significant changes to the program presented in the City's JURMP have been made since the submittal of that document.

14.0 JURMP REVISIONS

Changes to the JURMP made since the overall JURMP update in the spring of 2008 are discussed in the individual "Program Review and Modification" subsections in the preceding sections in this JURMP Annual Report.

15.0 CONCLUSIONS AND RECOMMENDATIONS

During 2008/2009, the City of Poway continued to implement its storm water program based on the revised 2008 JURMP. During this time, the City identified several elements in the City's JURMP that required changes to improve program implementation. Updates to the City's program were made as necessary and are discussed in each individual section of this Annual Report.

Additionally, the City continued to work collaboratively with the other Copermittees to facilitate sharing of information about how best to run these programs and to provide regional guidance on standardized implementation where applicable. The City will continue to refine and improve its storm water program based on information made available by these collaborative efforts.

Notes
TTWQ – Threat to Water Quality
SIC –Standard Industrial Classification Code
Likely Source – Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with the receiving water

APPENDIX B

Appendix B
Complaint Log

Date	Location	Complaint Type	Complaint	Resolution
7/9/08	Luiseno Drive	Municipal	Brow ditch clogged	Brow ditch was cleaned.
7/10/08	Painted Desert/Bridlewood	Industrial/Commercial	Oil in street	Dumped oil from contractor's rental equipment. Small amount of oil staining on street, no contractor present, no info available, area cleaned.
7/10/08	14415 Lake Poway Road	Municipal	Grate filled with debris	Debris from grate in back of mechanic's facility was cleaned.
7/18/08	Valle Verde Road	Municipal	Odor was reported in storm drain on the east side of Valle Verde Road	Drain inspected and noted to be clean, no odor.
7/24/08	Blue Ridge Trail	Municipal	Debris around storm drain channel	Limbs were removed.
7/29/08	13841 Tobiasson Road	Municipal	Odor was reported in storm drain.	Storm drain inspected, no odor found.
8/1/08	13719 Silver Lake Drive	Municipal	Odor was reported in storm drain pipe from the drop inlet to Utopia Road tie-in.	Pipe cleaned with jetrod.
8/5/08	Pomerado Road	Municipal	Debris reported in concrete channel at the north end of Brookview Senior Complex.	20 cubic yards of material were removed.
8/5/08	Espola Road	Municipal	Debris reported in channel	Silt and debris was removed from channel.
8/8/08	Soule Street	Municipal	Debris in creek	Trash was removed from creek.
9/2/08	Community Road	Municipal	Reported grease dumped in storm drain outlet at site 124.	Inspected, no grease found.
9/24/08	12911 Evalyn Court	Residential	Car leaking oil	Gave resident NPDES info and educated on best practices for containing oil drips.
9/29/08	13530 Old Winery Road	Municipal	Report of buildup of debris in drainage ditch at east end of Old Winery Road	Weeds and debris were removed.
11/25/08	14408 Poway Road	Residential	Neighbor draining pool on property.	Pool was de-chlorinated; Left NPDES info for reference.

Appendix B (Continued)
Complaint Log

Date	Location	Complaint Type	Complaint	Resolution
11/26/08	Riparian Road	Municipal	Geo-logs requested.	Four geo-logs were placed at drop inlet due to runoff from homeowner's project.
12/1/08	Espola Road	Municipal	Debris reported in storm drain.	Four bags of human feces were removed from box culvert.
12/9/08	Grimsley Avenue	Municipal	Debris reported in storm drain.	Rocks, debris, and bicycle were removed from inlet behind house at open space.
12/17/08	Camino Del Valle	Municipal	Drainage pipe blocked causing backup of storm water.	Debris was removed.
12/31/08	Stone Canyon Road	Municipal	Blocked slip-drain by the east side.	Cleared with vactor.
1/12/09	14141 Mazatlan Way	Industrial/Commercial	Neighbor reported dumping cooking oil in gutter. Cooking oil stored in driveway in boxes.	Owner will take oil to Haz Mat waste facility by 1/17/09 and clean sidewalk.
1/23/09	13230 Pomerado	Residential	Disturbed dirt on private street and vacant lot. No BMPs.	Spoke to workers at Cornerstone Church, gave NPDES info, and deadline for installing BMPs. 1/26/2009 - Erosion control in place.
1/30/09	Frame Road	Residential	Reported washing of commercial truck in street.	No truck or active violation observed. (see related incident 3/18/09)
2/9/09	Acacia Terrace	Municipal	Debris in storm drain.	Debris from inlet to slip-drain was cleared. Backfill of erosion on bank is private property.
2/13/09	12425 Oak Knoll	Residential	Car leaking oil	No violations noted.
2/17/09	13104 Grape Arbor	Residential	Reported draining pool into street, smells like chlorine.	Site inspected, no chlorine odor observed. Pool maintenance worker was aware of need to de-chlorinate and had done so over the last week. Left NPDES info packet for reference.
3/4/09	Old Winemaster Court	Municipal	Debris in brow ditch.	Brow ditch on City easement cleared.

Appendix B (Continued)
Complaint Log

Date	Location	Complaint Type	Complaint	Resolution
3/4/09	13108 Standish Drive	Residential	Reported dumping dirt in storm drain.	3/5/09 - Dirt still in channel, called owner, will make certain dirt is out of the channel by Saturday 3/7/09 when he returns to town. 3/10/09 - Violation corrected
3/6/09	Espola Road	Municipal	Debris on the side of the road.	Debris was removed from both sides of Espola Road from Ezra Lane to Poway Road.
3/9/09	Community Road	Municipal	Stepping stones submerged under water at the south end of Hilleary Park.	Obstruction/debris was removed to allow proper flow, exposing stepping stones.
3/9/09	Espola Road	Municipal	Damage to drain pipe reported.	Inspect possible drain pipe erosion on west side of Espola Road at approximately 1000 ft. north of Poway Road.
3/10/09	Standish Drive	Municipal	Debris in creek	Inspected and found that citizen removed pile of dirt in creek.
3/11/09	12910 Meadowglenn Way	Residential	Public works reported a resident placed oil by the curb, may get into storm drain if spilled or rain.	3/11/2009 - No violations observed. Already removed. Left NPDES info.
3/18/09	14027 Frame Road	Industrial/Commercial	Observed property owner washing cement truck in street.	Issued Courtesy Notice, NPDES info, and advised to not bring truck to residence.
3/31/09	Stone Canyon Road	Municipal	Debris reported in brow ditch	Debris was removed, ice plant trimmed.
4/1/09	Peartree Terrace	Municipal	Debris reported in brow ditch	Removed brush from city brow ditch. Assisted by Honor Camp.
4/3/09	13111 Bonita Vista	Municipal	Paint spill reported	Inspected, no spill found.
4/3/09	Amso Street	Municipal	Debris in channel	Mattress was removed.
4/15/09	Margate Avenue	Municipal	Debris in curb outlet reported	Curb outlet was cleaned with vactor.
5/5/09	Bronco Way	Municipal	Debris in storm drain inlet reported	Debris was cleared.

Appendix B (Continued)
Complaint Log

Date	Location	Complaint Type	Complaint	Resolution
5/20/09	12345 Crosthwaite Circle	Industrial/Commercial	Complaint made (claimed to be employee) regarding paint being washed into the storm drain.	Officers inspected the site and found some "milky" substance flowing across property from an area that appears to be a cleaning and painting area for the seatainers. Advised branch manager to discontinue activity, prevent any additional fluid from entering the system, and clean the property to prevent rain runoff of substance. Gave NPDES info. 5/21/2009 - Referred to Public Works for drainage system clean-up if needed.
5/21/09	Crosthwaite Circle	Municipal	Report of illegal dumping of fluids possibly entering the storm drain system.	Checked site, no cleaning needed, set out BMPs for manager.
5/26/09	Sutter Mill Road	Municipal	Storm drain cover missing	Grate replaced on 5/27/09.
5/27/09	13340 Frame Road	Residential	Neighbor reported to be dumping diatomaceous earth into gutter.	5/28/2009 - Left 1 day Courtesy Notice and NPDES info. 5/29/2009 - No change, door hanger still on door. Referred to Public Works and cleaned up.
5/29/09	13095 Poway Road	Industrial/Commercial	Employee reported to be cleaning parking lot and driveway with dishwashing liquid.	Provided Storm Water flyer to manager and advised to not use products when cleaning, and that it would be best to sweep the area.
6/2/09	Vaughan Road	Municipal	Missing grate	Grate replaced on 6/2/09.
6/3/09	15475 Harrow Lane	Residential	NPDES Storm Water violation	6/3/09 - Left Courtesy Notice and Storm Water info - no violation in progress.
6/11/09	15190 Saddlebrook Court	Industrial/Commercial	City street sweeper hit a patch of stone fines slurry from a well drilling project. BMPs in place, but one bag failed. Contractor was contacted to clean up	7/8/09 - Contractor left message, will clean up.
6/16/09	14061 Saddlewood Court	Residential	Home pumping diatomaceous earth into brow ditch reported.	6/24/2009 - Left Courtesy Notice, no evidence of violation.

Appendix B (Continued)
Complaint Log

Date	Location	Complaint Type	Complaint	Resolution
6/22/09	13823 Tam-O-Shanter	Industrial/Commercial	Public Works called in regarding roof power washing, runoff going into gutters.	No violation noted, left NPDES info.
6/23/09	14008 Arbolitos	Residential	Discharge into gutter reported.	No violation found. Left Courtesy Notice and NPDES info.

APPENDIX C

Appendix C
JURMP Annual Report Requirements Checklist

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	Location in Report
i. A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.	2.2, 2.3, 2.4
ii. Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.	2.4.4.2
iii. A listing of the development projects to which SUSMP requirements were applied.	Table 2-2
iv. Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.	Table 2-1, 2.4.4.2
v. At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.	2.4.4.2
vi. A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.	2.4.4.2
vii. An updated treatment control BMP inventory.	2.4.4.3, Appendix A.1
viii. The number of treatment control BMPs inspected, including a summary of inspection results and findings.	2.4.4.3, Table 2-5, Table 2-6
ix. A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.	2.4.4.3
x. Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.	2.4.4.2
xi. A listing of any projects which received a SUSMP waiver.	2.4.4.2
xii. A description of implementation of any SUSMP waiver mitigation program.	2.4.4.2
xiii. A description of Hydromodification Management Plan (HMP) development collaboration and participation.	2.4.4.2
xiv. A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.	NA, HMP not yet adopted
xv. A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.	NA, HMP not yet adopted

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	**Location in Report**
xvi. A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.	2.4.4.2
xvii. The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	2.4.4.3, Table 2-6
xviii. A description of notable activities conducted to manage urban runoff from development projects.	2.1.1

Construction

Permit Annual Reporting Requirement—Section J.3.a.(3).(b)	**Location in Report**
i. Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.	3.5
ii. Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.	3.2
iii. A description of modifications made to the construction and grading ordinances and approval processes.	3.3
iv. Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.	3.5
v. Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.	3.5
vi. A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.	3.5
vii. For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.	3.5, Appendix A.2
viii. A description of the general results of the inspections.	3.5
ix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	3.5
x. The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	3.5 Table 3-1
xi. A description of notable activities conducted to manage urban runoff from construction sites.	3.1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
i. Any updates to the municipal inventory and prioritization.	Appendix A (inventory)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.	4.2.4, 4.3.4, 4.4.4, 4.5.4, 4.6.4, 4.7.4
iii. A description of inspections and maintenance conducted for municipal treatment controls.	2.4.3.2
iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.	4.4.4 Table 4-2
v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.	4.4.4, Table 4-2
vi. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.	4.4.4, Table 4-2
vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.	4.4.4, Table 4-2
viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.	**(N/A for 08-09)**
ix. Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.	4.2.3
x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1
xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-2
xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
xiii. Identification of the total distance of curb-miles swept.	4.3.4, Table 4-1
xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.	4.3.4, Table 4-1
xv. Amount of material (tons) collected from street and parking lot sweeping.	4.3.4, Table 4-1
xvi. A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4	4.5.4
xvii. Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.	4.2.4, 4.3.4, Table 4-3
xviii. A description of the general results of the inspections.	Table 4-3
xix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	4.2.4
xx. The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	4.2.4
xxi. A description of notable activities conducted to manage urban runoff from municipal areas and activities.	Throughout Section

Industrial and Commercial

Permit Annual Reporting Requirement—Section J.3.a.(3).(d)	**Location in Report**
i. Any updates to the industrial and commercial inventory.	5.2.2 (stationary), 5.3.2 (mobile), Appendix A (inventory)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.	5.2.4, 5.3.4
iii. A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.	5.2.4, 5.3.4
iv. Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.	5.2.2, 5.3.2; 5.2.4, 5.3.4; Table 5-1
v. Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.	5.2.4
vi. Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.	5.2.4
vii. Identification of the number of third party inspections conducted.	5.2.4
viii. Identification of efforts conducted to verify third party inspection effectiveness.	5.2.4
ix. A description of efforts implemented to address mobile businesses.	5.3.4
x. The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	5.2.4, 5.3.4
xi. A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.	5.2.4, Table 5-2
xii. A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.	Throughout Section

Residential

Permit Annual Reporting Requirement—Section J.3.a.(3).(e)	**Location in Report**
i. Identification of the high threat to water quality residential areas and activities that were focused on.	6.2
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.	6.4
iii. A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.	6.4
iv. Types and amounts of household hazardous wastes collected, if applicable.	6.4
v. A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of the evaluation.	6.4 (see discussion in JURMP)
vi. The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	6.4
vii. A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.	6.4
viii. A description of notable activities conducted to manage urban runoff from residential areas and activities.	6.4

IDDE*

Permit Annual Reporting Requirement—Section J.3.a.(3).(f)	**Location in Report**
i. Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.	7.4
ii. Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.	7.4, Table 7-2, 7-3, and 7-4
iii. Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.	7.4, Attachment 7.1
iv. A brief description of any other investigations and follow-up activities for illicit discharges and connections.	7.5
v. The number and brief description of illicit discharges and connections identified.	7.5, Appendix B
vi. The number of illicit discharges and connections eliminated.	7.5, Appendix B
vii. Identification and description of all spills to the MS4 and response to the spills.	7.3, Appendix B
viii. A description of activities implemented to prevent sewage and other spills from entering the MS4.	7.3
ix. A description of the mechanism whereby notification of sewage spills from private laterals and septic systems is received.	7.3
x. Number of times the hotline was called, as compared to previous reporting periods, and a summary of the calls.	7.2, Appendix B
xi. A description of efforts to publicize and facilitate public reporting of illicit discharges.	7.2
xii. The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	7.5, Table 7-1, Appendix B

IDDE*

Permit Annual Reporting Requirement—Section J.3.a.(3).(f)	Location in Report
xiii. A description of notable activities conducted to manage illicit discharges and connections.	7.5, Table 7-1

IDDE—Additional Dry Weather Monitoring Program Requirements*

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
Meets applicable standard monitoring and reporting requirements listed in Municipal Permit Attachment B.	7.4
c. (1) Determining Sampling Frequency: Dry weather field screening and analytical monitoring shall be conducted at each identified station at least once between May 1st and September 30th of each year or as often as the Copermittee determines is necessary to comply with the requirements of section D.4 of Order No. R9-2007-0001.	7.4
c. (2) If flow or ponded runoff is observed at a dry weather field screening or analytical monitoring station and there has been at least seventy-two (72) hours of dry weather, make observations and collect at least one (1) grab sample. Record general information such as time since last rain, quantity of last rain, site descriptions (i.e., conveyance type, dominant watershed land uses), flow estimation (i.e., width of water surface, approximate depth of water, approximate flow velocity, flow rate), and visual observations (i.e., odor, color, clarity, floatables, deposits/stains, vegetation condition, structural condition, and biology).	7.4
c. (3) At a minimum, collect samples for analytical laboratory analysis of the following constituents for at least twenty five percent (25%) of the dry weather monitoring stations where water is present: (a) Total Hardness, (b) Oil and Grease, (c) Diazinon and Chlorpyrifos, (d) Cadmium (Dissolved), (e) Lead (Dissolved), (f) Zinc (Dissolved), (g) Copper (Dissolved), (h) Enterococcus bacteria, (i) Total Coliform bacteria, (j) Fecal Coliform bacteria	7.4
c.(4) At a minimum, conduct field screening analysis of the following constituents at all dry weather monitoring stations where water is present:	7.4
c. (a) Specific conductance (calculate estimated Total Dissolved Solids), (b) Turbidity, (c) pH, (d) Reactive Phosphorus, (e) Nitrate Nitrogen, (f) Ammonia Nitrogen, (g) Surfactants (MBAS)	7.4
c. (5) If the station is dry (no flowing or ponded runoff), make and record all applicable observations and select another station from the list of alternate stations for monitoring.	7.4

IDDE—Additional Dry Weather Monitoring Program Requirements*

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
c. (6) Develop and/or update criteria for dry weather field screening and analytical monitoring results whereby exceedance of the criteria will require follow-up investigations to be conducted to identify and eliminate the source causing the exceedance of the criteria.	7.4
c. (7) Assess the presence of trash in receiving waters and urban runoff at each dry weather field screening or analytical monitoring station. Assessments of trash shall provide information on the spatial extent and amount of trash present, as well as the nature of the types of trash present.	7.4
c. (8) Dry weather field screening and analytical monitoring stations identified to exceed dry weather monitoring criteria for any constituents shall continue to be screened in subsequent years.	7.4
c. (9) Develop and/or update procedures for source identification follow up investigations in the event of exceedance of dry weather field screening and analytical monitoring result criteria. These procedures shall be consistent with procedures required in section D.4.d of Order No. R9-2007-0001.	7.4
c. (10) Develop and/or update procedures to eliminate detected illicit discharges and connections. These procedures shall be consistent with each Copermittees Illicit Discharge and Elimination component of its Jurisdictional Urban Runoff Management Plan as discussed in section D.4 of Order No. R9-2007-0001.	7.4
d. The Copermittees shall commence implementation of dry weather field screening and analytical monitoring under the requirements of this Order by May 1, 2008. Each Copermittee shall conduct dry weather analytical and field screening monitoring in accordance with its storm water conveyance system map and dry weather analytical and field screening monitoring procedures as described in section II.B.3 above. If monitoring indicates an illicit connection or illegal discharge, conduct the follow-up investigation and elimination activities as described in submitted dry weather field screening and analytical monitoring procedures and sections D.4.d and D.4.e of Order No. R9-2007-0001. Until the dry weather field screening and analytical monitoring program is implemented under the requirements of this Order, each Copermittee shall continue to implement dry weather field screening and analytical monitoring as it was most recently implemented pursuant to Order No. 2001-01.	7.4

* Section 7, the Illicit Discharge Detection and Elimination component, of the 2008/2009 Annual Report, will be submitted to the RWQCB no later than December 15, 2008.

Education

Permit Annual Reporting Requirement—Section J.3.a.(3).(g)	**Location in Report**
i. A description of education efforts conducted for each target community.	8.3
ii. A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.	8.3
iii. A description of education efforts conducted for municipal departments and personnel.	8.2
iv. A description of education efforts conducted for the new development and construction communities.	8.3
v. A description of jurisdictional education efforts conducted for residents, the general public, and school children.	8.3

Public Participation

Permit Annual Reporting Requirement—Section J.3.a.(3).(h)	**Location in Report**
i. A description of public participation efforts conducted.	9.2 and 9.3

Effectiveness Assessment

Permit Annual Reporting Requirement—Section J.3.a.(3).(i)	**Location in Report**
i. An assessment of the effectiveness of the Jurisdictional Urban Runoff Management Program which meets all requirements of section I.1 of this Order.	11

Fiscal Analysis

Permit Annual Reporting Requirement—Section J.3.a.(3).(j)	**Location in Report**
i. A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order. (For 2007-2008, the requirements that apply are essentially the same as those found in Order No. 2001-01)	10

Special Investigations

Permit Annual Reporting Requirement—Section J.3.a.(3).(k)	**Location in Report**
i. A description of any special investigations conducted.	12

Non-Emergency Firefighting

Permit Annual Reporting Requirement—Section J.3.a.(3).(l)	Location in Report
i. A description of efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.	4.2.3, 13

JURMP Revisions

Permit Annual Reporting Requirement—Section J.3.a.(3).(m)	Location in Report
i. A description of any proposed revisions to the JURMP.	14 and each program component section

BMP Daily Checks

Week of:	Monday	Tuesday	Wednesday	Thursday	Friday
Is the site free of debris					
Parking lots free of debris					
Roof down spouts dir away					
Daily litter abatement					
Erosion prevention employed					
Minimized water run-off					
Are adequate trash cans avail.					
Is the trash can area clear					
Are trash can emptied often					
Outdoor storage areas covered					
Are outdoor containers labeled					
Is their a spill response kit					
Are storage tank contained/2nd					
Is 2nd containment free of spills					
Parking area free of Spills					
Vehicle washed in designated. Areas					
Free of illegal discharge and spills					
Free of illegal storm drain release					
Unleaded Dispenser Checked					
Diesel Dispenser checked					
Fire Extinguisher at Gas Island Chckd					
Fuel are cleaned spill free					
Front of building area clear					
Battery cart under canopy					
East side of building clean					
Equipment stored under canopy					
All scrap metal removed					
Check flammable locker for seals					
Check tire shed & remove old tires					
Check both back drains for debris					
Check lot for oil leaks & drip Pans					
Check south and west side of bldg					
Are hazardous mat. Stored prop					
Accumulation Start Date On					
Drums Less than 6 Months					
(allow time for drum removal)

B. FACILITY/SITE INFORMATION

Principal activity:_____

Assigned JURMP Classification: ◯High ◯Medium ◯Low ◯Unassigned

New JURMP Classification (if applicable)?_____

Is facility subject to CA Statewide General Industrial Permit? ◯Mandatory ◯Conditional ◯No

If yes, has facility filed a Notice of Intent (NOI) to comply? ◯Yes ◯No WDID#_____

If no, does facility have a Notice of Non-Applicability (NONA/NEC)? ◯Yes ◯No

Does facility maintain SWPPP or BMP Plan? ◯Yes ◯No

Does facility have a storm water monitoring program? ◯Yes ◯No

C. INITIAL OBSERVATIONS

Nearest conveyances or water bodies: _____ Hydrologic Area _____ ____

Approximate distance to receiving water bodies: ◯< 200 ft. ◯200 – 1,000 ft. ◯> 1,000 ft.

Sensitivity of receiving waters: ◯Sensitive (ESA, 303(d), or other) ◯Non-sensitive

Discharge points: _____

_____

Discharge observed: ◯Yes ◯No

If yes, describe: _____

Estimated area covered by municipal facility: _____square feet

Estimated % impervious surface of this area: _____%

Exposed areas of intensive outdoor activity: _____

D. BMP ASSESSMENT

D.1 General

BMPs	N/A	Yes	No	Comments
Is the site free of excessive litter and debris?	☐	☐	☐	
Are discharge locations free of excessive sediment and debris?	☐	☐	☐	
Are parking lots, sidewalks and streets free of excessive sediment and debris?	☐	☐	☐	
Is wash water from pressure washing/hosing managed appropriately?	☐	☐	☐	
Are roof downspouts directed away from areas of potential pollutants?	☐	☐	☐	
Are employees trained in storm water management, pollution prevention and good housekeeping measures?	☐	☐	☐	
D.2 Landscaping				
Are adequate erosion prevention measures employed? (vegetation or physical stabilization)	☐	☐	☐	
Are irrigation systems programmed to minimize over-watering and runoff?	☐	☐	☐	
Are stockpiles of soil or landscape waste contained to prevent runoff transport?	☐	☐	☐	
Are pesticides, herbicides, and fertilizers managed in accordance with the JURMP BMPs?	☐	☐	☐	
D.3 Materials and Wastes				
Are adequate trash containers provided?	☐	☐	☐	
Are adequate recycling containers provided?	☐	☐	☐	
Is the trash/recycling area enclosed and free of litter and debris?	☐	☐	☐	
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?	☐	☐	☐	
Are outdoor material storage areas adequate (covered area with secondary containment)?	☐	☐	☐	
Are outdoor storage containers properly labeled?	☐	☐	☐	
Is there an accessible spill response kit?	☐	☐	☐	
Are outdoor storage containers equipped with secondary containment?	☐	☐	☐	
Is secondary containment free of spills and rainwater?	☐	☐	☐	
Are loading and unloading areas free of spills and debris?	☐	☐	☐	
D.4 Equipment and Vehicles				
Are exposed parking areas free of significant spills and leaks?	☐	☐	☐	
Are heavy equipment and vehicles stored in garages or under canopies?	☐	☐	☐	
Are vehicle maintenance activities conducted within contained areas (garage, canopy, work shop)?	☐	☐	☐	
Are vehicle-fueling areas covered and are storm drain inlets in/around the fueling area protected from spills and leaks?	☐	☐	☐	
Is vehicle washing performed in a contained area where runoff does not enter the MS4?	☐	☐	☐	

D.5 Building Repair/Construction /Structural BMPs

BMPs	N/A	Yes	No	Comments
Are adequate erosion prevention measures employed throughout the site? (vegetation or physical stabilization)	☐	☐	☐	
Are adequate sediment control BMPs employed throughout the site? (gravel bags, inlet filters etc.)	☐	☐	☐	
Are impervious areas free of debris and spills from painting, scraping, and/or sandblasting activities?	☐	☐	☐	
Are structural BMPs adequately maintained? (NA if no structural BMPs at facility)	☐	☐	☐	
D.6 Non-Storm Water Management				
Is the site free of evidence of illicit connections and illegal discharges?	☐	☐	☐	
Is the site free of evidence of unauthorized releases to storm drains?	☐	☐	☐	
If not, have the appropriate authorities been notified?	☐	☐	☐	
D.7 Other				
Are appropriate signs/stenciling present at the facility?	☐	☐	☐	
Are there any other potential storm water pollution issues or concerns? If yes, explain below.	☐	☐	☐	
Are all applicable activity-specific BMPs being implemented?	☐	☐	☐	
Does this facility have a fire sprinkler system?	☐	☐	☐	

D.8 BMP Summary/Additional Comments

E. RECOMMENDED CORRECTIVE ACTION

Is corrective action needed? ◯Yes ◯No

If **BMP-related** corrective action is required, describe below. If other corrective action, check the appropriate box in section G.

Owner/operator has been notified of recommended corrective actions both verbally and by: ☐Hand Delivery ☐Mail ☐Fax

F. VIOLATIONS

- ☐ No violations have been noted at this time
- ☐ No violations have been noted, but recommend taking corrective action described in Section F.
- ☐ **Violation of the City's storm water ordinance:**
  - ☐Prohibited discharge(s) of pollutants to the storm drain system or to receiving waters
    Description_____
  - ☐Illicit connection(s) to the storm drain system
    Location_____
  - ☐Littering
  - ☐Improper Implementation of Required BMPs
  - ☐Failure to comply with the storm water monitoring requirements for high priority industrial facilities.
- ☐ **Failure to comply with the requirements of the State Industrial Storm Water General Permit.**
  - ☐In the future, under a new Industrial Permit which has not yet been adopted, this facility may be able to qualify for a No Exposure Certification (NEC) and exemption from Permit coverage.
- ☐ **Other Violation**_____

SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE:

- ☐ Implement the recommended corrective actions listed in Section F.
- ☐ File a Notice of Intent (NOI) with the State Water Resources Control Board to obtain coverage under the Industrial Permit - see Attachment 3 of the Industrial Permit (http://www.waterboards.ca.gov/stormwtr/industrial.html).
  - ☐ For "Conditional" facilities only: if you implement all the recommended BMPs and eliminate outdoor exposure, contact the City to request a re-inspection. If it is determined that you qualify, NONA/NEC paperwork will be provided for you to complete, and you will not have to file an NOI.
- ☐ Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.
- ☐ Develop and implement a storm water monitoring program—see section B of the Industrial Permit for guidelines.
- ☐ Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC). Retain one copy of each onsite, and send additional copies to the City of Poway and the State Water Resources Control Board. (See attached instructions provided with the documents.)

Additional actions required:

G. ADDITIONAL RECOMMENDED CITY ACTIONS*

Is a follow-up inspection recommended for this business? ◯ **Yes** ◯ **No**

ASSESSMENT

Level of knowledge regarding stormwater issues:	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
Level of cleanliness, BMP implementation, orderliness of site:	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5

*Recommended City Actions listed at the time of inspection are subject to change based on later review by office staff.

BMP Assessment

General

BMPs	N/A	Yes	No	Comments
Is the site free of litter and debris?				
Are discharge locations free of sediment and debris?				
Are parking lots, sidewalks and streets free of sediment and debris?				
Is pressure washing of parking lots or sidewalks conducted at the facility?				
If yes, Is wash water captured?				
Are roof downspouts directed away from areas of potential pollutants?				
Landscaping				
Are adequate erosion prevention measures employed? (vegetation or physical stabilization)				
Are irrigation systems programmed to minimize over-watering and runoff?				
Are stockpiles of soil or landscape waste equipped to prevent runoff transport?				
Materials and Wastes				
Are adequate trash containers provided?				
Are adequate recycling containers provided?				
Is the trash/recycling area enclosed and free of litter and debris?				
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?				
Are outdoor material storage areas adequate (covered area with secondary containment)?				
Is there an accessible spill response kit?				
Are storage tanks equipped with secondary containment?				
Is secondary containment free of spills and rainwater?				
Are loading and unloading areas free of spills and debris?				
Equipment and Vehicles				
Are exposed parking areas free of significant spills and leaks?				
Are heavy equipment and vehicles stored in garages or under canopies?				
Are vehicle maintenance activities conducted within contained areas (garage, canopy, work shop)?				
Are vehicle-fueling areas covered and are storm drain inlets protected from spills and leaks?				
Is vehicle washing performed in a contained area where runoff does not enter the MS4?				

BMPs	N/A	Yes	No	Comments
Food Establishments				
Does facility have a grease trap or grease interceptor?				
When was the last time the grease trap was maintained? _____				
Where is the grease trap located? ☐ Under the sink ☐ Outside ☐ Other _____				
How is used oil disposed of? ☐ Outside rendering service ☐ Sanitary sewer/sink ☐ Other: _____ ☐ N/A				
Are oil-recycling/grease bins stored properly with overhead coverage and secondary containment?				
What is the cleaning method? _____				
Where is used cleaning water discharged? _____				
Does the restaurant hose off the site (parking lot, back lot, etc.)? If so, how often?				
How are kitchen floor mats cleaned? ☐ Hose off outside ☐ Clean inside (mop sink) ☐ Cleaning Service ☐ Other: _____				
Are storm drain inlets free of grease and other food debris?				
Non-Storm Water Management				
Is the site free of evidence of illicit connections and illegal discharges?				
If not, have the appropriate authorities been notified?				
Other				
Are there any other potential storm water pollution issues or concerns? If yes, explain below.				
Are all applicable activity-specific BMPs being implemented?				
Were any educational materials distributed? Please list:				
BMP Notes:				

Recommended Corrective Action

Is BMP-related corrective action needed? ☐ Yes ☐ No

Owner/operator has been notified of recommended corrective actions both verbally and by: ☐ Photocopy ☐ Fax

SWPPP Review: Does facility maintain a SWPPP: ☐ Yes ☐ No ☐ Not Applicable

SWPPP Component	Provided
Site Map/Description	☐ Yes ☐ No
Materials List	☐ Yes ☐ No
Significant Spills/Leaks	☐ Yes ☐ No
Pollution Prevention	☐ Yes ☐ No
Industrial Activities	☐ Yes ☐ No
Pollutant Sources/Risks	☐ Yes ☐ No
Compliance Activity Schedule	☐ Yes ☐ No
Employee Training	☐ Yes ☐ No
Accessible to staff	☐ Yes ☐ No
Existing BMPs	☐ Yes ☐ No

Does this facility have a storm water monitoring program? ☐ Yes ☐ No ☐ N/A

Was appropriate monitoring conducted during the most recent wet season? ☐ Yes ☐ No

- If not, does the facility have documentation of no qualifying rain events? ☐ Yes ☐ No
  - If not, is the facility in a GMP and not scheduled for most recent year? ☐ Yes ☐ No

Do monitoring results show that existing BMPs are effective in removing pollutants? ☐ Yes ☐ No ☐ N/A

Notes: _____

Violations

- ☐ No violations have been noted at this time
- ☐ No violations have been noted, but recommend taking corrective action described above.
- ☐ Violation of the City's storm water ordinance:
  - ☐ Prohibited discharge(s) of pollutants to the storm drain system or to receiving waters
    Description _____
  - ☐ Illicit connection(s) to the storm drain system – Location: _____
  - ☐ Littering
  - ☐ Improper Implementation of Required BMPs – Description: _____
- ☐ Failure to comply with the requirements of the State Industrial Storm Water General Permit.
  - ☐ File a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB) to obtain coverage under the Industrial Permit - see Attachment 3 of the Industrial Permit (www.waterboards.ca.gov/stormwtr/industrial.html).
  - ☐ Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.
  - ☐ Develop and implement a storm water monitoring program—see section B of the Industrial Permit for guidelines.
  - ☐ File a Notice of Non-Applicability and No Exposure Certification (NONA/NEC) with the State Water Resources Control Board and the City of Poway. (See attached instructions provided with the documents.)
- ☐ Other Violation _____

Is a follow-up inspection recommended for this business? ☐ **Yes** ☐ **No**

Additional actions required: _____

ATTACHMENT 5.2

EDUCATIONAL MATERIALS DISTRIBUTED DURING INDUSTRIAL AND COMMERCIAL INSPECTIONS

What's the difference?

Sanitary Sewer vs. Storm Drain

The water that drains down a sink or toilet in a home or business flows to the sanitary sewer and is treated by the City of San Diego at a wastewater treatment plant.

The storm drain system, on the other hand, is designed to carry rainwater from City streets and driveways to prevent flooding. This water does not receive any treatment. It flows directly to creeks and rivers – terminating at the Pacific Ocean!

Unfortunately, as rainfall flows over the ground it picks up debris and pollutants and deposits them into our watersheds.

COUNTY OF SAN DIEGO STORM WATER

ONLY RAIN DOWN THE STORM DRAIN

Urban storm water runoff is the **largest contributor** to **watershed pollution** in San Diego County.

Your business is **required** to prevent

Pollutants of Concern

As rainfall flows over the ground, it picks up a variety of pollutants and deposits them into our watersheds. The following pollutants are commonly transported in the storm drain system and have been found to degrade water quality.

- Sediments
- Fertilizers
- Metals
- Detergents
- Pesticides
- Organic Compounds (solvents)
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

The following **B**est **M**anagement **P**ractices (**BMPs**) are required to be used at all industrial and commercial businesses, where applicable, to reduce urban runoff pollution in our streams and waterways. To do your part in protecting our water quality, please implement the following BMPs, where applicable or noted by the City inspector.

General

- ❑ Regularly sweep around site, **do not use a hose.** Collect and dispose of debris in trash.
- ❑ Train all employees to consider urban runoff pollution before performing any outdoor activities.
- ❑ Never dispose of wash water to the storm drain system. Properly dispose of it in the sanitary sewer (sink or toilet).
- ❑ Report any illegal dumping into the storm drain system by calling (858) 668-4668 during business hours.

Landscaping

- ❑ Only irrigate during early morning or late evening to avoid evaporation.
- ❑ Aim sprinklers to avoid watering other areas.
- ❑ Time sprinklers to avoid over-watering and causing runoff.
- ❑ Minimize use of pesticides, herbicides, and fertilizer, which are harmful to animals downstream.
- ❑ Hand pull weeds instead of using herbicides.
- ❑ Do not use pesticides that eliminate beneficial insects (i.e., Integrated Pest Management).

Outdoor Material Storage

- ❑ Store all potential pollutants indoors or under a covered area not exposed to rain.
- ❑ Clean up all spills immediately using absorbent materials. Properly dispose of used absorbents.
- ❑ Keep lids on all outdoor storage containers.
- ❑ Label all material storage containers.
- ❑ Regularly sweep and clean all outdoor storage areas to remove any sediment (dirt) and debris.

Waste Management

- ❑ Keep the ground around all outdoor garbage and dumpster areas free of trash, sediment, and debris.
- ❑ Keep lids on dumpsters and trash cans whenever possible.
- ❑ Fix any leaks in garbage cans or dumpsters.
- ❑ Clean up all spills immediately.

Vehicle /Equipment Maintenance

- ❑ Perform all vehicle maintenance indoors when possible.
- ❑ Use drip-pans to collect fluids from leaky vehicles.
- ❑ Clean up spills immediately using absorbent materials. Properly dispose of used absorbents.

Vehicle /Equipment Washing

- ❑ Wash vehicles at a commercial car wash when possible. (Commercial car washes recycle water and drain to the sanitary sewer, not to the storm drain.)
- ❑ Wash vehicles over a pervious (absorbent) surface such as dirt, gravel, or grass to prevent runoff.
- ❑ Minimize the use of soaps and water while washing.
- ❑ Drain excess wash water to the sanitary sewer (sink or toilet), not to storm drains.

General Cleaning

- ❑ Perform washing over a pervious surface or where water drains to sanitary sewer.
- ❑ Minimize use of cleaning agents.
- ❑ Dispose of used wash water to sanitary sewer, not to storm drains.

Construction

- ❑ Minimize the amount of exposed soils to prevent erosion from wind or water.
- ❑ Cover construction material stockpiles with tarps or plastic liners to prevent sediment from blowing or washing away.
- ❑ Use gravel bags around site perimeter to capture any sediment (dirt) washed away in runoff.
- ❑ Protect nearby storm drains with gravel bags.
- ❑ Regularly inspect and clean equipment, vehicles, and storage areas.
- ❑ Keep lids secured on all material storage containers.
- ❑ Store materials where not exposed to rain.

A Clean Environment is Important to All of Us!

In the City of Poway, storm drains flow directly into our creeks, lakes, and the ocean without treatment.

In recent years, sources of water pollution, like industrial wastes from factories have been greatly reduced. However, the majority of water pollution now occurs from things like cars leaking oil, wash water from restaurants, fertilizers from farms, lawns and gardens, failing septic tanks, residential car washing, and pet waste washing into the storm drains and into waterways and the ocean.

All these sources add up to a pollution problem! But each of us can do small things to help clean up our water too—and that adds up to a pollution solution!

The City of Poway is committed to improving water quality and reducing the amount of pollutants that enter our precious waterways.

A Word About "Biodegradable" Soaps

"Biodegradable" is a popular marketing term that can be misleading. Because a product is labeled as biodegradable doesn't mean that it is non-toxic. Some products are more toxic than others, but none are harmless to aquatic life. Soapy water entering the storm drain system can impact fish and other wildlife within hours.

ONLY RAIN DOWN THE STORM DRAIN!

This brochure is one of a series of pamphlets describing storm drain protection measures, which are available at the Development Services Department at City Hall, or online at www.ci.poway.ca.us.

Other pamphlets include:

- **Home Repair and Remodeling BMPs**
- **Restaurant BMPs**
- **Concrete & Mortar Project BMPs**
- **Horses & Livestock BMPs**
- **Mobile Auto Detailing BMPs**

The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for POWER WASHING

What is Power Washing?

Power washing is any activity that uses a water pressure system, including steam cleaning, to clean vehicles, equipment, sidewalks, buildings, dumpsters, or other impervious surfaces. In addition to water, detergents, degreasers and other products may be used in commercial power washing.

What's the Problem with Power Washing?

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. **Wash water from power washing activities may contain significant quantities of oil, grease, chemicals, dirt, and detergents that could end up in our creeks, rivers, lakes, and the ocean.** Disposing of these materials into storm drains causes serious ecological problems—and is PROHIBITED by law.

Best Management Practices

Best Management Practices, or BMP's, are procedures that help to prevent pollutants from entering our storm drains. Each of us can do our part to keep storm water clean. Using BMP's adds up to a pollution solution!

Use Dry Clean-up Methods

- Instead of pressure washing, determine what alternative dry methods are available.
- Use mops, brooms, rags or wire brushes to clean pavement, buildings, and equipment as much as possible.
- Use vacuums or other machines to remove and collect loose debris before applying water.

Location, Location, Location!

- Prior to a washing, block all storm drains with an impervious barrier such as gravel bags or berms, or seal private storm drains with plugs or rubber mats. Make sure this practice does not flood the area or adversely affect vehicle or pedestrian traffic.
- **Never dispose of wash water into the street, storm drains, landscape drains, drainage ditches, or streams.**
- Wash vehicles and equipment on grassy or gravel areas so that the wash water can seep into the ground.
- **Create** a containment area with berms and tarps or take advantage of low ground to keep wash water contained.
- **Check** that the wash water is not leaking through and add more berms or barriers to contain the wash water.

Just Enough for the Job!

- Minimize water use by using high pressure, low volume nozzles.
- Use the minimal amount and least toxic detergents and degreasers you will need to complete the job. Try phosphate free detergents.
- Use a mop or rags to clean heavily soiled areas before power washing.

Only Rain Down the Storm Drain!

- Do not wash equipment or vehicles outdoors on saturated ground or on days when rain is probable.
- Pump or vacuum up <u>all</u> wash water in the contained area.
- With property owners permission, pump or pour the wash water to landscaped areas that will not run off to a storm drain; or drain it to the sanitary sewer through an interior building drain, sink, or private sewer clean-out. Discharges to the sewer **<u>should not</u>** contain hazardous materials, grease, grit, or any material that could clog piping.
- Sediments and other solids remaining on the ground should be swept or vacuumed up immediately so they don't wash into the storm drain system.

Who Can You Contact?

