During 2011/2012, the City inspected all high TTWQ sites on the City's industrial and commercial business inventory and inspected more than 25 percent of all inventoried sites, surpassing the Municipal Permit requirement of at least 25 percent. The City conducted a total of 168 full industrial and commercial inspections (27 more than during the previous reporting period). The City's watershed-based industrial and commercial inventory was updated based on information gained since the previous inventory update. The City's updated industrial and commercial inventory includes 585 stationary and 81 mobile businesses. During inspections, the City notified businesses of the City's minimum BMP requirements and discussed storm water concepts with facility personnel. The average knowledge score of business representatives increased from 2.77 in 2010/2011 to 3.19 in 2011/2012; and average cleanliness score of the site increased from 2.89 in 2010/2011 to 3.22 in 2011/2012, despite the fact that 27 businesses had not previously been inspected. The City followed up with the 21 facilities at which significant BMP deficiencies were identified, and 19 have been resolved. The remaining two cases are in progress and will be resolved in early 2012/2013. Inspectors also assessed each facility's compliance with the State of California Industrial General Permit, Order No. 97-03-DWQ (Industrial Permit).

Residential Component

A large percentage of land use in the City of Poway is residential, and the City used a variety of methods to educate its residents. For example, the City provided each quarterly edition of the *Poway Today* newsletter to more than 17,000 residential addresses, and each issue was available on the City's website. The newsletters contained a variety of storm water-related articles and opportunities for involvement in clean-up events and household hazardous waste (HHW) disposal events. At these events, residents properly disposed of 287,735 pounds of HHW and 1,367.53 gallons of used oil during these events. The City also responded to and resolved 26 complaints made to the City's SWPP hotline regarding residential areas. The complaint investigations were used as opportunities to enforce BMP requirements and to educate residents.

Illicit Discharge Detection and Elimination Component

On September 10, 2008, the RWQCB adopted Addendum No. 2 to the Municipal Permit. This addendum requires the City to wait to submit the illicit discharge detection and elimination (IDDE) section of its JURMP Annual Report until the report for the 2012 Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program), which took place during June 2012, is finalized. The section must be submitted to the RWQCB no later than December 15, 2012.

The City implemented its IDDE program component during 2011/2012, although the full section will not be submitted until after September 30, 2012. During this period, the City responded to and resolved 33 complaints made to its SWPP hotline and the Public Works maintenance hotline. The recommendations made as a result of the 2011 Dry Weather Monitoring Program were addressed during this reporting period. The City also continued maintenance of the sanitary sewer system to prevent SSOs.

Education Component

The City continued to educate a variety of audiences in the City as a means to raise storm water awareness in various communities throughout 2011/2012. During this reporting period, the City's efforts resulted in an estimated 204,401 impressions made, which is 21,310 more than those made in the last reporting period. City staff attended municipal training sessions that covered SWPPP and BMP implementation. The City continued to circulate the quarterly *Poway Today* newsletter to approximately 17,000 residences and 2,000 industrial and commercial businesses. Newsletters sent during 2011/2012 included storm water related articles aimed at both residents and businesses in the City. Industrial and commercial businesses were also provided educational material during inspections. Additionally, the City continued working with I Love A Clean San Diego (ILACSD) to provide education and storm water literature to approximately 1,290 attendees of all ages at Rendezvous in Poway and the Spring Street Fair.

Public Participation Component

During 2011/2012, the City continued to provide opportunities for the public to participate in storm water related events, such as cleanup events, and participate in outreach activities, through which the City works to increase general knowledge and awareness regarding storm water issues. Volunteers of the City's Adopt-a-Trail program spent 970 hours

removing trash and debris from City trails. Additionally, residents participated in a number of large item and household hazardous waste (HHW) disposal events. During the 2011/2012 reporting period, approximately 4,776 visits were made to the HHW facility to dispose of 287,735 pounds of HHW, 1,367.53 gallons of used motor oil were collected by the eight certified collection centers, and 1,724 households participated in the City's self-haul clean-up event to properly dispose of over 690 tons of trash and debris. Overall, an increase of 1,721 visits and 21,832 pounds of HHW disposed of at City sponsored events was noted from the amounts reported during the previous reporting period.

Fiscal Analysis Component

During 2009/2010, a fiscal analysis reporting template was developed collectively by the Copermittees. The City continued to used this template to report the 2011/2012 program budget in this JURMP Annual Report. The City's SWPP Program funding sources have changed in 2011/2012, as detailed in Section 10 of this report.

Effectiveness Assessment Component

Indications of the program's effectiveness have been seen during this reporting period, such as an increase in average knowledge and site cleanliness scores of industrial and commercial businesses, fewer deficient facilities, an increase in the number of participants and amount of HHW and large items properly disposed of at City sponsored disposal events, and a generally declining trend in the average concentrations of constituents measured during the City's Dry Weather Monitoring Program. Additionally, a decrease in dry weather flow rates has been measured since 2002, suggesting that the City's efforts to reduce dry weather discharges to the MS4 have been successful.

Special Investigations

Aside from upstream investigations conducted as part of the Dry Weather Monitoring Program, no special investigations were needed or conducted during this reporting period.

Non-Emergency Fire Fighting

City staff continue to implement BMPs during regular maintenance of fire and emergency vehicles and equipment, training exercises, facilities maintenance, and post-emergency rehabilitation of response equipment.

JURMP Revisions

No changes to the City's JURMP were made during the reporting period.

Conclusions and Recommendations

During future fiscal years, the City will continue to implement the programs detailed in its JURMP; it is anticipated that some program refinements will continue to be made as implementation progresses. The City is working with other Copermittees in its watersheds in response to the Bacteria Project I Total Maximum Daily Load (TMDL) and the Los Penasquitos sediment TMDL currently under development. The City will also continue to collaborate with the other Copermittees to improve the overall efficiency of its program and to develop updated methods of assessing program effectiveness.

1.0 INTRODUCTION

1.1 BACKGROUND

This JURMP Annual Report presents a summary of activities conducted by the City of Poway during the 2011/2012 fiscal year. The JURMP Annual Report preparation and submission are required by the Municipal Permit.

1.1.1 REGULATORY BACKGROUND

The 1987 amendments to the Federal Water Pollution Control Act, also known as the Clean Water Act (CWA), established a framework for regulating MS4 discharges under the NPDES. In 1990, the RWQCB issued the first regional NPDES permit for municipalities in the San Diego Region, followed by a revised permit in 2001. RWQCB Order No. 2001-01 was replaced by the current Municipal Permit in 2007.

In 2002, the City, like all Copermittees, developed and submitted a JURMP to the RWQCB. The City then submitted an updated JURMP, as required by the Municipal Permit, in March 2008. The JURMP explains management measures for different sectors, including municipal, industrial, commercial, construction, and significant development and re-development activities.

Annual reports documenting the implementation of the JURMP are required to be submitted to the RWQCB by September 30. This JURMP Annual Report presents data from the 2011/2012 fiscal year, which extended from July 1, 2011, to June 30, 2012.

1.1.2 CITY SETTING

The City of Poway is located in central San Diego County, surrounded by the City of San Diego and unincorporated portions of San Diego County. The City itself covers approximately 39 square miles and has an estimated population size of approximately 50,000. It extends across three watersheds in San Diego County: the San Dieguito Watershed, the Los Peñasquitos Watershed, and the San Diego River Watershed. The northern portion of the City lies in the San Dieguito Watershed, which is designated as Hydrologic Unit (HU) 905. The southern half of the City is part of the Los Peñasquitos Watershed, HU 906, and a very small section of eastern Poway lies in the San Diego River Watershed, HU 907. This section of the City is designated as permanent open space, which cannot be developed. Since the area draining to the San Diego River is permanent undevelopable space, the Municipal Permit does not include City of Poway as a responsible party for the San Diego River Watershed Urban Runoff Management Program (WURMP).

1.2 PURPOSE AND OBJECTIVES

The City's JURMP presents strategies to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The JURMP describes various programs intended

to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. This JURMP Annual Report has been prepared to document the implementation of the City of Poway's JURMP during the 2011/2012 reporting period.

1.3 REPORT ORGANIZATION

This report follows the standard reporting outline jointly developed by the Copermittees and submitted to the RWQCB in July 2007. The following sections are included in the JURMP Annual Report.

Section 1 **Introduction**
Section 2 **Development Planning Component**
Section 3 **Construction Component**
Section 4 **Municipal Component**
Section 5 **Industrial and Commercial Component**
Section 6 **Residential Component**
Section 7 **Illicit Discharge Detection and Elimination Component**
Section 8 **Education Component**
Section 9 **Public Participation Component**
Section 10 **Fiscal Analysis Component**
Section 11 **Effectiveness Assessment Component**
Section 12 **Special Investigations**
Section 13 **Non-Emergency Fire Fighting**
Section 14 **JURMP Revisions**
Section 15 **Conclusions and Recommendations**
Section 16 **References**

Each section includes all components required by the standard JURMP Annual Report format. In some cases, additional subsections within the standardized sections have been added to provide a more detailed explanation of the City's activities during the reporting period. For example, in this introduction section, the standard reporting format only includes subsections 1.1 and 1.2. Background, subsection 1.1, has been divided into Regulatory Background, subsection 1.1.1, and City Setting, subsection 1.1.2, for clarity.

2.0 DEVELOPMENT PLANNING COMPONENT

2.1 INTRODUCTION

The development planning component of the City's JURMP aims to improve overall storm water quality by reducing the discharge of pollutants from development projects to the MEP and managing increases in runoff from development projects that have the potential to negatively affect downstream water bodies.

The major components of the City's program include development project reviews to apply SUSMP requirements, BMP inspections, and requiring parties responsible for installed BMPs to certify that appropriate maintenance has been conducted each fiscal year.

2.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the reporting period are presented in the following bulleted list. More details about the City's activities for this component of its storm water program are provided in the remainder of this section.

- Inspected BMPs at 10 completed sites with approved treatment control BMPs and met required inspection frequencies, as shown in Table 2-1.
- Obtained verification of BMP maintenance from inventoried projects.
- Implemented updated hydromodification requirements as required by the Municipal Permit.
- Staff attended a training session on hydrologic modeling used to meet hydromodification management requirements.

2.2 LAND USE PLANNING

2.2.1 BACKGROUND

The City's General Plan was last updated in 2002 and contains water quality and watershed protection principles in its Natural Resources Element. The principles established in 2002 provide an ample framework for implementing the development planning requirements of the Municipal Permit, and no changes to these policies were necessary during this reporting period.

2.2.2 SOURCE CHARACTERIZATION

The City's General Plan contains established restrictions on the types of new development projects based on their planned land uses to ensure public safety and limit negative impacts to the surrounding environment. No changes to the development restrictions in the City's General Plan for storm water purposes were implemented during the reporting period.

2.2.3 Best Management Practice Requirements

Please refer to the City's updated JURMP document for a list of the water protection policies included in the City's General Plan. These policies remained the same throughout the reporting period.

2.2.4 Program Implementation

The City implemented its water protection-related land use policies during the reporting period mainly through the City's Municipal Code. The City updated the SUSMP requirements in Division VI of Title 16 of its Municipal Code by passing Ordinance 712, which went into effect on January 14, 2011 and was in effect during this reporting period. The ordinance updates were consistent with the final HMP prepared by the Copermittees and adopted by the RWQCB on July 14, 2010. Ordinance 712 is included as Attachment 2.1 of this JURMP Annual Report, and the complete SUSMP requirements in Title 16 of the Municipal Code can be accessed via the City's website, www.poway.org.

Details on how the City implemented its established water protection policies through its environmental review process and its development project approval and verification processes during the reporting period are provided in Sections 2.3 and 2.4 of this JURMP Annual Report.

2.3 Environmental Review Process

The City's current environmental review process is detailed in the City's JURMP. No modifications to the City's environmental review process were made during the reporting period.

2.4 Development Project Approval and Verification Process

2.4.1 Background

During the 2011/2012 fiscal year, the City implemented the watershed protection principles in the City's General Plan through various aspects of the City's development project approval and verification process, as detailed below.

2.4.2 Source Characterization

The different priority pollutants, sources, and activities associated with development projects within the City are addressed through the implementation of the City's Municipal Code. The City's SUSMP regulations comprise Division VI of Title 16 of the Municipal Code. Projects subject to SUSMP regulations are identified by completion of applicability checklists. More detail about this process is provided in Section 2.4.4.2.

2.4.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City last updated its hydromodification management requirements for development projects in January 2011, as described in Section 2.2.4 above.

2.4.4 PROGRAM IMPLEMENTATION

During the 2011/2012 fiscal year, the City required implementation of its BMP requirements for all development projects through education, the development project approval process, and the treatment control BMP inspection and maintenance verification program.

2.4.4.1 OUTREACH AND STAFF TRAINING

During 2011/2012 the City's land development engineers met weekly to discuss SUSMP and hydromodification management requirements and the status of SUSMP projects in the City. The City's Storm Water Program Administrator also coordinated with land development engineers as needed on SUSMP requirements. These methods of regular communication helped ensure the City's procedures to identify projects subject to SUSMP and then apply the requirements to subject projects were being effectively implemented.

Since the implementation of updated hydromodification requirements in January 2011, City staff attended a workshop on January 31, 2012, on the San Diego Hydrology Model tool developed to assist applicants and reviewers in implementing both hydromodification management and Low Impact Development (LID) requirements.

Project proponents are made aware of SUSMP requirements through the development review process, including interaction with staff at the front counter and meetings with City staff. Distribution of maintenance verification letters to parties responsible for maintenance of treatment control BMPs at completed projects has also increased the level of knowledge of regulated parties.

2.4.4.2 URBAN RUNOFF APPROVAL PROCESS FOR DEVELOPMENT PROJECTS

All development projects that required City permits were required to undergo the City's urban runoff approval process as detailed in the City's JURMP. Checklists were completed to determine storm water requirements for each project, including whether SUSMP requirements applied. The City records this information for each project in a spreadsheet continuously throughout the year. A summary of the projects submitted during the reporting period and whether each was subject to SUSMP requirements is presented in Table 2-2 at the end of this section.

Of the submitted projects, five were determined to be subject to SUSMP requirements. These five projects are listed with the types of treatment control BMPs proposed in Table 2-3 at the end of this section. City reviewers use requirements checklists to verify that applicable SUSMP requirements are addressed in the proposed designs and to document the proposed BMPs.

During 2011/2012, none of the SUSMP projects approved by the City proposed low removal efficiency treatment control BMPs. No projects received a SUSMP waiver for implementation of treatment control BMPs, and at this time the City has no plans to develop a SUSMP waiver mitigation program.

The Target Garden Center Conversion is one example of a project that was subjected to SUSMP requirements in this reporting period. The project was processed in two separate phases, the second of which was approved in December 2011. City staff worked with the developer to approve flow-through planter BMPs in the first Water Quality Technical Report that were designed to provide treatment for both project phases. In this way, review for the second phase was simplified and expedited.

The City continues to maintain its retrofitted detention basins, which provide treatment for many SUSMP projects in the South Poway Business Park area, as well as neighboring projects completed prior to SUSMP regulations that otherwise would not receive any treatment. Figure 2-1 shows the locations of the retrofitted detention basins and their respective drainage areas treated. Results of wet weather monitoring conducted to assess the treatment effectiveness of the South Poway Business Park detention basins are discussed in Section 11 of this JURMP Annual Report.

Hydromodification Management Plan

The City has incorporated the standards of the final regional HMP (approved by the RWQCB on July 14, 2010) into its requirements for development projects, as discussed earlier in this section. The requirements of the City's Interim Hydromodification Criteria (IHC) have been superseded by the new requirements. City staff actively participated in the regional Land Development Workgroup, which regularly discussed hydromodification monitoring and hydromodification management requirements implementation. Priority Development Projects (PDPs) reviewed in 2011/2012 were subject to the new hydromodification standards unless proponents could demonstrate the applicability of specific approved exemptions.

Of the submitted projects, two were determined to be subject to HMP requirements: Chinmaya Spiritual Center and Hoist Fitness. The Target Poway Garden Center Conversion, Orange Gardens Apartment Rehabilitation, and Poway Toyota Redevelopment projects were deemed exempt from HMP requirements because they did not result in increased impervious area or discharge rates.

BMP Installation Verification

City inspectors check to see that proposed BMPs have been implemented prior to granting occupancy for development projects subject to SUSMP. City inspectors continued documenting BMP installation during pre-occupancy verification visits using a GPS unit and camera during the reporting period.

2.4.4.3 Treatment Control BMP Inspection and Maintenance Verification Program

Toward the beginning of each fiscal year the City updates its inventory of completed projects with approved treatment control BMPs prior to mailing out operation and maintenance verification letters and selecting sites for inspection during the fiscal year. This process includes adding all PDPs completed during the previous fiscal year and making other inventory updates as needed. The final inventory of treatment control BMPs for 2011/2012 is included as Appendix A.1.

Maintenance verification letters were mailed to the responsible parties for inventoried BMPs prior to the beginning of the 2011/2012 wet season. City Public Works staff provided documentation of maintenance for all City-maintained BMPs, including the South Poway Business Park detention basins, prior to October 1, 2011. The City obtained completed verification forms from 32 of the sites listed in Appendix A.1 and all the South Poway Business Park detention basins. The detention basins are not included in the SUSMP inventory because they are not themselves PDPs. The detention basins are listed in Table 2-4 and shown on Figure 2-1.

Some additional projects were completed during the reporting period. The City's procedure for each site completed after the inventory is established for the fiscal year is to complete the check for BMPs prior to occupancy, record the site information and assign it a TTWQ priority, and then add the project and its BMPs to the inventory of projects subject to the City's inspection and annual maintenance verification program the following fiscal year. This process helps the City focus its inspection resources on sites more likely to have maintenance deficiencies, as maintenance deficiencies are generally less likely at sites with recently installed BMPs. A table of the projects completed after the establishment of the inventory presented in Appendix A.1 is presented in Table 2-5.

The City visited sites with approved treatment control BMPs to inspect the maintenance condition of the BMPs. Sites designated as a high priority were inspected prior to October 1, 2011. The City's inspections met all the relevant frequency requirements listed in the Municipal Permit, as summarized in Table 2-1 below.

Table 2-1
Assessment of Compliance with Required Inspection Frequencies

Class	Number of Sites	Inspections	Percent Inspected	Permit Requirement	Requirement Met
All Inventoried Sites	37	10	27%	20%	**Yes**
Sites with Drainage Inserts	18	9	50%	50%	**Yes**
High Priority Sites	5	5	100%	100%	**Yes**

In some cases, inspections found that corrective actions were necessary. Parties responsible for BMP maintenance at sites for which deficiencies were noted were informed of the required corrective actions, and received a copy of the inspection report. Follow-up consisted of letters, calls, and follow-up inspections. These actions were sufficient to bring about compliance or bring responsible parties onto a clear path to compliance, and no NOVs or administrative citations were issued. Table 2-6 at the end of this section presents a list of the inspections completed during the reporting period, whether issues requiring significant corrective actions were discovered, and the resolution status for instances where corrections were necessary.

2.5 Development Planning Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

2.6 Program Review and Modification

No changes to the City's development planning component were made during 2011/2012.

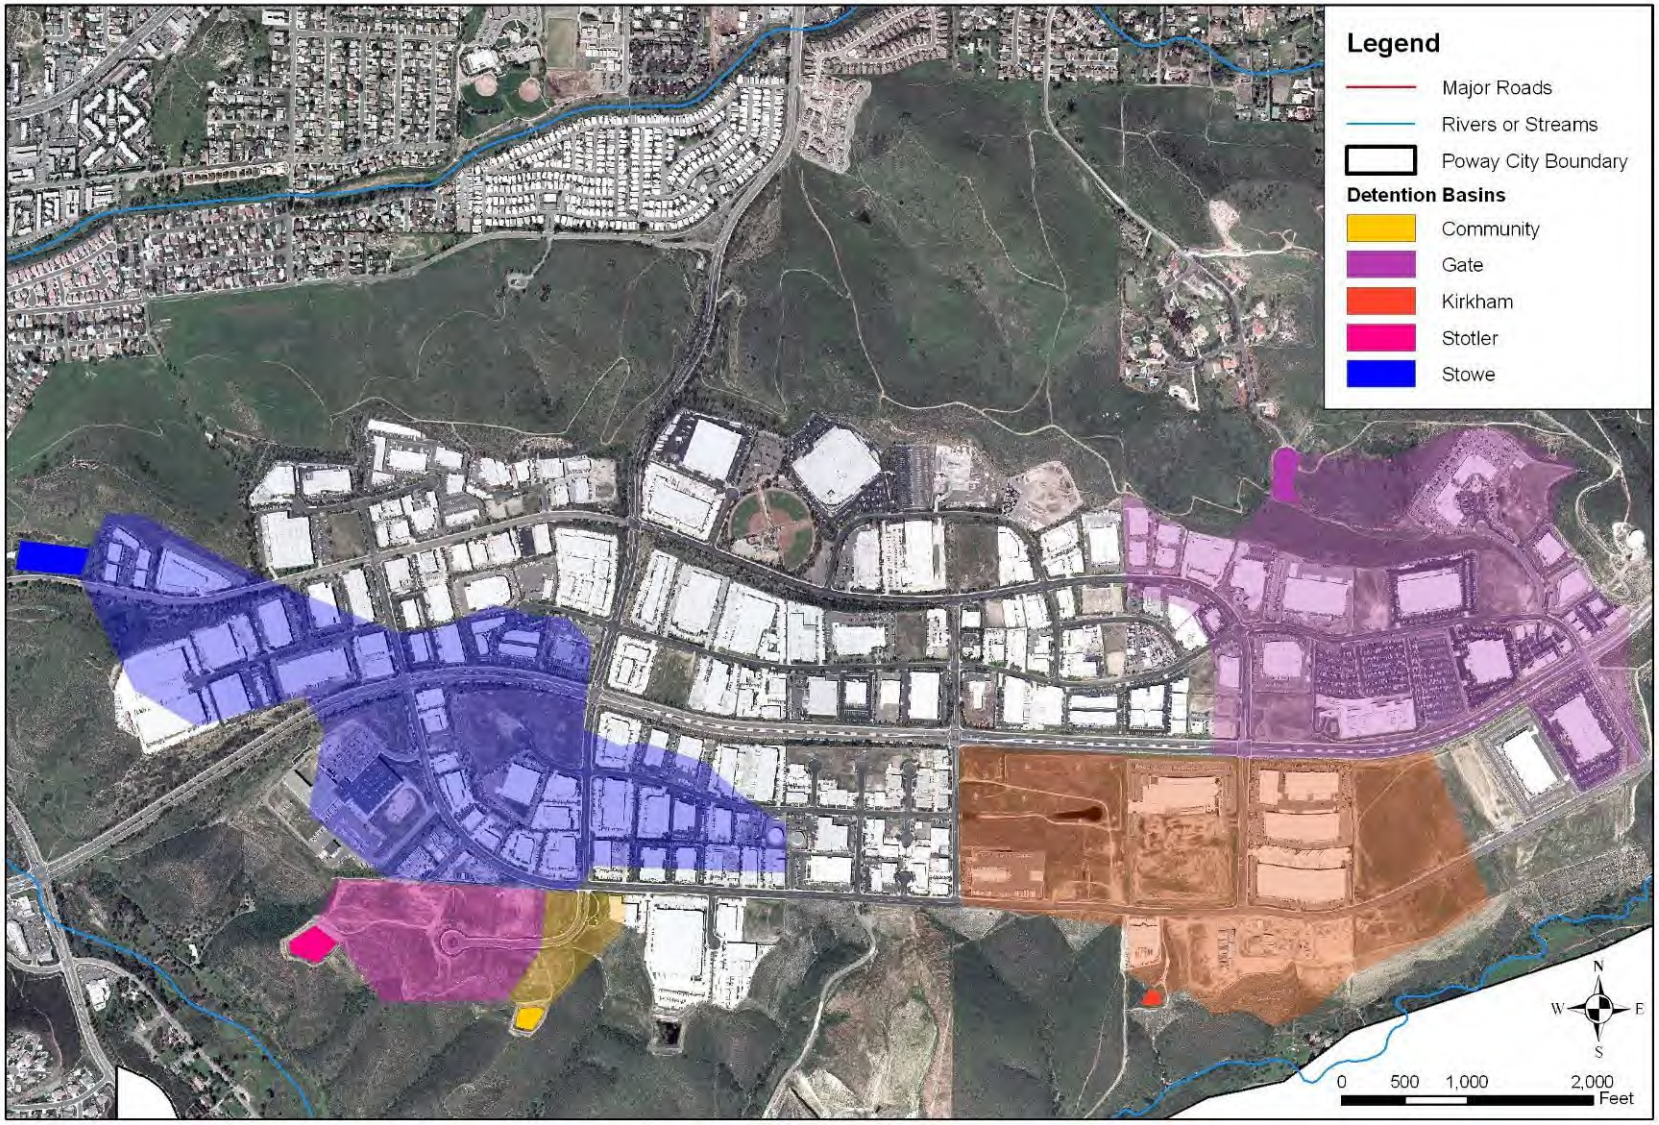
South Poway Retrofitted Detention Basins and Corresponding Drainage Areas Treated



3.0 CONSTRUCTION

3.1 INTRODUCTION

The City's construction program is designed to control construction and grading activities in the City. These types of projects have the potential to affect nearby water bodies due to the presence of disturbed soils and building materials and the potential for associated pollutants to be transported off site by storm water or non-storm water flows. The City continued to implement its construction program throughout 2011/2012.

3.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the construction component during the 2011/2012 reporting period are presented in the following bulleted list. The following subsections provide more detail on how the City complied with the Municipal Permit during the reporting period.

- Conducted plan checks of erosion control plans to ensure construction projects were in compliance with the City's minimum BMP requirements.
- Educated project proponents and contractors on storm water pollution prevention requirements at preconstruction meetings.
- Conducted 167 formal storm water inspections at construction sites.
- Issued 26 Correct Work Notices in response to non-compliance with the City's minimum BMP requirements.

3.2 SOURCE CHARACTERIZATION

The City maintains a watershed-based inventory of all private and public construction projects, both active and completed. The database where the inventory is stored is updated daily. Projects are never deleted from the database; the status is changed to inactive upon the completion of the project. During this reporting period, there were 73 active construction projects. A total of 58 of these projects were private development/construction projects and 15 of these projects were Capital Improvement Projects (CIPs). Appendix A.2 includes a list of all construction projects that were active during 2011/2012.

3.3 UPDATES TO ORDINANCES AND APPROVAL PROCESS

The City addresses storm water pollution through implementation of various components of its Municipal Code. During 2009/2010, the City updated the SUSMP Ordinance to include the updated model SUSMP. No changes were made to the City's project approval process during 2011/2012.

3.4 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City requires BMP implementation at all construction sites to reduce and/or eliminate the impact of discharges from construction site runoff on receiving water quality. Section 5.4 of the City's JURMP outlines the minimum construction BMPs required by the City. There were no changes to these requirements during 2011/2012.

3.5 PROGRAM IMPLEMENTATION

The City implemented the construction component of its JURMP throughout the reporting period through education and staff training, its comprehensive construction and grading approval process, and its construction inspection program, as detailed below.

3.5.1 EDUCATION AND STAFF TRAINING

The City provides information regarding storm water quality to project proponents, project personnel, employees, contractors, subcontractors, and other parties involved with construction activities. The following is a list of construction-related training activities that the City has provided or participated in during 2011/2012:

- All new development and redevelopment project proponents are required to attend a preconstruction meeting that includes education on storm water management topics including federal, state, and local regulations, implementation of a Storm Water Pollution Prevention Plan (SWPPP), if required, and implementation and maintenance of BMPs.
- The City sends out an annual announcement prior to the rainy season to all parties responsible for construction projects describing the enhanced construction BMP requirements and storm water management requirements during the rainy season (Attachment 3.1). Copies of this notice were also distributed by construction inspectors in the field as an additional means of notification.
- Engineering Inspectors met weekly during 2011/2012 for project review and training conducted by the Construction Program Supervisor.

3.5.2 CONSTRUCTION AND GRADING APPROVAL PROCESS

The City requires that all proposed construction and grading projects implement measures to ensure that pollutants from the site will be reduced to the MEP and will not cause or contribute to an exceedance of water quality objectives. Proponents of all construction and grading projects are required to comply with practices detailed in the City's JURMP and the City's Grading and Storm Water Ordinances. The grading approval process also includes the City requirement of cash securities for all grading projects and Minor Development Review Application (MDRA; non-grading) projects to ensure compliance with the City's storm water and grading ordinances.

As previously mentioned, all new development and redevelopment project proponents are required to attend a preconstruction meeting with City staff. During these meetings, the

project proponent is educated on storm water management topics including federal, state, and local regulations, implementation of a SWPPP, if required, and implementation and maintenance of BMPs. Additionally, the developer, owner, and contractor are required to watch an educational video covering construction site BMPs and storm water management.

During 2011/2012, all construction projects were required to undergo the approval process described above. These requirements are tracked by the Land Development and CIP Divisions as part of their routing and record-keeping database.

Additionally, the City continued to enforce a 17-acre maximum disturbed area for grading activities during 2011/2012; however, none of the City's active construction sites were larger than 17 acres. In addition, all construction sites were still required to limit exposed cleared or graded areas to the amount of area that could be protected prior to a rain event, as prescribed in the City's seasonal BMP requirements.

The City also continued implementing advanced treatment requirements during the reporting period. Criteria for determining when advanced treatment is required are detailed in the City's JURMP. During the reporting period, the City's minimum BMP requirements were adequate at controlling sediment discharges at all of the active construction sites within the City's jurisdiction, and advanced treatment methods were not required at any construction sites.

3.5.3 Inspection of Construction Sites

Construction inspections conducted during the reporting period were performed as described in the City's JURMP to ensure that required BMPs were appropriately implemented. During inspections, inspectors discuss BMPs with each site project manager, developer, or owner and complete an inspection form. The City also inspects MDRA sites for compliance with BMP implementation requirements, including erosion and sediment control. The City requires every construction project and MDRA to have a Weather-Triggered Action Plan for Construction Sites for rain events. This Weather-Triggered Action Plan details the site's preparation for rain events and the additional BMPs to be implemented in the case of rain. Additionally, City Building Inspectors may enforce storm water regulations or forward any noted violations on to the Engineering Inspectors for corrective action.

Inspected construction sites, along with their TTWQ, the number of weeks the site was active within the rainy season, and the number of inspections conducted during both the wet and dry seasons, the number of follow-up inspections, and the total number of inspections for each site is included with the inventory in Appendix A.2. During this reporting period, the City conducted 167 formal storm water inspections at construction sites. It should be noted that this number does not represent all BMP inspections. Although inspectors review BMPs at every site visit, only instances where a complete inspection form was filled out are counted toward this Permit requirement.

The City continued using the comprehensive permit tracking software package, called TRAKiT, to manage data for its construction inspection program. The program tracks

permit issuance and other paperwork-related items, ground-disturbing activity, and construction activity. This system allows automatic reminders to be sent to the inspector when an inspection is due, and also stores the inspection records for easy retrieval and data analysis. The City also continued to use the updated BMP inspection form in the field (Attachment 3.2).

3.5.4 Enforcement Measures

The City's enforcement procedures require corrective actions when non-compliance is observed. Non-compliant sites receive a Correct Work Notice and timeframe for compliance. The site is required to become compliant within one to five working days, unless rain is imminent, in which case a Stop Work Notice is issued immediately. Failure to install BMPs indicated in a Correct Work Notice within the appropriate timeframe results in issuance of a Stop Work Notice, and notification is sent to the RWQCB. Additional enforcement actions including accessing the site's cash securities to do the work, revocation of permits, and issuance of citations also can be taken as necessary.

The City issued 26 Correct Work Notices to 21 projects for storm water BMP deficiencies during this reporting period. Table 3-1 describes each notice, along with the follow-up actions taken to correct the deficiency. Seventeen projects were inspected and brought into compliance (three after the end of the reporting period), three projects were referred to Land Development for further action (grading without a permit), and one project is being followed up as it works toward compliance.

3.6 Construction Activities Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

3.7 Program Review and Modification

No changes to the City's construction component were made during 2011/2012.

Table 3-1
Enforcement Actions Taken at Construction Sites During 2011/2012

No.	Date	Project	Address	Type of Notice Issued	Resolution
1	3/5/2012	(was Lerner, G1582-07)	Belvedere Street	Correct Work	Inspected 7/3/12; in compliance[1]
2	11/3/2011	Arbolitos Sports Fields (CIP11-007)	Pomerado Road	Correct Work	Inspected 11/4/11; in compliance
3	9/27/2011	Brewer Residence (G1614-08)	15140 Skyridge Road	Correct Work	Inspected 10/4/11; in compliance
4	5/2/2012	Butsumyo Residence (no permit)	14413 Trailwind	Correct Work	Inspected 8/27/12; in compliance[1]
5	9/20/2011	Cross Residence (no permit)	15058 Midland Road	Correct Work	Referred to Land Development for further action
6	9/27/2011	Delong Residence (G1613-08)	15257 Skyridge Road	Correct Work	Inspected 10/4/11; in compliance
7	12/16/2011	Five Star/Pomerado Liquor (no permit)	13530 Pomerado Road	Correct Work	Inspected 1/9/12; in compliance
8	11/2/2011	Gate Drive (G1624-08)	Gate Drive	Correct Work	Inspected 11/4/11; in compliance
9	4/6/2012	Hazen Residence (no permit)	16102 Martincoit Road	Correct Work	Inspected 4/9/12; in compliance
10	3/9/2012	Hensley Residence (no permit)	14878 Eastvale Road	Correct Work	Referred to Land Development for further action
11	3/22/2012	Kruglick Addition (G10-0011)	13842 Deergrass Court	Correct Work	Inspected 3/28/12; in compliance
12	1/24/2012	Majumder Residence (G10-0008)	13220 Highlands Ranch Road	Correct Work	Inspected 1/25/12; in compliance
13	4/11/2012	Majumder Residence (G10-0008)	13220 Highlands Ranch Road	Correct Work	Inspected 4/12/12; in compliance
14	4/17/2012	Majumder Residence (G10-0008)	13220 Highlands Ranch Road	Correct Work	Inspected 4/18/12; in compliance
15	1/9/2012	Old Winery Sewer (CIP1829)	Old Winery	Correct Work	Inspected 1/12/12; in compliance
16	2/7/2012	Orange Gardens (G11-0002)	Oak Knoll Road	Correct Work	Inspected 2/8/12; in compliance

[1] Compliance was reached after the completion of the 2011/2012 reporting period.

Table 3-1 (Continued)
Enforcement Actions Taken at Construction Sites During 2011/2012

No.	Date	Project	Address	Type of Notice Issued	Resolution
17	5/9/2012	Poway Equestrian Center (G12-0001)	Mina de Oro	Correct Work	Inspected 5/16/12; in compliance
18	5/17/2012	Rasmussen Residence (no permit)	12712 Soule Street	Correct Work	Inspected 8/27/12; in compliance[1]
19	7/27/2011	Seventh-Day Adventist (G1625-08)	Pomerado Road	Correct Work	Inspected 7/27/11; in compliance
20	12/28/2011	Seventh-Day Adventist (G1625-08)	Pomerado Road	Correct Work	Inspected 12/30/11; in compliance
21	1/23/2012	Seventh-Day Adventist (G1625-08)	Pomerado Road	Correct Work	Inspected 1/31/12; in compliance
22	1/23/2012	Smith Residence (G11-0003)	15410 Markar Road	Correct Work	Inspected 2/6/21; in compliance
23	7/7/2011	Sysco Addition (G11-0001)	Kirkham Road	Correct Work	Inspected 7/11/11; in compliance
24	7/18/2011	Sysco Addition (G11-0001)	Kirkham Road	Correct Work	Inspected 7/20/11; in compliance
25	6/29/2012	Viewpoint Estates (G1521-05)	Tooth Rock Road	Correct Work	Inspector continues to follow up; working toward compliance.
26	3/6/2012	Yeager Residence (no permit)	12792 Gate Drive	Correct Work	Referred to Land Development for further action

[1] Compliance was reached after the completion of the 2011/2012 reporting period.

4.0 MUNICIPAL COMPONENT

4.1 INTRODUCTION

Throughout 2011/2012, the City of Poway continued to manage municipal areas and activities to reduce municipal discharges of pollutants to the MS4 to the MEP. As discussed in detail in the City's JURMP, the City owns and operates a variety of municipal facilities and activities. Public parks and recreation facilities, administrative buildings, fire stations, and public works facilities make up the bulk of the municipal areas in the City. Municipal activities conducted by the City include power washing, landscaping activities, street sweeping, street and sidewalk repair, and MS4 and sanitary sewer system maintenance. Information about the City's prioritized street sweeping program can be found in Table 4-1, and information about the City's MS4 maintenance program can be found in Table 4-2. The City's municipal inspection results can be found in Table 4-3. The City continued to respond to complaints made to the City's storm water hotline. All complaints made to the hotline are included in Appendix B; enforcement actions taken in response to complaint investigations are discussed in Section 4.8.

4.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the municipal component during the 2011/2012 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the municipal component of its storm water program during the reporting period are provided in the remainder of Section 4.

- The City inspected all high TTWQ fixed municipal facilities.
- The City performed eight special event inspections.
- The City hosted several training events/meetings for municipal personnel; 72 City personnel received storm water training.
- The City removed over 1,557 tons of debris through street sweeping activities.
- The City removed over 2,273 cubic yards of debris through standard MS4 cleaning activities.
- The City cleaned 87 miles of sewer line during 2011/2012.

4.2 FIXED FACILITIES

4.2.1 BACKGROUND

The City owns and operates a variety of municipal fixed facilities. As mentioned in the City's JURMP, municipal fixed facilities have been grouped under one category, fixed facilities. This is because these facilities receive routine inspections as part of the City's municipal program, making program implementation generally similar.

4.2.2 SOURCE CHARACTERIZATION

All fixed facilities are included in the City's municipal inventory, which is included in this JURMP Annual Report as Appendix A.3. The designations of pollutants potentially generated by municipal facilities on the inventory are based on the pollutant loading potentials shown in Table 6-1 of the City's JURMP. TTWQ prioritizations are assigned via the process laid out in the flow chart shown in Figure 6-1 of the City's JURMP. No modifications were made to the City's municipal inventory in 2011/2012.

4.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City continues to implement and assess the effectiveness of BMPs for fixed municipal facilities as set forth in the City's JURMP. City staff are trained to recognize the need for additional BMPs and implement them as necessary. Strict BMPs remain in place for the management of pesticides, herbicides, and fertilizers; these BMPs, as described in the City's JURMP, have not changed. City Public Works employees, fire station employees, and employees at other fixed municipal facilities in the City continue to implement BMPs appropriate to the facility type as described in the City's JURMP. Parking lots at fixed facilities are swept during regular maintenance activities. City fire response personnel continue to be trained in implementing BMPs for non-emergency fire fighting activities as described in Section 3 of the City's JURMP. There have been no changes in BMP requirements for any fixed municipal facilities.

4.2.4 PROGRAM IMPLEMENTATION

Parks and Trails

During 2011/2012, the City's Parks and Trails Maintenance Division continued to implement the BMPs described in its JURMP for the management and use of pesticides, herbicides, and fertilizers, including the City's Integrated Pest Management (IPM) Program. City Parks and Trails staff implemented BMPs to control landscaping waste from parks and to keep City parks and trails free of trash and other debris. The City continued to work with local residents through the Adopt-a-Trail Program, which is discussed in Section 9 of this Annual Report.

Public Works Facilities, Fire Stations, Other Fixed Facilities

As previously mentioned, City personnel continued to implement appropriate BMPs for fixed municipal facilities as described in the City's JURMP. BMPs are also implemented during regular maintenance, such as landscaping and building maintenance, as necessary.

Currently, the Material Handling Yard is covered under the Industrial Permit. The waste discharger identification number for the Material Handling Yard is 9 37I015616. This facility maintains a site-specific SWPPP and conducts storm water monitoring in accordance with the requirements of the General Industrial Permit. The SWPPP document and the storm water monitoring records are kept on-site and can be easily accessed by staff during an inspection. Additionally, City staff clean the City's Material Handling Yard on a weekly basis and also use a monthly BMP checklist to ensure maintained compliance with SWPPP

requirements. The BMP checklist for the Material Handling Yard can be found in Attachment 4.1. This facility is also included in the Industrial/Commercial inventory because it is covered by the Industrial Permit. In addition to the regular inspections by Public Works staff, described above, this facility receives annual inspections by storm water staff as part of the City's storm water inspection program.

Fleet/Facility Maintenance staff continued to use a BMP advisement checklist to check on the status of BMP implementation at the City's Vehicle Maintenance Facility on a weekly basis. The BMP advisement checklist used at the Vehicle Maintenance Facility is included in Attachment 4.1. The City's Vehicle Maintenance Facility continued the practice of placing protective mats on the storm drains at the front and back of the facility and stocking and labeling spill kits located at fuel dispensers. Additionally, four permanent canopies cover tires that are on site for disposal or retreading. The canopies are also used to cover jack stands and other non-motorized equipment and to provide temporary storage for small equipment that the City is taking to auction.

During 2011/2012, additional BMPs were implemented on site, including the reorientation of the enclosure for the street sweeper and other debris, and the addition of a sand filter around the perimeter to contain any potential of contaminated runoff from making its way to the storm drain.

Municipal Inspections

All high TTWQ fixed municipal facilities received a routine annual inspection in 2011/2012, for a total of 25 inspected sites. The City's inspection approach, as described in the JURMP, was implemented for all inspections at fixed municipal facilities conducted in 2011/2012. Inspected facilities and their associated corrective actions are included in Table 4-3. Inspections were also conducted for several special events and four mobile municipal activities, the details of which are also provided in Table 4-3.

No municipal facilities were recommended for follow-up inspection based on routine municipal inspection results, but appropriate City staff members were notified of any recommended minor corrective actions. The City's municipal inspection form is included as Attachment 4.2.

4.3 ROADS, STREETS, HIGHWAYS, AND PARKING FACILITIES

4.3.1 BACKGROUND

The City conducts regular maintenance of roads, streets, highways, and parking facilities in the City to control pollutants such as sediment, metals, and litter and debris.

4.3.2 SOURCE CHARACTERIZATION

The City maintains 165 miles of roads, streets, and highways, and 21 municipal parking lots. Roads, streets, and highways are included as one entity on the City's municipal inventory, which is included in Appendix A.3.

4.3.3 BEST MANAGEMENT PRACTICES

The City's primary BMP for roads, streets, highways, and parking facilities is street sweeping; other BMPs are outlined in the JURMP. There were no changes to the BMPs implemented for roads, streets, highways, and parking facilities in 2011/2012.

4.3.4 PROGRAM IMPLEMENTATION

During 2011/2012, the City swept approximately 10,473 curb miles and removed over 1,557 tons of debris. Table 4-1, below, describes the areas assigned high, medium, and low sweeping priorities and the associated sweeping frequency. As discussed in the City's JURMP, the City sweeps all streets in the City at least every two weeks. Although parking facilities associated with municipal facilities are considered part of the municipal facility on the inventory, the sweeping frequency is included in the table.

Table 4-1
Street Sweeping Prioritization and Frequency

Category	Description	Approximate Mileage of Route (curb miles)	Sweeping Frequency
High	Main arterials	108 miles	Once every two weeks
Medium	Business Park areas	20 miles	Once every two weeks
Low	Residential areas	273 miles	Once every two weeks
Parking Lots at Fixed Facilities	21 parking lots associated with fixed municipal facilities	N/A*	Once every two weeks
Material Handling Yard	Material Handling Yard	N/A*	Once per week
Total Amount of Debris Collected from Street Sweeping Activities: 1,557 tons			

* A separate measurement of mileage data is not available for the swept area of parking lots associated with municipal facilities, and the Material Handling Yard. Mileage accrued while sweeping these facilities is included in the total mileage.

Inspections
Trash, debris, and sediment that have accumulated on City streets is identified and cleaned up via street sweeping, so additional inspections beyond this effort are not necessary.

4.4 MS4

4.4.1 BACKGROUND

The City's storm water conveyance system is designed to collect and convey surface runoff to receiving waters to prevent flooding during rain events.

4.4.2 SOURCE CHARACTERIZATION

The City's MS4, as one complete entity, is included in the City's high TTWQ municipal inventory. The City's MS4 consists of over 1,452 drop inlets, 44 box culverts, 65 miles of underground drainage pipe 18 inches or more in diameter, approximately 11 miles of open channels, and 12 detention basins, five of which have been retrofitted as treatment control BMPs in the South Poway Business Park.

4.4.3 BEST MANAGEMENT PRACTICES

The City maintained an MS4 inspection, maintenance, and cleaning schedule throughout the reporting period. Maintenance and cleaning are conducted to keep the MS4 in good operating condition and remove any trash or debris that may otherwise be carried to receiving waters. BMPs for MS4 maintenance activities, as described in the City's JURMP, did not change during 2011/2012; however, improved implementation of these BMPs was achieved through the use of better equipment and material application.

4.4.4 PROGRAM IMPLEMENTATION

The City's MS4 inspection and cleaning schedule for 2011/2012 is shown in Table 4-2. All MS4 facilities were inspected at least once during the fiscal year, and all visits were conducted between May 1 and September 30.

The City has approximately 11 miles of concrete and earthen channels within urban areas of the City that undergo routine maintenance as part of the City's MS4 maintenance program. During 2011/2012, all of these channels were inspected and cleared of trash, fallen vegetation, and accumulated silt as appropriate. While small amounts of litter have been found in all open channels, City personnel have identified one segment of open channel that requires increased maintenance activities. This area is located near a large movie theater complex and several convenience stores; patrons to these businesses have been identified as a contributing factor to the trash in this area. The City routinely inspects this area and cleans observed anthropogenic litter. Per the City's regulatory permits for channel maintenance, invasive vegetation is mowed and sprayed in place to maintain channel capacity.

An additional 94 miles of conveyances are located in open, undeveloped space, or on private property. Channel-like conveyances in open spaces are not considered to be part of the MS4 channel system, and the City does not maintain channels located on private property without dedicated easements. If maintenance of private channels is needed, the City requires the property owner to complete the maintenance.

Table 4-2
MS4 Maintenance Data

	Percent Inspected and/or Cleaned*	Percent of Open Channels Found with Anthropogenic Litter	Approximate Amount of Material Removed by Cleaning Activities
Catch Basins/ Self-Cleaning MS4 Facilities	100%	N/A	Silt: 20 cubic yards Vegetation: 4 cubic yards Trash: 2.25 cubic yards
Detention Basins	100%	N/A	None
Concrete Channels	100%	100%	Silt: 1,080 cubic yards Vegetation: 127 cubic yards Trash: 8.4 cubic yards
Earthen Channels	100%	100%	Silt: 1,025 cubic yards Vegetation: 3 cubic yards Trash: 3.6 cubic yards
Total Debris Removed From MS4 Maintenance Activities: 2,273.25 cubic yards			

* The City cleans out all structures, including self-cleaning structures, in which trash and debris is observed prior to the rainy season. Debris was removed from 73 drop inlets during the reporting period, including ten drop inlets that were observed at or above 33% capacity. Thus far, maintenance staff has not identified any structures that repeatedly have higher than average accumulations of trash and debris.

As described in Table 4-2, approximately 2,273.25 cubic yards of material was removed during MS4 maintenance conducted in 2011/2012. City staff involved in maintenance activities reported materials removed by category for each type of MS4 maintenance activity. The volumes were converted to estimated weights using the conversion factors of 2,300 pounds per cubic yard of sediment/silt and 400 pounds per cubic yard of vegetation, trash, and debris. The total weight of material removed was estimated to be 2,473.35 tons.

4.5 SANITARY SEWER SYSTEM

4.5.1 BACKGROUND

To reduce the possibility of a spill or leak caused by a malfunction of a component of the City's sanitary sewer system, the City conducts routine maintenance of the system. A spill that introduces untreated sewage to receiving waters can contain high concentrations of bacteria, viruses, and even hazardous chemicals. Routine inspection and maintenance of the sanitary sewer system works to reduce the potential for a spill or SSO and also helps prevent the infiltration of seepage from the sanitary sewer system to the City's MS4.

4.5.2 SOURCE CHARACTERIZATION

The City maintains a system of public sanitary sewer facilities to convey wastewater from the City to be treated. The City's sanitary sewer system includes 185 miles of collection system and several pump/lift stations.

4.5.3 BEST MANAGEMENT PRACTICES

The City implements BMPs for the sanitary sewer system as described in Appendix C of the City's JURMP. There have been no changes to these BMPs during 2011/2012. The City inspects and maintains the sanitary sewer system as part of regular wastewater activities and clears blockages and repairs leaks as needed.

4.5.4 PROGRAM IMPLEMENTATION

The City continually inspects and maintains various aspects of the City's sanitary sewer system and cleans out or repairs any identified problem areas as necessary. The City continued to use a video camera to locate blockages, locate areas in need of repair, and identify any illegal connections during 2011/2012. Identifying areas of the sewer system that require repair and making prompt repairs prevents those areas from becoming future seepage points or point of origin of an SSO. During 2011/2012, the City cleaned 87 miles of sewer line and found 320 feet of the system that required repair. The City also conducted weekly inspections at five City-owned pump stations.

During 2011/2012, the City continued to implement a Fats, Oils, and Grease (FOG) program that targets grease-producing facilities, such as eating establishments. The goal of the program is to reduce grease buildup in the sanitary sewer system, which can cause or contribute to SSOs. The City conducted FOG inspections at 137 eating establishments during 2011/2012, and continued cross-referencing the City's business license database to verify that all grease-producing businesses are identified.

In case of an SSO, the City maintains a spill response plan that establishes procedures for responding to an SSO. Detailed information about the City's SSO spill response plan is included in the City's JURMP. There were three SSOs during 2011/2012, which were appropriately reported through the California Integrated Water Quality System (CIWQS).

4.6 MOBILE MUNICIPAL ACTIVITIES, INCLUDING POWER WASHING

4.6.1 BACKGROUND

The City conducts a variety of different mobile municipal activities, typically involving vehicle maintenance, landscape maintenance, street and sidewalk repair, and power washing. These activities are not confined to a specific location, so BMPs must be implemented wherever one of these activities is taking place.

4.6.2 SOURCE CHARACTERIZATION

Emergency vehicle maintenance, landscape maintenance, power washing, and street and sidewalk repair are listed on the City's high TTWQ municipal inventory as mobile activities.

4.6.3 BEST MANAGEMENT PRACTICES

The City implements BMPs for mobile activities as described in the City's JURMP and as applicable to the activity. City personnel are trained to implement BMPs for the specific activity in which they are involved. The City continued to use a pressure-washing unit with a vacuum and debris boom to prevent discharge during pressure-washing operations and City personnel performing power washing are trained to collect all waste water. City personnel conducting emergency vehicle maintenance activities are trained to use drip pans and other spill containment during emergency vehicle maintenance.

4.6.4 PROGRAM IMPLEMENTATION

Power washing (for graffiti removal) and emergency vehicle maintenance, both high TTWQ activities, are conducted on an as-needed basis and are therefore not on a set schedule. Neither power washing nor emergency vehicle maintenance was scheduled to be conducted during the timeframe that routine municipal inspections were conducted. BMPs are implemented during these activities to prevent discharge of any pollutants to the storm drain system. Water from pressure-washing activities is not discharged to the MS4. Personnel responsible for these activities were contacted to discuss BMP implementation, and they confirmed that these BMPs continue to be implemented when graffiti removal and emergency vehicle maintenance activities occur.

Municipal personnel that conduct other mobile activities such as infrastructure maintenance and landscape maintenance are trained regularly regarding BMPs for material use and disposal. City staff conducted inspections of landscape maintenance and street and sidewalk repair. Appropriate BMPs were implemented during each activity, and there were no corrective actions provided to City staff conducting the mobile activities. Inspection results are listed in Table 4-3 at the end of this section. City staff will continue to be trained on appropriate BMPs for mobile activities as described in the City's JURMP.

4.7 SPECIAL EVENTS

4.7.1 BACKGROUND

As discussed in the City's JURMP, special events have the potential to generate trash and litter as a result of the patrons and activities of the special event. The City hosts several special events throughout the year. These events include festivals, fairs, and other events for various causes and occasions.

4.7.2 SOURCE CHARACTERIZATION

As required by the Municipal Permit, special events are included on the City's high TTWQ municipal inventory.

4.7.3 BEST MANAGEMENT PRACTICES

As detailed in the City's JURMP, the City has selected BMPs for special events hosted in the City. In general, the goal of the City's special event BMPs are to properly manage trash and litter generated by the event, keep catch basins and other nearby MS4 facilities free of litter/debris from the event, and raise storm water awareness among the vendors and patrons of the event, as applicable.

4.7.4 PROGRAM IMPLEMENTATION

The City's minimum BMPs were in place for each special event in the City during 2011/2012. Additionally, City staff was available throughout the duration of each event to address any immediate issues and notify other City staff of an issue if necessary. Individuals applying for a permit to hold an event on City property are notified that approval of the activity does not excuse compliance with City ordinances, including the City's municipal storm water ordinance. The temporary use permit includes a condition of approval which prohibits illicit discharges and requires storm drain protection, trash BMPs, appropriate storage of liquids, and proper disposal of pet waste. This temporary use permit is available as Attachment 4.3.

During 2011/2012, the City routinely inspected and cleaned up during and after all eight permitted special events, and took preventive measures as applicable. No events resulted in excessive litter or debris, and routine cleaning and trash removal followed all events. BMPs were also in place at all events as a condition of the temporary use permits. For example, rubber mats were placed over inlet grates during both the Fall and Spring Street Fairs, and fiber rolls protected curb inlets during the Poway Annual Heritage Parade.

The City's special event inspection form is included as Attachment 4.4.

4.8 PUBLIC REPORTING OF ILLICIT CONNECTIONS AND DISCHARGES

Reporting and Response

Public and municipal involvement is crucial to preventing and eliminating illicit connections and illicit discharges (IC/IDs) from the storm water conveyance system. The Storm Water Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The hotline number is provided on the City's website, and in distributed storm water educational materials. All complaints received through the hotline and website are logged into the TRAKiT permit tracking software for documentation and tracking. Each logged complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop or clean up any and all illicit discharges. The Public Works

Department also receives complaints regarding storm water, often due to infrastructure concerns. Complaints to the Public Works Department are also tracked and investigated.

Complaints received by the City during the 2011/2012 reporting period and the City's response to each are listed in Appendix B. Thirty-three complaints were documented this year.

Enforcement
As previously stated, complaints received via the Storm Water Hotline, City website, and Public Works hotline, are included in a table in Appendix B. The table also includes a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included clean-up, providing educational materials, and discussing storm water concepts with individuals involved in the complaint.

4.9 Spill Reporting, Response, and Prevention

The City has documented procedures for preventing and responding to SSOs. Preventive maintenance is regularly conducted on the City's sanitary sewer system, and inspections are regularly conducted to monitor the condition of the public sewer lines and to determine the necessity of maintenance. Private lateral lines do not receive preventive maintenance, but the City assists in the containment and cleanup of sewer spills if the spill could potentially reach the City's MS4.

Individuals in the City are encouraged to report any SSOs to the City's SWPP hotline. During the 2011/2012 reporting period, there were three SSOs. All SSOs were reported to the RWQCB via the CIWQS website. During 2011/2012, the City also acquired PIG brand spill products to better contain SSOs.

4.10 Education and Outreach

During 2011/2012, the City continued to educate municipal personnel regarding proper BMP implementation and other storm water and watershed concepts. The City held multiple training sessions for City personnel. Detailed information regarding the education and outreach conducted for City personnel is provided in Section 8 of this Annual Report.

4.11 Municipal Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

4.12 Program Modification and Review

No updates were made to the municipal component of the City's JURMP during 2011/2012.

Table 4-3
Municipal Inspection Results

No.	Facility Name	Facility Address	TTWQ	Facility Category	Inspection Date	Corrective Actions
1	Adobe Ridge Mini Park	12244 Adobe Ridge Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/26/2012	• No corrective actions noted
2	Arbolitos Park	Pomerado Road and Ted Williams Parkway	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/26/2012	• No corrective actions noted
3	Aubrey Park	13544 Aubrey Street	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/26/2012	• No corrective actions noted
4	Bette Bendixen Neighborhood Park	12342 Old Pomerado Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/26/2012	• No corrective actions noted
5	Blue Sky Ecological Reserve	16275 Espola Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/26/2012	• Keep trailhead free of debris and litter • Consider stenciling storm drain inlets
6	City Operations Center	14445 Lake Poway Road	High	Public Works Operations Facilities	6/26/2012	• Consider stenciling storm drain inlet at the top of the stairs from Fleet Maintenance
7	Community Park	13094 Civic Center Drive	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/27/2012	• Finish spreading mulch pile by Dog Park
8	Emergency Vehicle Maintenance	Throughout City	High	Mobile Municipal Activities, Including Power Washing	6/27/2012	• No corrective actions noted
9	Fire Station No. 1	13050 Community Road	High	Fire Stations	6/26/2012	• Consider stenciling storm drain inlet by hose drying rack • Ensure annual storm water training is completed by Safety Services Staff

Table 4-3 (Continued)
Municipal Inspection Results

No.	Facility Name	Facility Address	TTWQ	Facility Category	Inspection Date	Corrective Actions
10	Fire Station No. 2	16912 Old Coach Road	High	Fire Stations	6/26/2012	• Ensure annual storm water training is completed by Safety Services Staff
11	Fire Station No. 3	14322 Pomerado Road	High	Fire Stations	6/26/2012	• Consider replacing the broken gravel bags at the northwest corner of the lot • Consider replacing the faded fuel tank placard • Ensure annual storm water training is completed by Safety Services Staff
12	Fire Training Tower	12325 Crosthwaite Circle	High	Fire Training Tower	6/27/2012	• Consider removing any sediment and debris from around the drain in the southwest corner of the lot • Consider stenciling the storm drains in the southwest and northwest corners of the lot
13	Garden Road Park	14820 Garden Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/26/2012	• No corrective actions noted
14	Hilleary Park	13500 Community Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/26/2012	• No corrective actions noted
15	Lake Poway Park	14656 Lake Poway Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	6/26/2012	• Keep stockpiles covered • Keep dumpster lids closed • Keep dumpster area free of litter, debris, and sediment
16	Landscape Maintenance	Throughout City	High	Mobile Municipal Activities, Including Power Washing	6/27/2012	• No corrective actions noted
17	Lester J. Berglund Treatment Plant	14521 Lake Poway Road	High	Public Works Operations Facilities	6/25/2012	• Consider stenciling storm drain inlets
18	Material Handling Yard*	12325 Crosthwaite Circle	High	Public Works Operations Facilities	6/27/2012	• Consider removing any sediment and debris from storm drain inlets • Consider moving sand pile from current paved location to a pervious surface

* The Material Handling Yard is also covered by the Industrial Permit.

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

5.1 INTRODUCTION

During the 2011/2012 reporting period, the City continued to implement its program to mitigate urban runoff pollution from industrial and commercial sites and sources. The City aims to reduce the amount of pollutants discharged from industrial and commercial facilities through various aspects of the industrial and commercial program.

5.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Notable achievements for the industrial and commercial component during the 2011/2012 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the industrial and commercial component of its storm water program during the reporting period are provided in the remainder of Section 5.

- The City met the Municipal Permit requirement of inspecting at least 25 percent of its stationary industrial and commercial inventory.
- The City inspected all high TTWQ industrial and commercial facilities.

5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES / SOURCES ELEMENT

5.2.1 BACKGROUND

The City's updated industrial and commercial inventory (Appendix A.4) includes all stationary facilities known to be operating in the City that are required to be included on the City's inventories. Stationary facilities in the City include, but are not limited to, manufacturing facilities, wholesalers, auto dealerships, auto repair shops, and restaurants. The City requires industrial and commercial businesses to implement pollution prevention measures and activity-specific minimum BMPs to mitigate the impacts of business activities on water quality.

5.2.2 SOURCE CHARACTERIZATION

As previously mentioned, the City's inventories include stationary industrial and commercial businesses, as required by the Municipal Permit. Information on how the City prioritizes the industrial and commercial inventories based on TTWQ is discussed in detail in the City's JURMP. The City considers factors including those listed below when prioritizing the inventories:

- Subjectivity to coverage under the Industrial Permit
- Consideration of downstream water body and whether the business is likely to discharge pollutants for which the water body is impaired

- Results from previous inspections and institutional knowledge
- Proximity to the receiving water body

During 2011/2012, the City updated its industrial and commercial inventory. The list of businesses with active business certificates was checked against the City's industrial and commercial inventory to identify recently opened businesses that should be added to the inventory. Businesses conducting activities listed in Section D.3.b(1) of the Municipal Permit that had obtained business licenses since the last inventory update were added to the City's inventory. The City's updated inventory includes 585 stationary industrial and commercial facilities.

5.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

Industrial and commercial businesses in the City are required to implement pollution prevention methods and other BMPs to reduce or potentially eliminate the generation of pollutants from business areas/activities. The City has established a set of minimum BMPs based on the California Stormwater Quality Association (CASQA) Industrial and Commercial Handbook and the Caltrans Manual. The requirements include BMPs applicable to all facilities as well as activity-specific BMPs. The City's BMP requirements are included in Appendix C of the City's JURMP and have not changed since the adoption of the City's JURMP in March 2010.

5.2.4 PROGRAM IMPLEMENTATION

Industrial and Commercial Inspections

During 2011/2012, the City conducted storm water compliance inspections at selected stationary industrial and commercial facilities. The inspected facilities were selected by using the following criteria:

- All high TTWQ facilities
- New businesses added to the inventory
- Time since last inspection

Table 5-1 provides a summary of industrial and commercial site visits that occurred during 2011/2012. The purpose of the City's inspection program is to confirm that the City's minimum BMPs are being implemented at stationary industrial and commercial facilities.

Table 5-1
Summary of Industrial and Commercial Inspections

Facility Category	Inventoried Stationary Sites	Full Inspections	Percentage Inspected
High TTWQ Sites	67*	67	100%
Additional Sites	516	101	17.3%
Totals	**585**	**168**	**28.7%**

*Number of high TTWQ sites found to be active during 2011/2012. Inventory at the beginning of the 2011/2012 reporting period included 69 high TTWQ sites, one of which was no longer operating by the time of their inspection in 2011/2012, and one which was found to not be conducting activities that would require their inclusion on the City's inventory.

Facility inspections were conducted in accordance with the protocol set in the City's JURMP. Inspections involved a thorough examination of the facility and all outdoor activities for required BMP implementation. A comprehensive training session was provided for staff conducting the City's industrial and commercial inspections. This training ensured the City met the Municipal Permit requirement for annual inspector training. More information about staff training is provided in Section 8 of this JURMP Annual Report.

BMP deficiencies and corrective actions were recorded on the City's industrial and commercial inspection form, which is included in the City's JURMP, and discussed with facility personnel present during the inspection. The City's industrial/commercial inspection form is included as Attachment 5.1. Table 5-2 provides a list of all facilities visited as part of the routine inspection program. The City completed full inspections at 168 facilities.

During the inspection process, the City checked Industrial Permit compliance status when applicable. The City also reviewed SWPPPs and monitoring results when applicable. Businesses observed to be in violation of the Industrial Permit are included in Table 5-3.

The City did not rely on third-party inspections to satisfy its industrial and commercial inspection requirements during the reporting period. The City does not presently maintain a third-party inspection program.

Industrial Permit

As previously mentioned, Industrial Permit compliance status was evaluated during the inspection process. If the business was new and had not previously been inspected, or if the business had recently changed activities, the inspector gathered information about the business activities that occur on site and assigned or reassigned the business' standard industrial classification (SIC) code(s). The inspector then evaluated Industrial Permit subjectivity based on the assigned SIC code(s). Violations of any aspect of Industrial Permit requirements were recorded on the standard industrial and commercial inspection form and are presented in Table 5-3. The table includes businesses directed to file a Notice of Intent (NOI) and develop a SWPPP and monitoring program, as well as businesses that could

potentially gain exemption from Industrial Permit requirements by completing Notice of Non-Applicability/No Exposure Certification (NONA/NEC) paperwork. Each business was notified of any Industrial Permit-related non-compliance by the inspector.

Education and Outreach

In addition to checking for compliance with the City's requirements and the Industrial Permit, inspections provide a venue to provide site-specific one-on-one education regarding storm water concepts and BMPs. Inspectors discussed a variety of topics such as watershed concepts and the City's BMP requirements. The main types of material distributed by inspectors were the Industrial and Commercial BMP brochure and the restaurant brochure. Educational materials distributed during the 2011/2012 industrial and commercial storm water compliance inspections are included as Attachment 5.2 and are discussed further in Section 8 of this report. Attachment 5.2 also includes other industrial and commercial outreach material that was used during 2011/2012. Section 8 provides a discussion of other educational efforts directed toward industrial and commercial businesses during 2011/2012.

Each inspected business that required corrective action was mailed a copy of the inspection form as a written record of the need for corrective actions observed at the time of inspection via post or electronic mail, as their preferences dictated. Most sites that required corrective actions had minor issues such as open dumpster lids or housekeeping issues. Facilities with more significant issues were recommended for follow-up; more information about these facilities is provided in the discussion below.

Enforcement

During 2011/2012, 21 industrial and commercial facilities were recommended for follow-up. Information about follow-up inspections is included in Table 5-2 with information about routine industrial and commercial inspections.

The City was able to work with 19 businesses that required a follow-up inspection to bring them into compliance to date. Follow-up and enforcement measures were taken at an additional two businesses where further action and escalating enforcement measures will continue in 2012/2013 as needed until compliance is achieved.

In addition to the industrial and commercial storm water compliance inspection program, the City regulates industrial and commercial facilities through complaints received by City's storm water hotline. A total of three complaints regarding stationary industrial and commercial facilities were received by the City's SWPP hotline. Each complaint was investigated and appropriate action was taken to bring about compliance. Details of all complaint investigations are included in the complaint log (Appendix B) and Section 4 of this Annual Report.

There were no instances of noncompliance at stationary businesses found to present a significant threat to human health or the environment observed during 2011/2012. Other than facilities observed to be out of compliance with the Industrial Permit, discussed earlier in this section, no other businesses were reported to the RWQCB.

5.3 MOBILE SOURCES

5.3.1 BACKGROUND

Due to the nature of activities of most mobile businesses, a major area of concern tends to be the potential for illegal discharges. In general, mobile businesses can be hard to identify, as many may not have City business licenses. Additionally, because many mobile businesses may be home based and activities do not occur in one fixed location, inspections of such facilities are impractical.

5.3.2 SOURCE CHARACTERIZATION

Known mobile industrial and commercial businesses, as described in the City's JURMP that are doing business within the City are included in the City's inventory. A total of 81 businesses comprise the City's 2011/2012 mobile inventory, included as Appendix A.5. Additionally, the Regional Industrial and Commercial Workgroup also developed a web-based mobile business database for use by all Copermittees. The goal of developing this database is to allow Copermittees to share information about mobile businesses, which may be active in more than one jurisdiction.

5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

BMPs for stationary industrial and commercial facilities, as discussed earlier in this section, are also required to be implemented for mobile activities, as applicable. BMPs applicable to mobile businesses, including key principles such as proper collection and disposal of any discharge, are discussed in the City's JURMP.

5.3.4 PROGRAM IMPLEMENTATION

The City continues to use business license records to identify mobile businesses located in or performing services within the City. Complaints received by the City's storm water hotline regarding mobile business activities also help the City identify mobile businesses. Complaints received by the storm water hotline regarding insufficient BMP implementation by mobile businesses are responded to by Code Compliance Officers or other City staff; educational materials are distributed as applicable. During 2011/2012, the City received four mobile business complaints. Each complaint was investigated and appropriate action was taken to bring about compliance. Details of all complaint investigations are included in the complaint log (Appendix B) and Section 4 of this Annual Report.

Education, Outreach, and Enforcement

Responses to mobile business complaints include City personnel discussing the BMP requirements of mobile businesses with the responsible party. Educational materials such as the Industrial and Commercial BMP brochure (Attachment 5.2) are also provided.

There were no instances of noncompliance of mobile businesses that were believed to present potential threats to human health or the environment observed during 2011/2012, so none were reported to the RWQCB.

5.4 Industrial and Commercial Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

5.5 Program Review and Modification

The City did not make any changes to its industrial and commercial inspection program or facility prioritization processes in 2011/2012.

6.0 RESIDENTIAL COMPONENT

6.1 INTRODUCTION

Thirty-six percent of land use in the City of Poway is residential. Due to the large residential area, activities that take place in residential areas have the potential to affect the quality of receiving waters. Residential activities such as vehicle washing, over-irrigation, and home maintenance can potentially contribute pollutants to the City's MS4 if BMPs are not implemented. Additionally, improper disposal of HHW can also contribute pollutants to the City's MS4. The City has worked to implement a range of programs to address these high TTWQ residential activities with the goal of reducing pollutant loads associated with such activities. Pollutants of concern for Poway's watersheds include bacteria, sediment, and nutrients.

6.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the residential component during the 2011/2012 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the residential component of its storm water program during the reporting period are provided in the remainder of Section 6.

- The City has a permanent HHW collection facility; 4,776 participants properly disposed of 287,735 pounds of HHW.
- The City's Used Oil Recycling Program collected 1,367.53 gallons of used motor oil.
- The City continued to distribute issues of the quarterly *Poway Today* newsletter to more than 17,000 households in the City.
- The City continued to promote the use of the storm water hotline for residents to call in potential violations of the City's municipal storm water ordinance.

6.2 SOURCE CHARACTERIZATION

The City has identified high TTWQ residential areas within its jurisdiction and has designated various high TTWQ residential activities, which are discussed in the following subsections.

6.2.1 HIGH THREAT TO WATER QUALITY ACTIVITIES

During the 2011/2012 reporting period the City continued to identify the following residential activities as high TTWQ:

- Automobile repair and maintenance
- Automobile washing
- Automobile parking

- Home and garden care activities and product use
- Disposal of trash and pet waste

6.2.2 HIGH THREAT TO WATER QUALITY AREAS

In addition to high TTWQ activities, the City has identified several residential areas that pose a high TTWQ. High TTWQ residential areas are designated by considering complaint investigations, institutional knowledge, data from the City's Dry Weather Monitoring Program, and criteria as defined in the Municipal Permit. Residential areas that have not been designated as high TTWQ but may be sources of pollutants are also monitored by the City.

The City has mapped out areas identified as high TTWQ. The maps delineate the residential areas described below, and a series of smaller maps provide more detail about each individual area. The maps were printed and distributed to Public Works personnel, and large copies were posted in the Public Works office so staff can become familiar with high TTWQ areas and be vigilant to storm water issues that may arise in these areas. The maps are included as Attachment 6.1.

North Poway Residential Areas
North Poway includes a large part of the Multi Species Conservation Program and Biological Core and Linkage Area (BCLA). Sections of the Sycamore and Thompson Creeks fall within these areas. Runoff from residential streets bordering the BCLA eventually discharges at an outlet within the corridor at the northern end of Glen Arven Lane. Additionally, some rural roads located within the BCLA may discharge directly to the creeks.

Rattlesnake Canyon Cornerstone
This region is located approximately one mile east of the intersection of Twin Peaks Road and Espola Road, and is within a designated BCLA. Rattlesnake Creek flows from Rock Haven Cornerstone, down through Rattlesnake Canyon Cornerstone, and eventually to Poway Creek.

Rattlesnake Basin
This area includes the residential area south of Twin Peaks Road and West of Espola Road.

South Poway Cornerstone
South Poway Cornerstone consists of BCLA land that encompasses southern portions of the City south of Poway Creek and along the north side of Beeler Canyon Creek. Los Peñasquitos Creek passes through the east portion of the South Poway Cornerstone and joins Poway Creek. Small communities on the south end of Gate Drive, Calle Seco, Paseo Bonita, Welton Lane, and Shirra Avenue are potential contributors of runoff in this area.

Residential Areas Draining to the Blue Sky Ecological Reserve
This area is designated as an Environmentally Sensitive Area (ESA) and includes a portion of Sycamore Creek north of Lake Poway. The residential region in the vicinity of the Blue Sky Ecological Reserve is fairly low density, and the population is relatively small. Potential

runoff sources may include residences located on Twisted Branch Road, Country Day Road, High Sierra Road, and Espola Road.

6.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City has continued to provide information regarding the implementation of pollution prevention measures, such as good housekeeping practices, for residential areas and activities. Section 8.3 of the City's JURMP includes the City's minimum BMP requirements for specific residential activities. General residential BMPs include conscientious automotive maintenance and care, erosion control, and good housekeeping measures, such as sweeping rather than hosing off driveways and sidewalks. Other residential BMPs include non-storm water discharge management, including elimination of IC/IDs. There have been no changes to the City's residential BMP requirements as discussed in Appendix C of the City's JURMP.

6.4 PROGRAM IMPLEMENTATION

The City's residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting are conducted to ensure that the required BMPs are implemented. This minimizes pollutants associated with residential activities and areas. The residential program has an education component so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities.

6.4.1 TRAINING, EDUCATION, AND OUTREACH

The City has continued to conduct training, education, and outreach activities for residents, which are described below.

***Poway Today* Newsletter Articles**

The City publishes storm water-related articles in the quarterly *Poway Today* newsletter. Three of the four newsletters published during the reporting period contained articles on storm water pollution prevention. A copy of each edition was provided to approximately 17,000 residential addresses within the City. Each issue was also available on the City's website. The storm water-related articles published in 2011/2012 are summarized below. All newsletters published during the 2011/2012 reporting period are included as Attachment 6.2.

The Fall 2011 newsletter contained the following storm water-related articles and announcements:

- "HOUSEHOLD HAZARDOUS WASTE TIPS" provided residents with examples of hazardous waste and notified them of proper disposal procedures.
- "CONTINUED WATER CONSERVATION" offered water-efficient landscaping tips.

The Winter 2011 newsletter contained the following storm water-related articles and announcements:

- "WASTEWATER 101" described the treatment and reclamation process that Poway's wastewater goes through after leaving the City.
- "A DAY WITHOUT A DISPOSABLE BAG" notified residents of the annual event in which participating retailers would be giving away free reusable shopping bags in order to reduce disposable bag usage.

The Summer 2012 newsletter contained the following storm water-related articles:

- "DON'T BREAK THE BANK" provided residents with information regarding hazardous waste disposal and encouraged proper waste disposal at the facility in the interests of public and environmental protection.
- "STILL GOT THE SPRING CLEANING BUG?" reminded residents to utilize the free cleanup coupons they received in the mail to dispose of their large bulk items, and notifies them that a second coupon will be provided at a later date.
- "CUTTING THROUGH THE F.O.G." advised residents of proper fats, oils, and grease disposal, and discussed the environmental and property damage that can result from an SSO.

Other Educational Outreach Materials and Activities

If Public Works crews notice storm water-related issues such as trash or animal waste in the vicinity of clean-out location, informational door hangers are distributed to residences in close proximity to the issue. During 2011/2012 a total of 12 door hangers were distributed to residents in the vicinity of observed storm water issues. The door hanger can be found as Attachment 6.3.

Educational materials were also distributed during community events to further encourage pollution prevention measures and to increase knowledge about storm water. Efforts further included adult and youth presentations on watershed issues, storm water pollution prevention, and recycling of used motor oil. Additionally, the City has continued to provide storm water information and contacts on its website (http://www.poway.org/). The City's SWPP hotline also provides a medium for City residents and business owners to obtain storm water information and file storm water related complaints.

Residents were also encouraged to participate in local activities to improve water quality, such as clean-up events and recycling programs. Activities included the Adopt-A-Trail program and the Poway Spirit Day cleanup. More information regarding the City's public participation is included in Section 9 of this report. More detailed information about the City's residential education program is included in Section 8 of this report. During 2011/2012 the City continued to work in concert with the Regional Residential Education Program.

6.4.1.1 PUBLIC EVENTS

HHW Events

The City maintains a permanent collection facility for HHW and electronic waste. The facility is open every Saturday from 9 a.m. to 3 p.m., with the exception of holiday weekends. A total of 287,735 pounds of HHW was collected at this facility. For disabled residents or residents over 65, door-to-door pickup services were provided. The City's five Used Oil Recycling Program collection centers reported that 1,367.53 gallons of used motor oil was collected during the 2011/2012 reporting year.

6.4.2 COMPLIANCE AND ENFORCEMENT

The City continues to implement compliance and enforcement measures by identifying potential sources of pollutants in residential areas from Dry Weather Monitoring Program data, complaints received by the storm water hotline, and observations made by the City's municipal personnel. If a potential to affect water quality is present, the City can provide a verbal warning, written warning, order to abate or correct, or monetary fines as applicable. If there was no active discharge seen during the complaint investigation, a courtesy notice along with educational material was left with the resident.

The City received 26 residential-related complaints during this reporting period. Many of the verified complaints involved residents who were unaware of residential BMPs. City personnel distributed informational door hangers when observed storm water issues may be attributed to area residents (Attachment 6.3). City personnel also cleaned areas in the public right of way as necessary to resolve complaints received by the City's Public Works Department. The resolutions of all residential complaints are provided in Appendix B of this JURMP Annual Report.

6.5 RESIDENTIAL COMPONENT EFFECTIVENESS ASSESSMENT

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

6.6 PROGRAM REVIEW AND MODIFICATION

No changes to the residential component of the City's JURMP were made during the reporting period.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

In accordance with the September 10, 2008, RWQCB adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the 2011/2012 Illicit Discharge Detection and Elimination section and attachments to the RWQCB no later than December 15, 2012.

8.0 EDUCATION COMPONENT

8.1 INTRODUCTION

During 2011/2012, the City continued to provide education and outreach to a variety of audiences within the City. The City's education program targets municipal personnel, industrial and commercial businesses, construction site owners and operators, and residents. The City aims to reduce storm water pollution by increasing awareness about the storm water conveyance system and promoting the implementation of BMPs. Through education and outreach, the City works to foster change in both the attitude and behaviors of the regulated community.

8.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the education component during the 2011/2012 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the education component of its storm water program during the reporting period are provided in the remainder of Section 8.

- Municipal staff trainings had 72 attendees during the reporting period.
- The City's quarterly newsletter, *Poway Today*, featured several articles highlighting storm water topics. These newsletters were distributed to 19,000 businesses and residents in the City.
- ILACSD staffed booths at two City of Poway events, including Rendezvous in Poway and the Spring Street Fair, where staff interacted with approximately 1,290 attendees and distributed educational materials.

8.2 STAFF TRAINING ELEMENT

The City has provided extensive training and educational outreach to its municipal personnel. Many municipal personnel are out in the field on a daily basis, so it is important that they understand the importance of implementing BMPs. Additionally, municipal personnel are encouraged to report any IC/IDs observed to the appropriate City staff and to educate other municipal personnel and the general public about storm water pollution prevention. The City's Public Works Department conducted comprehensive training sessions on September 26th and October 10th, 2011, regarding storm water pollution prevention and NPDES requirements. In addition to the formal training sessions, City storm water staff regularly provided guidance to other City staff on implementation of storm water requirements.

Public Works staff were also provided with maps of the high TTWQ residential areas, as discussed in Section 6 of this JURMP Annual Report. The maps are also posted in the Public Works office. These maps were displayed so staff can become familiar with high TTWQ

areas and be vigilant to storm water issues that may arise in these areas. The maps are included as Attachment 6.1.

8.3 EDUCATIONAL OUTREACH ELEMENT

In addition to internal training, the City has continued to provide education and outreach to industrial and commercial businesses, construction site owners and developers, and residents. These efforts promote storm water awareness and BMP implementation and are discussed in the following subsections.

8.3.1 INDUSTRIAL AND COMMERCIAL BUSINESSES

As required by the Municipal Permit, the City inspects its inventoried businesses to evaluate compliance with the City's BMP requirements and provides site-specific education outreach to business owners and operators. Results of the inspections conducted in 2011/2012 are discussed in Section 5 of this report. Each facility inspected received verbal education on storm water issues and received inspection results by mail when corrective actions were necessary. At least 153 "Preventing Urban Runoff Pollution" brochures describing industrial and commercial storm water BMPs, 89 Think Blue Calendars, and 50 Restaurant BMP brochures were distributed during inspections. Educational materials for industrial and commercial businesses are included as Attachment 5.2.

During the 2011/2012 reporting period, the City's quarterly *Poway Today* newsletter featured several storm water-related articles (Attachment 6.2). Approximately 2,000 of these newsletters were distributed to industrial and commercial facilities in the City. Details about the newsletters can be found in Section 6 of this report.

