Note that violations are based on inspection results. Businesses may have filed required paperwork with the RWQCB or taken other actions to remedy the violations noted subsequent to the inspection.

6.0 RESIDENTIAL COMPONENT

6.1 INTRODUCTION

Thirty-six percent of land use in the City of Poway is residential. Due to the large residential area, activities that take place in residential areas have the potential to affect the quality of receiving waters. Residential activities such as vehicle washing, over-irrigation, and home maintenance can potentially contribute pollutants to the City's MS4 if BMPs are not implemented. Additionally, improper disposal of household hazardous waste (HHW) can also contribute pollutants to the City's MS4. The City has worked to implement a range of programs to address these high TTWQ residential activities with the goal of reducing pollutant loads associated with such activities. Pollutants of concern for Poway's watersheds include bacteria, sediment, and nutrients.

6.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the residential component during the 2009/2010 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the residential component of its storm water program during the reporting period are provided in the remainder of Section 6.

- The City has a permanent HHW collection facility; participants properly disposed of 307,417 pounds of HHW.
- The City's Used Oil Recycling Program collection centers reported that 12,116 gallons of used motor oil were collected.
- The City continued to distribute issues of the quarterly *Poway Today* newsletter to more than 19,000 households in the City.
- I Love A Clean San Diego (ILACSD) conducted several presentations for adults and youth about general storm water concepts.
- The City continued to promote the use of the storm water hotline for residents to call in potential violations of the City's municipal storm water ordinance.

6.2 SOURCE CHARACTERIZATION

The City has identified high TTWQ residential areas within its jurisdiction and has designated various high TTWQ residential activities, which are discussed in the following subsections.

6.2.1 HIGH THREAT TO WATER QUALITY ACTIVITIES

During the 2009/2010 reporting period the City continued to identify the following residential activities as high TTWQ:

- Automobile repair and maintenance

- Automobile washing
- Automobile parking
- Home and garden care activities and product use
- Disposal of trash and pet waste

6.2.2 HIGH THREAT TO WATER QUALITY AREAS

In addition to high TTWQ activities, the City has identified several residential areas that pose a high TTWQ. High TTWQ residential areas are designated by considering complaint investigations, institutional knowledge, data from the City's Dry Weather Monitoring Program, and criteria as defined in the Municipal Permit. Residential areas that have not been designated as high TTWQ but may be sources of pollutants are also monitored by the City.

The City has mapped out areas identified as high TTWQ. The maps delineate the residential areas described below, and a series of smaller maps provide more detail about each individual area. The maps were printed and distributed to Public Works personnel, and large copies were posted in the Public Works office so staff can become familiar with high TTWQ areas and be vigilant to storm water issues that may arise in these areas. The maps are included as Attachment 6.1.

North Poway Residential Areas
North Poway includes a large part of the Multi Species Conservation Program and Biological Core and Linkage Area (BCLA). Sections of the Sycamore and Thompson Creeks fall within these areas. Runoff from residential streets bordering the BCLA eventually discharges at an outlet within the corridor at the northern end of Glen Arven Lane. Additionally, some rural roads located within the BCLA may discharge directly to the creeks.

Rattlesnake Canyon Cornerstone
This region is located approximately one mile east of the intersection of Twin Peaks Road and Espola Road, and is within a designated BCLA. Rattlesnake Creek flows from Rock Haven Cornerstone, down through Rattlesnake Canyon Cornerstone, and eventually to Poway Creek

Rattlesnake Basin
This area includes the residential area south of Twin Peaks Road and West of Espola Road.

South Poway Cornerstone
South Poway Cornerstone consists of BCLA land that encompasses southern portions of the City south of Poway Creek and along the north side of Beeler Canyon Creek. Los Peñasquitos Creek passes through the east portion of the South Poway Cornerstone and joins Poway Creek. Small communities on the south end of Gate Drive, Calle Seco, Paseo Bonita, Welton Lane, and Shirra Avenue are potential contributors of runoff in this area.

Residential Areas Draining to the Blue Sky Ecological Reserve
This area is designated as an Environmentally Sensitive Area (ESA) and includes a portion of Sycamore Creek north of Lake Poway. The residential region in the vicinity of the Blue Sky Ecological Reserve is fairly low density, and the population is relatively small. Potential runoff sources may include residences located on Twisted Branch Road, Country Day Road, High Sierra Road, and Espola Road.

6.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City has continued to provide information regarding the implementation of pollution prevention measures, such as good housekeeping practices, for residential areas and activities. Section 8.3 of the City's JURMP includes the City's minimum BMP requirements for specific residential activities. General residential BMPs include conscientious automotive maintenance and care, erosion control, and good housekeeping measures, such as sweeping rather than hosing off driveways and sidewalks. Other residential BMPs include non-storm water discharge management, including elimination of IC/IDs. There have been no changes to the City's residential BMP requirements as discussed in Appendix C of the City's JURMP.

6.4 PROGRAM IMPLEMENTATION

The City's residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting are conducted. This minimizes pollutants associated with residential activities and areas. The residential program has an education component so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities.

6.4.1 TRAINING, EDUCATION, AND OUTREACH

The City has continued to conduct training, education, and outreach activities for residents, which are described below.

***Poway Today* Newsletter Articles**
The City publishes storm water-related articles in the quarterly *Poway Today* newsletter. Four newsletters were published during the reporting period. A copy of each edition was provided via hard copy or e-copy to approximately 19,000 residential addresses within the City for the first three quarters of the year, and to approximately 21,000 residential addresses in the fourth quarter. Each issue was also archived on the City's website. The storm water-related articles published in 2009/2010 are summarized below. All newsletters published during the 2009/2010 reporting period are included as Attachment 6.2.

The Fall 2009 newsletter contained the following storm water-related articles and announcements:

- "POWAY DECLARES LEVEL 2 WATER SHORTAGE" informed City residents of the mandatory water cuts and discussed the City's plans to meet water reduction

regulations. The article also provided a phone number and website for reporting excessive run-off or broken sprinklers.

- "WHAT'S IN MY WATERSHED?" explained why it is important to keep pet waste, dirt, fertilizers and pesticides from entering the waterways and how to minimize discharges of these constituents of concern.

The Winter 2009 newsletter contained the following storm water-related articles and announcements:

- "STATEWIDE WATER SUPPLIES PREDICTED TO REMAIN LOW" provided reasons why the City and its residents must reduce water consumption, information on gray water systems, and sustainable landscaping resources.
- "WINTER RAINS BRING RISK OF FLOODING" informed property owners of the possibilities of flooding and their responsibility for preventing it through clearing private drainage channels and brow ditches of landscape material and debris.
- "KICK THAT CHRISTMAS TREE TO THE CURB!" provided information on proper Christmas tree recycling through EDCO's waste disposal services.

The Spring 2010 newsletter contained the following storm water-related articles and announcements:

- "WATER CONSERVATION" provided information on how residents may reduce indoor and outdoor water consumption.
- "WATER RESTRICTION UPDATE" reminded residents of the mandatory water cuts and provided a phone number for the Water Conservation Team to report broken sprinklers or excessive run-off.
- "POWAY'S ADOPT-A-TRAIL PROGRAM" called for volunteers to join the City's program to maintain local trails and pick up trash. This informational article directed potential volunteers to a contact number and the City's website.
- "DEPARTMENT SPOTLIGHT: PARKS, TRAILS, AND OPEN SPACE MAINTENANCE DIVISION PUBLIC WORKS DEPARTMENT" introduced residents to the City's Public Works department and volunteer programs.
- "SPRING CLEANUP EVENT" informed residents of the upcoming cleanup coupons that were being mailed out to residents. The collection was performed by EDCO and allowed residents to dispose of large items or unwanted household materials (not including HHW) free of charge.

The Summer 2010 newsletter contained the following storm water-related articles and announcements:

- "MORE USE, LESS WATER!" informed residents of the new synthetic fields at two Poway schools which have eliminated the need for fertilization and will conserve 9 million gallons of water per year.

Other Educational Outreach Materials and Activities
If Public Works crews notice storm water-related issues such as trash or animal waste in the vicinity of clean-out location, informational door hangers are distributed to residences in close proximity to the issue. During 2009/2010 a total of 17 door hangers were distributed to residents in the vicinity of where material had been dumped in a drainage channel. The door hangers can be found as Attachment 6.3.

Educational materials were also distributed during community events to further encourage pollution prevention measures and to increase knowledge about storm water. Efforts further included adult and youth presentations on watershed issues, storm water pollution prevention, and recycling of used motor oil. Additionally, the City has continued to provide storm water information and contacts on its website (http://www.poway.org/). The City's storm water hotline also provides a medium for City residents and business owners to obtain storm water information and file storm water related complaints.

Residents were also encouraged to participate in local activities to improve water quality such as clean-up events. Four California-Friendly Landscape classes were offered to residents during 2009/2010. These workshops were designed to teach residents about choosing a water-smart landscape.

More detailed information about the City's residential education program is included in Section 8 of this report.

6.4.1.1 PUBLIC EVENTS

HHW Events
The City maintains a permanent collection facility for HHW and electronic waste. The facility is open every Saturday from 9 a.m. to 3 p.m., with the exception of holiday weekends. A total of 307,417 pounds of HHW was collected at this facility. For disabled residents or residents over 65, door-to-door pickup services were provided. The City's five Used Oil Recycling Program collection centers reported that 12,116 gallons of used motor oil was collected during the 2009/2010 reporting year.

6.4.2 COMPLIANCE AND ENFORCEMENT

The City continues to implement compliance and enforcement measures by identifying potential sources of pollutants in residential areas from Dry Weather Monitoring Program data, complaints received by the storm water hotline, and observations made by the City's municipal personnel. If a potential to affect water quality is present, the City can provide a verbal warning, written warning, order to abate or correct, or monetary fines as applicable. If there was no active discharge seen during the complaint investigation, a courtesy notice along with educational material was left with the resident.

The City received 14 residential-related complaints during this reporting period. Six verbal warnings and 1 courtesy notice were issued to residents and/or landlords in response to these complaints. Many of the verified complaints involved residents who were unaware of residential BMPs. City personnel distributed informational door hangers or storm water

pamphlets during complaint investigations (Attachment 6.3 and Attachment 6.4, respectively). City personnel also cleaned areas in the public right of way as necessary to resolve complaints received by the City's Public Works Department. All residential complaints were resolved, and no further actions, such as fines or reports to the RWQCB aside from this JURMP Annual Report, were deemed necessary.

6.5 RESIDENTIAL COMPONENT EFFECTIVENESS ASSESSMENT

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

6.6 PROGRAM REVIEW AND MODIFICATION

No changes to the residential component of the City's JURMP were made during the reporting period.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

In accordance with the September 10, 2008, RWQCB adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the 2009/2010 Illicit Discharge Detection and Elimination section and attachments to the RWQCB no later than December 15, 2010.

8.0 EDUCATION COMPONENT

8.1 INTRODUCTION

During 2009/2010, the City continued to provide education and outreach to a variety of audiences within the City. The City's education program targets municipal personnel, industrial and commercial businesses, construction site owners and operators, and residents. The City aims to reduce storm water pollution by increasing awareness about the storm water conveyance system and promoting the implementation of BMPs. Through education and outreach, the City works to foster change in both the attitude and behaviors of the regulated community.

8.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the education component during the 2009/2010 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the education component of its storm water program during the reporting period are provided in the remainder of Section 8.

- Over 150 municipal personnel received storm water training.
- The City's quarterly newsletter, *Poway Today*, featured several articles highlighting storm water topics. These newsletters were distributed to tens of thousands of businesses and residents in the City.
- Various educational materials targeting mobile business activities, such as mobile auto detailing, were made available on the City's website.
- Several California-friendly landscaping classes for residents were provided.
- A total of 12 storm water presentations were provided for adults and school-aged children.

8.2 STAFF TRAINING ELEMENT

The City has provided extensive training and educational outreach to its municipal personnel. Many municipal personnel are out in the field on a daily basis, so it is important that they understand the importance of implementing BMPs. Additionally, municipal personnel are encouraged to report any IC/IDs observed to the appropriate City staff and to educate other municipal personnel and the general public about storm water pollution prevention. The City's Stormwater Program Administrator and Stormwater Inspector provided 10 training sessions to other City staff during the fiscal year. In addition to the formal training sessions, City storm water staff regularly provided guidance to other City staff on implementation of storm water requirements. One example of this type of training is the weekly meetings the Stormwater Program Administrator held with the City's land development engineers about SUSMP requirements. In addition to internal training, City

staff also attended a number of other training events put on by consultants, statewide and national organizations, and CalEPA. Table 8-1 includes all training sessions that were provided for various municipal staff and departments during 2009/2010.

Table 8-1
Municipal Training Sessions

Date(s)	Event	Topic(s)	Number of Participants
7/27/2009, 7/29/2009, 9/9/2009, 1/8/2010	Trainings by Storm Water Program Administrator	SUSMP and BMPs	16
9/23/2009	Training by Weston Solutions, Inc.	TMDL seminar	3

9/29/2009, 10/7/2009, 10/16/2009, 12/29/2009	Trainings by Storm Water Program Administrator	Construction site BMPs and inspection forms	6
10/27/2009	Training by Storm Water Program Administrator	Special events BMPs and inspection forms	9
11/2/2009	California Storm Water Quality Association (CASQA) 5th Annual Conference	New Construction Permit Training	1
11/18/2009	California's Construction General Permit Web Conference	Post-construction BMPs, Hydromodification, and regulatory strategies	5
12/22/2009	Training by D-MAX Engineering, Inc.	Industrial and Commercial Annual Inspector Training	3
2/25/2010	Presentation by Interwest Consulting Group	Discussion of the new state General Construction Permit (GCP)	3
3/3/2010	Seminar by American Public Works Association	Discussion of San Diego County Model Standard Urban Storm Water Mitigation Plan (SUSMP)	8
3/17-3/19/2010, 3/23/2010, 4/14/2010, 4/27/2010	Trainings by City of Poway Inspector, Cal EPA, Storm Water Program Administrator, and D-MAX Engineering, Inc.	Industrial and commercial storm water inspector training	3
5/7/2010 – 6/11/2010	Storm Water Pollution Prevention Training	Municipal BMP concepts. Training included video entitled "Storm Watch: Municipal Storm Water Pollution Prevention Training"	81
6/8/2010	Presentation by Orco Block Co.	Discussion of permeable interlocking concrete pavers	6

Table 8-1
Municipal Training Sessions

Date(s)	Event	Topic(s)	Number of Participants
6/16/2010	Training by D-MAX Engineering, Inc.	Hydromodification Management Plan (HMP) and new state General Construction Permit (GCP)	8

During the municipal BMP training sessions conducted in May and June 2010, 81 Public Works Employees watched an informational storm water video entitled "Storm Watch: Municipal Storm Water Pollution Prevention". To evaluate the effectiveness of the video and quantify an increase in knowledge of individuals that watched the video, pre- and post-tests were administered. The City's staff is well trained on storm water concepts and many individuals scored a perfect score on the pre-test. Most of the staff that did not score perfectly on the pre-test improved their test results in the post-test, which demonstrated that the training was successful.

In addition to the training sessions discussed above, Public Works staff were provided maps of the high TTWQ residential areas, as discussed in Section 6 of this JURMP Annual Report. The maps are also posted in the Public Works office. These maps were displayed so staff can become familiar with high TTWQ areas and be vigilant to storm water issues that may arise in these areas. The maps are included as Attachment 6.1.

8.3 EDUCATIONAL OUTREACH ELEMENT

In addition to municipal staff, the City has continued to provide education and outreach to industrial and commercial businesses, construction site owners and developers, and residents. These efforts promote storm water awareness and BMP implementation and are discussed in the following subsections.

8.3.1 INDUSTRIAL AND COMMERCIAL BUSINESSES

As required by the Municipal Permit, the City inspects its inventoried businesses to evaluate compliance with the City's BMP requirements and provides site-specific education outreach to business owners and operators. Results of the inspections conducted in 2009/2010 are discussed in Section 5 of this report. Each facility inspected received verbal education on storm water issues and received inspection results by mail when corrective actions were necessary. Brochures including general storm water techniques, integrated pest management (IPM) techniques, and BMPs for horses and livestock were distributed during inspections as applicable. Educational materials for industrial and commercial businesses are included as Attachment 5.2.

During the 2009/2010 reporting period, the City's quarterly *Poway Today* newsletter featured several storm water-related articles (Attachment 6.2). Several thousand of these newsletters were distributed to industrial and commercial facilities in the City. Details about the

newsletters can be found in Section 6 of this report. The total numbers of educational materials distributed to industrial and commercial are included in Table 8-2, below.

Table 8-2
Educational Materials Distributed to Industrial and Commercial Businesses

Type of Educational Material Distributed	Number Distributed
Green Wrench Guide	2
Preventing Urban Runoff Pollution	74
Restaurant BMP Handout	27
Power Washing Handout	3
Integrated Pest Management Cards	59
Horse and Livestock BMPs Brochure	2
Mobile Auto Detailing BMPs Brochure	3
Poway Today (4 issues)	7,600

8.3.1.1 MOBILE BUSINESSES

Mobile businesses, such as mobile car detailers or power washers, may present threats to water quality due to the nature of their business activities and the possibility of prohibited non-storm water discharges if proper BMPs are not implemented. Mobile businesses are not confined to a single area and many may not have City business licenses, making them difficult to identify. The City keeps track of mobile businesses that are discovered through business licenses and during field inspections. In order to ensure that these mobile businesses are implementing appropriate BMPs, BMP handouts for power washers, concrete and mortar projects, and mobile auto detailing are distributed as necessary. BMP information about these activities may also be accessed on the City's website.

8.3.2 CONSTRUCTION SITE OWNERS AND DEVELOPERS

Due to the nature of activities, construction sites have the potential to discharge various types of pollutants to receiving waters if not managed properly. To ensure that construction site owners, contractors, and developers are abiding by regional and federal regulation, new development and redevelopment project proponents are required to attend a preconstruction meeting that includes education on storm water management topics. These meetings include federal, state, and local regulations, implementation of a SWPPP, if required, and implementation and maintenance of BMPs. Project proponents view a video on proper BMP implementation for construction sites and sign an acknowledgement that they have received this information. Prior to the rainy season, the City also sends out a yearly letter to all parties responsible for construction projects which describes enhanced

construction BMP requirements and storm water management requirements during the rainy season. Additionally, the City distributed SUSMP handouts to project proponents during 2009/2010. SUSMP regulations and BMP information included in the City's JURMP are also made available on the City's website and a copy of the JURMP is at the front counter of Development Services.

8.3.3 RESIDENTIAL AREAS

Distribution of Educational Material

Since residential areas make up a large portion of Poway, the City understands the importance of reaching this particular audience through educational outreach programs. The City continued to send the quarterly *Poway Today* newsletter (Attachment 6.2) to residential addresses in the City. Four editions of *Poway Today* were distributed during 2009/2010: 19,000 copies for each of the fall, winter, and spring editions and 21,000 copies for the summer edition. As detailed in Section 6, several storm water articles were included in the newsletters distributed in 2009/2010.

The City website, www.poway.org, is another way in which City residents can become familiar with the design and intended use of the storm drain system, minimum BMPs for various high TTWQ activities, information regarding volunteer opportunities, information about IPM techniques, and City contact information.

As mentioned in Section 6 of this report, if Public Works crews noticed storm water-related issues such as trash or animal waste during normal maintenance activities, informational door hangers were distributed to residences in close proximity to the issue. During 2009/2010, 17 door hangers were distributed to residents in the vicinity of a nearby channel where material had been dumped. The door hangers reminded residents of general storm water BMPs and can be found as Attachment 6.3.

The City also distributed educational material to residents through public events such as Earth Day and Poway Days Festival. The City distributed educational materials, including magnets, pet waste bags, and other storm water-related material during these events. A detailed description of public participation events that took place in the City during 2009/2010 is provided in Section 9. A storm water educational calendar was also provided at the City's front counter, aquatic center, and at events, including the fishing derby and farmer's market.

Training Events

Several water-wise landscaping workshops for residents were provided by the City's Water Conservation Department in May 2010. The classes focused on choosing low water use/drought-resistant plants, installing effective irrigation systems, and fertilizer techniques to help conserve water, and thus avoid issues with over-irrigation.

During 2009/2010, ILACSD provided 12 presentations to students at Poway schools. These presentations included a discussion of watersheds, storm water issues, pollution prevention measures, and appropriate ways to recycle used motor oil. A total of 315 students attended

these presentations. Table 8-3, below, includes the locations and number of presentations delivered to the select student groups.

Table 8-3
ILACSD Storm Water Presentations

Date	Location	Description
11/6/2009	Abraxas High School	1 presentation for developmentally disabled adults
1/15/2010	Painted Rock Elementary	4 presentations for 2nd/3rd graders
3/3/2010	Tierra Bonita Elementary	2 presentations for 3rd graders
4/21/2010	Garden Road Elementary	1 presentation for 2nd/3rd graders
6/2/2010	Midland Elementary	4 presentations for 3rd graders

8.3.4 UNDERSERVED COMMUNITIES

The City of Poway has not identified any underserved communities within City boundaries. There is no inner-city area within the City's jurisdiction, and the non-English speaking populations are very small in size.

8.3.5 COMPLAINT INVESTIGATIONS

To further aid the process of identifying illicit discharges, the City encourages the public and City staff to report IC/IDs to the City's storm water hotline. All complaints are investigated by City staff. If a representative for the reported business, residential address, or construction site is present, the inspector will provide one-on-one verbal education about the complaint and storm water in general. Pollution prevention concepts are emphasized, and educational materials are distributed as applicable.

8.4 OUTREACH COMPONENT EFFECTIVENESS ASSESSMENT

The estimated number of impressions made by the City's education and outreach efforts during 2009/2010 is presented and described below.

Impressions Made

As discussed in this section, the City has continued to provide storm water-related education to different audiences in the City through inspections, distribution, and mailing of educational materials, and during various events throughout the year. The City calculates an estimate of impressions based on the number and type of educational materials distributed. Estimates of impressions generated by the City's efforts allow for a more realistic evaluation of the effectiveness of the NPDES storm water program.

The estimated number of impressions was generated by multiplying each effort by the number of impressions thought to be generated by that particular effort. For example, inspections have been presumed to generate three impressions, with the exception of

municipal inspections. Municipal inspections generally involve more people and are assumed to generate five impressions. Training sessions and cleanup events have been assumed to generate a number of impressions equal to four times the number of attendees because it is likely that the attendees will discuss the content with others after the training session or event. Printed educational materials distributed are assumed to generate three impressions each. Table 8-4, below, details the number of impressions made by the City during this reporting year.

Table 8-4
Impressions Made by the City

Impression Type	Count	Unit	Estimated Impressions
Municipal Inspections	28	Inspections	140
Industrial/Commercial Inspections	136	Inspections	408

Training Session/Activities and Events	1,309	Attendees	5,236
Total City Impressions			***265,460***

Please refer to Section 11 of this JURMP Annual Report for the remainder of the effectiveness assessment for this program component.

8.5 PROGRAM REVIEW AND MODIFICATION

No significant changes to the education component of the City's JURMP were made during 2009/2010.

9.0 PUBLIC PARTICIPATION COMPONENT

9.1 INTRODUCTION

The City encourages public participation in the City's JURMP as a means to develop storm water awareness and improve water quality. Public participation includes, but is not limited to, clean-up events, special community projects, reporting observed IC/IDs, and participating in City-hosted waste disposal and collection events. Collaboration between the City and the community should help foster a sense of shared responsibility in protecting water quality both locally and regionally. The City has encouraged public participation through the programs discussed in this section.

9.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the public participation component during the 2009/2010 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the public participation component of its storm water program during the reporting period are provided in the remainder of Section 9.

- Volunteers for the City's Adopt-a-Trail program, which involved residents keeping local parks and open spaces free of litter, logged over 860 hours.
- The City's year-round HHW collection facility received 307,417 pounds of HHW from approximately 4,305 City residents.
- Bi-annual self-haul clean-up events were hosted by the City in conjunction with EDCO. The events allowed residents to dispose of large items, unwanted household materials (not including HHW), and green waste free of charge. A total of 1,545 households participated in these events and over 618 tons of material was collected.

9.2 PUBLIC PARTICIPATION ACTIVITIES

Adopt-a-Trail

The City's Adopt-a-Trail Program promotes cleanliness in the City by encouraging City residents to keep hiking trails, creeks, and open space safe and free of trash. Volunteers pick up trash and debris during activities such as daily walks. This program was advertised in the City's *Poway Today* newsletter (Attachment 6.2), which was circulated to tens of thousands of residential and business addresses in the City. During this reporting period, volunteers spent 860 hours removing trash from open space and trails.

Hazardous Waste Collection and Used Oil Recycling Program

The City's Community Hazardous Waste Collection and Electronic Waste Collection Programs encourage City residents and business owners to properly dispose of HHW and miscellaneous electronic waste. Door-to-door pickup service was also provided for seniors over 65 and disabled residents. The City's Used Oil Recycling Program involves five certified used oil centers within the City. In the 2009/2010, the collection centers reported

that 12,116 gallons of used motor oil. Information about the used motor oil, HHW, and electronic waste collection facilities was advertised in *Poway Today* and on the City's website. A flyer advertising proper disposal of HHW and universal waste is included as Attachment 9.1.

Other Waste Disposal

The City hosts bi-annual self-haul cleanup events from October to December and April to June to encourage proper disposal of unwanted bulk items and other refuse. The City's waste hauler, EDCO Waste and Recycling Services, distributes coupons for disposal of large items, appliances, and yard waste to residents of Poway. These coupons allow residents to drop off any unwanted trash and debris, excluding HHW, free of charge. During these events, the transfer station remains open from 7 a.m. to 4:30 p.m. seven days a week. There were approximately 1,545 participants and 618 tons of waste was delivered to the collection facility in 2009/2010. These two events were advertised in the *Poway Today* newsletter (Attachment 6.2).

Public Reporting

As discussed in Section 4, complaints are received through the City's storm water hotline and through the City's Public Works Department. The number for the hotline is advertised in articles published in the *Poway Today* newsletter, on various educational materials given out at public outreach events, and on the City's website. The residential, industrial and commercial, construction, and municipal communities are encouraged to use the hotline to report IC/IDs. The City investigates each complaint and tracks the complaint and follow-up actions, as applicable. A total of 31 complaints were made and responded to during 2009/2010.

9.3 OUTREACH EVENTS

The City has continued to provide educational outreach programs for a variety of different communities in the City. Since it is an effective way of reaching large numbers of individuals, educational outreach is typically associated with an event. Other outreach events in the City include distributing educational materials to commercial businesses and the City's participation in regional meetings and events.

Poway Days Festival

On September 13, 2009, The City of Poway hosted a community celebration, the Poway Days Festival, which is a free event with entertainment and booths of local businesses and activities. I Love A Clean San Diego (ILACSD) staffed a booth at the event. Staff displayed and distributed curbside recycling information provided by EDCO, Universal Waste flyers, HHW pens, and storm water chip clips. Staff provided information about an upcoming Coastal Cleanup Day and other volunteer events for interested community members. Approximately 100 people visited the booth and interacted with ILACSD staff members.

City of Poway Green Fair Booth

On March 17, 2010 the City of Poway Sustainability Committee hosted Green Day 2010 at City Hall Council Chambers. The Sustainability Committee, along with the Water

Conservation Team, presented information on sustainability, recycling, and resource conservation during this lunch time activity. ILACSD sponsored two Lunch N' Learn workshops on composting: one on vermiculture composting basics and the other on household waste composting for the garden. These sessions taught participants the importance and value of recycling organic waste. ILACSD also distributed IPM cards and dog waste bags during the event.

Earth Day/Spring Street Fair

On April 25, 2010, the City of Poway hosted an environmental awareness street fair held at the Blue Sky Ecological Reserve. ILACSD displayed the "Operation Cleanup", an interactive watershed model for children where pollutants are located and removed from the model. This allowed for explanation of storm water pollution concepts, emphasizing the importance of keeping waterways clean to promote a healthy environment. Approximately 200 people participated at the booth and interacted with the ILACSD staff members. The ILACSD booth also provided information to Poway residents on proper disposal of HHW including electronics and battery recycling, in both Spanish and English. Information about what can be recycled through the City's curbside recycling program was also presented. Free refrigerator magnets with similar information were also distributed as well as chip clips and dog waste bags. An ILACSD environmental educator gave two presentations to children on reducing, reusing, and recycling.

Storm Water Copermittee Meetings and Other City Participation

City personnel attended, and were active in, various storm water Copermittee workgroups during 2009/2010. The workgroups provide a forum for representatives from various jurisdictions within San Diego County and other interested parties, including the general public, to exchange information and ideas regarding the management of storm water programs. The City participated in nearly all Copermittee meetings and several Copermittee workgroups. These meetings will continue to be attended by City personnel during 2010/2011 reporting period.

9.4 PUBLIC PARTICIPATION COMPONENT EFFECTIVENESS ASSESSMENT

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

9.5 PROGRAM REVIEW AND MODIFICATION

No changes were made to the public participation component of the City's JURMP during the reporting period.

10.0 FISCAL ANALYSIS

10.1 INTRODUCTION

The City continued to collect a Storm Water Fee to provide a dedicated source of funds for its Storm Water Pollution Prevention Program. Developer and inspection fees funded services tied to a specific permit. A Used Oil Block Grant funded portions of the Education and Public Participation Programs. AB939 trash fee funds supported the HHW Program. Portions of the City's Program that benefit only City-owned properties or undeveloped properties were funded by the City's General Fund.

During 2009/2010, a fiscal analysis reporting template was developed collectively by the Copermittees. Fiscal information is reported in the tables below, which follow the standard format adopted by the Copermittees.

Table 10-1
Expenditure Summary

JURISDICTIONAL COMPONENTS	
Administration	$243,263
Development Planning	$44,846
Construction	$45,849
Municipal	$984,022
Industrial and Commercial	$97,562
Residential	$182,538
IDDE	$100,000
Education	$15,460
Public Participation	$1,140
Special Investigations	$10,000
Non-Emergency Firefighting	$0
Jurisdictional Total	**$1,724,680**

WATERSHED	
Los Peñasquitos	$39,666
San Dieguito	$35,889
Watershed Total	**$75,556**

REGIONAL	**$99,456**

TOTAL COSTS	**$1,899,692**

Table 10-2
Fund Summary

FUNDING BY SOURCE	
General Fund	$350,058
Storm Water Fee	$1,340,900
Developer Deposits and Fees	$31,388
Registration and Inspection Fees	$2,180
Grant Funds	$11,750
Other	$163,416
Total	**$1,899,692**

Table 10-3
Watershed Urban Runoff Management Program (WURMP) Expenses

	Los Peñasquitos	San Dieguito
Administration (1)	$13,506	$13,506
Cost Share Contribution	$5,412	$1,883
Watershed Activities	$748	$500
Other	$20,000	$20,000
TOTAL	**$39,666**	**$35,889**

(1) Administration – includes Watershed strategic planning, management, mapping, assessment, and reporting.

Table 10-4
Regional Urban Runoff Management Program (RURMP) Expenses

Regional Programs	Jurisdictional Cost
Administration (1)	$32,456
Cost Share Contribution	$67,000
Other (2)	$0
TOTAL	**$99,456**

(1) Administration – includes assessment, reporting, management, etc.
(2) Other – examples include regional and special studies.

11.0 EFFECTIVENESS ASSESSMENT

11.1 INTRODUCTION

The City regularly evaluates its storm water program to make it as effective as possible at reducing discharges of urban runoff related pollution to the MEP. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes. Next, the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique.

Based on participation in regional efforts and its experience implementing its JURMP, the City has identified a variety of metrics to assess progress toward targeted outcomes. At the end of each reporting year, the City uses selected metrics to assess the effectiveness of its program implementation. Example metrics were provided in Section 13 of the City's 2008 JURMP, and the City has refined those metrics in the reporting periods since then.

The effectiveness assessment approach developed by the Copermittees during the last permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

11.2 EFFECTIVENESS ASSESSMENT RESULTS

The Municipal Permit requires the City to assess the effectiveness of each significant activity for each program component, for each program component as a whole, and for the storm water program as a whole. Level 1, Level 5, and Level 6 outcomes are discussed in Section 11.2.1. At this time the City is not able to assess Level 5 or Level 6 outcomes for individual

program activities or individual programs. As has been noted in CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

11.2.1 OUTCOME LEVEL ASSESSMENTS

Level 1

Level 1 outcomes are essentially measures of Municipal Permit compliance. The component-specific sections in this JURMP Annual Report provide details of programmatic actions taken to comply with the applicable Municipal Permit requirements. Appendix C of this JURMP Annual Report also includes a checklist that matches the Municipal Permit's annual reporting requirements with the section(s) or appendix of this report that addresses each requirement.

The City created and filled a Storm Water Program Administrator position in 2008/2009. The Storm Water Program Administrator is responsible for coordinating with various staff in the City who have storm water responsibilities, such as engineers, planners, and Public Works maintenance staff. Modifications have been made to improve the effectiveness of the implementation of several components of the City's storm water program since the Storm Water Program Administrator was hired.

Levels 2 and 3

See Tables 11-1 through 11-8 at the end of this section for discussions of Level 2 and Level 3 outcomes for significant activities within each program component. Please note that only a Level 1 assessment applies to fiscal analysis, so no table for fiscal analysis is included. For example, see Figure 11-1 and Figure 11-2 for industrial and commercial business assessments of knowledge and BMP implementation, respectively.

Level 4

The tables at the end of this section provide information for Level 4 assessments where feasible. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning. For most other programs, reliable load estimation methods have not yet been developed.

Level 5

The Dry Weather Monitoring Program is the City's primary mechanism of measuring the quality of discharges. Figure 11-3 presents historical average values from field tests. Trends in ammonia-nitrogen concentrations are shown in Figure 11-4. Ammonia-nitrogen is one of the constituents with the longest historical data record and has shown a general decreasing trend over the course of the program. Results for fecal coliform bacteria and *Enterococcus* bacteria analyses are displayed in Figure 11-5. Fecal coliform levels show a declining trend over time. Heavy metals and organophosphate pesticides have rarely been detected since testing for them began in 2002.

The City has also completed several years of inflow and outflow monitoring of its retrofitted detention basins to assess their effectiveness. The studies have indicated the basins have a significant positive effect on water quality. See Attachment 11.1 for details.

Level 6

The City recognizes the importance of protecting water quality of receiving water bodies in and around the City, and continues to participate in regional monitoring efforts. The long-term trend monitoring station in the Peñasquitos Watershed, referred to as a mass loading station (MLS), is well downstream of the City, and the MLS in the San Dieguito Watershed is downstream of Lake Hodges. Lake Hodges typically retains runoff from upstream areas, including the City of Poway, so results from the downstream MLS are unlikely to be representative of runoff from areas upstream of Lake Hodges. Temporary watershed assessment stations were located closer to the City in both the San Dieguito and Penasquitos watershed in 2007/2008, and data from these stations showed relatively low levels of pollution. Those two stations are scheduled to be monitored again during 2010/2011. Data from the upcoming year's monitoring may provide additional insight into receiving water conditions in the general area around Poway.

11.2.2 OVERALL COMPONENT ASSESSMENTS

Development Planning

The operation and maintenance verification program, which requires responsible parties to certify that their BMPs have been maintained properly, along with site inspections, has increased the responsible parties' understanding of the requirements. As a result of this contact with the City, many sites have contracted with outside parties to maintain their BMPs or set regular schedules for in-house staff to complete the maintenance.

All projects approved during the reporting period proposed high or medium removal efficiency BMPs. The City has now retrofitted five detention basins for use as shared treatment control BMPs, which provides effective treatment to SUSMP projects that drain to the basins and non-SUSMP projects that are also in the basins' drainage areas.

The City recently hired a new Stormwater Program Administrator and a new staff of engineers. Toward the end of 2008/2009, shortly after these staff came on board, it was discovered that in the past the implementation of the SUSMP program in some cases had not been fully compliant. City staff cooperated with the RWQCB in this process, including conducting an internal audit of all previously completed SUSMP projects. While the City did receive an NOV for past noncompliance, City staff worked diligently to resolve the issues discovered at previously completed projects during 2009/2010. City storm water staff and engineering staff now meet on a weekly basis to discuss SUSMP requirements and their application to projects in the City. The City has also contracted with D-MAX to provide training for its engineers and inspectors on field verification and inspection of treatment control BMPs and to provide additional training to its engineers about upcoming hydromodification requirements.

Construction

The available data indicate that on the whole the City's construction program is effective in requiring BMP implementation at both public and private construction sites. Any BMP deficiencies noted are typically remedied promptly. During 2009/2010, reporting and record-keeping procedures were improved to increase the ability for the City to effectively track active construction sites. The City received no storm water hotline calls about poor BMP implementation during construction activities during 2009/2010. The City will continue its efforts to notify project proponents and homeowners of the City's BMP requirements. City engineers and inspectors attended several training sessions, including three sessions about the new General Construction Permit that went into effect on July 1, 2010.

Municipal

The City's municipal activities effectively implement BMPs and reduce pollutant loading. The City's municipal staff are regularly trained on storm water issues, and the City's MS4 cleaning and street sweeping programs meet or exceed minimum Municipal Permit frequency requirements. The City also continues to repair and clean sewer lines in an effort to prevent SSOs.

Industrial and Commercial

The City has a comprehensive inspection program and tracks inspection results using the TRAKiT permit tracking software. The City continued to utilize BMP and knowledge scores to assess the level of BMP implementation and level of knowledge at inspected facilities. Overall trends for both BMP implementation and knowledge scores over the past several years show fewer low scores of 1s and 2s and more high scores of 4s and 5s, which indicates improvement in both BMP implementation and levels of knowledge at industrial and commercial facilities.

Residential

The City's residential component achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. City staff that conduct routine maintenance in residential areas are trained to observe and respond to potential storm water issues such as pet waste and minor trash and debris with educational material. During 2009/2010 City staff distributed 17 educational door hangers to residents. Internal distribution of maps showing high TTWQ residential areas to Public Works staff has increased staff awareness of the location and sensitivity of these areas.

Illicit Discharge Detection and Elimination

The City's IDDE program has effectively responded to complaints. No IC/IDs were identified during the 2010 Dry Weather Monitoring Program. There were no SSOs during the reporting period, indicating sanitary sewer system maintenance efforts were effective. The City will continue to take action to prevent and eliminate IC/IDs.

Education
During 2009/2010, the City has continued to educate various audiences on storm water concepts and BMPs. The estimated number of impressions made thorough the City's education component during 2009/2010 was similar to those seen in previous years.

Public Participation
The City will continue looking for new opportunities for public involvement. Attendance at public events was similar to that of previous years.

11.3 PROGRAM REVIEW AND MODIFICATION

No significant changes to the effectiveness assessment component of the City's JURMP were made during the reporting period.

Table 11-1
Development Planning Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review and approve project plans	External A relatively small number of projects submitted reports during 2009/2010. Based on meetings with applicants and BMPs proposed, it appears that the level of knowledge is increasing. Internal City storm water staff provided training for engineers and planners on SUSMP requirements. Storm water staff and engineers have weekly SUSMP requirements coordination meetings. City personnel also attended training sessions—see sections 2 and 8.	Percent of approved projects implementing BMPs with high or medium removal efficiencies for key pollutants of concern	100%	N/A, addressed through other significant activities for this component
Verify proposed BMPs are implemented	External N/A, knowledge is evaluated by appropriate implementation of BMPs as shown in Level 3 Internal The City contracts with a qualified consultant to perform treatment control BMP inspections.	Percent of inspected projects requiring follow-up	57%	BMP implementation is likely to have reduced pollutant loads.
		Resolution status of enforcement actions	See Section 2	
Verify BMPs are properly maintained	External Contacting responsible parties increased their awareness of the need for BMP maintenance. Internal N/A, City staff are aware of the need for BMP maintenance.	Percent of sites returning verification forms	100%	Additional load reduction could be achieved through improved BMP maintenance.
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-2
Construction Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review proposed plans and BMPs	External Projects submit plans for construction BMP implementation for their projects; the level of awareness of construction BMP requirements is fairly high. Internal Training for City staff is described in Section 8. City staff are familiar with relevant construction BMPs.	BMPs proposed for construction projects generally meet requirements; no significant problems have been noted.		Proper pre-project planning is likely to have reduced pollutant loading.
Verify proposed BMPs are implemented	External Grading projects implement BMPs as required by their permits, and contractors are familiar with the City's requirements. Internal Training for City staff is described in Section 8. City inspectors are familiar with relevant construction BMPs.	Percent of projects implementing required BMPs by end of reporting period	99%	Proper BMP implementation is likely to have reduced pollutant loading.
		Percent of projects in compliance with BMP requirements during all inspections	76%	
		Resolution status of enforcement actions	See Section 3	
		Number of dry weather monitoring exceedances traced to construction sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-3
Municipal Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Verify proposed BMPs are implemented at facilities	City staff are regularly trained on BMP implementation; see sections 4 and 8. Public Works staff took a pre-test and a post-test after training sessions in 2009/2010. The average pre-test score was 9.8/10 correct, and the average post-test score was 9.9/10 correct. These results indicate that Public Works staff maintain a high level of storm water knowledge.	Percent of inspected facilities/activities in compliance with BMP requirements	100%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of sites requiring follow-up inspections	See Section 4	Number of pet waste bags distributed	168,000
		Number of dry weather monitoring exceedances traced to municipal sites	0	Amount of pet waste removed through pet waste bag use*	33,600 lbs
Sweep streets and parking facilities		N/A, streets and parking facilities are swept as often as directed by management.		Amount of sediment and debris removed (weight or volume)	857.2 tons
				Amount of sediment and debris removed per length of street swept (weight or volume per curb mile)	0.07 tons/ curb mile
Maintain and clean out MS4		N/A, MS4 structures are maintained as often as directed by management.		Amount of sediment and debris removed (weight or volume)	452.4 cubic yards
Maintain sanitary sewer system		N/A, the sanitary sewer system is maintained as often as directed by management.		Total volume of SSO discharge to MS4 (gallons)	0
Maintain municipal treatment control BMPs		N/A, treatment control BMPs are maintained as often as directed by management.		Amount of debris removed from treatment BMPs (detention basins)	4.15 cubic yards
				BMP effectiveness studies	Attachment 11.1
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

*Based on studies conducted by the County of San Diego, approximately 0.2 pounds of pet waste is collected per bag used. A separate literature search performed by the San Diego County Regional Airport Authority found a figure of 0.25 pounds per bag (San Diego Bay Copermittees, 2010). To be conservative, the estimate in this table is based the smaller of the two numbers.

Table 11-4
Industrial and Commercial Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Require BMP implementation	External Knowledge assessment scores indicated a slightly low level of understanding of relevant storm water concepts. See Figure 11-1 on the following page for a score distribution. See Section 8 for more detail on educational materials and other outreach efforts. Internal The City contracts with a qualified consultant to perform industrial and commercial inspections.	Percent of inspected sites requiring follow-up	21%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of enforcement actions	See Section 5		
		Number of dry weather monitoring exceedances traced to industrial or commercial sources	1	Number of IC/IDs eliminated (inspections and complaint investigations)	0
		The distribution of BMP assessment scores continues to improve over time. See Figure 11-2 on the following page for a score distribution.			
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Figure 11-1
Knowledge Assessment Scores

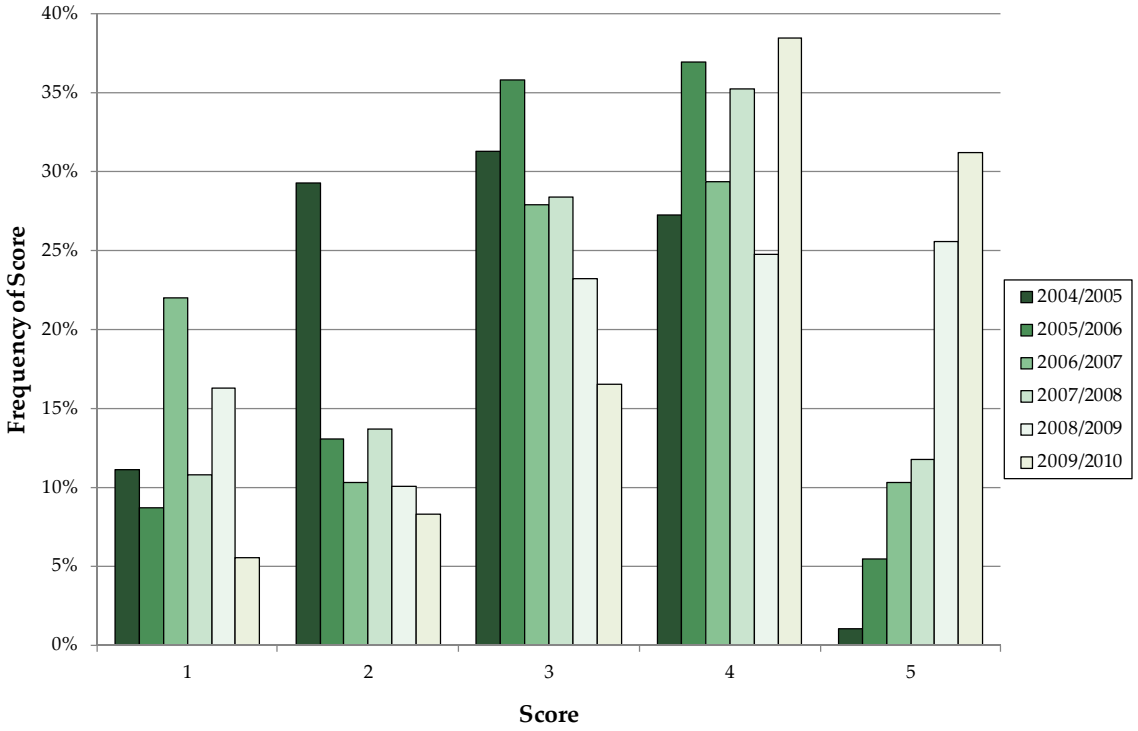

Figure 11-2
BMP Assessment Scores

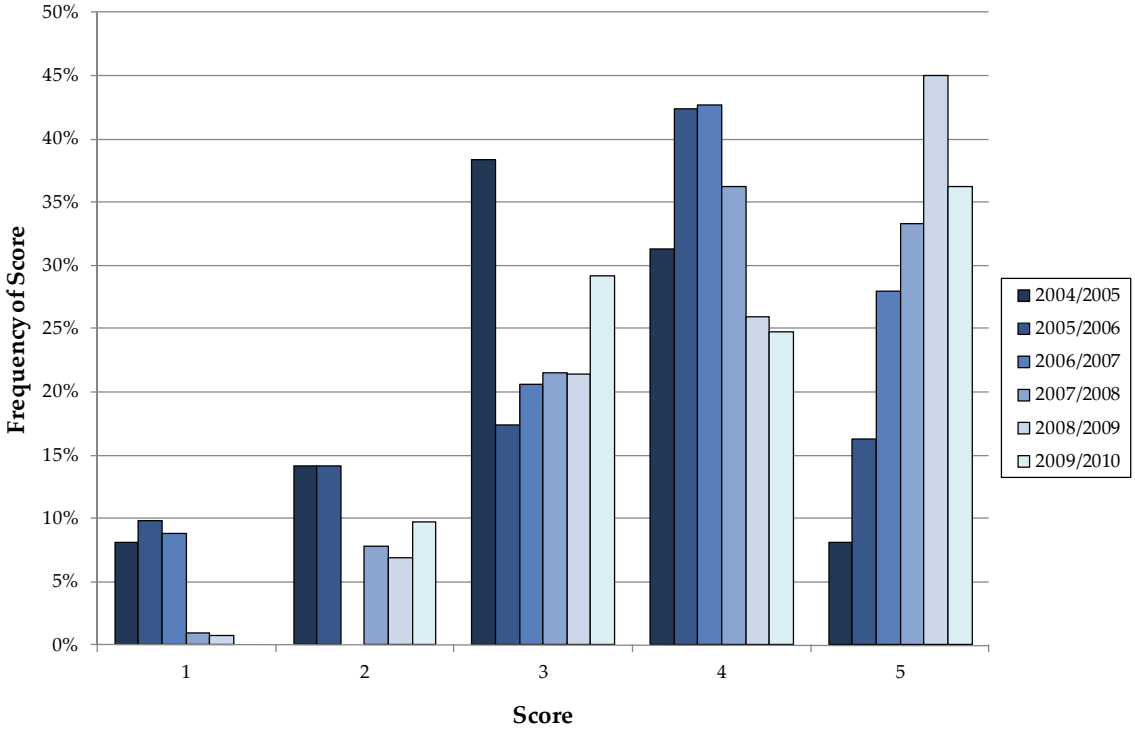

Table 11-5: Residential Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Require BMP implementation	External Residents were educated in a variety of ways in 2009/2010; see sections 6 and 8 for details. Internal Maps of high TTWQ residential areas were created and distributed to Public Works staff to increase their awareness of the location and sensitivity of these areas. The City's Storm Water Program Administrator is heavily involved in the implementation of the residential component.	Number of residential incidents reported to storm water hotline	14	Resolution of residential incidents reported to the hotline likely resulted in a decrease in pollutant loading through improved BMP implementation.
		Resolution of enforcement actions	See Section 6	
		Number of dry weather monitoring exceedances traced to residential sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-6: Illicit Discharge Detection and Elimination Component Assessment Measures

Significant Activity	Level 2	Level 3	Level 4
Conduct Dry Weather Monitoring Program	The City contracts with a qualified consultant to perform its Dry Weather Monitoring Program.	N/A, personnel conduct monitoring as directed by management.	No significant, long-term IC/IDs were eliminated, so a reliable estimate of load reduction cannot be made.
Respond to incidents reported to storm water hotline	The City's Storm Water Program Administrator trains City staff as needed. See sections 4 and 8. City staff were responsible for many of the reports made to the hotline, as shown in Appendix B.	N/A, personnel respond to incidents as directed by management.	Resolution of the incidents reported to the hotline and listed in Appendix B are likely to have resulted a pollutant loading reduction.
Respond to and clean up SSOs	City staff are thoroughly trained on how to respond to SSOs.	The City conducts additional preventive inspections and maintenance in areas with a higher history of problems. See Section 4 for details.	There were no SSOs during the reporting period.

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-7: Education Component Assessment Measures

Significant Activity	Level 2		Level 3	Level 4
Provide storm water education to the public	External The City actively educates the various audiences in its jurisdiction. See Section 8 for details.		See Level 3 outcomes for other program components for information about behavior change.	Sufficient data to estimate load reductions due to educational efforts is not available for 2009/2010.
	Estimated number of impressions made	265,460		

Notes
Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-8: Public Participation Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Involve the public in activities that relate to storm water protection	External The City and City partners put on a number of opportunities for the public to participate. See section 9 for details.	Number of attendees at events	1151	Amount of trash and debris collected at cleanup events (including large item disposal event)	618 tons.
		Number of complaints received (see Appendix B for details)	31	Amount of HHW collected	307,417 pounds of HHW, 12,116 gallons of used oil

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

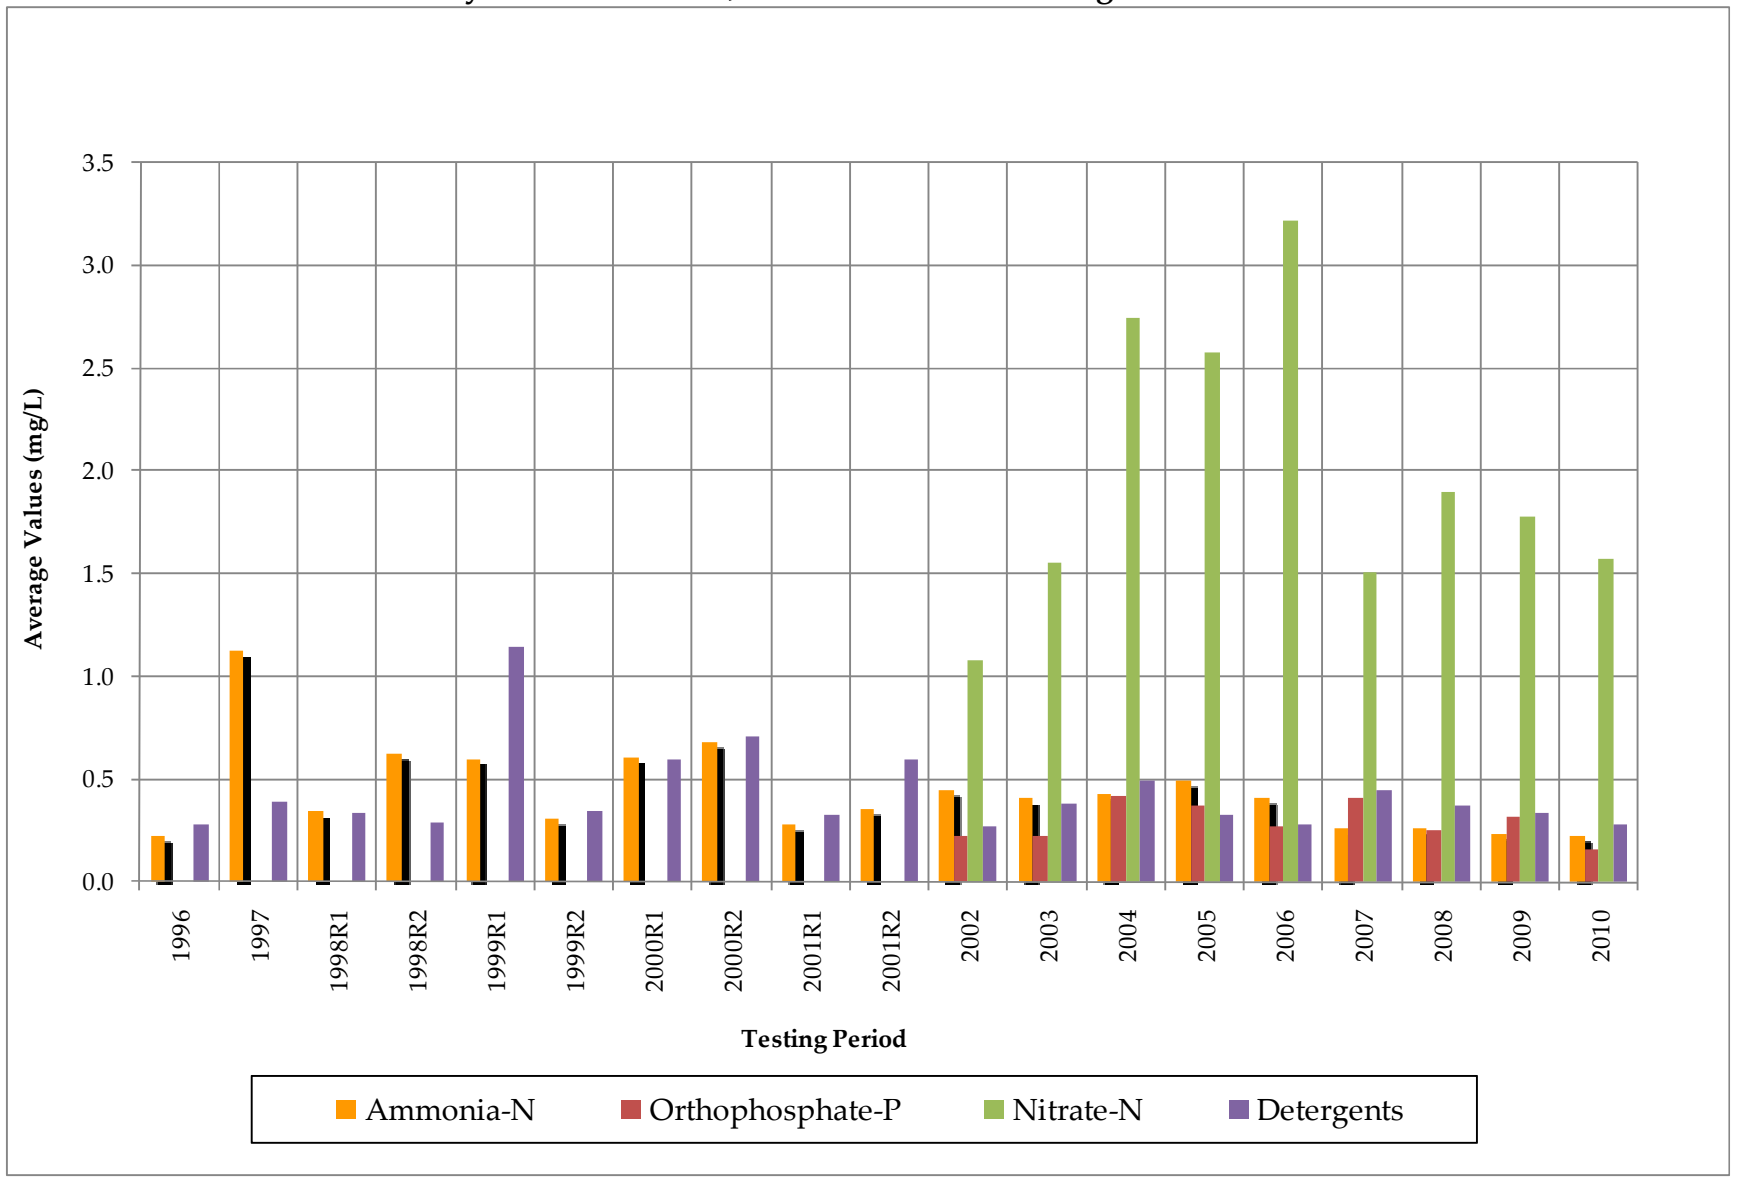

Figure 11-4
Dry Weather Results, Ammonia-N Concentrations (1996-2010)

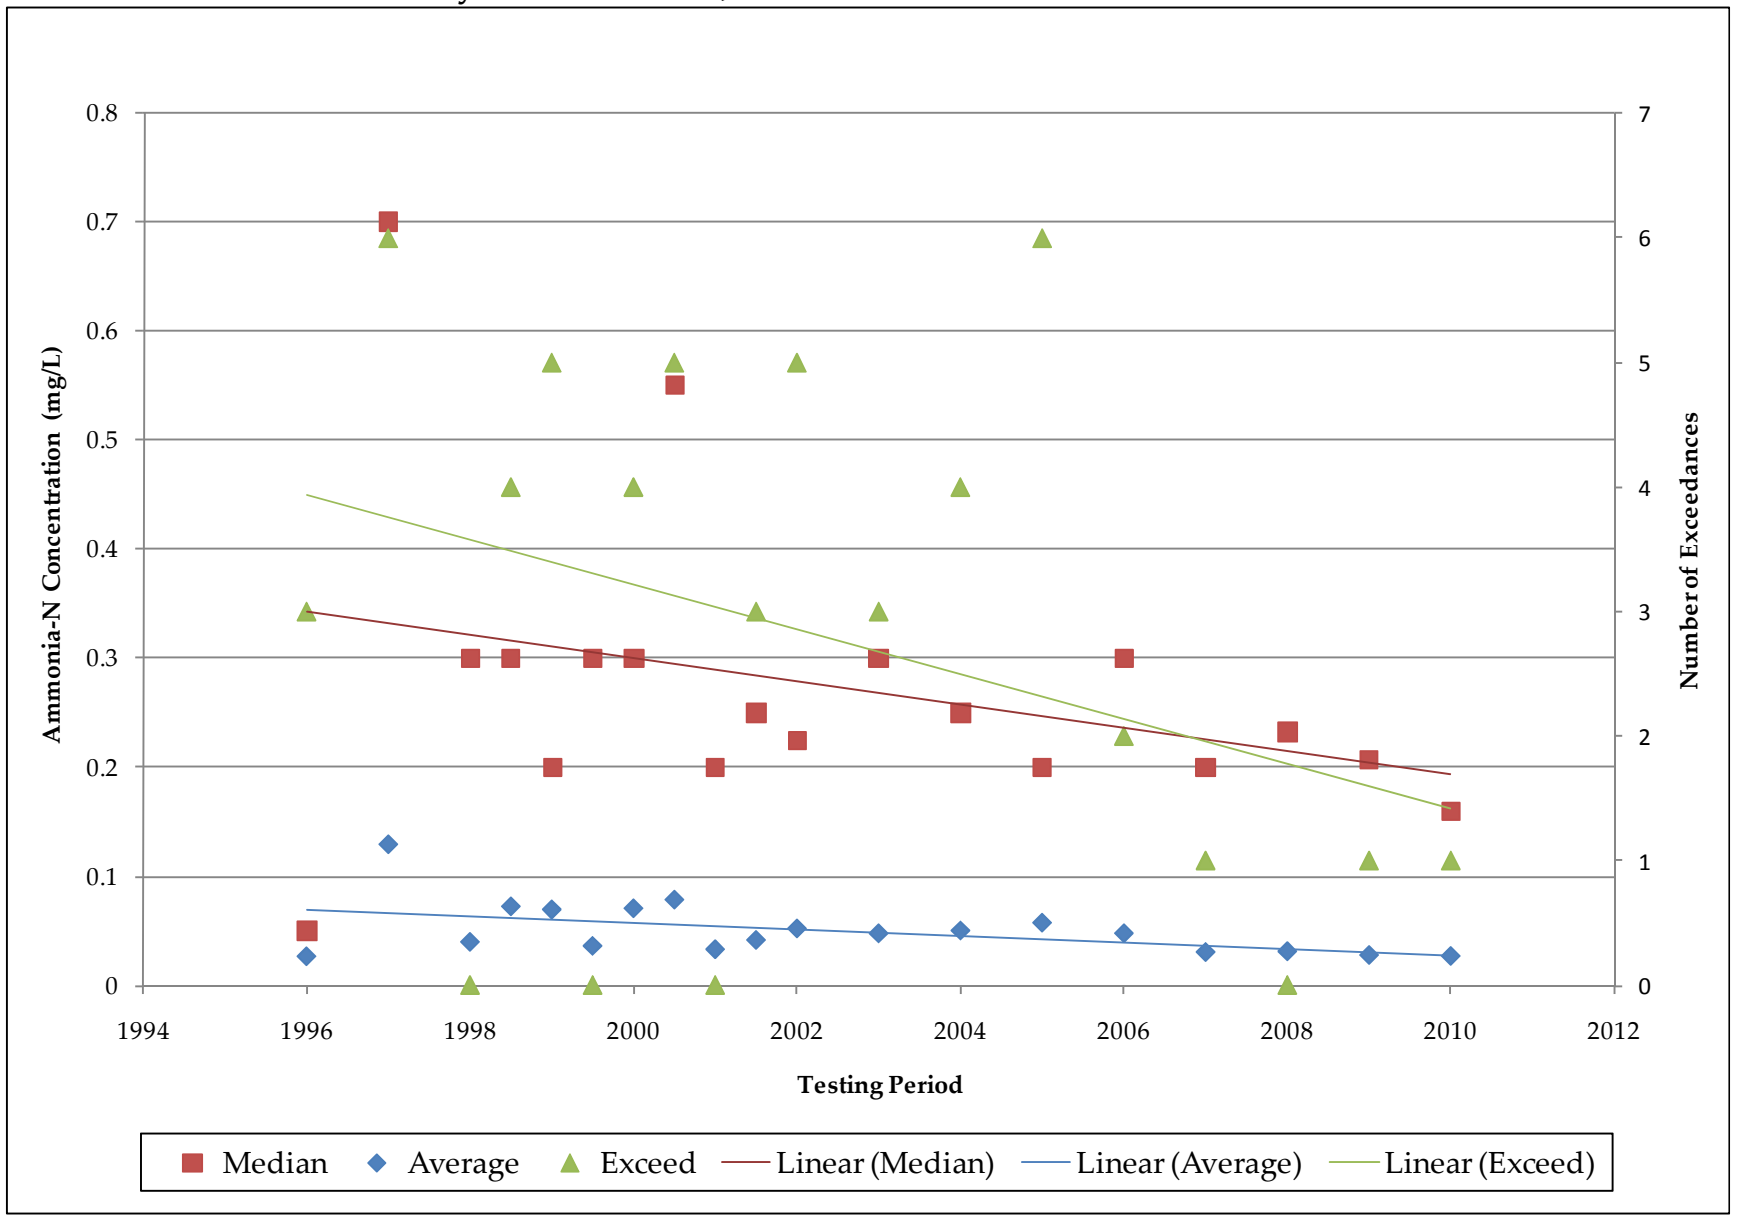

Figure 11-5
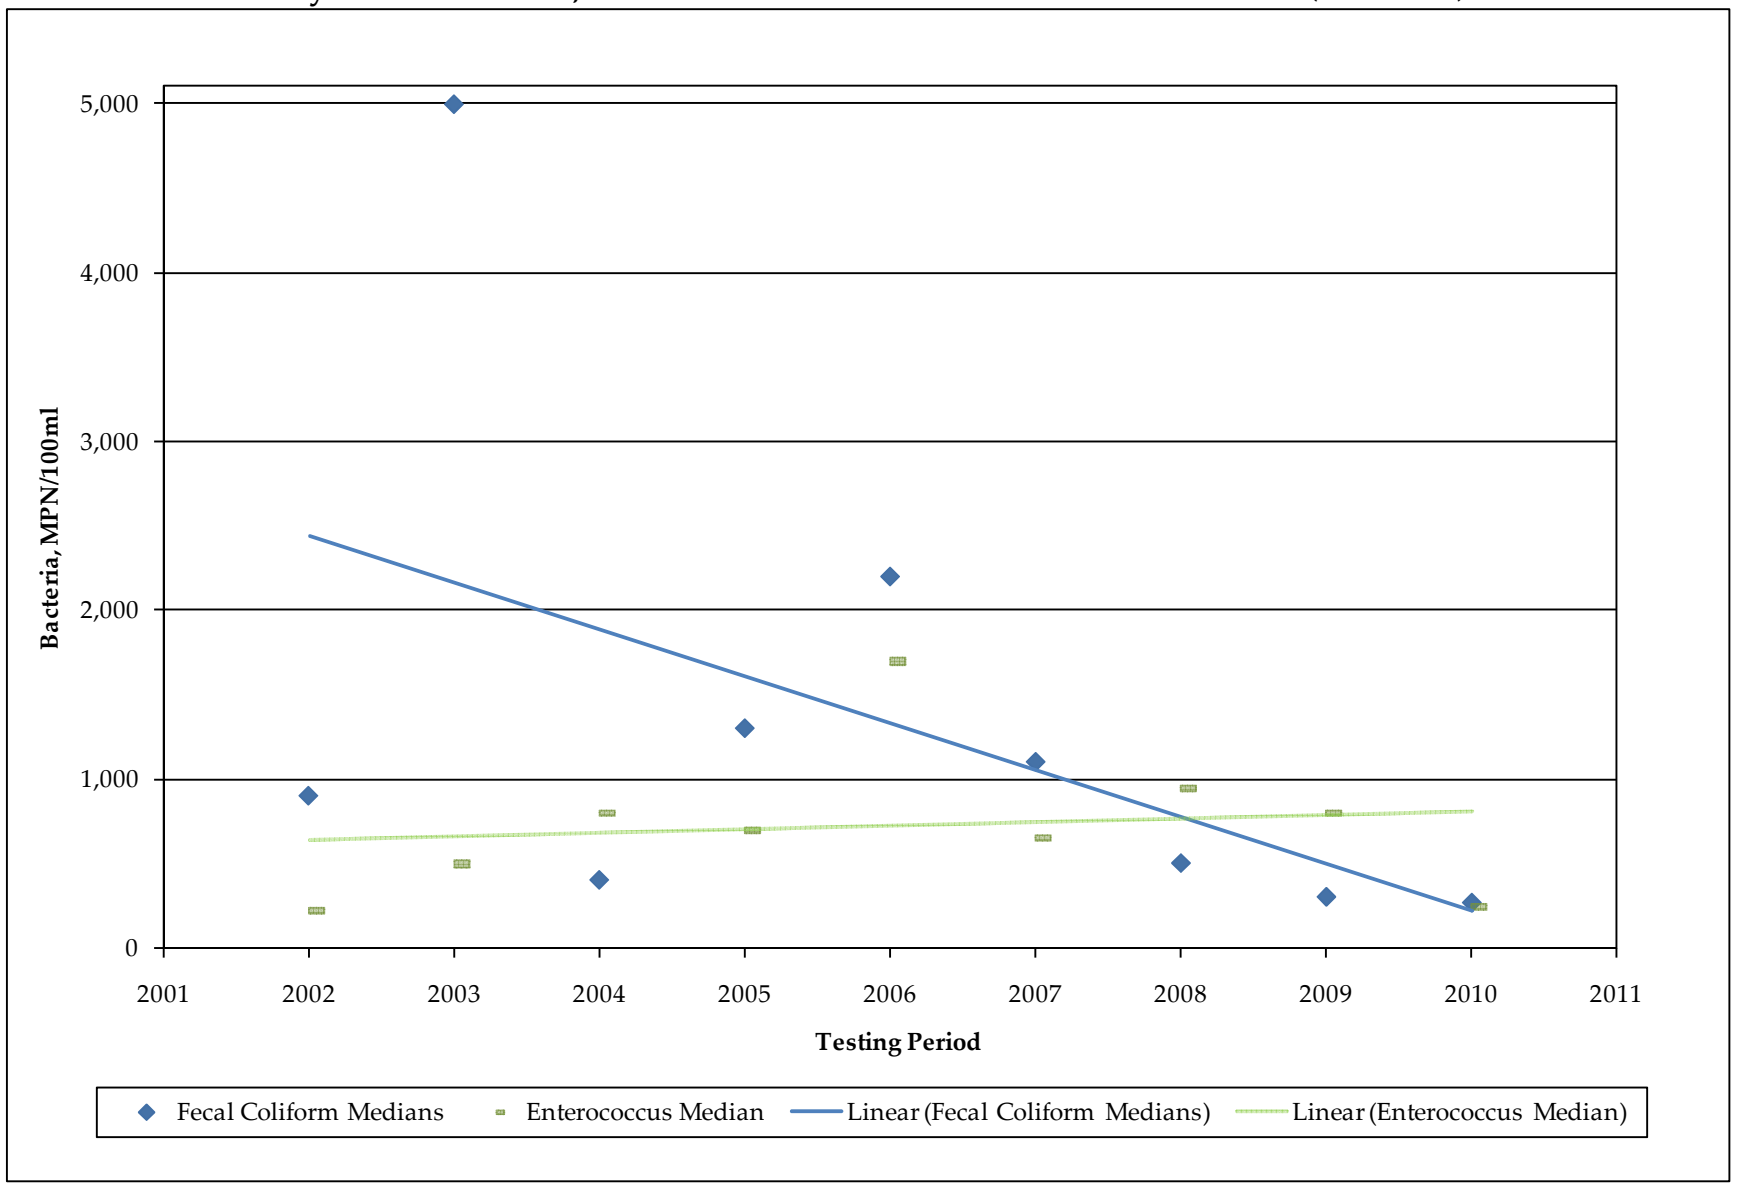
Dry Weather Results, Fecal Coliform and *Enterococcus* Bacteria Trends (2002-2010)



12.0 SPECIAL INVESTIGATIONS

The City takes a proactive approach to storm water management in an attempt not only to protect receiving water quality, but also to improve the quality of water that is discharged from the City's MS4. Data collected through the City's various monitoring and inspection programs are used to identify locations within the City that may be contributing to storm water contamination. Source identification investigations are then initiated to pinpoint the exact cause of detected pollution. Aside from upstream investigations conducted as part of the dry weather monitoring and sampling program (to be reported as part of the Illicit Discharge Detection and Elimination component in December), no special investigations were needed or conducted during this reporting period.

13.0 NON-EMERGENCY FIRE FIGHTING

A program of BMPs for non-emergency fire fighting flows was adopted in March 2008 as Section 3.4 of the City's JURMP. These BMPs are implemented during regular maintenance of fire and emergency vehicles and equipment, training exercises, facilities maintenance, and post-emergency rehabilitation of response equipment. No significant changes to the program presented in the City's JURMP have been made since the submittal of that document.

14.0 JURMP REVISIONS

Changes to the JURMP made during the reporting period are discussed in the individual "Program Review and Modification" subsections in the preceding sections in this JURMP Annual Report.

15.0 CONCLUSIONS AND RECOMMENDATIONS

During 2009/2010, the City of Poway continued to implement its storm water program based on the revised 2008 JURMP. During this time, the City identified several elements in the City's JURMP that required changes to improve program implementation. Updates to the City's program were made as necessary and are discussed in each individual section of this Annual Report. Highlights of the City's storm water program for 2009/2010 included the update of the City's municipal code to include model SUSMP requirements and the continued operation and monitoring of the South Poway Business Park Detention Basins.

Additionally, the City continued to work collaboratively with the other Copermittees to facilitate sharing of information about how best to run these programs and to provide regional guidance on standardized implementation where applicable. The City will continue to refine and improve its storm water program based on information made available by these collaborative efforts.