For more information, please call
(858) 668-4636
Report Illegal Dumping to:
Poway Code Compliance (during business hours, 8 a.m. to 5 p.m.) at (858) 668-4663 or (858) 668-4664, press "0" for immediate assistance
Or
Poway Sheriff's Station (after 5 p.m.) at (858) 513-2800

CITY OF POWAY

The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for Horses & Livestock

Storm Water and Horses & Livestock

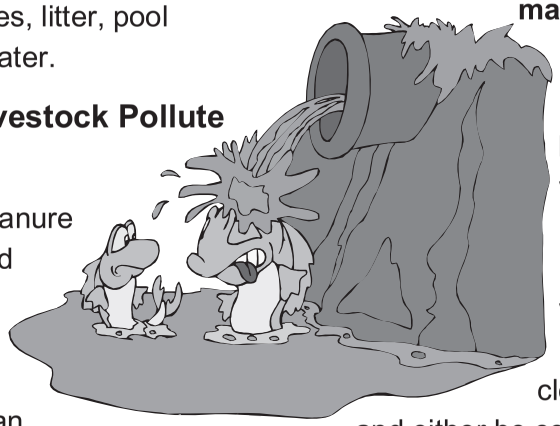
What is Stormwater Pollution?

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. However, this water is not filtered or treated and all the contaminants it contains eventually flow to our streams, lakes, and ocean where we swim and fish.

Once there, polluted runoff can harm wildlife and habitats. Horses and livestock wastes are among the many common storm water pollutants that can degrade water quality. Other examples include paint, oil and automotive fluids, construction debris, pesticides, litter, pool chemicals, and dirty wash water.

How do Horses and Livestock Pollute Stormwater?

During rainfall, uncovered manure and sediment can be washed from barns, pastures, and stables. These wastes end up flowing directly into streams, lakes, and the ocean where they can harm human health and the environment.



Stormwater runoff has been found to contain high concentrations of pathogens such as bacteria, parasites, and viruses.

When they wash into our recreational waters they can make people sick with sore throats, intestinal problems, rashes, nausea, and eye and ear infections.

Manure also contains nutrients, such as phosphorus and nitrogen, that fertilize aquatic algae. When these nutrients are too abundant they cause algae to grow very rapidly, and as a result, deplete oxygen in the water which kills fish and plant life.

Sediment is also harmful to our waters. In addition to causing flooding, sediment washed from pastures and livestock facilities can also harm aquatic life by clogging the gills of fish, blocking light transmission, lowering water temperatures, and preventing the production of oxygen by plants.

Poway Municipal Code section 13.09.080G has specific requirements for the management of manure and pet maintenance:

1. Manure deposited by horses and large animals within an enclosure or on uncovered areas, from which runoff could enter receiving waters or the storm water conveyance systems, must be cleaned up at least once weekly and either be composted, or be stored prior to disposal in a manner that prevents contact with runoff to receiving waters or the storm water conveyance system.
2. Areas used for composting such manure must be located, configured or managed to prevent runoff to receiving waters or the storm water conveyance system.
3. Pet waste shall not be disposed to the storm water conveyance system or receiving waters.

Best Management Practices

- Put barns, corrals, and fences in areas that drain away from creeks or streams or other storm drain conveyance systems.
- Keep livestock away from wet fields when possible. During rain events, cover manure stockpiles with a tarp or visqueen to reduce pollutant runoff.
- Cover dirt areas with loose hay or plant fast-growing grasses to shield and bind the soil to prevent erosion.
- Collect soiled bedding and manure from stalls and paddocks daily, and store them in sturdy, insect-resistant, and seepage free units.
- When grooming animals, use less toxic alternatives.
- If you must use pesticides, always read the label and use the products as directed.

A Clean Environment is Important to All of Us!

In the City of Poway, storm drains flow directly into our creeks, lakes, and the ocean without treatment.

In recent years, sources of water pollution, like industrial wastes from factories have been greatly reduced. However, the majority of water pollution now occurs from things like cars leaking oil, wash water from restaurants, fertilizers from farms, lawns and gardens, failing septic tanks, residential car washing, and pet waste washing into the storm drains and into waterways and the ocean.

All these sources add up to a pollution problem! But each of us can do small things to help clean up our water too—and that adds up to a pollution solution!

The City of Poway is committed to improving water quality and reducing the amount of pollutants that enter our precious waterways.

Only Rain Down the Storm Drain!

This brochure is one of a series of pamphlets describing storm drain protection measures, which are available in the Development Services Department at City Hall, or online at www.ci.poway.ca.us

Other pamphlets include:

The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for Concrete and Mortar Projects

Pollution Prevention is up to YOU!

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. Untreated pollutants such as concrete and mortar flow directly into creeks, rivers, lakes, and the ocean and are toxic to fish and other wildlife. Disposing of these materials into storm drains causes serious ecological problems—and is PROHIBITED by law.

Do the Job Right!

This brochure was designed for do-it-yourself remodelers, masons and bricklayers, contractors, and anyone else who uses concrete or mortar to complete a construction project. Keep storm water protection in mind whenever you, or people you hire, work on your house or property.

Best Management Practices

Best Management Practices, or BMPs, are procedures and practices that help to prevent pollutants such as chemicals, concrete, mortar, pesticides, waste, paint, and other hazardous materials from entering our storm drains. All these sources add up to a pollution problem.

But each of us can do our part to keep storm water clean. These efforts add up to a pollution solution!

What YOU Can Do:

- **Always** store both dry and wet materials under cover, protected from rainfall and runoff and away from storm drains or waterways.
- **Keep all construction debris away from the street, gutter and storm drains.**
- **Never dispose of washout into the street, storm drains, landscape drains, drainage ditches, or streams.**
- Look for and clean up material that may have traveled away from your property after each days work.
- If you or your contractor keep a dumpster at your site, be sure it is securely covered with a lid or tarp when not in use.
- **Don't** mix up more fresh concrete or mortar than you will need for a project.
- Set up and operate small mixers on tarps or heavy plastic drop cloths.
- **Protect** applications of fresh concrete and mortar from rainfall and runoff until the material has dried.
- **Protect** dry materials from wind. Secure bags of concrete mix and mortar after they are open. **Don't allow dry products to blow into driveways, sidewalks, streets, gutters, or storm drains.**
- Empty mixing containers and wash out chutes onto dirt or other landscaped areas that do not flow to streets, drains or waterways, or allow material to dry and dispose of properly.
- **Never wash excess material from bricklaying, patio, driveway or sidewalk construction into a street or storm drain.**
- Sweep up and dispose of small amounts of excess dry concrete, grout, and mortar in the trash.
- Wash concrete or brick areas only when the wash water can flow onto a dirt area without further runoff or drain onto a surface which has been bermed so that the water and solids can be pumped off or vacuumed up for proper disposal.
- **Don't** place fill material, soil or compost piles on the sidewalk or street.
- During cleanup, check the street and gutters for sediment, refuse, or debris. Look around the corner or down the street and clean up any materials that may have already traveled away from your property.

The City of Poway is committed to improving water quality and reducing the amount of pollutants that enter our precious waterways to protect our water quality for future generations.

A Word About "Biodegradable" Soaps

"Biodegradable" is a popular marketing term that can be misleading. Because a product is labeled as biodegradable doesn't mean that it is non-toxic. Some products are more toxic than others, but none are harmless to aquatic life. Soapy water entering the storm drain system can impact fish and other wildlife within hours.

ONLY RAIN DOWN THE STORM DRAIN!

The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for Mobile Auto Detailing

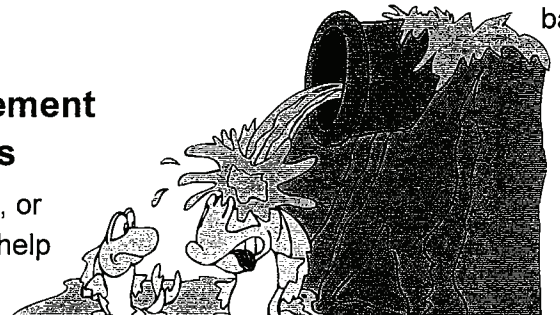
Mobile Detailing Procedures

What's the Problem with Mobile Detailing?

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. **Wash water from mobile detailing activities may contain significant quantities of oil, residues from exhaust fumes, brake dust, grease, and other chemicals that could end up in our creeks, rivers, lakes, and the ocean.** Disposing of these materials into storm drains causes serious ecological problems—and is PROHIBITED by law.

Best Management Practices

Best Management Practices, or BMP's, are procedures that help to prevent pollutants from



berms, or seal private storm drains with plugs or rubber mats. Make sure this practice does not flood the area or adversely affect vehicle or pedestrian traffic.

- **Never dispose of wash water into the street, storm drains, landscape drains, drainage ditches, or streams.**
- Select a site and wash vehicles on grassy or gravel areas so the wash water can filter through the vegetation and/or soil.
- **Create** a containment area with berms and tarps or take advantage of low ground to keep wash water contained so that it can evaporate.
- **Check** that the wash water is not leaking through gravel bags or other containment measure, and if necessary add more berms or barriers to keep the wash water contained.

Just Enough for the Job!

Only Rain Down the Storm Drain!

- Do not wash vehicles outdoors on saturated ground or on days when rain is probable.
- Pump or vacuum up <u>all</u> wash water in the contained area.

Pollution Prevention is up to you!

- With property owners permission, pump or pour the wash water to landscaped areas that will not run off to a storm drain; or drain it to the sanitary sewer through an interior building drain, sink, or private sewer clean-out. Discharges to the sewer **<u>should not</u>** contain hazardous materials, grease, grit, or any material that could clog piping.
- Sediments and other solids remaining on the ground should be swept or vacuumed up immediately so they don't wash into the storm drain system during the next rain.
- Shake car mats into a trash can or vacuum them. Do not shake dirt from car mats directly to the ground.
- Don't forget to properly dispose of any used gravel bags!

Dispose of Fat, Oil, and Grease Properly

One of the most important sources of water pollution is sewer spills caused by fat, oil, and grease (FOG) blocking the pipes. These spills damage the environment and can create property damage and health hazards leading to expensive repairs, health code violations, or restaurant closure.

The City has created the FOG Program, which works with local food establishments by providing information and inspections to help you avoid the negative impacts of sewer spills. The FOG Program can:

- Issue your Food Establishment Wastewater Discharge (FEWD) Permit (this free permit is required for all food establishments)
- Show you Best Management Practices for handling FOG
- Evaluate your grease traps, interceptors, and other facilities so you can be sure they are adequate

To obtain your FEWD Permit or receive additional information on the FOG Program, please call the City of Poway Wastewater Division at (858) 668-4719.

ONLY RAIN DOWN THE STORM DRAIN

Remember, storm drains are NOT connected to sanitary sewer systems and treatment plants. Anything that goes into the storm drains flows directly into our creeks, rivers, and ocean without any filtering or treatment. Please do your part to help keep our water clean by using Best Management Practices and making sure that nothing but rain goes down the storm drain.

Best Management Practices for RESTAURANTS

A Clean Environment is Important to All of Us!

Best Management Practices

Restaurants contribute to storm water pollution through improper cleaning practices that allow food particles, oil, grease, trash, and cleaning products to flow into the street, gutter, or storm drain. These discharges pollute our creeks, rivers, and ocean and are **PROHIBITED BY LAW**. Below are recommended Best Management Practices (BMPs) for restaurants.

- **NEVER** pour wash water outside or into a street, gutter, or storm drain.
- **NEVER** pour grease or oil into a sink, floor drain, storm drain, or dumpster.
- Sweep, mop, or vacuum instead of using a hose to clean outdoor areas.
- **Always** clean equipment including floor mats, grease filters, grills, and garbage cans indoors or in a covered outdoor wash area that is plumbed to the sanitary sewer.
- Clean equipment in a mop sink if possible (never in a food preparation sink).

- If your restaurant does not have a mop sink, dedicate an indoor cleaning area where there is a drain that is plumbed to the sanitary sewer.
- Discharges to the sewer **must not** contain hazardous materials, grease, grit, or any material that could clog piping.
- All wastewater containing oil and grease must be disposed of in a grease trap or interceptor. Concentrated waste oil and grease must be collected in a grease bin and disposed of by a certified waste grease hauler.
- Major cleaning of exterior surfaces must include capturing wash water and disposing it in the sanitary sewer in compliance with local regulations.
- **Wash water must not be allowed to enter the street gutter or storm drain**.
- All mop water from cleaning floors must be disposed of indoors in a mop sink, toilet, or other drain that is plumbed to the sanitary sewer.
- **Dry sweep pavement** areas, including "drive-through" areas, parking lots, outdoor eating areas, and dumpster or grease bin areas frequently. If you must use water for cleaning, use a mop and bucket and dispose of wash water in a mop sink or floor drain that is plumbed to the sanitary sewer.

Sweep, mop or vacuum instead of using a hose to clean outdoor areas.

- Use dry methods for spill cleanup. Rags or absorbents can be used to pick up liquids or grease. Sweep up the absorbent, seal it in a plastic bag, and dispose of it in the trash.
- Keep outside areas free of trash and debris. Clean outdoor eating areas frequently using dry cleaning methods such as sweeping or vacuuming.
- **Never** wash down dumpsters or grease bins with a hose. Check dumpsters regularly for leaks. If a dumpster or tallow bin must be cleaned or repaired, contact the leasing company.

www.ci.poway.ca.us

POWAY TODAY

Fall 2008 · Volume 26 · Number 3

A Quarterly Municipal Newsletter for the Residents of Poway, California

Join Poway's Community Day Celebration!

Poway's Community Day celebration will be held Saturday, September 13. The celebration kicks off with the Poway Heritage parade at 10:00 a.m. The parade will begin at Pomerado Road and continue East on Poway Road to Community Park. The Annual Lions Club Pancake Breakfast will begin at 7:00 a.m. at the Poway Senior Center.

Community Day festivities start at noon at Community Park, located at 13094 Civic Center Drive, and continue throughout the day. Community Day will include games, kiddie rides, and entertainment. The main entertainment stage will feature demonstrations from various City programs, local dance groups, dog contests, and an evening performance by Rockola at 6:30 p.m.

In recognition of the important role dogs play in our community, we will be incorporating Dog Day into this event! There will be vendors and demonstrators at Dog Park from noon to 6:00 p.m. and fun contests for owners and pets from 2:00 p.m. to 3:00 p.m. So leash up your dogs and bring the whole family to Community Day for a tail waggin' good time!

For more information about Poway's Community Day Celebration, contact Kelley Clark, Event Coordinator at (858) 668-4574.

Important Infrastructure Improvements Are Underway!

Many people think of Poway's Capital Improvements Program in terms of the new buildings and services it provides; such as fire stations, parks, and streetlights. Just as important is the maintenance of infrastructure such as roadways and water and sewer systems. Keeping our infrastructure up to date and in good condition is vital to public safety, promotes community pride, and supports the quality of life that Poway is known for.

Regularly scheduled road maintenance such as filling pot holes and repaving high-traffic streets cost the City less money than waiting until excessive damage requires major repairs.

Pavement Maintenance

Performing regular maintenance on our roadways is far less expensive in the long run than repairing roads that have been allowed to deteriorate. The key to using maintenance funds wisely is choosing the correct maintenance and performing it at the right time.

To determine the current condition of our streets, City staff inspected all 165 miles of public roads in Poway. Cracking, potholes, and wearing were measured and evaluated for severity. This information was then used to create a maintenance plan. The City has been divided into seven zones. One zone will receive maintenance each year. The type of repair for each street ranges from patching and sealing to a complete overlay, depending upon its condition.

This year's scheduled maintenance will occur in zone 4, which covers the western portion of Poway from Twin Peaks Road to Espola Road. The work will begin in August and run through October 2008. Residents on each street will be notified before work begins. Major closures, if any, will be announced on the City's website and through press releases.

Espola Road Water Line

By the end of this summer, work will begin on a new, larger, 42" diameter water line along Espola Road from Titan Way to Twin Peaks Road. The current 24" diameter water line is nearing the end of its service life and will need to be taken out of service for repairs. Placement of the new water line will occur without any interruption of water service. Increasing the size of the line will improve water delivery and reservoir refilling rates.

This project is expected to take four months to complete. Traffic lanes will be affected during the construction, but no road closures or detours are anticipated.

If you have any questions regarding the City's capital improvements, please contact the Development Services Department at (858) 668-4668 or visit the City's website at www.poway.org.

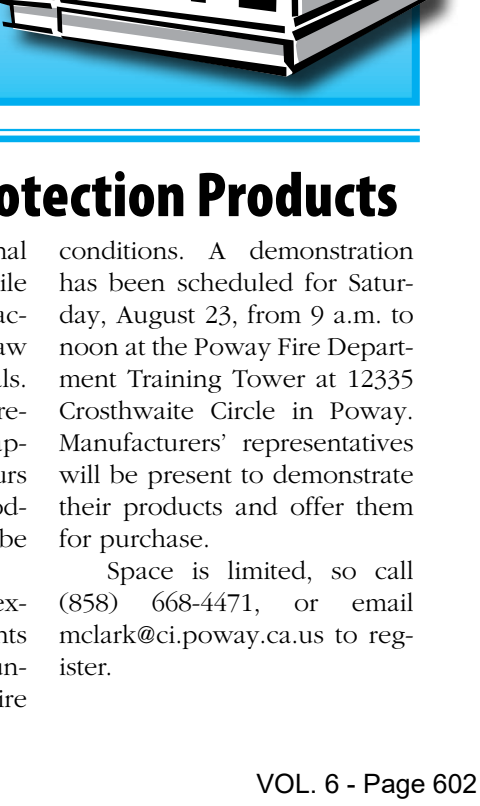
Are You Being Affected by the Mortgage Crisis?

If so, there are resources available to assist you.

The national Homeowner's HOPE Hotline is available to any homeowner in the United States who is having trouble paying the mortgage. The hotline is available anytime – 24 hours a day, 7 days a week, and offers free foreclosure prevention counseling by expert counselors from the U.S. Department of Housing and Urban Development's approved agencies.

The hotline is paid for by the Homeownership Preservation Foundation, a nonprofit dedicated to preserving homeownership. The Foundation partners with local governments, nonprofits, borrowers, and mortgage lenders/servicers to deliver innovative homeownership preservation solutions. To learn more please visit www.995hope.org.

Another resource available to you is the Housing Opportunities Collaborative (HOC), a coalition of nonprofit organizations and agencies in the San Diego region. The HOC can connect you to legal and consumer protection assistance, credit, and fair housing counseling, and other agencies that can help you. To find out more about HOC, please visit www.housingcollaborative.org or call (619) 282-6647 x373.



Demonstration of Home Fire Protection Products

As a result of the Witch Creek and Cedar Fires, Department of Safety Services' staff began looking at fire protection products that residents could use to protect dwellings in fire-prone areas. These products are intended to be used after property owners have met defensible space requirements that separate residences from brush, chaparral, and other flammable vegetation.

Local fire experts have identified two products that appear to provide additional protection to structures, while still allowing residents to evacuate when ordered to by law enforcement and fire officials. These products include fire-proofing gels that can be applied by residents several hours before a fire strikes, and wood-treatment products that can be applied during construction.

The City would like to extend an invitation for residents to preview these products under controlled and safe fire conditions. A demonstration has been scheduled for Saturday, August 23, from 9 a.m. to noon at the Poway Fire Department Training Tower at 12335 Crosthwaite Circle in Poway. Manufacturers' representatives will be present to demonstrate their products and offer them for purchase.

Space is limited, so call (858) 668-4471, or email mclark@ci.poway.ca.us to register.

Families Rebuilding in Poway

During the Witch Creek Fire, 90 homes were destroyed in Poway. The City's CARE (City Assists Rebuilding Efforts) Team has been assisting families who lost their homes or had other structural damage. The Team continues to serve as a resource and personal point of contact at City Hall for families as they rebuild. Whether the question is City related or not, the Team works to obtain answers for families. The Team also hosts monthly insurance meetings with an expert to assist families with their insurance claims. These meetings are expected to continue until October 2008.

As families rebuild their homes, the CARE Team continues to serve as an internal liaison to ensure that each person is secure in the knowledge that their calls and inquiries will receive priority. CARE Team member and Associate Planner, Carol Rosas, walks each property owner through the steps required during the home design and rebuilding process. In some cases, certain permit fees can be waived if the property owner's insurance will not cover them. Fire-damaged properties are given priority in plan check and review, to speed up the process.

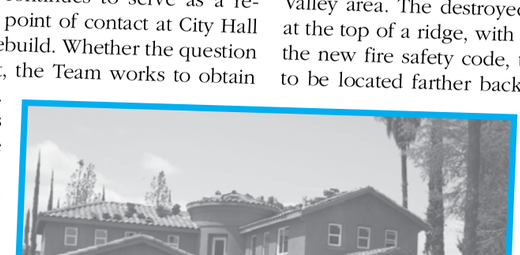
Property owners are encouraged to contact City staff early in the design stage to discuss and review proposed replacement home projects. Because building codes and other requirements change over time, homes cannot always be rebuilt exactly as they had been before. City staff engages in problem-solving to help property owners address all code a while building their new home

One example where early c was with a family that lost their Valley area. The destroyed hor at the top of a ridge, with a sce the new fire safety code, the n to be located farther back fron slop sen bas and

S ous prop thei achi desig nee mair view there to ob requ from slope. grant Coun the yard s the h move the ed for gr ty, yet in the area erty.

In th since propert submitt plans. T dited review, the first building perm the month after the fire, and 20 bui have been issued so far.

A number of the houses are completion, and families are eage to return home. City staff, includi Team, will continue to serve as the all property owners affected by the Fire.



Families will soon be home again in these houses on St. Andrews Drive and Valley View Road.

Oak Knoll Neighborhood Beautificat

In September 2007, the Oak Knoll neighborhood participated in a community barbecue. Residents requested that a number of items be included in the proposed neighborhood improvements, including maximized parking, street lighting, traffic calming, and the undergrounding of utilities. Residents' input was extremely helpful in determining the design of the project.

Now it's time to start the improvements! This $7.3 million renovation project will begin with replacing the old sewer line from Bowron Road to Pomerado Road. The undergrounding of utilities and sewer work will start this summer, and continue through the end of the year. The sidewalk, curb, gutter, landscape, and lighting work is expected to begin in Winter 2008/09, and should take six months to complete.

While the City is working on sewer and road improvements, Community HousingWorks, a nonprofit housing developer, will be r the Oak Knoll Villas Apartment Compl 52 apartments will be updated and leas and very-low income residents, with of a $7.3 million loan from the Redeve Agency.

This renovation will take six m complete. Outside, the roof, entran landscaping will be enhanced, and a to community room for residents will be Inside the apartments, the cabinets, cou fixtures, flooring, heating, and plumbing upgraded.

The City and Redevelopment Age committed to the continued revitalizatio Oak Knoll area. Combined, these improv will make a dramatic and lasting differ the neighborhood.

Living with Wildfire

Are Your Family and Home Prepared?

Fire is part of our environment. Our brush-covered hills, canyons, and forests burned periodically long before homes were built in Poway. Today's wildfires can burn fast…and seasonal hot, dry winds drive fires even faster; making them difficult to control and exceptionally dangerous.

To lessen the devastating impacts that wildfire can have upon our community, here are some tips that can help you better prepare for the next wildfire.

WHAT TO DO BEFORE A WILDFIRE STRIKES:

- Make sure all adult and teenage members of your family know where your gas, electric, and water main shut-off controls are and how to turn them off.
- Practice Defensible Space! Design and landscape your home with wildfire safety in mind. Detailed defensible space information can be found on the City's website at www.poway.org and search for "defensible space."
- Make sure your address is readily visible – use contrasting colors to mark your home address numbers at the curb and on your house.
- Plan several different escape routes from your home and neighborhood, and designate an emergency meeting place for your family to reunite. Identify a contact person, who lives outside the area, for concerned relatives to call.
- The City of Poway uses the County of San Diego's reverse 9-1-1 system to make evacuation advisories and notifications, in addition to contacting the media and posting information on the City's website. The reverse 9-1-1 system includes land-line numbers. If you have a Voice over IP or cell phone and would like to be notified using that device, or by email, register those numbers and/or email with reverse 9-1-1 by visiting www.sdcounty.ca.gov/oes/ready/signup.html.
- Know how to seal attic and ground vents. Have the necessary equipment on hand before a wildfire strikes using precut, non-combustible coverings.
- Talk to your neighbors about working together before, during, and after a wildfire. How can you help neighbors who have special needs, such as elderly or disabled persons? Make plans to take care of children who may be on their own if parents can't return home.
- Periodically review your homeowner's insurance policy with your insurance agent to make sure that you have enough coverage to rebuild your home and life, should you be the victim of a disaster.
- You may not be home when wildfire threatens. Authorities must close roads for safety and you may not be able to return. Make evacuation arrangements in advance for persons or pets at home when you're not.
- Check with your child's school regarding their Student Release Policy. The schools should have plans to protect children in place or take them to a safer location.

Put together an emergency kit that includes at least the following items:

- A three-day supply of drinking water and food that needs no refrigeration and, generally, no cooking;
- Emergency cooking equipment, if required;
- A portable radio;
- First aid supplies;
- Toilet supplies;
- Medications;
- Basic tools, such as a wrench, a flashlight, and gloves;
- Portable lanterns and batteries;
- Credit cards and cash;
- Eyeglasses and important documents, including insurance policies; and
- Pet food, leashes, and carriers (if you have pets).

Visit www.redcross.org for additional information.

WHAT TO DO DURING A WILDFIRE:

- If you are warned that a wildfire is threatening your area, listen to your portable radio, and view the City of Poway's website and news media for reports and evacuation information.
- Back your car into the garage or park it in an open space facing your evacuation route, so you have the best visibility when you have to leave. Shut car doors, roll up windows, and leave the key in the ignition (or another accessible location). Load your important items and supplies.
- Close garage windows and doors. Disconnect automatic garage door openers, so the door does not open in the event of a power failure.
- Confine pets to one room. Make plans to care for your pets in case you must evacuate. If taking them with you, load them into the car when you leave.
- Arrange temporary housing outside the threatened area.
- When advised to evacuate, do so immediately. Drive with headlights on at all times.
- Wear protective clothing – sturdy shoes, cotton or woolen clothing, long pants, a long-sleeved shirt, gloves, and a handkerchief to protect your face.
- Take your emergency kit.
- Lock your home.
- Notify your relatives that you have left, and how you can be reached.
- Follow the evacuation route that your local officials have identified. If no official route exists, choose a route away from fire hazards. Watch for changes in the speed and direction of the fire and smoke.
- Check-in at an evacuation center established by the Red Cross. Whether you decide to stay or not, checking in will help others know you're safe.
- Don't leave garden sprinklers on – they can waste critical water storage capacity and pressure.
- Don't call 9-1-1 for nonemergencies.

IF YOU ARE SURE YOU HAVE THE TIME, TAKE THESE ADDITIONAL STEPS TO PROTECT YOUR HOME:

- Close windows, vents, doors, venetian blinds, and heavy drapes. Remove lightweight curtains and combustibles from windows.
- Shut off your gas at the meter. Turn off pilot lights.
- Move flammable furniture into the center of the home away from windows and sliding-glass doors.
- Move patio furniture at least 30 feet away from the home. Cluster the furniture and other items that may snag firefighter hose lines.
- Turn on a light in each room to increase the visibility of your home in heavy smoke. Leave an exterior light on – it helps firefighters locate your home.
- Seal attic and ground vents.
- Turn off propane tanks.
- Connect the garden hose to outside taps and place them strategically around your home.

"Natural" Pollutants: Bacteria and Sediment

What do the most prevalent pollution problems found in Poway's waterways have in common? They are "natural" substances that become serious pollutants when human activity increases their levels.

Bacteria

Bacteria, viruses, and other organisms can cause flu-like illnesses, skin rashes, and other infections. They can come from failing septic systems, sewage spills, trash, pet waste, rotting plant material, and other sources.

Here are some ways that you can help prevent bacteria pollution in our streams:

- Put trash in proper receptacles;
- Pick up after your pets;
- Eliminate overwatering and overspray from your irrigation system;
- Maintain your septic system and private sewage pipes;
- Keep animals and animal waste (manure and bedding) away from drainage ways; and
- Sweep up yard clippings and trash.

Sediment

Excess sediment or dirt in the water can smother aquatic life, clog fish gills, and cut off light to underwater plants. It can also block waterways and cause flooding. Excess sediment is the result of erosion from disturbed areas.

Some ways you can help prevent sediment pollution include:

- Properly install silt fencing, fiber rolls, and other protective devices during grading and landscaping;
- Replant or use mulch to cover bare ground; and
- Remove weeds by mowing.

Even if your property is not near a stream, you can help prevent water pollution. Remember, what goes into our storm drains and drainage ditches flows untreated into our creeks, lakes, and the ocean.

If you would like more information on preventing water pollution, please contact the Development Services Department at (858) 668-4668 or visit the City's website at www.poway.org.

Tell US how it is!

The City of Poway would like to hear from you. What do you think about the services and facilities provided in the community? What could we do to better serve you?

This cutout form is provided twice a year for comments, suggestions, and service requests. Clip out the form, and mail it or deliver it in person to City Hall at: 13325 Civic Center Drive.

All comments will be reviewed by the City Manager's Office and referred to the appropriate City department. Please be specific with your comments and the location of services, so that we can better serve you.

Please call us at (858) 668-4500 with any comments or suggestions.

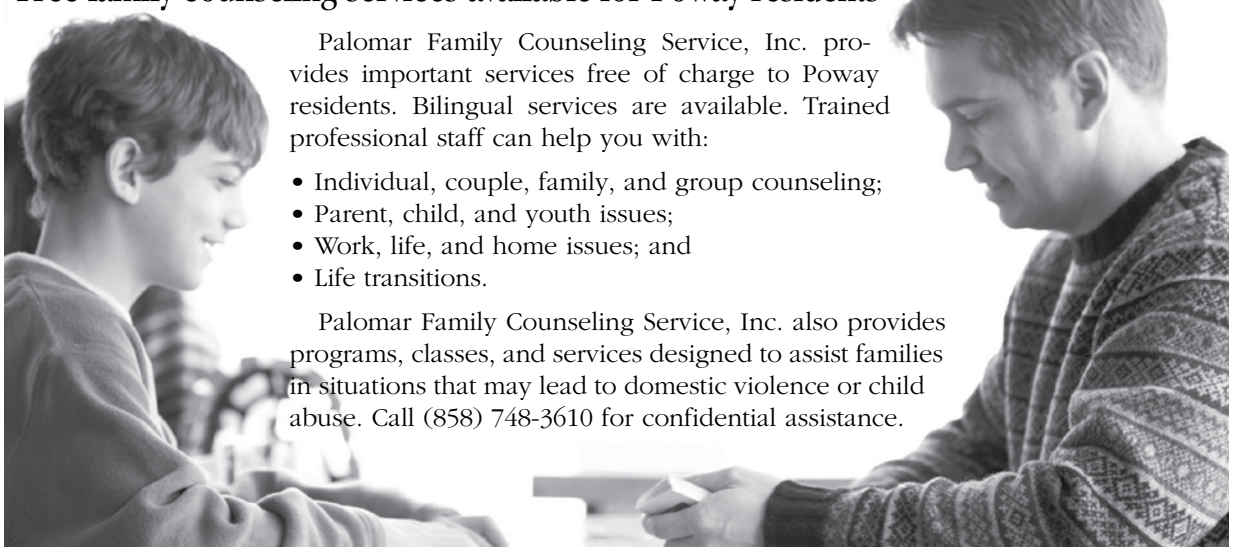
Free family counseling services available for Poway residents



Palomar Family Counseling Service, Inc. provides important services free of charge to Poway residents. Bilingual services are available. Trained professional staff can help you with:

- Individual, couple, family, and group counseling;
- Parent, child, and youth issues;
- Work, life, and home issues; and
- Life transitions.

Palomar Family Counseling Service, Inc. also provides programs, classes, and services designed to assist families in situations that may lead to domestic violence or child abuse. Call (858) 748-3610 for confidential assistance.

CERT
COMMUNITY EMERGENCY RESPONSE TEAM

The City of Poway Fire Department's next Community Emergency Response Team (CERT) class will begin in September 2008. This nine-week program will teach participants how to help themselves, their neighbors, and the community during disaster situations when fire and law enforcement may not immediately be able to meet the demand for service.

If you are interested in becoming a CERT volunteer in Poway, please call (858) 668-4460.

Cloud 9
SAN DIEGO'S TRANSPORTATION SOLUTION
SuperShuttle

Special Rates for 92064

Poway's partnership with Cloud 9 SuperShuttle results in reduced fares for Powegians

Did you know that Cloud 9 Shuttle is now known as Cloud 9 SuperShuttle? The City is thrilled to continue its partnership with Cloud 9 SuperShuttle, which enables Poway residents and business travelers to enjoy discounted rates to and from the 92064 zip code in exchange for the City promoting Cloud 9 SuperShuttle's reduced fares.

There is no need to request a special rate. By providing the 92064 zip code as your pick up or drop off location, you will automatically be provided with a reduced rate when you book your reservation.

To make a reservation call 1-800-974-8885, or visit the Cloud 9 SuperShuttle website at www.cloud9shuttle.com

Special Rates for Poway

As a single shared ride passenger, you can obtain service from your home to the San Diego airport, train, or cruise ship terminals for $36. Additional options include:

2 passengers $43
3 passengers $50
4 passengers $57
5 passengers $64
6 passengers $71
7 passengers $78

All rates are one-way.

POWAY TODAY

Winter 2008 · Volume 26 · Number 4

A Quarterly Municipal Newsletter for the Residents of Poway, California

Water Conservation Residential Surveys

Have you ever wondered how your family may be able to save more water? A residential landscape survey may be just the thing for you.

Free for those who seek to save as much water as possible, landscape surveys educate water customers on water saving opportunities. Representatives from the San Diego County Water Authority examine residential water use and identify water leaks, determine irrigation efficiency, and offer water conservation recommendations.

Before scheduling an appointment, water officials will conduct a brief question and answer session over the phone to better understand your home's water usage. That way, when experts arrive to evaluate the residence, they will have a better understanding of your water usage.

Residential surveys focus on both outdoor and indoor water use although most of the time will be spent on the irrigation system which typically accounts for the largest part of the water bill and provides the most opportunities for water savings.

At the end of the survey, customers will receive a check list with detailed recommendations and savings opportunities for their home, as well as information explaining the drought situation and the different conservation programs available, such as information on rebates.

To schedule a free residential landscape survey, call (800) 986-4538. For additional water conservation information, visit 20gallonchallenge.com or poway.org/waterconservation.

By participating in the Residential Water Survey and upgrading your appliances and irrigation systems, you may be eligible for the following rebates and water savings.

APPLIANCE	REBATE AMOUNT	ESTIMATED WATER SAVINGS
High-Efficiency Washing Machine	$185 rebate	10 gallons per load
High-Efficiency Toilet	$200 new rebate or $30 upgrade rebate	8 gallons per day
Rotating Sprinkler Nozzles	$4.00 per nozzle	20 gallons per day
Weather-Based Irrigation Controller	$350/acre for less than 1 acre $630/acre for more than 1 acre	40 gallons per day
Artificial Turf	$1.00/sq.ft. up to 1,000 sq. ft. $0.30/sq. ft. for additional area over 1,000 sq. ft.	46 gallons per sq. ft. per year

2-1-1 HOTLINE SERVICE

The multilingual hotline number 2-1-1 is a free and confidential 24-hour community, health, and disaster public resource service in San Diego County. The Federal Communications Commission created the number for residents to easily access community information from a live specialist. In the event of a regional emergency or disaster, 2-1-1 becomes the primary source of information for the public.

For instance, during the 2007 wildfires in San Diego, residents made 120,000 calls to 2-1-1, and received up-to-date information on evacuations, shelters, road closures, volunteer opportunities, and relief and recovery services.

By dialing 2-1-1, residents help lower the number of 9-1-1 calls made, allowing safety and law enforcement officials to better direct their already scarce resources on more urgent crises.

During non-emergencies, the public can dial 2-1-1 for information on the 5,000 health and human services available, ranging from substance abuse treatment to elderly care.

For more information on 2-1-1, visit their web site at www.211sandiego.org.

Wildfire Defensible Space Program

The removal of highly flammable chaparral vegetation within 100 feet of structures as shown in the above photo, can greatly reduce the chances of home losses during wildfires.

On September 19, 2008 the City of Poway introduced the Wildfire Defensible Space Program, designed to reduce the risks and impacts of wildfires. After experiencing two devastating firestorms in four years, this new program directly addresses the creation and maintenance of what is commonly referred to as "defensible space." The program is a result of a six-month long process that incorporated extensive community feedback, including a special City Council session dedicated solely to this critical topic.

Wildfires, while a normal part of our environment, represent the greatest threat to our safety. They are naturally reoccurring because our community is located in an area that has hilly terrain, canyons, and highly flammable chaparral vegetation. Combined with Santa Ana winds, we live in one of the most challenging fire environments in the world. With development and population expanding in the wildland areas, the frequency of fires and area burned is also increasing.

The purpose of this program is to save homes during wildfires, primarily through fire prevention education and the reduction of highly flammable chaparral vegetation within 100 feet of structures. By managing the vegetation, the speed and intensity of wildfires will be reduced, firefighter safety is enhanced, and homes will be less likely to be ignited by burning embers.

The program is very specific about what types of vegetation is affected and how it will be managed. Targeted vegetation types include sumac, sage, chamise, and scrub oak, which are highly combustible and typically found in between homes and nearby undeveloped areas. It does not include ornamental landscaping and tree species, nor does it include trees such as palms or eucalyptus, which may spread, seed, and grow without human assistance.

Hazardous vegetation will need to be thinned and managed on an annual basis. Grading, grubbing, scraping, clearing, and using herbicides are prohibited. Only cutting and mowing, which leaves the root structures intact, are approved methods of eliminating vegetation.

Streambeds, banks, and vernal pools are also excluded from this program. In addition, any dead or dying trees or shrubs may need to be removed if they represent a fire hazard. All property owners must receive a no-fee Vegetation Reduction Permit from the Development Services Department, prior to the removal of any vegetation.

For more information, visit the City's website at www.poway.org with a keyword search of "Defensible Space."

Contact the Development Services Department Code Compliance Division at (858) 668-4463 for additional information and home assessment appointments.

~ POWAY ~
Your First Choice for Holiday Shopping!

With the holiday season upon us, please consider Poway businesses for all of your holiday shopping needs. Purchasing local goods and services has become more important than ever in these uncertain economic times. Sales tax revenues generated from local spending goes toward maintaining the high level of City services enjoyed by Poway residents. It is truly an investment in the community. So, as you start making your holiday shopping list this year, please remember to make Poway Your First Choice this holiday season!

Recycling Composting Energy Efficiency WaterWise Drought Tolerant Conservation Wind Energy

Go Green Water Quality Air Quality

A Focus on Sustainability

Alternative Fuels Environment

Open Space Habitat Preservation Solar Power Transportation Natural Resources Waste Reduction

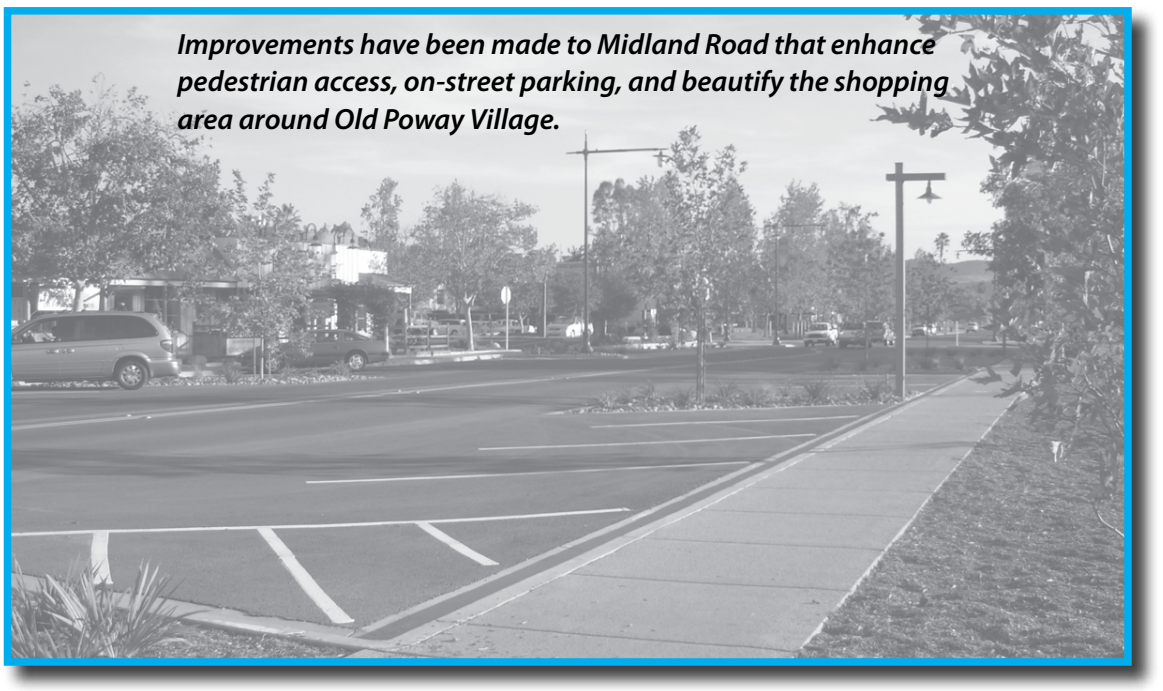
With the environment becoming a greater concern in the country and as an increasing number of Americans go "green," the City of Poway is becoming a leader in sustainability. For example, Poway was one of the first cities in San Diego County to use energy efficient lights in traffic signals and pedestrian crossing signs. Solar panels were recently installed at Fire Station 1 to increase energy efficiency. The City also utilizes rubberized asphalt in a variety of applications and rubberized median mulch on roadways throughout the City. At South Poway Business Park, recycled water irrigates the landscape. The City of Poway also has a policy to protect natural lands by limiting growth and protecting open space.

There are a number of ways for the public to be "green" as well. For instance, residents can shop for locally grown produce at the Farmers Market in Old Poway Park. Drought tolerant plants in the garden best suit Poway's semi-arid climate. Using less water in the yard and in the home eases the current California drought situation and lowers the bills. Biking to work or school is not only healthier but diminishes the carbon emissions that are released when driving. Compact fluorescent light bulbs (CFLs) last up to 15 times longer than regular light bulbs.