8.3.1.1 MOBILE BUSINESSES

Mobile businesses, such as mobile car detailers or power washers, may present threats to water quality due to the nature of their business activities and the possibility of prohibited non-storm water discharges if proper BMPs are not implemented. Mobile businesses are not confined to a single area and many may not have City business licenses, making them difficult to identify. The City keeps track of mobile businesses that are discovered through business licenses and during field inspections. In order to ensure that these mobile businesses are implementing appropriate BMPs, BMP handouts for power washers, concrete and mortar projects, and mobile auto detailing are distributed as necessary. BMP information about these activities may also be accessed on the City's website.

8.3.2 CONSTRUCTION SITE OWNERS AND DEVELOPERS

During the project design process, City Development Services staff work closely with developers and project engineers to ensure requirements are understood prior to and during the review process. SUSMP regulations and BMP information included in the City's JURMP are also made available on the City's website, and a copy of the JURMP is available at the front counter of Development Services.

Due to the nature of activities, construction sites have the potential to discharge various types of pollutants to receiving waters if not managed properly. To ensure that construction site owners, contractors, and developers are abiding by regional and federal regulation, new development and redevelopment project proponents are required to attend a preconstruction meeting that includes education on storm water management topics. These meetings include federal, state, and local regulations, implementation of a SWPPP, if required, and implementation and maintenance of BMPs. Project proponents view a video on proper BMP implementation for construction sites and sign an acknowledgement that they have received this information. Prior to the rainy season, the City also sends out a yearly letter to all parties responsible for construction projects which describes enhanced construction BMP requirements and storm water management requirements during the rainy season. At least 57 construction sites were sent this letter prior to the 2011/2012 rainy season.

8.3.3 RESIDENTIAL AREAS

Distribution of Educational Material

Since residential areas make up a large portion of Poway, the City understands the importance of reaching this particular audience through educational outreach programs. The City continued to send the quarterly *Poway Today* newsletter (Attachment 6.2) to residential addresses in the City. Four editions of *Poway Today* were distributed during 2011/2012: 19,000 copies for each of the four editions were distributed, approximately 17,000 of which to residential addresses. As detailed in Section 6, several storm water articles were included in the newsletters distributed in 2011/2012.

The City website, www.poway.org, is another way in which City residents can become familiar with the design and intended use of the storm drain system, minimum BMPs for various high TTWQ activities, information regarding volunteer opportunities, information about IPM techniques, and City contact information.

As mentioned in Section 6 of this report, if Public Works crews noticed storm water-related issues such as trash or animal waste during normal maintenance activities, informational door hangers were distributed to residences in close proximity to the issue. During 2011/2012, 12 door hangers were distributed to residents in the vicinity of an area where vegetation and debris, including animal feces, had been removed. The door hangers remind residents of general storm water BMPs and can be found as Attachment 6.3.

ILACSD staffed booths at two City of Poway events, including Rendezvous in Poway and the Spring Street Fair. Staff distributed City of Poway brochures regarding landscape irrigation, runoff prevention, and storm water pollution prevention. A detailed description of public participation events that took place in the City during 2011/2012 is provided in Section 9.

8.3.4 UNDERSERVED COMMUNITIES

The City of Poway has not identified any underserved communities within City boundaries. There is no inner-city area within the City's jurisdiction, and the non-English speaking populations are very small in size.

8.3.5 COMPLAINT INVESTIGATIONS

To further aid the process of identifying illicit discharges, the City encourages the public and City staff to report IC/IDs to the City's SWPP hotline. All complaints are investigated by City staff. If a representative for the reported business, residential address, or construction site is present, the inspector will provide one-on-one verbal education about the complaint and storm water in general. Pollution prevention concepts are emphasized, and educational materials are distributed as applicable.

8.4 OUTREACH COMPONENT EFFECTIVENESS ASSESSMENT

The estimated number of impressions made by the City's education and outreach efforts during 2011/2012 is presented and described below.

Impressions Made

As discussed in this section, the City has continued to provide storm water-related education to different audiences in the City through inspections, distribution, and mailing of educational materials, and during various events throughout the year. The City calculates an estimate of impressions based on the number and type of educational materials distributed. Estimates of impressions generated by the City's efforts allow for a more realistic evaluation of the effectiveness of the NPDES storm water program.

The estimated number of impressions was generated by multiplying each effort by the number of impressions thought to be generated by that particular effort. For example, inspections have been presumed to generate three impressions, with the exception of municipal inspections. Municipal inspections generally involve more people and are assumed to generate five impressions. Training sessions and cleanup events have been assumed to generate a number of impressions equal to four times the number of attendees because it is likely that the attendees will discuss the content with others after the training session or event. Printed educational materials distributed are assumed to generate three impressions each. Table 8-1, below, details the number of impressions made by the City during this reporting year.

Table 8-1
Impressions Made by the City

Impression Type	Count	Unit	Estimated Impressions
SUSMP Handout	70	Brochures	210
Construction Seasonal Requirements Letter	28	Letters	84
Municipal Inspections	30	Inspections	150
Municipal Staff Training Sessions	72	Attendees	288
Industrial/Commercial Inspections	168	Inspections	504
Industrial/Commercial Preventing Urban Runoff Pollution	170	Brochures	510
NOI Paperwork	4	Brochures	12
NONA/NEC Paperwork	10	Brochures	30
Restaurant BMP Trifold	50	Brochures	150
Storm Water Door Hangers	12	Door Hangers	36
Special Events and School Presentations	7,790	Attendees	31,160
Think Blue Storm Water Pollution Prevention Calendars	89	Calendars	267
Poway Today Newsletter	57,000	Newsletters	171,000
Total City Impressions			**204,401**

Please refer to Section 11 of this JURMP Annual Report for the remainder of the effectiveness assessment for this program component.

8.5 PROGRAM REVIEW AND MODIFICATION

No significant changes to the education component of the City's JURMP were made during 2011/2012.

9.0 PUBLIC PARTICIPATION COMPONENT

9.1 INTRODUCTION

The City encourages public participation in the City's JURMP as a means to develop storm water awareness and improve water quality. Public participation includes, but is not limited to, clean-up events, special community projects, reporting observed IC/IDs, and participating in City-hosted waste disposal and collection events. Collaboration between the City and the community should help foster a sense of shared responsibility in protecting water quality both locally and regionally. The City has encouraged public participation through the programs discussed in this section.

9.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the public participation component during the 2011/2012 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the public participation component of its storm water program during the reporting period are provided in the remainder of Section 9.

- Volunteers for the City's Adopt-a-Trail program, which involved residents keeping local parks and open spaces free of litter, logged over 970 hours.
- The City's year-round HHW collection facility received 287,735 pounds of HHW from approximately 4,776 visits by City residents.
- The City's collected 1,367.53 gallons of used motor oil at the HHW collection facility and verified participation of eight certified used oil collection centers.
- Bi-annual self-haul clean-up events were hosted by the City in conjunction with EDCO. The events allowed residents to dispose of large items, unwanted household materials (not including HHW), and green waste free of charge. A total of 1,724 households participated in these events and over 690 tons of material were collected.

9.2 PUBLIC PARTICIPATION ACTIVITIES

Adopt-a-Trail
The City's Adopt-a-Trail Program promotes cleanliness in the City by encouraging City residents to keep hiking trails, creeks, and open space safe and free of trash. Volunteers pick up trash and debris during activities such as daily walks. During this reporting period, 34 groups of volunteers spent 970 hours removing trash from open space and trails.

Hazardous Waste Collection and Used Oil Recycling Program
The City's Community Hazardous Waste Collection and Electronic Waste Collection Programs encourage City residents and business owners to properly dispose of HHW and miscellaneous electronic waste. Door-to-door pickup service was also provided for seniors over 65 and disabled residents. The City's Used Oil Recycling Program involves eight

certified used oil centers within the City. In the 2011/2012 reporting period, the collection centers reported that 1,367.53 gallons of used motor oil was collected. Information about the used motor oil, HHW, and electronic waste collection facilities was advertised in *Poway Today* and on the City's website. A flyer advertising proper disposal of HHW and universal waste was also distributed at the certified collection centers, and is included as Attachment 9.1.

Other Waste Disposal

The City hosts bi-annual self-haul cleanup events from October to December and April to June to encourage proper disposal of unwanted bulk items and other refuse. The City's waste hauler, EDCO Waste and Recycling Services, distributes coupons for disposal of large items, appliances, and yard waste to residents of Poway. These coupons allow residents to drop off any unwanted trash and debris, excluding HHW, free of charge. During these events, the transfer station remains open from 7 a.m. to 4:30 p.m. seven days a week. The Spring Cleanup event was advertised in the Summer 2012 *Poway Today* newsletter. There were approximately 1,724 participants and 690 tons of waste was delivered to the collection facility in 2011/2012.

Public Reporting

As discussed in Section 4, complaints are received through the City's storm water hotline and through the City's Public Works Department. The number for the hotline is advertised on various educational materials given out at public outreach events, and on the City's website. The residential, industrial and commercial, construction, and municipal communities are encouraged to use the hotline to report IC/IDs. The City investigates each complaint and tracks the complaint and follow-up actions, as applicable. A total of 33 complaints were made and responded to during 2011/2012.

9.3 OUTREACH EVENTS

The City has continued to provide educational outreach programs for a variety of different communities in the City. Since it is an effective way of reaching large numbers of individuals, educational outreach is typically associated with an event. Other outreach events in the City include distributing educational materials to commercial businesses and the City's participation in regional meetings and events.

Rendezvous in Poway

On September 18, 2011, the City of Poway hosted a community celebration, Rendezvous in Poway, which is a free event with entertainment, booths of local businesses, and activities. ILACSD staffed a booth at the event. Staff distributed City of Poway brochures regarding landscape irrigation, runoff prevention, and storm water pollution prevention. Approximately 290 people visited the booth and interacted with ILACSD staff members.

Day Without A Bag

On December 15, 2011, the City participated in a region-wide effort to encourage the use of reusable shopping bags. The event included free reusable bag giveaways along with tips for remembering to bring reusable bags when shopping. Several retailers in the City of Poway,

and the Poway Community Library, participated in the event and distributed either their own signature reusable bags or bags donated by EDCO or the "Think Blue" San Diego Region (Copermittee Regional Education Workgroup). This event promoted storm water pollution prevention and waste reduction in the Poway community.

Spring Street Fair
On April 15, 2012, the City of Poway hosted an environmental awareness street fair held on Midland Road in the City of Poway. ILACSD staffed a booth at the event. Staff distributed City of Poway brochures regarding landscape irrigation, runoff prevention, and storm water pollution prevention. Approximately 1,000 people participated at the booth and interacted with the ILACSD staff members.

Storm Water Copermittee Meetings and Other City Participation
City personnel attended and were active in various storm water Copermittee workgroups during 2011/2012. The workgroups provide a forum for representatives from various jurisdictions within San Diego County and other interested parties, including the general public, to exchange information and ideas regarding the management of storm water programs. The City participated in many Copermittee meetings and workgroups. These meetings will continue to be attended by City personnel during the 2012/2013 reporting period. The City is also a member of the stakeholder advisory group for the development of the Los Penasquitos Watershed Sediment TMDL, which includes representatives of Caltrans, the Los Penasquitos Lagoon Foundation, Coastkeeper, and California State Parks in addition to municipal Copermittees.

9.4 PUBLIC PARTICIPATION COMPONENT EFFECTIVENESS ASSESSMENT

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

9.5 PROGRAM REVIEW AND MODIFICATION

No changes were made to the public participation component of the City's JURMP during the reporting period.

10.0 FISCAL ANALYSIS

10.1 INTRODUCTION

The City's SWPP Program was largely funded by the City's General Fund in 2011/2012. Developer and inspection fees funded services tied to a specific permit. A Used Oil Block Grant funded portions of the Education and Public Participation Programs. AB939 trash fee funds supported the HHW Program. Due to legal issues, the City rescinded its Storm Water Program Fee during the 2011/2012 reporting period, so the actual fee amount collected was substantially less than budgeted. This shortfall was made up with General Fund.

Fiscal information from 2011/2012 is reported in the tables below, which indicate budgeted amounts following the standard format developed collectively by the Copermittees during 2009/2010.

Table 10-1
Expenditure Summary

JURISDICTIONAL COMPONENTS	
Administration	$289,490
Development Planning	$27,736
Construction	$20,628
Municipal	$977,479
Industrial and Commercial	$54,449
Residential	$213,371
IDDE	$48,500
Education	$3,150
Public Participation	$0
Special Investigations	$0
Non-Emergency Firefighting	$0
Jurisdictional Total	**$1,634,803**

WATERSHED	
Los Peñasquitos	$61,429
San Dieguito	$61,204
Watershed Total	**$122,633**

REGIONAL	**$97,260**

TOTAL COSTS	**$1,854,696**

Table 10-2
Fund Summary

FUNDING BY SOURCE	
General Fund	$178,017
Storm Water Fee	$1,398,300 (1)
Developer Deposits and Fees	$22,128
Registration and Inspection Fees	$2,180
Grant Funds	$22,549
Other	$231,522
Total	**$1,854,696**

(1) Per the standard format, amounts shown in the tables are budgeted amounts. The actual fee collected before it was eliminated was $484,190. The shortfall was made up with General Fund.

Table 10-3
Watershed Urban Runoff Management Program (WURMP) Expenses

	Los Peñasquitos	San Dieguito
Administration (1)	$9,704	$9,704
Cost Share Contribution	$7,500	$7,500
Watershed Activities	$44,225	$44,000
Other	$0	$0
TOTAL	**$61,429**	**$61,204**

(1) Administration – includes Watershed strategic planning, management, mapping, assessment, and reporting.

Table 10-4
Regional Urban Runoff Management Program (RURMP) Expenses

Regional Programs	Jurisdictional Cost
Administration (1)	$25,260
Cost Share Contribution	$72,000
Other (2)	$0
TOTAL	**$97,260**

(1) Administration – includes assessment, reporting, management, etc.
(2) Other – examples include regional and special studies.

11.0 EFFECTIVENESS ASSESSMENT

11.1 INTRODUCTION

Per the Municipal Permit, the City's JURMP is assessed regularly in order to increase its effectiveness in minimizing the presence of pollutants in urban runoff to the MEP. The overall structure of the City's JURMP contains three major components: Program Planning, Program Implementation, and Effectiveness Assessment.

Program Planning
The initial step is program planning, which requires identification of potential pollutant sources, establishment of BMP requirements, and identification of targeted outcomes and ways to measure those outcomes. Next, the program developed during the planning step is implemented.

Program Implementation
Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique.

Effectiveness Assessment
Results of the program implementation phase of the JURMP provide the City with various metrics used to interpret the overall effectiveness of the program in achieving progress toward targeted outcomes. Example metrics were provided in Section 13 of the City's 2008 JURMP, and the City has refined those metrics in the reporting periods since then. The effectiveness assessment approach developed by the Copermittees during the last permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes (Level 1) to more difficult to measure, quality-based outcomes (Level 6). The levels are listed below.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

11.2 EFFECTIVENESS ASSESSMENT RESULTS

The Municipal Permit requires the City to assess the effectiveness of each program component, the significant activities within each component, and the storm water program as a whole. Level 1, Level 5, and Level 6 outcomes are discussed in Section 11.2.1. At this time the City is only able to assess Level 5 or Level 6 outcomes for the storm water program as a whole, and not on a component or activity-specific basis. As has been noted in CASQA

effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

11.2.1 OUTCOME LEVEL ASSESSMENTS

Level 1

Level 1 outcomes are essentially measures of Municipal Permit compliance. The component-specific sections in this JURMP Annual Report provide details of programmatic actions taken to comply with the applicable Municipal Permit requirements. Appendix C of this JURMP Annual Report also includes a checklist that matches the Municipal Permit's annual reporting requirements with the section(s) or appendix of this report that addresses each requirement.

Storm water program personnel coordinate with various City staff members who have storm water responsibilities, such as engineers, planners, and Public Works maintenance staff.

Levels 2 and 3

Tables 11-1 through 11-8 at the end of this section provide discussions of Level 2 and Level 3 outcomes for significant activities within each program component. Additionally, Figures 11-1 and 11-2 display knowledge and BMP implementation scores, respectively, for industrial and commercial businesses. Please note that only a Level 1 assessment applies to fiscal analysis, so no table for fiscal analysis is included.

Level 4

The tables at the end of this section provide information for Level 4 assessments where feasible. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning. For most other programs, reliable load estimation methods have not yet been developed.

Figure 11-3 at the end of this section, displays historical flow rates for four downstream dry weather monitoring sites within the City. These sites were selected due to their locations at points furthest downstream of the City, which makes them most representative of the City as a whole, and more accurately characterizes the total flow leaving the City. The majority of other sites in the City have very low flow rates, typically below 10 gallons per minute. Each graph illustrates a slightly decreasing trend in dry weather flows, which may indicate discharges to the MS4, such as runoff from over-irrigation, have declined over the years. This may result in a decrease of pollutant loads.

Level 5

The Dry Weather Monitoring Program is the City's primary mechanism of measuring the quality of discharges. Figure 11-4 presents historical average values from field tests. Trends in ammonia-nitrogen concentrations are shown in Figure 11-5. Ammonia-nitrogen is one of the constituents with the longest historical data record and has shown a general decreasing trend over the course of the program. Results for fecal coliform bacteria and *Enterococcus* bacteria analyses are displayed in Figure 11-6. Median fecal coliform levels show a

declining trend over time. Heavy metals and organophosphate pesticides have rarely been detected since testing for them began in 2002.

The City has also completed several years of inflow and outflow monitoring of its retrofitted detention basins to assess their effectiveness. The studies have indicated the basins have a significant positive effect on water quality, such as the reduction of indicator bacteria counts in discharges observed during 2011 monitoring. See Attachment 11.1 for details.

Level 6

The City recognizes the importance of protecting water quality of receiving water bodies in and around the City, and continues to participate in regional monitoring efforts. The long-term trend monitoring station in the Peñasquitos Watershed, referred to as a mass loading station (MLS), is well downstream of the City, and the MLS in the San Dieguito Watershed is downstream of Lake Hodges. Lake Hodges typically retains runoff from upstream areas, including the City of Poway, so results from the downstream MLS are unlikely to be representative of runoff from areas upstream of Lake Hodges. Temporary watershed assessment stations, located closer to the City in both the San Dieguito and Penasquitos watersheds, showed relatively low levels of pollution in 2007/2008. These stations were scheduled for monitoring again in 2010/2011; however, the regional monitoring report has not yet been completed.

11.2.2 OVERALL COMPONENT ASSESSMENTS

Development Planning

The operation and maintenance verification program, which requires responsible parties to certify that their treatment control BMPs have been maintained properly and includes site inspections, has increased the responsible parties' understanding of the requirements. The City has retrofitted five detention basins for use as shared treatment control BMPs, which provides effective treatment to SUSMP projects that drain to the basins and non-SUSMP projects that are also in the basins' drainage areas. Annual effectiveness assessment monitoring of these basins has been conducted. The monitoring results have demonstrated notable reductions in the levels of many different pollutants; see Attachment 11.1 for details.

Construction

The available data indicate that on the whole the City's construction program is effective in requiring BMP implementation at both public and private construction sites. Any BMP deficiencies noted are typically remedied promptly. Since 2009/2010, reporting and record-keeping procedures have been improved to increase the ability of the City to effectively track active construction sites. The City will continue its efforts to notify project proponents and homeowners of the City's BMP requirements. Storm water program staff also held weekly meetings with the City's land development engineers regarding SUSMP requirements.

Municipal

The City's municipal staff are regularly trained on storm water issues, and the City's MS4 cleaning and street sweeping programs meet or exceed minimum Municipal Permit

frequency requirements. The City also continues to repair and clean sewer lines, and conduct a food establishment inspection program for FOG management, in an effort to prevent SSOs. This year, all of the City's municipal activities and facilities were in compliance with BMP requirements, which is a slight increase from the previous reporting period (96 percent in compliance). Street sweeping activities in 2011/2012 removed the largest amount of sediment and debris from City streets in the past five years.

Industrial and Commercial

The City has a comprehensive inspection program and tracks inspection results using the TRAKiT permit tracking software. The City continued to utilize BMP implementation and knowledge scores to evaluate the level of BMP implementation and level of knowledge at inspected facilities, which improved from the previous reporting period. These scores help the City understand which categories of businesses are most in need of education outreach and which will require additional attention during inspections. As depicted in Figures 11-1 and 11-2 later in this section, the average knowledge score of business representatives went from 2.77 in 2010/2011 to 3.19 in 2011/2012; and average BMP implementation scores increased from 2.89 in 2010/2011 to 3.22 in 2011/2012, despite the fact that 27 businesses had not previously been inspected. The inspection deficiency frequency was significantly lower during 2011/2012 than in previous years, with only 12.5 percent of inspected businesses requiring additional follow-up action.

Residential

The City's residential component achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. In 2011/2012, 26 residential complaints were received by the SWPP hotline, which is the greatest amount received over the past five years. This may indicate an increase in awareness of the importance of preventing storm water pollution and of the City's BMP requirements. City staff that conduct routine maintenance in residential areas are trained to observe and respond to potential storm water issues such as pet waste and minor trash and debris with educational material. During 2011/2012, City staff distributed 12 educational door hangers to residents. Internal distribution of maps showing high TTWQ residential areas to Public Works staff has increased staff awareness of the location and sensitivity of these areas.

Illicit Discharge Detection and Elimination

The City's IDDE program has effectively responded to complaints. No IC/IDs were identified during the 2012 Dry Weather Monitoring Program. There were three SSOs during the reporting period, which occurred during heavy rain events and were reported through CIWQS to the RWQCB. Two of the SSOs were completely recovered after the occurrence. Sanitary sewer system maintenance efforts and FOG inspection enforcement were adjusted in response to the SSOs. The City will continue to take action to prevent and eliminate IC/IDs.

Education

During 2011/2012, the City has continued to educate audiences of all ages on storm water concepts and BMPs during public events, inspections, and while investigating complaints. Knowledge scores for industrial and commercial business representatives, depicted in

Figure 11-1 later in this section, were higher than those recorded in the previous reporting period.

Public Participation
In 2011, Poway Lake was selected as a clean-up site for the annual California Coastal Clean-Up Day, sponsored by IlACSD and San Diego Coastkeeper. The number of visits and the amount of HHW disposed of at City sponsored events was slightly higher as compared to that of previous years. As a result, during 2011/2012, the amount of large items and debris collected during disposal and clean-up events was the highest recorded over the past five years. The City will continue looking for new opportunities for public involvement, while continuing existing clean-up and recycling programs and events.

11.3 Program Review and Modification

No significant changes to the effectiveness assessment component of the City's JURMP were made during the reporting period.

Table 11-1
Development Planning Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review and approve project plans	External A small number of projects submitted reports for SUSMP review during 2011/2012. Based on meetings with applicants and BMPs proposed, it appears that the level of knowledge regarding LID and HMP requirements is increasing. Internal City storm water staff provides training for engineers and planners on SUSMP requirements. Storm water staff and engineers have weekly SUSMP requirements coordination meetings. City staff also attended one training session—see sections 2 and 8.	Percent of approved projects implementing BMPs with high or medium removal efficiencies	100%	N/A, addressed through other significant activities for this component
Verify proposed BMPs are implemented	External N/A, knowledge is evaluated by appropriate implementation of BMPs as shown in Level 3 Internal The City contracts with a qualified consultant to perform treatment control BMP inspections.	Percent of inspected projects requiring follow-up	50%	BMP implementation is likely to have reduced pollutant loads.
		Resolution status of enforcement actions	See Section 2	
Verify BMPs are properly maintained	External Contacting responsible parties increased their awareness of the need for BMP maintenance. Internal N/A, City staff are aware of the need for BMP maintenance.	Percent of sites returning verification forms	86%	Additional load reduction could be achieved through improved BMP maintenance.
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-2
Construction Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review proposed plans and BMPs	External Project proponents submit plans for construction BMP implementation for their projects, and attend a preconstruction meeting with City staff where education on storm water pollution prevention is provided; the level of awareness of construction BMP requirements is fairly high. Internal Training for City staff is described in Section 8. City staff are familiar with relevant construction BMPs.	BMPs proposed for construction projects generally meet requirements; no significant problems have been noted.		Proper pre-project planning is likely to have reduced pollutant loading.
Verify proposed BMPs are implemented	External Grading projects implement BMPs as required by their permits, and contractors are familiar with the City's requirements. Internal Training for City staff is described in Section 8. City inspectors are familiar with relevant construction BMPs.	Percent of deficiencies corrected by the end of the reporting period	69%	Proper BMP implementation is likely to have reduced pollutant loading.
		Percent of projects in compliance with BMP requirements during all inspections	70%	
		Resolution status of enforcement actions	See Section 3	
		Number of dry weather monitoring exceedances traced to construction sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-3
Municipal Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Verify proposed BMPs are implemented at facilities	City staff are regularly trained on BMP implementation; see sections 4 and 8. Public Works staff attended annual training sessions in 2011/2012, ensuring that they maintain a high level of storm water knowledge.	Percent of inspected facilities/activities in compliance with BMP requirements	100%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of sites requiring follow-up inspections	N/A, see Section 4		
		Number of dry weather monitoring exceedances traced to municipal sites	0		
Sweep streets and parking facilities		N/A, streets and parking facilities are swept as often as directed by management.		Amount of sediment and debris removed (weight or volume)	1,557 tons
				Number of curb miles swept	10,473
Maintain and clean out MS4		N/A, MS4 structures are maintained as often as directed by management.		Amount of sediment and debris removed (weight or volume)	2,273.25 cubic yards
Maintain sanitary sewer system		N/A, the sanitary sewer system is maintained as often as directed by management.		Total volume of SSO recovered from MS4	1,879 gallons
				Total length of sewer lines cleaned and/or repaired	87 miles cleaned 320 feet repaired
Maintain municipal treatment control BMPs		N/A, treatment control BMPs are maintained as often as directed by management.		Municipal Treatment Control BMPs (detention basins) inspected	100%
				BMP effectiveness studies	Attachment 11.1
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-4
Industrial and Commercial Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Require BMP implementation	External Knowledge assessment scores indicated a greater than medium level of understanding of relevant storm water concepts. See Figure 11-1 on the following page for a score distribution. See Section 8 for more detail on educational materials and other outreach efforts. Internal The City contracts with a qualified consultant to perform industrial and commercial inspections. Staff were also provided inspection refresher training during 2011/2012 to ensure a high level of knowledge.	Percent of inspected sites requiring follow-up	12.5%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of enforcement actions	See Section 5		
		Number of dry weather monitoring exceedances traced to industrial or commercial sources	0	Number of IC/IDs eliminated (inspections and complaint investigations)	8
		The City revisits businesses with low BMP assessment scores. See Figure 11-2 on the following page for a score distribution.			
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Figure 11-1
Knowledge Assessment Scores

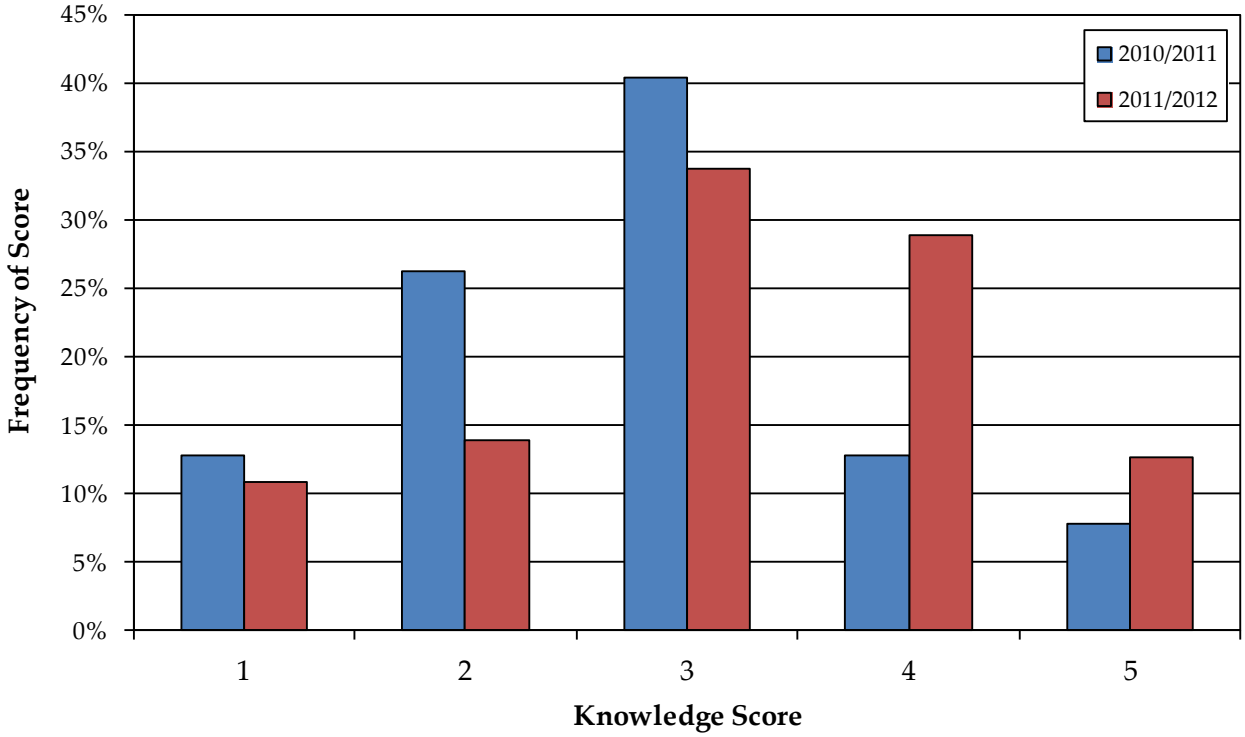

Figure 11-2
BMP Assessment Scores

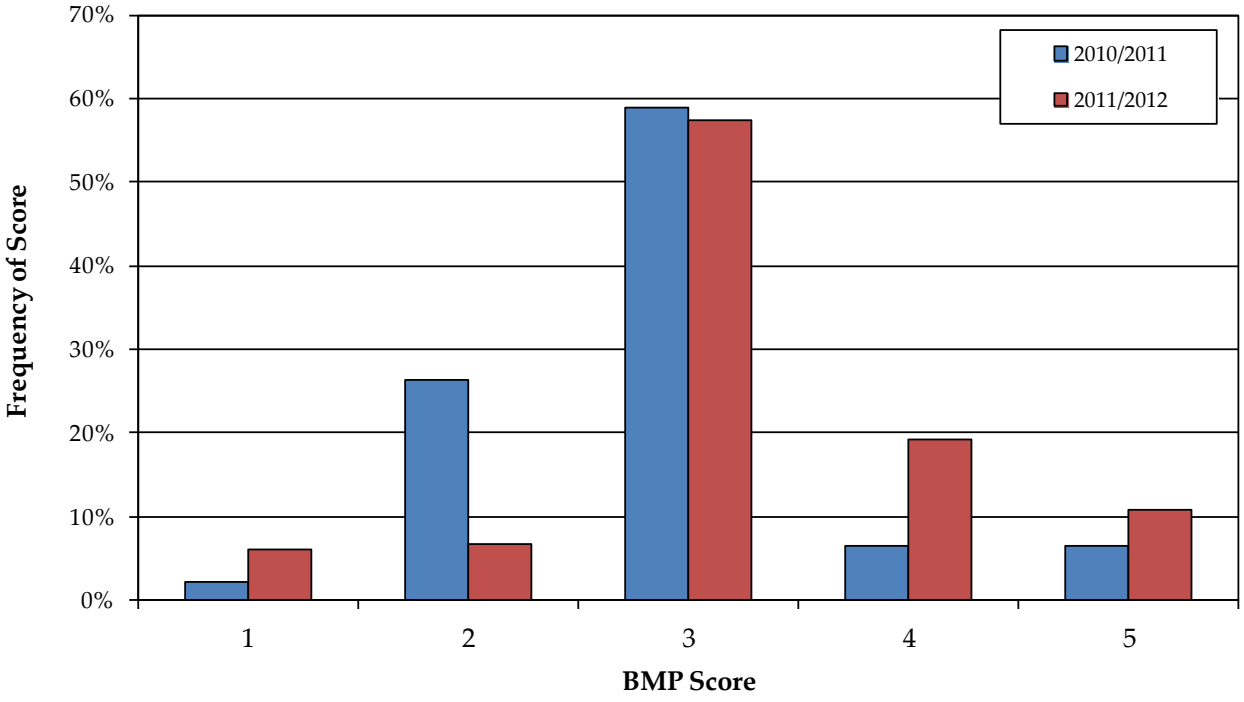

Table 11-5: Residential Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Require BMP implementation	External Residents were educated in a variety of ways in 2011/2012; see sections 6 and 8 for details. Internal Maps of high TTWQ residential areas were created and distributed to Public Works staff to increase their awareness of the location and sensitivity of these areas. The City's Storm Water Program Administrator is heavily involved in the implementation of the residential component.	Number of residential incidents reported to SWPP hotline	26	Resolution of residential incidents reported to the hotline likely resulted in a decrease in pollutant loading through improved BMP implementation.
		Resolution of enforcement actions	See Section 6 and Appendix B	
		Number of dry weather monitoring exceedances traced to residential sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-6: Illicit Discharge Detection and Elimination Component Assessment Measures

Significant Activity	Level 2	Level 3	Level 4
Conduct Dry Weather Monitoring Program	The City contracts with a qualified consultant to perform its Dry Weather Monitoring Program.	N/A, personnel conduct monitoring as directed by management.	No significant, long-term IC/IDs were eliminated, so a reliable estimate of load reduction cannot be made.
Respond to incidents reported to storm water hotline	The City's Storm Water Program Administrator trains City staff as needed (see sections 4 and 8). City staff identify and refer complaints from other agencies to the Storm Water Department as appropriate.	N/A, personnel respond to incidents as directed by management.	Resolution of the incidents reported to the hotline and listed in Appendix B are likely to have resulted a pollutant loading reduction.
Respond to and clean up SSOs	City staff are thoroughly trained on how to respond to SSOs.	The City conducts additional preventive inspections and maintenance in areas with a higher history of problems. See Section 4 for details.	1,879 gallons of sewage were recovered after SSOs during rain events in 2011/2012.

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-7: Education Component Assessment Measures

Significant Activity	Level 2		Level 3	Level 4
Provide storm water education to the public	External The City actively educates the various audiences in its jurisdiction. See Section 8 for details.		See Level 3 outcomes for other program components for information about behavior change.	Sufficient data to estimate load reductions due to educational efforts is not available for 2011/2012.
	Estimated number of impressions made	204,401		

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-8: Public Participation Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Involve the public in activities that relate to storm water pollution prevention	External The City and City partners put on a number of opportunities for the public to participate. See section 9 for details.	Number of attendees at events	1,427	Amount of trash and debris collected at cleanup events (including large item disposal event)	More than 690 tons
		Number of drop-offs of large items and HHW to the City's recycling facility	6,500		
		Number of complaints received (see Appendix B for details)	33	Amount of HHW collected	287,735 pounds of HHW, 1,367.53 gallons of used oil

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

12.0 SPECIAL INVESTIGATIONS

The City takes a proactive approach to storm water management in an attempt not only to protect receiving water quality, but also to improve the quality of water that is discharged from the City's MS4. Data collected through the City's various monitoring and inspection programs are used to identify locations within the City that may be contributing to storm water contamination. Source identification investigations are then initiated to pinpoint the exact cause of detected pollution. Aside from upstream investigations conducted as part of the dry weather monitoring and sampling program (to be reported as part of the IDDE component in December), no special investigations were needed or conducted during this reporting period.

13.0 NON-EMERGENCY FIRE FIGHTING

A program of BMPs for non-emergency fire fighting flows was adopted in March 2008 as Section 3.4 of the City's JURMP. These BMPs are implemented during regular maintenance of fire and emergency vehicles and equipment, training exercises, facilities maintenance, and post-emergency rehabilitation of response equipment. No significant changes to the program presented in the City's JURMP have been made since the submittal of that document.

14.0 JURMP REVISIONS

There were no changes made to the City's JURMP during the reporting period.

15.0 CONCLUSIONS AND RECOMMENDATIONS

During 2011/2012, the City of Poway continued to implement its storm water program based on its 2008 JURMP. Additionally, the City continued to work collaboratively with the other Copermittees to facilitate sharing of information about how best to run these programs and to provide regional guidance on standardized implementation where applicable. The City will continue to refine and improve its storm water program based on information made available by these collaborative efforts.

Notes:

Likely Source – Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with the receiving water.

L = Likely, PO = Possible, UL= Unlikely

* Discharge of heavy metals and oil and grease is possible if the facility has on-site parking.

** Sediment and oxygen demanding substances are possible pollutants for earthen or natural conveyances. Bacteria, but generally not viruses and other pathogens, may regrow in MS4s under certain conditions. While other pollutants may be discharged from the MS4, the MS4 itself is not a direct source of those pollutants.

*** The sanitary sewer system is only a potential source of pollutants in the event of sewer line breaks or SSOs.

[1] The Material Handling Yard is covered by the Industrial Permit and is also included on the City's industrial and commercial inventory.

Notes:

SIC - Standard Industrial Classification Code

TTWQ - Threat to Water Quality

HSA – Hydrologic Subarea

Likely Source – Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with any of the downstream receiving water bodies. Where a facility has a "Likely" pollutant discharge potential for a specific pollutant, a "Yes" is placed in the appropriate column.

[1]The Material Handling Yard is a municipal facility that is covered by the Industrial Permit and is therefore included on both the City's industrial/commercial inventory and the City's municipal inventory.

Notes
SIC –Standard Industrial Classification Code
TTWQ – Threat to Water Quality
HSA –Hydrologic Subarea
* Due to the nature of mobile businesses, it is possible that work may be performed in any portion of the City. Therefore, if a business is operating within the City, and has a pollutant discharge potential of "Likely" for one or more pollutants of concern associated with any of the receiving water bodies within or downstream of the City of Poway, they will be marked as a Likely Source.

APPENDIX B

Appendix B
Complaint Log

#	Date	Location	Complaint Type	Complaint	Resolution
1	7/6/2011	AVENIDA FLORENCIA	Residential	Request for the walls of the brow ditch to be extended higher to prevent debris from falling in the ditch.	Area was cleaned; 10 cubic yards of soil, one small palm, and one shopping cart removed from the area and adjacent creek.
2	7/22/2011	MIDLAND RD	Commercial	Mattress and couch reportedly dumped in the drainage culvert behind the Poway Adult School location at Twin Peaks and Midland.	Mattress and couch were removed.
3	9/5/2011	ST ANDREWS DR	Residential	Reported sulfuric odor from storm drain to Stoneridge golf course pond.	Inspected and met with the resident. The overall site was clean and odorless. Observed some decomposing leaves that could be causing odor. Resident will pursue with golf course manager/owner of the property.
4	9/5/2011	POMERADO RD	Commercial	Reported possible sewer odor on Pomerado Rd. Waste water performed a field investigation and indicated the odor is not sewer related but that the odor could possibly be coming from the storm drain system in the area.	Area was inspected, and no discharge or odor was observed.
5	9/26/2011	12770 MAPLEWOOD CT	Residential	Landscaper blowing leaves down storm drain.	Spoke with gardener about cleaning up debris from gutter. Distributed NPDES materials.

Appendix B (Continued)
Complaint Log

#	Date	Location	Complaint Type	Complaint	Resolution
6	9/29/2011	14943 HUNTINGTON GATE	Residential	Bank erosion evident.	Requested additional BMPs; sandbags added to top of bank.
7	10/3/2011	TOBIASSON RD	Residential	Resident requested inspection and cleaning of storm drain inlet behind home.	Removed a minimal amount of debris from inlet.
8	10/6/2011	16420 AVENIDA FLORENCIA	Residential	Possible laundry water discharge into brow ditch.	Unfounded. Property owner says laundry water goes into septic system.
9	10/19/2011	12675 SAGECREST DR	Residential	Water leaking onto street and gutter.	NPDES info left at door. After several attempts to communicate with property owner, leak was stopped.
10	10/25/2011	13371 VIA MARK	Residential	Discharge into curb and gutter.	Direct contact with property owner. Asked to sweep residue off surfaces. NPDES info left.
11	11/1/2011	12619 ARABIAN WAY	Residential	Leaves piled in street.	NPDES info left. Inspection later found area clean.
12	11/1/2011	12358 HILL COUNTRY DR	Residential	Vehicle leaking oil on street.	NPDES info left with instruction to use absorbent on oil spot. Vehicle moved to private property on soil.
13	11/1/2011	12615 ARABIAN WAY	Residential	Leaves piled in street.	NPDES info distributed. Area swept.

Appendix B (Continued)
Complaint Log

#	Date	Location	Complaint Type	Complaint	Resolution
14	11/3/2011	12834 REO REAL DR	Residential	Pet waste deposited in and next to watercourse.	NPDES info distributed. Notice sent asking waste to be removed. Cleaned.
15	12/5/2011	13272 POWAY RD	Mobile	Uncontained pressure washing.	Contractors using pressure washer on site. Ceased activity immediately NPDES material distributed. Spoke with property owner regarding regulations.
16	12/8/2011	13414 FRAME RD	Mobile	Landscape debris in street.	Contractor gone when site visit was performed. Spoke with property owner; gave NPDES info. Inspection next day found site clean.
17	1/10/2012	13373 OLIVE GROVE DR	Residential	Vehicle leaking oil on street.	NPDES info left. Property owner repaired vehicle and cleaned area with absorbent.
18	1/19/2012	12636 STOUTWOOD ST	Residential	Drainage from curb drain.	NPDES info left asking property owner to find source of leak and repair. Subsequent inspection found leak repaired.
19	2/7/2012	MONTAUK ST	Residential	Report of trash and debris at the south end of Montauk Street.	Removed 2 bags of dumped trash.

Appendix B (Continued)
Complaint Log

#	Date	Location	Complaint Type	Complaint	Resolution
20	2/13/2012	12721 CASA AVE	Residential	Stockpile of soil and rock in street; rain event coming.	Spoke with property owner who immediately started moving material. NPDES material left. Re-inspection found area clean.
21	2/22/2012	12988 TRIUMPH DR	Residential	Vehicle leaking oil on street.	NPDES info left. Vehicle moved to driveway with oil pan underneath. Street cleaned with absorbent.
22	2/27/2012	16756 MARTINCOIT RD	Mobile	Pool discharge.	Property owner unaware pool was being drained to trail. He will deal with pool cleaner. Area monitored with no further discharges.
23	3/12/2012	13616 CELESTIAL RD	Residential	Leaking water.	Courtesy notice left for property owner asking for leak to be located and repaired. Further inspection found leak stopped.
24	3/12/2012	13416 UTOPIA RD	Residential	Steam cleaned engine on street.	No debris found in the area. Left NPDES info and asked property owner to call office regarding this activity. No contact, but activity discontinued.
25	4/3/2012	12956 TRIUMPH RD	Residential	Draining pool into street.	Left NPDES materials at door. No further discharges.
26	4/24/2012	12612 ARABIAN WAY	Residential	Blowing large amount of grass into curb line.	No violation found. Area compliant.

Appendix B (Continued)
Complaint Log

#	Date	Location	Complaint Type	Complaint	Resolution
27	4/24/2012	SOULE ST	Residential	Grocery cart in creek near the foot bridge at the end of Soule St., near the park.	Removed shopping cart.
28	5/2/2012	ADAH LN	Commercial	Construction debris in the culvert behind the businesses on the east side of Adah Lane.	One yard of debris removed.
29	5/8/2012	CARRIAGE RD	Residential	Reported odor of gasoline coming from the first two manholes in sidewalk on Carriage Road, near Pequot Drive.	Inlet boxes inspected at described locations, no odor or fuel was observed.
30	5/31/2012	13616 CELESTIAL RD	Residential	Leak from back yard irrigation.	NPDES information left. Property owner states he is getting a plumber to look at it. No further leaking.
31	5/31/2012	14000 SADDLEWOOD DR	Mobile	Uncontained power washing of roof.	Spoke with contractor; NPDES material left. Run-off water redirected to garden area.
32	6/20/2012	BOWRON RD	Residential	Two shopping carts reported in the drainage channel behind Poway Royal Estates, about half-way across the walking bridge on the east side.	One shopping cart on the east side by the north bank, and two midway across on the east side, were removed.
33	6/26/2012	14363 CRESTWOOD AVE	Residential	Reported run off in street.	Unfounded. Nothing visual at address.

APPENDIX C

Appendix C
JURMP Annual Report Requirements Checklist

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	**Location in Report**
i. A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.	2.2, 2.3, 2.4
ii. Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.	2.4.4.2
iii. A listing of the development projects to which SUSMP requirements were applied.	Table 2-4
iv. Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.	Table 2-3, Table 2-4, 2.4.4.2
v. At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.	2.4.4.2
vi. A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.	2.4.4.2
vii. An updated treatment control BMP inventory.	2.4.4.3, Appendix A.1
viii. The number of treatment control BMPs inspected, including a summary of inspection results and findings.	2.4.4.3, Table 2-1, Table 2-7
ix. A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.	2.4.4.3
x. Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.	2.4.4.2
xi. A listing of any projects which received a SUSMP waiver.	2.4.4.2
xii. A description of implementation of any SUSMP waiver mitigation program.	2.4.4.2
xiii. A description of Hydromodification Management Plan (HMP) development collaboration and participation.	2.4.4.2
xiv. A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.	Table 2-4, 2.4.4.2
xv. A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.	Table 2-4, 2.4.4.2

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	Location in Report
xvi. A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.	2.4.4.2
xvii. The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	2.4.4.3, Table 2-2, Table 2-7
xviii. A description of notable activities conducted to manage urban runoff from development projects.	2.1.1

Construction

Permit Annual Reporting Requirement—Section J.3.a.(3).(b)	**Location in Report**
i. Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.	3.5.2
ii. Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.	3.2
iii. A description of modifications made to the construction and grading ordinances and approval processes.	3.3
iv. Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.	3.5.3
v. Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.	3.5.2
vi. A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.	3.5.2
vii. For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.	3.5, Appendix A.2
viii. A description of the general results of the inspections.	3.5.4
ix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	3.5.3
x. The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	3.5.4, Table 3-1
xi. A description of notable activities conducted to manage urban runoff from construction sites.	3.1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
i. Any updates to the municipal inventory and prioritization.	Appendix A.3 (inventory)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.	4.2.4, 4.3.4, 4.4.4, 4.5.4, 4.6.4, 4.7.4
iii. A description of inspections and maintenance conducted for municipal treatment controls.	2.4.4.2, 4.4.4
iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.	4.4.2, 4.4.4 Table 4-2
v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.	4.4.2, 4.4.4, Table 4-2
vi. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.	4.4.4, Table 4-2
vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.	4.4.4, Table 4-2
viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.	(N/A for 2011-2012)
ix. Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.	4.2.3
x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1
xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1
xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
xiii. Identification of the total distance of curb-miles swept.	4.3.4, Table 4-1
xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.	4.3.2, 4.3.4, Table 4-1
xv. Amount of material (tons) collected from street and parking lot sweeping.	4.3.4, Table 4-1
xvi. A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4	4.5.4
xvii. Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.	4.2.4, 4.3.4, Table 4-3
xviii. A description of the general results of the inspections.	Table 4-3
xix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	4.2.4
xx. The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	4.2.4
xxi. A description of notable activities conducted to manage urban runoff from municipal areas and activities.	Throughout Section 4

Industrial and Commercial

Permit Annual Reporting Requirement—Section J.3.a.(3).(d)	**Location in Report**
i. Any updates to the industrial and commercial inventory.	5.2.2 (stationary), 5.3.4 (mobile), Appendices A.4, A.5 (inventory)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.	5.2.4, 5.3.4
iii. A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.	5.2.4, 5.3.4
iv. Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.	5.2.2, 5.3.2; 5.2.4, 5.3.4; Table 5-1; Appendices A.4, A.5
v. Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.	5.2.4
vi. Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.	5.2.4
vii. Identification of the number of third party inspections conducted.	5.2.4
viii. Identification of efforts conducted to verify third party inspection effectiveness.	5.2.4
ix. A description of efforts implemented to address mobile businesses.	5.3.4
x. The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	5.2.4, 5.3.4, Table 5-2
xi. A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.	5.2.4, Table 5-3
xii. A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.	Throughout Section

Residential

Permit Annual Reporting Requirement—Section J.3.a.(3).(e)	**Location in Report**
i. Identification of the high threat to water quality residential areas and activities that were focused on.	6.2
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.	6.4
iii. A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.	6.4.1
iv. Types and amounts of household hazardous wastes collected, if applicable.	6.4.1.1
v. A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of the evaluation.	6.4.2 (see discussion in JURMP)
vi. The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	6.4.2; Appendix B
vii. A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.	6.4.1
viii. A description of notable activities conducted to manage urban runoff from residential areas and activities.	6.4

IDDE*

Permit Annual Reporting Requirement—Section J.3.a.(3).(f)	Location in Report
* Section 7, the Illicit Discharge Detection and Elimination component, of the 2011/2012 Annual Report, will be submitted to the RWQCB no later than December 15, 2012.	

IDDE—Additional Dry Weather Monitoring Program Requirements*

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
* Section 7, the Illicit Discharge Detection and Elimination component, of the 2011/2012 Annual Report, will be submitted to the RWQCB no later than December 15, 2012.	

Education

Permit Annual Reporting Requirement—Section J.3.a.(3).(g)	**Location in Report**
i. A description of education efforts conducted for each target community.	8.3
ii. A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.	8.3
iii. A description of education efforts conducted for municipal departments and personnel.	8.2
iv. A description of education efforts conducted for the new development and construction communities.	8.3.2
v. A description of jurisdictional education efforts conducted for residents, the general public, and school children.	8.3, Table 8-1

Public Participation

Permit Annual Reporting Requirement—Section J.3.a.(3).(h)	**Location in Report**
i. A description of public participation efforts conducted.	9.2 and 9.3

Effectiveness Assessment

Permit Annual Reporting Requirement—Section J.3.a.(3).(i)	**Location in Report**
i. An assessment of the effectiveness of the Jurisdictional Urban Runoff Management Program which meets all requirements of section I.1 of this Order.	11

Fiscal Analysis

Permit Annual Reporting Requirement—Section J.3.a.(3).(j)	**Location in Report**
i. A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order. (For 2007-2008, the requirements that apply are essentially the same as those found in Order No. 2001-01)	10

Special Investigations

Permit Annual Reporting Requirement—Section J.3.a.(3).(k)	**Location in Report**
i. A description of any special investigations conducted.	12

Non-Emergency Firefighting

Permit Annual Reporting Requirement—Section J.3.a.(3).(l)	**Location in Report**
i. A description of efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.	4.2.3, 13

JURMP Revisions

Permit Annual Reporting Requirement—Section J.3.a.(3).(m)	**Location in Report**
i. A description of any proposed revisions to the JURMP.	14 and each program component section

JANUARY 2011 MUNICIPAL CODE UPDATE TO INCORPORATE NEW HYDROMODIFICATION MANAGEMENT REQUIREMENTS

ORDINANCE NO. 712

AN ORDINANCE OF THE CITY OF POWAY, CALIFORNIA, AMENDING SECTION 16.103.050 OF THE POWAY MUNICIPAL CODE REGARDING HYDROMODIFICATION MANAGEMENT

WHEREAS, on February 21, 2001, the California Regional Water Quality Control Board, San Diego Region (SDRWQCB) issued Order No. 2001-01, National Pollutant Discharge Elimination System (NPDES) Permit No. CAS0108758, naming the City of Poway and other Copermittees responsible for the implementation of a Countywide Stormwater Management Program; and

WHEREAS, on January 24, 2007, the SDRWQCB issued Order No. 2007-0001, which revised the requirements of the 2001 Permit; and

WHEREAS, Order No. 2007-0001 requires all Copermittees, including the City of Poway, to develop and implement a Hydromodification Management Plan; and

WHEREAS, the Hydromodification Management Plan is intended to manage increases in runoff discharge rates and durations from all Priority Development Projects to protect the environment;

WHEREAS, as Title 16, Division VI of the Poway Municipal Code has been updated to comply with Permit Order No. 2007-0001.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF POWAY DOES ORDAIN AS FOLLOWS:

Section 1: The City Council finds that this Ordinance is exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15061(b)(3) of the CEQA Guidelines, as it entails State-mandated updates to current City regulations, and there is no possibility that this will have a significant effect on the environment.

Section 2: Section 16.103.050, entitled "Identifying conditions of concern in receiving waters" is amended to read as follows:

A. Common impacts to the hydrologic regime resulting from development typically include increased runoff volume and velocity; reduced infiltration; increased flow frequency, duration, and peaks; faster time to reach peak flow; and water quality degradation. These changes have the potential to permanently impact downstream channels and habitat integrity. A change to a priority project site's hydrologic regime would be considered a condition of concern if the change would impact downstream channels and habitat integrity. Because of these potential impacts, the following steps shall be followed by each priority project:

1. Evaluate the project's conditions of concern in a drainage study report prepared by a registered civil engineer in the State of California with experience in fluvial geomorphology and water resources management.

The report shall consider the project area's location (from the larger watershed perspective), topography, soil and vegetation conditions, percent impervious area, natural and infrastructure drainage features, and any other relevant hydrologic and environmental factors to be protected specific to the project area's watershed.

2. As part of the drainage study, a qualified, licensed professional shall provide a report on proposed infiltration techniques (trenches, basins, dry wells, permeable pavements with underground reservoir for infiltration) regarding any potential adverse geotechnical concerns. Geotechnical conditions such as slope stability, expansive soils, compressible soils, seepage, groundwater depth, and loss of foundation or pavement subgrade strength should be addressed, and mitigation measures provided.

3. As part of the drainage study, the civil engineer shall conduct a field reconnaissance to observe and report on downstream conditions, including undercutting erosion, slope stability, vegetative stress (due to flooding, erosion, water quality degradation, or loss of water supplies) and the area's susceptibility to erosion or habitat alteration as a result of an altered flow regime.

4. The drainage study shall compute rainfall runoff characteristics from the project area including, at a minimum, peak flow rate, flow velocity, runoff volume, time of concentration, and retention volume. These characteristics shall be developed for the two-year and 10-year frequency, Type I storm, of six-hour or 24-hour duration (whichever is the closer approximation of the site's time of concentration), during critical hydrologic conditions for soil and vegetative cover. The drainage study shall report the project's conditions of concern based on the hydrologic and downstream conditions discussed above. Where downstream conditions of concern have been identified, the drainage study shall establish that pre-project hydrologic conditions affecting downstream conditions of concern would be maintained by the proposed project, satisfactory to the Director of Development Services, by incorporating the site design, source control, and treatment control requirements identified in this division.

B. Priority development projects are subject to the City's Hydromodification Management Plan (HMP) as incorporated in the Poway Local SUSMP. The HMP shall demonstrate how priority projects will manage increases in runoff discharge rates and durations where such increased rates and durations are likely to cause increased erosion of channel beds and banks, sediment pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force. Projects will be required to utilize a continuous hydrological simulation and the results of a hydromodification management analysis must adhere to the following criteria:

1. For flow rates between the pre-project lower flow threshold and the pre-project 10-year runoff event, the post-project discharge rates and durations may not deviate above the pre-project discharge rates and durations by more than 10 percent over more than 10 percent of the length of the flow duration curve.

2. Lower flow thresholds may be determined using the tools provided in the local SUSMP along with a critical flow calculator and channel screening tools developed by the Southern California Coastal Water Research Project (SCCWRP). These methods identify lower flow thresholds for a range of channel conditions. The critical flow calculator recommends a lower flow value of 0.1Q2, 0.3Q2 or 0.5Q2 dependent on the receiving channel material and dimensions, where Q2 is defined as the 2-year runoff event. This value will be compared to channel susceptibility rating (High, Medium or Low) as determined from the most recent SCCWRP screening tools to determine the final lower flow threshold.

3. The lower flow threshold may alternately be determined as 10 percent of the pre-project 2-year runoff event or 0.1Q2. This approach is available if the project applicant chooses not to complete the channel screening analysis.

C. Priority Development Projects are required to implement hydromodification mitigation measures so that post-project runoff flow rates and durations do not exceed pre-project flow rates and durations. Hydromodification mitigation can be provided as follows:

1. Demonstrate no post-project increase in impervious area and resultant peak flow rates as compared to pre-project conditions.

2. Installation of LID BMPs such as bioretention facilities to control runoff flows and durations from new impervious areas.

3. Mitigation of flow and durations through implementation of extended detention flow duration control basins.

4. Preparation of continuous simulation hydrologic models and comparison of the pre-project and mitigated post-project runoff peaks and durations (with hydromodification flow controls) until compliance is achieved.

5. Implementation of in-stream rehabilitation controls to demonstrate that projected increases in runoff peaks and/or durations would not accelerate erosion to the rehabilitated receiving stream reach.

D. Priority development projects shall be exempt from the HMP criteria under the following conditions.

1. If the proposed project does not increase the impervious area or peak flows to any discharge location.

2. If the proposed project discharges runoff directly to an exempt receiving water such as the Pacific Ocean, an exempt river reach, an exempt reservoir, or a tidally influenced area.

3. If the proposed project discharges to a stabilized conveyance system that extends to the Pacific Ocean, a tidally influenced area, an exempt river reach or reservoir.

4. If the contributing watershed area to which the project discharges has an impervious area percentage greater than 70 percent.

5. If an urban infill project discharges to an existing hardened or rehabilitated conveyance system that extends beyond the "domain of analysis", the potential for cumulative impacts in the watershed are low, and the ultimate receiving channel has a low susceptibility to erosion as defined in the SCCWRP channel assessment tool.

E. LID facilities must be designed to be practically built and maintained within the urban environment. Projects are encouraged to use LID design approaches to provide both treatment for the 85th percentile water quality event as well as flow control to meet hydromodification criteria. To assure compliance with hydromodification flow control requirements, design criteria, specifications, and long-term operations and maintenance requirements have been provided in the local SUSMP for a variety of LID-based flow control methods including bioretention basins, flow-through planter boxes, and bioretention systems in combination with cisterns and vaults. Sizing factor development shall include the use of continuous simulation of runoff from the long-term rainfall record.

F. Proof of a long-term maintenance responsibility and mechanism will be required for all post-construction BMP and flow control facilities. If not properly designed or maintained, hydromodification flow control devices may create a habitat for vectors such as mosquitoes or rodents. Maintenance activities for flow control and LID devices shall be specified in the proposed Project Submittal.

G. The local SUSMP outlines the monitoring program to assess the effectiveness of hydromodification management facilities. Monitoring activities will include inflow and outflow monitoring from BMPs, baseline cross section monitoring, and flow-based sediment monitoring.

Section 3: This Ordinance shall be codified.

EFFECTIVE DATE: This Ordinance shall take effect and be in force on January 14, 2011; and before the expiration of fifteen (15) days after its passage, it shall be published once with the names of members voting for and against the same in the *Poway News Chieftain*, a newspaper of general circulation published in the City of Poway.

Introduced and first read at a Regular Meeting of the City Council of the City of Poway held the 16th day of November 2010, and thereafter PASSED AND ADOPTED at a regular meeting of said City Council held the 7th day of December 2010.

Don Higginson, Mayor

ATTEST:

Linda A. Troyan, MMC, City Clerk

STATE OF CALIFORNIA)
) ss.
COUNTY OF SAN DIEGO)

I, Linda A. Troyan, City Clerk of the City of Poway, do hereby certify that the foregoing Ordinance No. 712, was duly adopted by the City Council at a meeting of said City Council held on the 7th day of December 2010, and that it was so adopted by the following vote:

AYES: BOYACK, GROSCH, MULLIN, CUNNINGHAM, HIGGINSON

NOES: NONE

ABSTAIN: NONE

DISQUALIFIED: NONE

CONSTRUCTION SEASONAL REQUIREMENTS LETTER

CITY OF POWAY

DON HIGGINSON, Mayor
JIM CUNNINGHAM, Deputy Mayor
MERRILEE BOYACK, Councilmember
DAVE GROSCH, Councilmember
JOHN MULLIN, Councilmember

September 7, 2011

**** EROSION CONTROL NOTICE ****

Our records indicate that you have an active construction project in the City of Poway. The City of Poway Municipal Code (PMC) requires that the attached erosion/sediment control measures be implemented on all projects by the beginning of the wet season on October 1, 2011. These wet season erosion/sediment control measures are in addition to the basic measures required year-round. **Please contact your inspector as soon as possible to discuss your erosion/sediment control measures. Early coordination with your inspector is very important. Maintenance will be closely monitored.**

If you fail to implement adequate measures by October 1, 2011, the City may find it necessary to hire a contractor to do so at your expense. You are also expected to maintain these facilities, including cleanup of any off-site siltation, through the end of the wet season on April 30, 2012. These requirements are in place to protect public and private properties, and are secured by cash deposits and grading securities. The permittee shall be responsible for all fines assessed by any outside agencies.

Discharges of pollutants and sediment from your site are prohibited under PMC Title 16, PMC Chapter 13.09, and your grading permit. They are also prohibited under State law (California Water Code), Federal law (Clean Water Act), and the statewide National Pollutant Discharge Elimination System (NPDES) General Construction Storm Water Permit. Violators are subject to enforcement action, including significant monetary penalties. **If your construction site is one acre or larger and you have not obtained coverage under the statewide NPDES General Construction Storm Water Permit, you should contact the California Regional Water Quality Control Board (CRWQCB) at (858) 467-2952 immediately.**

Sincerely,

DEVELOPMENT SERVICES DEPARTMENT

Steve Crosby
City Engineer

Staff

5.1.1.1 SEASONAL SITE MANAGEMENT REQUIREMENTS

Construction sites are required to implement all minimum construction BMPs as necessary to prevent pollution discharges to the Maximum Extent Practicable regardless of the season. The City does, however, maintain different requirements for some erosion and sediment control BMPs between the wet and dry seasons as described below:

Dry Season (May 1st through September 30th)

- All exposed disturbed areas including building pads, unfinished roads, and slopes must have erosion prevention controls properly installed (slopes greater than 33.3% or 3:1 vertical vs. horizontal may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement, but all slopes must be covered before rough grade approval will be given).
- Adequate perimeter protection BMPs must be installed and maintained.
- Adequate sediment control BMPs must be installed and maintained.
- Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.
- At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and prevent sediment discharges must be stored on the site.
- An approved Weather-Triggered Action Plan must be prepared at the start of each project and updated in the event that a predicted storm event has a 50% chance of rain. The proponent must have the capacity to deploy the standby BMPs within 48 hours of the predicted storm event.
- All slopes must be equipped with erosion prevention BMPs as soon as slopes are completed for any portion of the site.
- The amount of cleared or graded areas left exposed at any given time is limited to 17 acres or to the alternate maximum area approved by the City in writing (see Section 5.4.3).

Wet Season (October 1st through April 30th)

All dry season requirements are required in addition to the following:

- Perimeter protection and sediment control BMPs must be upgraded if necessary to provide sufficient protection for storms.
- Adequate erosion prevention BMPs must be installed and established for all completed slopes prior to October 1 and maintained throughout the wet season. If a BMP fails, it must be repaired, improved or replaced with an acceptable alternate as soon as it is safe to do so.
- Standby erosion and sediment control BMPs must be able to protect all exposed soil areas. An incomplete disturbed area that is not being actively graded must be fully protected from erosion if left for 10 days or more.

ADDITIONAL INFORMATION FOR PROJECTS SUBJECT TO THE GENERAL CONSTRUCTION PERMIT

If your project is subject to the General Construction Permit and was grandfathered into the new program, please be advised that you are required to reassess the level of risk associated with your project within two years after permit adoption. Two years after permit adoption was September 2, 2011.

> **Dischargers Covered Under 99-08-DWQ and 2003-0007-DWQ:** Existing dischargers subject to State Water Board Order No. 99-08-DWQ (existing dischargers) will continue coverage under 99-08-DWQ until July 1, 2010. After July 1, 2010, all NOIs subject to State Water Board Order No. 99-08-DWQ will be terminated. Existing dischargers shall electronically file their PRDs no later than July 1, 2010. If an existing discharger's site acreage subject to the annual fee has changed, it shall mail a revised annual fee no less than seven days after receiving the revised annual fee notification, or else lose permit coverage. All existing dischargers shall be exempt from the risk determination requirements in Section VIII of this General Permit until two years after permit adoption. All existing dischargers are therefore subject to Risk Level 1 requirements regardless of their site's sediment and receiving water risks. However, a Regional Board retains the authority to require an existing discharger to comply with the Section VIII risk determination requirements.

Below are some of the frequently asked questions that were noted on the State Water Resources Control Board's website. Should you have any questions, please feel free to directly contact the State Water Resources Control Board at http://www.waterboards.ca.gov/sandiego/

1. After a project is grandfathered into coverage under the new CGP at risk level 1 (type 1), can the State Water Board or Regional Water Board change that project's risk level?

Yes, the Regional Water Boards have the authority to require a risk determination be performed on grandfathered projects that have a history of non-compliance with the 99-08-DWQ, 99-06-DWQ, and 2003-0007-DWQ Permits, or where the project poses a significant threat to water quality without the implementation of the additional Risk Level 2 or 3 requirements.

2. Will grandfathered construction projects need to have their SWPPPs developed by a Qualified SWPPP Developer (QSD)?

Yes, after July 1, 2010, all SWPPPs and SWPPP updates entered into the SMARTS system must be certified by an individual holding one of the certifications/registrations listed in Section VII of the 2009-0009-DWQ Permit. Effective two years after the permit adoption (September 2, 2011), the QSD must have also attended the State Water Board sponsored or approved QSD Training Course.

3. For grandfathered projects, can existing SWPPPs be submitted during the PRD process, or does the SWPPP need to be amended/adjusted to reflect the new CGP?

The SWPPPs must be amended to meet the minimum criteria listed in Section XIV, SWPPP Requirements, and Attachment C, Risk Level 1 Requirements, of the CGP.

4. Does the Qualified SWPPP Practitioner (QSP) need to have the pre-qualifications listed in Section VII of the 2009-0009-DWQ Permit by July 1, 2010?

No. Effective September 2, 2011, the QSP shall have one of the pre-qualifications listed in Section VII of the 2009-0009-DWQ Permit and shall have attended the State Water Board sponsored or approved QSP Training Course. Between July 1, 2010, and September 2, 2011, anyone can be a QSP.

Inspector Name /Signature/Date: _____

Inspection: ☐ Permit-Required Inspection ☐ Follow-up Inspection ☐ Other (Explain)_____

Construction Project Priority: ☐ High ☐ Medium ☐ Low

GENERAL INFORMATION

Grading Permit #: _____ Issue Date: _____ Permit Final Date: _____

Project Name & Type: _____

Project Location & Address: _____

Contractor's Name & Telephone #: _____

Property Owner & Telephone #: _____

Is this Project Greater than an Acre? ☐ Yes ☐ No ☐ N/A

If yes: Provide Record of Waste Discharge Identification Number (WDID#): _____

Does this Project have an NOI/SWPPP Available? ☐ Yes ☐ No ☐ N/A

Is Weather Triggered Action Plan Completed? ☐ Yes ☐ No ☐ N/A

Is Advanced Treatment Implemented Appropriately? ☐ Yes ☐ No ☐ N/A

Is Less than 17 Acres of Cleared or Graded Areas Left Exposed at Any Given Time? ☐ Yes ☐ No ☐ N/A

Is 125% of Materials to Install Standby BMPs Available? ☐ Yes ☐ No ☐ N/A

Are Routine Self-Inspections Being Conducted by Developer/Owner? ☐ Yes ☐ No ☐ N/A

Project Site is in What Watershed: _____

Nearest conveyances or water bodies: _____

BMP	Yes	No	N/A	Description	Effective Yes/No
Soil Stabilization and Erosion Prevention					
Preservation of existing vegetation					
Physical Stabilization: Hydraulic Mulch, Hydroseeding, Soil Binders, Straw Mulch					
Geotextiles, Plastic Covers, Erosion Prevention Blankets, Wood Mulching					
Site Drainage: Outlet Protection/Slope Drains					
Inlet/Outlet Protection					
Sediment Control/Containment					
Perimeter Protection: Silt Fencing, Gravel Bags, Fiber Rolls					
Storm Drain inlet protection: Sediment Trap, De-silting Basin, Gravel Bag Barrier					

Tracking Controls: Stabilized Entrance/Exit and Road Stabilization, Tire Wash, Street Sweeping					
BMP	**Yes**	**No**	**N/A**	**Description**	**Effective Yes/No**
Materials and Equipment Management					
Are materials and wastes stored in a manner that minimizes or eliminates the potential to discharge these materials to the storm drain system, is secondary containment used?					
Are material stockpiles protected: covered, contained with temporary perimeter, located away from non-storm water discharges?					
Are heavy equipment and vehicles parked in designated areas with permeable surface?					
Are appropriate spill response and containment measures kept on the site?					
Are wastes managed and stored properly (Solid, liquid, sanitary, concrete, hazardous)					
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?					
Non-Storm Water Management					
Is the site free of evidence of illegal connections and/or illicit discharges?					
Discharge Locations					
Are the discharge locations free of significant erosion or sediment transport?					
Other					
Are there any other potential storm water pollution issues or concerns? If yes, explain below.					
Was there any employee or subcontractor training on stormwater pollution prevention measures?					

III. VIOLATIONS

- ☐ No violations noted at time of inspection/investigation
- ☐ No violations; however, recommended corrective actions (see IV)
- ☐ Violation: Illegal Discharge/Illegal Connection/Improper BMPs Implementation

IV. RECOMMENDED CORRECTIVE ACTION

MUNICIPAL FACILITY BMP CHECKLISTS

Monthly Compliance and Maintenance Duties

Crosthwaite Material Handling Yard

Five divisions in the public works department currently use Crosthwaite Material Handling Yard. Drainage/Storm Water, Parks, Water, Wastewater, and Streets are the major users of the yard and are responsible for compliance maintenance, courtesy maintenance and upkeep.

In addition to regular duties, each month one division will be responsible for compliance inspection, compliance maintenance, up-keep, and documentation. Duties include:

- Vacuum all four inlet filters. Once a month
- Pressure wash batch plant and surrounding area (Vactor or graffiti trailer). Once a month
- Pick up trash and loose debris throughout yard. Once a week
- Load green waste dumpsters. Monday and Wednesday
- Load trash from K-rail to dumpsters. Twice a week
- Empty trash can outside lounge. Once a week
- Inspect and remove excessive debris from perimeter brow ditch. Once a month
- Sweep or blow off excessive debris from all concrete and asphalt surfaces. Once a week
- Inspect and replace rock bags, straw waddles and tarps. As needed
- Incidental compliance issues. As needed

This list with a job order shall be completed by the responsible division each month. If for any reason the list and job order can't be completed by the end of the month, the duties of Crosthwaite Material Handling yard shall remain with that division until the tasks are done. Failure to complete the duties jeopardizes the City's NPDES compliance and the harmonious use of Crosthwaite Material Handling Yard. If assistance is needed contact the Storm Water Supervisor, Public Works Manager, or the Utilities Manager. The storm water supervisor shall complete the compliance inspection and documentation each month.

WEEKLY BMP CHECKLIST

Week of:	**Monday**	**Tuesday**	**Wednesday**	**Thursday**	**Friday**
Is the site free of debris					
Parking lots free of debris					
Roof down spouts dir away					
Daily litter abatement					
Erosion prevention employed					
Minimized water run-off					
Are adequate trash cans avail.					
Is the trash can area clear					
Are trash can emptied often					
Outdoor storage areas covered					
Are outdoor containers labeled					
Is their a spill response kit					
Is 2nd containment free of spills					
Parking area free of Spills					
Vehicles washed in designated areas					
Free of illegal discharge and spills					
Free of illegal storm drain release					
Fire Extinguisher at Gas Island Chckd					
Fuel are cleaned spill free					
Front of building area clear					
Battery cart under canopy					
East side of building clean					
Equipment stored under canopy					
All scrap metal removed					
Check flammable locker for seals					
Check tire shed & remove old tires					
Check both back drains for debris					
Check lot for oil leaks & drip Pans					
Check south and west side of bldg					
Are hazardous mat. Stored prop

B. FACILITY/SITE INFORMATION

Principal activity:_____

Assigned JURMP Classification: ☐ High ☐ Medium ☐ Low ☐ Unassigned

New JURMP Classification (if applicable)?_____

Is facility subject to CA Statewide General Industrial Permit? ☐ Mandatory ☐ Conditional ☐ No

If yes, has facility filed a Notice of Intent (NOI) to comply? ☐ Yes ☐ No WDID#_____

If no, does facility have a Notice of Non-Applicability (NONA/NEC)? ☐ Yes ☐ No

Does facility maintain SWPPP or BMP Plan? ☐ Yes ☐ No

Does facility have a storm water monitoring program? ☐ Yes ☐ No

C. INITIAL OBSERVATIONS

Nearest conveyances or water bodies: _____ Hydrologic Area _____ ____

Approximate distance to receiving water bodies: ☐ < 200 ft. ☐ 200 – 1,000 ft. ☐ > 1,000 ft.

Sensitivity of receiving waters: ☐ Sensitive (ESA, 303(d), or other) ☐ Non-sensitive

Discharge points: _____
_____

Discharge observed: ☐ Yes ☐ No

If yes, describe: _____

Estimated area covered by municipal facility: _____square feet

Estimated % impervious surface of this area: _____%

Exposed areas of intensive outdoor activity: _____

D. BMP ASSESSMENT

D.1 General

BMPs	N/A	Yes	No	Comments
Is the site free of excessive litter and debris?				
Are discharge locations free of excessive sediment and debris?				
Are parking lots, sidewalks and streets free of excessive sediment and debris?				
Is wash water from pressure washing/hosing managed appropriately?				
Are roof downspouts directed away from areas of potential pollutants?				
Are employees trained in storm water management, pollution prevention and good housekeeping measures?				
D.2 Landscaping				
Are adequate erosion prevention measures employed? (vegetation or physical stabilization)				
Are irrigation systems programmed to minimize over-watering and runoff?				
Are stockpiles of soil or landscape waste contained to prevent runoff transport?				
Are pesticides, herbicides, and fertilizers managed in accordance with the JURMP BMPs?				
D.3 Materials and Wastes				
Are adequate trash containers provided?				
Are adequate recycling containers provided?				
Is the trash/recycling area enclosed and free of litter and debris?				
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?				
Are outdoor material storage areas adequate (covered area with secondary containment)?				
Are outdoor storage containers properly labeled?				
Is there an accessible spill response kit?				
Are outdoor storage containers equipped with secondary containment?				
Is secondary containment free of spills and rainwater?				
Are loading and unloading areas free of spills and debris?				
D.4 Equipment and Vehicles				
Are exposed parking areas free of significant spills and leaks?				
Are heavy equipment and vehicles stored in garages or under canopies?				
Are vehicle maintenance activities conducted within contained areas (garage, canopy, work shop)?				
Are vehicle-fueling areas covered and are storm drain inlets in/around the fueling area protected from spills and leaks?				
Is vehicle washing performed in a contained area where runoff does not enter the MS4?				

D.5 Building Repair/Construction /Structural BMPs

BMPs	N/A	Yes	No	Comments
Are adequate erosion prevention measures employed throughout the site? (vegetation or physical stabilization)				
Are adequate sediment control BMPs employed throughout the site? (gravel bags, inlet filters etc.)				
Are impervious areas free of debris and spills from painting, scraping, and/or sandblasting activities?				
Are structural BMPs adequately maintained? (NA if no structural BMPs at facility)				
D.6 Non-Storm Water Management				
Is the site free of evidence of illicit connections and illegal discharges?				
Is the site free of evidence of unauthorized releases to storm drains?				
If not, have the appropriate authorities been notified?				
D.7 Other				
Are appropriate signs/stenciling present at the facility?				
Are there any other potential storm water pollution issues or concerns? If yes, explain below.				
Are all applicable activity-specific BMPs being implemented?				
Does this facility have a fire sprinkler system?				

D.8 BMP Summary/Additional Comments

E. RECOMMENDED CORRECTIVE ACTION

Is corrective action needed? ☐ Yes ☐ No

If **BMP-related** corrective action is required, describe below. If other corrective action, check the appropriate box in section G.

Owner/operator has been notified of recommended corrective actions both verbally and by: ☐ Hand Delivery ☐ Mail ☐ Fax

F. VIOLATIONS

☐ No violations have been noted at this time

☐ No violations have been noted, but recommend taking corrective action described in Section F.

☐ **Violation of the City's storm water ordinance:**

- ☐ Prohibited discharge(s) of pollutants to the storm drain system or to receiving waters
  Description_____
- ☐ Illicit connection(s) to the storm drain system
  Location_____
- ☐ Littering
- ☐ Improper Implementation of Required BMPs
- ☐ Failure to comply with the storm water monitoring requirements for high priority industrial facilities.

☐ **Failure to comply with the requirements of the State Industrial Storm Water General Permit.**

- ☐ In the future, under a new Industrial Permit which has not yet been adopted, this facility may be able to qualify for a No Exposure Certification (NEC) and exemption from Permit coverage.

☐ **Other Violation**_____

SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE:

☐ Implement the recommended corrective actions listed in Section F.

☐ File a Notice of Intent (NOI) with the State Water Resources Control Board to obtain coverage under the Industrial Permit - see Attachment 3 of the Industrial Permit (http://www.waterboards.ca.gov/stormwtr/industrial.html).

- ☐ For "Conditional" facilities only: if you implement all the recommended BMPs and eliminate outdoor exposure, contact the City to request a re-inspection. If it is determined that you qualify, NONA/NEC paperwork will be provided for you to complete, and you will not have to file an NOI.

☐ Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.

☐ Develop and implement a storm water monitoring program—see section B of the Industrial Permit for guidelines.

☐ Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC). Retain one copy of each onsite, and send additional copies to the City of Poway and the State Water Resources Control Board. (See attached instructions provided with the documents.)

Additional actions required:

G. ADDITIONAL RECOMMENDED CITY ACTIONS*

Is a follow-up inspection recommended for this business? ☐ **Yes** ☐ **No**

ASSESSMENT

Level of knowledge regarding stormwater issues:	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
Level of cleanliness, BMP implementation, orderliness of site:	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5

*Recommended City Actions listed at the time of inspection are subject to change based on later review by office staff.

TEMPORARY USE PERMIT

CITY OF POWAY
DEVELOPMENT SERVICES DEPARTMENT

Temporary Use Permit

Date received: _____
APN: _____
File number: _____
Receipt number: _____
Fee: _____

Name of Business or activity: _____
Address: _____
Applicant's name: _____ Phone: _____
Address: _____
Property Owner's name: _____ Phone: _____
Address: _____
Zone: _____ Existing land use: _____
Proposed structure of activity area sq. footage: _____

ACTIVITY DESCRIPTION

Full description of proposed activity (please be specific):

Date of commencement (please allow 15 working days for City review for those projects not requiring City Council Action): _____
Date of completion: _____

SITE PLAN

Attach an 8-1/2" x 11" site plan that illustrates the proposed activity, and includes the location and description of structures and equipment, parking, vehicle access, signage, etc. To apply for approval of Special Event signs, the applicant shall submit a letter that describes the proposed sign by means of a sketch that includes the display dates, and also denotes the length, width, height and square feet of each proposed sign.

ACTION

☐ APPROVED by _____ Date _____
☐ DENIED by _____ Date _____
Reasons for denial

CONDITIONS OF APPROVAL

1. The site shall be developed in accordance with the approved site plan on file in the Planning Department, except as may otherwise by provided herein, prior to commencement of the activity.

2. The Building, Fire, and County Sheriff's Departments shall be contacted for approprate permits and inspections prior to the commencement of the activity.

3. Use of signs shall first be reviewed by the Planning Services Department for compliance with the sign ordinance prior to installation.

4. Approval of this activity shall not excuse compliance with all other sections of the Zoning Ordinance and all other applicable City ordinances presently in effect.

5. Date this approval shall become null and void:_____, 200_, On this date the site shall be restored to its original condition.

6. A vendor's license shall be obtained from the Customer Services Department for all temporary sales locations, including, but not limited to to Christmas tree lots and other holiday and special event sales.

7. No person shall discharge any material and or liquid into storm drains. For special events, storms drains shall be covered and or protected to the maximum extent practicable. Best Management Practices may be required to ensure that trash is contained and disposed of appropriately. Liquids shall be placed in secondary containment and covered prior to a rain event. Pet waste shall be collected and placed in trash cans.

8. Approval by the San Diego County Department of Environmental Health, Food, and Housing Divsion, shal be obtained prior to the sale of any food itmes. Evidence of such approval shall be available for inspection at the event.

OWNER CERTIFICATION

I, _____, certify that I am the owner of the property described herein. Further, I agree to permit the proposed activity to be conducted on said property for the length of time specified herein.