APPENDIX B

Appendix B
Complaint Log

Date	Location	Complaint Type	Complaint	Resolution
8/5/09	Sycamore Avenue	Municipal	Request to inspect and clean inlet on Sycamore Canyon just before Scripps Poway Parkway overpass	Removed trash. No further action necessary.
8/11/09	Sagewood Drive	Residential	Request to inspect erosion on private property	Erosion on private property, not the responsibility of City; resident never called back to schedule site visit. No discharge to City's MS4; no further action necessary.
8/11/09	16256 Avenida Florencia	Municipal	Pieces of broken up concrete in drainage ditch	Removed 0.5 cubic yards of concrete debris. No further action necessary.
8/13/09	Community Park	Municipal	Reported water flowing from North West Corner Community Pool into creek	This issue was also observed during routine municipal inspections; please see Municipal Section of this report for details.
8/13/09	Crosthwaite Circle	Industrial / Commercial	Potential discharge into MS4 by Mobile Mini pressure washing activity	Inspected inlets in front of facility and saw no evidence of discharge (moisture or residue). No further action necessary.
8/27/09	Stowe Drive	Municipal	Request to assist cleaning all inlets and some debris in the brow ditch with the Vactor in the parking lot at the South Poway Sports Park	Crews cleaned inlets and brow ditch with Vactor. No further action necessary.
9/3/09	Hilleary Park Drive	Residential	Report of water flowing out of drain and into street	Observed pool spilling over at apartment complex. Property management was notified. No further action necessary.
9/10/09	Espola Road	Municipal	Report of light accumulation of anthropogenic trash and debris at various locations along Espola Road	Crews removed 4 bags of trash from right-of-ways. No further action necessary.
9/25/09	Soule Street	Municipal	Report of dumped material in Poway Creek.	Crews removed dumped dirt. Supervisor placed 17 door hangers on houses fronting Poway Creek, east of foot bridge. No further action necessary.

Appendix B (Continued)
Complaint Log

Date	Location	Complaint Type	Complaint	Resolution
10/12/09	Garden Road	Municipal	Request to clean out storm drain located on the northeast side of "T" intersection at Garden Road and Montego. It was reported to have been plugged with dirt since last year.	Crews inspected and determined that the structure is a curb outlet and not blocked. No further action necessary.
10/22/09	14239 Garden Road	Municipal	Channel overgrown.	Trees and weeds were trimmed.
11/9/09	13811 Poway Road	Industrial / Commercial	Public Works staff reported a discharge point coming from back of auto dealership leading to creek area on RDA-owned property (13112 Vista View).	Upon investigation, this complaint was unfounded.
11/10/09	Old Coach Road	Municipal	Trash observed in right-of-way on Old Coach Road	Crews removed 4 bags of trash. No further action necessary.
1/6/10	12664 Acacia Terrace	Residential	Neighbor believed to be washing pool filter into street.	Left Courtesy Notice with Storm Water Pamphlet at door. Requested property owner to dry clean the gutter and discontinue the practice of disposing into the gutter.
1/21/10	15864 Bromegrass Court	Municipal	Storm drain in front of house experiencing major muddy runoff from rain.	No specific source was identified. Sand bags were installed at the storm water conveyance.
1/26/10	Highlands Ranch Terrace	Residential	Erosion and slope protection	Property owner contacted regarding erosion during rain event. Erosion control methods were installed per the MDRA and run-off was cleaned up.
2/2/10	14943 Huntington Gate Drive	Residential	Erosion control on slope	Property owner contacted regarding erosion during rain event. Erosion control methods were installed and run-off was cleaned up.

Appendix B (Continued)
Complaint Log

Date	Location	Complaint Type	Complaint	Resolution
2/11/10	Hidden Valley Drive at Birch Lane	Residential	Erosion control required	Property owner contacted regarding erosion during rain event. Erosion control methods were installed and run-off was cleaned up.
3/2/10	Gate Drive	Residential	Horses and sheds in flood plain	Upon investigation, this complaint was unfounded.
3/3/10	12730 Robison Boulevard	Residential	Large quantity of oil from vehicle in driveway and street	Tenant/property owner contacted, Storm Water Pamphlet provided. Required clean up of oil and future preventive measures. Compliance obtained.
4/8/10	12845 Poway Road, Suite 301	Industrial / Commercial	Beach Grass Café grease bin dirty.	Follow-up inspection conducted and compliance achieved.
4/13/10	15015 Lucidi Farms Way	Industrial / Commercial	Spraying pesticides	Upon investigation, this complaint was unfounded. According to complainant, spraying had not happened yet.
4/15/10	12761 Cherrywood Street	Residential	Pressure washing car in street.	Owner ceased pressure washing and cleaned street of debris. NPDES brochure left with resident.
4/20/10	13502 Quiet Hills Drive	Residential	Area drain discharge onto sidewalk	Property owner removed recently installed landscape drain and cleaned debris from street.
4/20/10	13132 Poway Road, Suite A	Industrial / Commercial	Sushi Lounge: deficient used oil BMP	Follow-up inspection conducted and compliance achieved.

Appendix B (Continued)
Complaint Log

Date	Location	Complaint Type	Complaint	Resolution
5/7/2010	San Moritz	Construction	Residents reported an odor of unknown origin to 911.	Poway Fire Department and San Diego County Hazmat initially responded. The odor was traced to a storm drain realignment project on San Moritz. Vegetable oil associated with the pipe curing process was believed to be the source of the odor. City crews promptly deployed absorbent booms at the outfall to Pomerado Channel. No sheen was observed in the channel. City staff also pressure washed the pipe and reclaimed the water to ensure removal of any vegetable oil residue.
5/18/10	12730 Robison Boulevard	Residential	Large quantity of oil from vehicle in driveway and street	This was a repeat violation. Tenant/property owner contacted, Storm Water Pamphlet provided. Property owner removed oil from street and driveway. Required future preventive measures. Compliance obtained.
5/27/10	12611 Mustang Drive	Residential	Illegal discharge	Upon investigation, this complaint was unfounded.
5/28/10	12818 Neddick Avenue	Municipal	Drainage channel behind house reported to have a lot of trash and weeds approximately 4 feet high. Due to its proximity to the houses, the weeds were reported as a fire hazard.	Resident was informed that vegetation on bank is homeowner's discretion. Crews picked up trash and replaced lock on gate. No further action necessary.
6/4/10	Roberto Way	Residential	Milky discharge	Unable to determine source, referred to Public Works for clean up.
6/22/10	14912 Budwin Lane	Residential	Large "cement" blocks dumped in drainage ditch.	No action taken, on private property. No discharge to City's MS4.

APPENDIX C

Appendix C
JURMP Annual Report Requirements Checklist

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	Location in Report
i. A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.	2.2, 2.3, 2.4
ii. Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.	2.4.4.2
iii. A listing of the development projects to which SUSMP requirements were applied.	Table 2-4
iv. Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.	Table 2-3, Table 2-4, 2.4.4.2
v. At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.	2.4.4.2
vi. A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.	2.4.4.2
vii. An updated treatment control BMP inventory.	2.4.4.3, Appendix A.1
viii. The number of treatment control BMPs inspected, including a summary of inspection results and findings.	2.4.4.3, Table 2-1, Table 2-7
ix. A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.	2.4.4.3
x. Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.	2.4.4.2
xi. A listing of any projects which received a SUSMP waiver.	2.4.4.2
xii. A description of implementation of any SUSMP waiver mitigation program.	2.4.4.2
xiii. A description of Hydromodification Management Plan (HMP) development collaboration and participation.	2.4.4.2
xiv. A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.	NA, HMP not yet adopted
xv. A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.	NA, HMP not yet adopted

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	Location in Report
xvi. A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.	2.4.4.2
xvii. The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	2.4.4.3, Table 2-2, Table 2-7
xviii. A description of notable activities conducted to manage urban runoff from development projects.	2.1.1

Construction

Permit Annual Reporting Requirement—Section J.3.a.(3).(b)	**Location in Report**
i. Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.	3.5.2
ii. Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.	3.2
iii. A description of modifications made to the construction and grading ordinances and approval processes.	3.3
iv. Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.	3.5.3
v. Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.	3.5.2
vi. A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.	3.5.2
vii. For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.	3.5, Appendix A.2
viii. A description of the general results of the inspections.	3.5.3
ix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	3.5.4
x. The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	3.5.4, Table 3-1
xi. A description of notable activities conducted to manage urban runoff from construction sites.	3.1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
i. Any updates to the municipal inventory and prioritization.	Appendix A (inventory)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.	4.2.4, 4.3.4, 4.4.4, 4.5.4, 4.6.4, 4.7.4
iii. A description of inspections and maintenance conducted for municipal treatment controls.	2.4.3.2
iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.	4.4.2, 4.4.4 Table 4-2
v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.	4.4.2, 4.4.4, Table 4-2
vi. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.	4.4.4, Table 4-2
vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.	4.4.4, Table 4-2
viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.	**(N/A for 09-10)**
ix. Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.	4.2.3
x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1
xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1
xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
xiii. Identification of the total distance of curb-miles swept.	4.3.4, Table 4-1
xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.	4.3.4, Table 4-1
xv. Amount of material (tons) collected from street and parking lot sweeping.	4.3.4, Table 4-1
xvi. A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4	4.5.4
xvii. Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.	4.2.4, 4.3.4, Table 4-3
xviii. A description of the general results of the inspections.	Table 4-3
xix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	4.2.4
xx. The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	4.2.4
xxi. A description of notable activities conducted to manage urban runoff from municipal areas and activities.	Throughout Section 4

Industrial and Commercial

Permit Annual Reporting Requirement—Section J.3.a.(3).(d)	**Location in Report**
i. Any updates to the industrial and commercial inventory.	5.2.2 (stationary), 5.3.2 (mobile), Appendix A (inventory)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.	5.2.4, 5.3.4
iii. A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.	5.2.4, 5.3.4
iv. Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.	5.2.2, 5.3.2; 5.2.4, 5.3.4; Table 5-1
v. Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.	5.2.4
vi. Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.	5.2.4
vii. Identification of the number of third party inspections conducted.	5.2.4
viii. Identification of efforts conducted to verify third party inspection effectiveness.	5.2.4
ix. A description of efforts implemented to address mobile businesses.	5.3.4
x. The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	5.2.4, 5.3.4
xi. A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.	5.2.4, Table 5-2
xii. A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.	Throughout Section

Residential

Permit Annual Reporting Requirement—Section J.3.a.(3).(e)	**Location in Report**
i. Identification of the high threat to water quality residential areas and activities that were focused on.	6.2
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.	6.4
iii. A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.	6.4
iv. Types and amounts of household hazardous wastes collected, if applicable.	6.4
v. A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of the evaluation.	6.4 (see discussion in JURMP)
vi. The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	6.4
vii. A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.	6.4
viii. A description of notable activities conducted to manage urban runoff from residential areas and activities.	6.4

IDDE*

Permit Annual Reporting Requirement—Section J.3.a.(3).(f)	Location in Report
* Section 7, the Illicit Discharge Detection and Elimination component, of the 2009/2010 Annual Report, will be submitted to the RWQCB no later than December 15, 2010.	

IDDE—Additional Dry Weather Monitoring Program Requirements*

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
* Section 7, the Illicit Discharge Detection and Elimination component, of the 2009/2010 Annual Report, will be submitted to the RWQCB no later than December 15, 2010.	

Education

Permit Annual Reporting Requirement—Section J.3.a.(3).(g)	**Location in Report**
i. A description of education efforts conducted for each target community.	8.3
ii. A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.	8.3
iii. A description of education efforts conducted for municipal departments and personnel.	8.2, Table 8-1
iv. A description of education efforts conducted for the new development and construction communities.	8.3
v. A description of jurisdictional education efforts conducted for residents, the general public, and school children.	8.3, Table 8-3

Public Participation

Permit Annual Reporting Requirement—Section J.3.a.(3).(h)	**Location in Report**
i. A description of public participation efforts conducted.	9.2 and 9.3

Effectiveness Assessment

Permit Annual Reporting Requirement—Section J.3.a.(3).(i)	**Location in Report**
i. An assessment of the effectiveness of the Jurisdictional Urban Runoff Management Program which meets all requirements of section I.1 of this Order.	11

Fiscal Analysis

Permit Annual Reporting Requirement—Section J.3.a.(3).(j)	**Location in Report**
i. A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order. (For 2007-2008, the requirements that apply are essentially the same as those found in Order No. 2001-01)	10

Same as old Permit for 2007-2008

Special Investigations

Permit Annual Reporting Requirement—Section J.3.a.(3).(k)	**Location in Report**
i. A description of any special investigations conducted.	12

Non-Emergency Firefighting

Permit Annual Reporting Requirement—Section J.3.a.(3).(l)	Location in Report
i. A description of efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.	4.2.3, 13

JURMP Revisions

Permit Annual Reporting Requirement—Section J.3.a.(3).(m)	Location in Report
i. A description of any proposed revisions to the JURMP.	14 and each program component section

RESPONSE TO RWQCB COMMENTS ON THE 2007/2008 JURMP ANNUAL REPORT

Response to RWQCB Comments on the 2007/2008 JURMP Annual Report

On August 18, 2009, RWQCB staff met with City representatives to discuss the City's 2008 JURMP and 2007/2008 JURMP Annual Report. Following that meeting, a comment letter was issued to the City on August 27, 2009. The letter included nine comments on the 2007/2008 JURMP Annual Report; no comments on the 2008 JURMP were received. Eight of the JURMP Annual Report comments were required to be addressed in the 2009/2010 JURMP Annual Report, and one comment was to be on a shorter time schedule. The City provided the RWQCB with the requested information for that one item by the stated deadline of September 30, 2009. All nine comments are listed below in italics, with each RWQCB comment followed by the City's response.

Development Planning JURMP Annual Report

1. Treatment Control BMP's: Section J.3.a.(3)(a)vii of the Order requires the City to include an updated treatment control BMP inventory in their Annual Report. During the review meeting the City staff confirmed that the information in Table 2-2 could be simplified and clarified better reflecting those BMPs that were still "under review." Also, this inventory is to identify the number of treatment control BMPs inspected, including a summary of the inspection results and findings (Section J.3.a.(3)(a)viii). Additional information shall be added to Table 2-2 or within Section 2 of the Annual Report that further describes the treatment control BMP inspection results and findings. Further explanation of the treatment control BMP inspection results and findings is needed for the next annual reporting cycle.

- The City revised its procedures for maintaining its treatment control BMP inventory, as described in the 2008/2009 JURMP Annual Report. One of the key changes was to review the inventory and remove any projects which had previously been approved but which never went forward to completion. Projects removed from the inventory for this reason were discussed in the 2008/2009 JURMP Annual Report, and additional updates are described in the 2009/2010 JURMP Annual Report. For full details of the City's inventory management process, see the discussions in Section 2 of the 2008/2009 and 2009/2010 JURMP Annual Reports. In the 2009/2010 JURMP Annual Report, inventory-related information is provided in five tables for the sake of clarity. Those tables are as follows:
    - Table 2-3, which lists the development projects approved by the City during the fiscal year and identifies which of those were subject to SUSMP.
    - Table 2-4, which lists more detailed review information for Priority Development Projects identified in Table 2-3.
    - Table 2-5, which lists the City's retrofitted South Poway Business Park Detention Basins. The basins are SUSMP treatment control BMPs, but since they are not themselves Priority Development Projects, they are listed independently of the inventory.
    - Appendix A.1, which lists the 2009/2010 inventory of projects with approved treatment control BMPs.
    - Table 2-6, which lists the Priority Development Projects completed during the fiscal year but after the finalization of the 2009/2010 inventory. These projects will be added to the inventory in the following fiscal year.

- Table 2-1 in the 2009/2010 JUMRMP Annual Report provides a summary of the number of inspected projects that clearly demonstrates compliance with the inspection frequency requirements of the Municipal Permit. Table 2-7 provides a list of all projects inspected along with a description of the inspection findings and, where applicable, follow-up and enforcement actions.

Construction Component JURMP Annual Report

2. Clarification: Section 3.2 Source Characterization of the Annual Report states: "The appropriate department determined the priority status." It is unclear what was meant by this statement in the context of the construction project approval process. Further explanation of each department's role and responsibility in "determining a projects status" is needed for the next annual reporting cycle.

- The City's Land Development engineers assign construction threat to water quality priorities to private projects, and Capital Improvement Project (CIP) engineers assign priorities to the City's own projects. Priorities are assigned during the review process, prior to the start of construction. Sites are prioritized per the process presented in section 5.2.1.1 of the City's 2008 JURMP.

3. Construction Inspections: Section 3.5.4 Inspection Program of the Annual Report states: "During the preparation of this Annual Report, it became apparent that the City's tracking and reporting methods were not meeting the Permit standard. The inspection counts per site during the rainy season and dry season during the 14 weeks in which the new requirements were in effect are shown in Table 3.1. As can be seen from the table, City records do not show the required number of inspections and many sites do no show any inspections at all." The details of the steps the City has taken to correct their inspection tracking deficiencies (roll out of a new database tracking software) were discussed during the review meeting. Provision J.3.a.(3).(b) vii requires the City to specify the number of inspections conducted at an active site during the wet and dry seasons. Our discussion drew specific attention to the wet season and the way the City determined when a construction site was "active." As we discussed, correction to the inspection tracking process and reporting spreadsheet is needed for the next annual reporting cycle.

- During 2009/2010, the City started using a comprehensive permit tracking software package called TRAKiT. This program tracks permit issuance and other paperwork related items, ground-disturbing activity, and construction activity. The system is now able to effectively track numbers of inspections and is also allows automatic reminders to be sent to the inspector when an inspection is due. The format of the inventory in Appendix A.2 of the 2009/2010 JURMP Annual Report has been revised to clearly show numbers of weeks active and inspections completed for the wet and dry season. During 2009/2010, the City met the minimum inspection frequency for construction inspections per Municipal Permit requirements.

4. Compliance Verification: Provision D.2.d.(5) requires the City to "Based upon inspection findings, implement all follow-up actions(i.e. reinspections, enforcement) necessary to comply with this Order." Provision J.3.a.(3).(b).ix requires "Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance." Table 3-2 does not contain enough information for the Regional Board to determine the City's compliance with these two provisions. Our discussion during the

review meeting clarified some of our concerns. However, explanation of the Cities efforts to correct identified violations and clearly report that compliance with the provisions of this Order is needed for the next annual reporting cycle.

- The 2009/2010 Annual Report states that construction inspections conducted during the reporting period were performed as described in the City's JURMP (section 5.4.4). The inspection steps fully address compliance with the City's minimum BMP requirements for construction sites. Further, the City developed and implemented an updated construction inspection form during 2009/2010. The updated form, which was used during the 2009/2010 inspections, is included as Attachment 3.2 of the 2009/2010 JURMP Annual Report.
- A discussion of enforcement actions taken against construction sites during 2009/2010 is included in section 3.5.4 of the 2009/2010 JURMP Annual Report; details of specific enforcement actions taken are included in Table 3-1.

Municipal JURMP Annual Report

5. Compliance Verification: Provision D.3.a.(7)(c) of the Order requires the City "implement all follow-up actions (based on site inspection findings) necessary to comply with the Order. Provision J.3.a.(3).(c).xix requires "Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance." Section 4.2.4.2 of the Annual Report states, in general, follow up actions were implemented at the few sites that needed additional BMP's to reduce and prevent storm water pollution. The corrective actions were completed, and the facility was re-inspected. The annual report did not elaborate as to which sites needed this additional corrective action. Statements made implied that a re-inspection was conducted but did not document that "full compliance was achieved." Tracking and reporting on municipal inspections and corrective actions are required by the Order. The addition of more detail to the table is warranted to describe the corrective action and how the City confirmed that any recommended actions described in Section 4.2.4.2 were implemented and that compliance was achieved. As discussed during the review meeting an improved, more detailed municipal facility inspection database reporting format is needed for the next reporting cycle.

- The 2009/2010 Annual Report states that municipal inspections conducted during the reporting period were performed as described in the City's JURMP (section 6.2.4.3). The inspection steps fully address compliance with the City's minimum BMP requirements for municipal facilities.
- Section 4.2.4 in the 2009/2010 Annual Report discusses general findings of inspections; specific details of individual inspections are included in Table 4-3. Appropriate personnel were notified of the corrective actions observed during inspections. In most cases, the corrective actions observed at municipal facilities were minor and the next inspection per Municipal Permit requirements should be adequate in addressing the corrective actions. During 2009/2010, two municipal facilities were observed to have more serious issues that required follow-up action. The City followed-up with these facilities; details of the follow-up actions are discussed in section 4.2.4 of the Annual Report.

6. Special Events: Section 4.7 describes the City's actions to inspect and track BMP implementation during and after Special Events. Missing from this discussion are those actions the City takes to inform special event vendors, prior to the event, of the requirements to address potential discharges from the event to the MS4. Discussion during the review meeting focused on what, if any, storm water BMP requirements are placed on the vendors as a condition to their special events permit. A brief discussion to describe the City's special event permitting process is warranted with specific attention to any consideration of storm water BMP requirements as a condition of obtaining a special event permit. As discussed during the review meeting, a more detailed description of how the City storm water program is implemented prior to and during special events is needed for the next reporting cycle.

- Parties applying for a permit to hold an event on City property are notified prior to the event that approval of the activity does not excuse compliance with City ordinances, including the City's municipal storm water ordinance. The temporary use permit includes a condition of approval which prohibits illegal discharges and requires storm drain protection, trash BMPs, appropriate storage of liquids, and proper disposal of pet waste. This process is also discussed in section 4.7.4 of the 2009/2010 JURMP Annual Report.

Industrial/Commercial JURMP Annual Report

7. Facility Inspections: Section 5.2.4.2 of the Annual Report explains how the City selects a business for inspection. The report states, in general, if a business chosen for inspection could not be contacted, the business was placed on next year's list of businesses to inspect. As described, it appears as if a business could repeatedly go uninspected just because the City is unable to contact them. Discussion during the review meeting clarified the City's process to deal with businesses that are placed on the next year's inspection list. However a more detailed narrative discussion is warranted in next year's annual report.

- Except in rare cases, the City is able to complete inspections at all businesses chosen for inspection each year. In exceptional cases when a business cannot be contacted during a fiscal year, such as if a small business owner is out of town for an extended period toward the end of a fiscal year, the business is inspected during the following fiscal year. Since 2007/2008, the City has not had any sites that did not receive inspections because they could not be contacted.

8. Non-Filers: The City identified nine potential industrial businesses requiring coverage under the General Industrial Storm Water Permit. A brief description of the business and the reason why the City determined they need coverage under the General Industrial Storm Water Permit is needed. The City's response is due by September 30, 2009.

- A list of potential non-filers from the 2009/2010 reporting period is included in Table 5-3 of the 2009/2010 Annual Report. The table includes the name, address, and SIC code of the business as well as notes about why the business may be subject to the Industrial Permit and any Industrial Permit-related corrective actions noted.

9. Compliance Verification: Provision D.3.b.(3)(e) of the Order requires the City implement all follow-up actions (based on site inspection findings) necessary to comply with the Order. Provision J.3.a.(3).(d).vi requires "Confirmation that the inspections conducted addressed all the required inspection steps to

determine full compliance." Section 5.2.4.3 of the Annual Report identifies seven facilities on a compliance schedule. Table 5.7 describes the violations observed but fails to clearly document that status of each site towards compliance. The narrative discussion in the column titled, Resolution, in Table 5.7, does not adequately describe the nature of the resolution such that the Regional Board can conclude that "full compliance was achieved." Tracking and reporting on industrial / commercial inspections and corrective actions are required by the Order. The addition of more detail to the table is warranted to describe the corrective action and how the City confirmed that any recommended actions were implemented and that compliance was achieved. As discussed during the review meeting, an improved, more detailed industrial facility inspection database reporting format is needed for the next reporting cycle.

- Industrial and commercial inspections are completed according to the procedure in the City's JURMP. Some of the follow-up actions associated with the 2007/2008 routine inspections were completed in 2008/2009; those actions were reported in the 2008/2009 JURMP Annual Report. A list of all inspection results from 2009/2010, including follow-up status, if applicable, is included in Table 5-2 of the 2009/2010 JURMP Annual Report. All compliance issues observed at industrial and commercial sites recommended for follow-up were resolved during 2009/2010.

ATTACHMENT 2.1

FEBRUARY 2010 MUNICIPAL CODE UPDATE TO INCORPORATE NEW SUSMP REQUIREMENTS

ORDINANCE NO. 702

AN ORDINANCE OF THE CITY OF POWAY, CALIFORNIA, AMENDING TITLE 16, DIVISION VI OF THE POWAY MUNICIPAL CODE BY AMENDING CHAPTERS 16.100, 16.101, 16.102, AND 16.103; REPEALING CHAPTERS 16.104 THROUGH 16.107; AND RENUMBERING CHAPTERS 16.108 AND 16.109, ALL REGARDING THE STANDARD URBAN STORMWATER MITIGATION PLAN

WHEREAS, on February 21, 2001, the California Regional Water Quality Control Board, San Diego Region (SDRWQCB) issued Order No. 2001-01, National Pollutant Discharge Elimination System (NPDES) Permit No. CAS0108758, naming the City of Poway and 19 other jurisdictions as Copermittees responsible for the implementation of a countywide Stormwater Management Program; and

WHEREAS, on January 24, 2007, the SDRWQCB issued Order No. 2007-0001, which revised the requirements of the 2001 Permit; and

WHEREAS, Order No. 2007-0001 requires all Copermittees, including the City of Poway, to update their Standard Urban Stormwater Mitigation Plan (SUSMP) for Priority Development Projects; and

WHEREAS, the purpose of this Ordinance is to update the City of Poway's SUSMP pursuant to the requirements of Order No. 2007-0001; and

WHEREAS, as a part of the update to the City of Poway's SUSMP, a detailed set of guidelines entitled the "City of Poway Local SUSMP" has been created, which is incorporated by reference into the Poway Municipal Code by this Ordinance.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF POWAY DOES ORDAIN AS FOLLOWS:

Section 1: The City Council finds that this Ordinance is exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15061(b)(3) of the CEQA Guidelines, as it entails State-mandated updates to current City regulations, and there is no possibility that this will have a significant effect on the environment.

Section 2: Section 16.100.040, entitled "Applicability of division" is amended to read as follows:

A. The regulations set forth in this chapter shall apply to the development plan approval process for discretionary development applications, and prior to issuing development permits for ministerial projects.

B. To allow flexibility in meeting the design standards set forth in this division, structural treatment control best management practices (BMPs) may be located on- or off-site, used singly or in combination, or shared by multiple developments, provided certain conditions are met.

C. All new development and significant redevelopment projects that fall into one of the following priority project categories are subject to the requirements of this division, subject to the lawful prior-approval provisions of the Municipal Permit. In the instance where a project feature, such as a parking lot, falls into a priority project category, the entire project footprint is subject to the requirements of this division. These categories are:

1. Residential development of 10 units or more;
2. Commercial development greater than one acre;
3. Industrial development greater than one acre;
4. Automotive repair shops;
5. Restaurants;
6. Hillside development greater than 5,000 square feet;
7. Projects discharging to receiving waters within environmentally sensitive areas;
8. Parking lots with 5,000 square feet or more of impervious surface, or with greater than 15 parking spaces, that are potentially exposed to urban runoff;
9. Streets, roads, driveways, highways, and freeways which would create a new paved impervious surface that is 5,000 square feet or greater; and
10. Retail gasoline outlets 5,000 square feet or more or with a projected average daily traffic (ADT) of 100 or more vehicles per day.
11. Pollutant generating development project that is one acre or more of disturbance. Pollutant generating development projects are those projects that generate pollutants at levels greater than background levels.

Where redevelopment results in an increase of less than 50 percent of the impervious surfaces of a previously existing development, and the existing development was not subject to SUSMP requirements, the numeric sizing criteria apply only to the addition and not the entire development. When redevelopment results in an increase of more than 50 percent of the impervious surfaces of a previously existing development, the numeric sizing criteria apply to the entire development.

Section 3: Chapter 16.101, entitled "Definitions" is amended to read as follows:

Section 16.101.010 City of Poway Local SUSMP

"City of Poway Local SUSMP" means the most recent guidelines concerning the Standard Urban Stormwater Mitigation Plan Requirements for Development

Applications, as adopted by the City Council by resolution, which is incorporated by reference into this Division.

16.101.020 Commercial development.

"Commercial development" means any development on private land that is not exclusively heavy industrial or residential uses. The category includes, but is not limited to: mini-malls and other business complexes, shopping malls, hotels, office buildings, public warehouses, hospitals, laboratories and other medical facilities, educational institutions, recreational facilities, plant nurseries, car wash facilities, automotive dealerships, commercial airfields, and other light industrial complexes.

16.101.030 Commercial development greater than one acre.

"Commercial development greater than one acre" means any commercial development that results in the disturbance of one acre or more of land.

16.101.040 Environmentally sensitive areas.

"Environmentally sensitive areas" means areas that include, but are not limited to, all Clean Water Act 303(d) impaired water bodies ("303(d) listed water bodies"); areas designated as an "Area of Special Biological Significance (ASBS)" by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); water bodies designated as having a RARE beneficial use by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments), or areas designated as preserves or their equivalent under the Multiple Species Conservation Program (MSCP) within the Cities and County of San Diego. The limits of Areas of Special Biological Significance are those defined in the Water Quality Control Plan for the San Diego Basin (1994 and amendments). Environmentally sensitive area is defined for the purposes of implementing SUSMP requirements, and does not replace or supplement other environmental resource-based terms, such as "environmentally sensitive lands," employed by the City in their land development review processes.

16.101.050 Hillside.

"Hillside" means lands that have a natural gradient of 25 percent (four feet of horizontal distance for every one foot of vertical distance) or greater and a minimum elevation differential of 50 feet, or a natural gradient of 200 percent (one foot of horizontal distance for every two feet of vertical distance) or greater and a minimum elevation differential of 10 feet.

16.101.060 Hillside development greater than 5,000 square feet.

"Hillside development greater than 5,000 square feet" means any development that would create more than 5,000 square feet of impervious surfaces in hillsides with known erosive soil conditions.

16.101.070 Industrial development greater than one acre.

"Industrial development greater than one acre" means development of industrial facilities that results in the disturbance of over one acre of land. Industrial facilities include those defined at 40 CFR 122.26(b)(14) including those subject to the general industrial permit or other individual NPDES permit, operating and closed landfills, facilities subject to SARA Title III, and hazardous waste treatment, disposal, storage and recovery facilities. Examples of industrial facilities include manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, truck, or other vehicles).

16.101.080 Low impact development (LID).

"Low impact development (LID)" means a stormwater management and land development strategy that emphasizes conservation and the use of on-site natural features integrated with engineered, small-scale hydrologic controls to more closely reflect predevelopment hydrologic features.

16.101.090 Maximum extent practicable (MEP).

"Maximum extent practicable (MEP)" means the technology-based standard established by Congress in the Clean Water Act Section 402(p)(3)(B)(iii) that municipal dischargers of urban runoff must meet. MEP generally emphasizes pollution prevention and source control BMPs primarily (as the first line of defense) in combination with treatment methods serving as a backup (additional lines of defense).

16.101.100 New development.

"New development" means land disturbing activities; structural development, including construction or installation of a building or structure; the creation of impervious surfaces; and land subdivision.

16.101.110 Parking lot.

"Parking lot" means land area or facility for the temporary parking or storage of motor vehicles used personally, or for business or commerce.

16.101.120 Projects discharging to receiving waters within environmentally sensitive areas.

"Projects discharging to receiving waters within environmentally sensitive areas" means all development and significant redevelopment that (1) would create 2,500 square feet of impervious surfaces or increase the area of imperviousness of a project site to 10 percent or more of its naturally occurring condition, and (2) is located within or directly adjacent to (where any portion of the project footprint is located within 200 feet of the environmentally sensitive area) an environmentally sensitive area (where discharges from the development or redevelopment will enter receiving waters within the environmentally sensitive area) or discharges to a receiving water within an environmentally sensitive area without mixing with flows

from adjacent lands (where the project footprint is located more than 200 feet from the environmentally sensitive area).

16.101.130 *Project footprint.*

"Project footprint" means the limits of all grading and ground disturbance, including landscaping, associated with a project.

16.101.140 Receiving waters.

"Receiving waters" means surface bodies of water that directly or indirectly receive discharges from urban runoff conveyance systems, including naturally occurring wetlands, streams (perennial, intermittent, and ephemeral (exhibiting bed, bank, and ordinary high water mark)), creeks, rivers, reservoirs, lakes, lagoons, estuaries, harbors, bays and the Pacific Ocean. The Director of Development Services shall determine the definition for wetlands and the limits thereof for the purposes of this definition, provided this definition is as protective as the Federal definition utilized by the United States Army Corps of Engineers and the United States Environmental Protection Agency. Constructed wetlands are not considered wetlands under this definition, unless the wetlands were constructed as mitigation for habitat loss. Other constructed BMPs are not considered receiving waters under this definition, unless the BMP was originally constructed in receiving waters. Construction of treatment control BMPs in receiving waters is prohibited and therefore may not be used to satisfy SUSMP requirements.

16.101.150 Residential development.

"Residential development" means any development on private land that provides living accommodations for one or more persons. This category includes, but is not limited to: single-family homes, multifamily homes, condominiums, and apartments.

16.101.160 Residential development of 10 units or more.

"Residential development of 10 units or more" means any development that provides 10 or more residential units. Residential units can be attached or detached.

16.101.170 Restaurant.

"Restaurant" means a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (Standard Industrial Classification code 5812). Restaurants where the land area for development is greater than 5,000 square feet shall meet all SUSMP requirements. Restaurants where the land development is less than 5,000 square feet shall meet all SUSMP requirements except for the structural treatment BMP and numeric sizing criteria requirement and the hydromodification requirement.

16.101.180 Significant redevelopment.

"Significant redevelopment" means development that would create, add, or replace at least 5,000 square feet of impervious surfaces on an already developed

site that falls under one or more priority development project categories. Significant redevelopment includes, but is not limited to, the expansion of a building footprint; addition to or replacement of a structure; replacement of an impervious surface that is not part of a routine maintenance activity; and land disturbing activities related with structural or impervious surfaces. Replacement of impervious surfaces includes any activity that is not part of a routine maintenance activity where impervious material(s) are removed, exposing underlying soil during construction. Significant redevelopment does not include trenching and resurfacing associated with utility work; resurfacing and reconfiguring surface parking lots; new sidewalk construction, pedestrian ramps, or bike lane on existing roads; and replacement of damaged pavement.

16.101.190 Site design BMP.

"Site design BMP," also known as a significant part of low impact development (LID), means any project design feature that reduces the amount of impervious surfaces, disconnects impervious surfaces, reduces creation or severity of potential pollutant sources, and/or reduces the alteration of the project site's natural flow regime. Redevelopment projects that are undertaken to remove pollutant sources (such as existing surface parking lots and other impervious surfaces) or to reduce the need for new roads and other impervious surfaces (as compared to conventional or low-density new development) by incorporating higher densities and/or mixed land uses into the project design, are also considered site design BMPs.

16.101.200 Source control BMP (both structural and nonstructural).

"Source control BMP (both structural and nonstructural)" means land use or site planning practices or structures that aim to prevent urban runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimize the contact between pollutants and urban runoff. Examples include roof structures over trash or material storage areas, and berms around fuel dispensing areas.

16.101.210 Stormwater best management practice (BMP).

"Stormwater best management practice (BMP)" means any schedule of activities, prohibitions of practices, general good housekeeping practices, pollution prevention and educational practices, maintenance procedures, structural treatment BMPs, and other management practices to prevent or reduce to the maximum extent practicable the discharge of pollutants directly or indirectly to receiving waters. It is any procedure or device designed to minimize the quantity of pollutants that enter the storm drain system. Stormwater BMPs also include treatment requirements, operating procedures and practices to control site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage. This SUSMP groups stormwater BMPs into the following categories: site design, source control, and treatment control (pollutant removal) BMPs.

16.101.220 Stormwater conveyance system.

"Stormwater conveyance system" shall have the same meaning as set forth in PMC 8.68.020.

16.101.230 Streets, roads, highways, and freeways.

"Streets, roads, highways, and freeways" means any project that is not part of a routine maintenance activity, and would create a new paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles and other vehicles. This category includes commercial and residential driveways. For the purposes of SUSMP requirements, streets, roads, highways and freeways do not include trenching and resurfacing associated with utility work; applying asphalt overlay to existing pavement; new sidewalk, pedestrian ramps, or bike lane construction on existing roads; and replacement of damaged pavement.

16.101.240 Treatment control (structural) BMP.

"Treatment control (structural) BMP" means any engineered system designed and constructed to remove pollutants from urban runoff. Pollutant removal is achieved by simple gravity settling of particulate pollutants, filtration, biological uptake, media adsorption or any other physical, biological, or chemical process.

Section 4: Section 16.102.030 entitled "Implementation" is amended to read as follows:

Implementation.

A. All priority projects shall implement stormwater BMPs according to the provisions of the City of Poway Local SUSMP, including:

1. LID and site design BMPs;
2. Source control BMPs; and
3. Structural treatment BMPs after the pollutants and conditions of concern have been identified.

B. Stormwater BMPs shall be considered and implemented where expressly required by this division and, if not so required, where determined applicable and feasible by the Director of Development Services. The stormwater BMPs shall adhere to the requirements of this division and the City of Poway Local SUSMP, and shall be correctly designed, implemented, and maintained so as to remove pollutants to the maximum extent practicable. A flow chart summarizing the stormwater BMP selection procedure is provided in Figure 1.

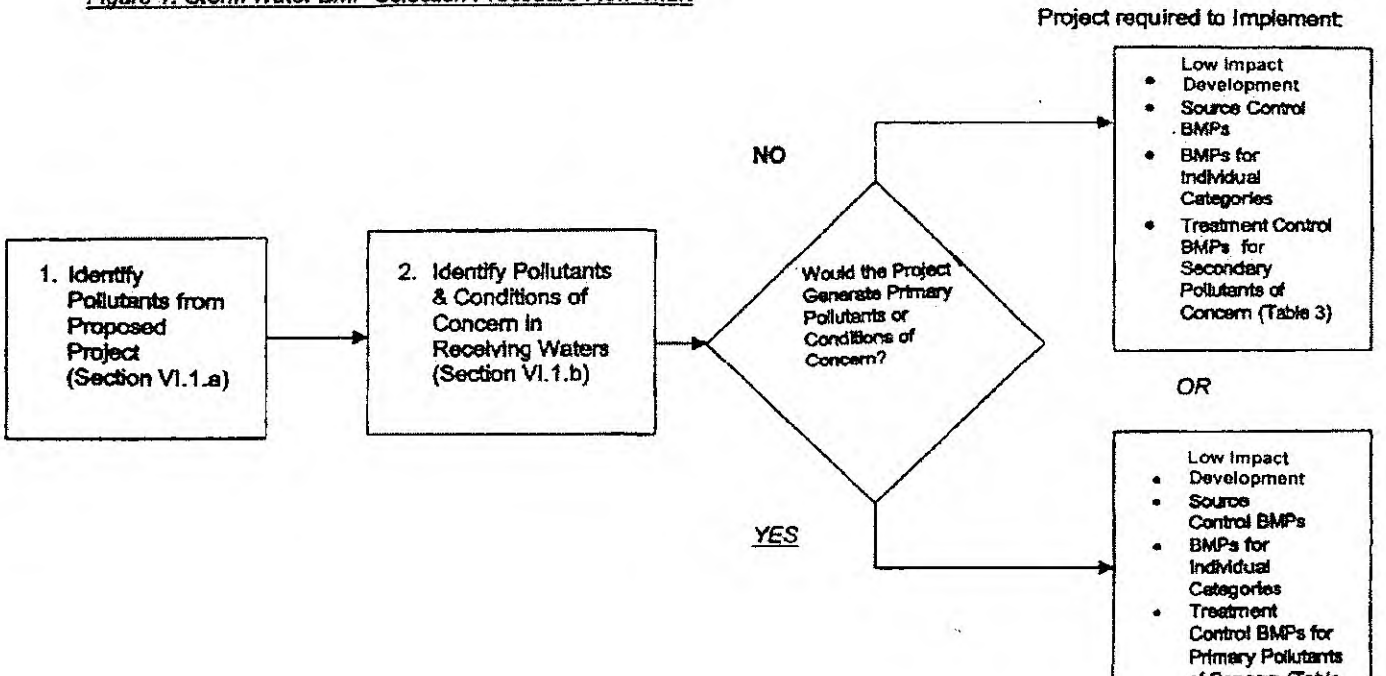
Section 5: Section 16.102.050 entitled, "Alternative methods for achieving treatment requirements" is amended to read as follows:

The City may choose to implement the Local Equivalent Area Drainage (LEAD) Method as proposed by the City of San Diego to meet treatment BMP requirements. Any alternative treatment must meet the following criteria:

A. The alternative treatment area shall be located within the proximity of the project;
B. The alternative treatment area shall discharge to the same receiving water as the project;
C. The alternative treatment area shall be equivalent to or greater than the project footprint;
D. The alternative treatment area shall have an equivalent or greater impervious surface area than the project;
E. The alternative treatment area shall have an equivalent or greater pollutant load than the project;
F. LID and source control BMPs shall be required in the project design; and
G. Alternative treatments shall be limited to redevelopment or infill projects.

Section 5: Figure 1 to Chapter 16.102 is amended to read as follows:

Figure 1. Storm Water BMP Selection Procedure Flow Chart



Section 6: The Title of Chapter 16.103 is amended to read "City of Poway Local SUSMP".

Section 7: The Title of Section 16.103.010 is amended to read "Compliance with City of Poway Local SUSMP", and Section 16.103.010 is amended to read as follows:

"All Priority Development projects, as defined by Section 16.100.040, shall comply with the provisions of the City of Poway Local SUSMP, as adopted by the City Council by resolution, and incorporated by reference into this Division. Compliance with the City of Poway Local SUSMP includes, but is not limited to:

A. Identifying pollutants and conditions of concern.
B. Establishing stormwater BMPs.
C. LID and Site Design BMPs including LID Integrated Management Practices.
D. Source Control BMPs.
E. Treatment Control BMPs.
F. Hydromodification
G. Operations and Maintenance of Stormwater Facilities."

Section 8: Chapter 16.104, entitled "Establishment of Stormwater BMP's is hereby repealed.

Section 9: Chapter 16.105, entitled "Low Impact Development (LID) and Site Design BMP's" is hereby repealed.

Section 10: Chapter 16.106, entitled "Source Control BMP's" is hereby repealed.

Section 11: Chapter 16.107, entitled "Treatment Control BMP's" is hereby repealed.

Section 12: Chapter 16.108, entitled "Providing Proof of Ongoing BMP Maintenance" is hereby renumbered to Chapter 16.104.

Section 13: Chapter 16.109, entitled "Waiver of Structural Treatment BMP Requirements" is hereby renumbered to Chapter 16.105.

Section 14: This Ordinance shall be codified.

EFFECTIVE DATE: This Ordinance shall take effect and be in force thirty (30) days after the date of its passage; and before the expiration of fifteen (15) days after its passage, it shall be published once with the names of members voting for and against the same in the *Poway News Chieftain*, a newspaper of general circulation published in the City of Poway.

Introduced and first read at a Regular Meeting of the City Council of the City of Poway held the 2nd day of February 2010, and thereafter PASSED AND ADOPTED at a regular meeting of said City Council held the 16th day of February 2010.

Don Higginson, Mayor

ATTEST:

Linda A. Troyan, MMC, City Clerk

STATE OF CALIFORNIA)
) ss.
COUNTY OF SAN DIEGO)

I, Linda A. Troyan, City Clerk of the City of Poway, do hereby certify that the foregoing Ordinance No. 702, was duly adopted by the City Council at a meeting of said City Council held on the 16th day of February 2010, and that it was so adopted by the following vote:

AYES: BOYACK, CUNNINGHAM, KRUSE, HIGGINSON

NOES: NONE

ABSENT: REXFORD

DISQUALIFIED: NONE

Linda A. Troyan, MMC, City Clerk
City of Poway

ATTACHMENT 2.2

CITY OF POWAY LOCAL STANDARD URBAN STORMWATER MITIGATION PLAN

CITY OF POWAY LOCAL SUSMP

Standard Urban Stormwater Mitigation Plan
Requirements for Development Applications

March 2010

City of Poway Local Standard Urban Stormwater Mitigation Plan (SUSMP)

SUMMARY

In January 2007, the California Regional Water Quality Control Board for the San Diego Region (Regional Water Board) reissued a municipal stormwater NPDES permit to San Diego area municipal Copermittees, which includes the City of Poway. The reissued permit updates and expands stormwater requirements for new developments and redevelopments. Stormwater treatment requirements have been made more widely applicable and more stringent; minimum standards for Low Impact Development (LID) have been added, and the Copermittees are required to develop and implement criteria for the control of runoff peaks and durations from development sites.

Low Impact Development is an integrated site design methodology that uses small-scale detention and retention to minimize pollutants conveyed by runoff and to mimic pre-project site hydrological conditions.

As required by the reissued permit, the Copermittees have prepared an updated Countywide Model SUSMP to replace the current countywide model SUSMP, which has been in effect since 2002. The City of Poway has updated its local SUSMP to implement these new requirements. To assist the land development community, to streamline project reviews, and to maximize cost-effective environmental benefits, this local SUSMP incorporates a unified LID design procedure. This design procedure integrates site planning and design measures with engineered, small-scale Integrated Management Practices (IMPs) such as bioretention. By following the procedure, applicants can develop a single integrated design which complies with the complex and overlapping NPDES permit LID requirements, stormwater treatment requirements, and runoff peak-and-duration-control (hydromodification management) requirements.

Along with the detailed design procedure, the updated local SUSMP includes design information and criteria for dispersal of runoff to landscaped areas and for pervious pavements, bioretention facilities, flow-through planters, dry wells, infiltration basins, and cisterns. Where feasible and where allowed, water in cisterns may be directed to nonpotable uses, augmenting water supplies. Bioretention facilities and planter boxes can be designed with an impermeable barrier so that runoff does not saturate native soils; instead, runoff is filtered through an engineered soil mix before being captured in an underdrain and conveyed to off-site storm drains. This configuration may be needed where groundwater is high, is contaminated, or where increasing soil moisture may present a hazard to foundations or slope stability.

Applicants for development project approvals may choose not to use the unified LID design procedure; however, they will still need to demonstrate compliance with the applicable LID criteria, stormwater treatment criteria, and hydromodification management criteria. This local SUSMP requires that runoff be infiltrated or else treated by bioretention facilities, planter boxes, filters, settling ponds, or constructed wetlands. In some special circumstances—

retrofit of existing drainage systems, some pedestrian-oriented developments, and roadway widening projects—where it can also be demonstrated it is not be feasible to construct any of these facilities, higher-rate surface biofilters or higher-rate vault based filtration units may be used.

Applicants for approval of Priority Development Projects must demonstrate compliance with the hydromodification management criteria in the NPDES permit. This local SUSMP includes guidance for demonstrating compliance. Submittals for projects smaller than 50 acres may demonstrate compliance by using the integrated LID design procedure. For larger projects, the applicant may use a continuous simulation hydrologic computer model to simulate pre-project and post-project runoff, including the effect of LID facilities, detention basins, or other stormwater management facilities, or may identify an exemption applicable to the site.

Applicants must also incorporate into their project design features to control pollutants from specified on-site sources, such as refuse areas, outdoor storage areas, and vehicle washing and repair facilities. This SUSMP presents a table listing the types of sources to be controlled and for each, the corresponding source control measures required.

This local SUSMP provides the applicant with step-by-step instructions for preparing a Project Submittal for review by city staff. The recommended steps are:

1. Assemble needed information.
2. Identify site opportunities and constraints.
3. Follow the LID Design Guidance to analyze the project for LID and to develop and document the drainage design.
4. Specify source controls using the sources/source control checklist in the appendix.
5. Plan for ongoing maintenance of treatment and flow-control facilities.
6. Complete the Project Submittal.

The step-by-step instructions are augmented by a checklist which city staff utilizes as a guide when reviewing the Project Submittal. This local SUSMP also includes an example project submittal outline and contents.

As required by the reissued NPDES permit, the City of Poway implements a program to verify that approved stormwater treatment facilities are operating effectively. To facilitate implementation of these programs, this local SUSMP includes instructions for applicants to prepare detailed maintenance plans.

Glossary

Best Management Practice (BMP)	Any procedure or device designed to minimize the quantity of pollutants that enter the storm drain system.
California Association of Stormwater Quality Agencies (CASQA)	Publisher of the California Stormwater Best Management Practices Handbooks, available at www.cabmphandbooks.com. Successor to the Storm Water Quality Task Force (SWQTF).
California BMP Method	A method for determining the required volume of stormwater treatment facilities. Described in Section 5.5.1 of the California Stormwater Best Management Practice Manual (New Development) (CASQA, 2003).
Conditions of Approval (COAs)	Requirements a municipality may adopt for a project in connection with a discretionary action (e.g., adoption of an EIR or negative declaration or issuance of a use permit). COAs may include features to be incorporated into the final plans for the project and may also specify uses, activities, and operational measures that must be observed over the life of the project.
Continuous Simulation Modeling	A method of hydrological analysis in which a set of rainfall data (typically hourly for 30 years or more) is used as input, and runoff rates are calculated on the same time step. The output is then analyzed statistically for the purposes of comparing runoff patterns under different conditions (for example, pre- and post-development-project).
Copermittees	See **Dischargers**.
Detention	The practice of holding stormwater runoff in ponds, vaults, within berms, or in depressed areas and letting it discharge slowly to the storm drain system. See definitions of **infiltration** and **retention**.
Directly Connected Impervious Area	Any impervious surface which drains into a catch basin, area drain, or other conveyance structure without first allowing flow across pervious areas (e.g. lawns).
Direct Infiltration	Infiltration via methods or devices, such as dry wells or infiltration trenches, designed to bypass unsaturated surface soils and transmit runoff directly to groundwater.
Dischargers	The agencies named in the **stormwater NPDES permit** (see definition): the County of San Diego; the Cities of Carlsbad, El Cajon, La Mesa, Poway, Solana Beach, Chula Vista, Encinitas, Lemon Grove, San Diego, Vista, Coronado, Escondido, National City, San Marcos, Del Mar, Imperial Beach, Oceanside, and Santee; the San Diego Unified Port District, and the San Diego County Regional Airport Authority.
Drainage Management Areas	Areas delineated on a map of the development site showing how drainage is detained, dispersed, or directed to **Integrated Management Practices**. There are four types of Drainage Management Areas, and specific criteria apply to each type of area. See Chapter 4.

Drawdown time	The time required for a stormwater detention or infiltration facility to drain and return to the dry-weather condition. For detention facilities, drawdown time is a function of basin volume and outlet orifice size. For infiltration facilities, drawdown time is a function of basin volume and infiltration rate.
Environmentally Sensitive Areas	Areas that include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); water bodies designated with the RARE beneficial use by the State Water Resources Control Board (Water Quality Control Plan for the San Diego Basin (1994) and amendments); areas designated as preserves or their equivalent under the Multi Species Conservation Program within the Cities and County of San Diego; and any other equivalent environmentally sensitive areas which have been identified by the Copermittees.
Flow Control	Control of runoff rates and durations as required by the Hydromodification Management Plan.
Head	In hydraulics, energy represented as a difference in elevation. In slow-flowing open systems, the difference in water surface elevation, e.g., between an inlet and outlet.
Higher-Rate Biofilter	A biofilter with a design surface loading rate higher than the 5 inches per hour rate specified in this document for bioretention facilities and planter boxes.
Hydrograph	Runoff flow rate plotted as a function of time.
Hydromodification Management Plan (HMP)	A Plan implemented by the **dischargers** so that post-project runoff shall not exceed estimated pre-project rates and/or durations, where increased runoff would result in increased potential for erosion or other adverse impacts to beneficial uses. Also see definition for **flow control.**
Hydrologic Soil Group	Classification of soils by the Natural Resources Conservation Service (NRCS) into A, B, C, and D groups according to infiltration capacity.
Impervious surface	Any material that prevents or substantially reduces infiltration of water into the soil. See discussion of imperviousness in Chapter Two.
Infeasible	As applied to best management practices, impossible to implement because of technical constraints specific to the site.
Infiltration	Seepage of runoff into soils underlying the site. See definition of **retention.**
Infiltration Device	Any structure, such as a dry well, that is designed to infiltrate stormwater into the subsurface and, as designed, bypasses the natural groundwater protection afforded by surface or near-surface soil. See definition for **direct infiltration**.
Integrated Management Practice (IMP)	A facility **(BMP)** that provides small-scale treatment, retention, and/or detention and is integrated into site layout, landscaping and drainage design. See **Low Impact Development.**

Integrated Pest Management (IPM)

An approach to pest management that relies on information about the life cycles of pests and their interaction with the environment. Pest control methods are applied with the most economical means and with the least possible hazard to people, property, and the environment.

Interim Hydromodification Criteria

Pursuant to NPDES permit Provision D.1.d.g.(6), the Copermittees prepared Interim Hydromodification Management criteria, which apply to projects disturbing 50 acres or more. The criteria are described in Chapter 2 and in memoranda on the Project Clean Water website.

Jurisdictional Urban Runoff Management Plan (JURMP)

A written description of the specific jurisdictional urban runoff management measures and programs that each Copermittee implements to comply with the **stormwater NPDES permit** and ensure pollutant discharges are reduced to the MEP and do not cause or contribute to a violation of water quality standards. See **Stormwater Pollution Prevention Program.**

Lead Agency

The public agency that has the principal responsibility for carrying out or approving a project. (CEQA Guidelines §15367).

Low Impact Development

An integrated site design methodology that uses small-scale detention and retention (Integrated Management Practices, or **IMPs**) to mimic pre-existing site hydrological conditions.

Maximum Extent Practicable (MEP)

Standard, established by the 1987 amendments to the Clean Water Act, for the implementation of municipal **stormwater pollution prevention programs** (see definition). According to the Act, municipal stormwater NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."

National Pollutant Discharge Elimination System (NPDES)

As part of the 1972 Clean Water Act, Congress established the NPDES permitting system to regulate the discharge of pollutants from municipal sanitary sewers and industries. The NPDES was expanded in 1987 to incorporate permits for stormwater discharges as well.

Numeric Criteria

Sizing requirements for stormwater treatment facilities established in Provision D.1.d.(6)(c) of the San Diego RWQCB's stormwater NPDES permit.

Operation and Maintenance (O&M)

Refers to requirements in the **Stormwater NPDES Permit** to inspect treatment BMPs and implement preventative and corrective maintenance in perpetuity. See Chapter Five.

Parking Lot

A land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce.

Permeable Pavements

Pavements for roadways, sidewalks, or plazas that are designed to infiltrate a portion of rainfall, including pervious concrete, pervious asphalt, unit-pavers-on-sand, and crushed gravel.

Priority Development Project	A project subject to SUSMP requirements. Defined in **Stormwater NPDES Permit** Provision D.1.d.(1). See Chapter One.
Project Area	The entire project area comprises all areas to be altered or developed by the project, plus any additional areas that drain on to areas to be altered or developed.
Project Submittal	Documents submitted to a municipality in connection with an application for development approval and demonstrating compliance with Stormwater NPDES Permit requirements for the project. Specific requirements vary from municipality to municipality.
Proprietary	A proprietary device is one marketed under legal right of the manufacturer.
Redevelopment	The creation, addition, and or replacement of impervious surface on an already developed site. Examples include the expansion of a building footprint, road widening, the addition to or replacement of a structure, and creation or addition of impervious surfaces. Replacement of impervious surfaces includes any activity that is not part of a routine maintenance activity where impervious material(s) are removed, exposing underlying soil during construction. Redevelopment does not include trenching and resurfacing associated with utility work; resurfacing and reconfiguring surface parking lots and existing roadways; new sidewalk construction, pedestrian ramps, or bikelane on existing roads; and routine replacement of damaged pavement, such as pothole repair.
Rational Method	A method of calculating runoff flows based on rainfall intensity, tributary area, and a factor representing the proportion of rainfall that runs off.
Regional (or Watershed) Stormwater Treatment Facility	A facility that treats runoff from more than one project or parcel.
Regional Water Quality Control Board (Regional Water Board or RWQCB)	California RWQCBs are responsible for implementing pollution control provisions of the Clean Water Act and California Water Code within their jurisdiction. There are nine California RWQCBs.
Retention	The practice of holding stormwater in ponds or basins, or within berms or depressed areas, and allowing it to slowly infiltrate into underlying soils. Some portion will evaporate. See definitions for **infiltration** and **detention**.
Self-retaining area	An area designed to retain runoff. Self-retaining areas may include graded depressions with landscaping or pervious pavements and may also include tributary impervious areas up to a 2:1 impervious-to-pervious ratio.
Self-treating area	A natural, landscaped, or turf area drains directly off site or to the public storm drain system.
Source Control	Land use or site planning practices, or structural or nonstructural measures that aim to prevent urban runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimize the contact between pollutants and urban runoff.

Standard Industrial Classification (SIC)	A Federal government system for classifying industries by 4-digit code. It is being supplanted by the North American Industrial Classification System but SIC codes are still referenced by the Regional Water Board in identifying development sites subject to regulation under the NPDES permit. Information and an SIC search function are available at http://www.bls.gov/bls/NAICS.htm
Stormwater NPDES Permit	A permit issued by a **Regional Water Quality Control Board** (see definition) to local government agencies (**Dischargers**) placing provisions on allowable discharges of municipal stormwater to waters of the state.
Storm Water Pollution Prevention Plan (SWPPP)	A plan providing for temporary measures to control sediment and other pollutants during construction as required by the statewide stormwater NPDES permit for construction activities.
Stormwater Pollution Prevention Program	A comprehensive program of activities designed to minimize the quantity of pollutants entering storm drains. See **Jurisdictional Urban Runoff Management Plan.**
Standard Urban Stormwater Mitigation Plan (SUSMP)	Refers to various documents prepared in connection with implementation of the stormwater **NPDES permit** mandate to control pollutants from new development and redevelopment. Each **discharger** will adapt this **model countywide SUSMP** to create a **local SUSMP** for their respective jurisdiction. Applicants for development project approvals will use the local SUSMP to prepare a submittal for each **Priority Development Project** they propose.
Treatment	Removal of pollutants from runoff, typically by filtration or settling.
Water Board	See **Regional Water Quality Control Board.**
Water Quality Volume (WQV)	For stormwater treatment facilities that depend on detention to work, the volume of water that must be detained to achieve maximum extent practicable pollutant removal. This volume of water must be detained for a specified **drawdown time**.

This page intentionally left blank.

How to Use the SUSMP

Review Chapters 1 and 2 to get a general understanding of the requirements. Then follow step-by-step instructions in Chapter 3 to prepare your Project Submittal.

THIS *Standard Urban Stormwater Mitigation Plan (SUSMP)* will help you ensure your project complies with the California Regional Water Quality Control Boards' requirements. Most applicants will require the assistance of a qualified civil engineer, architect, and/or landscape architect. Because every project is different, you should begin by checking specific requirements with city staff.

To use the *SUSMP,* start by reviewing **Chapter One** to find out whether and how stormwater quality requirements apply to your project. Chapter One also provides an overview of the process of planning, design, construction, operation, and maintenance leading to compliance.

If there are terms and issues you find puzzling, try finding answers in the glossary or in **Chapter Two**. Chapter Two provides background on key stormwater concepts and water quality regulations, including design criteria.

Then proceed to **Chapter Three** and follow the step-by-step guidance to prepare a Project Submittal for your site.

Chapter Four, the Low Impact Development Design Guide, includes design procedures, calculation procedures, and instructions for presenting your design and calculations in your Project Submittal.

In **Chapter Five** you'll find a detailed description of the process for ensuring operation and maintenance of your stormwater facilities over the life of the project. The chapter includes step-by-step instructions for preparing a Stormwater Facilities Operation and Maintenance Plan.

Throughout each Chapter, you'll find references and resources to help you understand the regulations, complete your Project Submittal, and design stormwater control measures for your project.

► PLAN AHEAD TO AVOID THE THREE MOST COMMON MISTAKES

The most common (and costly) errors made by applicants for development approvals with respect to stormwater quality compliance are:

1. Not planning for compliance early enough. You should think about your strategy for stormwater quality compliance before completing a conceptual site design or sketching a layout of subdivision lots (Chapter 3).

2. Assuming proprietary stormwater treatment facilities will be adequate for compliance. Most aren't (Chapter 2).

3. Not planning for periodic inspections and maintenance of treatment and flow-control facilities. Consider who will own and who will maintain the facilities in perpetuity and how they will obtain access, and identify which arrangements are acceptable to your municipality (Chapter 5).

Chapter 1

Policies and Procedures

Determine if your development project must comply with stormwater quality requirements, and review the steps to compliance.

A Low Impact Development Design Procedure

The San Diego Regional Water Board reissued a municipal stormwater NPDES permit to the municipal **Copermittees** in January 2007. The permit updates and expands stormwater requirements for new developments and redevelopments. Stormwater treatment requirements have been made more stringent, minimum standards for **Low Impact Development** (LID) have been added, and the Copermittees are required to develop and implement criteria for the control of runoff peaks and durations from development sites.

To assist the land development community, streamline project reviews, and maximize cost-effective environmental benefits, the Copermittees have developed a unified LID design procedure. This design procedure integrates site planning and design measures with engineered, small-scale **Integrated Management Practices** (IMPs) such as bioretention. By following the procedure, applicants can develop a single integrated design which complies with the complex and overlapping NPDES permit LID requirements, stormwater treatment requirements, and flow-control (**hydromodification management**) requirements.

The design approach is detailed in Chapter 4. General instructions for preparing a complete Project Submittal are in Chapter 3, and specific local submittal requirements are available from municipal staff.

Applicants may choose not to use this design procedure, in which case they will need to demonstrate, in their submittal, compliance with applicable LID criteria, stormwater treatment criteria, and flow-control criteria. These criteria are described in Chapter 2 and in the NPDES permit.

Requirements for All Development Projects

All development projects must include control measures to reduce the discharge of stormwater pollutants to the maximum extent practicable.

In general, for projects that are not "Priority Development Projects," this will include:

- Implementation of source control BMPs as listed in the Appendix.
- Inclusion of some LID features that conserve natural features, set back development from natural water bodies, minimize imperviousness, maximize infiltration, and retain and slow runoff.
- Compliance with requirements for construction-phase controls on sediment and other pollutants.

City staff may also require additional controls appropriate to the project, which may include stormwater treatment controls. LID treatment controls such as infiltration or bioretention are preferred. See "Selection of Treatment Facilities" on page 20. If treatment facilities are included, provisions must be made to ensure their long-term maintenance.

Priority Development Projects

The NPDES permit requires more specific criteria be applied to Priority Development Projects.

► NEW DEVELOPMENT

Projects on previously undeveloped land are Priority Development Projects if they are in one or more of the categories listed in Table 1-1.

TABLE 1-1. Priority Development Projects.

Is the project in any of these categories?			
Yes ❑	No ❑	**A**	**Housing subdivisions of 10 or more dwelling units.** Examples: single-family homes, multi-family homes, condominiums, and apartments.
Yes ❑	No ❑	**B**	**Commercial—greater than one acre.** Any development other than heavy industry or residential. Examples: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; airfields; and other light industrial facilities.
Yes ❑	No ❑	**C**	**Heavy industry—greater than one acre.** Examples: manufacturing plants, food processing plants, metal working facilities, printing plants, fleet storage areas (bus, truck, etc.).
Yes ❑	No ❑	**D**	**Pollutant Generating Development Project—one acre or more.** Includes all pollutant generating Development Projects that result in the disturbance of one acre or more of land. Pollutant generating Development Projects are those projects that generate pollutants at levels greater than background levels.
Yes ❑	No ❑	**E**	**Automotive repair shops.** A facility categorized in any one of Standard Industrial Classification (SIC) codes 5013, 5014, 5541, 7532-7534, or 7536-7539.
Yes ❑	No ❑	**F**	**Restaurants.** Facility selling prepared foods/drinks for consumption, include stationary lunch counters, refreshment stands selling prepared foods, drinks for immediate consumption (SIC5812), where land area for development is > 5,000 sqft. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for structural treatment BMP and numeric sizing criteria requirements and hydromodification requirements.
Yes ❑	No ❑	**G**	**Hillside development greater than 5,000 square feet.** Any development that creates 5,000 square feet of impervious surface and is located in an area with known erosive soil conditions, where the development will grade on any natural slope twenty-five percent or greater.
Yes ❑	No ❑	**H**	**Environmentally Sensitive Areas (ESAs).** All development located within or directly adjacent to or discharging directly to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition. "Directly adjacent" means situated within 200 feet of the ESA. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands.
Yes ❑	No ❑	**I**	**Parking lots 5,000 square feet or more** or with 15 or more parking spaces and potentially exposed to urban runoff.
Yes ❑	No ❑	**J**	**Streets, roads, highways, and freeways.** Any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles. This category includes commercial and residential driveways.
Yes ❑	No ❑	**K**	**Retail Gasoline Outlets (RGOs)** that are: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.

To use the table, review each definition A through K. If any of the definitions match, the project is a **Priority Development Project**. Note some thresholds are defined by square footage of impervious area created; others by the total area of the development.

► PREVIOUSLY DEVELOPED SITES

Projects on previously developed sites ("**redevelopment** projects") are Priority Development Projects if they create, add, or replace 5,000 square feet or more of impervious surface and also are in one of the categories listed in Table 1-1.

City staff may choose to designate projects not within the categories in Table 1-1 as Priority Development Projects, based on potential impacts to stormwater quality.

► THE "50% RULE" FOR PREVIOUSLY DEVELOPED PROJECTS

Projects on previously developed sites may also need to retrofit drainage of **all** impervious areas of the **entire** site. For sites creating or replacing more than 5,000 square feet of impervious area:

- If the new project results in an increase of, or replacement of, 50% or more of the previously existing impervious surface, and the existing development was not subject to SUSMP requirements, then the entire project must be included in the treatment measure design.
- If less than 50% of the previously impervious surface is to be affected, only that portion must be included in the treatment measure design.

If a new Development Project feature such as a parking lot falls into a Priority Development Project category, then the entire project footprint is subject to SUSMP requirements.

Projects limited to interior remodels, routine maintenance or repair, roof or exterior surface replacement, resurfacing and reconfiguring surface parking lots and existing roadways, new sidewalk construction, pedestrian ramps, or bike lanes on existing roads, and routine replacement of damaged pavement such as pothole repair are not subject to treatment requirements. However, other requirements, including incorporation of appropriate source controls, still apply.

Compliance Process at a Glance

For the applicant for development project approval, stormwater compliance follows these general steps:

1. Discuss requirements during a pre-application meeting with City staff.
2. Review the instructions in this SUSMP before you prepare your tentative map, preliminary site plan, drainage plan, and landscaping plan.

3. Prepare your Project Submittal, which is typically made with your application for development approvals (entitlements).

4. Create your detailed project design, incorporating the features described in your Project Submittal.

5. In a table on your construction plans, list each stormwater compliance feature and facility and the plan sheet where it appears.

6. Prepare and submit a draft Stormwater Facility Operation and Maintenance Plan..

7. Maintain stormwater facilities during construction and following construction in accordance with required warranties.

8. Following construction, formally transfer responsibility for maintenance to the owner.

9. The owner must periodically verify stormwater facilities are properly maintained.

Preparation of a complete and detailed Project Submittal is the key to cost-effective stormwater compliance and expeditious review of your project. Instructions for preparing your Project Submittal are in Chapter 3.

Phased Projects

When determining whether SUSMP requirements apply, a "project" should be defined consistent with California Environmental Quality Act (CEQA) definitions of "project." That is, the "project" is the whole of an action which has the potential for adding or replacing or resulting in the addition or replacement of roofs, pavement, or other impervious surfaces and thereby resulting in increased flows and stormwater pollutants. "Whole of an action" means the project may not be segmented or piecemealed into small parts if the effect is to reduce the quantity of impervious area for any part to below the SUSMP thresholds.

City staff may require, as part of an application for approval of a phased development project, a conceptual or master Project Submittal which describes and illustrates, in broad outline, how the drainage for the project will comply with the SUSMP requirements. The level of detail in the conceptual or master Project Submittal should be consistent with the scope and level of detail of the development approval being considered. The conceptual or master Project Submittal should specify that a more detailed Project Submittal for each later phase or portion of the project will be submitted with subsequent applications for discretionary approvals.

New Subdivisions

If a tentative map approval would potentially entitle future owners to construct new or replaced impervious area which, in aggregate, could exceed one of the SUSMP thresholds (Table 1-1),

then the applicant must take steps to ensure SUSMP requirements can and will be implemented as the subdivision is built out.

If the tentative map application does not include plans for site improvements, the applicant should nevertheless identify the type, size, location, and final ownership of stormwater treatment and flow-control facilities adequate to serve common private roadways and any other common areas, and to also manage runoff from an expected reasonable estimate of the square footage of future roofs, driveways, and other impervious surfaces on each individual lot. The municipality may condition approval of the map on implementation of stormwater treatment and other SUSMP measures when construction occurs on the individual lots. At the City's discretion, this condition may be enforced by a grant deed of development rights or by a development agreement.

If a municipality deems it necessary, the future impervious area of one or more lots may be limited by a deed restriction. This might be necessary when a project is exempted from one or all SUSMP provisions because the total impervious area is below a threshold, or to ensure runoff from impervious areas added after the project is approved does not overload a stormwater treatment and flow-control facility.

The City may require subdivision maps to dedicate an "open space easement, as defined by Government Code Section 51075," to suitably restrict the future building of structures at each stormwater facility location if necessary.

In general, in new subdivisions **stormwater treatment, infiltration, or flow-control facilities should not be located on individual single-family residential lots**, particularly when those facilities manage runoff from other lots, from streets, or from common areas. A better alternative is to locate stormwater facilities on one or more separate, jointly owned parcels.

After consulting with local planning staff, applicants for subdivision approvals will propose one of the following four options, depending on project characteristics and local policies:

1. Show the number of parcels and the total impervious area to be created on all parcels could not, in the future, exceed any of the thresholds in Table 1-1.

2. Show that, for each and every lot, the intended use can be achieved with a design which disperses runoff from roofs, driveways, streets, and other impervious areas to self-retaining pervious areas, using the criteria in Chapter 4.

3. Prepare improvement plans showing drainage to treatment and/or flow-control facilities designed in accordance with this SUSMP, and commit to constructing the facilities prior to transferring the lots.

4. Prepare improvement plans showing drainage to treatment and/or flow-control facilities designed in accordance with this SUSMP, and provide appropriate legal instruments to ensure the proposed facilities will be constructed and maintained by subsequent owners.

For the option selected, City staff will determine the appropriate conditions of approval, easements, deed restrictions, or other legal instruments necessary to assure future compliance.

Compliance with Flow-Control Requirements

Priority Development Projects (Table 1-1) must be designed so that runoff rates and durations are controlled to maintain or reduce downstream erosion conditions and protect stream habitat.

For projects disturbing areas smaller than 50 acres, this can be accomplished by implementing **Low Impact Development** (LID) design using the design criteria and procedures in Chapter 4. The criteria will be updated following RWQCB approval of the Copermittees' **Hydromodification Management Plan** (see Option 2 below).

Priority Development Projects disturbing 50 acres or more must meet the following **interim hydromodification standard**:

> "…post-project runoff flow rates and durations shall not exceed pre-project runoff flow rates and durations … where the increased discharge flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to increased flow rates and durations."

As required in Provision D.1.g of the NPDES Permit, the Program has adopted interim hydromodification criteria which will be superseded after the HMP is accepted by the Regional Water Board.

Compliance with the interim hydromodification criteria can be achieved by one of the following options:

1. Use a continuous simulation hydrologic computer model such as USEPA's Hydrograph Simulation Program—Fortran (HSPF) to simulate pre-project and post-project runoff, including the effect of proposed IMPs, detention basins, or other stormwater management facilities, and demonstrate the standard is achieved.
2. Use Low Impact Development Integrated Management Practices to manage hydrograph modification impacts, using design procedures, criteria, and sizing factors (ratios of LID IMP volume or area to tributary area) specified by the Copermittees.
3. Identify an exemption applicable to the site.

► OPTION 1: CONTINUOUS SIMULATION

Prepare an analysis of pre-project and post-project runoff following the instructions in the memoranda "Using Continuous Simulation to Size Stormwater Control Facilities" (May 9, 2008)

and "Development of Interim Hydromodification Criteria" (October 30, 2007). Both memoranda are available at www.projectcleanwater.org.

Before preparing the analysis, discuss with City staff the required documentation for your Project Submittal, which will include assumptions and modeling parameters used in the analysis and a graphical presentation demonstrating compliance with the following:

1. For flow rates from 20% of the pre-project 5-year runoff event (0.2Q5) to the pre-project 10-year runoff event (Q10), the post-project discharge rates and durations shall not deviate above the pre-project rates and durations by more than 10% over and more than 10% of the length of the flow duration curve.

2. For flow rates from 0.2Q5 to Q5, the post-project peak flows shall not exceed pre-project peak flows. For flow rates from Q5 to Q10, post-project peak flows may exceed pre-project flows by up to 10% for a 1-year frequency interval. For example, post-project flows could exceed pre-project flows by up to 10% for the interval from Q9 to Q10 or from Q5.5 to Q6.5, but not from Q8 to Q10. (Note that the 0.2Q5 end of the range may be modified).

► OPTION 2: LID INTEGRATED MANAGEMENT PRACTICES

Low Impact Development Integrated Management Practices, such as bioretention facilities, planter boxes, and dry wells, can achieve the hydromodification standard. However, the Copermittees have not yet prepared design criteria and sizing factors for these facilities applicable to projects 50 acres or more. Project proponents for projects 50 acres or more may use Option 1 to demonstrate their IMPs meet the interim criteria.

► OPTION 3: EXEMPTION FROM HYDROMODIFICATION MANAGEMENT

Exemption from the IHC is allowed for development projects when any of the following conditions are met. (However, plans to restore a channel reach may re-introduce the applicability of hydromodification management.)

