CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	N/A	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N/A	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	NO	see remarks
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N/A	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	

NOTES/REMARKS: Some of dirt by east & south drainages & dirt & leaves by south leaf drain. Plastic cover needed at est-50th of hill outside of fence for prevent erosio

ITEMS TO REVIEW:

- Outdoor storage activities
- Significant dust or particulate generating activities
- Onsite waste management and disposal practices
- Outdoor maintenance or processing activities

INSPECTOR AND DATE Zohra Alexander 1/18/08

VISUAL INSPECTION CHECKLIST	(YES/NO)	IF YES, ACTION TAKEN:
CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	Yes	
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	Yes	
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	N/A	
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	Yes	
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	No	
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	No	
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	No	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	~~Yes~~ No	
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	Yes	
STORAGE: Is there evidence of drips or leaks from any equipment?		
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	N/A	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	Yes	See remarks
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N/A	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	N/A

STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N/A	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	N/A	

STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N/A	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	N/A	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	NO	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	YES	See Pictures
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	NO	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	NO	

NOTES/REMARKS:

ITEMS TO REVIEW:

- Outdoor storage activities
- Significant dust or particulate generating activities
- Onsite waste management and disposal practices
- Outdoor maintenance or processing activities

○ CONSTRUCTION SITE OR ○ FACILITY (PUMP STATION, DISTRIBUTION RESERVOIR, WATER TREATMENT PLANT, OTHER): Catalina Stand Pipe 200 Block Catalina Boulevard San Diego CA		
INSPECTOR AND DATE P. SCHLITT / September 7, 2007		
VISUAL INSPECTION CHECKLIST	(YES/NO)	NOTES/ACTION TAKEN
CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	No	
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	No see note	Small amount of leaf litter collected in curb/gutter - minor cleaning required of curb/gutter
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	yes	minor amount of leaf debris needs to be removed before rainy season
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	No	
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	No	
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	No	fiber rolls already installed along northside of property line
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	No	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	No	
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	No	
STORAGE: Is there evidence of drips or leaks from any equipment?	No	No equipment stored on site
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	No	no mechanical equipment stored outside
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	No	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	no chemical storage at facility
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N/A	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	N/A	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	yes	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	yes	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	No long-term parking associated with facility
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	No dumpster onsite one garage can
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	No loading docks associated with facility
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	yes	fiber rolls installed along the northside of the property to prevent runoff on adjoining property
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	yes	
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N/A	No evidence of slope or vegetation damage associated with planting beds that surround reservoir
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	No loading docks associated with facility

NOTES/REMARKS: Removal of leaf litter along curb and gutters prior to rainy season

CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	No	
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	No	No surface storm drain inlets at facility ~~stormwater~~ irrigation to sheet flows off site
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	N/A	
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	No	
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	No	
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	No	existing grounds surrounding stand pipe covered with ornamental landscape plantings
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	No	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	No	
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	No	
STORAGE: Is there evidence of drips or leaks from any equipment?	N/A	No mechanical equipment stored outside
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	N/A	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	N/A	No dry chemical storage at facility
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	No containment structures associated with facility
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N/A	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	No	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N/A	No exterior storage areas associated with facility
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	Yes	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	No long-term parking required at this facility
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	No trash bins located at this facility
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	No trash bins located at this facility
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N/A	No slope protection required - entire perimeter of facility adequately vegetated
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	N/A	No drain inlets located at facility
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N/A	No evidence of surrounding slope drainage
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	

NOTES/REMARKS: Overall facility in good condition

ITEMS TO REVIEW:

- Outdoor storage activities
- Significant dust or particulate generating activities
- Onsite waste management and disposal practices
- Outdoor maintenance or processing activities

○ CONSTRUCTION SITE OR ○ FACILITY (PUMP STATION, DISTRIBUTION RESERVOIR, WATER TREATMENT PLANT, OTHER): Del Cerro Reservoir Rockhurst Court / Rockhurst Drive, San Diego, CA

INSPECTOR AND DATE P. SCHLITT / September 7, 2007

VISUAL INSPECTION CHECKLIST	(YES/NO)	EXPLANATION IF YES
CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	No	Misc leaf litter around perimeter of reservoir
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	No	2 weighted fiber rolls encircling storm drain grate on southeast corner of facility
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	yes	minor amount of leaf litter in bottom of drain inlet on southeast corner of facility
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	No	
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	No	
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	No	No evidence of sediment runoff on paved portions surrounding reservoir
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	No	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	No	
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	No	
STORAGE: Is there evidence of drips or leaks from any equipment?	No	No equipment currently being stored outside on ground
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	N/A	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	N/A	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	No dry chemical storage onsite
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N/A	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	No	

SITE ASSESSMENT QUESTIONS		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	yes	One small storage area located under stairwell-area clean of debris
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	yes	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	No long-term parking required at this facility
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	No outside storage bins visible
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	No loading docks associated with facility
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	No	All surrounding slope adequately protected with vegetation
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	N/A	No evidence of accumulated sediment on paved areas
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N/A	No evidence of damage to surrounding slopes.
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	