To bring about worldwide environmental transformation, a local impact needs to be made first, and Poway is encouraging the community to change its habits with small, easy steps.

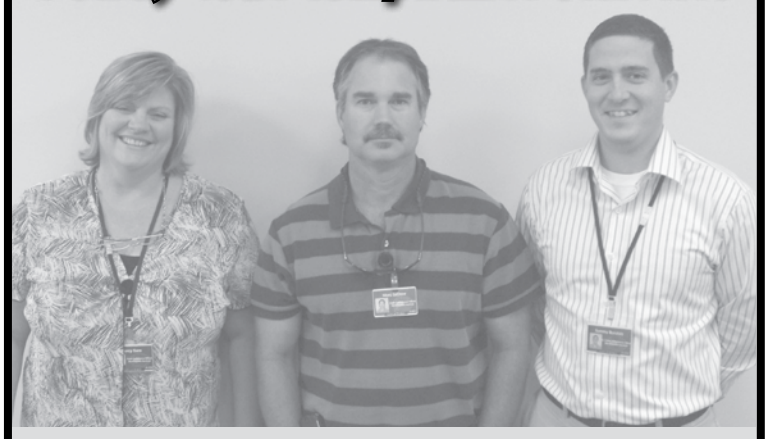
Midland Road Upgrades Create Unique Shopping & Dining Experience

The new section of Midland Road near Old Poway Park has several completed upgrades, such as newly paved asphalt lanes, better drainage, diagonal parking spaces, underground utilities and tree-filled planters. The improvements create a pedestrian-friendly atmosphere with the addition of 1,300 shrubs and 31 trees (one for every three parking stalls) to complete the look. New diagonal parking spaces along Midland Road, as well as the improvements to the Farmers Market parking lot, make it even more convenient to visit the many unique shops at Old Poway Village and eat at the Hamburger Factory Restaurant while making Poway Your First Choice!



Improvements have been made to Midland Road that enhance pedestrian access, on-street parking, and beautify the shopping area around Old Poway Village.

Employee Spotlight - Meet Your Poway Code Compliance Officers!



Poway's Code Compliance Officers work very hard to maintain our high quality of life and reputation as a safe and healthy place to live, work, and play. Among other things, Code Compliance Officers investigate complaints of local and State code violations, run the City's vegetation-related fire protection programs, and work closely with the San Diego Sheriff's Department to help identify and resolve chronic neighborhood problems. Poway recently added a new officer to its team to help support new fire-fuel reduction efforts in the Wildfire Defensible Space Program.

Marc LeDrew: With the City for over 15 years, Marc works full-time to implement our new Wildfire Defensible Space Program. It's a difficult but important job that positively affects each resident's safety.

Darcy Sare: Darcy joined the City in October of this year. She brings a wealth of knowledge in project management and problem solving to the team, and is enthusiastic about putting her skills to work for Poway.

Tomás Borobia: Coordinates Code Compliance and other City efforts to ensure that we use our resources to full advantage to help resolve problems.

Poway's Code Compliance Officers are working hard to keep Poway great, so if you see them around town, let them know you appreciate their efforts! To speak with a Code Compliance Officer, please call (858) 668-4688 or e-mail codecompliance@ci.poway.ca.us.

Pet Safety During the Holidays

Always remember that decorations and festive feasts during the holidays can be hazardous to your pets. Please keep in mind the following tips to ensure the safety of your pets.

Certain plants such as Mistletoe berries, and the leaves, stem and flowers of the Poinsettia can be dangerous to pets. Be sure to keep these plants well out of the reach of animals in your home, or consider using artificial versions.

Foods and drinks such as alcoholic beverages, seeds and pits from many fruits, chocolate, macadamia nuts, walnuts, and other foods can be harmful to pets.

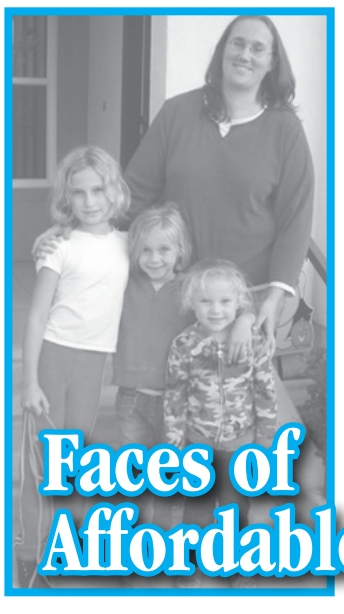
Never feed pets leftovers from the dinner table. Items such as chicken or turkey bones can easily splinter and choke cats and dogs.

Simple precautions taken around the home can protect your pets from accidents and illnesses commonly caused by holiday treats and decorations.

Decorations such as tinsel, glass ornaments and garlands can easily attract pets, but are dangerous choking hazards. Electric decorations such as stringed lights can give your pets a shock should they chew on the wires. Keep decorations out of their reach.

The unusual commotion of the holiday season can be stressful on animals. Put your pets in a quiet room or quiet area of the house when guests are visiting.

If you need additional information regarding the care of animals, you may contact the Escondido Humane Society at (760) 888-BARK.



Faces of Affordable Housing

Charisse Officer has been a resident of Hillside Village in Poway for the past several years, where she raises her three young daughters. As a clerk for a local Poway grocery store, Charisse has been working towards her goal of buying a house for her family. She is actively taking steps to turn that dream into a reality. Charisse has completed Community HousingWorks' Financial Fitness and HomeBuyer Education programs, and has opened an Individual Development Account where she continues to save towards her goal of homeownership.

Let's Work Together To Prevent Pollution!

Keeping our waterways clean is a big job, so the City's Stormwater Pollution Prevention Program includes staff from the Divisions of Engineering, Planning, Streets and Drainage, Wastewater, Parks, and more.

However, the City's biggest resource in the fight against stormwater pollution is you – the residents. Preventing pollution in our homes, neighborhoods, and businesses is a team effort.

Here are some of the ways the City's Stormwater Pollution Prevention Program helps keep our waterways clean:

- **Cleaning and maintaining the storm drain system**
- **Maintaining the sewer system to prevent spills**
- **Educating the public about the importance of pollution prevention**
- **Inspecting businesses and construction sites to make sure they don't pollute**
- **Monitoring and sampling throughout the City to detect any pollution, with follow-up studies to find and eliminate the cause**

Here are some things you can do to help:

- **Avoid over-irrigation, which washes fertilizer and other pollutants into the gutter and storm drains**
- **Clean up after your pets**
- **Recycle used motor oil**
- **Wash your car at a car wash, or use water and soap sparingly and pour your bucket of soapy water down the sink instead of into the street**
- **Minimize soil erosion with proper landscaping and ground cover**
- **Put trash in proper receptacles, and keep the lids closed**

By working together, we can protect the environment and our families' health and safety. We all benefit from clean water, and all of us play a role in keeping our storm drains, creeks, lakes, and ocean clean.

For more information on the City's Stormwater Pollution Prevention Program, visit the City's website at www.poway.org or call (858) 668-4668.

Water testing and educating residents about the negative impacts of polluted stormwater runoff are just two ways the City of Poway is working to maintain clean waterways.

Tree Care Tips

Trees beautify our surroundings, increase property values, and help save energy. If not done properly, tree pruning can cause serious damage to the health of your tree. Tree topping is the harmful pruning of tree branches beyond what is necessary in order to sustain healthy growth. Unfortunately, many homeowners mistakenly "top" trees because they grow into utility wires, interfere with views or sunlight, or simply grow too large for a property.

The tree topping process is often times self-defeating. Ugly, bushy, and weak limbs usually grow back quickly, usually much higher than the original branches. The removal of leaves and branches during the topping process drastically reduces the tree's food-making ability, causing it to starve, and making it susceptible to insects, disease, fungi, and damage from the sun's rays. Some trees may even be so shocked by tree topping that they will die, which in turn can create a serious hazard.

If tree branches do need to be removed, no more than 1/3 of the total branches should be removed at any one time. As trees grow, start removing lower branches in the early years. If a branch must be shortened, cut all the way back to a lateral that is large enough to assume the terminal role, do not leave stubs. Try to prune live branches while the tree is dormant, during mid-winter or early spring. If extensive cuts need to be made, it may be best to move the tree to a safer and more appropriate site.

The City strongly recommends that homeowners hire or consult with a professional arborist to safely prune trees. An arborist can offer suggestions on how to best improve the safety, health, and appearance of trees, as well as provide trained crews and equipment to prune them.

Tree Topping is an incorrect pruning method which is harmful to the tree and makes branches weak and unsightly. Proper pruning ensures healthy growth and beautiful foliage.

Update on the Witch Creek Fire Rebuilding Efforts

Ninety (90) homes were destroyed in Poway by the Witch Creek Fire. Development Services and Fire Department staff continue to work with these families and their building professionals, providing feedback to assist them in understanding the rebuilding review process and in designing homes that would allow compliance with City development standards, including the Wildland Urban Interface (WUI) setback requirements. To date, building permits have been issued for 27 replacement homes in Poway and 4 of these homes have progressed to the point of building occupancy approval with the families moving into their new homes.

Rebuilding continues for Poway families affected by last year's wildfires.

Hampton Inn & Suites – Open for Business

we love having you here.®

The Hampton Inn & Suites is the newest addition to the Poway Business Park, providing 108 rooms and conference space to businesses and the Poway community.

The hotel offers a variety of guest amenities including spacious rooms and one bedroom studio suites, hot breakfast, fitness center, business center, heated outdoor pool and spa, suite shop, and guest laundry facilities.

This hotel is owned by Ocean Park Hotels, a company with substantial experience in hotel development, management, and operations. The Poway Redevelopment Agency recently began marketing efforts to locate a full-service, sit-down restaurant for the adjacent Agency-owned site.

The hotel is located at 14068 Stowe Drive. For more information about the hotel or to make reservations, please call (858) 391-1222.

Be "Winter Wise"

Prepare Now for Future Storms

Every year the winter season brings with it the risk of severe storms and the possibility of flooding in our City. Even if your property is located some distance away from a creek or dry stream bed, it should be checked for the possibility of flooding. To prevent flooding, property owners are responsible for maintaining the drainage, storm drains, and creeks on their property so water flows away from homes.

Some things to consider when preparing for winter storms:

- Inspect, clean, and repair rain gutters, roof tops, and yard drains.
- Address any problem spots you noticed during last year's storms.
- Clear private drainage channels and brow ditches of landscape material and debris.
- Place plastic sheeting, secured with gravel bags, over sections of disturbed soil to prevent erosion.
- Turn off sprinklers a few days before and after the rain to conserve water.

If winter storms are severe, the City provides free unfilled sandbags and loose sand on Garden Road (across from Garden Road School), Midland Road (across from Old Poway Park Train Barn), and Lake Poway Road (at the first parking lot on the right approaching the lake).

Flood maps and flood protection references are available at the Poway Public Library. To inquire if you are in a mapped floodplain, visit the City of PowayDevelopment Services Department at City Hall. For flood zone information and copies of elevation certificates on buildings built in the floodplain since 1995, call the Development Services Department at (858) 668-4656 or (858) 668-4600.

To report flooding during business hours, call the Public Works Department at (858) 668-4700. To report flooding after business hours, call Public Works at (858) 668-4751 or the Poway Sheriff's Station at (858) 513-2800.

Make sure you clean out rain gutters and repair roof leaks before winter rains come.

Recycle Your Christmas Tree!

EDCO Waste and Recycling will pick up your tree at the curb on collection day, for two weeks immediately following Christmas day. Please remove the stand and all trimmings, and cut the tree to lengths of no more than 4 feet. Flocked trees (covered with artificial "snow") are not recyclable and will be collected with other refuse. Residents must cut and bundle their trees if they are placed for collection after the two-week period ends. Look for more details about tree recycling in your EDCO billing statement, or please call EDCO Waste and Recycling Services at (858) 748-7769.

Junk Your Car Free of Charge

Take advantage of the City's offer to remove inoperative or abandoned vehicles from private property free of charge. Yard work will be much easier without vehicles in your way, and your neighbors will thank you. Leaving inoperative, dismantled or wrecked vehicles on your property is a violation of Poway Municipal Code Section 10.52.040 and considered a misdemeanor. Vehicles will be taken to a wrecking yard to be dismantled. Call (858) 668-4668 for more information, or e-mail codecompliance@ci.poway.ca.us.

Alert San Diego!

"Get Signed Up – Get Notified"

Do you want to be sure to receive notification in the event of a regional emergency? The County of San Diego has recently launched a regional notification system that will be able to send notifications to residents and businesses within San Diego County during emergency situations.

The system already includes all listed and unlisted land-line telephone numbers by utilizing the region's 9-1-1 database. If you would prefer to also receive notifications on your cell phone, VoIP, or e-mail, please visit www.alertsandiego.org to register your information. Get signed up, get notified!

POWAY TODAY

A Quarterly City Newsletter for the Residents of Poway, California

City Maintains Conservative Fiscal Position

Goal is to remain the safest, most family-friendly city in San Diego County

The state of the economy seems to be on everyone's mind lately. Falling home prices, lackluster retail and business-to-business sales, and a tumultuous stock market may leave some wondering about the financial health of the City. While Poway has always maintained a conservative approach to budgeting, it is not immune to outside forces in the overall economy.

Sales Tax Revenues Down Sharply

City revenues have been severely affected over the last year with sales tax collections having decreased by 16%. While sales taxes remain the largest revenue source, they are just one of several sources of City revenue. The City of Poway only receives one penny of every 7.75 cents per dollar of retail sales taxes collected. Property taxes are shared between cities, the County, public schools, bond repayments and special districts. "The City of Poway only receives 15 percent of every dollar paid in property taxes," stated Tina White, Poway's Administrative Services Director.

On average, the City spends $2,322 per property on city services and programs per year while it receives an average of $704 back in property taxes per property. Services are further supported using sales taxes, fees and other revenue sources.

Making The Necessary Changes

With revenues from sales and property taxes shrinking, so must growth in spending. "The City reviewed expenditures during the past 18 months and eliminated $3.5 million from the budget," says Rod Gould, Poway's City Manager. "We will continue to carefully monitor expenditures through 2009 to make those changes necessary to maintain customer service levels to the extent possible." The City Council also voted in November 2008 to adjust a number of fees to help recover costs more effectively.

Proactive financial policies, such as these, will help Poway to set a financially sustainable course in light of new economic conditions. The commitment remains to properly fund community priorities such as roads, parks and safety services, although adjustments may become necessary.

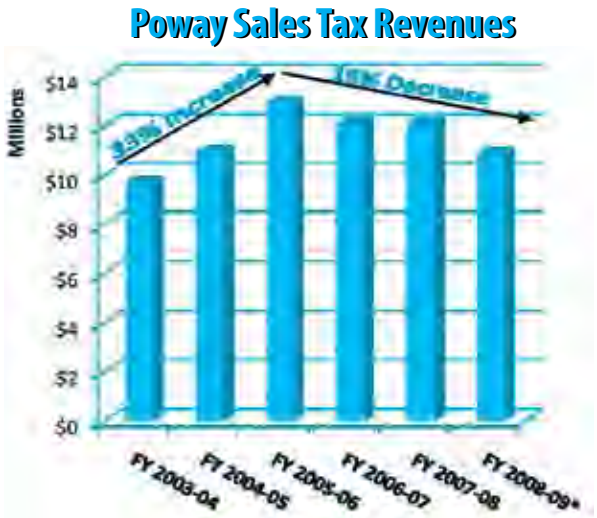
Alternative financial plans are also being crafted by the City to address future fluctuations that may occur in the economy. The budget battle taking place at the state level may have negative consequences for cities if the state decides to pilfer funds from local government coffers, such as the $2.8 million in redevelopment funding that was taken by the state in 2008. The City will continue to carefully monitor the situation and will make additional reductions, as necessary.

Support Your Community

Despite doses of negative economic news, there are many reasons to be optimistic about the future of Poway. Residents still enjoy a high quality of life with excellent park, recreation, open space and community services. Fire and emergency services are among the finest due to significant investments and frequent training.

The City's infrastructure, such as streets, sidewalks, water and sewer pipes, and public facilities, is in excellent shape due to preventative maintenance and capital replacement. Poway Unified School District continues to be recognized as one of the best in the nation and the Poway Business Park continues to expand with General Atomics' announcement of 2,200 new jobs in 2009. Residents with questions regarding Poway's modified budget can call (858) 668-4414.

Poway Sales Tax Revenues



Despite doses of negative economic news, there are many reasons to be optimistic about the future of Poway.

Shop Poway!

Residents can help support vital City services, and the local business community, by shopping within Poway. Almost 35% of the City's general fund is composed of sales tax revenues. It is important now, more than ever before, and helps sustain jobs locally.

Wildfire Defensible Space Neighborhood Outreach Begins!

On January 12, 2009, City staff began contacting residents in neighborhoods located within high fire-risk areas that have been identified in the Wildfire Defensible Space (WDS) Program. This unique program provides no-fee home assessments and other resources to property owners at risk from wildfires. Residents included in this program will receive a packet by mail notifying them of program requirements.

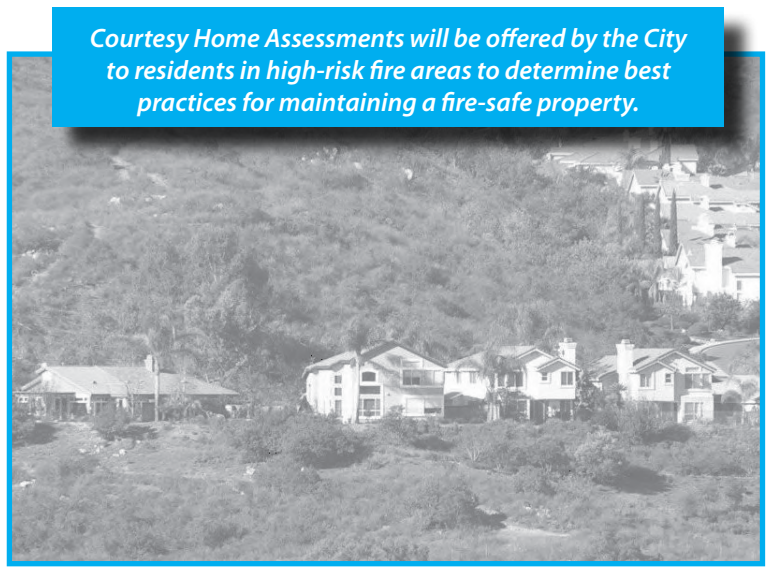
The program's purpose is to save lives and homes during wildfires by reducing flammable vegetation around structures by creating what is often referred to as "defensible space." The creation of defensible space is an important part of the City's comprehensive strategy to lessen the devastating impacts of wildfire. Reducing highly flammable vegetation shortens the flame length and reduces the speed and intensity of a wildfire. It also enhances firefighter safety and lowers the risk of burning embers penetrating structures.

As part of the program, City staff will work in partnership with property owners to develop specific plans to lessen the risk of wildfire. The program requires reduction of highly flammable chaparral species and weeds within 100 feet of habitable structures. It does not include ornamental landscaping or tree species such as palm, oak, or eucalyptus trees.

Courtesy Home Assessments will be provided that include a detailed checklist of steps residents may take to help safeguard their property, such as creation of defensible space, fuel reduction, intelligent landscaping, fire-resistant building materials and more. Homeowners who are asked to remove flammable vegetation will be given a list of contractors that are available to assist with the removal. A no-fee permit will be required before any work can begin and residents will be given a minimum of 30 days to complete any required work. Residents later found in non-compliance may incur fines.

If you have questions about the program or would like more information on creating defensible space in your neighborhood, please call the WDS Program Hotline at (858) 668-4611, or e-mail WDSP@ci.poway.ca.us.

Courtesy Home Assessments will be offered by the City to residents in high-risk fire areas to determine best practices for maintaining a fire-safe property.



Neighborhood Outreach Visits Scheduled for 2009

Van Dam Peak Area	January
West Twin Peaks Area	February – March
East Twin Peaks Area	March – April
High Valley/Lake Poway Area	April – May
Garden Road/Poway Grade Area	May – June
Old Coach/Valle Verde Area	June – July
Kent Hill Area	July – August
Palisades Area	August – September
Business Park Area	September – November

WATER: A Resource We Can't Live Without

You've read the papers, heard the radio ads, seen the billboards – Southern California's water supply is in trouble. Even with respectable rainfall totals this winter, 20% mandatory water restrictions most likely will occur in 2009.

The City of Poway imports 100% of its water supply, mostly from Northern California and the Colorado River. Southern California's water supply is running low because of a drought throughout the southwestern United States and environmental restrictions on the amount of water pumped from Northern California.

The City of Poway buys almost all of its water from the San Diego County Water Authority (SDCWA) and the Metropolitan Water District (MWD) and will receive mandatory water cuts from these agencies this year, reducing the supply of available water that is delivered to businesses and residents.

Everyone will be asked to conserve. Without community-wide participation, Poway will not achieve the necessary savings. Some customers have more opportunities to save than others who may have already taken steps to use less water. The City will continue to provide resources, education, and financial incentives to help customers save even more.

The City is looking for drought management tools that are equitable, cost efficient and result in water savings. This spring, the City Council will consider additional financial incentives, education programs and a revised water rate structure that encourages conservation.

To report water waste in your neighborhood, please call (858) 668-1215. To learn more about education programs and financial incentives call (858) 668-4415 or visit www.poway.org/waterconservation.

Water Wise Resources

- *FREE on-site residential water-use surveys*
- *Water-savings tips*
- *Guidance on reading a water meter*
- *Landscaping classes*
- *Presentations to community groups*

***Rebates** are available for water-saving indoor plumbing devices, irrigation equipment and artificial turf for residential and business water customers. To learn more about any of these resources, visit www.poway.org/waterconservation.*

Top Ways to Save

- *Water landscaping no more than three days/week in summer and one day/week (or less) in winter.*
- *Run sprinklers for a few less minutes per cycle. Most landscapes are overwatered.*
- *Fix sprinklers that leak and spray the sidewalk. Water down the gutter is your money down the drain!*
- *Upgrade to a high-efficiency washer.*
- *Replace toilets with 1.2 gallon per flush model.*

Water Main Improvements on Espola Road Near Completion

Installation has begun of a 42-inch water main pipeline in Espola Road from Titan Way to Twin Peaks Road. This $4 million construction project will help prevent disruptions of service and increase capacity in the south Poway area.

Motorists can expect some delays on Espola Road during construction. Work will be timed to reduce the impact on traffic as much as possible and no complete closures of Espola Road are expected. Construction of the new pipeline is scheduled to be completed by late spring 2009. If you have any questions about this project or other capital improvement projects, please call (858) 668-4668.

Department Spotlight: Office of the City Clerk

Poway's City Clerk is Linda A. Troyan. Together with Shelley Collins and Darry Powers, the City Clerk's Office provides a variety of services to the public and to City employees, including keeping the municipal records for the City and ensuring that all local legislative actions comply with City, State, and federal laws.

The City Clerk acts as the City's Elections Official. From election pre-planning to the certification of election results and filing of final campaign disclosure documents, the City Clerk manages the process which forms the foundation of our democratic system of government.

The City Clerk also acts as the City's Legislative Administrator, preparing the City Council Agenda, verifying that proper legal notices have been posted and coordinating official responses to public records requests.

(L-R) Shelley Collins, Linda Troyan, Darry Powers

With over 25 years of government experience, Linda A. Troyan is certified as a Master Municipal Clerk. In 2004, she was recognized as the City Clerk of the Year by the City Clerks Association of California.

The next time you're at City Hall, say hello to the friendly folks in the Office of the City Clerk. If you are interested in lending a hand, the Office of the City Clerk is always looking for volunteers. For information about volunteering in the Office of the City Clerk, please call (858) 668-4536.

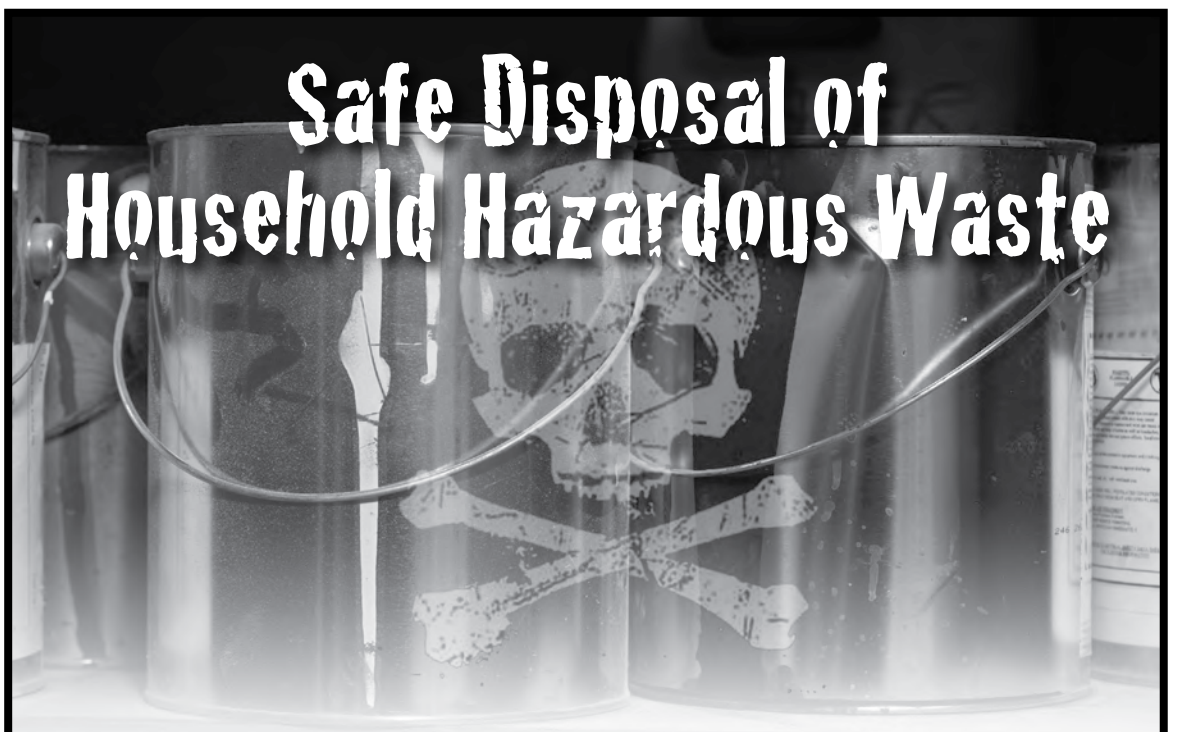
Faces of Affordable Housing

Maria Batanga – Haley Ranch Estates

Maria's future is a little brighter these days, thanks in part to the stable and positive environment that she experienced while living with her grandparents at Haley Ranch Estates in Poway. She has gained valuable skills and mentored others as a junior youth leader in Haley's tutoring program. Maria also recently completed a summer internship for non-profit developer Community HousingWorks and is currently a nursing major at San Diego State University.

New Directional Signage

As you drive around town, you may have noticed attractive new directional signs installed near key entryways and intersections throughout the City. There are seventeen in total, many of which replaced older versions that had deteriorated. These decorative new signs will provide a heightened sense of community identity and point Powegians and visitors alike to key amenities and destinations around town.



Safe Disposal of Household Hazardous Waste

Got plans for a spring clean-up this year? Don't forget to safely dispose of household hazardous waste (HHW) products, such as paints, solvents, pesticides, pool chemicals, electronic waste, pharmaceutical drugs, batteries, fluorescent tubes, and sharps. They cannot be poured in sinks or storm drains, disposed of on the ground, or put in the trash without creating a threat to your environmental health.

Free disposal of HHW is available at the City of Poway's HHW Collection Facility located at 12325 Crosthwaite Circle in the South Poway Business Park. It is open every Saturday from 9:00 a.m. to 3:00 p.m., excluding holidays. Proof of residency (formal I.D. or current utility bill) is required. Contractors or businesses that generate small quantities of hazardous waste must schedule a separate drop-off by calling (858) 547-3100.

The legal transportation limit is 15 gallons or 125 pounds per vehicle. Don't forget to check with your neighbors to see if they have HHW to dispose of. For more information about the safe disposal of HHW, please contact the Public Works Department at (858) 668-4700.

Reduce the Amount Of HHW Your Household Generates

- Use products containing hazardous materials sparingly or shop for non-hazardous/less hazardous alternatives.
- Select water-based products over solvent-based products, or use pump sprays instead of aerosol sprays.
- Buy just enough of the product to do the job and use it up.
- Keep leftover products in original labeled containers to refer to the directions for proper use and disposal.
- If properly labeled, share leftover products with a friend or neighbor.

Looking To Volunteer? You're On the Right Trail!

The City of Poway needs volunteers of all ages and skill levels to help with the Adopt-a-Park and Adopt-a-Trail programs. There are 18 parks in the program and volunteers will help with activities like planting trees, repairing benches, or minor trail maintenance. The City of Poway also has 82 miles of public recreational trails with many segments available for adoption. Individuals, families, and organizations can all participate and we'll help find the right volunteer opportunity for you. For more information about Adopt-a-Park, call (858) 668-4721 or for Adopt-a-Trail, call (858) 668-4716.

Upcoming C.E.R.T. Classes

Community Emergency Response Team Classes Now Forming

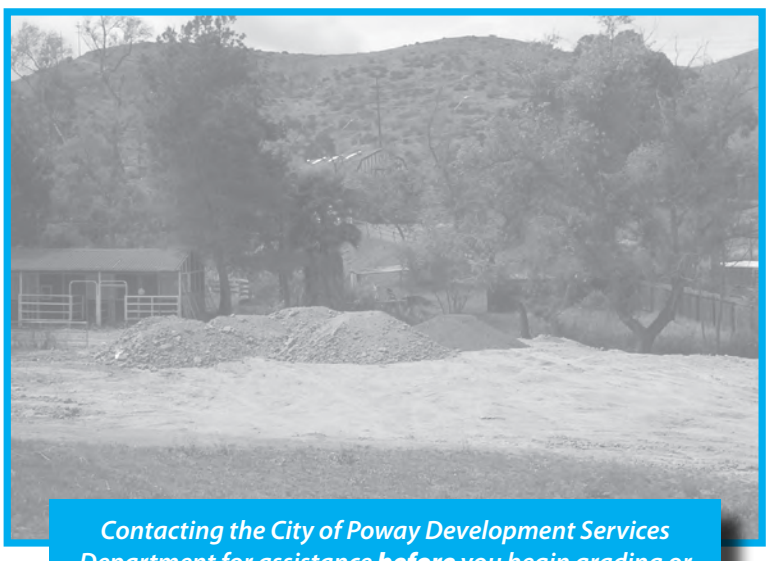
The City of Poway Fire Department, in conjunction with Palomar College, will offer Community Emergency Response Team (CERT) classes starting in March 2009. CERT is a ten-week program that provides participants with valuable information on what to do when a major disaster strikes. Participants will learn important life-saving skills to protect themselves, their families and their neighbors when a disaster occurs. During a large scale disaster, fire and law enforcement resources may be not be able to respond during peak demands of service. Trained CERT volunteers will be able to assist until emergency services arrive. Please call (858) 668-4460 if you would like to sign-up for spring classes.

Do I Need a Grading Permit?

Are you about to embark upon a grading, excavation or clearing project? Let the Development Services Department assist you in determining whether you need a grading permit. Depending upon the scope of the project, even installation of a retaining wall may require a permit.

Instances of unauthorized grading activities have occurred over the past year in environmentally sensitive areas that have led to the involvement of State and Federal agencies. A simple phone call can help you avoid the hassle and potentially save you thousands of dollars in fines.

Please help us protect our environment and the quality of life we all cherish. Call the City of Poway at (858) 668-4600 and let us assist you before you begin your next grading project. To report illegal grading activity, please contact the Engineering Inspection Division at (858) 668-4668.



*Contacting the City of Poway Development Services Department for assistance **before** you begin grading or excavating soil on your property can greatly reduce the potential for State and Federal intervention and fines.*

Tell US how It is!

The City of Poway would like to know your opinions on services and facilities provided in the community in order to serve you better.

This cutout form is provided twice a year for comments, suggestions and service requests. Clip out the form and mail it in or submit it in person at City Hall, 13325 Civic Center Drive. You may also e-mail your comments to twinney@ci.poway.ca.us.

All comments received are reviewed by the City Manager's Office and referred to the appropriate City department. A reply is sent from the Mayor with a description of what action, if necessary, will be taken. Please be specific with comments and location of services, so we may serve you efficiently.

Please call us at (858) 668-4505 with any comments or suggestions as well.

Crime Prevention Corner – Neighborhood Burglaries

While Poway is one of the safest cities in the region, residential and vehicle burglaries still occur. Minimize your chances of becoming a victim by following these easy tips.

AT HOME:

- Always lock your doors (including sliding glass doors) and windows (including second story windows).
- Install quality locks that are strong and reliable.
- Keep the garage door closed, especially when you are away. Many residential burglaries occur because garage doors are left open.
- Lock doors that lead into the garage from side yards or those leading into the home from the garage.
- Install an alarm system. Be sure to arm the system when you are home and while you are away, and train your family to use the system to avoid false alarms.
- Put timers on lights, radios or TVs when you are away from your home, and don't let newspapers accumulate in the driveway or on the door stoop.
- Keep your landscaping well maintained to provide maximum visibility to and from your home.
- Organize a Neighborhood Watch in your area.

IN YOUR VEHICLE:

- Close the windows (even in hot weather) and always remember to lock the vehicle doors.
- Never leave valuables (including satellite radios and GPS systems) in plain view inside your vehicle. Most vehicle burglaries occur because the thief sees something of value.
- Park in the garage rather than on the driveway or street.
- Park in open, well-lit areas.
- Use reliable anti-theft devices.

Always remain aware of your surroundings and report suspicious activity to the Sheriff's Department at (858) 565-2800. For more Crime Prevention information, including setting-up a Neighborhood Watch, please call (858) 513-2807.

It's Spring Cleanup Time!

EDCO provides free one-time disposal of bulky refuse

Each year, EDCO Waste and Recycling Services conducts spring and fall self-haul clean-up events for Poway residents. At the end of March, EDCO will mail a spring clean-up coupon to all residential customers. The coupon is good for one FREE load of household bulky items or wood waste at either the Ramona Transfer Station or the Escondido Transfer Station.

Items Accepted: furniture, appliances, residential wood waste and scrap metal.

Items NOT ACCEPTED: hazardous waste, tires, computer monitors, televisions, contractor waste, large trailer loads and commercial truckloads of debris.

The spring clean-up coupon is valid any day of the week between 7:00 a.m. and 4:30 p.m., giving residents the flexibility to use the coupon at their convenience between April and June. Directions and more information are provided on the coupon. Please be sure to have your coupon with you and present a picture I.D. with the current address (or a copy of an EDCO trash bill that corresponds to the service address listed on the reverse side of the coupon) to qualify for FREE disposal.

If you need a replacement coupon, please contact EDCO at (858) 748-7769. For more information about this program or other disposal services, please contact Annette Gonzalez in the Public Works Department at (858) 668-4702.

The following items cannot be accepted as a part of this program:

- **Hazardous Waste**
- **Tires**
- **Computer monitors & Televisions**
- **Appliances containing Freon**
- **Business or Contractor - generated waste**
- **Large trailer loads or commercial truckloads of waste**

E-Pay for E-Z Billing

Manage your City of Poway Utility Account Online!

Now you can pay your water and sewer utility bills online with E-Pay! The City of Poway is pleased and excited to announce our new Online Bill Pay System for water and sewer utility billing.

Online Bill Pay is a free service where customers can view their utility bills online and establish automatic recurring payments through their checking or savings account. The service also provides flexibility for those who prefer to make one-time payments. Online customers have the ability to view their payment history. Additionally, bills and billing inserts are archived and available online for a period of one year from the time you sign up.

Customers can choose to set-up their account to be completely paperless. Not only is this friendly to the environment, you can eliminate receiving a paper bill in the mail and the need to buy stamps! By going paperless, customers receive an e-mail letting them know when their online bill is available for viewing.

To sign up for Online Bill Pay, go to www.poway.org and click on "online services." From there, click on "e-pay" and you will be directed to the Online Bill Pay webpage. For questions regarding this service, contact Customer Services at (858) 668-4401, or customerservices@ci.poway.ca.us.

Where: Old Poway Park

EDCO Spring Cleanup
When: April - June 2009
Where: Ramona & Escondido Transfer Stations

Poway – "Your First Choice"

Making "Poway Your First Choice" is more important than ever in these challenging economic times. Local sales tax revenue accounts for approximately 35% of the City's General Fund budget. Purchasing goods and services locally helps the City to fund important things like road improvements, parks and recreation and safety services. The City has teamed up with the Poway Chamber of Commerce to promote the "Poway – Your First Choice" program to encourage residents to spend their shopping dollars locally. Watch for the program in the Chieftain, street pole banners, placards in storefront windows and movie preview ads at the UltraStar Cinemas. Remember to make "Poway – Your First Choice!"

POWAY TODAY

A Quarterly City Newsletter for the Residents of Poway, California

Poway's Water Supply To Be Cut on July 1

Residents and Businesses Urged to Save Water Now

The City of Poway's water supply will be cut by up to 10% starting in July 2009 by the City's water wholesaler, the Metropolitan Water District, in response to California's ongoing drought. That means there will soon be less water available for the more than 13,900 homes and businesses that buy water from the City.

Poway imports 100% of its water from Northern California and the Colorado River. 80% of the water is used by residential customers, with approximately 50% of the total water supply used to irrigate landscaping.

After July 1, the amount of water the City receives will be calculated based on the average amount of water purchased by the City of Poway between July 2004 and June 2007. Should the City use more than its allotment, we will face steep financial penalties and the possibility of further water reductions citywide. Reducing water consumption will require everyone to do their part to save.

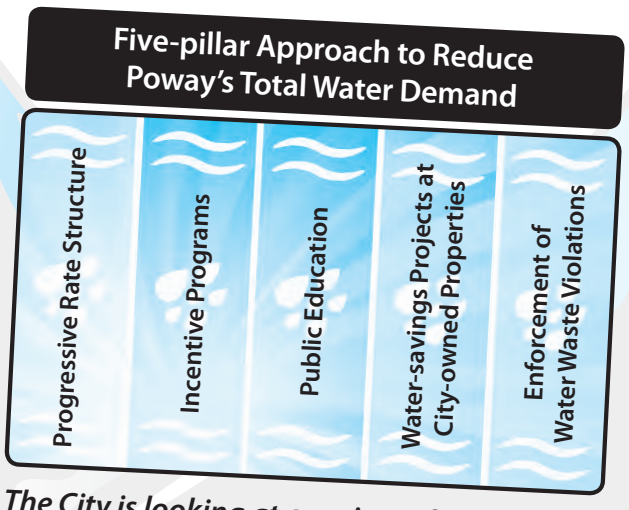
Outlook for California

Poway is not alone in its conservation efforts. Water shortages loom for the entire State of California. Governor Arnold Schwarzenegger declared a water supply State of Emergency in February 2009. The challenge we face is not temporary. Unlike droughts of previous decades, a few rainstorms will not provide the necessary relief.

What's Poway's Plan?

Any plan adopted by the City has to effectively achieve savings, must be fair for all customers and must be feasible for the City to administer. The City of Poway is not planning to cut water supplies for individual customers, like many other water agencies in San Diego County. Poway is trying a different approach.

Poway's strategy for cutting water consumption focuses on long-term behavior changes in water use and matching customers with the resources they need to cut their water consumption.



The City is looking at a variety of approaches to achieve necessary water savings.

Progressive Rate Structure

For decades in Poway, all water customers have paid the same rate for each unit of water, regardless of customer-type or amount of water used. The City Council is considering moving to a more progressive rate structure that creates a financial incentive for reducing water use.

Regardless of the model used, rates will increase simply because the City's cost to purchase water has increased. The City's cost to buy water went up by 18% in January 2009 and it is expected to increase significantly in the near future.

Public Education

The City's Water Conservation Program has been hard at work trying to get the word out about water conservation. The goal is to match customers with the resources they need to help them achieve water reduction savings. Examples include historical water consumption reports for individual customers and one-on-one business visits.

Incentive Programs

The City of Poway already offers nearly two dozen incentives for residents and businesses to defray the cost of water-savings investments, such as high-efficiency toilets and washing machines. Look for incentives later this summer for swimming pool covers and replacing lawns with water-wise landscaping. The City will also offer indoor water use audits for businesses.

Cont'd on Page 15

A Tribute: City of Poway Says Goodbye To Mayor Cafagna

Mayor Mickey Cafagna passed away on April 11, 2009, after a long battle with cancer. A Poway resident for over 30 years, Cafagna served on the City Council since 1992 and became Mayor in 1998.

As Mayor, Cafagna represented Poway on the San Diego Association of Governments since 1998, and was chosen as the regional planning agency's chairman in 2004. Cafagna was instrumental in the push for the extension of the TransNet sales tax, a half-cent-on-the-dollar sales tax that pays for a variety of regional transportation projects. He also served as chairman of the Regional Solid Waste Association and was the designated alternate for the Metropolitan Transit System board of directors.

Cafagna was known for his leadership, consensus building and dedication to the economic vitality of cities. He served as past president of the San Diego County Division of the League of California Cities, where he helped advocate for greater local control of government.

"Mickey was a peacemaker and leader in every sense of the word," said Deputy Mayor Don Higginson. "He had a way of bringing people together on the issues."

Mayor Cafagna will be missed, and is fondly remembered for his 17 years of dedicated service to the City of Poway

Other accomplishments of note include a leadership role in the development of the Poway Business Park, the construction of Poway City Hall and establishing many long-standing relationships with the business community and the Chamber of Commerce.