1. The project would discharge into channels that are concrete-lined or significantly hardened (e.g., with rip-rap, sackcrete, etc.) downstream to their outfall in bays or the ocean;

2. The project would discharge into underground storm drains discharging directly to bays or the ocean;

3. The project would discharge to a channel where the sub-watershed areas below the project's discharge points are highly impervious (e.g. >70%) and the potential for single-project and/or cumulative impacts is minimal; or

4. The applicant conducts an assessment incorporating sediment transport modeling across the range of geomorphically-significant flows that demonstrates project flows and sediment reductions will not detrimentally affect the receiving water. A May 15,

2008 memorandum, "Geomorphic Analysis for Interim Hydrograph Modification Plan" is available on the Project Clean Water website.

Grandfathering. Projects with prior lawful approval (such as a development agreement, vested tentative map, or a building or grading permit) that have started construction before March 25, 2008, may not have to meet the interim hydromodification management requirements. Verify with municipal staff.

Note these are interim requirements and will be superseded following approval of the HMP by the Regional Water Board sometime after mid-2009. Updated hydromodification criteria for all Priority Development Projects will be incorporated into local SUSMP requirements sometime in 2010 or later.

Waivers from Numeric Sizing Criteria

The NPDES permit allows for a project to be waived from numeric sizing criteria for stormwater treatment **only** if all available treatment facilities have been considered and found **infeasible**. City staff must inform the Water Board within 5 days of granting a waiver. Other SUSMP requirements—including site designs to minimize imperviousness and source control BMPs—will still apply.

Experience has shown implementation of LID facilities, as described in Chapter 4, is feasible on nearly all development sites. However, the use of LID to retrofit existing drainage systems, to manage runoff from sites smaller than one acre in pedestrian-oriented developments, or to manage runoff from widened portions of roadways, sometimes presents special challenges. In these special situations, applicants should see the discussion of "Selection of Stormwater Treatment Facilities" in Chapter 2 and evaluate the options described on page 22 in order (depending on the specific characteristics of the project and as determined by local development review staff). All the options listed meet the numeric sizing criteria in the NPDES permit.

If infeasibility of all these options can be established, development review staff may determine eligibility of the project for a waiver.

Chapter 2

Concepts and Criteria

Technical background and explanations of policies and design requirements

The Regional Water Board reissued a municipal stormwater NPDES permit to San Diego County, its 18 cities, the San Diego Unified Port District, and the San Diego Regional Airport Authority in January 2007. The permit mandates a comprehensive program to prevent stormwater pollution. That program now includes street sweeping, maintenance of storm drains, business inspections, public outreach, construction site inspections, monitoring and studies of stream and ocean health, and control of runoff pollutants from new developments and redevelopments.

Permit Provision D.1.d. requires Copermittees to regulate projects in specific categories (Table 1-1) to:

1. Reduce discharges of pollutants to the maximum extent practicable.
2. Prevent runoff discharges from causing or contributing to a violation of water quality standards.

The Copermittees have created a Low Impact Development (LID) design procedure (Chapter 4) that ensures consistent and thorough implementation of the Regional Water Board's requirements. This chapter explains the technical background of the LID approach and how it was derived.

The previous permit, issued in 2001, included a requirement to control the post-development peak storm water runoff rates and velocities to maintain or reduce pre-development downstream erosion and protect stream habitat. The 2007 permit includes, in addition to this ongoing requirement, a new requirement to develop a hydromodification management plan (HMP) to identify and define a methodology and performance criteria to ensure flow rates and durations do not exceed pre-project runoff where increased runoff could cause erosion or other significant adverse impacts to beneficial uses.

As required by the NPDES permit, the Copermittees have adopted interim hydromodification criteria. See Chapter One.

Water-Quality Regulations

Provision D.1 requires the Copermittees to condition development approvals on incorporation of specified stormwater controls.

Provision D.1 requires applicable new developments and redevelopments:

- Design the site to conserve natural areas, existing trees and vegetation and soils, to maintain natural drainage patterns, to minimize imperviousness, to detain runoff, and to infiltrate runoff where feasible
- Cover or control sources of stormwater pollutants
- Treat runoff prior to discharge. Provision E.10 states: "Urban runoff treatment and/or mitigation must occur prior to the discharge of urban runoff into a receiving water. Federal regulations at 40 CFR 131.10(a) state that in no case shall a state adopt waste transport or waste assimilation as a designated use for any waters of the U.S."
- Ensure runoff does not exceed pre-project peaks and durations where increases could affect downstream habitat or other beneficial uses
- Maintain treatment and flow-control facilities

The municipalities each maintain a database to track approved installations of treatment facilities and to verify facilities are maintained. The Copermittees' annual report to the Regional Water Board includes a list of development projects subject to SUSMP conditions and descriptions of those projects that:

- Received a waiver from SUSMP criteria;
- Used hydrologic controls used to meet HMP requirements, including a description of the controls;
- Have an area of 50 acres or greater, thus subject to **Interim Hydromodification Criteria**; and

The Copermittees must also report the number of violations and enforcement actions taken upon development projects. The Copermittees' programs are subject to audit by the Regional Water Board.

The municipalities—not the Regional Water Board or its staff—are charged with ensuring development projects comply with the D.1 requirements. Regional Water Board staff sometimes review stormwater controls and hydromodification impacts in connection with applications for Clean Water Act Section 401 water-quality certification, which is required for projects that involve work, such as dredging or placement of fill, within streams, creeks, or other waters of the US.

► MAXIMUM EXTENT PRACTICABLE

Clean Water Act Section 402(p)(3)(iii) sets the standard for stormwater controls as "maximum extent practicable," but doesn't define that term. As implemented, "maximum extent practicable" is ever-changing and varies with conditions.

Many stormwater controls, including LID facilities, have proven to be practicable in most site development projects. To achieve fair and effective implementation, criteria and guidance, requirements for controls must be detailed and specific—while also offering the right amount of flexibility or exceptions for special cases. The NPDES permit includes various standards, including hydrologic criteria, which have been found to comprise "maximum extent practicable." By following this local SUSMP, applicants can ensure their project design meets "maximum extent practicable."

► BEST MANAGEMENT PRACTICES

Clean Water Act Section 402(p) and USEPA regulations (40 CFR 122.26) specify a municipal program of "management practices" to control stormwater pollutants. **Best Management Practice (BMP)** refers to any kind of procedure, activity or device designed to minimize the quantity of pollutants that enter the storm drain system. BMPs are typically used in place of assigning numeric effluent limits. The criteria for source control BMPs and treatment and flow-control facilities are crafted to fulfill "maximum extent practicable."

To minimize confusion, this guidebook refers to "facilities," "features," or "controls" to be incorporated into development projects. All of these are BMPs.

Pollutants of Concern

NPDES Permit Provision D.1.d.(3) requires each Copermittee to develop and implement a procedure for pollutants of concern to be identified for each Priority Development Project. The Copermittees have considered this requirement jointly and have determined the LID design procedures in Chapters 3 and 4 of this local SUSMP fully address the need to identify pollutants of concern insofar as that identification may affect the selection of source control BMPs and treatment facilities.

Documentation of the approach to identifying pollutants of concern and selecting BMPs and facilities follows.

► GROUPING OF POTENTIAL POLLUTANTS OF CONCERN

Urban runoff from a developed site has the potential to contribute pollutants, including oil and grease, suspended solids, metals, gasoline, pesticides, and pathogens to the storm water conveyance system and receiving waters. For the purposes of identifying pollutants of concern and associated storm water BMPs, pollutants are grouped in nine general categories as follows:

- **Sediments** are soils or other surficial materials eroded and then transported or deposited by the action of wind, water, ice, or gravity. Sediments can increase

turbidity, clog fish gills, reduce spawning habitat, lower young aquatic organisms survival rates, smother bottom dwelling organisms, and suppress aquatic vegetation growth.

- **Nutrients** are inorganic substances, such as nitrogen and phosphorus. They commonly exist in the form of mineral salts that are either dissolved or suspended in water. Primary sources of nutrients in urban runoff are fertilizers and eroded soils. Excessive discharge of nutrients to water bodies and streams can cause excessive aquatic algae and plant growth. Such excessive production, referred to as cultural eutrophication, may lead to excessive decay of organic matter in the water body, loss of oxygen in the water, release of toxins in sediment, and the eventual death of aquatic organisms.

- **Metals** are raw material components in non-metal products such as fuels, adhesives, paints, and other coatings. Primary sources of metal pollution in storm water are typically commercially available metals and metal products. Metals of concern include cadmium, chromium, copper, lead, mercury, and zinc. Lead and chromium have been used as corrosion inhibitors in primer coatings and cooling tower systems. At low concentrations naturally occurring in soil, metals are not toxic. However, at higher concentrations, certain metals can be toxic to aquatic life. Humans can be impacted from contaminated groundwater resources, and bioaccumulation of metals in fish and shellfish. Environmental concerns, regarding the potential for release of metals to the environment, have already led to restricted metal usage in certain applications.

- **Organic compounds** are carbon-based. Commercially available or naturally occurring organic compounds are found in pesticides, solvents, and hydrocarbons. Organic compounds can, at certain concentrations, indirectly or directly constitute a hazard to life or health. When rinsing off objects, toxic levels of solvents and cleaning compounds can be discharged to storm drains. Dirt, grease, and grime retained in the cleaning fluid or rinse water may also adsorb levels of organic compounds that are harmful or hazardous to aquatic life.

- **Trash** (such as paper, plastic, polystyrene packing foam, and aluminum materials) and biodegradable organic matter (such as leaves, grass cuttings, and food waste) are general waste products on the landscape. The presence of trash & debris may have a significant impact on the recreational value of a water body and aquatic habitat. Excess organic matter can create a high biochemical oxygen demand in a stream and thereby lower its water quality. Also, in areas where stagnant water exists, the presence of excess organic matter can promote septic conditions resulting in the growth of undesirable organisms and the release of odorous and hazardous compounds such as hydrogen sulfide.

- **Oxygen-Demanding Substances** includes biodegradable organic material as well as chemicals that react with dissolved oxygen in water to form other compounds. Proteins, carbohydrates, and fats are examples of biodegradable organic compounds. Compounds such as ammonia and hydrogen sulfide are examples of oxygen-

demanding compounds. The oxygen demand of a substance can lead to depletion of dissolved oxygen in a water body and possibly the development of septic conditions.

- Primary sources of **oil and grease** are petroleum hydrocarbon products, motor products from leaking vehicles, esters, oils, fats, waxes, and high molecular-weight fatty acids. Introduction of these pollutants to the water bodies are very possible due to the wide uses and applications of some of these products in municipal, residential, commercial, industrial, and construction areas. Elevated oil and grease content can decrease the aesthetic value of the water body, as well as the water quality.

- **Bacteria and Viruses** are ubiquitous microorganisms that thrive under certain environmental conditions. Their proliferation is typically caused by the transport of animal or human fecal wastes from the watershed. Water, containing excessive bacteria and viruses can alter the aquatic habitat and create a harmful environment for humans and aquatic life. Also, the decomposition of excess organic waste causes increased growth of undesirable organisms in the water.

- **Pesticides** (including herbicides) are chemical compounds commonly used to control nuisance growth or prevalence of organisms. Excessive application of a pesticide may result in runoff containing toxic levels of its active component.

► IDENTIFYING POLLUTANTS OF CONCERN BASED ON LAND USES

Table 2-1 associates pollutants with the categories of Priority Development Projects. Pollutants associated with any hazardous material sites that have been remediated or are not threatened by the proposed project are not considered a pollutant of concern.

► WATERSHEDS WITH SPECIAL POLLUTANT CONCERNS

Local receiving water conditions may require specialized attention. The three local conditions to consider include:

- Ocean waters designated as an "Area of Special Biological Significance" (ASBS)

- 303(d) listed waters; and

- Waters with established TMDLs.

TABLE 2-1. ANTICIPATED AND POTENTIAL Pollutants Generated by Land Use Type.

	General Pollutant Categories								
Priority Project Categories	Sediment	Nutrients	Heavy Metals	Organic Compounds	Trash & Debris	Oxygen Demanding Substances	Oil & Grease	Bacteria & Viruses	Pesticides
Detached Residential Development	X	X			X	X	X	X	X
Attached Residential Development	X	X			X	P(1)	P(2)	P	X
Commercial Development >one acre	P(1)	P(1)	X	P(2)	X	P(5)	X	P(3)	P(5)
Heavy Industry	X		X	X	X	X	X		
Automotive Repair Shops			X	X(4)(5)	X		X		
Restaurants					X	X	X	X	P(1)
Hillside Development >5,000 ft2	X	X			X	X	X		X
Parking Lots	P(1)	P(1)	X		X	P(1)	X		P(1)
Retail Gasoline Outlets			X	X	X	X	X		
Streets, Highways & Freeways	X	P(1)	X	X(4)	X	P(5)	X	X	P(1)

X = anticipated
P = potential
(1) A potential pollutant if landscaping exists on-site.
(2) A potential pollutant if the project includes uncovered parking areas.
(3) A potential pollutant if land use involves food or animal waste products.
(4) Including petroleum hydrocarbons.
(5) Including solvents.

The State Water Resources Control Board's California Ocean Plan identifies thirty-four locations along the California coast as **Areas of Special Biological Significance (ASBS)**. The Ocean Plan prohibits the discharge of wastes into these locations, thus barring discharges associated with industrial activities, publicly owned treatment works, and other traditional point discharges. In 2004 the SWRCB informed affected municipal stormwater programs throughout the state that urban runoff contained a waste and was subject to the prohibition. In March 2008, the SWRCB released a draft *Special Protections for Selected Storm Water and Nonpoint Source Discharges into Areas of Special Biological Significance* that defines design criteria for treating stormwater discharges and elimination of dry-weather discharges associated with non-stormwater sources. San Diego County contains two ASBS locations, the La Jolla ASBS and the San Diego-Scripps ASBS.

The NPDES Permit identifies several receiving waters as impaired for constituents or water quality effects pursuant to **Section 303(d)** of the Clean Water Act. Placement of a water onto the list requires the Regional Board to make further analysis of the impairment and development of total maximum daily loads (TMDLs) for addressing the impairment. The 303(d) listing in itself does not demand that a project proponent select BMPs on the basis of the impairment; however, the project proponent should be cognizant of the impairment and the future implications a TMDL might have upon the proposed land use.

Once a TMDL is established it may impose conditions on development either through an implementation plan and schedule for the listed water, or through special conditions required of the municipality affected by the numeric criteria of the TMDL. At this time, several 303(d) listings in San Diego County are at various stages of TMDL development with only four TMDLs having been adopted by the Regional Board. However, there are approximately 190 pending TMDLs in the county.

The **adopted TMDLs** in the San Diego area include:

- Diazinon for Chollas Creek;
- Nitrogen and phosphorous for Rainbow Creek;
- Dissolved copper for Shelter Island Yacht Basin;
- Copper, lead, and zinc for Chollas Creek, and
- Indicator bacteria for beaches and creeks in the San Diego Region.

The applicant should meet with City staff to determine if any project characteristics or watershed characteristics affect selection and design of BMPs. Except in rare circumstances, the use of the LID Design Guide (Chapter 4) and the Stormwater Pollutant Sources/Source Control Checklist (Appendix) will ensure your project complies with all stormwater requirements.

Selection of Permanent Source Control BMPs

Based on identification of potential pollutants of concern associated with various types of facilities, the Copermittees have developed a Stormwater Pollutant Sources/Source Control Checklist (Appendix) of "maximum extent practicable" source controls associated with each facility type. This approach ensures appropriate BMPs are applied to potential sources of each pollutant of concern.

Selection of Stormwater Treatment Facilities

The model SUSMP updated in early 2008 groups pollutants of concern by how easily they are removed by various treatment processes (Table 2-2).

The same document also includes a general comparison of how various types of treatment facilities perform for each group of pollutants (Table 2-3).

TABLE 2-2. GROUPING OF POTENTIAL POLLUTANTS of Concern by fate during stormwater treatment

Pollutant	Coarse Sediment and Trash	Pollutants that tend to associate with fine particles during treatment	Pollutants that tend to be dissolved following treatment
Sediment	X	X	
Nutrients		X	X
Heavy Metals		X	
Organic Compounds		X	
Trash & Debris	X		
Oxygen Demanding		X	
Bacteria		X	
Oil & Grease		X	
Pesticides		X	

TABLE 2-3. GROUPS OF POLLUTANTS and relative effectiveness of treatment facilities

Pollutants of Concern	Bioretention Facilities (LID)	Settling Basins (Dry Ponds)	Wet Ponds and Constructed Wetlands	Infiltration Facilities or Practices (LID)	Media Filters	Higher-rate biofilters*	Higher-rate media filters*	Trash Racks & Hydro-dynamic Devices	Vegetated Swales
Coarse Sediment and Trash	High	High	High	High	High	High	High	High	High
Pollutants that tend to associate with fine particles during treatment	High	High	High	High	High	Medium	Medium	Low	Medium
Pollutants that tend to be dissolved following treatment	Medium	Low	Medium	High	Low	Low	Low	Low	Low

*See page 22 for a discussion of selection of treatment facilities in special situations.

Based on this analysis, the Copermittees have determined that the following types of facilities are appropriate for treatment of runoff potentially containing most pollutants of concern. These types of facilities can be used for stormwater treatment for all land uses in all watersheds, except where site-specific constraints make them infeasible.

- Infiltration facilities or practices, including dry wells, infiltration trenches, infiltration basins, and other facilities that infiltrate runoff to native soils (sized to detain and infiltrate a volume equivalent to the 85th percentile 24-hour event).

- Bioretention facilities and media filters that detain stormwater and filter it slowly through soil or sand (sized with a surface area at least 0.04 times the effectively impervious tributary area).

- Extended detention basins, wet ponds, and wetlands or other facilities using settling (sized to detain a volume equivalent to runoff from the tributary area generated by the 85th percentile 24-hour event).

The recommended design procedure in Chapter 4 integrates LID practices—optimizing the site design, using pervious surfaces, and dispersing of runoff to adjacent pervious areas—with the use of infiltration facilities and practices and bioretention facilities to meet NPDES permit LID requirements, treatment requirements, and flow-control requirements in a cost-effective, unified design.

Oil/water separators ("water quality inlets"), storm drain inlet filters, and hydrodynamic separators, including vortex separators and continuous deflection separators ("CDS units"), are less effective means of stormwater treatment, although they may be used in series with more effective facilities.

Underground vaults typically lack the detention time required for settling of fine particles associated with stormwater pollutants. They also require frequent maintenance and may retain stagnant water, potentially providing harborage for mosquitoes. Because vaults may be "out of sight, out of mind," experience shows that the required maintenance may not occur.

Lack of space, in itself, is not a suitable justification for using a less-effective treatment on a development site, because the uses of the site and the site design can be altered as needed to accommodate bioretention facilities or planter boxes. In most cases, these effective facilities can be fit into required landscaping setbacks, easements, or other unbuildable areas.

Where possible, drainage to inlets, and drainage away from overflows and underdrains, should be by gravity. Where site topography makes it infeasible to accommodate gravity-fed facilities in the project design, the design flow may be captured in a vault or sump and pumped via force main to an effective facility.

The following situations sometimes present special challenges:

- Portions of sites which are not being developed or redeveloped, but which must be retrofit to meet treatment requirements in accordance with Provision D.1.d.(1)(a) which states in part: "Where redevelopment results in an increase of, or replacement of, more than fifty percent of the impervious surface of a previously existing development, the numeric sizing criteria applies to the entire development."
- Sites smaller than one acre approved for development or redevelopment as part of the City's stated objective to preserve or enhance a pedestrian-oriented "smart-growth" type of urban design.
- Roadway widening projects.

In these special situations, the following types of facilities should each be evaluated in priority order (depending on the specific characteristics of the site) until a feasible design is found.

1. Bioretention areas or planter boxes fed by gravity.
2. Capture of the design flow in a vault or sump and pumping to bioretention areas or planter boxes.
3. A subsurface sand or media filter with a maximum design surface loading rate of 5 inches per hour and a minimum media depth of 18 inches. The sand surface must be made accessible for periodic inspection and maintenance (for example, via a removable grating).
4. A higher-rate surface biofilter, such as a tree-pit-style unit. The grading and drainage design should minimize the area draining to each unit and maximize the number of discrete drainage areas and units.
5. A higher-rate vault-based filtration unit (for example, vaults with replaceable cartridge filters filled with inorganic media).

Proprietary Devices
Many currently available proprietary devices do not meet City's requirements when used alone for stormwater treatment. Consult with City staff before proposing these devices.

Many proprietary stormwater treatment devices are currently marketed, and new brands will be introduced. Applicants and applicants' engineers and design professionals should review with City staff any proposals for using proprietary devices for stormwater treatment before they commence work on preliminary site layout, drainage plans, grading plans, or landscape plans.

Hydrology for NPDES Compliance

► IMPERVIOUSNESS

Schueler (1995) proposed **imperviousness** as a "unifying theme" for the efforts of planners, engineers, landscape architects, scientists, and local officials concerned with urban watershed

protection. Schueler argued (1) that imperviousness is a useful indicator linking urban land development to the degradation of aquatic ecosystems, and (2) imperviousness can be quantified, managed, and controlled during land development.

Imperviousness has long been understood as the key variable in urban hydrology. Peak runoff flow and total runoff volume from small urban catchments is usually calculated as a function of the ratio of impervious area to total area **(rational method)**. The ratio correlates to the runoff factor, usually designated "C". Increased flows resulting from urban development tend to increase the frequency of small-scale flooding downstream.

Imperviousness links urban land development to degradation of aquatic ecosystems in two ways.

First, the combination of paved surfaces and piped runoff efficiently collects urban pollutants and transports them, in suspended or dissolved form, to surface waters. These pollutants may originate as airborne dust, be washed from the atmosphere during rains, or may be generated by automobiles and outdoor work activities.

Second, increased peak flows and runoff durations typically cause erosion of stream banks and beds, transport of fine sediments, and disruption of aquatic habitat. Measures taken to control stream erosion, such as hardening banks with riprap or concrete, may permanently eliminate habitat. By reducing infiltration to groundwater, imperviousness may also reduce dry-weather stream flows.

Imperviousness has two major components: rooftops and transportation (including streets, highways, and parking areas). The transportation component is usually larger and is more likely to be **directly connected** to the storm drain system.

The effects of imperviousness can be mitigated by disconnecting impervious areas from the drainage system and by encouraging detention and retention of runoff near the point where it is generated. Detention and retention reduce peak flows and volumes and allow pollutants to settle out or adhere to soils before they can be transported downstream.

► LOW IMPACT DEVELOPMENT REQUIREMENTS

The NPDES permit requires LID be used on all projects to minimize directly connected impervious area and promote infiltration. For Priority Development Projects, the minimum standards are:

- Drain a portion of impervious areas into pervious areas, if any.
- Design and construct pervious areas, if any, to effectively receive and infiltrate runoff from impervious areas, taking into account soil conditions, slope, and other pertinent factors.
- Construct a portion of paved areas with low traffic and appropriate soil conditions with permeable surfaces.

The LID design procedure in Chapter 4 incorporates these requirements into an integrated design which also meets sizing requirements for stormwater treatment facilities and flow-control (hydromodification management) requirements.

► SIZING REQUIREMENTS FOR STORMWATER TREATMENT FACILITIES

The guidance in Chapter 4 was crafted to ensure LID facilities comply with the NPDES permit's hydraulic sizing requirements for stormwater treatment facilities and flow-control facilities. The technical background follows.

Most runoff is produced by frequent storms of small or moderate intensity and duration. Treatment facilities are designed to treat smaller storms and the first flush of larger storms—approximately 80% of average annual runoff.

The NPDES permit identifies two types of treatment facilities—volume-based and flow-based.

Volume-based facilities must be designed to infiltrate, filter, or treat the volume of runoff produced from a 24-hour 85th percentile storm event as determined from the County of San Diego's 85th Percentile Precipitation Isopluvial Map. As shown on the map, rainfall depths vary from about 0.55" to 1.55".

For **flow-based** facilities, the NPDES permit specifies the rational method be used to determine flow. The rational method uses the equation

Q = CiA, where

Q = flow

C = weighted runoff factor between 0 and 1

i = rainfall intensity

A = area

The permit identifies two alternatives for calculating rainfall intensity:

1. the 85th percentile rainfall intensity times two, or
2. 0.2 inches per hour.

It is typically found that both methods yield similar results. The 0.2 inches per hour rainfall intensity should be used for sizing flow-based treatment facilities within the Copermittees' jurisdiction.

The 0.2 inches per hour criterion is the basis for a **consistent countywide sizing factor** for bioretention facilities when used for stormwater treatment only (i.e., not for flow control). The factor is based on maintaining a minimum percolation rate of 5 inches per hour through the engineered soil mix. The sizing factor is the ratio of the design intensity of rainfall on tributary

impervious surfaces (0.2 inches/hour) to the design percolation rate in the facility (5 inches/hour), or **0.04** (dimensionless).

► **FLOW-CONTROL (HYDROMODIFICATION MANAGEMENT)**

The NPDES permit specifies for applicable projects:

> … post-project runoff flow rates and durations shall not exceed pre-project runoff flow rates and durations where the increased discharge flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to changes in flow rates and durations.

Under current Interim Hydromodification Criteria, the requirement applies to projects disturbing 50 acres or more, and applicants may select among **three options** for compliance: Use a continuous simulation model to compare pre-project and post-project runoff, use LID facilities with sizing factors and design criteria developed by the Copermittees, or identify a specified exemption. See Chapter One.

The technical background for the Interim Hydromodification Criteria is in the memorandum "Development of Interim Hydromodification Criteria" (October 30, 2007) and other technical documents available on the Project Clean Water website (www.projectcleanwater.org).

Criteria for Infiltration Devices

The NPDES permit restricts the design and location of "infiltration devices" that, as designed, may bypass filtration through surface soils before reaching groundwater. These devices include:

- Infiltration basins.
- Infiltration trenches (includes French drains).
- Unlined retention basins (i.e., basins with no outlets).
- Unlined or open-bottomed vaults or boxes installed below grade (dry wells).

Infiltration devices may not be used in:

- Areas of industrial or light industrial activity; areas subject to high vehicular traffic (25,000 or greater average daily traffic on main roadway or 15,000 or more average daily traffic on any intersecting roadway);
- Automotive repair shops;
- Car washes;

- Fleet storage areas (bus, truck, etc.);
- Nurseries;
- Other areas with pollutant sources that could pose a threat to groundwater, as determined by City staff.

The vertical distance from the base of any infiltration device to the seasonal high groundwater mark shall be at least 10 feet. Infiltration devices shall be located a minimum of 100 feet horizontally from any known water supply wells.

In addition, infiltration devices are not recommended where:

- The infiltration device would receive drainage from areas where chemicals are used or stored, where vehicles or equipment are washed, or where refuse or wastes are handled.
- Surface soils or groundwater are polluted.
- The facility could receive sediment-laden runoff from disturbed areas or unstable slopes.
- Increased soil moisture could affect the stability of slopes of foundations.
- Soils are insufficiently permeable to allow the device to drain within 72 hours.

► MOST LID FEATURES AND FACILITIES ARE NOT INFILTRATION DEVICES

Self-treating and self-retaining areas, pervious pavements, bioretention facilities, and planter boxes are not considered to be infiltration devices.

Bioretention facilities work by percolating runoff through 18 inches or more of engineered soil. This removes most pollutants before the runoff is allowed to seep into native soils below. Further pollutant removal typically occurs in the unsaturated (vadose) zone before moisture reaches groundwater.

Where there is concern about the effects of increased soil moisture on slopes or foundations, an impermeable barrier may be added so the facility is "flow through" and all treated runoff is underdrained away from the facility. See the design sheets for Bioretention Facilities and Flow-Through Planters in Chapter 4.

Environmental and Economic Benefit Perspective

The San Diego Region has varied topography consisting of coastal plain, central mountain-valley, and eastern mountain valley areas. Elevations range from sea level at the Pacific Ocean to approximately 6,000 feet at the summit of Palomar Mountain. Temperature averages about 65 degrees Fahrenheit and average annual precipitation is between 10 and 13 inches.

San Diego County comprises 10 major stream systems: San Onofre Creek, Santa Margarita River, San Luis Rey River, San Marcos Creek, Escondido Creek, San Dieguito River, San Diego River, Sweetwater River, Otay River, and the Tijuana River. Almost all stream systems in the San Diego region have both perennial and ephemeral reaches. In addition, most of these streams have been impacted by impoundments and/or channelization. There are few undisturbed stream reaches left in San Diego County.

San Diego County is approximately 2.7 million acres and roughly 1.8 million acres (66 percent) is developed or in use. Much of the remaining land is preserved from future development.

Impervious surfaces now cover much of the land, and storm drains pipe runoff from urban areas directly into streams. As in many of California's urban areas, growth and development have caused changes in the timing and intensity of stream flows. These changes can then lead to more frequent flooding, destabilized stream banks, armoring of streambanks with riprap and concrete, loss of streamside trees and vegetation, and the destruction of stream habitat.

The remaining habitat in the region is composed of sensitive coastal sage scrub, chaparral, woodlands, and grasslands. Human encroachment and habitat loss threaten close to 300 species of plants and animals in California. Many of those reside in southern California and range from native grasslands to the Fairy Shrimp.

Once altered, natural streams and their ecosystems cannot be fully restored. However, **it is possible to stop, and partially reverse, the trend of declining habitat** and preserve some ecosystem values for the benefit of future generations.

This is an enormous, long-term effort. Managing runoff from a single development site may seem inconsequential, but by changing the way most sites are developed (and redeveloped), we may be able to preserve and enhance existing stream ecosystems in urban and urbanizing areas.

Chapter 3

Preparing Your Project Submittal

Step-by-step assistance to demonstrate compliance.

Your Project Submittal will demonstrate your project complies with all applicable requirements in the stormwater NPDES permit—to minimize imperviousness, retain or detain stormwater, slow runoff rates, incorporate required source controls, treat stormwater prior to discharge, control runoff rates and durations, and provide for operation and maintenance of treatment and flow-control facilities.

Typically, your Project Submittal must be coordinated with your application for discretionary approvals and must have sufficient detail to ensure the stormwater design, site plan, and landscaping plan are congruent.

A complete and thorough Project Submittal will facilitate quicker review and fewer cycles of review. The City requires a submittal for every applicable project.

Be sure to obtain specific submittal requirements from the City Development Services Department. Your Project Submittal may consist of a report and an exhibit. **City staff will use a checklist** to evaluate your Project Submittal:

CITY OF POWAY SUBMITTAL CHECKLIST

CONTENTS OF EXHIBIT

Show all of the following on drawings:

- ❒ Existing natural hydrologic features (depressions, watercourses, floodplains, relatively undisturbed areas) and significant natural resources. (Step 1 in the following step-by-step instructions)
- ❒ Soil types and depth to groundwater. (Step 1)
- ❒ Existing and proposed site drainage network and connections to drainage off-site. (Step 3)
- ❒ Proposed design features and surface treatments used to minimize imperviousness. (Step 3)
- ❒ Entire site divided into separate drainage areas, with each area identified as self-treating, self-retaining (zero-discharge), draining to a self-retaining area, or draining to an IMP. (Step 3)
- ❒ For each drainage area, types of impervious area proposed (roof, plaza/sidewalk, and streets/parking) and area of each. (Step 3)
- ❒ Proposed locations and sizes of treatment or flow-control facilities. (Step 3)
- ❒ Potential pollutant source areas, including refuse areas, outdoor work and storage areas, etc. listed in the Appendix and corresponding required source controls. (Step 4)

CONTENTS OF REPORT

Include all of the following in a report:

- ❒ Narrative analysis or description of site features and conditions that constrain, or provide opportunities for, stormwater control. (Step 2)
- ❒ Narrative description of site design characteristics that protect natural resources. (Step 3)
- ❒ Narrative description and/or tabulation of site design characteristics, building features, and pavement selections that reduce imperviousness of the site. (Step 3)
- ❒ Tabulation of proposed pervious and impervious area, showing self-treating areas, self-retaining areas, and areas tributary to each treatment or flow-control facility. (Step 3)
- ❒ Preliminary designs, including calculations, for each infiltration, treatment, or flow-control facility. Elevations should show sufficient hydraulic head for each. (Step 3)
- ❒ A table of identified pollutant sources and for each source, the source control measure(s) used to reduce pollutants to the maximum extent practicable. See worksheet in the Appendix. (Step 4)
- ❒ General maintenance requirements for infiltration, treatment, and flow-control facilities (Step 5)
- ❒ Means by which facility maintenance will be financed and implemented in perpetuity. (Step 5)
- ❒ Statement accepting responsibility for interim operation & maintenance of facilities (Step 5).
- ❒ Identification of any conflicts with codes or requirements or other anticipated obstacles to implementing the proposed facilities in the submittal (Step 6).
- ❒ Construction Plan SUSMP Checklist (Step 6).
- ❒ Certification by a civil engineer, architect, and landscape architect (Step 6).

Step by Step

Suggested coordination with site and landscape design

Plan and design your stormwater controls integrally with the site planning and landscaping for your project. It's best to start with general project requirements and preliminary site design concepts, then prepare the detailed site design, landscape design, and stormwater control design simultaneously. **This will help ensure that your site plan, landscape plan, and Project Submittal are congruent.**

The following step-by-step procedure should optimize your design by identifying the best opportunities for stormwater controls **early in the design process.**

Begin with general project requirements and program.

The recommended steps are:

1. Assemble needed information.

Sketch conceptual site layout, building locations, and circulation.

2. Identify site opportunities and constraints.
3. Follow the LID design guidance in Chapter 4 to analyze your project for LID and to develop and document your drainage design.

Revise site layout, building locations, and circulation to accommodate LID design. Develop land-scaping plan.

4. Specify source controls using the sources/source control checklist in the Appendix.
5. Plan for ongoing maintenance of treatment and flow-control facilities.
6. Complete the Project Submittal.

Submit Site Plan, Landscape Plan, and SUSMP Submittal

City staff required that project proponent prepare and submit a preliminary site design prior to formally applying for planning and zoning approvals. Your preliminary site design should incorporate a conceptual plan for site drainage, including self-treating and self-retaining areas and the location and approximate sizes of any treatment facilities. This additional up-front design effort will save time and avoid potential delays later in the review process.

Step 1: Assemble Needed Information

To select types and locations of treatment facilities, the designer needs to know the following site characteristics:

- **Existing natural hydrologic features** and natural resources, including any contiguous natural areas, wetlands, watercourses, seeps, or springs.

- **Existing site topography**, including contours of any slopes of 4% or steeper, general direction of surface drainage, local high or low points or depressions, any outcrops or other significant geologic features.
- **Zoning**, including requirements for **setbacks** and **open space**.
- **Public Works Standards** or other local codes governing minimum street widths, sidewalk construction, allowable pavement types, and drainage. These codes may conflict with Low Impact Development objectives to minimize imperviousness and to maintain or restore natural site hydrology.
- Soil types (including **hydrologic soil groups**) and depth to groundwater, which may determine whether infiltration is a feasible option for managing site runoff. Depending on site location and characteristics, and on the selection of treatment and flow-control facilities, site-specific information (e.g. from boring logs or geotechnical studies) may be required.
- **Existing site drainage.** For undeveloped sites, this should be obtained by inspecting the site and examining topographic maps and survey data. For previously developed sites, site drainage and connection to the municipal storm drain system can be located from site inspection, municipal storm drain maps, and plans for previous development.
- Existing **vegetative cover** and **impervious areas**, if any.

References and Resources
- *Site Planning for Urban Stream Protection* (Scheuler 1995).
- *Start at the Source* (BASMAA 1999), p. 36

Step 2: Identify Constraints & Opportunities

Review the information collected in Step 1. Identify the principal constraints on site design and selection of treatment and flow-control facilities as well as opportunities to reduce imperviousness and incorporate facilities into the site and landscape design. For example, **constraints** might include impermeable soils, high groundwater, groundwater pollution or contaminated soils, steep slopes, geotechnical instability, high-intensity land use, heavy pedestrian or vehicular traffic, restricted right-of-way, or safety concerns. **Opportunities** might include existing natural areas, low areas, oddly configured or otherwise unbuildable parcels, easements and landscape amenities including open space and buffers (which can double as locations for bioretention facilities), and differences in elevation (which can provide hydraulic head). Note stormwater treatment facilities should not be located within protected riparian areas.

Prepare a brief **narrative** describing site opportunities and constraints. This narrative will help you as you proceed with LID design and explain your design decisions to others.

Step 3: Prepare and Document Your LID Design

Use the Low Impact Development Design Guide (Chapter 4) to analyze your project for LID, design and document drainage, and specify preliminary design details for integrated management practices. **Follow the detailed instructions in Chapter 4 to ensure your project complies with NPDES permit LID requirements (Provision D.1.d.(4)) as well as stormwater treatment requirements in Provision D.1.d.(6)).** In future editions of this local SUSMP, the LID Design Guide will be updated so that additional hydromodification management requirements are also met via this unified design procedure. Chapter 4 includes calculation procedures and formats for presenting your calculations.

As shown in the checklist (page 30), your Project Submittal shall include a drawing showing:

- The entire site divided into separate drainage management areas (DMAs), with each area identified as one of the following: self-treating, self-retaining, draining to a self-retaining area, or draining to an IMP. Each area should be clearly marked with a unique identifier.
- For each drainage area, the types of impervious area proposed, and the area of each.
- Proposed locations and sizes of treatment facilities. Each facility should be clearly marked with a unique identifier.

Compliance
The design criteria for DMAs in Chapter 4 ensure the required volume of flow from all developed portions of the project, including landscaped areas, is infiltrated, filtered, or treated (Provision D.1.d.(6)(a).

Your Project Submittal shall include:

- Tabulation of proposed self-treating areas, self-retaining areas, areas draining to self-retaining areas, and areas draining to IMPs, and the corresponding IMPs identified on the Exhibit.
- Calculations, in the format shown in Chapter 4, showing the minimum square footage required and proposed square footage for each IMP.
- Preliminary designs for each IMP. The design sheets and accompanying drawings in Chapter 4 may be used or adapted for this purpose.

The following shall be required of the project proponent to understand the design:

- A narrative overview of your design and how your design decisions optimize the site layout, use pervious surfaces, disperse runoff from impervious surfaces, and drain impervious surfaces to engineered IMPs. See Chapter 4.
- A narrative briefly describing each **drainage management area** (DMA), its drainage, and where drainage will be directed.

- A narrative briefly describing each IMP. Include any special characteristics or features distinct from the design sheets in Chapter 4.

Step 4. Specify Source Control BMPs

Some everyday activities – such as trash recycling/disposal and washing vehicles and equipment – generate pollutants that tend to find their way into storm drains. These pollutants can be minimized by applying **source control BMPs**.

Source control BMPs include **permanent**, structural features that must be incorporated into your project plans and **operational** BMPs, such as regular sweeping and "housekeeping," that must be implemented by the site's occupant or user. The maximum extent practicable standard typically requires both types of BMPs. In general, operational BMPs cannot be substituted for a feasible and effective permanent BMP.

Use the following procedure to specify source control BMPs for your site:

► IDENTIFY POLLUTANT SOURCES

Review the first column in the **Pollutant Sources/Source Control Checklist** (Appendix). Check off the potential sources of pollutants that apply to your site.

► NOTE LOCATIONS ON SUBMITTAL DRAWING

Note the corresponding requirements listed in Column 2 of the Pollutant Sources/Source Control Checklist (Appendix). Show the location of each pollutant source and each permanent source control BMP in your submittal drawing.

► PREPARE A TABLE AND NARRATIVE

Check off the corresponding requirements listed in Column 3 in the Pollutant Sources/Source Control Checklist (Appendix). Now, create a table using the format in Table 3-1. In the left column, list each potential source on your site (from Appendix, Column 1). In the middle column, list the corresponding **permanent, structural BMPs** (from Columns 2 and 3, Appendix) used to prevent pollutants from entering runoff. Accompany this table with a narrative that explains any special features, materials, or methods of construction that will be used to implement these permanent, structural BMPs.

► IDENTIFY OPERATIONAL SOURCE CONTROL BMPS

TABLE 3-1. Format for table of permanent and operational source control measures.

Potential source of runoff pollutants	*Permanent source control BMPs*	*Operational source control BMPs*

To complete your table, refer once again to the Pollutant Sources/Source Control Checklist (Appendix, Column 4). List in the right column of your table the operational BMPs that should be implemented as long as the anticipated activities continue at the site. The same BMPs may also be required as a condition of a use permit or other revocable discretionary approval for use of the site.

References and Resources

- Appendix: Stormwater Pollutant Sources/Source Control Checklist

- *Start at the Source*, Section 6.7: Details, Outdoor Work Areas
- *California Stormwater Industrial/Commercial Best Management Practice Handbook*
- *Urban Runoff Quality Management* (WEF/ASCE, 1998) Chapter 4: Source Controls

Step 5: Stormwater Facility Maintenance

As required by NPDES Permit Provision D.1.c.(5), the City will require submittal of proof of a mechanism under which ongoing long-term maintenance of stormwater treatment and flow-control facilities will be conducted. The City requires the following items be included in your Project Submittal:

1. Identification of financially responsible party for facility maintenance in perpetuity.
2. Acceptance of responsibility for maintenance from the time the facilities are constructed until responsibility for operation and maintenance is legally transferred. A warranty covering a period following construction may also be required.
3. An outline of general maintenance requirements for the treatment and flow-control facilities you have selected.

The City requires that you prepare and submit a detailed plan that sets forth a maintenance schedule for each of the treatment and flow-control facilities built on your site.

Details of these requirements, and instructions for preparing a detailed operation and maintenance plan, are in Chapter 5.

References and Resources

- *Chapter 5*
- Operation, Maintenance, and Management of Stormwater Management Systems (Watershed Management Institute, 1997)

Step 6: Complete Your Project Submittal

Your Project Submittal should document the information gathered and decisions made in Steps 1-5. A clear, complete, well-organized Project Submittal will make it possible to confirm your design meets the minimum requirements of the NPDES permit, the municipal stormwater ordinance, and this *SUSMP*.

► COORDINATION WITH SITE, ARCHITECTURAL, AND LANDSCAPING PLANS

Before completing your Project Submittal, ensure your stormwater control design is fully coordinated with the site plan, grading plan, and landscaping plan being proposed for the site.

Information submitted and presentations to design review committees, planning commissions, and other decision-making bodies must incorporate relevant aspects of the stormwater design. In particular, ensure:

- Curb elevations, elevations, grade breaks, and other features of the drainage design are consistent with the delineation of DMAs.
- The top edge (overflow) of each bioretention facility is level all around its perimeter—this is particularly important in parking lot medians.
- The resulting grading and drainage design is consistent with the design for parking and circulation.
- Bioretention facilities and other IMPs do not create conflicts with pedestrian access between parking and building entrances.
- Vaults and utility boxes can be accommodated outside bioretention facilities and will not be placed within bioretention facilities.
- The visual impact of stormwater facilities, including planter boxes at building foundations and any terracing or retaining walls required for the stormwater control design, is shown in renderings and other architectural drawings.
- Landscaping plans, including planting plans, show locations of bioretention facilities, and the plant requirements are consistent with the engineered soils and conditions in the bioretention facilities.
- Renderings and representation of street views incorporate any stormwater facilities located in street-side buffers and setbacks

► CONSTRUCTION PLAN SUSMP CHECKLIST

When you submit construction plans for City review and approval, the reviewer will compare that submittal with your earlier Project Submittal. By creating a Construction Plan SUSMP Checklist for your project, you can facilitate the reviewer's comparison and speed review of your project.

TABLE 3-2. Format for Construction Plan SUSMP Checklist.

SUSMP Page #	*BMP Description*	*See Plan Sheet #s*

Here's how:

1. Create a table similar to Table 3-2. Number and list each measure or BMP you have specified in your Project Submittal in Columns 1 and 2 of the table. Leave Column 3 blank. Incorporate the table into your Project Submittal.

2. When you submit construction plans, **duplicate the table** (by photocopy or electronically). Now fill in Column 3, identifying the plan sheets where the BMPs are shown. List all plan sheets on which the BMP appears. Submit the updated table with your construction plans.

Note that the updated table—or Construction Plan SUSMP Checklist—is **only a reference tool** to facilitate comparison of the construction plans to your Project Submittal. Planning Department staff can advise you regarding the process required to propose changes to your approved Project Submittal.

► CERTIFICATION

City staff will require that your Project Submittal be certified by an architect, landscape architect, or civil engineer.

The certification should state: "The selection, sizing, and preliminary design of stormwater treatment and other control measures in this plan meet the requirements of Regional Water Quality Control Board Order R9-2007-0001 and subsequent amendments."

► PROJECT SUBMITTAL OUTLINE AND CONTENTS

I. Project Setting

- A. Project Name, Location, Description
- B. Existing site features and conditions
- C. Opportunities and constraints for stormwater control

II. Low Impact Development Design Strategies

- A. Optimization of site layout
  - (1) Limitation of development envelope
  - (2) Preservation of natural drainage features
  - (3) Setbacks from creeks, wetlands, and riparian habitats
  - (4) Minimization of imperviousness
  - (5) Using drainage as a design element
- B. Use of permeable pavements
- C. Dispersal of runoff to pervious areas
- D. Use of Integrated Management Practices

III. Documentation of Drainage Design

- A. Drainage Management Areas
  - (1) Tabulation
  - (2) Descriptions
- B. Integrated Management Practices
  - (1) Tabulation and Sizing Calculations
  - (2) Descriptions

IV. Source Control Measures

- A. Description of site activities and potential sources of pollutants
- B. Table showing sources, permanent source controls, and operational source controls

V. Facility Maintenance Requirements

A. Ownership and responsibility for maintenance in perpetuity.

(1) Commitment to execute any necessary agreements.

(2) Statement accepting responsibility for operation and maintenance of facilities until that responsibility is formally transferred.

B. Summary of maintenance requirements for each stormwater facility.

VI. Construction Plan SUSMP Checklist

VII. Certifications

Attachment: SUSMP Exhibit

► PROJECT SUBMITTALS

Your submittal will reflect the unique character of your own project and should meet the requirements identified in this *SUSMP*. City staff can assist you to determine how specific requirements apply to your project.

This page intentionally left blank.

Chapter 4

Low Impact Development Design Guide

Guidance for designing and documenting your LID site drainage, stormwater treatment facilities, and flow-control facilities

Follow the Low Impact Development (LID) design in this SUSMP to achieve compliance with the stormwater treatment requirements as well as the LID requirements in the stormwater NPDES permit.

This will require careful documentation of:

- Pervious and impervious areas in the planned project.
- Drainage from each of these areas.
- Locations, sizes, and types of proposed treatment facilities.

Your Project Submittal must include calculations showing the site drainage and proposed LID treatment facilities meet the criteria in this *SUSMP*.

This Low Impact Development Design Guide will help you:

- **Analyze your project** and identify and select options for implementing LID techniques to meet runoff treatment requirements—and flow-control requirements, if they apply.
- **Design and document drainage** for the whole site and document how that design meets this *SUSMP's* stormwater treatment criteria.
- **Specify preliminary design details** and integrate your LID drainage design with your paving and landscaping design.

Alternatives to LID design are discussed in the final section of this chapter.

Analyze Your Project for LID

Conceptually, there are four LID strategies for managing runoff from buildings and paving:

1. **Optimize the site layout** by preserving natural drainage features and designing buildings and circulation to minimize the amount of roofs and paving.

2. **Use pervious surfaces** such as turf, gravel, or pervious pavement—or use surfaces that retain rainfall, such as vegetated roofs. All drainage from these surfaces is considered to be "self-retained" (a detailed definition corresponding to this concept is on page 48). No further management of runoff is necessary. An emergency overflow should be provided for extreme events.

3. **Disperse runoff** from impervious surfaces on to adjacent pervious surfaces (e.g., direct a roof downspout to disperse runoff onto a lawn).

4. Drain impervious surfaces to engineered **Integrated Management Practices** (IMPs), such as bioretention facilities, planter boxes, cisterns, or dry wells. IMPs infiltrate runoff to groundwater and/or percolate runoff through engineered soil and allow it to drain away slowly. Depending on site conditions and local regulations, it may be possible to harvest and reuse rainwater in conjunction with IMPs.

A combination of two or more strategies may work best for your project. With forethought in design, the four strategies can provide multiple, complementary benefits to your development. Pervious surfaces reduce heat island effects and temperature extremes. Landscaping improves air quality, creates a better place to live or work, and upgrades value for rental or sale. Retaining natural hydrology helps preserve and enhance the natural character of the area. LID drainage design can also conserve water and reduce the need for drainage infrastructure.

Table 4-1 includes ideas for applying LID strategies to site conditions and types of development.

TABLE 4-1. Ideas for Runoff Management

Fit IMPs into landscape and setback areas				✓			✓
Make drainage a design feature		✓		✓			✓
Convey as well as treat stormwater				✓			

► OPTIMIZE THE SITE LAYOUT

To minimize stormwater-related impacts, apply the following design principles to the layout of newly developed and redeveloped sites.

Conserve natural areas, soils, and vegetation. Define the development envelope and protected areas, identifying areas that are most suitable for development and areas that should be left undisturbed. Use the following guideline to determine the least sensitive areas of the site, in order of increasing sensitivity:

1. Areas devoid of vegetation, including previously graded areas and agricultural fields.
2. Areas of non-native vegetation, disturbed habitats and eucalyptus woodlands where receiving waters are not present.
3. Areas of chamise or mixed chaparral, and non-native grasslands.
4. Areas containing coastal scrub communities.
5. All other upland communities.
6. Occupied habitat of sensitive species and all wetlands (as both are defined by the local jurisdiction).

Within each of the previous categories, hillside areas should be considered more sensitive than flatter areas.

Coordination
Chapter One includes a presentation of how review of your project's site design and landscape design is coordinated with review for compliance with stormwater NPDES requirements.

Where possible, conform the site layout along natural landforms, avoid excessive grading and disturbance of vegetation and soils, and replicate the site's natural drainage patterns. Set back development from creeks, wetlands, and riparian habitats. Preserve significant trees, especially native trees and shrubs, and identify locations for planting additional native or drought tolerant trees and large shrubs. Concentrate development on portions of the site with less permeable soils, and preserve areas that can promote infiltration.

For all types of development, **limit overall coverage** of paving and roofs. Where allowed by local zoning and design standards—and provided public safety and a walkable environment are not compromised—this can be accomplished by designing compact, taller structures, narrower and shorter streets and sidewalks, smaller parking lots (fewer stalls, smaller stalls, and more efficient lanes), and indoor or underground parking. Examine site layout and circulation patterns and identify areas where landscaping can be substituted for pavement.

Detain and retain runoff throughout the site. On flatter sites, it typically works best to intersperse landscaped areas and IMPs among the buildings and paving. On hillside sites, drainage from upper areas may be collected in conventional catch basins and piped to landscaped areas and IMPs in lower areas.

Use drainage as a design element. Use depressed landscape areas, vegetated buffers, and bioretention areas as amenities and focal points within the site and landscape design. Bioretention areas can be almost any shape and should be located at low points. Bioretention areas shaped as swales can detain and treat low runoff flows and also convey higher flows.

► USE PERVIOUS SURFACES

Consider a vegetated roof. Although not yet widely used in California, vegetated or "green" roofs are growing in popularity. Potential benefits include longer roof life, lower heating and cooling costs, and better sound insulation, in addition to air quality and water quality benefits. For SUSMP compliance purposes, vegetated roofs are considered not to produce increased runoff or runoff pollutants (i.e., any runoff from a vegetated roof requires no further treatment or detention). For more information on vegetated roofs, see www.greenroofs.org.

Consider permeable pavements and surface treatments. Inventory paved areas on your preliminary site plan. Identify where permeable pavements, such as crushed aggregate, turf block, unit pavers, pervious concrete, or pervious asphalt could be substituted for impervious concrete or asphalt paving.

► DISPERSE RUNOFF TO ADJACENT PERVIOUS AREAS

Look for opportunities to direct runoff from impervious areas to adjacent landscaping. The design, including slopes and soils, must reflect a reasonable expectation that an inch of rainfall will soak into the soil and produce no runoff. For example, a lawn or garden depressed 3-4" below surrounding walkways or driveways provides a simple but functional landscape design element.

For sites subject to stormwater treatment requirements only, a 2:1 maximum ratio of impervious to pervious area is acceptable. Be sure soils will drain adequately.

Under some circumstances, it may be allowable to direct runoff from impervious areas to pervious pavement (for example, from roof downspouts to a parking lot paved with crushed aggregate or turf block). The pore volume of pavement and base course must be sufficient to retain an inch of rainfall, including runoff from the tributary area. The slopes and soils must be compatible with infiltrating that volume without producing runoff.

► DIRECT RUNOFF TO INTEGRATED MANAGEMENT PRACTICES

Project Clean Water (www.projectcleanwater.org) has developed design criteria for the following IMPs:

- **Bioretention facilities**, which can be configured as swales, free-form areas, or planters to integrate with your landscape design.
- **Flow-through planters**, which can be used near building foundations and other locations where infiltration to native soils is not desired.

- **Dry wells** and other infiltration facilities, which can be used only where soils are permeable.

- **Cisterns**, in combination with a bioretention facility.

See the design sheets at the end of this chapter.

It may be possible to create a site-specific design that uses cisterns to achieve stormwater flow control, stormwater treatment, and rainwater reuse for irrigation or indoor uses (**water harvesting**). Such a design could expand the multiple benefits of LID to include water conservation. Keep in mind:

- Facilities must meet criteria for capturing and treating the volume specified by Equation 4-8 below. This volume must be allowed to empty within 24 hours so runoff from additional storms, which may follow, is also captured and treated. Additional volume may be required if the system also stores runoff for longer periods for reuse.

- Storage of water for longer than 48 hours creates the potential for mosquito harborage. Cisterns must be designed to prevent entry by mosquitoes.

- Indoor uses of non-potable water may be restricted or prohibited. Check with municipal staff.

Some references and resources for water harvesting appear at the end of this chapter.

Finding the right location for treatment facilities on your site involves a careful and creative integration of several factors:

- To make the most efficient use of the site and to maximize aesthetic value, **integrate IMPs with site landscaping**. Many local zoning codes may require landscape setbacks or buffers, or may specify that a minimum portion of the site be landscaped. It may be possible to locate some or all of your site's treatment and flow-control facilities within this same area, or within utility easements or other non-buildable areas.

- Planter boxes and bioretention areas must be **level or nearly level** all the way around. Bioretention areas configured as swales may be gently sloped in the linear direction, but opposite sides must be at the same elevation.

- For effective, low-maintenance operation, **locate facilities so drainage into and out of the device is by gravity flow.** Pumped systems are feasible, but are expensive, require more maintenance, are prone to untimely failure, and can cause mosquito control problems. Most IMPs require 3 feet or more of head.

- If the property is being subdivided now or in the future, the facility should be in a **common, accessible area.** In particular, avoid locating facilities on private residential lots. Even if the facility will serve only one site owner or operator, make

sure the facility is located for ready access by inspectors from the local municipality and local mosquito control agency.

- The facility must be accessible to equipment needed for its maintenance. **Access requirements for maintenance** will vary with the type of facility selected. Planter boxes and bioretention areas will typically need access for the same types of equipment used for landscape maintenance.

To complete your analysis, include in your Project Submittal a brief **narrative** documenting the site layout and site design decisions you made. This will provide background and context for how your design meets the quantitative LID design criteria.

Develop and Document Your Drainage Design

The **design documentation procedure** begins with careful delineation of pervious areas and impervious areas (including roofs) throughout the site. The procedure accounts for how runoff from each delineated area is managed. For areas draining to IMPs, the procedure ensures each IMP is appropriately sized.

The procedure results in a space-efficient, cost-efficient LID design for meeting SUSMP requirements on most residential and commercial/industrial developments. The procedure arranges documentation of drainage design and IMP sizing in a consistent format for presentation and review.

This procedure is intended to facilitate, not substitute for, creative interplay among site design, landscape design, and drainage design. **Several iterations may be needed** to optimize your drainage design as well as aesthetics, circulation, and use of available area for your site.

You should be able to complete the needed calculations using only the project's site development plan.

► STEP 1: DELINEATE DRAINAGE MANAGEMENT AREAS

This is the key first step. You must divide the **entire project area** into individual, discrete Drainage Management Areas (DMAs). Typically, lines delineating DMAs follow grade breaks and roof ridge lines. The Exhibit, tables, text, and calculations in your Project Submittal will illustrate, describe, and account for runoff from each of these areas.

Use separate DMAs for each surface type (e.g., landscaping, pervious paving, or roofs). Each DMA must be assigned a single hydrologic soil group. Assign each DMA an identification number and determine its size in square feet.

► STEP 2: CLASSIFY DMAS AND DETERMINE RUNOFF FACTORS

Next, determine how drainage from each DMA will be handled. Each DMA will be one of the following four types:

1. Self-treating areas.
2. Self-retaining areas (also called "zero-discharge" areas).
3. Areas that drain to self-retaining areas.
4. Areas that drain to IMPs.

Self-treating areas are landscaped or turf areas that do not drain to IMPs, but rather drain directly off site or to the storm drain system. Examples include upslope undeveloped areas which are ditched and drained around a development and grassed slopes which drain off-site to a street or storm drain. In general, self-treating areas include no impervious areas, unless the impervious area is very small (5% or less) in relationship to the receiving pervious area and slopes are gentle enough to ensure runoff will be absorbed into the vegetation and soil. Criteria for self-treating areas are in the design sheet "Self Treating and Self-Retaining Areas" at the end of this chapter.

Rationale
Pollutants in rainfall and windblown dust will tend to become entrained in the vegetation and soils of landscaped areas, so no additional treatment is needed. It is assumed the self-treating landscaped areas will produce runoff less than or equal to the pre-project site condition.

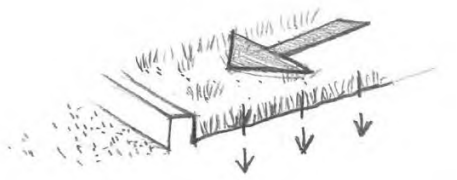

FIGURE 4-1. Self-treating areas are entirely pervious and drain directly off-site or to the storm drain system.

Self-retaining areas are designed to retain the first one inch of rainfall without producing any runoff. The technique works best on flat, heavily landscaped sites. It may be used on mild slopes if there is a reasonable expectation that a one-inch rainfall event would produce no runoff.

To create self-retaining turf and landscape areas in flat areas or on terraced slopes, berm the area or depress the grade into a concave cross-section so that these areas will retain the first inch of rainfall. Specify slopes, if any, toward the center of the pervious area. Inlets of area drains, if any, should be set 3 inches above the low point to allow ponding.

Criteria for self-retaining areas are in the design sheet "Self Treating and Self-Retaining Areas" following this chapter.

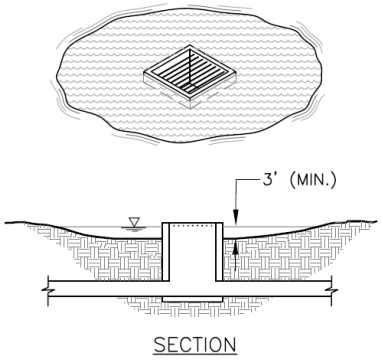

FIGURE 4-2. Self-retaining areas. Berm or depress the grade to retain at least an inch of rainfall and set inlets of any area drains at least 3 inches above low point to allow ponding.

Areas draining to self-retaining areas. Runoff from impervious or partially pervious areas can be managed by routing it to self-retaining pervious areas. For example, roof downspouts can be directed to lawns, and driveways can be sloped toward landscaped areas. The maximum ratio is 2 parts impervious area for every 1 part pervious area.

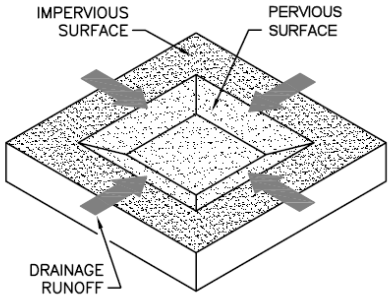

FIGURE 4-3. Relationship of impervious to pervious area for self-retaining areas. Ratio: ***pervious ≥ ½ impervious***

The drainage from the impervious area must be directed to and dispersed within the pervious area, and the entire area must be designed to retain an inch of rainfall without flowing off-site. For example, if the maximum ratio of 2 parts impervious area into 1 part pervious area is used, then the pervious area must absorb 3 inches of water over its surface before overflowing to an off-site drain.

A partially pervious area may be drained to a self-retaining area. For example, a driveway composed of unit pavers may drain to an adjacent lawn. In this case, the maximum ratios are:

(Runoff factor) x (tributary area) ≤ 2 x (self-retaining area) *Equation 4-1*

Use the runoff factors in Table 4-2.

Prolonged ponding is a potential problem at higher impervious/pervious ratios. In your design, ensure that the pervious area soils can handle the additional run-on and are sufficiently well-drained.

Under some circumstances, pervious pavement (e.g., crushed stone, pervious asphalt, or pervious concrete) can be self-retaining. Adjacent roofs or impervious pavement may drain on to the pervious pavement in the same maximum ratios as described above.

To design a pervious pavement to be a self-treating area, ensure:

- The gravel base course is a minimum of four or more inches deep.
- The base course is not to be underdrained.
- A qualified engineer has been consulted regarding infiltration rates, pavement stability, and suitability for the intended traffic.

Runoff from self-treating and self-retaining areas does not require any further treatment or flow control.

TABLE 4-2. Runoff factors for surfaces draining to IMPs.

Surface	Factor
Roofs	1.0
Concrete	1.0
Pervious Concrete	0.1
Porous Asphalt	0.1
Grouted Unit Pavers	1.0
Solid Unit Pavers on granular base, min. 3/16 inch joint space	0.2
Crushed Aggregate	0.1
Turfblock	0.1
Amended, mulched soil	0.1
Landscape	0.1

Areas draining to IMPs are multiplied by a sizing factor to calculate the required size of the IMP. On most densely developed sites—such as commercial and mixed-use developments and small-lot residential subdivisions—most DMAs will drain to IMPs.

More than one drainage area can drain to the same IMP. However, because the minimum IMP sizes are determined by ratio to drainage area size, a drainage area may not drain to more than one IMP. See Figures 4-4 and 4-5.

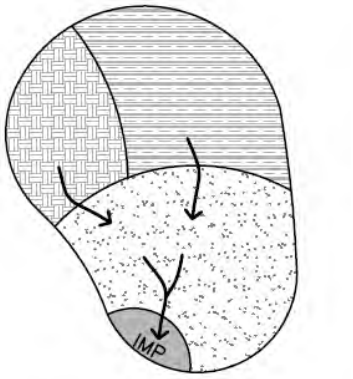

FIGURE 4-4. MORE THAN ONE
Drainage Management Area can drain to a single IMP.

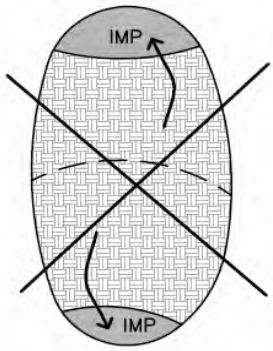

FIGURE 4-5. ONE DRAINAGE
Management Area cannot drain to more than one IMP. Use a grade break to divide the DMA.

Where possible, design site drainage so **only impervious roofs and pavement** drain to IMPs. This yields a simpler, more efficient design and also helps protect IMPs from becoming clogged by sediment.

If it is necessary to include turf, landscaping, or pervious pavements within the area draining to an IMP, list each surface as a separate DMA. A runoff factor (similar to a "C" factor used in the rational method) is applied to account for the reduction in the quantity of runoff. For example, when a turf or landscaped drainage management area drains to an IMP, the resulting increment in IMP size is:

$$\Delta \text{ (Area)} = \text{(pervious area)} \times \text{(runoff factor)} \times \text{(sizing factor)}.$$

Use the runoff factors in Table 4-2.

► STEP 3: TABULATE DRAINAGE MANAGEMENT AREAS

- Tabulate self-treating areas in the format shown in Table 4-3.
- Tabulate self-retaining areas in the format shown in Table 4-4.
- Tabulate areas draining to self-retaining areas in the format shown in Table 4-5. Check to be sure the total product of (square feet of tributary area × runoff factor) for all DMAs draining to a receiving self-retaining area is no greater than a 2:1 ratio to the square footage of the receiving self-retaining area itself.
- Compile a list of DMAs draining to IMPs. Proceed to Step 4 to check the sizing of the IMPs.

TABLE 4-3. Format for Tabulating Self-Treating Areas

DMA Name	*Area (square feet)*

TABLE 4-4. Format for Tabulating Self-Retaining Areas

DMA Name	*Area (square feet)*

TABLE 4-5. Format for Tabulating Areas Draining to Self-Retaining Areas

DMA Name	*Area (square feet)*	*Post-project surface type*	*Runoff factor*	*Receiving self-retaining DMA*	*Receiving self-retaining DMA Area (square feet)*

► STEP 4: SELECT AND LAY OUT IMPS ON SITE PLAN

Select from the list of IMPs in Table 4-6. Illustrations, designs, and design criteria for the IMPs are in the "IMP Design Details and Criteria" at the end of this chapter.

Once you have laid out the IMPs, calculate the square footage you have set aside on your site plan for each IMP.

► STEP 5: REVIEW SIZING FOR EACH IMP

For each of the IMPs, use the appropriate sizing from Table 4-6.

TABLE 4-6. IMP Sizing

Bioretention Facilities	Sizing Factor for Area = 0.04
Flow-through Planters	Sizing Factor for Area = 0.04
Dry Well or Infiltration Basin	See Step 6 to Calculate Min. Volume
Cistern with Bioretention	See Step 6 to Calculate Min. Volume of Cistern; then use 0.04 to calculate minimum size of bioretention area

► STEP 6: CALCULATE MINIMUM AREA AND VOLUME OF EACH IMP

The minimum area of bioretention facilities and flow-through planters is found by summing up the contributions of each tributary DMA and multiplying by the adjusted sizing factor for the IMP.

Equation 4-7

$$Min.\ IMP\ Area = \sum \begin{pmatrix} DMA \\ Square \\ Footage \end{pmatrix} \times \begin{pmatrix} DMA \\ Runoff \\ Factor \end{pmatrix} \times \begin{pmatrix} IMP \\ Sizing \\ Factor \end{pmatrix}$$

Use the format of Table 4-7 to present the calculations of the required minimum area and volumes for **bioretention areas** and **planter boxes**:

TABLE 4-7. Format for presenting calculations of minimum IMP Areas for bioretention areas and planter boxes.

DMA Name	*DMA Area (square feet)*	*Post-project surface type*	*DMA Runoff factor*	*DMA Area × runoff factor*	*Soil Type:*	*IMP Name*			
					IMP Sizing factor		*Minimum Area*	*Proposed Area*	
			Total		***0.04***				***IMP Area***

To size **dry wells**, **infiltration basins**, or **infiltration trenches**, use the following procedure:

1. Use the County of San Diego's 85th Percentile Isopluvial Map to determine the minimum unit volume.
2. Determine the weighted runoff factor ("C" factor) for the area tributary to the facility. The factors in Table 4-2 may be used.
3. Multiply the weighted runoff factor times the tributary area times the minimum unit volume.

Equation 4-8

$$Volume = [Tributary\ Area] \times [weighted\ runoff\ \ factor] \times [unit\ volume]$$

4. Select a facility depth.

5. Determine the required facility area. Dry wells may be designed as an open vault or with rock fill. If rock fill is used, assume a porosity of 40%.

6. Ensure the facility can infiltrate the entire volume within 72 hours.

To size a **cistern in series with a bioretention facility**:

1. Use Equation 4-8 to calculate the required cistern volume.

2. Design a discharge orifice for a drawdown time of 24 hours.

3. Determine the maximum discharge from the orifice.

4. The minimum area of the bioretention facility must treat this flow based on a percolation rate of 5" per hour through the engineered soil.

► STEP 7: DETERMINE IF AVAILABLE SPACE FOR IMP IS ADEQUATE

Sizing and configuring IMPs may be an iterative process. After computing the minimum IMP area using Steps 1 – 6, review the site plan to determine if the reserved IMP area is sufficient. If so, the planned IMPs will meet the SUSMP sizing requirements. If not, revise the plan accordingly. Revisions may include:

- Reducing the overall imperviousness of the project site.
- Changing the grading and drainage to redirect some runoff toward other IMPs which may have excess capacity.
- Making tributary landscaped DMAs self-treating or self-retaining.
- Expanding IMP surface area.

► STEP 8: COMPLETE YOUR SUMMARY REPORT

Present your IMP sizing calculations in tabular form. Adapt the following format as appropriate to your project. Coordinate your presentation of DMAs and calculation of minimum IMP sizes with the Project Submittal drawing (labeled to show delineation of DMAs and locations of IMPs). It is also helpful to incorporate a brief description of each DMA and each IMP.

Sum the total area of all DMAs and IMPs listed and show it is equal to the total project area. This step may include adjusting the square footage of some DMAs to account for area used for IMPs.

Format:

			Total						***IMP Area***

Specify Preliminary Design Details

In your Project Submittal, describe your IMPs in sufficient detail to demonstrate the area, volume, and other criteria of each can be met within the constraints of the site.

Ensure these details are consistent with preliminary site plans, landscaping plans, and architectural plans submitted with your application for planning and zoning approvals.

Following are design sheets for:

- Self-treating and self-retaining areas
- Pervious pavements
- Bioretention facilities
- Flow-through planter
- Dry wells and infiltration basins
- Cistern with bioretention facility

These design sheets include recommended configurations and details, and example applications, for these IMPs. **The information in these design sheets must be adapted and applied to the conditions specific to the development project such as unstable slopes or the lack of available head. City staff has final review and approval authority over the project design.**

Keep in mind that proper and functional design of the IMP is the responsibility of the applicant. Effective operation of the IMP throughout the project's lifetime will be the responsibility of the property owner.

Alternatives to Integrated LID Design

If you believe design of features and facilities as described above is infeasible for your development site, consult with City staff before preparing an alternative design for stormwater treatment, flow control, and LID compliance.

For all alternative designs, the applicant must prepare a complete Project Submittal, including a drawing showing the entire site divided into discrete Drainage Management Areas, text and tables showing how drainage is routed from each DMA to a treatment facility, and calculations demonstrating the design achieves the applicable design criteria for each stormwater treatment facility. Alternative treatment facilities are limited to the circumstances and selection criteria identified beginning on page 20. The Project Submittal must also show how the project meets the minimum LID criteria (page 23) and ensures runoff rates, durations, and velocities are controlled to maintain or reduce downstream erosion conditions and protect stream habitat (NPDES Permit Provision D.1.d.(10)).

► DESIGN OF ALTERNATIVE TREATMENT FACILITIES

Here are criteria and design considerations for some alternative treatment facilities:

Sand Filters. To ensure effectiveness is not compromised by compacting or clogging of the filter surface, sand filters must be maintained frequently.

The following criteria apply to sand filters:

- Calculate the design flow using the rational method with an intensity of 0.2"/hour and the "C" factors for "treatment only" from Table 4-2.
- To determine the required filter surface area, divide the design flow by an allowable design surface loading rate of 5"/hour.
- The minimum depth of filter media is 18". The media should be washed sand, with gradation similar to that specified for fine aggregate in ASTM C-33.
- The entire filter area must be accessible for easy maintenance without the need to enter a confined space.

A typical filter design includes a gravel drain layer and a perforated pipe underdrain. Filter fabric may be used to prevent the filter media from entering the gravel layer.

The design should not include any permanent pool or other standing water. Instead of including a pretreatment basin, consider the following features in the area tributary to the filter to reduce the potential for filter clogging:

- Limit the size of the Drainage Management Area.
- Include only impervious areas in the DMA.
- Stabilize slopes and eliminate sources of sediment in the DMA.
- Provide screens for trash and leaves at storm drain inlets.

For additional design considerations and details, see *Design of Stormwater Filtering Systems* by Richard A. Claytor and Thomas R. Schueler, The Center for Watershed Protection, 1996, and *California Stormwater BMP Handbooks* Fact Sheet TC-40, Media Filter.

Extended ("Dry") Detention Basins. The required detention volume is based on the 85th percentile 24-hour storm depth. The steps to calculate the required detention volume are:

1. Use the County of San Diego's 85th Percentile Isopluvial Map to determine the unit basin volume.
2. Determine the weighted runoff factor ("C" factor) for the area tributary to the basin. The factors in Table 4-2 may be used.

3. Multiply the weighted runoff factor times the tributary area times the unit basin volume.

For maximum effectiveness the basin should not be sized substantially larger than this volume.

For design considerations and details, see the *California Stormwater Best Management Practice Handbooks*, Fact Sheet TC-22, "Extended Detention Basins." The basin outlet should be designed for a 24-hour drawdown time.

As noted in Fact Sheet TC-22, "dry" detention basins may not be practicable for drainage areas less than 5 acres. The potential for mosquito harborage is a concern. In the design, do not create any areas that will hold standing water for 72 hours or more.

"Wet" Detention Ponds and Constructed Wetlands. The required detention volume is determined as with a "dry" detention basin. Before proceeding with design, contact the local mosquito control agency to coordinate the design and plan ongoing inspection and maintenance of the facility for mosquito control. For design considerations and details, see the *California Stormwater Best Management Practices Handbooks*, Fact Sheet TC-20, "Wet Ponds," and Fact Sheet TC-21, "Constructed Wetlands."