NOTES/REMARKS: Overall site in excellent condition

ITEMS TO REVIEW:

- Outdoor storage activities

INSPECTOR AND DATE SAID MAHDAVI 9-10-07

STORM INSPECTION CHECKLIST	(Y/N/NA)	DESCRIPTION/ACTION TAKEN
CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	No	
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	YES	See attached Picture (2)
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	No	
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	No	
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	No	
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	No	
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	N/A	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	N/A	
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	N/A	
STORAGE: Is there evidence of drips or leaks from any equipment?	N/A	
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	N/A	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	N/A	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N/A	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	N/A	

STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N/A	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	No	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N/A	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	No	
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	No	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	No	

NOTES/REMARKS:

ITEMS TO REVIEW:

- Outdoor storage activities
- Significant dust or particulate generating activities
- Onsite waste management and disposal practices
- Outdoor maintenance or processing activities

○ CONSTRUCTION SITE OR ○ FACILITY (PUMP STATION, DISTRIBUTION RESERVOIR, WATER TREATMENT PLANT, OTHER): REDWOOD VILLAGE		
INSPECTOR AND DATE GRIMA 9/14/07		"IE026"
VISUAL INSPECTION CHECKLIST	YES/NO	IF YES, ACTION TAKEN:
CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	NO	
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	N	BMPs ARE IN ADEQUATE CONDITION
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	N	
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	N	UNPAVED AREAS ARE MOSTLY COVERED WITH GRAVEL.
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	N	SITE HAS CONCRETE SWALE TO GUIDE RUNOFF AWAY FROM SLOPE.
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	N	
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	N	NO ACTION NECESSARY
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	N	NONE OBSERVED
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	N	SITE IS WELL-DRAINED
STORAGE: Is there evidence of drips or leaks from any equipment?	N	NONE OBSERVED
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	N	NO ACTION NECESSARY
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	N	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N	ASPHALT SURFACE AND CONCRETE SWALES IN GOOD CONDITION.
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	N/A	

EXHIBIT NO. 5 APPLICATION NO. 6-12-09

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N	NO ACTION NECESSARY
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	N	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	NO LOADING DOCKS HERE.
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N	NO ACTION NECESSARY
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	N	NOT A CONCERN AS LONG AS NORMAL MAINTENANCE CONTINUES.
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N	NOT A CONCERN
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	

NOTES/REMARKS: ACCUMULATION OF DEAD LEAVES AND FALLEN TREE BRANCHES COULD END UP CLOGGING THE INLET AT THE BOTTOM OF THE HILL (OFF THE PROPERTY) IF REGULAR CLEANING & MAINTENANCE IS NOT KEPT UP.

ITEMS TO REVIEW:

- Outdoor storage activities
- Significant dust or particulate generating activities
- Onsite waste management and disposal practices
- Outdoor maintenance or processing activities

VISUAL INSPECTION CHECKLIST	(YES/NO)	IF YES, ACTION TAKEN:
CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	NO	
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	NO	
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?		
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	NO	
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	NO	
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	NO	
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	NO	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	NO	
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	NO	
STORAGE: Is there evidence of drips or leaks from any equipment?	NO	
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	NO	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	NO	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	NO	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	NO	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	NO	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	NO	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N/A	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	YES	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	YES	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	YES	
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	YES	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	

NOTES/REMARKS: Dirt mound on property, covered with Tarp. The Dirt is there due to a water leak that has been dug out.

ITEMS TO REVIEW:

- Outdoor storage activities
- Significant dust or particulate generating activities

VISUAL INSPECTION CHECKLIST	(YES/NO)	IF YES, ACTION TAKEN:
CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	No	
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	yes	see remarks
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	yes	"
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	No	
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	NO	
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	No	
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	N/A	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	No	
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	No	
STORAGE: Is there evidence of drips or leaks from any equipment?	NO	
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	N/A	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	N/A	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N/A	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	No	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	Yes	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	N/A	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	NO	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	NO	see remarks
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N/A	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	

NOTES/REMARKS: BMPs are old & need replacement. Leaves & dirth need to be cleaned from the storm drain. Behind the fence on the street side the big concrete pipe brings storm H_2O from the street (if) at the end of the ditch (pipe) there is drain inlet, it is covered with a lot of ~~trees~~ dirt - Please check it) Also there is a lot of leaves to be cleaned. The brick are still there.

ITEMS TO REVIEW:

SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	NO	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	NO	
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	NO	
STORAGE: Is there evidence of drips or leaks from any equipment?	N/A	
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	N/A	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	N/A	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N/A	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	NO	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N/A	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	YES	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N/A	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	YES	
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N/A	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	

NOTES/REMARKS: BRUSH inside YARD NEEDS CUTTING. ALSO some TREE limbs to be moved. Small VAULT COVER missing, on VAULT outside of FENCED station. (EASTside).