SIGNATURE_____ DATE _____

APPLICANT CERTIFICATION

I, _____, certify that I am the applicant for the activity described herein. Further, I acknowledge the filing of this permit application, certify that all of the information contained herein is true and accurate, and shall comply with the conditions of approval stated herein above.

SIGNATURE _____ DATE _____

What's the difference?

Sanitary Sewer vs. Storm Drain

The water that drains down a sink or toilet in a home or business flows to the sanitary sewer and is treated by the City of San Diego at a wastewater treatment plant.

The storm drain system, on the other hand, is designed to carry rainwater from City streets and driveways to prevent flooding. This water does not receive any treatment. It flows directly to creeks and rivers – terminating at the Pacific Ocean!

Unfortunately, as rainfall flows over the ground it picks up debris and pollutants and deposits them into our watersheds.

ONLY RAIN DOWN THE STORM DRAIN

Urban storm water runoff is the **largest contributor** to **watershed pollution** in San Diego County.

Your business is **required** to prevent urban runoff pollution by implementing **B**est **M**anagement **P**ractices (**BMPs**).

The City conducts inspections to ensure that BMPs are being used and water quality is protected.

Pollutants of Concern

As rainfall flows over the ground, it picks up a variety of pollutants and deposits them into our watersheds. The following pollutants are commonly transported in the storm drain system and have been found to degrade water quality.

- Sediments
- Fertilizers
- Metals
- Detergents
- Pesticides
- Organic Compounds (solvents)
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

The following **B**est **M**anagement **P**ractices (**BMPs**) are required to be used at all industrial and commercial businesses, where applicable, to reduce urban runoff pollution in our streams and waterways. To do your part in protecting our water quality, please implement the following BMPs, where applicable or noted by the City inspector.

General

- ❑ Regularly sweep around site, **do not use a hose.** Collect and dispose of debris in trash.
- ❑ Train all employees to consider urban runoff pollution before performing any outdoor activities.
- ❑ Never dispose of wash water to the storm drain system. Properly dispose of it in the sanitary sewer (sink or toilet).
- ❑ Report any illegal dumping into the storm drain system by calling (858) 668-4668 during business hours.

Landscaping

- ❑ Only irrigate during early morning or late evening to avoid evaporation.
- ❑ Aim sprinklers to avoid watering other areas.
- ❑ Time sprinklers to avoid over-watering and causing runoff.
- ❑ Minimize use of pesticides, herbicides, and fertilizer, which are harmful to animals downstream.
- ❑ Hand pull weeds instead of using herbicides.
- ❑ Do not use pesticides that eliminate beneficial insects (i.e., Integrated Pest Management).

Outdoor Material Storage

- ❑ Store all potential pollutants indoors or under a covered area not exposed to rain.
- ❑ Clean up all spills immediately using absorbent materials. Properly dispose of used absorbents.
- ❑ Keep lids on all outdoor storage containers.
- ❑ Label all material storage containers.
- ❑ Regularly sweep and clean all outdoor storage areas to remove any sediment (dirt) and debris.

Waste Management

- ❑ Keep the ground around all outdoor garbage and dumpster areas free of trash, sediment, and debris.
- ❑ Keep lids on dumpsters and trash cans whenever possible.
- ❑ Fix any leaks in garbage cans or dumpsters.
- ❑ Clean up all spills immediately.

Vehicle /Equipment Maintenance

- ❑ Perform all vehicle maintenance indoors when possible.
- ❑ Use drip-pans to collect fluids from leaky vehicles.
- ❑ Clean up spills immediately using absorbent materials. Properly dispose of used absorbents.

Vehicle /Equipment Washing

- ❑ Wash vehicles at a commercial car wash when possible. (Commercial car washes recycle water and drain to the sanitary sewer, not to the storm drain.)
- ❑ Wash vehicles over a pervious (absorbent) surface such as dirt, gravel, or grass to prevent runoff.
- ❑ Minimize the use of soaps and water while washing.
- ❑ Drain excess wash water to the sanitary sewer (sink or toilet), not to storm drains.

General Cleaning

- ❑ Perform washing over a pervious surface or where water drains to sanitary sewer.
- ❑ Minimize use of cleaning agents.
- ❑ Dispose of used wash water to sanitary sewer, not to storm drains.

Construction

- ❑ Minimize the amount of exposed soils to prevent erosion from wind or water.
- ❑ Cover construction material stockpiles with tarps or plastic liners to prevent sediment from blowing or washing away.
- ❑ Use gravel bags around site perimeter to capture any sediment (dirt) washed away in runoff.
- ❑ Protect nearby storm drains with gravel bags.
- ❑ Regularly inspect and clean equipment, vehicles, and storage areas.
- ❑ Keep lids secured on all material storage containers.
- ❑ Store materials where not exposed to rain.

A Clean Environment is Important to All of Us!

In the City of Poway, storm drains flow directly into our creeks, lakes, and the ocean without treatment.

In recent years, sources of water pollution, like industrial wastes from factories have been greatly reduced. However, the majority of water pollution now occurs from things like cars leaking oil, wash water from restaurants, fertilizers from farms, lawns and gardens, failing septic tanks, residential car washing, and pet waste washing into the storm drains and into waterways and the ocean.

All these sources add up to a pollution problem! But each of us can do small things to help clean up our water too—and that adds up to a pollution solution!

The City of Poway is committed to improving water quality and reducing the amount of pollutants that enter our precious waterways.

A Word About "Biodegradable" Soaps

"Biodegradable" is a popular marketing term that can be misleading. Because a product is labeled as biodegradable doesn't mean that it is non-toxic. Some products are more toxic than others, but none are harmless to aquatic life. Soapy water entering the storm drain system can impact fish and other wildlife within hours.

ONLY RAIN DOWN THE STORM DRAIN!

This brochure is one of a series of pamphlets describing storm drain protection measures, which are available at the Development Services Department at City Hall, or online at www.ci.poway.ca.us.

Other pamphlets include:

- **Home Repair and Remodeling BMPs**
- **Restaurant BMPs**
- **Concrete & Mortar Project BMPs**
- **Horses & Livestock BMPs**
- **Mobile Auto Detailing BMPs**

The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for POWER WASHING

Mobile and Surface Cleaning

What is Power Washing?

Power washing is any activity that uses a water pressure system, including steam cleaning, to clean vehicles, equipment, sidewalks, buildings, dumpsters, or other impervious surfaces. In addition to water, detergents, degreasers and other products may be used in commercial power washing.

What's the Problem with Power Washing?

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. **Wash water from power washing activities may contain significant quantities of oil, grease, chemicals, dirt, and detergents that could end up in our creeks, rivers, lakes, and the ocean.** Disposing of these materials into storm drains causes serious ecological problems—and is PROHIBITED by law.

Best Management Practices

Best Management Practices, or BMP's, are procedures that help to prevent pollutants from entering our storm drains. Each of us can do our part to keep storm water clean. Using BMP's adds up to a pollution solution!

Use Dry Clean-up Methods

- Instead of pressure washing, determine what alternative dry methods are available.
- Use mops, brooms, rags or wire brushes to clean pavement, buildings, and equipment as much as possible.
- Use vacuums or other machines to remove and collect loose debris before applying water.

Location, Location, Location!

- Prior to a washing, block all storm drains with an impervious barrier such as gravel bags or berms, or seal private storm drains with plugs or rubber mats. Make sure this practice does not flood the area or adversely affect vehicle or pedestrian traffic.
- **Never dispose of wash water into the street, storm drains, landscape drains, drainage ditches, or streams.**
- Wash vehicles and equipment on grassy or gravel areas so that the wash water can seep into the ground.
- **Create** a containment area with berms and tarps or take advantage of low ground to keep wash water contained.
- **Check** that the wash water is not leaking through and add more berms or barriers to contain the wash water.

Just Enough for the Job!

- Minimize water use by using high pressure, low volume nozzles.
- Use the minimal amount and least toxic detergents and degreasers you will need to complete the job. Try phosphate free detergents.
- Use a mop or rags to clean heavily soiled areas before power washing.

Only Rain Down the Storm Drain!

- Do not wash equipment or vehicles outdoors on saturated ground or on days when rain is probable.
- Pump or vacuum up <u>all</u> wash water in the contained area.
- With property owners permission, pump or pour the wash water to landscaped areas that will not run off to a storm drain; or drain it to the sanitary sewer through an interior building drain, sink, or private sewer clean-out. Discharges to the sewer **<u>should not</u>** contain hazardous materials, grease, grit, or any material that could clog piping.
- Sediments and other solids remaining on the ground should be swept or vacuumed up immediately so they don't wash into the storm drain system.

Who Can You Contact?

A Clean Environment is Important to All of Us!

In the City of Poway, storm drains flow directly into our creeks, lakes, and the ocean without treatment.

In recent years, sources of water pollution, like industrial wastes from factories have been greatly reduced. However, the majority of water pollution now occurs from things like cars leaking oil, wash water from restaurants, fertilizers from farms, lawns and gardens, failing septic tanks, residential car washing, and pet and horse waste washing into the storm drains and into waterways and the ocean.

All these sources add up to a pollution problem! But each of us can do small things to help clean up our water too—and that adds up to a pollution solution!

The City of Poway is committed to improving water quality and reducing the amount of pollutants that enter our precious waterways to protect our water quality for future generations.

A Word About "Biodegradable" Soaps

"Biodegradable" is a popular marketing term that can be misleading. Because a product is labeled as biodegradable doesn't mean that it is non-toxic. Some products are more toxic than others, but none are harmless to aquatic life. Soapy water entering the storm drain system can impact fish and other wildlife within hours.

ONLY RAIN DOWN THE STORM DRAIN!

This brochure is one of a series of pamphlets describing storm drain protection measures, which are available at the Development Services Department at City Hall, or online at http://www.ci.poway.ca.us/env/env_issues.html

Other pamphlets include:

- **Home Repair and Remodeling BMPs**
- **Concrete and Mortar Projects BMPs**
- **Restaurant BMPs**
- **Power Washing BMPs**

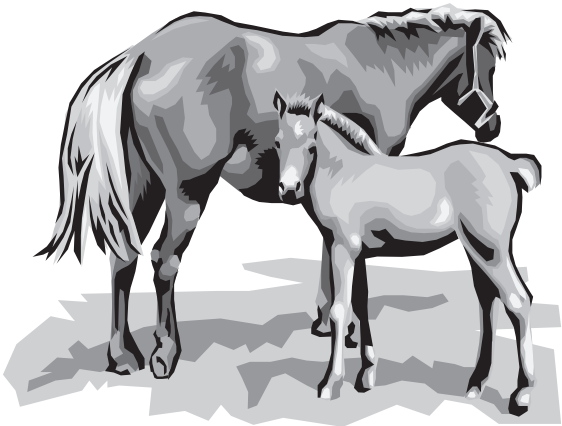
The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for Horses & Livestock



Storm Water and Horses & Livestock

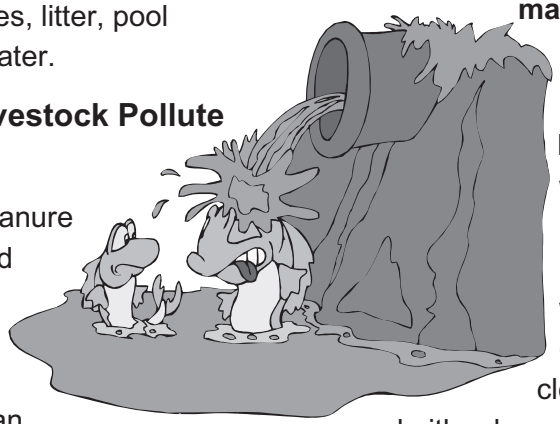
What is Stormwater Pollution?

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. However, this water is not filtered or treated and all the contaminants it contains eventually flow to our streams, lakes, and ocean where we swim and fish.

Once there, polluted runoff can harm wildlife and habitats. Horses and livestock wastes are among the many common storm water pollutants that can degrade water quality. Other examples include paint, oil and automotive fluids, construction debris, pesticides, litter, pool chemicals, and dirty wash water.

How do Horses and Livestock Pollute Stormwater?

During rainfall, uncovered manure and sediment can be washed from barns, pastures, and stables. These wastes end up flowing directly into streams, lakes, and the ocean where they can harm human health and the environment.



Stormwater runoff has been found to contain high concentrations of pathogens such as bacteria, parasites, and viruses.

When they wash into our recreational waters they can make people sick with sore throats, intestinal problems, rashes, nausea, and eye and ear infections.

Manure also contains nutrients, such as phosphorus and nitrogen, that fertilize aquatic algae. When these nutrients are too abundant they cause algae to grow very rapidly, and as a result, deplete oxygen in the water which kills fish and plant life.

Sediment is also harmful to our waters. In addition to causing flooding, sediment washed from pastures and livestock facilities can also harm aquatic life by clogging the gills of fish, blocking light transmission, lowering water temperatures, and preventing the production of oxygen by plants.

Poway Municipal Code section 13.09.080G has specific requirements for the management of manure and pet maintenance:

1. Manure deposited by horses and large animals within an enclosure or on uncovered areas, from which runoff could enter receiving waters or the storm water conveyance systems, must be cleaned up at least once weekly and either be composted, or be stored prior to disposal in a manner that prevents contact with runoff to receiving waters or the storm water conveyance system.
2. Areas used for composting such manure must be located, configured or managed to prevent runoff to receiving waters or the storm water conveyance system.
3. Pet waste shall not be disposed to the storm water conveyance system or receiving waters.

Best Management Practices

- Put barns, corrals, and fences in areas that drain away from creeks or streams or other storm drain conveyance systems.
- Keep livestock away from wet fields when possible. During rain events, cover manure stockpiles with a tarp or visqueen to reduce pollutant runoff.
- Cover dirt areas with loose hay or plant fast-growing grasses to shield and bind the soil to prevent erosion.
- Collect soiled bedding and manure from stalls and paddocks daily, and store them in sturdy, insect-resistant, and seepage free units.
- When grooming animals, use less toxic alternatives.
- If you must use pesticides, always read the label and use the products as directed.

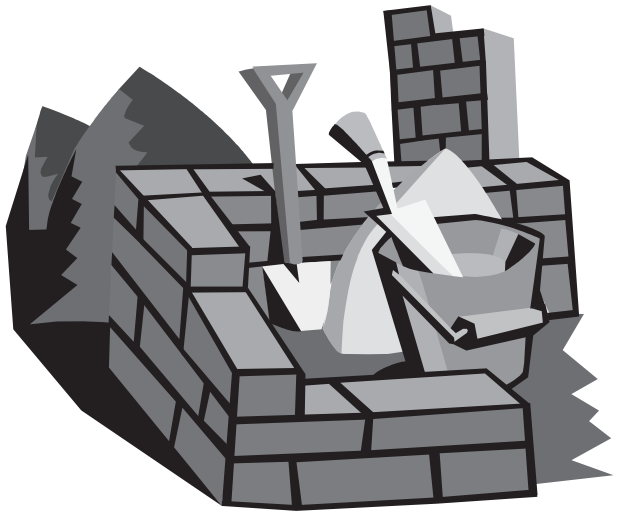
The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for Concrete and Mortar Projects



Pollution Prevention is up to YOU!

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. Untreated pollutants such as concrete and mortar flow directly into creeks, rivers, lakes, and the ocean and are toxic to fish and other wildlife. Disposing of these materials into storm drains causes serious ecological problems—and is PROHIBITED by law.

Do the Job Right!

This brochure was designed for do-it-yourself remodelers, masons and bricklayers, contractors, and anyone else who uses concrete or mortar to complete a construction project. Keep storm water protection in mind whenever you, or people you hire, work on your house or property.

Best Management Practices

Best Management Practices, or BMPs, are procedures and practices that help to prevent pollutants such as chemicals, concrete, mortar, pesticides, waste, paint, and other hazardous materials from entering our storm drains. All these sources add up to a pollution problem.

But each of us can do our part to keep storm water clean. These efforts add up to a pollution solution!

What YOU Can Do:

- **Always** store both dry and wet materials under cover, protected from rainfall and runoff and away from storm drains or waterways.
- **Keep all construction debris away from the street, gutter and storm drains.**
- **Never dispose of washout into the street, storm drains, landscape drains, drainage ditches, or streams.**
- Look for and clean up material that may have traveled away from your property after each days work.
- If you or your contractor keep a dumpster at your site, be sure it is securely covered with a lid or tarp when not in use.
- **Don't** mix up more fresh concrete or mortar than you will need for a project.
- Set up and operate small mixers on tarps or heavy plastic drop cloths.
- **Protect** applications of fresh concrete and mortar from rainfall and runoff until the material has dried.
- **Protect** dry materials from wind. Secure bags of concrete mix and mortar after they are open. **Don't allow dry products to blow into driveways, sidewalks, streets, gutters, or storm drains.**
- Empty mixing containers and wash out chutes onto dirt or other landscaped areas that do not flow to streets, drains or waterways, or allow material to dry and dispose of properly.
- **Never wash excess material from bricklaying, patio, driveway or sidewalk construction into a street or storm drain.**
- Sweep up and dispose of small amounts of excess dry concrete, grout, and mortar in the trash.
- Wash concrete or brick areas only when the wash water can flow onto a dirt area without further runoff or drain onto a surface which has been bermed so that the water and solids can be pumped off or vacuumed up for proper disposal.
- **Don't** place fill material, soil or compost piles on the sidewalk or street.
- During cleanup, check the street and gutters for sediment, refuse, or debris. Look around the corner or down the street and clean up any materials that may have already traveled away from your property.

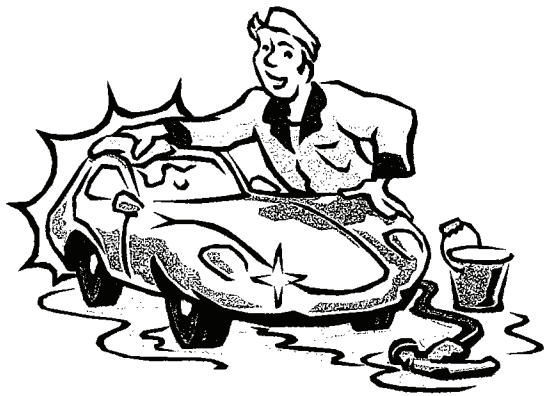
Best Management Practices for Mobile Auto Detailing



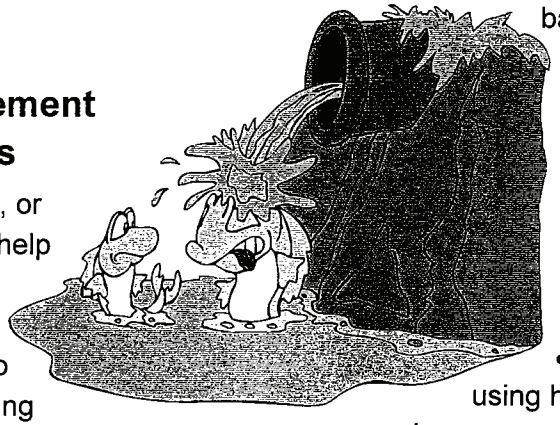
Mobile Detailing Procedures

What's the Problem with Mobile Detailing?

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. **Wash water from mobile detailing activities may contain significant quantities of oil, residues from exhaust fumes, brake dust, grease, and other chemicals that could end up in our creeks, rivers, lakes, and the ocean.** Disposing of these materials into storm drains causes serious ecological problems—and is PROHIBITED by law.

Best Management Practices

Best Management Practices, or BMP's, are procedures that help to prevent pollutants from entering our storm drains. Each of us can do our part to keep storm water clean. Using BMP's adds up to a pollution solution!



Location, Location, Location!

- Prior to a washing, block all storm drains with an impervious barrier such as gravel bags or berms, or seal private storm drains with plugs or rubber mats. Make sure this practice does not flood the area or adversely affect vehicle or pedestrian traffic.
- **Never dispose of wash water into the street, storm drains, landscape drains, drainage ditches, or streams.**
- Select a site and wash vehicles on grassy or gravel areas so the wash water can filter through the vegetation and/or soil.
- **Create** a containment area with berms and tarps or take advantage of low ground to keep wash water contained so that it can evaporate.
- **Check** that the wash water is not leaking through gravel bags or other containment measure, and if necessary add more berms or barriers to keep the wash water contained.

Just Enough for the Job!

- Minimize water use by using high pressure, low volume nozzles.
- Use the minimal amount and least toxic detergents you will need to complete the job. Try phosphate free detergents. The safest products for the environment are vegetable-based or citrus-based soaps.

Only Rain Down the Storm Drain!

- Do not wash vehicles outdoors on saturated ground or on days when rain is probable.
- Pump or vacuum up <u>all</u> wash water in the contained area.

Pollution Prevention is up to you!

- With property owners permission, pump or pour the wash water to landscaped areas that will not run off to a storm drain; or drain it to the sanitary sewer through an interior building drain, sink, or private sewer clean-out. Discharges to the sewer **<u>should not</u>** contain hazardous materials, grease, grit, or any material that could clog piping.
- Sediments and other solids remaining on the ground should be swept or vacuumed up immediately so they don't wash into the storm drain system during the next rain.
- Shake car mats into a trash can or vacuum them. Do not shake dirt from car mats directly to the ground.
- Don't forget to properly dispose of any used gravel bags!

Who Can You Contact?

For more information, please call (858) 668-4636
Report Illegal Dumping to:
Poway Code Compliance (during business hours, 8 a.m. to 5 p.m.) at (858) 668-4663 or (858) 668-4664, press "0" for immediate assistance
Or
Poway Sheriff's Station (after 5 p.m.) at (858) 513-2800

Dispose of Fat, Oil, and Grease Properly

One of the most important sources of water pollution is sewer spills caused by fat, oil, and grease (FOG) blocking the pipes. These spills damage the environment and can create property damage and health hazards leading to expensive repairs, health code violations, or restaurant closure.

The City has created the FOG Program, which works with local food establishments by providing information and inspections to help you avoid the negative impacts of sewer spills. The FOG Program can:

- Issue your Food Establishment Wastewater Discharge (FEWD) Permit (this free permit is required for all food establishments)
- Show you Best Management Practices for handling FOG
- Evaluate your grease traps, interceptors, and other facilities so you can be sure they are adequate

To obtain your FEWD Permit or receive additional information on the FOG Program, please call the City of Poway Wastewater Division at (858) 668-4719.

ONLY RAIN DOWN THE STORM DRAIN

Remember, storm drains are NOT connected to sanitary sewer systems and treatment plants. Anything that goes into the storm drains flows directly into our creeks, rivers, and ocean without any filtering or treatment. Please do your part to help keep our water clean by using Best Management Practices and making sure that nothing but rain goes down the storm drain.

Best Management Practices for RESTAURANTS

A Clean Environment is Important to All of Us!

Best Management Practices

Restaurants contribute to storm water pollution through improper cleaning practices that allow food particles, oil, grease, trash, and cleaning products to flow into the street, gutter, or storm drain. These discharges pollute our creeks, rivers, and ocean and are **PROHIBITED BY LAW**. Below are recommended Best Management Practices (BMPs) for restaurants.

- **NEVER** pour wash water outside or into a street, gutter, or storm drain.
- **NEVER** pour grease or oil into a sink, floor drain, storm drain, or dumpster.
- Sweep, mop, or vacuum instead of using a hose to clean outdoor areas.
- **Always** clean equipment including floor mats, grease filters, grills, and garbage cans indoors or in a covered outdoor wash area that is plumbed to the sanitary sewer.
- Clean equipment in a mop sink if possible (never in a food preparation sink).

- If your restaurant does not have a mop sink, dedicate an indoor cleaning area where there is a drain that is plumbed to the sanitary sewer.
- Discharges to the sewer **must not** contain hazardous materials, grease, grit, or any material that could clog piping.
- All wastewater containing oil and grease must be disposed of in a grease trap or interceptor. Concentrated waste oil and grease must be collected in a grease bin and disposed of by a certified waste grease hauler.
- Major cleaning of exterior surfaces must include capturing wash water and disposing it in the sanitary sewer in compliance with local regulations.
- **Wash water must not be allowed to enter the street gutter or storm drain**.
- All mop water from cleaning floors must be disposed of indoors in a mop sink, toilet, or other drain that is plumbed to the sanitary sewer.
- **Dry sweep pavement** areas, including "drive-through" areas, parking lots, outdoor eating areas, and dumpster or grease bin areas frequently. If you must use water for cleaning, use a mop and bucket and dispose of wash water in a mop sink or floor drain that is plumbed to the sanitary sewer.

Sweep, mop or vacuum instead of using a hose to clean outdoor areas.

- Use dry methods for spill cleanup. Rags or absorbents can be used to pick up liquids or grease. Sweep up the absorbent, seal it in a plastic bag, and dispose of it in the trash.
- Keep outside areas free of trash and debris. Clean outdoor eating areas frequently using dry cleaning methods such as sweeping or vacuuming.
- **Never** wash down dumpsters or grease bins with a hose. Check dumpsters regularly for leaks. If a dumpster or tallow bin must be cleaned or repaired, contact the leasing company.

POWAY TODAY NEWSLETTERS

www.poway.org

POWAY Today

A Quarterly Municipal Newsletter for the Residents of Poway, California

Fall 2011

Poway Pension Reform

The City Council recently reached two-year agreements with its employees for pay and benefits from July 1, 2011 through June 30, 2013, completing the City Council's pension reform goals.

Poway employees began paying part of their pension costs in 2009, and increased their share last year. For the new fiscal year beginning July 1, 2011, employees have agreed to pay the full employee share of CalPERS pension costs (7% of salary for non-Safety employees and 9% of salary for Fire). City Council members will also pay the full 7% employee pension contribution beginning in July 2011. This means that City employees are now paying the maximum allowed by CalPERS and will be contributing over $1 million per year toward their pensions.

The second major front in pension reform in the City of Poway is the process of changing the structure and terms of the pensions themselves. Some critics have said that public pensions are too generous or too expensive. A number of cities in San Diego County, including Poway, are well on their way to reforming local government pensions to address this concern. In fact, a recent survey revealed that seven of San Diego County's nineteen cities are moving toward changing their employee pension plans. These reformed plans lower long-term costs by reducing the pension benefits, or raising the retirement age, or both.

"The employees of the City of Poway recently agreed that all employees hired after January 1, 2012 will be enrolled in "second-tier" retirement plans that provide a smaller retirement benefit and require them to work five years longer before they are eligible for full benefits."

– Penny Riley, City Manager

This collaboration between the City and its employees brings immediate budgetary savings with employees paying the full employee share of the CalPERS pension, and additional long-term savings from the second-tier pension for new employees. Both are significant achievements.

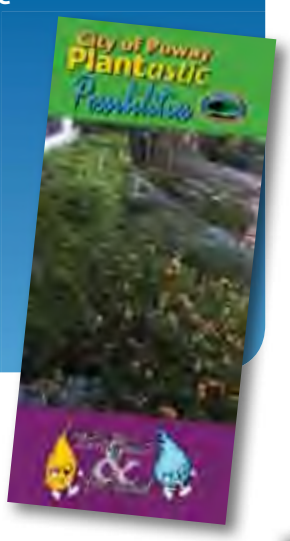
Continued Water Conservation Needed this Year – *Even after plenty of rain this spring*

A wet winter and cooler spring temperatures mean mandatory water restrictions and assigned irrigation days have ended in Poway.

Thanks to an improved water supply outlook for the region, Poway's wholesale water suppliers ended mandatory water cutbacks that started July 1, 2009. At its May 17, 2011 meeting, the City Council voted to immediately discontinue the Level 2 water shortage condition, ending mandatory water-use restrictions and assigned days for outdoor irrigation.

Good Landscaping Water-Efficiency Habits

1) Limit watering to three days per week.
2) Minimize sprinkler runoff and overspray.
3) Fix sprinkler heads that have too much pressure, causing them to blow water into the wind.
4) Replace traditional pop-up sprinkler heads with rotating nozzles.
5) Consider replacing lawn with water-wise plants.



Poway residents and businesses responded noticeably to the call for water efficiency. Between 2006 (record high water use for Poway) and 2010, total water use in Poway decreased by 38%.

Maintaining the water-wise habits practiced in recent years will continue to be extremely important for Poway.

Since Poway imports all of its drinking water (about half from the Colorado River and half from Northern California), local water supply is affected by conditions hundreds of miles away. While wet weather ended California's "drought," restrictions on the amount of water that can be pumped from Northern California remain due to environmental concerns.

Other factors driving the need for permanent water-efficiency in Poway include:

- The City's cost to buy imported raw water is expected to steadily increase for the next decade, mainly due to energy costs and maintenance of the network of pipes, pumps, and storage reservoirs that bring the water to Poway.
- Recent California legislation requires that water agencies curb water use by 20% by 2020. Reduced water use in recent years will help achieve and maintain Poway's 2020 target, which means the community needs to voluntarily keep water use at the same levels as 2009 and 2010. If water use returns to the level of 2006, 2007, or 2008, Poway will not meet the reduction.

Though the "drought" may be over, efficient water use is still important. Visit www.poway.org/waterconservation for resources, such as information on rebate programs, a sprinkler tune-up checklist, water-wise plant lists, and a landscape water-use calculator.

Rotating sprinklers use about 20% less water than regular pop-up spray heads.

Poway Farmers Market

More Than Just Fruits and Veggies

When you think of the term "Farmers Market," everything from a flea market to a grocery store comes to mind. But if you're looking for some of the finest fresh fruits and vegetables, then the City of Poway Farmers Market is for you! Join us at Old Poway Park on Saturday mornings year-round from 8:00 a.m. to 11:30 a.m. and the newly-added Wednesday evenings from 3:00 p.m. to 7:00 p.m. through September 21.

The Farmers Market, managed by Outback Farms, is certified by the County Agricultural Commission, meaning every product is grown locally by a San Diego County farmer and sold fresh to the consumer. Many farmers offer certified organic produce – free from pesticides, herbicides, or chemical fertilizers. During the summer months, it is not uncommon to find ripe melons, pears, sweet corn, figs, and more.

The Poway Farmers Market not only offers healthy and fresh produce, but also has vendors who offer a variety of other items. You will find flowers, fresh bakery items, unique jams and jellies, cheeses, eggs, seafood, and Mediterranean fare. It is a great opportunity to sample products, share information, and receive recipes and tips on food preparation. Some of the vendors have participated in the market for almost 20 years and price their goods competitively due to the reduction in packaging, shipping, and "middleman" costs.

Come support regional, family-owned farms, and experience the sights and sounds of your Poway Farmers Market – it's more than just fruits and veggies!

Household Hazardous Waste Tips

Load size and type affects City's cost for disposal of HHW!

Hazardous materials are contained in many common household products such as cleaners, paints, pool supplies and pesticides. Improper disposal of household hazardous waste (HHW) in the trash, in a storm drain, or down the sewer system is dangerous and harmful to the environment.

We thank Poway residents for disposing of HHW responsibly and safely at the Poway HHW collection facility located at 12325 Crosthwaite Circle (in the City's materials handling yard). The City is committed to making HHW disposal convenient for residents by being open most Saturdays between 9 a.m. and 3 p.m. with no appointment necessary.

Although a direct fee is not collected from residents when dropping off HHW, City revenues collected on your trash bill are used to pay the contractor to properly store and dispose of HHW at this facility.

Examples of Household Hazardous Waste include:

- **Aerosol cans, non-empty**
- **All Purpose Cleaners**
- **Antifreeze**
- **Auto Batteries**
- **Auto Fluids, Oil & Filters**
- **Batteries**
- **Cooking Oil, Residential**
- **Disinfectants**
- **Drain Opener**
- **Electronic Devices: TVs, Monitors, VCRs, Stereo Equipment, Computers, Wireless Phones, Microwave Ovens, etc.**
- **Fertilizers**
- **Fluorescent Tubes/Bulbs & other Mercury-Containing Lamps**
- **Furniture Polish**
- **Gasoline (w/ container)**
- **Latex (water based) Paint**
- **Lighter Fluid**
- **Oil-Based Paint**
- **Oven Cleaner**
- **Pesticides**
- **Pool Chemicals**
- **Propane Canisters**
- **Sharps (Medical needles & blades)**
- **Smoke Detectors**
- **Solvents & Thinners**
- **Thermometers**
- **Thermostats**
- **Varnishes**

Plan your next trip to the Poway HHW collection facility & help stretch City's budget for disposal:

- If you combine several types of household hazardous waste into one load, make it a FULL load to make the most of the per load charge the City pays.
- Every time electronic waste, batteries and sharps are brought to the facility "mixed" together with other types of HHW, the City is charged a flat disposal fee per vehicle, regardless of the load size.
- To help the City contain costs, bring one single-type of HHW load at a time to save charges to the City:
  - Electronic Waste ONLY (computer, monitor, TV)
  - Batteries ONLY (household alkaline batteries)
  - Sharps ONLY
- The legal transportation limit is up to 125 pounds, so make your trip count by bringing in a FULL load. A typical 125-pound load is equal to 15 gallons of liquids (paint, oil, or gasoline), or a 30-33 gallon trash can full of dry items (pesticides, aerosol cans, fertilizer).

For more information go to www.poway.org/hazardous or contact Annette Gonzalez at 858-668-4702, agonzalez@poway.org.

Are you ready to give back to your community?

Sheriff's Senior Volunteers Wanted

The Poway Sheriff's Senior Volunteers are looking for a few good men and women to join them to help keep Poway safe and secure. Volunteers must be at least fifty years old, in good physical health, and pass a background check. Applicants will attend a two week academy and then be assigned at least one six hour patrol per week. Scheduling is flexible to accommodate active lifestyles. Patrol duties include conducting home security checks, visiting homebound seniors, enforcing disabled parking regulations, and traffic control at accidents, special events, and disaster situations. If you want to do something meaningful with your spare time and have fun doing it, then please call the volunteer administrator, Pete Babich, at 858-232-8000 or Peter.Babich@sdsheriff.org for more information or to request an application.

Tell US how It is?

The City of Poway would like to hear from you. What do you think about the services and facilities provided in the community? What could we do to better serve you?

This cutout form is provided twice a year for comments, suggestions, and service requests. Clip out the form, and mail it or deliver it in person to City Hall at: 13325 Civic Center Drive.

All comments will be reviewed by the City Manager's Office and referred to the appropriate City department. Please be specific with your comments and the location of services, so that we can better serve you.

I have the following comments ❑ suggestions ❑ service requested ❑

Orange Gardens PROJECT UPDATE

Apartments Remodel Scheduled For 2012

The City's Housing Authority has partnered with Affirmed Housing Group to rehabilitate Orange Gardens Apartments located at 12510 Oak Knoll Road. Once the rehabilitation is complete, the 1-, 2-, and 3-bedroom apartments will convert to affordable rental rates which will be determined based upon qualifying residents' income levels. Construction will start this fall, with the rehabilitation scheduled to be complete in early 2012. This project is part of the City's ongoing efforts to revitalize the Oak Knoll corridor which has included significant streetscape and public infrastructure improvements, along with the recently completed renovation of Oak Knoll Villas. To place your name on the interest list to live in the Orange Gardens Apartments, please call Solari Enterprises at (714) 282-2520, ext. 215.

Start Smart!

The Poway Sheriff's Offer "Start Smart" Safety Classes for Teen Drivers

The National Highway Traffic Safety Administration and the California Office of Traffic Safety released statistics indicating the number of teen drivers involved in collisions is on the rise. In most cases, a "distraction" in the vehicle being driven by the teen driver was documented. Distractions can be anything from another occupant, the radio, a cell phone, or other multitasking acts such as eating or applying make-up while driving.

In an effort to warn teen drivers of these risk factors, the Poway Sheriff's Station Traffic Unit began offering a Start Smart program in September 2009. The Start Smart program is an "in your face" look (for both teen drivers and their parents) at the distractions that exist for teen drivers as well as the consequences of illegal acts. The program also addresses a parent's responsibility to make sure their new driver is abiding by the laws—specifically during their probationary license period. Since beginning the program, 419 teens and their parents have attended.

Start Smart classes are scheduled at the Poway Sheriff's Station on Thursday, August 11, and Monday, September 12, from 6 to 8 p.m. Additional classes will be scheduled for the coming months. If you have a new teen driver and would like to attend, please call 858-513-2800 and ask to be scheduled for the Start Smart class.

The Poway Sheriffs encourage you and your teen to attend this important class.

Distracted driving is as dangerous as impaired driving

According to www.distraction.gov:

- In 2008, nearly 6,000 people died in vehicle accidents involving a distracted or inattentive driver, and more than half a million people were injured. (NHTSA)
- The worst offenders are the youngest and least-experienced drivers—men and women under 20 years old. (NHTSA)
- Drivers who use hand-held devices are four times as likely to get into vehicle accidents serious enough to injure themselves. (Source: Insurance Institute for Highway Safety)

SEPTEMBER IS National Emergency Preparedness Month

Poway is considered by many to be the best place to live, work, visit, and raise a family in San Diego County. The joy, peace, and security of residing in the "City in the Country" resonate throughout the community. Each year, however, Poway's tranquility is marred by the arrival of high temperatures, low humidity, and Santa Ana winds. The arrival of these weather conditions and the long-lasting memories of the 2003 and 2007 wildfires serve as a steadfast reminder that simple planning and preparation is necessary.

The potential for large wildfires to cause huge losses and require unmanageable demands on firefighting resources is real. Every task you can do in advance of a wildfire reduces the risk to you, your family, your property, and your business.

For more information on some simple planning and preparation ideas, please visit www.poway.org or call (858) 668-4460.

Are You Prepared?

- ***CREATE A DEFENSIBLE SPACE*** around your home or business and maintain fire-resistive landscaping.
- ***CREATE A DEFENSIBLE HOME*** or business by using fire-resistive construction techniques and practices.
- ***PREPARE A KIT*** of emergency supplies, medications, special documents, and "important stuff."
- ***HAVE ENOUGH DRINKING WATER*** to last for three-days: one gallon, per person, per day.
- ***DESIGN AN EVACUATION PLAN*** that includes alternate routes and a common meeting place.
- ***GET NOTIFIED*** by registering your mobile phone with AlertSanDiego.org.
- ***DECIDE EARLY TO STAY OR GO*** following your own initiative or recommendations by authorities.

Captain's Corner

New Captain at the Poway Sheriff's Station!

In May 2011, the City of Poway welcomed Captain Mike Hernandez to the Poway Sheriff's Station to replace Captain Mark Elvin, who was promoted to the position of Commander.

Captain Hernandez has worked for the San Diego County Sheriff's Department for 27 years in a variety of assignments including investigations, patrol, traffic, internal affairs, and specialized investigations. His most recent assignment was with the East County Regional Gang Task Force. Captain Hernandez, who was raised in Poway, and is a graduate of Poway High School, is happy to return to the City.

The City is fortunate to have another experienced, veteran officer in charge of the Poway Sheriff's Station. Welcome Captain Hernandez!

Poway's Crime Rate Continues to be the Lowest in San Diego County

The City of Poway ended 2010 with a crime rate of 11.8 – the lowest of all cities in San Diego County. This means that less than 12 of the FBI Type 1 crimes (homicide, rape, robbery, aggravated assault, burglary, theft, auto theft, and arson) occurred for every 1,000 residents. Of the 615 crimes in Poway:

- **90 were violent crimes (homicide, rape, robbery or aggravated assault)**
- **525 were property crimes (burglary, theft, and auto theft)**

Burglary and theft (such as shoplifting, purse snatching, and thefts from vehicles, excluding auto theft) represented the largest portion of total crime in Poway in 2010.

- **There were a total of 157 burglaries**
- **There were 328 thefts**

Achieving and maintaining a low crime rate begins, in many respects, with prevention. The Sheriff's Department provides many crime prevention resources including a Crime Prevention Specialist who can be reached at (858) 513-2807. In addition, the Sheriff Department's website, www.sdsheriff.net, is a valuable source of helpful information.

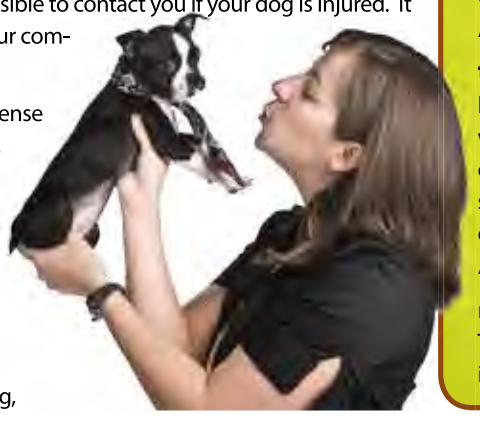
Why License Your Dog?

It's one way to show that you're a responsible pet owner – and it's the law

Dog licenses make a difference for you and your four-legged friend! You might be surprised at some of the good reasons to license your pet:

Lost Animals – The Escondido Humane Society, who manages our animal control contract, impounds hundreds of lost or abandoned dogs from Poway each year. Only 37% are reunited with their families. A tag with a current license can be a ticket home for your dog.

Injured Animals – Your dog's license will make it possible to contact you if your dog is injured. It could mean the difference between life and death for your companion.



Dog Bite and Rabies Prevention – Your dog's license is proof that your pet has been vaccinated against rabies. The rabies vaccination protects your pet and your family from a potentially-deadly disease.

Cost Savings – Every dog who has reached the age of four months requires a license. If your dog is unlicensed, you can be cited and fined. It's far less expensive to license your dog.

For more information on where to license your dog, please contact the Department of Animal Control at (760) 746-7307.

Poway Pet Policies

Do you know how many dogs and cats are allowed on your property?

According to the Poway Municipal Code (Section 17.08.110 F), you may keep up to three dogs and up to three cats in all residential zones; and up to six dogs and up to six cats in a large lot residential zone (RR-A through RR-C, RS-1 and RS-2)

Be sure to check with your apartment or condominium complex as they may have more restrictive regulations. For more information or the complete animal guidelines, please visit our website at: www.poway.org.

Don't let excuses stand between you and your pet!

"My dog hates to wear a collar…" Your dog would also hate to be lost without a license; he or she may never come home to you. With a bit of training, any dog can wear a collar and license without discomfort.

"My dog never leaves the yard…" If that were always true, the Humane Society wouldn't take in such a large number of dogs each year. It only takes one time for a gate not to latch properly, an unexpected trauma to send a dog bolting in fear, or a curious child to let your dog come out for playtime.

"If my dog gets lost, I'll find her at the shelter…" A licensed dog has a much better chance of getting home than one without a license. What if your dog is hit by a car and not taken to a shelter? An injured or stray dog may be taken to a veterinarian who can contact you if there is a license.

"I can't afford a license…" The cost of a license is minimal: $14/year if your dog has been spayed or neutered. That is far less than the cost of a citation and less than the cost of impound fees to reclaim an unlicensed dog.

Special Rates for Poway residents!

The City is pleased to continue its partnership with Cloud 9 SuperShuttle, which enables Poway residents and business travelers to enjoy discounted rates between the San Diego Airport and the 92064 zip code.

There is no need to request a special rate. By providing the 92064 zip code as your pick-up or drop-off location, you will automatically be provided with a reduced rate when you book your reservation. For reservations call (800) 974-8885, or visit the SuperShuttle website at ***www.cloud9shuttle.com.***

Wastewater 101

Where does it all go?

Except on properties with a septic tank, wastewater in Poway from sinks, showers, washing machines, and toilets enters the City's 170-mile sewer system.

About one-billion gallons of wastewater each year flow through Poway's system of pipes. Poway's wastewater system has 3,200 manholes, used for inspecting, cleaning, and maintaining the system. Keeping the system clear is a major objective for the City's Public Works Department to protect public health and the environment.

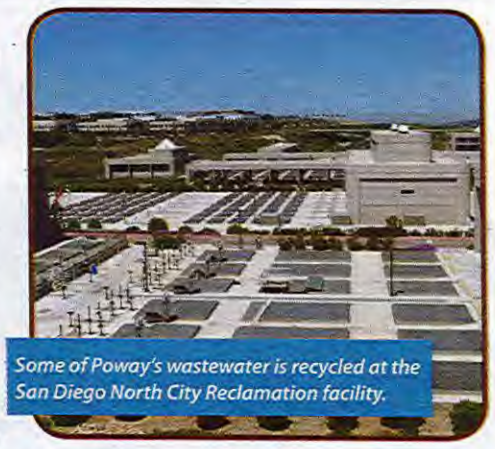
Ultimate Destination

From the extensive pipe network, wastewater travels to the main trunk sewer on Poway Road, and then travels west into San Diego's sewer system.

Most of Poway's wastewater ultimately ends up in the Pacific Ocean, released through a 4.5 mile pipe off the coast of Point Loma - 320 feet below the surface. Before wastewater can be released into the ocean (or into a river) it has to be treated to a certain quality level, set by Federal regulations. Several levels of treatment occur at different facilities along the wastewater's route to Point Loma.

The City of Poway does not operate its own wastewater treatment plant. To share resources and save money, the City of Poway partners with the City of San Diego and 11 other agencies from the southern portion of San Diego County, like Padre Dam Water District, Otay Water District, and the cities of Chula Vista, Del Mar, El Cajon, Imperial Beach, and La Mesa to run a regional system operated by the City of San Diego. The participating agencies share the pipe system and the cost. Poway's participation in this regional arrangement dates back to 1971, before Poway became a city in 1980. Poway is responsible for about 2% of the cost of the regional system.

Not all of Poway's wastewater is discharged into the ocean. The City of San Diego operates a water reclamation facility in the Miramar area, where wastewater is transformed into recycled water for landscape irrigation. About 20% of Poway's wastewater flows to this facility and is used to create recycled water. The recycled water runs through separate pipe infrastructure called "purple pipe" because the pipes and all related plumbing equipment are purple to distinguish them from drinking water pipes. Recycled water produced at the Miramar facility is used in many areas of northern San Diego (like Scripps Ranch, Carmel Valley, and Rancho Peñasquitos) and the Poway Business Park.



Some of Poway's wastewater is recycled at the San Diego North City Reclamation facility.

Holiday Recycling

Recycle your Christmas tree and reduce Holiday waste

EDCO will pick up Christmas trees on collection day for two weeks immediately following Christmas day. Please remove the stand and all trimmings, cut the tree to lengths of no more than 4 feet, and place at the curb. Residents must cut and bundle trees after the two-week period. Look for more details in your EDCO billing statement, or please call EDCO Waste and Recycling Services at (858) 748-7769.

For more tips on minimizing holiday waste, visit *http://www.calrecycle.ca.gov/publiced/holidays.*

A Day Without a disposable Bag

December 15, 2011 marks the annual A DAY WITHOUT A BAG event in San Diego County. For one day, residents and businesses are encouraged to utilize reusable bags as an alternative to the usual plastic and paper bags. Participating retailers and outlets will be giving away FREE reusable shopping bags to reduce disposable bag usage.

Each year, people in the greater San Diego region use more than 1.7 billion plastic bags, which is about 500 bags per person annually. While plastic bags are convenient to use and can be taken to major grocery stores and pharmacies for recycling, the United States Environmental Protection Agency estimates that less than five percent are actually recycled. Even though paper bags can be recycled in the City's curbside recycling program, single-use of any disposable bag is not the highest and best use of natural resources.

Last year over 150 outlets throughout the county participated in A DAY WITHOUT A BAG including the following businesses in Poway: Stater Bros., Target, Wal-Mart, 99 Cents Only, Pomerado Hospital, and the Poway Library. Reusable bags were donated by the stores and by EDCO Waste and Recycling Services.

For more details about A DAY WITHOUT A BAG, including giveaway locations and tips for remembering to use reusable bags, please visit www.NoBagDaySD.org.

POWAY Today

A Quarterly Municipal Newsletter for the Residents of Poway, California

Spring 2012

It Pays to be Energy Efficient

Poway Residents Enthusiastic About Energy Efficiency Rebates

Poway's Energy Efficiency Rebate program has been so well received in the community that participation has outpaced last year's total SDG&E regional rebate numbers.

In spring 2011, the City of Poway launched two energy efficiency rebate programs to help residents save energy and lower their utility bills. These programs end on June 30, 2012.

Rebates are funded with a $50,000 Energy Efficiency & Conservation Block Grant from the Department of Energy. So far, more than 133 Poway residents have taken advantage of the program, and the City has issued rebate checks totaling $33,000. Last year, a total of 100 participants from SDG&E's whole service territory took part in the program. A handful of rebates for Powegians are still available until June 30, 2012 or until the funds are expended, whichever happens first.

Residents interested in participating in either program can find more information and rebate applications for both the City of Poway and SDG&E rebate programs on the City of Poway website: **www.poway.org/rebate**.

Residential Pool Pump Rebate:

Residents who participate in SDG&E's $200 pool pump rebate offer for replacing their single speed pool pump with a multiple or variable speed pool pump are eligible to apply for an additional $300 rebate from the City.

Residential Air Conditioning, Cooling Coil and Condenser Rebate:

The City is offering residents an additional $300 rebate when they take part in the Energy Upgrade™ California rebate program through SDG&E for making certain upgrades to their residential air conditioning.

Poway Prohibits Medical Marijuana establishments throughout City

On February 7, 2012, the Poway City Council adopted an Ordinance that permanently prohibits the establishment of medical marijuana dispensaries, cooperatives and collectives in all zones in the city. This action was taken as a result of a study conducted by staff, at the direction of City Council to determine if these uses should be prohibited or allowed in certain zones and regulated within the City of Poway. In July of 2011, the City Council approved an Urgency Ordinance, which temporarily prohibited the establishment of these facilities in the City through August 21, 2011. At the meeting, concerns were raised by local residents, and the City Council requested staff to conduct a study to evaluate land use compatibility for these uses within Poway. In August, the City Council adopted a second Ordinance which extended the original Urgency Ordinance prohibiting these establishments for an additional 10 months.

Over the last few years, Poway, like other California cities, experienced an increase in inquiries made for the establishment of medical marijuana dispensaries, cooperatives or collectives. California laws such as the Compassionate Use Act (CUA), and the Medical Marijuana Program (MMP), protect seriously ill persons and their primary caregivers from prosecution for growing, possessing, and using medical marijuana. The MMP specifies that qualified medical marijuana patients and their primary caregivers are not subject to criminal prosecution solely for collectively or cooperatively growing marijuana for medical purposes. Additional guidelines were adopted governing collective or cooperative medical marijuana activities to ensure security and prevent the sale of marijuana to unauthorized persons.

In many California cities, new establishments opened, including areas in San Diego County. During the study period staff monitored legal developments concerning the operation and regulation of dispensaries, collectives and cooperatives, including pending legal actions in other jurisdictions. These efforts have included studying how other cities throughout California have opted to regulate such uses.

At the July 6, 2011, public hearing, several residents spoke in opposition to allowing such facilities in Poway due to factors such as health, safety and welfare of the community and also spoke to the issues related to crimes committed at dispensary facilities in other areas of San Diego County. Staff's research concluded that dispensaries have frequently been burglarized or robbed, and dispensaries have also involved other illegal drugs and firearms activities on premises. The crimes associated with medical marijuana dispensaries in other cities have concerned residents within the City of Poway. The City of San Diego and County of San Diego (unincorporated) allow dispensaries, but under limited circumstances.

The City of Poway has an overriding interest in planning and regulating development of all uses within the City. The City's General Plan details goals and objectives for Poway which include providing for the health, safety and welfare of its residents. Without safe neighborhoods, areas of the city could quickly deteriorate, with detrimental consequences to social, environmental, and economic values.

As a result, the City Council adopted an Ordinance prohibiting the establishment of medical marijuana dispensaries, cooperatives or collectives in all zones within the City of Poway. While the Ordinance prohibits medical marijuana dispensaries, cooperatives, and collectives, it does not ban the use or growth of medical marijuana in the city. Qualified patients and primary caregivers are allowed certain rights to possess, cultivate and use medical marijuana under State law and none of those rights would be affected by the adopted Ordinance.

The End of Redevelopment Funding in California

The City of Poway has lost its primary financing mechanism for building infrastructure and new facilities. Tax increment financing, a tool used by the Poway Redevelopment Agency to capture growth in property tax, has been instrumental in building community amenities since 1983. Through legislative action, and a recent California Supreme Court ruling, the Poway Redevelopment Agency and more than 400 other California redevelopment agencies were forced to shut down on February 1, 2012.

Since the Poway Redevelopment Agency was formed in 1983, the Agency has invested several hundred million dollars in the local community and improved the quality of life for many of Poway's residents and business owners. Redevelopment created new parks and community facilities, improved roadways and infrastructure, spurred commercial revitalization, enhanced school facilities, and supported affordable housing developments. Some of the most notable redevelopment projects include the Poway Center for the Performing Arts, gymnasiums at Meadowbrook and Twin Peaks middle schools, Old Poway Train Depot, Aubrey Park, Poway Community Library, Veterans Park, Oak Knoll area revitalization, and nine award-winning affordable housing developments. At the top of the list of economic success is the Poway Business Park, which was developed with the help of redevelopment funds and brings highly skilled jobs to our community. Poway has also shared more than $40 million in redevelopment funds with the Poway Unified School District which it has used to improve Poway school facilities.

As the City sorts through the complicated process of dissolving the Agency's affairs, there are still many outstanding questions. However, there are some things that are more certain. The Redevelopment Agency will cease to receive property tax revenue which currently totals about $39 million per year. The City is required to turn over all uncommitted redevelopment funds, including the balance of its low and moderate income housing fund. The City will remit approximately $5 million of non-housing tax increment and about $20 million in low and moderate income housing funds. The Agency's outstanding debt obligations are protected under the new law, and will be repaid. Moving forward, some portion of the property tax that once flowed to the Agency will be redistributed to the City as one of many agencies in the County that receive property tax. At this time, we are waiting for the County of San Diego to calculate the revised property tax amounts.

The implementation of the new state law will tremendously affect planned City projects such as the Community Facility and Senior Center, the fire apparatus building at Fire Station #2, and the Monte Vista affordable housing project to name a few. The new law will also affect the City's day-to-day operations because the City shared administrative services with the Redevelopment Agency. Rather than duplicating staffing, the Redevelopment Agency was supported by City employees and the Agency shared in the cost. The elimination of redevelopment removes millions of dollars that helped offset administrative costs and rent at City Hall and will put stress on the City's general fund.

It will be some months before the dust settles and the City knows the exact return in property taxes the City will realize from the elimination of redevelopment. City staff will provide ongoing updates to the City Council and our community. Be assured the City remains committed to strong fiscal principles and to maintaining core services, while building partnerships with local businesses and the community, strengthening neighborhoods, assisting schools and low income families, and effectively implementing the community's vision.

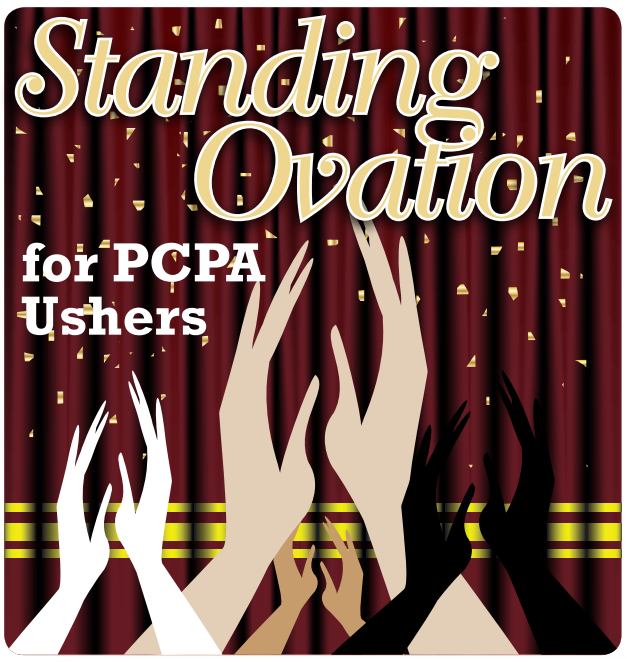
Poway's Trail Systems:
Where will they take you?

Iron Mountain Trail - Right in Our Own Back Yard

Recently featured in Sunset Magazine, Poway's Iron Mountain Trail is quickly becoming one of San Diego's most popular and well-used hiking destinations. Iron Mountain Trail is the longest multi-use wilderness trail in the city and claims the second highest peak within Poway. The terrain is spotted with large outcroppings of boulders and steep hills and the vegetation includes southern oak woodlands, mixed chaparral and large patches of manzanita. The hike to the top can be a bit strenuous but upon reaching the peak, you're rewarded by breathtaking views like none other within the County. Trails.com notes, "On many a crystalline winter day, the summit offers a sweeping, 360-degree panorama from glistening ocean to blue mountains and back to the ocean again." The round-trip hike, beginning from the staging area, is just over six exposed miles so pack plenty of water and snacks, wear appropriate attire for the conditions, and don't forget to bring plenty of sunblock.

Lake Poway Trails Enjoyed by All – From Beginner to Avid Hikers

The trails in and around Lake Poway Recreation Area have something to offer everyone. These multi-use trails offer hikers, mountain bikers and equestrians, from beginner to experienced, a large variety of challenging, yet memorable opportunities. Within Lake Poway Park itself, there are two small loop trails that border the northwest and southwest shorelines of the lake. These trails provide hikers a glimpse of the park, as well as numerous views of the rugged mountains and terrain that border the lake to the east. These loop trails are an excellent way for beginners to build up their endurance and offer some of the most picturesque views in Poway. For those looking for a bit more challenge, the Lake Poway Trail consists of a 3.5 mile loop with multiple peaks and valleys, and serves as the gateway to the extremely strenuous Mount Woodson Trail to the east, the Sumac Trail that connects Lake Poway to High Valley on the south, and the state-owned Blue Sky Ecological Reserve to the north. Both the Mount Woodson Trail and the Blue Sky Reserve present adventures of their own, so your best bet is to spend a day enjoying the Lake Poway Recreation Area and the numerous trail adventures it has to offer.



If you share a love for theatre and interest in giving back to your community, consider becoming an usher. That is exactly what more than 100 theatre volunteers, ranging in age from 16 to 87, do at the Poway Center for the Performing Arts (PCPA). Both the Poway community and individual volunteers reap the rewards from this valuable relationship.

While on-the-job, our volunteer ushers deliver top-notch service for 60,000 patrons at more than 150 performances each season. That equates to about 7,290 hours of service a year. Some volunteers have given more than 15 years of service! Volunteers contribute significantly to PCPA's ability to host professional performances, ranging from major plays and concerts to appearances by individual artists of national acclaim. What do they do? They greet you at the door with a friendly smile, scan your ticket, provide you with a playbill, assist you to your seat, and even serve you a delicious beverage at the concession.

Gaining valuable experience, improving communication skills, and creating professional connections are just a few of the benefits from volunteering as an usher. If you asked an usher, you would likely hear about the important social benefits, too. It is a great way to meet new people and build lasting friendships. Bi-monthly potlucks become the perfect place for camaraderie, a healthy recipe exchange or sharing stories and a hearty laugh. At every social event, not only do volunteers have fun, but time is made to recognize exemplary volunteer service and achievement.

Many an usher will tell you that one of the greatest rewards from volunteering at the theatre is watching young children arrive dressed as the Tin Man to see the "Wizard of Oz" for the first time. Others will tell you about the opportunity to see an entire season of theatre, free-of-charge. No matter what the reason, volunteers have a feeling of self-fulfillment and the knowledge that they have made a difference in the City of Poway.

Experience all LAKE POWAY has to offer

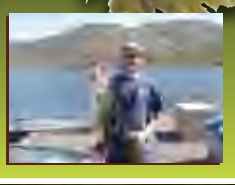
The Lake Poway Recreation Area offers year-round opportunities, but you can't beat spring and summer for getting the best out of the great outdoors. Lake Poway is more than just Poway's very own fishing hole and water resource. Together, the lake and Clyde Rexrode Wilderness Area make for an excellent location for families and friends to celebrate and recreate.

Feeling a little competitive? Enjoy a game of softball, horseshoes, or volleyball. Challenge a friend to a contest of arrows at the archery range. There is also plenty to do out on the water. You can captain a pedal boat to discover the treasures of hidden bay or catch a summer breeze aboard a row or motor boat. Hikers, bikers, and equestrian riders alike can discover local native plants and animals on the extensive and serene open trail system. Summer programming will keep you and the kids busy with Poway's own Lake Poway Day Camp, family campouts, summer concerts, and night fishing.

If your outdoor activity of choice is wide-open green spaces and beautiful views, then the new rental areas are for you. Hosting your child's birthday, a company barbecue, or simply enjoying a picnic with friends and family is easier than ever. New park areas can be rented in customer-friendly, two- to eight-hour blocks. Our helpful and knowledgeable staff will ensure you get the best park area for your event. Receive a price break with eight-hour rentals offered for the price of seven hours. For the spontaneous visitors, there are still plenty of first-come, first-serve park areas for your impromptu picnic or post-hike cool down.

Lake Poway offers some of the lowest prices on fishing permits and boat rentals in San Diego County. Don't miss your chance to catch the "big one." Active military can take advantage of the weekend parking fee waiver by presenting a valid identification card at the entry booth April through October. Seniors and all military personal receive reduced rates on fishing permits and boat rentals five days a week.

Lake Poway is an excellent place in your community to gather, participate in a program, and have some fun! If you haven't visited the lake to enjoy time with friends and family, cast a line in the fishing hole, or listened to a concert, then now is an excellent time to discover treasures that can only be found in the great outdoors.



ater & Sewer Rate Update

r Rates to Stay the e

of Poway water rates will not crease in 2012 even though the ego County Water Authority, which les untreated water to Poway, will ase its rates between 7.4%, and in 2012. Poway can absorb this t increase and not pass it on to Poway idents because of improved efficiency the City's water operations and its educed labor costs.

During the drought in 2009 the agencies that supply the City's water cut deliveries by 8%. During this time, the City restricted water use by declaring a Level 2 water shortage. In 2010 and 2011 the state received higher–than-average rainfall. So, in April of last year, the City's water suppliers lifted their restrictions. In May, Poway did the same, ending the Level 2 water restriction.

Decreased water use in Poway over the past four years is the result of increased rainfall and conservation by residents.

From 2008 to 2009 water use by residents decreased by 12%, fell another 18% the following year, and dropped again by 6% in the past year. Also during this period, the water used for City parks, landscaping, and facilities decreased by 30%. We expect water demand in Poway to level out in 2012 and remain the same in 2013.

Sewer Rates to Decrease

In 2012 the City will reduce variable sewer service charges by another 7% for all customers. This will reduce the bimonthly bill for the average single family residential customer by $4.64. This is the second consecutive year the City of Poway has been able to implement rate reductions. For 2011, sewer rates were decreased 13%. City staff credits efficient management of operations, and reduced staffing and labor costs for making this possible. However, any more increases in San Diego's sewer operating or capital costs could result in a recommendation for a rate increase by January 2013. City staff will continue to closely monitor San Diego's sewer costs and operations.

In 2009 the City of San Diego, which processes sewage for the City of Poway, was able to put off major capital improvements when it received another five-year waiver from State authorities. Eventually, capital improvements to San Diego's system will be required and the City of Poway will be expected to share in the cost. Early estimates put Poway's share of the improvements at $10 to $11 million.

Fortunately, sufficient sewer funds have been set aside for these improvements. All Poway sewer customers pay a fixed sewer service charge based on water meter size and customer classification to cover the City's costs for meeting system capacity, billing, and administrative overhead. The current fixed sewer service charge is $16.35 every two months for residential customers, and varies for commercial/industrial customers.

Poway's commercial and industrial sewer customers also pay a variable sewer charge each month based on water consumption. For residential customers, variable sewer charges are set by tiers. Customers are assigned to one of seven tiers based on their lowest average winter water consumption over three years. In January of each year, these "tier assignments" are recalculated. This year, many residential customers will be reassigned to lower sewer rate tiers due to water conservation. This results in additional customer savings.

Poway residents can be assured that the City works hard to keep the cost of providing safe and efficient water and sewer service as low as possible.

Captain's Corner

Sheriff's Department Website: A Treasure Trove of Public Safety Information

The mission statement of the San Diego County Sheriff's Department includes providing the highest-quality, public-safety services in an effort to make San Diego the safest urban county in the nation.

The Sheriff's Department's public website at www.sdsheriff.net provides a wide variety of information. It is essentially a one-stop, go-to location that covers topics such as recruitment, community resources, and outreach including crime mapping, crime analysis, and crime prevention. In addition, it offers links to federal, state, county, and local law enforcement agencies as well as non-profit agencies performing public safety services. Poway residents are encouraged to explore this valuable resource to learn more about the Sheriff's Department and what it offers to the community.

Learn more at:

Sheriff's Department Prescription Drug Drop-Off Program

The Concern:

Unwanted, unused, or expired prescription drugs present substantial risks to our community by either falling into the wrong hands or by damaging our environment through improper disposal. The San Diego County Sheriff's Department and the County Board of Supervisors have worked together to provide a safe, alternative method to dispose of unwanted medications.

The Solution:

The Sheriff's Department participates in prescription drug "take-b
days when the public can turn in unwanted medications at specifie
locations. With the success of these events, it became apparent tha
it would be prudent to provide the community with the opportun
to relinquish medications without having to wait for these events
be scheduled. Secure collection drop-boxes have been installed
several Sheriff's facilities including the Poway Sheriff's Station. Th
is encouraged to utilize this resource and can do so during norm
business hours when the lobby is open.

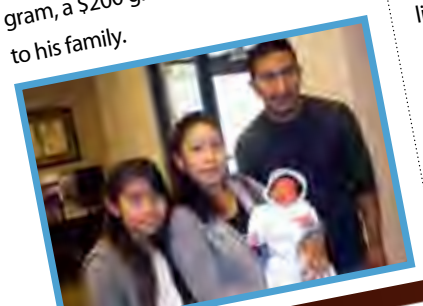
Medications in standard containers may be deposited in th
off box. Any loose or liquid medications should be enclosed i
containers before being deposited.

For more information, contact the Poway Sheriff's Station
(858) 513-2800.

Poway's 2012 First Baby

The City of Poway would like to welcome Jesus Junior Hernandez. He was born at 6:42 p.m. on January 3, 2012, at Pomerado Hospital, making him the first Poway baby born in the New Year. Jesus was welcomed by his mother Araceli and his father Pedro, along with his 8-year old sister, Nailea. He weighed 6 lbs. 11 oz. and arrived just one day before his mother's birthday.

As part of the City's First Baby Program, a $200 gift card was presented to his family.



Become a TIP Volunteer

The Trauma Intervention Programs (TIP) of San Diego County, Inc. is seeking Poway area volunteers who would like to be trained to help residents in distress as a result of a traumatic event. Following a natural or unexpected death by fire, crime, or other crisis situations, volunteers are called to the scene by a peace officer or firefighter to assist those who are family or friends of a victim.

The first few hours after a crisis situation has occurred are very confusing for everyone involved. TIP volunteers can help provide the necessary emotional support until the people affected by the crisis are able to depend on family, friends, and others. This allows the emergency responders to return to work more quickly, feeling confident that the victim will receive the assistance needed. Among other activities, volunteers provide support to victims or survivors; arrange food, shelter, clothing, and transportation; notify family members and friends; and serve as a liaison between the victims and emergency services personnel.

All adult and teen volunteers are required to attend a 50-hour training class. No prior experience is necessary to become a volunteer; however, volunteers must be at least 16 years of age, have automobile transportation, and live in the Poway area.

Do you want to make a difference? Join an organization whose mission supports compassion and caring for others. For more information, contact the TIP office at (760) 931-2104 or check the website at www.tipsandiego.org.

The Art and Science of Pristine Pavement

Poway's 165 miles of paved roadways represent a significant city asset with an estimated replacement value of $418 million. The City makes a substantial annual investment to provide roadways that ensure smooth, high quality surfaces that users don't have to think twice about. To achieve this goal, Poway employs a formal Pavement Management System to ensure limited dollars result in maximum return.

Use and environmental effects cause all streets to deteriorate over time and eventually require some sort of maintenance. Pavement management is an organized, analytical process of ensuring that the right treatment is applied to the right street at the right time.

The process begins with experts conducting a visual evaluation of all paved streets, and scoring each street segment to determine a Pavement Condition Index (PCI). PCI categories are as follows:

Good to Excellent	100 to 70
Fair	70 to 50
Poor	50 to 25
Very Poor	25 to 0

The pavement maintenance strategy recommended for a street segment is based on the segment's PCI, the type of traffic on the street, and the structural properties of the street.

A street scoring in the "Good to Excellent" category may not require any maintenance other than crack filling, while a street in the "Very Poor" category may need a complete removal and reconstruction. Costs increase exponentially for more extensive treatments. Current crack sealing costs can be as low as $0.17 a square foot, while complete reconstruction costs almost fourteen times that or up to $2.30 a square foot. These costs vary greatly year to year depending on oil prices and raw material costs.

Before pavement management, paving programs were based on a "worst-first" strategy. Streets getting treatment were those that had failed or closest to failure, resulting in the most expensive and time-consuming projects.

This strategy exhausted funding by focusing on streets that couldn't get any worse. In the meantime, streets in good condition deteriorated due to lack of attention and quickly added to an insurmountable backlog that rapidly outpaced available funds.

Current paving science calls for a systematic approach to managing a City's total pavement network. When artfully executed, the service life of a street can be extended by three to five years. On the other side of the coin, delaying pavement preservation for only one year can rob five to six years of service life.

The goal is to keep the majority of the network in the "Good to Excellent" range by applying less costly treatments while streets are in good condition to keep them from slipping into lower categories thus postponing or eliminating a more expensive repair. The reality is that it is more cost effective to do a balanced program of seals and overlays than to prematurely exhaust funding to do just the worst streets.

Poway's average PCI for its entire street network is 80 ("Good to Excellent"). For purposes of pavement management, the city is divided into eight zones so that every street receives some sort of treatment every eight years.

Poway's commitment to a formal Pavement Management System ensures that the best aspects of both the art and science of paving are applied and the City achieves maximum return on investment for our residents.

Zone 3 in 2012!

Zone 3 is in west central Poway bordered by Pomerado Road on the west, Poway Road on the south, Community Road on the east, Twin Peaks on the north and includes most residential streets encompassed within these borders.

Don't Break the Bank:

Make the Most of your Household Hazardous Waste Fees with Larger but Fewer Loads

$63.75 per Load!

Proper Household Hazardous Waste (HHW) disposal is expensive but necessary to protect the public and the environment. Please help us use the limited funds collected for this service in a cost-effective manner.

Plan Your HHW Drop-off

Did you know that $1.20 a month of your monthly residential trash bill goes to finance the HHW collection site at 12325 Crosthwaite Circle? In order to make those dollars stretch so that the City can continue to provide free, uninterrupted HHW collection year-round for residents, please keep these tips in mind when planning your next visit:

Mixed Loads: Cost $63.75

Whether you bring in a pound or 125 pounds (which is the maximum weight per load), the City pays $63.75 per vehicle for a mixed load of HHW products. Plan to maximize your HWW trip by bringing all your HHW disposal items in one large load rather than many small loads throughout the year.

Poway's facility is very popular, serving over 4,000 vehicles a year. Of those visitors, 83% are repeat customers bringing loads that weigh less than the 125 pound limit.

Single Type Load: Cost FREE

Transport a single type of the items listed below and the City is not charged. The items that can be dropped off free of charge include:

- E-waste-computers, monitors, televisions
- Household batteries
- Sharps Only

The City of Poway's HHW collection facility is open most Saturdays between 9 a.m. and 3 p.m. For closed days and more information about this program, please visit the City's web site at www.poway.org/hazardous.

The first of two annual clean-up coupons have been mailed to EDCO Waste and Recycling Services' residential customers in Poway. The spring cleaning coupon is good for FREE disposal of one load of household bulky items until June 30 at either the Ramona Transfer Station or the Escondido Transfer Station. The transfer stations are open every day between 7:00 a.m. and 4:30 p.m. (Ramona transfer station is closed on Sundays).

Directions and more information are provided on the coupon. Customers must present their coupon and a picture I.D. with the current address (or a copy of an EDCO trash bill that corresponds to the service address listed on the reverse side of the coupon) to qualify for FREE disposal.

Items NOT ACCEPTED: hazardous waste, tires, computer monitors, televisions, contractor waste, large trailer loads, and commercial truckloads of debris.

Residents and contractors performing a major renovation or property cleanup may contact EDCO at 858-748-7769 to request temporary bin service.

Items Accepted:

- Furniture
- Appliances (charges apply for appliances containing freon)
- Residential wood waste
- Yard waste
- Scrap metal

Penny Taylor: Poway's Newest Librarian

Meet Poway's newest librarian, Penny Taylor. Penny has worked for the San Diego County Library system for six years at the Santee branch and prior to that with the San Diego Public Library system for three years.

As a young girl growing up on a farm in Indiana, Taylor often thought about becoming a librarian. For her, going to the library each week was a treat. But by the time she was accepted to Indiana University, Penny had a change of heart and pursued a degree in business administration.

After years of social work, fundraising, and administration in the arts, Penny felt the need to make a change. She attended San Jose State where she completed her master's in Library Science.

Penny appreciates the larger space, existing programs, loyal patrons, and dedicated volunteers at the Poway Library. "I also love the community room, a place where groups can listen to a speaker or have other activities."

Penny would like to add a few adult reading programs, such as Breakfast and Books, or a book group, which reads a suggested title, then watches and compares the film of the same name. "I'd really like to connect with the Poway Senior Center, which is practically around the corner from the library," Penny said.

When Penny is asked about the advances in technology, such as e-books and other devices, she states, "As long as vibrant library programs are offered and patrons value the free access to books and computers; libraries will exist. Make it a place people want to come to, make it a destination."

Cutting Through the F.O.G.

City Teams Up with Local Eateries to Optimize Wastewater System

Every year, about 1.1 billion gallons of wastewater and sewage moves through Poway's 185 miles of collection pipelines and five sewage lift stations. On a daily basis, most customers don't think much about the system that ensures wastewater leaves our homes and businesses efficiently and uneventfully. Those who have experienced a sewer back-up, though, may have a special appreciation for a working wastewater system.

In spite of the City's comprehensive, proactive maintenance program, grease-related sewer blockages occur every year. A Fat, Oil or Grease (FOG) blockage usually starts in the sewer pipeline owned by customers and can lead to a blockage in the City-maintained sewer system. A rapid response is necessary to prevent property damage and sewer spills that can cause environmental damage and result in expensive fines from regulatory agencies.

One common cause of spills is FOG disposed down the drain both in commercial establishments and private residences. FOG items that should never be put down the drain include:

- Frying oil
- Salad oil
- Meat drippings
- Bacon fat
- Greasy leftovers

All improperly disposed cooking oils can cause problems in the sewer system. Cooking grease coats pipelines just like fatty foods can clog human arteries. The grease clings to the inside of the pipelines, eventually causing complete blockage.

Staff undertakes special inspections when a sewer spill caused by grease occurs. Once the cause of the spill is determined, recommendations are developed to address the cause. Solutions can involve changes to the piping system and/or more aggressive maintenance. The City currently has over 50 locations that require high frequency maintenance to address FOG build-ups.

The City appreciates the assistance of residents and businesses to eliminate grease in the sewer system. This optimization will help manage maintenance costs and decrease the frequency of spills that can cause expensive damage to property and the environment. Please contact Public Works at 858-668-4700 if you would like to know more about the program or visit the City's website at www.poway.org, search word: FOG.

It's Up to All of Us to Help Prevent Sewer Blockages Caused by FOG

Everyone can help prevent costly sewer spills. At home, a few simple steps can help avert a sewage disaster:

1. All cooking oil should be poured into a non-recyclable container (e.g. old milk carton) and placed in the trash.
2. Dishes and pots that are coated with greasy leftovers should be wiped clean with a disposable towel prior to washing or putting in the dishwasher and the towel should be placed in the trash.
3. Don't place fat trimmings from meat in the garbage disposal, put them in the garbage.

Captain's Corner

Juvenile Laws: Drinking, Driving & Curfew

With summer fast approaching, parents and teenagers should be aware of two important laws. One is often forgotten and commonly violated. That is curfew. The other is very serious and often deadly. That is drinking and driving by a minor. In the U.S., an estimated 5,000 people under age 21 die each year from injuries caused by underage drinking.

Minors (people under the legal drinking age of 21) and alcohol do not mix. It is illegal for minors to possess alcohol on their person or in a vehicle, or drive while having any alcohol in their systems. A violation will result in criminal prosecution and an automatic suspension of the minor's driving privilege.

Poway Municipal Code sets curfew for juveniles between 11:00 p.m. and 5:00 a.m. San Diego County differs from Poway Code, and sets curfew between 10:00 p.m. and 5:00 a.m. Curfew exceptions are 1) attending or going to and from a school or religious function, 2) emergencies, 3) inside a privately owned establishment, 4) with a guardian or parent or by a parent's or guardian's permission, or 5) in the company of a responsible adult over 21 years old.

A violation of either law will result in the minor being taken into custody. Those under 18 will be released to a parent or guardian. Those over 18 will be booked into custody. It would be very worthwhile for parents to have a discussion with their teenagers at this time of year about the seriousness of the curfew laws and the consequences of underage drinking.

Fire & Life Safety: Poway's Business Self-Inspection Program

In January 2010, professional and business service offices (low-hazard occupancies) were selected for a new self-inspection program that will help augment the City's longstanding company fire inspection program. The program was designed to increase fire prevention effectiveness by partnering with business owners to address common fire and life safety concerns in the workplace.

Here's how it works. Every two years, professional and business service offices will receive a self-inspection form by mail that identifies common fire hazards and explains how to eliminate them from the workplace. Once the self-inspection and documentation are completed, the business owner retains the report as part of their records. Self-inspections of these occupancies typically take no more than one half hour to complete.

During the alternate year, fire company personnel will perform a fire and life safety inspection and will update contact information and records.

There is no charge to business owners for either the inspections performed by the fire companies or their self-inspection. The goal is to make everyone and every business more fire safe through a more comprehensive, interactive, and educational approach to fire prevention and life safety.

ATTACHMENT 6.3

STORM WATER DOOR HANGER

Dear Resident:

The City of Poway's storm drain system collects water run off and drainage from rainfall. The storm drain system is not connected to the sewer system, which means this water is untreated as it is channeled through local creeks to an intricate storm water conveyance system that ultimately leads to the ocean.

Most of the time, pollutants unknowingly and unintentionally flow into storm drains every time it rains or when water flows out of yards. Sometimes pollutants such as pesticides, fertilizers, pet waste, litter and oil are inadvertently disposed in storm drains. In both cases pollution of the storm water system can have harmful effects on our recreational areas, waterways and wildlife.

Please see reverse side for tips on how you can play an important part in storm water pollution prevention.

Improper disposal of automotive fluids and other hazardous substances is a violation of the Federal Clean Water Act and the Poway Municipal Code. To report illegal dumping of automotive fluids and other hazardous substances in storm drains please call:

Poway Code Compliance (during business hours) at (858) 668-4663 or 668-4664, press "0" for immediate assistance

Or

Poway Sheriff's Station (after regular business hours) at (858) 513-2800.

Sincerely,

City of Poway
PUBLIC WORKS DEPARTMENT
(858) 668-4707

Helpful & Inexpensive Tips for Storm Water Pollution Prevention

- When using hazardous substances such as paints, solvents, and cleaners, buy only what you need and use it all up.
- Properly dispose of unwanted household hazardous waste (HHW) at the **Poway HHW collection facility.** Please call **(858) 668-4710** for location and hours of operation.
- For water-based paints, rinse paint brushes in the sink. For oil-based paints, filter and reuse paint thinner. Dispose of all unwanted paints and materials at the Poway HHW collection facility.
- If you are working on a home improvement project, dispose of small amounts of drywall, concrete and mortar in the trash after it is dry.
- Dispose of pet waste in the toilet or deposit in a bag in a trash receptacle.
- Use pesticides or fertilizers sparingly. Avoid using them if the forecast calls for rain within the next week.
- Use mulch as a substitute for herbicides to prevent weeds from growing and to help absorb water.
- Do not over water your lawn and water during the cooler times of the day.
- Drain swimming pools only when advised to by professionals, and take steps to ensure water will not harm our environment.
- Sweep and pick up leaves and debris from your driveway instead of hosing it down into the storm drain.
- If you wash your own car, use a shutoff nozzle on your hose, and use mild detergents and water sparingly.
- When changing fluids from your car, drain in a clean container (e.g., an empty milk jug) and seal. Take used oil and oil filters to a **used oil collection center** in Poway. Call **1-800-CLEANUP** for locations.