Vegetated Swales. Design recommendations for conventional vegetated swales are in the *California Stormwater Best Management Practices Handbooks*. The conventional swale design uses available on-site soils and does not include an underdrain system. Where soils are clayey, there is little infiltration. Treatment occurs as runoff flows through grass or other vegetation before exiting at the downstream end. Recommended detention times are on the order of 10 minutes.

Conventional vegetated swales may be used to meet NPDES permit treatment requirements and LID requirements (see page 25). The following should be incorporated in the design:

- Determine the weighted runoff factor ("C" factor) for the area tributary to the swale. The factors in Table 4-2 may be used.
- Calculate the design flow by multiplying the weighted runoff factor times the tributary area times either (1) 0.2 inches of rainfall per hour, or (2) twice the 85th percentile hourly rainfall intensity.
- When sizing the swale, use a value of 0.25 for Manning's "n".
- Ensure that all flow enters the swale near its highest point and that no flow short-circuits treatment by entering the swale along its length.
- The swale should be a minimum 100 feet in length.
- Longitudinal slopes should not exceed 2.5%; on flatter slopes, incorporate measures to avoid prolonged surface ponding.

Consider using linear-shaped bioretention areas (see page 71) in place of conventional vegetated swales because:

- Conventional swale design has resulted in standing water and associated nuisances.
- Conventional swales often don't obtain even the design residence time because of the length required and because proper design requires runoff enter the swale at the upstream end rather than at various locations along its length, and
- Bioretention areas provide a more flexible drainage design, more effective practicable treatment, and more effective flow control within the same footprint.

► TREATMENT FACILITIES FOR SPECIAL CIRCUMSTANCES

Higher-rate surface filters and vault-based proprietary filters can only be used in the circumstances described beginning on page 20 and when sand filters, extended "dry" detention basins, and "wet" detention ponds or constructed wetlands have been found infeasible.

For surface filters, the grading and drainage design should minimize the area draining to each unit and maximize the number of discrete drainage areas and units. Proprietary facilities should be installed consistent with the manufacturer's instructions.

Self-Treating and Self-Retaining Areas

Best Uses

- Heavily landscaped sites

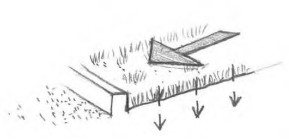
Advantages

- No maintenance verification requirement
- Complements site landscaping

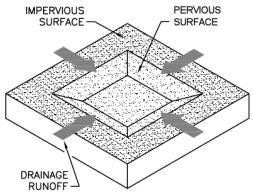
Limitations

- Requires substantial square footage
- Grading requirements must be coordinated with landscape design

► **CRITERIA**



Rainfall on self-treating areas infiltrates or—during intense storms— drains directly off-site or to the storm drain system.



Self-retaining areas are designed to retain the first one inch of rainfall without producing any runoff. During intense storms, runoff may drain off-site, to the storm drain system, or to IMPs.

LID design seeks to manage runoff from roofs and paving so effects on water quality and hydrology are minimized. Runoff from landscaping, however, does not need to be managed the same way.

Runoff from landscaping can be managed by creating self-treating and self-retaining areas.

Self-treating areas are natural, landscaped, or turf areas that drain directly off site or to the storm drain system. Examples include upslope undeveloped areas that are ditched and drained around a development and grassed slopes that drain offsite to a street or storm drain. Self-treating areas may not drain on to adjacent paved areas.

Where a landscaped area is upslope from or surrounded by paved areas, a **self-retaining area** (also called a zero-discharge area) may be created. Self-retaining areas are designed to retain the first one inch of rainfall without producing any runoff. The technique works best on flat, heavily landscaped sites. It may be used on mild slopes if there is a reasonable expectation that the first inch of rainfall would produce no runoff.

To create self-retaining turf and landscape areas in flat areas or on terraced slopes, berm the area or depress the grade into a concave cross-section so that these areas will retain the first inch of rainfall. Inlets of area drains, if any, should be set 3 inches above the low point to allow ponding.

Areas draining to self retaining areas. Drainage from roofs and paving can be directed to self-retaining areas and allowed to infiltrate into the soil. The maximum allowable ratio is 2 parts impervious: 1 part pervious.

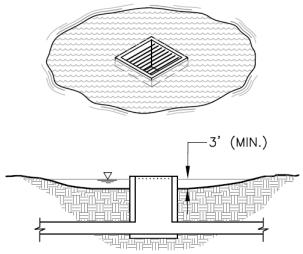
The self-retaining area must be bermed or depressed to retain an inch of rainfall including the flow from the tributary impervious area.

► DETAILS

Drainage from self-treating areas must flow to off-site streets or storm drains without flowing on to paved areas.

Pavement within a self-treating area cannot exceed 5% of the total area.

In self-retaining areas, overflows and area drain inlets should be set high enough to ensure ponding over the entire surface of the self-retaining area.



Set overflows and area drain inlets high enough to ensure ponding (3" deep) over the surface of the self-retaining area.

Self–retaining areas should be designed to promote even distribution of ponded runoff over the area.

Leave enough reveal (from pavement down to landscaped surface) to accommodate buildup of turf or mulch.

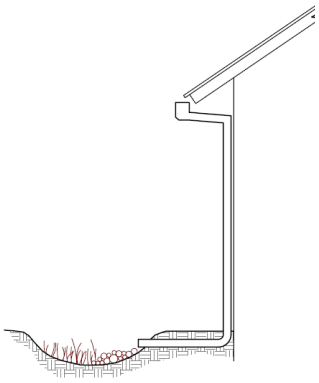
► APPLICATIONS

Lawn or landscaped areas adjacent to streets can be considered self-treating areas.

Self-retaining areas can be created by depressing lawn and landscape below surrounding sidewalks and plazas.

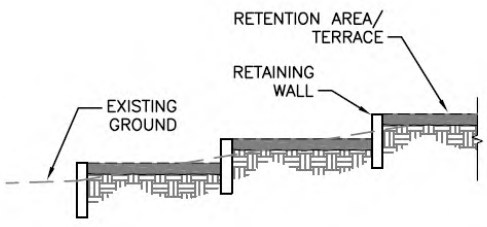
Runoff from walkways or driveways in parks and park-like areas can sheet-flow to self-retaining areas.

Roof leaders can be connected to self-retaining areas by piping beneath plazas and walkways. If necessary, a "bubble-up" can be used.



Connecting a roof leader to a self-retaining area. The head from the eave height makes it possible to route roof drainage some distance away from the building.

Self-retaining areas can be created [illegible] elevation difference promotes subsurface drainage.



Mild slopes can be terraced to create self-retaining areas.

► DESIGN CHECKLIST FOR SELF-TREATING AREAS

- ❒ The self-treating area is at least 95% lawn or landscaping (not more than 5% impervious).
- ❒ Re-graded or re-landscaped areas have amended soils, vegetation, and irrigation as may be required to maintain soil stability and permeability.
- ❒ Runoff from the self-treating area does not enter an IMP or another drainage management area, but goes directly to the storm drain system.

► DESIGN CHECKLIST FOR SELF-RETAINING AREAS

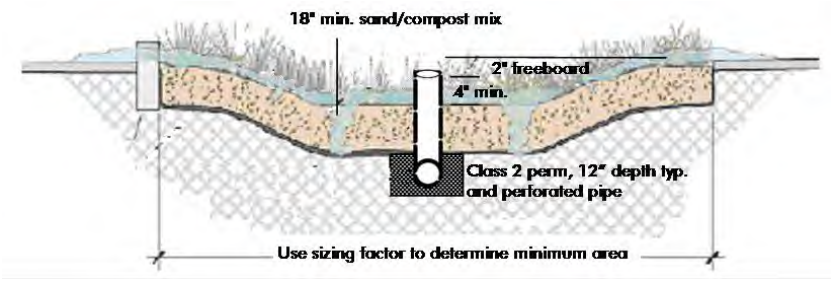
- ❒ Area is bermed all the way around or graded concave.

- ❒ Slopes do not exceed 4%.
- ❒ Entire area is lawn, landscaping, or pervious pavement (see criteria in Chapter 4).
- ❒ Area has amended soils, vegetation, and irrigation as may be required to maintain soil stability and permeability.
- ❒ Any area drain inlets are at least 3 inches above surrounding grade.

► DESIGN CHECKLIST FOR AREAS DRAINING TO SELF-RETAINING AREAS

- ❒ Ratio of tributary impervious area to self-retaining area is not greater than 2:1.
- ❒ Roof leaders collect runoff and route it to the self-retaining area.
- ❒ Paved areas are sloped so drainage is routed to the self-retaining area.
- ❒ Inlets are designed to protect against erosion and distribute runoff across the area.

Bioretention Facilities



Bioretention facility configured for treatment-only requirements. Bioretention facilities can rectangular, linear, or nearly any shape.

Bioretention detains runoff in a surface reservoir, filters it through plant roots and a biologically active soil mix, and then infiltrates it into the ground. Where native soils are less permeable, an underdrain conveys treated runoff to storm drain or surface drainage.

Bioretention facilities can be configured in nearly any shape. When configured as linear **swales**, they can convey high flows while percolating and treating lower flows.

Bioretention facilities can be configured as in-ground or above-ground planter boxes, with the bottom open to allow infiltration to native soils underneath. If infiltration cannot be allowed, use the sizing factors and criteria for the Flow-Through Planter.

Best Uses

- Commercial areas
- Residential subdivisions
- Industrial developments
- Roadways
- Parking lots
- Fit in setbacks, medians, and other landscaped areas

Advantages

- Can be any shape
- Low maintenance
- Can be landscaped

Limitations

- Require 4% of tributary impervious square footage
- Typically requires 3-4 feet of head
- Irrigation typically required

► CRITERIA

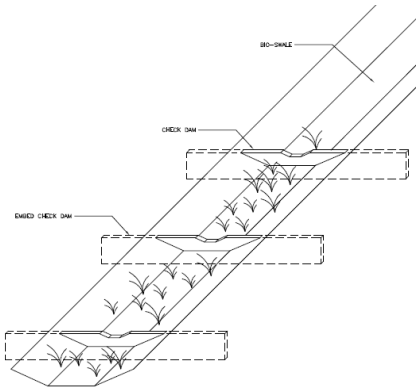
For development projects subject only to runoff treatment requirements, the following criteria apply:

Parameter	Criterion
Soil mix depth	18 inches minimum
Soil mix minimum percolation rate	5 inches per hour minimum sustained (10 inches per hour initial rate recommended)
Soil mix surface area	0.04 times tributary impervious area (or equivalent)

Parameter	Criterion
Surface reservoir depth	6 inches minimum; may be sloped to 4 inches where adjoining walkways.
Underdrain	Required in Group "C" and "D" soils. Perforated pipe embedded in gravel ("Class 2 permeable" recommended), connected to storm drain or other accepted discharge point.

► DETAILS

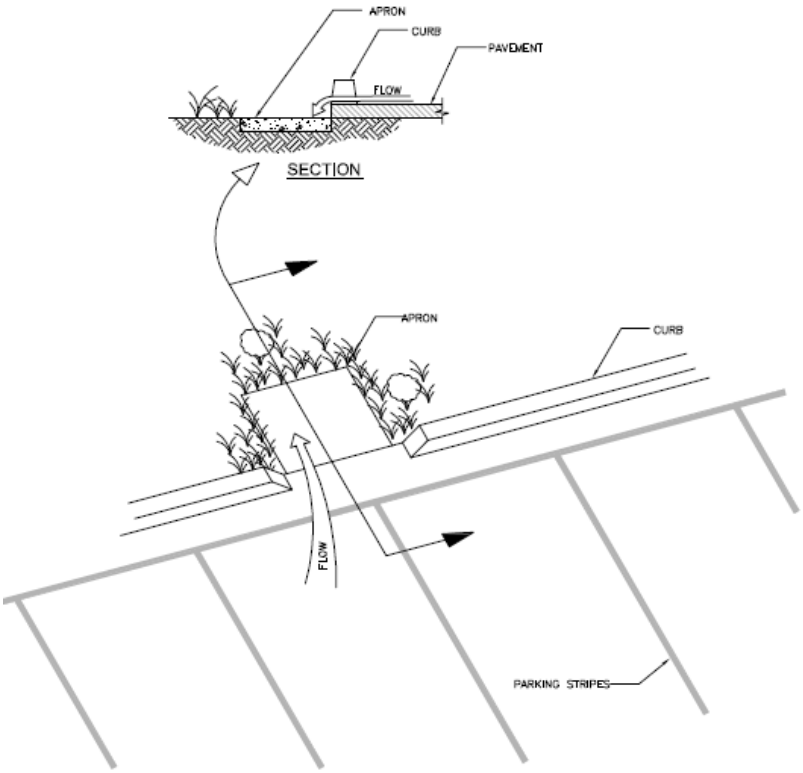
Plan. On the surface, a bioretention facility should be one level, shallow basin—or a series of basins. As runoff enters each basin, it should flood and fill throughout before runoff overflows to the outlet or to the next downstream basin. This will help prevent movement of surface mulch and soil mix.



Use check dams for linear bioretention facilities (swales) on a slope.

In a linear swale, check dams should be placed so that the lip of each dam is at least as high as the toe of the next upstream dam. A similar principle applies to bioretention facilities built as terraced roadway shoulders.

Inlets. Paved areas draining to the facility should be graded, and inlets should be placed, so that runoff remains as sheet flow or as dispersed as possible. Curb cuts should be wide (12" is recommended) to avoid clogging with leaves or debris. Allow for a minimum reveal of 4"-6" between the inlet and soil mix elevations to ensure turf or mulch buildup does not block the inlet. In addition, place an apron of stone or concrete, a foot square or larger, inside each inlet to prevent vegetation from growing up and blocking the inlet.



Recommended design details for bioretention facility inlets (see text).

Where runoff is collected in pipes or gutters and conveyed to the facility, protect the landscaping from high-velocity flows with energy-dissipating rocks. In larger installations, provide cobble-lined channels to better distribute flows throughout the facility.

Upturned pipe outlets can be used to dissipate energy when runoff is piped from roofs and upgradient paved areas.

Soil mix. The required soil mix is similar to a loamy sand. It must maintain a minimum percolation rate of 5" per hour throughout the life of the facility, and it must be suitable for maintaining plant life. Typically, on-site soils will not be suitable due to clay content.

Storage and drainage layer. "Class 2 permeable," Caltrans specification 68-1.025, is recommended. Open-graded crushed rock, washed, may be used, but requires 4"-6" washed pea gravel be substituted at the top of the crushed rock gravel layers. **Do not use filter fabric** to separate the soil mix from the gravel drainage layer or the gravel drainage layer from the native soil.

Underdrains. No underdrain is required where native soils beneath the facility are Hydrologic Soil Group A or B. For treatment-only facilities where native soils are Group C or D, a perforated pipe must be bedded in the gravel layer and must terminate at a storm drain or other approved discharge point.

Outlets. In treatment-only facilities, outlets must be set high enough to ensure the surface reservoir fills and the entire surface area of soil mix is flooded before the outlet elevation is reached. In swales, this can be achieved with appropriately placed check dams.

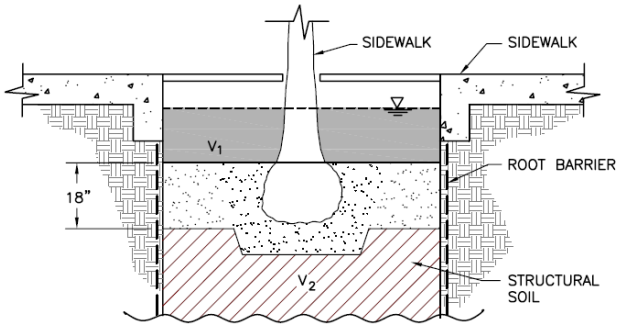
The outlet should be designed to exclude floating mulch and debris.

Vaults, utility boxes and light standards. It is best to locate utilities outside the bioretention facility—in adjacent walkways or in a separate area set aside for this purpose. If utility structures are to be placed within the facility, the locations should be anticipated and adjustments made to ensure the minimum bioretention surface area and volumes are achieved. Leaving the final locations to each individual utility can produce a haphazard, unaesthetic appearance and make the bioretention facility more difficult to maintain.

Emergency overflow. The site grading plan should anticipate extreme events and potential clogging of the overflow and route emergency overflows safely.

Trees. Bioretention areas can accommodate small or large trees. There is no need to subtract the area taken up by roots from the effective area of the facility. Extensive tree roots maintain soil permeability and help retain runoff. Normal maintenance of a bioretention facility should not affect tree lifespan.

The bioretention facility can be integrated with a tree pit of the required depth and filled with structural soil. If a root barrier is used, it can be located to allow tree roots to spread throughout the bioretention facility while protecting adjacent pavement. Locations and planting elevations should be selected to avoid blocking the facility's inlets and outlets.



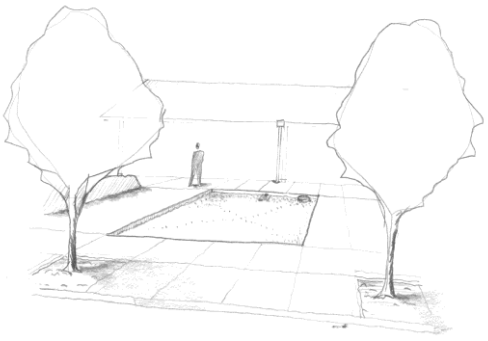
Bioretention facility configured as a tree well.
The root barrier is optional.

► APPLICATIONS

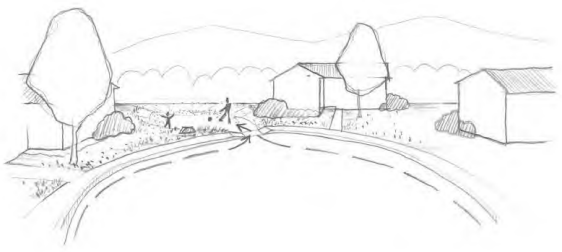
Multi-purpose landscaped areas. Bioretention facilities are easily adapted to serve multiple purposes. The loamy sand soil mix will support turf or a plant palette suitable to the location and a well-drained soil.

Example landscape treatments:

- Lawn with sloped transition to adjacent landscaping.
- Swale in setback area
- Swale in parking median
- Lawn with hardscaped edge treatment
- Decorative garden with formal or informal plantings
- Traffic island with low-maintenance landscaping
- Raised planter with seating
- Bioretention on a terraced slope



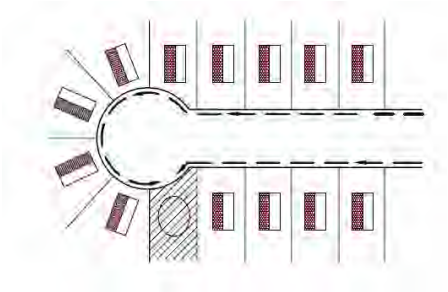
Bioretention facility configured as a recessed decorative lawn with hardscaped edge.



Bioretention facility configured and planted as a lawn/ play area.

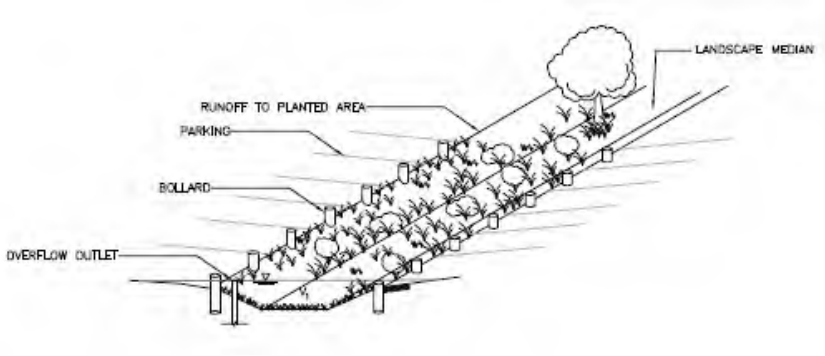
Residential subdivisions. Some subdivisions are designed to drain roofs and driveways to the streets (in the conventional manner) and then drain the streets to bioretention areas, with one bioretention area for each 1 to 6 lots, depending on subdivision layout and topography.

If allowed by the local jurisdiction, bioretention areas can be placed on a separate, dedicated parcel with joint ownership.



Bioretention facility receiving drainage
from individual lots and the street in
a residential subdivision.

Sloped sites. Bioretention facilities must be constructed as a basin, or series of basins, with the circumference of each basin set level. It may be necessary to add curbs or low retaining walls.



Bioretention facility configured as a parking median.
Note use of bollards in place of curbs, eliminating the need for curb cuts.

Design Checklist for Bioretention

- ❒ Volume or depth of surface reservoir meets or exceeds minimum.
- ❒ 18" depth "loamy sand" soil mix with minimum long-term percolation rate of 5"/hour.
- ❒ Area of soil mix meets or exceeds minimum.
- ❒ Perforated pipe underdrain bedded in "Class 2 perm" with connection and sufficient head to storm drain or discharge point (except in "A" or "B" soils).
- ❒ No filter fabric.
- ❒ Underdrain has a clean-out port consisting of a vertical, rigid, non-perforated PVC pipe, with a minimum diameter of 6 inches and a watertight cap.
- ❒ Location and footprint of facility are shown on site plan and landscaping plan.
- ❒ Bioretention area is designed as a basin (level edges) or a series of basins, and grading plan is consistent with these elevations. If facility is designed as a swale, check dams are set so the lip of each dam is at least as high as the toe of the next upstream dam.
- ❒ Inlets are 12" wide, have 4"-6" reveal and an apron or other provision to prevent blockage when vegetation grows in, and energy dissipation as needed.
- ❒ Overflow connected to a downstream storm drain or approved discharge point.
- ❒ Emergency spillage will be safely conveyed overland.
- ❒ Plantings are suitable to the climate and a well-drained soil.
- ❒ Irrigation system with connection to water supply.
- ❒ Vaults, utility boxes, and light standards are located outside the minimum soil mix surface area.
- ❒ When excavating, avoid smearing of the soils on bottom and side slopes. Minimize compaction of native soils and "rip" soils if clayey and/or compacted. Protect the area from construction site runoff.

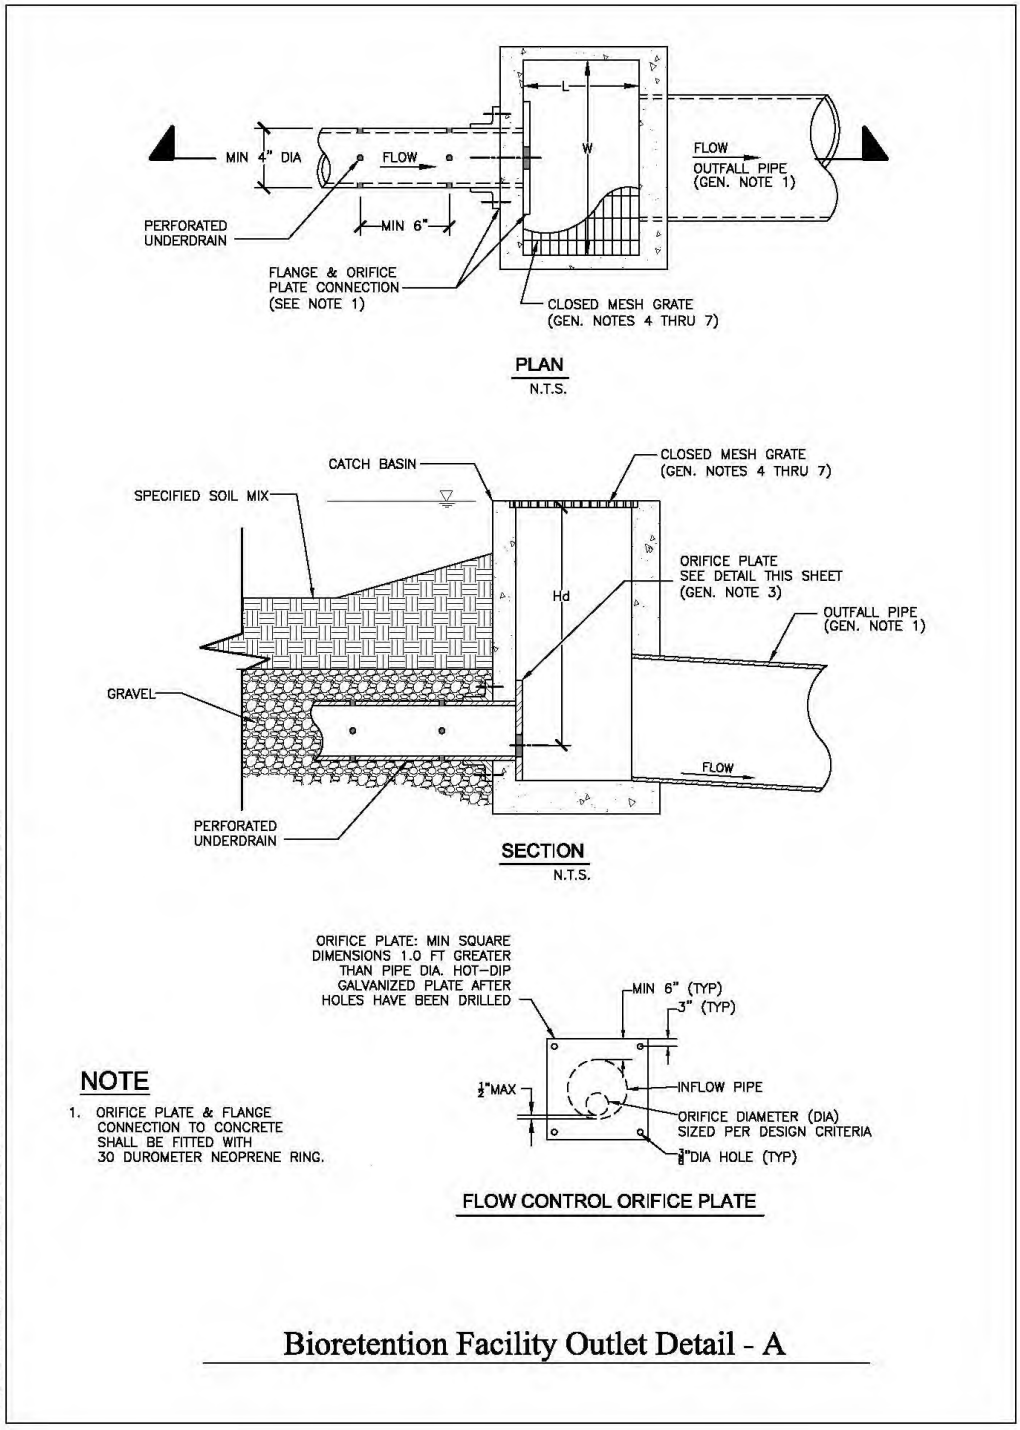
NOTE

1. SURFACE AREA LIMIT DETERMINED BY EXTENT OF SPECIFIED PLANTING MIX, WHICH IS GOVERNED BY THE OUTLET SPILL ELEVATION. FOR REQUIRED SURFACE AREA REFER TO THE FACTORS AND EQUATIONS IN THE STORMWATER C.3 GUIDEBOOK.
2. V_2 STORAGE ACCOMPLISHED WITH INFILTRATION ARCHES, PERFORATED PIPES, CLASS 2 PERM OR OTHER AT THE DESIGNERS DISCRETION.

Bioretention Facility



Bioretention Facility Outlet Detail - A

Flow-through Planter

Portland 2004 Stormwater Manual

Best Uses

- Management of roof runoff
- Next to buildings
- Dense urban areas
- Where infiltration is not desired

Advantages

- Can be used next to structures
- Versatile
- Can be any shape
- Low maintenance

Limitations

- Can be used for flow-control only on sites with "C" and "D" soils
- Requires underdrain
- Requires 3-4 feet of head

Flow-through planters treat and detain runoff without allowing seepage into the underlying soil. They can be used next to buildings and on slopes where stability might be affected by adding soil moisture.

Flow-through planters typically receive runoff via downspouts leading from the roofs of adjacent buildings. However, they can also be set in-ground and receive sheet flow from adjacent paved areas.

Pollutants are removed as runoff passes through the soil layer and is collected in an underlying layer of gravel or drain rock. A perforated-pipe underdrain is typically connected to a storm drain or other discharge point. An overflow inlet conveys flows which exceed the capacity of the planter.

► CRITERIA

Treatment only. For development projects subject only to runoff treatment requirements, the following criteria apply:

Parameter	Criterion
Soil mix depth	18 inches minimum
Soil mix minimum percolation rate	5 inches per hour minimum sustained (10 inches per hour initial rate recommended)

Parameter	Criterion
Soil mix surface area	0.04 times tributary impervious area (or equivalent)
Surface reservoir depth	6" minimum; may be sloped to 4" where adjoining walkways.
Underdrain	Typically used. Perforated pipe embedded in gravel ("Class 2 permeable" recommended), connected to storm drain or other accepted discharge point.

► DETAILS

Configuration. The planter must be level. To avoid standing water in the subsurface layer, set the perforated pipe underdrain and orifice as nearly flush with the planter bottom as possible.

Inlets. Protect plantings from high-velocity flows by adding rocks or other energy-dissipating structures at downspouts and other inlets.

Soil mix. The required soil mix is similar to a loamy sand. It must maintain a minimum percolation rate of 5" per hour throughout the life of the facility, and it must be suitable for maintaining plant life. Typically, on-site soils will not be suitable due to clay content.

Gravel storage and drainage layer. "Class 2 permeable," Caltrans specification 68-1.025, is recommended. Open-graded crushed rock, washed, may be used, but requires 4"-6" of washed pea gravel be substituted at the top of the crushed rock layer. **Do not use filter fabric** to separate the soil mix from the gravel drainage layer.

Emergency overflow. The planter design and installation should anticipate extreme events and potential clogging of the overflow and route emergency overflows safely.

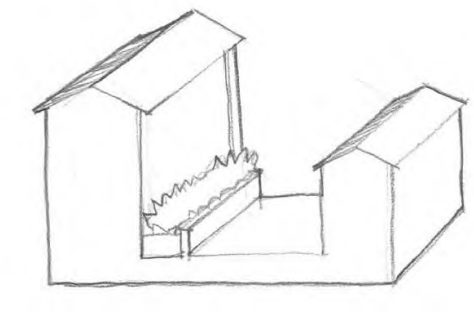
► APPLICATIONS

Adjacent to buildings. Flow-through planters may be located adjacent to buildings, where the planter vegetation can soften the visual effect of the building wall. A setback with a raised planter box may be appropriate even in some neo-traditional pedestrian-oriented urban streetscapes.

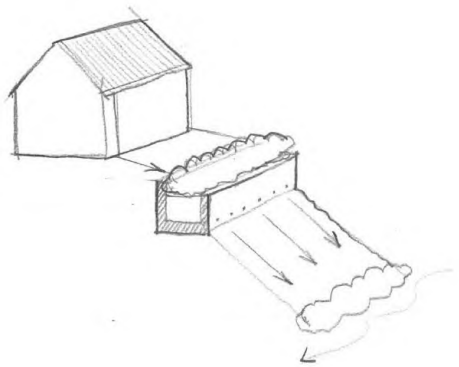
At plaza level. Flow-through planters have been successfully incorporated into podium-style developments, with the planters placed on the plaza level and receiving runoff from the tower roofs above. Runoff from the plaza level is typically managed separately by additional flow-through planters or bioretention facilities located at street level.

Steep slopes. Flow-through planters provide a means to detain and treat runoff on slopes that cannot accept infiltration from a bioretention facility. The planter can be built into the slope similar to a retaining wall. The design should consider the need to access the planter for periodic

maintenance. Flows from the planter underdrain and overflow must be directed in accordance with local requirements. It is sometimes possible to disperse these flows to the downgradient hillside.



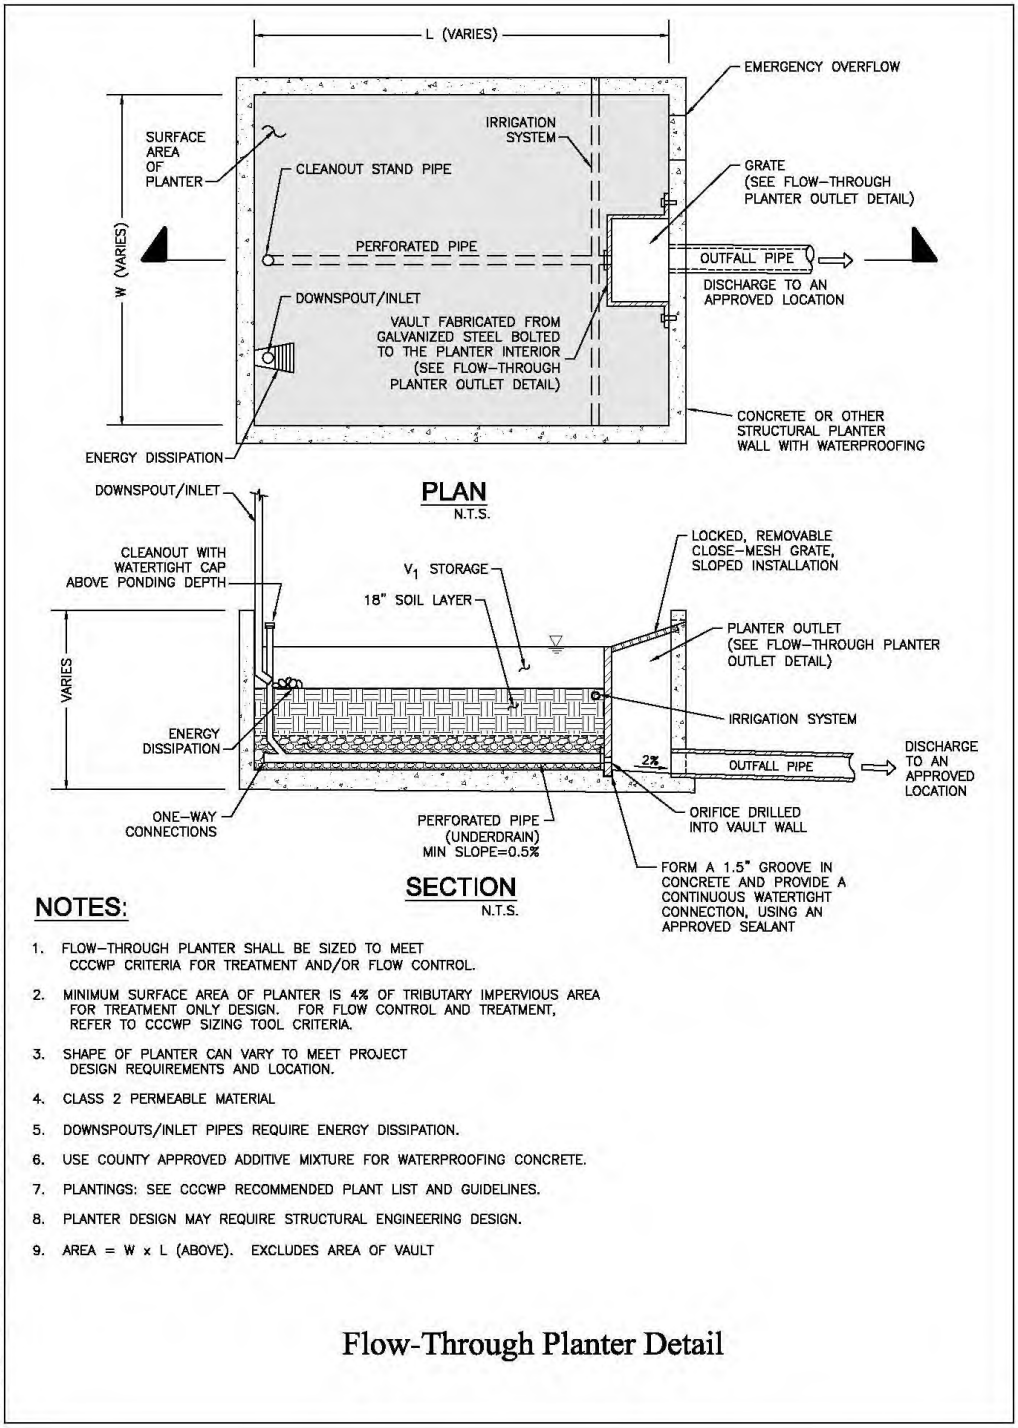
Flow-through planter on the plaza level of a podium-style development.



Flow-through planter built into a hillside. Flows from the underdrain and overflow must be directed in accordance with local requirements.

Design Checklist for Flow-through Planter

- ❒ Reservoir depth is 4-6" minimum.
- ❒ 18" depth "loamy sand" soil mix with minimum long-term infiltration rate of 5"/hour.
- ❒ Area of soil mix meets or exceeds minimum.
- ❒ "Class 2 perm" drainage layer.
- ❒ No filter fabric.
- ❒ Perforated pipe underdrain with outlet located flush or nearly flush with planter bottom. Connection with sufficient head to storm drain or discharge point.
- ❒ Underdrain has a clean-out port consisting of a vertical, rigid, non-perforated PVC pipe, with a minimum diameter of 6 inches and a watertight cap.
- ❒ Overflow connected to a downstream storm drain or approved discharge point.
- ❒ Location and footprint of facility are shown on site plan and landscaping plan.
- ❒ Planter is set level.
- ❒ Emergency spillage will be safely conveyed overland.
- ❒ Plantings are suitable to the climate and a well-drained soil.
- ❒ Irrigation system with connection to water supply.



NOTES:

1. FLOW-THROUGH PLANTER SHALL BE SIZED TO MEET CCCWP CRITERIA FOR TREATMENT AND/OR FLOW CONTROL.
2. MINIMUM SURFACE AREA OF PLANTER IS 4% OF TRIBUTARY IMPERVIOUS AREA FOR TREATMENT ONLY DESIGN. FOR FLOW CONTROL AND TREATMENT, REFER TO CCCWP SIZING TOOL CRITERIA.
3. SHAPE OF PLANTER CAN VARY TO MEET PROJECT DESIGN REQUIREMENTS AND LOCATION.
4. CLASS 2 PERMEABLE MATERIAL
5. DOWNSPOUTS/INLET PIPES REQUIRE ENERGY DISSIPATION.
6. USE COUNTY APPROVED ADDITIVE MIXTURE FOR WATERPROOFING CONCRETE.
7. PLANTINGS: SEE CCCWP RECOMMENDED PLANT LIST AND GUIDELINES.
8. PLANTER DESIGN MAY REQUIRE STRUCTURAL ENGINEERING DESIGN.
9. AREA = W x L (ABOVE). EXCLUDES AREA OF VAULT

Dry Wells and Infiltration Basins

Best Uses

- Alternative to bioretention in areas with permeable soils

Advantages

- Compact footprint
- Can be installed in paved areas

Limitations

- Can be used only on sites with "A" and "B" soils
- Requires minimum of 10' from bottom of facility to seasonal high groundwater
- Not suitable for drainage from some industrial areas or arterial roads
- Must be maintained to prevent clogging.

The typical dry well is a prefabricated structure, such as an open-bottomed vault or box, placed in an excavation or boring. The vault may be empty, which provides maximum space efficiency, or may be filled in rock.

An infiltration basin has the same functional components—a volume to store runoff and sufficient area to infiltrate that volume into the native soil—but is open rather than covered.

► CRITERIA

Dry wells and infiltration basins must be designed with the minimum volume calculated by Equation 4-8 using a unit volume based on the County of San Diego's 85th Percentile Isopluvial Map.

Consult with the local jurisdiction engineer regarding the need to verify soil permeability and other site conditions are suitable for dry wells and infiltration basins. Some proposed criteria are on Page 5-12 of Caltrans' 2004 *BMP Retrofit Pilot Study Final Report* (CTSW-RT-01-050).

The infiltration rate and infiltrative area must be sufficient to drain a full facility within 72 hours.

► DETAILS

Dry wells should be sited to allow for the potential future need for removal and replacement.

In locations where native soils are coarser than a medium sand, the area directly beneath the facility should be over-excavated by two feet and backfilled with sand as a groundwater protection measure.

Design Checklist for Dry Well

- ❒ Volume and infiltrative area meet or exceed minimum.
- ❒ Overflow connected to a downstream storm drain or approved discharge point.
- ❒ Emergency spillage will be safely conveyed overland.
- ❒ Depth from bottom of the facility to seasonally high groundwater elevation is ≥10'.
- ❒ Areas tributary to the facility do not include automotive repair shops; car washes; fleet storage areas (Bus, truck, etc.); nurseries, or other uses that may present an exceptional threat to groundwater quality.
- ❒ Underlying soils are in Hydrologic Soil Group A or B. Infiltration rate is sufficient to ensure a full basin will drain completely within 72 hours. Soil infiltration rate has been confirmed.
- ❒ Set back from structures 10' or as recommended by structural or geotechnical engineer

This page intentionally left blank.

Cistern with Bioretention Facility

A cistern in series with a bioretention facility can meet treatment requirements where space is limited. In this configuration, the cistern is equipped with a flow-control orifice and the bioretention facility is sized to treat a trickle outflow from the cistern.

Best Uses

- In series with a bioretention facility to meet treatment requirement in limited space.
- Management of roof runoff
- Dense urban areas

Advantages

- Storage volume can be in any configuration

Limitations

- Somewhat complex to design, build, and operate
- Requires head for both cistern and bioretention facility

► CRITERIA

Cistern. The cistern must detain the volume calculated by Equation 4-8 and must include an orifice or other device designed for a 24-hour drawdown time.

Bioretention facility. See the design sheet for bioretention facilities. The area of the bioretention facility must be sized to treat the maximum discharge flow, assuming a percolation rate of 5" per hour through the engineered soil.

Use with sand filter. A cistern in series with a sand filter can meet treatment requirements. See the discussion of treatment facility selection in Chapter 2 and the design guidance for sand filters in Chapter 4.

► DETAILS

Flow-control orifice. The cistern must be equipped with an orifice plate or other device to limit flow to the bioretention area.

Preventing mosquito harborage. Cisterns should be designed to drain completely, leaving no standing water. Drains should be located flush with the bottom of the cistern. Alternatively—or in addition—all entry and exit points, should be provided with traps or sealed or screened to prevent mosquito entry. Note mosquitoes can enter through openings 1/16" or larger and will fly for many feet through pipes as small as ¼".

Exclude debris. Provide leaf guards and/or screens to prevent debris from accumulating in the cistern.

Ensure access for maintenance. Design the cistern to allow for cleanout. Avoid creating the need for maintenance workers to enter a confined space. Ensure the outlet orifice can be easily accessed for cleaning and maintenance.

► APPLICATIONS

Shallow ponding on a flat roof. The "cistern" storage volume can be designed in any configuration, including simply storing rainfall on the roof where it falls and draining it away slowly. See the County of San Diego's 85th percentile isopluvial diagrams for required average depths.

Cistern attached to a building and draining to a planter. This arrangement allows a planter box to be constructed with a smaller area.

Vault with pumped discharge to bioretention facility. In this arrangement, runoff from a parking lot and/or building roofs can be captured and detained underground and then pumped to a bioretention facility on the surface. Alternatively, treatment can be accomplished with a sand filter. See the discussion of selection of stormwater treatment facilities in Chapter 2.

Water harvesting or graywater reuse. It may be possible to create a site-specific design that uses cisterns to achieve stormwater flow control, stormwater treatment, and rainwater reuse for irrigation or indoor uses (**water harvesting**). Facilities must meet criteria for capturing and treating the volume specified by Equation 4-8. This volume must be allowed to empty within 24 hours so runoff from additional storms, which may follow, is also captured and treated. Additional volume may be required if the system also stores runoff for longer periods for reuse. Indoor uses of non-potable water may be restricted or prohibited. Check with municipal staff.

Design Checklist for Cistern

- ❒ Volume meets or exceeds minimum.
- ❒ Outlet with orifice or other flow-control device restricts flow and is designed to provide a 24-hour drawdown time.
- ❒ Outlet is piped to a bioretention facility designed to treat the maximum discharge from the cistern orifice.
- ❒ Cistern is designed to drain completely and/or sealed to prevent mosquito harborage.
- ❒ Design provides for exclusion of debris and accessibility for maintenance.
- ❒ Overflow connected to a downstream storm drain or approved discharge point.
- ❒ Emergency spillage will be safely conveyed overland.

Chapter 5

Operation & Maintenance of Stormwater Facilities

How to prepare a customized Stormwater Maintenance Plan for the treatment BMPs on your site.

The stormwater NPDES Permit requires each Copermittee to verify all treatment and flow-control facilities are adequately maintained. Facilities you install as part of your project will be verified for effectiveness and proper performance. The City also verifies the ongoing function of stormwater management features that are not treatment or flow control facilities, such as permeable pavements and limitations on impervious area.

Operation and maintenance of stormwater facilities is a six-stage process:

1. Determine **who will own** the facility and be responsible for the maintenance of treatment facilities. Identify the means by which ongoing maintenance will be assured (for example, a maintenance agreement that runs with the land).

2. Identify typical maintenance requirements, and allow for these requirements in your project planning and preliminary design.

3. Prepare a **maintenance plan** for the site incorporating detailed requirements for **each treatment and flow-control facility**.

4. **Maintain** the facilities from the time they are constructed until ownership and maintenance responsibility is formally transferred.

5. **Formally transfer** operation and maintenance **responsibility** to the site owner or occupant. A warranty, secured by a bond, or other financial instrument, may be required to secure against lack of performance due to flaws in design or construction.

6. Maintain the facilities in perpetuity and comply with the City's self-inspection, reporting, and verification requirements.

See the schedule for these stages in Table 5-1.

Stage 1: Ownership and Responsibility

You must specify a means to **ensure maintenance** of treatment and flow-control facilities **in perpetuity.**

Depending on the intended use of your site, the City may require one or more of the following:

- Execution of a maintenance agreement that "runs with the land."
- Creation of a homeowners association (HOA) and execution of an agreement by the HOA to maintain the facilities as well as an annual inspection fee.
- Formation of a new community facilities district or other special district, or addition of the properties to an existing special district.
- Dedication of fee title or easement transferring ownership of the facility (and the land under it) to the municipality.

Ownership and maintenance responsibility for treatment and flow-control facilities should be discussed at the **beginning of project planning**, typically at the pre-application meeting for planning and zoning review. Experience has shown provisions to finance and implement maintenance of treatment and flow-control facilities can be a major stumbling block to project approval, particularly for **small residential subdivisions**. (See "New Subdivisions" in Chapter 1.)

► PRIVATE OWNERSHIP AND MAINTENANCE

The City requires that a maintenance agreement be executed.

TABLE 5-1. SCHEDULE for planning operation and maintenance of stormwater treatment BMPs

Stage	*Description*	*Schedule*
1	Determine facility ownership and maintenance responsibility	Discuss with planning staff at pre-application meeting
2	Identify typical maintenance requirements	In initial submittal, coordinate with planning & zoning application
3	Develop detailed operation and maintenance plan	As required by the City in the WQTR
4	Interim operation and maintenance of facilities	During and following construction including warranty period
5	Formal transfer of operation & maintenance responsibility	On sale and transfer of property or permanent occupancy
6	Ongoing maintenance and compliance with inspection & reporting requirements	In perpetuity

Typically, these agreements provide that the City may collect a management and/or inspection fee established by a standard fee schedule. In addition, the agreement may provide that, if the property owner fails to maintain the stormwater facility, the municipality may enter the property, restore the stormwater facility to good working order and obtain reimbursement, including administrative costs, from the property owner. To augment and enforce these requirements, some municipalities have established Community Facilities Districts (Mello-Roos) to cover the costs of inspections and, if necessary, maintenance and repair of individual facilities.

► TRANSFER TO PUBLIC OWNERSHIP

The City may choose to have a treatment and flow-control facility deeded to the public in fee or as an easement and maintain the facility as part of the municipal storm drain system. The municipality may recoup the costs of maintenance through a special tax, assessment district, or similar mechanism.

Even if the facility is to be conveyed to the municipality after construction is complete, it is still the responsibility of the builder to identify general operation and maintenance requirements, prepare a detailed operation and maintenance plan, and to maintain the facility until that responsibility is formally transferred.

Stage 2: General Maintenance Requirements

Include in your Project Submittal a general description of anticipated facility maintenance requirements. This will help ensure that:

- Ongoing costs of maintenance have been considered in your facility selection and design.
- Site and landscaping plans provide for access for inspections and by maintenance equipment.
- Landscaping plans incorporate irrigation requirements for facility plantings.
- Initial maintenance and replacement of facility plantings is incorporated into landscaping contracts and guarantees.

Fact sheets available on the Project Clean Water web page describe general maintenance requirements for the types of stormwater facilities featured in the LID Design Guide (Chapter 4). You can use this information to specify general maintenance requirements in your Project Submittal.

Maintenance fact sheets for conventional stormwater facilities are available in the California Stormwater BMP Handbooks.

Stage 3: Detailed Maintenance Plan

Prepare a detailed maintenance plan and submit to the City with the initial Project Submittal. Additionally, the City requires that the detailed maintenance plan incorporate solutions to any problems or changes that occurred during project construction.

Your detailed maintenance plan should be kept on-site for use by maintenance personnel and during site inspections. It is also recommended that a copy of your initial Project Submittal be kept onsite as a reference.

► YOUR DETAILED MAINTENANCE PLAN: STEP BY STEP

The following step-by-step guidance will help you prepare your detailed maintenance plan.

Preparation of the plan will require familiarity with your stormwater facilities as they have been or will be constructed and a fair amount of "thinking through" plans for their operation and maintenance.

► STEP 1: DESIGNATE RESPONSIBLE INDIVIDUALS

To begin creating your detailed maintenance plan, designate and identify:

- The individual who will have direct responsibility for the maintenance of stormwater controls. This individual should be the designated contact with City inspectors and should sign self-inspection reports and any correspondence with the municipality regarding verification inspections.
- Employees or contractors who will report to the designated contact and are responsible for carrying out BMP operation and maintenance.
- The corporate officer authorized to negotiate and execute any contracts that might be necessary for future changes to operation and maintenance or to implement remedial measures if problems occur.
- Your designated respondent to problems, such as clogged drains or broken irrigation mains, that would require immediate response should they occur during off-hours.

Updated contact information must be provided to the City immediately whenever a property is sold and whenever designated individuals or contractors change.

Draw or sketch an **organization chart** to show the relationships of authority and responsibility between the individuals responsible for maintenance. This need not be elaborate, particularly for smaller organizations.

Describe how **funding for BMP operation and maintenance** will be assured, including sources of funds, budget category for expenditures, process for establishing the annual maintenance budget, and process for obtaining authority should unexpected expenditures for major corrective maintenance be required.

Describe how your organization will accommodate initial **training** of staff or contractors regarding the purpose, mode of operation, and maintenance requirements for the stormwater facilities on your site. Also, describe how your organization will ensure ongoing training as needed and in response to staff changes.

► STEP 2: SUMMARIZE DRAINAGE AND BMPS

Incorporate the following information from your Project Submittal into your maintenance plan:

- Figures delineating and designating pervious and impervious areas.
- Figures showing locations of stormwater facilities on the site.
- Tables of pervious and impervious areas served by each facility.

Review the Project Submittal narrative, if any, that describes each facility and its tributary drainage area and update the text to incorporate any changes that may have occurred during planning and zoning review, building permit review, or construction. Incorporate the updated text into your maintenance plan.

► STEP 3: DOCUMENT FACILITIES "AS BUILT"

Include the following information from final construction drawings:

- Plans, elevations, and details of all facilities. Annotate if necessary with designations used in the initial Project Submittal.
- Design information or calculations submitted in the detailed design phase (i.e., not included in the initial Project Submittal.)
- Specifications of construction for facilities, including sand or soil, compaction, pipe materials and bedding.

In the maintenance plan, note field changes to design drawings, including changes to any of the following:

- Location and layouts of inflow piping, flow splitter boxes, and piping to off-site discharge
- Depths and layering of soil, sand, or gravel
- Placement of filter fabric or geotextiles
- Changes or substitutions in soil or other materials.
- Natural soils encountered (e.g., sand or clay lenses)

► STEP 4: PREPARE MAINTENANCE PLANS FOR EACH FACILITY

Prepare a maintenance plan, schedule, and inspection checklists (routine, annual, and after major storms) for each facility. Plans and schedules for two or more similar facilities on the same site may be combined.

Use the following resources to prepare your customized maintenance plan, schedule, and checklists.

- Specific information noted in Steps 2 and 3, above.
- Other input from the facility designer, municipal staff, or other sources.
- Operation and Maintenance Fact Sheets (available on the Project Clean Water website www.projectcleanwater.org).

Note any particular characteristics or circumstances that could require attention in the future, and include any troubleshooting advice.

Also include manufacturer's data, operating manuals, and maintenance requirements for any:

- Pumps or other mechanical equipment.
- Proprietary devices used as BMPs.

Manufacturers' publications should be referenced in the text (including models and serial numbers where available). Copies of the manufacturers' publications should be included as an attachment in the back of your maintenance plan or as a separate document.

► STEP 5: COMPILE MAINTENANCE PLAN

The following general outline provides guidance.

I. Inspection and Maintenance Log

II. Updates, Revisions and Errata

III. Introduction

A. Narrative overview describing the site; drainage areas, routing, and discharge points; and treatment facilities.

IV. Responsibility for Maintenance

A. General

(1) Name and contact information for responsible individual(s).

(2) Organization chart or charts showing organization of the maintenance function and location within the overall organization.

(3) Reference to Operation and Maintenance Agreement (if any). A copy of the agreement should be attached.

(4) Maintenance Funding

(1) Sources of funds for maintenance

(2) Budget category or line item

(3) Description of procedure and process for ensuring adequate funding for maintenance

B. Staff Training Program

C. Records

D. Safety

V. Summary of Drainage Areas and Stormwater Facilities

A. Drainage Areas

(1) Drawings showing pervious and impervious areas (copied or adapted from initial Project Submittal).

(2) Designation and description of each drainage area and how flow is routed to the corresponding facility.

B. Treatment and Flow-Control Facilities

(1) Drawings showing location and type of each facility

(2) General description of each facility (Consider a table if more than two facilities)

(1) Area drained and routing of discharge.

(2) Facility type and size

VI. Facility Documentation

A. "As-built" drawings of each facility (design drawings in the draft Plan)

B. Manufacturer's data, manuals, and maintenance requirements for pumps, mechanical or electrical equipment, and proprietary facilities (include a "placeholder" in the draft plan for information not yet available).

C. Specific operation and maintenance concerns and troubleshooting

VII. Maintenance Schedule or Matrix

A. Maintenance Schedule for each facility with specific requirements for:

(1) Routine inspection and maintenance

(2) Annual inspection and maintenance

(3) Inspection and maintenance after major storms

B. Service Agreement Information

Assemble and make copies of your maintenance plan. One copy must be submitted to the City, and at least one copy kept on-site. Here are some suggestions for formatting the maintenance plan:

- Format plans to 8½" x 11" to facilitate duplication, filing, and handling.
- Include the revision date in the footer on each page.
- Scan graphics and incorporate with text into a single electronic file. Keep the electronic file backed-up so that copies of the maintenance plan can be made if the hard copy is lost or damaged.

► STEP 6: UPDATES

Your maintenance plan will be **a living document**.

Operation and maintenance personnel may change; mechanical equipment may be replaced, and additional maintenance procedures may be needed. Throughout these changes, the maintenance plan must be kept up-to-date.

Updates may be transmitted to the local municipality at any time. However, at a minimum, updates to the maintenance plan must accompany the annual inspection report.

Stage 4: Interim Maintenance

Applicants will typically be required to warranty stormwater facilities against lack of performance due to flaws in design or construction. The warranty may need to be secured by a bond or other financial instrument.

Stage 5: Transfer Responsibility

As part of the detailed maintenance plan, note the expected date when responsibility for operation and maintenance will be transferred. Notify the City when this transfer of responsibility takes place.

Stage 6: Operation & Maintenance Verification

The City implements an operation and maintenance verification program, including periodic site inspections.

Contact City staff to determine the frequency of inspections, whether self-inspections are allowed, and applicable fees, if any.

CONSTRUCTION SEASONAL REQUIREMENTS LETTER

DON HIGGINSON, Mayor
CARL KRUSE, Deputy Mayor
MERRILEE BOYACK, Councilmember
JIM CUNNINGHAM, Councilmember
BETTY REXFORD, Councilmember

CITY OF POWAY

September 1, 2009

**** EROSION CONTROL NOTICE ****

City Ordinance requires that the attached erosion/sediment control measures be implemented on all projects by the beginning of the wet season on October 1, 2009. These wet season erosion/sediment control measures are in addition to the basic measures required year-round. **Please contact your inspector as soon as possible to discuss your erosion/sediment control measures. Early coordination with your inspector is very important. Maintenance will be closely monitored.**

If you fail to implement adequate measures by October 1, 2009, the City may find it necessary to hire a contractor to do so at your expense. You are also expected to maintain these facilities, including cleanup of any off-site siltation, through the end of the wet season on April 30, 2010. These requirements are in place to protect public and private properties, and are secured by cash deposits and grading securities. The permittee shall be responsible for all fines assessed by any outside agencies.

Discharges of pollutants and sediment from your site are prohibited under City of Poway Ordinance No. 437, Ordinance No. 553, Ordinance No. 671, and your grading permit. They are also prohibited under State law (California Water Code), Federal law (Clean Water Act), and the statewide National Pollutant Discharge Elimination System (NPDES) General Construction Storm Water Permit. Violators are subject to enforcement action, including significant monetary penalties. **If your construction site is one acre or larger and you have not obtained coverage under the statewide NPDES General Construction Storm Water Permit, you should contact the California Regional Water Quality Control Board (CRWQCB) at (858) 467-2952 immediately.**

Sincerely,

DEVELOPMENT SERVICES DEPARTMENT

Malik Tamimi
Stormwater Program Administrator

5.1.1.1 SEASONAL SITE MANAGEMENT REQUIREMENTS

Construction sites are required to implement all minimum construction BMPs as necessary to prevent pollution discharges to the Maximum Extent Practicable regardless of the season. The City does, however, maintain different requirements for some erosion and sediment control BMPs between the wet and dry seasons as described below:

Dry Season (May 1st through September 30th)

- All exposed disturbed areas including building pads, unfinished roads, and slopes must have erosion prevention controls properly installed (slopes greater than 33.3% or 3:1 vertical vs. horizontal may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement, but all slopes must be covered before rough grade approval will be given).
- Adequate perimeter protection BMPs must be installed and maintained.
- Adequate sediment control BMPs must be installed and maintained.
- Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.
- At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and prevent sediment discharges must be stored on the site.
- An approved Weather-Triggered Action Plan must be prepared at the start of each project and updated in the event that a predicted storm event has a 50% chance of rain. The proponent must have the capacity to deploy the standby BMPs within 48 hours of the predicted storm event.
- All slopes must be equipped with erosion prevention BMPs as soon as slopes are completed for any portion of the site.
- The amount of cleared or graded areas left exposed at any given time is limited to 17 acres or to the alternate maximum area approved by the City in writing (see Section 5.4.3).

Wet Season (October 1st through April 30th)

All dry season requirements are required in addition to the following:

- Perimeter protection and sediment control BMPs must be upgraded if necessary to provide sufficient protection for storms.
- Adequate erosion prevention BMPs must be installed and established for all completed slopes prior to October 1 and maintained throughout the wet season. If a BMP fails, it must be repaired, improved or replaced with an acceptable alternate as soon as it is safe to do so.
- Standby erosion and sediment control BMPs must be able to protect all exposed soil areas. An incomplete disturbed area that is not being actively graded must be fully protected from erosion if left for 10 days or more.

Contractor's Name & Telephone #: _____

Property Owner & Telephone #: _____

Is this Project Greater than an Acre? ☐ Yes ☐ No ☐ N/A

If yes: Provide Record of Waste Discharge Identification Number (WDID#): _____

Does this Project have an NOI/SWPPP Available? ☐ Yes ☐ No ☐ N/A

Is Weather Triggered Action Plan Completed? ☐ Yes ☐ No ☐ N/A

Is Advanced Treatment Implemented Appropriately? ☐ Yes ☐ No ☐ N/A

Is Less than 17 Acres of Cleared or Graded Areas Left Exposed at Any Given Time? ☐ Yes ☐ No ☐ N/A

Is 125% of Materials to Install Standby BMPs Available? ☐ Yes ☐ No ☐ N/A

Are Routine Self-Inspections Being Conducted by Developer/Owner? ☐ Yes ☐ No ☐ N/A

Project Site is in What Watershed: _____

Nearest conveyances or water bodies: _____

BMP	Yes	No	N/A	Description	Effective Yes/No
Soil Stabilization and Erosion Prevention					
Preservation of existing vegetation					
Physical Stabilization: Hydraulic Mulch, Hydroseeding, Soil Binders, Straw Mulch					
Geotextiles, Plastic Covers, Erosion Prevention Blankets, Wood Mulching					
Site Drainage: Outlet Protection/Slope Drains					
Inlet/Outlet Protection					
Sediment Control/Containment					
Perimeter Protection: Silt Fencing, Gravel Bags, Fiber Rolls					
Storm Drain inlet protection: Sediment Trap, De-silting Basin, Gravel Bag Barrier					

Tracking Controls: Stabilized Entrance/Exit and Road Stabilization, Tire Wash, Street Sweeping					
BMP	**Yes**	**No**	**N/A**	**Description**	**Effective Yes/No**
Materials and Equipment Management					
Are materials and wastes stored in a manner that minimizes or eliminates the potential to discharge these materials to the storm drain system, is secondary containment used?					
Are material stockpiles protected: covered, contained with temporary perimeter, located away from non-storm water discharges?					
Are heavy equipment and vehicles parked in designated areas with permeable surface?					
Are appropriate spill response and containment measures kept on the site?					
Are wastes managed and stored properly (Solid, liquid, sanitary, concrete, hazardous)					
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?					
Non-Storm Water Management					
Is the site free of evidence of illegal connections and/or illicit discharges?					
Discharge Locations					
Are the discharge locations free of significant erosion or sediment transport?					
Other					
Are there any other potential storm water pollution issues or concerns? If yes, explain below.					
Was there any employee or subcontractor training on stormwater pollution prevention measures?					

III. VIOLATIONS

- ☐ No violations noted at time of inspection/investigation
- ☐ No violations; however, recommended corrective actions (see IV)
- ☐ Violation: Illegal Discharge/Illegal Connection/Improper BMPs Implementation

IV. RECOMMENDED CORRECTIVE ACTION

MUNICIPAL FACILITY BMP CHECKLISTS

Monthly Compliance and Maintenance Duties

Crosthwaite Material Handling Yard

Five divisions in the public works department currently use Crosthwaite Material Handling Yard. Drainage/Storm Water, Parks, Water, Wastewater, and Streets are the major users of the yard and are responsible for compliance maintenance, courtesy maintenance and upkeep.

In addition to regular duties, each month one division will be responsible for compliance inspection, compliance maintenance, up-keep, and documentation. Duties include:

- Vacuum all four inlet filters. Once a month
- Pressure wash batch plant and surrounding area (Vactor or graffiti trailer). Once a month
- Pick up trash and loose debris throughout yard. Once a week
- Load green waste dumpsters. Monday and Wednesday
- Load trash from K-rail to dumpsters. Twice a week
- Empty trash can outside lounge. Once a week
- Inspect and remove excessive debris from perimeter brow ditch. Once a month
- Sweep or blow off excessive debris from all concrete and asphalt surfaces. Once a week
- Inspect and replace rock bags, straw waddles and tarps. As needed
- Incidental compliance issues. As needed

This list with a job order shall be completed by the responsible division each month. If for any reason the list and job order can't be completed by the end of the month, the duties of Crosthwaite Material Handling yard shall remain with that division until the tasks are done. Failure to complete the duties jeopardizes the City's NPDES compliance and the harmonious use of Crosthwaite Material Handling Yard. If assistance is needed contact the Storm Water Supervisor, Public Works Manager, or the Utilities Manager. The storm water supervisor shall complete the compliance inspection and documentation each month.

Review Date:	**10/12/2009**
NOT Effective Date:	**10/10/2009**

Dear Permittee:

This letter is to inform you that we have approved the Notice of Termination (NOT) of Coverage under the Statewide Storm Water General Permit for WDID number as referenced above. Please keep this letter as proof of termination under the Statewide Storm Water General Permit. Should site conditions change such that coverage under the Storm Water General Permit is again necessary, you must submit a new Notice of Intent, site map, and appropriate fee.

Please note if there are applicable unpaid invoice(s) when the NOT is approved, all outstanding invoices are required to be paid in full. If you have any questions regarding fees, please contact the Fee Unit at (916) 341-5247.

If you have any further questions, please contact the California Regional Water Quality Control Board, San Diego Region at 858-467-2952.

Sincerely,

Chiara Clemente

B. FACILITY/SITE INFORMATION

Principal activity:_____

Assigned JURMP Classification: ☐ High ☐ Medium ☐ Low ☐ Unassigned

New JURMP Classification (if applicable)?_____

Is facility subject to CA Statewide General Industrial Permit? ☐ Mandatory ☐ Conditional ☐ No

If yes, has facility filed a Notice of Intent (NOI) to comply? ☐ Yes ☐ No WDID#_____

If no, does facility have a Notice of Non-Applicability (NONA/NEC)? ☐ Yes ☐ No

Does facility maintain SWPPP or BMP Plan? ☐ Yes ☐ No

Does facility have a storm water monitoring program? ☐ Yes ☐ No

C. INITIAL OBSERVATIONS

Nearest conveyances or water bodies: _____ Hydrologic Area _____ ____

Approximate distance to receiving water bodies: ☐ < 200 ft. ☐ 200 – 1,000 ft. ☐ > 1,000 ft.

Sensitivity of receiving waters: ☐ Sensitive (ESA, 303(d), or other) ☐ Non-sensitive

Discharge points: _____
_____

Discharge observed: ☐ Yes ☐ No

If yes, describe: _____

Estimated area covered by municipal facility: _____square feet

Estimated % impervious surface of this area: _____%

Exposed areas of intensive outdoor activity: _____

D. BMP ASSESSMENT

D.1 General

BMPs	N/A	Yes	No	Comments
Is the site free of excessive litter and debris?				
Are discharge locations free of excessive sediment and debris?				
Are parking lots, sidewalks and streets free of excessive sediment and debris?				
Is wash water from pressure washing/hosing managed appropriately?				
Are roof downspouts directed away from areas of potential pollutants?				
Are employees trained in storm water management, pollution prevention and good housekeeping measures?				
D.2 Landscaping				
Are adequate erosion prevention measures employed? (vegetation or physical stabilization)				
Are irrigation systems programmed to minimize over-watering and runoff?				
Are stockpiles of soil or landscape waste contained to prevent runoff transport?				
Are pesticides, herbicides, and fertilizers managed in accordance with the JURMP BMPs?				
D.3 Materials and Wastes				
Are adequate trash containers provided?				
Are adequate recycling containers provided?				
Is the trash/recycling area enclosed and free of litter and debris?				
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?				
Are outdoor material storage areas adequate (covered area with secondary containment)?				
Are outdoor storage containers properly labeled?				
Is there an accessible spill response kit?				
Are outdoor storage containers equipped with secondary containment?				
Is secondary containment free of spills and rainwater?				
Are loading and unloading areas free of spills and debris?				
D.4 Equipment and Vehicles				
Are exposed parking areas free of significant spills and leaks?				
Are heavy equipment and vehicles stored in garages or under canopies?				
Are vehicle maintenance activities conducted within contained areas (garage, canopy, work shop)?				
Are vehicle-fueling areas covered and are storm drain inlets in/around the fueling area protected from spills and leaks?				
Is vehicle washing performed in a contained area where runoff does not enter the MS4?				

D.5 Building Repair/Construction /Structural BMPs

BMPs	N/A	Yes	No	Comments
Are adequate erosion prevention measures employed throughout the site? (vegetation or physical stabilization)				
Are adequate sediment control BMPs employed throughout the site? (gravel bags, inlet filters etc.)				
Are impervious areas free of debris and spills from painting, scraping, and/or sandblasting activities?				
Are structural BMPs adequately maintained? (NA if no structural BMPs at facility)				
D.6 Non-Storm Water Management				
Is the site free of evidence of illicit connections and illegal discharges?				
Is the site free of evidence of unauthorized releases to storm drains?				
If not, have the appropriate authorities been notified?				
D.7 Other				
Are appropriate signs/stenciling present at the facility?				
Are there any other potential storm water pollution issues or concerns? If yes, explain below.				
Are all applicable activity-specific BMPs being implemented?				
Does this facility have a fire sprinkler system?				

D.8 BMP Summary/Additional Comments

E. RECOMMENDED CORRECTIVE ACTION

Is corrective action needed? ☐ Yes ☐ No

If **BMP-related** corrective action is required, describe below. If other corrective action, check the appropriate box in section G.

Owner/operator has been notified of recommended corrective actions both verbally and by: ☐ Hand Delivery ☐ Mail ☐ Fax

F. VIOLATIONS

☐ No violations have been noted at this time

☐ No violations have been noted, but recommend taking corrective action described in Section F.

☐ **Violation of the City's storm water ordinance:**

- ☐ Prohibited discharge(s) of pollutants to the storm drain system or to receiving waters
  Description_____
- ☐ Illicit connection(s) to the storm drain system
  Location_____
- ☐ Littering
- ☐ Improper Implementation of Required BMPs
- ☐ Failure to comply with the storm water monitoring requirements for high priority industrial facilities.

☐ **Failure to comply with the requirements of the State Industrial Storm Water General Permit.**

- ☐ In the future, under a new Industrial Permit which has not yet been adopted, this facility may be able to qualify for a No Exposure Certification (NEC) and exemption from Permit coverage.

☐ **Other Violation**_____

SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE:

☐ Implement the recommended corrective actions listed in Section F.

☐ File a Notice of Intent (NOI) with the State Water Resources Control Board to obtain coverage under the Industrial Permit - see Attachment 3 of the Industrial Permit (http://www.waterboards.ca.gov/stormwtr/industrial.html).

- ☐ For "Conditional" facilities only: if you implement all the recommended BMPs and eliminate outdoor exposure, contact the City to request a re-inspection. If it is determined that you qualify, NONA/NEC paperwork will be provided for you to complete, and you will not have to file an NOI.

☐ Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.

☐ Develop and implement a storm water monitoring program—see section B of the Industrial Permit for guidelines.

☐ Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC). Retain one copy of each onsite, and send additional copies to the City of Poway and the State Water Resources Control Board. (See attached instructions provided with the documents.)

Additional actions required:

G. ADDITIONAL RECOMMENDED CITY ACTIONS*

Is a follow-up inspection recommended for this business? ☐ **Yes** ☐ **No**

ASSESSMENT

Level of knowledge regarding stormwater issues:	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
Level of cleanliness, BMP implementation, orderliness of site:	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5

*Recommended City Actions listed at the time of inspection are subject to change based on later review by office staff.

CITY OF POWAY
DEVELOPMENT SERVICES DEPARTMENT

Temporary Use Permit

Date received: _____
APN: _____
File number: _____
Receipt number: _____
Fee: _____

Name of Business or activity: _____
Address: _____
Applicant's name: _____ Phone: _____
Address: _____
Property Owner's name: _____ Phone: _____
Address: _____
Zone: _____ Existing land use: _____
Proposed structure of activity area sq. footage: _____

ACTIVITY DESCRIPTION

Full description of proposed activity (please be specific):

Date of commencement (please allow 15 working days for City review for those projects not requiring City Council Action): _____
Date of completion: _____

SITE PLAN

Attach an 8-1/2" x 11" site plan that illustrates the proposed activity, and includes the location and description of structures and equipment, parking, vehicle access, signage, etc. To apply for approval of Special Event signs, the applicant shall submit a letter that describes the proposed sign by means of a sketch that includes the display dates, and also denotes the length, width, height and square feet of each proposed sign.

ACTION

☐ APPROVED by _____ Date _____
☐ DENIED by _____ Date _____
Reasons for denial

CONDITIONS OF APPROVAL

1. The site shall be developed in accordance with the approved site plan on file in the Planning Department, except as may otherwise by provided herein, prior to commencement of the activity.

2. The Building, Fire, and County Sheriff's Departments shall be contacted for approprate permits and inspections prior to the commencement of the activity.

3. Use of signs shall first be reviewed by the Planning Services Department for compliance with the sign ordinance prior to installation.

4. Approval of this activity shall not excuse compliance with all other sections of the Zoning Ordinance and all other applicable City ordinances presently in effect.

5. Date this approval shall become null and void:_____, 200_, On this date the site shall be restored to its original condition.

6. A vendor's license shall be obtained from the Customer Services Department for all temporary sales locations, including, but not limited to to Christmas tree lots and other holiday and special event sales.

7. No person shall discharge any material and or liquid into storm drains. For special events, storms drains shall be covered and or protected to the maximum extent practicable. Best Management Practices may be required to ensure that trash is contained and disposed of appropriately. Liquids shall be placed in secondary containment and covered prior to a rain event. Pet waste shall be collected and placed in trash cans.

8. Approval by the San Diego County Department of Environmental Health, Food, and Housing Divsion, shal be obtained prior to the sale of any food itmes. Evidence of such approval shall be available for inspection at the event.

OWNER CERTIFICATION

I, _____, certify that I am the owner of the property described herein. Further, I agree to permit the proposed activity to be conducted on said property for the length of time specified herein.

SIGNATURE_____ DATE _____

APPLICANT CERTIFICATION

I, _____, certify that I am the applicant for the activity described herein. Further, I acknowledge the filing of this permit application, certify that all of the information contained herein is true and accurate, and shall comply with the conditions of approval stated herein above.