STORAGE: Is there evidence of drips or leaks from any equipment?	No	
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	No	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	No	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	No	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	No	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	No	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	No	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	Yes	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	N/A	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	39 ~~N/A~~ Yes	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	Yes	
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N/A	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	

NOTES/REMARKS:

ITEMS TO REVIEW:

STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	NO	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	N/A	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N/A	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	N/A	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N/A	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	N/A	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N/A	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	NO	
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	NO	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	

NOTES/REMARKS: The previous inspection (9/10/07) showed work to be done, but nothing is done. Leaves on the driveway ~~direct~~ will be taken by the rain into the storm drain on the street (needs cleaning). The ditch had a lot of dirt & leaves to be cleand By the gate, there is a BMP but it has catched a lot of dirt & leaves to be cleaned

ITEMS TO REVIEW:

- Outdoor storage activities
- Significant dust or particulate generating activities
- Onsite waste management and disposal practices
- Outdoor maintenance or processing activities

STORAGE: Is there evidence of drips or leaks from any equipment?	NO	
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	NO	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	NO	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	NO	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	NO	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	NO	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	YES	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	YES	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N/A	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	NO	NEEDS BRANCHES & LEAVES REMOVED
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N/A	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	

NOTES/REMARKS:

ITEMS TO REVIEW:

STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	N	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	N	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	N	
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N	

NOTES/REMARKS:

ITEMS TO REVIEW:

- Outdoor storage activities
- Significant dust or particulate generating activities
- Onsite waste management and disposal practices
- Outdoor maintenance or processing activities

○ CONSTRUCTION SITE OR ◎ FACILITY (PUMP STATION, DISTRIBUTION RESERVOIR, WATER TREATMENT PLANT, OTHER): CHANNEL INDUSTRIAL PUMP STATION		
INSPECTOR AND DATE GRIMA 9/7/07		
VISUAL INSPECTION CHECKLIST	(YES/NO)	IF YES, ACTION TAKEN:
CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	YES	A FEW BAGS OF CONCRETE MIX BUSTED.
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	NO	
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	N	
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	N	
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	N	NO ACTION NECESSARY
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	N	FACILITY IS WELL VEGETATED/LANDSCAPED
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	N	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	N	NONE OBSERVED.
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	N	
STORAGE: Is there evidence of drips or leaks from any equipment?	N	
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	YES	COVER THE GENERATOR.
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	YES	THE GENERATOR SHOULD BE COVERED.
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	NO CHEMICAL STORAGE HERE.
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N	NO STORAGE CONTAINERS
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	N	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	N	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N	NO ACTION NECESSARY
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	NO LOADING DOCKS.
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	N	NO ACTION NECESSARY
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	NO LOADING DOCKS AT THIS FACILITY.

NOTES/REMARKS: IT LOOKS LIKE SOMEONE IS BUILDING A BRICK-AND-MORTAR SHED TO KEEP THE EMERGENCY GENERATOR IN. THE GENERATOR SHOULD BE COVERED/PROTECTED UNTIL THE SHED IS COMPLETED. THERE ARE SEVERAL READY-MIX BAGS THAT HAVE BUSTED OPEN, LEAVING CEMENT MIX IN PILES ON THE GROUND. NEED TO CLEAN THEM UP.

CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	No	
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	N/A	
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	N/A	
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	No	
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	No	
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	No	entire pump station of level ground
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	Yes	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	No	
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	No	
STORAGE: Is there evidence of drips or leaks from any equipment?	No	
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	N/A	no mechanical equipment stored at facility
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	No	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N/A	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	No	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N/A	No exterior storage areas associated with facility
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	yes	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N/A	No long-term parking required at this facility
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	No trash bins located at facility
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	No loading docks associated with facility
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N/A	No slope protection required - entire perimeter adequately vegetated
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	N/A	No drain inlets or catch basins associated with facility
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N/A	No evidence of surrounding slope damage
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	

NOTES/REMARKS:

○ CONSTRUCTION SITE OR ◉ FACILITY (PUMP STATION, DISTRIBUTION RESERVOIR, WATER TREATMENT PLANT, OTHER): MERCY HIGH PS

INSPECTOR AND DATE GRIMA 9/14/07

VISUAL INSPECTION CHECKLIST	(YES/NO)	IF YES, ACTION TAKEN:
CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	Y	THERE WERE LOTS OF DEAD LEAVES.
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	N	NO ON-SITE INLETS ALL RUNOFF IS DIRECTED TO THE STREET/CURB.
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	N	
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	N	NO UNPAVED AREAS AT THIS SITE
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	N	
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	N	NO ACTION NECESSARY
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	N	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	N	NONE OBSERVED.
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	N	
STORAGE: Is there evidence of drips or leaks from any equipment?	N	NO EQUIPMENT OBSERVED
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	N	〃
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	N	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N	NO CHEMICALS STORED HERE
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N	ALL ARE IN GOOD SHAPE
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	N/A	

RCVD SEP 17 '07

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N	NO ACTION NECESSARY
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	N	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N	NO ACTION NECESSARY
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	NO DUMPSTERS HERE.
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N	NO ACTION NECESSARY
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	N	
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	NO LOADING DOCK AT THIS SITE.