"The City of Poway has lost a true leader and friend," states City Manager Rod Gould. "We will deeply miss his kind spirit, intelligence, sense of optimism and ability to win people's commitment to doing what is needed."

Mr. Cafagna was chairman of the board of Square One Development, a real estate development and property management firm, based in Kearny Mesa. Survivors include his wife, Sharon, two grown children and five grandchildren.

In lieu of flowers, donations can be made in memory of Mickey Cafagna to the Kidney Cancer Research Fund, 1500 Duarte Road, Duarte, CA, 91010 or to Cancer For College, 1345 Specialty Drive, Suite E, Vista, CA, 92081.

Poway Ranks Among Lowest In County For Home Foreclosures

Contact the City of Poway Code Compliance Division if you find that a home in your neighborhood is falling under neglect.

Foreclosure, once a rare topic, is now affecting families and neighborhoods throughout the country. The City of Poway recently completed a foreclosure study to better understand the impacts of the current foreclosure crisis on Poway and identify actions to support Poway's homeowners and neighborhoods.

Fortunately, Poway has fared better than most other cities in San Diego County, ranking 13 out of the 18 cities in the County. The results of the foreclosure study revealed that since 2007, approximately 391 households in Poway have experienced some threat of foreclosure and there may be many more on the horizon.

If you or someone you know is having trouble or unable to pay their mortgage, now is the time to find help by visiting the City's website www.poway.org. The Web site provides links to local foreclosure counseling agencies and information about local clinics where homeowners can meet with financial and legal professionals to review their situation and determine the best course of action. The Web site also provides information from San Diego's District Attorney about how to avoid foreclosure abuses and a list of counseling agencies approved by the Federal Department of Housing and Urban Development (HUD). Many of the counseling agencies charge minimal fees to help homeowners keep their homes.

If you notice a neglected home in your neighborhood that you suspect is bank-owned and becoming a nuisance, please call Poway's Code Compliance Division at (858) 668-4668.

Poway's Water Supply To Be Cut on July 1 Cont'd from Page 1

Water-Savings Projects for City-Owned Properties

It is important that the City of Poway lead by example and be a good steward of resources. City parks and facilities are currently being studied so that more water-efficient plumbing equipment and irrigation practices can be put into place. The City is committed to doing its part to conserve during this drought.

Enforcement of Water Waste Regulations

The City plans to alert residents and businesses when water waste is observed and provide resources to help fix the problem. Of course, fixing a water waste problem also saves you money on your water bill. If the water supply is further diminished, the City will need to hold customers accountable in situations of repeated water waste.

What about New Development?

Creating more demand for water at a time when water supplies are extremely limited causes concern in the community. The City Council will consider establishing a policy to ensure new development is "ultra water efficient" and developers may be asked to pay a fee to fund water-savings projects elsewhere in the City.

What Can I Do?

This year requires extra diligence on behalf of all residents and businesses to ensure our limited water supply is used as efficiently as possible. Residents and businesses are encouraged to identify a personal plan for cutting back water use.

Some residents have already saved water, but may still be able to do a little more. Others will easily be able to cut back, just by watering the yard fewer times per week, only running the clothes washer when full, and upgrading their toilets. Success will require participation by everyone.

If you would like more information, contact the Water Conservation Team, Monday thru Friday, 8:00 am to 5:00 pm at (858) 668-1215 or visit us at www.poway.org/waterconservation.

City Spotlight: Poway Swim Center Lifeguards & Instructors

The Poway Community Swim Center is one of the largest aquatic facilities in San Diego County. The primary responsibilities of the Lifeguards and Swim Instructors are to ensure that the Poway Community Swim Center is a safe place to enjoy and that kids gain water safety skills.

The swim center recruits and trains only the most capable and qualified candidates. Our lifeguards undergo monthly audits of all lifeguarding skills to ensure their proficiency. Staff members have won the American Red Cross' annual Lifeguard Games two out of the past three years.

The lifeguards look out for the safety of nearly 50,000 swimmers annually and an average of 450 swimmers per day during the summer months. Instructors are responsible for teaching over 300 swim classes and over 100 private lessons.

The facility hosts over 200 birthday party reservations and events like Swim-In Movies that let families enjoy watching a movie on the giant screen while floating in the pool.

The lifeguards at the Poway Community Swim Center are looking forward to another great and safe summer. See you in the water!

Poway's Swim Center offers year-round activities. Thanks to the vigilance and hard work of the Lifeguards and Swim Instructors, all Swim Center pool users are kept safe while they're having fun.

More Than Just A Summer Job!

The City offers many opportunities for young adults looking for summer-time employment

Each summer, Poway hires young adults as camp counselors, recreation leaders and lifeguards. These jobs are fun, well-paying and offer opportunities to give back to the community.

Summer jobs with the City instill valuable skills like leadership, organization and patience. Employees are role models who make a lasting impression on the kids they work with. A summer job can also lead to a career in recreation, as individuals realize the rewards of working with the community.

The Poway Community Services Department is looking for bright and energetic Recreation Leaders and Lifeguards. If you are interested in making a difference in the community, call (858) 668-4440.

What's Your Plan to Cut Water Use?

- ☐ Study how much water you typically use. Review past water bills or call (858) 668-1215 for assistance.
- ☐ Call (800) 986-4538 to schedule a free residential water use survey. A water conservation consultant will visit and provide you with specific recommendations.
- ☐ Learn to read your water meter using the instructions at poway.org. See how much water your family uses in a typical day.
- ☐ Tune-up your sprinkler system using tips on page 3 of this issue of *Poway Today*.
- ☐ Sign up for free landscape classes on May 9th and 16th, 2009. Learn more about sprinkler systems, soils, watering and fertilizers.
- ☐ Consider the rebate programs and business incentives for rotating sprinkler nozzles, toilets, and washing machines.
- ☐ Browse the resources available at poway.org/waterconservation.

BETTY REXFORD, Councilmember

CITY OF POWAY

June 25, 2009

Re: Stormwater Pollution Prevention

Dear Resident:

During routine water quality monitoring in Rattlesnake Creek in the vicinity of your neighborhood, oil or grease was detected in the water. This letter is being sent to residents upstream of the monitoring location to inform them about this problem and to provide information on how to prevent this type of pollution from re-occurring.

You may not be aware that sewers and storm drains are completely separate systems. Although drains from indoor plumbing such as sinks and toilets are connected to the sewer system, which leads to a treatment plant, storm drains are designed to carry only rain water and are connected directly to our creeks. Anything that goes into a drainage ditch, gutter, or storm drain flows into our creeks and all the way to the ocean without any treatment.

Allowing any type of pollutant to enter the storm drain system may negatively affect the environment and is a violation of Poway's Municipal Code. Please do your part to preserve clean water: keep your car properly maintained, place trays under leaky vehicles, use absorbent material such as kitty litter to remove oil stains, sweep instead of hosing down outdoor areas, dispose of cooking grease in a secured container in the trash, and keep trash containers covered. The enclosed brochure provides additional tips on preventing pollution.

If you would like additional information on Poway's Stormwater Pollution Prevention Program, please contact me at (858) 668-4636 or visit the City's website at www.poway.org.

Sincerely,

DEVELOPMENT SERVICES DEPARTMENT

Roger Morrison
Management Analyst

RESIDENTIAL BMP BROCHURE

City of Poway Storm Water Program
(858) 668-4707

Only Rain Down the Storm Drain!

Only Rain Down the Storm Drain!

Easy Steps to Clean Water

Sweep or Rake

Conserve water.
Do not use a hose to wash off sidewalks, driveways, and patios. Sweep up debris and put it in a trash can. Rake up yard waste to compost or recycle.

Reduce the Use of Landscape Chemicals

Decrease the use of lawn and garden care products such as pesticides, weed killers, and chemical fertilizers. Consider using non-toxic pest control methods. Avoid over watering which may wash these products into the gutter and storm drains.

Buy Non-Toxic Products

When possible, use non-toxic products for household cleaning. If you must use a toxic cleaning product, buy small quantities, use it sparingly and properly dispose of unused portions. You should dispose of your toxic products at the Poway Household Hazardous Waste Collection Facility. Please call (858) 668-4710 for the location and hours of operation.

Recycle Used Motor Oil and Earn $$

Certified used oil collection centers will pay a few cents per gallon for used oil. Collect used oil in sealed containers and take it to a certified center. For the certified center nearest you, call 1-800-CLEANUP
1 (800) 253-2687
or visit the City of Poway's website at www.ci.poway.ca.us

Dispose of Yard Waste Frequently

By disposing of grass, leaves, shrubs, and other organic matter more frequently, less will wash into storm drains. Recycle or compost your yard waste.

Clean up After Your Pets

Take a bag when you walk your pets and always clean up after them. Flush pet waste down the toilet or dispose of it in a sealed plastic bag and throw it in the trash.

Care for Your Vehicles

Change your oil routinely. Fix fluid leaks immediately. Keep your vehicles tuned up. If possible, wash your vehicle at home on an unpaved area, such as lawn or gravel. Use very little soap. Pour remaining soapy water into an indoor sink or toilet. Conserve water by using a shutoff nozzle. Consider using a car wash designed to collect the wash water.

For more information on how you can prevent the pollution of our creeks, rivers, lakes, and ocean visit **www.ci.poway.ca.us** or **www.projectcleanwater.org**
To report illegal dumping of automotive fluids and other substances into storm drains please call: Poway Code Compliance (during business hours 8 a.m. to 5 p.m.) at (858) 668-4663 or (858) 668-4664, press "0" for immediate assistance; or Poway Sheriff's Station (after regular business hours) at (858) 513-2800.

City of Poway Stormwater Management and Discharge Control Ordinance, Chapter 13.09, prohibits the discharge of pollutants to the storm water conveyance system.

FUNDED BY A GRANT FROM THE CALIFORNIA INTEGRATED WASTE MANAGEMENT BOARD

03/05

Only Rain Down the Storm Drain!

Clean Water is Important to All of Us!

When rain flows over streets and other surfaces, it picks up pollutants and carries them into the storm water conveyance ("storm drain") system.

Did you know that storm drains are **NOT** connected to sanitary sewer systems and treatment plants?

The storm drain system is designed to prevent flooding by transporting water away from developed areas.

However, this water is not filtered or treated, and all the contaminants it contains eventually flow to our creeks, lakes, and the ocean where we swim and fish.

Once there, polluted runoff can harm wildlife and habitats. In some cases, it can even cause beach closures or make our fish and shellfish unsafe to eat.

Why do we need Clean Water?

Clean water is essential for every aspect of life. In addition to sustaining our local water resources, it ensures economic growth and prosperity. Population growth has impacted water quality and placed increasing pressure on supplies. Controlling pollution is critical to preserving our aquatic resources and the economic viability of our region.

How you can help keep our water clean...

Poway residents can make a difference. Becoming aware of ways to prevent storm water pollution is the first step toward having cleaner water for drinking, swimming, boating, and fishing.

ATTACHMENT 6.5

STORM WATER DOOR HANGER

Dear Resident:

The City of Poway's storm drain system collects water run off and drainage from rainfall. The storm drain system is not connected to the sewer system, which means this water is untreated as it is channeled through local creeks to an intricate storm water conveyance system that ultimately leads to the ocean.

Most of the time, pollutants unknowingly and unintentionally flow into storm drains every time it rains or when water flows out of yards. Sometimes pollutants such as pesticides, fertilizers, pet waste, litter and oil are inadvertently disposed in storm drains. In both cases pollution of the storm water system can have harmful effects on our recreational areas, waterways and wildlife.

Please see reverse side for tips on how you can play an important part in storm water pollution prevention.

Improper disposal of automotive fluids and other hazardous substances is a violation of the Federal Clean Water Act and the Poway Municipal Code. To report illegal dumping of automotive fluids and other hazardous substances in storm drains please call:

Poway Code Compliance (during business hours) at (858) 668-4663 or 668-4664, press "0" for immediate assistance

Or

Poway Sheriff's Station (after regular business hours) at (858) 513-2800.

Sincerely,

City of Poway
PUBLIC WORKS DEPARTMENT
(858) 668-4707

Helpful & Inexpensive Tips for Storm Water Pollution Prevention

- When using hazardous substances such as paints, solvents, and cleaners, buy only what you need and use it all up.
- Properly dispose of unwanted household hazardous waste (HHW) at the **Poway HHW collection facility.** Please call **(858) 668-4710** for location and hours of operation.
- For water-based paints, rinse paint brushes in the sink. For oil-based paints, filter and reuse paint thinner. Dispose of all unwanted paints and materials at the Poway HHW collection facility.
- If you are working on a home improvement project, dispose of small amounts of drywall, concrete and mortar in the trash after it is dry.
- Dispose of pet waste in the toilet or deposit in a bag in a trash receptacle.
- Use pesticides or fertilizers sparingly. Avoid using them if the forecast calls for rain within the next week.
- Use mulch as a substitute for herbicides to prevent weeds from growing and to help absorb water.
- Do not over water your lawn and water during the cooler times of the day.
- Drain swimming pools only when advised to by professionals, and take steps to ensure water will not harm our environment.
- Sweep and pick up leaves and debris from your driveway instead of hosing it down into the storm drain.
- If you wash your own car, use a shutoff nozzle on your hose, and use mild detergents and water sparingly.
- When changing fluids from your car, drain in a clean container (e.g., an empty milk jug) and seal. Take used oil and oil filters to a **used oil collection center** in Poway. Call **1-800-CLEANUP** for locations.

MUNICIPAL TRAINING SESSION PRE/POST TEST

NPDES STORMWATER QUIZ

NAME:	
DEPARTMENT/DIVISION:	
DATE:	
PRE TEST	

Please circle one of the answers **True** or **False**

1. Storm drain and sewer system are all the same and treated at a water treatment facility. **True or False**

2. It is not your responsibility or role to protect water quality while on the job. **True or False**

3. The best place to wash your equipment is outside right over a drain so that you don't flood the area. **True or False**

4. If you spill some fertilizer on the ground or some liquid material, the best way to clean it up really well is to hose it down into the drain so the pavement is clean. **True or False**

5. If you are saw cutting concrete, work should be scheduled right before a rain storm so that the rain can wash off all the concrete residue after you are done with the job. **True or False**

6. Dumpster lids should be left open at all times so it is easier to throw trash in it. **True or False**

7. Dumpsters are the best place to dump liquids. **True or False**

8. If you see a PVC pipe or hose connected to a storm drain, this is an illicit connection. **True or False**

9. The City of Poway is within two watersheds. **True or False**

10. Watersheds are all the land, creeks, and rivers flowing to one body of water. **True or False**

RESULTS OF THE 2008/2009 WATER QUALITY MONITORING, FLOOD CONTROL DETENTION BASINS, POWAY, CALIFORNIA

February 11, 2009
Project No. 200846W-

Mr. Danis Bechter
Engineering Inspection Supervisor/NPDES Coordinator
City of Poway
P.O. Box 789
Poway, CA 92074-0789

Re: Results of 2008/2009 Water Quality Monitoring, Flood Control Detention Basins, Poway, California

Dear Danis:

In order to evaluate the effectiveness of City of Poway (City) retrofitted flood control detention basins in removing pollutants from storm water, D-MAX Engineering, Inc. (D-MAX) conducted sampling and analyses of selected parameters for the detention basins located at Stotler Court, Stowe Drive, Community Road, Kirkham Way, and Gate Drive during the storm event in the Poway area on December 15, 2008. These sites were revisited 96 hours later on December 19, 2008, to sample the water released from the basins. This letter summarizes our sampling procedure and the results of the analyses.

Background

The City of Poway had retrofitted four flood control detention basins for use as regional storm water best management practices (BMP). This year a fifth basin in Gate Drive has been retrofitted and used for runoff water quality purposes. The drainage area of the Gate Drive basin has been delineated as shown on Figure 1. All basins were modified to capture and mitigate the volume of runoff produced by 0.6 inch of rain. The City modified these basins to serve as regional BMPs rather than requiring that every Priority Project within the drainage area to the basins install individual treatment control BMPs. These regional shared BMPs are less expensive for businesses, and they typically provide more effective treatment than most BMPs installed on private developments.

The City has conducted these analyses since 2004. Based on the anticipated and potential pollutants generated by the land use types upstream of the detention basins, the parameters below were selected for analyses.

<u>Field Analysis</u>

- Temperature
- pH
- Specific Conductance

Laboratory Analysis

- Total Hardness
- Total Suspended Solids (TSS)
- Total Organic Carbon
- Oil and Grease
- Nitrate Nitrogen
- Ammonia Nitrogen
- Orthophosphate Phosphorus
- Total and Dissolved Copper
- Total and Dissolved Lead
- Total and Dissolved Zinc
- Total and Dissolved Cadmium
- Diazinon, Chlorpyrifos, and Malathion
- Surfactants (MBAS)
- Specific Conductance
- Turbidity
- Total Coliform Bacteria
- Fecal Coliform Bacteria
- *Enterococcus* Bacteria

Sampling Procedure

Sampling was conducted for a rain event in the morning of December 15, 2008. According to information from the County of San Diego rain gauge station in Poway the sampled storm generated approximately 1.5 inches of rain. The D-MAX field crew arrived on site before the rain event began, and samples were taken over the duration of the rain event, including collection of the first flush of runoff. Once sufficient rain had fallen to produce runoff at the sampling locations, time weighted composite samples were taken by collecting equal volumes of samples from the inlets of all detention basins every 15 minutes for the duration of the rain event, which was approximately 10 hours. All samples were collected, mixed, and transferred to the appropriate bottles.

In the field, temperature, pH, and specific conductance were measured for all composite samples. Dissolved oxygen was not measured for the inflow samples because the long duration of sampling would have resulted in an under estimation of the dissolved oxygen in the composited samples. However, dissolved oxygen for the outflow was measured and the results show dissolved oxygen above the Regional Board Basin Plan water quality objectives (WQO). Samples for laboratory analysis were also collected. The samples for the three types of bacterial indicators were grab samples taken in the middle of the rain event and sent to the lab to meet the short holding times for bacteria. The samples for all other constituents were composited. The collected samples were placed into the appropriate sampling bottles provided by the laboratory and preserved on ice until they were delivered to EnviroMatrix Analytical Laboratory to be analyzed for the remainder of the parameters listed above. The samples were delivered within the appropriate holding times, and strict chain-of-custody procedures were followed.

During the previous years, runoff was kept in the basins for 48 to 72 hours. This year due to the consecutive rainfall events, the runoff was kept in the basins for 96 hours. During this period scattered rain showers dropped more than an inch of rain in the same catchment, which also flowed to the basins. When the captured runoff was released, temperature, pH, dissolved oxygen, and specific conductance were measured again in the field at the outflow sites. The collected samples were then sent to the laboratory for analysis of the remaining parameters, following the same procedure that had been used for the samples collected during the rain event. The laboratory analytical reports are attached to this report.

Results

This year enough runoff was produced to collect inflow and outflow samples for all five basins, the general locations of which are shown in Figure 1. A description of results, also found in tables 1 through 5, is presented below.

Table 1 summarizes the results for samples taken at the Stotler Detention Basin and presents a comparison of the inflow and outflow results. Thirteen parameters, total cadmium, total copper, total lead, dissolved cadmium, dissolved copper, dissolved lead, dissolved zinc, chlorpyrifos, diazinon, malathion, surfactants, oil and grease, and total suspended solids were not at detectable levels. The concentrations of eight parameters decreased after being detained in the detention basin: total zinc, ammonia nitrogen, nitrate nitrogen, turbidity, pH, total coliforms, fecal coliform, and enterococcus. Specific conductance, total hardness, orthophosphate, and total organic carbon all increased after being detained in the detention basin.

Table 2 summarizes the results for samples taken at the Stowe Detention Basin using the same format as Table 1. Eleven parameters, total cadmium, total copper, total lead, dissolved cadmium, dissolved lead, chlorpyrifos, diazinon, malathion, surfactants, oil and grease, and total suspended solids, were not detected in either the inflow or the outflow samples. The concentrations of seven parameters decreased after being detained in the detention basin: total zinc, dissolved copper, ammonia nitrogen, orthophosphate, turbidity, fecal coliform, and enterococcus. Dissolved zinc, specific conductance, total hardness, nitrate nitrogen, total organic carbon, pH, and total coliforms increased after being detained in the detention basin.

Table 3 summarizes the results for samples taken at the Community Detention Basin. Eleven parameters, total cadmium, total copper, total lead, dissolved cadmium, dissolved lead, chlorpyrifos, diazinon, malathion, surfactants, oil and grease, and total suspended solids, were not detected in either the inflow or the outflow samples. The concentrations of 12 parameters decreased after being detained in the detention basin: total zinc, dissolved copper, dissolved zinc, ammonia nitrogen, specific conductance, total hardness, orthophosphate, total organic carbon, pH, total coliforms, fecal coliforms, and enterococcus. Nitrate nitrogen and turbidity, increased after being detained in the detention basin.

Table 4 summarizes the results for samples taken at the Kirkham Detention Basin. Twelve parameters, total and dissolved cadmium, total and dissolved copper, total and dissolved lead, chlorpyrifos, diazinon, malathion, surfactants, oil and grease, and TSS were not detected in either the inflow or the outflow samples. The concentrations of nine parameters decreased after being detained in the detention basin: total and dissolved zinc, ammonia nitrogen, nitrate nitrogen, orthophosphate, total organic carbon, turbidity, total coliforms, and enterococcus. Specific conductance, total hardness, and fecal coliform increased after being detained in the detention basin. PH did not change.

Table 5 summarizes the results for samples taken at the Gate Drive Detention Basin. Eleven parameters, total cadmium, total copper, total lead, dissolved cadmium, dissolved lead, chlorpyrifos, diazinon, malathion, surfactants, oil and grease, and total suspended solids, were not detected in either the inflow or the outflow samples. The concentrations of five parameters decreased after being detained in the detention basin: dissolved copper, ammonia nitrogen, pH, fecal coliforms, and enterococcus. Total and dissolved zinc, specific conductance, total hardness, nitrate nitrogen, orthophosphate, total organic carbon, turbidity, and total coliforms, increased after being detained in the detention basin.

Table 6 summarizes the overall results in all five detention basins during the past rainfall event.

The overall results indicate that the detention basins have been effective in removing many common pollutants. In four out of five basins, total zinc and fecal coliform levels were reduced. In all five basins, ammonia nitrogen and enterococcus were significantly reduced. The concentration of orthophosphate phosphorus was reduced in all basins except the Stotler and Gate Drive, which had relatively small concentrations in both samples. If metals were detected in the inflow, the concentrations were reduced in the outflow, with the exception of a minor increase in dissolved zinc at Stowe and in dissolved and total zinc at Gate Drive. This increase in zinc may be from the second rain event that occurred after inflow sampling was already taken. Additional zinc may have flowed into the storm drain basins, thereby affecting the outflow sampling results. Total cadmium, total copper, total lead, dissolved cadmium, dissolved lead, chlorpyrifos, diazinon, malathion, surfactants, oil and grease, and total suspended solids were not detected in any of the samples.

Nitrate nitrogen levels increased from inflow to outflow in the Stowe, Community and Gate Drive Detention Basins. Total organic carbon also increased in the outflow of the Stowe and Gate Drive Basin. One explanation for the increases in these parameters may be due to the second rain event increasing the flow of nitrate nitrogen and total organic carbon to these basins after inflow sampling was conducted.

This year, TSS was not detected in any inflow or outflow samples. Turbidity also was measured at lower levels compared to last year. The Stowe, Stotler, and Kirkham detention basins effectively reduced turbidity levels, but at the Community and Drive Detention Basins, turbidity was slightly higher in the outflow than in the inflow samples. Last year's turbidity results show the same trend with the Community Detention Basin, however there is not enough data for the Drive Detention Basin to extrapolate any pattern. All outflow turbidity readings were below the Basin Plan WQO.

At four of the detention basins total hardness and specific conductance increased due to the fact that captured runoff was subject to evaporation prior to the outfall sampling. Hardness and specific conductance measure dissolved ions in a particular solution. These ions do not settle out of solution and the ratio of dissolved solids to water increases as water evaporates. As a result, there is usually an increase in total hardness as well as specific conductance.

Dissolved oxygen was also tested in outflow samples to evaluate if water released from the basins after being held for several days still met the WQO for dissolved oxygen. Samples from all five basins had dissolved oxygen levels well above the minimum of 5.0 mg/L specified in the Basin Plan.

All bacteria counts decreased significantly in the Community detention basin as they did the previous year. However, total coliform levels were higher in the outflow than the inflow at the Stowe, and Drive detention basins. The Kirkham detention basin also had a higher fecal coliform in the outflow sample, however the *Enterococcus* count was lower in the outflow sample for all basins.

Fecal coliforms and enterococci are both typically associated with fecal matter. It is unknown why one indicator would increase while the other decreases. The basins in which bacteria increased and decreased last year are not the same as those in which bacteria increased and decreased this year. One possible cause of unequal bacterial

growth between basins is the content of the basins prior to the rain event. Because bacterial levels are dependent on such a wide variety of factors, more bacteria sampling events may be necessary to identify patterns of increase and decrease in the basins.

If you have any questions regarding this report, please give me a call at (858) 586-6600 ext. 22.

Sincerely,
D-MAX Engineering, Inc.

Arsalan Dadkhah, Ph.D., P.E.
Project Manager

Enterococci (MPN/100mL)	20	1300	130	90.0%

Notes

ND = not detected

NA = not applicable

NT = not tested

* These parameters were measured in the field.

Percent change for values which were not detected is based on half of reporting limit concentration.

Percent change for constituents reported to be above the maximum reportable value are based on the maximum reportable value.

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-02	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.
QR-02	The RPD result exceeded the QC limits due to non-homogeneity of sample.
QM-06	Due to noted non-homogeneity of the QC sample matrix, the MS/MSD did not provide reliable results for accuracy and precision. Sample results for the QC batch were accepted based on LCS/LCSD percent recoveries and RPD values.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

CITY OF POWAY

2008/2009
JURISDICTIONAL URBAN RUNOFF MANAGEMENT PROGRAM ANNUAL REPORT

IDDE SECTION

DECEMBER 2009

PREPARED BY:

D-MAX ENGINEERING, INC.
7220 TRADE STREET, SUITE 119
SAN DIEGO, CALIFORNIA 92121
858.586.6600

INTRODUCTION AND CONTENTS

Introduction

Section 7 of the Annual Report discusses the implementation of the illicit discharge detection and elimination (IDDE) component of the City's storm water program. This program consists of dry weather monitoring activities and other activities intended to prevent and respond to illicit connection and illicit discharges, such as operating a storm water hotline. The reporting period for the portions of this section that discuss dry weather monitoring activities have been extended through September 30, 2009, but the reporting period for other activities described in the section was not changed and thus extends through June 30, 2009, consistent with rest of the JURMP Annual Report. Because field work for the dry weather monitoring program is not required to be completed until September 30, the same day that the JURMP Annual Report is to be submitted, the RWQCB extended the submittal deadline for all of Section 7 of the JURMP Annual Report until December 15 of each year.

Contents

This submittal includes a certification statement, the text of Section 7 of the 2008/2009 JURMP Annual Report, and the attachments associated with that section. For clarity, the items included in this submittal are listed below.

- Certification Statement for Section 7 Submittal
- Introduction and Contents
- Section 7 (IDDE Component) of the 2008/2009 JURMP Annual Report
- JURMP Annual Report Requirements Checklist (for Section 7 only)
- Attachment 7.1, City of Poway Dry Weather Field Screening and Analytical Monitoring Program 2009

Please note that the complaint log, referenced as Appendix B in Section 7, was already provided with the main JURMP Annual Report submittal in September 2009 and is not included again with this December submittal.

CERTIFICATION STATEMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

The City maintains several programs to prevent and to seek out and eliminate illicit connections and illicit discharges (IC/IDs), which can be significant sources of pollutants to the City's MS4. Illicit discharges may result from activities such as vehicle washing or equipment cleaning without the use of proper BMPs. Illicit connections include improper links to the MS4, typically of conveyances that should be plumbed to the sanitary sewer system, such as car wash facility drains. City storm water personnel work with residents, businesses, and City staff to make them aware of BMPs to prevent IC/IDs and to encourage reporting of IC/IDs. The following activities are the primary components of the City's program to combat IC/IDs:

- Inspecting local businesses, construction sites, and municipal facilities
- Conducting the Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program)
- Operating a public complaint hotline

These activities enable the City to provide a comprehensive system to improve the quality of storm water and urban runoff throughout the City through detection and elimination of IC/IDs.

7.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the illicit discharge detection and elimination component during the 2008/2009 reporting period are presented in the following bulleted list. Please note that per Addendum No. 2 to the Municipal Permit, the reporting period for the Dry Weather Monitoring Program extended through September 30, 2009. The reporting period for all other components of the City's illicit discharge detection and elimination (IDDE) program ended on June 30, 2009.

- Five IC/IDs were discovered and reported during the 2008/2009 reporting period. Additionally, one IC/ID was identified during Dry Weather Monitoring Program follow-up investigations. City personnel followed up on all IC/IDs, and enforcement measures were applied as necessary.
- The City continued to operate two public complaint hotlines; the City recorded and investigated 50 complaints during the reporting period (Appendix B).
- The City performed all of the recommended corrective actions proposed in the 2008 Dry Weather Monitoring Program Report to prevent possible pollutants from entering the storm drain system.
- The City conducted the 2009 Dry Weather Monitoring Program.

7.2 PUBLIC REPORTING OF ILLICIT DISCHARGES AND CONNECTIONS

Reporting and Response

Public and municipal involvement is crucial to the prevention and elimination of IC/IDs from the storm water conveyance system. The public complaint hotline provides an effective means for individuals in the City to report suspected IC/IDs. The City of Poway encourages citizens to report illicit discharges or water quality concerns associated with discharges into or from the MS4 through the City's Storm Water hotlines:

- Development Services Department: (858) 668-4668
- Public Works Department: (858) 668-4700

Information can also be accessed and reports made via the City's website at http://poway.org. One or both of the public reporting numbers are listed in the City's storm water pollution prevention brochures, and the numbers are posted on the City's website.

Each complaint is investigated by City personnel for verification. Responsible parties for any verified IC/ID are identified, educated and/or given a notice of violation as necessary, and required to stop illegal discharges. Development Services staff maintains a database of all complaints from the public reporting hotline and the resulting enforcement actions. Complaints received by the City during the 2008/2009 reporting period and the City's response to each are listed in Appendix B, which was included with the September 2009 JURMP Annual Report submittal. A total of 50 complaints were documented this year, an increase from the 24 that were recorded last year. This may indicate that Poway residents are becoming more aware of the City's Storm Water Pollution Prevention Program, and are making calls to the City when they see a violation.

The City responded to and resolved all 50 complaints during the 2008/2009 reporting period, including seven located at industrial or commercial businesses and 12 located in residential areas.

Enforcement

As previously stated, investigated complaints from the Storm Water Hotline and City website are included in Appendix B, which was included with the September 2009 JURMP Annual Report submittal. Appendix B also includes relevant Public Works Department complaints and a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included clean-up, providing educational material and discussing storm water concepts with individuals involved in the complaint and, in some cases, issuing courtesy notices identifying the deficiency and remedy. The City issued five courtesy notices in response to complaints received by the City's storm water hotline.

7.3 SPILL REPORTING, RESPONSE, AND PREVENTION

The City has documented procedures for preventing and responding to sanitary sewer overflows (SSOs). Preventive maintenance is regularly conducted on the City's sanitary sewer system, and inspections are regularly conducted to monitor the condition of the public sewer lines and to determine the necessity of maintenance. Private property owners are responsible for maintaining the private lateral lines on their properties, but the City assists in the containment and cleanup of sewer spills if the spill could potentially reach the City's MS4.

Individuals in the City are encouraged to report any SSOs to the City's Storm Water Hotline. There were no SSOs or significant spills during the 2008/2009 reporting period.

7.4 URBAN RUNOFF MONITORING

The City has continued to conduct a Dry Weather Monitoring Program, as required by the Municipal Permit. This program assists the City in detecting and eliminating IC/IDs to the storm drain system. There are three major components to the Dry Weather Monitoring Program:

- Field observations, which include site descriptions and qualitative observations
- Field screening, which includes flow estimation and sample testing using meters and test kits at the site
- Analytical monitoring, which involves submittal of collected samples from selected sites, constituting at least 25 percent of all sites with flowing or ponded water, to an analytical laboratory for additional testing

The City visits all designated primary monitoring stations each year between May 1 and September 30 to collect dry weather monitoring data. When a primary monitoring station is found to be dry, the City visits designated alternate monitoring stations.

Numeric action levels are used as the primary approach for the interpretation of most constituent concentrations measured in the field and laboratory. Action levels for dissolved metals follow the California Toxics Rule (CTR) Criteria Maximum Concentration (CMC). Temperature, turbidity, and conductivity parameters are evaluated using best professional judgment to determine if further investigation is needed. The action levels for pH, surfactants, ammonia-nitrogen, nitrate-nitrogen, orthophosphate-phosphorus, oil and grease, diazinon, and chlorpyrifos were adopted in 2003 and were based on statistical analyses of previous Dry Weather Monitoring Program data, established water quality benchmarks from the Basin Plan, and the United States Environmental Protection Agency Multi-Sector General Permit.

The Regional Monitoring Workgroup in November 2008 requested the Dry Weather Monitoring Sub-workgroup to evaluate dry weather action levels that were submitted in April 2003 by the County of San Diego on behalf of the Copermittees. The Dry Weather Monitoring Sub-workgroup determined that the bacterial indicators action levels required

additional analysis. All other action levels were deemed appropriate and will not change. The Dry Weather Monitoring Sub-workgroup contracted the services of D-MAX Engineering (D-MAX) to conduct the evaluation of historical bacterial data collected from dry weather monitoring from 2002 through 2007. Details of this evaluation are posted on the Project Clean Water Website at http://www.projectcleanwater.org/pdf/science_mon/dry_weather_2009bacteria_action_level_report_draft.pdf. The Regional Monitoring Workgroup on May 19, 2009, evaluated the recommendations of the Dry Weather Monitoring Sub-workgroup and selected the 80th percentile values to be proposed as the dry weather action levels for bacterial indicators beginning on May 1, 2010. The current levels and the levels proposed for use beginning May 1, 2010, are presented in Table 7-1.

Table 7-1
Bacterial Indicators Action Levels for Dry Weather Monitoring Program

	Total Coliform (MPN/100 mL)	**Fecal Coliform (MPN/100 mL)**	***Enterococcus* (MPN/100 mL)**
2003-2009 Action Levels	50,000	20,000	10,000
Proposed 2010 -2012 Action Levels	130,000	13,000	7,000

7.4.1 2008 DRY WEATHER MONITORING PROGRAM

During the 2008 Dry Weather Monitoring Program 50 primary monitoring stations and four alternate monitoring stations were visited. Six sites exceeded action levels for one or more constituents. All routine and follow-up visits were completed as scheduled during the 2008 dry season. For further information about how the City addressed notable findings of the 2008 Dry Weather Monitoring Program and responded to the resulting recommendations, see Section 7.5.1 of this report.

7.4.2 2009 DRY WEATHER MONITORING PROGRAM

The City's storm water consultant, D-MAX, completed the 2009 Dry Weather Monitoring Program in September 2009. Fifty primary monitoring stations and four alternate monitoring stations were visited. One IC/ID was identified and eliminated during upstream investigations.

A summary of action level exceedances for field and laboratory constituents is provided in Table 7-2, below. The results of all follow-up investigations are presented in Table 7-3, in Section 7.5.2 of this report. A list of all monitoring stations visited is displayed in Table 7-4. At the end of this section complete field and laboratory analytical results are included as Table 7-5 and Table 7-6, respectively.

Table 7-2
Summary of 2009 Action Level Exceedances

Field Screening (50 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
pH	0	0	---
Conductivity	0	0	---
Turbidity	0	0	---
Surfactants	2	4	3A, 3B
Ammonia-N	1	2	21B
Nitrate-N	2	4	18A, 141
Orthophosphate-P	0	0	---
Laboratory Analyses (14 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Sites Exceeding Action Level**
Oil & Grease	0	0	---
Cadmium	0	0	---
Copper	0	0	---
Lead	0	0	---
Zinc	0	0	---
Diazinon	0	0	---
Chlorpyrifos	0	0	---
Total Coliforms	2	14	4, 36A
Fecal Coliforms	3	21	4, 36A, 132
Enterococci	3	21	3, 36A, 132

Note: Data includes initial site visits only; confirmation and follow-up visit data is not included.

A trash assessment was performed at each routine site visit during the 2009 Dry Weather Monitoring Program in accordance with the Municipal Permit requirements. A qualitative estimate of the abundance of trash is made based upon a general impression of the site. The Trash Assessment Form's five categories are primarily qualitative descriptions of the amount and extent of trash, although a number of trash pieces is also included in each category as a rough guideline. The five categories are defined as follows.

- Optimal: On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
- Suboptimal: On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.

- Marginal: Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
- Submarginal: Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (~100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
- Poor: Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health are also assessed at each site. Prior to the beginning of the 2009 dry weather season, the Dry Weather Monitoring Sub-workgroup added additional detail to the definitions of these categories to help achieve a greater level or inter-jurisdictional consistency. The definitions are as follows:

- *Threat to Human Health* – Presence of more than one of, or a combination of, the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment.
- *Threat to Aquatic Health* – Large amount (50 pieces or more) of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amounts of settleable, degradable, and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence of large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment.

During the 2009 Dry Weather Monitoring Program, 54 sites in the City of Poway were evaluated, including the four dry sites. Eighty-five percent of sites were rated optimal. A few sites ranked suboptimal or marginal, and no sites ranked submarginal or poor. Additionally, no sites were determined to pose a threat to human or aquatic health. Actions taken by the City in response to the trash assessment results are addressed in Section 7.5.2 of this report.

The 2009 Dry Weather Monitoring Program Report can be found as Attachment 7.1.

7.5 FOLLOW-UP AND ENFORCEMENT

7.5.1 ACTIONS TAKEN IN RESPONSE TO THE 2008 DRY WEATHER MONITORING PROGRAM FINDINGS

Based on the results of the 2008 Dry Weather Monitoring Program for the City of Poway, the following actions were completed by the City of Poway.

EDUCATION

- Educational materials were mailed to all residences upstream of Site 124 regarding proper disposal of cooking fats, oils, and grease (see Attachment 5.2 of the September 2009 JURMP Annual Report submittal). Distribution areas included the residences located at 13252 to 13360 Olive Meadows Drive, 14008 to 14050 Mazatlan Way, 14008 to 14101 Hermosillo Way, and all those on Olive Mesa Court, Olive Mesa Place, and Olive Crest Way.

INSPECTION AND MAINTENANCE

- Decaying organic material and sediment in the storm water conveyance directly upstream of the outlet at Site 36A and in upstream conveyances near Twin Peaks Middle School were removed to allow proper drainage and reduce stagnation of water. Horse manure was removed from upstream areas; human waste was removed from under the bridge by Site 36A.
- Human waste from under the bridge at Site 142 was removed.
- Trash was removed from sites 36A, 132, 142, 2, 21A, 64A, 91, 106, and 119, which were scored as submarginal or marginal by the trash assessment during routine site visits. Additionally, trash was removed from sites 121 and 140, where the trash was also in contact with the water. These sites were added to the City's existing clean up schedule as appropriate.
- Sites that received a suboptimal trash score were also cleaned up and added to the City's existing clean up schedule as appropriate, including sites 15, 18A, 21B, 30, 34, 35, 90, 103, 105, 109, 111, 115, 124, 128, 130, 135, 136, and 137.

7.5.2 2009 DRY WEATHER MONITORING FOLLOW-UP INVESTIGATIONS

If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days. Upstream investigations are performed when exceedances are verified during confirmation visits. See the City's JURMP for a complete discussion of upstream investigation procedures.

Table 7-3 presents conclusions based on the results of confirmation visits and, where necessary, upstream investigations conducted during the 2009 Dry Weather Monitoring Program.

Table 7-3
Summary of 2009 Follow-Up Investigations

Site	Upstream Investigation Target Constituent(s)		Results / Probable Sources
	Field	Laboratory	
3	---	Enterococci	Decomposition of landscaping waste discharged by Benchmark Landscaping. City code enforcement staff followed up to ensure the discharge was eliminated and proper BMPs will be used in the future.
3A	Surfactants	---	Transient flow
3B	Surfactants	---	Transient flow
4	---	Total Coliforms, Fecal Coliforms	Decomposition of leaves and wildlife waste in the upstream open area.
18A	Nitrate-N	---	Nitrate-containing groundwater seepage.
21B	Ammonia-N	---	Transient flow, potentially generated by organic material decomposition at site, and increased concentration of ammonia-N as ponded water evaporated.
36A	---	Total Coliforms, Fecal Coliforms, Enterococci	Decomposing leaves and trash in the ponded water at the site, and fecal matter upstream.
132	---	Fecal Coliforms, Enterococci	Transient flow
141	Nitrate-N	---	Nitrate-containing groundwater; nitrate likely due to a history of agricultural activity in the area.

The City is in the process of responding to the 2009 Dry Weather Monitoring Program findings. These actions and any other actions taken with respect to the City's Dry Weather Monitoring Program during the remainder of 2009/2010 will be described in the 2009/2010 JURMP Annual Report.

7.5.3 IC/IDs IDENTIFIED

During the reporting period, five IC/IDs were identified and eliminated based on investigations of reports made to the City's public complaint hotline. Details of all complaints made to the City's public complaint hotline are included in the City's complaint log, included with the September 2009 JURMP Annual Report submittal as Appendix B.

7.6 Illicit Discharge Detection and Elimination Component Effectiveness Assessment

The effectiveness assessment of this program component is provided in Section 11 of this JURMP Annual Report, which was submitted in September 2009.

7.7 Program Review and Modification

Changes to the definitions of threat to human health and threat to aquatic health used during the trash assessment component of the Dry Weather Monitoring Program and proposed bacteria action levels to be used in the 2010 dry weather season are discussed earlier in this section. No other changes to the City's illicit discharge detection and elimination component were made during the reporting period.