SIGNATURE _____ DATE _____

BMP	Yes	No	N/A	Describe Concerns and Resolution
Site Conditions & Cleanup				
Temporary screens on catch basins and storm drain inlets installed?				
Temporary fencing or other BMPs to prevent windblown trash from entering adjacent water bodies and MS4 channels implemented?				
Proper management of trash and litter including temporary trash receptacles and staff assigned for immediate trash cleanup implemented?				
Catch basin cleaning following special event/prior to anticipated rain event?				
Street sweeping of roads, streets, highways, and parking facilities following the special event implemented?				
Site clean and free of debris?				
Storm drains clear of trash/debris and spills?				
Non-stormwater such as wash water contained (including secondary containment), collected, and disposed of properly?				
Site free of illegal discharge to storm drain/receiving waters (channels/creeks)?				
Nearby water bodies, MS4, and creeks free of event-related trash and debris?				

VIOLATIONS

☐ No violations noted at time of inspection/investigation
☐ No violations; however, recommended corrective actions and Follow-up Inspection
☐ Violation: Illegal Discharge/Illegal Connection/Improper BMPs Implementation

RECOMMENDED CORRECTIVE ACTION

Assigned SIC Code(s): _____ _____
Revised SIC Code(s): _____ _____

CA Statewide General Industrial Permit Compliance:

☐ **Mandatory**
- Notice of Intent (NOI) Filed? ☐ Yes ☐ No
- WDID#_____
- SWPPP or BMP Plan maintained? ☐ Yes ☐ No
- Monitoring programs conducted? ☐ Yes ☐ No

☐ **Conditional**
- Exterior exposure present? ☐ Yes* ☐ No
- * If yes, see mandatory requirements
- Notice of Non-Applicability (NONA/NEC) Filed? ☐ Yes ☐ No

☐ **N/A**

Threat to Water Quality (TTWQ):

☐ High ☐ Medium ☐ Low ☐ Unassigned Revised TTWQ: _____

Hydrologic Area _____ Nearest Water Body: _____

Distance to water bodies: ☐ < 200 ft. ☐ > 200 ft

Sensitivity of receiving waters: ☐ Sensitive (ESA, 303(d), or other) ☐ Non-sensitive

Size of facility: ☐ < 5 ac. ☐ > 5 ac. < 10 ac. ☐ > 10 ac.

Significant amount of exposed outdoor storage and/or activities? ☐ Yes ☐ No

Discharge points along perimeter: _____

General BMPs ☐ Yes ☐ No ☐ Not Applicable

- ☐ Litter
- ☐ Sediment & vegetative debris present
- ☐ Discharge locations blocked
- ☐ Downspouts directed into pollutants
- ☐ Improper exterior storage
- ☐ Wash water not captured or inappropriately disposed
- ☐ Evidence of illicit connections/illegal discharges
  - ☐ Appropriate authorities to be notified
- ☐ Other potential storm water pollution issues or concerns -see below

Comments/Recommended Corrective Action:

Landscaping ☐ Yes ☐ No ☐ Not Applicable

- ☐ Erosion control lacking
- ☐ Over-watering evident
- ☐ Stockpile inappropriately stored
- ☐ Fertilizer or pesticide inappropriately used

Comments/Recommended Corrective Action:

Materials & Waste ☐ Yes ☐ No ☐ Not Applicable

- ☐ Dumpster lids open
- ☐ Trash/recycling containers inadequate
- ☐ Litter & debris present in trash/recycling area
- ☐ Trash/recycling containers overflowing
- ☐ Secondary containment missing
- ☐ Spill response kit missing
- ☐ Secondary containment full or in disrepair
- ☐ Spills/ debris present in loading areas

Comments/Recommended Corrective Action:

- ☐ Please keep dumpster lids closed

Equipment & Vehicles ☐ Yes ☐ No ☐ Not Applicable

- ☐ Significant spills/leaks present
- ☐ Heavy equipment/vehicles storage exposed
- ☐ Vehicle maintenance activities conducted in exposed area
- ☐ Vehicle-fueling areas exposed
- ☐ Vehicle washing performed in an exposed area

Comments/Recommended Corrective Action:

Food Establishments ☐ Yes ☐ No ☐ Not Applicable

- ☐ Grease trap/interceptor improperly maintained
- ☐ Improper grease bin storage
- ☐ Improper oil disposal
- ☐ Improper wash water disposal
- ☐ Power washing without capturing wash water
- ☐ Improper floor mat cleaning

Comments/Recommended Corrective Action:

SWPPP Review ☐ Yes ☐ No ☐ Not Applicable

- ☐ Monitoring not conducted
- ☐ Monitoring results show ineffective BMPs

Comments/Recommended Corrective Action:

INDUSTRIAL AND COMMERCIAL EDUCATIONAL MATERIALS

What's the difference?

Sanitary Sewer vs. Storm Drain

The water that drains down a sink or toilet in a home or business flows to the sanitary sewer and is treated by the City of San Diego at a wastewater treatment plant.

The storm drain system, on the other hand, is designed to carry rainwater from City streets and driveways to prevent flooding. This water does not receive any treatment. It flows directly to creeks and rivers – terminating at the Pacific Ocean!

Unfortunately, as rainfall flows over the ground it picks up debris and pollutants and deposits them into our watersheds.

ONLY RAIN DOWN THE STORM DRAIN

Urban storm water runoff is the **largest contributor** to **watershed pollution** in San Diego County.

Your business is **required** to prevent urban runoff pollution by implementing **B**est **M**anagement **P**ractices (**BMPs**).

The City conducts inspections to ensure that BMPs are being used and water quality is protected.

Pollutants of Concern

As rainfall flows over the ground, it picks up a variety of pollutants and deposits them into our watersheds. The following pollutants are commonly transported in the storm drain system and have been found to degrade water quality.

- Sediments
- Fertilizers
- Metals
- Detergents
- Pesticides
- Organic Compounds (solvents)
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

The following **B**est **M**anagement **P**ractices (**BMPs**) are required to be used at all industrial and commercial businesses, where applicable, to reduce urban runoff pollution in our streams and waterways. To do your part in protecting our water quality, please implement the following BMPs, where applicable or noted by the City inspector.

General

- ❑ Regularly sweep around site, **do not use a hose.** Collect and dispose of debris in trash.
- ❑ Train all employees to consider urban runoff pollution before performing any outdoor activities.
- ❑ Never dispose of wash water to the storm drain system. Properly dispose of it in the sanitary sewer (sink or toilet).
- ❑ Report any illegal dumping into the storm drain system by calling (858) 668-4668 during business hours.

Landscaping

- ❑ Only irrigate during early morning or late evening to avoid evaporation.
- ❑ Aim sprinklers to avoid watering other areas.
- ❑ Time sprinklers to avoid over-watering and causing runoff.
- ❑ Minimize use of pesticides, herbicides, and fertilizer, which are harmful to animals downstream.
- ❑ Hand pull weeds instead of using herbicides.
- ❑ Do not use pesticides that eliminate beneficial insects (i.e., Integrated Pest Management).

Outdoor Material Storage

- ❑ Store all potential pollutants indoors or under a covered area not exposed to rain.
- ❑ Clean up all spills immediately using absorbent materials. Properly dispose of used absorbents.
- ❑ Keep lids on all outdoor storage containers.
- ❑ Label all material storage containers.
- ❑ Regularly sweep and clean all outdoor storage areas to remove any sediment (dirt) and debris.

Waste Management

- ❑ Keep the ground around all outdoor garbage and dumpster areas free of trash, sediment, and debris.
- ❑ Keep lids on dumpsters and trash cans whenever possible.
- ❑ Fix any leaks in garbage cans or dumpsters.
- ❑ Clean up all spills immediately.

Vehicle /Equipment Maintenance

- ❑ Perform all vehicle maintenance indoors when possible.
- ❑ Use drip-pans to collect fluids from leaky vehicles.
- ❑ Clean up spills immediately using absorbent materials. Properly dispose of used absorbents.

Vehicle /Equipment Washing

- ❑ Wash vehicles at a commercial car wash when possible. (Commercial car washes recycle water and drain to the sanitary sewer, not to the storm drain.)
- ❑ Wash vehicles over a pervious (absorbent) surface such as dirt, gravel, or grass to prevent runoff.
- ❑ Minimize the use of soaps and water while washing.
- ❑ Drain excess wash water to the sanitary sewer (sink or toilet), not to storm drains.

General Cleaning

- ❑ Perform washing over a pervious surface or where water drains to sanitary sewer.
- ❑ Minimize use of cleaning agents.
- ❑ Dispose of used wash water to sanitary sewer, not to storm drains.

Construction

- ❑ Minimize the amount of exposed soils to prevent erosion from wind or water.
- ❑ Cover construction material stockpiles with tarps or plastic liners to prevent sediment from blowing or washing away.
- ❑ Use gravel bags around site perimeter to capture any sediment (dirt) washed away in runoff.
- ❑ Protect nearby storm drains with gravel bags.
- ❑ Regularly inspect and clean equipment, vehicles, and storage areas.
- ❑ Keep lids secured on all material storage containers.
- ❑ Store materials where not exposed to rain.

A Clean Environment is Important to All of Us!

In the City of Poway, storm drains flow directly into our creeks, lakes, and the ocean without treatment.

In recent years, sources of water pollution, like industrial wastes from factories have been greatly reduced. However, the majority of water pollution now occurs from things like cars leaking oil, wash water from restaurants, fertilizers from farms, lawns and gardens, failing septic tanks, residential car washing, and pet waste washing into the storm drains and into waterways and the ocean.

All these sources add up to a pollution problem! But each of us can do small things to help clean up our water too—and that adds up to a pollution solution!

The City of Poway is committed to improving water quality and reducing the amount of pollutants that enter our precious waterways.

A Word About "Biodegradable" Soaps

"Biodegradable" is a popular marketing term that can be misleading. Because a product is labeled as biodegradable doesn't mean that it is non-toxic. Some products are more toxic than others, but none are harmless to aquatic life. Soapy water entering the storm drain system can impact fish and other wildlife within hours.

ONLY RAIN DOWN THE STORM DRAIN!

This brochure is one of a series of pamphlets describing storm drain protection measures, which are available at the Development Services Department at City Hall, or online at www.ci.poway.ca.us.

Other pamphlets include:

- **Home Repair and Remodeling BMPs**
- **Restaurant BMPs**
- **Concrete & Mortar Project BMPs**
- **Horses & Livestock BMPs**
- **Mobile Auto Detailing BMPs**

Best Management Practices for POWER WASHING

Mobile and Surface Cleaning

What is Power Washing?

Power washing is any activity that uses a water pressure system, including steam cleaning, to clean vehicles, equipment, sidewalks, buildings, dumpsters, or other impervious surfaces. In addition to water, detergents, degreasers and other products may be used in commercial power washing.

What's the Problem with Power Washing?

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. **Wash water from power washing activities may contain significant quantities of oil, grease, chemicals, dirt, and detergents that could end up in our creeks, rivers, lakes, and the ocean.** Disposing of these materials into storm drains causes serious ecological problems—and is PROHIBITED by law.

Best Management Practices

Best Management Practices, or BMP's, are procedures that help to prevent pollutants from entering our storm drains. Each of us can do our part to keep storm water clean. Using BMP's adds up to a pollution solution!

Use Dry Clean-up Methods

- Instead of pressure washing, determine what alternative dry methods are available.
- Use mops, brooms, rags or wire brushes to clean pavement, buildings, and equipment as much as possible.
- Use vacuums or other machines to remove and collect loose debris before applying water.

Location, Location, Location!

- Prior to a washing, block all storm drains with an impervious barrier such as gravel bags or berms, or seal private storm drains with plugs or rubber mats. Make sure this practice does not flood the area or adversely affect vehicle or pedestrian traffic.
- **Never dispose of wash water into the street, storm drains, landscape drains, drainage ditches, or streams.**
- Wash vehicles and equipment on grassy or gravel areas so that the wash water can seep into the ground.
- **Create** a containment area with berms and tarps or take advantage of low ground to keep wash water contained.
- **Check** that the wash water is not leaking through and add more berms or barriers to contain the wash water.

Just Enough for the Job!

- Minimize water use by using high pressure, low volume nozzles.
- Use the minimal amount and least toxic detergents and degreasers you will need to complete the job. Try phosphate free detergents.
- Use a mop or rags to clean heavily soiled areas before power washing.

Only Rain Down the Storm Drain!

- Do not wash equipment or vehicles outdoors on saturated ground or on days when rain is probable.
- Pump or vacuum up <u>all</u> wash water in the contained area.
- With property owners permission, pump or pour the wash water to landscaped areas that will not run off to a storm drain; or drain it to the sanitary sewer through an interior building drain, sink, or private sewer clean-out. Discharges to the sewer **<u>should not</u>** contain hazardous materials, grease, grit, or any material that could clog piping.
- Sediments and other solids remaining on the ground should be swept or vacuumed up immediately so they don't wash into the storm drain system.

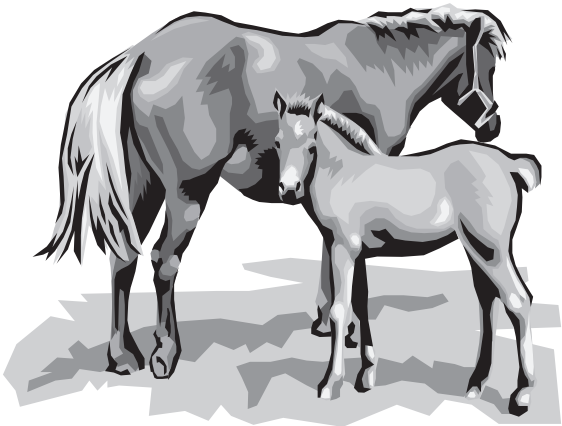
The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for Horses & Livestock



Storm Water and Horses & Livestock

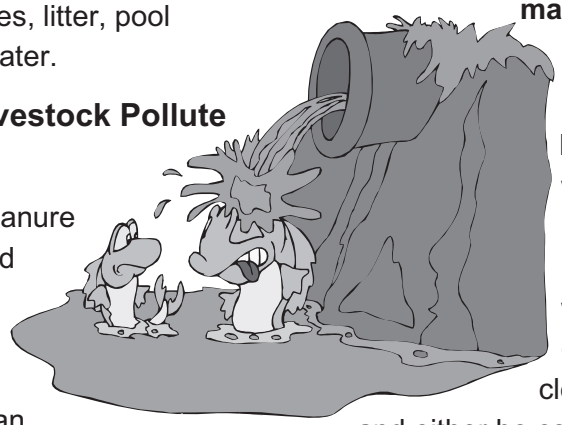
What is Stormwater Pollution?

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. However, this water is not filtered or treated and all the contaminants it contains eventually flow to our streams, lakes, and ocean where we swim and fish.

Once there, polluted runoff can harm wildlife and habitats. Horses and livestock wastes are among the many common storm water pollutants that can degrade water quality. Other examples include paint, oil and automotive fluids, construction debris, pesticides, litter, pool chemicals, and dirty wash water.

How do Horses and Livestock Pollute Stormwater?

During rainfall, uncovered manure and sediment can be washed from barns, pastures, and stables. These wastes end up flowing directly into streams, lakes, and the ocean where they can harm human health and the environment.



Stormwater runoff has been found to contain high concentrations of pathogens such as bacteria, parasites, and viruses.

When they wash into our recreational waters they can make people sick with sore throats, intestinal problems, rashes, nausea, and eye and ear infections.

Manure also contains nutrients, such as phosphorus and nitrogen, that fertilize aquatic algae. When these nutrients are too abundant they cause algae to grow very rapidly, and as a result, deplete oxygen in the water which kills fish and plant life.

Sediment is also harmful to our waters. In addition to causing flooding, sediment washed from pastures and livestock facilities can also harm aquatic life by clogging the gills of fish, blocking light transmission, lowering water temperatures, and preventing the production of oxygen by plants.

Poway Municipal Code section 13.09.080G has specific requirements for the management of manure and pet maintenance:

1. Manure deposited by horses and large animals within an enclosure or on uncovered areas, from which runoff could enter receiving waters or the storm water conveyance systems, must be cleaned up at least once weekly and either be composted, or be stored prior to disposal in a manner that prevents contact with runoff to receiving waters or the storm water conveyance system.
2. Areas used for composting such manure must be located, configured or managed to prevent runoff to receiving waters or the storm water conveyance system.
3. Pet waste shall not be disposed to the storm water conveyance system or receiving waters.

Best Management Practices

- Put barns, corrals, and fences in areas that drain away from creeks or streams or other storm drain conveyance systems.
- Keep livestock away from wet fields when possible. During rain events, cover manure stockpiles with a tarp or visqueen to reduce pollutant runoff.
- Cover dirt areas with loose hay or plant fast-growing grasses to shield and bind the soil to prevent erosion.
- Collect soiled bedding and manure from stalls and paddocks daily, and store them in sturdy, insect-resistant, and seepage free units.
- When grooming animals, use less toxic alternatives.
- If you must use pesticides, always read the label and use the products as directed.

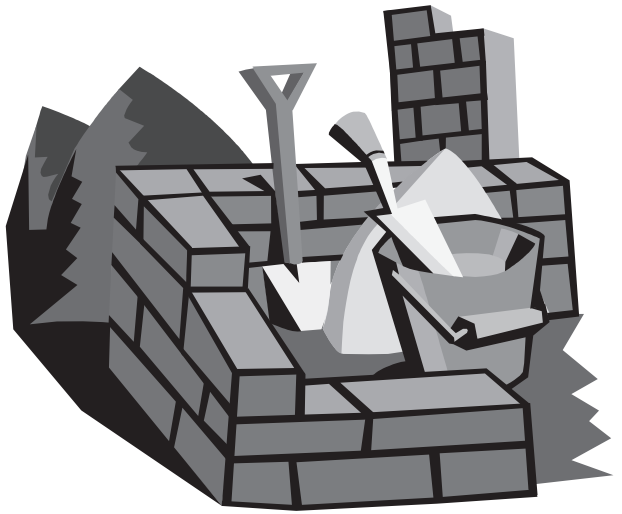
The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for Concrete and Mortar Projects



Pollution Prevention is up to YOU!

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. Untreated pollutants such as concrete and mortar flow directly into creeks, rivers, lakes, and the ocean and are toxic to fish and other wildlife. Disposing of these materials into storm drains causes serious ecological problems—and is PROHIBITED by law.

Do the Job Right!

This brochure was designed for do-it-yourself remodelers, masons and bricklayers, contractors, and anyone else who uses concrete or mortar to complete a construction project. Keep storm water protection in mind whenever you, or people you hire, work on your house or property.

Best Management Practices

Best Management Practices, or BMPs, are procedures and practices that help to prevent pollutants such as chemicals, concrete, mortar, pesticides, waste, paint, and other hazardous materials from entering our storm drains. All these sources add up to a pollution problem.

But each of us can do our part to keep storm water clean. These efforts add up to a pollution solution!

What YOU Can Do:

- **Always** store both dry and wet materials under cover, protected from rainfall and runoff and away from storm drains or waterways.
- **Keep all construction debris away from the street, gutter and storm drains.**
- **Never dispose of washout into the street, storm drains, landscape drains, drainage ditches, or streams.**
- Look for and clean up material that may have traveled away from your property after each days work.
- If you or your contractor keep a dumpster at your site, be sure it is securely covered with a lid or tarp when not in use.
- **Don't** mix up more fresh concrete or mortar than you will need for a project.
- Set up and operate small mixers on tarps or heavy plastic drop cloths.
- **Protect** applications of fresh concrete and mortar from rainfall and runoff until the material has dried.
- **Protect** dry materials from wind. Secure bags of concrete mix and mortar after they are open. **Don't allow dry products to blow into driveways, sidewalks, streets, gutters, or storm drains.**
- Empty mixing containers and wash out chutes onto dirt or other landscaped areas that do not flow to streets, drains or waterways, or allow material to dry and dispose of properly.
- **Never wash excess material from bricklaying, patio, driveway or sidewalk construction into a street or storm drain.**
- Sweep up and dispose of small amounts of excess dry concrete, grout, and mortar in the trash.
- Wash concrete or brick areas only when the wash water can flow onto a dirt area without further runoff or drain onto a surface which has been bermed so that the water and solids can be pumped off or vacuumed up for proper disposal.
- **Don't** place fill material, soil or compost piles on the sidewalk or street.
- During cleanup, check the street and gutters for sediment, refuse, or debris. Look around the corner or down the street and clean up any materials that may have already traveled away from your property.

Who Can You Contact?

For more information, please call (858) 668-4636

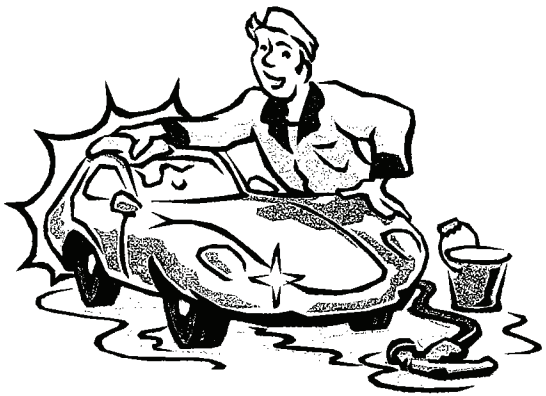
Best Management Practices for Mobile Auto Detailing



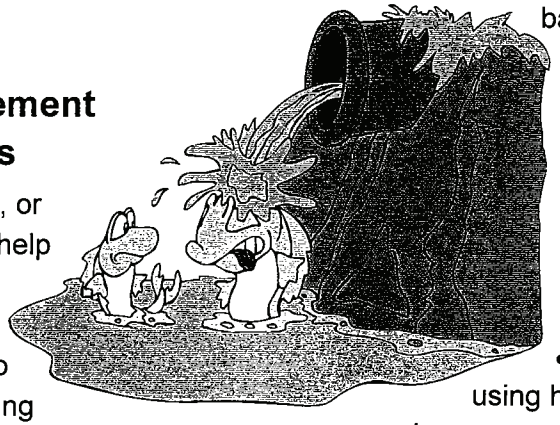
Mobile Detailing Procedures

What's the Problem with Mobile Detailing?

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. **Wash water from mobile detailing activities may contain significant quantities of oil, residues from exhaust fumes, brake dust, grease, and other chemicals that could end up in our creeks, rivers, lakes, and the ocean.** Disposing of these materials into storm drains causes serious ecological problems—and is PROHIBITED by law.

Best Management Practices

Best Management Practices, or BMP's, are procedures that help to prevent pollutants from entering our storm drains. Each of us can do our part to keep storm water clean. Using BMP's adds up to a pollution solution!



Location, Location, Location!

- Prior to a washing, block all storm drains with an impervious barrier such as gravel bags or berms, or seal private storm drains with plugs or rubber mats. Make sure this practice does not flood the area or adversely affect vehicle or pedestrian traffic.
- **Never dispose of wash water into the street, storm drains, landscape drains, drainage ditches, or streams.**
- Select a site and wash vehicles on grassy or gravel areas so the wash water can filter through the vegetation and/or soil.
- **Create** a containment area with berms and tarps or take advantage of low ground to keep wash water contained so that it can evaporate.
- **Check** that the wash water is not leaking through gravel bags or other containment measure, and if necessary add more berms or barriers to keep the wash water contained.

Just Enough for the Job!

- Minimize water use by using high pressure, low volume nozzles.
- Use the minimal amount and least toxic detergents you will need to complete the job. Try phosphate free detergents. The safest products for the environment are vegetable-based or citrus-based soaps.

Only Rain Down the Storm Drain!

- Do not wash vehicles outdoors on saturated ground or on days when rain is probable.
- Pump or vacuum up <u>all</u> wash water in the contained area.

Pollution Prevention is up to you!

- With property owners permission, pump or pour the wash water to landscaped areas that will not run off to a storm drain; or drain it to the sanitary sewer through an interior building drain, sink, or private sewer clean-out. Discharges to the sewer <u>**should not**</u> contain hazardous materials, grease, grit, or any material that could clog piping.
- Sediments and other solids remaining on the ground should be swept or vacuumed up immediately so they don't wash into the storm drain system during the next rain.
- Shake car mats into a trash can or vacuum them. Do not shake dirt from car mats directly to the ground.
- Don't forget to properly dispose of any used gravel bags!

Who Can You Contact?

For more information, please call (858) 668-4636
Report Illegal Dumping to:
Poway Code Compliance (during business hours, 8 a.m. to 5 p.m.) at (858) 668-4663 or (858) 668-4664, press "0" for immediate assistance
Or
Poway Sheriff's Station (after 5 p.m.) at (858) 513-2800

Dispose of Fat, Oil, and Grease Properly

One of the most important sources of water pollution is sewer spills caused by fat, oil, and grease (FOG) blocking the pipes. These spills damage the environment and can create property damage and health hazards leading to expensive repairs, health code violations, or restaurant closure.

The City has created the FOG Program, which works with local food establishments by providing information and inspections to help you avoid the negative impacts of sewer spills. The FOG Program can:

- Issue your Food Establishment Wastewater Discharge (FEWD) Permit (this free permit is required for all food establishments)
- Show you Best Management Practices for handling FOG
- Evaluate your grease traps, interceptors, and other facilities so you can be sure they are adequate

To obtain your FEWD Permit or receive additional information on the FOG Program, please call the City of Poway Wastewater Division at (858) 668-4719.

ONLY RAIN DOWN THE STORM DRAIN

Remember, storm drains are NOT connected to sanitary sewer systems and treatment plants. Anything that goes into the storm drains flows directly into our creeks, rivers, and ocean without any filtering or treatment. Please do your part to help keep our water clean by using Best Management Practices and making sure that nothing but rain goes down the storm drain.

The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for RESTAURANTS

A Clean Environment is Important to All of Us!

Best Management Practices

Restaurants contribute to storm water pollution through improper cleaning practices that allow food particles, oil, grease, trash, and cleaning products to flow into the street, gutter, or storm drain. These discharges pollute our creeks, rivers, and ocean and are **PROHIBITED BY LAW**. Below are recommended Best Management Practices (BMPs) for restaurants.

- **NEVER** pour wash water outside or into a street, gutter, or storm drain.
- **NEVER** pour grease or oil into a sink, floor drain, storm drain, or dumpster.
- Sweep, mop, or vacuum instead of using a hose to clean outdoor areas.
- **Always** clean equipment including floor mats, grease filters, grills, and garbage cans indoors or in a covered outdoor wash area that is plumbed to the sanitary sewer.
- Clean equipment in a mop sink if possible (never in a food preparation sink).

- If your restaurant does not have a mop sink, dedicate an indoor cleaning area where there is a drain that is plumbed to the sanitary sewer.
- Discharges to the sewer **must not** contain hazardous materials, grease, grit, or any material that could clog piping.
- All wastewater containing oil and grease must be disposed of in a grease trap or interceptor. Concentrated waste oil and grease must be collected in a grease bin and disposed of by a certified waste grease hauler.
- Major cleaning of exterior surfaces must include capturing wash water and disposing it in the sanitary sewer in compliance with local regulations.
- **Wash water must not be allowed to enter the street gutter or storm drain**.
- All mop water from cleaning floors must be disposed of indoors in a mop sink, toilet, or other drain that is plumbed to the sanitary sewer.
- **Dry sweep pavement** areas, including "drive-through" areas, parking lots, outdoor eating areas, and dumpster or grease bin areas frequently. If you must use water for cleaning, use a mop and bucket and dispose of wash water in a mop sink or floor drain that is plumbed to the sanitary sewer.

Sweep, mop or vacuum instead of using a hose to clean outdoor areas.

- Use dry methods for spill cleanup. Rags or absorbents can be used to pick up liquids or grease. Sweep up the absorbent, seal it in a plastic bag, and dispose of it in the trash.
- Keep outside areas free of trash and debris. Clean outdoor eating areas frequently using dry cleaning methods such as sweeping or vacuuming.
- **Never** wash down dumpsters or grease bins with a hose. Check dumpsters regularly for leaks. If a dumpster or tallow bin must be cleaned or repaired, contact the leasing company.

Who Can You Contact?

For more information, please call (858) 668-4636

Report Illegal Dumping to:
Poway Code Compliance (during business hours, 8 a.m. to 5 p.m.) at (858) 668-4663 or (858) 668-4664, press "0" for immediate assistance
Or
Poway Sheriff's Station (after 5 p.m.) at (858) 513-2800

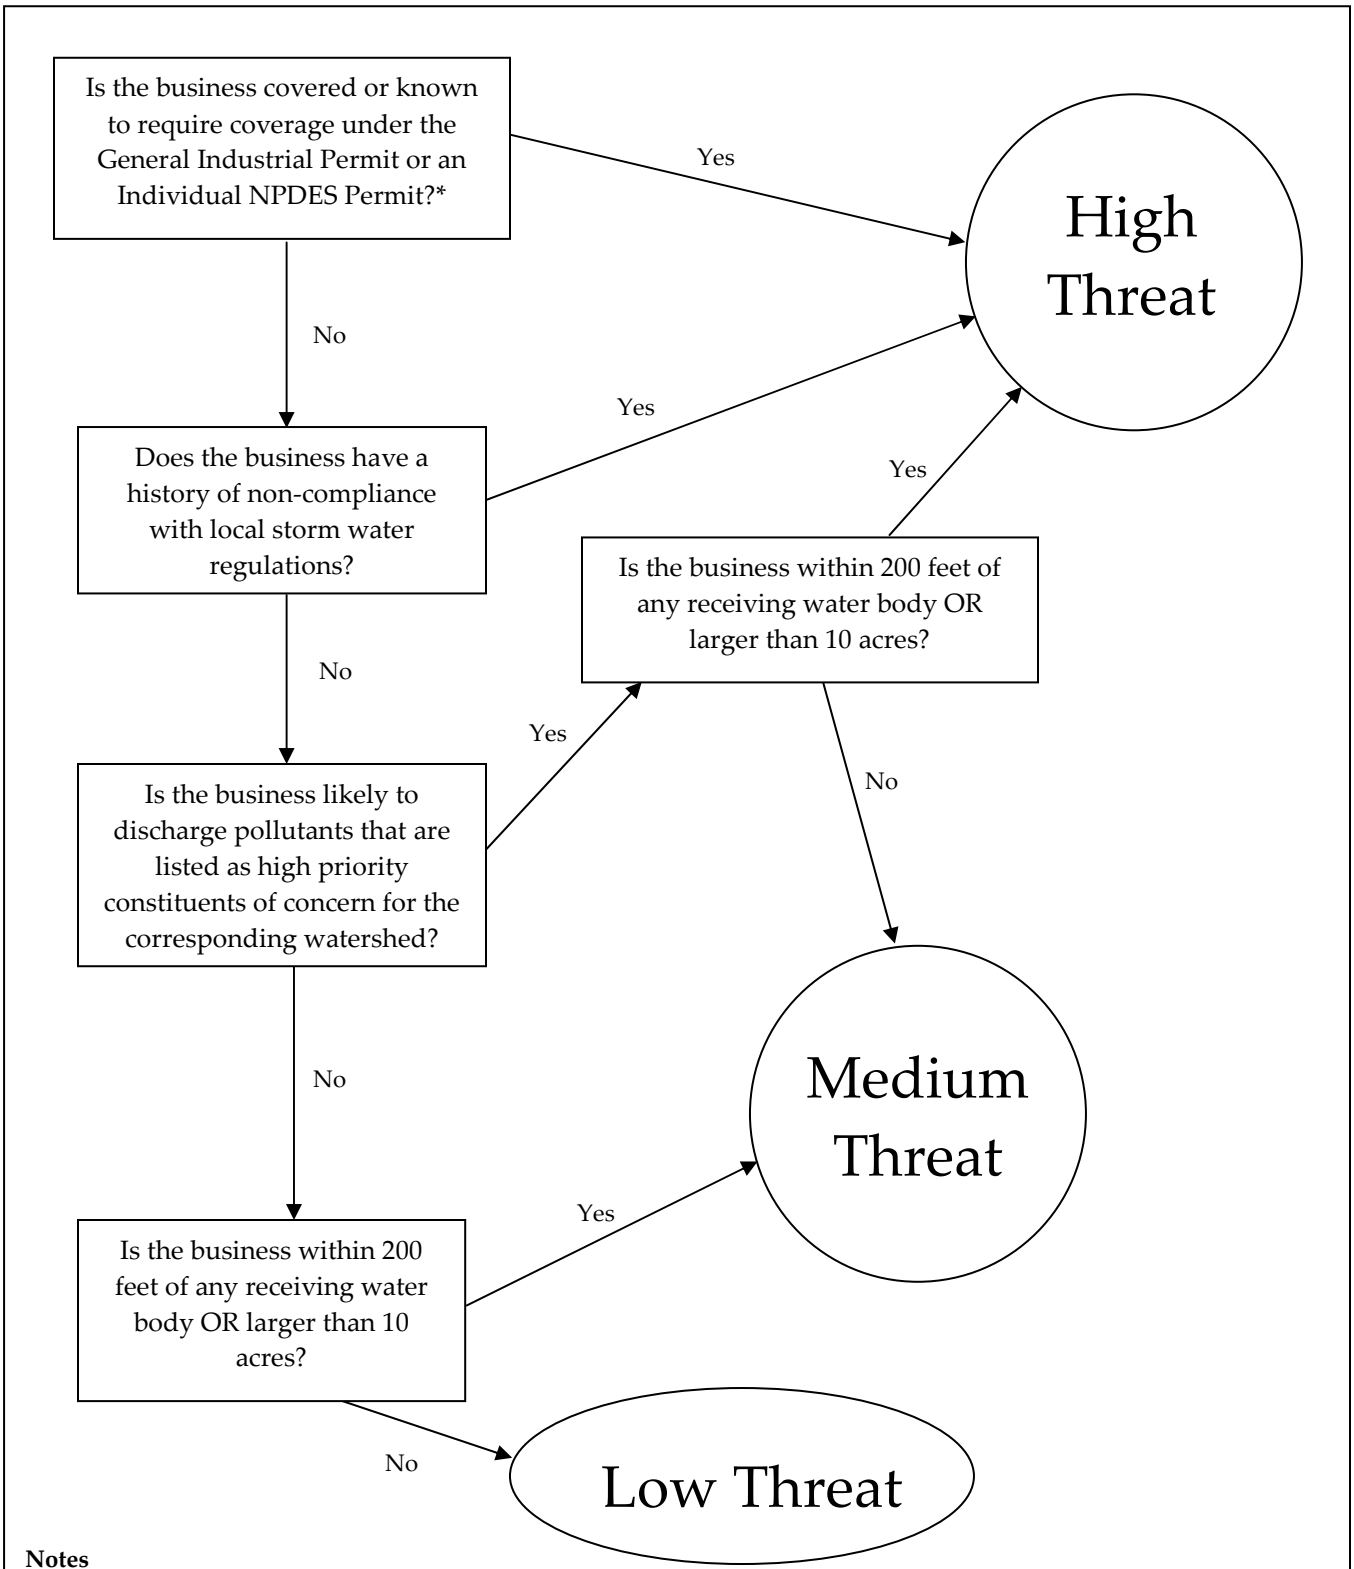
TTWQ PRIORITIZATION PROCESS FOR INDUSTRIAL AND COMMERCIAL SOURCES

TTWQ Prioritization Process for Industrial and Commercial Sources



Notes

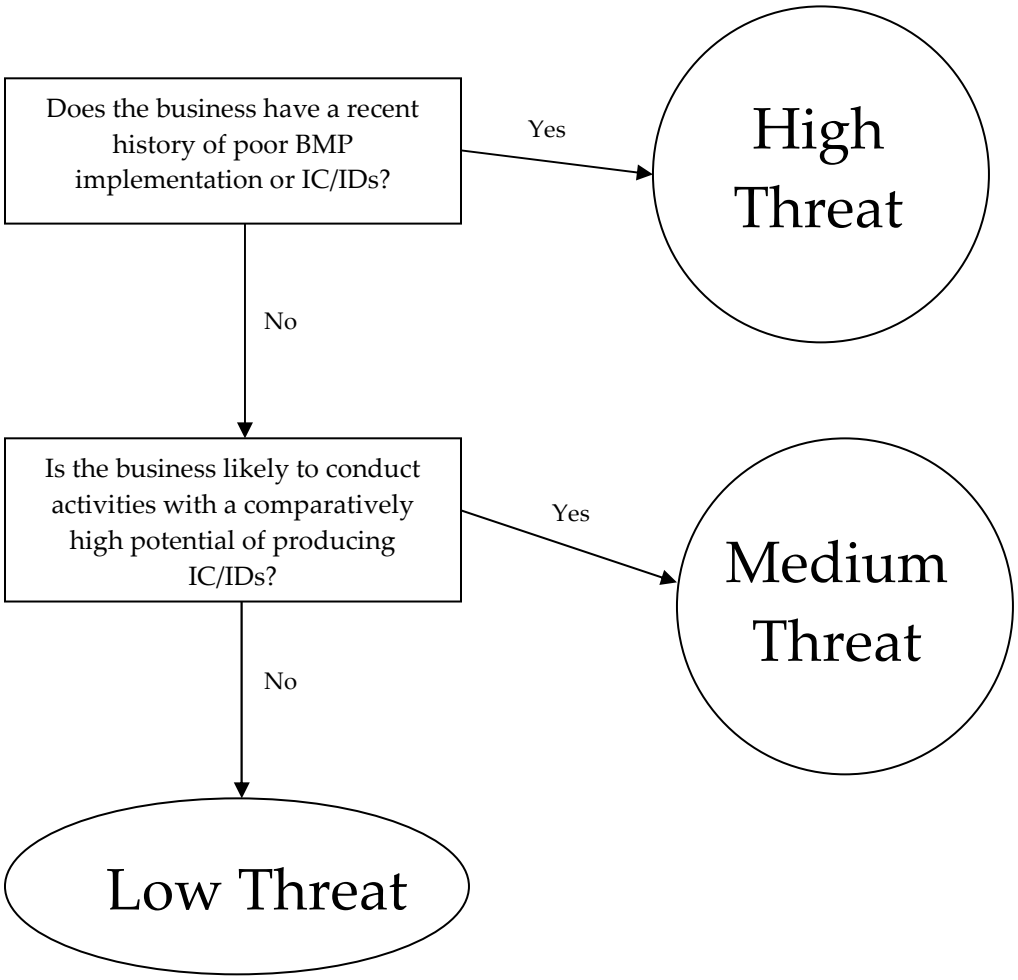
*If the facility is either unconditionally subject to the General Industrial Permit (Order No. 97-03-DWQ), or conditionally subject to the General Industrial Permit and not eligible for NONA/NEC certification.

The City reserves the right to assign higher TTWQ ratings than those dictated by this flow chart if deemed appropriate based on field observations during inspections or other investigations.

Figure 7-1
TTWQ Prioritization Process for Industrial and Commercial Sources

#	Criterion	Description
1	Is the business covered or known to require coverage under the General Industrial Permit or an Individual NPDES Permit?*	If the facility has existing coverage under the General Industrial Permit (Order No. 97-03-DWQ) or an individual NPDES Permit or if the facility does not have coverage but is either unconditionally subject to the General Industrial Permit or conditionally subject to the General Industrial Permit and not eligible for NONA/NEC certification.
2	Does the business have a history of non-compliance with local storm water regulations?	Based on results from the last inspection at the business: businesses that were marked as needed a follow-up inspection.
3	Is the business larger than 10 acres?	If site area is greater than 10 acres.
4	Is the business within 200 feet of any receiving water body?	If the site is within 200 feet of a receiving water body. Only major streams (Poway Creek, Rattlesnake Creek, Pomerado, Green Valley, Sycamore, etc.) were considered, not the unnamed tributaries. When distance to the water body is determined by GIS analysis based off geocoding based on street segments (which places the address point on the street), businesses with a GIS-measured distance of less than 500 feet were considered to be less than 200 feet to be conservative. This is because it is possible for a stream to pass behind a business such that the business parcel is less than 200 feet from the stream, but the geocoded point in the street in front of the business is more than 200 feet away from the stream.
5	Is the business likely to discharge pollutants that are listed as high priority constituents of concern for the corresponding watershed?	Pollutant discharge component: if inspected in the past, based on most recent PDP score; if not inspected before, based on PDP rating in the standard table of category based PDP ratings (Table 7-1 in JURMP). A site is considered likely to discharge a pollutant ("yes") if it has a Table 7-1 rating of "L" (likely). Note that businesses with an "L" for either oxygen-demanding substances or pH are considered to generated "gross pollutants." Pollutants of concern: • Peñasquitos Watershed: bacteria, sediment, and nutrients • San Dieguito Watershed: bacteria

TTWQ PRIORITIZATION PROCESS FOR MOBILE INDUSTRIAL AND COMMERCIAL SOURCES



Note: The City reserves the right to assign higher TTWQ ratings than those dictated by this flow chart if deemed appropriate based on field observations during inspections or other investigations.
IC/ID = Illicit Connection or Illegal Discharge

TTWQ PRIORITIZATION PROCESS FOR MOBILE INDUSTRIAL AND COMMERCIAL SOURCES

#	Criterion	Description
1	Does the business have a recent history of poor BMP implementation or IC/IDs?	Based on results from the last inspection at the business: any IC/ID recorded or a BMP score of 1 or 2.
2	Is the business likely to conduct activities with a comparatively high potential of producing IC/IDs?	Based on business category. Categories were marked as those with a comparatively high potential of producing IC/IDs based on best professional judgment. The categories are as follows: Vehicle Washing, Carpet/Furniture Cleaning, Cement Mixing/Cutting, Masonry, Painting/Coating, Pool/Fountain Cleaning, and Power Washing.

POWAY TODAY NEWSLETTERS

www.poway.org

POWAY Today

A Quarterly Municipal Newsletter for the Residents of Poway, California

Fall 2009

Poway Declares LEVEL 2 Water Shortage

City Water Supply Cut by 8% Starting July 1

A Level 2 water shortage was declared by the Poway City Council on July 1. This move was in response to a directive by the City's water wholesaler, the Metropolitan Water District, to cut water consumption statewide by 8% as a result of California's ongoing drought. This reduction will apply to all Poway homes and businesses.

Failure to meet the overall 8% reduction in water consumption will result in significantly higher water costs for all customers. Residents are being asked to conserve water to meet this challenge head-on. The City has many resources available to assist you, such as rebates for water-efficient sprinkler nozzles, free landscaping classes and free business and residential water-use surveys.

The water supply challenge facing Southern California is not temporary and will require that we permanently rethink the way we use our finite water supply. The City encourages residents and businesses to embrace efficient water use measures as a "new normal." It will take all of us doing our part to reduce Poway's total water use by at least 8%.

Call the Poway Water Conservation Team today at (858) 668-1215 to schedule a personalized residential water use survey. The survey will provide you with indoor and outdoor recommendations on how you can save water and money on your bill. You can also learn more at the City of Poway's water conservation website at www.poway.org/waterconservation. To report broken sprinklers or excessive run-off, please call (858) 668-1215 or go online at the same web address.

Mandatory Residential Water Restrictions

- Water between the hours of 6 p.m. and 10 a.m. only. Preferably complete watering by 8 a.m.
- When watering areas that do not have an irrigation system, use a hand-held hose with a positive shut-off nozzle, or a bucket.
- No washing down of paved surfaces, except when necessary to alleviate safety or sanitary hazards. Use a broom whenever possible.
- No sprinkler overspray or runoff from excessive watering.
- Wash vehicles using a bucket and a hand-held hose with positive shut-off nozzle, or at a commercial car wash that recirculates water on-site.
- Check plumbing and irrigation systems for leaks and repair within 72-hours.
- Add water to pools and spas only when necessary to maintain proper operation.
- For the complete list of water restrictions, visit www.poway.org/waterconservation.

Watering Schedules (through October)
Hours of Irrigation: 6 p.m. through 10 a.m.

Even Number Addresses	Saturday, Monday, Wednesday
Odd Number Addresses	Sunday, Tuesday, Thursday
Apartments, Condominiums, and Businesses	Monday, Wednesday, Friday
For irrigation systems using standard sprinklers, no more than 10 minutes per watering station on assigned day (does not apply to drip, micro-irrigation, or stream rotor systems).	
Trees and shrubs not irrigated by a landscape irrigation system may be watered on assigned day by using a hand-held container or hose with positive shut-off nozzle, or a low-volume soaker hose.	

Patrick and Roberta Korch

Poway's 2009 California-Friendly Landscape Contest Winner

The Korchs planted drought tolerant, native plants in their yard, saving green while keeping Poway beautiful.

City Wins Community Partner of the Year Award

Three school fields will get new artificial turf through ongoing partnership

Since incorporation, the City of Poway has worked with the Poway Unified School District (PUSD) to improve education while increasing the quality of life for all of the City's residents. This has taken many forms, including:

- Construction and operation of joint-use facilities such as gymnasiums, multi-purpose rooms and the Poway Center for the Performing Arts (PCPA)
- Funding the cost of two School Resource Officers to promote campus security
- Contributing to educational and athletic programs
- Quarterly meetings between City and PUSD staff to discuss traffic, security, and other issues.

In recognition of this partnership, PUSD nominated the City for the San Diego County School Boards Association's "Honoring Our Own" Community Partner of the Year Award. The award was recently presented to City Councilmembers. "PUSD schools are a tremendous asset to our City," said City Manager Rod Gould. "We greatly value our relationship with Poway Unified. The entire community benefits from having award winning schools, which makes Poway a very attractive place to live."

The latest collaboration between the City and PUSD will be the replacement of grass with synthetic turf on three sports fields: two at Meadowbrook Middle School and one at Valley Elementary School. The Poway Redevelopment Agency will provide the funding for this project, and PUSD will assume responsibility for the installation and maintenance. Once installed, the artificial turf will increase each field's play days by 60 days per year, due to decreased maintenance and avoidance of rain-related shutdowns, as well as saving approximately 6 million gallons of water each year. That's enough water for 37 average households!

> **"We greatly value our relationship with Poway Unified. The entire community benefits from having award winning schools, which makes Poway a very attractive place to live." –** *Rod Gould, City Manager*

This long term partnership between the City and PUSD helps to make Poway a family-friendly, safe, and vibrant community for everyone to enjoy.

Are You Ready For The Next Wildfire?

Maintaining defensible space around your home is one of the key actions you can take to reduce the risk to your property and to protect your neighbors. Retrofitting your home with fire retardant materials can also improve the chances it will be left standing after the next wildfire strikes. Refer to the following checklist to help assess your home for fire safety.

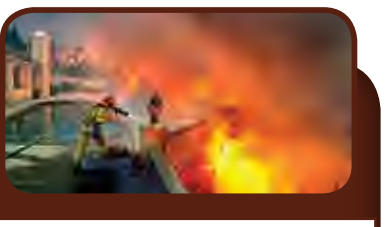
Get prepared by assessing your home for fire readiness now

Retrofitting your home will not completely protect you from the next wildfire, but it will greatly increase the chances that your home will be left unscathed. If you would like to learn more about how to protect your home, the Burn Institute's brochure "Living with Wildfire" is available to all Poway residents online at http://www.poway.org/Index.aspx?page=422 or during business hours at the Poway Fire Department offices at 13050 Community Road. If you would like to receive a courtesy home assessment, please call the Wildfire Defensible Space Program hotline at (858) 668-4611.

Fire Gel Demonstration

Fireproofing gels can be applied by residents several hours before a fire strikes, and wood-treatment products can be applied during construction that will help reduce your fire risk. A demonstration has been scheduled on Saturday, August 1, from 9 a.m. to noon, at the Poway Fire Department Training Tower at 12335 Crosthwaite Circle in Poway. Manufacturers' representatives will be present to demonstrate their products and provide them for purchase. Space is limited, so call (858) 668-4471 now to confirm your attendance.

Fire Assessment Checklist



☐ **Roof**	The roof is the most vulnerable part of your home to wildfires. During a wildfire, firebrands can fall on your roof, landing in your roof's nooks and crannies where a fire can easily start. Make sure your roof is fire-resistant. When your roof needs to be replaced, ask for a Class A roof covering. It's the law and it can be a lifesaver.
☐ **Exterior Walls**	Exterior walls are susceptible to a wildfire's radiant and convective heat. Wall materials that resist heat and flames include cement, plaster and stucco and concrete masonry such as stone, brick or block. Vinyl loses its integrity when exposed to flames.
☐ **Exterior Windows, Glass Doors & Skylights**	Exposure to the heat of the wildfire can cause both double and single pane glass to fracture and collapse. Purchase tempered windows, if possible. If you are building a home in a Wildland Urban Interface area, tempered windows are required.
☐ **Eaves, Fascias & Soffits**	Eaves, fascias, and soffits are vulnerable to both firebrands and convective exposures. They should be 'boxed' or enclosed with noncombustible materials to reduce the size of the vents. Noncombustible screening should be used in the vents. Avoid enclosing these areas with vinyl.
☐ **Attic, Subfloor, or Foundation Vents**	Wind can push firebrands through the vents into your home's basement or crawl space. Vent openings should be screened. Screens should be constructed of non-combustible materials.
☐ **Fireplace Chimneys**	Embers from your own fire can fly out of the chimney and start a wildfire right in your own neighborhood. They can also be blown into the chimney during a wildfire. The best way to avoid this situation is to install a spark arrestor made from welded wire or woven wire mesh with openings less than ¼-inch wide.
☐ **Overhangs & Other Attachments**	Overhangs and structures attached to a residence, such as room pushouts, bay windows, decks, porches, carports and fences, can pose a risk. Remove all fuels around these areas. Next, box in the undersides of the overhangs, decks and balconies with noncombustible or fire-resistant materials. Make sure fences don't attach directly to your home.

The Oxycodone Epidemic: Hitting close to home

The Poway Sheriff's Department has seen a rise in the abuse of Oxycodone with increased arrests for possession and sale over the past year. Oxycodone is an opiate that is prescribed for moderate to high pain relief. It is also very addictive and has a high potential for abuse.

OxyContin, Percocet, Percodan, and Tylox are other trade names for Oxycodone products. Slang terms for these drugs include: Norcos or Watsons (Vicodin); Z-Bars, bars, or Zannies (Xanax); Perks (Percocet); OC, Ox, 80's, or Beans (OxyContin).

Teenagers and young adults buy the OxyContin wherever they can get it and pay between $50 and $80 per pill. Users typically grind-up pills and inhale them through the nose or inhale the smoke from melting the pills. Withdrawal symptoms will ensue until the user gets more. Those who can't get OxyContin will sometimes move on to using heroin since it is cheaper and has similar effects.

Is My Child Abusing OxyContin?

Look for changes in your teen's behavior. Abusers will often lose interest in things that used to be very important to them, such as school, sports, church, or family dinners. Physical indicators include weight loss, poor complexion or hygiene and lack of energy.

OxyContin abusers are often found in possession of paraphernalia such as rolls of aluminum foil, lighters, straws, rolled up dollar bills, syringes, and spoons that are burnt on one side. It is common for OxyContin abusers to wipe off the pill coating on their clothing, leaving tell tale green marks.

Abusers will begin stealing money or household items in order to pawn or trade them for money. Text messaging is also very common, so look for slang terms mentioned above. For more information on OxyContin abuse, please contact Detective Dave Ross, San Diego Sheriff's Department's Narcotics Task Force at (858) 616-4590.

What's In My Watershed?

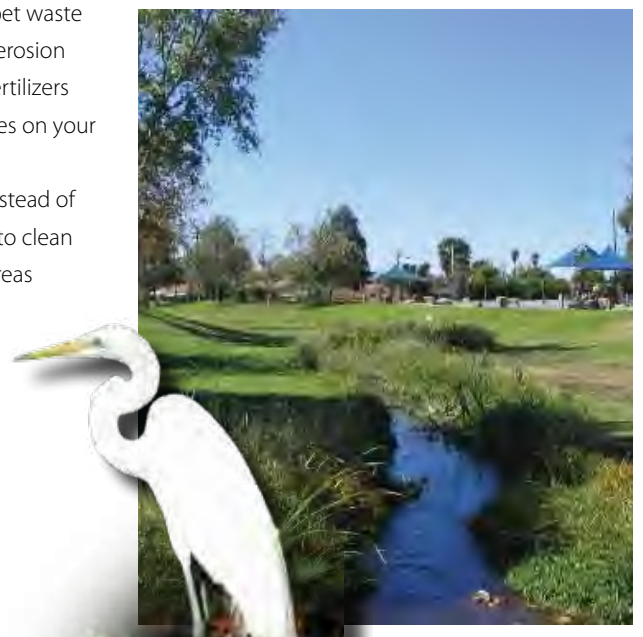
Runoff from Poway's watersheds flows straight into creeks, lakes and eventually, the ocean

A watershed is the area of land that drains to the same body of water. The southern two-thirds of Poway is part of the Los Peñasquitos Watershed while all of northern Poway is part of the San Dieguito Watershed. Runoff from properties flows directly into our storm drains, creeks, lakes and ocean without being treated.

Runoff often contains pollutants from pet waste, dirt, fertilizers and pesticides. Help prevent pollutants from entering Poway's watersheds by:

- preventing over-irrigation
- picking up pet waste
- minimizing erosion and use of fertilizers and pesticides on your property
- dry sweep instead of using water to clean hardscape areas

Healthy watersheds mean a healthier environment for all of us to enjoy.



Poway's Arts Center Is Wired For Digital Sound

The City will soon complete a long overdue digital upgrade of the sound system at the Poway Center for the Performing Arts (PCPA). The digital system will replace the antiquated 20 year old sound system, which is now failing.

The Poway Performing Arts Center, owned and operated by the City of Poway, originally opened in May 1990. It seats 780 and enjoys exceptional acoustics. The Center is professionally operated and serves as one of San Diego County's premier venues for live performances and a place for culturally enriching experiences for young people.

The PCPA Foundation kicks off the Professional 2009-10 season in October. The season includes Dave Mason, Cherryholmes, Paula Cole, Ed Asner and Leon Redbone. Tickets for all shows are on sale now at the Poway Center for the Performing Arts box office located at 15498 Espola Road, by phone at (858) 748-0505, or online at www.powaycenter.org. A complete season schedule can be found on Page 13 of *Poway Today*.

Paula Cole will help put the new sound system to the test as she joins the 2009 performance season at the Poway Center for the Performing Arts

HOME Clinic Helps Distressed Poway Homeowners

Assistance is available for Poway residents considering foreclosure

On Saturday, June 20, 2009, many Poway homeowners facing foreclosure found help at the Home Ownership Mobile Education (HOME) clinic held at Poway City Hall. The event, co-hosted with the County of San Diego, provided distressed homeowners with the opportunity to meet one-on-one with attorneys, counselors, and mortgage professionals, free of charge. Each homeowner was provided valuable resources and information about how to prevent a looming foreclosure.

Later this fall, the City of Poway will host additional workshops to help homeowners avoid foreclosure and rebuild their credit. If you or someone you know would like additional information about avoiding foreclosure, please call (858) 668-4551 or visit www.poway.org.

FACES OF AFFORDABLE HOUSING

Barbie is proud to call Poway her hometown. A long-time Poway resident, past cheerleader for Poway High School and now an administrative assistant for the Poway Unified School District, Barbie can finally call herself a Poway homeowner as well. This is due in part to a loan from Poway's Supporting Home Ownership in Poway (SHOP) Program. As Barbie says, "It's so nice to put down roots someplace and be able to have ownership, not just of your home, but of the community." To learn more about the SHOP program, visit the City's website at: http://www.poway.org/Index.aspx?page=712.

"It's so nice to put down roots someplace and be able to have ownership, not just of your home, but of the community."

Oak Knoll Road Gets $7 Million Dollar Face Lift

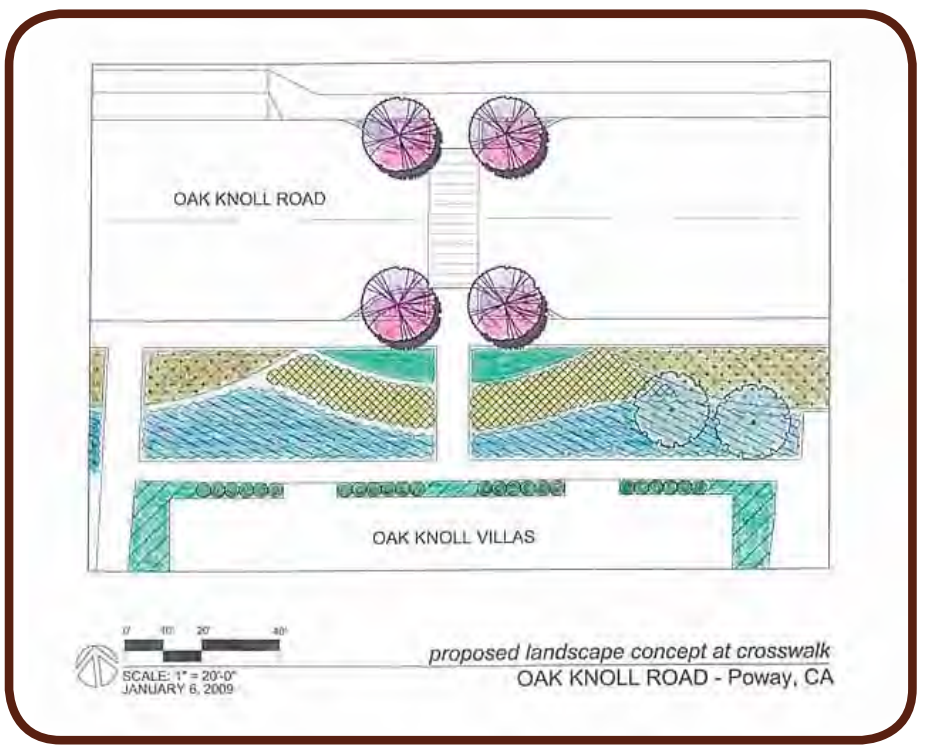
Street improvements scheduled to begin in October, will enhance pedestrian access and beautify the Oak Knoll Road corridor

Replacement of the outdated, major sewer line along Oak Knoll Road was completed in June. Phase II will now begin with street improvements including curbs, gutters, and sidewalks, handicapped-accessible curb ramps, driveway approaches, intersection improvements, drainage improvements, streetlights, additional parking and new and overlaid pavement. Work on these street improvements is scheduled to begin in October 2009, and will run in phases through the end of 2010.

The City's contractor will complete the major roadway improvements and then utility company crews will move some utilities underground along the stretch of Oak Knoll from Pomerado Road to west of Carriage Road, while also relocating any remaining poles away from sidewalks and pathways to provide handicapped-accessible routes. The City's contractor will then return for pavement overlay and finishing touches on both Oak Knoll Road and Carriage Road north to Poway Road.

Although some traffic delays can be expected, at least one lane of Oak Knoll Road will remain open during construction. If you have any questions regarding this project, please contact Melody Rocco, Assistant Engineer, at (858) 668-4622, or at mrocco@ci.poway.ca.us.

Conceptual drawing of the new, landscaped cross walk being built just east of Pomerado Road.



Looking For Leadership

Enhance your leadership skills and learn how you can give back to the community of Poway

The Poway Community Leadership Institute (PCLI) is looking for Poway residents to participate in a series of classes to enhance leadership skills and prepare future leaders to serve on boards, committees and commissions in Poway. It is also designed to instill a strong sense of personal civic responsibility.

PCLI classes will run from October 2009 – May 2010 and are composed of 8 separate classes discussing City governance, local businesses, regional issues, education, land use and more. If you would like to broaden your network and interact with community decision makers, please contact Gary Rossi at (858) 538-7988 or visit www.poway.com/pcli to learn more.

Poway Today Gets A New Look

Welcome to the inaugural issue of the redesigned *Poway Today* – the official newsletter of the City of Poway. The new look is the first significant change in appearance since its inception in 1983.

Poway recently contracted with a new printing company, which enabled *Poway Today* to move to full color while saving money. To honor our commitment to the environment, the publication is now printed with soy-based ink and printed at a facility that reclaims 100% of paper waste through automated recycling. We hope you enjoy the new look.

Keep Shopping in Poway

Buying goods from local businesses keeps your sales tax dollars in Poway

The next time you purchase groceries, fill up your car or go out for a quick bite to eat, do it close to home. Not only will you save gas by not driving as far, but a portion of every dollar you spend in Poway comes back to the community in the form of improved roads and City services. Please make shopping in Poway your first choice.

Winter 2009

Statewide Water Supplies Predicted to Remain Low

Powegians Step Up To Meet The Challenge

Two years ago, Poway stepped up efforts to promote water conservation. Powegians have heard the message and are using less water; however, the nature of the statewide drought requires all Californians to permanently alter the way they utilize water.

Why do we need to conserve more?

The current water supply challenge is different than any previously encountered. It is not a temporary problem that will end after one wet winter. Part of the problem is weather. Drought conditions for several years means there is less water available.

More significant are severe limits on the amount of water that can be pumped to Southern California from the north. Nearly one hundred percent of Poway's water originates from several hundred miles away. The costs to buy the water and to bring it to Poway have increased by about 40% in less than one year. These challenges will take years to fix and will be very expensive.

The Delta Problem

Half of Poway's water comes from north of Sacramento. Moving the water south requires it be pumped through the delta of the Sacramento and San Joaquin rivers (the "Delta"), east of San Francisco Bay.

Though the Delta is 500 miles from Poway, it is central to California's water system. This 1,300 square mile ecosystem contains over 1,000 miles of dirt levees, canals and channels, some constructed more than a century ago, through which water moves on its way to reservoirs and farmland. The levees are in need of repair and reinforcement. A major earthquake could potentially destroy the levee system, disrupting water service to Southern California for an extended time.

Enormous pumps are used to move the water out of the Delta into the California Aqueduct, the 450 mile cement-lined canal that runs along Interstate 5 through the Central Valley. In recent years, scientists have learned the pumps are detrimental to fish. Many species are threatened as part of the food chain, including salmon and orca.

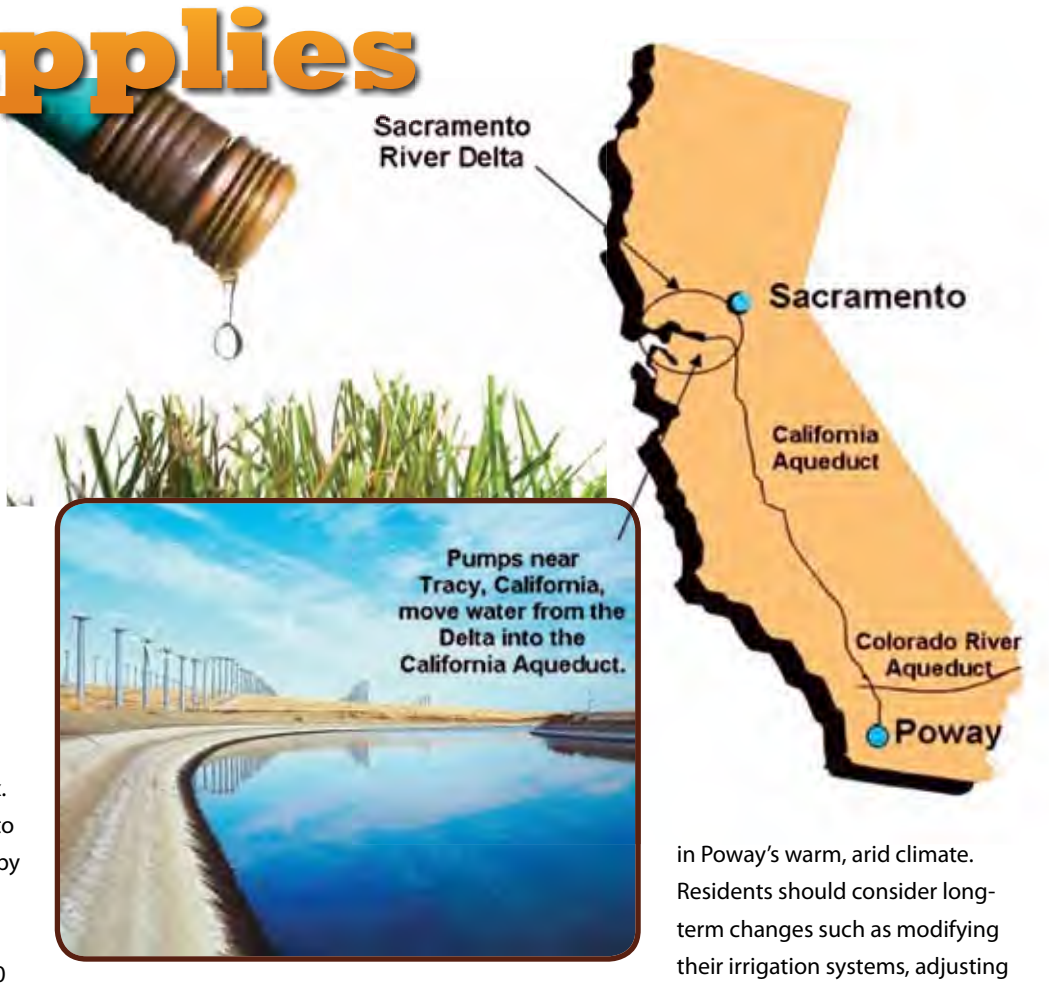
Issues surrounding the Delta are complex. Solutions are expensive and will take years to construct. One option under consideration by the State of California is a new canal system to move water around the Delta instead of through it – this project will cost around $40 billion and take ten years to build.

Local Efforts

Locally, the City of Poway and San Diego region are exploring options to diversify the water supply. Water industry experts commonly identify conservation as the cheapest source of new water.

Homeowners may consider gray water systems to reuse laundry and bathing water for landscape irrigation. The County of San Diego oversees gray water systems for Poway. Call (858) 565-5173 or go to *sdcounty.ca.gov* for details.

The City of Poway is doing its part also to make long-term water use changes. City landscape crews continue to refine the irrigation systems and watering schedules in over 400 acres of green space at 58 facilities. Less than three percent of overall water use in Poway is for City parks, landscape maintenance districts and City facilities.



Temporary Change vs. Long-Term Change

Poway's water conservation goal is long-term change in water use, particularly outdoors. The objective is to make irrigation systems as efficient as possible for the chosen landscaping.

More sustainable landscaping features less lawn and more plants and trees that thrive in Poway's warm, arid climate. Residents should consider long-term changes such as modifying their irrigation systems, adjusting irrigation run-times to avoid over-saturation and run-off and replacing sections of lawn with water-wise landscaping.

The water supply challenge facing California is unprecedented. Locally, Poway residents are experiencing the changes first-hand through increased water costs and changing landscapes; however, these circumstances are not unique to Poway.

The City's Water Conservation Team offers useful resources to assist Poway residents and businesses with this new water reality. For more information on available resources, call 858.668.1215 or visit *poway.org/waterconservation.*

Shop Poway this holiday season and make a difference in your community

Sales taxes account for 34% of the City's revenues!

As we approach the busy holiday season, the Poway Chamber of Commerce and the City of Poway are partnering in a "Poway–Your First Choice" advertising campaign to encourage residents and non-residents alike to shop right here in Poway.

Shoppers and diners bring measurable value to the community by spending their holiday dollars locally. When you make purchases in Poway, a portion of your sales tax dollars go to help fund essential City services valued by residents such as fire protection, law enforcement, emergency medical response, parks and recreation, and library services.

Your sales taxes help provide law enforcement to fight crime, diversify the local economy and fund preservation of open space.

Lessons Learned *from the* Witch Creek Fire

Maintenance Is Key To Ensuring Fire Safety Around Your Home

In January 2009, the City of Poway began actively engaging residents in neighborhoods located within high fire-risk areas that have been identified in the Wildfire Defensible Space (WDS) Program. This unique program provides no-fee home assessments and other resources to property owners at risk from wildfires.

The program's purpose is to save lives and homes during wildfires by reducing flammable vegetation around structures, thereby creating what is often referred to as "defensible space." The creation of defensible space is an important part of the City's comprehensive strategy to lessen the devastating impacts of wildfire. Reducing highly flammable vegetation shortens the flame length and reduces the speed and intensity of a wildfire. It also enhances firefighter safety and reduces the risk of burning embers penetrating structures.

Homeowners are encouraged to maintain the defensible space created around their homes. Here are some helpful tips:

Courtesy Home Assessments are available to Poway residents interested in creating defensible space around their homes. If you have questions or would like more information about the defensible space program, please call the WDS Program Hotline at (858) 668-4611, or email WDSP@ci.poway.ca.us.

- *Flammable native vegetation should be thinned and cut back to no more than six inches above the ground. Do not completely remove all vegetation – some is necessary to prevent erosion.*
- *Remove dead plants and clean up plant litter.*
- *Ensure that your watering practices are consistent with the City's water conservation requirements. Deep water trees and shrubs at least once a month for drought tolerant species and once a week for plants requiring more water.*
- *Trim tree branches to at least six feet from the ground and ten feet from your chimney. Remove branches overhanging your roof.*
- *Call San Diego Gas & Electric for help with trees near power lines. Never trim them yourself.*
- *Ask your local nursery about landscaping with fire-resistant and drought-tolerant plants.*
- *Identify open space-easements or environmentally protected areas that may exist on your property. City staff can assist you in identifying these areas.*

PVC Pipes Deter Fire Fighting Efforts

The heat from a fire can melt the plastic polyvinyl chloride (PVC) pipes used to irrigate landscape and orchards. The damaged pipes decrease the water pressure needed to fight fires. This occurred during the Witch Creek Fire in 2007. Melted PVC pipes caused the reservoir level to fall. City water and customer service crews had to physically visit 60 sites to shut down meters to limit water loss and stabilize the reservoir level.

If your house is equipped with a residential fire sprinkler system, the melted irrigation pipes can also rob the sprinkler system of the water it needs, rendering it ineffective. Ensuring continual water supply and proper pressure is critical for a system to operate as designed.

Property owners should ask themselves the following questions when evaluating their irrigation systems to determine whether PVC pipes need replacement:

- *Is the water supply from the water meter to the house located above ground at any point, and are these above ground pipes PVC?*
- *Are there above ground pressurized PVC pipes used for irrigation?*

If you answered "Yes" to either question, the PVC pipes should be relocated at least 18 inches below ground or replaced with metal or copper pipe including fittings. Metal and copper pipe have a higher melting temperature compared to PVC and can typically withstand the temperatures generated by wildfires. Another option is to have an isolation valve between your home and the outdoor irrigated areas to shut off the irrigated areas while keeping water supplied to the home.

Small improvements can pay large dividends, helping save water and possibly saving your home during the next wildfire.

The Silent Threat

Identity theft is one of the fastest growing crimes in America. It occurs when someone uses your personally identifying information, like your name, Social Security number, or credit card number, without your permission to commit fraud or other crimes.

Identity theft is serious. While some identity theft victims can resolve their problems quickly, others spend hundreds of dollars and many days repairing damage to their good name and credit record. Some consumers victimized by identity theft may lose out on job opportunities, or be denied loans for education, housing or cars because of negative information on their credit reports. In rare cases, they may even be arrested for crimes they did not commit.

The City of Poway is committed to reducing the number of identity theft cases that occur. Follow these helpful tips to reduce your chances of becoming a victim.

For additional information on identity theft, please call Darlene Duncan at the Poway Sheriff's Station Crime Prevention Unit at (858) 513-2807.

- *Monitor your financial records on a regular basis. Get your free credit report from credit reporting agencies at least once a year.*
- *Shred all confidential documents, including expired credit and debit cards and driver's licenses using a crosscut shredder.*
- *Do not carry your social security card in your wallet, and minimize the number of credit and debit cards you carry with you.*
- *Do not leave wallets and purses in your vehicle at any time or unattended in shopping carts while you shop.*
- *Do not leave outgoing mail in your residential mailbox with the red flag up, which can alert thieves. Use a locking mailbox if possible.*
- *Opt-out of credit card offers received in the mail by calling (888) 567-8688.*
- *Have new checks sent to your bank for pick up rather than to your home address.*
- *Be aware of your surroundings when using your PIN number at ATM machines, and never write your PIN on your card.*

Winter Rains Bring Risk of Flooding

Winter brings the risk of severe storms and flooding in Poway. Stay safe this season and remember to cautiously approach areas of standing water on the road. As little as 6 inches of water will reach the bottom of most passenger cars causing loss of control and possible stalling.

To prevent flooding, property owners are responsible for maintaining the drainage, storm drains and creeks on their properties. Take these easy steps to prevent flooding on your property this winter:

- ***Inspect, clean, and repair rain gutters, roof tops, and yard drains. Address any problem spots you noticed during last year's storms.***
- ***Clear private drainage channels and brow ditches of landscape material and debris.***
- ***Place plastic sheeting secured with sandbags over sections of disturbed soil to prevent erosion.***
- ***Turn off sprinklers a few days before and after the rain to conserve water.***

If winter storms are severe, the City provides free, unfilled sandbags and loose sand on Garden Road (across from Garden Road School), Midland Road (across from Old Poway Park Train Barn), and Lake Poway Road (at the first parking lot on the right approaching the lake).

Flood maps and flood protection references are available at the Poway Public Library. To inquire if you are in a mapped floodplain, call the Poway Development Services Department at (858) 668-4600. To report flooding, call the Public Works Department at (858) 668-4700 (during business hours) or (858) 668-4751 (after hours).

Department Spotlight: Fire Station 3 A Division

(L to R) Jeff Cole, Kelley Delotch, Scott Post, Nick Snyder & Alan Rowe crew the fire engine & ambulance on their shifts...