NOTES/REMARKS: THIS SITE HAS SEVERAL TREES. THIS PRODUCES LOTS OF LEAVES, ESPECIALLY ON AN AREA THAT SLOPES TOWARD THE STREET. THIS FACILITY NEEDS MORE MAINTENANCE TO REMOVE EXCESSIVE ACCUMULATION OF DEAD LEAVES.

ITEMS TO REVIEW:

- Outdoor storage activities
- Significant dust or particulate generating activities
- Onsite waste management and disposal practices
- Outdoor maintenance or processing activities

○ CONSTRUCTION SITE OR ● FACILITY (PUMP STATION, DISTRIBUTION RESERVOIR, WATER TREATMENT PLANT, OTHER): Montezuma Pump Station Catoctin & Montezuma, San Diego, CA		
INSPECTOR AND DATE P. Schlitt / September 5, 2009		
VISUAL INSPECTION CHECKLIST	(YES/NO)	EXPLANATION/ACTION TAKEN
CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	No	Minor amount of leaf debris on pavement surfaces along southside of pump station
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	N/A	one manhole located on site
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	N/A	No surface drains or curb inlets onsite
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	N/A	area entirely paved w/asphalt
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	No	Entire surroundings vegetated
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	N/A	area entirely paved w/asphalt
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	No	area entirely surrounded by asphalt
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	yes	diesal generator located next to pump station - minor amount of oil leaking on ground from trailer
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	No	
STORAGE: Is there evidence of drips or leaks from any equipment?	yes	see above - oil leaking from trailer
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	No	one trailer generator on-site - no need to cover
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	No	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	No	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N/A	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	No containers located outside of pump station
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	No	No excessive storage outside of structure

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N/A	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	yes	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	No	parking available on site, however no long-term parking required
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	No waste containers on site
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	No such facilities on site
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N/A	Perimeter of property entirely vegetated with ornamentals
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	N/A	No evidence of sediment collected on site, no storm drain inlets located on property
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N/A	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N/A	

NOTES/REMARKS: - Misc building materials/supplies scattered on ground around the perimeter of pump building.

Photo of site conditions taken on Sept 5, 2007 - included evidence of leaking oil from trailer containing diesal generator.

STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	N/A	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	N/A	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N/A	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	no	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N/A	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	yes	Spoil on East side (30 yds) 20' of AC Pipe UNWRAPED

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	NO	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	NO	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	NO	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	NO	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	NO	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	yes	NO BMP or vegetation on North side of Pump Sta, Look's to be under construction
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	NO	
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	yes	Same ↑
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	NO	

NOTES/REMARKS: 20' of AC Pipe 16" Left unwraped and Broken (Big Problem) Hazard'es material

ITEMS TO REVIEW:

- (•) Outdoor storage activities
- Significant dust or particulate generating activities
- (•) Onsite waste management and disposal practices
- Outdoor maintenance or processing activities

○ CONSTRUCTION SITE OR ~~X~~ FACILITY (PUMP STATION, DISTRIBUTION RESERVOIR, WATER TREATMENT PLANT, OTHER): STONEBRIDGE 1135 PS		
INSPECTOR AND DATE CHANDLER 9-6-07		
VISUAL INSPECTION CHECKLIST	(YES/NO)	IF YES, ACTION TAKEN:
CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	N	
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	N	
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	N	
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	N	
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	N	
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	N	
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	N	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	N	
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	N	
STORAGE: Is there evidence of drips or leaks from any equipment?	N	
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	N	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	N	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	N	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	N	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	N	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	N	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	N	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	N	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	N	
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	N	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	N	

NOTES/REMARKS: NO SEDIMENT PRODUCED. ALL AREAS SEALED.

ITEMS TO REVIEW:

INSPECTOR AND DATE SAID MAHDAVI 9-4-07

VISUAL INSPECTION CHECKLIST	(YES/NO)	IF YES, ACTION TAKEN:
CLEANING: Are there signs of poor housekeeping (walkways cluttered, floors not swept, etc.) in any facility areas?	NO	
STORM DRAIN: Have the BMPs at storm drain inlets, catch basins and curb inlets been neglected? Do they need replacing?	NO	
STORM DRAIN: Are there obstructions or debris in the catch basins or curb inlets?	NO	
SITE WORK: Do unpaved areas of the facility produce excessive dust and dirt on windy days?	NO	
SITE WORK: Inspect the site prior to a forecast storm event. Site work: Should plastic sheet covers or tarps be placed on slopes not vegetated to avoid sediment flow or soil erosion?	NO	
SITE WORK: Are unpaved areas of the facility subject to scour or erosion during rainfall?	NO	
SITE WORK: To avoid erosion at the discharge end, should the rooftop runoff be made to spill into a pervious area (e.g. grass yard)?	NO	
SITE WORK/STORAGE: Are there spots, pools puddles or other traces of oil on any hard surfaces?	NO	
SITE WORK/STORAGE: Is standing water found in inappropriate areas long after the rain has stopped?	NO	
STORAGE: Is there evidence of drips or leaks from any equipment?	NO	
STORAGE: Mechanical equipment stored outside should be covered with tarp or plastic. Does any equipment need this type of weather protection?	NO	
STORAGE: Does any equipment stored outdoors capture/collect rainwater that could lead to rusting or contamination by grease, oil, gas, etc.?	NO	
STORAGE: Does the dry chemical storage area need protection from the wind or rain?	NO	
STORAGE: Have the secondary containment structures (berms, dikes, walls, etc.) developed cracks or other issues that will keep them from working as designed to capture spills?	NO	
STORAGE: Does the inspection of storage containers reveal signs of cracks, corrosion or leaks?	NO	
STORAGE: Has this site inspection revealed any indications of poor or improper storage practices?	NO	