Table 7-4
2009 Dry Weather Monitoring Locations

Site	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Subarea	Latitude	Longitude
1	Behind 12371 Old Pomerado Road	Outlet	Residential	Open	906.20	32.94284	-117.06485
2	North of business center at 12300- 12340 Stowe Drive	Outlet	Commercial	Industrial	906.20	32.94183	-117.05915
3	Behind industrial site at the end of Kirkham Court, approximately 150 feet into canyon	Outlet	Commercial	Industrial	906.20	32.94424	-117.05537
3A	At the end of Kirkham Court, across from Life Force International, in the street	Manhole	Commercial	Industrial	906.20	32.94327	-117.05326
3B	At the end of Kirkham Court east of Site 3A	Manhole	Commercial	Industrial	906.20	32.94318	-117.05283
4	12342 Old Pomerado Road, north of Veterans Building at Bette Bendixen Park	Natural Creek	Residential	Open	906.20	32.94270	-117.06604

Notes:
nd = not detected
na = not analyzed
Red values were at or above the measured constituent's action level
denotes a confirmation visit
* = Number of fecal coliforms for confirmation samples is derived from *E. coli* count. Number of fecal coliforms = (Number of *E. coli*) / 0.85
** = Bacteria confirmation samples are analyzed using Colilert and Enterolert methods, which have a reporting limit of 10 MPN/100 mL.
*** = Total hardness is not considered a pollutant, and thus has no established action level for the purposes of dry weather monitoring. Total hardness is measured because the CTR action levels for metals are dependent on the total hardness value of the water sample.

IDDE

Permit Annual Reporting Requirement—Section J.3.a.(3).(f)	Location in Report
i. Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.	7.4
ii. Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.	7.4, 7.5; Tables 7-2 through 7-6; Attachment 7.1
iii. Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.	Attachment 7.1
iv. A brief description of any other investigations and follow-up activities for illicit discharges and connections.	7.5; Table 7-3; Appendix B
v. The number and brief description of illicit discharges and connections identified.	7.5; Appendix B
vi. The number of illicit discharges and connections eliminated.	7.5; Appendix B
vii. Identification and description of all spills to the MS4 and response to the spills.	4.10; 7.3, Appendix B
viii. A description of activities implemented to prevent sewage and other spills from entering the MS4.	4.10, 7.3
ix. A description of the mechanism whereby notification of sewage spills from private laterals and septic systems is received.	4.10, 7.3
x. Number of times the hotline was called, as compared to previous reporting periods, and a summary of the calls.	4.9, 7.2, Appendix B
xi. A description of efforts to publicize and facilitate public reporting of illicit discharges.	4.9, 7.2
xii. The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	4.9, 7.2; Appendix B
xiii. A description of notable activities conducted to manage illicit discharges and connections.	7.1

IDDE—Additional Dry Weather Monitoring Program Requirements

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
Meets applicable standard monitoring and reporting requirements listed in Municipal Permit Attachment B.	Attachment 7.1
c. (1) Determining Sampling Frequency: Dry weather field screening and analytical monitoring shall be conducted at each identified station at least once between May 1st and September 30th of each year or as often as the Copermittee determines is necessary to comply with the requirements of section D.4 of Order No. R9-2007-0001.	7.4; Attachment 7.1
c. (2) If flow or ponded runoff is observed at a dry weather field screening or analytical monitoring station and there has been at least seventy-two (72) hours of dry weather, make observations and collect at least one (1) grab sample. Record general information such as time since last rain, quantity of last rain, site descriptions (i.e., conveyance type, dominant watershed land uses), flow estimation (i.e., width of water surface, approximate depth of water, approximate flow velocity, flow rate), and visual observations (i.e., odor, color, clarity, floatables, deposits/stains, vegetation condition, structural condition, and biology).	7.4; Attachment 7.1
c. (3) At a minimum, collect samples for analytical laboratory analysis of the following constituents for at least twenty five percent (25%) of the dry weather monitoring stations where water is present: (a) Total Hardness, (b) Oil and Grease, (c) Diazinon and Chlorpyrifos, (d) Cadmium (Dissolved), (e) Lead (Dissolved), (f) Zinc (Dissolved), (g) Copper (Dissolved), (h) Enterococcus bacteria, (i) Total Coliform bacteria, (j) Fecal Coliform bacteria	7.4; Table 7-6; Attachment 7.1
c.(4) At a minimum, conduct field screening analysis of the following constituents at all dry weather monitoring stations where water is present:	(n/a)
c. (a) Specific conductance (calculate estimated Total Dissolved Solids), (b) Turbidity, (c) pH, (d) Reactive Phosphorus, (e) Nitrate Nitrogen, (f) Ammonia Nitrogen, (g) Surfactants (MBAS)	7.4; Table 7-5; Attachment 7.1
c. (5) If the station is dry (no flowing or ponded runoff), make and record all applicable observations and select another station from the list of alternate stations for monitoring.	7.4; Attachment 7.1
c. (6) Develop and/or update criteria for dry weather field screening and analytical monitoring results whereby exceedance of the criteria will require follow-up investigations to be conducted to identify and eliminate the source causing the exceedance of the criteria.	7.4; Attachment 7.1
c. (7) Assess the presence of trash in receiving waters and urban runoff at each dry weather field screening or analytical monitoring station. Assessments of trash shall provide information on the spatial extent and amount of trash present, as well as the nature of the types of trash present.	7.4; Attachment 7.1

IDDE—Additional Dry Weather Monitoring Program Requirements

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
c. (8) Dry weather field screening and analytical monitoring stations identified to exceed dry weather monitoring criteria for any constituents shall continue to be screened in subsequent years.	7.4; Attachment 7.1
c. (9) Develop and/or update procedures for source identification follow up investigations in the event of exceedance of dry weather field screening and analytical monitoring result criteria. These procedures shall be consistent with procedures required in section D.4.d of Order No. R9-2007-0001.	7.5; Attachment 7.1
c. (10) Develop and/or update procedures to eliminate detected illicit discharges and connections. These procedures shall be consistent with each Copermittees Illicit Discharge and Elimination component of its Jurisdictional Urban Runoff Management Plan as discussed in section D.4 of Order No. R9-2007-0001.	7.5; Attachment 7.1
d. The Copermittees shall commence implementation of dry weather field screening and analytical monitoring under the requirements of this Order by May 1, 2008. Each Copermittee shall conduct dry weather analytical and field screening monitoring in accordance with its storm water conveyance system map and dry weather analytical and field screening monitoring procedures as described in section II.B.3 above. If monitoring indicates an illicit connection or illegal discharge, conduct the follow-up investigation and elimination activities as described in submitted dry weather field screening and analytical monitoring procedures and sections D.4.d and D.4.e of Order No. R9-2007-0001. Until the dry weather field screening and analytical monitoring program is implemented under the requirements of this Order, each Copermittee shall continue to implement dry weather field screening and analytical monitoring as it was most recently implemented pursuant to Order No. 2001-01.	7.4, 7.5; Attachment 7.1

Re: 2009 Dry Weather Field Screening and Analytical Monitoring Program
City of Poway, California

Dear Mr. Tamimi:

Enclosed please find our final report for the City of Poway 2009 Dry Weather Field Screening and Analytical Monitoring Program. This report presents the results of the monitoring program conducted in the City of Poway during the 2009 dry weather season. The contents include field screening results, trash assessment data, analytical laboratory test results, analyses of the collected data, and photographs of sampling locations. The report also presents the results of follow-up investigations conducted to identify the sources of pollutants detected during the field screening program and our recommendations for additional actions.

Review comments from the draft report submitted to the City have been incorporated into this final report. It has been our pleasure working with the City of Poway on this project. If you have any questions regarding this report, please call me at (858) 586-6600 ext. 22.

Sincerely,
D-MAX Engineering, Inc.

Arsalan Dadkhah, Ph.D., P.E.
Project Manager

1 INTRODUCTION

1.1 Program Overview

The purpose of the Dry Weather Field Screening and Analytical Monitoring Program is to detect and eliminate illicit connections and illegal discharges (IC/ID) to the storm water conveyance system, minimizing the negative impact of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following components:

- Field screening observations
- Field screening analytical monitoring
- Trash assessments
- Laboratory analytical monitoring

The data gathered from dry weather monitoring is used to characterize discharges to the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up investigations are conducted as needed to detect and eliminate the sources of these pollutants. The results from the current year's Dry Weather Monitoring Program conducted by D-MAX Engineering, Inc., (D-MAX) are presented herein.

1.2 Hydrologic Setting

The City of Poway (City) includes portions of three watersheds within San Diego County. The northern portion of the City lies within the San Dieguito Watershed, which is designated as Hydrologic Unit (HU) 905. The southern half of the City is part of the Peñasquitos Watershed, HU 906. A very small portion of eastern Poway lies within the San Diego River Watershed, HU 907. Nine smaller drainage basins are recognized within the City of Poway and are listed below.

- Sycamore Creek Basin
- Green Valley Creek Basin
- Stone Canyon Basin
- Pomerado Creek Basin
- Rattlesnake Creek Basin
- Silver Lake Drive Basin
- Poway Creek Basin
- Beeler Creek Basin
- San Vicente Creek Basin

Catch basins, creeks, channels, culverts, and detention basins convey runoff from small, local waterways to the larger receiving waters of the three major watersheds. Water quality in each of the three major watersheds has been evaluated annually since 2002 to identify constituents of concern (COCs). In addition to the City of Poway, these major watersheds drain other large portions of San Diego County and eventually discharge to the Pacific Ocean. The City of Poway shares the responsibility of addressing the COCs with other cities falling within the watershed boundaries. Figure A at the end of this report presents a drainage map of the City and illustrates the locations of the drainage basins and associated water bodies.

Los Peñasquitos, Hydrologic Area 906.2

Poway Creek drains most of southern Poway and collects flow generated from Pomerado Creek, Silver Lake Drive, Rattlesnake Creek, and Beeler Creek basins. This flow eventually converges with Los Peñasquitos Creek, and discharges into Los Peñasquitos Lagoon. The 2005-06 Peñasquitos Watershed Urban Runoff Management Program (WURMP) Annual Report identified Constituents of Concern in this watershed as total dissolved solids (TDS), total suspended solids (TSS), turbidity, total coliform, fecal coliform, and *Enterococcus* bacteria. TDS and fecal coliform bacteria were identified as the higher priority COCs.

San Dieguito River, Hydrologic Area 905.2

The majority of northern Poway lies in the San Dieguito watershed, including Green Valley Creek, Stone Canyon Creek, Sycamore Creek, Lake Poway, and Thompson Creek. These basins drain into Lake Hodges, which discharges to the San Dieguito River, eventually terminating in the San Dieguito Lagoon. The 2005-06 San Dieguito WURMP Annual Report identifies total suspended solids (TSS), total dissolved solids (TDS), turbidity, biochemical oxygen demand (BOD), total coliform bacteria, and *Enterococcus* bacteria as the constituents of concern. TDS and Enterococci bacteria are the two highest priority COCs. Turbidity and total coliform bacteria continue to be lower priority COCs.

San Diego River, Hydrologic Unit 907.0

A very small portion of eastern Poway drains into San Vicente Creek, eventually discharging into the San Diego River watershed. Because this portion of Poway is designated as permanent open space, which is restricted from any future development, the San Diego Regional Water Quality Control Board (RWQCB) has indicated that the City of Poway is not included as a responsible party for the San Diego River WURMP under the Municipal Permit.

1.3 Regulatory Requirements

In accordance with the San Diego RWQCB Order No. R9-2007-0001 (Municipal Permit), each of the 18 cities within San Diego County, the County of San Diego, the Port of San Diego, and the San Diego County Regional Airport Authority (Copermittees), including the City of Poway, are required to annually perform dry weather field screening of discharges into its storm drain conveyance system. During the dry weather season, May 1 through September 30, selected locations along the storm drain conveyance system are evaluated. This procedure includes recording field observations, estimating observed flow rates, and conducting field testing. The Municipal Permit also necessitates that Copermittees conduct laboratory analyses for at least 25 percent of the visited sites with flowing or ponded water. If a sampling location is dry, meaning there is no flowing or ponded water, an alternate sampling station is selected. If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days.

1.4 Previous Work

The City of Poway has conducted the Dry Weather Monitoring Program since 1994. A summary of the number of sites sampled each year is presented in Table 1-1. Historical dry weather monitoring data is included in Appendix A.

TABLE 1-1
SUMMARY OF HISTORICAL DRY WEATHER SITES

Year	Number of Sites Screened [1]		Number of Flowing Sites		Number of Ponded Sites		Number of Dry Sites		Number of Lab Analysis Sites [2]	
	R1	R2	R1	R2	R1	R2	R1	R2	R1	R2
1994	Data not available [4]								---	
1995									---	
1996									---	
1997	49		39		10		21		---	
1998 [3]	47	40	39	34	8	6	11	15	---	---
1999 [3]	32	28	20	23	12	5	14	19	---	---
2000 [3]	26	32	23	27	3	5	18	12	---	---
2001 [3]	31	32	26	27	5	5	13	13	---	---
2002	50		40		10		2		13	
2003	50		47		3		1		13	
2004	50		41		9		3		13	
2005	50		47		3		1		13	
2006	50		45		5		2		13	
2007	50		44		6		4		13	
2008	50		41		9		4		14	

Notes:

[1] Number of Sites Screened = Number Flowing + Number Ponded. Field screening cannot be conducted at sites found to be dry. Dry sites are replaced by either a flowing or ponded site.

[2] Laboratory analyses commenced in 2002 as required by RWQCB Order 2001-001.

[3] Two rounds of dry weather monitoring were conducted for these reporting periods.

[4] Available information does not distinguish between types of flow at visited sites during this period.

1.5 Report Outline

This report is presented in the following order.

Section 1, Introduction, includes a program overview, a discussion of the City's hydrologic setting, regulatory background, a summary of previous dry weather monitoring, and the report outline.

Section 2, **Sampling Locations,** describes the field screening sampling locations and site selection criteria.

Section 3, Field and Laboratory Analytical Methods, includes field screening and laboratory analytical procedures, quality assurance protocols, and follow-up action levels.

Section 4, Field Screening Results, presents qualitative observations of the sampling locations and quantitative results of the field screening analyses.

Section 5, Trash Assessment, discusses the procedure and results of the trash assessment.

Section 6, Laboratory Analytical Results, presents results of the laboratory analyses.

Section 7, Data Analysis, provides an analysis of this year's field and laboratory data, as well as a comparison of past results.

Section 8, Follow-up Investigations, details the results of follow-up investigations undertaken to isolate the sources of action level exceedances measured during the monitoring program.

Section 9, Summary and Recommendations, provides a summary of the program results and recommendations for follow-up actions.

Appendix A Historical Dry Weather Monitoring Data

Appendix B Photographs of Sampling Locations

Appendix C Laboratory Analytical Reports

Appendix D Field Data and Trash Assessment Sheets

2 SAMPLING LOCATIONS

The City of Poway has 50 designated primary monitoring stations, as well as 26 alternate sites to replace primary sites without flowing or ponded water. Fourteen of the 50 primary sites are also designated for laboratory analysis. All sites are located in San Diego Hydrological Units 905 and 906.

During the 2009 Dry Weather Monitoring Program, primary sites 15, 53, 65, and 131 were dry, and thus alternate sites 1, 125, 135, and 138 were selected as locations for monitoring.

Table 2-1 provides the site number, location, conveyance configuration, primary and secondary land uses, hydrological subarea (HSA), and Global Positioning System (GPS) coordinates of the sampling locations that were visited. Photographs of sampling locations are included as Appendix B. A map of the drainage basins within the City is included as Figure A, and a map of the watersheds in and around the City, broken down into HSAs, is included as Figure B. A City map with sampling locations is included as Figure C.

3 FIELD AND LABORATORY ANALYTICAL METHODS

3.1 Field Screening Procedures and Methods

Field screening techniques consist of qualitative field observations, flow measurement, and quantitative field analyses of selected water quality parameters. Weather conditions, time since last rainfall, and the type of storm water conveyance are recorded as well. Specific observations and results of the field water quality analyses are documented on field datasheets, which also serve as a record of the field visit. Datasheets are completed for every site visit regardless of whether or not samples were collected. Check boxes on the datasheets indicate if the visit is for routine field screening, confirmation of an exceedance, or an IC/ID follow-up visit. A confirmation visit is a revisit of the original site, whereas an IC/ID follow-up is an upstream investigation. Datasheets from the 2009 Dry Weather Monitoring Program are included as Appendix D. Field screening and analyses were conducted according to the following procedures and methods:

Qualitative Observations

Qualitative field observations are made during each site visit. These observations include a general site assessment and description of water odor, clarity, the presence of floatable materials, visible deposits or stains, and organisms. Evidence of present or past illicit connections and illegal discharges to the storm drain system can also be discovered through careful field observations. Each field screening location is photographed to document site conditions. Photographs are included in Appendix B.

Flow Measurement

Flow measurements can help estimate pollutant mass loading, prioritize storm drains for future investigation, and identify significant changes in discharge that may be indicative of an illegal discharge. Various field methods are used in formulas to estimate the flow rate. These include measuring the velocity, depth, and width of the flowing water; recording the amount of time required to fill a bottle of known volume with sample water; or, if measuring flow within a cylindrical pipe, measuring the pipe diameter as well as the depth and velocity of the flow. Low levels of flow may also be assessed visually.

Field Water Quality Analyses

At each site with ponded or flowing water, water samples were collected and analyzed in the field for the following constituents:

- Specific Conductance
- Temperature
- pH
- Turbidity
- Surfactants, measured as methylene blue active substances (MBAS)*
- Nitrate-Nitrogen (Nitrate-N)
- Ammonia-Nitrogen (Ammonia-N)
- Orthophosphate-Phosphorus (Orthophosphate-P)

* Surfactants are also referred to as detergents.

The methods used to perform the above field analyses, along with the reporting limit, range, and accuracy of each method, are listed in Table 3-1.

TABLE 3-1
FIELD ANALYTICAL METHODS

Parameter	Method	Reporting Limit	Range	Accuracy
Specific Conductance	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.01 mS/cm	0 – 20 mS/cm	± 2% of functional sensitivity[1]
Temperature	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.1°C	0.0°C – 60.0°C	± 0.5°C
pH	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.01	0.00 – 14.00	± 0.01 pH
Turbidity	Hanna Instruments HI 93703 Portable Turbidity Meter***	0.01 NTU	0.01 – 50.00 NTU and 50 – 1000 NTU	± 0.5 NTU or 5% of reading (whichever is greater)
Surfactants	CHEMetrics CHEMets Kit (K-9400) methylene blue active substances	0.13 mg/L	0.00 mg/L – 3.00 mg/L*	± 0.13 & ± 0.5 mg/L[2]
Nitrate-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Nitrate 3 Vacu-vials® (K-6933) Cadmium reduction[3]***	1.13 mg/L**	1.13 mg/L – 113 mg/L**	± 30%of practical detection limit[4]
Ammonia-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Ammonia 3 Vacu-vials® (K-1403) Salicylate***	0.100 mg/L**	0.100 mg/L – 3.000 mg/L**	Varies with measured concentration[4,5]
Ortho-phosphate-P	CHEMetrics V-2000 Multi-Analyte LED Photometer – Phosphate 2 Vacu-vials® (K-8513) Stannous chloride chemistry[6]***	0.098 mg/L**	0.098 mg/L – 2.608 mg/L**	Varies with measured concentration[4,5]

Notes:

EC = electrical conductivity

mS/cm = millisiemens per centimeter

°C = Degrees Celsius

NTU = nephelometric turbidity unit

mg/L = milligrams per liter

LED = light-emitting diode

[1] Functional sensitivity (FS) represents the lowest limit at which quantitative information is reliable. FS is estimated as the mean concentration for a spiked sample whose coefficient of variance (CV) is 20%. CV is the standard deviation divided by the mean.

[2] ± 0.13 for the range of 0.0 to 1.0 mg/L, ± 0.25 mg/L for the range of 1.0 to 2.0 mg/L and 0.5 mg/L for the range of 2.0 to 3.0 mg/L.

[3] This method determines the concentration of nitrate in mg/L NO_3. To determine the amount of nitrate-nitrogen, the concentration of nitrogen must be adjusted for the presence of oxygen in the NO_3 molecule. Therefore, the result is multiplied by a conversion factor of 0.226, the ratio of the molecular weight of N (14g/mol) to NO_3 (62 g/mol). The practical detection limit (PDL) for nitrate is 5.0 mg/L; however, the PDL for nitrate-nitrogen is lower due to the conversion.

[4] PDL is defined as the lower limit of the stated test range.

[5] Percent error adjusts as follows: ±30% at PDL, ±20% for 25% of full range, ±10% for 75% of full range, ±10% for 120% of full range.

[6] This method determines the concentration of orthophosphate in mg/L PO_4. To determine the amount of orthophosphate-P, the concentration of phosphate must be adjusted for the presence of oxygen in the PO_4 molecule. Oxygen is 67.4% of phosphate by mass but is not a plant nutrient in this form. Therefore, the result is multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31g/mol) to PO_4 (95 g/mol). The practical detection limit for orthophosphate is 0.3 mg/L; however, the practical detection limit for orthophosphate-phosphorus is lower due to the conversion.

*Extended ranges in chemical analyses can be achieved through dilutions. Accuracies decrease proportionally with further dilutions.

** Readings below the PDL have increased percent error; measurements are reported, but are flagged as being below the PDL.

***Test method information taken from Hanna Instruments and CHEMetrics manuals, available online at www.hannainst.com and www.chemetrics.com.

3.2 Laboratory Analytical Methods

In accordance with the Municipal Permit, laboratory samples were collected at 14 sites, representing 25 percent of the sites where ponded or flowing water was observed. Samples were submitted to EnviroMatrix Analytical, Inc, a laboratory certified by the California Department of Health Services, for analysis of the following constituents:

- Total hardness
- Oil and grease
- Diazinon
- Chlorpyrifos
- Dissolved Cadmium
- Dissolved Copper
- Dissolved Lead
- Dissolved Zinc
- Total Coliform bacteria
- Fecal Coliform bacteria
- *Enterococcus* bacteria

The methods used to perform each of the above analyses along with method reporting limits and holding times are listed in Table 3-2.

3.3 Quality Assurance and Quality Control (QA/QC)

The QA/QC Plan utilized for this project includes the United States Environmental Protection Agency (USEPA) approved test methods for the field and laboratory analysis of water samples, calibration of test equipment, and pre- and post-rinsing of sample collection containers and test vials. Key components of the QA/QC Plan are described below.

3.3.1 Field Sampling and Analysis QA/QC

The pH meters, turbidity meter, and conductivity meter are tested daily before field screening begins. The pH meters are calibrated as needed with sodium/potassium phosphate, monobasic buffer solutions with pH values equal to 4.00 ± 0.01, 7.00 ± 0.01, and 10.00 ± 0.01 units. The glass electrode tube is kept moist to preserve the meter's accuracy during fieldwork. The turbidity meter and conductivity meter are calibrated as needed using standard solutions.

Field sample collection containers are rinsed first with distilled water and then with the sample water prior to sample collection. Upon completion of sampling and testing at each site, sample collection containers, test vials, and ion-sensitive electrodes are rinsed twice with distilled water and dried.

The accuracy of field analytical techniques and equipment is assessed at the beginning of each sampling week by analyzing solutions of known concentrations for ammonia-nitrogen, surfactants, nitrate, and orthophosphate. The results of the assessment are shown in Table 3-3.

TABLE 3-2
LABORATORY ANALYTICAL METHODS

Analyte	Analytical Method	Method Reporting Limit	Maximum Holding Time [1]
Oil and Grease	USEPA 1664	5 mg/L	28 days
Total Hardness	USEPA 200.7	10 mg/L	14 days
Dissolved Cadmium	USEPA 200.8	0.001 mg/L	24 hours
Dissolved Copper	USEPA 200.8	0.001 mg/L	24 hours
Dissolved Lead	USEPA 200.8	0.001 mg/L	24 hours
Dissolved Zinc	USEPA 200.8	0.020 mg/L	24 hours
Diazinon	USEPA 8141A	0.05 µg/L	7 days
Chlorpyrifos	USEPA 8141A	0.05 µg/L	7 days
Total Coliforms[2]	SM 9221	20 – 1,600,000 MPN/100 mL	6 hours
Fecal Coliforms[2]	SM 9221	20 – 160,000 MPN/100 mL	6 hours
Enterococci[2]	SM 9230	20 – 160,000 MPN/100 mL	6 hours
Total Coliforms	SM 9223 (IDEXX Colilert)[3]	10 – 2,419,600 MPN/100 mL	6 hours
Escherichia coli (*E. coli*) [4]	SM 9223 (IDEXX Colilert)[3]	10 – 2,419,600 MPN/100 mL	6 hours
Enterococci	IDEXX Enterolert[4]	10 – 241,960 MPN/100 mL	6 hours

Notes:

µg/L = micrograms per liter

MPN/100 mL = most probable number (of colony-forming units) per 100 milliliters

[1] Maximum Holding Time values listed apply to samples collected and preserved in accordance with the quality assurance and quality control procedures listed in Section 3.3.2.

[2] For D-MAX's Dry Weather Monitoring Program, EnviroMatrix Analytical, Inc. (EMA) performs standard dilutions for total coliforms to quantify from 20-1,600,000 most probable number per 100 milliliters (MPN/100 mL). For fecal coliforms and Enterococci, EMA performs standard dilutions to quantify from 20-160,000 MPN/100 mL. During the analysis and interpretation of the results, the number of tubes used to quantify the sample must fit the MPN index table from Standard Method 9221. The dilution set used will determine the detection limit. A standard dilution analysis is set up with 15 tubes at different concentrations. The reporting limit will always be adjusted depending on the dilution factor used for quantifying the actual results based on the MPN table. If the result for the analysis was less than 16,000 MPN/100 mL, the reporting limit will always be 20, and the dilution factor will be 10. As the dilution factor goes up, the reporting limit listed in the results from EMA will also go up based on the calculation made with EMA's data system. However, the lowest quantifiable number or reporting limit would still be 20 based on how the standard tubes for the sample is set up.

[3] IDEXX Colilert and Enterolert tests are used during upstream investigations only.

[4] Number of fecal coliforms is derived from number of *E. coli* through the following formula:

Fecal Coliforms = *E. coli* / 0.85. The converted fecal coliform count, not the number of *E. coli*, is reported in this report's data tables.

TABLE 3-3
FIELD ANALYSIS QA/QC RESULTS

Date	Analyte	Known Concentration (mg/L)	Acceptable Range* (mg/L)	Field Test Kit Results (mg/L)
6/22/09	Ammonia-Nitrogen	0.82	0.66 – 0.98	0.708
6/22/09	Surfactants	1.00	0.75 – 1.25	1.00
6/22/09	Nitrate **	44.3	31.0 – 57.6	40.79
6/22/09	Orthophosphate **	3.07	2.45 – 3.68	2.995
8/03/09	Ammonia-Nitrogen	0.82	0.66 – 0.98	0.669
8/03/09	Surfactants	1.00	0.75 – 1.25	1.00
8/03/09	Nitrate **	44.3	31.0 – 57.6	41.60
8/03/09	Orthophosphate **	3.07	2.45 – 3.68	2.627
8/12/09	Ammonia-Nitrogen	0.82	0.66 – 0.98	0.718
8/12/09	Surfactants	1.00	0.75 – 1.25	1.00
8/12/09	Nitrate **	44.3	31.0 – 57.6	40.02
8/12/09	Orthophosphate **	3.07	2.45 – 3.68	2.627
8/17/09	Ammonia-Nitrogen	0.82	0.66 – 0.98	0.728
8/17/09	Surfactants	1.00	0.75 – 1.25	1.00
8/17/09	Nitrate **	44.3	31.0 – 57.6	43.08
8/17/09	Orthophosphate **	3.07	2.45 – 3.68	2.899

Notes:
* Acceptable range is calculated based on the error associated with the methods as listed in Table 3-1.
** Nitrate and orthophosphate are converted to nitrate-nitrogen and orthophosphate-phosphorus, respectively, when conducting standard field screening. This is accomplished by multiplying the results by 0.226 for nitrate and 0.326 for orthophosphate. To simplify the calibration process, the unconverted numbers are used when calibrating the instruments.

3.3.2 Laboratory Sampling and Analysis QA/QC

Samples for laboratory analysis are collected concurrently with field samples and utilize the same sampling procedures. Pre-sterilized sample bottles are obtained from the laboratory and thus do not require rinsing with sample water prior to sample collection. After sample collection, all laboratory samples are kept in a cooler on ice until picked up by the lab. Strict chain of custody procedures are followed, and samples are delivered and analyzed within the appropriate holding times listed in Table 3-2. Completed chain of custody forms are included in Appendix C.

3.4 Follow-up Action Levels

Based on dry weather field screening results, immediate follow-up investigations are sometimes necessary to identify and eliminate pollutant sources. In order to determine whether an immediate source investigation is necessary, numeric action levels and best professional judgment are used to interpret the field screening results. If visual and/or analytical evidence of gross contamination are present at a site (e.g., substantial petroleum sheen, extremely high ammonia concentration, evidence of a sewage release, etc.), then an immediate source identification investigation is initiated. For sites that exceed numeric action levels but are not perceived as an immediate threat to water quality, a confirmation visit is conducted within two business days. An upstream pollutant source investigation is

conducted thereafter if elevated concentrations persist and no sources can be identified in the immediate vicinity of the monitoring station. If elevated levels of pollutants are detected by the laboratory analyses, a comprehensive follow-up pollutant source investigation is conducted within two business days of receiving the laboratory results. A discussion of follow-up investigations is included in Section 8.

The following three methods are employed to determine whether immediate or comprehensive follow-up investigations are necessary: (1) Numeric Action Levels; (2) California Toxics Rule (CTR); and (3) Best Professional Judgment. All three approaches are described in detail below and presented in Table 3-4.

Numeric Action Levels

Numeric action levels are used as the primary approach for interpreting pH, orthophosphate-P, nitrate-N, ammonia-N, surfactants, oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, and *Enterococcus* analytical results (see Table 3-4). Prior to the 2003 dry weather season, no standard action levels had been adopted for use throughout San Diego County. D-MAX calculated the current set of numeric action levels based on county-wide sampling data. These action levels have been used by all San Diego County Copermittees since the 2003 dry weather season.

California Toxics Rule

The CTR criterion maximum concentration (CMC) is a short term concentration limit in which aquatic life can be sustained. The CMC is used to determine appropriate action levels for dissolved trace metals, including cadmium, copper, lead, and zinc. The CTR equations, as provided in USEPA Federal Register Doc. 40 Code of Federal Regulations (CFR) Part 131, are used to calculate benchmarks based on the total hardness of the sampled water, with the action levels increasing as hardness increases. More information on the CTR is available at http://www.epa.gov/region09/water/ctr.

Best Professional Judgment

Best professional judgment is utilized as the primary approach for interpreting turbidity, water temperature, and conductivity and as a secondary approach for interpreting the results of all other field and laboratory analyses. Under best professional judgment, the need for a follow-up investigation is left to the discretion of the D-MAX field crew. Best professional judgment may indicate that results which either exceed certain action levels or are statistical outliers may be the result of natural or background factors.

TABLE 3-4
ACTION LEVELS FOR FIELD SCREENING AND LABORATORY PARAMETERS

Field Screening Analytes	Action Levels[1]	Source/ Notes
pH	<6.5 or >9.0	Basin Plan[2], with allowance for elevated pH due to excessive photosynthesis. Elevated pH is especially problematic in combination with high ammonia.
Orthophosphate-P (mg/L)	2.0	USEPA Multi-sector General Permit
Nitrate-N (mg/L)	10.0	Basin Plan and drinking water standards
Ammonia-N (mg/L)	1.0	Based on Workgroup experience. May also consider unionized ammonia fraction.
Turbidity (NTU)	Best Professional Judgment	WQOs relevant to inland surface waters are not available. Base judgment on channel type and bottom, time since last rain, background levels, and most importantly visual observation (e.g. unusual colors and lack of clarity) and unusual odors.
Temperature (°C)	Best Professional Judgment	Base judgment on season, air temperature, channel type, shading, etc.
Conductivity (mS/cm)	Best Professional Judgment	Conductivity may be highly elevated in some regions due to high TDS, groundwater exfiltration to surface water, mineral dissolution, drought, and seawater intrusion. Normal source ID and discharge elimination work is not effective in these situations. Knowledge of area background conditions is important. Values <0.75 may indicate excessive potable water discharge or flushing.
Laboratory Analytes	**Action Levels**	**Source/ Notes**
Oil and Grease (mg/L)	15	USEPA Multi-sector General Permit. If petroleum sheen is observed, the sample should be collected from the water surface. Visual observations may justify immediate investigation.
Diazinon (µg/L)	0.5	Response to diazinon and chlorpyrifos levels above 0.5 µg/L should focus on education and outreach to potential dischargers in the target drainage basin. Highly elevated levels should be investigated aggressively as with other potential IC/IDs.
Chlorpyrifos (µg/L)	0.5	
Dissolved Cadmium (µg/L)	California Toxics Rule	Use California Toxics Rule, 1-hour criteria to determine appropriate action level for individual samples. Table provides benchmarks based on hardness and dissolved metals concentration. For example, at 300 mg/L hardness the following action levels would apply: Cd – 14 ppb; Cu – 38 ppb; Pb – 209 ppb; and Zn – 297 ppb.
Dissolved Copper (µg/L)		
Dissolved Lead (µg/L)		
Dissolved Zinc (µg/L)		
Total Coliforms (MPN/100 mL)	50,000	Bacteria levels in many storm drains are likely to exceed public health guidance criteria. Use confidence interval test and best professional judgment to identify conveyances for source ID.
Fecal Coliforms (MPN/100 mL)	20,000	
Enterococci (MPN/100 mL)	10,000	

Notes:

[1] The referenced action levels should not be the sole criteria for initiating a source identification investigation. Dry weather monitoring data should be interpreted using a variety of available information, including within-site and between-site sample variability.

[2] Basin Plan = Water Quality Control Plan for the San Diego Basin

WQO = Water Quality Objective

ppb = parts per billion

4 FIELD SCREENING RESULTS

Sampling for the 2009 Dry Weather Monitoring Program began June 23, 2009, and was completed September 22, 2009. A total of 54 routine site visits were performed. Field screening was conducted at the 50 sites where ponded or flowing water was observed. Since primary sampling sites 15, 53, 65, and 131 were dry, alternate sites 1, 125, 135, and 138 were selected as replacements. Completed field data sheets for each site visit are included in Appendix D.

4.1 Qualitative Observations

Qualitative observations for all routine field screening visits are summarized below. Routine filed screening data and confirmation visit data are presented in Table 4-1:

Light Conditions
Light conditions were primarily sunny, with a few occurrences of partly cloudy or overcast weather.

Odor
Water samples from two sites had a musty odor, and the sample from one site had an odor similar to wood. The remaining samples were odorless.

Color
Water samples taken from most of the sites were colorless, with the exception of one yellow and one brown water sample.

Clarity
Aside from negligible amounts of suspended particles, most water samples were clear. Two sites had slightly cloudy water.

Floatable Materials
The most common material found floating on the water's surface was trash, present at six sites. Section 5 of this report discusses the complete results of the ,Trash Assessment. Four sites had bubbles or foam and three sites had an oily sheen on the water's surface.

Deposits
Sediment, gravel, and/or fine particulates were observed at almost all sites. No other types of deposits were noted.

Vegetation
The majority of sites evaluated contained normal or no vegetation, appropriate to the amount of sunlight exposure and soil at the site. A few sites had only limited vegetation.

Biology
The presence of organisms can be an indication of healthy waters. The presence of algae often indicates that flow is persistent. An overabundance of algae often implies high levels of nutrients in the water and can have negative effects on aquatic life. No sites had excessive algal growth this year. Insects and algae were prevalent at most sites, except in manholes. Many sites were also host to snails, crayfish, and fish.

Notes:

denotes a confirmation visit

denotes a location sampled for laboratory analysis

ns = not sampled (dry site)

4.2 Field Analytical Results

Field analyses are conducted at all sites with flowing or ponded water. The measured constituents are described below.

Flow rate quantifies the volume of fluid passing across a given surface per unit time. Flow rate measurements are needed to calculate the load of a pollutant discharged.

Water temperature is needed to assess the significance of other parameters, such as pH and conductivity. Also, the aquatic habitat must remain within a certain temperature range in order to sustain sensitive aquatic life. In the field, water temperature is measured immediately upon sample collection at each site.

The **pH** is an expression of acidity or alkalinity of a water sample. The pH of an aquatic system will affect a variety of chemical reactions, including the availability of nutrients and the solubility of chemical substances, particularly heavy metals.

Turbidity describes the clarity or cloudiness of a water sample, or the degree to which light is blocked by suspended material in the water. Turbid waters not only limit the amount of light that reaches submerged vegetation, thus reducing photosynthetic capacity, but excessive suspended particles can also absorb heat and increase water temperatures.

Specific Conductance (Conductivity) measurements indicate the total concentration of ions in an aquatic system and the ability of the water to conduct electricity. This parameter can be used to assess the mineral content of water and potentially indicate the presence of dissolved pollutants.

Surfactant concentrations in water samples often reflect illegal discharges from industrial, commercial, or residential sources. Pollution resulting from surfactants alters the surface tension of water and disrupts the breathing mechanisms of fish gills and other aquatic organisms.

Ammonia-Nitrogen (ammonia-N) is an indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment; however, in higher quantities it can become toxic to fish and other organisms.

Nitrate-Nitrogen (nitrate-N) is a common sign of nutrient pollution from agricultural or household fertilizer runoff. Nitrate pollution can cause excessive algal growth, resulting in oxygen depletion as algae decomposes and may eventually suffocate other aquatic life. During field screening, nitrate is measured and converted into nitrate-N using a conversion factor of 0.226. This process is explained in Note 3 of Table 3-1.

Orthophosphate-Phosphorus (orthophosphate-P) is also an indicator of nutrient pollution from agricultural or household fertilizer runoff. Similar to nitrate-N, orthophosphate-P pollution can cause nutrient enrichment, stimulate algal growth, and thus deplete oxygen in the water to levels that are dangerous for aquatic life. Even low levels of orthophosphate-P can cause significant algal growth, as it is commonly the limiting nutrient in plant growth. During field screening, orthophosphate is measured and converted into orthophosphate-P using a conversion factor of 0.326. This process is explained in Note 6 of Table 3-1.

A statistical summary of the routine field analytical results is presented in Table 4-2. Table 4-3 shows the results of all field analyses conducted at the sampled sites. Graphs of the various parameters and action levels for follow-up investigations are included at the end of this section.

TABLE 4-2
FIELD ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Average	Median	Standard Deviation	Number of Exceedances	Graph Number
Flow Rate (gpm)	94	0 (ponded)	8	2	16	---	4-1
Temperature (°C)	30.6	19.9	24.3	24.4	2.5	0	4-2

5 TRASH ASSESSMENT

5.1 Regulatory Requirements

Section II.B.3.C.(7) of the Municipal Permit's Receiving Waters and Urban Runoff Monitoring and Reporting Program requires Copermittees to assess the presence of trash in receiving waters and urban runoff at each dry weather monitoring site. This trash assessment program is designed to provide information on the spatial extent and relative amount of trash present, as well at the nature and origin of the trash at the site.

5.2 Procedure and Definitions

The San Diego Copermittee Dry Weather Monitoring Workgroup developed a Trash Assessment Form to document the amount and extent of trash at each evaluated site. The form categorizes the site into one of five trash categories: optimal, suboptimal, marginal, submarginal, or poor. The form also addresses any potential threats that the trash may pose to human or aquatic health. For sites rating submarginal or poor, the form includes a section to record types, prevalence, potential routes, and sources of trash.

A qualitative estimate of the abundance of trash is made based upon a general impression of the site. The Trash Assessment Form's five categories are primarily qualitative descriptions of the amount and extent of trash although a number of trash pieces is also included in each category as a rough guideline. The five categories are defined as follows.

- Optimal: On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
- Suboptimal: On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
- Marginal: Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
- Submarginal: Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (~100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
- Poor: Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health is assessed at each site using the following definitions:

- *Threat to Human Health* – Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment.

- *Threat to Aquatic Health* – Large amount (50 pieces or more) of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amounts of settleable, degradable, and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence of large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment.

In the event that a site is noted as potentially posing a threat to human or aquatic health, additional descriptive comments are recorded in the "Comments" section of the Trash Assessment Form.

If a site is labeled as submarginal or poor, it is assessed for types of trash present (e.g., automotive, biohazard, food waste), which are ranked based on their prevalence and the potential threat to water quality. Lastly, the potential mechanism through which trash reached the site (e.g., dumping, littering, upstream sources) and the potential source of the trash (e.g., construction, commercial, transient) are noted.

5.3 Trash Assessment Results

During the 2009 Dry Weather Monitoring Program, 85 percent of sites sampled in the City of Poway were rated optimal. A few sites ranked suboptimal or marginal, and no sites ranked submarginal or poor. Additionally, no sites were determined to pose a threat to human or aquatic health.

Table 5-1 and Graph 5-1 summarize the trash assessment results. Figure 5-1 provides a map of sampling sites and their corresponding trash assessment.

6 LABORATORY ANALYTICAL RESULTS

6.1 Summary

Laboratory analyses were conducted at 14 sites, representing over 25 percent of all sites with ponded or flowing water. The laboratory constituents measured are defined below.

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources, including parking lots and streets, washing activities, illegal discharges, and automobile repair facilities.

Total hardness measures the amount of calcium and magnesium ions in a water sample, with the result expressed in mg/L of $CaCO_3$. Hardness itself is not considered a pollutant, but is measured to calculate CTR limits for dissolved metals. Hardness affects the solubility of dissolved metals as well as other minerals and ions.