Meet the A Division Crew of Fire Station #3. The Station houses a fire engine, aerial ladder truck and a paramedic unit. The Station has three divisions (A, B, and C) and eight crew members are on duty 24-hours a day. Fire Captain Scott Post, Acting Fire Engineer Alan Rowe, and Firefighter/Paramedics Kelley Delotch, Jeff Cole, and Nick Snider staff the fire engine and ambulance. Fire Captain Andy Page, Fire Engineer Jonathan Marshall, and Firefighter/Paramedic David Ontiveros staff the City's ladder truck. All members of the A Division crew are also licensed paramedics.

During their 24-hour shift, the crew works together to protect the lives and property of the citizens of Poway. The crew also provides automatic aid to the City of San Diego and mutual-aid throughout the county, region, and state, upon request. Many of the crew members have also volunteered to serve on strike teams fighting fires throughout the State of California in recent years.

...while (L to R) Andy Page, Jonathan Marshall & David Ontiveros operate the ladder truck.

Feel Like There is Something Missing this Holiday Season?

Visit the Poway Senior Center for some Holiday Cheer!

In the bustle of the holiday season, we forget that for some, the holidays can be a lonely time. Loneliness affects people physically and emotionally, particularly the elderly who may not have family and friends close to home. Look around and you may see elderly neighbors and relatives in need of some holiday cheer.

If you know someone who could use a visit, a hot meal, or just to share a laugh with a caring heart, call us at Poway Senior Center (PSC). There is never a dull moment at PSC with karaoke, exercise, tai chi, yoga, bingo, scrabble, poker and a creative arts program. Visit the center today and discover good times and good friends.

Volunteers, young and old, are also needed to help serve lunch in the center bistro or to deliver lunches to home-bound seniors. Join the staff, members, and volunteers at PSC and help us make a difference this holiday season. PSC is located within Poway Community Park at 13094 Civic Center Drive and can reached by calling (858) 748-6094 extension 301.

FACES OF AFFORDABLE HOUSING

Valerie Dignazio lives at Oak Knoll Villas. She recently earned a Valor Scholarship from Community Housing Works, a nonprofit housing development organization, in recognition for the many hours she volunteered mentoring and tutoring youth living at Oak Knoll Villas. The scholarship will help her finish her college education.

When asked about her experience at Oak Knoll Villas, Valerie states "Life gives you challenges to overcome. Use every opportunity to improve your life." Valerie currently attends Miramar College and is looking forward to attending San Diego State next year. Congratulations go to Valerie for making the Oak Knoll neighborhood a better place to live!

> "Life gives you challenges to overcome. Use every opportunity to improve your life."

Remodel Adds Sparkle To Oak Knoll Villas

Two new projects are underway on Oak Knoll Road that will make the neighborhood a more attractive and safe place for local residents. New sidewalks, underground utility lines and an enhanced crosswalk for safety will be completed by late 2010 as part of a $2 million project which first began in October 2009.

To compliment the roadwork, the Oak Knoll Villas complex has also undergone a significant remodel. Residents of the aging apartment building will enjoy new heating and cooling, fresh paint and new cabinets, counter tops, tubs and flooring. Upgrades to the building exteriors will brighten up Oak Knoll with updated roof treatments, freshly painted stucco, new archways and awnings to dress up the buildings. A new community building will also provide a computer lab and space for resident children to get homework assistance after school.

A contribution from the City of Poway's redevelopment agency allowed the nonprofit owner, Community HousingWorks, to charge affordable rents. Poway's redevelopment agency sets aside funds required by law to support affordable housing in the community. The affordable rents help resident families to make ends meet. The Oak Knoll project also creates numerous jobs in the construction industry that, in turn, pump additional dollars into the local economy.

If you have questions regarding road work along Oak Knoll, please contact Melody Rocco at (858) 668-4622 or at *mrocco@ci.poway.ca.us.* For questions about Oak Knoll Villas, contact the onsite manager, Eddie Lopez at 858-486-1079 or at *oakknoll@chworks.net.*

The before and after photos of the Oak Knoll Villas demonstrate how a remodel can enhance the neighborhood

Community Emergency Response Team Classes Now Forming

Learn how you can protect your family and your community when a disaster strikes

The City of Poway Fire Department, in conjunction with Palomar College, will offer Community Emergency Response Team (CERT) classes starting in January 2010. CERT is a ten-week program that provides participants with valuable information on what to do when a major disaster strikes. Participants will learn important life-saving skills to protect themselves, their families and their neighbors when a disaster occurs. During a large scale disaster, fire and law enforcement resources may be not be able to respond during peak demands of service. Trained CERT volunteers will be able to assist until emergency services arrive. Please contact (858) 668-4460 or *firedept@ci.poway.ca.us* if you would like to sign-up for classes.

The City is thrilled to continue its partnership with Cloud 9 SuperShuttle, which enables Poway residents and business travelers to enjoy discounted rates between the San Diego Airport and the 92064 zip code.

There is no need to request a special rate. By providing the 92064 zip code as your pick up or drop off location, you will automatically be provided with a reduced rate when you book your reservation. For reservations call 1-800-974-8885, or visit the Cloud 9 SuperShuttle website at *www.cloud9shuttle.com.*

Special Rates for Poway residents!

Number of Passengers	One-Way Fare
1	$36
2	$43
3	$50
4	$57
5	$64
6	$71
7	$78

Kick that Christmas Tree to the Curb!

EDCO Waste and Recycling will pick up your tree at the curb on your collection day for two weeks following Christmas day. Remove the stand and all trimmings and cut the tree to lengths of no more than 4 feet. Flocked trees (covered with artificial "snow") are not recyclable and will be collected with other refuse. Residents must cut and bundle their trees if placed for collection after the two-week period ends. Look for more details about holiday recycling in your EDCO billing statement, or please call EDCO Waste and Recycling Services at (858) 748-7769 to learn more.

Poway's New Technology

The City uses cutting-edge computing to increase efficiency and service

Over the past three years, the City has ushered in new technology that improves the way we communicate with our community and streamlines the services we provide to our businesses. We have improved our network infrastructure between all City facilities, improved resident services through the website, introduced permit tracking software, automated business certificate processing, virtual server technology, and much more.

> **"I believe it is vital for cities to invest in technology improvements that will save money and resources in the long run, even during a recession."**
>
> *–Penny Riley*
> *Interim City Manager*

New Look for the City's Website

If you have visited www.poway.org recently, you may have noticed that the City's website looks better than ever! We have completely redesigned it with improvements to the overall look and layout of the site, as well as improved navigation and search functions.

The screen width was increased to accommodate today's wider monitors and improved graphics. Graphics and banners used to promote City events and topics now serve as clickable links that take visitors to dedicated pages for those events and topics.

The goal of the re-design effort was to create more ways to access information directly from the homepage. This was accomplished by enhancing the spotlight and news areas and improving the search capability from the homepage. Visitors can now find information by completing the phrase, "I want to…" They can also find information by entering specific services or information they need, which will return all information on the website related to that particular topic.

The City of Poway's new website connects the community to the City

If you have not already visited the new website, we encourage you to spend some time visiting www.poway.org to find out more about what the City of Poway has to offer.

E-Government Solutions

The City also expanded its "e-gov" initiatives to allow residents and businesses to access more services online without needing to set foot in City Hall. The new website features an improved "online services" section. Visitors can now pay their water/sewer bills online, register their business, obtain zoning information, request non-emergency services, buy tickets for shows at the Poway Center for the Performing Arts, or register for recreation classes and activities. Anyone can sign up to receive e-mail news alerts for the services they want to know about, such as upcoming City Council meeting agendas, the latest fishing report, special events, or recreation class offerings.

Development Services is on TRAKiT

Development Services recently went live with a new TRAKiT software application to help track and manage projects, permits, and code compliance cases. The goal is to provide a "one-stop-shop" where customers can go for all of their project needs. Customers will experience shorter times at the counter, reduced project processing times, and be able to break ground on their projects faster. TRAKiT also interacts seamlessly with the business registration system and other existing software that staff currently uses, such as GIS mapping applications. Here's a sample of what TRAKiT can do:

- ***Keeps an electronic record of project status accessible to all City departments***
- ***Provides public access to construction permits, forms, and inspection scheduling***
- ***Tracks conditions placed on projects and permits***
- ***Automatically assigns projects and schedules reviews and inspections***
- ***Speeds up the review process by allowing simultaneous review by multiple staff members***
- ***Tracks electronic versions of maps and plans***
- ***Warns staff of expiring permits***
- ***Tracks staff time working on projects to help control costs***
- ***Tracks code violations and resident complaints***
- ***Provides robust performance tracking reports***

On the Cutting Edge with Blade Server Technology

We implemented a new Virtualized Server and Storage Area Network. The new "blade server" replaced 24 traditional servers with just four blade servers. The new servers provide a stable, energy efficient system that will manage current technology needs and future growth of the City's government business applications, online web applications, and databases.

The new Virtual Server has an estimated energy savings of $6,700 a year. The City qualified for an SDG&E rebate of over $4,000 to help bring the new technology to the City.

Faces of Affordable Housing

New Faces at the Meadows

Residents of the City's newest affordable for-sale housing development, The Meadows, received a very special gift this holiday season - a home to call their own. Located on Metate Lane and York Avenue, homes at The Meadows were ready for move-in just in time for the holidays.

The Cox family is just one of many families who were able to purchase a home at The Meadows thanks to the Supporting Home Ownership in Poway (SHOP) program. This program provides funding to qualified first-time homebuyers in the form of a second mortgage through the Poway Redevelopment Agency. Sean and Venecia Cox, along with their two young children, are happy to call The Meadows home. Sean, a firefighter, is excited about working close to home and Venecia is looking forward to raising her family in the same community she grew up in.

Twelve of The Meadows homes, located on Metate Lane, are still for sale to moderate income families. For more information, please call Crista McClure Swan with Pacific Scene Homes at (760) 458-0797.

Poway's 1st Baby of 2010

The City of Poway would like to welcome Ryder Chase Bergstrom. He was born at 5:12 p.m. on January 1, 2010, at Pomerado Hospital, making him the first Poway baby born in the New Year. Ryder was welcomed by his mother Victoria. He weighed 6 lbs, 8 oz, and was 19 inches at birth.

As part of the City's First Baby Program, a $200 savings bond was purchased for the new baby.

Water Conservation

Helpful tips to keep your water use in check this Spring

This is the time of the year that many people begin to focus on their yards and consider adding new plants to their landscape. Please use the following tips to help conserve water year-round:

- *Reduce your turf area and replace with vibrant and beautiful drought tolerant plants.*
- *Plant as soon as possible so the roots can become established before summer.*
- *Group plants together according to their water needs to make your irrigation more efficient.*
- *Use mulch to retain moisture in the soil and reduce weeds.*
- *Check your irrigation system for leaks or runoff.*
- *Water on your assigned day and water less than 10 minutes per station for standard sprinklers.*
- *Turn off your irrigation system when it rains.*
- *Visit our website at: www.poway.org/waterconservation for additional landscape resources and samples of drought tolerant plants. You can also sign up for free landscaping classes!*

For great ideas on creating a beautiful and water efficient landscape, please consult a garden expert at a local nursery. Additional information is also available at the Water Conservation Garden at Cuyamaca College, 12122 Cuyamaca College Drive West, El Cajon, CA 92010.

Water Restriction Update

Although the winter season is winding down and spring is just around the corner, Southern California is still facing a water supply challenge that requires everyone to make permanent changes to how we use our finite water supply. Poway remains in a Level 2 Water Shortage Alert, which includes mandatory water-use measures and specific watering schedules. For more specific information and resources please visit: www.poway.org/waterconservation.

Call the Water Conservation Team at (858) 668-1215 to learn about rebates, free business and residential water-use surveys, or to report broken sprinklers or excessive run-off. Thank you for your continued efforts to conserve water.

Watering Schedules (through October) Hours of Irrigation: 6 p.m. through 10 a.m.	
Even Number Addresses	Saturday, Monday, Wednesday
Odd Number Addresses	Sunday, Tuesday, Thursday
Apartments, Condominiums, and Businesses	Monday, Wednesday, Friday
For irrigation systems using standard sprinklers, no more than 10 minutes per watering station on assigned day (does not apply to drip, micro-irrigation, or stream rotor systems).	
Trees and shrubs not irrigated by a landscape irrigation system may be watered on assigned day by using a hand-held container or hose with positive shut-off nozzle, or a low-volume soaker hose.	

Poway's Adopt-A-Trail Program

Poway's Adopt-A-Trail Program provides an opportunity for individuals, families, or groups to give back to the community by helping to maintain our beautiful trails. There are many segments of the trail system throughout the City available for volunteers to "adopt" by assisting with trail inspections, vegetation clearing, and trash clean up.

Volunteers from Rancho Bernardo Church perform maintenance on the Lake Poway Trail

With the construction of the Iron Mountain Staging Area nearly complete, please consider adopting a segment of this fantastic trail. The staging area is located at the intersection of Highway 67 and Poway Road. There is ample parking for access to the Iron Mountain Trail and also a Park and Ride lot.

The City continues to make improvements to its scenic trails system for the safety and enjoyment of users. The 55+ miles of recreational trails located on both City-owned property and dedicated easements throughout the community are enjoyed by thousands of hikers, bicyclists, and equestrians. This extensive use requires ongoing trail planning, improvement, and maintenance. For more information about Adopt-A-Trail, please call (858) 668-4716 or visit www.poway.org.

Department Spotlight:

PARKS, TRAILS, AND OPEN SPACE MAINTENANCE DIVISION PUBLIC WORKS DEPARTMENT

Thousands of people enjoy the City's parks, trails, and open space each year. This is the amazing crew in the City's Public Works Department that maintains it all. The crew of the Parks, Trails, and Open Space Maintenance Division provide safe, well-maintained, and attractive public parks, trails, and green spaces to support the City's quality programming and enhance the enjoyment of all residents and visitors.

The crew maintains 16 parks (encompassing 230 acres), 18 playground sites, the Skate Park, 21 restrooms, 55 miles of trails, and 3,800 acres of open space. Their activities often focus on water conservation and irrigation efficiency, which have become even more important during this time of water awareness. The crew also maintains the grounds at several City facilities and the landscape in various street medians.

The City enjoys a vibrant volunteer program, and the Division coordinates the Adopt-a-Park Program and the Adopt-A-Trail Program, which currently has 41 individuals, families, and groups that volunteered over 740 hours in 2009. The Parks, Trails, and Open Space Maintenance Division may have a small number of staff, but this dedicated crew produces huge benefits for the community's enjoyment of the great outdoors.

Parks, Trails, and Open Space Maintenance Division of the Public Works Department

Poway – Your First Choice Program Expands

The City of Poway and Poway Chamber of Commerce have combined efforts once again to launch the "Poway – Your First Choice" program. The program focuses on educating residents about the benefits of shopping locally. To encourage residents and employees to shop in Poway, the Chamber is distributing Poway- Your First Choice discount cards. This card entitles you to special pricing and discounts at participating Poway businesses. To request a card, or obtain a list of participating Poway businesses, visit the Chamber's website at www.poway.com.

Remember, when you shop and dine in Poway, you keep sales tax dollars here. The sales tax collected in the City help support the services that you use every day, such as public safety, parks, and roads. So, the next time you go to spend one of your hard-earned dollars, make Poway – Your First Choice!

Top Ten Reasons to Shop Locally

1. Invest in the Poway community
2. Keep your tax dollars in Poway
3. Support our local Poway merchants
4. Create and keep Poway jobs
5. Help protect our local environment
6. Local merchants support Poway non-profits
7. Build local relationships with Poway merchants
8. Promote competition and diversity
9. Get better service
10. Keep the money in Poway!

Look for the green "Shop Poway" sticker in participating stores and use your First Choice card to save even more!

Your Input is Needed!

Preserving Poway's Past

A visit to the Heritage Museum & Nelson House will take you back into Poway's History

Vintage tools, timelines and even a schoolhouse replica demonstrate what life was like in old Poway

Have you ever sat at a desk in a one-room school house? Do you know what tools early settlers used to process corn? If you have a passion for local history, please visit the Heritage Museum and the Nelson House, located in beautiful Old Poway Park. The Poway Historical and Memorial Society volunteers share their knowledge of history on the weekends and, in cooperation with the City, host tours for school children and adult groups on weekdays.

It is an exciting time for the Society as they welcome Jeff Frye as the new president. "It is of utmost importance that we preserve the knowledge of the past for future generations. We have many opportunities for individuals who would like to join us in this venture," Frye said. There are unique artifacts, documents, and photos of early Poway and its residents, as well as an early 20th century one-room school house. From metates used for grinding and processing corn, to farming tools used by early settlers, the museum provides a comprehensive glimpse of Poway's past.

Volunteers are needed to ensure that the public has the opportunity to learn more about Poway's fascinating history. There is no time like the present to preserve the past. If you are interested in volunteering, please call (858) 679-8587 for more information.

Crime Corner: Click It or Ticket & Don't You Dare DUI

All too frequently the local news headline reads, "Suspected Drunk Driver Crashes Vehicle - Kills Occupants." In an effort to help combat this epidemic, the Poway Sheriff's Station will continue its aggressive driving-under-the-influence (DUI) enforcement through grant money obtained from the California Office of Traffic Safety (OTS).

The Poway Sheriff's Station is the recipient of approximately $120,000 in grants, which will be used to enforce DUI and seatbelt violations. OTS awarded $20,000 in grant monies for enforcement of "Click It or Ticket," and $37,000 to fund five DUI checkpoints from October 2009 through September 2010.

The San Diego Sheriff's Department was also awarded a DUI Awareness Grant. This grant was divided between the contract cities, with Poway receiving nearly $68,000, to be used to fund two additional DUI checkpoints, DUI saturation patrols, warrant sweeps, and stake-outs on unlicensed drivers due to DUI convictions.

There is also DUI enforcement money available to the Poway Sheriff's Station through the Countywide "AVOID" Grant. This is a three-year, $1.1 million OTS grant, which is in its second year.

Driving under the influence is a serious criminal offense that can have life-altering consequences. So remember to use a designated driver, alternate means to get home, or call a taxi. The average cost of a first offense DUI is $10,000. A $30 cab ride could save you more than $10,000—it could save a life!

Driving under the influence of drugs or alcohol not only puts lives at risk, it could cost you more than $10,000 if you're convicted of a DUI.

Penny Riley appointed as Interim City Manager

The City of Poway is pleased to announce that Penny Riley has been appointed to the position of Interim City Manager. Penny replaces Rod Gould, who had been the City Manager since 2006.

Penny has worked at the City of Poway since March 1988, starting as a college intern. Areas of emphasis have included City planning, water conservation, disaster preparedness, and 16 years in the City Manager's Office. In January 2010, she was appointed Interim City Manager, and Interim Executive Director for the Redevelopment Agency. She served as project manager for the award-winning $21 million City Office Building. Part of her duties include providing policy recommendations to the City Council, personnel management, budget development, and creating implementation plans for City operations. Penny is the mentor for the Employee Giving Committee.

Penny served 6 years in the United States Navy as a hospital corpsman before completing her degree, in Urban Geography at San Diego State University in 1989. Penny has been active in Municipal Management Assistants of Southern California and was selected for the Ernie Mariner Award for MMASC in 1997-98.

Special Rates for Poway residents!

The City is thrilled to continue its partnership with Cloud 9 SuperShuttle, which enables Poway residents and business travelers to enjoy discounted rates between the San Diego Airport and the 92064 zip code.

There is no need to request a special rate. By providing the 92064 zip code as your pick-up or drop-off location, you will automatically be provided with a reduced rate when you book your reservation. For reservations call (800) 974-8885, or visit the SuperShuttle website at *www.cloud9shuttle.com.*

Spring Cleanup Event

Look for the coupon for free disposal from April through June

EDCO Waste and Recycling Services is sponsoring two self-haul cleanup events for Poway customers this year, providing the opportunity to plan both a spring and fall "cleanup day". The spring event will start with EDCO mailing a coupon to residential customers at the end of March, which is good for FREE disposal of one load of household bulky items at either the Ramona Transfer Station or the Escondido Transfer Station. The transfer stations are open every day (Ramona transfer station is closed on Sundays) between 7:00 a.m. and 4:30 p.m., giving you the flexibility to use the coupon at your convenience between April and June.

Items Accepted:

- ***Furniture***
- ***Appliances (charges apply for appliances containing freon)***
- ***Residential wood waste***
- ***Yard waste***
- ***Scrap metal***

Directions and more information are provided on the coupon. Please be sure to have your coupon with you and present a picture I.D. with the current address (or a copy of an EDCO trash bill that corresponds to the service address listed on the reverse side of the coupon) to qualify for FREE disposal and avoid a disposal fee.

Items NOT ACCEPTED: hazardous waste, tires, computer monitors, televisions, contractor waste, large trailer loads, and commercial truckloads of debris.

Residents and contractors performing a major renovation or property cleanup may contact EDCO at (858)748-7769 to request temporary bin service.

POWAY Today

A Quarterly Municipal Newsletter for the Residents of Poway, California

Summer 2010

City Sells Poway Royal Estates for $38.3 Million

On May 4, 2010, the City Council approved an agreement to sell Poway Royal Estates Mobilehome Park to Hometown America for $38.3 million. If all goes as planned, the City will transfer ownership of the Park to Hometown in mid-July 2010. This comes after many months of hard work to identify a highly qualified buyer. Poway taxpayers will also benefit from the net sale proceeds of approximately $1.9 million.

As part of the purchase, Hometown will complete an extensive list of Park repairs and renovations and accept the resident guarantees included in the City's terms and conditions for the sale.

Why did the City buy Poway Royal Estates?

The City purchased Poway Royal Estates twenty years ago at the request of Park residents. The City's goals were to stabilize rents, ensure proper Park maintenance, and preserve Poway Royal as a reasonably priced housing opportunity in the community. While the City owned two other mobilehome parks at that time, it never intended to retain ownership of these parks long-term. The City Council's goal has always been to transfer ownership when the time was right. In 2003, the City sold Poinsettia mobilehome parks to a non-profit, leaving Poway Royal as the only mobilehome park owned by the City.

Why sell the Park now?

Historically, the City has used Park reserve funds to cover the Park's revenue shortfall. If this continues, reserve funds will be exhausted in a few years. The City's General Fund would then have to cover the excess cost, negatively impacting the City's ability to fund programs and services. The City Council has a responsibility to the community to ensure this does not happen.

During the fall of 2009, staff evaluated the potential savings from refinancing Park debt and studied current market conditions to sell the Park. Analysis found that investors would be attracted to purchase the Park because of its long-term rent and vacancy stability. The City Council authorized staff to list the Park for sale in February 2010, while preserving the option to refinance the debt.

Why was Hometown America selected?

Hometown America was selected as the buyer because it ensured City Council's goals and objectives for a sale of the Park would be met, submitted the highest offer, accepted the City's terms and conditions for the sale, and has an excellent track record as an owner and operator of more than 129 mobilehome communities nationwide. When City staff interviewed residents at other Hometown-owned parks, they found great resident satisfaction with Hometown America and its onsite management staff.

Why didn't the City sell the Park to residents?

Poway Royal residents did not submit an offer to buy the Park. While some residents showed support for an offer submitted by a for-profit buyer, Rancho Carlsbad Partners, which indicated residents may be given an opportunity to buy the Park in the future, other residents expressed concern that they would not be able to afford a resident purchase.. Although the Rancho Carlsbad offer indicated that residents may be given the chance to purchase the Park in the future, a sale to residents was not guaranteed. Additionally, in order for a future resident purchase to occur through the Rancho offer, a $10 million City subsidy would be required, which would result in a $3 million fee to Rancho Carlsbad. This required subsidy is equal to the annual cost to provide law enforcement services to the entire community. Finally, if the City subsidized the sale of the Park, only Park residents and Rancho Carlsbad would benefit. This could be considered a gift of public funds and an illegal use of taxpayer dollars.

There were additional concerns about the Rancho Carlsbad offer because it did not provide all of the resident guarantees included in the City's terms and conditions for the sale. The offered purchase price was also millions of dollars below Hometown's offer.

Guarantees for Poway Royal Residents:

- No rent increase for 2 years during the $1million in Park renovations;
- Existing leases will be honored indefinitely;
- Limitations on future rent increases; and
- Rent Subsidy and/or Resale Restriction program participants will receive a permanent reduction in their base rent

Why didn't the City sell the Park to a non-profit?

The City attempted to sell the Park to a non-profit owner/operator several years ago. However, non-profit ownership requires that over half of Park residents earn less than 120% of the area's median income ($89,900 for a family of four). Poway Royal does not meet this requirement. Additionally, if the Park was sold to a non-profit, there would be restrictions on how much residents could charge to sell their homes.

How will the City ensure residents are not negatively affected?

Ensuring that existing Park residents are not negatively affected by a sale of the Park is a top priority for the City Council, so the City has structured the Park sale around resident guarantees and $1 million in Park renovations. Resident guarantees include no rent increases for two years while repair and renovation work is being completed, continuation of existing lease terms, and limitations on future rent increases for existing and future residents. Additionally, residents who currently participate in the Rent Subsidy or Resale Restriction programs will receive a permanent reduction in their base rent for as long as they live in the Park. Resident guarantees are secured by 20-year secondary financing held by the City and a covenant recorded on the property.

Next Steps

The City expects to close escrow in July 2010. Staff will work with Hometown for a smooth resident transition and ensure that the required renovations are completed. For more information, contact the Poway Redevelopment Agency at (858) 668-4551, or www.powayroyal.com.

City Council Goals for Sale of Poway Royal:

- Park sale should not disadvantage the low- and moderate-income residents of the Park;
- The Park must be sold at the current market value through an open and competitive process;
- There should be no ongoing financial or management responsibilities by the City or the Poway Redevelopment Agency once the Park has been sold;
- The Park should continue to be well-maintained, and
- The Park will remain a perpetual mobile home park land use.

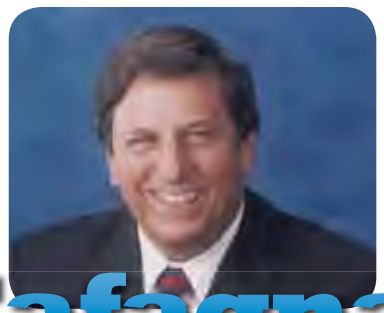
To honor our late Mayor Mickey Cafagna, the City plans to dedicate a portion of Scripps Poway Parkway as the ***Mayor Mickey Cafagna Memorial Parkway*** and establish the ***Michael P. Cafagna Community Center*** in Community Park.



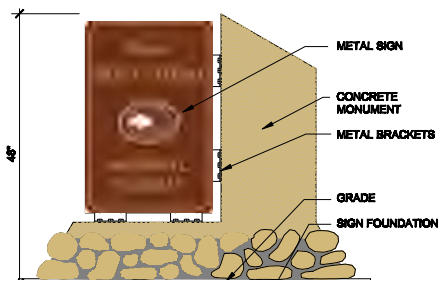
Mayor Mickey Cafagna Memorial Parkway

A resident of Poway for more than 30-years, Mickey was appointed to the City Council in 1992, and was elected Poway's third Mayor in 1998. Mickey is remembered for his leadership, consensus building, and dedication to the economic vitality of the City. A few of Mickey's accomplishments include building consensus for the voter-approved transportation sales tax initiative; fundraising and development of the Poway Boys and Girls Club; leadership for the development of the Business Park; and advocating for affordable housing.

Two freestanding monument signs will be constructed along Scripps Poway Parkway, between Pomerado Road and Danielson Street later this year. These signs are meant to signify the notable contributions Mickey has made to the community and particularly his worthwhile accomplishments towards the development of the Business Park.

The City has also established the "Michael P. Cafagna Community Center," a building that is anticipated in the Community Park Master Plan. The Community Center, which will be located in Community Park, is planned as a 30,000 square foot building. The building is expected to offer City recreation programs, classes for both youth and seniors, and host many other community events. The adoption of the Master Plan is expected at the end of 2010 or early 2011, with some park improvements potentially taking place in 2011.

Mickey passed away on April 11, 2009 after a long battle with cancer. The memorial parkway and community center building will be tangible evidence of the community's acknowledgement of his years of service and his contributions that have enriched the lives of our residents.



Two signs will memorialize Mickey's contributions to the City of Poway

Veterans Park

Scheduled to open November 2010

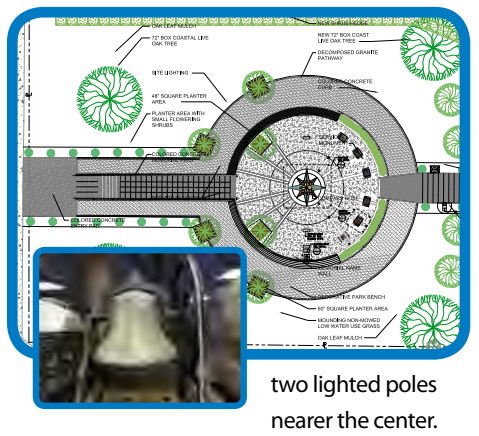
It has been a long-standing desire of the City Council to recognize and honor veterans. After years of planning, the City is proud to announce that a site has been selected and a design has been approved for the Veterans Park. The Park will serve as a permanent tribute to those who have passed, those who currently serve, and those to come in the future.

The project is a collaborative effort between the Veterans Committee and the City to create a space that will properly tell the story of service, vigilance and duty to country. City Manager Penny Riley states, "We are looking to keep the spirit of the American service men and women alive. The Park is designed as a permanent fixture to honor those that serve our country."

The site, which is currently owned by the Poway Redevelopment Agency, is nearly 1/2 acre in size, and is located on the northeast corner of Midland Road and Adrian Street in Old Poway.

The design was inspired by the ceremonies that will take place in the Park. The circular form of the plaza is symbolic of the nature of time, that it is never ending, and that this monument will always serve as a reminder to the future of the sacrifices of the past.

The lighted service flag poles for the Army, Marines, Navy, Air Force, Coast Guard, and Merchant Marines, with the Army National Guard and the Air National Guard under their respective parent services, are placed in an arch on the east side. The United States, Prisoner of War, California and Poway flags will be placed on two lighted poles nearer the center.



The compass rose is symbolic in military history as it is seen on maps used by navigating forces around the world.

The memorial name walls are a major design feature of the monument, and will be recessed so they are only visible to visitors after they have entered the Park.

Additionally, a single pole will be placed on the south side of the plaza and it will cast a shadow northward. The tip of the shadow from this pole, at mid-day, will rest on a series of plaques that will be situated so that on the day that a particular war ended, the shadow would rest on that plaque.

Finally, two historical amenities will be placed on site, an 1864 cannon and an 1870 freedom bell from the Meneely Bell foundry of West Troy, New York. The bell will be used in ceremonies by the veterans groups.

The Veterans Park will be dedicated to the public on November 11, 2010, at 11:00 am.

Talking & Texting On Cell Phones While Driving

It has been one of those days. As you left the house today, you noticed your other car had a flat tire. You have been juggling phone calls at the office all day concerning your children, your dog, and plans for a romantic weekend with your spouse. As you end your workday, you get a text message from your spouse reminding you to pick up a few things at the grocery store. What do you do?

Of course it's tempting to continue driving while you text a reply. Don't do it! If traffic ahead of you comes to a complete stop you may not be able to avoid a collision. Or maybe, while you're tapping out that text message, a child runs out in front of you chasing her ball. Is sending that text message or making that phone call really worth taking this kind of risk? Don't make a bad day worse. Be a safe driver by giving your complete attention to the road.

The safest way to answer or make a call or text on a cell phone while driving is to pull over to the side of the road.

For more information contact Jason Rothlein, Poway Sheriff's Station at 858-513-2800.

What does the law say?

Persons under the age of 18 shall not use a cellular phone even if it is equipped with a hands-free device. (California Vehicle Code (CVC) 23124)

A hands-free device must be used when driving a motor vehicle. (CVC 23123)

Writing, reading, or sending a text-based communication while driving is prohibited. (CVC 23123.5)

The code relating to cell phone use does not apply to emergency services professionals using a wireless telephone while operating an authorized emergency vehicle, in the course and scope of his or her duties. (CVC 23123)

Distracted driving is as dangerous as impaired driving

According to www.distraction.gov:

- Using a cell phone while driving, whether handheld or hands free, delays a driver's reactions as much as having a blood alcohol concentration at the legal limit of .08 percent. (Source: University of Utah)
- Driving while using a cell phone reduces the amount of brain activity associated with driving by 37 percent. (Source: Carnegie Mellon)
- 80 percent of all crashes and 65 percent of near crashes involve some type of distraction. (Source: Virginia Tech 100-car study for NHTSA)
- In 2008, nearly 6,000 people died in vehicle accidents involving a distracted or inattentive driver, and more than half a million people were injured. (NHTSA)
- The worst offenders are the youngest and least-experienced drivers—men and women under 20 years old. (NHTSA)
- Drivers who use hand-held devices are four times as likely to get into vehicle accidents serious enough to injure themselves. (Source: Insurance Institute for Highway Safety)

Poway announces the new Redevelopment Service Manager

Alex Andrade >

The City of Poway is pleased to announce that **Alex Andrade** has been selected as Poway's new Redevelopment Services Manager. Alex joins the City with over 10 years of experience in the fields of redevelopment, economic and community development. He has worked successfully with California redevelopment agencies in San Francisco, Los Angeles and San Jose, and most recently, for the City of Menlo Park.

Alex has significant experience customizing redevelopment and economic development initiatives for the purpose of retaining, expanding, and attracting businesses. Alex states, "I look forward to providing services and resources that preserve the high quality of life in Poway, with the purpose of enhancing the business climate, while maintaining a positive balance between growth and economic vitality."

Alex holds a masters degree in Public Administration from the University of San Francisco and a bachelor of arts degree in Sociology (Law and Society Emphasis) from the University of California, San Diego.

He has been a Board of Director of the Redwood City Library Foundation and an active member of Silicon Valley Economic Development Association (SVEDA), California Redevelopment Association (CRA), and California Association for Local Economic Development (CALED).

Meet Poway's New City Planner

< Suparna Dasgupta

On April 19, the City of Poway welcomed **Suparna Dasgupta** as its new City Planner. Suparna has a bachelor's degree in Economics from Kanpur University in India and a masters degree in Community Planning from the University of Cincinnati. She comes to Poway from the Town of Buckeye, Arizona, where she worked as the Planning and Zoning Manager, Assistant Director of Community Development, and ultimately became the Community Development Director. Prior to that, Suparna was a Planner with the City of Hamilton, Ohio, and a Project Manager with Vivian Llambi and Associates in Cincinnati.

As City Planner, Suparna is responsible for the day-to-day operations of the Planning Division. This division processes land-use applications and ensures compliance with grading and building plan reviews. She also oversees the City's Code Compliance Officers, who are responsible for enforcing a wide range of City regulations, including signs, graffiti, illegal commercial businesses, noise complaints, vegetation management, and stormwater pollution.

Suparna says, "This is an exciting time in the development of the City of Poway. The Planning Division is working to finalize the Community Park Master Plan, and will soon begin work on a comprehensive General Plan update. I look forward to working with City staff and residents on these important projects and other issues that affect Poway's quality of life."

Two new synthetic turf fields

MORE USE, LESS WATER!

Field Improvements

Through the joint effort of the City and Poway Unified School District, play fields at Valley Elementary and Meadowbrook Middle School have been converted from natural grass to synthetic turf. These resurfaced fields will dramatically increase the City's ability to support athletics, while contributing to our overall water conservation goals.

Synthetic Running Track

The field at Meadowbrook was enlarged to create an even bigger playing surface. A new synthetic running track was added. Students benefit from the fields during their physical education classes and extended day activities. During the late afternoon, into the evening and on weekends, youth sports can use the fields to their maximum benefit.

Increased Usage

The City anticipates the number of days the fields can be used for sports to increase an average of 60 days each year. There are several reasons for this. First, natural grass fields are closed approximately six weeks every year during the summer for fertilization, new sod installation, and aeration. Secondly, natural grass fields are closed an average of 18 days each year because of rain and wet field conditions. This excess water also leads to field damage, which creates longer closure periods. Synthetic turf recovers quickly after it rains, allowing for safe play almost immediately.

Reduced Cost

In addition to the expanded number of days synthetic fields are available, synthetic turf yields tremendous water savings and reduced maintenance costs. The conversion is expected to save approximately 9 million gallons of water each year. That is enough water to support roughly 35 households per year. This savings contributes to the City's overall water conservation efforts.

Who's Responsible For Maintenance?

Poway Unified School District will be responsible for providing ongoing maintenance and upkeep. The existing joint-use agreement between the City and the district outlines the field-sharing arrangements for both sites. Poway Unified School District and the City will continue to partner on future field replacement, as opportunities arise.

Synthetic turf recovers quickly after it rains, allowing for safe play almost immediately.

Faces of Affordable Housing

Hamid Dadafshar & Afsaneh Shamlou

Supporting Home Ownership in Poway

Like many immigrants, Hamid Dadafshar and his wife, Afsaneh Shamlou, came to the United States with the goal of providing a better way of life for themselves and their children. Owning their own home was a long-held dream for Mr. Dadafshar and his family, but they thought they would have to leave the Poway area in order to realize this dream. Fortunately, with the help of the Supporting Home Ownership in Poway (SHOP) program, the Dadafshars qualified for an affordable home at the newly-developed Meadows community. The Dadafshar family moved into their new home in the fall of 2009. For more information on the newly-developed Meadows community, please contact Crista McClure-Swan with Pacific Scene Homes at (760) 458-0797.

"…we ended up living in a good neighborhood. Now everyone in my family is happy. Today our kids are speaking English and Spanish, and the youngest will finish high school soon and be off to college."

Residents Help Shape Community Park Design

Poway residents gathered for a community workshop on March 20 to share their visions for the future of Community Park.

Community Park is home to the Community Center, Skate Park, Dog Park, Senior Center, Swim Center, athletic fields, and more. Built in the late 1970s, the park has served Poway well. However, in order to keep pace with current community needs, the Park will need to undergo a major transformation. Resident input is an important factor in determining its future. In 2007, community workshops were held to determine overall development priorities. The City began initial site plan review and design research based on the input. In 2009, the community was engaged again to reconfirm what was most important for the park. Those priorities include more green space and trees, an enhanced creek, safety and security, multi-use sports fields, and the new Michael P. Cafagna Community Center.

The March 20 workshop was led by the project consultant, RJM Design Group. The morning began with an interactive walking tour. The primary focus of the day was seeking input for the detailed design elements that were identified by the community, including buildings, landscaping, play areas, parking, and more. RJM Design Group will develop design schematics and present those to the community in May for feedback. For more information, or to be added to the project interest list, please go to the City website at **www.poway.org.**

Poway's current Community Park was built in the late 1970's

ELECTION REMINDER:

City of Poway employees film San Diego

Blood Bank Commercial

Keep your eyes glued to the TV to see your City of Poway employees make their television commercial debut!

On February 11, 2010, City employees gathered to film a public service announcement for the San Diego Blood Bank. Many participants wore red not only for the commercial, but to also show support for National Heart Health Month.

The City of Poway is very proud of its long history and partnership with the San Diego Blood Bank and has qualified for the Annual Life Level 4 honor, which is the highest level of donation. City employees have been hosting regular blood drives since 2007, donating over 231 pints of blood. Employee Laurrie Stacconi was featured in the commercial. Laurrie has a rare medical condition that requires her to receive blood transfusions on a regular basis. She and many others have benefitted greatly from the generosity of blood donors.

Look for the public service announcements on local television stations this spring and summer.

Give Blood Poway!

Participate in our next blood drive at City Hall on Thursday, July 15, 2010.

STORM WATER DOOR HANGER

Dear Resident:

The City of Poway's storm drain system collects water run off and drainage from rainfall. The storm drain system is not connected to the sewer system, which means this water is untreated as it is channeled through local creeks to an intricate storm water conveyance system that ultimately leads to the ocean.

Most of the time, pollutants unknowingly and unintentionally flow into storm drains every time it rains or when water flows out of yards. Sometimes pollutants such as pesticides, fertilizers, pet waste, litter and oil are inadvertently disposed in storm drains. In both cases pollution of the storm water system can have harmful effects on our recreational areas, waterways and wildlife.

Please see reverse side for tips on how you can play an important part in storm water pollution prevention.

Improper disposal of automotive fluids and other hazardous substances is a violation of the Federal Clean Water Act and the Poway Municipal Code. To report illegal dumping of automotive fluids and other hazardous substances in storm drains please call:

Poway Code Compliance (during business hours) at (858) 668-4663 or 668-4664, press "0" for immediate assistance

Or

Poway Sheriff's Station (after regular business hours) at (858) 513-2800.

Sincerely,

City of Poway
PUBLIC WORKS DEPARTMENT
(858) 668-4707

Helpful & Inexpensive Tips for Storm Water Pollution Prevention

- When using hazardous substances such as paints, solvents, and cleaners, buy only what you need and use it all up.
- Properly dispose of unwanted household hazardous waste (HHW) at the **Poway HHW collection facility.** Please call **(858) 668-4710** for location and hours of operation.
- For water-based paints, rinse paint brushes in the sink. For oil-based paints, filter and reuse paint thinner. Dispose of all unwanted paints and materials at the Poway HHW collection facility.
- If you are working on a home improvement project, dispose of small amounts of drywall, concrete and mortar in the trash after it is dry.
- Dispose of pet waste in the toilet or deposit in a bag in a trash receptacle.
- Use pesticides or fertilizers sparingly. Avoid using them if the forecast calls for rain within the next week.
- Use mulch as a substitute for herbicides to prevent weeds from growing and to help absorb water.
- Do not over water your lawn and water during the cooler times of the day.
- Drain swimming pools only when advised to by professionals, and take steps to ensure water will not harm our environment.
- Sweep and pick up leaves and debris from your driveway instead of hosing it down into the storm drain.
- If you wash your own car, use a shutoff nozzle on your hose, and use mild detergents and water sparingly.
- When changing fluids from your car, drain in a clean container (e.g., an empty milk jug) and seal. Take used oil and oil filters to a **used oil collection center** in Poway. Call **1-800-CLEANUP** for locations.

Only Rain Down the Storm Drain!

Only Rain Down the Storm Drain!

Easy Steps to Clean Water

Sweep or Rake

Conserve water.
Do not use a hose to wash off sidewalks, driveways, and patios. Sweep up debris and put it in a trash can. Rake up yard waste to compost or recycle.

Reduce the Use of Landscape Chemicals

Decrease the use of lawn and garden care products such as pesticides, weed killers, and chemical fertilizers. Consider using non-toxic pest control methods. Avoid over watering which may wash these products into the gutter and storm drains.

Buy Non-Toxic Products

When possible, use non-toxic products for household cleaning. If you must use a toxic cleaning product, buy small quantities, use it sparingly and properly dispose of unused portions. You should dispose of your toxic products at the Poway Household Hazardous Waste Collection Facility. Please call (858) 668-4710 for the location and hours of operation.

Recycle Used Motor Oil and Earn $$

Certified used oil collection centers will pay a few cents per gallon for used oil. Collect used oil in sealed containers and take it to a certified center. For the certified center nearest you, call 1-800-CLEANUP
1 (800) 253-2687
or visit the City of Poway's website at www.ci.poway.ca.us

Dispose of Yard Waste Frequently

By disposing of grass, leaves, shrubs, and other organic matter more frequently, less will wash into storm drains. Recycle or compost your yard waste.

Clean up After Your Pets

Take a bag when you walk your pets and always clean up after them. Flush pet waste down the toilet or dispose of it in a sealed plastic bag and throw it in the trash.

Care for Your Vehicles

Change your oil routinely. Fix fluid leaks immediately. Keep your vehicles tuned up. If possible, wash your vehicle at home on an unpaved area, such as lawn or gravel. Use very little soap. Pour remaining soapy water into an indoor sink or toilet. Conserve water by using a shutoff nozzle. Consider using a car wash designed to collect the wash water.

For more information on how you can prevent the pollution of our creeks, rivers, lakes, and ocean visit **www.ci.poway.ca.us** or **www.projectcleanwater.org**
To report illegal dumping of automotive fluids and other substances into storm drains please call: Poway Code Compliance (during business hours 8 a.m. to 5 p.m.) at (858) 668-4663 or (858) 668-4664, press "0" for immediate assistance; or Poway Sheriff's Station (after regular business hours) at (858) 513-2800.

City of Poway Stormwater Management and Discharge Control Ordinance, Chapter 13.09, prohibits the discharge of pollutants to the storm water conveyance system.

FUNDED BY A GRANT FROM THE CALIFORNIA INTEGRATED WASTE MANAGEMENT BOARD

03/05

Only Rain Down the Storm Drain!

Clean Water is Important to All of Us!

When rain flows over streets and other surfaces, it picks up pollutants and carries them into the storm water conveyance ("storm drain") system.

Did you know that storm drains are **NOT** connected to sanitary sewer systems and treatment plants?

The storm drain system is designed to prevent flooding by transporting water away from developed areas.

However, this water is not filtered or treated, and all the contaminants it contains eventually flow to our creeks, lakes, and the ocean where we swim and fish.

Once there, polluted runoff can harm wildlife and habitats. In some cases, it can even cause beach closures or make our fish and shellfish unsafe to eat.

Why do we need Clean Water?

Clean water is essential for every aspect of life. In addition to sustaining our local water resources, it ensures economic growth and prosperity. Population growth has impacted water quality and placed increasing pressure on supplies. Controlling pollution is critical to preserving our aquatic resources and the economic viability of our region.

How you can help keep our water clean...

Poway residents can make a difference. Becoming aware of ways to prevent storm water pollution is the first step toward having cleaner water for drinking, swimming, boating, and fishing.

HHW AND UNIVERSAL WASTE FLYER

CITY OF POWAY'S

Household Hazardous Waste Collection Facility

12325 Crosthwaite Circle (off Stowe Drive) in
the South Poway Business Park, Poway, CA

Hours of Operation:

9:00 a.m.- 3:00 p.m. Saturdays Only

(Closed on Sundays, weekdays, and holiday weekends)
For recorded information call: **(858) 668-4710**

Household Hazardous Waste includes:

- Aerosol cans, non-empty
- All Purpose Cleaners
- Auto Batteries
- Auto Fluids, Oil & Filters
- Batteries
- Cooking Oil, Residential
- Disinfectants
- Drain Opener
- Electronics: Computer CPU, Monitor, Printer, TV, VCR, Wireless Phone, Microwave Oven
- Fertilizers
- Fluorescent Tubes and Bulbs & Other Mercury-Containing Lamps
- Furniture Polish
- Gasoline (w/ container)
- Latex (water based) Paint
- Lighter Fluid
- Oil-Based Paint
- Oven Cleaner
- Pesticides
- Pool Chemicals
- Propane Canisters
- Sharps in rigid, sealed containers labeled "Sharps"
- Solvents & Thinners
- Thermometers
- Thermostats
- Varnishes

To reduce the amount of Household Hazardous Waste you generate, please buy only what you need and use it up. Choose less toxic alternatives and recyclables.

1/2009

HOUSEHOLD HAZARDOUS WASTE is unused or leftover portions of products containing hazardous chemicals used to maintain your residence. Products labeled *Caution, Warning, Danger, Poison, Toxic, Flammable or Corrosive* are considered hazardous.

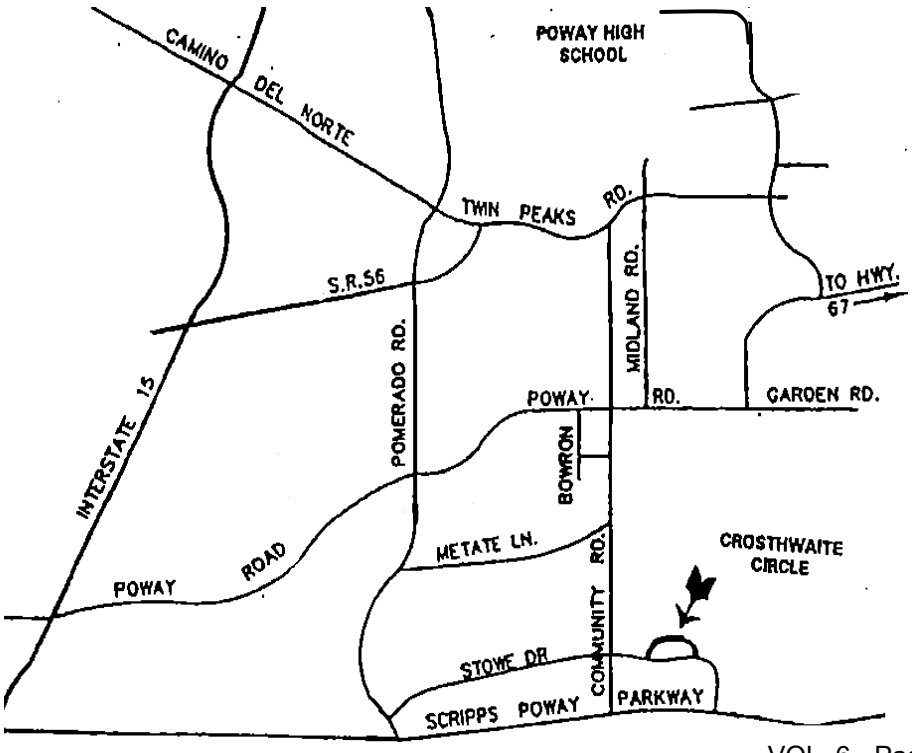
PROPER DISPOSAL: It is dangerous and illegal to discard household hazardous waste into the trash, a storm drain, or down the sewer drain. Instead, use up the product as intended or take the unused portion to a Household Hazardous Waste Collection Facility. Uncontaminated used oil, oil filters, antifreeze, and automotive batteries may also be taken to a certified collection center.

TRANSPORTATION AND WEIGHT LIMITS: Leave products in the original container with lids on tight so they will not leak. Transport containers in the trunk or in the back of the vehicle away from passengers. **DO NOT** transport more than 15 gallons or 125 pounds at a time in containers no larger than a 5-gallon bucket.

CONSTRUCTION WASTE: Hazardous waste from a home remodeling project where a commercial contractor was used is commercial waste. The disposal is the responsibility of the contractor.

DO NOT BRING: **BUSINESS WASTE, TIRES, EXPLOSIVES, RADIOACTIVE MATERIAL or MEDICAL WASTE except sharps.**

Funded by the City of Poway, participating agencies, and grants provided by the California Integrated Waste Management Board.



Universal Waste

Universal waste (U-waste) is hazardous waste that comes from a wide variety of generators, including residences and businesses. Under California's "Universal Waste Rule," U-waste cannot go in the trash, and must be taken to a collection location where it is then sent for recycling or proper disposal.

Examples of Universal Waste

- Common Batteries (AA, AAA, C cells, D cells and button cell batteries)
- Electronic Devices such as: Computer and television monitors, wireless phones, computer processing units, printers, VCRs and microwave ovens
- Fluorescent light tubes and bulbs
- High intensity discharge lamps
- Mercury switches
- Mercury thermometers
- Mercury thermostats
- Non-empty aerosol cans

How To Dispose of U-waste

- Retailers that sell rechargeable batteries should have a take back service. Rechargeable batteries and cell phones are accepted at retail sites participating in the Rechargeable Battery Recycling Corp. Program.
- Poway Residents may take their waste to the Poway HHW Collection Facility along with their other HHW.

For additional information about universal waste go to:
http://www.calrecycle.ca.gov/HomeHazWaste/Uwaste/

www.ciwmb.ca.gov/HHW/Uwaste

P.O. Box 789
Poway, CA 92064-0789

Re: Results of 2009/2010 Water Quality Monitoring, Flood Control Detention Basins, Poway, California

Dear Mr. Tamimi:

In order to evaluate the effectiveness of City of Poway (City) retrofitted flood control detention basins in removing pollutants from storm water, D-MAX Engineering, Inc. (D-MAX) conducted sampling and analyses of selected parameters for the detention basins located at Stotler Court, Stowe Drive, Community Road, Kirkham Way, and Gate Drive during the storm event in the Poway area on December 7, 2009. These sites were revisited approximately three days later on December 10, 2009, to sample the water released from the basins. This letter summarizes our sampling procedure and the results of the analyses.

Background

The City of Poway has retrofitted five flood control detention basins for use as regional storm water best management practices (BMP). All basins were modified to capture and mitigate the volume of runoff produced by an 85th percentile, 24-hour rain event. The City modified these basins to serve as shared BMPs for Priority Development Projects within their drainage areas. These shared BMPs are less expensive for developments subject to the City's Standard Urban Stormwater Mitigation Plan (SUSMP), and they also treat runoff from other parcels within the basins' drainage areas that were not subject to SUSMP and would not have received any treatment if a standard SUSMP design approach of installing BMPs only on the Priority Development Project site was used.

The City has conducted analyses of inflow to and outflow from the basins to assess their effectiveness since 2004. Based on the anticipated and potential pollutants generated by the land use types upstream of the detention basins, the parameters below were selected for analyses. In previous years, laboratory analyses were conducted for diazinon, chorpyrifos, and malathion. These constituents had not been present at detectable levels throughout the course of the program, and were therefore excluded from analysis in 2009. Due to Los Peñasquitos Creek's 303(d) listing for phosphorus, total phosphorus analysis was added to the program this year to provide a more complete picture of the basins' phosphorus removal performance. The program previously included analysis of orthophosphate phosphorus but not total phosphorus. A list of the parameters measured during the December 2009 monitoring is presented on the following page.

Field Analyses

- Temperature
- pH
- Specific Conductance

Laboratory Analyses

- Total Hardness
- Total Suspended Solids (TSS)
- Total Organic Carbon
- Oil and Grease
- Nitrate Nitrogen
- Ammonia Nitrogen
- Orthophosphate Phosphorus
- Total Phosphorus
- Total and Dissolved Copper
- Total and Dissolved Lead
- Total and Dissolved Zinc
- Total and Dissolved Cadmium
- Surfactants (MBAS)
- Specific Conductance
- Turbidity
- Total Coliform Bacteria
- Fecal Coliform Bacteria
- *Enterococcus* Bacteria

Sampling Procedure

Sampling was conducted for a rain event beginning in the morning of December 7, 2009. According to information from the County of San Diego rain gauge station in Poway the sampled storm generated 1.11 inches of rain. The D-MAX field crew arrived at approximately 6:00 AM and concluded sampling at approximately 6:00 PM. Once sufficient rain had fallen to produce runoff at the sampling locations, time weighted composite samples were taken by collecting equal volumes of samples from the inlets of all detention basins every 20 minutes. All samples were collected, mixed, and transferred to the appropriate bottles.

In the field, temperature, pH, and specific conductance were measured for all composite samples. Samples for laboratory analysis were also collected. In accordance with standard sampling procedure, grab samples were taken in the middle of the rain event and promptly sent to the lab for analyses of the three types of bacterial indicators and oil and grease. The samples for all other constituents were composited. The collected samples were placed into the appropriate sampling bottles provided by the laboratory and preserved on ice until they were delivered to EnviroMatrix Analytical Laboratory to be analyzed for the remainder of the parameters listed above. The samples were delivered within the appropriate holding times, and strict chain-of-custody procedures were followed.

Runoff from this rain event was kept in the basins for approximately three days before being released. During this period scattered rain showers dropped 0.34 inches of rain in the same catchment, which also flowed to the basins. When the captured runoff was released, temperature, pH, and specific conductance were measured again in the field at the outflow sites. The collected samples were then sent to the laboratory for analysis of the remaining parameters, following the same procedure that had been used for the samples collected during the rain event. The laboratory analytical reports are attached to this report.

Results

The drainage area for the Community detention basin is much less impervious than the drainage areas for the other four basins and is also relatively flat. As a result, the runoff response for this basin typically comes much later in rain events for this basin than the other basins, and during smaller rain events essentially no runoff reaches the detention basin. This year enough runoff was produced to collect inflow and outflow samples for all five basins, including the Community basin. The locations of all five basins and their drainage areas are shown in Figure 1.

Tables 1 through 5 present the results of the sampling and analysis for each basin. Table 6 presents an overall summary of the results, indicating the change in each parameter (increase, decrease, or no change) from inflow to outflow as well as the outflow value. Table 7 summarizes the percent reductions for the parameters tested at all five basins. Table 8 presents overall median and average values for the inflow and outflow values, as well as percent reductions based on the overall averages and medians presented in the table.

In general, most parameters either had lower concentrations in the outflow than in the inflow or were not detected in both the inflow and the outflow. In all five basins, total zinc, turbidity, fecal coliforms and enterococci were significantly reduced. With the exception of dissolved zinc at the Kirkham Basin, in cases where metals were detected in the inflow sample, concentrations were either lower or not detected in the outflow sample. Dissolved zinc at Kirkham was only four micrograms per liter higher in the outflow sample, and the outflow value was still below the California Toxics Rule Criterion Continuous Concentration (the more stringent of the two applicable numeric limits). It should be noted that a 59 microgram per liter decrease in total zinc was observed at the same basin.

At four of the detention basins total hardness and specific conductance increased due to the fact that captured runoff was subject to evaporation prior to the outfall sampling. Hardness and specific conductance measure dissolved ions in a particular solution. These ions do not settle out of solution and the ratio of dissolved solids to water increases as water evaporates. As a result, there is usually an increase in total hardness as well as specific conductance. An opposite trend was noted at the Community basin. This is likely because, as mentioned earlier, the drainage area for Community is significantly different from the other basins' drainage areas, and both the total volume of runoff and the flow rates observed during the storm were significantly smaller for Community. Rain water typically has low specific conductance and hardness, and these parameters are usually higher for water that has come into contact with soil for longer periods of time. Accordingly, the slower moving, more turbid inflow tested for the Community basin had higher hardness and specific conductance levels than those measured at the other basins. The scattered showers that occurred during the period between the inflow and outflow sampling, which would have had lower specific conductance and hardness than the inflow sample tested, likely contributed a proportionally much larger volume in the Community basin than in the other basins.

In all basins over 80 percent reductions in fecal coliforms and enterococci were noted. Both these reduction rates and the absolute outflow bacteria counts are overall superior to previous years.

Total coliforms, which are less likely to be related to fecal sources than the other two groups of bacteria measured and are generally considered poor public health indicators,

had more mixed results. Decomposing organic material in the detention basins the most likely source of the total coliform increases where they were observed. Also note that the highest inflow bacteria levels were measured at the Community basin. Based on visual observations, the flow sampled for the bacteria grab sample at the Community basin had a much lower flow rate and higher turbidity level and was influenced by the presence of animal waste in the conveyance.

Mixed results were observed with nutrient levels. Nitrate nitrogen levels decreased from inflow to outflow at all basins except Community, which saw a moderate increase. Ammonia nitrogen decreased or did not change in all of the basins except Kirkham. Both organophosphate phosphorus and total phosphorus decreased at Community and Gate but increased at Stowe and Kirkham, while Stotler showed an increase in orthophosphate phosphorus but a decrease in total phosphorus. With the exception of Community, the outflow values for orthophosphate phosphorus and total phosphorus were fairly similar, and it appears that inflow concentration variation is the main reason for the differences in removal rates. As shown in Table 8, overall nitrate nitrogen and total phosphorus decreased, but more mixed results were seen for orthophosphate phosphorus and ammonia nitrogen depending on whether the average or median values were used. In these cases it appears the average is more strongly influenced by a single value well above or below the rest of the values, and the median is likely a more representative measure. The most likely reason for the variations in nutrients levels and removal percentages among the basins is the presence of plants and other organic matter in the basins.

Among other constituents, surfactants were never detected, and oil and grease was only detected in one inflow sample. That detection was at the minimum reporting limit of 5 milligrams per liter.

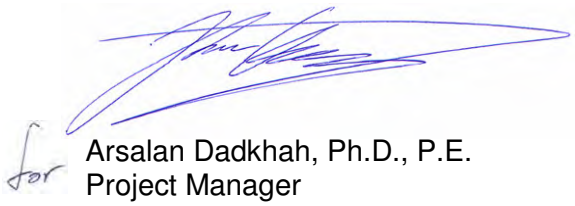
Summary of Findings

A summary of the main findings of the 2009 detention basin monitoring program is presented below.

- Percent reductions in excess of 80 percent were observed for fecal coliforms and enterococci in all five basins.
- Metals generally were not detected at all or had lower outflow than inflow concentrations.
- Turbidity reductions of 35 to 80 percent were observed at all basins, and total suspended solids were not detected in the outflow of any of the five basins.
- Surfactants were not detected in any of the samples.
- Oil and grease was only detected in one inflow sample and was not detected in any of the outflow samples.
- Total hardness and specific conductance were higher in the outflow for most basins. This is consistent with past years and is likely due to the effect of evaporation during the period that water is detained in the basins.
- Mixed results were observed with nutrients. In general, reductions in nitrate nitrogen and total phosphorus were observed.

It has been our pleasure working with the City of Poway on this interesting project. If you have any questions regarding this report, please give me a call at (858) 586-6600 ext. 22.

Sincerely,
D-MAX Engineering, Inc.



for Arsalan Dadkhah, Ph.D., P.E.
Project Manager

Enterococci (MPN/100mL)	20	600	110	81.7%

Notes

ND = not detected

NA = not applicable

mg/L – milligrams per liter

mmhos/cm – micromhos per centimeter

NTU – Nephelometric turbidity units

^{o}C – degrees Celsius

mS/cm – millisiemens per centimeter

MPN/100 mL – most probable number (of colony forming units) per 100 milliliters

* These parameters were measured in the field.

Percent change for values which were not detected is based on half of reporting limit concentration.

	Outflow	220	70	130	110	110	110

Notes

↓ Indicates the outflow value was lower than the inflow value

↑ Indicates the outflow value was higher than the inflow value

- Indicates the parameter was detected in the inflow and outflow, but no change was observed

ND Indicates the parameter was not detected in either the inflow or the outflow

Outflow is the outflow value measured for the parameter

*Overall column shows the median outflow value for the parameter across all monitored basins and the net increase or decrease across the basins. A value of "<[reporting limit]" was entered where a large number of non-detect results brought the median below the reporting limit. The net increase or decrease is the number of increases minus the number of decreases. For example, two increases and one decrease is represented by showing one increase arrow.

Table 7: Pollutant Removal Percentages at All Basins

pH*	7.5	7.5	6.6	6.6	12%	12%
Field Specific Conductance (mS/cm)*	0.23	0.10	0.24	0.22	-7%	-120%
Total Coliforms (MPN/100mL)	338,600	23,000	39,600	30,000	88%	-30%
Fecal Coliforms (MPN/100mL)	34,640	2,200	482	300	99%	86%
Enterococci (MPN/100mL)	34,100	1,400	128	110	100%	92%

Notes

NA = not detected in both inflow and outflow

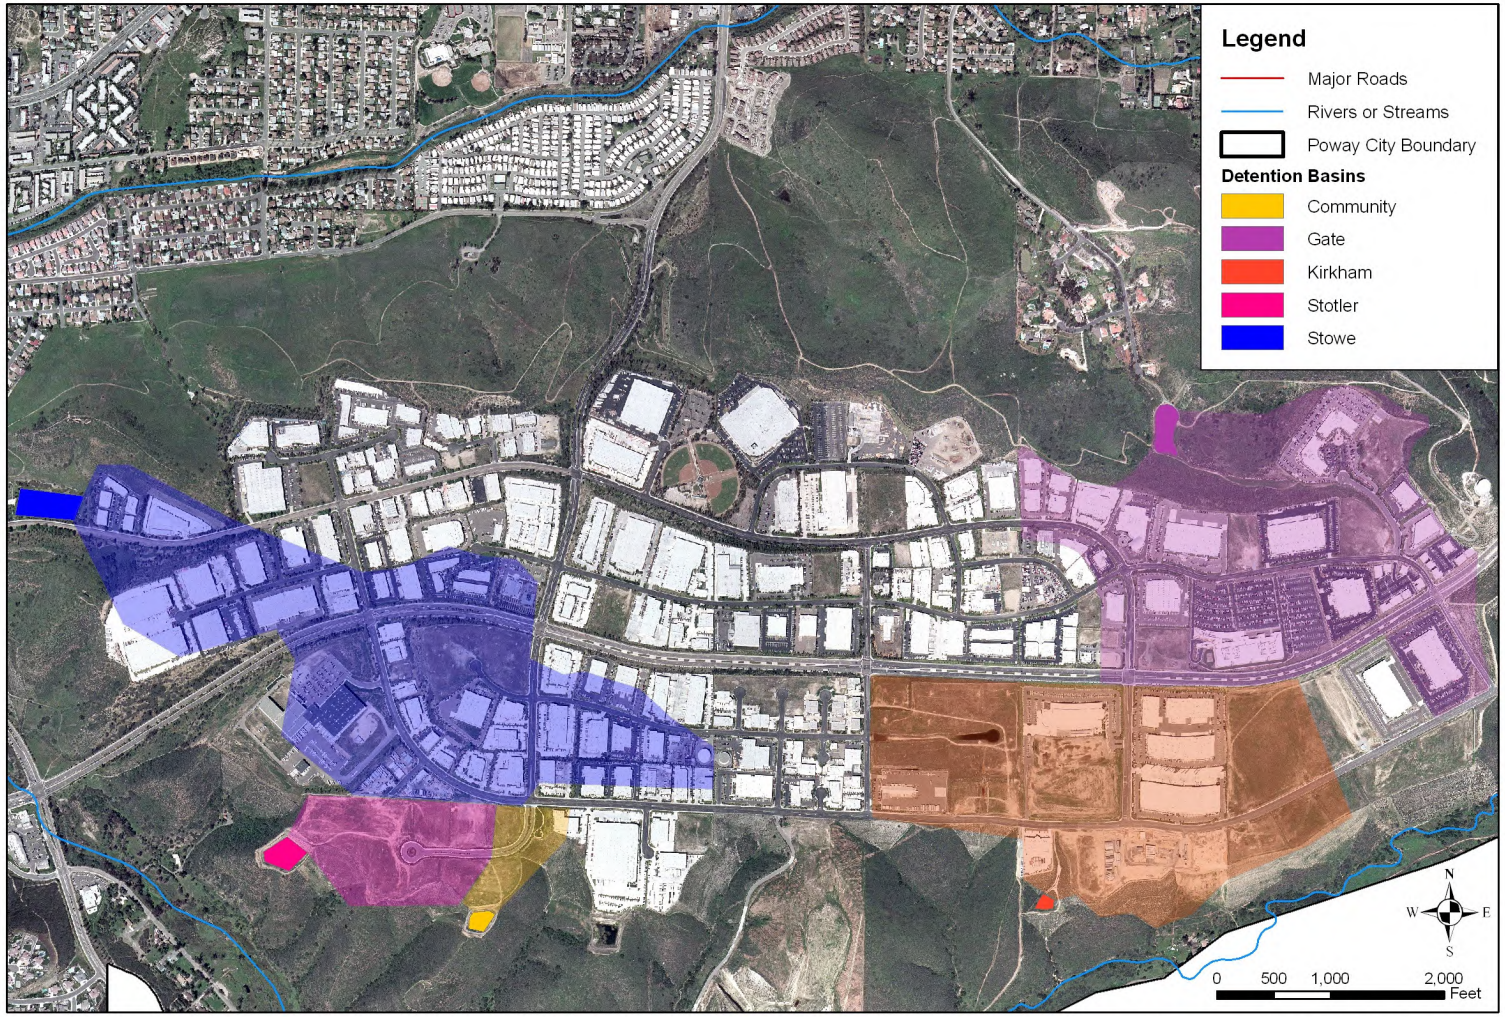
* These parameters were measured in the field.

** Oil and grease and total suspended solids were detected in only a few inflow samples and no outflow samples. Statistically the medians for inflow and outflow were both equal, but the inflow averages were higher than the outflow averages.

One half the reporting limit was substituted for non-detect ("ND") values in statistical calculations.

Negative percentages indicate the outflow value was higher than the inflow.

Figure 1
South Poway Retrofitted Detention Basins and Corresponding Drainage Areas



Base Data Sources: USGS, SanGIS, SANDAG. Aerial photos are from 2004. The basins themselves are shown in darker colors, and corresponding drainage areas are the slightly lighter, transparent areas.

Notes and Definitions

W-02	The sample for nitrate analysis was preserved with H2SO4 after the nitrite portion of the analysis was completed to extend the holding time for the sample. Nitrate results are corrected for the nitrite contribution per the method.
QR-04	The RPD between the sample and sample duplicate is not valid since both results are below the reporting limit for this analyte.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Project Name: Poway Detention Basin
Project Number: 200943W-1

Enclosed with this letter are the test results performed by subcontract laboratory for the following analyses:

- TOC-Liquid by SM5310B

The samples were received by EnviroMatrix Analytical, Inc. intact and with chain-of-custody documentation. The test results and pertinent quality assurance/quality control data are listed on the attached tables.

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hard copy data report has been authorized by the following signature.

Dan Verdon
Laboratory Director

Clinical Laboratory of San Bernardino, Inc.

17 December 2009 Clinical Lab No.: 09L0347

Louis Luick
EnviroMatrix Analytical, Inc.
4340 Viewridge., Ste. A
San Diego, CA 92123

Project Name: Drinking Water
Sub Project: 0912252

Enclosed are the results of the analyses for samples received at the laboratory on 12/15/09 . Samples were received within temperature range, in correct containers and preservation.

Analyses were performed pursuant to client's chain of custody, within hold times, utilizing EPA or other ELAP approved methodologies.

I certify that the results are within compliance both technically and for completeness. Analytical results are attached to this letter. Please call if any additional information and or assistance are needed.

Thank you for choosing Clinical Laboratory of San Bernardino for your analytical needs.

Sincerely,

Stu Styles
Client Services Manager

Notes and Definitions

W-02	The sample for nitrate analysis was preserved with H2SO4 after the nitrite portion of the analysis was completed to extend the holding time for the sample. Nitrate results are corrected for the nitrite contribution per the method.
QR-04	The RPD between the sample and sample duplicate is not valid since both results are below the reporting limit for this analyte.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

EMA Log#: 0912349

Project Name: Poway Detention Basin
Project Number: 200943W-1

Enclosed with this letter are the test results performed by subcontract laboratory for the following analyses:

- TOC-Liquid by SM5310B

The samples were received by EnviroMatrix Analytical, Inc. intact and with chain-of-custody documentation. The test results and pertinent quality assurance/quality control data are listed on the attached tables.

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hard copy data report has been authorized by the following signature.

Dan Verdon
Laboratory Director

Clinical Laboratory of San Bernardino, Inc.

17 December 2009 Clinical Lab No.: 09L0345

Louis Luick
EnviroMatrix Analytical, Inc.
4340 Viewridge., Ste. A
San Diego, CA 92123

Project Name: Drinking Water
Sub Project: 0912349

Enclosed are the results of the analyses for samples received at the laboratory on 12/15/09 . Samples were received within temperature range, in correct containers and preservation.

Analyses were performed pursuant to client's chain of custody, within hold times, utilizing EPA or other ELAP approved methodologies.

I certify that the results are within compliance both technically and for completeness. Analytical results are attached to this letter. Please call if any additional information and or assistance are needed.

Thank you for choosing Clinical Laboratory of San Bernardino for your analytical needs.

Sincerely,

Stu Styles
Client Services Manager

Telephone Number: (858) 668-4722

INTRODUCTION AND CONTENTS

Introduction

Section 7 of the Annual Report discusses the implementation of the illicit discharge detection and elimination (IDDE) component of the City's storm water program. This program consists of dry weather monitoring activities and other activities intended to prevent and respond to illicit connections and illegal discharges, such as operating a storm water hotline. The reporting period for the portions of this section that discuss dry weather monitoring activities extends through September 30, 2010, but the reporting period for other activities described in the section extends through June 30, 2010, consistent with the rest of the JURMP Annual Report. Because field work for the dry weather monitoring program is not required to be completed until September 30, the same day that the JURMP Annual Report is to be submitted, the RWQCB extended the submittal deadline for all of Section 7 of the JURMP Annual Report until December 15 of each year.

Contents

This submittal includes a certification statement, the text of Section 7 of the 2009/2010 JURMP Annual Report, and the attachments associated with that section. For clarity, the items included in this submittal are listed below.

- Certification Statement for Section 7 Submittal
- Introduction and Contents
- Section 7 (IDDE Component) of the 2009/2010 JURMP Annual Report
- JURMP Annual Report Requirements Checklist (for Section 7 only)
- Attachment 7.1, City of Poway Dry Weather Field Screening and Analytical Monitoring Program 2010

Please note that the complaint log, referenced as Appendix B in Section 7, was already provided with the main JURMP Annual Report submittal in September 2010 and is not included again with this December submittal.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

The City maintains several programs to prevent and to seek out and eliminate illicit connections and illegal discharges (IC/IDs), which can be significant sources of pollutants to the City's MS4. Illicit connections include conveyances inappropriately plumbed to the MS4 such as sewer pipes or car wash facility drains. Illegal discharges may result from activities such as vehicle washing or equipment cleaning without the use of proper BMPs. City storm water personnel work with residents, businesses, and City staff to make them aware of BMPs to prevent IC/IDs and to encourage reporting of IC/IDs. The following activities are the primary components of the City's program to combat IC/IDs:

- Inspecting local businesses, construction sites, and municipal facilities
- Conducting the Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program)
- Operating a public complaint hotline

These activities are a critical part of the City's work to improve the quality of storm water and urban runoff throughout the City.