SITE ASSESSMENT CHECKLIST		
STORAGE: Keep storage areas clean, well organized, and equipped with ample clean-up supplies as appropriate for the materials stored.	N/A	
CLEANING: Is onsite cleaning limited to washing with water and soap? If not, provide a dedicated wash-down area and utilize appropriate BMPs to contain hazard/runoff.	NO	
PARKING: Make a dedicated parking space available for vehicles or motive equipment that leak and place drip pans at each location.	NC	
WASTE MANAGEMENT: Plan timely service and removal to prevent dumpsters from overflowing.	N/A	
LOADING DOCKS: Cover large deliveries with a canopy or awning if they will be stored outside for any period.	N/A	
SLOPES: Use plastic sheet cover or other BMPs on unprotected slopes during storm events. Implement temporary soil stabilization measures until permanent stabilization is achieved.	N/A	
SEDIMENT REMOVAL: After a rain event, clean and dispose of the sediment and debris that has collected at the storm inlets and catch basins as soon as weather conditions permit.	Nc	
SLOPE REPAIR: Repair any slope/vegetation damage that has occurred during a storm event as soon as weather conditions permit.	Nc	
STORM DRAIN: Direct connections to storm drains from depressed loading docks (truck wells) must use protective BMPs. Filter fabric and oil/water separators should be used in these areas.	No

- Bare, unprotected soil conditions

Special Event Municipal Inspection Forms

SPECIAL EVENTS
STORM WATER SITE COMPLIANCE INSPECTION CHECKLIST

I. Inspection Information

Special Event Category: Festival Person Inspecting: Carolyn Wormer

Date/Time of Inspection: 5/24/08 3:00-5:00 PM Phone Number: 619. 685-1332

II. Special Event Information

NAME OF SPECIAL EVENT: 13th Annual FFFM Smooth Jazz Gaslamp FESTIVAL

EVENT ADDRESS: G St/ Btwn 7th Ave & 6th Ave 5th Ave Btwn Market St. & F St. ZIP CODE: 92101

EVENT HOST/COORDINATOR: Gaslamp Quarter Assoc. PHONE: 619 233-5227

III. General Site Conditions and Storm Water Best Management Practices Review

		Yes	No	N/A	(If "No") Resolution
General	Does event have BMPs in place?	✓			
	Is event reasonably clean and free of litter and debris?	✓			roving continuous pick-up
	Are enough trash cans provided for event?	✓			1:1 ration trash to recycle
	Are storm drain inlets protected?	✓			see picture
	Is there storm water signage at applicable locations?	✓			
Trash storage areas	Is area reasonably clean and uncluttered?	✓			
	Are trash cans and garbage bins being disposed of needed?	✓			
Spill Kits	Spill containment and cleanup kits readily available at designated spots?	✓			
	Is there evidence of discharges, spills, and or leaks in any areas?		✓		
End of Event	Was area left clean?	✓			
	Were all BMPs, signage and chalk removed from site?	✓			
	Are the storm drains clean of debris?	✓			

IV. Reporting Pollutant Discharges

NOTE: If a spill is observed, and the spill entered the storm drain system, *please report the discharge to the City's Storm Water Hotline: (619) 235-1000*.

Event

13th Annual KIFM Smooth Jazz Gaslamp Festival

KIFM 98.1 is inviting persons age 21+ to the Gaslamp Quarter to enjoy smooth jazz sounds on two outdoor stages and in a dozen indoor clubs. It's a great place to dance and dine in pleasure with delicious food and spirits. Come and experience the enchantment of the Gaslamp Quarter!

Date	May 24, 2008
Time	1:00 pm - 10:00 pm
Location	5th Avenue (between Market St. & F St.) ~ G Street (between 4th Ave. & 6th Ave.)
Admission	$42.00 - $47.00
Anticipated Attendance	10,000
Hosted By	Gaslamp Quarter Association/KIFM 98.1
Public Contact	Tricia Tellier @ (619) 233-5227
Media Contact	Chris Turner @ (619) 718-7116
Vendor Contact	Coleen Davidson @ (619) 718-7152

Planning For

STORM WATER POLLUTION PREVENTION

at Your Special Event

Contact the Office of Special Events at (619) 685-1331 to coordinate a preliminary discussion about your special event.