Diazinon and **chlorpyrifos** are organophosphate pesticides that are highly toxic to insects, birds, and mammals, freshwater fish, and invertebrates. In 2005, the Environmental Protection Agency banned the sale of diazinon in the United States and tightened restrictions on chlorpyrifos use.

Coliform bacteria are relatively harmless to humans and are present in mammalian digestive tracts, most surface waters, and soils. Testing water samples for total coliform bacteria is a standard practice in public health. Total coliform is measured as an indicator of other more harmful pathogens, since these pathogens are generally present in much smaller quantities and are difficult to detect.

Fecal coliform, a subset of coliform bacteria, and ***Enterococcus*** are found primarily in the gastro intestinal tracts of humans and animals and are commonly used as indicators of water contamination by fecal matter. Without the use of significantly more expensive methods, such as ribotyping, it is not possible to determine whether the source of fecal material is human or animal. Human fecal material is known to contain pathogens dangerous to humans, but the relationship between animal waste and threat to human health is less certain.

Metal contamination of water can arise from a variety of sources, including automobile operation, automobile repair, vehicle washing, galvanizing of metal, and electronics manufacturing. Certain dissolved metals are toxic pollutants that are hazardous to the development and survival of aquatic organisms.

The California Toxics Rule for Dissolved Metals in Fresh Waters defines metal toxicity as a function of water hardness. As hardness increases, so does the CMC. CMC values differ for various metals. Dry weather monitoring laboratory samples are analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Table 6-1 shows the sites with detectable metal concentrations, the measured total hardness of the sample, and the associated CMC.

Table 6-2 presents a statistical summary of the laboratory results from all routine samples. Table 6-3 presents the laboratory results from all routine and confirmation samples. Laboratory reports are included in Appendix C.

TABLE 6-1
CTR – CMC FOR DISSOLVED METALS

Site	Total Hardness (mg/L)	Concentration (mg/L)	CMC (mg/L)
Dissolved Copper			
3	480	0.003	0.050
16	1010	0.001	0.050
30	741	0.002	0.050
36A	311	0.003	0.039
90	1,330	0.002	0.050
108	3,100	0.001	0.050
Dissolved Zinc			
3	480	0.035	0.379
4	892	0.042	0.379
12	1,590	0.025	0.379
Dissolved Lead			
4	892	0.001	0.625

Note: Sites listed are those at which a particular dissolved metal was detected. Cadmium was not detected in any of the samples. For equations and constants used in California Toxics Rule calculations, see http://www.epa.gov/ost/standards/ctr/toxic.pdf

TABLE 6-2
LABORATORY ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	No. of Exceedances
Total Hardness (mg/L $CaCO_3$)	3,100	311	*
Oil and Grease (mg/L)	nd	nd	0
Diazinon (µg/L)	nd	nd	0
Chlorpyrifos (µg/L)	nd	nd	0
Cadmium (dissolved, mg/L)	nd	nd	0
Copper (dissolved, mg/L)	0.003	nd	0
Lead (dissolved, mg/L)	0.001	nd	0
Zinc (dissolved, mg/L)	0.042	nd	0
Total Coliform (MPN/100 mL)	500,000	500	2
Fecal Coliform (MPN/100 mL)	90,000	nd	3
Enterococcus (MPN/100 mL)	160,000	110	3

Notes:
nd = not detected
Calculations include complete routine visit data only. Confirmation visits, follow-up visits, and dry sites are not incorporated.
* Total hardness is not considered a pollutant (see section 3.4 for details), and thus has no established action level for the purposes of dry weather monitoring
.

Notes:

nd = not detected

na = not analyzed

Red values were at or above the measured constituent's action level

denotes a confirmation visit

* = Number of fecal coliforms for confirmation samples are derived from *E. coli* count. Number of fecal coliforms = (Number of *E. coli*) / 0.85

** = Confirmation samples are analyzed using the Colilert and Enterolert methods described in Table 3-2, which have a reporting limit of 10 MPN/100 mL.

*** = Total hardness is not considered a pollutant (see Section 3.4), and thus has no established action level for the purposes of dry weather monitoring. Total hardness is measured because the CTR action levels for metals are dependent on the total hardness value of the water sample.

7 DATA ANALYSIS

This section provides an overall evaluation of test results of the 2009 Dry Weather Monitoring Program, as well as a discussion of historical trends for various constituent exceedances.

7.1 2009 Results

Of the 50 sites sampled, fecal coliform and *Enterococcus* bacteria were the constituents most frequently in exceedance, occurring at three sites each. Two sites had surfactant concentration exceedances that were likely the result of transient flows. Table 7-1 presents a summary of the constituent exceedances noted in 2009.

Note: Table reflects exceedances occurring during routine visits only, not confirmation or follow-up visits.

7.2 Previous Results

Table 7-2 shows the percentage of sampled sites that have had exceedances each year of the Dry Weather Monitoring Program. Graph 7-1 illustrates the percentage of sites with exceedances for field screening each year, and Graph 7-2 presents the percentage exceedances for laboratory analyses annually.

Since testing began in accordance with Order 2001-01, no exceedances were measured in water temperature, conductivity, oil and grease, cadmium, copper, lead, zinc, or chlorpyrifos. Thus, these constituents have not been included in the following graphs.

The historical data for the results of field analyses, presented in Graph 7-1, indicate a general decrease of ammonia-nitrogen exceedances. An exceedance of pH occurred only once, in 2002. No distinguishable trends can be drawn for turbidity, surfactants, nitrate-nitrogen, or orthophosphate-phosphorus.

The historical data for the results of laboratory analyses presented in Graph 7-2 indicate that total coliform bacteria exceedances have been generally declining since 2005. Fecal coliform and *Enterococcus* bacteria remain persistent at a low percentage of sites over the years. No exceedances in diazinon have been noted since 2003.

Since these trends have been based on only eight years of data, conclusions regarding pollution trends cannot be drawn with a large degree of certainty.

TABLE 7-2

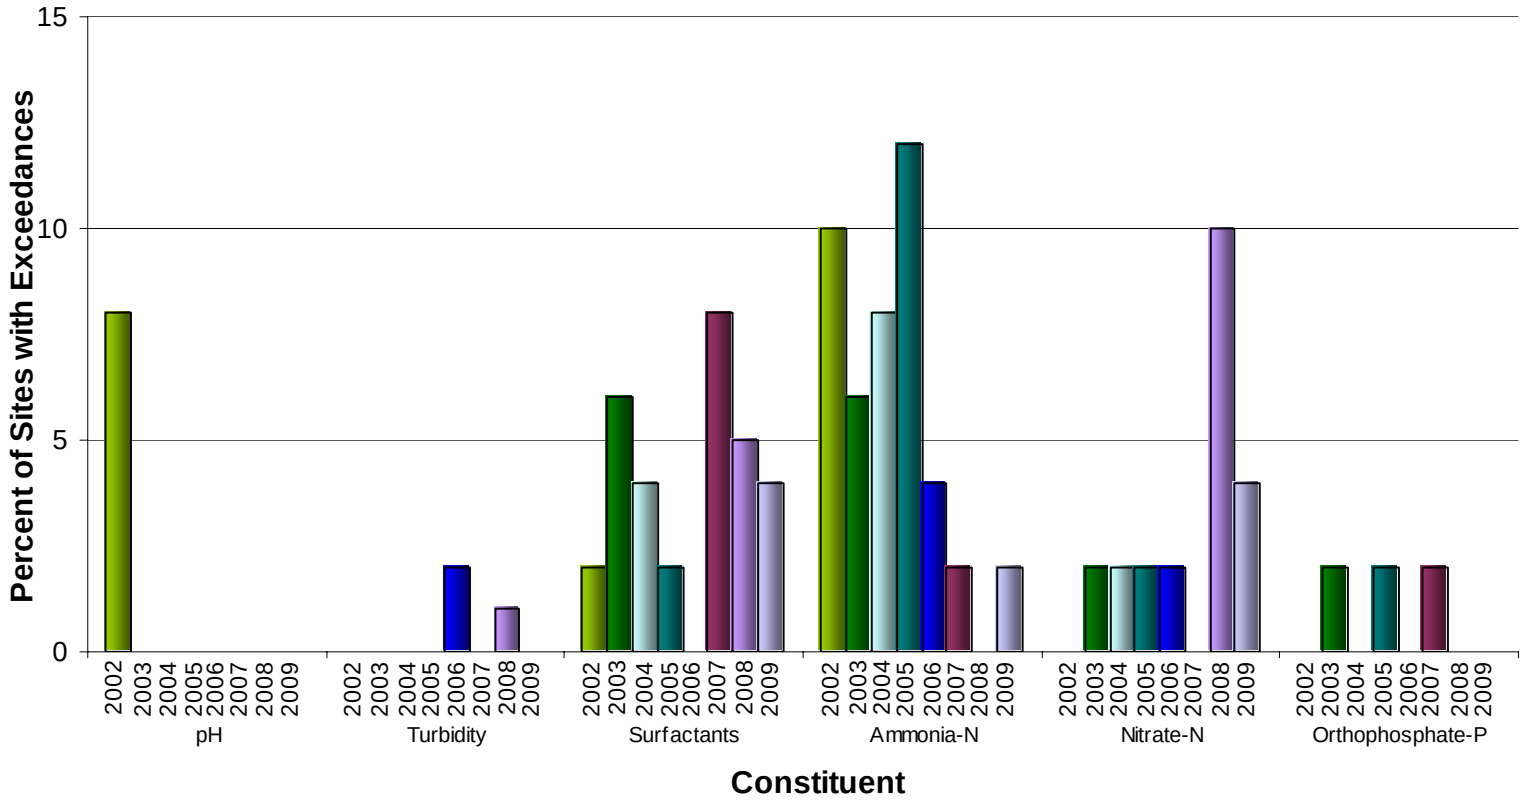
Notes:

Results based on complete routine visits only. Confirmation visits, follow-up visits, and dry sites not included.

* By regional consensus, the action level for conductivity has been changed during past years from numeric values to best professional judgment in order to account for sites in which salt water and groundwater increase conductivity. High conductivity levels at these sites are not necessarily exceedances or considered to be a water quality concern.

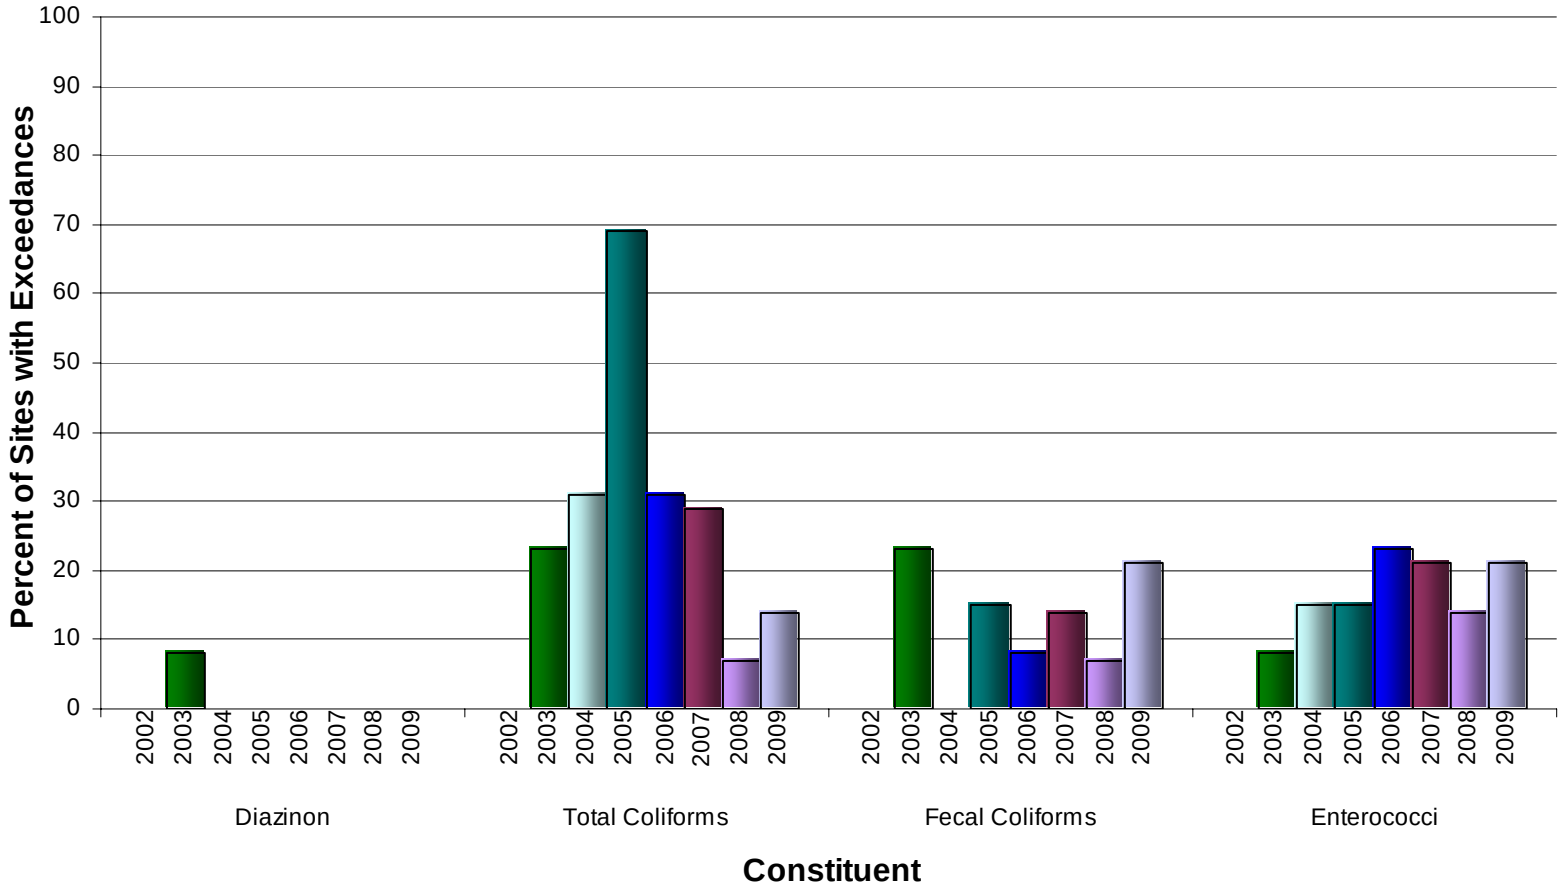
** Bacteria analytical methods in 2002 do not allow numerical comparison of results to those in subsequent years.

GRAPH 7-1
PERCENT OF SITES WITH FIELD SCREENING EXCEEDANCES BY YEAR



* Action level for turbidity is best professional judgement.

GRAPH 7-2
PERCENT OF SITES WITH LABORATORY ANALYSIS EXCEEDANCES BY YEAR



8 FOLLOW-UP INVESTIGATIONS

The purpose of follow-up investigations is to determine the sources of pollutants that exceeded action levels during the initial field screening and laboratory testing.

8.1 Investigation Procedures

Follow-up investigations are conducted in two rounds. The first follow-up investigations are for the sites at which action level exceedances are indicated by field testing. These investigations are in the form of additional field testing and are conducted within two business days of the initial findings. The second round of follow-up investigations are carried out for the sites at which laboratory testing shows elevated constituent levels. These investigations are conducted within two business days of receiving the laboratory test results.

During the follow-up investigations, flow rates are measured, visual observations are performed, and field testing is conducted. Visual observations, such as water color, clarity, odor, floatable materials, vegetation, and biology are recorded on field data sheets at each site. Field data sheets are included in Appendix D.

Source identification investigations begin by testing the water at the site again. This is referred to as a "confirmation" visit, as its purpose is to confirm the initial findings. If follow-up testing at a site results in constituent concentrations below specified action levels, the exceedance found during the initial sampling may have been due to a transient flow. If follow-up testing at a site finds constituent concentrations again above the specified action levels, an upstream investigation will be conducted. The field crew will progress upstream to isolate and identify potential pollutant sources.

Upstream investigations are also referred to as "IC/ID follow-up" visits, as the purpose is to identify illicit connections and illegal discharges. They are conducted by checking a number of upstream branches for any potential sources of the constituent of concern. The estimated flow rate in each branch and any relevant observations are recorded. Depending upon the constituent under investigation, laboratory samples may be collected for analysis.

The laboratory test for investigating upstream bacteria sources differs from routine bacteria testing. The IDEXX Colilert and IDEXX Enterolert test methods are used instead of the multiple tube fermentation methods used in routine testing. Information about these methods is provided in Table 3-2. Results for the Colilert and Enterolert tests are typically available within 24 hours, as opposed to the five business days needed for multiple tube fermentation analyses. The quicker turnaround time allows for additional upstream investigations as needed.

8.2 Investigated Sites

During the 2009 Dry Weather Monitoring Program, nine sites required follow-up investigations for constituent exceedances. Action levels were exceeded for nitrate-nitrogen at two sites, ammonia-nitrogen at one site, surfactants at two sites, total coliform bacteria at two sites, fecal coliform bacteria at three sites, and *Enterococcus* bacteria at three sites. This section includes a description of the site, analytical results, photographs of selected upstream locations, and the results of upstream investigations. Table 9-2 in Section 9 of this report provides a summary of the investigation results.

Site 3

Site 3 is located at an outlet behind the commercial and industrial complexes at the end of Kirkham Court. *Enterococcus* bacteria levels were measured at 11,000 MPN/100 mL at the initial site visit, and 241,960 MPN/100 mL at the confirmation visit, both exceeding the action level of 10,000 MPN/100 mL.

Upstream of the site, decomposing leaves and other organic debris were found in many of the catch basins on Kirkham Court, a number of which were damp. Surface areas damp with irrigation runoff were also observed. *Enterococcus* bacteria levels were over 241,960 MPN/100 mL in a manhole on Kirkham Court (location 3-1). No surface flow was located upstream of this area on the day of the confirmation visit.

The area was revisited on another day to attempt to identify a source while water was flowing upstream of Site 3. The water at Site 3 on this day was green in color and *Enterococcus* bacteria measured 241,960 MPN/100 mL. Flow from two primary lines were contributing to Site 3 from the upstream industrial area during the investigation, one from the east along Stowe Drive and one from the south along Kirkham Road.

Photo 8-1: The wash area of the landscaping company upstream of Site 3

Investigation of the line to the east revealed an illegal discharge from the Benchmark Landscaping companies' facility at 12575 Stowe Drive. Truck beds containing grass and leaf clipping debris were hosed out in a gravel area, where discharge entered a storm drain inlet, as seen in Photo 8-1. A sample of this discharge, taken from a manhole in front of the business on Stowe Drive, had *Enterococcus* bacteria levels measured at 241,960 MPN/100 mL (location 3-2). The water was green in color, just as at Site 3 on the same day, which indicates that the grass clippings were decomposing in the water. No other sources were contributing flow to the conveyance, indicating that the discharge from the landscaping company was solely responsible for the elevated bacteria levels at this location. The washing activities were discontinued after speaking to the company manager.

The conveyance from the south, on Kirkham Road south of Stowe Drive, had a flow of clear water, with *Enterococcus* bacteria levels measuring at 63 MPN/100 mL (location 3-3). Flow at this location was traced to the discharge from the Tomahawk USA companies' location at 12255 Kirkham Road, where a small hose was connected to a storm drain. Flow from this location did not contain high levels of *Enterococcus* bacteria, but City code enforcement staff were still dispatched to the site to investigate whether the connection was permissible. Code enforcement staff determined the connection was related to deionized water production and should not be connected to the storm drain system. The business removed the connection to the storm drain and instead redirected the water to a sink inside the building.

The overall findings of the upstream investigations for Site 3 indicate that the discharge from the landscaping company is the primary upstream source contributing bacteria to the storm water conveyance system. Decomposing organic material will produce high levels of bacteria in water, and is the primary source of bacteria to Site 3. The City was notified of the illegal discharge from Benchmark Landscaping, and code enforcement personnel were sent

to the site to follow up and direct site personnel to cease washing discharges. Subsequent to the code enforcement visit, City storm water staff also met with Benchmark Landscaping staff to discuss alternative methods of washing vehicles that could be used as more long term solutions. Benchmark Landscaping staff agreed to make structural modifications to the property such that washing activities would not result in discharges to the storm drain system.

The results of sampling during the upstream investigation for Site 3 are provided in Table 8-1; a map of sampling locations is provided in Figure 8-1.

FIGURE 8-1
SITE 3 BACTERIA UPSTREAM INVESTIGATION MAP

Site 3A and Site 3B

Sites 3A and 3B are located within manholes at the west end of Kirkham Court. Site 3A is downstream of Site 3B, and the sites share a common upstream conveyance. Samples from both sites exceeded the surfactants action level of 1.00 mg/L during their initial visits. Surfactant concentrations measured 2.50 mg/L for Site 3A and 1.00 mg/L for Site 3B. Puddles of water were noted in a few parking lots in the commercial and industrial areas upstream, however no flowing water was observed. The following day, both sites had a surfactants concentration measuring 0.50 mg/L, below the action level. It was concluded that the surfactants exceedances at sites 3A and 3B were the result of transient flows.

Site 4

Site 4 is located in a natural creek in Bette Bendixen Park. At the initial site visit, total coliform bacteria levels were measured at 80,000 MPN/100 mL, over the action level of 50,000 MPN/100 mL, and fecal coliform bacteria levels were measured at 50,000 MPN/100 mL, over the action level of 20,000 MPN/100 mL. Action levels for both constituents were exceeded at the confirmation visit, at which time total and fecal coliform bacteria levels were measured at 57,900 MPN/100 mL.

Immediately upstream of Site 4 is a residential area from which no runoff was observed. Further upstream, east of Pomerado Road, is an undeveloped area downstream of the Stowe detention basin. A sample of the outflow from the detention basin prior to entering the open area (location 4-1) had total and fecal coliform bacteria levels that were measured below action levels at 15,500 MPN/100 mL and 129 MPN/100 mL, respectively.

Upstream of the Stowe detention basin, the flow from a commercial and industrial area (location 4-2) had total coliform bacteria measuring above the action level at 81,600 MPN/100 mL, and fecal coliform bacteria measuring below the action level at 1,765 MPN/100 mL.

Photo 8-2: Animal feces in the open area upstream of Site 4

Due to the fact that high bacteria levels are present downstream of the open area at Site 4 and not upstream where the detention basin discharges, it was concluded that activity within the open area was the most likely source of bacteria to Site 4. Animal waste was seen in proximity to the stream in the open area, as shown in Photo 8-2. The commercial and industrial areas further upstream appear to contribute bacteria to the storm water conveyance system; however bacteria counts below the action levels measured between this area and Site 4 suggests that the industrial and commercial area is not the source of bacteria to the site. Animal waste around the stream in the open area, in combination with the large amount of decomposing organic material in the stream, is the most likely cause of the high total and fecal coliform bacteria levels at Site 4. The results of this investigation are provided in Table 8-2, and a map of sampling locations is provided in Figure 8-2.

TABLE 8-2
SITE 4 BACTERIA UPSTREAM INVESTIGATION

Site	Location	Flow (gpm)	Total Coliforms (MPN/100 mL)	Fecal Coliforms (MPN/100 mL)
4	12342 Old Pomerado Road, north of Veterans Building, at Bette Bendixen Park	12	**80,000**	**50,000**
4 (Confirmation)	Same as above.	5	**57,900**	**57,900***
4-1	Downstream of Stowe detention basin	10	15,500	129
4-2	Primary Site 2, off Stowe Drive north of business center 12300-12340	10	**81,600**	1,765

Note:
Red Bold Type = value exceeds action level
* E.coli was measured at 51,700 MPN/100 mL; applying the standard conversion factor to determine the number of fecal coliforms would produce a value of 60,824 MPN/100 mL, greater than the total coliform count, which is not possible. Therefore, the fecal coliform value is reported here as equal to the total coliform count.

FIGURE 8-2
SITE 4 BACTERIA UPSTREAM INVESTIGATION MAP

Site 18A

Site 18A is located in a concrete channel just north of the Hilleary Place bridge, east of Community Road. During the initial visit, nitrate-nitrogen was measured at 11.32 mg/L, over the action level of 10.00 mg/L. A confirmation visit was performed the following day, at which time nitrate-nitrogen was measured at 14.71 mg/L.

The residential area upstream of the site was visually assessed, however no potential sources of nitrate or surface flow were observed. At a manhole in the intersection of Midland Road and Somerset Road, flow was entering the concrete box from lines to the east and north, and additional flow of less than 1 gpm was observed seeping through a crack within the conveyance. The flow from the confluence of the eastern and northern pipes, location 18A-1, had a nitrate-nitrogen concentration measured at 13.97 mg/L. The flow seeping from the crack in the conveyance, location 18A-2, had a nitrate-nitrogen concentration measured at 17.22 mg/L.

This site has a history of high nitrate-nitrogen levels, which have in the past been attributed to nitrate containing groundwater seepage into the conveyance. The seepage of water through a crack in the conveyance observed upstream, and the fact that there was no surface flow in the upstream area, suggests that groundwater seepage was again the source of elevated nitrates to Site 18A. Seepage is likely to enter the conveyance at multiple points in the line, resulting in a higher flow rate at Site 18 than at upstream locations, even in the

absence of surface flow. The results of this investigation are provided in Table 8-3, and a map of sampling locations is provided in Figure 8-3.

Note: **Red Bold Type** = value exceeds action level

FIGURE 8-3
SITE 18A NITRATE-N UPSTREAM INVESTIGATION MAP

Site 21B

Site 21B is located within a manhole at the intersection of Garden Road and Clair Drive, in the pipe from the east. At the time of the initial visit, the water was ponded, and decomposing leaves were in contact with the water. The ammonia-nitrogen level was measured at 1.105 mg/L, over the action level of 1.000 mg/L.

The following day, the ammonia-nitrogen concentration was below the action level at 0.358 mg/L. It is possible that the transient exceedance was due to the decomposition of organic material in ponded water, which produces ammonia-nitrogen as a byproduct. As the ponded water evaporates, ammonia-nitrogen levels become more concentrated. Evidence of recent irrigation runoff was observed in the surrounding area. It is likely that the input of irrigation water overnight diluted the ponded water at the site, decreasing the ammonia-nitrogen concentration.

Site 36A

Site 36A is located at an outlet just west of the bridge on Tierra Bonita Road, south of Poway Valley Road. During the routine and confirmation visits, the water was ponded, and nearby Rattlesnake Creek was dry. Laboratory analyses indicated the level of total coliform bacteria measured at 500,000 MPN/100 mL, fecal coliform bacteria measured at 90,000 MPN/100 mL, and *Enterococcus* bacteria measured at 160,000 MPN/100 mL at the initial visit. All three of these values exceeded their respective action levels. A confirmation visit was performed, and analyses of the sample indicated all three types of bacteria continued to exceed action levels. Total coliform bacteria were measured at 2,420,000 MPN/100 mL, fecal coliform bacteria at 51,176 MPN/100 mL, and *Enterococcus* bacteria at 198,630 MPN/100 mL. No upstream sources of flow were noted during the investigation, so no additional samples could be taken.

Photo 8-3: Trash in the conveyance at Site 36A

The water at Site 36A contained decomposing trash and organic debris, as seen in Photo 8-3, a likely source of bacteria. In a ponded environment, bacteria is likely to proliferate. Areas upstream of the site, beneath the Tierra Bonita Road bridge, contained human and animal feces, food and food packaging waste, and decomposing leaves, which may provide a source for the trash and organic waste at Site 36A. Catch basins on Tierra Bonita Road, south of Evening Star Way and north of Twin Peaks Road, also contained large amounts of food packaging waste and decomposing leaves. Bacteria from these sources may be transported to Site 36A when intermittent flows, such as landscape overwatering, occur.

Site 132

Site 132 is located in a natural creek where it intersects Lake Poway Road, just west of Summer Sage Road. Laboratory analysis measured the level of fecal coliform bacteria at 24,000 MPN/100 mL, and *Enterococcus* bacteria measured 11,000 MPN/100 mL at the initial visit.

During the confirmation visit, water at Site 132 was flowing at less than half the rate observed during the initial visit, and both fecal coliform and *Enterococcus* bacteria levels measured below action levels. An upstream investigation was performed concurrent with the confirmation visit to increase efficiency. Minor amounts of decomposing leaves were observed upstream of Site 132, along the creek banks, and in catch basins along Trailwind Road, where some irrigation runoff was entering the storm water conveyance. Samples were taken from the eastern (location 132-1) and southern (location 132-2) lines contributing to the site. Both samples had fecal coliform and *Enterococcus* bacteria counts measuring below action levels. No additional bacteria sources were observed.

Since no bacteria exceedances were measured during the confirmation visit and upstream investigation, it was concluded that the initial exceedances of fecal coliform and *Enterococcus* bacteria at Site 132 were due to a transient flow. The results of this investigation are provided in Table 8-5, and a map of sampling locations is provided in Figure 8-4.

Note: **Red Bold Type** = value exceeds action level

FIGURE 8-4
SITE 132 BACTERIA UPSTREAM INVESTIGATION MAP

Site 141

Site 141 is located in a natural creek near 17150 Old Coach Road. During the initial visit, nitrate-nitrogen was measured at 11.02 mg/L. At the time of the confirmation visit, nitrate-nitrogen was measured at 10.37 mg/L. The site receives flow from two directions, from the east in the Hidden Valley Ranch property and from the south along Old Coach Road. The conveyance along Old Coach Road was dry upstream of the site. Flow from the eastern line originated at two irrigation ponds. A sample taken from the irrigation pond discharge, seen in Photo 8-4, had a nitrate-nitrogen level below the action level at 0.90 mg/L (location 141-1).

Photo 8-4: Discharge from lower irrigation pond, upstream of Site 141

The conveyance downstream of the irrigation ponds is comprised primarily of earthen channels. This year and historically, flow through this earthen area is absorbed into the soil and reemerges above ground in the storm water conveyance pipe just upstream of Site 141. It appears that nitrate-nitrogen concentrations increase from the point where water is

absorbed into the soil to where the flow reemerges above ground. Thus, groundwater appears to be causing the exceedance downstream. This area has a history of agricultural use, and the site is located in a low-lying area, where nitrate may have accumulated over time. The results of this investigation are provided in Table 8-6, and a map of sampling locations is provided in Figure 8-5.

9 SUMMARY AND RECOMMENDATIONS

9.1 Summary of Dry Weather Monitoring Results

Fifty-four monitoring locations were visited during the 2009 Dry Weather Monitoring Program. Four alternate sites were selected to replace dry primary sites. Laboratory analyses were performed on water samples from 14 of the primary sites, representing over 25 percent of sites with flowing or ponded water.

Most sites visited had clear, colorless, flowing water, with normal or limited vegetation that provided habitat for a variety of aquatic organisms. As a result of the trash assessment, 46 sites were rated optimal, six suboptimal, and two marginal. Taking into account both field screening and laboratory analyses, water from nine sites had parameters measuring at or above corresponding action levels. Table 9-1 provides a summary of action level exceedances.

TABLE 9-1
SUMMARY OF ACTION LEVEL EXCEEDANCES

9.2 Summary of Follow-Up Investigation Data

Table 9-2 presents the conclusions based on the results of confirmation visits and upstream investigations conducted at nine sites in the 2009 Dry Weather Monitoring Program.

TABLE 9-2
SUMMARY OF UPSTREAM INVESTIGATIONS

Site	Upstream Investigation Target Constituent(s)		Results / Probable Sources
	Field	Laboratory	
3	---	Enterococci	Decomposition of landscaping waste discharged by Benchmark Landscaping
3A	Surfactants	---	Transient flow
3B	Surfactants	---	Transient flow
4	---	Total Coliforms, Fecal Coliforms	Decomposition of leaves and wildlife waste in the upstream open area
18A	Nitrate-N	---	Nitrate-containing groundwater seepage
21B	Ammonia-N	---	Transient flow, potentially generated by organic material decomposition at site, and increased concentration of ammonia-N as ponded water evaporated
36A	---	Total Coliforms, Fecal Coliforms, Enterococci	Decomposing leaves and trash in the ponded water at the site, and fecal matter upstream
132	---	Fecal Coliforms, Enterococci	Transient flow
141	Nitrate-N	---	Nitrate-containing groundwater; nitrate likely due to a history of agricultural activity in the area

9.3 Recommendations

Based on the results of the 2009 Dry Weather Monitoring Program for the City of Poway, the following actions are recommended for consideration.

9.3.1 Maintenance

- Remove decomposing organic material and animal waste from the earthen channel in the open area upstream of Site 4, which had bacteria exceedances this year.

- Remove decomposing organic material and trash in the storm water conveyance at Site 36A, which had bacteria exceedances this year. Remove human and animal waste and trash from beneath the Tierra Bonita bridge, and remove trash and decomposing leaves from the catch basins on Tierra Bonita Road, south of Evening Star Drive and north of Twin Peaks Road. These areas are upstream of Site 36A, and are likely to contribute to bacteria levels at the site when there is sufficient flow.
- Remove trash from sites 31 and 109, which received marginal trash assessment ratings, and from sites 16, 21A, 90, 106, and 111, which received suboptimal trash assessment ratings.

Laboratory Analytical Reports

EnviroMatrix Analytical, Inc.

28 September 2009

D-Max Engineering
Attn: Arsalan Dadkhah
7220 Trade Street, Suite 119
San Diego, California 92121

EMA Log #: 0909635

Project Name: Poway Dry Weather Monitoring
Project Desc./#: 200934W-2 2009 Follow-Up

Enclosed are the results of analyses for samples received by the laboratory on 09/22/09 15:42. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that this data is in compliance both technically and for completeness.

Dan Verdon
Laboratory Director

CA ELAP Certification #: 2564

4340 Viewridge Avenue, Suite A - San Diego, California 92123 - (858) 560-7717 - Fax (858) 560-7763

Project Name: Poway Dry Weather Monitoring
Project Desc./#:200934W-1

Enclosed are the results of analyses for samples received by the laboratory on 08/13/09 12:48. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that this data is in compliance both technically and for completeness.

Dan Verdon
Laboratory Director

CA ELAP Certification #: 2564

Notes and Definitions

GC-05	Results confirmed by GCMS.
A-01	Dilutions used for the fecal coliforms provided an MPN > than the total coliforms according to the MPN table due to the greater precision of the total coliform dilutions analyzed.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-02	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.
GC-05	Results confirmed by GCMS.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

2009 Trash Assessment Form

SITE ID: 1 DATE: 8/19/09

OBSERVER: JL/MD TIME: 15:30

LOCATION: Behind 12371 Old Pomerado Road

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 15x5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 3 DATE: 8/13/09

OBSERVER: JL/MD TIME: 10:35

LOCATION: Behind industrial site at the end of Kirkham Court, 150 ft into the canyon

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 10 x 5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 3B **DATE:** 8/17/09

OBSERVER: JL/MD **TIME:** 11:25

LOCATION: At the end of Kirkham Court, east of 3A

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 5x5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ **MS4** ☐ **RECEIVING WATER** ☐ **BOTH**	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 12 **DATE:** 8/12/09

OBSERVER: JL/MD **TIME:** 12:45

LOCATION: Behind 12818 Beeler Creek Trail, at merger of Poway Creek and Beeler Creek

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L X W (FT): 10 x 10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☐ MS4 ☐ RECEIVING WATER ☑ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 15 DATE: 8/12/09

OBSERVER: JL/MD TIME: 11:20

LOCATION: End of Montauk Street in Poway Creek

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 10x10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☑ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 19 **DATE:** 6-23-09

LOCATION: 13106 Gate Dr. **TIME:** 11:30

OBSERVER: David Kunugi

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 20 x 6

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☒ BOTH	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☒ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 34 DATE: 8/19/09

OBSERVER: JL/MD TIME: 13:30

LOCATION: Community Rd, southwest of the Sycamore Tree Lane intersection

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 25x15

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 54 DATE: 8/13/09

OBSERVER: JL/MD TIME: 13:50

LOCATION: West of Espola Rd, between Lake Poway Rd and Morning Air Road

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 10x10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. 2009 Trash Assessment Form

SITE ID: 90 DATE: 8/6/09

OBSERVER: JL/MD TIME: 11:15

LOCATION: Off Pomerado Road, East of Powers Rd on Vaughan Rd, south of bridge

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 20x10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☑ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 106 DATE: 8/19/09

OBSERVER: JL/MD TIME: 9:30

LOCATION: East of Community Rd, between Metate Lane and Stowe Dr, in canyon

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Marginal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 25x10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☐ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☑ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 115 DATE: 8/12/09

OBSERVER: JL/MD TIME: 15:20

LOCATION: At the end of Silver Lake Rd at the Utopia Rd intersection

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 5x5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

ESTIMATED AREA OF ASSESSMENT L X W (FT): 20x25

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ **MS4** ☐ **RECEIVING WATER** ☐ **BOTH**	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2009 Trash Assessment Form

SITE ID: 132 DATE: 8/13/09

OBSERVER: JL/MD TIME: 11:30

LOCATION: Lake Poway Rd, between Summer Sage Rd and Prairie Vista Rd at the creek

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Submarginal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 20x15

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☑ RECEIVING WATER ☑ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. 2009 Trash Assessment Form

SITE ID: 135 DATE: 8/13/09

OBSERVER: JL/MD TIME: 15:10

LOCATION: South of Espola Rd, at the end of Elmfield Lane, behind 12811 Cedar Tree Way

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 10x5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

Telephone Number: (858) 668-4722

EXECUTIVE SUMMARY

In January 2007, the Regional Water Quality Control Board (RWQCB) issued Order No. R9-2007-0001 (Municipal Permit), a National Pollution Discharge Elimination (NPDES) Permit regulating discharges to the storm drain system within 18 municipalities in San Diego County, the County of San Diego, the San Diego County Regional Airport Authority, and the San Diego Unified Port District (collectively referred to as "Copermittees"). As required by the Municipal Permit, the City of Poway (City) has created and maintains a Jurisdictional Urban Runoff Management Program (JURMP). The City's JURMP includes Best Management Practices (BMP) standards for businesses, construction and development projects, residents, and the City's own activities. The JURMP also includes programs for water quality monitoring and educational outreach.

This JURMP Annual Report presents the City's activities to implement its JURMP during the 2009/2010 fiscal year, which began on July 1, 2009, and ended on June 30, 2010. The RWQCB submitted comments on the City's 2007/2008 JURMP Annual Report during the 2009/2010 reporting period. The City has addressed the comments; a summary of the comments and the City's response to each is provided as Attachment 1.1 of this JURMP Annual Report.

Each section of this JURMP Annual Report discusses the City's efforts during 2009/2010 and how those efforts met the requirements of the Municipal Permit. Key actions taken for the major components of the City's storm water program are summarized below.

Development Planning Component

During 2009/2010, the City continued to oversee development activities occurring in the City to mitigate potential threats to water quality due to such activities. The local Standard Urban Stormwater Mitigation Plan (SUSMP) was updated during the fiscal year as required by the Municipal Permit, and the City collaborated with the other Copermittees to develop the Hydromodification Management Plan (HMP). The final HMP was approved by the RWQCB in July 2010. The City successfully obtained verification of treatment control BMP maintenance from all projects on its treatment control BMP inventory. Fourteen sites in the City with approved treatment control BMPs were inspected, and all High Threat to Water Quality (TTWQ) projects were inspected prior to the start of the 2009/2010 rainy season. The City also took action to resolve a Notice of Violation related to implementation of its SUSMP program for several development projects in previous years. This action included re-review of projects and working with property owners to correct any deficiencies noted for previously completed projects, including requiring retrofits to install BMPs. Additionally, RWQCB staff conducted a field visit to treatment control BMPs in the City in September 2009. No violations were noted during that field visit. City staff received two development-related training sessions from an outside consultant, and City storm water staff and land development engineers met weekly to discuss SUSMP requirements and their application to projects in the City.

Construction Component

During 2009/2010, the City had 145 active construction sites, prioritized as 20 High TTWQ, 49 Medium TTWQ, and 76 Low TTWQ. The City conducted plan checks of erosion control plans to ensure construction projects complied with the City's minimum BMP requirements. The City conducted 346 inspections to verify BMP implementation, and issued 60 Correct Work Notices and 9 Stop Work Orders to construction sites that were not in compliance with City requirements. In two instances the City hired a contractor to install BMPs at private sites that did not have sufficient BMPs when rain was imminent. One of these was the Viewpoint project, at which the project's security deposit was not sufficient to cover the cost of BMP installation, so the City paid the additional costs directly to ensure proper BMPs were in place before the rain event.

Municipal Component

The City inspected all high TTWQ municipal fixed facilities during 2009/2010. The City also continued its rigorous street sweeping and MS4 maintenance programs. A total of 857.2 tons of trash and debris was removed through street sweeping activities, and 456.55 cubic yards of debris were removed during routine MS4 maintenance activities. The City also inspected and cleaned 67 miles of sewer line and continued to maintain its sanitary sewer system to decrease the potential for a sanitary sewer overflow (SSO); there were no SSOs during the reporting period. City personnel were regularly trained regarding storm water pollution prevention concepts and practices.

Industrial and Commercial Component

During 2009/2010, the City inspected all high TTWQ sites on the City's industrial and commercial inventory and met the Municipal Permit requirement that at least 25 percent of inventoried sites in the City be inspected each year. The City conducted a total of 136 full industrial and commercial inspections. The City's watershed-based industrial and commercial inventory was updated based on information gained since the previous inventory update in 2008/2009. The City's updated industrial and commercial inventory includes 522 stationary and 46 mobile businesses. During inspections, the City notified industrial and commercial businesses of the City's BMP requirements by discussing concepts with facility personnel. The City followed up with 29 facilities at which BMP deficiencies were identified. Inspectors also assessed each facility's compliance with the State of California General Industrial Permit (Industrial Permit).