7.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the IDDE component during the 2009/2010 reporting period are presented in the following bulleted list. Please note that per Addendum No. 2 to the Municipal Permit, the reporting period for the Dry Weather Monitoring Program extends through September 30, 2010. The reporting period for all other components of the City's IDDE program ended on June 30, 2010.

- The City continued to operate the Storm Water Pollution Prevention (SWPP) Hotline; the City recorded and investigated 31 complaints during the reporting period (Appendix B). City personnel followed up on all suspected IC/IDs, but there were no confirmed IC/IDs during the reporting period.
- The City addressed all of the recommendations proposed in the 2009 Dry Weather Monitoring Program Report to prevent possible pollutants from entering the storm drain system.
- The City conducted the 2010 Dry Weather Monitoring Program.

7.2 PUBLIC REPORTING OF ILLICIT DISCHARGES AND CONNECTIONS

Reporting and Response

Public and municipal involvement is crucial to the prevention and elimination of IC/IDs. The SWPP Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The City of Poway encourages citizens to use the SWPP Hotline to report illicit discharges to the MS4. The City also receives complaints through its website at http://poway.org. The SWPP Hotline numbers are listed in all storm water pollution prevention brochures and on the City's website.

All public complaints are investigated by City personnel for verification. Responsible parties for IC/IDs are identified, educated and/or given a notice of violation as necessary, and required to stop illegal discharges. Development Services staff maintains a database of all complaints to the SWPP Hotline. Complaints received by the City during the 2009/2010 reporting period and the City's response to each are listed in Appendix B. A total of 31 complaints were documented this year, a decrease from the 50 complaints that were recorded last year. This may indicate that Poway residents are becoming more aware of the City's Storm Water Pollution Prevention Program and, therefore, fewer violations are occurring.

The City responded to and resolved all 31 complaints during the 2009/2010 reporting period. One complaint related to a construction project in the vicinity of San Moritz on May 7 was determined to be a potential threat to environmental health. As a result it was reported to the RWQCB. The situation was resolved by City crews, as described in Appendix B.

Enforcement

As previously stated, investigated complaints from the SWPP Hotlines and City website are included in Appendix B of this JURMP Annual Report. Appendix B also includes relevant Public Works Department complaints and a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included clean-up, providing educational material and discussing storm water concepts with individuals involved in the complaint and, in some cases, issuing notices of violation. The City issued one notice of violation in response to a complaint received by the City's SWPP Hotline.

7.3 SPILL REPORTING, RESPONSE, AND PREVENTION

The City has documented procedures for preventing and responding to sanitary sewer overflows. Preventive maintenance is regularly conducted on the City's sanitary sewer system, and inspections are regularly conducted to monitor the condition of the public sewer lines and to determine the necessity of maintenance. Private lateral lines do not receive preventive maintenance, but the City assists in the containment and cleanup of sewer spills if the spill could potentially reach the City's MS4.

Individuals in the City are encouraged to report any SSOs to the City's SWPP Hotline. There were no SSOs or significant spills during the 2009/2010 reporting period.

7.4 URBAN RUNOFF MONITORING

The City has continued to conduct a Dry Weather Monitoring Program, as required by the Municipal Permit. This program assists the City in detecting and eliminating IC/IDs to the storm drain system. There are three major components to the Dry Weather Monitoring Program:

- Field observations, which include site descriptions and qualitative observations
- Field screening, which includes flow estimation and sample testing using meters and test kits at the site
- Analytical monitoring, which involves submittal of collected samples from selected sites constituting 25 percent of all flowing or ponded sites, to an analytical laboratory for additional testing

The City visits all designated primary monitoring stations each year between May 1 and September 30 to collect dry weather monitoring data. When a primary monitoring station is found to be dry, the City visits designated alternate monitoring stations.

Numeric action levels are used as the primary approach for the interpretation of most constituent concentrations measured in the field and laboratory. Action levels for dissolved metals follow the California Toxics Rule (CTR) Criteria Maximum Concentration (CMC). Temperature, turbidity, and conductivity parameters are evaluated using best professional judgment to determine if further investigation is needed. The action levels for pH, surfactants, ammonia-nitrogen, nitrate-nitrogen, orthophosphate-phosphorus, oil and grease, diazinon, and chlorpyrifos were adopted in 2003 and were based on statistical analyses of previous Dry Weather Monitoring Program data, established water quality benchmarks from the Basin Plan, and the United States Environmental Protection Agency Multi-Sector General Permit.

The Regional Monitoring Workgroup in November 2008 requested the Dry Weather Monitoring Sub-workgroup to evaluate dry weather action levels that were submitted in April 2003 by the County of San Diego on behalf of the Copermittees. The Dry Weather Monitoring Sub-workgroup determined that the bacterial indicators action levels required additional analysis. The Dry Weather Monitoring Sub-workgroup contracted D-MAX Engineering through the City of La Mesa to evaluate historical bacterial data collected from dry weather monitoring from 2002 through 2007. Details of their evaluation are posted on the Project Clean Water Website at http://www.projectcleanwater.org/pdf/science_mon/dry_weather_2009bacteria_action_level_report_draft.pdf. The Regional Monitoring Workgroup on May 19, 2009 evaluated the recommendations of the Dry Weather Monitoring Sub-workgroup and selected the 80th percentile values to be the dry weather action levels for bacterial indicators beginning on

May 1, 2010. The previous and current action levels (effective as of May 1, 2010) are presented in Table 7-1.

Table 7-1
Bacterial Indicators Action Levels for Dry Weather Monitoring Program

	Total Coliform (MPN/100 mL)	Fecal Coliform (MPN/100 mL)	*Enterococcus* (MPN/100 mL)
2003-2009 Action Levels	50,000	20,000	10,000
2010 -2012 Action Levels	130,000	13,000	7,000

7.4.1 2009 Dry Weather Monitoring Program

During the 2009 Dry Weather Monitoring Program 50 primary monitoring stations and four alternate monitoring stations were visited. One IC/ID was identified and eliminated during upstream investigations. All routine and follow-up visits were completed as scheduled during the 2009 dry season. For further information about how the City addressed notable findings of the 2009 Dry Weather Monitoring Program and responded to the resulting recommendations, see Section 7.5.1 of this report.

7.4.2 2010 Dry Weather Monitoring Program

The City's storm water consultant, D-MAX, completed the 2010 Dry Weather Monitoring Program in September 2010. Fifty primary monitoring stations and four alternate monitoring stations were visited. Of all routine samples taken at 50 sites, only two exceeded action levels, each for one constituent.

A summary of action level exceedances for field and laboratory constituents is provided in Table 7-2, below. The results of all follow-up investigations are presented in Table 7-3, in Section 7.5.2 of this report. A list of all monitoring stations visited is displayed in Table 7-4. At the end of this section complete field and laboratory analytical results are included as Table 7-5 and Table 7-6, respectively.

Table 7-2
Summary of 2010 Action Level Exceedances

Field Screening (50 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
pH	0	0	---
Conductivity	0	0	---
Turbidity	0	0	---
Surfactants	0	0	---
Ammonia-N	1	2	36A
Nitrate-N	1	2	18A
Orthophosphate-P	0	0	---
Laboratory Analyses (14 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Sites Exceeding Action Level**
Oil & Grease	0	0	---
Cadmium	0	0	---
Copper	0	0	---
Lead	0	0	---
Zinc	0	0	---
Diazinon	0	0	---
Chlorpyrifos	0	0	---
Total Coliforms	0	0	---
Fecal Coliforms	0	0	---
Enterococci	0	0	---

Note: Data includes initial site visits only; confirmation and follow-up visit data is not included.

A formal trash assessment was performed in 2010 in accordance with the Municipal Permit requirements. A qualitative estimate of the abundance of trash is made based upon a general impression of the site. The Trash Assessment Form's five categories are primarily qualitative descriptions of the amount and extent of trash although a number of trash pieces is also included in each category as a rough guideline. The five categories are defined as follows.

- Optimal: On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
- Suboptimal: On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.

- Marginal: Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
- Submarginal: Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (~100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
- Poor: Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health is assessed at each site using the following definitions:

- *Threat to Human Health* – Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment.
- *Threat to Aquatic Health* – Large amount (50 pieces or more) of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amounts of settleable, degradable, and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence of large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment.

During the 2010 Dry Weather Monitoring Program, 54 sites in the City of Poway were evaluated, including the four dry sites. Eighty-five percent of sites were rated optimal. A few sites were ranked as suboptimal or marginal, and no sites were ranked as submarginal or poor. Additionally, none of the sites were determined to pose a threat to human or aquatic health. Actions taken by the City in response to the trash assessment results are addressed in Section 7.5.2 of this report.

The 2010 Dry Weather Monitoring Program Report can be found as Attachment 7.1.

7.5 FOLLOW-UP AND ENFORCEMENT

7.5.1 ACTIONS TAKEN IN RESPONSE TO THE 2009 DRY WEATHER MONITORING PROGRAM FINDINGS

Based on the results of the 2009 Dry Weather Monitoring Program for the City of Poway, the following actions were completed by the City of Poway.

Inspection and Maintenance

- Decomposing organic material and animal waste were removed from the earthen channel in the open area upstream of Site 4. Site 4 had bacterial exceedances during the 2009 Dry Weather Monitoring Program.
- Decomposing organic material was removed from the storm water conveyance at Site 36A, which also had bacterial exceedances during the 2009 program.
- Human and animal waste was removed from beneath the Tierra Bonita bridge, and trash and decomposing leaves were removed from the catch basins on Tierra Bonita Road. These areas are upstream of Site 36A and can potentially contribute to elevated bacterial levels.
- Trash was removed from sites 31 and 109, which were scored as marginal by the trash assessment during routine site visits. These sites were added to the City's existing clean up schedule as appropriate.
- Sites that received a suboptimal trash score were also cleaned up and added to the City's existing clean up schedule as appropriate, including sites 16, 21A, 36A, 90, 106, and 111.

7.5.2 2010 DRY WEATHER MONITORING FOLLOW-UP INVESTIGATIONS

If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days. Upstream investigations are performed when exceedances are verified during confirmation visits. See the City's JURMP for a complete discussion of upstream investigation procedures.

Table 7-3 presents conclusions based on the results of confirmation visits and, where necessary, upstream investigations conducted during the 2010 Dry Weather Monitoring Program.

Table 7-3
Summary of 2010 Follow-Up Investigations

Site	Upstream Investigation Target Constituent(s)		Results / Probable Sources
	Field	Laboratory	
18A	Nitrate-N	---	Nitrate-containing groundwater seepage
36A	Ammonia-N	---	Exceedance not confirmed, potentially generated by decomposition of leaves and trash, both at the site and upstream

The City is in the process of responding to the 2010 Dry Weather Monitoring Program findings.

Any other actions taken during the remainder of the reporting period will be described in the 2010/2011 JURMP Annual Report.

7.5.3 IC/IDs Identified

During the reporting period, no IC/IDs were identified based on investigations of reports made to the City's public complaint hotline. Details of all complaints made to the City's public complaint hotline are included in the City's complaint log, included with the JURMP Annual Report as Appendix B.

7.6 Illicit Discharge Detection and Elimination Component Effectiveness Assessment

The effectiveness assessment of this program component is provided in Section 11 of this JURMP Annual Report.

7.7 Program Review and Modification

No changes to the City's illicit discharge detection and elimination component were made during the reporting period.

Notes:

denotes a confirmation visit

denotes a location sampled for laboratory analysis

na = not analyzed; nd= not detected; ns = not sampled (dry site)

J = Detected below the reporting limit; therefore, result is an estimated concentration.

Red values were at or above the measured constituent's action level at the site visit.

* A confirmation visit was not conducted at Site 18A although there was a nitrate-N exceedance because of historic elevated levels of nitrate-N at this site. Instead of a confirmation visit, samples were taken at upstream locations 18A-1 and 18A-2 to pinpoint the origin of nitrate-N in the Municipal Separate Storm Sewer System (MS4).

viii. A description of activities implemented to prevent sewage and other spills from entering the MS4.	4.10, 7.3
ix. A description of the mechanism whereby notification of sewage spills from private laterals and septic systems is received.	4.10, 7.3
x. Number of times the hotline was called, as compared to previous reporting periods, and a summary of the calls.	4.9, 7.2, Appendix B
xi. A description of efforts to publicize and facilitate public reporting of illicit discharges.	4.9, 7.2
xii. The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	4.9, 7.2; Appendix B
xiii. A description of notable activities conducted to manage illicit discharges and connections.	7.1

IDDE—Additional Dry Weather Monitoring Program Requirements

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
Meets applicable standard monitoring and reporting requirements listed in Municipal Permit Attachment B.	Attachment 7.1
c. (1) Determining Sampling Frequency: Dry weather field screening and analytical monitoring shall be conducted at each identified station at least once between May 1st and September 30th of each year or as often as the Copermittee determines is necessary to comply with the requirements of section D.4 of Order No. R9-2007-0001.	7.4; Attachment 7.1
c. (2) If flow or ponded runoff is observed at a dry weather field screening or analytical monitoring station and there has been at least seventy-two (72) hours of dry weather, make observations and collect at least one (1) grab sample. Record general information such as time since last rain, quantity of last rain, site descriptions (i.e., conveyance type, dominant watershed land uses), flow estimation (i.e., width of water surface, approximate depth of water, approximate flow velocity, flow rate), and visual observations (i.e., odor, color, clarity, floatables, deposits/stains, vegetation condition, structural condition, and biology).	7.4; Attachment 7.1
c. (3) At a minimum, collect samples for analytical laboratory analysis of the following constituents for at least twenty five percent (25%) of the dry weather monitoring stations where water is present: (a) Total Hardness, (b) Oil and Grease, (c) Diazinon and Chlorpyrifos, (d) Cadmium (Dissolved), (e) Lead (Dissolved), (f) Zinc (Dissolved), (g) Copper (Dissolved), (h) Enterococcus bacteria, (i) Total Coliform bacteria, (j) Fecal Coliform bacteria	7.4; Table 7-6; Attachment 7.1
c.(4) At a minimum, conduct field screening analysis of the following constituents at all dry weather monitoring stations where water is present:	See following
c. (a) Specific conductance (calculate estimated Total Dissolved Solids), (b) Turbidity, (c) pH, (d) Reactive Phosphorus, (e) Nitrate Nitrogen, (f) Ammonia Nitrogen, (g) Surfactants (MBAS)	7.4; Table 7-5; Attachment 7.1
c. (5) If the station is dry (no flowing or ponded runoff), make and record all applicable observations and select another station from the list of alternate stations for monitoring.	7.4; Attachment 7.1
c. (6) Develop and/or update criteria for dry weather field screening and analytical monitoring results whereby exceedance of the criteria will require follow-up investigations to be conducted to identify and eliminate the source causing the exceedance of the criteria.	7.4; Attachment 7.1
c. (7) Assess the presence of trash in receiving waters and urban runoff at each dry weather field screening or analytical monitoring station. Assessments of trash shall provide information on the spatial extent and amount of trash present, as well as the nature of the types of trash present.	7.4; Attachment 7.1

IDDE—Additional Dry Weather Monitoring Program Requirements

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
c. (8) Dry weather field screening and analytical monitoring stations identified to exceed dry weather monitoring criteria for any constituents shall continue to be screened in subsequent years.	7.4; Attachment 7.1
c. (9) Develop and/or update procedures for source identification follow up investigations in the event of exceedance of dry weather field screening and analytical monitoring result criteria. These procedures shall be consistent with procedures required in section D.4.d of Order No. R9-2007-0001.	7.5; Attachment 7.1
c. (10) Develop and/or update procedures to eliminate detected illicit discharges and connections. These procedures shall be consistent with each Copermittees Illicit Discharge and Elimination component of its Jurisdictional Urban Runoff Management Plan as discussed in section D.4 of Order No. R9-2007-0001.	7.5; Attachment 7.1
d. The Copermittees shall commence implementation of dry weather field screening and analytical monitoring under the requirements of this Order by May 1, 2008. Each Copermittee shall conduct dry weather analytical and field screening monitoring in accordance with its storm water conveyance system map and dry weather analytical and field screening monitoring procedures as described in section II.B.3 above. If monitoring indicates an illicit connection or illegal discharge, conduct the follow-up investigation and elimination activities as described in submitted dry weather field screening and analytical monitoring procedures and sections D.4.d and D.4.e of Order No. R9-2007-0001. Until the dry weather field screening and analytical monitoring program is implemented under the requirements of this Order, each Copermittee shall continue to implement dry weather field screening and analytical monitoring as it was most recently implemented pursuant to Order No. 2001-01.	7.4, 7.5; Attachment 7.1

Re: 2010 Dry Weather Field Screening and Analytical Monitoring Program
City of Poway, California

Dear Mr. Tamimi:

Enclosed please find our final report for the City of Poway 2010 Dry Weather Field Screening and Analytical Monitoring Program. This report presents the results of the monitoring program conducted in the City of Poway during the 2010 dry weather season. The contents include field screening results, trash assessment data, analytical laboratory test results, analyses of the collected data, and photographs of sampling locations. The report also presents the results of follow-up investigations conducted to identify the sources of pollutants detected during the field screening program and our recommendations for additional actions.

Review comments from the draft report submitted to the City have been incorporated into this final report. It has been our pleasure working with the City of Poway on this project. If you have any questions regarding this report, please call me at (858) 586-6600 ext. 22.

Sincerely,
D-MAX Engineering, Inc.

Arsalan Dadkhah, Ph.D., P.E.
Project Manager

1 INTRODUCTION

1.1 Program Overview

The purpose of the Dry Weather Field Screening and Analytical Monitoring Program is to detect and eliminate illicit connections and illegal discharges (IC/ID) to the storm water conveyance system, minimizing the negative impact of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following components:

- Field screening observations
- Field screening analytical monitoring
- Trash assessments
- Laboratory analytical monitoring

The data gathered from dry weather monitoring is used to characterize discharges to the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up investigations are conducted as needed to detect and eliminate the sources of these pollutants. The results from the current year's Dry Weather Monitoring Program conducted by D-MAX Engineering, Inc. (D-MAX) are presented herein.

1.2 Regulatory Requirements

In accordance with the San Diego Regional Water Quality Control Board Order No. R9-2007-0001 (Municipal Permit), Copermittees are required to annually perform dry weather field screening of discharges into its storm drain conveyance system. During the dry weather season, May 1 through September 30, selected locations along the storm drain conveyance system are evaluated. This procedure includes recording field observations, estimating observed flow rates, and conducting field testing. The Municipal Permit also necessitates that Copermittees conduct laboratory analyses for at least 25 percent of the visited sites with flowing or ponded water. If a sampling location is dry, meaning there is no flowing or ponded water, an alternate sampling station is selected. If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days.

1.3 Hydrologic Setting

The City of Poway (City) includes portions of three watersheds within San Diego County. The northern portion of the City lies within the San Dieguito Watershed, which is designated as Hydrologic Unit (HU) 905. The southern half of the City is part of the Peñasquitos Watershed, HU 906. A very small portion of eastern Poway lies within the San Diego River Watershed, HU 907. Nine smaller drainage basins are recognized within the City of Poway and are listed below.

- Sycamore Creek Basin
- Green Valley Creek Basin
- Stone Canyon Basin
- Pomerado Creek Basin
- Rattlesnake Creek Basin
- Silver Lake Drive Basin
- Poway Creek Basin
- Beeler Creek Basin
- San Vicente Creek Basin

Catch basins, creeks, channels, culverts, and detention basins convey runoff from small, local waterways to the larger receiving waters of the three major watersheds. Water quality

in each of the three major watersheds has been evaluated annually since 2002 to identify Constituents of Concern (COC). In addition to the City of Poway, these major watersheds drain other large portions of San Diego County and eventually discharge to the Pacific Ocean. The City of Poway shares the responsibility of addressing the COCs with other cities falling within the watershed boundaries. Figure A at the end of this report presents a drainage map of the City and illustrates the locations of the drainage basins and associated water bodies.

Los Peñasquitos, Hydrologic Area 906.2

Poway Creek drains most of southern Poway and collects flow generated from Pomerado Creek, Silver Lake Drive, Rattlesnake Creek, and Beeler Creek basins. This flow eventually converges with Los Peñasquitos Creek, and discharges into Los Peñasquitos Lagoon. The 2005-06 Peñasquitos Watershed Urban Runoff Management Program (WURMP) Annual Report identified COCs in this watershed as total dissolved solids (TDS), total suspended solids (TSS), turbidity, total coliform, fecal coliform, and *Enterococcus* bacteria. TDS and fecal coliform bacteria were identified as the higher priority COCs.

San Dieguito River, Hydrologic Area 905.2

Most of northern Poway lies in the San Dieguito watershed, including Green Valley Creek, Stone Canyon Creek, Sycamore Creek, Lake Poway, and Thompson Creek. These basins drain into Lake Hodges, which discharges to the San Dieguito River, eventually terminating in the San Dieguito Lagoon. The 2005-06 San Dieguito WURMP Annual Report identifies TSS, TDS, turbidity, biochemical oxygen demand (BOD), total coliform bacteria, and *Enterococcus* bacteria as the COCs. TDS and Enterococci bacteria are the two highest priority COCs. Turbidity and total coliform bacteria continue to be lower priority COCs.

San Diego River, Hydrologic Unit 907.0

A small portion of eastern Poway drains into San Vicente Creek, eventually discharging into the San Diego River watershed. Because this portion of Poway is designated as permanent open space, which is restricted from any future development, the San Diego Regional Water Quality Control Board (RWQCB) has indicated that the City is not included as a responsible party for the San Diego River WURMP under the Municipal Permit.

1.4 Previous Work

The City has conducted the Dry Weather Monitoring Program since 1994. A summary of the number of sites sampled each year is presented in Table 1-1. Historical dry weather monitoring data is included in Appendix A.

TABLE 1-1

Notes:

[1] Number of Sites Screened = Number Flowing + Number Ponded. Field screening cannot be conducted at sites found to be dry. Dry sites are replaced by either a flowing or ponded site.

[2] Laboratory analyses commenced in 2002 as required by RWQCB Order 2001-001.

[3] Two rounds of dry weather monitoring were conducted for these reporting periods.

[4] Available information does not distinguish between types of flow at visited sites during this period.

1.5 Report Outline

This report is presented as follows.

Section 1, **Introduction**, includes a program overview, regulatory background, a discussion of the City's hydrologic setting, a summary of previous dry weather monitoring, and the report outline.

Section 2, **Sampling Locations,** describes the field screening sampling locations and site selection criteria.

Section 3, Field and Laboratory Analytical Methods, includes field screening and laboratory analytical procedures, quality assurance protocols, and follow-up action levels.

Section 4, Field Screening Results, presents qualitative observations of the sampling locations and quantitative results of the field screening analyses.

Section 5, Trash Assessment, discusses the procedure and results of the trash assessment.

Section 6, Laboratory Analytical Results, presents results of the laboratory analyses.

Section 7, Data Analysis, provides an analysis of this year's field and laboratory data, as well as a comparison of past results.

Section 8, Follow-up Investigations, details the results of follow-up investigations undertaken to isolate the sources of action level exceedances measured during the monitoring program.

Section 9, Summary and Recommendations, provides a summary of the program results and recommendations for follow-up actions.

Appendix A Historical Dry Weather Monitoring Data

Appendix B Photographs of Sampling Locations

Appendix C Laboratory Analytical Reports

Appendix D Field Data and Trash Assessment Sheets

2 SAMPLING LOCATIONS

The City of Poway has 50 designated primary monitoring stations, as well as 26 alternate sites to replace primary sites without flowing or ponded water. Fourteen of the 50 primary sites are also designated for laboratory analysis. All sites are located in San Diego Hydrological Units 905 and 906.

During the 2010 Dry Weather Monitoring Program, primary sites 15, 52, 53, and 131 were dry, and thus alternate sites 1, 125, 135, and 138 were selected as locations for monitoring.

Table 2-1 provides the site number, location, conveyance configuration, primary and secondary land uses, Hydrologic Subarea (HSA), and Global Positioning System (GPS) coordinates of the sampling locations that were visited. Photographs of sampling locations are included as Appendix B. A map of the drainage basins within the City is included as Figure A, and a map of the watersheds in and around the City, broken down into HSAs, is included as Figure B. A City map with sampling locations is included as Figure C.

TABLE 2-1
2010 DRY WEATHER MONITORING STATIONS

Site	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Subarea	Latitude	Longitude
1*	Behind 12371 Old Pomerado Road	Outlet	Residential	Open	906.20	32.94284	-117.06485
2	Off Stowe Drive, north of business center at 12300- 12340 Stowe Drive	Outlet	Commercial	Industrial	906.20	32.94183	-117.05915
3	Behind industrial site at the end of Kirkham Court, 150 feet into canyon	Outlet	Commercial	Industrial	906.20	32.94424	-117.05537
3A	At the end of Kirkham Court across from Olhausen Co. in the street	Manhole	Commercial	Industrial	906.20	32.94327	-117.05326
3B	At the end of Kirkham Court across from Hunter Douglas Co. in the street	Manhole	Commercial	Industrial	906.20	32.94318	-117.05283
4	12342 Old Pomerado Road, north of Veterans Building at Bette Bendixen Park	Natural Creek	Residential	Open	906.20	32.94270	-117.06604
12	Behind 12818 Beeler Creek Trail, at merger of Poway Creek and Beeler Creek	Natural Creek	Residential	Open	906.20	32.94917	-117.06958
15*	End of Montauk Street in Poway Creek	Outlet	Residential	Open	906.20	32.94957	-117.05802
16	12269 Oak Knoll Road, Gurudwara Sikh Hall	Natural Creek	Commercial	Residential	906.20	32.95007	-117.06580
18A	Hilleary Place, north of bridge, located approximately 200 feet east of Community Road	Concrete Channel	Residential	None	906.20	32.96015	-117.03840
19	Poway Creek 13106 Gate Drive, under bridge on south side	Outlet	Residential	Commercial	906.20	32.95502	-117.03390
21A	Clair Drive and Garden Road, across from the convenience store, western outlet	Manhole	Residential	Commercial	906.20	32.95625	-117.02264
21B	Clair Drive and Garden Road, across from the convenience store, eastern outlet	Manhole	Residential	Commercial	906.20	32.95625	-117.02264
30	End of Oak Knoll Road in Rattlesnake Creek	Concrete Channel	Parks	Residential	906.20	32.95135	-117.04967

TABLE 2-1
2010 DRY WEATHER MONITORING STATIONS (CONTINUED)

Site	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Subarea	Latitude	Longitude

141	Espola Road, Old Coach Road, next to the HVR 17150 sign, at the bridge.	Natural Creek	Open	Residential	905.21	33.02807	-117.02446

Note: Alternate sites 1, 125, 135, and 138 were substituted for dry primary monitoring sites 15, 52, 53, and 131.

3 FIELD AND LABORATORY ANALYTICAL METHODS

3.1 Field Screening Procedures and Methods

Field screening techniques consist of flow measurements, qualitative field observations, and quantitative field analyses of selected water quality parameters. Weather conditions, time since last rainfall, and the type of storm water conveyance are recorded as well. Specific observations and results of the field water quality analyses are documented on field datasheets, which also serve as a record of the field visit. Datasheets are completed for every site visit regardless of whether or not samples were collected. Check boxes on the datasheets indicate if the visit is for routine field screening, confirmation of an exceedance, or an IC/ID follow-up visit. A confirmation visit is a revisit of the original site, whereas an IC/ID follow-up is an upstream investigation. Datasheets from the 2010 Dry Weather Monitoring Program are included as Appendix D.

Field screening and analyses were conducted according to the following procedures and methods:

Qualitative Observations

Qualitative field observations are made during each site visit. These observations include a general site assessment and description of water odor, clarity, the presence of floatable materials, visible deposits or stains, and organisms. Evidence of present or past illicit connections and illegal discharges to the storm drain system can also be discovered through careful field observations. Each field screening location is photographed to document site conditions. Photographs of each site visited are included in Appendix B.

Flow Measurement

Flow measurements can help estimate pollutant mass loading, prioritize storm drains for future investigation, and identify significant changes in discharge that may be indicative of an illegal discharge. Various field methods are used in formulas to estimate the flow rate. These include measuring the velocity, depth, and width of the flowing water; recording the amount of time required to fill a bottle of known volume with sample water; or, if measuring flow within a cylindrical pipe, measuring the pipe diameter as well as the depth and velocity of the flow. Low levels of flow may also be assessed visually.

Field Water Quality Analyses

At each site with ponded or flowing water, water samples were collected and analyzed in the field for the following constituents:

- Specific Conductance
- Temperature
- pH
- Turbidity
- Nitrate-Nitrogen (Nitrate-N)
- Ammonia-Nitrogen (Ammonia-N)
- Orthophosphate-Phosphorus (Orthophosphate-P)
- Surfactants, measured as methylene blue active substances (MBAS)

The methods used to perform the above field analyses, along with the reporting limit, range, and accuracy of each method, are listed in Table 3-1.

TABLE 3-1
FIELD ANALYTICAL METHODS

Parameter	Method	Reporting Limit	Range	Accuracy
Specific Conductance	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.01 mS/cm	0 – 20 mS/cm	± 2% of FS[1]
Temperature	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.1°C	0.0°C – 60.0°C	± 0.5°C
pH	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.01	0.00 – 14.00	± 0.01 pH
Turbidity	Hanna Instruments HI 93703 Portable Turbidity Meter***	0.01 NTU	0.01 – 50.00 NTU and 50 – 1000 NTU	± 0.5 NTU or 5% of reading (whichever is greater)
Ammonia-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Ammonia 3 Vacu-vials® (K-1403) Salicylate***	0.20 mg/L**	0.20 mg/L – 3.00 mg/L**	Varies with measured concentration[2,3]
Nitrate-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Nitrate 3 Vacu-vials® (K-6933) Cadmium reduction[4]***	1.13 mg/L**	1.13 mg/L – 113 mg/L**	± 30%of PDL[2]
Ortho-phosphate-P	CHEMetrics V-2000 Multi-Analyte LED Photometer – Phosphate 2 Vacu-vials® (K-8513) Stannous chloride chemistry[4]***	0.098 mg/L**	0.098 mg/L – 2.608 mg/L**	Varies with measured concentration[2,3]
Surfactants	CHEMetrics CHEMets Kit (K-9400) methylene blue active substances	0.13 mg/L	0.00 mg/L – 3.00 mg/L*	± 0.13 & ± 0.5 mg/L[5]

Notes:

EC = electrical conductivity

mS/cm = millisiemens per centimeter

°C = Degrees Celsius

NTU = nephelometric turbidity unit

mg/L = milligrams per liter

LED = light-emitting diode

[1] Functional sensitivity (FS) represents the lowest limit at which quantitative information is reliable. FS is estimated as the mean concentration for a spiked sample whose coefficient of variance (CV) is 20%. CV is the standard deviation divided by the mean.

[2] Practical detection limit (PDL) is defined as the lower limit of the stated test range.

Percent error adjusts as follows: ±30% at PDL, ±20% for 25% of full range, ±10% for 75% of full range, ±10% for 120% of full range.

[3] This method determines the concentration of nitrate in mg/L NO_3. To determine the amount of nitrate-nitrogen, the concentration of nitrogen must be adjusted for the presence of oxygen in the NO_3 molecule. Therefore, the result is multiplied by a conversion factor of 0.226, the ratio of the molecular weight of N (14g/mol) to NO_3 (62 g/mol). The (PDL) for nitrate is 5.0 mg/L; however, the PDL for nitrate-nitrogen is lower due to the conversion.

[4] This method determines the concentration of orthophosphate in mg/L PO_4. To determine the amount of orthophosphate-P, the concentration of phosphate must be adjusted for the presence of oxygen in the PO_4 molecule. Oxygen is 67.4% of phosphate by mass but is not a plant nutrient in this form. Therefore, the result is multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31g/mol) to PO_4 (95 g/mol). The PDL for orthophosphate is 0.3 mg/L; however, the PDL for orthophosphate-phosphorus is lower due to the conversion.

[5] ± 0.13 for the range of 0.0 to 1.0 mg/L, ± 0.25 mg/L for the range of 1.0 to 2.0 mg/L and 0.5 mg/L for the range of 2.0 to 3.0 mg/L.

*Extended ranges in chemical analyses can be achieved through dilutions. Accuracies decrease proportionally with further dilutions.

** Readings below the PDL have increased percent error; measurements are reported, but are flagged as being below the PDL.

***Test method information taken from Hanna Instruments and CHEMetrics manuals, available online at www.hannainst.com and www.chemetrics.com.

3.2 Laboratory Analytical Methods

In accordance with the Municipal Permit, laboratory samples were collected at 14 sites, representing 25 percent of the sites where ponded or flowing water was observed. Samples were submitted to EnviroMatrix Analytical, Inc, a laboratory certified by the California Department of Health Services, for analysis of the following constituents:

- Total hardness
- Oil and grease
- Diazinon
- Chlorpyrifos
- Dissolved Cadmium
- Dissolved Copper
- Dissolved Lead
- Dissolved Zinc
- Total Coliform bacteria
- Fecal Coliform bacteria
- *Enterococcus* bacteria

The methods used to perform each of the above analyses along with method reporting limits and holding times are listed in Table 3-2.

3.3 Quality Assurance and Quality Control (QA/QC)

The QA/QC Plan utilized for this project includes the United States Environmental Protection Agency (USEPA) approved test methods for the field and laboratory analysis of water samples, calibration of test equipment, and pre- and post-rinsing of sample collection containers and test vials. Key components of the QA/QC Plan are described below.

3.3.1 Field Sampling and Analysis QA/QC

The pH meters, turbidity meter, and conductivity meter are tested daily before field screening begins. The pH meters are calibrated as needed with sodium/potassium phosphate, monobasic buffer solutions with pH values equal to 4.00 ± 0.01, 7.00 ± 0.01, and 10.00 ± 0.01 units. The glass electrode tube is kept moist to preserve the meter's accuracy during fieldwork. The turbidity meter and conductivity meter are calibrated as needed using standard solutions.

Field sample collection containers are rinsed first with distilled water and then with the sample water prior to sample collection. Upon completion of sampling and testing at each site, sample collection containers, test vials, and ion-sensitive electrodes are rinsed twice with distilled water and dried.

Field test kit accuracy is assessed prior to commencing sampling. Each lot of vacu-vials is analyzed against standard solutions of known concentrations for ammonia-nitrogen, nitrate, orthophosphate, and surfactant ampoules. The results of the assessment are shown in Table 3-3.

TABLE 3-2
LABORATORY ANALYTICAL METHODS

Analyte	Analytical Method	Method Reporting Limit	Maximum Holding Time [1]
Oil and Grease	USEPA 1664	5 mg/L	28 days
Total Hardness	USEPA 200.7	10 mg/L	14 days
Dissolved Cadmium	USEPA 200.8	0.001 mg/L	24 hours
Dissolved Copper	USEPA 200.8	0.001 mg/L	24 hours
Dissolved Lead	USEPA 200.8	0.001 mg/L	24 hours
Dissolved Zinc	USEPA 200.8	0.020 mg/L	24 hours
Diazinon	USEPA 8141A	0.05 µg/L	7 days
Chlorpyrifos	USEPA 8141A	0.05 µg/L	7 days
Total Coliforms[2]	SM 9221	2 – 1,600,000 MPN/100 mL	6 hours
Fecal Coliforms[2]	SM 9221	2 – 160,000 MPN/100 mL	6 hours
Enterococci[2]	SM 9230	2 – 160,000 MPN/100 mL	6 hours

Notes:
µg/L = micrograms per liter
MPN/100 mL = most probable number (of colony-forming units) per 100 milliliters
[1] Maximum Holding Time values listed apply to samples collected and preserved in accordance with the quality assurance and quality control procedures listed in Section 3.3.2.
[2] For D-MAX's Dry Weather Monitoring Program, EnviroMatrix Analytical, Inc. (EMA) performs standard dilutions for total coliforms to quantify from 2-1,600,000 most probable number per 100 milliliters (MPN/100 mL). For fecal coliforms and Enterococci, EMA performs standard dilutions to quantify from 2-160,000 MPN/100 mL. During the analysis and interpretation of the results, the number of tubes used to quantify the sample must fit the MPN index table from Standard Method 9221. The dilution set used will determine the detection limit. A standard dilution analysis is set up with 15 tubes at different concentrations. The reporting limit will always be adjusted depending on the dilution factor used for quantifying the actual results based on the MPN table. If the result for the analysis was less than 16,000 MPN/100 mL, the reporting limit will always be 2, and the dilution factor will be 10. As the dilution factor goes up, the reporting limit listed in the results from EMA will also go up based on the calculation made with EMA's data system. However, the lowest quantifiable number or reporting limit would still be 2 based on how the standard tubes for the sample is set up.

3.3.2 Laboratory Sampling and Analysis QA/QC

Samples for laboratory analysis are collected concurrently with field samples and utilize the same sampling procedures. Pre-sterilized sample bottles are obtained from the laboratory and thus do not require rinsing with sample water prior to sample collection. After sample collection, all laboratory samples are kept in a cooler on ice until picked up by the lab. Strict chain of custody procedures are followed, and samples are delivered and analyzed within the appropriate holding times listed in Table 3-2. Completed chain of custody forms are included in Appendix C.

TABLE 3-3
FIELD ANALYSIS QA/QC RESULTS

Analyte	Known Concentration (mg/L)	Acceptable Range* (mg/L)	Lot Number	Date	Field Test Kit Results (mg/L)
Ammonia-N	0.85	0.68 - 1.02	73707/2	5/17/2010	0.811
			74559/8	5/27/2010	0.821
Nitrate*	44.3	31.0 - 57.6	75362/2	5/17/2010	42.77
			73960/4	5/17/2010	41.02
Orthophosphate*	6.13	4.29 - 7.97	75263/4	5/17/2010	6.023
			73677/4	5/17/2010	5.265
Surfactants	1.0	0.75 - 1.25	75440/75293/12	5/17/2010	1.0
			74268/74253/2	5/17/2010	1.0

Notes:
* Acceptable range is calculated based on the error associated with the methods as listed in Table 3-1.
** Nitrate and orthophosphate are converted to nitrate-nitrogen and orthophosphate-phosphorus, respectively, when conducting standard field screening. This is accomplished by multiplying the results by 0.226 for nitrate and 0.326 for orthophosphate. To simplify the calibration process, the unconverted numbers are used when calibrating the instruments.

3. 4 Follow-up Action Levels

Based on dry weather field screening results, immediate follow-up investigations are sometimes necessary to identify and eliminate pollutant sources. In order to determine whether an immediate source investigation is necessary, numeric action levels and best professional judgment are used to interpret the field screening results. If visual and/or analytical evidence of gross contamination are present at a site (e.g., substantial petroleum sheen, extremely high ammonia concentration, evidence of a sewage release, etc.), then an immediate source identification investigation is initiated. For sites that exceed numeric action levels but are not perceived as an immediate threat to water quality, a confirmation visit is conducted within two business days. An upstream pollutant source investigation is conducted thereafter if elevated concentrations persist and no sources can be identified in the immediate vicinity of the monitoring station. If elevated levels of pollutants are detected by the laboratory analyses, a comprehensive follow-up pollutant source investigation is initiated within two business days of receiving the laboratory results. A discussion of follow-up investigations is included in Section 8.

The following three methods are employed to determine whether immediate or comprehensive follow-up investigations are necessary: (1) Numeric Action Levels; (2) California Toxics Rule (CTR); and (3) Best Professional Judgment. The three approaches are described as follows and presented with associated constituents in Table 3-4.

Numeric Action Levels

Numeric action levels are used as the primary approach for interpreting pH, orthophosphate-P, nitrate-N, ammonia-N, surfactants, oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, and *Enterococcus* analytical results. Prior to the 2003 dry weather season, no standard action levels had been adopted for use throughout San Diego County. D-MAX calculated the current set of numeric

action levels based on county-wide sampling data. These action levels have been used by all San Diego County Copermittees since the 2003 dry weather season. D-MAX performed statistical analyses on county-wide data to update action levels for bacterial indicators that were implemented in 2010.

California Toxics Rule

The CTR criterion maximum concentration (CMC) is a short term concentration limit in which aquatic life can be sustained. The CMC is used to determine appropriate action levels for dissolved trace metals, including cadmium, copper, lead, and zinc. The CTR equations, as provided in USEPA Federal Register Doc. 40 Code of Federal Regulations (CFR) Part 131, are used to calculate benchmarks based on the total hardness of the sampled water, with the action levels increasing as hardness increases. More information on the CTR is available at http://www.epa.gov/region09/water/ctr.

Best Professional Judgment

Best professional judgment is utilized as the primary approach for interpreting turbidity, water temperature, and conductivity and as a secondary approach for interpreting the results of all other field and laboratory analyses. Under best professional judgment, the need for a follow-up investigation is left to the discretion of the D-MAX field crew. Best professional judgment may indicate that results which either exceed certain action levels or are statistical outliers may be the result of natural or background factors.

TABLE 3-4
ACTION LEVELS FOR FIELD SCREENING AND LABORATORY PARAMETERS

Field Screening Analytes	Action Levels[1]	Source/ Notes
Conductivity (mS/cm)	Best Professional Judgment	Conductivity may be highly elevated in some regions due to high TDS, groundwater exfiltration to surface water, mineral dissolution, drought, and seawater intrusion. Normal source ID and discharge elimination work is not effective in these situations. Knowledge of area background conditions is important. Values <0.75 may indicate excessive potable water discharge or flushing.
Temperature (°C)	Best Professional Judgment	Base judgment on season, air temperature, channel type, shading, etc.
pH	<6.5 or >9.0	Basin Plan[2], with allowance for elevated pH due to excessive photosynthesis. Elevated pH is especially problematic in combination with high ammonia.
Turbidity (NTU)	Best Professional Judgment	WQOs relevant to inland surface waters are not available. Base judgment on channel type and bottom, time since last rain, background levels, and most importantly visual observation (e.g. unusual colors and lack of clarity) and unusual odors.
Ammonia-N (mg/L)	1.0	Based on Workgroup experience. May also consider unionized ammonia fraction.
Nitrate-N (mg/L)	10.0	Basin Plan and drinking water standards
Orthophosphate-P (mg/L)	2.0	USEPA Multi-sector General Permit
Surfactants (MBAS) (mg/L)	1.0	Basin Plan, with allowance based on Workgroup field experience and possible field reagent interferences.
Laboratory Analytes	**Action Levels**	**Source/ Notes**
Oil and Grease (mg/L)	15	USEPA Multi-sector General Permit. If petroleum sheen is observed, the sample should be collected from the water surface. Visual observations may justify immediate investigation.
Diazinon (µg/L)	0.5	Response to diazinon and chlorpyrifos levels above 0.5 µg/L should focus on education and outreach to potential dischargers in the target drainage basin. Highly elevated levels should be investigated aggressively as with other potential IC/IDs.
Chlorpyrifos (µg/L)	0.5	
Dissolved Cadmium (µg/L)	California Toxics Rule	Use CTR, 1-hour criteria to determine appropriate action level for individual samples. Table provides benchmarks based on hardness and dissolved metals concentration. For example, at 300 mg/L hardness the following action levels would apply: Cd – 14 ppb; Cu – 38 ppb; Pb – 209 ppb; and Zn – 297 ppb.
Dissolved Copper (µg/L)		
Dissolved Lead (µg/L)		
Dissolved Zinc (µg/L)		
Total Coliforms (MPN/100 mL)	130,000	Bacteria action levels were updated in 2010 by the Dry Weather Monitoring Sub-workgroup. Bacteria levels in many storm drains are likely to exceed public health guidance criteria. Use confidence interval test and best professional judgment to identify conveyances for source ID.
Fecal Coliforms (MPN/100 mL)	13,000	
Enterococci (MPN/100 mL)	7,000	

Notes:
[1] The referenced action levels should not be the sole criteria for initiating a source identification investigation. Dry weather monitoring data should be interpreted using a variety of available information, including within-site and between-site sample variability.
[2] Basin Plan = Water Quality Control Plan for the San Diego Basin
WQO = Water Quality Objective
ppb = parts per billion

4 FIELD SCREENING RESULTS

Sampling for the 2010 Dry Weather Monitoring Program took place between May and June 2010. Fifty-four routine site visits were performed, including visits to the four primary sampling sites that were dry: sites 15, 52, 53, and 131. Alternate sites 1, 125, 135, and 138 were selected as replacements for the dry sites. Field screening was conducted at the 50 sites where ponded or flowing water was observed. Completed field data sheets for each site visit are included in Appendix D.

4.1 Qualitative Observations

Qualitative observations for all routine field screening visits are summarized below. Routine filed screening data and confirmation visit data are presented in Table 4-1:

Light Conditions
Light conditions were primarily sunny, with a few occurrences of partly cloudy weather.

Odor
Water samples from two sites had a rotten egg odor, one sample had a sewage smell, and another sample had a musty odor. The remaining samples were odorless.

Color
Water samples taken from five sites were yellow, and one site had gray water. All other sites had colorless water.

Clarity
Two sites had slightly cloudy water, and all other sites were clear with the exception of negligible amounts of suspended particles.

Floatable Materials
Bubbles and foam were the most abundant materials found floating on the water's surface, which was present at four sites. Trash was present at three sites, and an oily sheen was observed on the surface of the water at one site. Section 5 of this report discusses the complete results of the Trash Assessment conducted at each routine site visit.

Deposits
Sediment, gravel, and/or fine particulates were observed at all sites. No other types of deposits were noted.

Vegetation
Most of sites evaluated contained normal or no vegetation, and one site had limited vegetation, appropriate to the amount of sunlight exposure and soil at the site,

Biology
The presence of organisms can be an indication of healthy waters. The presence of algae often indicates that flow is persistent in areas exposed to sunlight. An overabundance of algae often implies high levels of nutrients in the water and can have negative effects on aquatic life. No sites had excessive algal growth this year. Insects and algae were prevalent at most sites with the exception of manholes. Many sites were also host to snails and fish.

Notes:

denotes a confirmation visit

denotes a location sampled for laboratory analysis

ns = not sampled (dry site)

4.2 Field Analytical Results

Field analyses are conducted at all sites with flowing or ponded water. The measured constituents are described below.

Flow rate quantifies the volume of fluid passing across a given surface per unit time. Flow rate measurements are needed to calculate the load of a pollutant discharged.

Water temperature is needed to assess the significance of other parameters, such as pH and conductivity. The aquatic habitat must remain within a certain temperature range in order to sustain sensitive aquatic life.

The **pH** is an expression of acidity or alkalinity of a water sample. The pH of an aquatic system will affect a variety of chemical reactions, including the availability of nutrients and the solubility of chemical substances, particularly heavy metals.

Turbidity describes the clarity or cloudiness of a water sample, or the degree to which light is blocked by suspended material in the water. Turbid waters not only limit the amount of light that reaches submerged vegetation, thus reducing photosynthetic capacity, but excessive suspended particles can also absorb heat and increase water temperatures.

Specific Conductance (Conductivity) measurements indicate the total concentration of ions in an aquatic system and the ability of the water to conduct electricity. This parameter can be used to assess the mineral content of water and potentially indicate the presence of dissolved pollutants.

Surfactants concentrations in water samples often reflect illegal discharges from industrial, commercial, or residential sources, typically as a result of washing activities. Pollution resulting from surfactants alters the surface tension of water and disrupts the breathing mechanisms of fish gills and other aquatic organisms.

Ammonia-Nitrogen (ammonia-N) is an indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment; however, in higher quantities it can be toxic to fish and other organisms.

Nitrate-Nitrogen (nitrate-N) is a common sign of nutrient pollution from agricultural or household fertilizer runoff. Nitrate pollution can cause excessive algal growth, resulting in oxygen depletion as algae decomposes and may eventually suffocate other aquatic life. During field screening, nitrate is measured and converted into nitrate-N using a conversion factor of 0.226. This process is explained in Note 3 of Table 3-1.

Orthophosphate-Phosphorus (orthophosphate-P) is also an indicator of nutrient pollution from agricultural or household fertilizer runoff. Similar to nitrate-N, orthophosphate-P pollution can cause nutrient enrichment, stimulate algal growth, and thus deplete oxygen in the water to levels that are dangerous for aquatic life. Even low levels of orthophosphate-P can cause significant algal growth, as it is commonly the limiting nutrient in plant growth. During field screening, orthophosphate is measured and converted into orthophosphate-P using a conversion factor of 0.326. This process is explained in Note 4 of Table 3-1.

A statistical summary of the routine field analytical results is presented in Table 4-2. Table 4-3 shows the results of all field analyses conducted at the sampled sites. Graphs of the various parameters measured during routine visits are included at the end of this section. Statistics and graphs include data from routine visits at flowing or ponded sites only.

TABLE 4-2
FIELD ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Average	Median	Standard Deviation	Number of Exceedances	Graph Number
Flow Rate (gpm)	78	0 (ponded)	9.7	4.0	16.1	0	4-1

denotes a location sampled for laboratory analysis

na = not analyzed

nd= not detected

ns = not sampled (dry site)

J = Detected below the reporting limit; therefore, result is an estimated concentration.

Red values were at or above the measured constituent's action level at the site visit.

* A confirmation visit was not conducted at Site 18A although there was a nitrate-N exceedance because of historic elevated levels of nitrate-N at this site. Instead of a confirmation visit, samples were taken at upstream locations 18A-1 and 18A-2 to pinpoint the origin of nitrate-N in the Municipal Separate Storm Sewer System (MS4).

5 TRASH ASSESSMENT

5.1 Regulatory Requirements

Section II.B.3.C.(7) of the Municipal Permit's Receiving Waters and Urban Runoff Monitoring and Reporting Program requires Copermittees to assess the presence of trash in receiving waters and urban runoff at each dry weather monitoring site. This trash assessment program is designed to provide information on the spatial extent and relative amount of trash present, as well at the nature and origin of the trash at the site.

5.2 Procedure and Definitions

The San Diego Copermittee Dry Weather Monitoring Workgroup developed a Trash Assessment Form to document the amount and extent of trash at each evaluated site. The form categorizes the site into one of five trash categories: optimal, suboptimal, marginal, submarginal, or poor. The form also addresses any potential threats that the trash may pose to human or aquatic health. For sites rating submarginal or poor, the form includes a section to record types, prevalence, potential routes, and sources of trash.

A qualitative estimate of the abundance of trash is made based upon a general impression of the site. The Trash Assessment Form's five categories are primarily qualitative descriptions of the amount and extent of trash although a number of trash pieces is also included in each category as a rough guideline. The five categories are defined as follows.

- Optimal: On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
- Suboptimal: On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
- Marginal: Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
- Submarginal: Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (~100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
- Poor: Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health is assessed at each site using the following definitions:

- *Threat to Human Health* – Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment.

- *Threat to Aquatic Health* – Large amount (50 pieces or more) of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amounts of settleable, degradable, and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence of large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment.

In the event that a site is noted as potentially posing a threat to human or aquatic health, additional descriptive comments are recorded in the "Comments" section of the Trash Assessment Form.

If a site is labeled as submarginal or poor, it is assessed for types of trash present (e.g., automotive, biohazard, food waste), which are ranked based on their prevalence and the potential threat to water quality. Lastly, the potential mechanism through which trash reached the site (e.g., dumping, littering, upstream sources) and the potential source of the trash (e.g., construction, commercial, transient) are noted.

5.3 Trash Assessment Results

Table 5-1 and Graph 5-1 summarize the trash assessment results. Figure 5-1 provides a map of sampling sites and corresponding trash assessment rankings. General results of the trash assessment program are as follows.

- Eighty-five percent of sites sampled in the City of Poway received an optimal rating.
- Thirteen percent of sites ranked suboptimal.
- Two percent of sites ranked marginal.
- No sites ranked submarginal or poor.
- No sites were identified to pose a threat to human or aquatic health.

6 LABORATORY ANALYTICAL RESULTS

6.1 Summary

Laboratory analyses were conducted at 14 sites, representing 28 percent of all sites with ponded or flowing water. The laboratory constituents measured are defined below.

Diazinon and **chlorpyrifos** are organophosphate pesticides that are highly toxic to insects, birds, and mammals, freshwater fish, and invertebrates. In 2005, the Environmental Protection Agency banned the sale of diazinon in the United States and tightened restrictions on chlorpyrifos use.

Coliform bacteria are relatively harmless to humans and are present in mammalian digestive tracts, most surface waters, and soils. Testing water samples for total coliform bacteria is a standard practice in public health. Total coliform is measured as an indicator of other more harmful pathogens, since these pathogens are generally present in much smaller quantities and are difficult to detect.

Fecal coliform, a subset of coliform bacteria, and ***Enterococcus*** are found primarily in the gastro intestinal tracts of humans and animals and are commonly used as indicators of water contamination by fecal matter. Without the use of significantly more expensive methods, such as ribotyping, it is not possible to determine whether the source of fecal material is human or animal. Human fecal material is known to contain pathogens dangerous to humans, but the relationship between animal waste and threat to human health is less certain.

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources, including parking lots and streets, washing activities, illegal discharges, and automobile repair facilities.

Metal contamination of water can arise from a variety of sources, including automobile operation, automobile repair, vehicle washing, galvanizing of metal, and electronics manufacturing. Certain dissolved metals are toxic pollutants that are hazardous to the development and survival of aquatic organisms.

The CTR for Dissolved Metals in Fresh Waters defines metal toxicity as a function of water hardness. As hardness increases, so does the CTR CMC. CMC values differ for various metals. Dry weather monitoring laboratory samples are analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Table 6-1 shows the sites with detectable metal concentrations, the measured total hardness of the sample, and the associated CMC.

Total hardness measures the amount of calcium and magnesium ions in a water sample, with the result expressed in mg/L of $CaCO_3$. Hardness itself is not considered a pollutant, but is measured to calculate CTR limits for dissolved metals. Hardness affects the solubility of dissolved metals as well as other minerals and ions.

Table 6-2 presents a statistical summary of the laboratory results. Table 6-3 presents each site's laboratory results. Laboratory reports are included in Appendix C.

TABLE 6-1
CTR – CMC FOR DISSOLVED METALS

Site	Total Hardness (mg/L)	Concentration (mg/L)	CMC (mg/L)
Dissolved Copper			
3	787	0.003 J	0.0496

Action Levels			**15**	*****	**CTR**	**CTR**	**CTR**	**CTR**	**0.50**	**0.50**	**130,000**	**13,000**	**7,000**

Notes:

nd = not detected

J = Detected below the reporting limit; therefore, result is an estimated concentration.

CTR = California Toxics Rule

* Total hardness is not considered a pollutant (see Section 3.4), and thus has no established action level for the purposes of dry weather monitoring. Total hardness is measured because the CTR action levels for metals are dependent on the total hardness value of the water sample.

7 DATA ANALYSIS

This section provides an overall evaluation of test results of the 2010 Dry Weather Monitoring Program, as well as a discussion of historical trends for various constituent exceedances.

7.1 2010 Results

Table 7-1 presents a summary of the constituent exceedances noted in 2010 during routine site visits.

TABLE 7-1
2010 EXCEEDANCES SUMMARY

Site	Ammonia-N	Nitrate-N
18A		✓
36A	✓	

7.2 Previous Results

Table 7-2 shows the percentage of sampled sites that have had exceedances each year of the Dry Weather Monitoring Program. Graph 7-1 illustrates the percentage of sites with exceedances for field screening each year, and Graph 7-2 presents the percentage of sites with exceedances for laboratory analyses annually.

Since testing began in accordance with Order 2001-01, no exceedances have been identified for water temperature, conductivity, oil and grease, dissolved cadmium, dissolved copper, dissolved lead, dissolved zinc, or chlorpyrifos. Accordingly, these constituents have not been included in graphs 7-1 and 7-2.

Based on historical dry weather data, the following observations have been made:

- There appears to be a general decrease of exceedances of ammonia-N, orthophosphate-P, and, in recent years, of nitrate-N concentrations.
- A pH exceedance has occurred only once, in 2002.
- No distinguishable trends can be drawn for turbidity or surfactants.
- No exceedances in diazinon have been noted since 2003.
- Total coliform bacteria exceedances have been generally declining since 2005.
- The percentage of fecal coliform and *Enterococcus* bacteria exceedances are relatively low and show no discernable trend. Note that dry weather action levels for bacterial indicators were revised in 2010. Constituents have been compared to action levels in effect at the time of sampling to identify exceedances.

TABLE 7-2
PERCENT OF SITES WITH EXCEEDANCES BY YEAR

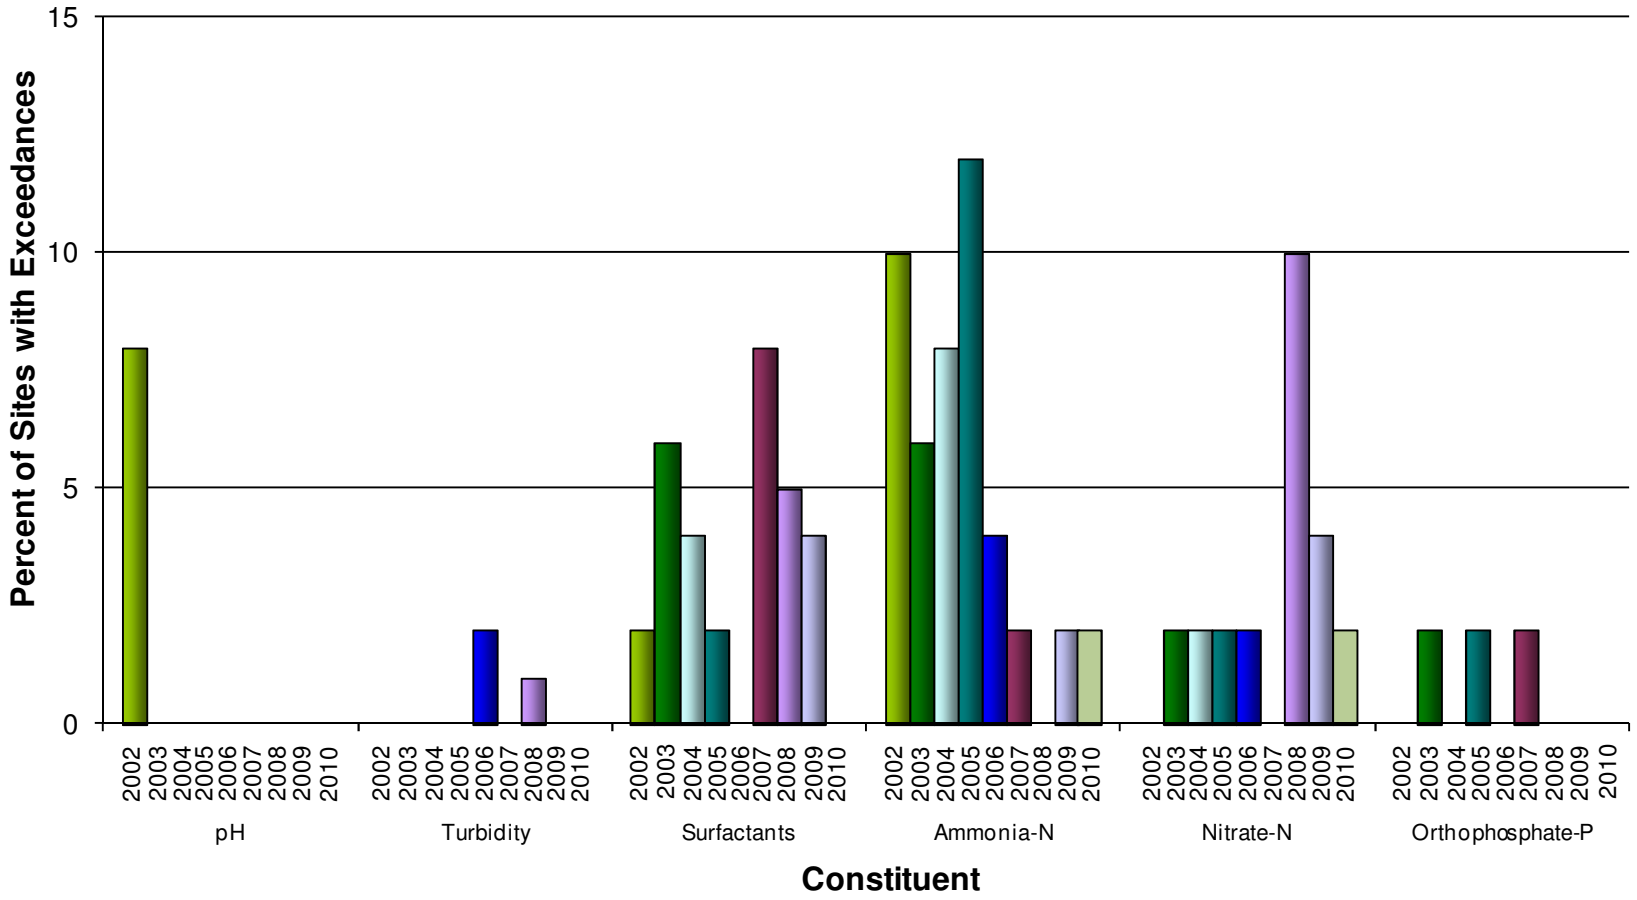
	Field Screening									Laboratory Analysis										
Year	**No. of Field Screening Sites**	Temperature	pH	Turbidity	Conductivity *	Surfactants	Ammonia-N	Nitrate-N	Orthophosphate-P	**No. of Laboratory Sampling Sites**	Oil & Grease	Cadmium	Copper	Lead	Zinc	Diazinon	Chlorpyrifos	Total Coliforms	Fecal Coliforms	Enterococci
2002	50	0	8	0	0	2	10	0	0	13	0	0	0	0	0	0	0	**	**	**
2003	50	0	0	0	0	6	6	2	2	13	0	0	0	0	0	8	0	23	23	8
2004	50	0	0	0	0	4	8	2	0	13	0	0	0	0	0	0	0	31	0	15
2005	50	0	0	0	0	2	12	2	2	13	0	0	0	0	0	0	0	69	15	15
2006	50	0	0	2	0	0	4	2	0	13	0	0	0	0	0	0	0	31	8	23
2007	50	0	0	0	0	8	2	0	2	14	0	0	0	0	0	0	0	29	14	21
2008	50	0	0	1	0	5	0	10	0	14	0	0	0	0	0	0	0	7	7	14
2009	50	0	0	0	0	4	2	4	0	14	0	0	0	0	0	0	0	14	21	21
2010	50	0	0	0	0	0	2	2	0	14	0	0	0	0	0	0	0	0	0	0

Notes: Results based on complete routine visits only. Confirmation visits, follow-up visits, and dry sites not included.

* By regional consensus, the action level for conductivity has been changed during past years from numeric values to best professional judgment in order to account for sites in which salt water and groundwater increase conductivity. High conductivity levels at these sites are not necessarily exceedances or considered to be a water quality concern.

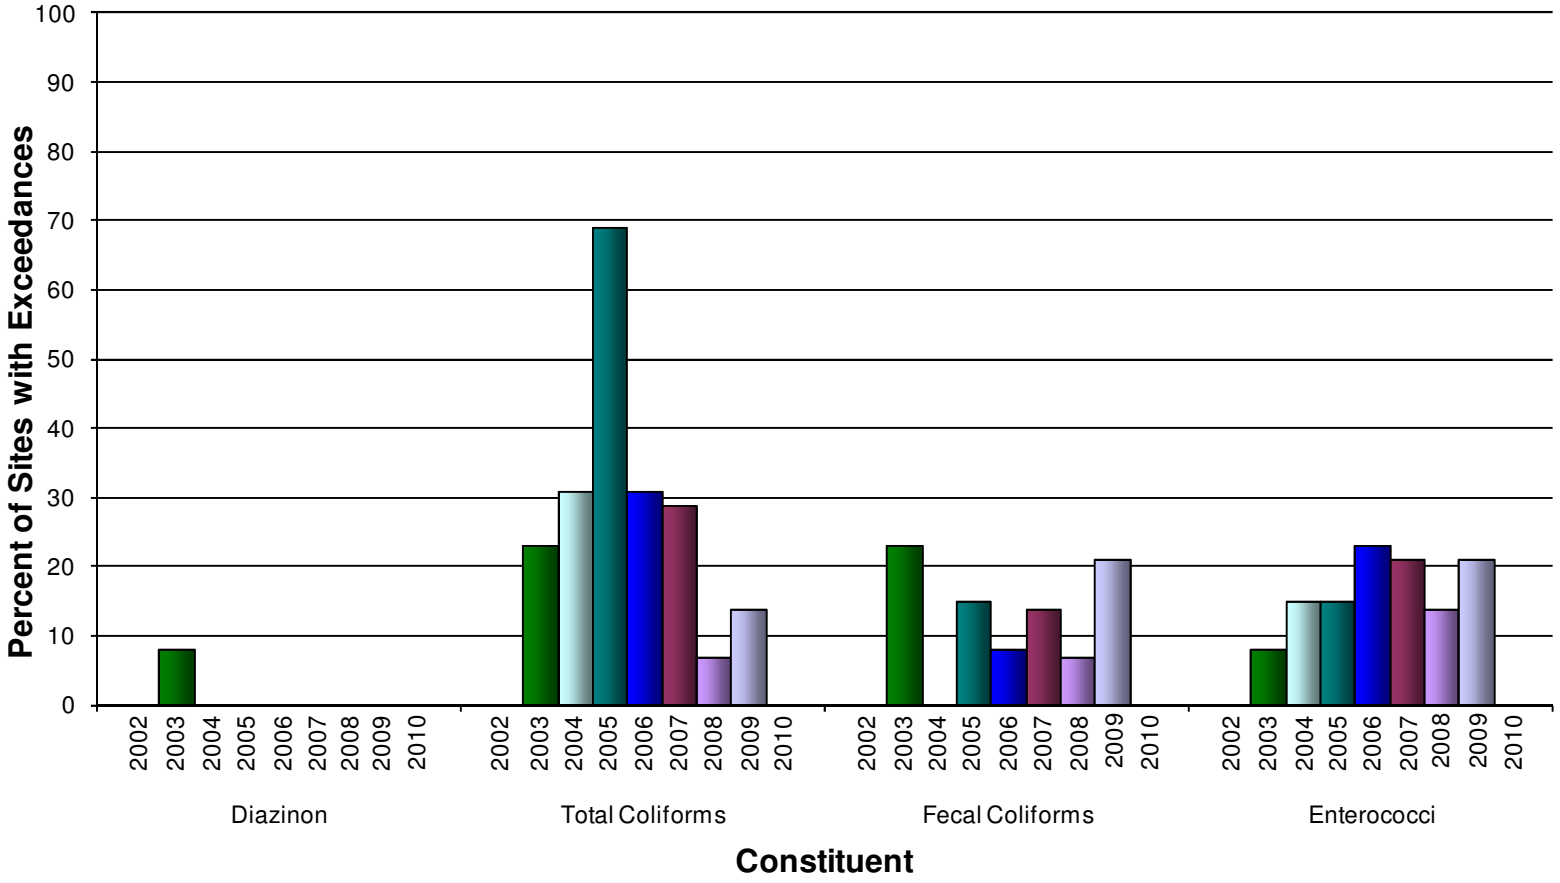
** Bacteria analytical methods in 2002 do not allow numerical comparison of results to those in subsequent years.

GRAPH 7-1
PERCENT OF SITES WITH FIELD SCREENING EXCEEDANCES BY YEAR



* Action level for turbidity is best professional judgment.

GRAPH 7-2
PERCENT OF SITES WITH LABORATORY ANALYSIS EXCEEDANCES BY YEAR



8 FOLLOW-UP INVESTIGATIONS

The purpose of follow-up investigations is to identify sources of pollutants that have caused action level exceedances during routine field screening and laboratory analysis.

8.1 Investigation Procedures

In the event that a constituent measurement is above the associated action level during the routine visit, a confirmation visit is typically conducted within two business days of receiving the result. The purpose of the confirmation visit is to verify whether the initial exceedance is persistent. The visit includes returning to the routine site to retest the water for the parameters initially in exceedance.

In circumstances where an exceedance has been sufficiently investigated through previous studies and a confirmation visit was not likely to provide new information, a confirmation visit was not conducted. Efforts were instead focused upon acquiring new information whenever possible.

If the constituent measures below specified action levels during the confirmation visit, the initial exceedance may have been due to a transient flow. If, however, the constituent concentration is found to exceed the specified action level during the confirmation visit, an upstream investigation is performed. In this case, the field crew progresses upstream to isolate and identify potential pollutant sources.

Follow-up investigations entail making visual observations of areas upstream of the routine site and collecting samples for field or lab analysis. Flow rates of each branch contributing to the site are measured, potential sources of the COC are identified, and sample data is used to assist in source identification. At each location sampled, visual observations are recorded on field data sheets and include water color, clarity, odor, floatable materials, vegetation, and biology present. Field data sheets are included in Appendix D.

8.2 Investigated Sites

During the 2010 Dry Weather Monitoring Program, two sites required follow-up investigations for constituent exceedances. Action levels were exceeded for nitrate-N and ammonia-N at one site each. This section includes a description of the site, analytical results, photographs of selected upstream locations, and the results of upstream investigations. Table 9-2 in Section 9 of this report provides a summary of the investigation results.

Site 18A is located at a concrete channel north of the Hilleary Place bridge, east of Community Road. During the initial visit, nitrate-N levels were measured above the action level. As in previous years, an upstream investigation concluded that water seeping into the Municipal Separate Storm Sewer System (MS4) through cracks in the conveyance was the source of flow and nitrate-N to Site 18A.

- Nitrate-N exceedances have been recorded each year of the Dry Weather Monitoring Program at Site 18A since sampling began in 2002. This indicates a very consistent source of nitrate-containing flow.
- Water was observed seeping into the MS4 through a crack in the storm water conveyance upstream of Site 18A.

- Flow to the site from a northern conveyance (location 18A-1) did not contain high levels of nitrate-N.
- Flow from an eastern line (location 18A-2) had a nitrate-N concentration above the action level.
- No surface flow was observed contributing to the eastern line (location 18A-2), and further upstream the line was dry, indicating that the flow to location 18A-2 is generated underground.
- Groundwater or interflow containing elevated nitrate-N levels is likely seeping into the MS4 conveyance underground.

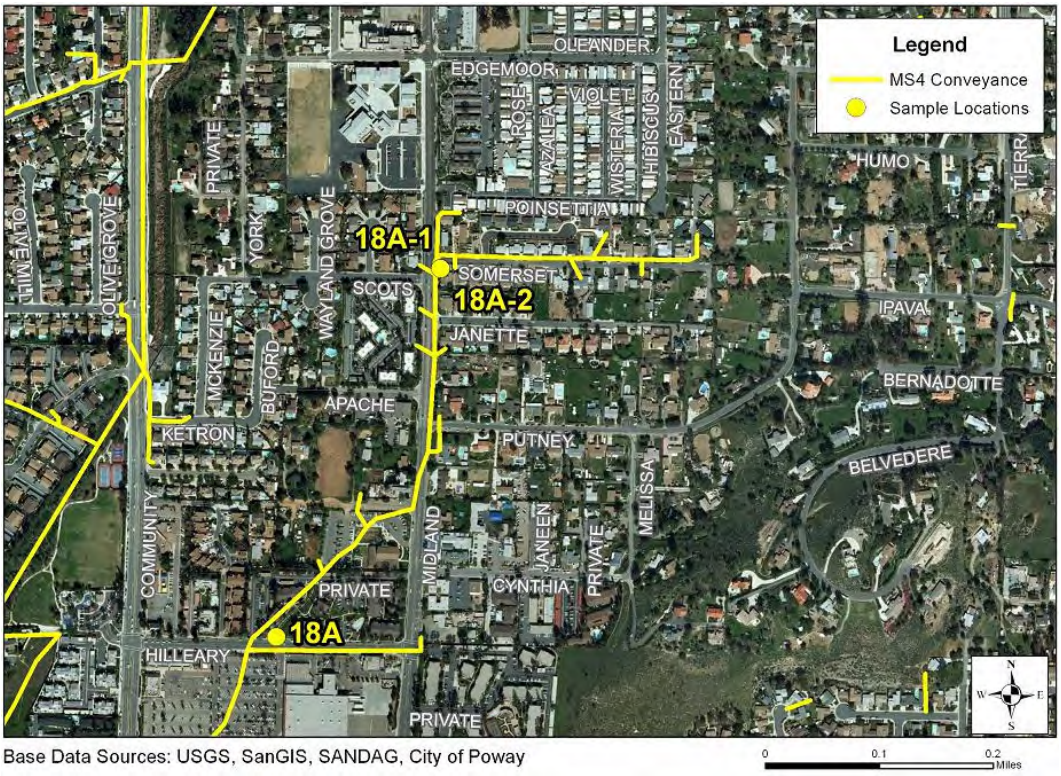
Table 8-1 presents a summary of the upstream investigation for Site 18A, and a map of sample locations is provided in Figure 8-1.

TABLE 8-1
SITE 18A NITRATE-N UPSTREAM INVESTIGATION

Site	Location	Flow (gpm)	Nitrate-N (mg/L)
18A	Hilleary Place, north of bridge, located approximately 200 feet east of Community Road.	9	**14.7**
18A-1	Midland Road and Somerset intersection, north line.	2	6.5
18A-2	Midland Road and Somerset intersection, east line.	2	**10.0**

Note: **Red** values exceed action level.

FIGURE 8-1
SITE 18A NITRATE-N UPSTREAM INVESTIGATION MAP



Site 36A is located in a natural creek southwest of the bridge near 14336 Tierra Bonita Road. During the initial field screening, from the water was ponded, with an ammonia-N level of 1.102 mg/L, over the action level of 1.0 mg/L. The sample water was slightly cloudy and gray in color, consistent with the relatively high turbidity reading of 64 NTU. The water had a sewage-like smell, attributed to the stagnant conditions and decomposing leaf debris observed.