San Diego is a region with tremendous beauty --- rugged coastline, accessible waterways and a temperate climate --- that affords residents a year-round opportunity to play on our beautiful beaches and in our bays. It's a life style we cherish and others envy, and still thousands of tourists enjoy every year. It is one of the main reasons that every year hundreds of people choose San Diego to host special events.

As you begin to plan your event, it is important to recognize that people who attend and participate in events frequently leave behind tons of litter, trash and debris, all of which can find its way into the storm drain.

This brochure has been developed to

STORM WATER POLLUTION PREVENTION

San Diego Municipal Code §43.0301 makes it illegal to pollute storm drains. The purpose of the municipal code is to ensure the health, safety and general welfare of San Diegans by controlling, reducing and eliminating discharges into the Storm Water Conveyance System from spills, dumping or disposal of materials other than storm water.looks to you as a Clean Water Leader, to ensure that the necessary plans are made and steps are taken to protect some of San Diego's precious resources, its beaches and bays.

The City of San Diego is aggressively working to protect our beaches from being diminished by the effects of Storm Water Pollution. This pollution, also called Urban Runoff, is a problem that affects all of us. It closes beaches, makes our children and us ill and threatens the health of marine and wildlife.

Special Event pollutants such as food waste, cooking oils, pet waste, cigarette butts, mop water, dirt, and unfinished beverages, plus the automotive fluids, brake dust, leaves, and grass clippings, that are generated everyday, combine to create an unhealthy mess that contaminates and closes our beaches.

When it rains, or when water is used, pollutants are picked-up from the ground and carried into the nearest storm drain down the street. The storm drains are not connected to a treatment system, so everything that flows down the drain goes directly to

VOL. 6 - Page 6215

PLAN AHEAD

Remember to include Storm Water Pollution Prevention strategies as part of your initial special event planning process. As an event organizer, your first step should be to identify the storm drains that your event could potentially affect. Once you have identified potential sources of pollutant discharges, adopt some simple Best Management Practices (BMPs) that can help stop pollutants from being generated and entering into the storm drain system. You should also make sure all of the vendors at your event also participate in storm water pollution prevention strategies.

When planning, be proactive. Assess your event's activity from a storm water pollution point-of-view and ask yourself, "will this activity, directly or indirectly, generate pollution?" And, "how can I get the job done and prevent debris from entering the storm drain?"

CREATE A SPILL CLEAN-UP PROTOCOL

Have a plan that includes:

- **Procedures for different types of spills**
- **Schedules for training of employees and volunteers about procedures**
- **Creation of clean-up kits placed in well marked areas where spills are likely to occur**
- **Designation of key employees/volunteers who will monitor clean-up**
- **Posting the clean-up plan in a visible**

3 Cs

As a general rule, here are some simple rules that can help you to make your event storm drain friendly. We refer to them as the 3 Cs: Control, Contain and Capture.

Control: Once you have located the nearest storm drain(s) and those most likely to be impacted, take measures to ensure that nothing will enter or be discharged into them. This may require sweeping up the area and discarding debris and trash into a trashcan prior to beginning the event.

Contain: Isolate the storm drain and/or work area, to prevent potential flow or discharge from leaving the area.

Capture: Once your event has ended and been a success, clean up the area. If there is litter, trash or sediment, sweep it up and discard of it in a trashcan. If you do have liquid spills, use an absorbent to clean it up. Never use a hose to wash it away.

So, sweep up after your special event and place the debris into a trash container.

PLANNING FOR STORM WATER POLLUTION PREVENTION AT YOUR SPECIAL EVENT

THE CITY OF SAN DIEGO

OFFICE OF
SPECIAL
EVENTS

VOL. 6 - Page 6216

Office of Special Events
Message to Event Organizers

Stormwater Pollution Prevention Plan

OFFICE OF SPECIAL EVENTS

Your event plans must comply with all local, state, and federal laws governing stormwater management and discharge control including the City of San Diego Storm Water Ordinance §43.03, "*Stormwater Management and Discharge Control*." Under the Stormwater Management and Discharge Control Ordinance, it is illegal to discharge pollutants into the City's storm drain system. Failure to prevent illegal discharges can result in fines up to $10,000 per day, per violation.

Storm Drain Identification
A storm drain conveyance system is a sidewalk, curb, gutter or drain inlet that is in the public right-of-way which collects flows and conveys them away from structures and property into a drain or channel or nearby waterway (e.g. creek, channel, stream, river, ocean, bay, etc.) All storm drains inside or adjacent to your event venue must be clearly marked on your Site Plan or Route Map using the following recommended symbol:

S/D Or Storm Drain

Large-scale events with potential to generate pollutants outside of the proposed event venue perimeter may be required to identify additional storms drains that could be impacted by event-related activities.

Best Management Practices
You are responsible for identifying and implementing Best Management Practices (BMPs) to prevent pollutant discharges to the storm drain system. Should a discharge to the storm drain system occur, immediately notify the Office of Special Events or City representative assigned to the event with details regarding the incident and any on-site actions taken to mitigation the incident. You should provide a written follow-up describing the incident and actions taken to mitigate discharges into the storm drain system to the Office of Special Events immediately following your event.