Residential Component

A large percentage of land use in the City of Poway is residential, and the City used a variety of methods to educate its residents. The City provided each quarterly edition of the *Poway Today* newsletter to more than 19,000 residential addresses, and each issue was archived on the City's website. Each newsletter published during 2009/2010 contained a variety of storm water-related articles. During 2009/2010 the City hosted a variety of waste disposal events and encouraged residents to participate in these events. Residents properly disposed of 307,417 pounds of household hazardous waste (HHW) and 12,116 gallons of used oil during these events. The City also responded to and resolved 14 complaints made

to the City's storm water hotline regarding residential areas. The complaint investigations were used as opportunities to enforce BMP requirements and to educate residents.

Illicit Discharge Detection and Elimination Component

On September 10, 2008, the RWQCB adopted Addendum No. 2 to the Municipal Permit. This addendum requires the City to wait to submit the illicit discharge detection and elimination (IDDE) section of its JURMP Annual Report until the report for the 2010 Dry Weather Field Screening and Analytical Monitoring Program, which took place during June and July 2010, is finalized. The section must be submitted to the RWQCB no later than December 15, 2010.

While the full section will not be submitted until after September 30, 2010, the City did still implement its IDDE program component during 2009/2010. During this period, the City responded to and resolved 30 complaints made to its storm water hotline and the Public Works maintenance hotline plus one additional incident referred via a 911 call. The recommendations in the final report for the 2009 Dry Weather Monitoring Program were addressed during this reporting period. The City continued maintenance of the sanitary sewer system to prevent SSOs, and there were no SSOs during 2009/2010.

Education Component

The City continued to educate a variety of audiences in the City as a means to raise storm water awareness in various communities throughout 2009/2010. During this reporting period, the City's efforts resulted in an estimated 265,460 impressions. City staff attended municipal training sessions that covered a variety of different topics ranging from routine storm water training to industrial and commercial inspection concepts and a seminar on total maximum daily loads (TMDLs). The City continued to circulate the quarterly *Poway Today* newsletter to industrial and commercial businesses and residents. Each newsletter sent during 2009/2010 included storm water-related articles aimed at both residents and businesses in the City. Industrial and commercial businesses were also provided educational material during inspections. Additionally, the City continued working with I Love A Clean San Diego (ILCASD) to provide educational presentations and storm water literature to the public. Approximately 315 adults and school-aged children attended presentations hosted by ILACSD that included information about watersheds, storm water issues, pollution prevention measures, and appropriate ways to recycle used motor oil.

Public Participation Component

During 2009/2010, the City continued to provide opportunities for the public to participate in storm water related events, such as cleanup events, and participate in outreach activities, through which the City works to increase general knowledge and awareness regarding storm water issues. Volunteers of the City's Adopt-a-Trail program spent 860 hours removing trash and debris from City trails. Additionally, residents participated in a number of large waste and household hazardous waste (HHW) disposal events. During the 2009/2010 a total of 5,850 households participated in the City's various waste disposal programs and properly disposed of over 307,417 of HHW, 12,116 gallons of used oil, and 618 tons of trash and debris.

Fiscal Analysis Component

The City continued to collect a Storm Water Fee to provide a dedicated source of funds for its Storm Water Pollution Prevention Program. Portions of the Program that benefit only City-owned properties or undeveloped properties were funded by the City's General Fund. During 2009/2010, a fiscal analysis reporting template was developed collectively by the Copermittees. The City used this template to report the 2009/2010 expenditures and the 2010/2011 budget in this JURMP Annual Report.

Effectiveness Assessment Component

During 2009/2010, the City continued to evaluate the effectiveness of its JURMP implementation. The City has seen some encouraging signs of the effect of its program, such as lower amounts of pollutants in its Dry Weather Monitoring Program in recent years and no SSOs reported in 2009/2010.

Special Investigations

Aside from upstream investigations conducted as part of the Dry Weather Monitoring and Sampling Program, no special investigations were needed or conducted during this reporting period.

Non-Emergency Fire Fighting

City staff continue to implement BMPs during regular maintenance of fire and emergency vehicles and equipment, training exercises, facilities maintenance, and post-emergency rehabilitation of response equipment.

JURMP Revisions

Any changes made to the JURMP since the JURMP update in the spring of 2008 and subsequent changes reported in the 2009 JURMP Annual Report are discussed throughout this JURMP Annual Report where applicable.

Conclusions and Recommendations

During future fiscal years, the City will continue to implement the programs detailed in its JURMP; it is anticipated that some program refinements will continue to be made as implementation progresses. The City is working with other Copermittees in its watersheds in response to the Bacteria Project I TMDL and the Los Penasquitos sediment TMDL currently under development. The City will also continue to collaborate with the other Copermittees to improve the overall efficiency of its program and to develop updated methods of assessing program effectiveness.

1.0 INTRODUCTION

1.1 BACKGROUND

This Jurisdictional Urban Runoff Management Program (JURMP) Annual Report presents an activity summary for the City of Poway (City) during the 2009/2010 fiscal year. The JURMP Annual Report preparation and submission are required by San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit).

1.1.1 REGULATORY BACKGROUND

The 1987 amendments to the Federal Water Pollution Control Act, also known as the Clean Water Act (CWA), established a framework for regulating Municipal Separate Storm Sewer System (MS4) discharges under the National Pollutant Discharge Elimination System (NPDES). In 1990, the RWQCB issued the first regional NPDES permit for municipalities in the San Diego Region, followed by a revised permit in 2001. RWQCB Order No. 2001-01 was replaced by the current Municipal Permit in 2007.

In 2002, the City, like all regulated municipalities in the San Diego region (collectively referred to as Copermittees), developed and submitted a JURMP to the RWQCB. The City then submitted an updated JURMP, as required by the Municipal Permit, in March 2008. The JURMP explains management measures for different sectors, including municipal, industrial, commercial, construction, and significant development and re-development activities.

Annual reports documenting the implementation of the JURMP are required to be submitted to the RWQCB by September 30. This JURMP Annual Report presents data from the 2009/2010 fiscal year, which extended from July 1, 2009, to June 30, 2010.

1.1.2 CITY SETTING

The City of Poway is located in central San Diego County, surrounded by the City of San Diego and unincorporated portions of San Diego County. The City itself covers approximately 39 square miles and has an estimated population size of approximately 50,000. It extends across three watersheds in San Diego County: the San Dieguito Watershed, the Los Peñasquitos Watershed, and the San Diego River Watershed. The northern portion of the City lies in the San Dieguito Watershed, which is designated as Hydrologic Unit (HU) 905. The southern half of the City is part of the Los Peñasquitos Watershed, HU 906, and a very small section of eastern Poway lies in the San Diego River Watershed, HU 907. This section of the City is designated as permanent open space, which cannot be developed. Since the area draining to the San Diego River is permanent undevelopable space, the Municipal Permit does not include City of Poway as a responsible party for the San Diego River Watershed Urban Runoff Management Program (WURMP).

1.2 PURPOSE AND OBJECTIVES

The City's JURMP presents strategies to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The JURMP describes various programs intended to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. This JURMP Annual Report has been prepared to document the implementation of the City of Poway's JURMP during the 2009/2010 reporting period.

1.3 RWQCB COMMENTS RECEIVED

During 2009/2010 RWQCB staff met with City staff to discuss the RWQCB review of the City's 2008 JURMP and 2007/2008 JURMP Annual Report. Subsequent to the meeting a comment letter requesting clarification about nine items from the 2007/2008 JURMP Annual Report was sent to the City. The City's response to the RWQCB comments is provided as Attachment 1.1 of this 2009/2010 JURMP Annual Report. The RWQCB also conducted a field visit to treatment control BMPs in the City in September 2009. No violations were noted during that field visit.

1.4 REPORT ORGANIZATION

This report follows the standard reporting outline jointly developed by the Copermittees and submitted to the RWQCB in July 2007. The following sections are included in the JURMP Annual Report.

Section 1 **Introduction**
Section 2 **Development Planning Component**
Section 3 **Construction Component**
Section 4 **Municipal Component**
Section 5 **Industrial and Commercial Component**
Section 6 **Residential Component**
Section 7 **Illicit Discharge Detection and Elimination Component**
Section 8 **Education Component**
Section 9 **Public Participation Component**
Section 10 **Fiscal Analysis Component**
Section 11 **Effectiveness Assessment Component**
Section 12 **Special Investigations**
Section 13 **Non-Emergency Fire Fighting**
Section 14 **JURMP Revisions**
Section 15 **Conclusions and Recommendations**
Section 16 **References**

Each section includes all components required by the standard JURMP Annual Report format. In some cases, additional subsections within the standardized sections have been added to provide a more detailed explanation of the City's activities during the reporting period. For example, in this introduction section, the standard reporting format only

includes subsections 1.1 and 1.2. Background, subsection 1.1, has been divided into Regulatory Background, subsection 1.1.1, and City Setting, subsection 1.1.2, for clarity.

2.0 DEVELOPMENT PLANNING COMPONENT

2.1 INTRODUCTION

The development planning component of the City's JURMP aims to improve overall storm water quality by reducing the discharge of pollutants from development projects to the MEP and managing increases in runoff from development projects that have the potential to negatively affect downstream water bodies.

The major components of the City's program include development project reviews to apply Standard Urban Storm Water Mitigation Plan (SUSMP) requirements, BMP inspections, and requiring parties responsible for installed BMPs to certify that appropriate maintenance has been conducted each fiscal year.

2.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the reporting period are presented in the following bulleted list. More details about the City's activities for this component of its storm water program are provided in the remainder of this section.

- Inspected BMPs at 14 completed sites with approved treatment control BMPs and met required inspection frequencies, as shown in Table 2-1.
- Obtained verification of BMP maintenance from all inventoried projects.
- Updated the SUSMP requirements in February 2010, in advance of the March 24, 2010 deadline.
- Worked with other Copermittees to develop a final Hydromodification Management Plan, which was approved by the RWQCB just after the end of the 2009/2010 reporting period.
- Worked with responsible parties of completed projects to correct design and installation deficiencies noted in 2009.
- Provided nine training sessions to City staff. The City's land development engineers and Stormwater Program Administrator also meet weekly to discuss SUSMP requirements as they applied to projects in the City.

2.2 LAND USE PLANNING

2.2.1 BACKGROUND

The City's General Plan was last updated in 2002 and contains water quality and watershed protection principles in its Natural Resources Element. The principles established in 2002 provide an ample framework for implementing the development planning requirements of the Municipal Permit, and no changes to these policies were necessary during this reporting period.

2.2.2 Source Characterization

The City's General Plan contains established restrictions on the types of new development projects based on their planned land uses to ensure public safety and limit negative impacts to the surrounding environment. No changes to the development restrictions in the City's General Plan for storm water purposes were implemented during the reporting period.

2.2.3 Best Management Practice Requirements

Please refer to the City's updated JURMP document for a list of the water protection policies included in the City's General Plan. These policies remained the same throughout the reporting period.

2.2.4 Program Implementation

The City implemented its water protection-related land use policies during the reporting period mainly through the City's Municipal Code. The City updated the SUSMP requirements in Division VI of Title 16 of its Municipal Code by passing Ordinance 702 on February 16, 2010. The updates made at this time were consistent with the Model SUSMP prepared by the Copermittees and adopted by the RWQCB on March 25, 2009. Ordinance 702 is included as Attachment 2.1 of this JURMP Annual Report, and the complete SUSMP requirements in Title 16 of the Municipal Code can be accessed via the City's website, www.poway.org. The City of Poway's Local SUSMP, a formatted guidance manual based on the regional Model SUSMP document, was also updated in February 2010. The City of Poway Local SUSMP is incorporated into Division VI of Title 16 of the Municipal Code by reference. The updated City of Poway Local SUSMP document is included as Attachment 2.2.

Details on how the City implemented its established water protection policies through its environmental review process and its development project approval and verification processes during the reporting period are provided in Sections 2.3 and 2.4 of this JURMP Annual Report.

2.3 Environmental Review Process

The City's current environmental review process is detailed in the City's JURMP. No modifications to the City's environmental review process were made during the reporting period.

2.4 DEVELOPMENT PROJECT APPROVAL AND VERIFICATION PROCESS

2.4.1 BACKGROUND

During the 2009/2010 fiscal year, the City implemented the watershed protection principles in the City's General Plan through various aspects of the City's development project approval and verification process, as detailed below.

2.4.2 SOURCE CHARACTERIZATION

The different priority pollutants, sources, and activities associated with development projects within the City are addressed through the implementation of the City's Municipal Code. The City's SUSMP regulations are included in Municipal Code chapters 16.100 through 16.105, which comprise Division VI of Title 16 of the Municipal Code. Projects subject to SUSMP regulations are identified by completion of applicability checklists. More detail about this process is provided in Section 2.4.4.2.

2.4.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City updated its SUSMP requirements for development projects in February 2010, as described in Section 2.2.4 above.

2.4.4 PROGRAM IMPLEMENTATION

During the 2009/2010 fiscal year, the City required implementation of its BMP requirements for all development projects through education, the development project approval process, and the treatment control BMP inspection and maintenance verification program.

In response to questions raised by the RWQCB about one development project in the City, toward the end of 2008/2009 the City completed a comprehensive review of SUSMP submittals from previously approved projects dating back to the inception of the SUSMP in 2002. As a result of that review process, several deficiencies were discovered at previously constructed projects, and these deficiencies and other aspects of the City's SUSMP program were discussed during a meeting with the RWQCB at the City on June 23, 2009. Following the meeting with the RWQCB, the City was issued a Notice of Violation (NOV) related to its SUSMP program implementation on July 29, 2009. During 2009/2010, City staff worked with the responsible parties for the developments at which deficiencies were discovered to resolve the identified issues. To bring about resolution to the identified issues, City staff sent corrective action letters, made site visits, met with property owners and engineers to discuss potential solutions, and made numerous phone calls. Results from this were sent to the RWQCB as updates during the fiscal year. Table 2-2 summarizes the results of this process.

The City's Stormwater Program Administrator also worked with the City's engineers in late 2008/2009 and throughout 2009/2010 to develop and implement new processes to prevent

future deficiencies from occurring. The Stormwater Program Administrator and land development engineers met weekly during 2009/2010 to discuss the status of current projects subject to SUSMP and how the proposed designs were appropriately meeting SUSMP requirements, especially in light of new requirements adopted in February 2010. All projects that did not have prior lawful approval prior to the adoption of the new requirements were required to meet the new requirements.

RWQCB staff also conducted a field inspection visit to treatment control BMPs on September 17, 2009. This visit focused on the South Poway Business Park Detention Basins. No violations were noted during this field visit.

2.4.4.1 OUTREACH AND STAFF TRAINING

Toward the end of the 2008/2009 reporting period, the City filled several engineering vacancies. The engineers hired had experience preparing documents for SUSMP compliance in their previous positions and brought this experience with them to the City, and the City's Stormwater Program Administrator also provided four SUSMP-focused training sessions to City development staff during the fiscal year. During the 2009/2010 the Stormwater Program Administrator and engineering staff worked together to clarify protocols for routing and reviewing projects to ensure SUSMP requirements were being met. As noted earlier in this section, the City's Stormwater Program Administrator met with the City's land development engineers weekly to discuss SUSMP requirements and the status of SUSMP projects in the City. The weekly meetings helped ensure the City's procedures to identify projects subject to SUSMP and then apply the requirements to subject projects were being effectively implemented.

In addition to the significant internal staff training and coordination completed during the fiscal year, D-MAX Engineering, Inc. (D-MAX) completed a training session on treatment control BMPs for City engineers and inspectors in September 2009. The training session included a PowerPoint presentation about common treatment control BMPs and associated maintenance measures plus a field visit to several installed BMPs. D-MAX staff demonstrated how to access BMPs and how to determine whether the maintenance of the BMPs is adequate or needs correction. City staff also attended training sessions by California Stormwater Quality Association and by D-MAX on hydromodification management, by the American Public Works Association on SUSMP requirements, and by Orco Block Company on the use of permeable pavers.

Project proponents are made aware of SUSMP requirements through the development review process, including interaction with staff at the front counter and meetings with City staff. Distribution of maintenance verification letters to parties responsible for maintenance of treatment control BMPs at completed projects has also increased the level of knowledge of regulated parties.

2.4.4.2 URBAN RUNOFF APPROVAL PROCESS FOR DEVELOPMENT PROJECTS

All development projects that required City permits were required to undergo the City's urban runoff approval process as detailed in the City's JURMP. Checklists were completed to determine storm water requirements for each project, including whether SUSMP requirements applied. The City records this information for each project in a spreadsheet continuously throughout the year. A summary of the projects submitted during 2009/2010 and whether each was subject to SUSMP requirements is presented in Table 2-3 at the end of this section.

Of the submitted projects, 10 were determined to be subject to SUSMP requirements. These 10 projects are listed with the types of treatment control BMPs proposed in Table 2-4 at the end of this section. One additional project, Sabin Residence, obtained a permit in 2008/2009 and is not included in Table 2-3. However, it was required to comply with SUSMP requirements in 2009/2010, so it is also included in Table 2-4. One example of a SUSMP project reviewed during 2009/2010 is St. Gabriel's Church. After working with the project proponent regarding effective BMP design during the review process, the final design included biofilters, an infiltration basin, and a detention system.

During 2009/2010 all SUSMP projects approved by the City proposed high or medium removal efficiency treatment control BMPs, so no feasibility analyses justifying the use of lower efficiency BMPs were necessary. No projects received a SUSMP waiver for implementation of treatment control BMPs, and at this time the City has no plans to develop a SUSMP waiver mitigation program.

The City continues to maintain its retrofitted detention basins, which provide treatment for many SUSMP projects in the South Poway Business Park area, as well as neighboring projects completed prior to SUSMP regulations that otherwise would not receive any treatment. Figure 2-1 shows the locations of the retrofitted detention basins and their respective drainage areas treated. Results of wet weather monitoring conducted to assess the treatment effectiveness of the South Poway Business Park detention basins are discussed in Section 11 of this JURMP Annual Report.

Hydromodification Management Plan

During the reporting period the Copermittee Land Development Workgroup met regularly to discuss key Hydromodification Management Plan (HMP) development issues and provide updates on the status of consultant work products. City staff regularly participated in the workgroup meetings. The final regional HMP was adopted by the RWQCB just after the end of the 2009/2010 reporting period on July 14, 2010. The City will be incorporating the HMP requirements into its local development requirements during 2010/2011.

The City's current Municipal Code contains detailed Interim Hydromodification Criteria (IHC), which the City implemented in 2009/2010 and will continue to implement until the recently adopted regional HMP requirements are incorporated into local requirements. No projects were subject to IHC requirements during 2009/2010.

BMP Installation Verification

City inspectors check to see that proposed BMPs have been implemented prior to granting occupancy for development projects subject to SUSMP. To help address deficiencies noted in installation of BMPs in projects completed in the past, training was provided for inspectors in 2009/2010. City inspectors also began documenting BMP installation during pre-occupancy verification visits using a GPS unit and camera during the reporting period.

2.4.4.3 TREATMENT CONTROL BMP INSPECTION AND MAINTENANCE VERIFICATION PROGRAM

Toward the beginning of each fiscal year the City updates its inventory of completed projects with approved treatment control BMPs prior to mailing out operation and maintenance verification letters. Based on the results of the historical review of all completed SUSMP projects dating back to the inception of the SUSMP program, three projects were removed from the inventory: Poway Corporate Lot 9, Hampton Inn, and Business Park Hotel/Restaurant Site. These sites were removed from the inventory because the only treatment control BMP for SUSMP requirements at each of these sites was a South Poway Business Park detention basin, which the City maintains. Some of these sites also installed source control BMPs such as trash racks, but these were not considered treatment control BMPs for SUSMP purposes and therefore are not included in the inventory. Additionally, some of the projects noted in previous JURMP Annual Reports to have been subjected to SUSMP requirements were abandoned and never constructed. If in the future the projects are ever restarted, new permits would need to be applied for, which would also involve a review for whatever SUSMP requirements are current at that time. Projects previously subjected to SUSMP requirements but which will not be constructed and added to the inventory in the future are listed below:

- Hoffman Residence
- Bowers
- Lerner Residence
- Gold
- Vietnamese Christian Alliance Church

The final inventory of treatment control BMPs for 2009/2010 is included as Appendix A.1.

Maintenance verification letters were mailed to the responsible parties for inventoried BMPs prior to the beginning of the 2009/2010 wet season. City Public Works staff provided documentation of maintenance for all City-maintained BMPs, including the South Poway Business Park detention basins, prior to October 1, 2010. The City obtained completed verification forms from all of the sites listed in Appendix A.1 and all the South Poway Business Park detention basins. The detention basins are not included in the SUSMP inventory because they are not themselves Priority Development Projects. The detention basins are listed in Table 2-5 and shown on Figure 2-1.

During the course of 2009/2010, some additional projects were completed. The City's procedure for sites completed after the inventory is established for the fiscal year is to complete the check for BMPs prior to occupancy, record the site information and assign it a TTWQ priority, and then add the BMPs to the inventory of projects subject to the City's inspection and annual maintenance verification program the following fiscal year. This process helps the City focus its inspection resources on sites more likely to have maintenance deficiencies, as maintenance deficiencies are generally less likely at sites with recently installed BMPs. A table of the projects completed after the establishment of the inventory presented in Appendix A.1 is presented in Table 2-6.

The City visited sites with approved treatment control BMPs to inspect the maintenance condition of the BMPs. Sites designated as a high priority were inspected prior to October 1, 2009. The City's inspections met all the relevant frequency requirements listed in the Municipal Permit, as summarized in Table 2-1 below.

Table 2-1
Assessment of Compliance with Required Inspection Frequencies

Class	Number of Sites	Inspections	Percent Inspected	Permit Requirement	Requirement Met
All Inventoried Sites	23	14	61%	20%	**Yes**
Sites with Drainage Inserts	17	11	65%	50%	**Yes**
High Priority Sites	3	3	100%	100%	**Yes**

In some cases, inspections found that corrective actions were necessary. Table 2-7 at the end of this section presents a list of the inspections completed during the reporting period, whether issues requiring significant corrective actions were discovered, and the resolution status for instances where corrections were necessary.

Other Follow-Up and Enforcement Actions

As described earlier in Section 2.4.4, the City identified several deficiencies at previously completed projects in 2008/2009 and worked to resolve them during 2009/2010. The original deficiencies noted and the corresponding resolutions brought about by City actions are described in Table 2-2. In addition to these actions, the City also confirmed that The Heights installed the treatment control BMPs proposed in its revised plans, which were necessary to address sizing and treatment efficiency deficiencies in the original design. The City also required that the Sabin Residence, a residential property on a lot within the overall development of The Heights, meet SUSMP requirements, as shown in Table 2-4.

2.5 DEVELOPMENT PLANNING COMPONENT EFFECTIVENESS ASSESSMENT

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

2.6 PROGRAM REVIEW AND MODIFICATION

The City's SUSMP requirements have been updated as described above in Section 2.2.4.

Table 2-2
Resolutions to SUSMP Deficiencies at Previously Completed Projects

Permit Number	Project Name	Design Defect Description	Installation Defect Description	Resolution Description
G1452-04, DR02-10	POMERADO PROPERTIES	No sizing calculations or dimensions provided for sand filter. Project drainage areas and/or total area are not provided to help infer sizing.	Map indicates 2 catch basin inserts. Catch basin inserts not actually installed based on field observation.	Site inspected on 9/24/09—one of two filters proposed was found to be installed. Sizing information provided for sand filter; sand filter has sufficient capacity to treat the upstream drainage area, including flow related to the drain without a drainage insert. Because the sand filter has capacity to treat the runoff and is a higher removal efficiency BMP than a drainage insert, the second (not installed) drainage insert was deemed not necessary. Sand filter sizing calculations were provided to the RWQCB.
G1461-04, DR04-02	GENERAL ATOMICS (FORMERLY SLOUGH ESTATES/SLOUGH PARKWAY BUSINESS CENTER)	Appears that roof drains are connected directly to storm drain; approximately 1.5 acres of roof draining east will bypass catch basin inserts and not be treated. Roof drains flowing to west storm drain line also will bypass inserts, but that line drains to a private detention basin for treatment.		The City has reviewed several iterations of proposed treatment designs to treat the portion of the rooftop not receiving treatment. The City has not yet approved submitted plans at this point but is working through the last details of the design with the property owner to reach a final design that will meet requirements.
G1559-06, CUP06-06, DR06-03	13795 BLAISDELL PL	The west side of the project discharges out to Blaisdell Pl without being treated.		Curb cuts made so that the west side of the project can drain to an existing grass swale. Calculations and report were provided to the RWQCB.

Table 2-2 (Continued)
Resolutions to SUSMP Deficiencies at Previously Completed Projects

Permit Number	Project Name	Design Defect Description	Installation Defect Description	Resolution Description
G1568-07	OLHAUSEN GARAGE AND DRIVEWAY	Bioswale appears to be sloped to drain, which does not allow water to percolate through soil media down to underdrain. Smaller grass swale is shown along road in section A-A, but the plan appears to show a curb was built instead of a grass swale. Detention basin originally proposed to aid treatment along with proposed drainage inserts was removed from design and not built.		The vegetated swale was not required for treatment control based on the permit requirements at the time of submittal and is considered site design, not treatment control. The detention basin was built onsite and catch basin inserts were installed. The WQTR and a brief narrative were forwarded to the RWQCB.
G1422-03, DR02-05	TEMPLE ADAT SHALOM		Last inspection indicated all catch basin inserts were missing.	All inserts were installed and confirmed.
G1590-07, DR95-19, CUP95-10	ANYTIME TOWING EXPANSION	Sand / Oil Interceptor is not a storm water BMP, and sizing calculations were not provided. Minimum size of related BMPs designed for storm water use by same manufacturer of BMP proposed in SUSMP is 894 gallons; BMP proposed for project has 320 gallon capacity. Based on water quality flow rate of 0.13 cfs in WQTR and documentation from Jensen Precast, a 320 gallon interceptor would not have capacity to treat the design flow. It also appears that the BMP lacks a bypass, which would be needed for storms larger than the design storm.		A revised WQTR has been approved. A high-rate media filter has been installed as the treatment control BMP.

Table 2-7
2009/2010 Treatment Control BMP Inspections and Follow-Up Actions

No.	Project	Inspection Date	Inspection Findings	Follow-Up	Resolution Status
1	13795 BLAISDELL PLACE	12/2/2009	Missing two catch basin drainage inserts.	November 2008 records showed drainage inserts had previously been installed. A corrective action letter was sent notifying the responsible party to resolve the deficiencies. BMPs were replaced by the responsible party.	Resolved
2	COMMUNITY PARK PARKING LOT	9/24/2009	Biofilter: sediment and organic debris build-up, gaps in vegetative cover.	Public Works conducted the required maintenance.	Resolved
3	COSTCO/HOME DEPOT	11/17/2009	No significant corrective actions.	N/A	N/A
4	GENERAL ATOMICS (FORMERLY SLOUGH ESTATES/SLOUGH PARKWAY BUSINESS CENTER)	11/23/2009	Seven of 16 drainage inserts required maintenance to remove sediment, debris, and plant growth, missing downspout filters.	Corrective action letter was sent notifying the responsible party to resolve maintenance deficiencies. The responsible party has submitted plans for treating runoff from the roof that would have been treated by downspout filters, see Table 2-2.	In Progress
5	GENERAL ATOMICS (FORMERLY TOPPAN OPTICAL)	11/23/2009	No significant corrective actions.	N/A	N/A
6	KENT HILLS ESTATES	11/17/2009	Drainage insert needed repair or replacement.	Public Works staff ordered a new BMP and had it installed.	Resolved

Table 2-7 (Continued)
2009/2010 Treatment Control BMP Inspections and Follow-Up Actions

No.	Project	Inspection Date	Inspection Findings	Follow-Up	Resolution Status
7	KIRKHAM RIDGE BUSINESS PARK	9/29/2009	Leaves found inside filters.	Corrective action letter was sent notifying the responsible party to resolve maintenance deficiencies. Responsible party responded regarding the BMP inspection and reported that issues were corrected by cleaning the filters, which were placed on a quarterly maintenance schedule, and removing leaves from grates weekly.	Resolved
8	KOHL'S/STAPLES	9/29/2009	Two of 13 drainage inserts had deposited leaves and debris and required maintenance.	Corrective action letter was sent notifying the responsible party to resolve maintenance deficiencies. Responsible party sent back confirmation that all BMPs were cleaned out.	Resolved
9	OLD POWAY NEIGHBORHOOD STREET IMPROVEMENTS	9/24/2009	No significant corrective actions.	N/A	N/A
10	POMERADO PROPERTIES	9/24/2009	No significant corrective actions.	N/A	N/A
11	POWAY MITSUBISHI HYUNDAI (PHASE 1 & 2)	11/17/2009	All (3) drainage inserts required maintenance and absorbent filter media pouch replacement.	Corrective action letter was sent notifying the responsible party to resolve maintenance deficiencies. Responsible party reported that drains were cleaned of debris and sediment and all filters were replaced.	Resolved
12	STOWE PLAZA	11/23/2009	Two of the four drainage inserts were full of debris and required maintenance.	Corrective action letter was sent notifying the responsible party to resolve maintenance deficiencies.	In Progress
13	TECH CONTRACTORS LOT 1B	11/17/2009	No significant corrective actions.	N/A	N/A

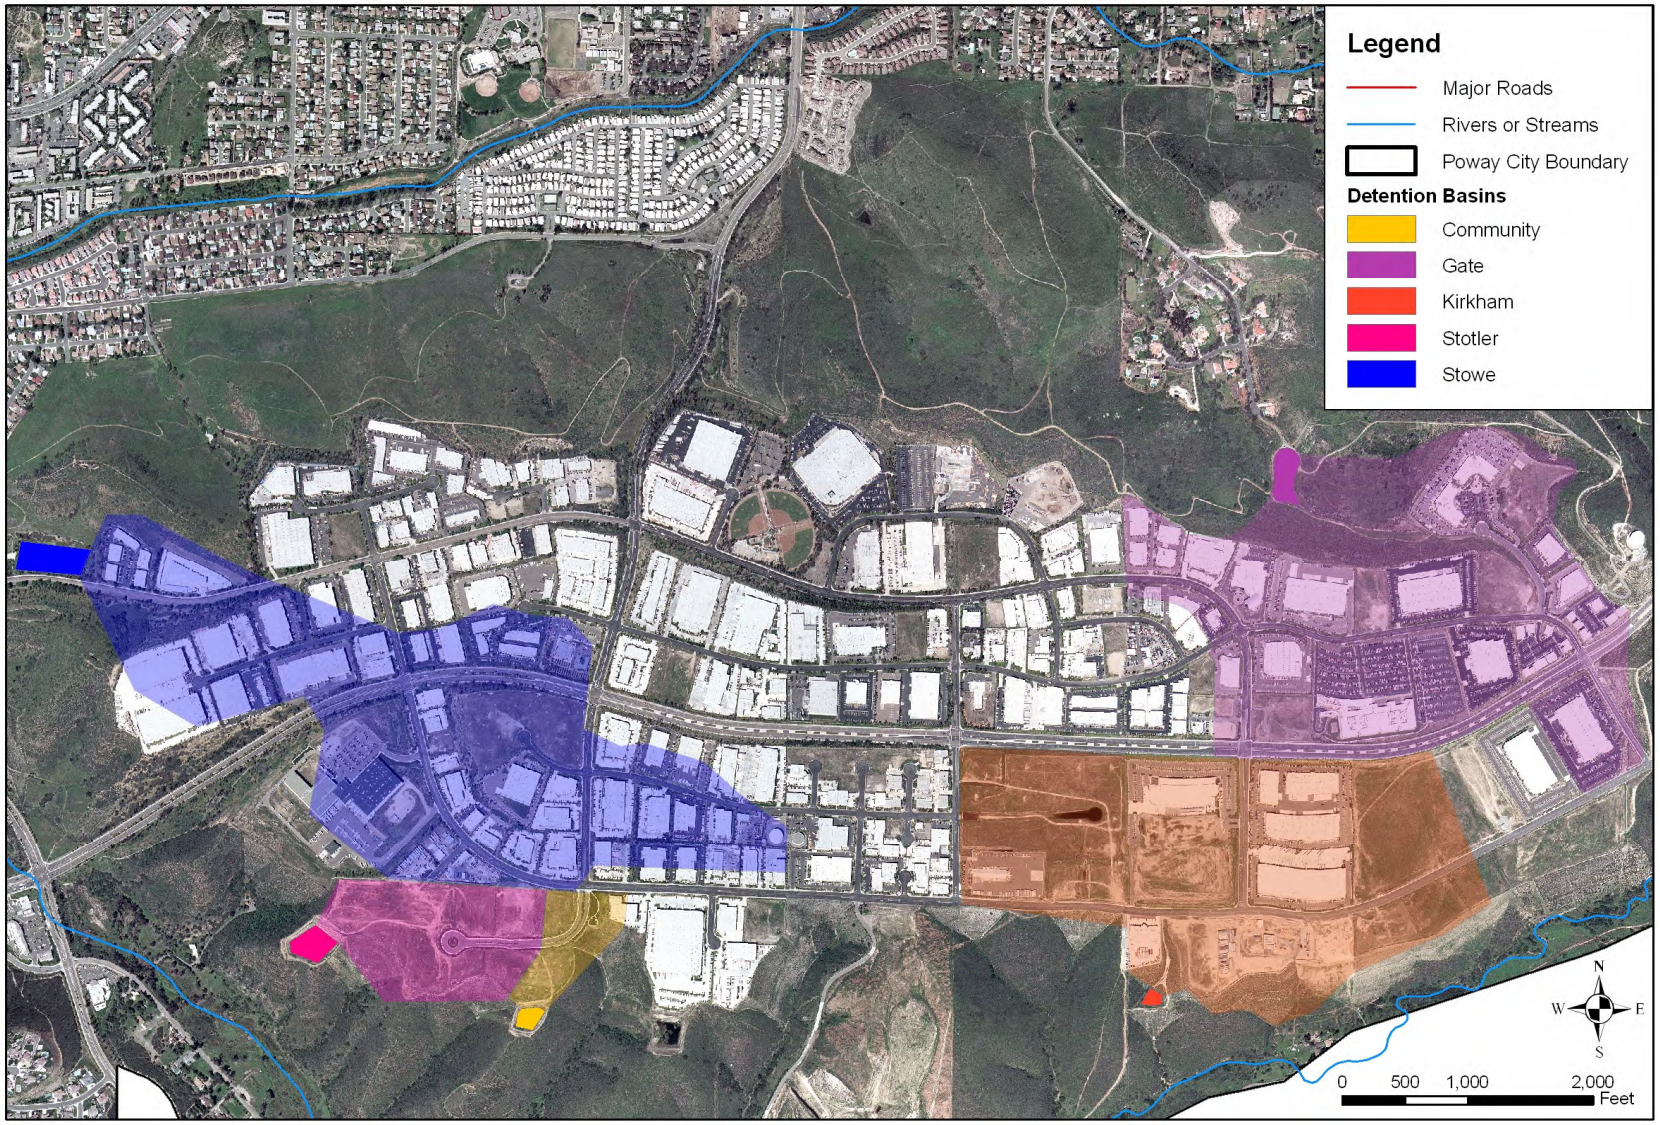
South Poway Retrofitted Detention Basins and Corresponding Drainage Areas Treated



3.0 CONSTRUCTION

3.1 INTRODUCTION

The City's construction program is designed to control construction and grading activities in the City. These types of projects have the potential to affect nearby water bodies due to the presence of disturbed soils and building materials and the potential for associated pollutants to be transported off site by storm water or non-storm water flows. The City continued to implement its construction program throughout 2009/2010.

3.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the construction component during the 2009/2010 reporting period are presented in the following bulleted list. The following subsections provide more detail on how the City complied with the Municipal Permit during the reporting period.

- Conducted plan checks of erosion control plans to ensure construction projects were in compliance with the City's minimum BMP requirements.
- Educated project proponents and contractors on storm water pollution prevention requirements at preconstruction meetings.
- Conducted Municipal Permit required training for appropriate City staff regarding the City's construction requirements, including three training sessions on the new General Construction Permit.
- Conducted 346 inspections at construction sites.
- Issued 60 Correct Work Notices and 9 Stop Work Notices in response to non-compliance with the City's minimum BMP requirements.
- A revised inspection form was developed and used at the inspections completed during the reporting period.

3.2 SOURCE CHARACTERIZATION

The City maintains a watershed-based inventory of all private and public construction projects, both active and completed. The database where the inventory is stored is updated daily. Projects are never deleted from the database; the status is changed to inactive upon the completion of the project. During this reporting period, there were 145 active construction projects. A total of 122 of these projects were private development/construction projects and 23 of these projects were CIPs. Appendix A.2 includes a list of all construction projects that were active during 2009/2010.

3.3 UPDATES TO ORDINANCES AND APPROVAL PROCESS

The City addresses storm water pollution through implementation of various components of its Municipal Code. During 2009/2010, the City updated the SUSMP Ordinance to include the updated model SUSMP. No changes were made to the City's project approval process during 2009/2010.

3.4 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City requires BMP implementation at all construction sites to reduce and/or eliminate the impact of discharges from construction site runoff on receiving water quality. Section 5.4 of the City's JURMP outlines the minimum construction BMPs required by the City. There were no changes to these requirements during 2009/2010.

3.5 PROGRAM IMPLEMENTATION

The City implemented the construction component of its JURMP throughout the reporting period through education and staff training, its comprehensive construction and grading approval process, and its construction inspection program, as detailed below.

3.5.1 EDUCATION AND STAFF TRAINING

The City provides information regarding storm water quality to project proponents, project personnel, employees, contractors, subcontractors, and other parties involved with construction activities. The following is a list of construction-related training activities that the City has provided or participated in during 2009/2010:

- All new development and redevelopment project proponents are required to attend a preconstruction meeting that includes education on storm water management topics including federal, state, and local regulations, implementation of a Storm Water Pollution Prevention Plan (SWPPP), if required, and implementation and maintenance of BMPs.
- The City sends out an annual announcement prior to the rainy season to all parties responsible for construction projects describing the enhanced construction BMP requirements and storm water management requirements during the rainy season (Attachment 3.1).
- Engineering Inspectors met weekly during 2009/2010 for project review and training conducted by the Construction Program Supervisor.
- Three training sessions for City engineers and inspectors were providedon the new General Construction Permit to help the City prepare for it going into effect on July 1, 2010.
- The City's Stormwater Program Administrator provided four training sessions on construction site BMPs and the updated inspection form. These efforts addressed the Municipal Permit required training for inspectors.

3.5.2 Construction and Grading Approval Process

The City requires that all proposed construction and grading projects implement measures to ensure that pollutants from the site will be reduced to MEP and will not cause or contribute to an exceedance of water quality objectives. Proponents of all construction and grading projects are required to comply with practices detailed in the City's JURMP and the City's Grading and Storm Water Ordinances. The grading approval process also includes the City requirement of cash securities for all grading projects and Minor Development Review Application (MDRA; non-grading) projects to ensure compliance with the City's storm water and grading ordinances.

As previously mentioned, all new development and redevelopment project proponents are required to attend a preconstruction meeting with City staff. During these meetings, the project proponent is educated on storm water management topics including federal, state, and local regulations, implementation of a SWPPP, if required, and implementation and maintenance of BMPs. Additionally, the developer, owner, and contractor are required to watch an educational video covering construction site BMPs and storm water management.

During 2009/2010 all construction projects were required to undergo the approval process described above. These requirements are tracked by the Land Development and CIP Divisions as part of their routing and record-keeping database.

Additionally, the City continued to enforce a 17 acre maximum disturbed area for grading activities during 2009/2010. None of the City's active construction sites were larger than 17 acres, and the maximum disturbed area limitation did not apply. However, all construction sites were still required to limit exposed cleared or graded areas to the amount of area that could be protected prior to a rain event, as prescribed in the City's seasonal BMP requirements.

The City also continued implementing advanced treatment requirements during the reporting period. Criteria for determining when advanced treatment is required are detailed in the City's JURMP. During the reporting period, the City's minimum BMP requirements were adequate at controlling sediment discharges at all of the active construction sites within the City's jurisdiction, and advanced treatment methods were not required at any construction sites.

3.5.3 Inspection of Construction Sites

Construction inspections conducted during the reporting period were performed as described in the City's JURMP. During inspections, inspectors discuss BMPs with each site project manager, developer, or owner and complete an inspection form. The City also inspects MDRA sites for compliance with BMP implementation requirements, including erosion and sediment control. The City requires every construction project and MDRA to have a Weather-Triggered Action Plan for Construction Sites for rain events. This Weather-Triggered Action Plan details the site's preparation for rain events and the additional BMPs to be implemented in the case of rain. Additionally, City Building Inspectors may enforce

storm water regulations or forward any noted violations on to the Engineering Inspectors for corrective action.

Inspected construction sites, along with their TTWQ, the number of weeks the site was active within the rainy season, and the number of inspections conducted during both the wet and dry seasons, the number of follow-up inspections, and the total number of inspections for each site is included with the inventory in Appendix A.2. During this reporting period, the City conducted 346 inspections at construction sites.

The City began using a comprehensive permit tracking software package, called TRAKiT, to manage data for its construction inspection program during 2009/2010. The program tracks permit issuance and other paperwork-related items, ground-disturbing activity, and construction activity. This system allows automatic reminders to be sent to the inspector when an inspection is due, and also stores the inspection records for easy retrieval and data analysis. Additionally, the City developed a revised BMP inspection form for use in the field (Attachment 3.2).

3.5.4 ENFORCEMENT MEASURES

The City's enforcement procedures require corrective actions when non-compliance is observed. Non-compliant sites receive a Correct Work Notice and timeframe for compliance. The site is required to become compliant within one to five working days, unless rain is imminent, in which case a Stop Work Notice is issued immediately. Failure to install BMPs indicated in a Correct Work Notice within the appropriate timeframe results in issuance of a Stop Work Notice, and notification is sent to the RWQCB. Additional enforcement actions including accessing the site's cash securities to do the work, revocation of permits, and issuance of citations also can be taken as necessary.