ATTACHMENT 9.1

HHW AND UNIVERSAL WASTE FLYER

CITY OF POWAY'S

Household Hazardous Waste Collection Facility

12325 Crosthwaite Circle (off Stowe Drive) in
the South Poway Business Park, Poway, CA

Hours of Operation:

9:00 a.m.- 3:00 p.m. Saturdays Only

(Closed on Sundays, weekdays, and holiday weekends)
For recorded information call: **(858) 668-4710**

Household Hazardous Waste includes:

- Aerosol cans, non-empty
- All Purpose Cleaners
- Auto Batteries
- Auto Fluids, Oil & Filters
- Batteries
- Cooking Oil, Residential
- Disinfectants
- Drain Opener
- Electronics: Computer CPU, Monitor, Printer, TV, VCR, Wireless Phone, Microwave Oven
- Fertilizers
- Fluorescent Tubes and Bulbs & Other Mercury-Containing Lamps
- Furniture Polish
- Gasoline (w/ container)
- Latex (water based) Paint
- Lighter Fluid
- Oil-Based Paint
- Oven Cleaner
- Pesticides
- Pool Chemicals
- Propane Canisters
- Sharps in rigid, sealed containers labeled "Sharps"
- Solvents & Thinners
- Thermometers
- Thermostats
- Varnishes

To reduce the amount of Household Hazardous Waste you generate, please buy only what you need and use it up. Choose less toxic alternatives and recyclables.

1/2009

HOUSEHOLD HAZARDOUS WASTE is unused or leftover portions of products containing hazardous chemicals used to maintain your residence. Products labeled *Caution, Warning, Danger, Poison, Toxic, Flammable or Corrosive* are considered hazardous.

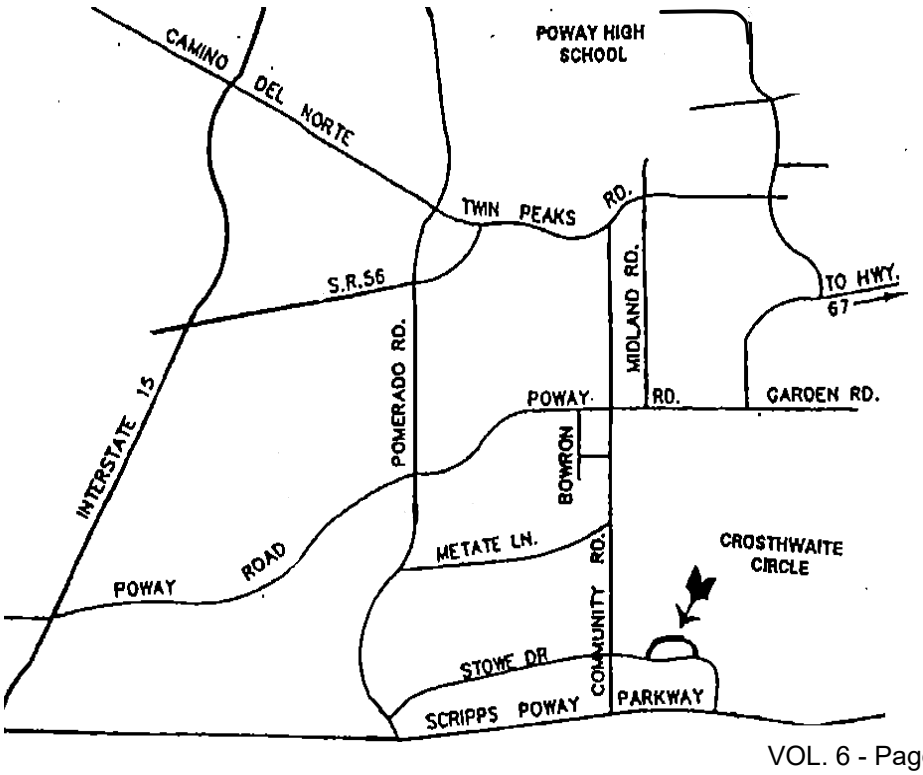
PROPER DISPOSAL: It is dangerous and illegal to discard household hazardous waste into the trash, a storm drain, or down the sewer drain. Instead, use up the product as intended or take the unused portion to a Household Hazardous Waste Collection Facility. Uncontaminated used oil, oil filters, antifreeze, and automotive batteries may also be taken to a certified collection center.

TRANSPORTATION AND WEIGHT LIMITS: Leave products in the original container with lids on tight so they will not leak. Transport containers in the trunk or in the back of the vehicle away from passengers. **DO NOT** transport more than 15 gallons or 125 pounds at a time in containers no larger than a 5-gallon bucket.

CONSTRUCTION WASTE: Hazardous waste from a home remodeling project where a commercial contractor was used is commercial waste. The disposal is the responsibility of the contractor.

DO NOT BRING: **BUSINESS WASTE, TIRES, EXPLOSIVES, RADIOACTIVE MATERIAL or MEDICAL WASTE except sharps.**

Funded by the City of Poway, participating agencies, and grants provided by the California Integrated Waste Management Board.



Universal Waste

Universal waste (U-waste) is hazardous waste that comes from a wide variety of generators, including residences and businesses. Under California's "Universal Waste Rule," U-waste cannot go in the trash, and must be taken to a collection location where it is then sent for recycling or proper disposal.

Examples of Universal Waste

- Common Batteries (AA, AAA, C cells, D cells and button cell batteries)
- Electronic Devices such as: Computer and television monitors, wireless phones, computer processing units, printers, VCRs and microwave ovens
- Fluorescent light tubes and bulbs
- High intensity discharge lamps
- Mercury switches
- Mercury thermometers
- Mercury thermostats
- Non-empty aerosol cans

How To Dispose of U-waste

- Retailers that sell rechargeable batteries should have a take back service. Rechargeable batteries and cell phones are accepted at retail sites participating in the Rechargeable Battery Recycling Corp. Program.
- Poway Residents may take their waste to the Poway HHW Collection Facility along with their other HHW.

For additional information about universal waste go to:
http://www.calrecycle.ca.gov/HomeHazWaste/Uwaste/

www.ciwmb.ca.gov/HHW/Uwaste

RESULTS OF 2010/2011 WATER QUALITY MONITORING, FLOOD CONTROL DETENTION BASINS, POWAY, CALIFORNIA

D-MAX Engineering, Inc.
Consultants in Water & Environmental Sciences

December 7, 2011
Project No. 201135W-1

Mr. Steve Crosby, P.E.
City Engineer
Development Services Department
13325 Civic Center Drive
Poway, CA 92064

Re: Results of 2011/2012 Water Quality Monitoring, Flood Control Detention Basins, Poway, California

Dear Mr. Crosby:

During the storm event in the Poway area on November 4, 2011, D-MAX Engineering, Inc. (D-MAX) conducted sampling and analyses of selected parameters for the detention basins located at Stotler Court, Stowe Drive, Community Road, Kirkham Way, and Gate Drive. The sampling was conducted in order to evaluate the effectiveness of City of Poway (City) retrofitted flood control detention basins in removing pollutants from storm water. These sites were revisited approximately five days after the sampled storm event, on November 9, 2011, to sample the water released from the basins. This letter summarizes our sampling procedure and the results of the analyses.

Background

The City of Poway has retrofitted five flood control detention basins in the South Poway Business Park area for use as regional storm water best management practices (BMP). All basins were modified to capture and mitigate the volume of runoff produced by an 85th percentile, 24-hour rain event. The City modified these basins to serve as shared BMPs for Priority Development Projects within their drainage areas. These shared BMPs are less expensive for developments subject to the City's Standard Urban Stormwater Mitigation Plan (SUSMP). The basins also treat runoff from other parcels within the basins' drainage areas that were not subject to SUSMP; these would typically not have received any treatment, if a standard SUSMP design approach of installing BMPs only on the Priority Development Project site was used.

The City has conducted analyses of inflow to and outflow from the basins to assess their effectiveness since 2004. Based on the anticipated and potential pollutants generated by the land use types upstream of the detention basins, the parameters on the following page were selected for analyses.

Field Analyses

- Temperature
- pH
- Specific Conductance
- Dissolved oxygen (Outflow only)

7220 Trade Street ■ Suite 119 ■ San Diego, CA 92121 ■ (858) 586-6600 ■ Fax (858) 586-6644

Laboratory Analyses

- Total Hardness
- Total Suspended Solids (TSS)
- Total Organic Carbon
- Oil and Grease
- Nitrate Nitrogen
- Ammonia Nitrogen
- Orthophosphate Phosphorus
- Total Phosphorus
- Total and Dissolved Copper
- Total and Dissolved Lead
- Total and Dissolved Zinc
- Total and Dissolved Cadmium
- Surfactants (MBAS)
- Specific Conductance
- Turbidity
- Total Coliform Bacteria
- Fecal Coliform Bacteria
- *Enterococcus* Bacteria

Sampling Procedure

Sampling was conducted for a rain event beginning at 9:30 in the morning on November 4, 2011. The National Weather Service reported 0.9 inches of rain at the Poway rain gauge on November 4. The D-MAX field crew arrived at approximately 9:30 AM and concluded sampling at approximately 6:00 PM. Once sufficient rain had fallen to produce runoff at the sampling locations, time weighted composite samples were taken by collecting equal volumes of samples from the inlets of all detention basins at regular time intervals. Samples were taken every 30 minutes for all basins except at Community, where samples were collected every 20 minutes. The Community basin has a largely pervious drainage area and thus does not see a runoff response until later in the storm. More frequent sampling is therefore conducted to ensure that sufficient volume is collected to meet laboratory analysis requirements. At each basin samples were collected and kept in a 2.5 gallon glass sampling container.

At the Gate basin, samples were taken from both of the two inlets to the basin. Each of the points was sampled according to the procedure described above, and then the composited samples from each of the two basin inlets were combined at a 2:1 ratio: two parts from the west basin inlet and one part from the east inlet. This combined sample was then submitted to the lab for analysis. The 2:1 ratio was determined by the sizes of the drainage areas.

In the field, temperature, pH, and specific conductance were measured for all composite samples using calibrated meters. In accordance with standard sampling procedure, grab samples were taken in the middle of the rain event and promptly sent to the lab for analyses of the three types of bacterial indicators and oil and grease. Grab samples are necessary for oil and grease, which requires that the top surface of the water be sampled, and for bacteria, which has a short holding time and must be delivered to the laboratory within a few hours of taking the samples. At each station, the samples for all other constituents were collected as composites in a 2.5 gallon glass sampling container and preserved on ice until they were delivered to EnviroMatrix Analytical Laboratory to be analyzed for the remainder of the parameters listed above. The samples were delivered within the appropriate holding times, and strict chain-of-custody procedures were followed.

An additional rain event started the evening of November 5 and continued into November 6, 2011. This storm occurred after the initial sampled storm but before water was released from the basins. This storm was originally predicted to be small, but it resulted in approximately 1.0 inch of rain. Typically runoff from a rain event would be kept in the

basins for approximately three days before being released; however, due to the second rain event ending on November 6, the captured runoff was released three days after the second storm, on November 9. Another set of samples was collected from the outfall of each basin at this time. Temperature, pH, and specific conductance were measured again in the field for the outflow samples, plus the additional parameter of dissolved oxygen. Because water in a detention basin is not flowing, it is possible for the dissolved oxygen level to fall over time. Testing the outflow dissolved oxygen helps asses if the outflow dissolved oxygen is in line with Basin Plan Water Quality Objectives. The collected samples were then sent to the laboratory for analysis of the same parameters as the inflow samples. The laboratory analytical reports for the inflow and outflow samples are attached to this report.

Results and Discussion

The locations of all five basins and their drainage areas are shown in Figure 1. Photos of the basins are shown in Figures 2 to 6. Tables 1 through 5 present the results of the sampling and analysis for each basin. Table 6 presents an overall summary of the results, indicating the change in each parameter (increase, decrease, or no change) from inflow to outflow as well as the outflow value. Table 7 summarizes the percent reductions for the parameters tested at all five basins. Table 8 presents overall median and average values for the inflow and outflow values, as well as percent reductions based on the overall averages and medians presented in the table.

In general, most parameters either had lower concentrations in the outflow than in the inflow or were not detected in both the inflow and the outflow. In all five basins, total lead, total zinc, dissolved zinc, surfactants, nitrate nitrogen, total suspended solids, and turbidity were significantly reduced.

At four of the detention basins total hardness and specific conductance increased, likely due to the fact that captured runoff was subject to evaporation prior to the outfall sampling. Hardness and specific conductance measure dissolved ions in a particular solution. These ions do not settle out of solution, and the ratio of dissolved solids to water increases as water evaporates. As a result, there is usually an increase in total hardness as well as specific conductance. An opposite trend was noted at the Community basin. The drainage area for Community is much less impervious than the other basins' drainage areas. Rain water typically has low specific conductance and hardness, but this effect is more pronounced for highly impervious drainage areas because runoff has little opportunity to pick up dissolved minerals from contact with soil. The inflow specific conductance and hardness values for the community basin, which mainly reflect levels of dissolved minerals, were about five times higher at the Community basin than at the other four basins. This explains why the inflow specific conductance was higher at the Community basin. The outflow value may have decreased with respect to the inflow value at this basin due to the second rain event on November 5 and 6. Since the soil moisture during that storm would have been higher due to the preceding storm, more runoff per unit of precipitation, and thus a lower ion level in that runoff would be expected.

Total dissolved solids, for which Los Penasquitos Creek is now listed as impaired, can be estimated by multiplying conductivity in µmhos/cm by 0.7. Applying this calculation to outflow specific conductivity results shows all outflow values were below the Basin Plan Water Quality Objective of 500 mg/L.

Reductions in fecal coliforms ranging from 28 percent to nearly 100 percent were observed in four of the five basins. Two of the five basins had outflow fecal coliform levels below the

bacteria total maximum daily load (TMDL) wet weather single sample maximum water quality standard of 400 MPN/100mL. Reductions in enterococci were observed in three of the five basins. Increases were observed at the Stotler and Gate detention basins, but the reason for the increase is uncertain. Animal waste was observed at the Gate detention basin and is a known source of enterococci. The Stotler detention basin had an abnormally low inflow value with a fairly normal outflow value, compared to previous years' data. Of the five basins, none had an outflow enterococci count below the TMDL standard.

Total coliforms, which are less likely to be related to fecal sources than the other two groups of bacteria measured and are generally considered poor public health indicators, decreased at three of the five basins. The increase was observed at the Stotler and Gate detention basins. Decomposing organic material in the Gate detention basin is the most likely source of the total coliform increases observed there. The reason for the increase at the Stotler basin is uncertain and is not consistent with past years' data.

Mixed results were observed with nutrient levels. Nitrate nitrogen levels decreased in all five basins, while ammonia nitrogen levels decreased at three of the five basins. For all the basins both ammonia and nitrate nitrogen inflow and outflow values were either similar to or lower than results from the previous year.

Organophosphate phosphorus and total phosphorus levels decreased from inflow to outflow at all basins but Kirkham, at which increases of 8 and 16 percent were observed, respectively. It is possible that the algae present in the basin before the storm contributed to this effect (Figure 7). Algae is a reservoir of nutrients and was observed at a high level only in the Kirkham basin.

Among other constituent, oil and grease were never detected. Surfactants were detected in a very low concentration in inflow and non-detect in outflow for four basins.

Summary of Findings

A summary of the main findings of the 2011/2012 detention basin monitoring program is presented below.

- Reductions in levels of fecal coliforms and enterococci were observed in four and three of the five basins, respectively. Where reductions were observed, reduction rates ranged from 28 percent to nearly 100 percent. Outflow samples were below the bacteria TMDL single sample maximum standard of 400 MPN/100mL for fecal coliform at two basins, and none were below the enterococci standard of 61 MPN/100mL.
- Metals generally were not detected, or had relatively low outflow concentrations
- Turbidity reductions of 68 to 95 percent were observed at all basins, and TSS reductions of 85 percent or greater were observed at all basins but Stowe which had a nearly 60 percent reduction. TSS levels were all below the minimum reporting limit and only slightly above the minimum detection limit in the outflow of each of the five basins. All outflow turbidity levels were below the Basin Plan water quality objective of 20 NTU.
- Dissolved oxygen was above the water quality objective of 5.0 mg/L in the outflows of all five basins.
- Oil and grease were never detected. Surfactants were detected in a very low concentration in inflow and non-detect in outflow for four basins.

- Total hardness and specific conductance were higher in the outflow for most basins. This is consistent with past years and is likely due to the effect of evaporation during the period that water is detained in the basins. However, estimated total dissolved solids were still below The Basin Plan Water Quality Objectives in the outflows from all basins.
- Nitrate decreased at all basins, and total phosphorus decreased at four of the five basins.

It has been our pleasure working with the City of Poway on this interesting project. If you have any questions regarding this report, please give me a call at (858) 586-6600 ext. 22.

Sincerely,
D-MAX Engineering, Inc.

Arsalan Dadkhah, Ph.D., P.E.
Project Manager

Dissolved Oxygen (mg/L)	0.01	Change	N/A	N/A	N/A	N/A	N/A	N/A
		Outflow	5.42	5.36	8.35	5.19	5.68	5.42

Notes

↓ Indicates the outflow value was lower than the inflow value

↑ Indicates the outflow value was higher than the inflow value

NC Indicates the parameter was detected in the inflow and outflow, but no change was observed

ND Indicates the parameter was not detected in either the inflow or the outflow

N/A Dissolved oxygen is only sampled in outflow samples, so inflow level and percent reduction are not applicable.

Outflow is the outflow value measured for the parameter

*Overall column shows the median outflow value for the parameter across all monitored basins and the net increase or decrease across the basins. A value of "ND" was entered where a large number of non-detect results brought the median below the reporting limit. The net increase or decrease is the number of increases minus the number of decreases. For example, two increases and one decrease is represented by showing one increase arrow.

Table 7: Pollutant Removal Percentages at All Basins

Parameters	Stotler	Stowe	Community	Kirkham	Gate
Total Cadmium (mg/l)	NA	NA	NA	NA	NA
Total Copper (mg/l)	75%	78%	-13%	75%	73%

Total Suspended Solids (mg/l)	95%	58%	95%	95%	84%
Total Organic Carbon (mg/l)	-40%	-168%	43%	-179%	-92%
Turbidity (NTU)	95%	68%	81%	92%	84%
Temperature (^{o}C)*	-67%	-186%	-79%	-137%	-148%
pH*	-14%	15%	-31%	-6%	-6%
Field Specific Conductance (µmhos/cm)	-67%	-40%	6%	-92%	-36%
Total Coliforms (MPN/100mL)	-1757%	47%	94%	77%	-285%
Fecal Coliforms (MPN/100mL)	-7547%	28%	100%	99%	86%
Enterococci (MPN/100mL)	-43900%	44%	65%	50%	-30%
Dissolved Oxygen (mg/L)	NA	NA	NA	NA	NA

Notes

NA = not detected in both inflow and outflow

* These parameters were measured in the field.

** Because analytical methods do not have detection limits of zero, a removal rate of exactly 100% cannot be stated. However, all values in this table are rounded to the nearest full percentage point, so values above 99.5% are shown as 100%.

Negative percentages indicate the outflow value was higher than the inflow.

Table 8: Statistical Summary of Pollutant Removal: All Basins

Parameters	Inflow		Outflow		Percent Reduction	
	Average	Median	Average	Median	Average	Median
Total Cadmium (mg/l)	<0.001	<0.001	<0.001	<0.001	0%	0%

Temperature (oC)*	7.76	6.6	16.44	15.4	-112%	-133%
pH*	6.44	6.3	6.94	6.7	-8%	-6%
Field Specific Conductance (mS/cm)*	0.364	0.11	0.398	0.15	-9%	-36%
Total Coliforms (MPN/100mL)	27,937	17,000	24,136	28,000	14%	-65%
Fecal Coliforms (MPN/100mL)	7,137	5,000	891	700	88%	86%
Enterococci (MPN/100mL)	522	900	1,168	2,200	-124%	-144%
Dissolved Oxygen (mg/L)	N/A	N/A	6	5.42	N/A	N/A

Notes

ND = not detected in both inflow and outflow

N/A Dissolved oxygen is only sampled in outflow samples, so inflow level and percent reduction are not applicable.

A value of < [MDL] (eg., <0.001) was entered where a large number of non-detect results brought the median and/or average below the reporting limit.

* These parameters were measured in the field.

** Oil and grease and total suspended solids were detected in only a few inflow samples and no outflow samples. Statistically the medians for inflow and outflow were both equal, but the inflow averages were higher than the outflow averages.

Geometric mean used instead of arithmetic mean for "average" calculations for bacteria.

One half the reporting limit was substituted for non-detect ("ND") values in statistical calculations.

Negative percentages indicate the outflow value was higher than the inflow. While the number of decimal places to which data is shown on the table is limited for significant figure reasons, the percentages shown were calculated based on the full calculated numbers before applying rounding for significant figure purposes.

Notes and Definitions

W-02	The sample for nitrate analysis was preserved with H2SO4 after the nitrite portion of the analysis was completed to extend the holding time for the sample. Nitrate results are corrected for the nitrite contribution per the method.
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Enclosed with this letter are the test results performed by subcontract laboratory for the following analyses:

- TOC – Liquid by SM5310B

The samples were received by EnviroMatrix Analytical, Inc. intact and with chain-of-custody documentation. The test results and pertinent quality assurance/quality control data are listed on the attached tables.

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hard copy data report has been authorized by the following signature.

Dan Verdon
Laboratory Director

Clinical Laboratory of San Bernardino, Inc.

17 November 2011 Clinical Lab No.: 11K0681

Louis Luick
EnviroMatrix Analytical, Inc.
4340 Viewridge., Ste. A
San Diego, CA 92123

Project Name: TOC Analysis
Sub Project: 11K0219

Enclosed are the results of the analyses for samples received at the laboratory on 11/08/11 . Samples were received within temperature range, in correct containers and preservation.

Analyses were performed pursuant to client's chain of custody, within hold times, utilizing EPA or other ELAP approved methodologies.

I certify that the results are within compliance both technically and for completeness. Analytical results are attached to this letter. Please call if any additional information and or assistance are needed.

Thank you for choosing Clinical Laboratory of San Bernardino for your analytical needs.

Sincerely,

Stephen Kavousy

Stephen Kavousy

Enclosed with this letter are the test results performed by subcontract laboratory for the following analyses:

- TOC – Liquid by SM5310B

The samples were received by EnviroMatrix Analytical, Inc. intact and with chain-of-custody documentation. The test results and pertinent quality assurance/quality control data are listed on the attached tables.

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hard copy data report has been authorized by the following signature.

Dan Verdon
Laboratory Director

Clinical Laboratory of San Bernardino, Inc.

16 November 2011 Clinical Lab No.: 11K1012

Louis Luick
EnviroMatrix Analytical, Inc.
4340 Viewridge., Ste. A
San Diego, CA 92123

Project Name: TOC Analysis
Sub Project: 11K0337

Enclosed are the results of the analyses for samples received at the laboratory on 11/11/11 . Samples were received within temperature range, in correct containers and preservation.

Analyses were performed pursuant to client's chain of custody, within hold times, utilizing EPA or other ELAP approved methodologies.

I certify that the results are within compliance both technically and for completeness. Analytical results are attached to this letter. Please call if any additional information and or assistance are needed.

Thank you for choosing Clinical Laboratory of San Bernardino for your analytical needs.

Sincerely,

Stephen Kavousy

Project/Sample Comments: Both dissolved and total metals analyses requested.

2°C on ice

[1]Additional costs may apply, consult a project manager for details.

[2]EMA reserves the right to return any samples that do not match our waste profile.

NOTE: By relinquishing samples to EMA, Inc., client agrees to pay for the services requested on this COC form and any additional analyses performed on this project. Payment for services is due within 30 days from date of invoice. Samples will be disposed of 7 days after report has been finalized unless otherwise noted. All work is subject to EMA's terms and conditions.

02 December 2011

Notes and Definitions

W-02	The sample for nitrate analysis was preserved with H2SO4 after the nitrite portion of the analysis was completed to extend the holding time for the sample. Nitrate results are corrected for the nitrite contribution per the method.
QR-04	The RPD between the sample and sample duplicate is not valid since both results are below the reporting limit for this analyte.
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

[2]EMA reserves the right to return any samples that do not match our waste profile.

NOTE: By relinquishing samples to EMA, Inc., client agrees to pay for the services requested on this COC form and any additional analyses performed on this project. Payment for services is due within 30 days from date of invoice. Samples will be disposed of 7 days after report has been finalized unless otherwise noted. All work is subject to EMA's terms and conditions.

THE CITY OF SAN DIEGO

January 30, 2008

Christina Arias
California Regional Water Quality Control Board, San Diego Region
9174 Sky Park Court, Suite 100
San Diego, CA 92123

Subject: City of San Diego Urban Runoff Management Plan FY 2007 Annual Report and Response to Review of FY 2006 JURMP Annual Report **(SWU:10-5015.02:carias)**

Dear Ms. Arias:

Attached please find paper and electronic copies of the City of San Diego's Urban Runoff Management Plan Fiscal Year 2007 Annual Report, and associated Appendices, submitted as part of the County of San Diego's Unified Jurisdictional Urban Runoff Management Program Annual Report.

The Annual Report also contains responses to the comments provided by the Regional Board in its September 26, 2007 letter (SWU:10-5015.02: carias) to the City. Text in the Annual Report addressing a comment is italized and notes the comment number and refers to Appendix A, which includes a copy of the Regional Board letter dated September 26.

If you have any questions, please contact Katherine Comer Santos, Associate Planner, at (619) 525-8527.

I certify under penalty of law that this Urban Runoff Management Plan Fiscal Year 2007 Annual Report and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted, to the best of my knowledge and belief, is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sincerely,

Drew Kleis
Acting Deputy Director

DK/ks

1 EXECUTIVE SUMMARY

San Diego is a beautiful city with its picturesque coastline and bountiful aquatic resources. In addition to supporting an abundance of wildlife, San Diego's natural surface water resources—its creeks, beaches and bays—provide miles of recreational opportunities for residents and serves as the centerpiece to San Diego's tourist industry. Pollution in urban runoff has the potential to harm the region's creeks, beaches, and bays and threatens its social and economic quality of life. Preserving San Diego's natural water resources is one of the most important goals of the City of San Diego (City). The Storm Water Pollution Prevention Division (Storm Water Division) was designated as the lead City agency to achieve this goal.

The City's Urban Runoff Management Plan establishes the blueprint for actions that the City would take to protect and improve the water quality of the creeks, beaches, and bays in the region and achieve compliance with San Diego Regional Water Quality Control Board Order Number 2001-01 (Municipal Permit). The plan, adopted by the City Council in January 2002, outlines a phased implementation approach allowing for increased activities as additional funding is identified.

As with the previous five years, the City has worked diligently over the past year to implement the Urban Runoff Management Plan. In addition, the City leveraged its resources in program areas that could achieve the most efficient benefits to water quality: special projects, which leverage funding and efforts in the region; education and training efforts in pollution prevention, and good housekeeping activities.

1.1 PROGRAM ACCOMPLISHMENTS

1.1.1 Special Projects

Special projects are an integral tool in the City's effort to leverage limited resources with grant dollars and partnerships with environmental organizations and agencies. The City's Storm Water Division achieved significant benefits to water quality beyond its FY 2007 $13.5 million budget by leveraging approximately $14 million (this amount includes both grant and match funding) in special projects, as summarized below. In addition to these water quality improvement projects, the Storm Water Division also participated in six Total Maximum Daily Load (TMDL) programs and numerous special water quality monitoring investigations to determine the sources of various water quality problems.

Table 1-1. Summary of Special Project Accomplishments in FY 2007.

Project	Accomplishments in FY 2007	Project Budget (Grant & Match Funding)
Areas of Special Biological Significance (ASBS) Project Planning	The City continued to work with the Scripps Institution of Oceanography and San Diego Coastkeeper to develop the La Jolla Integrated Coastal Watershed Management Plan (ICWMP). The Draft ICWMP was completed in June 2007 and submitted to the SWRCB and the community for review and input. The City applied to the SWRCB for additional grant funding under the 2005-2006 Consolidated Grants Program in 2006.	$678, 942

Project	Accomplishments in FY 2007	Project Budget (Grant & Match Funding)
Areas of Special Biological Significance Dry Weather Flow and Pollution Control Program	The City applied to the SWRCB for additional grant funding under the 2005-2006 Consolidated Grants Program in 2006. The City was awarded grant funding in FY 2007 for the installation of dry weather diversions within the La Jolla ASBS watershed.	$4,500,000
San Diego Watersheds Common Ground Project: San Diego Bay Watershed Demonstration	The City continued to work with its partners and consultant in the creation of a GIS- and web-based database to track and analyze conditions and trends associated with the region's water resources. Final comments from the Grant Manager on the draft report were incorporated and the Final Project Report was submitted to the Regional Board Grant Manager on March 1, 2007. The report provided an assessment of the success of the project to meet the primary goals of the project as stated in the Grant Agreement. The Final Report presented the findings of this assessment based on the work completed and survey data from the four workshops. The outcome of the project was that the goals had been met. Several recommendations were also presented included the funding of a regional data management program that can use the data, data management tools, mapping tools and educational content to continue to address these goals in the region.	$1,362,645
Mission Bay Computerized Irrigation Control System Project	The post-construction monitoring was completed in October 2006. The final Project Report was submitted to the State Grant Manager in FY 2007.	$1,336,455
Chollas Creek Water Quality Protection and Habitat Enhancement Project	Final design plans and construction specifications have been completed for the project, including the environmental permits. The City completed a public bidding process for the construction plans and specifications. The City continued to implement the education and outreach components of the grant project to residential and industrial sectors of the community.	$2,799,317
Rose and Tecolote Creeks Water Quality Improvement Projects	The City completed the construction of one baffle-box in the Tecolote Creek sub-watershed at Mount Ashmun Street and the system was operational.	$2,000,000
Ocean Beach–San Diego River Water Quality Improvements	Construction of the flap gate was completed in November 2006, and the project was completed in December 2006. The schedule for completion was extended due to the need to re-bid the project due to significant increase in concrete costs due to Hurricane Katrina impacts on the construction material sector.	$2,072,953
	Total value of special projects:	**$14,750,312**

1.1.2 Education and Outreach

The City's Storm Water Pollution Prevention Program goals for its FY 2007 public information campaign remain the original core goals from the initiation of the program. These goals are as follows:

- Increase awareness that storm water flows to water bodies untreated
- Change behaviors from those that pollute water bodies to those that do not
- Increase awareness of the *Think Blue* slogan

June 30, 2007, concluded the seventh year of the *Think Blue* Media, Education, and Public Advocacy Campaign. The campaign was able to put forth a broad, multifaceted effort, which included educating and training municipal employees, targeting external audiences as identified in the Municipal Permit (residential, business, and industrial audiences as well as school-aged children and the construction and development sectors), participating in grant education and outreach activities, and actively participating in regional outreach and education efforts with the Copermittees.

1.1.3 Enforcement

In FY 2007, the Storm Water Division received 2,157 contacts from the public and others. The public awareness and activism contributed to 1,964 investigations, 456 Administrative Citations, 880 Notices of Violation, and 157 Civil Penalties being issued to polluters for violating the Storm Water Ordinance (San Diego Municipal Code §43.03). The remainder of the contacts (193) were not related to potential storm water enforcement issues and resolved in other manners. The breakdown of investigations in Figure 1-1 shows investigator efforts in response to calls. The fact that many people reported wastewater violations indicates the public's growing awareness and ability to recognize prohibited discharges. Other issues to consider are the willingness to report on a single violator (perhaps a neighbor) versus willingness to report on an agency. Through the City's enforcement efforts, numerous sources of storm water pollution were identified and abated.

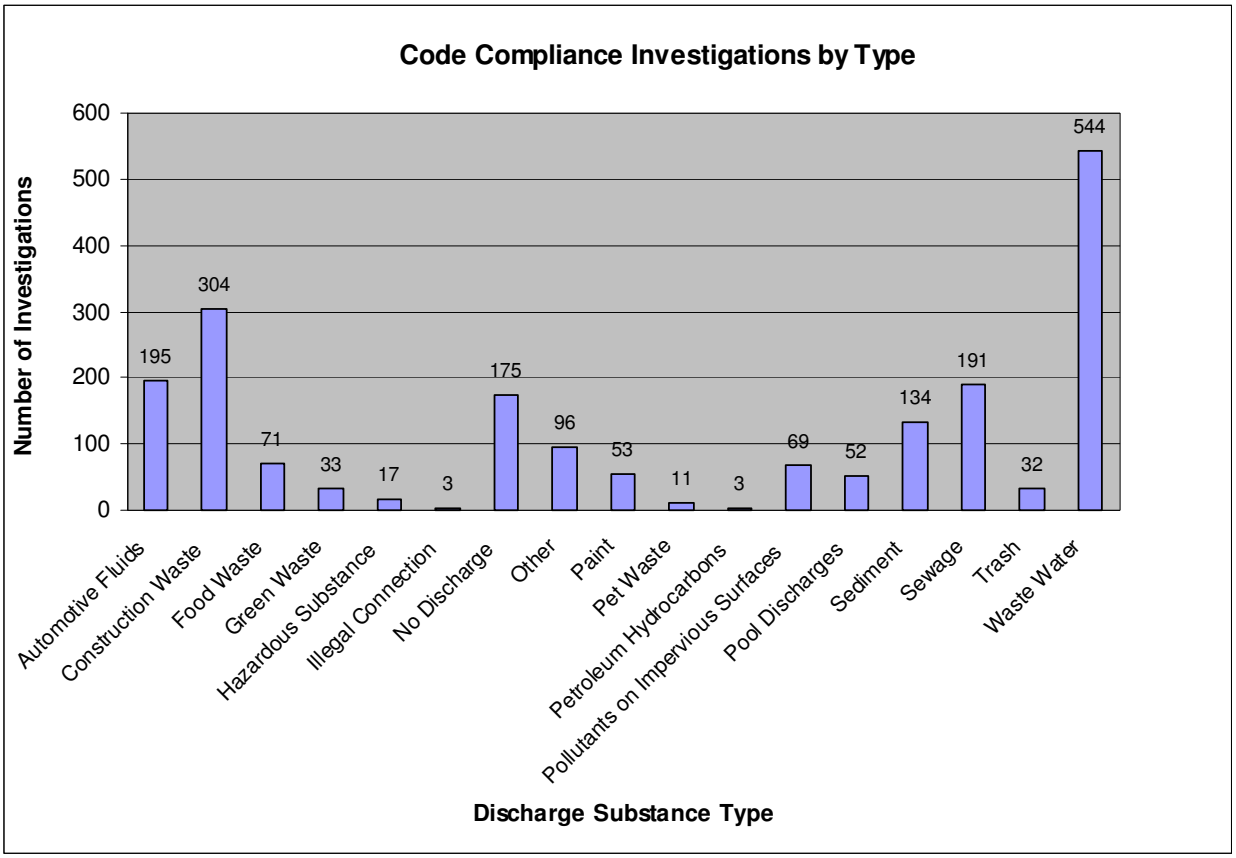

Figure 1-1. Code Compliance Investigation by Type.

1.1.4 Water Quality Monitoring

The City's Storm Water Division staff conducted routine water quality monitoring at 12 coastal beach and five lagoon sites on a monthly basis from November to March and on a semimonthly basis from April to October. Staff also conducted routine water quality monitoring at 302 Dry Weather Monitoring sites from May through September to help the City identify and characterize sources of pollution.

1.1.5 Development and Construction

The City continued to refine and improve its implementation of permanent storm water controls in new public and private development projects with continued internal staff training in FY 2007.

1.1.6 Industrial and Commercial Programs

The City continued to expand its industrial and commercial programs in order to institute effective measures to reduce pollutants. This year's efforts included the inspection of 255 industrial facilities and 5,064 commercial facilities. Beginning in April 2004, a mailing insert has accompanied business license renewals and business tax certificate mailings to inform businesses of storm water best management practices requirements and ordinances. This information reached approximately 76,000 businesses in FY 2007.

1.1.7 Municipal Activities

The City continued to place emphasis on storm water pollution prevention practices and awareness integrated into all field operations and activities at municipal facilities in FY 2007. Notable efforts in FY 2007 include:

- Street Division conducted street sweeping of nearly 77,311 curb miles and collected approximately 5,850 tons of debris.
- Street Division cleaned 7,219 storm drain structures, 8,950 feet (2.21 miles) of drainage pipe, and 3.11 miles of drainage channels, removing 9,816 tons of debris from the storm drain system.
- In total, the Street Division's street sweeping and storm drain system cleaning activities removed 15,665 tons of debris from the City's storm drain system in FY 2007.
- The Environmental Services Department cleaned or collected over 3,300.36 tons of trash, debris and recyclables in FY 2007.
- As another broad indicator of the overall effectiveness of the City's water quality protection efforts, specifically from the Metropolitan Wastewater Department, the City continued to reduce the number of sewer spills from 365 spills in 2000 to 85 in 2007, a 76.7 percent reduction since 2000 (see Figure 1-2). Although root intrusions caused a slight increase in the number of spills in FY 2007 compared to FY 2006, it is assumed that the reduction in sewer spills throughout the years has resulted in reductions to the amount of sewage discharged into the region's waterbodies and that discharge quality has improved. The City feels that their JURMP water quality protection efforts contributed to these gains. To address the slight increase, MWWD televised sewer lines to check for issues such as root intrusions as part of their preventative maintenance program.

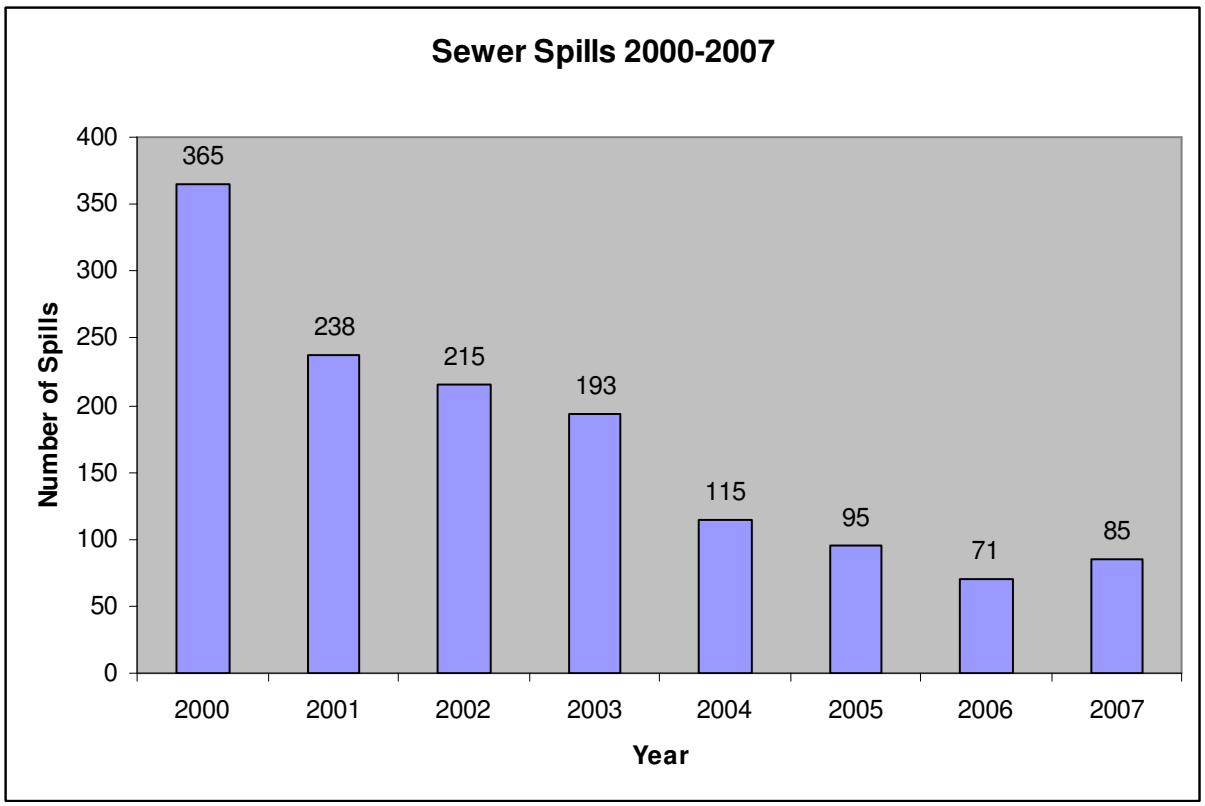

Figure 1-2. City of San Diego Sewer Spills from 2000 - 2007.

1.1.8 Focused Water Quality Efforts – Watershed Programs

The City is a part of six watersheds as defined by San Diego Regional Water Quality Control Board Order Number 2001-01 (Municipal Permit). However, in actuality, watershed scale is relative. For example, all areas within the City are also part of the San Diego Basin, a larger watershed draining Western San Diego County into the Pacific Ocean. It is at this larger watershed scale that watershed implementation of many programs, such as inspection or enforcement programs, are most efficiently implemented Citywide due to economies of scale and City structure.

Although the City's implementation may often occur jurisdictionally, watersheds, and in many cases sub-watersheds, form the appropriate scale for analysis of water quality problems and identification of pollution sources. Independently, and in coordination with other jurisdictions in the region, the City will continue to pursue focused, watershed-based source identification efforts throughout the City's six watersheds, as defined by the Municipal Permit.

1.2 FUTURE DIRECTIONS

Currently, the City is subject to multiple water quality regulatory programs, namely: the Municipal Permit, Total Maximum Daily Loads (TMDLs), Areas of Special Biological Significance (ASBS), and Cleanup and Abatement Orders (CAOs). By setting stringent water quality standards that the City must meet, these regulatory programs, in effect, mandate the implementation of structural (e.g., capital improvement projects) and non-structural (e.g., education and outreach, street sweeping) activities. Given that these regulatory programs essentially require similar, parallel efforts, careful program coordination is necessary to avoid

overlapping efforts, wasted resources, and loss of time. Therefore, the City is taking an integrated, "Strategic Approach" towards meeting the requirements of these regulatory programs simultaneously. The Storm Water Division began planning for a "Strategic Approach" to implementation in FY 2006 and continued this effort in FY 2007. Although initially the focus will be on the City's watershed-based programs and activities (particularly in the Chollas Creek, Tecolote, and Rose watersheds), implementation and assessment of these activities will ultimately help improve the City's jurisdictional activities as data and experience is gained from the watershed-based efforts.

The City will be working with the other Copermittees in refining their reporting and effectiveness assessment standards to facilitate cross-jurisdictional and cross-programmatic comparisons and evaluations. It is anticipated that the refined standards would lead to a more regionally integrated approach to water quality improvement efforts. In addition to continued inter-jurisdictional cooperation, the Storm Water Division will be using the program updates that will be required by the next Municipal Permit as an opportunity to coordinate with its various departments and further increase City employee awareness of storm water pollution prevention principles as they go about their daily business. The commencement of the process to update the JURMPs and WURMPs and develop the RURMP will provide the context for achieving these City objectives.

The City will continue to pursue alternative funding sources for urban runoff management and water quality protection to support the anticipated expansion of the programs over time. Currently, the City is benefiting from a number of grant-funded projects that will reduce pollutants. Meaningful special studies to identify the pollutant sources are also being conducted. The City will continue to partner with other stakeholders to develop water quality projects in order to compete for grant funds and leverage outside sources of funding. Staff will continue to work closely with the other storm water program managers in the region to collaborate on program implementation strategies. It is the City's objective to institute the most effective and efficient strategies in the San Diego region to clean and protect its creeks, beaches and bays for future generations.

To provide focus for program improvements in FY 2008, the Storm Water Division has identified the following objectives:

- Continue strategic, integrated approach to planning program efforts;
- Refinement and/or expansion of the Division's data management and tracking capabilities;
- Improvements in monitoring to aide in program and activity effectiveness assessment;
- Refinement/increase in municipal training;
- Revising and updating of the City's JURMP in response to Order No. 2007-0001;
- Implementation of new requirements in accordance with Order No. 2007-0001.

1.3 RESPONSE TO REGIONAL BOARD COMMENT LETTER (SWU:10-5015.02:CARIAS)

This Annual Report also contains responses to the comments provided by the Regional Board in its September 26, 2007 letter (SWU:10-5015.02:carias) to the City. Text in this Annual Report addressing a specific comment notes the comment number and refers to Appendix A, which includes a copy of the Regional Board comment letter.

2 INTRODUCTION

2.1 PROGRAM OVERVIEW FOR FISCAL YEAR 2007

The mission of the Storm Water Pollution Prevention Division (Storm Water Division) is to:

> "Protect and improve the water quality of rivers, bays, and the ocean for the citizens of San Diego and future generations by eliminating and reducing pollutants in urban runoff and storm water in an efficient, effective, and professional manner as part of a high-performing team through public education, employee training, watershed collaboration, field testing, investigations, enforcement, regional programs, and coordination."

The Storm Water Division in the General Services Department is the lead office for the efforts of the City of San Diego (City) to reduce pollutants in urban runoff and storm water to the maximum extent practicable and achieve compliance with San Diego Regional Water Quality Control Board (Regional Board) Order Number 2001-01 NPDES No. CAS0108758 (Municipal Permit).

In order to improve and protect our region's natural water resources, the Storm Water Division is actively engaged in a number of activities that will cumulatively result in improvements to water quality. The Citywide blueprint for protecting natural water resources is the Jurisdictional Urban Runoff Management Plan (JURMP), adopted by the City Council on January 28, 2002. The primary activities that the City continues to implement include, but are not limited to, public education, employee training, water quality monitoring, source identification, code enforcement, watershed management, and storm water best management practices development and implementation within the City's jurisdictional boundaries. While the City is implementing the JURMP within the City's jurisdictional boundaries, implementation of the Watershed Urban Runoff Management Program (WURMP) and the Total Maximum Daily Load (TMDL) programs are also occurring in conjunction with other stakeholders and jurisdictions to improve water quality not only within the City's jurisdictional boundaries but also in its watersheds.

The Storm Water Division represents the City on storm water and Municipal Permit issues before the Principal Permittee (County of San Diego) and the Regional Board. In addition, the Storm Water Division provides technical expertise and guidance to all City departments to ensure implementation and compliance with the Municipal Permit. Furthermore, the Storm Water Division prepares and transmits this annual report of all City activities governed by the Municipal Permit to the County of San Diego for submittal to the Regional Board and is the responsible entity that certifies that the City is in compliance with all Municipal Permit requirements.

2.2 REPORT ORGANIZATION

This Fiscal Year (FY) 2007 Annual Report has been organized into sections matching the table of contents agreed to and submitted by the Copermittees to the Regional Board. Like the FY 2006 report, the City continued to include several sections not identified in the table of contents submitted by the Copermittees, namely: Enforcement, Monitoring, and Special Projects.

Each section of the FY 2007 Annual Report is consistent with the components of the Municipal Permit and, where applicable, identifies priority pollutant sources, applicable requirements, and notable implementation efforts.

2.3 REPORTING PERIOD

This Annual Report provides information for FY 2007: July 1, 2006, to June 30, 2007.

2.4 RESPONSE TO REGIONAL WATER QUALITY CONTROL BOARD COMMENTS

This Annual Report also contains responses to the comments provided by the Regional Board in its September 26, 2007 letter (SWU:10-5015.02:carias) to the City. Text in this Annual Report addressing a specific comment notes the comment number and refers to Appendix A, which includes a copy of the Regional Board comment letter.

3 MUNICIPAL

The City continued to implement and assess its JURMP for municipal facilities and activities in FY 2007. Storm Water Division staff held periodic JURMP management meetings with key personnel from various City departments to address municipal issues and ensure that program objectives and Municipal Permit requirements were met. This section identifies the actions the City took during the reporting period to meet these objectives and requirements.

3.1 PRIORITY SOURCES

There were no updates to the inventory during FY 2007.

3.2 BEST MANAGEMENT PRACTICE (BMP) REQUIREMENTS

The City implemented BMPs consistent with those set forth throughout Chapter 2, *Storm Water Best Management Practices*, of the City's JURMP, including the implementation of Storm Water Pollution Prevention Plans (also called Water Quality Management Plans). City departmental personnel implemented the City's *Storm Water Management and Discharge Control Ordinance* (§43.03 of the Municipal Code) and additional internal departmental policies were established to reduce pollution in urban runoff.

3.3 BMP IMPLEMENTATION

The City implemented BMPs, including pollution prevention measures, to prevent and reduce pollutants in runoff from municipal areas and activities. BMPs that were implemented during FY 2007 are summarized below according to municipal facility and/or activity.

3.3.1 Municipal Areas/Activities

3.3.1.1 *Roadways*

The City currently maintains over 2,800 miles of roadways and alleys. The Street Division is responsible for inventorying, inspecting, maintaining, and repairing all roadway structures. For a detailed description of the BMPs implemented by the Street Division for roadway operations, refer to the Street Division's FY 2007 *Activity Reporting Form* in Appendix B.

Street Sweeping

The targeted street sweeping schedule for Street Division is based on generalized location and is summarized in Table 3-1. Actual street sweeping frequencies may be more or less frequent in specific areas of the City, depending on the identification and sweeping of new or known problem areas, and unique events (e.g., fires). Refer to Appendix B for the record of the actual street sweeping schedule that occurred in FY 2007.

Table 3-1. General Street Sweeping Schedule.

Location	Frequency
Downtown	5 times per week
Residential	Once every other month*
Commercial/Office/Industrial	Once per week

* Many routes located in the Chollas watershed were swept once a month

Areas surrounding Chollas Creek in the Chollas Creek watershed are considered priority areas. The area has a total of 694 curb miles. In FY 2007 sixty-six (66) curb miles were swept once a month on residential routes, and sixty-eight (68) curb miles were swept on commercial routes four times a month to prevent pollutants from entering watercourses. In addition, where possible, sub-watershed areas with water bodies identified on the Clean Water Act Section 303(d) List of Water Quality Limited Segments as impaired for sediment received additional sweeping as part of commercial and residential sweeping routes as noted in Appendix B. In total, the Street Division conducted street sweeping of approximately **77,311 curb miles and collected 5,850 tons of debris** in FY 2007.

Roadway Field Operations

The Street Division continued to implement site-specific BMP plans during roadway field operations including painting and asphalt or concrete repair activities. During FY 2007 the Street Division repaired 53,496 potholes City-wide. These repairs help to reduce the amount of broken asphalt and loose dirt that could potentially enter the City's storm drain system. Material collected from Street Division's roadway field operations (i.e., dredged material, litter, debris, and sediment from streets or storm drains) was collected and properly transported to a designated materials decanting site. BMPs were used during transport to ensure that material did not escape from the vehicles. Materials were dried prior to disposal following site-specific BMPs. For example, excess water from the material was captured, collected, and properly disposed of, and perimeter BMPs were properly maintained to ensure effectiveness.

Street Sweeper Maintenance

Sweeper operators are each responsible for the daily maintenance of their assigned sweeper, which includes washing, changing gutter brooms, lubricating all necessary fittings, checking and cleaning all filters, and checking for fluid leaks.

Daily washing of the sweepers and the vactors occurred at municipal yards in designated wash areas. These wash areas collect all runoff into a sump. The water is then vacuumed by a vactor truck weekly and deposited into the wastewater collection system. Any solid material is removed from the sump and dried at the materials decanting location discussed above and then deposited at the appropriate landfill. Each vactor or sweeper operator is required to properly complete a vehicle operator's daily inspection report that is kept on file for two years.

3.3.1.2 *Municipal Separate Storm Sewer System (MS4)*

The City has over 75,000 storm drain structures and 889 miles of drainage pipe. The Street Division is responsible for the inspection, maintenance, and repair of the MS4 in the public right-of-way and in drainage easements. The Street Division regularly inspected the City's MS4 and surrounding areas and removed and properly disposed of sediment, debris, and trash from the storm conveyance channels, storm drains, and

catch basins through hand cleaning, mechanical removal, and street sweeping. The Street Division also identified problem areas and conducted additional cleaning, where necessary, and recorded information about cleaning frequencies and material removed. In addition, the Street Division operated a daily, round-the-clock telephone hotline (619-527-7500) and online service request program (http://apps.sandiego.gov/streetdiv/) to address citizens' request for services.

In FY 2007, the Street Division continued efforts to update the map of the City's drainage infrastructure. Specifically, efforts focused on the hiring of an environmental consultant to continue mapping, surveying, and preparing of a Programmatic Environmental Impact Report and Resource Agency Permits to conduct City-wide storm drain conveyance system cleaning and maintenance. The Street Division also added two staff to increase the speed at which drainage systems are electronically entered into GIS.

In FY 2007, the Street Division continued efforts to develop a plan for the televising and evaluation of the City's corrugated metal pipes for their eventual full replacement. Replacement of the pipes will help minimize significant risk to life and property and result in water quality improvements through a decrease in slope failures, erosion, and downstream sedimentation.

MS4 Debris Removal

The storm drain system was inspected and cleaned as described below.

- Drainage structures that empty into or are adjacent to a body of water were identified, inspected, and cleaned before the wet season began.
- Drains designated as problem areas based on field observations were identified, inspected, and cleaned twice a year.

Material collected from cleaning operations was properly transported to the appropriate disposal site. Absorbent material was used during transport to prevent liquids from leaking. Material that was removed by machine cleaning (the vacuumed substance removed from the storm drain system by vactor trucks) was disposed of at the materials decanting site with proper BMPs (discussed in Section 3.3.1.1 above).

During FY 2007, the Street Division inspected **11,395 storm drain structures** (15.2% of the 75,000 structures in the City), cleaned **7,219 storm drain structures** (9.6%), **8,950 feet (1.70 miles) of drainage pipe,** and **3.11 miles of drainage channels.** A total of **9,816 tons of debris** was removed directly from the storm water conveyance system, including open channels. In combination with the Street Division's street sweeping activities discussed in Section 3.3.1.1 above, **the Street Division removed 15,665 tons of debris from the City's storm drain system in FY 2007.**

The City increased the inspection and cleaning of the storm drain structures and drainage channel from FY 2006. *In response to Comment 1 of the RWQCB City of San Diego FY 2006 Annual Report Comment letter (Appendix A), the City received additional funding for FY 2008 that will help to increase the City's inspection and cleaning (if necessary) efforts. It is important to note that the maximum extent practicable for inspection and cleaning of storm drain structures, drainage channels, and drainage pipe will vary in reporting periods based on variable factors including the amount of rainfall received and natural events, such as the recent wildfires. These factors significantly*

impact efforts by redirecting resources. Furthermore, the total weight of debris removed from channels has been reduced dramatically over the past few years due to environmental requirements restricting channel cleaning operations. The City will continue to study alternative funding sources, including an increase in the current storm drain fee, to enhance its storm drain structure inspection and cleaning efforts in future fiscal years. Based on the Mayor's current 5-year financial outlook, expenditures on storm water–related activities are anticipated to rise significantly.

Cleanup Activities

Other measures and operations were conducted to help reduce pollutants from the City's MS4.

In FY 2007, the Environmental Services Department collected trash and debris during cleanup activities and events throughout the year that had the potential to be transported to the City's MS4 or directly to drainages and water bodies. Table 3-2 summarizes these activities.

Table 3-2. Environmental Services Cleanup Data.

Event/Activity	Trash/Debris Collected (tons)
Public calls for cleanup (13,621 calls) of illegal dumping, litter, transient encampments, etc.	2,272
Debris clearing at Ridgehaven building	1
Public calls regarding dead animals (2,968 calls)	54
Community Cleanup Events (80)	974
Total Trash/Debris*:	**3,301**
*Note: Total excludes City-sponsored cleanup events identified in the City's six Watershed Urban Runoff Management Plan Fiscal Year 2007 Annual Reports, and municipal trash collection services, which collected and properly disposed of 359,965 tons of trash and a total of 70,503 tons of curbside recyclables and 31,513 curbside greenery in FY 2007.	

In addition, the Environmental Services Department collected **5,427 tons of household hazardous wastes (HHW) in FY 2007** as shown in Table 3-3 below.

Table 3-3. Environmental Services HHW Collection Data.

Event/Activity	HHW Collected (tons)
Load Check Program	13
Auto Product Recycling Events	40
HHW Transfer Facility	429
Door-to-Door Collection	5
Certified Oil Collection Centers (waste oil and oil filters)	4,940
Total HHW:	**5,427**

By law, HHW cannot be collected through regular refuse collection. When HHW is found, drivers tag the waste. The tag explains the proper disposal method for the HHW and the

City's hotline (1-800-694-7000) where more information can be obtained on proper HHW disposal methods.

Although HHW collection is a service provided by the Environmental Services Department for reasons beyond those of storm water pollution prevention, it is reasonable to conclude that additional hazardous waste is not being dumped into the storm drain system and is instead being properly collected due to the Environmental Services Department's educational and collection efforts. Refer to the department's FY 2007 *Activity Reporting Form* in Appendix B for more details.

Low Flow Diversion System

The City's Low Flow Diversion System is designed to capture urban runoff or sewage overflows from the City's MS4 during dry conditions and divert them to the City's wastewater collection system for treatment at the Point Loma Water Treatment Plant. In FY 2007, the City operated and maintained 53 Low Flow Diversion Facilities (47 in Mission Bay and 6 in the coastal areas). The facilities have proven to be extremely effective in capturing and diverting urban runoff and sewage overflows before they reach our coastal waters.

Stencils

Stencils with the storm water message and picture as shown here were created in FY 2003 to be used at storm drain inlets at municipal facilities. Stenciling is an effective way to educate the public and discourage illegal dumping into the storm drain.

Figure 3-1. Storm Drain Inlet Stencil.

In FY 2007 The Storm Water Division continued to work with other City departments to identify existing and new storm drain inlets on municipal properties to be stenciled.

In addition, the City distributed copies of the Mylar stencil and specifications for creating the stencil to the non-profit organization *I Love A Clean San Diego* (ILACSD). ILACSD used the stencil for all volunteer stenciling activities the organization conducts in the City. During FY 2007, 468 volunteers worked 646 hours to stencil 754 storm drains in the City of San Diego.

To ensure that new storm drains are marked during construction of both private and public development projects, the Storm Water Division coordinated with the Development Services Department and Field Engineering Division to write standard development permit language requiring contractors to concrete stamp or use a decal-type disc to mark all new storm drains. This requirement was in effect for all of FY 2007.

For public and private contractors, the Storm Water Division posted the specifications for creating a stencil on the City's *Think Blue* website (http://www.ThinkBlueSD.org).

3.3.1.3 *Wastewater Collection System (including Wastewater Treatment Plants and Pump Stations)*

The Metropolitan Wastewater Department (MWWD) is responsible for the collection and conveyance of wastewater from residences and businesses in the City of San Diego, serving a 330 square mile area with a population of 1.3 million people. MWWD currently

maintains over 3,000 miles of City sewer main line with over 250,000 city connections. MWWD also maintains a GIS inventory of wastewater structures. During FY 2007, the department conducted field inspections and televised sewer lines to monitor the condition of sewer lines, which can reveal blockages from debris to roots to grease and show pipeline cracks, breaks, or deterioration. Through proactive maintenance, spills or leaks to the storm drain system were minimized.

With the passage of four annual sewer rate increases by the Mayor and City Council in October 2001, MWWD embarked on an aggressive Sewer Spill Reduction Program. The results of this program are readily apparent in a sharp decrease in the number of sewer spills in the City. **The number of sewer spills in the City dropped from 193 in FY 2003 to 115 in FY 2004 to 95 in FY 2005 to 71 in FY 2006. In FY 2007 the City had 85 sewer spills, an increase from 71 during FY 2006. The cause of the increase in sewer spills was due to root intrusion.** To address this, MWWD televised sewer lines to check for issues such as root intrusions as part of their preventative maintenance program.

The notable accomplishments MWWD completed in FY 2007 to help reduce the number of sewer spills and protect water quality include:

- Replacement of 0.69 miles of sewer line
- Rehabilitation of 26 miles of sewer line
- Televising of 103 miles of sewer line
- Cleaning of 2,034 miles of sewer line
- Food Establishment Wastewater Discharge (FEWD) performed:
    - 4,809 facility inspections
    - 1,254 permit inspections
    - 4,421 Grease Removal Equipment inspections
    - Issued 1,360 permits
- Continuation of BMP implementation at 11 treatment facilities and pump stations as part of Storm Water Pollution Prevention Plans (SWPPPs) prepared in accordance with the State General Industrial NPDES Permit
- Quarterly inspections by Safety & Training personnel of 11 MWWD facilities with Industrial Permit SWPPPs
- Implementation of emergency BMPs at all sewer spills to quickly contain spills and minimize discharges.
- Development and implementation of standard operating procedures called IMAPs (interim maintenance access plans) for field crews working in the right of way
- Strategic installation of canyon access paths to minimize impacts to wetlands and water quality

MWWD also continued to implement the Grease Disposal Program to prevent sewer line blockages and resulting spills caused by the disposal of grease into the sewer system. The program aims to educate residents and businesses on the proper disposal alternatives for fats, oils, and grease and provide residents a place to dispose oil and grease at the Miramar Landfill. This program is described in greater detail in Section 6.3.3.

While monitoring storm drain runoff at dry weather monitoring stations, in FY 2007, the City's Storm Water Division also continued to investigate other possible sources of pollutants, including leaking or broken sewer lines. Monitoring staff tested water samples and documented odors of suspect flows. In FY 2007, there were no referrals to MWWD regarding potential spills.

Staff Training. MWWD continued to offer internal general storm water training classes to those employees unfamiliar with the Department's commitment to storm water pollution prevention. In FY 2007, MWWD conducted 13 general training classes (1,134 attendees) which covered storm water principles.

3.3.1.4 *Water System*

The Water Department owns and operates the potable water supply and distribution system for the residents of the City. The City's water system includes 3,000 miles of pipeline, 49 pump stations, three treatment plants, 32 potable water reservoirs, nine raw water reservoirs, and eight groundwater basins. Some of the City's water resources (raw water reservoirs and groundwater basins) are located outside the City limits. The system serves 1.3 million City customers and provides water and water storage to other municipalities and water districts in San Diego County.

In FY 2005, the Water Department received ISO 14001 Certification after its Water Operations Division successfully implemented the ISO 14001 Environmental Management System (ISO 14001 EMS) program. Under this program, the Water Department establishes annual objectives and targets for improvements in environmental performance, and Department employees perform their daily activities with an increased awareness and commitment to water quality protection and pollution prevention. In FY 2007, the Water Department continued to implement ISO 14001 Certification requirements, which included implementation of BMPs during cleaning and construction, responsible material delivery and storage, habitat/water quality protection, hazardous waste management, etc.

The Water Operations Division also maintains a Watershed/Storm Water Program that strives to meet the objectives set forth in the City's JURMP. In FY 2007, the Watershed/Storm Water Program continued to enforce existing municipal BMPs, perform storm water site inspections at Department facilities, conduct staff storm water training with the help of Water Department training personnel, and perform external education and outreach. Details on the Water Department's accomplishments are provided below.

Storm Water Pollution Prevention Plans (SWPPPs). The Water Department continued to implement previously produced SWPPPs for each of its water treatment plants (Alvarado, Miramar, and Otay) and its maintenance and equipment facilities at the Chollas and San Vicente municipal yards. Construction projects are underway at all three water treatment facilities to meet the future water demands of the City. Each facility is undergoing an expansion to provide increased treatment capacity, and the SWPPP for each facility is updated to reflect these changes as necessary. In FY 2007, the Water Department continued to use as-needed consultants to monitor and inspect the construction activities at these water treatment facilities and other large construction sites to ensure the implementation of the operational and construction SWPPPs.

Currently, the Water Department maintains 32 potable water distribution reservoirs and 49 pump stations as part of the overall water distribution system. Providing a SWPPP for each of these facilities is considered unnecessary since most pump stations occupy a small area with little if any outdoor activities and, therefore, contribute little runoff. The distribution reservoirs occupy a much larger area but are surrounded by landscaped buffer zones that serve to collect most of the runoff produced on site. A pollution prevention matrix has been developed as an alternative SWPPP. It lists each facility and the main storm water issues related to the facility.

Facility Inspections. In FY 2007, the Water Department frequently inspected all its high priority facilities, namely the water treatment plants and the municipal yards. Monthly site inspections, which included a visual walk-through inspection, were performed by facility maintenance employees. Staff prepared and sent out advisory e-mails to all project and construction managers at the start of the rainy season and in advance of predicted storm events, which reminded them of the need to monitor and maintain storm water BMPs before, during, and after anticipated storm events. A thorough inspection and assessment of each high priority site was performed in September 2006 as part of the annual pre-wet season inspections. If necessary, structural BMPs were immediately repaired or replaced or scheduled for replacement if applicable. All comments and suggestions noted on the monthly inspection forms were reviewed, and corrective actions were taken for each site. The SWPPP for each high priority site was maintained by the Water Department's Operations Division and updated as necessary.

The Water Department's distribution reservoirs and pump stations have been classified as low priority by the Watersheds/Storm Water Program. Every pump station and reservoir was inspected at least once per quarter, those facilities that are known to accumulate significant amounts of leaves, pine needles, and other debris were inspected more frequently. Deficiencies that were noted during these inspections were assessed during the pre-wet season inspection of these facilities. Deficiencies that were reported on the inspection forms were corrected before the beginning of the wet season if possible.

Staff Training. In FY 2007, the Water Department continued to integrate storm water pollution prevention courses into its training program. These courses included instruction on proper BMP selection and installation, spill containment, good housekeeping practices during cleaning and construction, responsible material delivery and storage, solid waste recycling management, and overall water quality protection. Table 3-4 summarizes the staff training conducted by the Department.

Table 3-4. FY 2007 Water Department Storm Water Staff Training.

Course Name	Course Length	Number of Courses	Number of Attendees
WU14SW01: Storm Water Pollution Prevention (General)	1 hour	13	122
WU14SW10: Storm Water Pollution Prevention Dams and Reservoirs (Lakes)	1 hour	2	5
WU14ZW13: Storm Water Pollution Prevention (Field Operations)	2 hours	2	22
WU1SW07: Storm Water BMPs (Policy Refresher)	1 hour	6	356
Tailgate Training (general storm water topics; BMP implementation; good housekeeping)	Varied	unknown	unknown

In FY 2007, the Water Department continued to produce and display posters throughout various work areas to celebrate employee commitment to working in an environmentally-sensitive manner. Photos featured employees integrating environmental awareness into their jobs, such as carefully handling hazardous waste materials, cleaning up at the jobsite, and recycling paper. They also served as reminders to Department employees of their role in protecting the environment including water quality and valuing customer service in complying with ISO 14001 EMS standards.

3.3.1.5 *Airports*

The City operates two general aviation airports: Brown Field and Montgomery Field. Operations at these facilities are conducted in compliance with General Industrial Permit requirements and according to the storm water program described in the facilities' SWPPPs, and Section 2.1.1, *Airports*, of the City's Urban Runoff Management Plan. BMPs implemented at these facilities, including inspection and monitoring information, are described within each facility's SWPPP.

Numerous industrial tenants and activities comprise airport operations. Therefore, in FY 2007, the City continued to rely on storm water representatives at each airport to work with tenant managers and owners to ensure storm water requirements are implemented at all times. Representatives also worked with vendors and the Environmental Services Department to ensure that hazardous materials, such as fuel/oil, batteries, and cleaning solvents, were stored and used appropriately and that hazardous wastes were disposed of properly.

Facility Inspections. In FY 2007, the aviation facilities, including tenant space, were inspected per the procedures outlined in their facility SWPPPs. The following inspections were conducted at Brown Field: two industrial activity area observations and four BMP evaluations and observations. No deficiencies were noted during all Brown Field inspections. The following inspections were conducted at Montgomery Field: three industrial activity area observations; and eight BMP evaluations and observations. No deficiencies were noted during all Montgomery Field inspections.

For a description of the BMPs implemented by the City and its tenants at its aviation facilities, refer to the Brown Field's and Montgomery Field's FY 2007 *Activity Reporting Forms* in Appendix B.

Staff Training. In FY 2007, one of the four members (25%) of the Brown Field staff received storm water training, and two of the 10 members (20%) of the Montgomery Field staff received training. It was not necessary to train the other staff as their duties do not impact storm water quality.

3.3.1.6 *Solid Waste Facilities*

The City of San Diego currently operates and maintains one active and six inactive landfills. During the reporting period, activities in compliance with General Industrial Permit requirements were performed at all active and inactive landfills, and the BMPs established in each facility SWPPP were implemented. A summary of the BMPs implemented at City-operated landfills is provided below:

Active Landfill (West Miramar Landfill)

The Environmental Services Department (ESD) maintains the siltation basins at the landfill to ensure effectiveness. Material from the basins was collected when necessary and disposed of according to current regulations. Erosion and sediment control measures, including mulch, tackifier, and straw wattles were put in place, where necessary. Concrete and asphalt areas, including parking areas, were swept monthly and hand sweeping was done as needed. Monthly inspections were performed at the site to ensure the working condition of BMPs and drainage structures. Hazardous wastes were properly stored according to current regulations and inspected on a weekly basis.

Inactive Landfills

In FY 2007, erosion and sediment control measures (such as mulch) were put in place, where necessary. Quarterly inspections were performed at the sites to ensure working condition of BMPs and drainage structures.

For detailed information about the BMPs implemented at City landfills, refer to ESD's FY 2007 *Activity Reporting Form* in Appendix B.

3.3.1.7 *Solid Waste Services*

Program achievements during FY 2007 include: numerous workshops and presentations on various topics, including recycling, energy, and composting; holding community recycling events; informing residents about recycling and various programs through public service announcements and newsletters; implementing recycling programs for City staff; and conducting awards ceremonies to recognize businesses for implementing environmentally-sound practices.

BMPs continued to be implemented during trash collection activities in FY 2007. For example, each trash truck carried sand, and additional sand was stored in containers at the Miramar Operations Yard to be used in the event of hydraulic/fluid spills. Vehicle operators were trained to cover an oil spill with sand and to protect nearby storm drains.

3.3.1.8 *Household Hazardous Waste Transfer Facilities*

ESD implements the Household Hazardous Waste (HHW) Program for the City and is responsible for the investigation, maintenance, collection, and remediation of hazardous substances, including HHW, from municipal facilities, other City departments, residents, and vacant land. ESD operates one permanent HHW Transfer Facility at Miramar Landfill, as well as several temporary collection facilities throughout the City. A summary of the BMPs implemented in FY 2007 at these facilities is provided below.

Parking Lots/Landscaped Areas

Erosion and sediment control measures, such as mulch, woodchips, and silt fences, were implemented and maintained at the transfer facilities, where necessary. Asphalted areas were swept monthly using mechanical street sweepers and hand sweeping was performed, as needed. Absorbent materials were used to clean up any fluids leaking from vehicles, which were sent to the Equipment Division for repairs.

Trash Bins/Roll-offs

Measures were taken to prevent pollution from trash bins and roll-off containers. Lids or covers were provided for trash bins and kept closed. Empty containers were bagged prior to being placed inside roll-off containers. Cardboard bins were covered or stored under cover.

HHW Operations Area

Sorting and packaging of hazardous waste were performed only in designated areas. BMPs were implemented when loading and unloading hazardous wastes from vehicles and in designated areas to prevent pollution from potential spills. All hazardous wastes were stored inside in storage lockers equipped with fire suppression and secondary containment, or outside on secondary containment pallets and covered. The storm drain at the site was protected with a gate valve and kept closed during hours of operation. Storage areas were inspected weekly for leaks.

Temporary Facilities

To prevent potential spills, sorting and packaging of hazardous waste was performed only in designated areas. BMPs were implemented when loading and unloading hazardous wastes from vehicles and in designated areas. Leaking material was immediately packaged into containers. Wastes were packaged in drums or pumped into a truck for transportation. Steps were taken to ensure that nearby storm drains and other areas were protected with BMPs. All wastes were removed from the site at the end of the day. Waste materials were stored on pallets. If inclement weather was predicted, BMPs were implemented to prevent waste materials from coming into contact with precipitation. Good housekeeping measures were implemented at all sites. Hand sweeping and litter pickup were performed at the end of collection events, as needed. Operations such as hand washing stations were conducted on pervious areas.

For more detailed information on BMPs conducted at HHW facilities, refer to ESD's FY 2007 *Activity Reporting Form* provided in Appendix B.

3.3.1.9 *Qualcomm Stadium*

The City owns and operates Qualcomm Stadium, a multi-purpose facility built to accommodate a wide variety of activities, including field events, such as baseball, football, concerts, and soccer matches, and parking lot activities, such as new and used car sales, auto racing, community service events, and RV shows. Qualcomm Stadium's water quality protection activities are described in a SWPPP for the 166-acre site. A summary of the BMPs implemented at Qualcomm Stadium in FY 2007 is provided below.

- The areas immediately surrounding all storm drains located inside the Stadium were re-stenciled in white with blue lettering to convey the message: *Think Blue – No Dumping – Goes To Ocean / No Tire Nada – Llega al Mar.*
- The dirt pile stored on site (6,000 cubic yards of soil) used for dirt show events was sprayed with an anti-erosion hydro-mulch stabilizer to prevent soil from getting into the storm drains. In addition, sandbags (three stacks high) were placed around the entire dirt pile along with K-Rail in the more susceptible areas to prevent soil erosion.

- Sandbags were set around storm drains along the field perimeter and around those located at the West Tunnel loading dock. All storm drains located in the Stadium's parking lots where major annual events take place (e.g. auto/RV shows) were covered and sealed to prevent any liquids or solids from entering during the events. Stadium representatives monitored the storm drains to ensure they were protected.
- During stadium wash-downs that followed events, street sweepers were used to capture any water that might have migrated across the parking lots before it reached the storm drains. All trash was cleaned as quickly as possible to reduce the possibility of trash being blown or washed into the storm drain system. In addition, Stadium staff and the San Diego Urban Corps implemented an aggressive and comprehensive cleaning program to capture recyclable trash immediately following events to successfully minimize recyclables making their way to the landfill and storm drains. The stadium received the City of San Diego "Director's Recycling Award" for 2007 from the Environmental Services Department for these efforts.
- Stadium staff and a Storm Water Division representative met with parking lot vendors and clients on site and discussed storm drain issues and proper storm drain management and protection methods. All parking lot contracts, agreements, and permits issued to clients and vendors included enforceable language on proper storm drain protection, including the use of sandbags and grate covers.
- During the Street Scene production meetings leading up to the event held in early August 2006, Stadium staff reviewed storm drain protection policies with the promoter. Included in the contract for use of the parking lots was language on covering all affected storm drains to prevent anything from entering the storm water conveyance system throughout the setup, two-day show, and teardown. Prior to and during the event, Stadium staff monitored the storm drains to ensure that they were protected throughout the event, as well as during the setup and teardown.

For more detailed information about BMPs implemented at Qualcomm Stadium, refer to the Stadium's FY 2007 *Annual Reporting Form* provided in Appendix B.

Facility Inspections. In FY 2007, almost daily inspections were performed throughout the Stadium property to detect and prevent any existing and potential problems associated with water and debris reaching the storm water conveyance system. Sandbags around storm drains were inspected, trash was cleaned away from storm drains and grates, and all storm drains that were to be impacted by events were inspected for proper coverings. Refer to the completed *Municipal Inspection Form* for Qualcomm Stadium in Appendix B.

Staff Training. In FY 2007, all Stadium staff received regular training on storm drain issues by way of tailgate meetings. Items covered during the meetings included the importance of keeping storm drains clean and clear by not allowing anything to enter them. Each staff member was trained on the proper response for illicit discharges. In total, 10 storm water staff training events were held. Thirty-two employees (68%) received training on activity-specific storm water principles.

3.3.1.10 *Municipal Yards and Operation Stations*

City departments perform a variety of activities at the three municipal yards (Chollas Operations Yard, Rose Canyon Operations Yard, and the Central Operations Station [also called "20th & B"]) and other operation areas. During FY 2007, City departments operating at the three municipal yards implemented SWPPPs. A summary of BMPs implemented at the municipal yards is provided below.

Sweeping

Parking lots and operation areas were swept at three municipal yards either by hand or by street sweeping vehicles. Some areas, such as the sand storage area, were swept based on a schedule, while other lower priority areas were swept as needed. For example, the Facilities Maintenance Division's areas at the 20th & B Operations Station were swept quarterly. Two street sweepers purchased by the Environmental Services Department and the Water Department in FY 2003 were used to facilitate routine maintenance and cleanup at municipal facilities. An additional small street sweeper was purchased by the Equipment Division and used at the Rose Canyon Operations Yard.

Trash

Municipal yards were inspected at least once annually for litter and debris (among other issues) and cleaned as needed. High use areas with the greatest potential to collect trash/debris were generally inspected and swept more frequently as part of employees' standard procedures. Municipal grounds, including parking areas, were kept free of trash and other items that could possibly enter the MS4. "Annual Yard Cleanup Days" were conducted at three yards to clean municipal grounds of litter and debris and involve City staff in performing good housekeeping measures.

Trash receptacles were provided throughout municipal yards and emptied as needed. Trash bins were provided with lids and kept closed. Where necessary, overhead cover for open recycling bins was provided to prevent contact with storm water. Trash receptacles were washed in designated areas to prevent wash water from entering the MS4.

Materials Storage

Materials at municipal yards were properly stored to prevent pollutants from entering the MS4. Where possible, materials, such as used batteries, were stored inside. BMPs such as tarps, secondary containment, or berms were used when materials were stored outside. Materials were stored away from storm drain inlets and in many cases were placed on pallets off the ground. Hazardous materials/waste was always stored inside or within secondary containment areas.

During FY 2007 after a review of the materials stored in the Chollas Operations Yard the Street Division discontinued the use of a thermoplastic bonding product whose hazmat components created a potential for storm water contamination. Street Division arranged with the City's hazmat disposal contactor to remove this product from the Chollas Yard and will no longer use it in field applications.

Vehicle Maintenance/Operations

The Equipment Division of the General Services Department maintains approximately 2,400 vehicles. The division dedicated one crew member to maintain all wash/steam racks and automated truck washes at each applicable municipal yard. These crew members were trained in activity-specific storm water issues and conducted bi-weekly inspections.

Figure 3-2. Grass Swale at Municipal Yard.

Drip pans were used for vehicles to capture any automotive fluids from potential leaks. Vehicle repairs were performed indoors, when possible, with the exception of minor repairs that did not involve fluids. Absorbent materials were used to clean up any fluids leaking from a vehicle.

Structural BMPs installed in FY 2003 at the 20th and B Operations Station vehicle wash area continued to be used to reduce and prevent excess water from discharging to the MS4. In addition, berms constructed in FY 2003 to contain runoff in other areas where vehicles are washed also continued to prevent excess water from discharging to the MS4.

Equipment Division personnel continued to implement good housekeeping practices, such as regular sweeping instead of hosing down of the municipal yard.

At the Chollas Operations Yard, a major remodel of the fuel island was completed in FY 2005. It included grade and elevation changes to control runoff, installation of a storm water sump with filtering system, and installation of a canopy. In FY 2007, the storm drain filter/separator serving the fuel island was cleaned on a monthly basis.

Spill Prevention and Cleanup

BMPs, such as good housekeeping and materials for spill capture and cleanup, were used to prevent pollutants from entering the MS4. Absorbent materials were used in many areas, such as around storage bins and as mats in garage areas, to catch leaks. These materials, in addition to spill kits, were made available in the event of an accidental spill. Procedures were also put in place for the prompt containment and cleanup of spills. Catch basins and drip pans were commonly used to capture leaks. Materials such as fiber rolls were used around selected storage bins and drain inlets.

Erosion and Sediment Control

Erosion and sediment control measures, such as silt fences, were implemented at municipal facilities as needed to prevent sediment from being transported to the MS4. At the Chollas Operations Yard, the Street Division replaced standard gravel bags with new longer-lasting Kevlar bags at the Roadways materials storage area, created a berm and weir to control runoff from the storage area, and installed a silt fence and Kevlar bags to

reduce sediment runoff. These BMPs were maintained on a quarterly basis or as needed during the rainy season.

Other BMPs

- Wood pallets were used to place all Electrical Section stored material off the ground.
- Sumps contained runoff from washrack areas. These sumps were maintained and cleaned out as needed.
- Measures such as gravel bags, straw wattles, and grass swales were used to protect storm drain inlets.
- Activities were performed inside, where possible.
- Operations conducted outside were contained, when possible, and areas were cleaned up when activities were completed.
- All debris, such as paint, concrete, plaster, etc. occurring as a result of operations was disposed of properly.
- Soilfloc™ was dispensed in the main silt basin at the West Miramar Landfill to enhance the settling of silt and clay (small particles) before discharging to San Clemente Creek.
- Silt-laden runoff was pumped from the main silt basin at the West Miramar Landfill between storm events and redispersed into the top deck mulch area.
- Silt was removed from the main silt basin at the West Miramar Landfill.
- Silt fencing was maintained at the active West Miramar Landfill.
- Mulch was applied to slopes at the West Miramar Landfill as needed.
- Tackifier was applied to selected landfill slopes as needed.
- Straw wattles were added to landfill slopes where necessary.