The following BMPs have been developed to assist in establishing your event plans. You are not limited to the following BMPs, but must establish procedures that produce equivalent or better results and are satisfactory to the City of San Diego.

I. Outreach/Training
- Provide training and educational information to event staff, vendors, attendees, and other participants regarding storm water pollution prevention strategies at your event.
- Notify all vendors of their storm water pollution prevention responsibilities and potential fines that could be assessed for violations.

II. Storm Drain Protection
- Provision of signage in visible areas throughout the event venue stating:

Do not pour liquids or place trash into the storm drain. Violators will be subject to fines/ No tire líquidos ni basura en los desagües. Violadores serán multados.

- Placement of food, craft, portable restrooms and other activities that may generate pollutants in areas significantly distanced from storm drains. Provide secondary containment underneath all portable restrooms (ADA- accessible restrooms excluded).
- Provision of spill kits comprised of paper towels, cloth towels, kitty litter and/or sand in all areas where food, beverages, craft/creative areas as well as where chemical or liquid activities or products such as portable restrooms may be placed within or adjacent to the event venue.
    - All spill materials must be removed from the public right of way once the spilled material is absorbed off the ground.
    - Spills leaving the event venue area into the surrounding streets must be captured and prevented from entering the surrounding non-event area(s) and storm drains.
- Place material over storm drain openings to preclude the discharge of pollutant/liquids into the storm drain. This strategy is to be used only if **no rain** is projected during the event time frame, including set-up and dismantle.
    - Any materials used to block a storm drain must be removed from the venue site upon conclusion of the event dismantle process.
    - **DO NOT** block a storm drain or use other BMPs that may create a potential for flooding if there is a chance of rain forecasted during you event, including set-up and dismantle time frames.
- Venue Housekeeping
    - An adequate number of personnel should be assigned to the collection of loose trash and debris throughout your event, including set-up and dismantle time frames.
    - Sweeping of all venue-related areas such as parking and production sites should take place throughout the event.
    - Use wet mops to remove any temporary public art (chalk, paint, charcoal, clay, etc.) at the conclusion of the event.
    - Ensure that any water used during the event (e.g., cooler water, mop water, food prep water, etc.) is either poured down a sink or released over a landscaped area with adequate capacity to contain the liquids and pollutants off the sidewalks, curbs, gutters, streets, and drains.
    - DO NOT power wash or rinse event residue within your event venue or production and parking areas unless all wash water is captured and disposed of in a sanitary sewer or released over a landscaped area with adequate capacity to contain the liquid and pollutants.
- Other
    - Many special events have unique event components and operational circumstances. You should develop additional or alternative storm drain protection strategies that address the unique circumstances of your proposed event.

Office of Special Events
Message to Event Organizers

Trash/Recyling Plan

OFFICE OF SPECIAL EVENTS

Trash

You must properly dispose of waste throughout the permitted time frame of your event. At the conclusion of your event, the event venue and surrounding areas must be returned to a clean condition. By leaving the venue in a better condition than which you found it, you can beneficially impact the San Diego community.

Failure to perform adequate clean-up or repair damages to city property and facilities due to your event will result in billing at full cost recovery rates plus overhead for clean-up and repair. In addition, the denial of future special event permit applications or the requirement of a cash deposit or surety bond for future events may occur. The city does not provide street sweeping services or additional bins for special events, so please plan accordingly.

Recycling

California state law requires that 50% of all waste generated at your event be recycled. Additionally, the City of San Diego also requires event organizers to provide a minimum of one recycling container for each trash container at an event. Failure to meet local and state recycling and waste reductions goals may result in penalties.

Responsible management of waste means *pre-planning* ways to reduce waste before the event, as well as planning recycling strategies for the waste generated at your event.

You must communicate the importance of the recycling/waste reduction program to everyone involved in the management of your event and to the people who attend or participate in your event. By developing guidelines for your event attendees, participants, vendors, and service providers, your event may generate less waste and save money on collection and disposal costs.

The following four steps have been developed to help you in your planning process:

I. Identify Waste Reduction Opportunities

- Identify waste reduction opportunities for your event.
- Cooperation and coordination among all vendors, service providers, and organizers is important to ensure the successful separation and collection of materials at your event.

II. Identify Recyclables

- Identify recyclable materials expected to be generated at your event.
- Determine the number and types of vendors or service providers who will be involved in the management of your event and the types of materials they will generate, either during event set-up, tear-down or through products/materials available to attendees that could end up being discarded.

III. Educate Vendors and Service Providers

- Vendors and service providers play critical roles in the success of your event's waste management efforts.
- Develop a waste reduction and recycling policy that each vendor and service provider must sign acknowledging their agreement to comply with the program.
    - Include expectations, such as how recyclables should be separated, if cardboard must be flattened, etc.
    - *You may want to require a deposit or charge a waste management fee as part of booth rentals to cover costs for recycling collection and trash disposal.*
    - A sample waste reduction and recycling policy and vendor letter is available on-line at www.recycleorelse.com

IV. Identify Collection Strategies

- As of July 1, 2007, you must provide one recycling container for every trash container at your event.
- Recycling containers for your event should be distinct from trash containers and be clearly labeled for recycling.
- If your event generates significant recyclables, a separate recycling dumpster(s) should be located where recyclables can be consolidated during the course of the event.