The City issued 60 Correct Work Notices and 9 Stop Work Notices to 51 projects for storm water BMP deficiencies during this reporting period. Table 3-1 describes each notice, along with the follow-up actions taken to correct the deficiency. Only two projects remained out of compliance at the end of 2009/2010. Of the two projects not in compliance, one site (Barbour Residence) has not resumed activity since a Stop Work Notice was issued, but the site was secured with additional BMPs. The City's Engineering Department is currently working with the owners of the other site (Ardizzone Residence) that did not come into compliance during 2009/2010. A letter was sent to the owner of the site requesting a meeting to discuss the BMP deficiencies observed.

Some notable enforcement actions taken during 2009/2010 are discussed below. For example, the City achieved compliance using security deposits at the following two sites:

- Inadequate erosion control at the Viewpoint Estates site on Tooth Rock Road resulted in a Correct Work Notice issued on 1/29/10 and then a Stop Work Notice issued on 2/1/10. Due to forecasted rain, the site was given two hours to correct all BMPs before the City would intervene to correct the BMPs. In this case, the BMP deficiencies were not corrected within two hours of the Stop Work Notice. Therefore, the City hired a private contractor to place emergency erosion controls at

the site to protect the site before the upcoming rain event. The project's security deposit was not sufficient to cover the costs of hiring the BMP installation contractor, so the City took on the additional costs of implementing the BMPs itself. A cost recovery effort for this work is in progress.

- The property owner at the Lerner Residence project site was found to be non-compliant and refused to implement BMPs prior to a rain event forecasted to have a seventy percent chance of occurring. After receiving the Correct Work Notice, the owner notified the City that he would not be able to correct the deficient BMPs prior to the upcoming rain event, so the City used the project's security deposit to place emergency erosion controls at the site in a timely manner.

The Heights development project, which includes the Sabin Residence as a separately permitted residential project on one of the lots, is a 122-acre development project in the northeastern portion of the City. During the 2009/2010 reporting period inadequate erosion control at The Heights project site resulted in the issuance of 11 Correct Work Notices, escalating to a Stop Work Notice issued by the City on February 5, 2010. The RWQCB also visited the site for inspections and issued an NOV to the City on March 3, 2010, by which time the City had already stopped work at the project in order to achieve compliance. The City's response letter was sent to the RWQCB on March 29, 2010. The City required the developer to install BMPs to bring the site into compliance, and installation of the BMPs was verified by inspection.

Finally, the City continued implementing its escalating enforcement process for past illegal grading activities at the Moritz project at 14272 Jerome Drive, continuing the legal action initiated in the previous reporting period. The RWQCB had previously issued a Cleanup and Abatement Order to this site, and the City is working with the RWQCB on enforcing storm water requirements at this site. No other projects required escalating enforcement actions beyond Correct Work and Stop Work Notices during this reporting period.

3.6 Construction Activities Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

3.7 Program Review and Modification

The City updated its construction inspection form, which was used for inspections during the reporting period. The City also began using a new permit tracking system, TRAKiT, to manage construction program data.

Table 3-1
Enforcement Actions Taken at Construction Sites During 2009/2010

#	Date	Project	Address	Type of Notice Issued	Resolution
1	7/13/2009	7-11 TENANT IMPROVEMENTS (STI09-308)	13012 POMERADO RD	Correct Work Notice	Inspected 9/8/09, in compliance

4.0 MUNICIPAL COMPONENT

4.1 INTRODUCTION

Throughout 2009/2010, the City of Poway continued to manage municipal areas and activities to reduce municipal discharges of pollutants to the MS4 to the MEP. As discussed in detail in the City's JURMP, the City owns and operates a variety of municipal facilities and activities. Public parks and recreation facilities, administrative buildings, fire stations, and public works facilities make up the bulk of the municipal areas in the City. Municipal activities conducted by the City include power washing, landscaping activities, street sweeping, street and sidewalk repair, and MS4 and sanitary sewer system maintenance. Information about the City's prioritized street sweeping program can be found in Table 4-1, and information about the City's MS4 maintenance program can be found in Table 4-2. The City's municipal inspection results can be found in Table 4-3. The City continued to respond to complaints made to the City's storm water hotline. All complaints made to the hotline are included in Appendix B; enforcement actions taken in response to complaint investigations are discussed in Section 4.8.

4.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the municipal component during the 2009/2010 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the municipal component of its storm water program during the reporting period are provided in the remainder of Section 4.

- The City inspected all high TTWQ fixed municipal facilities.
- The City hosted several training events/meetings for municipal personnel; over 100 City personnel participated in these training sessions.
- The City administered a pre-test and post-test quiz to staff undergoing routine storm water training to assess knowledge and the effectiveness of the training.
- The City removed over 857 tons of debris through street sweeping activities.
- The City removed over 456 cubic yards of debris through standard MS4 cleaning activities.
- The City cleaned 67 miles of sewer line during 2009/2010.

4.2 FIXED FACILITIES

4.2.1 BACKGROUND

The City owns and operates a variety of municipal fixed facilities. As mentioned in the City's JURMP, municipal fixed facilities have been grouped under one category, fixed

facilities. This is because these facilities receive routine inspections as part of the City's municipal program, making program implementation generally similar.

4.2.2 SOURCE CHARACTERIZATION

All fixed facilities are included in the City's municipal inventory, which is included in this JURMP Annual Report as Appendix A.3. Poway Royal Estate Mobile Home Park was sold to a private party and is no longer on the municipal inventory. Other than this change, no other modifications to the City's municipal inventory were made.

4.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City continues to implement and assess the effectiveness of BMPs for fixed municipal facilities as set forth in the City's JURMP. City staff are trained to recognize the need for additional BMPs and implement them as necessary. Strict BMPs remain in place for the management of pesticides, herbicides, and fertilizers; these BMPs, as described in the City's JURMP, have not changed. City public works employees, fire station employees, and employees at other fixed municipal facilities in the City continue to implement BMPs appropriate to the facility type as described in the City's JURMP. Parking lots at fixed facilities are swept during regular maintenance activities. City fire response personnel continue to be trained in implementing BMPs for non-emergency fire fighting activities as described in Section 3 of the City's JURMP. There have been no changes in BMP requirements for any fixed municipal facilities.

4.2.4 PROGRAM IMPLEMENTATION

Parks and Trails

During 2009/2010, the City's Parks and Trails Maintenance Division continued to implement the BMPs described in its JURMP for the management and use of pesticides, herbicides, and fertilizers, including the City's Integrated Pest Management (IPM) Program. City Parks and Trails staff implemented BMPs to control landscaping waste from parks and to keep City parks and trails free of trash and other debris. The City continued to work with local residents through the Adopt-a-Trail Program, which is discussed in Section 9 of this Annual Report.

Public Works Facilities, Fire Stations, Other Fixed Facilities

As previously mentioned, City personnel continued to implement appropriate BMPs for fixed municipal facilities as described in the City's JURMP. BMPs are also implemented during regular maintenance, such as landscaping and building maintenance, as necessary.

Currently, the Material Handling Yard is covered under The State of California General Industrial Permit (General Industrial Permit). The waste discharger identification (WDID) number for the Material Handling Yard is 9 37I015616. This facility maintains a site-specific Storm Water Pollution Prevention Plan (SWPPP) and conducts storm water monitoring in accordance with the requirements of the General Industrial Permit. The SWPPP document and the storm water monitoring records are kept on-site and can be easily accessed by staff

during an inspection. Additionally, City staff clean the City's Material Handling Yard on a weekly basis and also use a monthly BMP checklist to ensure maintained compliance with SWPPP requirements. The BMP checklist for the Material Handling Yard can be found in Attachment 4.1. During this reporting period, staff evaluated and improved the BMP checklist by revising it for clarity and including additional housekeeping BMPs. Additionally, City staff installed an asphalt berm around the batch plant to prevent any material from leaving the area in the event of a spill. This facility is also included in the Industrial/Commercial inventory because it is covered by the General Industrial Permit. In addition to the regular inspections by Public Works staff, described above, this facility receives annual inspections by storm water staff as part of the City's industrial and commercial inspection program.

Three City facilities, the City Operations Center, the Lester J. Berglund Treatment Plant, and the Vehicle Maintenance Facility, are located adjacent to each other and terminated General Industrial Permit coverage (WDID# 9 37I001092) during 2009/2010. The Notice of Termination (NOT) is available in Attachment 4.2. This change to the JURMP is also mentioned below in Section 4.12.

Fleet/Facility Maintenance staff continued to use a BMP advisement checklist to check on the status of BMP implementation at the City's Vehicle Maintenance Facility on a weekly basis. The BMP advisement checklist used at the Vehicle Maintenance Facility is included in Attachment 4.1. Improvements made to BMP implementation at the City's Vehicle Maintenance Facility during this reporting period include placing protective mats on the storm drains at the front and back of facility and stocking and labeling spill kits located at fuel dispensers. Additionally, four permanent canopies were constructed to cover tires that are on site for disposal or retreading. The canopies are also used to cover jack stands and other non-motorized equipment and to provide temporary storage for small equipment that the City is taking to auction.

Municipal Inspections

All high TTWQ fixed municipal facilities received a routine annual inspection in 2009/2010, for a total of 25 inspected sites. The City's inspection approach, as described in the JURMP, was implemented for all inspections at fixed municipal facilities conducted in 2009/2010. Inspected facilities and their associated corrective actions are included in Table 4-3.

Two municipal facilities were recommended for follow-up inspection based on routine municipal inspection results. South Poway Sports Park, located at McIvers Court and Stowe Drive, is a sport field complex with food preparation capabilities. During the inspection, inspectors observed a dirty waste cooking oil bin. The appropriate maintenance staff was contacted and the waste cooking oil bin was cleaned. To prevent future issues with the waste cooking oil bin, City staff equipped the bin with a secondary containment berm and overhead cover. Community Park, located at 13094 Civic Center Drive, was also recommended for a follow-up inspection. During the inspection, inspectors observed a leaky pipe near the pool that is located at the park. Field test kits indicated that the water was not chlorinated and therefore unlikely to be a discharge from the pool. City staff

believe the water is surfacing groundwater and continue to monitor the area for erosion or other issues caused by the flowing water.

For inspected sites with no significant BMP deficiencies, follow-up inspections were not conducted, but appropriate City staff were notified of the corrective actions necessary. Currently, City staff is on track to finish implementing all corrective actions observed during routine municipal inspections before the beginning of 2010/2011 wet season. The City's municipal inspection form is included as Attachment 4.3.

4.3 ROADS, STREETS, HIGHWAYS, AND PARKING FACILITIES

4.3.1 BACKGROUND

The City conducts regular maintenance of roads, streets, highways, and parking facilities in the City to control pollutants such as sediment, metals, and litter and debris.

4.3.2 SOURCE CHARACTERIZATION

The City maintains 165 miles of roads, streets, and highways. Roads, streets, and highways are included as one entity on the City's municipal inventory, which is included in Appendix A.3.

4.3.3 BEST MANAGEMENT PRACTICES

The City's primary BMP for roads, streets, highways, and parking facilities is street sweeping; other BMPs are outlined in the JURMP. There were no changes to the BMPs implemented for roads, streets, highways, and parking facilities in 2009/2010.

4.3.4 PROGRAM IMPLEMENTATION

During 2009/2010, the City swept approximately 12,000 curb miles and removed over 857 tons of debris. Table 4-1, below, describes the areas assigned high, medium, and low sweeping priorities and the associated sweeping frequency. As discussed in the City's JURMP, the City sweeps all streets in the City at least every two weeks. Although parking facilities associated with municipal facilities are considered part of the municipal facility on the inventory, the sweeping frequency is included in the table.

Table 4-1
Street Sweeping Prioritization and Frequency

Category	Description	Approximate Mileage of Route (curb miles)	Sweeping Frequency
High	Main arterials	153 miles	Once every two weeks
Medium	Business Park areas	20 miles	Once every two weeks
Low	Residential areas	332 miles	Once every two weeks
Parking Lots at Fixed Facilities	Parking lots associated with fixed municipal facilities	N/A*	Once every two weeks
Material Handling Yard	Material Handling Yard	N/A*	Once per week
Total Amount of Debris Collected from Street Sweeping Activities: 857.20 tons			

* A separate measurement of mileage data is not available for the swept area of parking lots associated with municipal facilities, and the Material Handling Yard. Mileage accrued while sweeping these facilities is included in the total mileage.

Inspections
Trash, debris, and sediment that has accumulated on City streets is identified and cleaned up via street sweeping, so additional inspections beyond this effort are not necessary.

4.4 MS4

4.4.1 BACKGROUND

The City's storm water conveyance system is designed to collect and convey surface runoff to receiving waters to prevent flooding during rain events.

4.4.2 SOURCE CHARACTERIZATION

The City's MS4, as one complete entity, is included in the City's high TTWQ municipal inventory. The City's MS4 consists of over 1,400 drop inlets, 44 box culverts, 65 miles of underground drainage pipe 18 inches or more in diameter, approximately 11 miles of open channels, and 12 detention basins, five of which have been retrofitted as treatment control BMPs in the South Poway Business Park.

4.4.3 BEST MANAGEMENT PRACTICES

The City maintained an MS4 inspection, maintenance, and cleaning schedule throughout the reporting period. Maintenance and cleaning are conducted to keep the MS4 in good operating condition and remove any trash or debris that may otherwise be carried to receiving waters. BMPs for MS4 maintenance activities, as described in the City's JURMP, did not change during 2009/2010.

4.4.4 PROGRAM IMPLEMENTATION

The City's MS4 inspection and cleaning schedule for 2009/2010 is shown in Table 4-2. All MS4 facilities were inspected at least once during the fiscal year, and all visits were conducted between May 1 and September 30.

The City has approximately 11 miles of concrete and earthen channels within urban areas of the City that undergo routine maintenance as part of the City's MS4 maintenance program. During 2009/2010, anthropogenic litter was observed in each of the channels during inspections, and all of these channels were inspected and cleared of trash and fallen vegetation, as appropriate. City personnel have identified a segment of open channel that requires increased maintenance activities. This area is located near a large movie theater complex and several convenience stores; patrons to these businesses have been identified as a contributing factor to the trash in this area. The City routinely inspects this area and cleans observed anthropogenic litter. Per the City's regulatory permits for channel maintenance, invasive vegetation is mowed and sprayed in place to maintain channel capacity. Therefore, sediment and mowed vegetation were not removed during channel maintenance activities conducted during 2009/2010.

An additional 94 miles of conveyances are located in open, undeveloped space, or on private property. Channel-like conveyances in open spaces are not considered to be part of the MS4 channel system, and the City does not maintain channels located on private property without dedicated easements. If maintenance of private channels is needed, the City requires the property owner to complete the maintenance.

Table 4-2
MS4 Maintenance Data

	Percent Inspected and/or Cleaned*	Percent of Open Channels Found with Anthropogenic Litter	Amount of Material Removed from Cleaning Activities
Catch Basins/ Self Cleaning MS4 Facilities	100%	N/A	Debris: 50 cubic yards
Detention Basins	100%	N/A	Trash: 4.15 cubic yards
Concrete Channels	100%	100%	Trash: 0.59 cubic yards Silt: 348 cubic yards Vegetation: 32 cubic yards
Earthen Channels	100%	100%	Trash: 21.81 cubic yards
Total Debris Removed From MS4 Maintenance Activities: 456.55 cubic yards			

* The City cleans out all structures, including self-cleaning structures, in which trash and debris is observed prior to the rainy season. Debris was removed from 60 drop inlets during the reporting period, including thirteen drop inlets that were observed at or above 33% capacity. Thus far, maintenance staff has not identified any structures that repeatedly have higher than average accumulations of trash and debris.

As described in Table 4-2, 456.55 cubic yards of material was removed during MS4 maintenance conducted in 2009/2010. City staff involved in maintenance activities reported estimated composition rates for each type of MS4 maintenance activities. For example, City staff reported that material removed during catch basin/self cleaning MS4 maintenance activities is almost entirely composed of litter and organic debris. The volumes were converted to estimated weights using the conversion factors of 2,300 pounds per cubic yard of sediment/silt and 400 pounds per cubic yard of vegetation, trash, and debris. The total weight of material removed was estimated at 421.91 tons.

4.5 SANITARY SEWER SYSTEM

4.5.1 BACKGROUND

To reduce the possibility of a spill or leak caused by a malfunction of a component of the City's sanitary sewer system, the City conducts routine maintenance of the system. A spill that introduces untreated sewage to receiving waters can contain high concentrations of bacteria, viruses, and even hazardous chemicals. Routine inspection and maintenance of the sanitary sewer system works to reduce the potential for a spill or SSO and also helps prevent the infiltration of seepage from the sanitary sewer system to the City's MS4.

4.5.2 SOURCE CHARACTERIZATION

The City maintains a system of public sanitary sewer facilities to convey wastewater from the City to be treated. The City's sanitary sewer system includes 182 miles of collection system and several pump/lift stations.

4.5.3 BEST MANAGEMENT PRACTICES

The City implements BMPs for the sanitary sewer system as described in Appendix C of the City's JURMP. There have been no changes to these BMPs during 2009/2010. The City inspects and maintains the sanitary sewer system as part of regular wastewater activities and clears blockages and repairs leaks as needed.

4.5.4 PROGRAM IMPLEMENTATION

The City continually inspects and maintains various aspects of the City's sanitary sewer system and cleans out or repairs any identified problem areas as necessary. The City continued to use a video camera to locate blockages, locate areas in need of repair, and identify any illegal connections. Identifying areas of the sewer system that require repair and making prompt repairs prevents those areas from becoming future seepage points or point of origin of an SSO. During 2009/2010, the City cleaned 67 miles of sewer line and found no areas of the system that required repair. The City also conducted weekly inspections at five of the City-owned pump stations.

During 2009/2010, the City continued to implement a Fats, Oils, and Grease (FOG) program that targets grease-producing facilities, such as eating establishments. The goal of the

program is to reduce grease buildup in the sanitary sewer system, which can cause or contribute to SSOs. The City conducted FOG inspections at 18 eating establishments during 2009/2010, and cross-referenced the City's business license database to verify that all grease-producing businesses are identified.

In case of an SSO, the City maintains a spill response plan that establishes procedures for responding to an SSO. Detailed information about the City's SSO spill response plan is included in the City's JURMP. There were no SSOs during 2009/2010.

4.6 MOBILE MUNICIPAL ACTIVITIES, INCLUDING POWER WASHING

4.6.1 BACKGROUND

The City conducts a variety of different mobile municipal activities, typically involving vehicle maintenance, landscape maintenance, street and sidewalk repair, and power washing. These activities are not confined to a specific location, so BMPs must be implemented wherever one of these activities is taking place.

4.6.2 SOURCE CHARACTERIZATION

Emergency vehicle maintenance, landscape maintenance, power washing, and street and sidewalk repair are listed on the City's high TTWQ municipal inventory as mobile activities.

4.6.3 BEST MANAGEMENT PRACTICES

The City implements BMPs for mobile activities as described in the City's JURMP and as applicable to the activity. City personnel are trained to implement BMPs for the specific activity in which they are involved. The City continued to use a pressure-washing unit with a vacuum and debris boom to prevent discharge during pressure-washing operations, and City personnel performing power washing are trained to collect all waste water. City personnel conducting emergency vehicle maintenance activities are trained to use drip pans and other spill containment during emergency vehicle maintenance.

4.6.4 PROGRAM IMPLEMENTATION

Power washing (for graffiti removal) and emergency vehicle maintenance, both high TTWQ activities, are conducted on an as-needed basis and are therefore not on a set schedule. Neither power washing nor emergency vehicle maintenance was scheduled to be conducted during the timeframe that routine municipal inspections were conducted. BMPs are implemented during these activities to prevent discharge of any pollutants to the storm drain system. Water from pressure-washing activities is not discharged to the MS4. Personnel responsible for these activities were contacted to discuss BMP implementation, and they confirmed that these BMPs continue to be implemented when graffiti removal and emergency vehicle maintenance activities occur.

Municipal personnel that conduct other mobile activities such as infrastructure maintenance and landscape maintenance are trained regularly regarding BMPs for material use and disposal. City staff conducted inspections of landscape maintenance and street and sidewalk repair. Appropriate BMPs were implemented during each activity, and there were no corrective actions provided to City staff conducting the mobile activities. Inspection results are listed in Table 4-3 at the end of this section. City staff will continue to be trained on appropriate BMPs for mobile activities as described in the City's JURMP.

4.7 Special Events

4.7.1 Background

As discussed in the City's JURMP, special events have the potential to generate trash and litter as a result of the patrons and activities of the special event. The City hosts several special events throughout the year. These events include festivals, fairs, and other events for various causes and occasions.

4.7.2 Source Characterization

As required by the Municipal Permit, special events are included on the City's high TTWQ municipal inventory.

4.7.3 Best Management Practices

As detailed in the City's JURMP, the City has selected BMPs for special events hosted in the City. In general, the goal of the City's special event BMPs are to properly manage trash and litter generated by the event, keep catch basins and other nearby MS4 facilities free of litter/debris from the event, and raise storm water awareness among the vendors and patrons of the event, as applicable.

4.7.4 Program Implementation

The City's minimum BMPs were in place for each special event in the City during 2009/2010. Additionally, City staff was available throughout the duration of each event to address any immediate issues and notify other City staff of an issue if necessary. Individuals applying for a permit to hold an event on City property are notified that approval of the activity does not excuse compliance with City ordinances, including the City's municipal storm water ordinance. The temporary use permit includes a condition of approval which prohibits illegal discharges and requires storm drain protection, trash BMPs, appropriate storage of liquids, and proper disposal of pet waste. This temporary use permit is available as Attachment 4.4.

During 2009/2010, the City routinely inspected and cleaned up during and after permitted special events. For example, the City conducted an inspection at the annual Poway Days Parade at Community Park, which occurred on September 12, 2009. The event includes a parade, food vendors, live music, and other activities. Public Works blocked the 13 storm

water inlets along the parade route to prevent trash from entering the system. Additional trash and recycling centers beyond the receptacles already in place at the park were set up, and any uncontained trash or debris were removed by City staff throughout the course of the event. Post-event clean-up and street sweeping was also conducted by City staff.

The City also inspected inlets and Rattlesnake Creek in the area of Old Poway Park for trash after a special event on October 5, 2009. No debris was observed. BMP implementation this year included increased use of booms and straw wattles at the City's special events. The City's special event inspection form is included as Attachment 4.5.

4.8 Public Reporting of Illicit Connections and Discharges

Reporting and Response

Public and municipal involvement are crucial to preventing and eliminating illicit connections and illegal discharges (IC/IDs) from the storm water conveyance system. The Storm Water Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The hotline number is provided on the City's website, in distributed storm water educational material, and in storm water articles in *Poway Today*. All complaints received through the hotline and website are logged onto a spreadsheet for documentation and tracking. Each logged complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop or clean up any and all illegal discharges. The Public Works Department also receives complaints regarding storm water, often due to infrastructure concerns. Complaints to the Public Works Department are also tracked and investigated.

Complaints received by the City during the 2009/2010 reporting period and the City's response to each are listed in Appendix B. Thirty-one complaints were documented this year. One complaint related to a construction project in the vicinity of San Moritz on May 7 was determined to be a potential threat to environmental health, so it was reported to the RWQCB in accordance with the 24 hour, five day reporting requirements of the permit. The situation was resolved by City crews, as described in Appendix B.

Enforcement

As previously stated, complaints received via the Storm Water Hotline, City website, and Public Works hotline are included in a table in Appendix B. The table also includes a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included clean-up, providing educational material and discussing storm water concepts with individuals involved in the complaint, and in some cases issuing courtesy notices. The City issued one courtesy notice in response to complaints received by the City's storm water hotline.

4.9 Spill Reporting, Response, and Prevention

The City has documented procedures for preventing and responding to SSOs. Preventive maintenance is regularly conducted on the City's sanitary sewer system, and inspections are

regularly conducted to monitor the condition of the public sewer lines and to determine the necessity of maintenance. Private lateral lines do not receive preventive maintenance, but the City assists in the containment and cleanup of sewer spills if the spill could potentially reach the City's MS4.

Individuals in the City are encouraged to report any SSOs to the City's Storm Water Hotline. During the 2009/2010 reporting period, there were no SSOs or significant spills.

4.10 Education and Outreach

During 2009/2010, the City continued to educate municipal personnel regarding proper BMP implementation and other storm water and watershed concepts. The City held a variety of training sessions for City personnel. Detailed information regarding the education and outreach conducted for City personnel is provided in Section 8 of this Annual Report.

4.11 Municipal Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

4.12 Program Modification and Review

One update was made to the municipal component of the City's JURMP during 2009/2010.

Fixed Facilities (Section 6.2 in the City's JURMP)
As previously mentioned, the City terminated General Industrial Permit Coverage for three fixed facilities that had been covered together under WDID# 9 37I001092. The activities conducted at the City Operations Center, the Lester J. Berglund Treatment Plant, and the Vehicle Maintenance Facility were reassessed and an NOT was filed. The effective date of coverage termination was October 10, 2009, per the response letter from the San Diego RWQCB included in Attachment 4.2.

Table 4-3
Municipal Inspection Results

#	Facility Name	Facility Address	TTWQ	Facility Category	Inspection Date	Corrective Actions
1	Adobe Ridge Mini Park	12244 Adobe Ridge Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	11/18/09	• Keep playground free of leaf debris. • Stabilize slope of north side of park. • Consider storm drain signage.
2	Arbolitos Park	Pomerado Road & Ted Williams Parkway	High	Parks, Recreational Facilities, and Other Landscaped Areas	11/18/09	• Keep parking lot and discharge locations free of leaf debris. • Stabilize eastern slope of soccer field around the middle of field. • Provide lids for trash cans. • Consider storm drain signage.
3	Aubrey Park	13544 Aubrey Street	High	Parks, Recreational Facilities, and Other Landscaped Areas	11/18/09	• Close dumpster lids. • Keep dumpster area free of sediment and debris. • Consider covering field maintenance vehicle. • Consider storm drain signage.
4	Bette Bendixen Neighborhood Park	12342 Old Pomerado Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	10/28/09	• Keep the park free of debris. • Provide lids for trash cans.
5	Blue Sky Ecological Reserve	16275 Espola Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	11/19/09	• Provide cover for trash cans. • Consider storm drain signage. • Stabilize slopes around parking lot.
6	City Operations Center*	14445 Lake Poway Road	High	Public Works Operations Facilities	9/30/09	No corrective actions noted.
7	Community Park	13094 Civic Center Drive	High	Parks, Recreational Facilities, and Other Landscaped Areas	11/18/09	• Consider cleaning oil stains in parking lot.
8	Fire Station No. 1	13050 Community Road	High	Fire Stations	12/2/09	• Prevent vehicle wash water from discharging to storm drain. • Conduct storm water training. • Consider storm drain signage.

Table 4-3 (Continued)
Municipal Inspection Results

#	Facility Name	Facility Address	TTWQ	Facility Category	Inspection Date	Corrective Actions
9	Fire Station No. 2	16912 Old Coach Road	High	Fire Stations	12/2/09	• Prevent vehicle wash water from discharging to storm drain. • Conduct storm water training. • Consider storm drain signage.
10	Fire Station No. 3	14322 Pomerado Road	High	Fire Stations	12/2/09	• Keep dumpster area free of sediment and debris. • Keep berm around diesel tank closed at all times. • Conduct storm drain training.
11	Fire Training Tower	12325 Crosthwaite Circle	High	Fire Training Tower	12/2/09	• Consider storm drain signage. • Keep forced entry training area free of sawdust accumulation.
12	Garden Road Park	14820 Garden Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	10/28/09	• Provide lids for trash cans.
13	Hilleary Park	13500 Community Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	10/28/09	• Provide lids for trash cans. • Keep parking lot free of sediment, debris, and oil stains.
14	Lake Poway Park	14656 Lake Poway Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	11/19/09	• Clean leaf debris around storm drain and in parking lots. • Stabilize slopes around Ranger and Public Works buildings. • Provide lids for trash cans. • Replace broken gravel bags.
15	Landscape Maintenance	Throughout City	High	Mobile Municipal Activities, Including Power Washing	11/19/09	No corrective actions noted.
16	Lester J. Berglund Treatment Plant*	14521 Lake Poway Road	High	Public Works Operations Facilities	9/30/09	• Protect south and west slopes from erosion.

Table 4-3 (Continued)
Municipal Inspection Results

#	Facility Name	Facility Address	TTWQ	Facility Category	Inspection Date	Corrective Actions
17	Material Handling Yard*	12325 Crosthwaite Circle	High	Public Works Operations Facilities	9/30/09	• Keep storm drain inlets free of debris. • Keep material bunk area clean and free of sediment. • Cover scrap metals next to storage room.
18	Old Poway Park Complex	Midland Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	11/18/09	• Keep storm drains and sidewalks free of leaf debris. • Provide cover for trash cans and rusty metal. • Keep parking lot free of oil stains.
19	Poway Oaks Mini-Park	Whispering Tree Lane, West of Shady Oak Court	High	Parks, Recreational Facilities, and Other Landscaped Areas	10/28/09	• Provide lids for trash cans.
20	Silverset Park	14795 Silverset Street	High	Parks, Recreational Facilities, and Other Landscaped Areas	11/18/09	• Clean storm drains of lawn clippings. • Keep swales and basketball court free of leaf debris. • Provide lids for trash cans. • Consider storm drain signage.
21	Skate Park	13090 Civic Center Drive	High	Parks, Recreational Facilities, and Other Landscaped Areas	11/18/09	• Keep storm drains free of leaf debris. • Consider providing recycling containers. • Consider storm drain signage.
22	South Poway Sports Park	McIvers Court and Stowe Drive	High	Parks, Recreational Facilities, and Other Landscaped Areas	11/19/09	• Keep storm drains and parking lots free of leaf debris and litter. • Keep parking lots free of leaf debris and oil stains. • Clean liquids in dumpster area. • Cover trash cans in complex. • Keep recycling bins closed. • Clean grease spills around grease bin storage. • Keep grease bin free of stains and spills.

28	Special Events	Throughout City	High	Special Events	Various	No corrective actions noted.

* These facilities were covered by the General Industrial Permit at the time when routine inspections were conducted and were inspected as part of the industrial and commercial inspection program. Subsequently, three of four facilities filed an NOT which was approved, effective on October 10, 2009. See Section 4.12 for details.

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

5.1 INTRODUCTION

During the 2009/2010 reporting period, the City continued to implement its program to mitigate urban runoff pollution from industrial and commercial sites and sources. The City aims to reduce the amount of pollutants discharged from industrial and commercial facilities through various aspects of the industrial and commercial program.

5.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Notable achievements for the industrial and commercial component during the 2009/2010 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the industrial and commercial component of its storm water program during the reporting period are provided in the remainder of Section 5.

- The City met the Municipal Permit requirement of inspecting at least 25 percent of its stationary industrial and commercial inventory.
- The City inspected all high TTWQ industrial and commercial facilities.

5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES / SOURCES ELEMENT

5.2.1 BACKGROUND

The City's updated industrial and commercial inventory (Appendix A.4) includes all stationary facilities known to be operating in the City that are required to be included on the City's inventories. Stationary facilities in the City include, but are not limited to, manufacturing facilities, wholesalers, auto dealerships, auto repair shops, and restaurants. The City requires industrial and commercial businesses to implement pollution prevention measures and activity-specific minimum BMPs to mitigate the impacts of business activities on water quality.

5.2.2 SOURCE CHARACTERIZATION

As previously mentioned, the City's inventories include stationary industrial and commercial businesses, as required by the Municipal Permit. Information on how the City prioritizes the industrial and commercial inventories based on TTWQ is discussed in detail in the City's JURMP. The City considers factors including those listed below when prioritizing the inventories:

- Subject to coverage under the Industrial Permit
- Consideration of downstream waterbody and whether the business is likely to discharge pollutants for which the waterbody is impaired

- Results from previous inspections and institutional knowledge
- Proximity to the receiving waterbody

During 2009/2010, the City updated its industrial and commercial inventory. City staff checked the list of businesses with active businesses certificates against the City's industrial and commercial inventory to identify recently opened businesses that should be added to the inventory. Businesses conducting activities listed in Section D.3.b(1) of the Municipal Permit that had obtained business licenses since the last inventory update were added to the City's inventory. Businesses that were on the City's inventory but were not listed as active businesses in the business license records were investigated to determine if they were still active in the City. If City staff determined these businesses were no longer active in the City they were removed from the City's inventory. The City's updated inventory includes 522 stationary industrial and commercial facilities.

5.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

Industrial and commercial businesses in the City are required to implement pollution prevention methods and other BMPs to reduce or potentially eliminate the generation of pollutants from business areas/activities. The City has established a set of minimum BMPs based on the CASQA Industrial and Commercial Handbook and the Caltrans Manual. The requirements include BMPs applicable to all facilities as well as activity-specific BMPs. The City's BMP requirements are included in Appendix C of the City's JURMP and have not changed since the adoption of the City's JURMP in March 2008.

Notably, the City has also taken an active role in the regional Industrial and Commercial Source Workgroup. City staff served as the chair of the inspection standards sub-workgroup, which during 2009/2010 worked to help develop better regional consistency in inspection procedures and inspection data reporting. The City of Poway chaired and hosted the majority of the meetings for this sub-workgroup. Draft documents were submitted to the overall workgroup toward the end of 2009/2010, with the goal of finalization in 2010/2011.

5.2.4 PROGRAM IMPLEMENTATION

Industrial and Commercial Inspections

During 2009/2010, the City conducted storm water compliance inspections at selected stationary industrial and commercial facilities. The inspected facilities were selected by using the following criteria:

- All high TTWQ facilities
- New businesses added to the inventory
- Time since last inspection

Table 5-1 provides a summary of industrial and commercial site visits that occurred during 2009/2010. The purpose of the City's inspection program is to confirm that the City's minimum BMPs are being implemented at stationary industrial and commercial facilities.

Table 5-1
Summary of Industrial and Commercial Inspections

Facility Category	Inventoried Stationary Sites	Full Inspections	Percentage Inspected
High TTWQ Sites	65	65	100%
Additional Sites	457	71	16%
Totals	**522**	**136**	**26%**

Facility inspections were conducted in accordance with the protocol set in the City's JURMP. Inspections involved a thorough examination of the facility and all outdoor activities. Five different training sessions were provided for staff conducting the City's industrial and commercial inspections, including an inspector certification class conducted by CalEPA. These trainings ensured the City met the Municipal Permit requirement for annual inspector training. More information about staff training is provided in Section 8 of this JURMP Annual Report.

BMP deficiencies and corrective actions were recorded on the City's industrial and commercial inspection form, which is included in the City's JURMP, and discussed with facility personnel present during the inspection. The City's industrial/commercial inspection form is included as Attachment 5.1. Table 5-2 provides a list of all facilities visited as part of the routine inspection program. The City completed full inspections at 136 facilities.

During the inspection process, the City also checked Industrial Permit compliance status when applicable. The City also reviewed storm water pollution prevention plans (SWPPP) and monitoring results when applicable. Businesses observed to be in violation of the Industrial Permit are included in Table 5-3.

The City did not rely on third-party inspections to satisfy its industrial and commercial inspection requirements during the reporting period. The City does not presently maintain a third-party inspection program.

General Industrial Permit

As previously mentioned, Industrial Permit compliance status was evaluated during the inspection process. If the business was new and had not previously been inspected, or if the business had recently changed activities, the inspector gathered information about the business activities that occur on site and assigned or reassigned the business' standard industrial classification (SIC) code(s). The inspector then evaluated Industrial Permit subjectivity based on SIC code. Violations of any aspect of Industrial Permit requirements were recorded on the standard industrial and commercial inspection form and are presented in Table 5-3. The table includes businesses directed to file a Notice of Intent (NOI) and develop a SWPPP and monitoring program, as well as businesses that had filed an NOI but had failed to develop a SWPPP and monitoring program. The table also includes facilities that could potentially gain exemption from Industrial Permit requirements by completing Notice of Non-Applicability/No Exposure Certification

(NONA/NEC) paperwork. Each business was notified of any Industrial Permit-related non-compliance by the inspector.

Education and Outreach

In addition to checking for compliance with the City's requirements and the Industrial Permit, inspections provide a venue to provide site-specific one-on-one education regarding storm water concepts and BMPs. Inspectors discussed a variety of topics such as watershed concepts and the City's BMP requirements. The main types of material distributed by inspectors were the Industrial and Commercial BMP brochure, restaurant brochure, and Integrated Pest Management (IPM) cards. Educational materials distributed during the 2009/2010 industrial and commercial storm water compliance inspections are included as Attachment 5.2 and are discussed further in Section 8 of this report. Attachment 5.2 also includes other industrial and commercial outreach material that was used during 2009/2010. Section 8 provides a discussion of other educational efforts directed toward industrial and commercial businesses during 2009/2010.

Each inspected business that required corrective action was mailed a copy of the inspection form as a written record of the need for corrective actions observed at the time of inspection. Most sites that required corrective actions had minor issues such as open dumpster lids or housekeeping issues. Facilities with more significant issues were recommended for follow-up; more information about these facilities is provided in the discussion below.

Enforcement

During 2009/2010, several industrial and commercial facilities were recommended for follow-up. Information about follow-up inspections is included in Table 5-2 with information about routine industrial and commercial inspections. Two facilities required more than one follow-up action. During a routine inspection at Beach Grass Café, the inspector observed a waste oil cooking spill in the grease bin area. The grease bin also lacked secondary containment. During the first follow-up the spill had not been cleaned up and secondary containment had not been obtained, so the City issued the business an NOV. After the NOV, facility personnel took appropriate steps to bring the business into compliance, which was verified by a second follow-up visit. In a similar situation, Sushi Lounge was also issued an NOV after the first follow-up inspection because facility personnel failed to provide the waste grease bin with secondary containment. After the NOV, facility personnel took appropriate steps to bring the business into compliance, which was verified by a second follow-up visit.

The City was able to work with all businesses that required a follow-up inspection to bring them into compliance before the end of the 2009/2010 fiscal year.

In addition to the industrial and commercial storm water compliance inspection program, the City regulates industrial and commercial facilities through complaints received by City's storm water hotline. A total of four complaints regarding stationary industrial and commercial facilities were received by the City's storm water hotline. Each complaint was investigated and appropriate action was taken to bring about compliance. Details of all

complaint investigations are included in the complaint log (Appendix B) and Section 4 of this Annual Report.

There were no instances of noncompliance at stationary businesses found to present a significant threat to human health or the environment observed during 2009/2010. Other than facilities observed to be out of compliance with the General Industrial Permit, discussed earlier in this section, no other businesses were reported to the RWQCB.

5.3 MOBILE SOURCES

5.3.1 BACKGROUND

Due to the nature of activities of most mobile businesses, a major area of concern tends to be the potential for illegal discharges. In general, mobile businesses can be hard to identify, as many may not have City business licenses. Additionally, because many mobile businesses may be home based and activities do not occur in one fixed location, inspections of such facilities are impractical.

5.3.2 SOURCE CHARACTERIZATION

Known mobile industrial and commercial businesses, as described in the City's JURMP, are included in Appendix A.5. Additionally, the Regional Industrial and Commercial Workgroup also developed a web-based mobile business database for use by all Copermittees. The goal of developing this database is to allow Copermittees to share information about mobile businesses, which may be active in more than one jurisdiction.

5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

BMPs for stationary industrial and commercial facilities, as discussed earlier in this section, are required to be implemented for mobile activities, as applicable. BMPs for mobile businesses, including key principles such as proper collection and disposal of any discharge, are discussed in the City's JURMP.

During 2009/2010, the Regional Industrial and Commercial Workgroup, in which the City was an active participant, adopted regional mobile business BMP standards. These standards were devised to create a uniform set of minimum BMPs for mobile businesses operating within the region. The Workgroup is currently developing a mobile business BMP notification template that each Copermittee may choose to use to notify mobile businesses operating within its jurisdiction.

5.3.4 PROGRAM IMPLEMENTATION

The City continues to use business license records to identify mobile businesses located in or performing services within the City. Complaints received by the City's storm water hotline regarding mobile business activities also help the City identify mobile businesses. Complaints received by the storm water hotline regarding insufficient BMP implementation

by mobile businesses are responded to by Code Compliance Officers or other City staff; educational materials are distributed as applicable. During 2009/2010, the City received one mobile business complaint during 2009/2010. The complaint was investigated, but no evidence of illegal discharges or other prohibited activity was observed.

Education and Outreach and Enforcement
Responses to mobile business complaints include City personnel discussing the BMP requirements of mobile businesses with the owner/manager. Educational materials such as the Industrial and Commercial BMP brochure (Attachment 5.2) are also provided.

There were no instances of noncompliance of mobile businesses that were believed to present potential threats to human health or the environment observed during 2009/2010, so none were reported to the RWQCB.

5.4 Industrial and Commercial Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

5.5 Program Review and Modification

During 2009/2010, the City made some minor changes to its industrial and commercial prioritization process. Overall, the process is still largely the same; however, several criteria were redundant, and therefore those criteria were removed. Similar to the old process, the new prioritization process establishes facilities that require Industrial Permit coverage or facilities with previous non-compliance issues as high TTWQ. Facilities that are less than 200 feet from any receiving water body or facilities over 10 acres are also high TTWQ.

Additionally, after determining that the prioritization process for mobile businesses does not use much of the same criteria due to the nature of a mobile business, the City developed a separate TTWQ prioritization process for mobile businesses. Similar to the stationary prioritization process, facilities that have previous non-compliance issues are automatically high TTWQ. Facilities that have no instances of previous non-compliance but have a high likelihood of discharge based on the business activity (likely to have uncontained water use) are medium TTWQ. The stationary and mobile prioritization flow charts, including descriptions of the flow chart options, are included in Attachment 5.3.

The City also updated its industrial and commercial inspection form, which is included as Attachment 5.1, and began using the TRAKiT data management system to record its inspection and inventory information.