Inspection

Municipal areas were inspected at various frequencies (bi-weekly, monthly, quarterly) to ensure that BMPs were in good working order and that grounds were free of debris and spills and leaks from equipment or materials. At a minimum, all municipal yards and operations stations were inspected once in FY 2007.

For detailed BMPs implemented at municipal yards and operations stations, refer to the Equipment Division's, Street Division's, Environmental Services Department's, Water Department's, and the Facilities Maintenance Division's FY 2007 *Annual Reporting Forms* provided in Appendix B.

3.3.1.11 *Environmental Services Department Facilities*

The Environmental Services Department continued to implement the following BMPs at the Ridgehaven Court "Green Building" in FY 2007:

- Excess and fallen debris/vegetation was collected from the surrounding canyons to prevent from entering the storm drain system.
- Walkways were swept daily to remove trash and debris.

3.3.1.12 *Parks and Recreational Facilities*

The City's Park and Recreation Department is responsible for overseeing and maintaining 39,441 acres of developed and undeveloped park land and open space; 337 parks including Balboa Park, Mission Trails Regional Park, and Mission Bay Park; 25

miles of shoreline from Sunset Cliffs to La Jolla; 13 pools that are open year round; three public golf complexes; 51 recreation centers; and 25 tennis sites.

In FY 2007, the Park and Recreation Department continued to implement its *Master Set of Best Management Practices Manual*, which was developed as a storm water pollution prevention reference guide for employees. The Manual includes 31 specific BMPs that are divided into four categories: organic, maintenance, chemical, and administrative. The Manual was developed to provide employees with a standard and consistent approach for performing job activities and reducing and eliminating impacts to water quality.

Staff Training. In FY 2007, 220 Park and Recreation Department employees received training in activity-specific storm water principles, 69 received general storm water principle training and 232 supervisors received training on collection of data for storm water annual reports. In total, twenty eight storm-water–related training sessions were conducted.

Cleanup Activities. In FY 2007, the Park and Recreation Department collected, through staff and contract programs, over 48,100 tons of trash. Cleanups were conducted during and after major holidays (e.g., Independence Day).

Facility Inspections. In FY 2007, the Park and Recreation Department performed inspections of its facilities, including those that it shared with other entities (such as schools). Refer to the completed *Municipal Inspection Forms* for Park and Recreation Department facilities in Appendix B.

For more information on the BMPs implemented at City parks and recreational facilities, refer to the Park and Recreation Department's FY 2007 *Annual Reporting Form* in Appendix B.

3.3.1.13 *Police Facilities*

The City's Police Department maintains 14 facilities. These facilities consist of a police headquarters, police stations and garages, a horse stable, a pistol range, and a canine facility. A summary of the practices implemented by the Police Department in FY 2007 at their facilities and when performing activities is provided below:

- Operational BMPs were implemented for the Police Mounted Unit to provide for the clean up of their horse manure on City streets and other public places.
- At the Police Headquarters building, the landscape irrigation was reduced to avoid excess runoff. Tailgate meetings were held twice a week to update staff on the BMPs being implemented for the Headquarters building.
- Informational meetings were held with staff sergeants and other personnel to assure that BMPs were understood and being implemented.
- The Police Department conducted scheduled cleanings of parking lots, inspections of rooftop drains and gutters, twice-weekly trash pickups, and cleaning of storm drain inlets.
- The Police Department spent $9,430 in FY 2007 to clean and remove trash from the Chollas Creek drainage culvert. They removed approximately 8.5 tons of material from the culvert.
- Lids were provided for all dumpsters and were kept closed at all times.
- Leaking dumpsters were replaced, as needed.

- Irrigation systems were maintained and adjusted, as needed, to prevent excess runoff.
- Facilities, including storage areas, storm drain inlets, and roof drains, were inspected regularly to prevent contamination of waterways.
- Trash and litter abatement procedures were implemented at all facilities, including parking lots.
- The Police Department implemented BMPs for the Air Support Unit located at Montgomery Field. Personnel assigned to that unit received training on these BMPs.
- Spill kits were provided for prompt cleanup of leaking vehicles or accidental spills.
- Hazardous materials were properly contained according to current regulations.
- BMPs were used to protect storm drain inlets near fueling stations and at the horse facility.
- Roll-off bins were properly covered, when necessary, to prevent storm water contact.
- Modified drainage at the pistol range and stables prevented contaminated runoff from entering the MS4.
- Procedures for washing vehicles and horse trailers were implemented. Horses and dogs were only washed in designated areas. Horse manure and dog feces were collected and properly disposed of.

For more information on BMPs implemented at Police facilities, refer to the Police Department's FY 2007 *Annual Reporting Form* provided in Appendix B.

3.3.1.14 *Fire Department Facilities*

The City's Fire-Rescue Department maintains 47 facilities and has developed and implemented a SWPPP for operations at each. A summary of the BMPs implemented by the Fire-Rescue Department in FY 2007 is provided below:

In newer fire stations, all equipment was washed in designated areas. Spill kits and drip pans were provided and used at all applicable facilities. Parking lots and other outdoor areas were routinely cleaned using dry sweeping methods. Apparatus floors and parking areas were routinely dry swept and crews trained to dispose of water into landscaped areas. The irrigation system was adjusted to reduce excess runoff. BMP information was posted at all fire station bulletin boards.

For more information on BMPs implemented at Fire-Rescue Department facilities, refer to the Fire-Rescue Department's FY 2007 *Annual Reporting Form* and completed *Municipal Inspection Forms* provided in Appendix B.

3.3.1.15 *City-Owned Leased Property*

The Real Estate Assets Department (READ) is responsible for overseeing City-owned leased property, including commercial, industrial, and residential land uses. In addition to training staff in general storm water requirements, READ implemented additional BMPs in FY 2007. The following is a summary of these BMPs:

- 60 city-owned leased and non-leased properties were inspected in FY 2007. Appropriate storm water pollution prevention fact sheets were distributed at the time of inspection. A copy of each completed checklist is maintained in READ's

records retention files. Of the 60 properties, five of them were City-owned non-leased properties, and the completed checklist for each of these properties is included in Appendix B.

- Standard lease language requiring Water Quality Management Plan compliance and preparation was incorporated into all new/renewal leases. During the reporting period, there were a total of 37 new or amended leases that included the storm water language.

In prior fiscal years, all City property was included in municipal facilities. However, after a thorough analysis it was determined that due to the transfer of property rights through legal agreements, leased properties are not municipal facilities since they are not operated by City staff. In FY 2008, commercial and industrial activities on these sites will be subject to the same requirements as other businesses that are located within City limits. Residential leases will be considered residential land uses.

For more information on BMPs implemented by the READ, refer to READ's FY 2007 *Annual Reporting Form* and completed *Municipal Inspection Forms* provided in Appendix B.

3.3.2 Training of Municipal Employees

City staff received training in general storm water issues and requirements. Employees also received training aimed at reducing or eliminating the discharge of pollutants from specific activities (activity-specific training). A summary of these trainings are provided in Section 12, *Education.*

3.4 MANAGEMENT OF PESTICIDES, HERBICIDES, AND FERTILIZERS

In FY 2007, the City took measures to reduce the contribution of pollutants associated with the application, storage, and disposal of pesticides, herbicides, and fertilizers from municipal areas and activities to the City's MS4. The Park and Recreation Department implemented BMPs included in its *Master Set of Best Management Practices Manual* developed as a storm water pollution prevention reference guide for employees. BMPs were implemented in priority areas, such as parks, landscaped areas, and municipal yards.

3.5 MUNICIPAL FACILITY INSPECTIONS

The City requires applicable City departments to inspect all high priority municipal facilities annually at a minimum. All municipal facilities were inspected in FY 2007. In many cases during the reporting period, municipal facilities were inspected more frequently, either formally (i.e., filling out a *Storm Water Municipal Inspection Form*) or informally (i.e., visual observations and walk-throughs). A copy of the *Storm Water Municipal Inspection Form* is provided at the end of this section.

The City took measures to ensure that all municipal facilities were in compliance with the requirements of the Municipal Permit and the City's JURMP. During the reporting period, if any issues were identified during facility inspections, the storm water representative responsible for inspections was trained to work with appropriate personnel to ensure that issues were addressed and ultimately resolved. These issues were reported to the

Storm Water Division and were documented using the *Storm Water Municipal Inspection Form*.

3.6 ENFORCEMENT AND COMPLIANCE

3.6.1 Hotline Complaint Investigations

The Storm Water Division manages the Storm Water Pollution Prevention Hotline (619) 235-1000 and other means of communication (e.g., website, main office line, fax) and encourages the reporting of illegal discharges to the storm drain system from locations within the City, including municipal areas.

3.6.2 Enforcement Actions

The Storm Water Division's Investigation and Enforcement Section enforces the City's *Storm Water Management and Discharge Control Ordinance* (§43.03 of the Municipal Code) Citywide, including municipal facilities and activities. The Storm Water Division took measures to ensure that all municipal facilities were in compliance with the requirements of the Municipal Permit and the City's municipal code and Urban Runoff Management Plan. As described above, issues identified during municipal inspections are reported to the Storm Water Pollution Prevention Division and are documented on the municipal inspection forms.

In FY 2007, Storm Water Division Code Compliance Officers conducted approximately 53 investigations of potential discharges at municipal facilities or activities. Code Compliance Officers issued 16 notices of violation and 4 citations. The remainder of the investigations resulted in the Code Compliance Officer determining that a storm water violation had not occurred, the discharge was not caused by the municipal activity/department/division, education was conducted, or a referral was made. See Appendix F for information about enforcement actions taken at municipal sites.

3.7 FUTURE ACTIVITIES AND PROGRAM AMENDMENTS

The City will be implementing a revised Municipal Program as required by the new Municipal Permit (Order No. 2007-0001), effective March 24, 2008.

Figure 3-3 Municipal Inspection Form.

Inspector: _____
Phone Number: _____
Date/Time: _____

I. Facility Information

Facility Name		
Street Address		Zip Code
Facility Contact Person		Phone
Standard Industrial Classification Code	Waste Discharge Identification Number	APN No.

II. Shared Facility Information

Is there more than one City department and/or division sharing this facility?

_____ No (skip this section) _____ Yes (complete this section)

Name of City Departments and/or Divisions Sharing Facility	Contact Person and Phone Number	Covered by this Inspection?

III. General Site Conditions and Runoff Management Practices Review

		S*	U*	N/A	Comments
General	Employees trained in storm water pollution prevention practices?				
	Common areas of yard reasonably clean and free of litter and debris?				
	Are parking areas generally clean and swept as needed?				
	Are storm drain inlets reasonably clean and free of debris?				
	Is there evidence of discharges, spills, and or leaks in any areas?				
Trash storage areas	Is area reasonably clean and uncluttered?				
	Are trash cans and garbage bins kept covered?				
Fueling areas	Is there a roof on fueling area?				
	Is there a mechanism in place for spill overflow protection?				
Vehicle/equipment maintenance area	Area reasonably clean and free of spills, leaks, or any other deleterious materials?				
	Is area covered overhead?				
	Dry clean up methods implemented?				
	Are there drip pans readily available for use?				
	Spill containment and cleanup kits readily available?				
	Storage areas covered and properly maintained?				

* S = Satisfactory, U = Unsatisfactory

Figure 3-3 Continued.

III. General Site Conditions and Runoff Management Practices Review (Cont.)

		S	U	N/A	Comments
Vehicle/equipment washing areas (cont)	Are related activities contained within designated area?				
	Hazardous materials/liquids stored above ground?				
	Are there containment mechanisms in place?				
Materials loading and storage areas	Area reasonably clean and free of litter and debris?				
	Designated area covered overhead?				
Chemical handling areas	Areas reasonably clean and organized?				
	Is area indoors or properly covered?				
	Spill containment cleanup kits readily available?				
	If outdoors, is water from surrounding areas prevented from reaching chemical handling areas?				
	Hazardous materials/liquids stored above ground?				
	Dry clean up methods implemented?				

IV. Water Quality Management Plan (WQMP) Review**

Has a WQMP (or SWPPP) been developed for this yard? _____ Yes (complete this section and skip section V)
_____ No (skip this section and complete section V)

		S	U	N/A	Comments
Facility site map	Identifies drainage areas and direction of flow				
	Identifies location of storm water conveyance system including ditches, inlets and storm drains				
	Identifies location of any existing storm water controls (e.g., berms, filters, grass swales, etc.)				
	Identifies location of building(s) and activity areas (e.g., fueling islands, hazardous materials storage areas, washing areas, etc.)				
Materials/activities used on site	List materials stored and handled on site, including storage location and typical quantities				
	Includes a narrative description of activities conducted on site which have the potential to result in discharges to storm drain system				
Potential Pollutants	Identifies potential pollutants which could be discharged from site given activities conducted at facility				
Best Management Practices (BMPs)	Describes BMPs implemented at facility to deal with **each** potential pollutant source identified				
	Minimum City wide BMPs listed				
	Storm water system regularly inspected/monitored				
Record keeping	Employee training records				
	Quarterly inspections records, if any				
	Storm water conveyance system monitoring (2/yr)[1]				

**The term Water Quality Management Plan (WQMP) is replacing the term Storm Water Pollution Prevention Plan (or SWPPP) for municipal facilities.

V. Water Quality Management Plan Status

Is facility in the process of developing a WQMP?
_____ Yes, expected completion date: _____
_____ No, this facility does not need a WQMP because _____

VI. Additional Comments (attach additional pages if necessary)

[1] Only required for NDPES General Storm Water Permit holders

4 INDUSTRIAL

The City continued to implement its Industrial Program during FY 2007. The City hired an environmental consultant/contractor qualified in conducting industrial inspections during FY 2007 to assist with implementation of the industrial inspection program, to conduct inspections of industrial facilities, and to maintain an industrial inspection database. In addition, the City uses other City programs to conduct additional inspections of industrial facilities. The FY 2007 accomplishments of these program elements are further described below.

4.1 PRIORITY SOURCES

The City tasked its environmental consultant to review all available records in order to update the inventory of industrial businesses. To do this, the City's consultant evaluated over 81,000 business licenses and the City's Real Estates Asset Department (READ) list of leased properties. The City's watershed based prioritized inventory is included in Appendix C-1, which includes the name and address, watershed, a description of the activities, NAICS code, SIC code, and priority taking into account pollutants generated and proximity to environmentally sensitive areas.

The City's consultant, using the process illustrated in the flow chart in Figure 4-1, determined the priority ranking of evaluated businesses. This prioritization flow chart shows the six water quality threat factors considered when assigning priority, including whether or not the facility generates pollutants which contribute to downstream impairments or are directly adjacent to or discharge directly to environmentally sensitive areas. If the water quality threat for a facility is "yes" from any of the first five factors, the facility is ranked as high priority. A "yes" to the sixth water quality factor ranked the facility as medium priority. Facilities that receive "no" for all six factors were ranked as low priority.

The first priority for the FY 2007 inspection program was known high priority industrial sites or those very likely to be high priority industrial. *As requested in comment 2 of the RWQCB comments on the City of San Diego 2005-2006 Annual Report letter (Appendix A), during FY 2007 the City inspected all high priority industrial facilities that had not been inspected or found not to be in compliance in FY 2006.* The group of high priority industrial facilities included:

- High priority industrial businesses found to not be in compliance when inspected in FY 2006.
- *High priority industrial businesses that were not inspected in FY 2006 because they were in compliance during the FY 2005 inspections (comment 4 of the RWQCB comment letter – Appendix A).*
- Businesses that had not previously been inspected but were identified as high priority industrial during inventory preparation.

Note: High priority industrial facilities inspected during FY 2006 that were in compliance were not selected for inspection in FY 2007.

After accounting for known high priority industrial sites, the City's consultant used several methods to seek out potential high priority industrial sites. Potential industrial businesses thought to generate the pollutant of concern for the water body were investigated if located less than 200 feet from a 303(d) listed water body or any of the 303(d) listed water body's tributaries

known to have flowing water. Because the NAICS codes on the City's business license list are not always accurate, experience has shown that selecting potential high priority industrial businesses solely on the basis of such codes ends up leading to few sites with significant pollutant discharge potential. Based on land use data from the San Diego Association of Governments (SANDAG) and past inspection experience, the City identified several areas of the City thought to contain higher concentrations of businesses that may pose greater threat to water quality. Several of the areas include aggregate operations and auto recycling facilities that the City has inspected in the past. Those areas had been thoroughly evaluated by the City in previous years, and inspections were conducted there again in 2FY 2007. The remaining three high priority areas of the City—the general areas along Dalbergia Street, Commercial Street, and National Avenue—were selected for the City's consultant to inspect the 634 parcels in those areas.

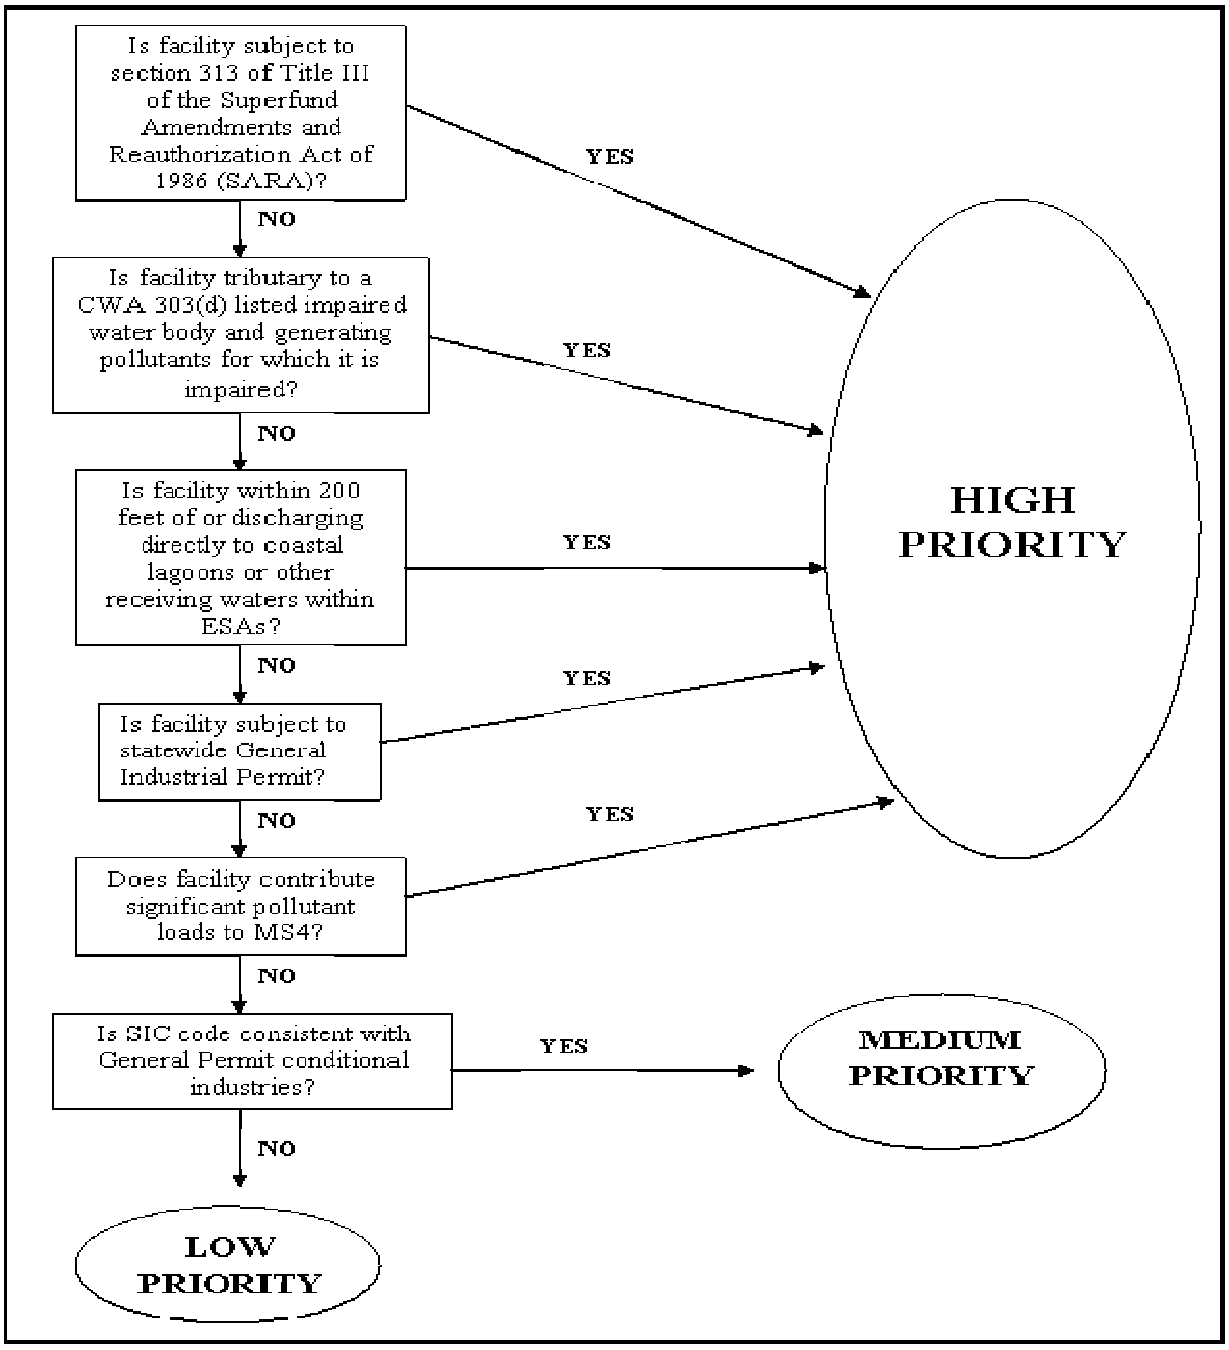

Figure 4-1. Industrial Facilities Water Quality Threat Prioritization Flow Chart.

4.2 BMP REQUIREMENTS

Minimum BMPs required for industrial facilities within the City are identified in Section 2.5, *Industrial and Commercial Uses*, of the City's JURMP. Industrial Facilities must also comply with the requirements set forth in the City's Storm Water Ordinance. The City also uses the California Storm Water Quality Association (CASQA) Industrial Handbook as a guidance document for industries implementing the required BMPs.

4.3 BMP IMPLEMENTATION

To ensure facility compliance of these required BMPs and other storm water regulations, the City conducts inspections and investigations of facilities and takes enforcement actions where appropriate. An important element of the Industrial Program is conducting education and outreach efforts to the staff at the businesses. These program components are further described below.

4.3.1 Education and Outreach

The City has an ongoing education and outreach element included in its industrial program. Industrial inspectors distributed fact sheets and educational information during inspections as appropriate. These materials are described and highlighted in the following sections.

Fact Sheets and Other Educational Handouts

Fact sheets and other educational handouts with information specific to industrial facilities and activities were distributed during inspections conducted during FY 2007. Fact sheets and handouts with topics applicable to both industrial and commercial activities include:

- Information for filing the proper Industrial Permit paperwork
- Industrial Facilities/Permit Compliance
- Impervious Surfaces BMPs (bilingual)
- Dumpsters & Loading Dock Areas BMPs (bilingual)
- Spill Response (bilingual)
- Automotive Fluids BMPs (bilingual)
- Bound and laminated mobile business cards BMPs
- Laminated storm water information cards (bilingual)
- Three C's Handout: Control, Contain, and Capture

In FY 2007, these fact sheets were provided to industries during inspections, investigations, via the *Think Blue* website (if applicable), or whenever requested.

Business License Storm Water Compliance Flyer

The City's Business License Storm Water Compliance Flyer summarizes the relevant storm water regulations in the City's Municipal Code, highlights business activities that reduce storm water pollution, and provides telephone, email, and website addresses should businesses need additional information. These flyers were mailed to businesses during the Office of the City Treasurer's annual renewal process. Approximately 76,000 notices were sent in FY 2007.

Think Blue Website

In FY 2007, the *Think Blue* website continued to provide information for industrial facilities within the City about storm water regulations and facility and activity requirements. The website posted the fact sheets created for industrial facilities as well as the City's JURMP, which outlines required BMPs for industrial sites. The website also provided resources and links for industries on BMPs.

Industrial Facility Leases

In FY 2007 Real Estate Assets Department (READ) added storm water requirements for City-owned leased property, including industrial sites, to amended, new, and renewing leases. This language educates leaseholders that they must take measures to reduce the discharge of

pollutants in runoff and advises that they will be accountable if storm water requirements are not met.

4.4 ENFORCEMENT AND COMPLIANCE

The City takes measures to ensure that facilities are complying with industrial storm water regulations. These include routine inspections, hotline complaint investigations, and enforcement actions, where necessary. These steps are described below.

4.4.1 Industrial Facility Inspections

The routine and follow-up site inspection procedure involved a thorough examination of the facility and all outdoor activities with the potential to generate urban runoff pollution. A standard five-page inspection form was completed at each site to document the visit. Whenever a business was found to have moved or was a duplicate listing, an inspection form was completed to document the site visit findings. *In response to comment 3 of the RWQCB comments on the City of San Diego 2005-2006 Annual Report letter (Appendix A), the City confirms that in the case of facilities where the listed business had moved and was replaced, routine site inspections were conducted at the replacement business if it was suspected to be high priority or if non-compliance was noted at the site.*

Based on the prioritization process, 255 industrial facilities received full industrial inspections. An additional 24 site visits were conducted, mainly at sites that were found to no longer be in business. Twenty-two sites were found to not need inspection via phone calls to the businesses. Many of these sites reported moving out of the City of San Diego, and this was often confirmed via checking the business' websites. Site visits for the significant contributors in high priority areas are included in the above numbers. These inspections located a number of high threat to water quality sites that did not have business licenses, and therefore would not have been inspected if the City relied on the business license list. An additional 501 parcels in the high priority areas were evaluated to determine if any industrial or commercial businesses needed to be added to the City's inventories. However, none were added.

A complete inventory of inspections is included as Appendix C-2. The inspection inventory shows the City's high priority industrial inventory and includes the prioritization, watershed, and inspection status for each facility. During FY 2007 Metropolitan Waste Water Division (MWWD) Industrial Wastewater Control Program staff performed 48 storm water inspections and a list of those facilities are included as Appendix C-3. A list of those facilities that were identified but not inspected, including justifications, is included as Appendix C-4. The City certifies that the industrial facilities listed in Appendix C-5 meet all the requirements of Order No. 2001-01, Section F.3.b.(6).(b).ii.

4.4.2 Complaint Investigations

The Storm Water Division operates the Storm Water Pollution Prevention Hotline (619-235-1000) and other means of communication (e.g., website, main office line, fax) and encourages the reporting of illegal discharges to the storm water conveyance system from locations within the City, including industrial facilities. A total of 2,157 contacts were logged by staff and 1,964 investigations were carried out by Code Compliance staff (remaining contacts were requests for information). Of these, approximately 67 investigations were conducted at industrial sites in FY 2007. The remaining investigations are discussed in other sections of this annual report.

4.4.3 Reporting of Non-Compliant Sites

All inspections performed at industrial facilities, including inspection information and findings, are reported to the Regional Board. American Recycling on Home Ave. was not inspected this term due to the fact that they would not permit an inspection. An inspection warrant could not be provided before the end of the inspection term. This facility was reported to the Regional Board as not cooperating with the City and potentially requiring a State General Industrial permit. The City is working on making the warrant process faster in order to avoid this type of situation in the future. A complete list of facilities reported to the Regional Board for violation of the State Industrial Permit is included as Appendix C-6.

4.4.4 Enforcement Actions

The City's process for inspection of industrial facilities ensures that appropriate enforcement actions are taken on facilities with violations of the City's storm water ordinances. During this reporting period, the City code enforcement officers investigated 67 industrial sites. As a result of the site investigations, there were 19 citations, 17 Notices of Violations, and 1 referral issued to the industrial facilities. There were also 22 sites where the City found no evidence of a violation or no enforcement actions were necessary. Education was the main enforcement action conducted for the remaining 8 sites due to the non-discharge nature of the violations noted. Appendix C-7 and Table 4-1 provide a summary of the enforcement actions (primarily educational) taken.

In response to comment 5 of the Regional Water Quality Control Board's Comments on the City of San Diego 2005-2006 Annual Report letter (Appendix A), the City conducts education as an initial enforcement technique at non-compliant industrial sites where the procedural violation (i.e., the facility is not complying with a BMP requirement, but a discharge has not occurred) does not warrant a citation, civil penalty or Notice of Violation (NOV). The City distributes educational materials or instructions to prevent potential discharges from occurring. This type of education is conducted at sites when the City believes educational instruction will be an effective method of achieving compliance through proper BMP implementation. If the City determines that education may not be the most effective mechanism for achieving compliance at the industrial site, then both the environmental and compliance significance are evaluated as part of the escalating enforcement process.

The City utilizes a database that evaluates the following parameters.

Environmental Significance (Category of Discharge):

- *Was the discharge intentional?*
- *Is it a regulated Industry?*
- *Did it discharge into a 303(d) Water body?*
- *If there is sediment, is the site over 25%?*
- *Was the discharge a large extent or volume?*
- *If needed and requested, was it cleaned up?*
- *Was it a damaged conveyance?*
- *Did the discharge reach an inlet or receiving waters via a conveyance system?*
- *Was there habitat degradation?*
- *Was wildlife impacted?*
- *Is there algal bloom discoloration or odor?*

Compliance Significance:

- *Prior penalty upheld with last 3 years?*
- *Prior penalty upheld within last 6 months?*
- *Prior violations or warnings?*
- *Education material previously provided?*
- *Prior knowledge of need for BMP?*
- *Discharge due to BMP failure?*

Repeat procedural violations are also assessed using the above database. If education has not achieved compliance, then an administrative citation, Notice of Violation, or Civil Penalty may be issued. An administrative citation may be issued as the initial enforcement step or may follow the issuance of a Notice of Violation based upon the evaluation using the factors listed above.

The maximum penalties for each administrative citation are prescribed in the Municipal Code and are not based on the type of discharge or its quantitative amount. Therefore, the first citation is always $100, the second is always $250, and the third is always $500. Administrative citations may be used in the case of repeat violations, i.e., a repeat of a violation which has previously been corrected. If such a repeat violation occurs within one year, the next highest fine amount may be imposed or if the case previously went to the third level, the highest fine amount may be repeated. A Civil Penalty may also be imposed and the City utilizes the database noted above to determine the degree of the Civil Penalty that shall be issued to the responsible party.

Several of the industrial sites that were inspected were found to be operating facilities that were currently eligible for exemption from the Industrial Permit based on no exposure. Where needed, NONA/NEC exemption paperwork was distributed, and assistance was provided in completing the forms. The facility representatives were reminded that in order to stay in compliance with Industrial Permit requirements and to avoid negating the conditions of NONA/NEC exemption, the businesses must periodically reassess their site's conditions to ensure that they maintain no exposure. The businesses were also informed that at some time in the future, pending the issuance of a new Industrial Permit, exemption requirements and procedures could change. During the inspection process, there were violations noted that were concerned with improper or inadequate BMP installation and maintenance. Due to the non-discharge nature of the violations noted during the inspection, education was the main enforcement action conducted. Table 4-1 provides a summary of the education materials distributed.

Table 4-1. Educational Materials Distributed in FY 2007.

Total	**232**

In FY 2007 the industrial inspections identified a number of businesses that did not conduct the required monitoring. All businesses that did not conduct monitoring that is required by their state industrial permit were referred to the RWQCB for enforcement (Appendix C-7). There is one business that is high priority but not subject to the State Industrial Permit. This business was sent a letter informing them of the requirement to conduct monitoring and monitoring results needed to be sent to the City. However, the timing between sending the notice of required monitoring and their annual inspection was such that there were no rain events that could be monitored. The City will continue to work with this business to ensure it complies with all monitoring requirements. If the City determines that the business is still in violation of the monitoring requirement, then the City will take enforcement action.

4.5 FUTURE ACTIVITIES AND PROGRAM AMENDMENTS

The City will be implementing a revised Industrial Program combined with the Commercial Program as required by the new Municipal Permit (Order No. 2007-0001), effective March 24, 2008. When reissued by the San Diego Regional Water Quality Control Board, the City will review the newly updated Industrial Storm Water General Permit for changes in industrial facilities' BMP requirements.

5 COMMERCIAL

The City continued to implement the Commercial Component of its Urban Runoff Management Plan (URMP) to reduce pollutants from commercial activities. Highlights of the Commercial Program include development and dissemination of educational materials for businesses, participation in outreach events, storm water inspection of commercial facilities, and enforcement actions on non-compliant sites. These program components are described below.

5.1 PRIORITY SOURCES

As part of the process of updating the industrial inventory, the City's environmental consultant described in section 4 also updated the commercial business inventory. Records reviewed included the over 81,000 businesses in the City's business license inventory and the City's complete Food Establishment Waste Discharge (FEWD) inventory. New commercial businesses categories that were added to the new Municipal Permit (Order No. 2007-0001) were included in the inventory. However, commercial businesses were prioritized according to the procedure in the 2001 Municipal Permit. That is, all businesses within commercial categories listed in the Municipal Permit were listed as high priority commercial, regardless of observed or perceived threat to water quality. The City's inventory of facilities is included in Appendix D-1.

5.2 BMP REQUIREMENTS

Minimum BMPs required for industrial and commercial facilities within the City are identified in Section 2.5, *Industrial and Commercial Uses*, of the City's URMP. Commercial businesses must also comply with the prohibitions and requirements set forth in the City's Storm Water Ordinance. The City also uses the California Storm Water Quality Association (CASQA) Commercial Handbook as a guidance document for businesses currently implementing required BMPs and those businesses that began implementing BMPs due to enforcement actions.

5.3 COMMERCIAL BMP IMPLEMENTATION

To ensure facility compliance of the required BMPs and other storm water regulations, the City conducts education and outreach efforts, performs inspections and investigations of facilities, and takes enforcement actions where appropriate. These program components are further described below.

5.3.1 Education and Outreach

The City conducts important education and outreach efforts for commercial activities. These efforts are an essential component to ensuring compliance and understanding of applicable storm water requirements.

5.3.1.1 *Business License Storm Water Compliance Flyer*

The City's Business License Storm Water Compliance Flyer summarizes the relevant storm water regulations in the City's Municipal Code, highlights business activities that reduce storm water pollution, and provides telephone, email, and website addresses should businesses need additional information. These flyers were mailed to businesses during the Office of the City Treasurer's annual renewal process. Approximately 76,000 notices were sent in FY 2007.

5.3.1.2 *Fact Sheets*

The Storm Water Division created and distributed fact sheets to educate businesses on topics related to storm water. Storm water public education and outreach staff created fact sheets specific to a variety of commercial activities that were distributed by Storm Water Division staff and other city employees during the reporting period. Table 5-1 is a summary of the fact sheets that were distributed in FY 2007. About 154 materials were distributed during inspections in FY 2007.

Table 5-1. Educational Materials Distributed in FY 2007.

Fact Sheet	Number Distributed
3 C's Handout	2
Think Blue Handout: Spills	17
Think Blue Handout: Spills (Spanish)	5
Think Blue Handout: Impervious Surfaces	34
Think Blue Handout: Impervious Surfaces (Spanish)	7
Think Blue Handout: Automotive Fluids	23
Think Blue Handout: Automotive Fluids (Spanish)	20
Think Blue Handout: Dumpsters and Loading Docks	13
Think Blue Handout: Dumpsters and Loading Docks (Spanish)	4
Mobile Business Cards	7
Think Blue Bilingual Informational Card	22
Total	**154**

These fact sheets were provided to businesses during inspections or investigations and were available on the *Think Blue* website (http://www.ThinkBlueSD.org).

5.3.1.3 Think Blue *Website*

In FY 2007, the *Think Blue* website continued to provide information about storm water regulations and requirements associated with commercial activities. The City's URMP outlines required minimum BMPs, and the *Think Blue* website posted fact sheets created to assist citizens and businesses understand proper BMPs for specific activities. The website also provided resources and links for commercial activities.

5.3.1.4 *Other Educational Materials*

The City developed a series of mobile business informational cards for businesses to reference when working in the field. The cards provide storm water information, such as pertinent regulations and suggested BMPs to comply with storm water requirements for specific businesses. In FY 2007, 2,198 materials targeting pressure wash operators and impervious surface cleaning were distributed.

5.3.1.5 *Grease Disposal Program*

In FY 2007, the Metropolitan Wastewater Department continued to implement the Grease Disposal Program to prevent sewer line blockages and resulting spills caused by the disposal of grease into the sewer system. The program aims to educate residents and business on the proper disposal alternatives for fats, oils, and grease. The Food Establishment Waste

Discharge (FEWD) Program regulates restaurants' sewer grease traps to ensure proper function and also reviews disposal procedures for oil and cooking grease. During the reporting period, information was provided to restaurants through the Metropolitan Wastewater Department's website, educational brochures, and a web-based video. The FEWD Program also makes referrals to the Storm Water Division regarding the restaurants that it inspects when necessary. During FY 2007, FEWD staff performed 4,809 storm water inspections.

5.4 COMPLIANCE AND ENFORCEMENT

The City takes measures to ensure that facilities are complying with storm water regulations associated with commercial activities. These include inspections, hotline complaint investigations, and enforcement actions, where necessary.

5.4.1 Commercial Facility Inspections

In addition to the City's FEWD inspections, the City's consultant was also tasked with inspections of targeted commercial facilities. That commercial inspection program primarily focused on automotive and equipment repair facilities in the Chollas Creek, Seventh Street Channel (La Paleta Creek), and Switzer Creek watersheds. A total of 255 full BMP assessments were conducted as part of this program, and another 69 sites were visited. Those 69 other site visits mostly comprised of visits to businesses found to have moved or gone out of business. A table is provided in Appendix D-2 that lists the commercial facilities inspected in FY 2007.

During the inspection program, 60 commercial businesses were found to be in violation of the City's municipal storm water ordinance. A list of these businesses is presented in Appendix D-3.

5.4.2 Complaint Investigations

The Storm Water Division operates the Storm Water Pollution Prevention Hotline (619-235-1000) and other means of communication (e.g., website, main office line, fax) and encourages the reporting of illegal discharges to the storm water conveyance system from locations within the City, including commercial facilities. A total of 2,157 contacts were logged by staff and 1,964 investigations were carried out by Code Compliance staff (the remaining contacts were requests for information). Of these, approximately 765 investigations were conducted at commercial/restaurant sites in FY 2007.

During FY 2007 the City's Storm Water Division also conducted a Pilot Power Washing Enforcement Project. The City had received complaints regarding several power washing companies washing sidewalks and not capturing the waste water associated with the cleaning. It was also reported that a lot of the washing was being conducted outside of normal business hours (early morning, weekends, evening, etc.) Beginning in May 2007 and commencing in August 2007, the City's Storm Water Division Enforcement staff conducted visual inspections in areas of the City during the weekday and weekend early morning hours (Table 5-2). The results of the City's pilot project showed that the majority of the discharges were not caused by the power washing companies, and many of the power washing companies took steps to make the appropriate corrections to their cleaning methods. Overall there were 33 citations and 3 Notices of Violations issued during the pilot project.

Table 5-2. Pilot Power Washing Project Schedule.

Date	Time	Area
May 5, 2007	0400 - 0800	Downtown, Gasplamp, and East Village
May 9, 2007	0400 - 0800	Ocean Beach, Pacific Beach, and La Jolla
May 17, 2007	0400 – 0800	University Avenue, El Cajon Boulevard, and San Ysidro
May 26, 2007	0600 - 1000	Rancho Bernardo
May 30, 2007	0400 - 0800	Downtown, Gasplamp, and East Village
June 7, 2007	0400 - 0800	Ocean Beach, Pacific Beach, and La Jolla
June 16, 2007	0600 - 1000	University Avenue, El Cajon Boulevard, and San Ysidro
June 19, 2007	0400 - 0800	Rancho Bernardo
June 28, 2007	0400 - 0800	Downtown, Gasplamp, and East Village
July 5, 2007	0400 - 0800	Downtown, Gasplamp, and East Village, Ocean Beach, Pacific Beach, and La Jolla
July 7, 2007	0600 - 1000	Ocean Beach, Pacific Beach, and La Jolla
July 10, 2007	0400 - 0800	University Avenue, El Cajon Boulevard, and San Ysidro
July 18, 2007	0400 - 0800	Rancho Bernardo
July 28, 2007	0400 - 0800	Downtown, Gasplamp, and East Village
July 31, 2007	0600 - 1000	Ocean Beach, Pacific Beach, and La Jolla
August 8, 2007	0400 - 0800	University Avenue, El Cajon Boulevard, and San Ysidro
August 16, 2007	0400 - 0800	Rancho Bernardo
August 25, 2007	0600 - 1000	Downtown, Gasplamp, and East Village

5.4.3 Reporting of Non-Compliant Sites

The FEWD Program makes referrals to the Storm Water Program regarding the restaurants that it inspects when an active discharge is involved. Code Compliance Officers are assigned to the cases to conduct investigations and implement the proper enforcement actions. In FY 2007, the Storm Water Division received and investigated 36 reports from the FEWD Program, as described below.

5.4.4 Enforcement Actions

The City's process for inspection and enforcement of violations ensures that commercial facility violations are abated. Sites with storm water violations noted during inspections are referred to the Storm Water Division's Investigations and Enforcements Section for follow-up investigation and enforcement. Refer to Appendix F for a table of enforcement actions taken in FY 2007.

Specifically, of the 36 reports from the FEWD Program in FY 2007, eight resulted in the issuance of a notice of violation, thirteen citations, and one educational enforcement action.

5.5 FUTURE ACTIVITIES AND PROGRAM AMENDMENTS

The City will be implementing a revised Commercial Program combined with the Industrial Program as required by the new Municipal Permit (Order No. 2007-0001), effective March 24, 2008.

6 RESIDENTIAL

The City continued to implement the Residential Component of its Jurisdictional Urban Runoff Management Plan (JURMP) to prevent and reduce pollutants in runoff from residential areas within the City. Highlights of the City's Residential Component during FY 2007 include distribution of numerous education and outreach materials, development of various residential programs, events to educate residents and reduce pollutants, and enforcement of storm water violations from residential activities. These program elements are further described below.

6.1 PRIORITY SOURCES

All residential areas in the City of San Diego have been identified as high priority. There have been no updates to the designated priority.

6.2 BMP REQUIREMENTS

Minimum BMPs for residential areas are identified in Section 2.6, *Residential Uses*, of the City's JURMP. Residential activities must also be carried out in compliance with the requirements set forth in the City's Storm Water Ordinance.

6.3 RESIDENTIAL BMP IMPLEMENTATION

To ensure facility compliance with these required BMPs and other storm water regulations, the City conducts education and outreach efforts, implements various collection programs, performs inspections and investigations, and takes enforcement actions where appropriate. These program components are further described below.

6.3.1 Education and Outreach

The City implemented a substantial education and outreach campaign directed at residential activities. Education and outreach efforts specific to residential activities are summarized below. For a detailed description of the City's Education Component, refer to Section 12, *Education*. Education and outreach efforts conducted for residents as part of the Household Hazardous Waste Program is described in below in Section 6.3.2, *Household Hazardous Waste Program*.

6.3.1.1 *Public Service Announcements*

In FY 2007, the Storm Water Division continued to implement the *Think Blue* media campaign to educate citizens on storm water issues and pollution prevention measures. The campaign was broadcast on local radio and television stations to reach English- and Spanish-speaking communities. A detailed discussion of the *Think Blue* media campaign is provided in Section 12.1.4, *Think Blue Campaign – FY 2007*.

6.3.1.2 *Think Blue Website*

In FY 2007, the *Think Blue* website (http://www.ThinkBlueSD.org) continued to provide information, storm water regulations, and requirements associated with residential activities. The website made available fact sheets created for these activities as well as the City's JURMP, which outlines required minimum BMPs. The website also provided a page for residents to locate tips for preventing or reducing pollutants from different areas of the home. The site also continued to feature the Chollas Creek Environmental Improvement and Awareness Programs,

which provided information on the City's efforts to restore Chollas Creek and improve its water quality. The website is estimated to have received approximately 52,678 hits in FY 2007.

6.3.1.3 *Fact Sheets and Brochures*

The Storm Water Division distributed educational fact sheets and brochures to educate residents and businesses on topics related to storm water. Fact sheets and brochures, specific to a variety of residential activities include:

Table 6-1. Educational Materials Distributed in FY 2007*.

Fact Sheet	Number Distributed (English)	Number Distributed (Spanish)
Think Blue Handout: Spills	17	5
Think Blue Handout: Impervious Surfaces	2,034	157
Think Blue Handout: Automotive Fluids	223	70
Brochure	1,800	165
Car Washing	400	50
Clean Water Leader	1,000	150
Concrete Washout	900	100
Construction Waste	2,000	60
Municipal Code	3,000	100
Regulations	400	50
Spills	800	50
Swimming Pools	300	50
Useful Tips for Ash	100	0
Water Discharge	200	50
Total	**13,174**	**1,057**

*Note the City tracks the total number of fact sheets distributed and some fact sheets noted may not have been distributed to only residents. Some may have gone to industrial, commercial, or construction sites.

These fact sheets were provided via the *Think Blue* website, or whenever requested.

6.3.1.4 *Outreach Events*

During the reporting period, the Storm Water Division, with the assistance of City Council office staff and media partners, participated in a number of outreach events, particularly to residents in the Chollas Creek Watershed. Refer to Table 12-2 in Section 12 and the City's WURMP Annual Reports for a listing of the residential outreach events conducted by the City.

6.3.2 Household Hazardous Waste Program

The Environmental Services Department (ESD) operates the Household Hazardous Waste (HHW) Program for the City and is responsible for public education and the investigation, maintenance, collection and remediation of hazardous substances including HHW from facilities, residents, vacant land, and other City departments. The collection program consists of a permanent HHW facility, auto product recycling events, door-to-door collection, and a load check point at the Miramar Landfill.

In FY 2007, ESD conducted education and outreach efforts directed at disseminating HHW information to residents. These efforts included numerous outreach events promoted with PSAs and other media advertisements, distributing educational materials, establishment of a hotline (858-694-7000) to answer questions and set up appointments for HHW disposal, and water bill informational inserts. The water bill inserts were distributed in the fall 2006 and spring 2007 to

approximately 270,000 customers for each distribution (approximately 540,000 total customers). Detailed information about these efforts is included in ESD's FY 2007 *Annual Reporting Form* provided in Appendix B.

6.3.3 Grease Disposal Program

In FY 2007, the Metropolitan Wastewater Department (MWWD) continued to implement the Grease Disposal Program to prevent sewer line blockages and resulting spills caused by the disposal of grease into the sewer system. The program aimed to educate residents and businesses on the proper disposal alternatives for fats, oils, and grease and directed residents to dispose oil and grease at the Miramar Landfill. As part of the education and outreach for this program, MWWD provided information (fact sheet and video) through its departmental website regarding proper grease disposal in both English and Spanish.

6.4 ENFORCEMENT AND COMPLIANCE

The City takes measures to ensure that facilities are complying with storm water regulations associated with residential activities. These include patrol of residential areas, hotline complaint investigations, and enforcement actions, where necessary. These elements are described below.

6.4.1 Residential Investigations

Code enforcement officers conduct routine patrols of residential areas and investigate complaints from the storm water hotline (619-235-1000). The Storm Water Division operates the Storm Water Pollution Prevention Hotline and other means of communication (e.g., website, main office line, fax) and encourages the reporting of illegal discharges to the storm water conveyance system from locations within the City, including residential areas and activities. In FY 2007, a total of 2,157 contacts (not all were residential related) were logged by staff, and 1,964 investigations were carried out by Code Compliance Staff (remaining contacts were requests for information). Approximately 61 investigations pertaining to residential sites were conducted in FY 2007.

6.4.2 Enforcement Actions

Mechanisms that are available to ensure compliance with storm water regulations include distribution of educational materials, issuances of notices of violation, administrative citations, and civil penalties. In more severe instances, cases are referred to the Consumer and Environmental Protection Unit of the City Attorney's Office for prosecution. The standard procedure for enforcing the City's Storm Water Ordinance by means of these mechanisms is described in Section 1.3, *Enforcement of Storm Water Ordinance*, in the City's JURMP. Refer to Section 9, *Enforcement*, and Appendix F of this document for information about enforcement actions taken in FY 2007.

6.5 FUTURE ACTIVITIES AND PROGRAM AMENDMENTS

The City will be implementing a revised Residential Program as required by the new Municipal Permit (Order No. 2007-0001), effective March 24, 2008.

7 LAND USE PLANNING FOR NEW DEVELOPMENT

The City continued to implement the Planning and Development Components of the JURMP to reduce the impacts of new development and redevelopment on storm water quality. Highlights of the City's Land Use Planning Component during FY 2007 include continued implementation of the *Storm Water Standards Manual*, implementation of the *Source Water Protection Guidelines for New Development*, and continued integration of storm water protection policies in the City's Community Plans and General Plan.

7.1 LONG-RANGE PLANNING

7.1.1 General Plan

A wide range of policies are proposed in the General Plan to help guide development and provide a conservation "blueprint" so that San Diego's environmental quality and heritage are preserved, maintained, improved and can be sustained for current and future generations. On October 22, 2002, the City Council adopted the Strategic Framework Element as an amendment to the City's 1979 *Progress Guide and General Plan* (1979 General Plan). This action initiated the comprehensive update of the 1979 General Plan. The Strategic Framework Element provided a new strategy for the City's future growth and development, a basis for a new Land Use Element, and a general policy framework for updating the existing elements in the 1979 General Plan. The water quality and watershed principles identified in the JURMP were incorporated into the Strategic Framework Element and associated Five-Year Action Plan and adopted by the City Council into the General Plan.

The Five-Year Action Plan included direction to update the Conservation Element to further address storm water and urban runoff. It also included recommendations to update other policies and regulations to address storm water and urban runoff, including amendments to the Street Design Manual, the Drainage Design Manual, and the Land Development Code. In May 2006, the Planning Department released revised drafts of the General Plan Update, and the Strategic Framework Element was incorporated into the introductory section of the Plan and no longer was a separate element.

General Plan elements under development in FY 2007 relevant to urban runoff include:

Conservation Element. The Conservation Element focuses on conserving natural resources, protecting unique landforms, preserving and managing the open space system, beaches and watercourses, preventing and reducing pollution, and ensuring preservation of our quality of life in San Diego. Many of the policies described in the element are already being implemented throughout the City, via specific programs and plans administered by various City departments, such as the Storm Water Pollution Prevention Program, the Sustainable Communities Program, and the Multiple Species Conservation Program (MSCP). The primary goals related to storm water are for the protection and restoration of water bodies, including reservoirs, coastal waters, creeks, bays, and wetlands, and the preservation of natural attributes of both the floodplain and floodway without endangering life and property. The Conservation Element policies that relate to urban runoff management are included below:

CE-E.1. Continue to develop and implement public education programs.

a. Involve the public in addressing runoff problems associated with development and raising awareness of how an individual's activities contribute to runoff pollution.

b. Work with local businesses and developers to provide information and incentives for the implementation of Best Management Practices for pollution prevention and control.

c. Implement watershed awareness and water quality educational programs for City staff, community planning groups, the general public, and other appropriate groups.

CE-E.2. Apply water quality protection measures to land development projects early in the process-during project design, permitting, construction, and operations-in order to minimize the quantity of runoff generated on-site, the disruption of natural water flows and the contamination of storm water runoff.

a. Increase on-site infiltration, and preserve, restore or incorporate natural drainage systems into site design.

b. Direct concentrated drainage flows away from the MHPA and open space areas. If not possible, drainage should be directed into sedimentation basins, grassy swales or mechanical trapping devices prior to draining into the MHPA or open space areas.

c. Reduce the amount of impervious surfaces through selection of materials, site planning, and street design where possible.

d. Increase the use of vegetation in drainage design.

e. Maintain landscape design standards that minimize the use of pesticides and herbicides.

f. Avoid development of areas particularly susceptible to erosion and sediment loss (e.g., steep slopes) and, where unavoidable, enforce regulations that minimize their impacts.

g. Apply land use, site development, and zoning regulations that limit impacts on, and protect the natural integrity of topography, drainage systems, and water bodies.

h. Enforce maintenance requirements in development permit conditions.

CE-E.3. Require contractors to comply with accepted storm water pollution prevention planning practices for all projects.

a. Minimize the amount of graded land surface exposed to erosion and enforce erosion control ordinances.

b. Continue routine inspection practices to check for proper erosion control methods and housekeeping practices during construction.

CE-E.4. Continue to participate in the development and implementation of Watershed Management Plans for water quality and habitat protection.

CE-E.5. Assure that City departments continue to use "Best Practice" procedures so that water quality objectives are routinely implemented.

a. Incorporate water quality objectives into existing regular safety inspections.

b. Follow Best Management Practices and hold training sessions to ensure that employees are familiar with those practices.

c. Educate City employees on sources and impacts of pollutants on urban runoff and actions that can be taken to reduce these sources.

d. Ensure that contractors used by the City are aware of and implement urban runoff control programs.

e. Serve as an example to the community-at-large.

CE-E.6. Continue to encourage "Pollution Control" measures to promote the proper collection and disposal of pollutants at the source, rather than allowing them to enter the storm drain system.

a. Promote the provision of used oil recycling and/or hazardous waste recycling facilities and drop-off locations.

b. Review plans for new development and redevelopment for connections to the storm drain system.

c. Follow up on complaints of illegal discharges and accidental spills to storm drains, waterways, and canyons.

CE-E.7. Manage floodplains to address their multi-purpose use, including natural drainage, habitat preservation, and open space and passive recreation, while also protecting public health and safety.

The Conservation Element draft is available online at
http://www.sandiego.gov/planning/genplan/index.shtml

Mobility Element. The Mobility and Land Use elements of the General Plan Update are closely linked. An overall goal of the Mobility Element is to further the attainment of a balanced, multi-modal transportation network that improves mobility and minimizes environmental and neighborhood impacts, including storm water and urban runoff pollution. The element includes a wide range of policies which advance a strategy for congestion relief and increased transportation choices in a manner that strengthens the City of Villages land use vision and fosters storm water pollution prevention by reducing automobile trips and demand for large parking areas. The Land Use Element identifies existing and planned land uses, and the Mobility Element identifies the proposed transportation network and strategies which have been designed to meet the future transportation needs generated by the land uses.

The Mobility Element draft is available online at
http://www.sandiego.gov/planning/genplan/index.shtml

Urban Design Element. This element includes language on minimizing the amount of surface parking lots for both aesthetic purposes and to allow for the infiltration of urban runoff into the ground. It calls for the use of trees and other landscape to provide shade, screening, and filtering of storm water runoff in parking lots.

The Urban Design Element draft is available online at http://www.sandiego.gov/planning/genplan/index.shtml

Public Facilities, Services, and Safety Element. This element specifically discusses storm water infrastructure in the City. It calls for the protection of beneficial water resources through pollution prevention and interception efforts. The element states as a goal for the City to have a storm water conveyance system that effectively reduces pollutants in urban runoff and storm water to the maximum extent practicable. It recognizes both the roles of structural and non-structural BMPs in preventing pollution in order to comply with federal and state mandates regarding storm water pollution and the need for the City to engage in comprehensive storm water planning, secure funding sources, and strengthens cooperation with other stakeholders in the region. The primary goals related to storm water are for the protection of beneficial water resources through pollution prevention and interception efforts, and for the storm water conveyance system that effectively reduces pollutants in urban runoff and storm water to the maximum extent practicable. The Public Facilities, Services, and Safety Element policies that relate to urban runoff management are included below:

PF-G.1. Ensure that all storm water conveyance systems, structures, and maintenance practices are consistent with federal Clean Water Act and California Regional Water Quality Control Board NPDES Permit standards.

PF-G.2. Install infrastructure that, where feasible, includes components to capture, minimize, and prevent pollutants in urban runoff from reaching receiving waters and potable water supplies.

PF-G.3. Meet and preferably exceed regulatory mandates to protect water quality in a cost-effective manner monitored through performance measures.

PF-G.4. Develop and employ Master Drainage Plans for the City's watersheds to foster a comprehensive approach to storm water infrastructure improvements.

PF-G.5. Identify and implement BMPs for projects that repair, replace, extend or otherwise affect the storm water conveyance system. These projects should also include design considerations for maintenance, inspection, and, as applicable, water quality monitoring.

PF-G.6. Identify partnerships and collaborative efforts to sponsor and coordinate pollution prevention BMPs that benefit storm water infrastructure maintenance and improvements.

The Public Facilities, Services, and Safety Element is available online at http://www.sandiego.gov/planning/genplan/index.shtml

Recreation Element. This element recognizes the importance of parks and open space in the City not only for recreational purposes, but also to allow for the infiltration of urban runoff into the ground. The primary goals related to storm water are to preserve, protect and enhance the integrity and quality of existing parks, open space, and recreation programs citywide, and to preserve, protect and enrich natural, cultural, and historic resources that serve as recreation

facilities. The recreation element contains a policy to protect beaches and canyons from uncontrolled urban runoff.

The Recreation Element is available online at http://www.sandiego.gov/planning/genplan/index.shtml

Edits are underway to the Draft General Plan in response to public comments received on the Draft General Plan and the associated Draft Environmental Impact Report. The Final Public Review Draft (October 2006) General Plan represents an important step toward the completion of the General Plan Update. The General Plan Draft Program EIR was released on April 26, 2007 and was available for a 60 day public review and comment period. City Council adoption of the General Plan Update is anticipated to be in the winter of 2007-2008.

7.1.2 Community Plans

Community plans are documents that guide the growth and development of a community. They include land use designations, design recommendations, and policies on a wide range of topics, including water quality protection. They are a part of the City's General Plan and the City is continuing to implement the Community Plans where applicable. Community-specific policies for storm water include:

- **Mission Valley Community Plan** – The Mission Valley Community Plan makes broad recommendations concerning the protection of urban runoff and storm water quality. Updates to the plan are significant to water quality since the San Diego River flows through Mission Valley. The Plan will reference or incorporate recommendations contained the San Diego River Master Plan. During FY 2007 Internal City staff meetings were held to continue the process of updating the Community Plan.
- **Ocean Beach Precise Plan Update** – The Ocean Beach Precise Plan is currently undergoing an update and will become known as the Ocean Beach Community Plan. The Ocean Beach Community Plan will have broad goals and recommendations relating to urban runoff and water quality. Goals will include: ensuring a reliable system of water, storm water, sewer facilities to serve the existing and future needs of the community; preserving the natural amenities of Ocean Beach, such as its open space, coastal bluffs, beaches, tidepools, and coastal waters; and protecting coastal and waterway resources by promoting sensitive development and restoring and preserving natural habitat. During FY 2007 the Ocean Beach Precise Plan Update Subcommittee met and reviewed draft elements of the Plan and offered revisions to City staff.

7.1.3 Street Design Manual

In November of 2002, the City Council approved a revision of the Street Design Manual that included guidelines for reduced impervious surfaces and increased natural filter systems. These guidelines included reduced street width standards (curb to curb) for local residential streets, parkway standards (curb to property line) that allow large canopy form tree species to be planted along with a wider area for landscaping opportunities, design provisions that allow landscaping opportunities in the majority of the surface area of raised islands (e.g., raised medians), and design requirements that required all traffic calming installations to have a landscape element. Such designs improve filtration of storm water. Throughout FY 2007, the Street Design Manual was applied to new development.

7.1.4 Drainage Design Manual

The Engineering and Capital Projects Department began work in FY 2006 on a City supplement to the County of San Diego's *Drainage Design Manual* and *Hydrology Manual*. As part of this effort, the Engineering and Capital Projects Department began coordinating with the Storm Water Division staff to incorporate new requirements associated with storm water quality protection. The originally anticipated completion date for these efforts was 2007, however, due to resource issues, the Manual is anticipated to be completed in FY 2008.

7.1.5 Source Water Protection Guidelines for New Development

In FY 2004, the Water Department produced the *Source Water Protection Guidelines for New Development* (Guidelines) to guide future activities in the San Diego County watersheds that drain into drinking water reservoirs (Hodges, Sutherland, San Vicente, El Capitan, Otay, Barrett, and Morena). The Guidelines were prepared to assist municipal agencies, designers, land planners, developers, and citizens to conduct site design planning and select BMPs that protect or improve the quality of runoff draining into drinking water reservoirs. These Guidelines do not address water quality concerns during construction activities but rather help project proponents and reviewers address potential water quality issues over the life of the project by incorporating better site designs and source controls to protect source water. In addition, for large or complex projects, the Guidelines are intended to help focus the selection of treatment BMPs that are most effective (based on published studies) at reducing the pollutants of concern for drinking water protection in San Diego County.

7.1.6 Watershed & Resource Management Plans

San Dieguito River Watershed Management Plan
The City of San Diego, in partnership with watershed stakeholders, local jurisdictions, and other governmental agencies, led the effort to develop and begin the implementation of the San Dieguito Watershed Management Plan. The comprehensive watershed-based management plan focuses on identifying priorities and strategies for the protection and restoration of water resources, native vegetation, water flows, riparian zones, beneficial uses of waters and overall water quality. The Watershed Management Plan includes the following: a watershed assessment, a watershed existing conditions report, a list of issues of concern, watershed goals and objectives, and a watershed action plan. Progress regarding the implementation of the San Dieguito Watershed Management Plan is reported in the Fiscal Year 2007 San Dieguito River Watershed Urban Runoff Management Program Annual Report.

Chollas Creek Enhancement Program
Chollas Creek is a natural drainage system that traverses inner-city neighborhoods within the Greater Mid-City (City Heights, Eastern), Encanto Neighborhoods, Southeastern San Diego, and Barrio Logan communities, from its headwaters in La Mesa and Lemon Grove to San Diego Bay. The historic channel and floodplain of Chollas Creek has been altered substantially as a result of decades of development and human activity. Today, the Chollas Creek-bed is an urban creek with little native vegetation, and much of the channel is armored or is concrete channel and culverts. The Chollas Creek Enhancement Program is intended to foster the restoration and rehabilitation of the creek's remaining wetlands, using existing wetland remnants as the source for wetland mitigation and enhancement for projects that disrupt wetland environments within the Chollas Creek geographic area and hydrological basin.

Progress regarding the implementation of the Chollas Creek Enhancement Program is reported in the FY 2007 San Diego Bay Watershed Urban Runoff Management Program Annual Report.

San Diego River Park Master Plan
The San Diego River corridor has been degraded by development and sand and gravel mining. The San Diego River Park planning effort, led by the Park and Recreation Department, seeks to improve water quality, sediment transport, and groundwater recharge, while also expanding riparian habitat. The master plan contains principles and recommendations for restoring San Diego River water quality, among other goals. During FY 2007 City staff continued to develop the draft San Diego River Park Master Plan for eventual adoption by the City Council. The City has been working to hire a consultant to prepare the program Environmental Impact Report for the Plan and an economic impact analysis.

Progress regarding the preparation and implementation of the San Diego River Master Plan is reported in the FY 2007 San Diego River Watershed Urban Runoff Management Program Annual Report.

San Dieguito River Park Concept Plan
This plan establishes the vision and goals for the future use of the San Dieguito River Valley. It describes the plan context and purposes, discusses planning considerations, and identifies plan objectives. It serves as a policy document for the San Diego River Park Joint Powers Authority. The overall goal of the plan is to: preserve land within the Focused Planning Area of the San Dieguito River Park as a regional open space greenway and park system that protects the natural waterways and the natural and cultural resources; provide compatible recreational opportunities that do not damage sensitive lands; and provide a continuous and coordinated system of preserved lands with a connecting corridor of walking, equestrian, and bicycle trails encompassing the San Dieguito River Valley from the ocean to the river's source and beyond.

San Pasqual Vision Plan
The purpose of the San Pasqual Vision Plan is to set forth a comprehensive vision for the San Pasqual Valley and action items for its protection. Plan goals include protecting the quality and capacity of the San Pasqual/Lake Hodges groundwater basin to ensure that this invaluable asset as a water resource is not compromised and ensuring the long-term protection of the Valley's unique agricultural, biological, and water resources. This includes, for example, restricting urban development in the valley, which simultaneously helps protect its agricultural assets and preserve its natural infiltration capabilities to treat storm water. The City Planning and Community Investment Department is responsible for implementing various components of this plan.

7.2 PROJECT PLANNING AND DESIGN

7.2.1 Storm Water Development Regulations

In December 2002, the City began implementation of the *Storm Water Standards Manual* for both private and public projects. The *Storm Water Standards Manual* incorporated additional permanent (including Standard Urban Storm Water Mitigation Plan, or SUSMP, requirements) and construction BMP requirements with the City's existing storm water-related development regulations, to reduce pollutants and control runoff flows from all new development and redevelopment projects. To help simplify the process and improve implementation of the requirements, all of the City's storm water-related requirements are included in the *Storm Water Standards Manual*. As an implementation manual to the City's Municipal Code, the *Storm Water Standards Manual* benefits from the unique position of being fully enforceable and "updateable" as new innovations occur or state construction or permanent BMP requirements

change. During the project planning and design review phase of development, the permanent and construction BMP requirements in the *Storm Water Standards Manual* are applied to development projects as further described below.

7.2.1.1 *Public Projects*

The Engineering and Capital Projects (ECP) Department is responsible for planning, design, and construction of most capital improvement projects (some capital improvement projects are managed by the Water Department, the Metropolitan Wastewater Department, and the Park and Recreation Department). All project managers of capital improvements program (CIP) projects that awarded construction contracts on or after December 10, 2002, have been required to incorporate the applicable permanent BMP requirements set forth in the *Storm Water Standards Manual* into the project (specifications and plans) during the design and contract award phases to ensure that storm water issues have been addressed in the project's permanent design. To assist project managers, storm water language was included in the CIP contract document (boilerplate) specifications along with standard drawing details. Drawings are routed internally (within the design sections) as part of a process termed "peer plan check" for a check on water quality design measures. When a project design has reached the 90% design level the project is routed to the Storm Water Division staff for a more detailed, formal, and mandatory review. Revisions are made to the design and then, at the project manager's discretion , the project is routed to the Storm Water Division staff for a more detailed and formal review. If permanent treatment BMPs are required, the design is discussed and coordinated with the department that will be maintaining the permanent BMP facility after it is built. All ensuing comments are routed back to the project managers for revision prior to the release of the construction drawings for bid.

The Storm Water Division provides an optional review of CIP projects for compliance with the City's *Storm Water Standards*. In FY 2007 the Storm Water Division reviewed 29 CIP projects. In addition to the plans, the Storm Water Division's engineering review staff often reviews Water Quality Technical Reports (WQTR), Storm Water Pollution Prevention Plans (SWPPP), and Water Pollution Control Plans (WPCP). After each review, a memo is sent to the City project manager informing him or her whether or not the project has met the requirements of the City's *Storm Water Standards* and, if needed, what additional documents, plan revisions, etc. are required in order for those requirements to be met. In FY 2007, there were **27 CIP priority projects**, which were required to prepare WQTRs.

7.2.1.2 *Private Development*

The Development Services Department (DSD) is responsible for managing the development project review services for private development in the City of San Diego. In December 2002, the Land Development Review Division of DSD adopted and began implementation of the *Storm Water Standards Manual*. Private projects are reviewed for conformance with the Storm *Water Standards Manual* requirements by the Engineering Review and Plan Checking sections of the Land Development Review Division. To ensure consistency and adequate implementation of the storm water requirements, staff from these sections meets on a bi-weekly basis to discuss specific issues on development projects. Before discretionary projects are scheduled for decision-maker approval or ministerial permits are issued, all storm water requirements must be satisfied either on the plans or in the project conditions.

During FY 2007, **212 private priority projects** were reviewed by DSD for conformance with the *Storm Water Standards Manual*. *In response to comment 6 of the RWQCB comments on the City of San Diego 2005-2006 Annual Report letter (Appendix A), the City has included a list of*

the projects which were required to meet SUSMP requirements in FY 2006 and FY 2007 (See Appendix I). DSD retains this list in its Storm Water Maintenance Agreement database which will be utilized for BMP maintenance assessment purposes.

7.3 EDUCATION AND OUTREACH

7.3.1 Fact Sheets

In FY 2007, DSD continued to make available a brochure and video entitled *Grading: Doing It Right*, which provided information about proper storm water pollution prevention practices. These resources were provided to the public and aired regularly on City TV 24. Approximately 1,000 brochures were distributed, and the video aired 30 times in FY 2007. DSD also distributed approximately 2,000 brochures, "Clean Construction, A Storm Water Pollution Prevention Guide for the Construction Industry", were provided to the industry and homeowners during the permitting process.

7.3.2 Websites

In FY 2007, DSD maintained its "Development Process: Step-by-Step" website, which guides applicants through the City's development process. The site references both the *Storm Water Applicability Checklist* as well as the *Storm Water Standards Manual*. DSD also continued to provide information on the Department's website regarding storm water issues. There is a section of the web site focused on grading and includes visual examples and a "Frequently Asked Questions" page. Additionally, the *Think Blue* web site provided links to resources that could provide additional information on land use planning and storm water regulations for new development and redevelopment.

7.3.3 Training

In FY 2007, the City Planning and Community Investment Department conducted three Community Orientation Workshops during which storm water–related informational brochures were distributed to more than 70 community members.

The department also conducted informal internal and external outreach focused mainly on the Department's activities related to storm water, such as the General Plan Update and other policies and programs.

In FY 2007, DSD continued to hold weekly staff meetings to discuss storm water requirements and implementation on private development projects. In addition to these meetings, Land Development Review Division had approximately 70 employees (or 15%) trained in activity-specific storm water principles during the year. In FY 2007, the Storm Water Division's *Think Blue* training staff also conducted two activity-specific trainings of targeted City staff. The two training sessions, "Storm Water – Your Role and Responsibility", targeting Development Services Department inspectors, were held on February 26, 2007 and May 17, 2007.

In FY 2007, DSD's Inspection Services Division provided individualized training to construction industry members on proper storm water pollution prevention and BMP techniques. Typically this was done at the counter and in the field where direct contact could occur. In addition, Inspection Services Division held twelve monthly meetings in 2007 to educate the construction and development communities.

In FY 2007, the Field Engineering Division continued to provide storm water activity-specific training to its resident engineers before the start of the dry and wet weather seasons. Storm water topics were discussed as needed at the monthly meeting of resident engineers. Approximately 80 staff (100% of the staff responsible for storm water inspections) received training on activity-specific storm water principles.

7.4 FUTURE ACTIVITIES AND PROGRAM AMENDMENTS

The City will be implementing a revised Land Use Planning for New Development Program as required by the new Municipal Permit (Order No. 2007-0001), effective March 24, 2008.

8 CONSTRUCTION

The City continued to implement the Construction Component of its Jurisdictional Urban Runoff Management Plan (JURMP) in FY 2007 to prevent and reduce pollutants in runoff from construction activities within the City. Highlights of the Construction Component include development of education and outreach materials, development and participation in various trainings and workshops to educate staff and the professional industry, implementation of a review program to ensure compliance with storm water requirements, inspection of construction sites, enforcement of storm water violations from construction activities, and most importantly, continued oversight of the implementation of storm water requirements at construction sites through the City's construction inspection programs. These program elements are further described below.

8.1 PRIORITY SOURCES

The construction list for FY 2007 was submitted to the Regional Board in October of 2006 and November 2006.

8.2 BMP REQUIREMENTS

Section 3.4, *Construction Contracts*, of the City's JURMP identifies the BMPs required for construction activities. These requirements are made enforceable through a series of regulations in the City's Municipal Code (Storm Water Management and Discharge Control Ordinance, §43.03, and Grading Regulations, §142.02), which are implemented through construction development regulations in the City's *Storm Water Standards Manual*.

In FY 2007, Storm Water Pollution Prevention Plans (SWPPPs) were required for all projects over one acre, and Water Pollution Control Plans (WPCPs) were required for all projects where a SWPPP was not required (under one acre in size), but had a potential to impact water quality during construction. To make this determination, all projects were required to complete a "Storm Water Requirements Applicability Checklist," included as Appendix A to the City's *Storm Water Standards Manual*. Where appropriate, additional site-specific construction storm water BMPs were required in SWPPPs, WPCPs, and/or construction contracts.

8.3 BMP IMPLEMENTATION

The City conducts measures to ensure compliance with the required construction BMPs and storm water regulations. The City implements a review and approval process, conducts education and outreach efforts, performs inspections and investigations, and takes enforcement actions, where appropriate. These program components are further described below.

8.3.1 Construction and Grading Approval Process

8.3.1.1 *Capital Improvement Projects*

The Engineering and Capital Projects (ECP) Department is responsible for planning, design, and construction of a majority of the City's Capital Improvement Program (CIP) projects. The remainder of the City's CIP projects are managed by the Water Department, the Metropolitan Wastewater Department, and the Park and Recreation Department. All project managers of CIP projects in these departments awarding construction contracts on or after December 10, 2002, have been required to incorporate the construction requirements set forth in the *Storm*

Water Standards Manual. These requirements must be incorporated into the project (specifications and plans) during the design and contract award phases to ensure that construction storm water issues are addressed. To assist project managers, storm water language was included in the Capital Improvements Project contract document (boilerplate) specifications along with standard drawing details. Drawings are routed internally (within the design sections) as part of a process termed "peer plan check" for a check on construction BMP measures. Revisions are made to the design when necessary and then if the CIP Project Manager chooses, routed to Storm Water Division staff for a more detailed and formal review. The drawings are simultaneously routed to the Field Engineering Division of the Engineering and Capital Projects Department for a constructability review and for evaluation of the adequacy and implementation of during-construction storm water protection plans. All ensuing comments are routed back to the project managers for revision prior to the release of the construction drawings.

8.3.1.2 *Private Projects*

The Development Services Department (DSD) is responsible for managing construction and development project review services for private development in the City of San Diego. In addition, DSD is responsible for inspecting grading and public improvement projects to ensure that the *Storm Water Standards Manual* requirements on private development projects are being implemented appropriately.

During FY 2007, DSD review staff conditioned all private projects to incorporate all necessary construction BMPs prior to the issuance of any construction permits. In addition, projects seeking construction permits were required to incorporate all construction BMPs on the plans and in the appropriate construction storm water plan (Water Pollution Control Plans were required on projects that did not require a State Construction NPDES Permit, and Storm Water Pollution Prevention Plans were required on projects subject to the State Construction NPDES Permit).

DSD issued over 800 public improvement and grading permits during FY 2007. Each of these permits had plans, which were reviewed to ensure they complied with the construction requirements found in the *Storm Water Standards Manual*. As part of the review process, DSD enforces the requirement that each development in excess of one acre submit a SWPPP and provide the Waste Discharge Identification (WDID) number.

In addition, in FY 2007, the Construction Storm Water Management Section of Field Engineering Division continued to use SWAT (Storm Water Action Team). E-mails are sent to every Resident Engineer (RE) when rain was forecasted to remind them to check the BMPs on their active sites. In addition, they continued to coordinate with the Inspection Services Division and Storm Water Pollution Prevention Division to address and enforce against activities that were not under the City's purview with the potential to discharge pollutants.

Education and Outreach

The City conducts education and outreach efforts for construction activities. For detailed information on the City's education efforts, including construction-related education, see Section 12, *Education*. A summary of the construction-related education efforts are provided below.

8.3.1.3 *Informational Material*

- The Field Engineering Division sent wet weather (approximately 195) and dry weather letters (approximately 135) to contractors with an active high priority construction project summarizing storm water requirements.

- DSD continued to make available a brochure and video entitled *Grading: Doing It Right*, which provides information about proper storm water pollution prevention practices. These resources were provided to the public and aired regularly on City TV 24. Approximately 1,000 brochures were distributed, and the video aired 30 times in FY 2007.

- The Construction Storm Water Management Section of Field Engineering Division distributed a storm water packet at all pre-construction meetings. Approximately 110 were distributed during FY 2007. These packets consisted of storm water–related information and the information was discussed with contractors during pre-construction meetings.

- DSD distributed approximately 2,000 brochures entitled "Clean Construction, A Storm Water Pollution Prevention Guide for the Construction Industry" in FY 2007 during the permitting processes.

- The Environmental Services Department developed a construction and demolition waste recycling video which is being used to assist with educating the construction industry on alternatives to landfill disposal.

8.3.1.4 *Websites*

In FY 2007, the *Think Blue* web site continued to provide information about construction activities requirements for storm water compliance within the City. The web site made available fact sheets as well as the City's JURMP. The web site also provided links for resources to assist with selecting and implementing BMPs for construction projects.

In FY 2007, DSD operated a web page devoted to construction industry professionals to provide them with online services and general information about the project review process and requirements. DSD's web page includes a guide for development—The Development Process: Step-by-Step. This online guide leads an applicant through the development process and has references to both the "Storm Water Applicability Checklist" as well as the Storm Water Standards Manual. In FY 2007 DSD created a new grading section to the website, which includes visual examples, frequently asked questions, and directs customers to the Think Blue website (http://www.sandiego.gov/development-services/industry/grading.shtml).

8.3.1.5 *Outreach Events*

To members of the construction industry the Development Services Department provided individualized training during FY 2007 regarding proper storm water pollution prevention and BMP techniques.

The Field Engineering Division of ECP continued to be an active participant in FY 2007 in educating the public at the following events: Construction Management Academy, Building Industry Association Storm Water Training Sessions, American Public Works Association (APWA) Storm Water Training, Engineering and General Contractors Association (EGCA)

Storm Water Training, and outreach events to youth and college students. There were a total of 12 storm water-related outreach events conducted by Field Engineering during FY 2007.

8.3.1.6 *Internal Training and Workshops*

The following notable construction BMP-related training sessions and workshops were held for City staff in FY 2007:

- The Water Department required supervisors and crews to attend section tailgate meetings to educate them on the implementation of BMPs during cleaning and construction; responsible material delivery and storage; and solid waste recycling management.
- Water Department staff education and training were encouraged by ongoing tailgate training for Storm Water Best Management Practices that covered the following topics: implementation of BMPs during cleaning and construction, storm water issues, responsible material delivery and storage, and solid waste recycling management. There were also 23 trainings conducted during FY 2007 that focused on Storm Water Pollution Prevention, Storm Water BMPs, Storm Water Pollution Prevention – Dams and Reservoirs, and Storm Water Pollution Prevention for Field Operations.
- At the beginning of the rainy season, a Rainy Season Reminder was mailed to all Project Managers to restate the Water Department's commitment in protecting storm drains and preventing runoff. There were also advisory e-mails sent to all project managers and construction managers in advance of predicted storm events reminding them of the need to monitor and maintain storm water BMPs, before, during and after the anticipated storm event. CIP environmental staff discussed storm water pollution prevention measures at all pre-con meetings and site inspections throughout the rainy season.
- The Land Development Review Division and the Inspection Services Division of DSD conducted individualized storm water–related staff training throughout the reporting period.
- The Field Division of ECP held activity-specific training for REs in the form of pre- and post-rainy season training sessions. As-needed training for REs was also provided based on evaluations by the Regional Board, observations of Field Supervisors, and/or sites that were not complying with storm water management requirements. Additionally, storm water quality topics were discussed in the monthly RE meeting as questions arose throughout the reporting period. There were a total of 14 training events conducted by Field Division during FY 2007. Approximately 80 employees were trained – these 80 are the staff that deal with storm water inspections.
- The Development Services Department Field Inspection Division provided training to their staff on storm water pollution prevention for construction sites.
- ESD staff conducted four trainings of its construction and project managers in the City's construction and project management academies. The training focused on promoting recycling of debris during construction, the use of recycled content product in new construction, and the handling of hazardous materials/waste and lead and asbestos.

8.4 ENFORCEMENT AND COMPLIANCE

The City takes measures to ensure that construction activities are conducted in compliance with storm water regulations. These include routine inspections, hotline complaint investigations, and enforcement actions, where necessary. These steps are described below.

8.4.1 Construction Site Inspections

Construction sites are required to be inspected based on the frequency schedule set forth in the City's JURMP. REs in the Field Engineering Division inspect BMPs associated with grading permits (private projects) and many public projects. Those public projects that are not inspected by Field Engineering are inspected by engineers in the department carrying out the project. Building Inspectors in DSD's Inspection Services Division inspect construction BMPs associated with projects performing construction under building permits.