With your help, we can work together in reducing the amount of trash disposed in San Diego's local landfills. For additional assistance in recycle planning for your event, please contact the Environmental Services Department using www.recycleorelse.com

PLANNING TO RECYCLE & REDUCE WASTE AT YOUR SPECIAL EVENT

THE CITY OF SAN DIEGO

OFFICE OF
SPECIAL
EVENTS

One of the most important jobs of an event planner is to ensure the health and safety of everyone in attendance...

Planning to RECYCLE & REDUCE WASTE at Your Special Event

Contact the Office of Special Events at (619) 685-1331 to coordinate a preliminary discussion about your special event.

Every year San Diego is host to hundreds of special events ranging from sports activities to parades, festivals and conventions. Frequently, people who attend and participate in these events leave behind tons of trash that could otherwise be recycled. Many people, however, are now recycling at home, work, and school and would welcome the opportunity to recycle at your special event.

Additionally, the California Integrated Waste Management Act (AB939) requires all cities to reduce the amount of solid waste disposed at landfills by 50% by the year 2000. As part of this law, recycling and waste reduction strategies are required to be incorporated at all events where waste may be generated.

This brochure is designed to help you develop a recycling and waste reduction plan for your special event.

PLAN AHEAD

Remember to include recycling and waste reduction strategies as part of your initial special event planning process. As an event organizer, your first step should be to identify ways in which you can reduce waste at your event. Examples of waste reduction strategies include the use of "finger foods" that eliminate the need for plates and utensils and the use of reusable sports bottles rather that disposable cups.

Once you have identified ways to reduce waste at your event, you will then be ready to concentrate on recycling strategies at your event. Throughout this process it is important that you work closely with the vendors and sponsors involved in the production of your event as well as a company or organization that can provide recycling services.

RECYCLING BEHIND THE SCENES

"Behind the scenes" recycling is an effective way to capture recyclable materials that never reach the public area of your venue. Require, or work closely with, the sponsors and vendors of your event to ensure the recycling of their own waste materials. Items used in production areas such as cardboard, plastic beverage bottles, glass and aluminum cans can easily be recycled and should represent a key element in your recycling plan.

RECYCLING DURING YOUR EVENT

Encourage people to *think* before they *throw*. While public awareness about recycling is improving, many people attending special events tend to toss trash in the nearest container or on the ground. You can create opportunities for participants to recycle at your event by providing containers that are:

- Colorful and eye-catching or markedly different from trash containers
- Clearly labeled for recycling
- Placed near trash containers to avoid trash being deposited in the recycling container
- Made with a small opening for recyclables only
- Anchored and locked securely
- Monitored and serviced frequently to prevent contamination and scavenging

RECYCLING CHALLENGES AND REWARDS

Many festival and community celebration event planners are challenged by the need to keep up with the collection of waste materials when large crowds gather within a short period of time. It is important that organizers of this type of event be prepared to accommodate a variety of recyclable materials in an expeditious manner. By establishing a comprehensive recycling plan at your festival or community celebration, you may be able to save on waste disposal costs due to the high volume of recyclables that are generated. Additionally, you will be providing a means by which participants, vendors and sponsors can easily participate in a recycling program.

Parades, races and walks present a unique challenge in that the event organizer must identify the types of recyclable materials that may be generated at the event and then select the best locations along the route at which to collect the waste and recyclable materials. As an event organizer, you may want to target areas along the route where large crowds may gather or near water station and medical service sites. By providing recycling opportunities at these types of events, you will promote environmental awareness to the participants and spectators involved in your event. Additionally, vendors and sponsors will have an occasion to promote their involvement in recycling efforts.

BUY RECYCLED PRODUCTS

Whatever type of special event you are organizing, you may be faced by recycling challenges. Remember the financial, environmental, educational and promotional rewards that can be derived through the development of a thorough recycling plan are well worth the effort.

Close the loop! Remember, you are not truly completing the recycling process until you buy products made from recycled material and use products that can be recycled. It's as easy as:

- Purchasing recycling containers made with recycled materials
- Printing your event letters, brochures, posters and other advertising materials on recycled paper
- Using paper products such as napkins and bags made from recycled material

DATA COLLECTION

As the final component of your recycling plan, keep track of the amount and type of materials you recycle at your event. This information will help you plan an even more successful event in the future and can be used in promotional press releases and literature written about your event. Finally, we encourage you to share this important information with the City of San Diego's recycling staff at (858) 492-5010.

FOR MORE INFORMATION

For more information about special event recycling, or to receive a list of local recyclers who provide collection services, please contact the City of San Diego's recycling staff at (858) 492-5010.