The Field Engineering Division's Construction Storm Water Management Section, which consists of a staff of six led by a senior civil engineer, is the support group for the Field Engineering Division on storm water–related issues, development of policies and procedures, and providing internal and external training on storm water requirements. In FY 2007, the Field Engineering Division was able to maintain the Construction Storm Water Management Section with six staff members. Their tasks included assisting with inspections of construction sites for BMP implementation, providing internal and external training, coordinating with other departments and agencies, and assisting in preventing discharges of construction related pollutants into the storm water conveyance system. They continued to patrol four different areas of the City to inspect active construction sites and to document any needed adjustments. The section also pursued enforcement actions for sites that did not implement and/or maintain BMPs.

REs inspect and issue Storm Water Notices monthly in the dry season, and at least weekly in the rainy season for high priority projects. In accordance with the City's JURMP, medium and low priority projects are inspected twice during the rainy season and as needed during the dry season. The Field Engineering Division's water notice is in triplicate form: one copy is given to the contractor, one is filed with the project, and the last copy is filed in the general storm water files with the Construction Storm Water Management section. Notices are not issued for projects that do not have any potential to discharge and may be near completion (i.e., delays or closeouts). All projects were inspected based on the required frequency. If the Storm Water Notices prove to be ineffective, then Stop Work Orders are issued.

Storm water issues are initially discussed during the pre-construction meeting and construction activities are not to begin (emergency projects are exempt) prior to the contractor having a plan in place to prevent pollutants from leaving the construction site. The plan may come in the form of a SWPPP (for sites that disturb more than one acre of soil) or a WPCP.

Based on the construction inventory that was submitted in October 2006 and November 2006, there were approximately **148 high priority, 518 medium priority, and 494 low priority active construction (CIP and private) sites**. **All of these sites were inspected according to the frequencies identified in the *Storm Water Standards Manual***. Depending on the status of any given project, the Field Engineering Division is required to perform more or less frequent construction inspections. A project's priority can change from day to day. For example, a project may be going through the closeout phase in which all construction activities have been completed. For the purposes of reporting, such a project would be considered a low priority site

but would not have any storm water inspections occurring. Additionally, the priority of a construction site may change due to the activities being conducted onsite and the potential to generate pollutants that may impact water quality. Therefore, the numbers listed above are a representative approximations. As previously stated, all projects were inspected based on the required frequency. Staff members from Inspection Services Division are currently coordinating to determine the processes and procedures necessary to assign, track, and report on the priority level of each building permit issued. *As requested in comment 7 of the RWQCB comments on the City of San Diego 2005-2006 Annual Report letter (Appendix A), staff will then modify the City's Project Tracking System to enable the active tracking and scheduling of inspections (both routine ones and follow-ups) based on priority level and the rainy/dry seasons. The Development Services Department Inspection section anticipates implementing these actions under the new Municipal Permit (Order No. 2007-0001); however, in the interim inspectors will review assigned cases to ensure all projects are inspected at the required frequency.*

8.4.1.1 *Capital Improvement Projects*

The construction projects discussed below were inspected by construction management consultants.

Water Department CIP Projects

The Water Department's CIP Program prioritized construction projects and conducted inspections according to the criteria set forth in the City's JURMP. A storm water checklist is completed during inspections to ensure compliance with regulatory requirements and evaluate whether the BMPs are adequate and properly implemented or whether additional control practices are needed. In FY 2007, **8 high priority sites were inspected**. There were no medium or low priority construction sites identified.

Metropolitan Wastewater Department CIP Projects

In FY 2007, the Metropolitan Wastewater Department inspected approximately **10 high priority, 327 medium priority construction sites** within the Wastewater Collections Division, and **one high priority site** within the Engineering and Program Management Division.

8.4.1.2 *Private Projects*

The Inspection Services Division of DSD inspects building sites routinely for compliance with storm water requirements. Inspectors within the division are assigned a district and are responsible for monitoring projects in that area. Each inspector routinely monitors his/her district on a daily basis. Sites are also inspected at the request of another department or in response to complaints. The Inspection Services Division created and implemented a special correction notice that is issued when corrections pertaining to storm water pollution prevention are needed. This notice is just that: it serves to notify the contractor that improvements must be made immediately. For more egregious or repeat issues, inspectors have been trained to issue re-inspection notices, which effectively stops work on the site until the corrections are made and the site is re-inspected.

In FY 2007, 8,746 building permits were issued. All permits issued were either of medium or low priority. The Inspection Services Division conducted 11,200 inspections; however, this number includes only projects that closed out in FY 2007 and does not include projects that continued to be in progress into FY 2008. *As requested in comment 7 of the RWQCB comments on the City of San Diego 2005-2006 Annual Report letter (Appendix A), staff will then modify the City's Project Tracking System to enable the active tracking and scheduling of*

inspections (both routine ones and follow-ups) based on priority level and the rainy/dry seasons. The Development Services Department Inspection section anticipates implementing these actions under the new Municipal Permit (Order No. 2007-0001); however, in the interim inspectors will review assigned cases to ensure all projects are inspected at the required frequency.

8.4.2 Hotline Complaint Investigations

The Storm Water Division manages the Storm Water Pollution Prevention Hotline and other means of communication (e.g., website, main office line, fax) and encourages the reporting of illegal discharges to the storm water conveyance system from locations within the City, including construction areas. A total of 2,157 contacts were logged by staff, and 1,964 investigations were carried out by Code Compliance Staff (remaining contacts were requests for information). Approximately 191 investigations were conducted at construction sites in FY 2007.

8.4.3 Enforcement Actions

Departments will generally coordinate with the contractor through the RE to correct any storm water issues or potential violations. If issues are not resolved and violations occur, stop work orders are generally issued, and work is halted until the site is brought into compliance with storm water regulations. In FY 2007, stop work orders were issued by Field Engineering Division REs on three construction projects. They are listed in the following table.

Table 8-1. Stop Work Orders Issued by ECP Field Engineering Division.

Project Name	Date Issued	Date Lifted
Seabreeze at Old El Camino Real	02/21/07	02/28/07
Brittania Industrial Park	02/21/07	02/28/07
Otay Pacific	02/22/07	03/08/07

The Inspection Services Division issued 518 notices and, of that amount, 45 were charged re-inspection fees (which essentially stops work until the problem is fixed and approved during a re-inspection by the building inspector). An additional 44 projects were told to stop work except for storm water–related corrections work.

Refer to Appendix F for a table of Storm Water Division enforcement actions taken at construction sites in FY 2007.

8.4.4 Reporting of Non-Compliant Sites

Inspections or investigations where sites are determined non-compliant and pose a threat to human or environmental health are reported to the Regional Board within 24 hours of the finding. During the reporting period, there was no incident of this nature at a construction site.

8.5 FUTURE ACTIVITIES AND PROGRAM AMENDMENTS

The City will be implementing a revised Construction Program as required by the new Municipal Permit (Order No. 2007-0001), effective March 24, 2008.

9 ENFORCEMENT

9.1 LEGAL AUTHORITY

The City's Municipal Code includes Storm Water Management and Discharge Control Ordinance ("Storm Water Ordinance") (§43.03) and Storm Water Runoff and Drainage Regulations (§142.01 and §142.02), which both protect citizens and water quality by prohibiting pollutants from entering the storm water conveyance system. The Storm Water Division's Investigations and Enforcement Section enforces the City's Storm Water Ordinance and implements enforcement actions via education, Notices of Violation, the administrative civil penalties and the citation processes. The City Attorney's office takes over cases when the Storm Water Division feels that prosecution in the courts is the appropriate enforcement.

9.2 ENFORCEMENT ACTIONS

Non-compliance with storm water regulations can be detected by several means. Routine inspection of municipal, industrial, and commercial facilities is one method of detection. Others include code compliance officers on patrol, referrals from other agencies and City departments, and hotline calls. Enforcement actions consist of issuances of notices of violation (NOVs), citations, and civil penalties. In more severe instances, cases are referred to the Consumer and Environmental Protection Unit of the City Attorney's Office for prosecution. The standard procedure for enforcing the storm water ordinance by means of these mechanisms was described in Section 1.3, *Enforcement of Storm Water Ordinance*, in the City's JURMP. Table 9-1 identifies the number of enforcement actions taken during the reporting period.

Table 9-1. FY 2007 Enforcement Actions.

Enforcement Action Taken	Number Issued In FY 07
Notice of Violation	**880**
Administrative Citation	**456**
Civil Penalty	**157**
Prosecution	**0**

9.3 FINDINGS

In FY 2007, the City's Storm Water Code Compliance Officers completed 1,964 investigations. Investigations are tracked by substance discharged. Categories include: Construction Waste (i.e., cement-like material), Wash Water, Petroleum Hydrocarbons (i.e., transmission fluid, oil, gasoline), Sewage, Sediment, Effluent on ground (i.e., pool water, water, ground water), Latex Paint, Waste Water, and Other (i.e., grease, chemicals, trash, green waste, hazardous substance). Figure 9-1 shows the FY 2007 investigations by discharge type.

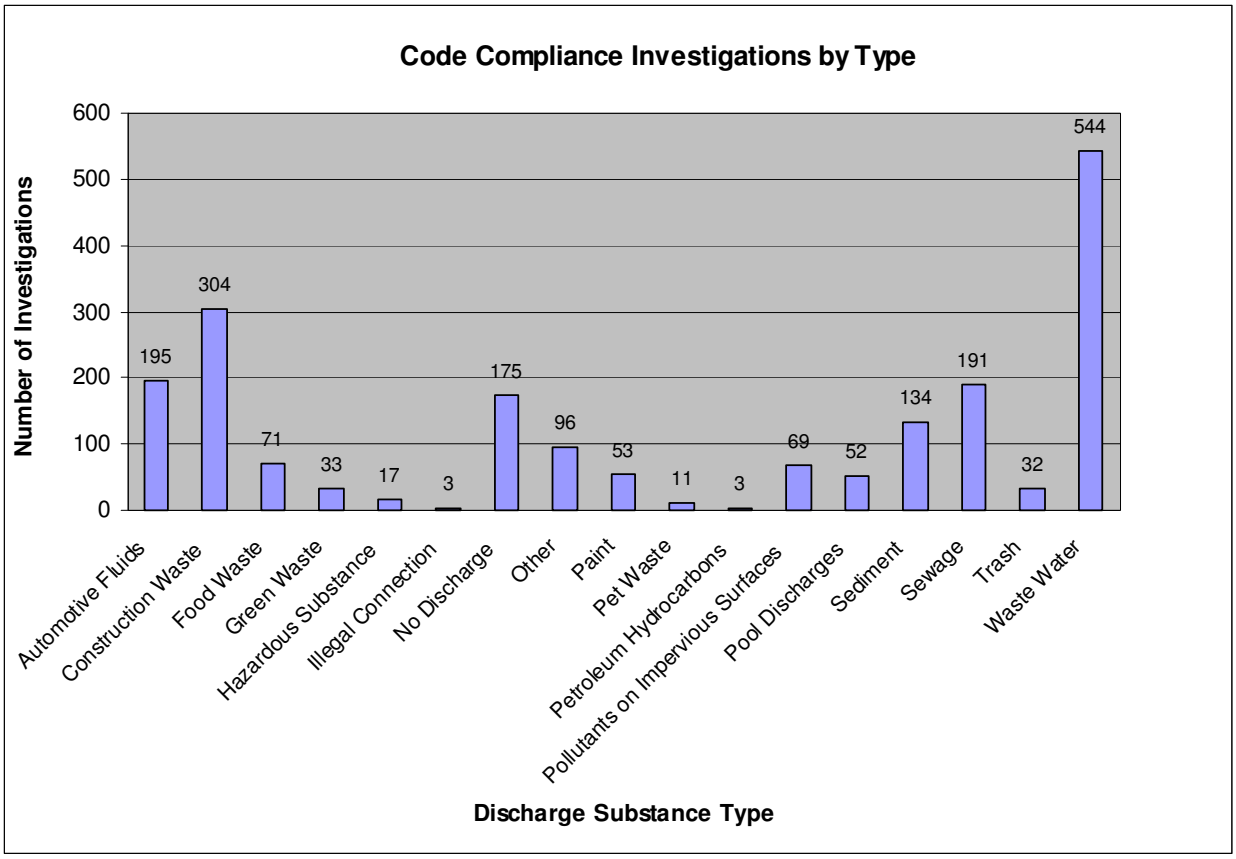

Figure 9-1. FY 2007 Investigations by Discharge Substance Type.

As a result of the City's investigations, 880 NOVs, 456 Administrative Citations, and 157 Civil Penalties were issued. During the reporting period, total penalties assessed were $146,895.36 through Civil Penalties and $45,700.00 through Administrative Citations, which averages to $1,465.34 per Civil Penalty assessed and $104.82 per Administrative Citation assessed.

9.4 FUTURE ACTIVITIES

The City will be implementing a revised Enforcement Program as required by the new Municipal Permit (Order No. 2007-0001), effective March 24, 2008. Furthermore, the Investigations and Enforcements Section has initiated the process to develop a division-wide database to further facilitate the tracking and analysis of investigations and enforcement actions. A beta version of the database is anticipated in the summer 2008. The Storm Water Division will continue to focus on refining and enhancing its enforcement database in response to Order 2007-0001 and in coordination with the other Copermittees to incorporate regional effectiveness assessment standards for cross-jurisdictional and cross-programmatic (e.g., JURMP, WURMP, and RURMP) analyses.

10 MONITORING

The City continued to implement the Monitoring Programs as identified in Section 1.4, *Water Quality Monitoring*, of the City's Urban Runoff Management Plan. The Storm Water Division either independently, or with other agencies and organizations, conducted numerous water quality monitoring studies in the San Diego region. A summary of the accomplishments in each of the monitoring programs (ongoing or completed) for FY 2007 is provided below. Findings and conclusions for the following programs (with the exception of the Toxic Hot Spots Monitoring in San Diego Bay) can be found in the *San Diego County Municipal Copermittees 2006–2007 Urban Runoff Monitoring Report* ("Monitoring Report").

10.1 DRY WEATHER MONITORING

Section 11, Illicit Discharge Detection and Elimination, of this Annual Report discusses the progress and findings made regarding the City's Dry Weather Monitoring Program in FY 2007.

10.2 URBAN STREAM BIOASSESSMENT MONITORING

To assess the ecological health of watersheds, the Copermittees hired a contractor to collect and analyze benthic macroinvertebrate samples at numerous locations throughout each watershed in FY 2007. Some of the sampling locations were located near mass loading stations so that a triad data review could be conducted. The Monitoring Report contains information and findings from sampling events conducted at a minimum of 20 reaches and three reference stations during the months of October 2006 and May 2007.

10.3 LONG-TERM MASS LOADING MONITORING

To assess the chemical characteristics of storm water urban runoff and the ability of storm runoff to support life, the Copermittees hired a contractor to collect flow weighted composite water samples and conduct chemical and toxicological analysis on samples from 10 locations in San Diego County. The mass loading stations were located near river mouths so that the water samples collected were most representative of the upstream watershed areas.

10.4 COASTAL STORM DRAIN OUTFALL MONITORING

The Coastal Storm Drain Monitoring Program is designed to identify illicit discharges into the storm water conveyance system, monitor the bacteria concentrations in receiving waters near storm drain outlets, and determine if urban runoff is negatively affecting recreational uses. The Storm Water Division coordinated through a regional monitoring work group attended by the County of San Diego Beach and Bay Monitoring staff, Copermittees in coastal areas, and consultants. During the period between November 2006 and October 2007, the City monitored 12 high-priority drains along the coast and five high-priority drains in Los Peñasquitos Lagoon on a monthly basis from November to March and on a semi-monthly basis from April to October. The City confirms that there were 357 site visits undertaken during this reporting period. At four Los Peñasquitos Lagoon sites, dual samples were unobtainable due to restrictions to entering sensitive habitats.

During winter 2006 and into spring 2007, the monitoring staff performed a coastal inventory. There are 92 known municipal storm drains that discharge to the San Diego City coastline (not including Mission Bay). The 12 priority storm drains monitored are drains that capture large drainage areas. The inventory is designed to:

- Identify each known outlet on the existing inventory; record information such as flow condition and accessibility points; and verify GPS coordinates and photographs.
- Identify and add new drains not present in the existing inventory and adding information as listed above.
- Update resource binders, paper maps, GPS database, and GIS files.

In response to Comment 8 of the RWQCB City of San Diego FY 2006 Annual Report Comment letter (Appendix A), starting in January 2008 the City will monitor all of the coastal storm drains that are safe and accessible both at the outlet and at the receiving waters. Details of this program can be found in the City's updated JURMP that will be submitted to the RWQCB in response to Order 2007-0001.

A more detailed and comprehensive report on coastal storm drain outfall monitoring can also be found as an attachment to the Unified Urban Runoff Monitoring Final Report submittal from the principal Copermittee, which represents a collaborative effort among members of the coastal monitoring workgroup. The coastal Copermittees have coordinated a comprehensive review of all monitoring data collected to determine trends, establish descriptive statistics of monitoring results, and provide information for further program evaluation and improvement.

10.5 TOXIC HOT SPOTS MONITORING IN SAN DIEGO BAY

The monitoring of San Diego Bay, formerly known as the California Bay Protection and Toxic Cleanup Program, was implemented for 10 years and identified five San Diego Bay locations that had sediment contamination causing toxicity to marine life and benthic community impairments. The California Bay Protection and Toxic Cleanup Program's goals and tasks were realigned and incorporated into the Regional Board's Pollutant Load Reduction Program. Currently, three of these areas of concern are being implemented under two TMDLs and a Cleanup and Abatement Order. For additional information on specific projects see the San Diego Bay Watershed Urban Runoff Management Program Annual Report.

11 ILLICIT DISCHARGE DETECTION AND ELIMINATION

The City has developed and implemented an aggressive program to detect and eliminate illicit discharges. The program consists of monitoring efforts, referrals and complaint investigations, MS4 and wastewater collection system inspection and maintenance, spill response and reporting, education efforts, enforcement actions, and hazardous waste collection. This program is detailed below.

11.1 DETECTION OF ILLICIT DISCHARGES AND CONNECTIONS

Detection of illicit discharges and connections is accomplished through a number of activities, including the Dry Weather Monitoring Program, MS4 inspection, Sanitary Sewer Canyon Program, hotline calls, and referrals from other sources. During the reporting period, staff conducted 69 investigations, as described below.

11.1.1 Monitoring for Illicit Discharges

The City's Dry Weather Monitoring Program (DWM) is designed specifically to detect and eliminate illicit connections and illegal discharges to the storm water conveyance system using frequent, geographically widespread dry weather discharge monitoring and follow-up investigations. All of the 302 DWM sites are located at storm drain outlets, manholes, or storm water catch basins. Information gathered from each monitoring site is recorded on a standard DWM Field Sheet. A total of 142 monitoring sites were visited prior to the start of the FY 2007 reporting period and are included in this report for consistency with past reports.

The City confirms the completion of required observations, field screening, and analytical monitoring of 300 of the 302 dry weather sites. A summary of monitoring activities is presented in Table 11-1. *As requested in comment 9 of the RWQCB comments on the City of San Diego 2005-2006 Annual Report letter (Appendix A), all follow up investigations will occur in compliance with the 2007 Municipal Permit, that is, within two business days of receiving the dry weather sample test results that exceed actions levels. The City will either conduct an investigation to identify the source of the discharge or provide rationale for why the discharge does not pose a threat to water quality and does not need further investigation.*

Table 11-1: Summary of 2006 Dry Weather Monitoring

Number	Monitoring Activity
302	Planned dry weather sites
2	Sites monitored- data sheets not located
300	Confirmed actual dry weather sites monitored
244	Sites with flowing or ponded water
56	Sites with no flowing or ponded water
140	Sites exceeding one or more action level
256	Total number of exceedances
240	Follow-ups that were dry, re-sampled within acceptable limits, or eliminated using Best Professional Judgement (BPJ)
16	Total number of exceedances requiring extensive investigation
12	Total number of sites requiring extensive investigation
12	Total number of investigations conducted

(1) Best Professional Judgment: Monitoring staff take into account weather conditions, storm drain structure, sample collection technique, possibility of groundwater or tidal intrusion, soil composition, and other pertinent factors.

11.1.1.1 *Dry Weather Monitoring Investigation Results*

Table 11-2 presents a brief summary of investigation results. Data from the 2006 Dry Weather Monitoring season are located in Appendix E.

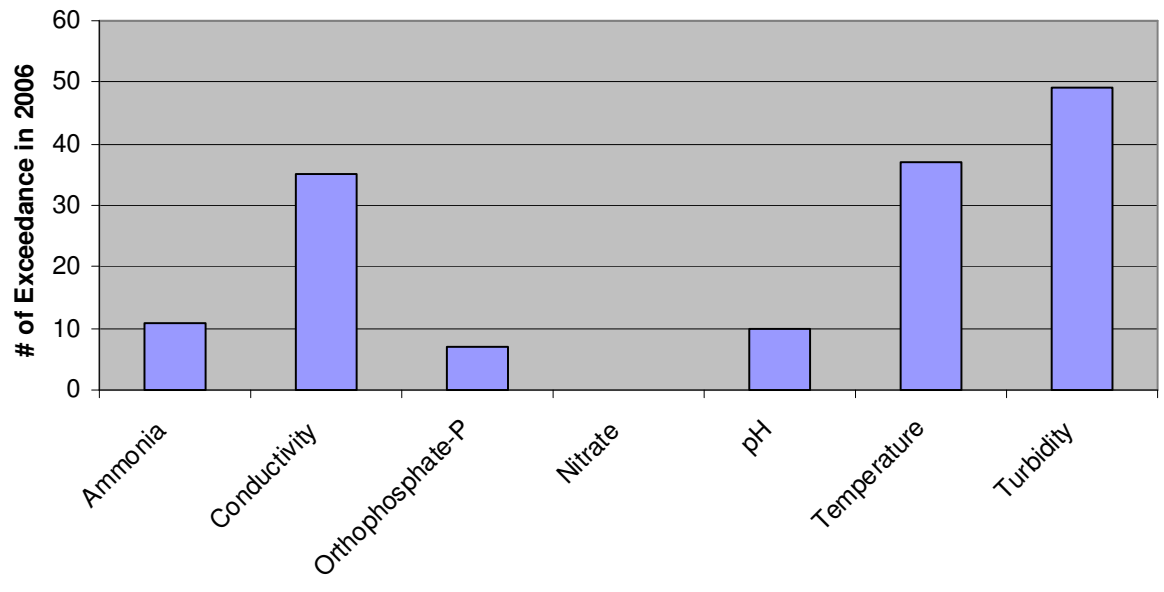
Table 11-2: Summary of Dry Weather Sites Requiring Follow-Up Investigations

Site ID	Routine Sample Date	Resample Date	Source/Result	Action Taken
DW021	8/14/06	11/20/06 & 12/14/06	Sediment in Storm Drain	Referred to Street Division for cleaning
DW064	5/11/06	11/6/06	Illicit Discharge	Education Materials Distributed in 2006, Administrative Citation and NOV Issued in 2007
DW120	5/10//06	8/22/06 & 11/21/06	Sediment in Storm Drain	Referred to Street Division for cleaning
DW123	7/17/06	11/15/06	Sediment in Storm Drain	Referred to Street Division for cleaning
DW133	6/26/06	11/20/06	Sediment in Storm Drain	Referred to Street Division for cleaning
DW183	6/20/06	11/13/06	Sediment in Storm Drain	Referred to Street Division for cleaning
DW188	6/20/06	11/15/06 & 11/21/06	Sediment in Storm Drain	Referred to Street Division for cleaning
DW190	6/20/06	11/15/06	Sediment in Storm Drain	Referred to Street Division for cleaning
DW213	6/26/06	9/22/06 & 11/13/06	Standing Water and Sediment in Storm Drain	Referred to Street Division for cleaning
DW238	9/20/06	6/20/07	Illicit Discharge	Education Materials Distributed, NOV Issued, Civil Penalties to be assessed

Site ID	Routine Sample Date	Resample Date	Source/Result	Action Taken
DW284	8/8/06	11/13/06	Sediment in Storm Drain	Referred to Street Division for cleaning
DW303	5/9/06	11/13/06 & 9/17/07	Ongoing	The investigation is still ongoing due to difficulty in accessing welded manholes and will be reported in the FY 2008 JURMP Annual Report. The manholes were welded shut for security purposes.

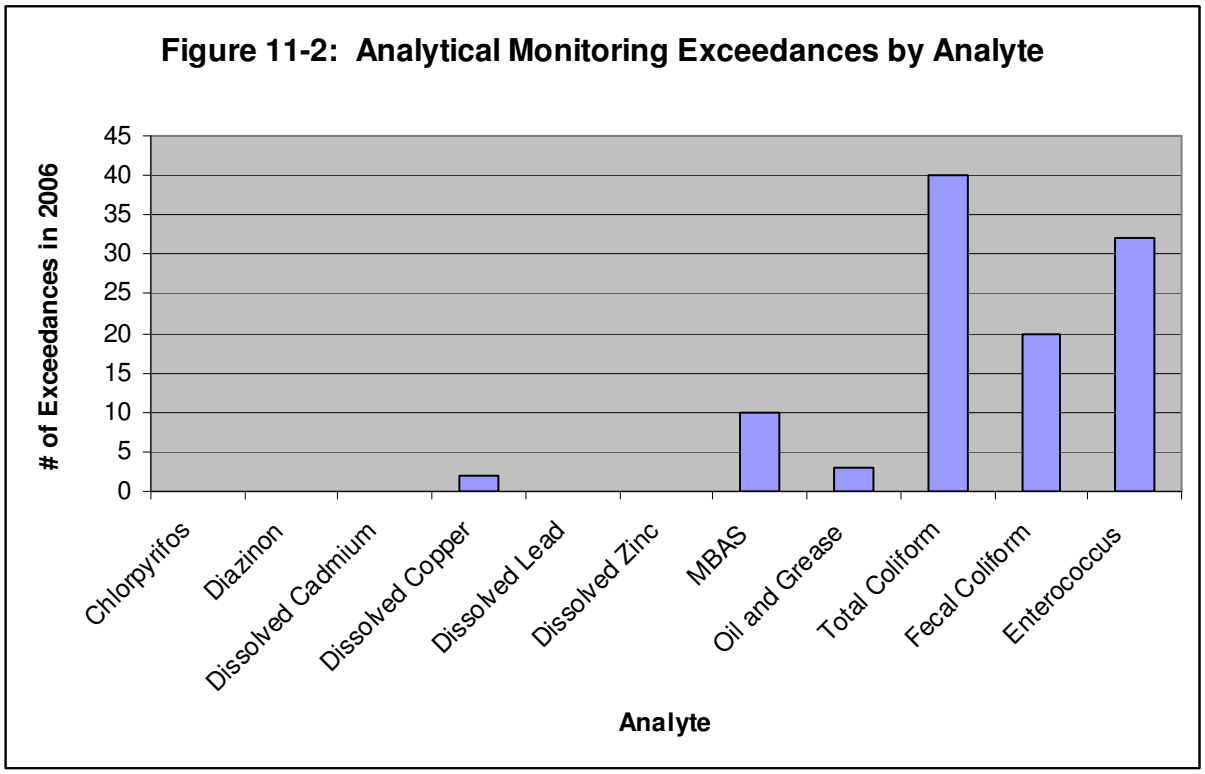
The field screening analytes that most frequently exceeded action levels were temperature, conductivity, and turbidity (Figure 11-1). Many of the sites with exceedances were found to be dry on a revisit, or were resampled and were below action levels. Many others, especially conductivity exceedances, were resolved using Best Professional Judgement. Only 2 of the 149 field screening exceedances required further upstream investigation. The field screening exceedances that required investigations were for a site with an orthophosphate-P exceedance and ammonia exceedance. An investigation was conducted at the site and resulted in the detection and elimination of an illegal discharge.

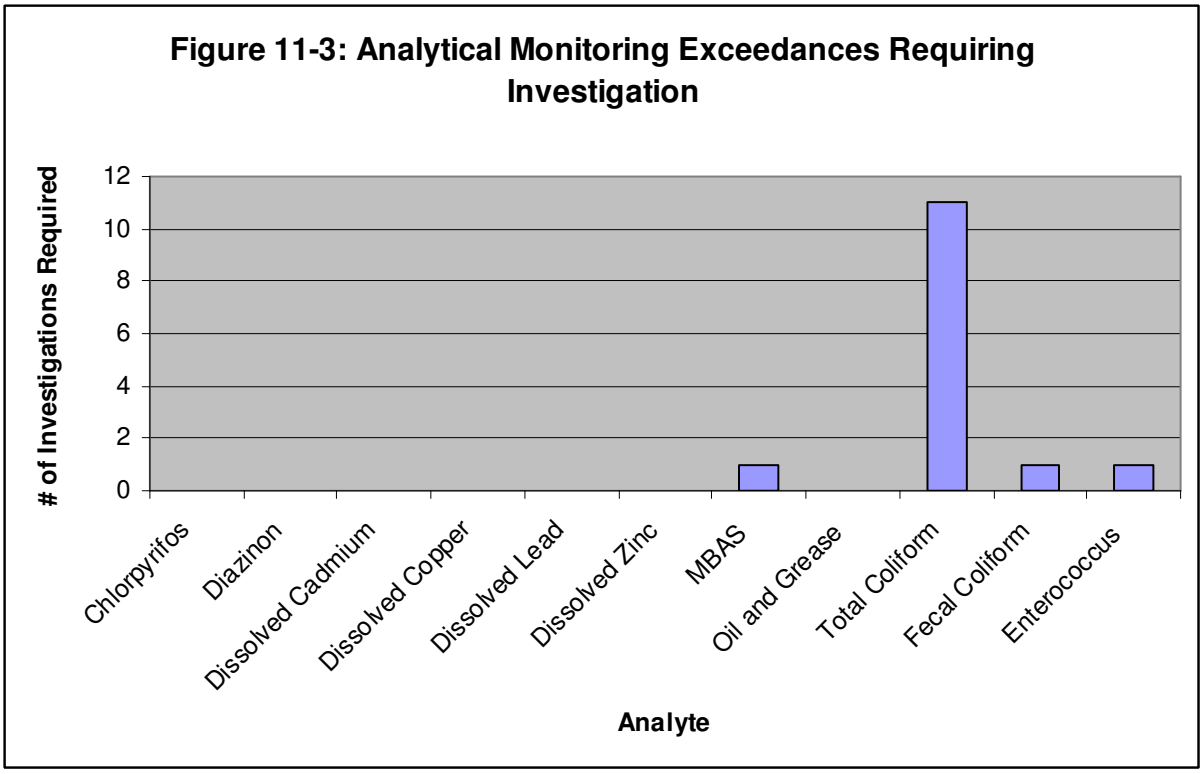
Figure 11-1: Field Screening Exceedances by Analyte



The analytical constituents that most frequently exceeded action levels were Total Coliform, Fecal Coliform, and *Enterococcus*. Many of these exceedances were resampled and were below action levels. Of the sites requiring investigation, Total Coliform was the most common exceedance. Upstream investigations of these exceedances were for the most part unproductive, except to note the prevalence of sediment and debris accumulation in the storm

drain system. Where no specific source was identified, the site was referred to the City of San Diego Street Division for cleaning. See Figures 11-2 and 11-3 below.





1.1.1.2 Non-Dry Weather Monitoring Related Investigation Results

The prescriptive monitoring requirements and associated follow-up investigations are not the only source of investigations. Monitoring staff routinely walk canyons and newly developed communities looking for hidden or new drains, drains plumbed over hillsides, and illegal discharges. In addition, monitoring staff responded to citizen and city employee referrals where complicated conditions exist and/or multiple sources make identifying a responsible party difficult. Once a responsible party is identified, the information is referred to a Code Compliance Officer for enforcement, including follow-up visits to ensure elimination of the discharge.

In FY 2007, the monitoring staff investigated 56 alleged discharges as a result of these referrals or observations, which resulted in 38 Enforcement Actions. See Table 11-3 for a summary of non-routine illicit discharge investigations. Refer to Appendix E for field data sheets and investigation information.

Table 11-3: Summary of Investigations Not Related to Dry Weather Monitoring

Number	Action
11	No Evidence of Violation
11	Investigations resulting in Notice of Violation issued to discharger
17	Investigations resulting in Administrative Citation issued to discharger
10	Investigations resulting only in distribution of educational material
5	No responsible party identified for discharge
2	Cases referred to other departments

11.1.2 MS4 Inspection

The Street Division is responsible for the routine inspection and maintenance of the City's MS4 and surrounding areas. If illicit discharges are detected while performing inspections or other field activities, the Street Division is instructed to contact the Storm Water Division for investigation.

11.1.3 Sanitary Sewer Canyon Program

The urban canyons of San Diego pose a unique challenge to the Metropolitan Wastewater Department (MWWD). If a sewer spill occurs in a canyon, it could go undetected. With approximately 250 miles of sewer lines located in the City's canyons and other non-right of way areas, MWWD has taken aggressive measures through the implementation of the multifaceted Canyon Program to reduce the possibility of a canyon sewer spill and to increase the chances that such a spill will be detected and reported quickly.

The Program included the televising of over 1,338 miles of the oldest and most problematic sewer lines in the system between 2001 and 2004, as measures to monitor the condition of sewer lines. Televising sewer lines has been an invaluable way of assessing the condition of a sewer line in real time. It can reveal blockages from debris to roots to grease; show cracks, breaks or deterioration of a pipe. In FY 2007, **103 miles** of sewer line were televised.

Physical inspection of canyons is another way to prevent sewer spills in the region's urban canyons. After every significant rainfall, MWWD's Wastewater Collection Division crews hike through portions of "critical canyons" (i.e., canyons where a sewer spill could easily end up in a river, bay or the ocean) to inspect the sewer lines and manholes. MWWD has also partnered with the San Diego Police Department to utilize police helicopters to patrol canyon areas after

significant rains. Similarly, the Department uses its Volunteer Canyon Watchers to report any indications of real or potential canyon sewer spills observed during recreational hikes through our urban canyons.

11.1.4 Hotline Calls/Referrals

The Storm Water Division operates the City's Storm Water Pollution Prevention Hotline and other means of communication (e.g., website, main office line, fax) and encourages the reporting of illegal discharges to the storm water conveyance system detected within the City. The Storm Water Division uses several strategies to capture citizen attention and impart the importance of recognizing and reporting illicit discharges and connections through television and radio programming, the *Think Blue* website, and educational fliers, handouts, flying discs, pencils, dustpans, etc. In FY 2007, a total of 2,157 contacts were logged by staff, and 1,964 investigations were carried out by Code Compliance Officers (remaining calls were requests for information).

The MWWD operates and advertises a sewer spill hotline for the reporting of sewer spills 24 hours a day, seven days a week. MWWD crews are also on call 24 hours a day, seven days a week to respond to the calls.

11.2 ELIMINATION OF ILLICIT DISCHARGES AND CONNECTIONS

Elimination of illicit discharges and connections is accomplished by implementing measures, such as education and outreach programs designed to maintain facilities and promptly respond to and capture spills and enforcement.

11.2.1 Education

The Storm Water Division educates residents and businesses through numerous education and outreach mechanisms. Educational materials, such as flyers, door hangers, and fact sheets, are distributed during events or by Code Compliance Officers while out in the field. The materials promote preventing illicit discharges through implementation of BMPs. The BMPs relate to the three *C*'s (i.e., control, contain, and capture), which is one key component of the storm water pollution prevention message. The City also disseminates information on the *Think Blue* website, through Public Service Announcements, community events, and workshops.

11.2.2 Complaint/Referral Investigations

Storm Water Division staff also conducts investigations of potential polluted discharges based on hotline complaints and referrals from other sources, such as other departments, agencies, etc. During FY 2007, the Storm Water Division's Monitoring Section initiated 56 IC/ID investigations from other referrals.

11.2.3 Spill Prevention and Response

The City implements spill prevention measures to eliminate and reduce the occurrence of spills and ensure that spills that do occur can promptly be contained and properly cleaned up. More detailed information about BMPs implemented during the reporting period is located in each department's FY 2007 *Activity Reporting Form* provided in Appendix B.

In addition to conducting spill prevention measures for municipal activities, the City also implements an aggressive program to educate the public and provide citizens and businesses with information needed to prevent, address, and report spills.

11.2.3.1 *Sanitary Sewer Overflow Prevention and Response*

MWWD continues to implement the measures of the Sanitary Sewer Overflow Prevention Plan and the Sewer Overflow Response Plan, to prevent and contain spills, leaks, and overflows from sanitary sewer pipe, and pump stations in the City. A copy of these plans can be obtained by calling the MWWD Collections Division at (858) 292-6484. Figure 11-5 shows the number of sewage spills each calendar year, as reported by MWWD. Although root intrusions caused a slight increase in the number of spills in FY 2007 compared to FY 2006, it is assumed that the reduction in sewer spills throughout the years has resulted in reductions to the amount of sewage discharged into the region's waterbodies and that discharge quality has improved.

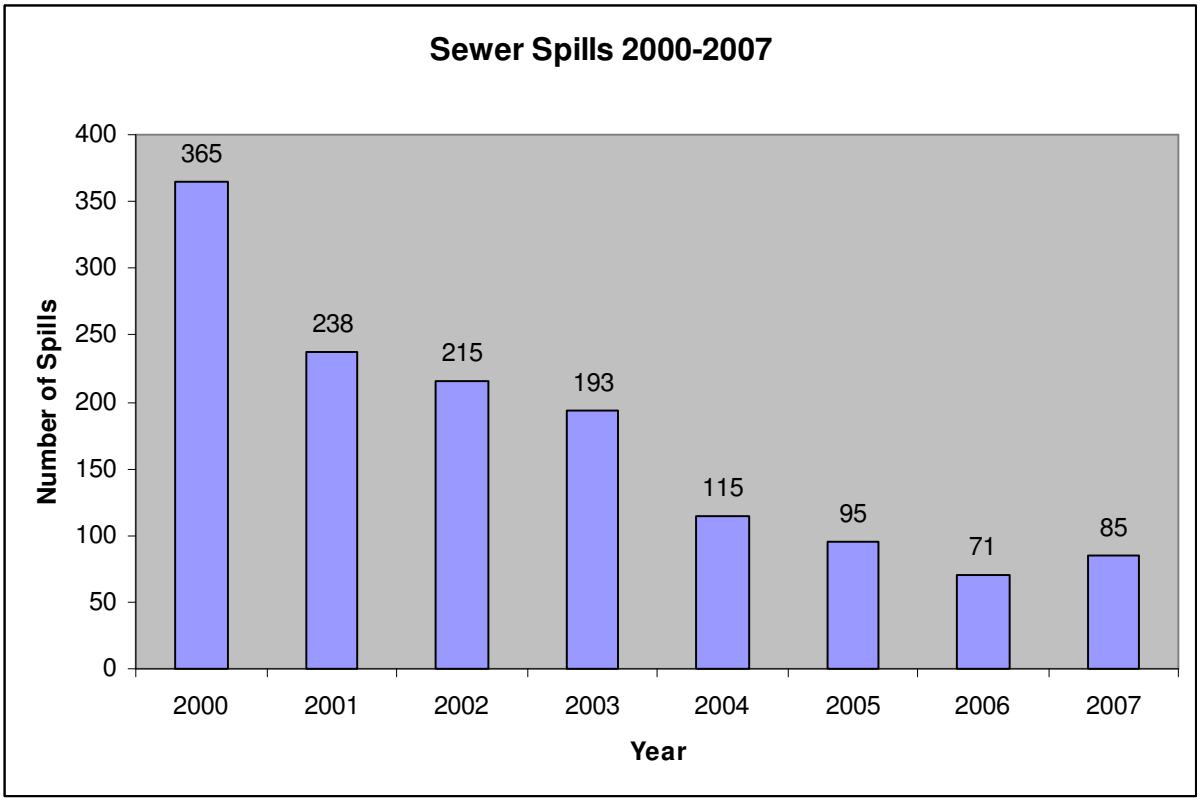


Figure 11-5. Sewer Spills by Year, 2000–2007.

The following actions are implemented to the maximum extent practicable to identify and resolve blockages and overflows and prevent seepage from the sanitary sewer to the City's MS4:

- Note the condition of sanitary sewer structures during routine maintenance and inspection, and identify areas that need repair or maintenance.
- Document suggestions and requests for repair and report the information to the appropriate manager or supervisor.
- Prioritize repairs based on the nature and severity of the problem.
- Televise sewer mains to determine their structural integrity and condition.
- Monitor the sewer infrastructure for capacity limitation.
- Patrol canyons where infrastructure exists that may be subject to damage after significant rain events.

- Implement a Capital Improvement Program that is prioritized based on need for a period of up to 10 years.
- Minimize the impact of sewage spills by using established procedures designed to protect water quality.
- Minimize the impact of sewer spills due to construction activities; all sewer contract documents include language requiring the contractor to submit a sewer spill prevention response plan.
- Utilize GPS notebooks to reduce error in logging information and requesting maintenance.
- Utilize new all surface access vehicles to maintain access to manholes while minimize habitat disturbance.

In addition to a number of the procedures listed above, other measures are taken to prevent seepage from the wastewater collection system to the City's MS4. Seepage can occur in areas where the infrastructure for the two systems is in close proximity. As part of this effort, field staff are trained to recognize suspected seepage from the sewer system to the MS4. MWWD also ensures compliance with the County Health Department's minimum requirement for the acceptable separation between the newly installed sewer pipelines and the MS4.

MWWD response crews are on call 24 hours a day, seven days a week to respond to, clean up, and repair sewer leaks and spills. Once notified, crews are mobilized and dispatched to the site to capture and contain spills and prevent further discharge. Vactor trucks are generally used to collect the spill. Additional methods may be used, as necessary to properly clean the spill and any debris or litter that was mobilized as a result of the spill. Depending on the location of the spill, it may be diverted to the sewer system by the low flow diversion system if it has already reached the City's MS4.

11.2.3.2 *Grease Disposal Program*

MWWD continues to implement the Grease Disposal Program to prevent sewer line blockages and resulting spills caused by the disposal of grease into the sewer system. The program aims to educate residents and business on the proper disposal alternatives for fats, oils, and grease. This program is described in greater detail in Section 6.3.3, *Grease Disposal Program*.

11.2.3.3 *24-Hour Reporting of Spills*

In FY 2002, the City developed a 24-hour discharge reporting form, disseminating a copy of the form to applicable departments with instructions on what discharges should be reported to the Regional Board. In addition, MWWD has developed and continues to use a standard sewer overflow form to promptly notify city departments and resource agencies about the date, time, magnitude, location, and receiving water (if applicable) of sewer discharges.

During the reporting period, MWWD responded to and reported spills that either discharged to, or had the potential to discharge to, the City's MS4 or directly to receiving waters. Significant spills were reported to the Regional Board following the 24-hour criteria. Appendix G provides a list with associated information (time, date, location, actions taken to correct the problem, etc.), of the incidents reported in FY 2007 that reached receiving waters or the City's MS4.

The Water Department reports all significant discharges to the Regional Board under the Hydrostatic Test and Potable Water Discharge Permit (R9-2002-0020) issued by the San Diego Regional Board in August of 2002. There were no other reports of significant spills during the reporting period.

11.2.4 Enforcement

The City implements education efforts as well as enforcement measures to eliminate illicit discharges and connections. Mechanisms that are available in order to ensure compliance with storm water regulations include distribution of educational materials, issuances of notices of violation, administrative citations, and civil penalties. In more severe instances, cases are referred to the Consumer and Environmental Protection Unit of the City Attorney's Office for prosecution. The standard procedure for enforcing the storm water ordinance by means of these mechanisms was described in Section 1.3, *Enforcement of Storm Water Ordinance* in the City's JURMP. *In response to Regional Board comment 10 in Appendix A, in FY 2007 all illicit discharges and connections were eliminated except for DW303 (see Table 11-2) which required futher investigation into FY 2008 and will be reported on in the next Annual Report.*

11.3 FACILITATE DISPOSAL OF HAZARDOUS MATERIALS

11.3.1 Collection Facilities and Events

The Environmental Services Department (ESD) operates the Household Hazardous Waste (HHW) Program for the City and is responsible for the investigation, maintenance, collection and remediation of hazardous substances including household hazardous waste from facilities, residents, vacant land and other City departments. The collection program consists of a permanent HHW facility, auto product recycling events, door-to-door collection, and a load check point at the Miramar Landfill. Refer to Table 3-3 of Section 3.3.1.2, *Municipal Separate Storm Sewer System*, for amounts of HHW collected in FY 2007 and to ESD's FY 2007 *Annual Reporting Form* in Appendix B for details on the events and activities conducted to facilitate the disposal of HHW.

11.3.2 Education

ESD conducts educational outreach programs for City residents and staff and promotes prudent purchase, use, and disposal of household hazardous waste through media announcements and distribution of educational materials. These programs designed and implemented through the Environmental Protection Division are vital to the diversion of dangerous or contaminated substances from the City's land and waterways.

The Storm Water Division conducts extensive education and outreach to San Diego residents and businesses to communicate the importance of proper disposal of hazardous materials and reporting of illicit discharges. These education and outreach efforts consist of distribution of informative materials, creating and running public service announcements on television and radio, and posting information on the *Think Blue* and Storm Water Division websites.

11.4 FUTURE ACTIVITIES AND PROGRAM AMENDMENTS

The City will be implementing a revised Illicit Discharge Detection and Elimination Program as required by the new Municipal Permit (Order No. 2007-0001), effective March 24, 2008.

12 EDUCATION

The City's storm water education campaign for both the external and internal audiences is managed by the Storm Water Division of the General Services Department. The *Think Blue* campaign is a multi-faceted effort that encompasses public outreach and storm water pollution prevention advocacy, media advertising, and employee training. Section 12.1.4 below discusses the Storm Water Division's *Think Blue* campaign. Other departments also create specific materials for their staff or customer use in protecting San Diego's water quality. Information on each City department's or division's education, outreach, and training efforts can be found in the FY 2007 *Activity Reporting Forms* in Appendix B.

12.1 STORM WATER DIVISION TRAINING OF MUNICIPAL EMPLOYEES

Training was provided to municipal employees via two avenues: training developed and given by Storm Water Division staff either in general storm water training or activity-specific storm water training formats; and department-developed and -provided activity-specific storm water training described in Section 2, *Municipal*.

12.1.1 General Storm Water Training

During FY 2007, the City's New Employee Orientation sessions were held every month. All new City employees were trained in *Storm Water and You,* general storm water pollution prevention awareness. Departments performed general or activity-specific storm water training for appropriate staff, as needed.

12.1.2 Activity-Specific Storm Water Training

In FY 2007, the Storm Water Division's *Think Blue* training staff conducted two activity-specific trainings of targeted City staff. The two training sessions, "Storm Water – Your Role and Responsibility", targeting Development Services Department inspectors, were held on February 26, 2007 and May 17, 2007. Please see Section 3, *Municipal*, for additional training that was conducted by individual departments, as well as the number of employees trained.

12.1.3 Storm Water Division External Education and Outreach

In 1998, the City, with the assistance of the Unified Port of San Diego, Caltrans District 11, and the County of San Diego, funded *Think Blue*, a bilingual regional education, outreach, and media campaign. The goals of the campaign are to: raise awareness of urban runoff as a major cause of beach, bay, watershed, and recreational water pollution; and change the polluting behaviors of residents and businesses.

12.1.4 Think Blue Campaign — FY 2007

12.1.4.1 Goals and Challenges

The City's Storm Water Division goals for its FY 2007 public information campaign were the same as those with which the campaign started. These goals were as follows:

- Increase awareness that storm water flows to water bodies untreated
- Change behaviors from those that pollute water bodies to those that do not
- Increase awareness of the *Think Blue* slogan.

The conclusion of FY 2007 on June 30, 2007, was also that of the seventh year of the *Think Blue* Media, Education and Public Advocacy Campaign.

12.1.4.2 2007 San Diego Storm Water Survey

The City of San Diego Storm Water Pollution Prevention Division conducted a telephone survey of adult residents in the City of San Diego between January 31 and February 7, 2007. The purposes of the survey included:

- To explore attitudes about storm water pollution;
- To explore barriers to behavioral change that might reduce storm water pollution;
- To assess different potential motivations for change including those that address barriers; and
- To provide information that can be used in formulating a community based social marketing program.

As part of the survey 800 interviews were conducted with adult residents using a random-digit dial methodology, in which a random list of all active residential telephone numbers served as the sample. The margin of error for citywide results is plus or minus 3.4% at a 95% confidence level. Results were weighted slightly by age and ethnicity to match U.S. Census data. Interviews were conducted in both English and Spanish.

A few questions in this survey were asked in similar studies conducted in previous years. Where appropriate, the results were compared from this survey with those from previous studies. The report presents results broken out by subgroups of adult residents (e.g., by men versus women or by zip code) only if the differences are both statistically significant using standard significance testing, and are of relevance. Where statistically significant and relevant, the results are broken out by watershed.

The survey results show deep interest in and concern about storm water pollution among San Diego residents. More than three of four say that pollution of the ocean, bay, and beaches is a very important issues facing the city, matching concern about the quality of public schools.

The survey also showed that most residents indicate a willingness to take actions to help prevent storm water pollution, especially keeping trash and recycling bins covered to prevent litter, recycling used motor oil, washing paint brushes properly, sweeping rather than hosing down sidewalks, picking up litter and trash, and fixing sprinklers. Between 61% and 85% of residents rated their willingness to take these actions as a 10 on a 1 to 10 scale.

It was also found that about 45% of residents indicate strong interest in learning more about what they can do to reduce storm water pollution and beach closures due to pollution, and to reduce litter and pollution in their neighborhoods. However, residents are not that well informed about how the storm drain system works. Only 9% knew they lived in a watershed and fewer than half (46%) knew that storm drain water is not treated. For comparison, a similar question asked in 2005 in San Bernardino County found that only 19% knew storm water was not treated, but in 2003, 57% in the City of Santa Barbara knew that storm water was not treated. Overall 91% were familiar with the term “storm drain”.

Just over half (55%) of residents say they saw or heard something in 2006 about ways to prevent pollution of storm drains, but only 36% said they heard anything specifically about steps the City is taking to prevent storm drain pollution. 46% percent say they have heard the slogan “Think Blue San Diego”. The survey does include some possible evidence of the successful impact of past Think Blue activities: 53% of those who said they had heard about the Think

Blue campaign knew that storm water is not treated, compared to 40% who had not heard about Think Blue.

The key barriers to participation in preventing storm water pollution appear to be lack of information and perceived lack of time, along with people saying they don't go to the beach so the pollution does not affect them. One interesting barrier to proper disposal of used motor oil is lack of a suitable container for transporting it to a recycling facility.

The survey showed that the most powerful motivations for taking action to reduce storm water pollution are to protect the health of people using the ocean, to protect the marine environment, to protect the legacy we leave behind for our children, and to connect with our neighbors.

The survey's final report with detailed results can be found on the City's website (www.sandiego.gov/thinkblue/pdf/2007ressurveyfinalreport.pdf.

12.1.4.3 FY 2007 Media Purchase and PSA Airtime

During FY 2007 the City aired PSAs on both local radio and television stations reaching the English- and Spanish-speaking communities. The City contracted for $1,280,000 in paid television and radio advertising and the advertising partners provided $52,450 of in-kind contributions. Leveraged in-kind airings are provided when time is available in the advertiser's inventory, which is not equal through 12 months. Additionally as part of the media buy, Think Blue received an estimated $48,230 of in-kind contributions through sponsored special events as well as free placement on media websites and free outdoor advertising.

PSAs that aired in FY 2007 are summarized in Table 12-1 below and can be found on the City's Think Blue website (http://www.sandiego.gov/thinkblue/videos/index.shtml). The television and radio PSAs aired a total of 7,269 times and made approximately 18,546,166 impressions.

Table 12-1 – FY 2007 Public Service Announcements

PSA	Media	Language
Roads to Beaches	Television and Radio	English and Spanish
Fowl Water	Television and Radio	English and Spanish
Water Babies	Television and Radio	English and Spanish
Photo Mosaic	Television	English and Spanish
Don't Trash Our Future	Television and Radio	English and Spanish
Ants in Your Plants	Television	English and Spanish
Chollas Creek – Flying	Television	English
Chollas Creek - Urban	Television	English

12.1.5 Print Media

In FY 2007, the City utilized billboards and transit shelters to promote Think Blue and storm Water pollution prevention awareness. A summary of the billboard and transit shelters locations and durations are included in the tables below.

Table 12-2 Billboard Locations and Durations

Location Description	Area	Start Date	End Date
El Cajon Boulevard east of Chamberlain Street	El Cajon	5/7/07	6/3/07
El Cajon Boulevard east of 73rd Street	La Mesa	5/7/07	6/3/07
Euclid Avenue south of University Avenue	San Diego	5/7/07	6/3/07
G Street north of 15th Street	Downtown San Diego	5/7/07	6/3/07
Imperial Avenue east of 32nd Street	Logan Heights	5/7/07	6/3/07
Imperial Avenue south of 69th Street	Lemon Grove	5/7/07	6/3/07

Location Description	Area	Start Date	End Date

Copies of the billboard and transit shelter graphics are included as Appendix H.

12.1.6 School Age Education – San Diego City Schools

Project SWELL — **S**tewardship: **W**ater **E**ducation for **L**ifelong **L**eadership

The City's effort to educate San Diego's youth stayed on track in FY 2007 as Project SWELL was expanded to more school grades and a new school district.

Project SWELL teaches children about the importance of the region's recreational waterways and human–water interaction through a well-balanced, comprehensive, and hands-on water quality and pollution prevention curricula.

To make this happen, the San Diego City School District, City of San Diego, and San Diego Coastkeeper have united to achieve a goal: enhance the existing science curriculum to address pressing environmental issues. The project partners have made progress in meeting these goals by developing and implementing a water quality and pollution prevention curricula for K-12 classrooms in San Diego City Schools. Below is a summary of the curricula that have been or are currently in development and implementation.

5th Grade: *Water*. Completed and in use. Project SWELL's first unit was issued to correspond with the fifth grade *Water* kit used by San Diego City Schools. The fifth grade unit reached 10,668 students in FY 2007. An assessment of the fifth grade curriculum was also conducted; however, the results are not yet available.

6th Grade: *Landforms*. Completed and in use. The sixth grade curriculum, *Landforms* kit, was completed and began circulating to 10,019 students in San Diego City Schools in the spring of FY 2006. Professional development occurred for 6th grade educators throughout the remainder of FY 2006 and FY 2007.

4th Grade: *Ecosystems*. Completed and in use. The fourth grade *Ecosystems* kit was integrated in the fall of FY2007 to 10,661 students. Professional development occurred for the 4th grade educators in the fall and winter of calendar year 2006.

Future activities:
2nd Grade: *Pebbles, Sand, and Silt*. Curriculum under development. The second grade curriculum, *Pebbles, Sand, and Silt*, will roll out to 10,222 students in Fiscal Year 2008 (Spring 2008) with professional development occurring in the Summer and Fall of 2008.

With the launch of the 2nd grade unit, which went into full rotation in September 2007, Project SWELL will be reaching over 42,000 elementary school students annually in San Diego City schools. Project SWELL has also expanded to the Oceanside Unified School District (5th and 6th grades).

12.1.7 Website

In addition to the media campaign, the Storm Water Educational web site (http://www.ThinkBlueSD.org) is available to the public and professional organizations as a compliance and education resource. The Think Blue website had approximately 52,678 visits during FY2007, averaging 4,390 visits a month. The month of June 2007 recorded the highest volume of visits with 7,249 hits, and June 2006 recorded the lowest number of hits in a month's time with 962. The site includes all of the campaign's informational fact sheets, brochures, the City's Urban Runoff Management Plan, the Storm Water Ordinance (Section 43.03 of the San Diego City Municipal Code), information on the Chollas Creek Environmental Improvement and Awareness Programs, Project SWELL, Total Maximum Daily Loads (TMDLs), Areas of Special Biological Significance (ASBS), a calendar of upcoming storm water events and outreach activities, the Public Service Announcements (PSAs), and other educational videos. A large portion of the site is available to browsers in both the English and Spanish languages.

12.1.8 Hotline and Other Contacts

In FY 2007, the City's Storm Water Hotline, (619) 235-1000, and other means of communication realized an increase in contacts from FY 2006 (see Table 12-4).

Table 12-4. Storm Water Division Contacts*.

Fiscal Year	Number of Contacts
2002	2,904
2003	4,206
2004	4,397
2005	3,818
2006	1,902
2007	2,158

*This table was presented in previous Annual Reports as only counting contacts made through the Storm Water Hotline.

12.1.9 Speaker's Bureau and Community Events

Table 12-5 below summarizes the outreach and education events that the City implemented and/or participated in during FY 2007 to educate the general public on storm water pollution prevention and promote the *Think Blue* slogan. While the City still conducted jurisdictional outreach, it is important to note that many of the City's outreach events were watershed focused and as such are included in the City's WURMP Annual Reports. This will be a continuing trend as the City's outreach events become more area and watershed specific. Furthermore, as the education program has become more sophisticated, we have learned that we can reach much larger audiences more effectively by focusing staff and resources on large events (such as Padres games and mass media), rather than numerous relatively minor community and neighborhood events reaching far fewer people.

Table 12-5. General Public Outreach and Education Events.

Date	Event Type	Event Title	Comments	Audience Type	Specific Audience	Estimated Audience #	Site Name/ Location
11/14/06	Conference	Industrial Environmental Association (IEA) Conference	Discussed Discharge of Fire Sprinkler Test Water	Industry	Industrial Business Owners	50	Harbor Island Sheraton

12/7/06	Jurisdiction Storm water-specific Event	Naval Medical Center Environmental Division Training Elements	Protecting our beaches, bays,and watersheds	Naval Medical staff	Naval Medical Staff	500	Naval Medical Center

<u>San Diego Coastkeeper's Ocean Gala</u>

Storm Water (Think Blue) and the City of San Diego have participated in and attended San Diego Coastkeeper's Ocean Gala event since 1999. The City has many staff and elected officials that attend the Ocean Gala every year, including Mayor Jerry Sanders, City Attorney Michael Aguirre, Council President Scott H. Peters, Councilmember Toni Atkins, Councilmember Kevin Faulconer, Councilmember Donna Frye, Councilmember Jim Madaffer and Councilmember Brian Maienschein. FY 2007 was the second year that Storm Water's Think Blue campaign has been a sponsor. Think Blue donated approximately $7,500 and has donated amounts up to $5,000 in previous years. This year will be the second year that Think Blue has debuted a Public Service Announcement (PSA) at the Ocean Gala. Last Year, Council Member Donna Frye introduced the 2006 Think Blue PSA, entitled "Chollas Creek - It's the Water that Connects Us", which went on to win an Emmy for Direction.

12.1.10 Think Blue Collateral Material Development and Distribution

Table 12-6 below identifies the campaign's collateral materials available and distributed in FY 2007 by target audiences. The italicized entries were new items for FY 2007.

Table 12-6. *Think Blue* Collateral Materials by Target Audience.

12.2 GENERAL EDUCATION INFO FROM OTHER CITY DEPARTMENTS

In addition to the education and outreach activities spearheaded by the Storm Water Division, other departments and divisions in the City also conducted activities in FY 2007. Highlights of these efforts are presented below. For more information regarding the education and outreach activities done by City departments and divisions, refer to the *Activity Reporting Forms* in Appendix B and to Section 13, *Public Participation*.

12.2.1 Water Department

The Watershed Source Water Protection Elevator Poster: This poster contains information reflecting the importance of watersheds and reservoirs, and why their protection is vital to providing healthy and safe drinking water to our communities. In addition, the *Think Blue* logo is featured in this poster.

Letter to residents along the Miramar Reservoir: The City of San Diego Water Department sent a letter to neighbors who live along the ridge around Miramar Reservoir requesting residents to help keep the reservoir safe, beautiful, and enjoyable for all by reducing water run-off from their properties. The Department sent a letter to 11 homes and a condominium complex.

Lakes Brochure and Insert: This brochure featured operation, location, and recreation information for each of the City's nine water supply reservoirs located throughout San Diego County. Additionally, this brochure reminded patrons about their responsibility to protect water quality by disposing their trash in appropriate bins. The insert included more ways to protect water quality and had information about the Multiple Species Conservation Program. Both materials featured the *Think Blue* logo. Brochures were available at all City reservoirs and on the Water Department website. Approximately two thousand of the brochures and inserts were distributed.

Newspaper: The Mission Times Courier newspaper ran an article in June 2007 about the top things to do at Murray Reservoir. Integrated in this list of fun activities is the reminder to protect water quality by keeping the reservoir area clean and picking up after your pets.

California Friendly Plants: A Smart Alternative was an article distributed to local press and media about how the benefits of these plants. California friendly plants require less fertilizing, cultivating and irrigation, thus reducing the likelihood of harmful runoff reaching San Diego's waterways. The *Think Blue* logo and contact number was also included in the article. This was distributed primarily to industry publications in July/August 2006.

2006 Annual Drinking Water Quality Report: This report was mailed to 570,204 residential and commercial customers in the City. The report included special sections on the Drinking Water Source Assessment and Protection (DWSAP) Program and Watershed and Source Water Protection. The *Think Blue* logo, website, and phone number were also featured in the report.

Additionally, a Watershed Newsletter was included in the report with information on the City's efforts to maintain and protect our reservoirs and watersheds, and features a list of community resources that one can access to learn more about participating in local water quality protection efforts.

A message in Spanish was included on the outside of the English-language report; directing customers to call the Public Information Office if they wished to receive a Spanish language version of the report. The Public Information Office received approximately 26 requests for the Spanish report. The report also contained the Water Operations Public Information Office phone number and an e-mail address where customers can write for more information or comment on the report. The department received many complimentary phone calls and e-mail messages in response to the report. Reports in English and Spanish were also distributed to libraries, community service centers and other key community locations.

City of San Diego Weekly Web Feature: The home page featured an accessible link to the 2006 Annual Drinking Water Quality Report. The report included special sections on the Drinking Water Source Assessment and Protection (DWSAP) Program and Watershed and Source Water Protection. The *Think Blue* logo, website and phone number were also featured in the report.

Watershed Boundary Sign Program: The City of San Diego Water Department received unanimous approval from the State Caltrans Traffic Control Devices Committee to begin a pilot Watershed Boundary Sign Program (WSP). The City's six signs have been produced and installed along public roadways located near three of our reservoirs. The signs promote storm water pollution prevention awareness. The goal is to create opportunities to learn about the importance of watersheds, drinking water reservoirs, and encourage community stewardship of watersheds. A media and outreach campaign is supplementing the pilot program. In FY 2007, the water department:

- Created and produced mock pilot sign
- Presented WSP to Project Clean Water Outreach Workgroup and Education TAC, and the Storm Water Copermittees
- Placed an ad in San Diego Family Magazine (June 2006)
- Placed an ad in North County Times newspaper daily for weeks
- Placed an ad in the East County Gazette weekly newspaper for six weeks
- Placed 20 radio public service announcements on two Clear Channel stations
- Placed a cinemedia ad at the Mira Mesa Edwards Theater and Parkway Plaza Regal Cinemas for six weeks
- Created an online survey
- Created a program webpage
- Ran a bulletin slide of our ad on City TV
- Posted a poster at the Reuben H. Fleet Science Center near the water cycle and Think Blue exhibit
- Created and distributed 2 issues of the Watershed Sign Program newsletter

12.2.2 Qualcomm Stadium

In FY 2007, stadium representatives and a City storm water liaison met with parking lot vendors and clients on site and discussed storm water issues and proper storm drain management and protection methods. All parking lot contracts and agreements issued to clients and vendors included enforceable language on proper storm drain protection.

12.2.3 Park and Recreation Department

In FY 2007, over 15 free educational programs were conducted by Park and Recreation Department staff and volunteers. These education programs included storm water awareness. In addition, 803 clean-up events were coordinated at the City's parks, beaches, and bays. Over 6,000 brochures were printed or reprinted for storm water education, and approximately 50 signs, kiosks, or displays were created or updated involving storm water awareness. The park use permits issued to the public by the department (approximately 8,500 annually) included education and language on storm water pollution prevention. The Park and Recreation Department implemented the City's No Smoking ordinance for beaches and bays within the City which included staff education and installation of over 300 public signs. By prohibiting smoking it is hoped the number of cigarette butts entering the water will be reduced.

12.3 FUTURE ACTIVITIES AND PROGRAM AMENDMENTS

The City will be implementing a revised Education Program as required by the new Municipal Permit (Order No. 2007-0001), effective March 24, 2008.

13 PUBLIC PARTICIPATION

13.1 PUBLIC PARTICIPATION

The following is a summary of activities that various City departments conducted that facilitated public participation on water quality issues in FY 2007.

13.1.1 Airports: Brown and Montgomery

In FY 2007, the Airports Advisory Committee held meetings which involved staff from both Brown Field and Montgomery Field as well as representatives of airport users, tenants, and community planning groups directly affected by the two airports. The forum provided opportunities for public input on airport issues, including storm water. The Airports Advisory Committee met once a month for a total of 12 meetings in FY 2007.

13.1.2 Development Services Department (DSD)

In FY 2007, the public was offered a myriad of opportunities (a minimum of 2 per week and approximately 350 per year) to participate in water quality issues via environmental document reviews, City Council hearings, Planning Commission hearings, and Hearing Officer meetings during the project review process. In addition, DSD provided individualized training to staff on storm water pollution prevention for construction sites.

13.1.3 Engineering and Capital Projects – Field Engineering Division

The following public participation opportunities (and the number of opportunities) were open to the industry and/or general public in FY 2007:

- Construction Management Academy (open to industry attendance) (1)
- Building Industry Association Storm Water Training Sessions (City-cosponsored) (2)
- American Public Works Association (APWA) Storm Water Training Session (3)
- Engineering and General Contractors Association (EGCA) Storm Water Training (2)
- Youth and College Student Outreach (1)
- Meetings with the Construction Industry

13.1.4 Metropolitan Wastewater Department

Metropolitan Wastewater Department (MWWD) participated in numerous outreach activities to involve the public in storm water related issues and provided the opportunity for comment and involvement. Staff from the Food Establishment Waste Discharge (FEWD) Program attended two expositions and distributed approximately 3,500 brochures related to the proper handling and disposal of fats, oil, and grease to reduce sanitary sewer blockages which could cause spills. The FEWD division also produced a video discussing the FEWD Program and the purpose of the FEWD permit system and the proper ways to dispose of fats, oils, and grease. Whenever a sewer spill/problem occurs that was caused by grease in a residential area, all residents upstream of the effected line are mailed a postcard informing them on the proper way to dispose of fats, oils, and grease.

Finally, MWWD also participates in the Canyon Watchers program. The Canyon Watchers program is a cooperative effort between MWWD and the San Diego Oceans Foundation. The program relies on volunteers who regularly walk in San Diego's urban canyons and inspect the sewer manholes for signs of leaks or deterioration of any kind. Instead of regular meetings, the

canyon watchers submit online reports of their observations to either the MWWD website or the Oceans Foundation website. If the volunteers see a sewage spill, they are directed to immediately call the sewer emergency line (619-515-3525) and report the problem and MWWD crews respond.

13.1.5 Planning Department

The City Planning and Community Investment Department (Planning Department) staffed many public meetings, workshops, and hearings where water quality issues were discussed. Major public outreach activities in FY 2007 are described below.

13.1.5.1 *General Plan Update*

It has been the goal of the Planning Department to increase community involvement and expand the role of public participation in the process of developing a new General Plan. The Planning Department has engaged the public using four primary methods; a series of forums, mass email distributions, workshops, and presentations and meetings. The form and type of public outreach and participation has varied from element-to-element based on the variety and number of interested groups associated with the element.

The Planning Department has built up an e-mail database with over 1,200 contacts of individuals and organizations interested in the General Plan Update. Over 350 of these contacts have elected to receive updates on Conservation Element issues and events.

Because of active participation from the Storm Water Division, the Draft General Plan incorporated significant language regarding storm water and urban runoff pollution prevention in the following elements: Conservation; Mobility; Urban Design; Public Facilities, Services, and Safety; and Recreation.

The most recent revision to the draft General Plan and additional information is available online at http://www.sandiego.gov/cityofvillages.

13.1.5.2 *Community Orientation Workshop*

Planning Department staff presented storm water educational materials at the Community Orientation Workshop, which is an introductory training session for the members of the City's forty-two community planning groups.

13.1.6 Water Department

The 2006 Annual Drinking Water Quality Report was mailed to 570,204 residential and commercial customers in the City. The report included special sections on the Drinking Water Source Assessment and Protection (DWSAP) Program and Watershed and Source Water Protection. The *Think Blue* logo, website, and phone number were also featured in the report. Additionally, a Watershed Newsletter was included in the report with information on the City's efforts to maintain and protect our reservoirs and watersheds. It features a list of community resources that one can access to learn more about participating in local water quality protection efforts. The City's home webpage featured a link to the Report.

A message in Spanish was included on the outside of the English-language report; directing customers to call the Public Information Office if they wished to receive a Spanish language version of the report. The Public Information Office received approximately 26 requests for the Spanish Report. The Report also contained the Water Operations Public Information Office phone number and an e-mail address where customers can write for more information or comment on the Report. The department received many supportive phone calls and e-mail

messages in response to the report. Reports in English and Spanish were also distributed to libraries, community service centers, and other key community locations.

Staff from various sections of the Water Department attended numerous events such as Council District meetings, community planning group meetings, community fairs and festivals, town council meetings, and construction meetings. Members of the public were given the opportunity to provide feedback to the department regarding its water quality activities via meetings and also via the department's website.

In addition, the construction update newsletter for the Alvarado Water Treatment Plant Upgrade and Expansion Project, AWTP Waterlines, was distributed to 6,913 residents, businesses and community facilities during the summer of 2006. The newsletter included the Think Blue logo and an article describing Best Management Practices (BMPs) for the use of pesticides and herbicides. The article also cited where BMP brochures could be obtained by the public.

Staff also continued to develop partnerships and collaborations with other related local and regional organizations to promote the importance water quality protection. The following is a list of other public participation opportunities that the Water Department was actively a part of in FY 2007:

- Water Department represented the City of San Diego to the newly formed San Dieguito Watershed Council. There were three meetings of the Council in FY 2007.

- The Water Department represented the City of San Diego to the San Diego Integrated Regional Water Management Plan [IRWM Plan]. There were six public workshops for the IRWM Plan and ten public meetings of the Regional Advisory Committee to the IRWM Plan. The IRWM Plan aims to integrate source water production, source water protection, watershed management, water quality monitoring, and storm water management across multiple jurisdictions and stakeholders.

13.1.7 General Services Department

The Storm Water Division is actively involved with implementing mechanisms of public participation. During FY 2007, the Storm Water Division held two public workshops to involve the public in the restoration of Chollas Creek. The Storm Water Division also seeks public comment on the Think Blue website. The website provides information and links to documents that are available for public comment and offers a mechanism for the public to submit their comments online.

13.2 FUTURE ACTIVITIES AND PROGRAM AMENDMENTS

The City will be implementing a revised Public Participation Program as required by the new Municipal Permit (Order No. 2007-0001), effective March 24, 2008.

14 ASSESSMENT OF JURMP EFFECTIVENESS

14.1 METHODOLOGY

The primary responsibility for the assessment of the overall program lies with the Storm Water Division. However, other departments and divisions subject to requirements within the JURMP are responsible for self-evaluation and reporting to the Storm Water Division. As part of the reporting process, departments quantified activities relevant to each component of the JURMP and provided a qualitative account of specific component activities. Each department also provided financial information on storm water expenditures for FY 2007 (refer to Section 15, *Fiscal Analysis*). Completed department FY 2007 *Annual Reporting Forms* are provided in Appendix B.

This Section assesses the City's efforts at two scales. First, at a broad scale, this Section provides an assessment of the City's overall storm water quality protection efforts. Because this assessment covers efforts City-wide, the assessment relies on correspondingly broad sets of data and analyses. Second, at a program-specific scale, this Section provides a quantitative and qualitative assessment of each JURMP program area. As in past years, the City relies predominantly on qualitative assessments of program activities in this year's assessment, and, where possible, direct quantitative measures are used to assess effectiveness. The program-specific assessment also includes analysis of each program's strengths and weaknesses.

This assessment has been conducted using the assessment approach and data categorization methodology developed by the Copermittees. The levels of data are listed below.

- Level 1: Compliance with Activity-Based Permit Requirements
- Level 2: Changes in Knowledge or Awareness
- Level 3: Behavioral Change/BMP Implementation
- Level 4: Load Reductions
- Level 5: Changes in Discharge Quality (no analysis at this level)
- Level 6: Changes in Receiving Water Quality

Please note that in addition to relying on activity-based permit requirements as Level 1 data, the Storm Water Division uses non-Permit requirement targets that the City has identified as internal measures to assist in evaluating the effectiveness of program efforts.

In response to Comment 14 of the RWQCB City of San Diego FY 2006 Annual Report comment letter (Appendix A), mechanisms to track and report information that will assist in evaluating the effectiveness and efficiency of program efforts are being developed as part of the city's updated urban runoff management programs required by the new Municipal Permit (Order No. 2007-0001).

In addition, although the letter was received after the FY 2007 reporting period had ended. However, some of the requested information was completed in FY 2007. For example, the City conducted a city-wide survey in FY 2007 to assess whether knowledge/awareness (assessment level 2) had changed or improved from previous fiscal year surveys. The City also gathered information on BMP implementation during commercial and industrial inspections to assess any changes (Appendix D).

14.2 OVERALL PROGRAM ASSESSMENT

The City is working to collect data sets that span several years and to improve the overall program assessment process. In addition, the City will continue to collaborate with its Copermittees in the periodic updating of the *San Diego Storm Water Copermittees Jurisdictional Urban Runoff Management Program Baseline Long-Term Effectiveness Assessment*, or BLTEA, which will provide Levels 5 and 6 data for use in analysis. Through the BLTEA, the City will be able to draw stronger conclusions regarding the trends in the quality of our receiving waters and effectiveness of our water quality protection efforts.

In the interim, however, it should be noted that the percentage of beach advisories and closures as compared to total beach mile days possible has continued to trend downward from calendar years 2000 through 2006 (see Figure 14-1). This Level 6 data is an indicator of continued improvement in receiving water quality within the City, which is the ultimate management goal of the Storm Water Division. Although it is premature to draw conclusive linkages between program efforts and receiving water quality, it can be inferred from this data that the City's, and specifically the Storm Water Division and MWWD's efforts have, to some degree, positively contributed to protection of surface water quality in the region.

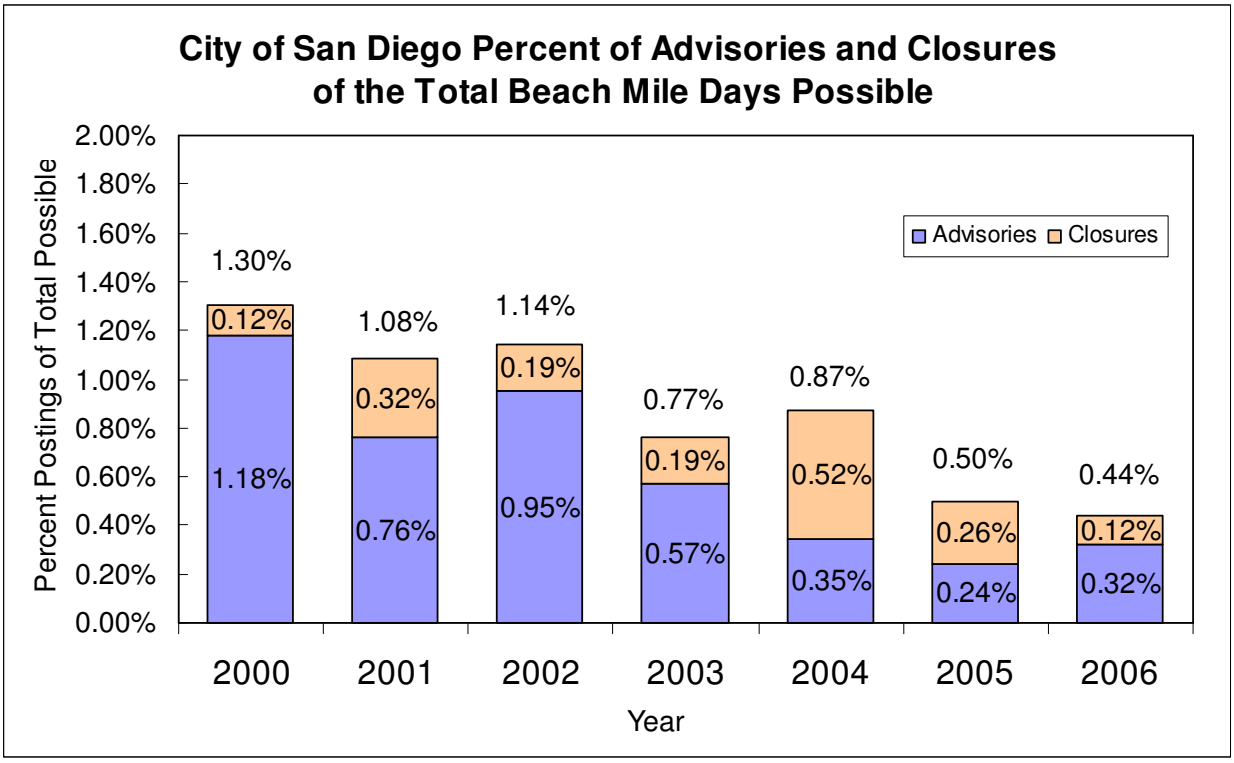

Figure 14-1. Percent of Beach Advisories and Closures as Compared to Total Beach Mile Days Possible.

The high variability of contributing factors to urban runoff monitoring, (e.g., geography, vegetation, duration and intensity of storm events, ambient environmental conditions, existing conditions of receiving waters, and wildlife, such as birds) makes it difficult to define typical storm water discharges, let alone develop standardized means of assessing their impacts. This variability in storm water monitoring data necessitates greater temporal and spatial breadth in data sets before they can be considered statistically significant. However, in some cases, it is

possible to identify quantities of pollutants removed from the storm drain system, changes in public awareness of storm water issues, and identify behavioral change by the public—all of which may be used to draw inferences regarding effective program implementation.

As another broad indicator of the overall effectiveness of the City's water quality protection efforts, specifically the Metropolitan Wastewater Department, the City continues to reduce the number of sewer spills from 365 spills in 2000 to 85 in 2007 (see Figure 14-2). Although root intrusions caused a slight increase in spill in FY 2007 compared to FY 2006, it can be assumed that the reduction in sewer spills throughout the years has resulted in reductions to the amount of sewage discharged into the region's waterbodies and that discharge quality has improved. To address the increase, MWWD televised sewer lines to check for issues such as root intrusions as part of their preventive maintenance program.

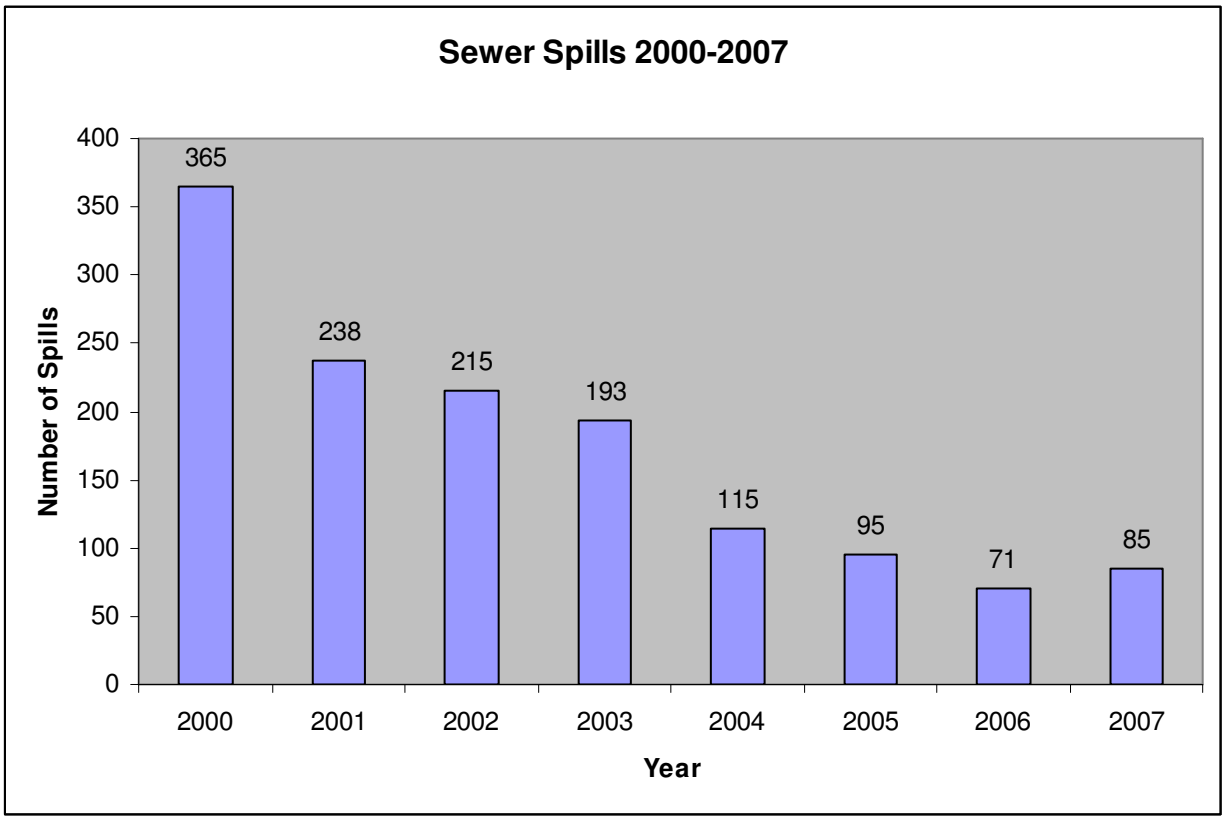

Figure 14-2. City of San Diego Sewer Spills from 2000 - 2006.

This program assessment concludes that the City is effectively implementing numerous activities that positively affect water quality in the San Diego region. Specific examples include:

- ✓ *The City's* Think Blue *education and outreach campaign continues to increase awareness of storm water pollution with residents and businesses. This was evident from the results of the City's survey which found that forty-six percent of residents say they have heard the slogan "Think Blue San Diego". The survey does include some possible evidence of the successful impact of past Think Blue activities: 53% of those who said they had heard about the Think Blue campaign*

knew that storm water is not treated, compared to 40% who had not heard about Think Blue.

- ✓ *The City continues to expand and maintain the low-flow diversion system to direct urban runoff during dry weather away from Mission Bay and other coastal areas to the wastewater treatment system.*
- ✓ *The City's pollution abatement efforts continue to identify and abate sources of pollution, as evidenced by the reductions in beach postings and closures over the last six years.*
- ✓ *The City's special monitoring studies have identified and characterized water quality issues, such as bacteria in Mission Bay, so that program efforts can be most effectively applied to sources of pollution.*
- ✓ *The City has obtained approximately $11.8 million in grants and has contributed City funding to implement monitoring projects, special studies, habitat and wetlands improvement projects, cleanup events, and other BMPs all focused on protecting and improving water quality.*
- ✓ *The Development Services Department and the Engineering and Capital Projects Department continue to work collectively to oversee the development industry and ensure the City maintains storm water compliance at construction sites.*

14.3 ASSESSMENT OF PROGRAM COMPONENTS

14.3.1 Municipal

Table 14-1. Level 1: Compliance with Activity-Based Permit Requirements – Municipal.

Applicable Permit Section	Activity	Measure of Success	Target	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
F.3.a.(5)	Inspect Storm Drain Structures	% Completion	100% (≈ 75,000)	15.2% (11,395)	21.6% (16,230)	17.3% (12,971)	21.4% (16,069)
F.3.a.(7)	Inspect Municipal Facilities*	% Completion	100% (540**)	98% (527)	162% (876)	114% (615)	100% (540)

* The number of inspections may fluctuate on a yearly basis due to changes in the prioritization of facilities.
**Excludes City-owned leased properties.

Table 14-2. Levels 1 and 4: Achievement of In-House Targets – Debris Removed Due to Storm Drain Inspections and Cleanings.

Applicable Permit Section	Activity*	Measure of Success	Target	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual
F.3.a.(5)	Clean Storm Drain	FY 2004 level (31,925 tons)	31,925 tons (100% of FY 2004 total)	9,816 tons (31%)	6,737 tons (21.1%)	26,635 tons (82.6%)

*Does not include debris removed from street sweeping.

Program Strengths

All high priority municipal sites as listed in the above table are inspected at least annually and often times more frequently. Additionally, most high priority facilities, including all operations yards, operate under a Storm Water Pollution Prevention Plan or a Water Quality Management Plan.

Municipal employees continue to be aware of the importance of storm water pollution prevention and the implementation of BMPs. They continue to implement BMPs throughout the course of their work as evidenced in the *Annual Reporting Forms* in Appendix B. For example, the Park and Recreation Department reduced trash loads by 48,100 tons through staff collection and contract programs in FY 2007; by maintaining the City's park and recreational facilities free from trash in a timely manner, especially after events, there is less chance for the trash to end up in the region's waterbodies. Also, the Environmental Services Department's Field Operations Division provided service to other departments/divisions, which resulted in 3,300 tons of trash and debris being diverted from the storm drain system and not loaded into local waterbodies. The services that were provided included bin service for sweepers, cleaning drains, cleaning right of ways, clearing transient camps, clearing unwanted vegetation, and clearing illegal dumps. Reducing trash and debris loads into the MS4 has contributed to protecting water quality.

The Street Division's procedures for cleaning the City's MS4 in FY 2007 resulted in approximately 9,816 tons of debris collected from storm drain structures and channels and 5,850 tons of debris collected through street sweeping for a total of 15,665 tons. The debris was collected prior to reaching the region's beaches and bays. *In response to Comment 12 of the RWQCB City of San Diego FY 2006 Annual Report Comment letter (Appendix A), the City received additional funding for FY 2008 that will help to increase the City's inspection efforts. Overall the City did remove more debris in FY 2007 than FY 2006. However, it is important to note that the maximum extent practicable (MEP) for inspection and cleaning of storm drain structures, drainage channels, and drainage pipe will vary in reporting periods based on variable factors including the amount of rainfall received and natural events, such as fires. Therefore, MEP cannot be defined solely by comparing the debris removed from one fiscal year to another. Furthermore, the total weight of debris removed from channels has been reduced dramatically over the past few years due to environmental requirements restricting channel cleaning operations. The City will continue to remove debris to the maximum extent practicable based on the above mentioned factors.*

In response to Comment 11 of the RWQCB City of San Diego FY2006 Annual Report Comment letter (Appendix A), the City confirms that in FY 2006 16,230 storm drain structures were inspected. The number of inspections noted in Section 3.3.1.2 of the Annual Report should have been 16,230 instead of 7,669.

Program Improvement Areas

Inter-departmental coordination was challenging for the City in FY 2007. As such, the City added two staff members to coordinate with City departments and ensure that program implementation is conducted appropriately. The City will also continue to study alternative funding sources, including an increase of the existing storm drain fee, to enhance its storm drain structure inspection and cleaning efforts in future fiscal years. Per the Mayor's 5-year financial outlook for the City, funds allocated towards water quality protection and improvement activities, including storm drain inspection and cleaning, are anticipated to increase (approximately an additional $10 million is being included in the FY 2008 budget for storm water-related activities per the Mayor's direction). In the meantime, the City will continue to make the most of its current resources through prioritization, focusing on structures most in need of attention as identified.

14.3.2 Industrial

Table 14-3. Level 1: Compliance with Activity-Based Permit Requirements – Industrial.

Applicable Permit Section	Activity	Measure of Success	Target	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
F.3.b.6	Inspect High Priority Industrial Facilities	% Inspected	100% (303)	100% (303)	100% (315)	100% (243)	100% (381)

Program Strengths

The Storm Water Division continues to use an environmental consultant/contractor to perform industrial inspections. In addition to the environmental consultant, inspections are performed by well-trained pretreatment inspectors within the City's Metropolitan Wastewater Department. The inspections are very thorough and include documentation on a field inspection sheet. In addition, the consultant/contractor continues to use a relational database to track inspections. This database is designed to allow Storm Water Division staff to evaluate inspections using GIS and to be able to relate abnormalities in dry weather monitoring data to industrial activity and industrial activity with code compliance enforcement activity. While this system is still under development and being improved, the database allows staff to inventory, prioritize, and manage the data needed to implement the Industrial Program and evaluate its effectiveness.

The Storm Water Division continues to improve its number of industrial site inspections. The number may vary from year to year due to industrial sites, for example, going out of business, moving to a different locale, or changing the manner that they conduct their activities in a way that alters their status as industrial facilities. In addition, the Storm Water Division and its consultant began to target sites for inspection suspected of being high priority sites but not subject to the State Industrial Permit. This activity has not only contributed to improving the City's inspection efforts of industrial sites but also to enhancing its complete list of prioritized industrial sites, which can be found in Appendix C-1.

Program Improvement Areas

The Storm Water Division will continue to improve its ability to identify those businesses that require coverage under the Industrial-Commercial Program for the 2007 Municipal Permit.

14.3.3 Commercial

Table 14-4. Level 1: Achievement of Activity-Based In-House Targets – Commercial.*

Applicable Permit Section	Activity	Measure of Success	Target**	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
F.3.c	Notify commercial business of storm water regulations	% completion	100% (100,000 business licensees)	76% (76,000)	45% (45,000)	11% (11,000)	11% (11,000)

* Tracking of this data was listed in previous Annual Reports as a Permit requirement.

** The City currently maintains a database of over 14,000 restaurants and over 2,500 other high priority businesses. Some of these businesses however may be considered industrial facilities.

NOTE: the numbers are approximations

Table 14-5. Level 1: Compliance with Activity-Based Permit Requirements - Commercial.

Applicable Permit Section	Activity	Measure of Success	Target*	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
F.3.c.	Inspect Commercial Facilities	% Completion	100% (3,000)	160.3% (5,063)	149.1% (4,473)	149% (4,469)	123% (3,703)

*The City currently maintains a database of over 14,000 restaurants and over 2,500 other high priority businesses. Some of these businesses however may be considered industrial facilities.

Program Strengths

Beginning in FY 2007, the Storm Water Division utilized an environmental consultant/contractor to perform commercial inspections. The consultant conducted a total of 254 full BMP assessments. In addition to the environmental consultant, inspections of food and drink establishments were performed by the Food Establishment Waste Discharge (FEWD) Program within the MWWD, which continues to be the backbone of the Commercial Program of the City. This program is staffed by inspectors formally trained to conduct storm water inspections in and around eating and drinking establishments. During the course of their inspections, they educate owners, managers, and workers on relevant storm water pollution prevention principles and distribute appropriate educational materials. FEWD is able to reach approximately 4,500 establishments annually (4,809 in FY 2007), which is approximately 32.1% of the eating and drinking establishments within the City (approximately 14,000).

FEWD also coordinated with the Storm Water Division in abating illegal discharges from such facilities. Code Compliance Officers from the Storm Water Division investigate referrals by FEWD (36 in FY 2007), and many of these investigations result in enforcement actions.

In addition to FEWD, the City's Commercial Program continued to be strong in the area of reports through the Storm Water Pollution Prevention Hotline and other means of communication (e.g., website, main office line, fax). The Storm Water Division received many reports through these means regarding commercial facilities illegally discharging into the storm water conveyance system, which were investigated and abated through the issuance of Notices of Violation, Administrative Citations, Civil Penalties, and, in extreme cases, criminal prosecution by the Office of the City Attorney. The City holds that such actions contribute significantly to the enforcement of the Storm Water Ordinance and the education of commercial facility operators regarding storm water pollution prevention.

Program Improvement Areas

While these inspections address the primary potential commercial sources of storm water pollution, in future years, the Storm Water Division will continue to improve efforts to expand the Industrial-Commercial inspection inventory.

14.3.4 Residential

Table 14-6. Levels 1 and 4: Achievement of Activity-Based In-House Targets – Residential.*

Activity	Measure of Success	Target*	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
HHW Collection	% completion	100% of FY 03 total (1,043 tons)	567.0% (5914 tons)	533.9% (5,569 tons)	105% 1,093 tons*	103% 1,071 tons

*Tracking of this data was listed in previous Annual Reports as a Permit requirement.

Program Strengths

The Environmental Services Department's Household Hazardous Waste (HHW) Program continued to do well in the investigation, maintenance, collection, and remediation of hazardous substances, including HHW from facilities, residents, vacant land, and other City departments. The collection program consists of a permanent HHW facility, auto product recycling events, door-to-door collection, and a load check point at the Miramar Landfill. Aside from the benefit of reducing loads by collecting over 5,914 tons of hazardous waste in FY 2007, this program helped protect water quality because a large component of the HHW Program is conducting education and outreach to inform residents on the proper use and disposal of hazardous materials. One inference that can be made regarding the rise in the number of tons of HHW collected over the years is that residents are changing their behavior to be more environmentally/storm water-friendly based on their heightened awareness as a result of City efforts.

Also in FY 2007, City Code Compliance Officers investigated 73 reports of illegal discharge into the storm water conveyance system in residential areas. Many of these investigations resulted in enforcement actions and also provided opportunities to educate members of the public.

The City continues to successfully reach out to residents and educating them (e.g., through water/sewer bill mailings sent to approximately 540,000 residential and commercial customers, 2006 Annual Drinking Water Quality Report mailed to 570,204 residential and commercial customers in the City of San Diego) about the importance of implementing storm water pollution prevention principles to protect the region's beaches, bays, rivers, and lagoons.

Program Improvement Areas

The City will continue to work to improve the tracking of enforcement actions at residential sites. The Storm Water Division will also continue to improve its enforcement database in light of the re-issuance of the Municipal Permit and anticipated coordination with the other Copermittees to establish regional effectiveness assessment standards for cross-jurisdictional and cross-programmatic (e.g., JURMP, WURMP, and RURMP) analyses.

14.3.5 Land Use Planning

Table 14-7. Level 1: Compliance with Activity-Based Permit Requirements – Land Use Planning.

Applicable Permit Section	Activity	Measure of Success	Target	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
F.1.b	Apply SUSMP requirements to applicable development	% completed	100% (239 projects)	100% (239 projects)	100% (266 projects)*	100% (302 projects)	100% (378 projects)

*This number is assumed to be consistent with the number of projects that were reviewed for SUSMP requirements since all applicable projects must be reviewed for compliance prior to permit approval.

Program Strengths

The Community Planning and Investment Department continued to refine the General Plan Update document for anticipated adoption by the City Council in Fall 2007. The Conservation; Mobility; Urban Design; Public Facilities, Service, and Safety; and Recreation elements of the draft General Plan Update include language on water quality and watershed protection principles to help guide the City and development community in protecting the region's water resources.

In addition, as community plans are updated throughout the City, water quality and watershed protection principles continued to be incorporated into them, as exhibited by the updates to the Ocean Beach and Mission Valley community plans currently underway.

The City's *Storm Water Standards Manual*, which requires permanent (SUSMP) BMPs and construction BMPs on all applicable development projects, continued to be applied to all public and private development projects. In FY 2007, 212 private projects and 27 CIP projects were considered Priority Projects under the Model SUSMP, and were required to incorporate treatment control BMPs, as required by the *Storm Water Standards Manual*. Each of these projects implemented permanent BMPs in their project design to address receiving water quality. Assuming that these BMPs performed with some degree of effectiveness, it can also be inferred that the City's requirement to implement development-related BMPs is having some positive effect on the discharge and receiving water quality in the region in FY 2007.

Development Services Department staff performing review of permanent BMPs on private projects also continued to undergo periodic training and were involved in biweekly discussions involving storm water requirements for development. An educated City force aware of storm water issues and pollution prevention issues helps ensure that development proposals take into consideration water quality.

In addition, it is reasonable to infer that the City's continued efforts to educate its labor force and the public on storm water pollution prevention principles and enforce its Storm Water Ordinance and land use plans have resulted in a higher level of awareness of storm water pollution, which, in turn, have led to increased BMP implementation throughout its jurisdiction and beyond.

Program Improvement Areas

The Storm Water Division will continue the training of City staff responsible for implementation of SUSMP requirements on both public and private projects. It is anticipated that work on updating the City's *Storm Water Standards Manual* will be finalized in FY 2008 in light of the re-issuance of the Municipal Permit and in coordination with the other Copermittees. During the 2007 Municipal Permit cycle the City will be inspecting treatment control BMPs to better estimate their effectiveness and potentially estimating load reductions.

14.3.6 Construction

Table 14-8. Level 1: Compliance with Activity-Based Permit Requirements – Construction.

Applicable Permit Section	Activity	Measure of Success	Target	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
F.2.g	Inspect high priority construction sites	% completion	100% (148)	100% (148)	100% (180)	100% (129)	100% (69)
F.2.g	Inspect medium/low priority construction sites	% completion	100% (1,012)	100% (1,012)	100% (919)	100% (800)	100% (759)

Program Strengths

The City continues to be successful in tracking and inspecting all private and CIP construction projects. BMPs are required and being enforced for all construction projects consistent with the requirements of the City's *Storm Water Standards Manual*.

Program Improvement Areas

Trainings and meetings focusing on site erosion and sediment controls will continue to be conducted for Inspection Services Division staff in the Development Services Department and Field Engineering Division staff in the Engineering & Capital Projects Department.

Although the Inspection Services Division and Field Engineering Division have effective programs in place to ensure all job sites are inspected and tracked, the City generally lacks software and data management tools designed to capture data for reporting purposes. Staff members from Inspection Services Division are currently coordinating to determine the processes and procedures necessary to assign, track, and report on the priority level of each building permit issued. Staff will then modify the City's Project Tracking System to enable the active tracking and scheduling of inspections (both routine ones and follow-ups) based on priority level and the rainy/dry seasons. The Development Services Department Inspection Services Division anticipates implementing these actions by January 2008. This will be an area for continued improvement in future years, and, in light of the re-issuance of the Municipal Permit, the City anticipates coordinating with the other Copermittees to formulate regional data standards to allow for cross-jurisdictional and cross-programmatic analyses and effectiveness assessment.

14.3.7 Monitoring

Table 14-9. Level 1: Compliance with Activity-Based Permit Requirements – Monitoring.

Applicable Permit Section	Activity	Measure of Success	Target	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
Attachment B(c)	Coastal site visits	% Completed	100% (357)	100% (357)	100% (357)	100% (357)	100% (323)
Attachment E(4)	Monitor dry weather sites	% Completed	100% (308)	100% (302*)	100% (306*)	100% (311)	98% (293)
Attachment E(4)	Conduct follow-ups on DWM exceedances	% Completed	100% (113)	227% (256)	100% (113)	100% (113)	data unavailable

*Number of sites can vary each year as new sites are identified or old ones are abandoned.

Program Strengths

In FY 2007, Storm Water Division staff performed monitoring at 302 sites within the storm water conveyance system as part of the Dry Weather Monitoring Program. This program provides thorough coverage of the six watershed areas within the jurisdiction of the City. Dry weather monitoring data are stored in a spreadsheet, which allows for limited GIS mapping. This data storage method has allowed Storm Water Division staff to perform limited statistical analysis in order to refine investigational triggers and identify areas that need further investigation.

The Storm Water Division's monitoring staff continues to implement the Coastal Storm Drain Monitoring Program as scheduled.

Program Improvement Areas

The Storm Water Division will continue to work on being able to collect and provide its monitoring data in a new database format that would allow for greater GIS mapping and analysis and statistical capabilities.

14.3.8 Enforcement

Table 14-10. Level 1: Compliance with Activity-Based Permit Requirements – Enforcement.

Applicable Permit Section	Activity	Measure of Success	Target	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
F.5.c	Investigate identified illicit discharges	% Completed	100%	100% (1,964)	100% (1,531)	100% (1,659)	100% (1,694)

Program Strengths

The Investigations and Enforcements Section of the Storm Water Division continued to be efficient in conducting investigations and issuing the appropriate enforcement actions. Appendix F provides a record of the investigations performed by the Code Compliance Officers in FY 2007. Note that every single reported discharge reported to the Storm Water Division was investigated. In FY 2007, 880 notices of violations, 456 administrative citations, 157 civil penalties were issued, and $200,546.17 in fines were assessed. Code Compliance Officers also continue to do well in educating violators about the importance of storm water pollution prevention through educational materials (*Think Blue* fact sheets) that they handed out and the numerous interactions (both face to face and via the telephone) that they had with the public throughout the course of their duties.

Program Improvement Areas

The Investigations and Enforcements Section has initiated the process to develop a division-wide database to further facilitate the tracking and analysis of investigations and enforcement actions. A beta version of the database is anticipated in the summer 2008. In addition, the Division is requesting one additional officer in FY 2009 to ensure that cases are investigated within two business days.

14.3.9 Illicit Discharge Detection and Elimination

Table 14-11. Level 1: Compliance with Activity-Based Permit Requirements – IDDEC.

Applicable Permit Section	Activity	Measure of Success	Target	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
F.5.c	Investigate potential illicit discharges	% Completed	100% (211)	100% (211)	100% (214)	35% (48)	45% (47)
F.5.d	Eliminate discharges	% Completed	100% (56)	100% (56)	89% (84)	25% (33)	45% (47)

Program Strengths

Storm Water Division staff worked successfully in FY 2007 to increase the rate of investigations successfully completed. Staff improved its tracking of investigations and was able to document not only an increase in the number of discharges investigated, but also a significant increase in

the number of discharges eliminated. Of the 38 instances in which an illicit discharge was detected, only 5 cases resulted in no responsible party identified. The majority of the 38 illicit discharges resulted in appropriate enforcement action, ranging from the distribution of educational materials to the levying of civil penalties. It can be inferred that, because progress is being made towards the identification and elimination of illicit discharges, discharge water quality is improving in the City**.**

Program Improvement Areas

In light of the expanded Dry Weather Monitoring Program outlined in the 2007 Municipal Permit, the Storm Water Division will seek sufficient resources to meet the expanded Dry Weather Monitoring Program required by the new Municipal Permit.

14.3.10 Education

Table 14-12. Level 1: Compliance with Activity-Based Permit Requirements – Education.

Applicable Permit Section	Activity	Measure of Success	Target*	FY 2007 Actual**	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
F.4	Conduct outreach	% completion	100% of 2003 number of 89	3.4% (3)	26.7% (24)	Unknown. Outreach tracking was disrupted in FY 2005 on into FY 2006	55% (49)

* The target was established near the beginning of Order 2001-01 JURMP implementation. Program implementation has evolved and improved since then. Specifically, as the education program has become more sophisticated, we have learned that we can reach much larger audiences more effectively by focusing staff and resources on large events (such as Padres games and mass media), rather than numerous relatively minor community and neighborhood events reaching far fewer people. The City has therefore developed modified assessment measures which will be included in the revised JURMP under Order 2007-0001.
** Most of the City's outreach activities are watershed focused and are reported in the City's WURMP Annual Reports.

Table 14-13. Level 1: Achievement of Activity-Based In-House Targets – Education.*

Activity	Measure of Success	Target	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
Distribute educational materials	% completion	100% of 2003 amount of 48,725	311% (151,550)	1,213.6% (591,346)	Unknown. Materials distribution was not tracked in FY 2005.	316.% (154,390)

*Tracking of this data was listed in previous Annual Reports as a Permit requirement.

Program Strengths

The Storm Water Division continued to implement an education and outreach program targeted for both City staff and external target audiences, including residental, business, industry, construction and children. The City's *Think Blue* campaign consisted of commercials, public service announcement development and airing, a website, training, and educational material development and distribution to educate the public about storm water and urban runoff pollution prevention including the use of billboards and transit shelters. While the City still conducted jurisdictional outreach, it is important to note that many of the City's outreach events were watershed focused and as such are included in the City's WURMP Annual Reports. This will be a continuing trend as the City's outreach events become more area and watershed specific.

During FY 2007 the Storm Water Division focused efforts on airing PSAs and contracting for paid television and radio advertising. The City focused on PSAs as an effective method for relaying pollution prevention information to a large audience. The City's PSAs aired on both local radio and television stations in FY 2007 reaching the English- and Spanish-speaking communities. The PSAs aired 7,269 times and made approximately 18,546,166 impressions.

The 2007 telephone survey results indicate that behavioral change continued to progress in a positive direction as a result of the City's efforts to educate the public and its labor force on storm water pollution prevention principles and enforce its Storm Water Ordinance. The survey shows deep interest in and concern about storm water pollution among San Diego residents. More than three of four say that pollution of the ocean, bay, and beaches is a very important issue facing the city, matching concern about the quality of public schools. The survey also showed that most residents indicate a willingness to take actions to help prevent storm water pollution, especially keeping trash and recycling bins covered to prevent litter, recycling used motor oil, washing paint brushes properly, sweeping rather than hosing down sidewalks, picking up litter and trash, and fixing sprinklers. Between 61% and 85% of residents rated their willingness to take these actions as a 10 on a 1 to 10 scale. It was also found that about 45% of residents indicate strong interest in learning more about what they can do to reduce storm water pollution and beach closures due to pollution, and to reduce litter and pollution in their neighborhoods.

The survey found that 46% of residents say they have heard the slogan "Think Blue San Diego". The survey does include some possible evidence of the successful impact of past Think Blue activities: 53% of those who said they had heard about the Think Blue campaign knew that storm water is not treated, compared to 40% that knew strom water was treated but who had not heard about Think Blue.

The Think Blue web site (http://www.ThinkBlueSD.org) available to the public and professional organizations continues to be a valuable compliance and educational resource. In FY 2007, the City Storm Water Division website reports approximately 52,678 hits. The site includes all of the campaign's informational fact sheets, brochures, the City's Urban Runoff Management Plan, the Storm Water Ordinance (Section 43.03 of the San Diego City Municipal Code), information on the Chollas Creek Environmental Improvement and Awareness Programs, Project SWELL, a calendar of upcoming storm water events and outreach activities, the PSAs, and other educational videos. In FY 2007, a document review section was added to allow other City staff and the public to obtain and comment on reports, plans, and other documents. A large portion of the site is available to browsers in both the English and Spanish languages.

Other departments and divisions continued to conduct education and outreach to employees and target audiences. Departments continued to provide staff with general and activity-specific storm water training. Additionally, many departments have created and distributed a large number of storm water educational materials and advertisements and have conducted workshops and outreach programs as both internal and external education measures. These activities demonstrate the level of storm water awareness achieved by the City among its employees, which inevitably translate into greater education and outreach efforts towards the public.

Program Improvement Areas

In FY 2007, the Storm Water Division realized an increase in contacts from FY 2006 (see Table 14-14). While the declining contact volume for FY 2005 and FY 2006 coincides with two consecutive years of decreased advertising for Think Blue, FY 2007 saw a funding increase and an increase in contact volume.

Table 14-14. Level 2: FY 2002 through FY 2007 Contacts Received*.

Fiscal Year	Total Contacts	Water Quality Contacts	Other (e.g., Information, Wrong Number, etc.)
2002	**2,904**		
2003	**4,206**		
2004	**4,695**		
2005	**3,818**	**1,659**	**2,159**
2006	**1,902**	**1,531**	**371**
2007	**2,158**	**1,851**	**307**

*This table was presented in previous Annual Reports as only including contacts made through the Storm Water Pollution Prevention Hotline.

The City will continue to expand its education and outreach programs to more effectively reach target audiences and affect behavioral change. Specific areas for improvement include:

- Reestablishing annual residential behavior data gathering and assessment activities;
- Reestablishing a mass media campaign;
- Focusing all jurisdictional education and outreach activities around the pollutants of concern identified for each watershed within the City's jurisdiction;
- Implement an outreach and education methodology that uses a social psychology approach that will maximize the City's efforts to achieve sustainable behavior changes in all target audiences as identified in the Municipal Permit and to perform Level 3 assessment;
- Strengthening the municipal training program; and
- Working collaboratively with other jurisdictions to address mobile businesses as a high priority pollution source.

In response to Comment 13 of the RWQCB City of San Diego FY 2006 Annual Report Comment letter (Appendix A), the City is taking steps to improve its education efforts. While education funding and staff had been reduced in FY 2006, there was increased funding for FY 2007 along with a greater funding increase for FY 2008. In addition, two new employees and a professional consultant were hired in FY 2007 to assist with education program. Furthermore, the Storm Water Division will be hiring approximately twelve consultants to assist with the education program in FY 2008 and beyond.

14.3.11 Public Participation

Table 14-15. Level 1: Achievement of Activity-Based In-House Targets – Public Participation.*

Applicable Permit Requirement	Activity	Measure of Success	Target	FY 2007 Actual	FY 2006 Actual	FY 2005 Actual	FY 2004 Actual
F.6	Events allowing the public to participate	# Conducted	500	395 (79%)	423 (85%)	488 (98%)	629 (129%)

*Tracking of this data was listed in previous Annual Reports as a Permit requirement.

Program Strengths

Departments and divisions throughout the City have provided opportunities for public involvement and have implemented measures to solicit public input related to storm water issues. Some of these efforts include, but are not limited to, workgroup meetings, several Citywide hotlines to take public comments and questions, volunteer programs and events, community and council meetings, fairs, presentations, and workshops.

Non-governmental organizations continued to be actively engaged in implementing the City's storm water program. For example, San Diego Coastkeeper continued to be a key partner in developing Project SWELL, the City's storm water education program for grade-school students, and providing valuable input on its conceptual BMP projects in the City's watersheds and along the La Jolla Shores Area of Special Biological Significance (ASBS).

Program Improvement Areas

The City will continue to actively pursue public participation activities to allow public input on and participation in storm water issues and policies. As mentioned previously, the Storm Water Division posts reports and documents on the Thinkblue website for public review and comment. The City will also continue to involve non-profit organizations, such as San Diego Coastkeeper, in the development of water quality activities.

15 FISCAL ANALYSIS

The Fiscal Analysis component was developed to identify costs associated with the JURMP for the entire City. Implementation of the Municipal Storm Water Permit requirements on a City-wide basis were projected (in FY 2001) to cost as follows:

Table 15-1. City's 2001 estimate of implementation costs for Order No. 2001-01.

Permit Year/Budget Permit	Cost*
1. July 1, 2001 – June 30, 2002	$27,254,833
2. July 1, 2002 – June 30, 2003	$55,828,016
3. July 1, 2003 – June 30, 2004	$49,421,368
4. July 1, 2004 – June 30, 2005	$50,678,255
5. July 1, 2005 – June 30, 2006	$52,928,582
Total Five-Year Cost	**$236,111,054**

*Estimated costs only. Actual yearly expenditures.

15.1 FISCAL ASSESSMENT

For Fiscal Year 2007, the City's actual City-wide expenditures for implementation of the Municipal Storm Water Permit requirements consisted of components that followed the sections in the JURMP (Figure 15-1).

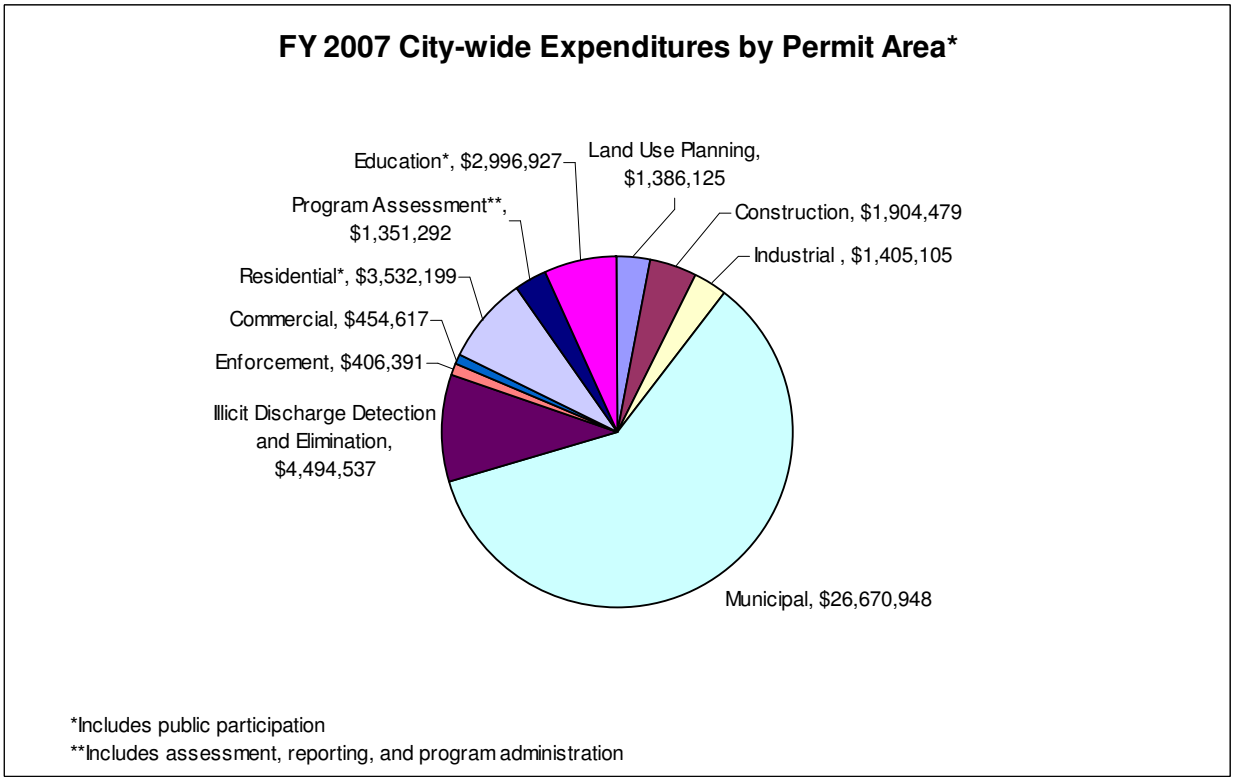

Figure 15-1. FY 2007 City-wide Expenditures by Permit Area

A total of $44,602,619 was actually expended in FY 2007 for the implementation of City-wide JURMP activities. This amount includes costs paid by sewer and water rate payers and costs reimbursed by project applicants. An overview of the expenditures reflected in these components is described below.

Explanations:

Land Use Planning
Activities identified in the Land Use Planning for New Development Section represent personnel and non-personnel expenses for plan check reviews, project design and SUSMP implementation, General Plan updates, and development and management of watershed plans.

Construction
Activities identified in this section represent personnel and non-personnel expenses for plan check review services, field inspections related to grading permits, public improvements, and building activities.

Municipal
Activities identified in this section represent personnel and non-personnel expenses for street sweeping, storm drain and channel maintenance, BMP implementation, and housekeeping (i.e., debris disposal and dry clean up methods).

Industrial
Activities identified in this section represent personnel and non-personnel expenses for inspection of industrial facilities.

Commercial
Activities identified in this section represent personnel and non-personnel expenses for Food Establishment Wastewater Discharge (FEWD) inspections.

Enforcement
Activities identified in this section represent personnel and non-personnel expenses for enforcing the City's storm water ordinance and implementation of the administrative civil penalties and citation process.

Residential
Activities identified in this section represent community clean up activities and educational activities.

Education and Public Participation
Activities identified in this section represent personnel and non-personnel expenses for training, educational materials, outreach events, and public service announcements.

Illicit Discharge Detection and Elimination
Activities identified in this section represent personnel and non-personnel expenses for the identification and elimination of illicit discharges.

Program Assessment
Activities identified in this section represent personnel and non-personnel expenses for City-wide management, reporting, and assessment of the Municipal Permit.

15.2 GRANTS AND OTHER FUNDING FOR SPECIAL STUDIES

In addition to resources identified for Municipal Permit requirements, the City actively seeks grants and other funding sources for special studies and capital projects. Funding for these projects are limited to the projects specified and cannot be reallocated to other projects. Therefore, these resources are currently not used in calculations for total expenditures. The following table lists projects that were initiated and/or in progress during FY 2007. The City managed a total of approximately $11.8 million in special projects during FY 2007.

Table 15-2. Funding for Special Projects.

Funding Source	*Project*	*Amount*
Proposition 13, Clean Beaches Initiative Grant	San Diego River–Ocean Beach Water Quality Improvement	$1.5 million
Proposition 13, Clean Beaches Initiative Grant	Mission Bay Computerized Central Irrigation System	$1.1 million
Proposition 13	San Diego Watershed Common Ground Project	$0.9 million
Proposition 13	Chollas Creek Water Quality Protection and Habitat Enhancement Project	$2.2 million
California State Appropriations	Rose and Tecolote Creeks Water Quality Improvement	$2.0 million
Proposition 50	Areas of Special Biological Significance Project Planning	$0.5 million
Proposition 50	Areas of Special Biological Significance Dry Weather Flow and Pollution Control Program	$3.6 million
Total Grant Funding		**$11.8 million**

15.3 FUNDING SOURCES

City-wide implementation of Municipal Permit requirements is funded through four main types of governmental funds: the General Fund, Special Revenue Funds, Enterprise Funds, and Internal Service Funds.

General Fund

The General Fund is the general operating fund for the City.

Enterprise Funds

Enterprise Funds are initiated for specific purposes and funded through fees for services. This funding type is designated for the operations, management, maintenance, and development of the department providing the service. For implementation of City-wide JURMP activities, activities are funded through the following enterprise funds:

- Airports Fund
- Development Services Enterprise Fund
- Recycling Fund
- Refuse Disposal Fund

- Sewer Revenue Funds
- Water Utility Fund
- Storm Water Fee

Internal Service Funds

Internal Service Funds are similar to Enterprise funds, in which fees are paid for services, but customers are usually other City departments. For implementation of City-wide JURMP activities, activities are funded through the following internal service funds:

- Engineering and Capital Projects Fund
- Equipment Division Funds

15.4 FUTURE PROJECTIONS

As mentioned before, City-wide expenditures are primarily funded through the General and non-General funds. One source of enterprise fund revenue is the Storm Water fee, which funds a portion of the City's storm drain maintenance activities, drainage capital projects, and efforts to reduce pollutants in the storm water. Annual revenue projections remain at approximately $6 million. To supplement this revenue, other funding options are being explored, including a possible increase of the existing storm drain fee discussed below.

In light of new Municipal Permit requirements, City-wide JURMP expenditures are projected to rise. The estimated Storm Water Pollution Prevention Division and Streets Division budget for FY 2008 is approximately $36 million. In anticipation of the new Municipal Permit requirements, as of the writing of this report other city-wide expenditures are being developed and will be included in the updated JURMP. Departments will continue to work diligently to prioritize and stretch the dollars that they have to effectively implement their components of the JURMP.

Alternative Storm Water Funding Study

In FY 2007, the City continued to study alternative sources of funding, including a possible increase of the existing storm drain fee, to support activities pursuant to the City's Municipal Permit as well as other regulatory programs (Total Maximum Daily Loads, Areas of Special Biological Significance, and Cleanup and Abatement Orders). The City is studying the implications of such alternative funding sources and the benefits and challenges of implementation.

It is anticipated that such funding will enable the City to take a more integrated approach in addressing the requirements of the various water quality regulatory programs through comprehensive watershed-based planning, monitoring/data tracking, significant investments in the City's infrastructure (e.g., storm drains), investments in urban runoff–related programs (e.g., street sweeping), updates to the City's development regulations, enhanced enforcement, and greater education and outreach efforts.

16 SPECIAL PROJECTS

This section identifies and describes the City's completed, ongoing, and planned special projects and grants that are designed to examine and/or improve water quality or habitat conditions in the San Diego region.

16.1 BACTERIA IMPAIRED WATERS TMDL PROJECT 1 FOR BEACHES AND CREEKS

In 1998, numerous coastal beaches were placed on the 303(d) as impaired for bacteria indicators. As a result of this action, the Regional Board coordinated with a consultant to develop a technical report of the bacteria impaired beaches and creeks in the boundaries of the San Diego Regional Water Quality Control Board Region 9. The City was designated as the Stakeholder Advisory Group (SAG) representative and continued in this role throughout FY 07.

During FY 2007, the Regional Board released revised draft technical reports on August 4, 2006 and March 9, 2007. The City reviewed the draft technical reports and provided comment letters on February 3, 2006 and September 18, 2006. In late FY 2007, the Regional Board released a revised draft technical report that included models, load duration curves, and additional data. The City will be reviewing the draft technical report, providing comments, and attending meetings, as appropriate in FY 2008.

16.2 DRAFT INVESTIGATION ORDER NO. R9-2005-0216 FOR THE DISCHARGE OF BACTERIA, NUTRIENTS AND SEDIMENTS INTO IMPAIRED LAGOONS AND ADJACENT BEACHES AND CREEKS

Within the City of San Diego, Famosa Slough and Los Penasquitos Lagoon were identified for the development of TMDLs. Activities will continue during the next reporting period. In November 2006 Southern California Coastal Water Research Project (SCCWRP) was invited to review the draft technical report and prepare a workplan for all seven lagoons identified by the Tentative order. Meetings were held with responsible parties to develop a comprehensive and consistent workplan. The final workplan was developed in June 2007 and responsible parties allocated work, by watershed, to consultants for implementation. Work is due to commence in October 2007 with both wet and dry weather monitoring as well as sediment sampling and index period sampling.

16.3 CLEANUP & ABATEMENT ORDER NO. R9-2005-0126 FOR THE SAN DIEGO BAY SHIPYARDS CONTAMINATED SEDIMENTS

On April 29, 2005, the City and other organizations received a Tentative Cleanup and Abatement Order (CAO) from the Regional Board with regards to contaminated marine sediments in San Diego Bay at the Shipyard Sediment Site. The CAO states that the City has caused or permitted the discharge of urban storm water pollutants through Municipal Separate Storm Sewer Systems (MS4) and Chollas Creek. Storm water is discharged from the MS4 at SW4 (Southwest Marine, Inc., leasehold), SW9 (NASSCO leasehold) and Chollas Creek and may contribute to the accumulation of pollutants in the marine sediments at the Shipyard Sediment Site. The CAO requires the City and other organizations to eliminate the effects of sediment contamination (metals, total suspended solids, petroleum products, and synthetic organics) to aquatic life in San Diego Bay.

The City is awaiting the release of the draft Technical Report supporting the Cleanup and Abatement Order recommendations to provide comments. A revised draft Cleanup and Abatement order is expected August or September 2007. The City will continue its participation by attending necessary meetings and providing input and comments as appropriate.

16.4 WATERSHED URBAN RUNOFF MANAGEMENT PROGRAM ANNUAL REPORTS SPECIAL PROJECTS

Below is a summary of some of the City of San Diego's special projects contained in the City's FY 2007 Watershed Urban Runoff Management Program (WURMP) Annual Reports.

Special Projects discussed in the San Dieguito WURMP Annual Report:

- San Dieguito Watershed Management Plan
- San Dieguito River Watershed Targeted Restaurant Inspections
- San Dieguito River Watershed Rain Barrel/Rain Harvesting
- San Dieguito River Watershed Restaurant BMP Booklet

Special Projects discussed in the Los Peñasquitos WURMP Annual Report:

- ALPHA Project for the Homeless, Inc. Cleanup Sponsorship
- Los Peñasquitos Creek Watershed Erosion and Sediment Control Poster
- Integrated Regional Water Management Plan Preparation Participation
- Los Peñasquitos Watershed Targeted Animal Facility Inspections

Special Projects discussed in the Mission Bay and La Jolla WURMP Annual Report:

- Areas of Special Biological Significance Nos. 29 and 31 – Integrated Coastal Watershed Management Plan
- Beach Area Low Flow Storm Drain Diversion Project, Phase III
- Aggressive Street Sweeping Program
- Kellogg Park Green Lot Retrofit Project – La Jolla Shores Watershed – Mission Bay Watershed Management Area
- Mount Abernathy "GreenStreet" Retrofit – Tecolote Creek – Mission Bay
- Rose and Tecolote Creeks Water Quality Improvement Project
- Mission Bay and Coastal Beaches Sewage Interceptor System Upgrades
- Pacific Beach Point Bacterial Sources Identification
- Rose Creek Watershed Opportunities Assessment
- South Shore Recreational Vehicle Pumpout
- Genessee and Balboa Avenues Community Based Social Marketing Outreach Pilot Project
- Mission Bay Central Computerized Irrigation System

Special Projects discussed in the San Diego River WURMP Annual Report:

- San Diego River Restoration Project
- Clean Beaches Initiative Grant: San Diego River – Ocean Beach Water Quality Improvement Project, Phase II
- San Diego River Watershed Boundary Signs

- San Diego River Park Master Plan

Special Projects discussed in the San Diego Bay WURMP Annual Report:

- San Diego River Restoration Project
- Dry Weather Aerial Deposition Study
- Chollas Creek Diazinon TMDL
- Chollas Creek Dissolved Metals TMDL
- Chollas Creek Enhancement Program
- Chollas Creek Integrated Pest Management Program (Proposition 13 Pesticide Research and Identification of Source and Mitigation Grant)
- Chollas Creek TMDL Source Loading Assessment, BMP Evaluation, and Recommended Monitoring Strategy
- Chollas Creek Water Quality Protection & Habitat Enhancement Project
- Chollas Creek Watershed Street Sweeping Phase I
- Chollas-Paleta-Switzer Creek Mouths TMDL
- Dalbergia and Thor Streets "Green Mall" Retrofit and Memorial Park Dual-Use Infiltration/Bioretention Retro-fit Projects – Chollas Creek Watershed
- Trash Containment Boom Cleaning Agreement with United States Navy
- San Diego Watersheds Common Ground: San Diego Bay Watershed Demonstration Project

Special Projects discussed in the Tijuana River WURMP Annual Report:

- San Diego River Restoration Project
- Tijuana Targeted Inspections
- Tijuana River Watershed Pesticide-Herbicide Guide Brochure

16.5 ADDITIONAL WATERSHED ACTIVITIES

Additional watershed activities that are planned for implementation in FY 2008 and beyond are described in the appropriate watershed urban runoff management plans and will be reported in the WURMP annual reports. Additional watershed activities will be implemented to meet the requirements of the 2007 Municipal Permit with funds from past awarded grants and other sources.

17 CONCLUSIONS AND PROGRAM AMENDMENTS

17.1 SUCCESSES AND CHALLENGES

Urban runoff discharged from municipal storm water conveyance systems has been identified by local, regional, and national research programs as one of the principal causes of water quality problems in most urban areas. The City's storm water conveyance system, which collects runoff from streets, rooftops, driveways, parking lots, and other impervious areas, flows directly to beaches and bays without receiving treatment. Through the hard work of the Storm Water Division and other City staff, there has been a reduction in the percentage of beach advisories and closures per total beach mile days possible over the last six years (see Figure 17-1). In addition to reducing beach postings, the City has also reduced the number of sewage spills between FY 2000 and FY 2007 (see Figure 17-2).

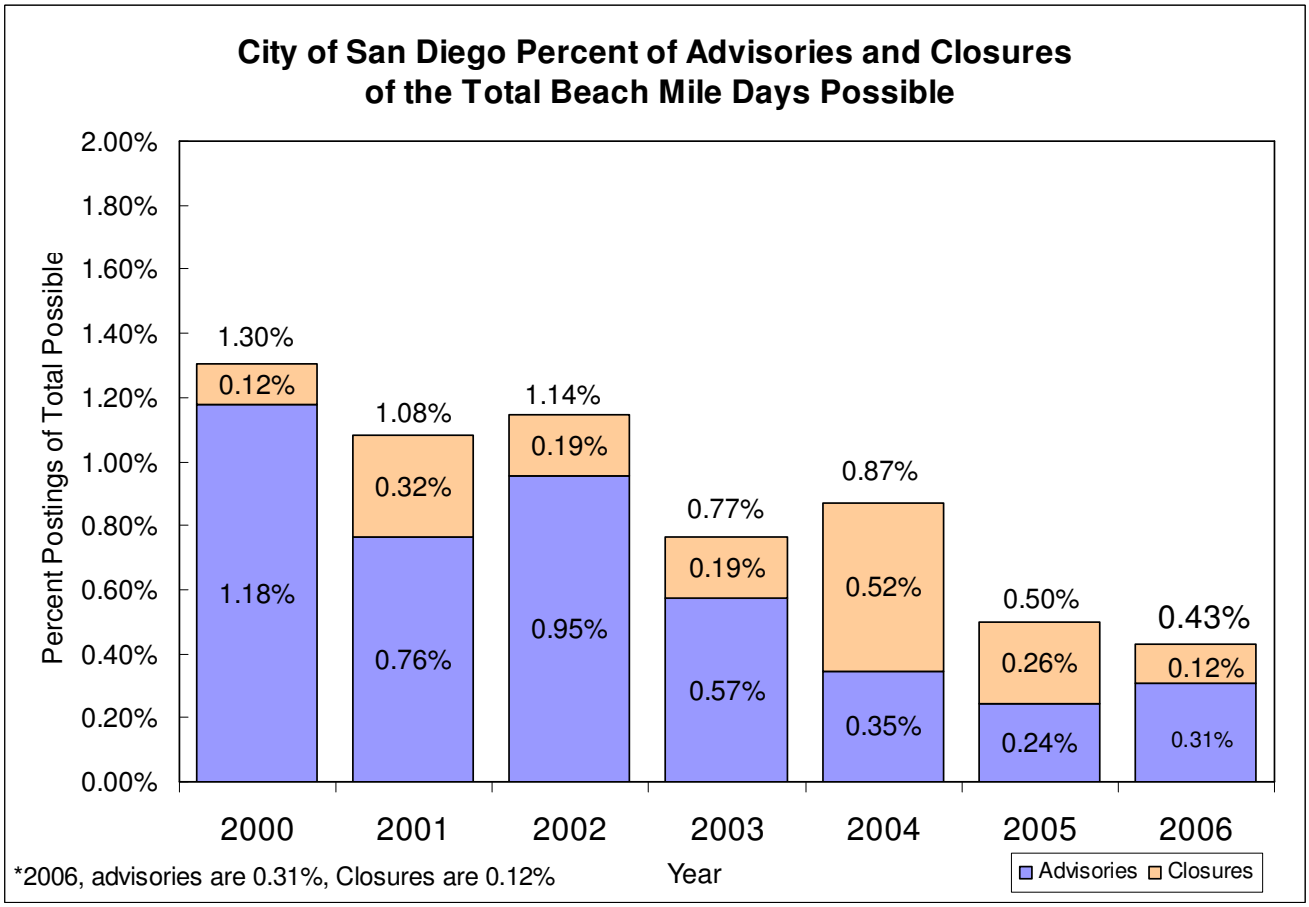

Figure 17-1. Beach Posting and Closures in City of San Diego Between FY 2000 and FY 2007.

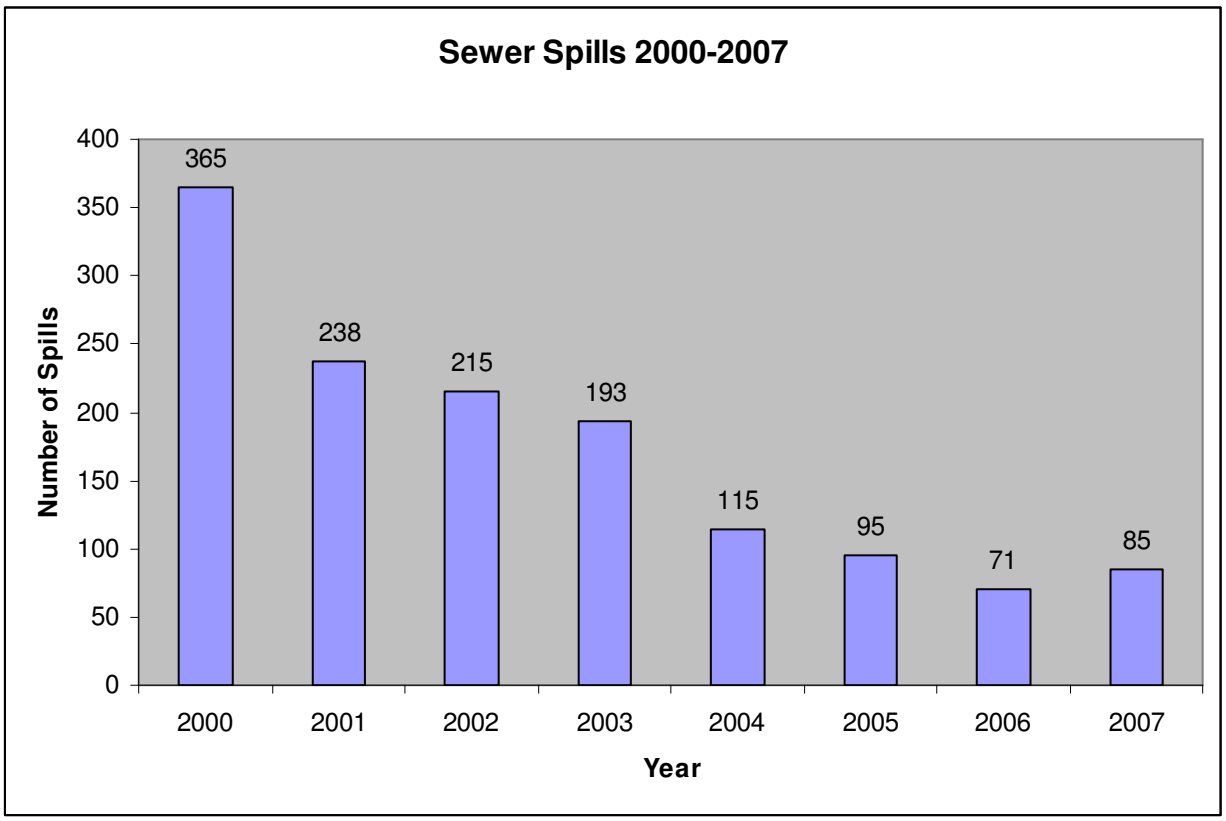

Figure 17-2. Number of Sewer Spills in City of San Diego between FY 2000 and FY 2007.

17.1.1 Successes

The City's Storm Water Division annual budget was increased in FY 2007 to $13.5 million from its FY 2006 budget of approximately $2.3 million. The City's Storm Water Division achieved significant benefits to water quality beyond its budget by leveraging special projects. Specifically, the City received approximately $11,800,000 in grant funds, supplemented by approximately $3 million in City and partner agency matching funds. The grants helped further the City's clean water efforts in San Diego Bay, San Diego River, Chollas Creek, and Mission Bay.

Special projects (data gathering efforts) are an integral tool in the City's effort to leverage limited resources with grant dollars and partnerships with environmental organizations and agencies. Special studies at Mission Bay Park and the mouth of the San Diego River have resulted in the implementation of bacteria source abatement projects. In addition to these water quality improvement projects, the Storm Water Division also participated in six Total Maximum Daily Load (TMDL) programs and numerous special water quality monitoring investigations to determine the sources of various water quality problems. Details are included in the WURMP Annual Reports associated with those watersheds.

In addition to the above mentioned special projects, the Storm Water Division achieved many other successes in implementing the JURMP in FY 2007.

- Completed post-construction monitoring of the Mission Bay Central Computerized Irrigation System. The final Project Report was submitted to the State Grant Manager.

- Completed the San Diego Bay Common Ground Project and the final Project Report was submitted to the State Grant Manager.
- Completed construction of the San Diego River – Ocean Beach Water Quality Improvement Project, Phase II, flap gate in November 2006 and the project was completed in December 2006.
- Eliminated 12 illicit discharges in FY 2007.
- Continued its efforts to seek out and abate illegal discharges and was responsible for issuing 880 notices of violation, 456 citations, and 157 civil penalties.
- The City continued implementing the *Storm Water Standards Manual* in FY 2007 and began revising the manual to reflect new requirements in the new Municipal Permit.
- Approximately 76,000 mailing inserts accompanying business license renewals and business tax certificate mailings were distributed to industrial and commercial businesses. They served to educate businesses of the City's storm water best management practices requirements and the Storm Water Ordinance.

17.1.2 Challenges

The City faces significant challenges in effectively gathering and managing storm water program data. With a growing population of over 1.2 million residents and 237 square miles of urbanized development, the City is huge relative to other jurisdictions in the region. The enormity of the data management challenge is something the Storm Water Division is continually working to overcome. To address the need for effective data management capabilities, as of the writing of this report in FY 2008, the Storm Water Division completed a division-wide data needs assessment and began developing an integrated database and software system. The system will be designed to manage data City-wide, with a web-based interface so that City departments can easily submit JURMP data to the Storm Water Division. As of the writing of this report, the Storm Water Division is continuing efforts to expand and improve its industrial program database. These efforts will form the foundation for future improvements, especially in light of the 2007 Municipal Permit needs.

In addition to the Municipal Permit, the City must also simultaneously comply with the requirements of other regulatory programs, such as Areas of Special Biological Significance (ASBS), Total Maximum Daily Loads (TMDLs), and Cleanup and Abatement Orders (CAOs). Although these regulatory programs are separate from the Municipal Permit, their ultimate goal is the same—the improvement and protection of the region's water quality. The convergence of these regulatory programs mandates that the City devote resources to advance planning efforts and nurture even stronger bonds and partnerships with other stakeholders in the region to achieve its goal of improved water quality.

17.2 FUTURE RECOMMENDATIONS

To continue to improve program efforts, the Storm Water Division has identified three major program goals, as detailed below.

– *Employ an integrated "Strategic Approach" to program implementation.* The City is subject to multiple water quality regulatory programs, namely: the Municipal Permit, TMDLs, ASBS, and CAOs. By setting stringent water quality standards that the City must meet, these regulatory programs in effect mandate the implementation of structural (e.g.,

capital improvement projects) and non-structural (e.g., education and outreach, street sweeping) activities. Given that these regulatory programs essentially require similar, parallel efforts, careful program coordination is needed to avoid unnecessary overlapping efforts, wasted resources, and loss of time. Therefore, the City is employing an integrated approach towards meeting the requirements of these regulatory programs simultaneously. The Storm Water Division began planning for an integrated approach to implementation called the "Strategic Plan for Watershed Activity Implementation" in FY 2006 and continued to employ this "Strategic Approach" in FY 2007. Although initially the focus will be on the City's watershed-based programs and activities (particularly in the Chollas Creek, Tecolote, and Rose subwatersheds), implementation and assessment of these activities will ultimately help improve the City's jurisdictional activities as knowledge is gained from the watershed-based efforts may be implemented City-wide.

– *Improve data management, reporting and assessment.* Also important, the City will be working with the other Copermittees in refining their reporting and effectiveness assessment standards to facilitate cross-jurisdictional and cross-programmatic comparisons and evaluations. The refined standards will lead to a more regionally-integrated approach to water quality improvement efforts. In addition to continued inter-jurisdictional cooperation, the Storm Water Division will be using the program updates that will be required by the next Municipal Permit as an opportunity to coordinate with its various departments and further increase City employee awareness of storm water pollution prevention principles as they go about their daily business. The anticipated commencement in the latter half of FY 2007 of the process to update the JURMPs and WURMPs and develop the RURMP will provide the context for achieving these City objectives.

– *Study needs and options for storm water-dedicated funding sources.* Staff continued to study long-term, dedicated funding mechanisms in FY 2007, including an increase in the current storm drain fee, to support the anticipated ramping up in the City's storm drain and water quality protection programs over the long run. This effort included analysis of projected program needs. However, over the near term, the City will continue to pursue short-term alternative funding sources, such as grants, for urban runoff management and water quality protection. Currently, the City is benefiting from a number of grant-funded projects that will reduce pollutants. The City will also continue to partner with other stakeholders to develop water quality projects in order to compete for grant funds and leverage outside sources of funding. Staff will continue to work closely with the other storm water program managers in the region to collaborate on program implementation strategies. It is the City's objective to institute the most effective and efficient strategies in the San Diego region to clean and protect its creeks, beaches, and bays for future generations.

To provide focus for program improvements in FY 2008, the Storm Water Division has identified the following specific objectives:

- Continue "Strategic Approach" to planning program efforts;
- Refinement and/or expansion of the Division's data management and tracking capabilities;
- Improvements in monitoring to aide in program and activity effectiveness assessment;
- Refinement/increase in municipal training;

- Revising and updating of the City's JURMP in response to Order No. 2007-0001;
- Implementation of new requirements in accordance with Order No. 2007-0001.

17.3 PROPOSED PROGRAM AMENDMENTS

The City will be implementing a revised Program as required by the new Municipal Permit (Order No. 2007-0001), effective March 24, 2008 and any program amendments or changes will be part of the City's revised JURMP.

California Regional Water Quality Control Board

San Diego Region

Mr. Jay Goldstone
Interim Chief Operating Officer
City of San Diego
202 C Street, 11th Floor
San Diego, CA 92101

In reply refer to:
SWU:10-5015.02:carias

Dear Mr. Goldstone:

SUBJECT: REVIEW OF JURISDICTIONAL URBAN RUNOFF MANAGEMENT PROGRAM 2005-2006 ANNUAL REPORT FOR THE CITY OF SAN DIEGO, ORDER NO. 2001-01, NPDES NO. CAS0108758.

The California Regional Water Quality Control Board, San Diego Region (Regional Board) has completed its review of the "County of San Diego (County) Urban Runoff Management Plan Fiscal Year 2005-2006 Annual Report." This year, the Regional Board focused on the following sections: Municipal, Industrial, Commercial, Land Use, Construction, Illicit Discharges Detection and Elimination, Education and Outreach, and Effectiveness Assessment. Our comments include requests for additional information needed to fully assess program implementation and compliance during the reporting period. Some comments may also request information to help ensure program compliance for future reporting periods. Revisions and any responses to comments should be addressed in the Fiscal Year 2006 - 2007 Annual Report, which is due in **January of 2008**.

The following comments reveal significant instances of incomplete and/or unclear reporting, in the Annual Report, of required actions and activities by your agency. If such required actions and activities actually did not occur during the reporting period, the identified serious deficiencies in your storm water program would be a basis for determining noncompliance with Order No. 2001-01. Such deficiencies may become the subject of future enforcement actions by the Regional Board. All comments are numbered to provide you the ability to track responses.

COMMENTS ON THE CITY OF SAN DIEGO 2005-2006 ANNUAL REPORT

Annual Report Section 3.0 (Municipal):

1. The Annual Report states that the City inspected and cleaned approximately 11 percent of its storm drain structures, 2.21 miles of its drainage pipe, and 0.8 miles of its drainage channel. The reported level of inspection and cleaning is

inadequate and does not meet the maximum extent practicable standard, since greater levels of cleaning have previously been achieved by the City. In your 2008 Annual Report, please identify the steps taken by the City to increase inspection and cleaning of these structures to at least the previous levels of effort.

Annual Report Section 4.0 (Industrial):

2. Appendix C-1 appears to identify thousands of businesses with the priority of "HPI," presumably standing for high priority industrial. The text states that only 530 industrial businesses potentially require inspections, when the permit requires, per section F.3.b.(6), annual inspection of all high priority industrial sites. Please clarify the meaning of "HPI" and verify that the City will increase the number of inspections to comply with the permit requirements.

3. It appears that the City did not inspect industrial businesses that have been replaced by other industrial businesses (Appendix C-4). Permit section F.3.b.(6)(i) requires annual inspection of all high priority industrial sites, regardless of whether the business at the site is new, has changed names, or is replacing another business. In your response to this letter, please confirm that all new businesses listed in Appendix C will be assessed to determine if they are high priority industrial sites, and if so, will be inspected as required. In addition, please confirm that in the future when a high priority industrial business is found to have been replaced, that the replacing business' priority status will be assessed and any required inspections will be conducted that same year.

4. Appendix C-5 of the Annual Report identifies 69 industrial businesses that the City certifies as meeting all requirements of permit section F.3.b.(6)(b)ii. As a result, these certified industrial businesses are only required to be inspected biannually. Since the businesses were last inspected fiscal year (FY) 04-05 and were not inspected FY 05-06, the businesses must be inspected FY 06-07. Please note that the biannual inspection schedule is not included in the new permit, Order No. R9-2007-0001.

5. The Annual Report states that the City has mainly used education as an enforcement technique at non-compliant industrial sites, since the violations observed primarily involved BMP implementation rather than active discharges. However, BMP-related violations can often warrant higher level enforcement actions. In your response to this letter, please provide a complete description of the specific types of BMP-related violations that result in education, versus the types of BMP-related violations that result in higher levels of enforcement. In

addition, please describe how enforcement of repeat violations is handled.

Annual Report Section 7.0 (Land-Use Planning for New Development):

6. The Annual Report does not provide a list of the projects which were required to meet SUSMP requirements during the reporting period. The Regional Board previously requested that this information be included in your Annual Report in our letter dated September 15, 2006. Application of SUSMP requirements is required pursuant to permit section F.1.b.2; therefore it must be reported per permit section I.1.a. Moreover, the ability to identify SUSMP projects is critical to ensure that permanent BMPs are adequately maintained. In your response to this letter, please provide a list of the projects which were required to meet SUSMP requirements, and describe how the list will be maintained for BMP maintenance assessment purposes.

Annual Report Section 8.0 (Construction):

7. In your 2008 Annual Report, please provide an update on the effort to develop the processes necessary to track inspections of construction sites operating under building permits.

Annual Report Section 10.0 (Monitoring):

8. The Annual Report states that the City currently monitors 17 of its more than 90 coastal storm drains. Please be aware that the new permit requires monitoring of all coastal storm drains.

Annual Report Section 11.0 (Illicit Discharges Detection and Elimination):

9. The Annual Report does not clearly indicate that dry weather field screening follow-up investigations were conducted in a timely manner. Follow-up investigations must be conducted in a timely manner when likely illicit discharges and discharge sources are detected by dry weather field screening. Timely follow-up investigations are required by permit sections F.5.c and F.5.d; therefore they must be reported on per permit section I.1.a and Attachment E section 7. In your response to this letter, please describe the timeframe under which dry weather field screening follow-up investigations will be conducted in the future.

10. The Annual Report does not confirm that all illicit discharges were eliminated when they were identified by follow-up investigation activities. The Annual Report typically discusses a referral or enforcement action taken, without

confirming that the illicit discharge has been eliminated. The Annual Report should confirm that identified illicit discharges were eliminated per permit section I.1.a and Attachment E section 7. In your response to this letter, please confirm that each illicit discharge that was identified as a result of field screening has been eliminated.

Annual Report Section 14.0 (Assessment of Jurisdictional URMP Effectiveness):

11. Section 3.3.1.2 of the Annual Report states that the City inspected 7,669 storm drain structures, while section 14.3.1 states that the City inspected 16,230 storm drain structures. In your response to this letter, please review Table 14-1 for accuracy and indicate the correct number of storm drain structures that were inspected.

12. The Annual Report states that the amount of debris removed due to storm drain inspections and cleanings was only 21.1 percent of the amount of debris removed in FY 2004. This reduction is inappropriate considering the trash conditions in receiving waters within the City, particularly within Chollas Creek. Moreover, this level of effort does not meet the maximum extent practicable standard, since greater levels of cleaning and debris removal have previously been achieved by the City. In your 2008 Annual Report, please identify the steps to be taken by the City to increase storm drain debris removal to previous levels.

13. The level of effort afforded the City's education programs appear to be declining. For example, the City only conducted 26.7 percent of the outreach it conducted in 2003 (Table 14-13), and the City received only 1,902 public contacts, as opposed to 4,695 in FY 2004. In your 2008 Annual Report, please indicate what steps the City will take to improve its education efforts and reach previous levels of effort in public education.

14. The City has not adequately assessed the effectiveness of its programs, as discussed below. The City must improve the effectiveness assessment of its programs in the 2008 Annual Report.

    a. **Changes in knowledge/awareness (assessment level 2)**. Opportunities for assessing changes in knowledge/awareness, such as conducting tests or surveys during education activities, or gathering information on storm water knowledge during inspections, were not utilized to the fullest extent for the purpose of assessing effectiveness.

    b. **BMP implementation (assessment level 3)**. Opportunities for assessing changes in BMP implementation, such as gathering information on BMP

implementation during inspections, were not utilized to the fullest extent for the purpose of assessing effectiveness.

c. **Pollutant load reductions (assessment level 4).** The City should attempt to assess pollutant load reductions for activities or BMPs other than MS4 cleaning activities and household hazardous waste collection. For example, estimating pollutant load reductions resulting from treatment control BMP implementation.

d. **Discharge water quality (assessment level 5).** At a minimum, dry weather field screening and analytical monitoring data provide the means to conduct this assessment at a basic qualitative level.

The heading portion of this letter includes a Regional Board code number noted after "In reply refer to." In order to assist us in the processing of your correspondence, please include this code number in the heading or subject line portion of all correspondence and reports to the Regional Board pertaining to this matter.

If you have any questions regarding this letter, please contact Ms. Christina Arias at (858) 627-3931 or email: carias@waterboards.ca.gov.

Respectfully,

JOHN ODERMATT, P.G.
Senior Engineering Geologist

EDUCATION AND PUBLIC PARTICIPATION FORM

Please submit this form with the Urban Runoff Management Program Activity Reporting Form [provided as a separate file]. If you have questions regarding this form, contact Jennifer Nichols Kearns at (619) 525-8606.

EDUCATION

1. Education of Target Audience

Please provide a short narrative responding to questions 1a. and 1b. Your written response should summarize your department's overall education and public participation accomplishments in FY 2007, and will be included in the annual report to the Regional Water Quality Control Board.

a. Please summarize the internal storm water pollution prevention education efforts, such as articles in employee newsletters and employee training, conducted by your department during the 2007 fiscal year.

   We have conducted annual reviews of Best Management Practices through station tailgate sessions. Shift Captains provide the crew members with updates as well as a refresher of the existing established protocols for the respective stations.

   Additional exposure to Storm Water issues is provided through the annual personnel review of handling hazardous materials on the job.

b. Please summarize the external storm water pollution prevention education efforts, such as mail inserts, contract language, external newsletters, and outreach activities, conducted by your department during the 2007 fiscal year.

   N/A

2. Conduct Education Efforts Focused on New Development and Redevelopment

Please describe all storm water pollution prevention education efforts conducted by your department that are focused on new development and redevelopment.

N/A

3. Education Focused on Construction Activities

a. Please describe all internal storm water pollution prevention education efforts focused on construction activities, such as employee training, that were conducted by your department during the 2007 fiscal year.

The review of bidding documents and construction documents being used during the construction, currently in progress, of new Fire Station 47 is conducted by each of the Fire Department liaisons. The identified contractor standards are reviewed and discussed with project team members to assist the field engineer in maintaining the required standards.

b. Please describe all external storm water pollution prevention education efforts focused on construction activities, such as contract language and outreach activities that were conducted by your department during the 2007 fiscal year.

During the pre-bid review with prospective bidders and during the pre-construction meetings, the Storm Water Discharge Control requirements are noted for the contractors to address. Contractor responsibilities are incorporated into each project contract document. See "Attachment D" for Fire Station 47, currently being constructed.

4. **Please provide the following information:**

a. Total number of employee training events, including general and activity specific tailgates, regarding storm water that were conducted by your department during the 2007 fiscal year.

Annual in-station tailgates are conducted at forty-seven locations with three divisions per location. In conducting a general review of the BMPs as they pertain to storm water concerns, this would account for 141 training events for the year.

b. Number of storm water-related education/instructional workshop/outreach events conducted by your department during the 2007 fiscal year.

c. Number of storm water related education/instructional materials/brochures distributed by your department during the 2007 fiscal year.

d. Number of storm water related surveys given either to the public or to city employees which were completed by your department during the 2007 fiscal year.

e. Percent of population statistically represented by educational survey listed above.

f. Number of storm water related display ads, project signage, and other storm water outreach materials created by your department during the 2007 fiscal year.

g. Dollar value of storm water project signage and other storm water outreach materials created by your department during 2007 fiscal year.

NOTE: Please only report activities that were implemented during the 2007 Fiscal Year (July 1, 2006 through June 30, 2007).

h. Number of employees trained on general storm water principles (video, pre and post test) during the 2007 fiscal year.

The current Fire-Rescue Department roster accounts for approximately 900 employees. The record keeping of new hires, those individuals who retire, and the academy replacements are not available to this office.

i. Number of employees trained in activity specific storm water principles during the 2007 fiscal year.

N/A

j. Percent of staff trained in activity-specific storm water principles during the 2007 fiscal year.

N/A

NOTE: Please only report activities that were implemented during the 2007 Fiscal Year (July 1, 2006 through June 30, 2007).

PUBLIC PARTICIPATION

This portion is Not Applicable.

1. Please summarize the activities that your department conducted during the 2007 fiscal year that facilitated public participation on water quality issues (e.g., forums or events such as, planning community meetings, EIR reviews, and City Council and Coastal Commission Meetings where the public can provide feedback to your department whether it be written or verbal.).

2. Indicate the number of opportunities provided by your department that enabled the public to participate.

FY07 FINANCIAL ASSESSMENT FORM

EDUCATION

1. Education of Target Audience

Please provide a short narrative responding to questions 1a. and 1b. Your written response should summarize your department's overall education and public participation accomplishments in FY 2007, and will be included in the annual report to the Regional Water Quality Control Board.

a. Please summarize the internal education efforts, such as newsletters and employee training, conducted by your department during the 2007 fiscal year.

No internal training was conducted by our department.

b. Please summarize the external education efforts, such as public service announcements, mail inserts, contract language, and outreach activities, conducted by your department during the 2007 fiscal year.

None.

2. **Conduct Education Efforts Focused on New Development and Redevelopment**

Please describe all education efforts conducted by your department that are focused on new development and redevelopment.

None

3. **Education Focused on Construction Activities**

a. Please describe all internal education efforts focused on construction activities, such as employee training, that were conducted by your department during the 2007 fiscal year.

N/A

b. Please describe all external education efforts focused on construction activities, such as contract language and outreach activities that were conducted by your department during the 2007 fiscal year.

N/A

NOTE: Please only report activities that were implemented during the 2007 Fiscal Year (July 1, 2006 through June 30, 2007).

4. **Please provide the following information:**
   a. Total number of employee training events, including general and activity specific tailgates, regarding storm water that were conducted by your department during the 2007 fiscal year.

      Planning staff went through storm water training in FY 2002. Sixty-one staff members have completed the training. No formal training has occurred since FY 2002.

   b. Number of storm water-related education/instructional workshop/outreach events conducted by your department during the 2007 fiscal year.

      None.

   c. Number of storm water related education/instructional materials/brochures distributed by your department during the 2007 fiscal year.

      In FY 2007, informational brochures were distributed at the Community Orientation Workshop (C.O.W.), attended by more than 70 community members.

   d. Number of storm water related surveys given either to the public or to city employees which were completed by your department during the 2007 fiscal year.

      None.

   e. Percent of population statistically represented by educational survey listed above.

      N/A

   f. Number of storm water related display ads, project signage, and other storm water outreach materials created by your department during the 2007 fiscal year.

      N/A

   g. Value of storm water display ads, project signage and other storm water outreach materials created by your department during 2007 fiscal year.

      N/A

   h. Number of employees trained on general storm water principles (video, pre and post test) during the 2007 fiscal year.

      None.

d. Number of employees trained in activity specific storm water principles during the 2007 fiscal year.

None.

e. Percent of staff trained in activity-specific storm water principles during the 2007 fiscal year.

None.

f. Number of storm water related display ads, such as project signage,. and other storm water outreach materials created by your department during the 2006 fiscal year reporting period.

N/A

g. Value of storm water display ads, such as project signage and other storm water outreach materials created by your department during 2006 fiscal year the reporting period

N/A

h. Number of employees trained on general storm water principles (video, pre and post test) during the 2006 fiscal year reporting period.

N/A

i. Number of employees trained in activity specific storm water principles during the 2006 fiscal year reporting period.

N/A

j. Percent of staff trained in activity-specific storm water principles during the 2006 fiscal year reporting period

N/A

NOTE: Please only report activities that were implemented during the 2007 Fiscal Year (July 1, 2006 through June 30, 2007).

PUBLIC PARTICIPATION

1. Please summarize the activities that your department conducted during the 2007 fiscal year that facilitated public participation on water quality issues (e.g., forums or events such as, planning community meetings, EIR reviews, and City Council and Coastal Commission Meetings where the public can provide feedback to your department whether it be written or verbal.).

   The Planning Department provided staff to many public meetings, workshops, and hearings where water quality issues were discussed. Major public outreach activities in FY 2006 included:

   General Plan Update and the City of Villages Strategy
   The City Planning and Community Department has built up an e-mail database with over 1,200 contacts of individuals and organization interested in the General Plan update. Over 350 of these contacts have elected to receive updates on Conservation Element issues and events. See Item No. 2 of "Program Assessment" in the Activity Reporting Form for more information).

   The new General Plan is intended to proactively address the challenges of growth and development through seeking solutions to infrastructure challenges, establishing better linkages between transit and land use planning, preserving important open spaces, strengthening our existing communities, and creating new neighborhood centers. The July 2005 Draft General Plan represents the results of five years of public input and staff work to prepare the Strategic Framework Element of the Draft General Plan and then to update the balance of the 1979 General Plan. Staff is continuing to seek public comment on the draft document. A revised draft May 2006 General Plan has been posted on the City's Planning website. A public review version will be released in September 2006, with an anticipated March 2007 City Council hearing date.

   The complete Conservation Element draft (May 2006 version) is available online at: www.sandiego.gov/cityofvillages.

   Community Plan Activities
   - Otay Mesa Community Plan Update - Staff has spent several months in meetings with the Development Coalition of Otay Mesa, meetings with consultants, Planning Commission Hearings, Planning Commission workshops, Planning Commission tours of Otay Mesa, EIR review, internal staff meetings, and response to public comment.
   - General Plan Update; City of Villages Strategy - Staff spent, at a minimum, approximately 14 weeks in meetings with the local planning group.

NOTE: Please only report activities that were implemented during the 2007 Fiscal Year (July 1, 2006 through June 30, 2007).

2. Indicate the number of opportunities provided by your department that enabled the public to participate.

   Through e-mail outreach, public meetings and hearings, there have been more than 250 opportunities for the public to comment on issues affecting water quality in FY 2007. No additional posting occurred in FY 2007. The Los Penasquitos Watershed Management Plan continues to be posted on the City Planning website and ProjectCleanWater.org website for public review/information.

CITY PLANNING AND COMMUNITY INVESTMENT DEPARTMENT
URBAN RUNOFF MANAGEMENT PROGRAM
ACTIVITY REPORTING FORM – FISCAL YEAR 2007

The *Municipal Storm Water Permit* issued to the City of San Diego requires that the City report all activities accomplished citywide during each fiscal year to implement the City's *Urban Runoff Management Plan*. This form is designed to gather information regarding the activities (and associated costs) accomplished by your department to implement your department's storm water requirements as identified in the Urban Runoff Management Plan *during the 2007 Fiscal Year* (July 1, 2006 to June 30, 2007). The form will also allow your department to make amendments to the Urban Runoff Management Plan. The information you provide will be incorporated into the City's Urban Runoff Management Program Annual Report for Fiscal Year 2007 and will be submitted to the Regional Water Quality Control Board.

Beginning with an explanatory kickoff meeting in July of this year, your liaison from the Storm Water Pollution Prevention Program (Storm Water Program), **Karen Comer Santos**, will be meeting with you to discuss the 2007 Fiscal Year's activity reporting form and provide you with an overview of the reporting process (after you've met and discussed this form, please sign below and return a copy of this cover page to your liaison to show that this process has been explained to you). The Storm Water Program requires that all departments submit this form by October 1 of each year.

Prior to formally submitting your department's activity reporting form for Fiscal Year 2007, your liaison will be meeting with you between August and September to review a draft of the reporting data your department has collected for fiscal year 2007. Your liaison will be available to answer any questions you may have, and discuss any amendments to the Urban Runoff Management Plan your department would like to propose. After discussing your draft reporting information with your liaison, and incorporating any necessary changes, **please submit a signed copy of your department's final activity reporting form including attachments to your liaison by October 1, 2007 (start of the rainy season).** If your department will also be proposing amendments to the Urban Runoff Management Plan, a copy of the strikeout/ underline amendments should also be submitted with this form. An electronic copy of this form (and proposed amendments, if any) should also be forwarded to the liaison via e-mail. Thank you for your help!

The information requested in this activity reporting form was explained and discussed with me, as the department's storm water representative.

EDUCATION AND PUBLIC PARTICIPATION FORM

Please submit this form with the Urban Runoff Management Program Activity Reporting Form [provided as a separate file]. If you have questions regarding this form, contact Jennifer Nichols Kearns at (619) 525-8606.

EDUCATION

1. Education of Target Audience

Please provide a short narrative responding to questions 1a. and 1b. Your written response should summarize your department's overall education and public participation accomplishments in FY 2007, and will be included in the annual report to the Regional Water Quality Control Board.

a. Please summarize the internal storm water pollution prevention education efforts, such as articles in employee newsletters and employee training, conducted by your department during the 2007 fiscal year.

   Garage personel, Air support, Canine and FM&D hold tailgate meeting on awareness of storm water pollution and inform staff on BMP'S to follow.

b. Please summarize the external storm water pollution prevention education efforts, such as mail inserts, contract language, external newsletters, and outreach activities, conducted by your department during the 2007 fiscal year.

   Contracted vendors are notified of the City BMP'S and they are inspected during the year to ensure compliance with the contract. A new generator contract was implemented this year and BMP'S were included.

2. Conduct Education Efforts Focused on New Development and Redevelopment

Please describe all storm water pollution prevention education efforts conducted by your department that are focused on new development and redevelopment.

The Police Department assisted the contractor with site improvements at the new Northwestern Area station

3. Education Focused on Construction Activities

a. Please describe all internal storm water pollution prevention education efforts focused on construction activities, such as employee training, that were conducted by your department during the 2007 fiscal year.

   Storm water tailgate meeting are held twice a year.

NOTE: Please only report activities that were implemented during the 2007 Fiscal Year (July 1, 2006 through June 30, 2007).

b. Please describe all external storm water pollution prevention education efforts focused on construction activities, such as contract language and outreach activities that were conducted by your department during the 2007 fiscal year.

Police project officer includes BMP'S in all contracts and monitors projects for compliance.

4. **Please provide the following information:**

a. Total number of employee training events, including general and activity specific tailgates, regarding storm water that were conducted by your department during the 2007 fiscal year.

4

b. Number of storm water-related education/instructional workshop/outreach events conducted by your department during the 2007 fiscal year.

0

c. Number of storm water related education/instructional materials/brochures distributed by your department during the 2007 fiscal year.

0

d. Number of storm water related surveys given either to the public or to city employees which were completed by your department during the 2007 fiscal year.

0

e. Percent of population statistically represented by educational survey listed above.

0

f. Number of storm water related display ads, project signage, and other storm water outreach materials created by your department during the 2007 fiscal year.
0

g. Dollar value of storm water project signage and other storm water outreach materials created by your department during 2007 fiscal year.

$100

NOTE: Please only report activities that were implemented during the 2007 Fiscal Year (July 1, 2006 through June 30, 2007).

h. Number of employees trained on general storm water principles (video, pre and post test) during the 2007 fiscal year.

11

i. Number of employees trained in activity specific storm water principles during the 2007 fiscal year.

10

j. Percent of staff trained in activity-specific storm water principles during the 2007 fiscal year.

URBAN RUNOFF MANAGEMENT PROGRAM
ACTIVITY REPORTING FORM – FISCAL YEAR 2007
Attachment A

NOTE: Please only report activities that were implemented during the 2007 Fiscal Year (July 1, 2006 through June 30, 2007).

PUBLIC PARTICIPATION

1. Please summarize the activities that your department conducted during the 2007 fiscal year that facilitated public participation on water quality issues (e.g., forums or events such as, planning community meetings, EIR reviews, and City Council and Coastal Commission Meetings where the public can provide feedback to your department whether it be written or verbal.).

   None this reporting year

2. Indicate the number of opportunities provided by your department that enabled the public to participate.

EDUCATION AND PUBLIC PARTICIPATION FORM

Please submit this form with the Urban Runoff Management Program Activity Reporting Form [provided as a separate file]. If you have questions regarding this form, contact Deborah Castillo at (619) 525-8649.

EDUCATION

1. Education of Target Audience

Please provide a short narrative responding to questions 1a. and 1b. Your written response should summarize your department's overall education and public participation accomplishments in FY 2007, and will be included in the annual report to the Regional Water Quality Control Board.

a. Please summarize the internal storm water pollution prevention education efforts, such as articles in employee newsletters and employee training, conducted by your department during the 2007 fiscal year.

   BTG/ISO Newsletter Updates are emailed to employees, posted on bulletin boards, and given to the supervisors to hand out with payroll. These updates include information on the progress of the BTG/ISO efforts and materials, awards given to the Department and to employees, new technology, employee highlights, and committee meeting briefs.

   BTG/ISO Pay for Performance Posters are displayed in each section, to help employees track their progress in accomplishing their Pay for Performance, ISO14001:2004 EMS, and budgetary goals. This helps track areas of strength and improvement, as well as to make sure that ISO 14001:2004 EMS strategies are being integrated into services. A Division-wide performance poster is also displayed to provide an overall review of how the Division is meeting its "Best In Class" goals.

b. Please summarize the external storm water pollution prevention education efforts, such as mail inserts, contract language, external newsletters, and outreach activities, conducted by your department during the 2007 fiscal year.

   Lakes Brochure and Insert: Revised every season, this brochure features operation, location, and recreation information for each of the nine water supply reservoirs throughout the San Diego County. Additionally, this brochure reminds patrons about their responsibility to protect water quality by disposing their trash in appropriate bins. The insert includes more ways to protect water quality and has information about the Multiple Species Conservation Program. Both materials feature the Think Blue logos.

   Results from the Customer Satisfaction Survey: The City of San Diego conducts an annual Residential Satisfaction Survey in which it polls San Diegans on various aspects

of customer satisfaction. One of the questions included in the survey deals with the public's opinion of the Water Department's customer service. The Water Department consistently rates high in this survey and recently won an award for the Most Improved Service.

As our goal is to provide quality service with the cost-effective use of funds, it is important to get input from the customers to ensure that the desired level of service is being met. To gather feedback about their experience with their service request, we created an additional customer satisfaction survey with a satisfaction scale used to weigh input on various items such as: process for requesting service, promptness of onsite service, explanation of problem and solution, answers to technical questions, clean-up after service, professional appearance of staff, courteousness of onsite staff, satisfaction with staff, and overall experience. Surveys are dropped off after field crews investigate and complete a service request, and are also available online for those who prefer to complete the survey electronically. To date, 80% of our customers rated our service as "Excellent or Above Average."

Customer Survey for Streets Division Services A new customer survey has been developed to gather feedback on Street Division's services, which included work such as repairing water utility trenches, sidewalks, or roadways after a water-related service has been provided. This particular customer satisfaction survey has a satisfaction scale used to weigh input on various items such as: quality of service, clean-up after service, professional appearance of staff, courtesy of onsite staff, satisfaction with staff, and overall experience.

San Diego Water Department took an active role to complete watershed management plans in three key watersheds in San Diego County: Otay River, San Dieguito, and San Diego River. All three management plans are advisory documents to the City and other jurisdictions in our County. Most of the watershed area falls outside of City limits, so working with other jurisdictions is critical to successful management of our watersheds.

The 2006 Annual Drinking Water Quality Report was mailed to 570,204 residential and commercial customers in the City of San Diego. The report included special sections on the Drinking Water Source Assessment and Protection (DWSAP) Program and Watershed and Source Water Protection. The Think Blue logo, website and phone number were also featured in the report. Additionally, a Watershed Newsletter was included in the Report with information on the City's efforts to maintain and protect our reservoirs and watersheds, and features a list of community resources that one can access to learn more about participating in local water quality protection efforts.

A message in Spanish is included on the outside of the English language Report; directing customers to call the Public Information Office if they wish to receive a Spanish

language version of the report. The Public Information Office received additional requests for the Spanish Report. The report also contained the Water Operations Public Information Office phone number and an email address where customers can write for more information or comment on the report. We received many complimentary phone calls and email messages in response to the report. Reports in English and Spanish were also distributed to libraries, community service centers and other key community locations.

City of San Diego Weekly Web Feature: The home page featured an accessible link to the 2006 Annual Drinking Water Quality Report. The report included special sections on the Drinking Water Source Assessment and Protection (DWSAP) Program and Watershed and Source Water Protection. The Think Blue logo, website and phone number were also featured in the report.

The Watershed Source Water Protection Elevator Poster: This poster provides contains information reflecting the importance of watersheds and reservoirs, and why their protection is vital to providing healthy and safe drinking water to our communities. In addition, the Think Blue logo is featured in this poster.

Letter to residents along the Miramar Reservoir: The City of San Diego Water Department sent a letter to neighbors who live along the ridge around Miramar Reservoir requesting residents to help keep the reservoir safe, beautiful, and enjoyable for all by reducing water run-off from their properties.

California Friendly Plants: A Smart Alternative was an article distributed to local press and media about how the benefits of these plants. California friendly plants require less fertilizing, cultivating and irrigation, thus reducing the likelihood of harmful runoff reaching San Diego's waterways. The Think Blue logo and contact number was also included in the article.

The Mission Times Courier newspaper ran an article in June 2007 about the top things to do at Murray Reservoir. Integrated in this list of fun activities is the reminder to protect water quality by keeping the reservoir area clean and picking up after your pets.

The City of San Diego Water Department received unanimous approval from the State Caltrans Traffic Control Devices Committee to begin a pilot Watershed Boundary Sign Program (WSP). Six signs have been produced and installed along public roadways located near three of our reservoirs. The signs will promote storm water pollution prevention awareness. The goal is to create opportunities to learn about the importance of watersheds, drinking water reservoirs, and encourage community stewardship of watersheds. A media and outreach campaign is supplementing the pilot program. In FY07, we have:

- Created and produced mock pilot sign
- Presented WSP to Project Clean Water Outreach Workgroup and Education TAC, and the Storm Water Copermittees
- Placed an ad in San Diego Family Magazine (June 2006)
- Placed an ad in North County Times newspaper daily for weeks
- Placed an ad in the East County Gazette weekly newspaper for six weeks
- Placed 20 radio public service announcements on two Clear Channel stations
- Placed a cinemedia ad at the Mira Mesa Edwards Theater and Parkway Plaza Regal Cinemas for six weeks
- Created an online survey
- Created a program webpage
- Ran a bulletin slide of our ad on City TV
- Posted a poster at the Reuben H. Fleet Science Center near the water cycle and Think Blue exhibit
- Created and distributed 2 issue of the Watershed Sign Program newsletter

2. Conduct Education Efforts Focused on New Development and Redevelopment

Please describe all storm water pollution prevention education efforts conducted by your department that are focused on new development and redevelopment.

Approximately, twenty copies of the Source Water Protection Guidelines for New Development were distributed to various individuals and agencies for FY 07.

3. Education Focused on Construction Activities

a. Please describe all internal storm water pollution prevention education efforts focused on construction activities, such as employee training, that were conducted by your department during the 2007 fiscal year.

At the beginning of the rainy season, a Rainy Season Reminder was mailed to all Project Managers to restate the Water Department's commitment in protecting storm drains and preventing runoff. Capital Improvement Program environmental staff discussed storm water pollution prevention measures at all pre-con meetings and site inspections throughout the rainy season were provided.

b. Please describe all external storm water pollution prevention education efforts focused on construction activities, such as contract language and outreach activities that were conducted by your department during the 2007 fiscal year.

Storm water measures were addressed in the Storm Water Pollution Prevention Plans for large CIP projects, Water Pollution Control Plans (WPCP) for mid-sized projects and Storm Water Management Plans (SMPs) for smaller projects. General requirement

contract projects with very small impact areas were addressed in the SMPs.

In all cases, the contractor was responsible for conducting regular monitoring and maintenance during construction activities while implementing storm water pollution protection measures. Project managers conducted site inspections with the contractor and maintained a copy of each monitoring report on file. Monitoring occurred weekly during the rainy season and monthly during the dry season.

CIP also retained an on-call consultant (MACTEC Engineering) to conduct sampling during storm events for the projects covered under Storm Water Pollution Prevention Plans. Sampling was conducted at each of the water treatment plants. There was no notice of violations or enforcement activities in FY07.

4. **Please provide the following information:**
   a. Total number of employee training events, including general and activity specific tailgates, regarding storm water that were conducted by your department during the 2007 fiscal year.

      The following Storm Water Pollution Prevention Trainings were conducted:
      - WU14SWO1: Storm Water Pollution Prevention (General) - One hour, 13 classes, 122 employees attended
      - WU1SW07: Storm Water BMPs (Policy Refresher) – Six events, 356 students
      - WU14SW10: Storm Water Pollution Preventions Dams and Reservoirs (Lakes) - One hour, two classes, five employees attended
      -WU14ZW13: Storm Water Pollution Prevention (Field Operations) - Two hours, two classes, 22 employees attended

      A Mandatory Section Tailgate has been conducted for supervisors and crews to educate all employees on ISO Awareness and ISO Recycling.

      Other General tailgates have been conducted by Water Operations Division Program Staff to include the following topics: implementation of Best Management Practices during cleaning and construction; storm water issues; responsible material delivery and storage; and, solid waste recycling management.

   b. Number of storm water-related education/instructional workshop/outreach events conducted by your department during the 2007 fiscal year.

      More than 23 presentations and over 22 events were done and attended by Water Department employees to various groups within the community including schools, public facilities, community sites, and recreation centers. The presentations discussed topics such as: water conservation, storm water pollution prevention, and water quality.

c. Number of storm water related education/instructional materials/brochures distributed by your department during the 2007 fiscal year.

Please refer to 1b.

Water Conservation Calendar was distributed to 10,000 residents citywide. The calendar includes water conservation tips and storm water messages. The Think Blue logo is featured in the calendar. Calendars were distributed at various locations and community events, such as the Del Mar Fairgrounds, Wild Animal Park, Fall Garden Festival, Earth Fair, and various elementary school presentations.

The construction update newsletter for the Alvarado Water Treatment Plant Upgrade and Expansion Project, AWTP Waterlines, was distributed to 6,913 residents, businesses and community facilities during the summer of 2006. The newsletter included the Think Blue logo and an article describing Best Management Practices (BMPs) for the use of pesticides and herbicides. The article also cited where BMPs brochures could be obtained by the public.

d. Number of storm water related surveys given either to the public or to city employees which were completed by your department during the 2007 fiscal year.

As our goal is to provide quality service with the cost-effective use of funds, it is important to get input from the customers to ensure that the desired level of service is being met. To gather feedback about their experience with their service request, we have a customer survey with a satisfaction scale used to weigh input on various items such as: process for requesting service, promptness of onsite service, explanation of problem and solution, answers to technical questions, clean-up after service, professional appearance of staff, courteousness of onsite staff, satisfaction with staff, and overall experience. Surveys are dropped off after field crews investigate and complete a service request, and are also available online for those who prefer to complete the survey electronically. For FY 2007, we have received approximately 400 surveys sent in to date with 80% of our customers rating our services as "Excellent or Above Average."

e. Percent of population statistically represented by educational survey listed above.

This survey is a multi-purpose tool used to solicit customer feedback voluntarily. The percent population would be hard to determine because customers can fill out an online survey to give input without having received a door hanger form.

f. Number of storm water related display ads, project signage, and other storm water outreach materials created by your department during the 2007 fiscal year.

Refer to Attachment A (A-11). See 1a and 1b for item description.

g. Dollar value of storm water project signage and other storm water outreach materials created by your department during 2007 fiscal year.

Refer to Attachment A (A-12).

h. Number of employees trained on general storm water principles (video, pre and post test) during the 2006 fiscal year.

With 13 classes conducted, 122 employees took one-hour class on Storm Water Pollution Prevention (General).

i. Number of employees trained in activity specific storm water principles during the 2007 fiscal year.

With two classes conducted, five employees took a one-hour class on Storm Water Pollution Prevention Dams and Reservoirs (Lakes)

With two classes conducted, 22 employees attended a two-hour class Storm Water Pollution Prevention (Field Operations).

With six events, 365 employees attended a Storm Water BMPs – Policy Refresher course.

j. Percent of staff trained in activity-specific storm water principles during the 2007 fiscal year.

Training	Attendance
Storm Water Pollution Prevention – General	122
Storm Water Pollution Prevention – Dams and Reservoirs	5
Storm Water Pollution Prevention – Field Operations	22
Storm Water Pollution Prevention – Policy Refresher	365
Tailgates	Varies

A percentage is difficult to calculate because attendance may overlap with more than one type of training.

Attachment A

NOTE: Please only report activities that were implemented during the 2007 Fiscal Year (July 1, 2006 through June 30, 2007).

PUBLIC PARTICIPATION

1. Please summarize the activities that your department conducted during the 2007 fiscal year that facilitated public participation on water quality issues (e.g., forums or events such as, planning community meetings, EIR reviews, and City Council and Coastal Commission Meetings where the public can provide feedback to your department whether it be written or verbal.).

   The 2006 Annual Drinking Water Quality Report* was mailed to 570,204 residential and commercial customers in the City of San Diego. The report included special sections on the Drinking Water Source Assessment and Protection (DWSAP) Program and Watershed and Source Water Protection. The Think Blue logo, website and phone number were also featured in the report. Additionally, a Watershed Newsletter was included in the Report with information on the City's efforts to maintain and protect our reservoirs and watersheds, and features a list of community resources that one can access to learn more about participating in local water quality protection efforts.

   A message in Spanish is included on the outside of the English language Report; directing customers to call the Public Information Office if they wish to receive a Spanish language version of the report. The Public Information Office received additional requests for the Spanish Report. The report also contained the Water Operations Public Information Office phone number and an email address where customers can write for more information or comment on the report. We received many complimentary phone calls and email messages in response to the report. Reports in English and Spanish were also distributed to libraries, community service centers and other key community locations.

   In addition, CIP and the Water Conservation Program had the following educational/informational materials and brochures.

   Water Conservation Calendar* was distributed to 10,000 residents citywide. The calendar includes water conservation tips and storm water messages. The Think Blue logo is featured in the calendar. Calendars were distributed at various locations and community events, such as the Del Mar Fairgrounds, Wild Animal Park, Fall Garden Festival, Earth Fair, and various elementary school presentations.

   The construction update newsletter for the Alvarado Water Treatment Plant Upgrade and Expansion Project, AWTP Waterlines*, was distributed to 6,913 residents, businesses and community facilities during the summer of 2006. The newsletter included the Think Blue Logo and an article describing Best Management Practices (BMPs) for the use of pesticides and herbicides. The article also cited where BMP's brochures could be obtained by the public.

Staff has also developed partnerships and collaborations with other related local and regional organizations to promote the importance water quality protection. Following is a list of other public participation opportunities that we're actively a part of:

- Water Department represents the City of San Diego to the newly formed San Dieguito Watershed Council. There were three meetings of the Council last year.
- Water Department represents the City of San Diego to the San Diego Integrated Regional Water Management Plan [IRWM Plan]. There were six public workshops for the IRWM Plan. There were 10 public meetings of the Regional Advisory Committee [RAC] to the IRWM Plan.

2. Indicate the number of opportunities provided by your department that enabled the public to participate.

Please refer to the previous answer. Items marked with an asterisk (*) apply to this question.

If your department has a Public Information Officer, please have them complete the table below.

ANNUAL MUNICIPAL FACILITY SITE COMPLIANCE INSPECTION CHECKLIST

Inspector: LEA ORIANNE
Phone Number: 858 636 4810
Date/Time: July 18, 2007

I. Facility Information

Facility Name: FIRE STATION 1		
Street Address: 1222 FIRST AVENUE		Zip Code: 92101
Facility Contact Person: FIRE STATION CAPTAIN		Phone: 619 236-6823
Standard Industrial Classification Code: N/A	Waste Discharge Identification Number: N/A	APN No.: N/A

II. Shared Facility Information

Is there more than one City department and/or division sharing this facility?

✓ No (skip this section) _____ Yes (complete this section)

Name of City Departments and/or Divisions Sharing Facility	Contact Person and Phone Number	Covered by this Inspection?
N/A		

III. General Site Conditions and Runoff Management Practices Review

		S*	U*	N/A	Comments
General	Employees trained in storm water pollution prevention practices?	✓			
	Common areas of yard reasonably clean and free of litter and debris?	✓			
	Are parking areas generally clean and swept as needed?	✓			
	Are storm drain inlets reasonably clean and free of debris?	✓			
	Is there evidence of discharges, spills, and or leaks in any areas?	✓			
Trash storage areas	Is area reasonably clean and uncluttered?	✓			
	Are trash cans and garbage bins kept covered?	✓			
Fueling areas	Is there a roof on fueling area?	✓			
	Is there a mechanism in place for spill overflow protection?	✓			spill kit
Vehicle/equipment maintenance area	Area reasonably clean and free of spills, leaks, or any other deleterious materials?	✓			
	Is area covered overhead?	✓			
	Dry clean up methods implemented?	✓			
	Are there drip pans readily available for use?	✓			
	Spill containment and cleanup kits readily available?	✓			
	Storage areas covered and properly maintained?	✓			

* S = Satisfactory, U = Unsatisfactory

III. General Site Conditions and Runoff Management Practices Review (Cont.)

		S	U	N/A	Comments
Vehicle/equipment washing areas (cont)	Are related activities contained within designated area?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Are there containment mechanisms in place?			✓	
Materials loading and storage areas	Area reasonably clean and free of litter and debris?	✓			
	Designated area covered overhead?	✓			
Chemical handling areas	Areas reasonably clean and organized?			✓	
	Is area indoors or properly covered?			✓	
	Spill containment cleanup kits readily available?			✓	
	If outdoors, is water from surrounding areas prevented from reaching chemical handling areas?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Dry clean up methods implemented?			✓	

IV. Water Quality Management Plan (WQMP)** Review

Has a WQMP (or SWPPP) been developed for this yard? ✓ Yes (complete this section and skip section V)
____ No (skip this section and complete section V)

		S	U	N/A	Comments
Facility site map	Identifies drainage areas and direction of flow	✓			
	Identifies location of storm water conveyance system including ditches, inlets and storm drains	✓			
	Identifies location of any existing storm water controls (e.g., berms, filters, grass swales, etc.)	✓			
	Identifies location of building(s) and activity areas (e.g., fueling islands, hazardous materials storage areas, washing areas, etc.)	✓			
Materials/activities used on site	List materials stored and handled on site, including storage location and typical quantities	✓			
	Includes a narrative description of activities conducted on site which have the potential to result in discharges to storm drain system	✓			
Potential Pollutants	Identifies potential pollutants which could be discharged from site given activities conducted at facility	✓			
Best Management Practices (BMPs)	Describes BMPs implemented at facility to deal with **each** potential pollutant source identified	✓			
	Minimum City wide BMPs listed	✓			
	Storm water system regularly inspected/monitored	✓			
Record keeping	Employee training records			✓	
	Quarterly inspections records, if any			✓	
	Storm water conveyance system monitoring (2/yr)[1]			✓	

**The term Water Quality Management Plan (WQMP) is replacing the term Storm Water Pollution Prevention Plan (or SWPPP) for municipal facilities.

V. Water Quality Management Plan Status

Is facility in the process of developing a WQMP?
____ Yes, expected completion date: _____
✓ No, this facility does not need a WQMP because this is a small station covering an area less than one acre.

VI. Additional Comments (attach additional pages if necessary)

[1] Only required for NDPES General Storm Water Permit holders

City of San Diego - Urban Runoff Management Plan

ANNUAL MUNICIPAL FACILITY SITE COMPLIANCE INSPECTION CHECKLIST

Inspector: LEA ORIANNE
Phone Number: (858)-636-4810
Date/Time: July 18, 2007

I. Facility Information

Facility Name		
FIRE STATION 3		
Street Address: 725 W. KALMIA St		Zip Code: 92103
Facility Contact Person: FIRE STATON CAPTAIN		Phone: 619 531 - 1568
Standard Industrial Classification Code: N/A	Waste Discharge Identification Number: N/A	APN No.: N/A

II. Shared Facility Information

Is there more than one City department and/or division sharing this facility?

__✓__ No (skip this section) _____ Yes (complete this section)

Name of City Departments and/or Divisions Sharing Facility	Contact Person and Phone Number	Covered by this Inspection?
N/A		

III. General Site Conditions and Runoff Management Practices Review

		S*	U*	N/A	Comments
General	Employees trained in storm water pollution prevention practices?	✓			
	Common areas of yard reasonably clean and free of litter and debris?	✓			
	Are parking areas generally clean and swept as needed?	✓			
	Are storm drain inlets reasonably clean and free of debris?	✓			
	Is there evidence of discharges, spills, and or leaks in any areas?	✓			
Trash storage areas	Is area reasonably clean and uncluttered?	✓			
	Are trash cans and garbage bins kept covered?	✓			
Fueling areas	Is there a roof on fueling area?			✓	
	Is there a mechanism in place for spill overflow protection?			✓	NO FUELING
Vehicle/equipment maintenance area	Area reasonably clean and free of spills, leaks, or any other deleterious materials?	✓			
	Is area covered overhead?	✓			
	Dry clean up methods implemented?	✓			
	Are there drip pans readily available for use?	✓			
	Spill containment and cleanup kits readily available?	✓			
	Storage areas covered and properly maintained?	✓			

* S = Satisfactory, U = Unsatisfactory

III. General Site Conditions and Runoff Management Practices Review (Cont.)

		S	U	N/A	Comments
Vehicle/equipment washing areas (cont)	Are related activities contained within designated area?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Are there containment mechanisms in place?			✓	
Materials loading and storage areas	Area reasonably clean and free of litter and debris?	✓			
	Designated area covered overhead?	✓			
Chemical handling areas	Areas reasonably clean and organized?			✓	
	Is area indoors or properly covered?			✓	
	Spill containment cleanup kits readily available?			✓	
	If outdoors, is water from surrounding areas prevented from reaching chemical handling areas?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Dry clean up methods implemented?			✓	

IV. Water Quality Management Plan (WQMP)** Review

Has a WQMP (or SWPPP) been developed for this yard? ✓ Yes (complete this section and skip section V)
____ No (skip this section and complete section V)

		S	U	N/A	Comments

	Spill containment and cleanup kits readily available?	✓			
	Storage areas covered and properly maintained?	✓			

* S = Satisfactory, U = Unsatisfactory

III. General Site Conditions and Runoff Management Practices Review (Cont.)

		S	U	N/A	Comments
Vehicle/equipment washing areas (cont)	Are related activities contained within designated area?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Are there containment mechanisms in place?			✓	
Materials loading and storage areas	Area reasonably clean and free of litter and debris?	✓			
	Designated area covered overhead?	✓			
Chemical handling areas	Areas reasonably clean and organized?			✓	
	Is area indoors or properly covered?			✓	
	Spill containment cleanup kits readily available?			✓	
	If outdoors, is water from surrounding areas prevented from reaching chemical handling areas?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Dry clean up methods implemented?			✓	

IV. Water Quality Management Plan (WQMP)** Review

Has a WQMP (or SWPPP) been developed for this yard? ✓ Yes (complete this section and skip section V)
____ No (skip this section and complete section V)

		S	U	N/A	Comments
Facility site map	Identifies drainage areas and direction of flow	✓			
	Identifies location of storm water conveyance system including ditches, inlets and storm drains	✓			
	Identifies location of any existing storm water controls (e.g., berms, filters, grass swales, etc.)	✓			
	Identifies location of building(s) and activity areas (e.g., fueling islands, hazardous materials storage areas, washing areas, etc.)	✓			
Materials/activities used on site	List materials stored and handled on site, including storage location and typical quantities	✓			
	Includes a narrative description of activities conducted on site which have the potential to result in discharges to storm drain system	✓			
Potential Pollutants	Identifies potential pollutants which could be discharged from site given activities conducted at facility	✓			
Best Management Practices (BMPs)	Describes BMPs implemented at facility to deal with **each** potential pollutant source identified	✓			
	Minimum City wide BMPs listed	✓			
	Storm water system regularly inspected/monitored	✓			
Record keeping	Employee training records			✓	
	Quarterly inspections records, if any			✓	
	Storm water conveyance system monitoring (2/yr)[1]			✓	

**The term Water Quality Management Plan (WQMP) is replacing the term Storm Water Pollution Prevention Plan (or SWPPP) for municipal facilities.

V. Water Quality Management Plan Status

Is facility in the process of developing a WQMP?
____ Yes, expected completion date: _____
✓ No, this facility does not need a WQMP because this is a small station covering less than one acre and is minimally landscaped.

VI. Additional Comments (attach additional pages if necessary)

[1] Only required for NDPES General Storm Water Permit holders

City of San Diego - Urban Runoff Management Plan

ANNUAL MUNICIPAL FACILITY SITE COMPLIANCE INSPECTION CHECKLIST

Inspector: LEA ORIANNE
Phone Number: 858 636 4810
Date/Time: July 17, 2007

I. Facility Information

Facility Name: FIRE STATION 10		
Street Address: 4605 62nd Street		Zip Code: 92115
Facility Contact Person: FIRE Station Captain		Phone: 619 531- 1589
Standard Industrial Classification Code: N/A	Waste Discharge Identification Number: N/A	APN No.: N/A

II. Shared Facility Information

Is there more than one City department and/or division sharing this facility?

✓ No (skip this section) _____ Yes (complete this section)

Name of City Departments and/or Divisions Sharing Facility	Contact Person and Phone Number	Covered by this Inspection?
N/A		

III. General Site Conditions and Runoff Management Practices Review

		S*	U*	N/A	Comments
General	Employees trained in storm water pollution prevention practices?	✓			
	Common areas of yard reasonably clean and free of litter and debris?	✓			
	Are parking areas generally clean and swept as needed?	✓			
	Are storm drain inlets reasonably clean and free of debris?	✓			
	Is there evidence of discharges, spills, and or leaks in any areas?	✓			
Trash storage areas	Is area reasonably clean and uncluttered?	✓			
	Are trash cans and garbage bins kept covered?	✓			
Fueling areas	Is there a roof on fueling area?		✓		
	Is there a mechanism in place for spill overflow protection?	✓			Spill kit
Vehicle/equipment maintenance area	Area reasonably clean and free of spills, leaks, or any other deleterious materials?	✓			
	Is area covered overhead?	✓			
	Dry clean up methods implemented?	✓			
	Are there drip pans readily available for use?	✓			
	Spill containment and cleanup kits readily available?	✓			
	Storage areas covered and properly maintained?	✓			

* S = Satisfactory, U = Unsatisfactory

Is there more than one City department and/or division sharing this facility?

✓ No (skip this section) _____ Yes (complete this section)

Name of City Departments and/or Divisions Sharing Facility	Contact Person and Phone Number	Covered by this Inspection?
N/A		

III. General Site Conditions and Runoff Management Practices Review

		S*	U	N/A	Comments
General	Employees trained in storm water pollution prevention practices?	✓			
	Common areas of yard reasonably clean and free of litter and debris?	✓			
	Are parking areas generally clean and swept as needed?	✓			
	Are storm drain inlets reasonably clean and free of debris?	✓			
	Is there evidence of discharges, spills, and or leaks in any areas?	✓			
Trash storage areas	Is area reasonably clean and uncluttered?	✓			
	Are trash cans and garbage bins kept covered?	✓			
Fueling areas	Is there a roof on fueling area?		✓		
	Is there a mechanism in place for spill overflow protection?	✓			spill kit
Vehicle/equipment maintenance area	Area reasonably clean and free of spills, leaks, or any other deleterious materials?	✓			
	Is area covered overhead?	✓			
	Dry clean up methods implemented?	✓			
	Are there drip pans readily available for use?	✓			
	Spill containment and cleanup kits readily available?	✓			
	Storage areas covered and properly maintained?	✓			

* S = Satisfactory, U = Unsatisfactory

III. General Site Conditions and Runoff Management Practices Review (Cont.)

		S	U	N/A	Comments
Vehicle/equipment washing areas (cont)	Are related activities contained within designated area?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Are there containment mechanisms in place?			✓	
Materials loading and storage areas	Area reasonably clean and free of litter and debris?	✓			
	Designated area covered overhead?	✓			
Chemical handling areas	Areas reasonably clean and organized?			✓	
	Is area indoors or properly covered?			✓	
	Spill containment cleanup kits readily available?			✓	
	If outdoors, is water from surrounding areas prevented from reaching chemical handling areas?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Dry clean up methods implemented?			✓	

IV. Water Quality Management Plan (WQMP)** Review

Has a WQMP (or SWPPP) been developed for this yard? ✓ Yes (complete this section and skip section V)
____ No (skip this section and complete section V)

		S	U	N/A	Comments
Facility site map	Identifies drainage areas and direction of flow	✓			
	Identifies location of storm water conveyance system including ditches, inlets and storm drains	✓			
	Identifies location of any existing storm water controls (e.g., berms, filters, grass swales, etc.)	✓			
	Identifies location of building(s) and activity areas (e.g., fueling islands, hazardous materials storage areas, washing areas, etc.)	✓			
Materials/activities used on site	List materials stored and handled on site, including storage location and typical quantities	✓			
	Includes a narrative description of activities conducted on site which have the potential to result in discharges to storm drain system	✓			
Potential Pollutants	Identifies potential pollutants which could be discharged from site given activities conducted at facility	✓			
Best Management Practices (BMPs)	Describes BMPs implemented at facility to deal with **each** potential pollutant source identified	✓			
	Minimum City wide BMPs listed	✓			
	Storm water system regularly inspected/monitored	✓			
Record keeping	Employee training records			✓	
	Quarterly inspections records, if any			✓	
	Storm water conveyance system monitoring (2/yr)[1]			✓	

**The term Water Quality Management Plan (WQMP) is replacing the term Storm Water Pollution Prevention Plan (or SWPPP) for municipal facilities.

V. Water Quality Management Plan Status

Is facility in the process of developing a WQMP?

____ Yes, expected completion date: ____

✓ No, this facility does not need a WQMP because this small station covers less than one acre and is minimally hardscaped.

	Quarterly inspections records, if any			✓	
	Storm water conveyance system monitoring (2/yr)[1]			✓	

**The term Water Quality Management Plan (WQMP) is replacing the term Storm Water Pollution Prevention Plan (or SWPPP) for municipal facilities.

V. Water Quality Management Plan Status

Is facility in the process of developing a WQMP?
____ Yes, expected completion date: ____
✓ No, this facility does not need a WQMP because This site is less than one acre and it is minimally hardscaped.

VI. Additional Comments (attach additional pages if necessary)

[1] Only required for NDPES General Storm Water Permit holders

City of San Diego - Urban Runoff Management Plan

ANNUAL MUNICIPAL FACILITY SITE COMPLIANCE INSPECTION CHECKLIST

Inspector: LEA ORIANNE
Phone Number (858) 636-4810
Date/Time: July 17, 2007

I. Facility Information

Facility Name: FIRE STATION 24		
Street Address: 13077 HARTFIELD AVENUE		Zip Code: 92130
Facility Contact Person: FIRE STATION CAPTAIN		Phone: (858) 552-1773
Standard Industrial Classification Code: N/A	Waste Discharge Identification Number: N/A	APN No.: N/A

II. Shared Facility Information

Is there more than one City department and/or division sharing this facility?

__✓__ No (skip this section) _____ Yes (complete this section)

Name of City Departments and/or Divisions Sharing Facility	Contact Person and Phone Number	Covered by this Inspection?
N/A		

III. General Site Conditions and Runoff Management Practices Review

		S*	U*	N/A	Comments
General	Employees trained in storm water pollution prevention practices?	✓			
	Common areas of yard reasonably clean and free of litter and debris?	✓			
	Are parking areas generally clean and swept as needed?	✓			
	Are storm drain inlets reasonably clean and free of debris?	✓			
	Is there evidence of discharges, spills, and or leaks in any areas?	✓			
Trash storage areas	Is area reasonably clean and uncluttered?	✓			
	Are trash cans and garbage bins kept covered?	✓			
Fueling areas	Is there a roof on fueling area?		X		
	Is there a mechanism in place for spill overflow protection?	✓			spill kit
Vehicle/equipment maintenance area	Area reasonably clean and free of spills, leaks, or any other deleterious materials?	✓			
	Is area covered overhead?	✓			
	Dry clean up methods implemented?	✓			
	Are there drip pans readily available for use?	✓			
	Spill containment and cleanup kits readily available?	✓			
	Storage areas covered and properly maintained?	✓			

* S = Satisfactory, U = Unsatisfactory

III. General Site Conditions and Runoff Management Practices Review (Cont.)

		S	U	N/A	Comments
Vehicle/equipment washing areas (cont)	Are related activities contained within designated area?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Are there containment mechanisms in place?			✓	
Materials loading and storage areas	Area reasonably clean and free of litter and debris?	✓			
	Designated area covered overhead?	✓			
Chemical handling areas	Areas reasonably clean and organized?			✓	
	Is area indoors or properly covered?			✓	
	Spill containment cleanup kits readily available?			✓	
	If outdoors, is water from surrounding areas prevented from reaching chemical handling areas?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Dry clean up methods implemented?			✓	

IV. Water Quality Management Plan (WQMP)** Review

Has a WQMP (or SWPPP) been developed for this yard? ✓ Yes (complete this section and skip section V)
____ No (skip this section and complete section V)

		S	U	N/A	Comments
Facility site map	Identifies drainage areas and direction of flow	✓			
	Identifies location of storm water conveyance system including ditches, inlets and storm drains	✓			
	Identifies location of any existing storm water controls (e.g., berms, filters, grass swales, etc.)	✓			
	Identifies location of building(s) and activity areas (e.g., fueling islands, hazardous materials storage areas, washing areas, etc.)	✓			
Materials/activities used on site	List materials stored and handled on site, including storage location and typical quantities	✓			
	Includes a narrative description of activities conducted on site which have the potential to result in discharges to storm drain system	✓			
Potential Pollutants	Identifies potential pollutants which could be discharged from site given activities conducted at facility	✓			
Best Management Practices (BMPs)	Describes BMPs implemented at facility to deal with **each** potential pollutant source identified	✓			
	Minimum City wide BMPs listed	✓			
	Storm water system regularly inspected/monitored	✓			
Record keeping	Employee training records			✓	
	Quarterly inspections records, if any			✓	
	Storm water conveyance system monitoring (2/yr)[1]			✓	

**The term Water Quality Management Plan (WQMP) is replacing the term Storm Water Pollution Prevention Plan (or SWPPP) for municipal facilities.

V. Water Quality Management Plan Status

Is facility in the process of developing a WQMP?
____ Yes, expected completion date: _____
✓ No, this facility does not need a WQMP because site is less than one acre.

Facility site map	Identifies drainage areas and direction of flow	✓			
	Identifies location of storm water conveyance system including ditches, inlets and storm drains	✓			
	Identifies location of any existing storm water controls (e.g., berms, filters, grass swales, etc.)	✓			
	Identifies location of building(s) and activity areas (e.g., fueling islands, hazardous materials storage areas, washing areas, etc.)	✓			
Materials/activities used on site	List materials stored and handled on site, including storage location and typical quantities	✓			
	Includes a narrative description of activities conducted on site which have the potential to result in discharges to storm drain system	✓			
Potential Pollutants	Identifies potential pollutants which could be discharged from site given activities conducted at facility	✓			
Best Management Practices (BMPs)	Describes BMPs implemented at facility to deal with **each** potential pollutant source identified	✓			
	Minimum City wide BMPs listed	✓			
	Storm water system regularly inspected/monitored	✓			
Record keeping	Employee training records			✓	
	Quarterly inspections records, if any			✓	
	Storm water conveyance system monitoring (2/yr)[1]			✓	

**The term Water Quality Management Plan (WQMP) is replacing the term Storm Water Pollution Prevention Plan (or SWPPP) for municipal facilities.

V. Water Quality Management Plan Status

Is facility in the process of developing a WQMP?

____ Yes, expected completion date: ____
✓ No, this facility does not need a WQMP because this site covers less than one acre.

VI. Additional Comments (attach additional pages if necessary)

[1] Only required for NDPES General Storm Water Permit holders

City of San Diego - Urban Runoff Management Plan

ANNUAL MUNICIPAL FACILITY SITE COMPLIANCE INSPECTION CHECKLIST

Inspector: LEA ORIANNE
Phone Number (858) 636-4810
Date/Time July 18, 2007

I. Facility Information

Facility Name		
FIRE STATION 31		
Street Address: 6002 CAMINO RICO		Zip Code: 92120
Facility Contact Person: FIRE STATION CAPTAIN		Phone: 619 531 - 1594
Standard Industrial Classification Code: N/A	Waste Discharge Identification Number: N/A	APN No.: N/A

II. Shared Facility Information

Is there more than one City department and/or division sharing this facility?

✓ No (skip this section) _____ Yes (complete this section)

Name of City Departments and/or Divisions Sharing Facility	Contact Person and Phone Number	Covered by this Inspection?
N/A		

III. General Site Conditions and Runoff Management Practices Review

		S*	U*	N/A	Comments
General	Employees trained in storm water pollution prevention practices?	✓			
	Common areas of yard reasonably clean and free of litter and debris?	✓			
	Are parking areas generally clean and swept as needed?	✓			
	Are storm drain inlets reasonably clean and free of debris?	✓			
	Is there evidence of discharges, spills, and or leaks in any areas?	✓			60 gallon cans w/
Trash storage areas	Is area reasonably clean and uncluttered?	✓			
	Are trash cans and garbage bins kept covered?			✓	LIDS
Fueling areas	Is there a roof on fueling area?		✓		
	Is there a mechanism in place for spill overflow protection?	✓			spill kit
Vehicle/equipment maintenance area	Area reasonably clean and free of spills, leaks, or any other deleterious materials?	✓			
	Is area covered overhead?	✓			
	Dry clean up methods implemented?	✓			
	Are there drip pans readily available for use?	✓			
	Spill containment and cleanup kits readily available?	✓			
	Storage areas covered and properly maintained?	✓			

* S = Satisfactory, U = Unsatisfactory

III. General Site Conditions and Runoff Management Practices Review (Cont.)

		S	U	N/A	Comments
Vehicle/equipment washing areas (cont)	Are related activities contained within designated area?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Are there containment mechanisms in place?			✓	
Materials loading and storage areas	Area reasonably clean and free of litter and debris?	✓			
	Designated area covered overhead?	✓			
Chemical handling areas	Areas reasonably clean and organized?			✓	
	Is area indoors or properly covered?			✓	
	Spill containment cleanup kits readily available?			✓	
	If outdoors, is water from surrounding areas prevented from reaching chemical handling areas?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Dry clean up methods implemented?			✓	

IV. Water Quality Management Plan (WQMP)** Review

Has a WQMP (or SWPPP) been developed for this yard? ___✓___ Yes (complete this section and skip section V)
_____ No (skip this section and complete section V)

Vehicle/equipment maintenance area	Area reasonably clean and free of spills, leaks, or any other deleterious materials?	✓			
	Is area covered overhead?	✓			
	Dry clean up methods implemented?	✓			
	Are there drip pans readily available for use?	✓			
	Spill containment and cleanup kits readily available?	✓			
	Storage areas covered and properly maintained?	✓			

* S = Satisfactory, U = Unsatisfactory

III. General Site Conditions and Runoff Management Practices Review (Cont.)

		S	U	N/A	Comments
Vehicle/equipment washing areas (cont)	Are related activities contained within designated area?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Are there containment mechanisms in place?			✓	
Materials loading and storage areas	Area reasonably clean and free of litter and debris?	✓			
	Designated area covered overhead?	✓			
Chemical handling areas	Areas reasonably clean and organized?			✓	
	Is area indoors or properly covered?			✓	
	Spill containment cleanup kits readily available?			✓	
	If outdoors, is water from surrounding areas prevented from reaching chemical handling areas?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Dry clean up methods implemented?			✓	

IV. Water Quality Management Plan (WQMP)** Review

Has a WQMP (or SWPPP) been developed for this yard? ✓ Yes (complete this section and skip section V)
_____ No (skip this section and complete section V)

		S	U	N/A	Comments
Facility site map	Identifies drainage areas and direction of flow	✓			
	Identifies location of storm water conveyance system including ditches, inlets and storm drains	✓			
	Identifies location of any existing storm water controls (e.g., berms, filters, grass swales, etc.)	✓			
	Identifies location of building(s) and activity areas (e.g., fueling islands, hazardous materials storage areas, washing areas, etc.)	✓			
Materials/activities used on site	List materials stored and handled on site, including storage location and typical quantities	✓			
	Includes a narrative description of activities conducted on site which have the potential to result in discharges to storm drain system	✓			
Potential Pollutants	Identifies potential pollutants which could be discharged from site given activities conducted at facility	✓			
Best Management Practices (BMPs)	Describes BMPs implemented at facility to deal with **each** potential pollutant source identified	✓			
	Minimum City wide BMPs listed	✓			
	Storm water system regularly inspected/monitored	✓			
Record keeping	Employee training records			✓	
	Quarterly inspections records, if any			✓	
	Storm water conveyance system monitoring (2/yr)[1]			✓	

**The term Water Quality Management Plan (WQMP) is replacing the term Storm Water Pollution Prevention Plan (or SWPPP) for municipal facilities.

V. Water Quality Management Plan Status

Is facility in the process of developing a WQMP?
_____ Yes, expected completion date: _____
_____ No, this facility does not need a WQMP because _____

VI. Additional Comments (attach additional pages if necessary)

[1] Only required for NDPES General Storm Water Permit holders

City of San Diego - Urban Runoff Management Plan

ANNUAL MUNICIPAL FACILITY SITE COMPLIANCE INSPECTION CHECKLIST

Inspector: LEA ORIANNE
Phone Number: (858) 636-4810
Date/Time: July 17, 2007

I. Facility Information

Facility Name: FIRE STATION 38		
Street Address: 8441 New Salem Street		Zip Code: 92126
Facility Contact Person: FIRE STATION CAPTAIN		Phone: (858) 538-8138
Standard Industrial Classification Code: N/A	Waste Discharge Identification Number: N/A	APN No.: N/A

II. Shared Facility Information

Is there more than one City department and/or division sharing this facility?

✓ No (skip this section) _____ Yes (complete this section)

Name of City Departments and/or Divisions Sharing Facility	Contact Person and Phone Numbers	Covered by this Inspection?

III. General Site Conditions and Runoff Management Practices Review

		S*	U*	NA	Comments
General	Employees trained in storm water pollution prevention practices?	✓			
	Common areas of yard reasonably clean and free of litter and debris?	✓			
	Are parking areas generally clean and swept as needed?	✓			
	Are storm drain inlets reasonably clean and free of debris?	✓			
	Is there evidence of discharges, spills, and or leaks in any areas?	✓			
Trash storage areas	Is area reasonably clean and uncluttered?	✓			
	Are trash cans and garbage bins kept covered?	✓			AGST
Fueling areas	Is there a roof on fueling area?		✓		fuel
	Is there a mechanism in place for spill overflow protection?	✓	→		Spill
Vehicle/equipment maintenance area	Area reasonably clean and free of spills, leaks, or any other deleterious materials?	✓			containment
	Is area covered overhead?	✓			
	Dry clean up methods implemented?	✓			
	Are there drip pans readily available for use?	✓			
	Spill containment and cleanup kits readily available?	✓			
	Storage areas covered and properly maintained?	✓			

* S = Satisfactory, U = Unsatisfactory

III. General Site Conditions and Runoff Management Practices Review (Cont.)

		S	U	N/A	Comments
Vehicle/equipment washing areas (cont)	Are related activities contained within designated area?			✓	
	Hazardous materials/liquids stored above ground?	✓			
	Are there containment mechanisms in place?	✓			
Materials loading and storage areas	Area reasonably clean and free of litter and debris?	✓			
	Designated area covered overhead?	✓			
Chemical handling areas	Areas reasonably clean and organized?			✓	
	Is area indoors or properly covered?			✓	
	Spill containment cleanup kits readily available?			✓	
	If outdoors, is water from surrounding areas prevented from reaching chemical handling areas?			✓	
	Hazardous materials/liquids stored above ground?			✓	
	Dry clean up methods implemented?			✓	

IV. Water Quality Management Plan (WQMP)** Review

Has a WQMP (or SWPPP) been developed for this yard? ✓ Yes (complete this section and skip section V)
____ No (skip this section and complete section V)

		S	U	N/A	Comments
Facility site map	Identifies drainage areas and direction of flow	✓			
	Identifies location of storm water conveyance system including ditches, inlets and storm drains	✓			
	Identifies location of any existing storm water controls (e.g., berms, filters, grass swales, etc.)	✓			
	Identifies location of building(s) and activity areas (e.g., fueling islands, hazardous materials storage areas, washing areas, etc.)	✓			
Materials/activities used on site	List materials stored and handled on site, including storage location and typical quantities	✓			
	Includes a narrative description of activities conducted on site which have the potential to result in discharges to storm drain system	✓			
Potential Pollutants	Identifies potential pollutants which could be discharged from site given activities conducted at facility	✓			
Best Management Practices (BMPs)	Describes BMPs implemented at facility to deal with each potential pollutant source identified	✓			
	Minimum City wide BMPs listed	✓			
	Storm water system regularly inspected/monitored	✓			
Record keeping	Employee training records			✓	
	Quarterly inspections records, if any			✓	
	Storm water conveyance system monitoring (2/yr)[1]			✓	

**The term Water Quality Management Plan (WQMP) is replacing the term Storm Water Pollution Prevention Plan (or SWPPP) for municipal facilities.

V. Water Quality Management Plan Status

Is facility in the process of developing a WQMP?
_____ Yes, expected completion date: _____
_____ No, this facility does not need a WQMP because _____

VI. Additional Comments (attach additional pages if necessary)

I. Facility Information

Facility Name: Central V.M.F.		
Street Address: 3940 Federal Blvd.		Zip Code
Facility Contact Person: Steve Shipkowski		Phone
Standard Industrial Classification Code	Waste Discharge Identification Number	APN No.

II. Shared Facility Information

Is there more than one City department and/or division sharing this facility?

X No (skip this section) _____ Yes (complete this section)

Name of City Departments and/or Divisions Sharing Facility	Contact Person and Phone Number	Covered by this Inspection?

III. General Site Conditions and Runoff Management Practices Review

		Y*	N*	N/A	Comments
General	Employees trained in storm water pollution prevention practices?	X			
	Common areas of yard reasonably clean and free of litter and debris?	X			
	Are parking areas generally clean and swept as needed?	X			
	Are storm drain inlets reasonably clean and free of debris?	X			
	Is there evidence of discharges, spills, and or leaks in any areas?		NO		
Trash storage areas	Is area reasonably clean and uncluttered?	X			
	Are trash cans and garbage bins kept covered?	X			
Fueling areas	Is there a roof on fueling area?	X			
	Is there a mechanism in place for spill overflow protection?	X			
Vehicle/equipment maintenance area	Area reasonably clean and free of spills, leaks, or any other materials?	X			
	Is area covered overhead?	X			
	Dry clean up methods implemented?	X			
	Are there drip pans readily available for use?	X			
	Spill containment and cleanup kits readily available?	X			
	Storage areas covered and properly maintained?	X			

* Y = Satisfactory, N = Unsatisfactory

III. General Site Conditions and Runoff Management Practices Review (Cont.)

		Y	N	N/A	Comments
Vehicle/equipment washing areas (cont)	Are related activities contained within designated area?	X			
	Hazardous materials/liquids stored in secondary containment?	X			
	Are there containment mechanisms in place?	X			
Materials loading and storage areas	Area reasonably clean and free of litter and debris?	X			
	Designated area covered overhead?		X		
Chemical handling areas	Areas reasonably clean and organized?	X			
	Is area indoors or properly covered?	X			
	Spill containment cleanup kits readily available?	X			
	If outdoors, is water from surrounding areas prevented from reaching chemical handling areas?			X	
	Hazardous materials/liquids stored within secondary containment?		X		
	Dry clean up methods implemented?	X			

IV. Water Quality Management Plan (WQMP)** Review

Has a WQMP (or SWPPP) been developed for this yard? __X__ Yes (complete this section and skip section V)
_____ No (skip this section and complete section V)

		S	U	N/A	Comments
Facility site map	Identifies drainage areas and direction of flow	X			
	Identifies location of storm water conveyance system including ditches, inlets and storm drains	X			
	Identifies location of any existing storm water controls (e.g., berms, filters, grass swales, etc.)	X			
	Identifies location of building(s) and activity areas (e.g., fueling islands, hazardous materials storage areas, washing areas, etc.)	X			
Materials/activities used on site	List materials stored and handled on site, including storage location and typical quantities	X			
	Includes a narrative description of activities conducted on site which have the potential to result in discharges to storm drain system	X			
Potential Pollutants	Identifies potential pollutants which could be discharged from site given activities conducted at facility	X			
Best Management Practices (BMPs)	Describes BMPs implemented at facility to deal with **each** potential pollutant source identified	X			
	Minimum City wide BMPs listed	X			
	Storm water system regularly inspected/monitored	X			
Record keeping	Employee training records	X			
	Quarterly inspections records, if any		X		
	Storm water conveyance system monitoring (2/yr)[1]			X	

**The term Water Quality Management Plan (WQMP) is replacing the term Storm Water Pollution Prevention Plan (or SWPPP) for municipal facilities.

V. Water Quality Management Plan Status

Is facility in the process of developing a WQMP?
_____ Yes, expected completion date: _____
_____ No, this facility does not need a WQMP because _____

VI. Additional Comments (attach additional pages if necessary)

REAL ESTATE ASSETS DEPARTMENT
URBAN RUNOFF MANAGEMENT PROGRAM

ACTIVITY REPORTING FORM – FISCAL YEAR 2007

NOTE: Please only report activities that were implemented during FY 07 (July 1, 2006 to June 30, 2007).

MUNICIPAL ACTIVITIES

1. **Pollution Prevention, Source Identification and BMP Implementation**
   a. Please describe the structural and non-structural/procedural *best management practices (BMPs)* and *pollution prevention best management practices* that were implemented by your department during the 2007 fiscal year at municipal facilities and/or during field activities.

      Approximately 60 leaseholds inspected during fiscal year, fact sheets distributed as necessary.

   b. Please submit a list of municipal facilities that are under your department's authority. (Exclude open space areas where your department owns land but no operational activities have occurred.)

      N/A - 650 leasehold sites, not municipal facilities

   c. Please provide the number of municipal facilities that have a Water Quality Management Plan (WQMP) or Storm Water Pollution Prevention Plan (SWPPP) created internally or externally.

      N/A

2. **Inspection of Municipal Areas and Activities**
   Please provide copies of all completed annual inspection forms for municipal facilities inspected during the 2007 fiscal year (The number of sites inspected should equal the number of sites identified in question 1b above.). **If deficient issues were identified as a result of the inspection, describe follow up actions taken to correct the problem.**

5 leasehold sites inspected, however they do not qualify as municipal facilities. Copies of checklists from inspections are attached.

NOTE: Please only report activities that were implemented during FY 07 (July 1, 2006 to June 30, 2007).

EDUCATION AND PUBLIC PARTICIPATION ACTIVITIES

Please distribute the "Education and Public Participation Form", provided as a separate file (Attachment A.doc), to the Public Information Officer (or other appropriate employee) to provide information regarding education and public participation and outreach activities implemented within your department during fiscal year 2007. When completed, please return the Education and Public Participation Form to the Storm Water Division liaison with this activity reporting form.

During FY07 five new employees were hired and received the Think Blue training included in orientation training. Three employees transferred into the department and had already received the required training.

NOTE: Please only report activities that were implemented during FY 07 (July 1, 2006 to June 30, 2007).

PROGRAM ASSESSMENT

1. Provide an overview of the major Urban Runoff Management Program accomplishments in your department during the 2007 fiscal year.
   Five inspections were conducted on leaseholds, if necessary fact sheets were distributed during the inspections.

2. In reviewing your sections of the Urban Runoff Management Plan and the activities the department committed to completing:

   a. Please determine if any additions or changes are needed to any activity or timeline listed.

      Change in definition of Municipal Facilities- previously all City property was included in "Muncipal Facilities", however after thorough analysis it was determined that due to the transfer of property rights through legal agreements leased properties are not "Muncipal" since they are not operated by City staff. Commercial and industrial activities on these sites are subject to the same requirements as other businesses that are located within the City limits.

   b. Please summarize any new activities that will be implemented during the next reporting period (fiscal year 2008) as a result of your department's assessment of activities associated with the Urban Runoff Management Program.

      For FY08 READ will include new language in lease agreements that refer to the development and implementation of BMPS for activities on City owned property.

[*NOTE: If your department proposes any amendments to the Urban Runoff Management Plan, please provide a hard and an electronic copy of the affected section(s) in "strikeout/underline" format. If you do not have a Microsoft Word file of the document, please request a copy from your liaison. You may display the proposed amendments by selecting the "track changes" option in the "Tools" pull-down menu in Microsoft Word.]

NOTE: Please only report activities that were implemented during FY 07 (July 1, 2006 to June 30, 2007).

FINANCIAL ASSESSMENT

The Storm Water Pollution Prevention Division requests that departments complete the "FY07 Financial Assessment Form", provided as a separate excel file (Attachment B), to document expenses required to perform activities as identified in the City's Urban Runoff Management Plan. This form has been designed to provide a detailed accounting for the costs associated for every department to implement their program's component(s). It is expected that departments that have either a primary or supporting role incurred costs and thus shall report it in this form. Each annual financial assessment form will have two components: a reporting on the actual expenditures incurred and a reporting on the planned expenditures for the next fiscal year. This will enable our division to accurately communicate the needs of the City's efforts to comply with the Urban Runoff Management Program.

We suggest the form be completed by your department/division analyst and that departments establish accounting mechanisms to record this information (i.e. the development/establishment of organization numbers and/or job order numbers). These tools will enable departments to easily track and present this information and ensure accuracy.

For any questions on this component feel free to contact Yvonne Alcoser, Assistance Management Analyst for the Storm Water Pollution Prevention Division at (619) 525-8642 or via email. Thank you for your cooperation.

When your department's budget analyst has completed, signed and returned the form to you, please sign, date and submit a copy of it with this activity reporting form to your Storm Water Division liaison.

GLOSSARY OF TERMS

Best Management Practices (BMPs) – Best Management Practices (BMPs) are activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the United States. BMPs also include treatment requirements, operating procedures and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage. In the case of municipal *storm water* permits, BMPs are typically used in place of testing the facility's discharges to determine if the discharge is below specific regulatory limits.

Discharge – A release or flow of storm water or other substance entering or leaving a conveyance system.

Education (external) – External education consists of storm water related information that departments provide to outside audiences and can include contract language, printed handouts, user agreements, signs, meetings and public service announcements.

Education (internal) – Internal education consists of storm water related information that departments provide to employees through such means as tailgates, printed materials, procedures and paycheck stuffers.

Hazardous Waste – A waste or combination of wastes that, because of its characteristics, can cause harm to humans, animals and the environment.

Illicit Discharge – Any discharge to a storm water conveyance system that is not composed entirely of storm water. Exceptions include discharges allowed by a NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer) and discharges resulting from fire fighting activities.

Municipal Storm Water Permit – This permit is a National Pollutant Discharge Elimination System (NPDES) Permit issued to San Diego County, San Diego Unified Port District, and 18 cities including the City of San Diego by the California Regional Water Quality Control Board in order to reduce pollutants in urban runoff. The permit includes a requirement for the City to develop and implement a jurisdictional Urban Runoff Management Program.

Municipal Facilities/Activities – Municipal facilities and activities are buildings or field work areas where City employees perform their daily operations.

Non-Storm Water – Non-storm water consists of all discharges entering and leaving a *storm water* conveyance system that do not originate from rain events. Non-storm water includes illicit discharges, non-prohibited discharges, and NPDES permitted discharges.

NOTE: Please only report activities that were implemented during FY 07 (July 1, 2006 to June 30, 2007).

Pollution Prevention BMP – Pollution prevention BMPs are practices and processes that specifically reduce or eliminate the generation of pollutants. Other types of BMPs only provide source control, treatment, or disposal of specific pollutants.

Priority – Ranking of sites or facilities based on their threat to an impaired water body. Please note that the criteria for ranking municipal facilities, industries, and construction projects differs. Refer to Component 1.5 of the City's Urban Runoff Management Plan for criteria in prioritizing municipal facilities. Refer to the City's Storm Water Standards Manual for criteria in a project's construction priority ranking.

Priority Project – See "SUSMP" definition below. A priority project is a project of sufficient type or magnitude to require the incorporation of a series of priority project requirements aimed at reducing a development projects potential impacts to water quality throughout the "use" of the project site (i.e., once the site is built). To determine if your project is a priority project, refer to the applicability checklist in Appendix A of the Storm Water Standards Manual.

SUSMP (Standard Urban Storm Water Mitigation Plan) – The Regional Water Quality Control Board's term for a series of storm water development requirements, required by the *Municipal Storm Water Permit*, aimed at reducing post-construction (i.e., once the site is in use) urban runoff pollution from new public and private development and redevelopment projects. The City of San Diego implements the SUSMP requirements through the *Priority Project* requirements in the *Storm Water Standards Manual* (see separate definitions).

Storm Water Standards Manual – This City document contains all of the City's construction and permanent (post-construction) storm water development requirements. *SUSMP* requirements are implemented by the "Priority Project" requirements in the Storm Water Standards Manual.

Storm Water – Storm water is defined as runoff that originates only from a rain event, although the term may frequently be incorrectly used when referring to water that is actually "urban runoff" (see below). Storm water is that portion of precipitation that flows across a surface to the storm drain system or receiving waters. Examples of this event include the water that flows off a building's roof when it rains (runoff from an impervious surface); the water that flows into streams when snow on the ground begins to melt (runoff from a semi-pervious surface); and the water that flows from a planted surface when rainfall can no longer absorb into the soil (runoff from a pervious surface). During rain events in urban areas, rain water picks up and transports pollutants through a storm water conveyance system, and ultimately delivers the pollutant to a water body.

Storm Water Conveyance System – A storm water conveyance system is those municipal and natural collection facilities within the City where storm water drains, collects and is transported

to a water body. Examples of conveyance systems are any roads with drainage systems, municipal streets, catch basins, natural (i.e., creeks and rivers) and artificial channels, aqueducts, canyons, stream beds, gullies, curbs, gutters and ditches.

Storm Water Pollution Prevention Plans, or SWPPPs (See also: Water Quality Management Plans) – SWPPPs and water quality management plans are plans containing storm water procedures or BMPs developed internally by city staff (specific department staff, Environmental Services Department or Storm Water Division), or externally by a consultant. These plans outline the specific procedures determined to eliminate or reduce pollutants from entering the storm water conveyance system, and are often developed for individual municipal yards.

Urban Runoff – Urban runoff is defined as all flows into a *storm water* conveyance system and consists of the following components: (1) *storm water* (wet weather flows) and (2) *non-storm water* illicit discharges (dry weather flows), with the exception of allowable discharges under the Municipal Storm Water Permit and the City's Storm Water Management & Discharge Control Ordinance (Municipal Code § 43.03).

Urban Runoff Management Plan (URMP) – The plan required to address pollutants in urban runoff as mandated by the *Municipal Storm Water Permit.* The City of San Diego URMP, adopted by the Regional Water Quality Control Board on January 28 2003, describes the activities each city department will implement to improve water quality and meet the requirements of the Permit. The City of San Diego is required to submit annual reports detailing the activities that were implemented during each fiscal year as part of the URMP. To see the entire URMP, go to the Think Blue website at http://www.thinkblue.org/brochures/URMP.htm.

Water Quality Management Plans (See also: Storm Water Pollution Prevention Plans, or SWPPPs) – Water quality management plans and SWPPPs are plans containing storm water procedures or BMPs developed internally by city staff (specific department staff, Environmental Services Department or Storm Water Division), or externally by a consultant. These plans outline the specific procedures determined to eliminate or reduce pollutants from entering the storm water conveyance system, and are often developed for individual municipal yards.

City of San Diego - Urban Runoff Management Plan

ANNUAL MUNICIPAL FACILITY SITE COMPLIANCE INSPECTION CHECKLIST

Inspector: VLADIMIR BALOKSTY
Phone Number: 619-235-5248
Date/Time: 10/20/06 10:30 AM

I. Facility Information

Facility Name		
US Olympic Training Center		
Street Address		Zip Code
2800 Olympic Pkwy		91915
Facility Contact Person		Phone
Bettie Angeli		619 482-6211
Standard Industrial Classification Code	Waste Discharge Identification Number	APN No.
N/A	N/A	

II. Shared Facility Information

Is there more than one City department and/or division sharing this facility?

X No (skip this section) _____ Yes (complete this section)

Name of City Departments and/or Divisions Sharing Facility	Contact Person and Phone Number	Covered by this Inspection?

III. General Site Conditions and Runoff Management Practices Review

		S*	U*	N/A	Comments
General	Employees trained in storm water pollution prevention practices?	S			
	Common areas of yard reasonably clean and free of litter and debris?	S			
	Are parking areas generally clean and swept as needed?	S			
	Are storm drain inlets reasonably clean and free of debris?	S			
	Is there evidence of discharges, spills, and or leaks in any areas?	S			NO
Trash storage areas	Is area reasonably clean and uncluttered?	S			
	Are trash cans and garbage bins kept covered?	S			
Fueling areas	Is there a roof on fueling area?			N/A	
	Is there a mechanism in place for spill overflow protection?			N/A	
Vehicle/equipment maintenance area	Area reasonably clean and free of spills, leaks, or any other deleterious materials?	S			
	Is area covered overhead?	S			
	Dry clean up methods implemented?			N/A	
	Are there drip pans readily available for use?			N/A	
	Spill containment and cleanup kits readily available?			N/A	
	Storage areas covered and properly maintained?	S			

* S = Satisfactory, U = Unsatisfactory

III. General Site Conditions and Runoff Management Practices Review (Cont.)

		S	U	N/A	Comments
Vehicle/equipment washing areas (cont)	Are related activities contained within designated area?			N/A	
	Hazardous materials/liquids stored above ground?	S			
	Are there containment mechanisms in place?			N/A	
Materials loading and storage areas	Area reasonably clean and free of litter and debris?	S			
	Designated area covered overhead?	S			
Chemical handling areas	Areas reasonably clean and organized?	S			
	Is area indoors or properly covered?	S			
	Spill containment cleanup kits readily available?			N/A	
	If outdoors, is water from surrounding areas prevented from reaching chemical handling areas?			N/A	
	Hazardous materials/liquids stored above ground?	-		N/A	
	Dry clean up methods implemented?			N/A	

IV. Water Quality Management Plan (WQMP) Review

Has a SWPPP been developed for this yard? __Y__ Yes (complete this section and skip section V)
_____ No (skip this section and complete section V)

		S	U	N/A	Comments
Facility site map	Identifies drainage areas and direction of flow	S			
	Identifies location of storm water conveyance system including ditches, inlets and storm drains	S			
	Identifies location of any existing storm water controls (e.g., berms, filters, grass swales, etc.)	S			
	Identifies location of building(s) and activity areas (e.g., fueling islands, hazardous materials storage areas, washing areas, etc.)	S			
Materials/activities used on site	List materials stored and handled on site, including storage location and typical quantities	S			
	Includes a narrative description of activities conducted on site which have the potential to result in discharges to storm drain system			N/A	
Potential Pollutants	Identifies potential pollutants which could be discharged from site given activities conducted at facility			N/A	
Best Management Practices (BMPs)	Describes BMPs implemented at facility to deal with each potential pollutant source identified			N/A	
	Minimum City wide BMPs listed	S			
	Storm water system regularly inspected/monitored	S			
Record keeping	Employee training records	S			
	Quarterly inspections records, if any	S			
	Storm water conveyance system monitoring (2/yr)[1]	S			

V. Storm Water Pollution Prevention Plan Status

Is facility in the process of developing a WQMP?
_X_ Yes, expected completion date: 3/1/2005
_____ No, this facility does not need a WQMP because _____

VI. Additional Comments (attach additional pages if necessary)

[1] Only required for NDPES General Storm Water Permit holders

Chapter 1
INTRODUCTION

The San Diego Regional Water Quality Board has issued a Municipal Storm Water Permit that requires the City of San Diego to substantially reduce pollutants going into the City's storm drain system. the Municipal Permit requires that all City-leased properties reduce the amount of pollutants entering the storm drain system to the maximum extent possible. To comply with the Municipal Permit's requirements, the city is requiring lessees to include procedures and precautions necessary to ensure that the leased property have minimized the contribution of pollutants to beaches and bays. the City is requiring lessees document these activities and procedures called Storm Water Best Management Practices "BMP" in a document called a Water Quality Management Plan "WQMP." The WQMP must be kept on the leasehold and made available upon request of a representative of the City.

1.1 Purpose of the WQMP

The regulations require us to prepare a Storm Water Pollution Prevention Plan (WQMP). It describes the measures that we will take. This plan is to be kept on the premises at the office of the CanyonSide Manager.

1.2 BMP Implementation Committee

The Permit requires that the WQMP identify personnel to oversee the implementation of any measures to reduce pollution (called Best Management Practices), to conduct monitoring activities, and to modify the WQMP as necessary over time. We have formed a standing committee which participated in the preparation of this plan and will oversee its implementation. The committee will be lead by CanyonSide LLC President, assisted by the onsite Manager and the LLC Secretary Treasurer.

1.3 Implementation Schedule

All of what are called "management BMPs" (those that do not involve any major construction) are to be implemented by the end of calendar year 2007. Any construction project timetable to be coordinated with city of San Diego.

1.4 Updating the WQMP

The San Diego Regional Water Quality Board can require changes to the plan. . We are required to change the plan whenever a change in our activities occurs that may affect significantly the discharge of pollutants. We may also change the plan if we determine that there are more economical BMPs to reduce pollutants than the one's currently identified in the WQMP. The LLC President is responsible for determining if the WQMP is to be changed, and when done, by the involvement of the Committee.

CHAPTER 2
SITE LOCATION AND GENERAL ENVIRONS

2.1 General Nature of Facility Activities

This facility, located at 12115 Black Mountain Road, San Diego, CA, 92129, is situated at the corner of Black Mountain and Mercy Roads. Approximately 15 acres, it is bordered on the east by city property designated "Dedicated Open Space." It is adjacent to and bordered on the west by the Los Penasquitos Canyon Preserve, also public use "Dedicated Open Space." The Penasquitos Canyon Creek runs long the north boundary. In addition, the Mohnike Adobe house and Barn are on the National Historic Register.

The facility is a historical, equestrian property owned by the City of San Diego and leased by CanyonSide Stables LLC for the exclusive purpose of operating and maintaining an equestrian center. Primary services are horse boarding, riding lessons, riding training classes and guided trail rides. Incidental uses include picnics, hay rides, barbecues and show ring activities.

It should be noted that as this property is owned by the City of San Diego and is a Designated Historical Site, the lessee is constrained from unilaterally implementing all conceivable measures due to preexisting building locations, geography, drainage and terrain slope, and existing restrictions to land grading, historical site modification, etc. Quoting from the Los Penasquitos Canyon Preserve Master Plan (1998), "development should be consistent with objectives [the preservation and enhancement of it's natural and cultural resources]; with care taken that public use should not endanger the qualities that make the preserve unique." Thus, it is our understanding that any changes, deletions or additions to the existing structures, terrain, slope, drainage, grading, etc. to comply with WQMP BMP's would be subject to city of San Diego approval and at the expense of the city of San Diego.

CHAPTER 3
DESCRIPTION OF POTENTIAL SOURCES OF POLLUTION

3.1 Horse manure/urine

Manure and urine deposits from boarded horses could enter Penasquitos Canyon Creek or the storm water drainage system. These pollutants can include: coliform bacteria, Ammonia, Salts, Nutrients and Sediments.

3.2 Horse wash rack runoff

Wash rack runoff could enter Penasquitos Canyon Creek. These pollutants can include: coliform bacteria, Ammonia, Salts, Nutrients and Sediments.

3.3 Maintenance Vehicle fluids

Fluids from maintenance tractors are potential pollutants if not handling properly. These include fuel, antifreeze and lube oil.

CHAPTER 4
STEPS TO REDUCE POLLUTION

4.1 What are Best Management Practices (BMPs)

The storm regulations state that we are to put in place Best Management Practices (BMPs) to reduce the contamination or potential for contamination of storm water. Many of the BMPs we are already doing: these are included in the WQMP with new BMPs that need to be implemented.

We are required by the permit to identify BMPs in the following general areas:

1. Site Design and Management: - Refers to those things we do to keep the horse boarding area as well as the picnic area clean.

2. Ensure cooperation of horse borders/owners as well as public citizens who use the facility.

3. Employee training: Our training program needs to include training as necessary for the various BMPs.

4.2 Site Design and Management

A. BMP: Site barns, corrals, manure storage, and other high-use areas on higher ground when possible or on the portion of property that drains away from creeks and channels. Do not site facilities or pasture on land where the slope is 30% or more.

Comment: Lower level pipe pens were relocated to higher ground some years ago and facility currently complies with this BMP.

B. BMP: Locate the following areas at least 50 feet away from creeks, intermittent streams, drains,domestic wells, septic tank or leach field sites:
Animal washing
Arenas and riding rings
Stalls, paddocks, and turnouts
Pasture and equestrian courses
Land application of manure and compost

Comment: Currently comply.

C. BMP: Locate bins and stockpiles at least 150 feet away from creeks, intermittent streams, drains, domestic wells, and septic tank or leach field sites. Separate barnyards, paddocks, and manure storage areas from waterways with vegetated buffers or pasture to act as a natural filter.

Comment: Currently comply. Earthen berm separates Penasquitos Canyon Creek from facility.

D. BMP: Keep "clean water clean." Use grassed ditches, berms, or subsurface drains and properly sized roof gutters and down spouts to divert clean runoff around barnyard manure and sediment.

Comment: The the Mohnike Adobe house and Barn are designated historical structures and do not have down spouts. Impact unknown but would appear to be minimal.

E. BMP: Divert contaminated runoff from manured areas away from waterways and to low gradient vegetated buffers.

Comment: As noted above in section 2.1, paragraph three (3), lessee would need city engineering to approve and conduct, at city's expense, any grading /slope modifications to property if current site drainage is deemed unacceptable.

F. BMP: Construct or repair trails, arenas, roads, parking areas, ditches, and culverts to drain water but not sediment.

Comment: Currently comply.

G. BMP: Use fencing to keep horses away from environmentally sensitive areas and protect stream banks. Keep fencing and gates in good repair at all times.

Comment: Currently comply.

H. BMP: Horse Access to Waterways
Provide animals with other sources of water and shade.

Design stream crossings to minimize erosion.
Prevent trampling of stream side vegetation.

Comment: currently comply.

I. BMP: Grazing Management
Focus on protecting the pasture's soil and vegetative cover. Prevent bare areas from forming. Establish healthy and vigorous pastures with at least 3 inches of leafy material present.
Subdivide grazing areas into three or more units of equal size, which can be grazed in rotation.
Clip tall weeds and old grass to control weeds and stimulate grass growth.
Rotate animals to clean pasture when grass is grazed down to 3-4 inches.
Let pasture regrow to 8-10 inches before allowing regrazing.
Manage grazing so that a cover of dry residual vegetation protects soil from the first rains.
Keep animals away from wet fields when possible.
During heavy rainfall, consider indoor feeding.
Use manure and soiled bedding sparingly to fertilize pastures and croplands.
Use turnout paddocks as "sacrifice areas" to preserve pastures.

Comment: Unable to comply. City property has never included more that one pasture. However, it is cleaned regularly, along with the remainder of the site.

J. BMP: Horse Waste Management
Clean up manure and soiled bedding regularly, especially during wet weather.
After cleanup, during the arid summer, water the areas where horses frequently deposit manure to promote decomposition.
Store horse waste in sturdy, insect-resistant, and seepage-free units that have an impervious surface bottom and a cover to prevent leaching and runoff. Do not dump horse waste on the edge or directly into stream channels.
Compost. Keep compost piles moist, and well aerated to promote decomposition.
Give away composted material to local greenhouses, nurseries and

botanical gardens.
Transport manure to topsoil companies or composting centers.

Comment: Currently comply with exception noted below. All pens, corrals, arenas, trails and common areas are cleaned of manure on a daily basis. Water truck used during arid weather. We contract with a commercial manure hauling service that takes manure to an approved disposal site.

Currently do not have an insect-resistant, and seepage-free site where manure is stored while awaiting transport. As noted above in section 2.1, paragraph three (3), will need to discuss with City Real Estate Assets Manager a suitable location, design etc.

K. BMP: Do not let horse wash water drain directly into waterways.

Comment: Currently comply. Horse wash racks are located well away from Penasquitos Canyon Creek.

L. BMP: Ensure fluids from vehicles such as tractors do not leak and pollute grounds.

Comment: Currently comply. We use licensed commercial mechanics. We place drip pans beneath tractors when not in use.

4.3 Public cooperation

BMP: Ensure cooperation of horse borders/owners as well as public citizens who use the facility.

Comment: Horse owner/boarders, as a group, are well in tune with keeping the facility clean and a nice place to visit. We have a high level of cooperation during painting and cleanup days. Facility provides adequate trash receptacles. Will post City-approved signs encouraging public to assist in keeping area neat as well as not to dump anything into the creek.

4.4 Employee training

BMP: Our training program needs to include training as necessary for the various BMPs.

Comment: Will brief all employees on the objectives and procedures of this document. Training will be monitored by the facility manager on an as needed basis.

Submitted By: Randall Hamud

Title: President, CanyonSide Stables LLC

Date: July 01, 2007

From: Vladimir Balotsky
To: rhamud@san.rr.com
Date: 7/25/2007 10:52:33 AM
Subject: Mr. Hamud,

Mr. Hamud,
The City reviewed the Water Quality Management Plan for the CanyonSide Stables, LLC. Park and Recreation Department has requested to revise the language in Section 4.J of the plan to have at least a weekly clean up of the manure from the trail under Black Mountain Rd to minimize the amount of pollution going into the creek.

Should you have any questions, please let me know.

Thanks,

Vladimir Balotsky

ANNUAL MUNICIPAL FACILITY SITE COMPLIANCE INSPECTION CHECKLIST

Inspector: _____
Phone Number: _____
Date/Time: _____

I. Facility Information

Facility Name		
QUALCOMM STADIUM		
Street Address 9449 Friars Road		Zip Code 92108
Facility Contact Person Steve Wightman		Phone 619-641-3106
Standard Industrial Classification Code	Waste Discharge Identification Number	APN No.

II. Shared Facility Information

Is there more than one City department and/or division sharing this facility?

___X__ No (skip this section) _____ Yes (complete this section)

Name of City Departments and/or Divisions Sharing Facility	Contact Person and Phone Number	Covered by this Inspection?

III. General Site Conditions and Runoff Management Practices Review

		S*	U*	N/A	Comments
General	Employees trained in storm water pollution prevention practices?	X			
	Common areas of yard reasonably clean and free of litter and debris?	X			
	Are parking areas generally clean and swept as needed?	X			Within 24 hours following events
	Are storm drain inlets reasonably clean and free of debris?	X			
	Is there evidence of discharges, spills, and or leaks in any areas?			X	
Trash storage areas	Is area reasonably clean and uncluttered?	**X**			
	Are trash cans and garbage bins kept covered?	**X**			Parking lot trash bins are uncovered during events
Fueling areas	Is there a roof on fueling area?		**X**		
	Is there a mechanism in place for spill overflow protection?	**X**			
Vehicle/equipment maintenance area	Area reasonably clean and free of spills, leaks, or any other deleterious materials?	**X**			
	Is area covered overhead?	**X**			
	Dry clean up methods implemented?	**X**			
	Are there drip pans readily available for use?	**X**			
	Spill containment and cleanup kits readily available?	**X**			
	Storage areas covered and properly maintained?	**X**			

* S = Satisfactory, U = Unsatisfactory

III. General Site Conditions and Runoff Management Practices Review (Cont.)

		S	U	N/A	Comments
Vehicle/equipment washing areas (cont)	Are related activities contained within designated area?	X			
	Hazardous materials/liquids stored above ground?	X			
	Are there containment mechanisms in place?	X			
Materials loading and storage areas	Area reasonably clean and free of litter and debris?	X			
	Designated area covered overhead?	X			
Chemical handling areas	Areas reasonably clean and organized?	X			
	Is area indoors or properly covered?	X			
	Spill containment cleanup kits readily available?	X			
	If outdoors, is water from surrounding areas prevented from reaching chemical handling areas?			X	
	Hazardous materials/liquids stored above ground?	X			
	Dry clean up methods implemented?	X			

IV. Water Quality Management Plan (WQMP)** Review

Has a WQMP (or SWPPP) been developed for this yard? ___X__ Yes (complete this section and skip section V)
_____ No (skip this section and complete section V)

		S	U	N/A	Comments
Facility site map	Identifies drainage areas and direction of flow	X			
	Identifies location of storm water conveyance system including ditches, inlets and storm drains	X			
	Identifies location of any existing storm water controls (e.g., berms, filters, grass swales, etc.)	X			
	Identifies location of building(s) and activity areas (e.g., fueling islands, hazardous materials storage areas, washing areas, etc.)	X			
Materials/activities used on site	List materials stored and handled on site, including storage location and typical quantities	X			
	Includes a narrative description of activities conducted on site which have the potential to result in discharges to storm drain system	X			
Potential Pollutants	Identifies potential pollutants which could be discharged from site given activities conducted at facility	X			
Best Management Practices (BMPs)	Describes BMPs implemented at facility to deal with **each** potential pollutant source identified	X			
	Minimum City wide BMPs listed	X			
	Storm water system regularly inspected/monitored	X			
Record keeping	Employee training records	X			
	Quarterly inspections records, if any	X			
	Storm water conveyance system monitoring (2/yr)[1]			X	

**The term Water Quality Management Plan (WQMP) is replacing the term Storm Water Pollution Prevention Plan (or SWPPP) for municipal facilities.

V. Water Quality Management Plan Status

Is facility in the process of developing a WQMP?
_____ Yes, expected completion date: _____
_____ No, this facility does not need a WQMP because _____
_____