Upstream of the site, a substantial amount of trash was observed in a manhole in front of a school. The manhole also had a musty or sewage-like odor which was attributed to the trash decomposition.

At the confirmation visit to Site 36A, ammonia-N was measured below the action level. The transient exceedance was likely the result of the decomposition of leaves and trash, which can produce ammonia-N as a byproduct.

Photo 8-1: Stagnant water at Site 36A

9 SUMMARY AND RECOMMENDATIONS

9.1 Summary of Dry Weather Monitoring Results

A summary of the results for the 2010 Dry Weather Monitoring Program is presented below. Table 9-1 provides a summary of action level exceedances.

- Fifty-four monitoring locations visited
- Four alternate sites selected to replace dry primary sites
- Laboratory analyses performed on water samples from 14 of the primary sites, representing over 25% of sites with flowing or ponded water
- Most sites visited had clear, colorless, flowing water, with normal or limited vegetation that provided habitat for a variety of aquatic organisms
- As a result of the trash assessment, 46 sites were rated optimal, seven suboptimal, and one marginal
- Two sites had parameters measuring above corresponding action levels.

TABLE 9-1
SUMMARY OF ACTION LEVEL EXCEEDANCES

Analyte	Number of Exceedances	Percentage of Sites with Exceedance	Site(s) Exceeding Action Level
Field Screening (50 samples)			
pH	0	0	---
Conductivity	0	0	---
Turbidity	0	0	---
Surfactants	0	0	---
Ammonia-N	1	2	36A
Nitrate-N	1	2	18A

9.2 Summary of Follow-Up Investigation Data

Table 9-2 presents the conclusions based on the results of confirmation visits and upstream investigations conducted at nine sites.

TABLE 9-2
SUMMARY OF UPSTREAM INVESTIGATIONS

Site	Upstream Investigation Target Constituent(s)		Results / Probable Sources
	Field	Laboratory	
18A	Nitrate-N	---	Nitrate-containing groundwater seepage
36A	Ammonia-N	---	Transient flow, potentially generated by decomposition of leaves and trash, both at the site and upstream

9.3 Recommendations

Based on the results of the 2010 Dry Weather Monitoring Program for the City of Poway, the following actions are recommended for consideration.

9.3.1 Maintenance

- Remove decomposing organic material and trash at Site 36A, which received a marginal trash assessment rating and had an ammonia-N exceedance during the routine visit.
- Clean the storm drain located on the northwest side of the intersection of Tierra Bonita Road and Twin Peaks Road (in front of Twin Peaks Middle School). This storm drain contained decomposing trash, which may have been contributing to the ammonia-N exceedance at Site 36A.

Laboratory Analytical Reports

14 June 2010

D-Max Engineering
Attn: Arsalan Dadkhah
7220 Trade Street, Suite 119
San Diego, California 92121

EMA Log #: 10E0642

Project Name: Poway Dry Weather Monitoring
Project Desc./#: 201031W-1

Enclosed are the results of analyses for samples received by the laboratory on 05/25/10 13:41. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that this data is in compliance both technically and for completeness.

Dan Verdon
Laboratory Director

CA ELAP Certification #: 2564

Client Name: D-Max Engineering
Project Name: Poway Dry Weather Monitoring

EMA Log #: 10E0642

ANALYTICAL REPORT FOR SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
Site 65	10E0642-01	Stormwater	05/25/10 10:30	05/25/10 13:41
Site 80	10E0642-02	Stormwater	05/25/10 11:25	05/25/10 13:41
Site 133	10E0642-03	Stormwater	05/25/10 12:20	05/25/10 13:41

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Project/Sample Comments:

[1]Additional costs may apply, consult a project manager for details.

[2]EMA reserves the right to return any samples that do not match our waste profile.

NOTE: By relinquishing samples to EMA, Inc., client agrees to pay for the services requested on this COC form and any additional analyses performed on this project. Payment for services is due within 30 days from date of invoice. Samples will be disposed of 7 days after report has been finalized unless otherwise noted. All work is subject to EMA's terms and conditions.

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

LOCATION: Behind 12371 Old Pomerado Rd.

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 15X10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: 19 DATE: 6/24/10

OBSERVER: MD/IT TIME: 12:00

LOCATION: 13106 Gate DC under bridge on South side

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 20 X 10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: 34 DATE: 6/4/10

OBSERVER: MD/IT TIME: 11:15

LOCATION: Community Rd, SW of the Sycamore Tree Ln intersection

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L X W (FT): 15X15

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: 90 DATE: 5/28/10

OBSERVER: MD/IT TIME: 11:15

LOCATION: Off Pomerado Rd, E of Powers Rd on Vaughan Rd, S of the bridge

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 30 x 10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. 2010 Trash Assessment Form

SITE ID: 106 DATE: 6/3/10

OBSERVER: MD/IT TIME: 9:35

LOCATION: E of Community Rd, between Metate Ln & Stowe Dr, in canyon

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Suboptimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 30x10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: 115 DATE: 5/24/10

OBSERVER: MD/LT TIME: 15:00

LOCATION: At the end of Silver Lake Rd at the Hwy 1 & Rd intersection

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 3X3

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: 124 DATE: 6/3/10

OBSERVER: MD/IT TIME: 15:40

LOCATION: Community Rd, across from Olive Meadows Dr., W side of channel

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 10X20

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: 131 DATE: 6/3/10

OBSERVER: MD/IT TIME: 14:50

LOCATION: Espola Rd, between Bounty Way & Sand Hill Rd, across from high school sports field

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 15x5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ **Potential Threat to Human Health**	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ **Potential Threat to Aquatic Health**	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

2010 Trash Assessment Form

SITE ID: 136 DATE: ~~12:00~~ 5/26/10

OBSERVER: MD/IT TIME: 12:00

LOCATION: South of Espola Rd, West of Valle Verde Dr across from field, next to 16780 Espola Rd.

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): Optimal

ESTIMATED AREA OF ASSESSMENT L x W (FT): 15 X 10

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Potential Threat to Human Health and/or Aquatic Health (applies to area of assessment)	
☐ Potential Threat to Human Health	Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment. Describe potential threat on back of form.
☐ Potential Threat to Aquatic Health	Large amount* of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amount of settleable, degradable and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries or spray cans; any evidence large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Describe potential threat on back of form. *Large amount is defined as 50 pieces or more.

EXECUTIVE SUMMARY

In January 2007, the Regional Water Quality Control Board (RWQCB) issued Order No. R9-2007-0001 (Municipal Permit), a National Pollution Discharge Elimination (NPDES) Permit regulating discharges to the storm drain system within 18 municipalities in San Diego County, the County of San Diego, the San Diego County Regional Airport Authority, and the San Diego Unified Port District (collectively referred to as "Copermittees"). As required by the Municipal Permit, the City of Poway (City) has created and maintains a Jurisdictional Urban Runoff Management Program (JURMP). The City's JURMP includes Best Management Practices (BMP) standards for businesses, construction and development projects, residents, and the City's own activities. The JURMP also includes programs for water quality monitoring and educational outreach.

This JURMP Annual Report presents the City's activities to implement its JURMP during the 2010/2011 fiscal year, which began on July 1, 2010, and ended on June 30, 2011. Each section of this JURMP Annual Report discusses the City's efforts during 2010/2011 and how those efforts met the requirements of the Municipal Permit. Key actions taken for the major components of the City's storm water program are summarized below.

Development Planning Component

The City's development requirements were updated to incorporate the requirements of the regionally developed final Hydromodification Management Plan in January 2011, as required by the Municipal Permit. City staff attended three training sessions on the new requirements and worked with project applicants to ensure appropriate requirements were applied to submitted designs. The City successfully obtained verification of treatment control BMP maintenance from all completed projects on its treatment control BMP inventory, and ten of these sites were inspected to assess BMP operation and maintenance conditions. All high-priority projects were inspected prior to October 1, 2010, as required by the Municipal Permit. City staff successfully worked with the project's responsible party to resolve the one remaining outstanding deficient project noted in the Notice of Violation related to implementation of its SUSMP program received in the previous fiscal year. All other projects' deficiencies had been addressed during 2009/2010.

Construction Component

During 2010/2011, the City had 86 active construction sites, prioritized as 9 High TTWQ, 20 Medium TTWQ, and 57 Low TTWQ. The City conducted checks of erosion control plans to ensure construction projects complied with the City's minimum BMP requirements. The City conducted 199 inspections to verify BMP implementation, and issued 64 Correct Work Notices and 13 Stop Work Notices to 30 construction sites that were not in compliance with City requirements. Ninety-six percent of all projects with BMP deficiencies were compliant at the end of 2010/2011, with the remaining four percent being referred for escalated enforcement.

Municipal Component

The City inspected all high TTWQ municipal fixed facilities during 2010/2011. The City also continued its rigorous street sweeping and MS4 maintenance programs. A total of 728 tons of trash and debris was removed through street sweeping activities, and 1,990 cubic yards of debris were removed during routine MS4 maintenance activities. The City also inspected and cleaned 71 miles of sewer line and continued to maintain its sanitary sewer system to decrease the potential for a sanitary sewer overflow (SSO). City personnel were regularly trained regarding storm water pollution prevention concepts and practices.

Industrial and Commercial Component

During 2010/2011, the City inspected all high TTWQ sites on the City's industrial and commercial inventory and met the Municipal Permit requirement that at least 25 percent of all inventoried sites in the City be inspected each year. The City conducted a total of 141 full industrial and commercial inspections. The City's watershed-based industrial and commercial inventory was updated based on information gained since the previous inventory update. The City's updated industrial and commercial inventory includes 530 stationary and 46 mobile businesses. During inspections, the City notified industrial and commercial businesses of the City's BMP requirements by discussing concepts with facility personnel. An additional mailing during 2010/2011 also ensured that all stationary and mobile businesses were notified of BMP requirements within three years of JURMP implementation. The City followed up with 38 facilities at which BMP deficiencies were identified. Inspectors also assessed each facility's compliance with the State of California General Industrial Permit (Industrial Permit).

Residential Component

A large percentage of land use in the City of Poway is residential, and the City used a variety of methods to educate its residents. The City provided each quarterly edition of the *Poway Today* newsletter to more than 17,000 residential addresses, and each issue was available on the City's website. The newsletters contained a variety of storm water-related articles and opportunities for involvement. During 2010/2011 the City hosted a variety of waste disposal events and encouraged residents to participate in these events. Residents properly disposed of 265,903 pounds of household hazardous waste (HHW) and 2,054 gallons of used oil during these events. The City also responded to and resolved 25 complaints made to the City's storm water hotline regarding residential areas. The complaint investigations were used as opportunities to enforce BMP requirements and to educate residents.

Illicit Discharge Detection and Elimination Component

On September 10, 2008, the RWQCB adopted Addendum No. 2 to the Municipal Permit. This addendum requires the City to wait to submit the illicit discharge detection and elimination (IDDE) section of its JURMP Annual Report until the report for the 2011 Dry Weather Field Screening and Analytical Monitoring Program, which took place during May and June 2011, is finalized. The section must be submitted to the RWQCB no later than December 15, 2011.

The City implemented its IDDE program component during 2010/2011, although the full section will not be submitted until after September 30, 2011. During this period, the City responded to and resolved 55 complaints made to its storm water hotline and the Public Works maintenance hotline. The recommendations in the final report for the 2010 Dry Weather Monitoring Program were addressed during this reporting period. The City also continued maintenance of the sanitary sewer system to prevent SSOs.

Education Component

The City continued to educate a variety of audiences in the City as a means to raise storm water awareness in various communities throughout 2010/2011. During this reporting period, the City's efforts resulted in an estimated 183,091 impressions. City staff attended municipal training sessions that covered a variety of different topics ranging from routine storm water training to a seminar about tools for sizing BMPs for compliance with the current HMP requirements. The City continued to circulate the quarterly *Poway Today* newsletter to more than 17,000 residences and more than 1,600 industrial and commercial businesses. Newsletters sent during 2010/2011 included storm water-related articles aimed at both residents and businesses in the City. Industrial and commercial businesses were also provided educational material during inspections. Additionally, the City continued working with I Love A Clean San Diego (ILACSD) to provide educational presentations and storm water literature to the public. In addition to staffing booths at community events, ILACSD also gave presentations at five Poway elementary and high schools, speaking to approximately 475 attendees. Presentations included information about watersheds, storm water issues, pollution prevention measures, water conservation, composting, and appropriate ways to dispose of hazardous waste.

Public Participation Component

During 2010/2011, the City continued to provide opportunities for the public to participate in storm water related events, such as cleanup events, and participate in outreach activities, through which the City works to increase general knowledge and awareness regarding storm water issues. Volunteers of the City's Adopt-a-Trail program spent 899 hours removing trash and debris from City trails. Additionally, residents participated in a number of large waste and household hazardous waste (HHW) disposal events. During the 2010/2011 reporting period, over 6,429 households participated in the City's various waste disposal programs and properly disposed of over 265,903 of HHW, 2,054 gallons of used oil, and 660 tons of trash and debris.

Fiscal Analysis Component

The City continued to collect a Storm Water Fee to provide a dedicated source of funds for its Storm Water Pollution Prevention Program. Portions of the Program that benefit only City-owned properties or undeveloped properties were funded by the City's General Fund. During 2009/2010, a fiscal analysis reporting template was developed collectively by the Copermittees. The City used this template to report the 2010/2011 program budget in this JURMP Annual Report.

Effectiveness Assessment Component
During 2010/2011, the City continued to evaluate the effectiveness of its JURMP implementation. The City has seen some encouraging signs of the effect of its program, such as lower amounts of pollutants in its Dry Weather Monitoring Program in recent years and increased public reporting of storm water issues.

Special Investigations
Aside from upstream investigations conducted as part of the Dry Weather Monitoring and Sampling Program, no special investigations were needed or conducted during this reporting period.

Non-Emergency Fire Fighting
City staff continue to implement BMPs during regular maintenance of fire and emergency vehicles and equipment, training exercises, facilities maintenance, and post-emergency rehabilitation of response equipment.

JURMP Revisions
Any changes made to the JURMP since the JURMP update in the spring of 2008 and subsequent changes reported in the 2009 JURMP Annual Report are discussed throughout this JURMP Annual Report where applicable.

Conclusions and Recommendations
During future fiscal years, the City will continue to implement the programs detailed in its JURMP; it is anticipated that some program refinements will continue to be made as implementation progresses. The City is working with other Copermittees in its watersheds in response to the Bacteria Project I TMDL and the Los Penasquitos sediment TMDL currently under development. The City will also continue to collaborate with the other Copermittees to improve the overall efficiency of its program and to develop updated methods of assessing program effectiveness.

1.0 INTRODUCTION

1.1 BACKGROUND

This Jurisdictional Urban Runoff Management Program (JURMP) Annual Report presents an activity summary for the City of Poway (City) during the 2010/2011 fiscal year. The JURMP Annual Report preparation and submission are required by San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit).

1.1.1 REGULATORY BACKGROUND

The 1987 amendments to the Federal Water Pollution Control Act, also known as the Clean Water Act (CWA), established a framework for regulating Municipal Separate Storm Sewer System (MS4) discharges under the National Pollutant Discharge Elimination System (NPDES). In 1990, the RWQCB issued the first regional NPDES permit for municipalities in the San Diego Region, followed by a revised permit in 2001. RWQCB Order No. 2001-01 was replaced by the current Municipal Permit in 2007.

In 2002, the City, like all regulated municipalities in the San Diego region (collectively referred to as Copermittees), developed and submitted a JURMP to the RWQCB. The City then submitted an updated JURMP, as required by the Municipal Permit, in March 2008. The JURMP explains management measures for different sectors, including municipal, industrial, commercial, construction, and significant development and re-development activities.

Annual reports documenting the implementation of the JURMP are required to be submitted to the RWQCB by September 30. This JURMP Annual Report presents data from the 2010/2011 fiscal year, which extended from July 1, 2010, to June 30, 2011.

1.1.2 CITY SETTING

The City of Poway is located in central San Diego County, surrounded by the City of San Diego and unincorporated portions of San Diego County. The City itself covers approximately 39 square miles and has an estimated population size of approximately 50,000. It extends across three watersheds in San Diego County: the San Dieguito Watershed, the Los Peñasquitos Watershed, and the San Diego River Watershed. The northern portion of the City lies in the San Dieguito Watershed, which is designated as Hydrologic Unit (HU) 905. The southern half of the City is part of the Los Peñasquitos Watershed, HU 906, and a very small section of eastern Poway lies in the San Diego River Watershed, HU 907. This section of the City is designated as permanent open space, which cannot be developed. Since the area draining to the San Diego River is permanent undevelopable space, the Municipal Permit does not include City of Poway as a responsible party for the San Diego River Watershed Urban Runoff Management Program (WURMP).

1.2 PURPOSE AND OBJECTIVES

The City's JURMP presents strategies to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The JURMP describes various programs intended to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. This JURMP Annual Report has been prepared to document the implementation of the City of Poway's JURMP during the 2010/2011 reporting period.

1.3 REPORT ORGANIZATION

This report follows the standard reporting outline jointly developed by the Copermittees and submitted to the RWQCB in July 2007. The following sections are included in the JURMP Annual Report.

Section 1 **Introduction**
Section 2 **Development Planning Component**
Section 3 **Construction Component**
Section 4 **Municipal Component**
Section 5 **Industrial and Commercial Component**
Section 6 **Residential Component**
Section 7 **Illicit Discharge Detection and Elimination Component**
Section 8 **Education Component**
Section 9 **Public Participation Component**
Section 10 **Fiscal Analysis Component**
Section 11 **Effectiveness Assessment Component**
Section 12 **Special Investigations**
Section 13 **Non-Emergency Fire Fighting**
Section 14 **JURMP Revisions**
Section 15 **Conclusions and Recommendations**
Section 16 **References**

Each section includes all components required by the standard JURMP Annual Report format. In some cases, additional subsections within the standardized sections have been added to provide a more detailed explanation of the City's activities during the reporting period. For example, in this introduction section, the standard reporting format only includes subsections 1.1 and 1.2. Background, subsection 1.1, has been divided into Regulatory Background, subsection 1.1.1, and City Setting, subsection 1.1.2, for clarity.

2.0 DEVELOPMENT PLANNING COMPONENT

2.1 INTRODUCTION

The development planning component of the City's JURMP aims to improve overall storm water quality by reducing the discharge of pollutants from development projects to the MEP and managing increases in runoff from development projects that have the potential to negatively affect downstream water bodies.

The major components of the City's program include development project reviews to apply Standard Urban Storm Water Mitigation Plan (SUSMP) requirements, BMP inspections, and requiring parties responsible for installed BMPs to certify that appropriate maintenance has been conducted each fiscal year.

2.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the reporting period are presented in the following bulleted list. More details about the City's activities for this component of its storm water program are provided in the remainder of this section.

- Inspected BMPs at 10 completed sites with approved treatment control BMPs and met required inspection frequencies, as shown in Table 2-1.
- Obtained verification of BMP maintenance from all inventoried projects.
- Implemented updated hydromodification requirements as required by the Municipal Permit.
- Resolved the remainder of the outstanding historical SUSMP BMP design and installation deficiencies noted in 2009.
- Attended three training sessions on hydromodification management requirements and implementation.

2.2 LAND USE PLANNING

2.2.1 BACKGROUND

The City's General Plan was last updated in 2002 and contains water quality and watershed protection principles in its Natural Resources Element. The principles established in 2002 provide an ample framework for implementing the development planning requirements of the Municipal Permit, and no changes to these policies were necessary during this reporting period.

2.2.2 SOURCE CHARACTERIZATION

The City's General Plan contains established restrictions on the types of new development projects based on their planned land uses to ensure public safety and limit negative impacts

to the surrounding environment. No changes to the development restrictions in the City's General Plan for storm water purposes were implemented during the reporting period.

2.2.3 Best Management Practice Requirements

Please refer to the City's updated JURMP document for a list of the water protection policies included in the City's General Plan. These policies remained the same throughout the reporting period.

2.2.4 Program Implementation

The City implemented its water protection-related land use policies during the reporting period mainly through the City's Municipal Code. The City updated the SUSMP requirements in Division VI of Title 16 of its Municipal Code by passing Ordinance 712 on December 7, 2010. Ordinance 712 went into effect on January 14, 2011, as required by the Municipal Permit, and revised hydromodification requirements were also discussed with project proponents during the time leading up to formal ordinance adoption. The ordinance updates were consistent with the final Hydromodification Management Plan prepared by the Copermittees and adopted by the RWQCB on July 14, 2010. Ordinance 712 is included as Attachment 2.1 of this JURMP Annual Report, and the complete SUSMP requirements in Title 16 of the Municipal Code can be accessed via the City's website, www.poway.org.

Details on how the City implemented its established water protection policies through its environmental review process and its development project approval and verification processes during the reporting period are provided in Sections 2.3 and 2.4 of this JURMP Annual Report.

2.3 Environmental Review Process

The City's current environmental review process is detailed in the City's JURMP. No modifications to the City's environmental review process were made during the reporting period.

2.4 Development Project Approval and Verification Process

2.4.1 Background

During the 2010/2011 fiscal year, the City implemented the watershed protection principles in the City's General Plan through various aspects of the City's development project approval and verification process, as detailed below.

2.4.2 Source Characterization

The different priority pollutants, sources, and activities associated with development projects within the City are addressed through the implementation of the City's Municipal

Code. The City's SUSMP regulations comprise Division VI of Title 16 of the Municipal Code. Projects subject to SUSMP regulations are identified by completion of applicability checklists. More detail about this process is provided in Section 2.4.4.2.

2.4.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City updated its hydromodification management requirements for development projects in January 2011, as described in Section 2.2.4 above.

2.4.4 PROGRAM IMPLEMENTATION

During the 2010/2011 fiscal year, the City required implementation of its BMP requirements for all development projects through education, the development project approval process, and the treatment control BMP inspection and maintenance verification program.

In response to questions raised by the RWQCB about one development project in the City, toward the end of 2008/2009 the City completed a comprehensive review of SUSMP submittals from previously approved projects dating back to the inception of the SUSMP in 2002. As a result of that review process, several deficiencies were discovered at previously constructed projects, and these deficiencies and other aspects of the City's SUSMP program were discussed with the RWQCB. The City was subsequently issued a Notice of Violation (NOV) related to its SUSMP program implementation on July 29, 2009. During 2009/2010, City staff worked with the responsible parties for the developments at which deficiencies were discovered to resolve the identified issues. To bring about resolution to the identified issues, City staff sent corrective action letters, made site visits, met with property owners and engineers to discuss potential solutions, and made numerous phone calls. Deficiencies were resolved at all but one project in 2009/2010. The deficiency at the remaining project was resolved during 2010/2011. Table 2-2 provides more information about that project and the resolution to its previously noted deficiencies.

2.4.4.1 OUTREACH AND STAFF TRAINING

During 2010/2011 the City's land development engineers met weekly to discuss SUSMP and hydromodification management requirements and the status of SUSMP projects in the City. The City's Stormwater Program Administrator also coordinated with land development engineers as needed on SUSMP requirements. These methods of regular communication helped ensure the City's procedures to identify projects subject to SUSMP and then apply the requirements to subject projects were being effectively implemented.

Prior to the implementation of updated hydromodification requirements in January 2011, City staff attended a training session on the upcoming requirements changes and a workshop on the BMP sizing calculator tool developed for regional use to assist applicants and reviewers in implementing hydromodification management requirements. City staff also attended a second session on the BMP sizing calculator in March 2011 and a full day workshop on design, inspection, and maintenance of LID measures in April 2011.

Project proponents are made aware of SUSMP requirements through the development review process, including interaction with staff at the front counter and meetings with City staff. Distribution of maintenance verification letters to parties responsible for maintenance of treatment control BMPs at completed projects has also increased the level of knowledge of regulated parties.

2.4.4.2 URBAN RUNOFF APPROVAL PROCESS FOR DEVELOPMENT PROJECTS

All development projects that required City permits were required to undergo the City's urban runoff approval process as detailed in the City's JURMP. Checklists were completed to determine storm water requirements for each project, including whether SUSMP requirements applied. The City records this information for each project in a spreadsheet continuously throughout the year. A summary of the projects submitted during the reporting period and whether each was subject to SUSMP requirements is presented in Table 2-3 at the end of this section.

Of the submitted projects, seven were determined to be subject to SUSMP requirements. These seven projects are listed with the types of treatment control BMPs proposed in Table 2-4 at the end of this section. City reviewers use requirements checklists to verify that applicable SUSMP requirements are addressed in the proposed designs and to document the proposed BMPs.

During 2009/2010 only one SUSMP project approved by the City did not propose high or medium removal efficiency treatment control BMPs. This project, High Valley Road Subdivision (Mechling), is a private road in an area with steep slopes and limited space for treatment BMPs. Bioretention was not feasible because limited space was available and the majority of the road has a slope of approximately 20 percent. Infiltration was not feasible due to low infiltration rate soils in the area. Wet ponds or wetlands were not feasible due to space constraints. A previously approved 401 certification required no changes to the downstream drainage conveyance or to the previously proposed BMPs—an underground detention system and ADS water quality inlet. Because of those additional constraints on space and limitations on the vertical distance between a BMP inlet and discharge invert with respect to minimum head requirements, sand filters and similar BMPs were also not feasible. A high-rate media filter installed in a catch basin was therefore determined to be the most effective BMP feasible. Note that the residential lots portion of the project is being processed as a separate permit and will be subject to a separate review process during 2011-2012. No projects received a SUSMP waiver for implementation of treatment control BMPs, and at this time the City has no plans to develop a SUSMP waiver mitigation program.

The City continues to maintain its retrofitted detention basins, which provide treatment for many SUSMP projects in the South Poway Business Park area, as well as neighboring projects completed prior to SUSMP regulations that otherwise would not receive any treatment. Figure 2-1 shows the locations of the retrofitted detention basins and their respective drainage areas treated. Results of wet weather monitoring conducted to assess the treatment effectiveness of the South Poway Business Park detention basins are discussed in Section 11 of this JURMP Annual Report.

Hydromodification Management Plan

The final regional Hydromodification Management Plan was approved by the RWQCB on July 14, 2010, and the City subsequently incorporated the updated standards into its requirements for development projects, as discussed earlier in this section. City staff actively participated in the regional Land Development Workgroup, which regularly discussed hydromodification monitoring and hydromodification management requirements implementation. The majority of Priority Development Projects reviewed in 2010/2011 were approved prior to the implementation of the new requirements on January 14, 2011. City staff discussed the new hydromodification standards with project applicants before this date as well and encouraged implementation of hydromodification controls. None of the projects approved prior to formal implementation of the Municipal Code updates for hydromodification were 50 acres or larger, so none of them were subject to the City's Interim Hydromodification Criteria. Two projects were submitted after the implementation of the new requirements. Sysco was required to implement hydrologic controls to comply with the updated hydromodification requirements; biofilters sized for both water quality treatment and hydromodification management were included in the design. The Target Poway Garden Center Conversion was deemed exempt from hydromodification management requirements because it did not result in increased impervious area or discharge rates.

BMP Installation Verification

City inspectors check to see that proposed BMPs have been implemented prior to granting occupancy for development projects subject to SUSMP. City inspectors continued documenting BMP installation during pre-occupancy verification visits using a GPS unit and camera during the reporting period.

2.4.4.3 TREATMENT CONTROL BMP INSPECTION AND MAINTENANCE VERIFICATION PROGRAM

Toward the beginning of each fiscal year the City updates its inventory of completed projects with approved treatment control BMPs prior to mailing out operation and maintenance verification letters and selecting sites for inspection during the fiscal year. This process includes adding all Priority Development Projects completed during the previous fiscal year and making other inventory updates as needed. Beyond adding projects completed in 2009/2010, the City also split Kohl's and Staples into two projects on the inventory instead of one. This is because through interacting with the responsible parties the City found that the site was now being managed as two separate properties rather than as one development, as had been done in the past. The final inventory of treatment control BMPs for 2010/2011 is included as Appendix A.1.

Maintenance verification letters were mailed to the responsible parties for inventoried BMPs prior to the beginning of the 2010/2011 wet season. City Public Works staff provided documentation of maintenance for all City-maintained BMPs, including the South Poway Business Park detention basins, prior to October 1, 2010. The City obtained completed verification forms from all of the sites listed in Appendix A.1 and all the South Poway

Business Park detention basins. The detention basins are not included in the SUSMP inventory because they are not themselves Priority Development Projects. The detention basins are listed in Table 2-5 and shown on Figure 2-1.

Some additional projects were completed during the reporting period. The City's procedure for each site completed after the inventory is established for the fiscal year is to complete the check for BMPs prior to occupancy, record the site information and assign it a TTWQ priority, and then add the project and its BMPs to the inventory of projects subject to the City's inspection and annual maintenance verification program the following fiscal year. This process helps the City focus its inspection resources on sites more likely to have maintenance deficiencies, as maintenance deficiencies are generally less likely at sites with recently installed BMPs. A table of the projects completed after the establishment of the inventory presented in Appendix A.1 is presented in Table 2-6.

The City visited sites with approved treatment control BMPs to inspect the maintenance condition of the BMPs. Sites designated as a high priority were inspected prior to October 1, 2010. The City's inspections met all the relevant frequency requirements listed in the Municipal Permit, as summarized in Table 2-1 below.

Table 2-1
Assessment of Compliance with Required Inspection Frequencies

Class	Number of Sites	Inspections	Percent Inspected	Permit Requirement	Requirement Met
All Inventoried Sites	30	10	33%	20%	**Yes**
Sites with Drainage Inserts	18	10	56%	50%	**Yes**
High Priority Sites	4	4	100%	100%	**Yes**

In some cases, inspections found that corrective actions were necessary. Parties responsible for BMP maintenance at sites for which deficiencies were noted were notified of the required corrective actions. Enforcement actions beyond these notifications, such as NOVs or administrative citations, were not necessary to bring about compliance or bring responsible parties onto a clear path to compliance during 2010/2011. Table 2-7 at the end of this section presents a list of the inspections completed during the reporting period, whether issues requiring significant corrective actions were discovered, and the resolution status for instances where corrections were necessary.

Other Follow-Up and Enforcement Actions

As described earlier in Section 2.4.4, the City identified several deficiencies at previously completed projects in 2008/2009 and worked to resolve them during 2009/2010. The one remaining deficiency not resolved during 2009/2010 was resolved during 2010/2011, as summarized in Table 2-2.

2.5 DEVELOPMENT PLANNING COMPONENT EFFECTIVENESS ASSESSMENT

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

2.6 PROGRAM REVIEW AND MODIFICATION

The City's SUSMP requirements have been updated as described above in Section 2.2.4.

Table 2-2
Resolution to SUSMP Deficiency at Previously Completed Project

Permit Number	Project Name	Design Defect Description	Installation Defect Description	Resolution Description
G1461-04, DR04-02	GENERAL ATOMICS (FORMERLY SLOUGH ESTATES/SLOUGH PARKWAY BUSINESS CENTER)	Appears that roof drains are connected directly to storm drain; approximately 1.5 acres of roof draining east will bypass catch basin inserts and not be treated. Roof drains flowing to west storm drain line also will bypass inserts, but that line drains to a private detention basin for treatment.		An existing underground detention basin was retrofitted to provide treatment for areas previously not receiving treatment.

MDRA 11-009	Target Poway Garden Center Conversion[4]	14823 Pomerado Rd	Commercial > 1 Acre (Redevelopment)	Flow-Through Planter	906.20	Yes	5/9/11

Notes

1. Approved prior to the adoption of the updated hydromodification requirements that extended hydromodification management requirements to all Priority Development Projects, which went into effect on January 14, 2011. Project was also smaller than 50 acres and therefore not subject to interim hydromodification management criteria.
2. See discussion in Section 2.4.4.2.
3. Project subject to hydromodification management requirements. Project design includes biofilters (bioretention) sized for both treatment and flow control.
4. Project exempt from hydromodification management requirements due to no increase in impervious area or discharge.

Table 2-5
South Poway Business Park Detention Basins Retrofitted as Storm Water Treatment BMPs

Treatment Control BMP	Location	Hydrologic Area	Fiscal Year Completed
Kirkham Detention Basin	South of Community Road and Kirkham Way	906.20	2005
Stowe Detention Basin	Between Stowe Drive and Metate Lane	906.20	2005
Community Detention Basin	South end of Community Road	906.20	2006
Stotler Detention Basin	Southwest of Tech Center Court cul-de-sac	906.20	2006
Gate Dr Detention Basin	Southern terminus of Gate Dr	906.20	2008

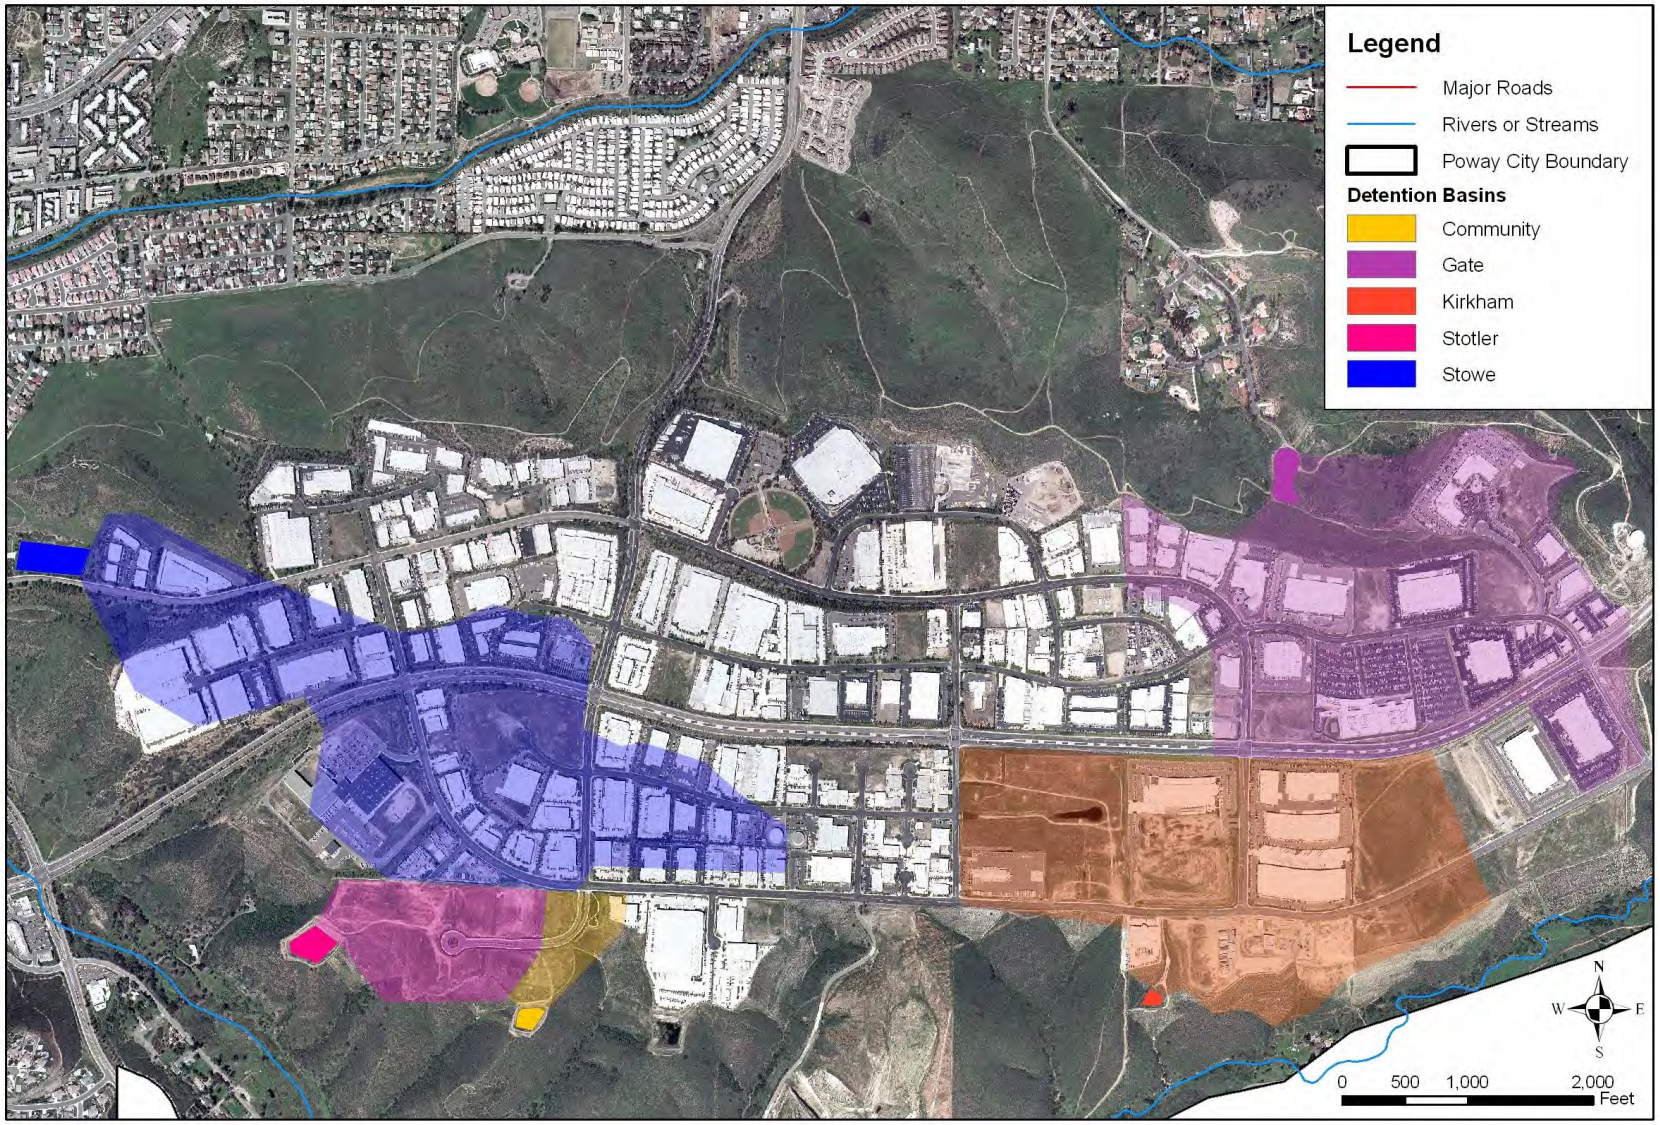
South Poway Retrofitted Detention Basins and Corresponding Drainage Areas Treated



3.0 CONSTRUCTION

3.1 INTRODUCTION

The City's construction program is designed to control construction and grading activities in the City. These types of projects have the potential to affect nearby water bodies due to the presence of disturbed soils and building materials and the potential for associated pollutants to be transported off site by storm water or non-storm water flows. The City continued to implement its construction program throughout 2010/2011.

3.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the construction component during the 2010/2011 reporting period are presented in the following bulleted list. The following subsections provide more detail on how the City complied with the Municipal Permit during the reporting period.

- Conducted plan checks of erosion control plans to ensure construction projects were in compliance with the City's minimum BMP requirements.
- Educated project proponents and contractors on storm water pollution prevention requirements at preconstruction meetings.
- Conducted Municipal Permit required training for appropriate City staff regarding the City's construction requirements, including two training sessions on the new General Construction Permit.
- Conducted 199 inspections at construction sites.
- Issued 64 Correct Work Notices and 13 Stop Work Notices in response to non-compliance with the City's minimum BMP requirements.

3.2 SOURCE CHARACTERIZATION

The City maintains a watershed-based inventory of all private and public construction projects, both active and completed. The database where the inventory is stored is updated daily. Projects are never deleted from the database; the status is changed to inactive upon the completion of the project. During this reporting period, there were 86 active construction projects. A total of 75 of these projects were private development/construction projects and 11 of these projects were CIPs. Appendix A.2 includes a list of all construction projects that were active during 2010/2011.

3.3 UPDATES TO ORDINANCES AND APPROVAL PROCESS

The City addresses storm water pollution through implementation of various components of its Municipal Code. During 2009/2010, the City updated the SUSMP Ordinance to include the updated model SUSMP. No changes were made to the City's project approval process during 2010/2011.

3.4 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City requires BMP implementation at all construction sites to reduce and/or eliminate the impact of discharges from construction site runoff on receiving water quality. Section 5.4 of the City's JURMP outlines the minimum construction BMPs required by the City. There were no changes to these requirements during 2010/2011.

3.5 PROGRAM IMPLEMENTATION

The City implemented the construction component of its JURMP throughout the reporting period through education and staff training, its comprehensive construction and grading approval process, and its construction inspection program, as detailed below.

3.5.1 EDUCATION AND STAFF TRAINING

The City provides information regarding storm water quality to project proponents, project personnel, employees, contractors, subcontractors, and other parties involved with construction activities. The following is a list of construction-related training activities that the City has provided or participated in during 2010/2011:

- All new development and redevelopment project proponents are required to attend a preconstruction meeting that includes education on storm water management topics including federal, state, and local regulations, implementation of a Storm Water Pollution Prevention Plan (SWPPP), if required, and implementation and maintenance of BMPs.
- The City sends out an annual announcement prior to the rainy season to all parties responsible for construction projects describing the enhanced construction BMP requirements and storm water management requirements during the rainy season (Attachment 3.1). Copies of this notice were also distributed by construction inspectors in the field as an additional means of notification.
- Engineering Inspectors met weekly during 2010/2011 for project review and training conducted by the Construction Program Supervisor.
- Two QSD training sessions on the new Construction General Permit were attended by City staff.
- The City's construction inspectors attended a training session covering JURMP construction BMP requirements, miscellaneous construction topics, and the new construction form.

3.5.2 CONSTRUCTION AND GRADING APPROVAL PROCESS

The City requires that all proposed construction and grading projects implement measures to ensure that pollutants from the site will be reduced to MEP and will not cause or contribute to an exceedance of water quality objectives. Proponents of all construction and grading projects are required to comply with practices detailed in the City's JURMP and the

City's Grading and Storm Water Ordinances. The grading approval process also includes the City requirement of cash securities for all grading projects and Minor Development Review Application (MDRA; non-grading) projects to ensure compliance with the City's storm water and grading ordinances.

As previously mentioned, all new development and redevelopment project proponents are required to attend a preconstruction meeting with City staff. During these meetings, the project proponent is educated on storm water management topics including federal, state, and local regulations, implementation of a SWPPP, if required, and implementation and maintenance of BMPs. Additionally, the developer, owner, and contractor are required to watch an educational video covering construction site BMPs and storm water management.

During 2010/2011 all construction projects were required to undergo the approval process described above. These requirements are tracked by the Land Development and CIP Divisions as part of their routing and record-keeping database.

Additionally, the City continued to enforce a 17 acre maximum disturbed area for grading activities during 2010/2011. One of the City's active construction sites, known as Parkway Summit (G1580-07), was larger than 17 acres and was therefore required to implement additional controls and BMPs as necessary. The City inspected the site biweekly and Correct Work Notices were issued as needed to achieve compliance. In addition, all construction sites were still required to limit exposed cleared or graded areas to the amount of area that could be protected prior to a rain event, as prescribed in the City's seasonal BMP requirements.

The City also continued implementing advanced treatment requirements during the reporting period. Criteria for determining when advanced treatment is required are detailed in the City's JURMP. During the reporting period, the City's minimum BMP requirements were adequate at controlling sediment discharges at all of the active construction sites within the City's jurisdiction, and advanced treatment methods were not required at any construction sites.

3.5.3 Inspection of Construction Sites

Construction inspections conducted during the reporting period were performed as described in the City's JURMP. During inspections, inspectors discuss BMPs with each site project manager, developer, or owner and complete an inspection form. The City also inspects MDRA sites for compliance with BMP implementation requirements, including erosion and sediment control. The City requires every construction project and MDRA to have a Weather-Triggered Action Plan for Construction Sites for rain events. This Weather-Triggered Action Plan details the site's preparation for rain events and the additional BMPs to be implemented in the case of rain. Additionally, City Building Inspectors may enforce storm water regulations or forward any noted violations on to the Engineering Inspectors for corrective action.

Inspected construction sites, along with their TTWQ, the number of weeks the site was active within the rainy season, and the number of inspections conducted during both the

wet and dry seasons, the number of follow-up inspections, and the total number of inspections for each site is included with the inventory in Appendix A.2. During this reporting period, the City conducted 199 inspections at construction sites.

The City continued using the comprehensive permit tracking software package, called TRAKiT, to manage data for its construction inspection program. The program tracks permit issuance and other paperwork-related items, ground-disturbing activity, and construction activity. This system allows automatic reminders to be sent to the inspector when an inspection is due, and also stores the inspection records for easy retrieval and data analysis. The City also continued to use the updated BMP inspection form in the field (Attachment 3.2).

3.5.4 Enforcement Measures

The City's enforcement procedures require corrective actions when non-compliance is observed. Non-compliant sites receive a Correct Work Notice and timeframe for compliance. The site is required to become compliant within one to five working days, unless rain is imminent, in which case a Stop Work Notice is issued immediately. Failure to install BMPs indicated in a Correct Work Notice within the appropriate timeframe results in issuance of a Stop Work Notice, and notification is sent to the RWQCB. Additional enforcement actions including accessing the site's cash securities to do the work, revocation of permits, and issuance of citations also can be taken as necessary.

The City issued 64 Correct Work Notices and 13 Stop Work Notices to 30 projects for storm water BMP deficiencies during this reporting period. Table 3-1 describes each notice, along with the follow-up actions taken to correct the deficiency. Three projects were referred to Land Development for further action, and no other projects remained out of compliance at the end of 2010/2011. Please note that some of the notices were issued to projects engaged in illegal grading without a permit, and are tracked as complaints in Appendix B since the projects were not on the inventory.

3.6 Construction Activities Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

3.7 Program Review and Modification

No changes to the City's construction component were made during 2010/2011.

Table 3-1
Enforcement Actions Taken at Construction Sites During 2010/2011

#	Date	Project	Address	Type of Notice Issued	Resolution
1	7/7/2010	Chang Residence (MDRA 09-025)	17660 St. Andrews	Correct Work	Inspected 7/20/10; in compliance

4.0 MUNICIPAL COMPONENT

4.1 INTRODUCTION

Throughout 2010/2011, the City of Poway continued to manage municipal areas and activities to reduce municipal discharges of pollutants to the MS4 to the MEP. As discussed in detail in the City's JURMP, the City owns and operates a variety of municipal facilities and activities. Public parks and recreation facilities, administrative buildings, fire stations, and public works facilities make up the bulk of the municipal areas in the City. Municipal activities conducted by the City include power washing, landscaping activities, street sweeping, street and sidewalk repair, and MS4 and sanitary sewer system maintenance. Information about the City's prioritized street sweeping program can be found in Table 4-1, and information about the City's MS4 maintenance program can be found in Table 4-2. The City's municipal inspection results can be found in Table 4-3. The City continued to respond to complaints made to the City's storm water hotline. All complaints made to the hotline are included in Appendix B; enforcement actions taken in response to complaint investigations are discussed in Section 4.8.

4.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the municipal component during the 2010/2011 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the municipal component of its storm water program during the reporting period are provided in the remainder of Section 4.

- The City inspected all high TTWQ fixed municipal facilities.
- The City performed eight special event inspections.
- The City hosted several training events/meetings for municipal personnel; over 100 City personnel received storm water training.
- The City removed over 728 tons of debris through street sweeping activities.
- The City removed over 1,990 cubic yards of debris through standard MS4 cleaning activities.
- The City cleaned 71 miles of sewer line during 2010/2011.

4.2 FIXED FACILITIES

4.2.1 BACKGROUND

The City owns and operates a variety of municipal fixed facilities. As mentioned in the City's JURMP, municipal fixed facilities have been grouped under one category, fixed facilities. This is because these facilities receive routine inspections as part of the City's municipal program, making program implementation generally similar.

4.2.2 SOURCE CHARACTERIZATION

All fixed facilities are included in the City's municipal inventory, which is included in this JURMP Annual Report as Appendix A.3. The designations of pollutants potentially generated by municipal facilities on the inventory are based on the pollutant loading potentials shown in Table 6-1 of the City's JURMP. TTWQ prioritizations are assigned via the process laid out in the flow chart shown in Figure 6-1 of the City's JURMP. No modifications were made to the City's municipal inventory in 2010/2011.

4.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City continues to implement and assess the effectiveness of BMPs for fixed municipal facilities as set forth in the City's JURMP. City staff are trained to recognize the need for additional BMPs and implement them as necessary. Strict BMPs remain in place for the management of pesticides, herbicides, and fertilizers; these BMPs, as described in the City's JURMP, have not changed. City Public Works employees, fire station employees, and employees at other fixed municipal facilities in the City continue to implement BMPs appropriate to the facility type as described in the City's JURMP. Parking lots at fixed facilities are swept during regular maintenance activities. City fire response personnel continue to be trained in implementing BMPs for non-emergency fire fighting activities as described in Section 3 of the City's JURMP. There have been no changes in BMP requirements for any fixed municipal facilities.

4.2.4 PROGRAM IMPLEMENTATION

Parks and Trails

During 2010/2011, the City's Parks and Trails Maintenance Division continued to implement the BMPs described in its JURMP for the management and use of pesticides, herbicides, and fertilizers, including the City's Integrated Pest Management (IPM) Program. City Parks and Trails staff implemented BMPs to control landscaping waste from parks and to keep City parks and trails free of trash and other debris. The City continued to work with local residents through the Adopt-a-Trail Program, which is discussed in Section 9 of this Annual Report.

Public Works Facilities, Fire Stations, Other Fixed Facilities

As previously mentioned, City personnel continued to implement appropriate BMPs for fixed municipal facilities as described in the City's JURMP. BMPs are also implemented during regular maintenance, such as landscaping and building maintenance, as necessary.

Currently, the Material Handling Yard is covered under The State of California General Industrial Permit (General Industrial Permit). The waste discharger identification (WDID) number for the Material Handling Yard is 9 37I015616. This facility maintains a site-specific Storm Water Pollution Prevention Plan (SWPPP) and conducts storm water monitoring in accordance with the requirements of the General Industrial Permit. The SWPPP document and the storm water monitoring records are kept on-site and can be easily accessed by staff during an inspection. Additionally, City staff clean the City's Material Handling Yard on a

weekly basis and also use a monthly BMP checklist to ensure maintained compliance with SWPPP requirements. The BMP checklist for the Material Handling Yard can be found in Attachment 4.1. This facility is also included in the Industrial/Commercial inventory because it is covered by the General Industrial Permit. In addition to the regular inspections by Public Works staff, described above, this facility receives annual inspections by storm water staff as part of the City's storm water inspection program.

Fleet/Facility Maintenance staff continued to use a BMP advisement checklist to check on the status of BMP implementation at the City's Vehicle Maintenance Facility on a weekly basis. The BMP advisement checklist used at the Vehicle Maintenance Facility is included in Attachment 4.1. The City's Vehicle Maintenance Facility continued the practice of placing protective mats on the storm drains at the front and back of the facility and stocking and labeling spill kits located at fuel dispensers. Additionally, four permanent canopies cover tires that are on site for disposal or retreading. The canopies are also used to cover jack stands and other non-motorized equipment and to provide temporary storage for small equipment that the City is taking to auction.

Municipal Inspections

All high TTWQ fixed municipal facilities received a routine annual inspection in 2010/2011, for a total of 25 inspected sites. The City's inspection approach, as described in the JURMP, was implemented for all inspections at fixed municipal facilities conducted in 2010/2011. Inspected facilities and their associated corrective actions are included in Table 4-3. Inspections were also conducted for several special events and four mobile municipal activities, the details of which are also provided in Table 4-3.

No municipal facilities were recommended for follow-up inspection based on routine municipal inspection results, but appropriate City staff members were notified of any recommended minor corrective actions. The City's municipal inspection form is included as Attachment 4.2.

4.3 ROADS, STREETS, HIGHWAYS, AND PARKING FACILITIES

4.3.1 BACKGROUND

The City conducts regular maintenance of roads, streets, highways, and parking facilities in the City to control pollutants such as sediment, metals, and litter and debris.

4.3.2 SOURCE CHARACTERIZATION

The City maintains 165 miles of roads, streets, and highways. Roads, streets, and highways are included as one entity on the City's municipal inventory, which is included in Appendix A.3.

4.3.3 BEST MANAGEMENT PRACTICES

The City's primary BMP for roads, streets, highways, and parking facilities is street sweeping; other BMPs are outlined in the JURMP. There were no changes to the BMPs implemented for roads, streets, highways, and parking facilities in 2010/2011.

4.3.4 PROGRAM IMPLEMENTATION

During 2010/2011, the City swept approximately 12,000 curb miles and removed over 728 tons of debris. Table 4-1, below, describes the areas assigned high, medium, and low sweeping priorities and the associated sweeping frequency. As discussed in the City's JURMP, the City sweeps all streets in the City at least every two weeks. Although parking facilities associated with municipal facilities are considered part of the municipal facility on the inventory, the sweeping frequency is included in the table.

Table 4-1
Street Sweeping Prioritization and Frequency

Category	Description	Approximate Mileage of Route (curb miles)	Sweeping Frequency
High	Main arterials	153 miles	Once every two weeks
Medium	Business Park areas	20 miles	Once every two weeks
Low	Residential areas	332 miles	Once every two weeks
Parking Lots at Fixed Facilities	Parking lots associated with fixed municipal facilities	N/A*	Once every two weeks
Material Handling Yard	Material Handling Yard	N/A*	Once per week
Total Amount of Debris Collected from Street Sweeping Activities: 728 tons			

* A separate measurement of mileage data is not available for the swept area of parking lots associated with municipal facilities, and the Material Handling Yard. Mileage accrued while sweeping these facilities is included in the total mileage.

Inspections
Trash, debris, and sediment that has accumulated on City streets is identified and cleaned up via street sweeping, so additional inspections beyond this effort are not necessary.

4.4 MS4

4.4.1 BACKGROUND

The City's storm water conveyance system is designed to collect and convey surface runoff to receiving waters to prevent flooding during rain events.

4.4.2 SOURCE CHARACTERIZATION

The City's MS4, as one complete entity, is included in the City's high TTWQ municipal inventory. The City's MS4 consists of over 1,400 drop inlets, 44 box culverts, 65 miles of underground drainage pipe 18 inches or more in diameter, approximately 11 miles of open channels, and 12 detention basins, five of which have been retrofitted as treatment control BMPs in the South Poway Business Park.

4.4.3 BEST MANAGEMENT PRACTICES

The City maintained an MS4 inspection, maintenance, and cleaning schedule throughout the reporting period. Maintenance and cleaning are conducted to keep the MS4 in good operating condition and remove any trash or debris that may otherwise be carried to receiving waters. BMPs for MS4 maintenance activities, as described in the City's JURMP, did not change during 2010/2011, however improved implementation of these BMPs was achieved through the use of better equipment and material application.

4.4.4 PROGRAM IMPLEMENTATION

The City's MS4 inspection and cleaning schedule for 2010/2011 is shown in Table 4-2. All MS4 facilities were inspected at least once during the fiscal year, and all visits were conducted between May 1 and September 30.

The City has approximately 11 miles of concrete and earthen channels within urban areas of the City that undergo routine maintenance as part of the City's MS4 maintenance program. During 2010/2011, all of these channels were inspected and cleared of trash, fallen vegetation, and accumulated silt as appropriate. While small amounts of litter have been found in all open channels, City personnel have identified one segment of open channel that requires increased maintenance activities. This area is located near a large movie theater complex and several convenience stores; patrons to these businesses have been identified as a contributing factor to the trash in this area. The City routinely inspects this area and cleans observed anthropogenic litter. Per the City's regulatory permits for channel maintenance, invasive vegetation is mowed and sprayed in place to maintain channel capacity.

An additional 94 miles of conveyances are located in open, undeveloped space, or on private property. Channel-like conveyances in open spaces are not considered to be part of the MS4 channel system, and the City does not maintain channels located on private property without dedicated easements. If maintenance of private channels is needed, the City requires the property owner to complete the maintenance.

Table 4-2
MS4 Maintenance Data

	Percent Inspected and/or Cleaned*	Percent of Open Channels Found with Anthropogenic Litter	Amount of Material Removed by Cleaning Activities
Catch Basins/ Self-Cleaning MS4 Facilities	100%	N/A	Silt: 26.5 cubic yards Debris: 0.45 cubic yards Vegetation: 0.5 cubic yards
Detention Basins	100%	N/A	Trash: 1.5 cubic yards
Concrete Channels	100%	100%	Silt: 1098.5 cubic yards Vegetation: 431.5 cubic yards
Earthen Channels	100%	100%	Silt: 430 cubic yards Trash: 1.75 cubic yards
Total Debris Removed From MS4 Maintenance Activities: 1,990.7 cubic yards			

* The City cleans out all structures, including self-cleaning structures, in which trash and debris is observed prior to the rainy season. Debris was removed from 31 drop inlets during the reporting period, including five drop inlets that were observed at or above 33% capacity. Thus far, maintenance staff has not identified any structures that repeatedly have higher than average accumulations of trash and debris.

As described in Table 4-2, 1,990.7 cubic yards of material was removed during MS4 maintenance conducted in 2010/2011. City staff involved in maintenance activities reported materials removed by category for each type of MS4 maintenance activity. The volumes were converted to estimated weights using the conversion factors of 2,300 pounds per cubic yard of sediment/silt and 400 pounds per cubic yard of vegetation, trash, and debris. The total weight of material removed was estimated to be 1,875.39 tons.

4.5 SANITARY SEWER SYSTEM

4.5.1 BACKGROUND

To reduce the possibility of a spill or leak caused by a malfunction of a component of the City's sanitary sewer system, the City conducts routine maintenance of the system. A spill that introduces untreated sewage to receiving waters can contain high concentrations of bacteria, viruses, and even hazardous chemicals. Routine inspection and maintenance of the sanitary sewer system works to reduce the potential for a spill or SSO and also helps prevent the infiltration of seepage from the sanitary sewer system to the City's MS4.

4.5.2 SOURCE CHARACTERIZATION

The City maintains a system of public sanitary sewer facilities to convey wastewater from the City to be treated. The City's sanitary sewer system includes 185 miles of collection system and several pump/lift stations.

4.5.3 BEST MANAGEMENT PRACTICES

The City implements BMPs for the sanitary sewer system as described in Appendix C of the City's JURMP. There have been no changes to these BMPs during 2010/2011. The City inspects and maintains the sanitary sewer system as part of regular wastewater activities and clears blockages and repairs leaks as needed.

4.5.4 PROGRAM IMPLEMENTATION

The City continually inspects and maintains various aspects of the City's sanitary sewer system and cleans out or repairs any identified problem areas as necessary. The City continued to use a video camera to locate blockages, locate areas in need of repair, and identify any illegal connections during 2010/2011. Identifying areas of the sewer system that require repair and making prompt repairs prevents those areas from becoming future seepage points or point of origin of an SSO. During 2010/2011, the City cleaned 71 miles of sewer line and found one mile of the system that required repair. The City also conducted weekly inspections at five City-owned pump stations.

During 2010/2011, the City continued to implement a Fats, Oils, and Grease (FOG) program that targets grease-producing facilities, such as eating establishments. The goal of the program is to reduce grease buildup in the sanitary sewer system, which can cause or contribute to SSOs. The City conducted FOG inspections at 32 eating establishments during 2010/2011, and continued cross-referencing the City's business license database to verify that all grease-producing businesses are identified.

In case of an SSO, the City maintains a spill response plan that establishes procedures for responding to an SSO. Detailed information about the City's SSO spill response plan is included in the City's JURMP. There were three SSOs during 2010/2011, which were appropriately reported through the California Integrated Water Quality System (CIWQS).

4.6 MOBILE MUNICIPAL ACTIVITIES, INCLUDING POWER WASHING

4.6.1 BACKGROUND

The City conducts a variety of different mobile municipal activities, typically involving vehicle maintenance, landscape maintenance, street and sidewalk repair, and power washing. These activities are not confined to a specific location, so BMPs must be implemented wherever one of these activities is taking place.

4.6.2 SOURCE CHARACTERIZATION

Emergency vehicle maintenance, landscape maintenance, power washing, and street and sidewalk repair are listed on the City's high TTWQ municipal inventory as mobile activities.

4.6.3 BEST MANAGEMENT PRACTICES

The City implements BMPs for mobile activities as described in the City's JURMP and as applicable to the activity. City personnel are trained to implement BMPs for the specific activity in which they are involved. The City continued to use a pressure-washing unit with a vacuum and debris boom to prevent discharge during pressure-washing operations, and City personnel performing power washing are trained to collect all waste water. City personnel conducting emergency vehicle maintenance activities are trained to use drip pans and other spill containment during emergency vehicle maintenance.

4.6.4 PROGRAM IMPLEMENTATION

Power washing (for graffiti removal) and emergency vehicle maintenance, both high TTWQ activities, are conducted on an as-needed basis and are therefore not on a set schedule. Neither power washing nor emergency vehicle maintenance was scheduled to be conducted during the timeframe that routine municipal inspections were conducted. BMPs are implemented during these activities to prevent discharge of any pollutants to the storm drain system. Water from pressure-washing activities is not discharged to the MS4. Personnel responsible for these activities were contacted to discuss BMP implementation, and they confirmed that these BMPs continue to be implemented when graffiti removal and emergency vehicle maintenance activities occur.

Municipal personnel that conduct other mobile activities such as infrastructure maintenance and landscape maintenance are trained regularly regarding BMPs for material use and disposal. City staff conducted inspections of landscape maintenance and street and sidewalk repair. Appropriate BMPs were implemented during each activity, and there were no corrective actions provided to City staff conducting the mobile activities. Inspection results are listed in Table 4-3 at the end of this section. City staff will continue to be trained on appropriate BMPs for mobile activities as described in the City's JURMP.

4.7 SPECIAL EVENTS

4.7.1 BACKGROUND

As discussed in the City's JURMP, special events have the potential to generate trash and litter as a result of the patrons and activities of the special event. The City hosts several special events throughout the year. These events include festivals, fairs, and other events for various causes and occasions.

4.7.2 SOURCE CHARACTERIZATION

As required by the Municipal Permit, special events are included on the City's high TTWQ municipal inventory.

4.7.3 BEST MANAGEMENT PRACTICES

As detailed in the City's JURMP, the City has selected BMPs for special events hosted in the City. In general, the goal of the City's special event BMPs are to properly manage trash and litter generated by the event, keep catch basins and other nearby MS4 facilities free of litter/debris from the event, and raise storm water awareness among the vendors and patrons of the event, as applicable.

4.7.4 PROGRAM IMPLEMENTATION

The City's minimum BMPs were in place for each special event in the City during 2010/2011. Additionally, City staff was available throughout the duration of each event to address any immediate issues and notify other City staff of an issue if necessary. Individuals applying for a permit to hold an event on City property are notified that approval of the activity does not excuse compliance with City ordinances, including the City's municipal storm water ordinance. The temporary use permit includes a condition of approval which prohibits illegal discharges and requires storm drain protection, trash BMPs, appropriate storage of liquids, and proper disposal of pet waste. This temporary use permit is available as Attachment 4.3.

During 2010/2011, the City routinely inspected and cleaned up during and after all eight permitted special events, and took preventive measures as applicable. No events resulted in excessive litter or debris, and routine cleaning and trash removal followed all events. BMPs were also in place at all events as a condition of the temporary use permits. For example, rubber mats were placed over inlet grates during both the Poway Spring Street Fair and the Old Fashioned Fourth of July events, and fiber rolls protected curb inlets during the Poway Annual Heritage Parade.

The City's special event inspection form is included as Attachment 4.4.

4.8 PUBLIC REPORTING OF ILLICIT CONNECTIONS AND DISCHARGES

Reporting and Response

Public and municipal involvement are crucial to preventing and eliminating illicit connections and illegal discharges (IC/IDs) from the storm water conveyance system. The Storm Water Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The hotline number is provided on the City's website, in distributed storm water educational material, and in storm water articles in *Poway Today*. All complaints received through the hotline and website are logged into the TRAKiT permit tracking software for documentation and tracking. Each logged complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop or clean up any and all illegal discharges. The Public Works Department also receives complaints regarding storm water, often due to infrastructure concerns. Complaints to the Public Works Department are also tracked and investigated.

Complaints received by the City during the 2010/2011 reporting period and the City's response to each are listed in Appendix B. Fifty-five complaints were documented this year.

Enforcement

As previously stated, complaints received via the Storm Water Hotline, City website, and Public Works hotline, are included in a table in Appendix B. The table also includes a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included clean-up, providing educational material and discussing storm water concepts with individuals involved in the complaint, and in some cases issuing courtesy notices. The City issued eight courtesy notices and one Notice of Violation in response to complaints received by the City's storm water hotline.

4.9 Spill Reporting, Response, and Prevention

The City has documented procedures for preventing and responding to SSOs. Preventive maintenance is regularly conducted on the City's sanitary sewer system, and inspections are regularly conducted to monitor the condition of the public sewer lines and to determine the necessity of maintenance. Private lateral lines do not receive preventive maintenance, but the City assists in the containment and cleanup of sewer spills if the spill could potentially reach the City's MS4.

Individuals in the City are encouraged to report any SSOs to the City's Storm Water Hotline. During the 2010/2011 reporting period, there were three SSOs and two other significant spills. All SSOs were reported to the RWQCB via the California Integrated Water Quality System website. Traffic accidents were the cause of the two non-SSO significant spills. The first spill consisted of fuel, and a rapid response prevented it from entering the storm drain so that 100 percent recovery could be achieved. The second spill contained motor oil and transmission fluid, and nearly all liquid was recovered. See Appendix B for additional details regarding spill response.

4.10 Education and Outreach

During 2010/2011, the City continued to educate municipal personnel regarding proper BMP implementation and other storm water and watershed concepts. The City held a variety of training sessions for City personnel. Detailed information regarding the education and outreach conducted for City personnel is provided in Section 8 of this Annual Report.

4.11 Municipal Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

4.12 PROGRAM MODIFICATION AND REVIEW

One minor revision was made to Table 6-1 and Table 6-2 in the municipal component of the City's JURMP during 2010/2011. A facility category of "Open Space Preserve" was added since, based on the City's experience, the Pollutant Loading Potential is different for these natural open spaces as compared to landscaped and managed City parks. Open Space Preserves have City-maintained trash receptacles and trails that are open to the public but otherwise consist of natural terrain since no landscaping is performed. The revised JURMP tables are available within Attachment 4.5 of this Annual Report.

Table 4-3
Municipal Inspection Results

#	Facility Name	Facility Address	TTWQ	Facility Category	Inspection Date	Corrective Actions
1	Adobe Ridge Mini Park	12244 Adobe Ridge Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	2/2/2011	• No corrective actions noted.
2	Arbolitos Park	Pomerado Road and Ted Williams Parkway	High	Parks, Recreational Facilities, and Other Landscaped Areas	2/2/2011	• Keep site free of litter.
3	Aubrey Park	13544 Aubrey Street	High	Parks, Recreational Facilities, and Other Landscaped Areas	2/3/2011	• Keep site free of sediment, debris and litter. • Consider stenciling storm drains.
4	Bette Bendixen Neighborhood Park	12342 Old Pomerado Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	2/1/2011	• No corrective actions noted.
5	Blue Sky Ecological Reserve	16275 Espola Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	2/3/2011	• Consider stabilizing slopes around parking lot. • Consider stenciling storm drains.
6	City Operations Center	14445 Lake Poway Road	High	Public Works Operations Facilities	2/3/2011	• Consider replacing/painting rusty metal racks. • Consider covering galvanized metal. • Consider stenciling storm drains.
7	Community Park	13094 Civic Center Drive	High	Parks, Recreational Facilities, and Other Landscaped Areas	2/1/2011	• Investigate potential sources of the water seeping to the concrete swale by the pool, such as a broken irrigation pipe.
8	Emergency Vehicle Maintenance	Throughout City	High	Mobile Municipal Activities, Including Power Washing	6/27/2011	• No corrective actions noted.

Table 4-3 (Continued)
Municipal Inspection Results

#	Facility Name	Facility Address	TTWQ	Facility Category	Inspection Date	Corrective Actions
9	Fire Station No. 1	13050 Community Road	High	Fire Stations	2/1/2011	• Conduct storm water training. • Keep dumpster areas free of leaf litter. • Ensure vehicle wash water is contained to indoor sewer drains. • Consider stenciling storm drains.
10	Fire Station No. 2	16912 Old Coach Road	High	Fire Stations	2/1/2011	• Keep parking lot free of sediment. • Conduct storm water training. • Consider enclosing trash area. • Ensure vehicle wash water is contained to indoor sewer drain. • Consider stenciling storm drains.
11	Fire Station No. 3	14322 Pomerado Road	High	Fire Stations	2/1/2011	• Consider replacing gravel bags on west slope. • Replace and close plug for diesel secondary containment. • Conduct storm water training.
12	Fire Training Tower	12325 Crosthwaite Circle	High	Fire Training Tower	2/1/2011	• Keep site free of sediment. • Consider enclosing trash area and keep lids closed. • Clean up oil stain on site. • Consider stenciling storm drains.
13	Garden Road Park	14820 Garden Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	2/2/2011	• No corrective actions noted.
14	Hilleary Park	13500 Community Road	High	Parks, Recreational Facilities, and Other Landscaped Areas	2/1/2011	• Keep site free of litter and sediment. • Consider stabilizing slopes around playground.

24	South Poway Sports Park	McIvers Court and Stowe Drive	High	Parks, Recreational Facilities, and Other Landscaped Areas	2/2/2011	• Keep site free of leaf litter. • Replace cover over stockpile. • Keep dumpster area free of liquid and litter. • Consider stenciling storm drain.
25	Starridge Park	13743 Starridge Street	High	Parks, Recreational Facilities, and Other Landscaped Areas	2/2/2011	• No corrective actions noted.
26	Street and Sidewalk Repair	Throughout City	High	Mobile Municipal Activities, Including Power Washing	2/2/2011	• No corrective actions noted.
27	Sycamore Creek Mini-Parks	Near Hidden Valley in Southeast Poway	High	Parks, Recreational Facilities, and Other Landscaped Areas	2/2/2011	• Keep site free of litter.
28	Valle Verde Park	16899 St. Andrews Drive	High	Parks, Recreational Facilities, and Other Landscaped Areas	2/2/2011	• Keep parking lot free of leaf debris. • Consider stenciling storm drain.
29	Vehicle Maintenance Facility	14415 Lake Poway Road	High	Public Works Operations Facilities	2/3/2011	• Keep site free of leaf litter.
30	Special Events	Throughout City	High	Special Events	Various	• No corrective actions noted.

* The Material Handling Yard is also covered by the General Industrial Permit.

5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

5.1 INTRODUCTION

During the 2010/2011 reporting period, the City continued to implement its program to mitigate urban runoff pollution from industrial and commercial sites and sources. The City aims to reduce the amount of pollutants discharged from industrial and commercial facilities through various aspects of the industrial and commercial program.

5.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Notable achievements for the industrial and commercial component during the 2010/2011 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the industrial and commercial component of its storm water program during the reporting period are provided in the remainder of Section 5.

- The City met the Municipal Permit requirement of inspecting at least 25 percent of its stationary industrial and commercial inventory.
- The City inspected all high TTWQ industrial and commercial facilities.

5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES / SOURCES ELEMENT

5.2.1 BACKGROUND

The City's updated industrial and commercial inventory (Appendix A.4) includes all stationary facilities known to be operating in the City that are required to be included on the City's inventories. Stationary facilities in the City include, but are not limited to, manufacturing facilities, wholesalers, auto dealerships, auto repair shops, and restaurants. The City requires industrial and commercial businesses to implement pollution prevention measures and activity-specific minimum BMPs to mitigate the impacts of business activities on water quality.

5.2.2 SOURCE CHARACTERIZATION

As previously mentioned, the City's inventories include stationary industrial and commercial businesses, as required by the Municipal Permit. Information on how the City prioritizes the industrial and commercial inventories based on TTWQ is discussed in detail in the City's JURMP. The City considers factors including those listed below when prioritizing the inventories:

- Subjectivity to coverage under the Industrial Permit
- Consideration of downstream water body and whether the business is likely to discharge pollutants for which the water body is impaired

- Results from previous inspections and institutional knowledge
- Proximity to the receiving water body

During 2010/2011, the City updated its industrial and commercial inventory. The list of businesses with active business certificates was checked against the City's industrial and commercial inventory to identify recently opened businesses that should be added to the inventory. Businesses conducting activities listed in Section D.3.b(1) of the Municipal Permit that had obtained business licenses since the last inventory update were added to the City's inventory. Businesses that were on the City's inventory but were not listed as active businesses in the business license records were investigated to determine if they were still active in the City. If City staff determined these businesses were no longer active in the City they were removed from the City's inventory. The City's updated inventory includes 530 stationary industrial and commercial facilities.

In August 2011 the City received comments from Coastkeeper indicating that Coastkeeper could not find the list of pollutants potentially generated by inventoried businesses or the identification of which businesses are tributary to impaired water bodies and likely generating pollutants for which the water bodies are impaired. For pollutants generated, this year the City's inventory has been reformatted to explicitly show the information about pollutants generated all in one table rather than in two separate tables—one listing the businesses and their categories, the other listing the categories and their pollutant discharge potentials. The City has also taken steps to individually evaluate pollutant discharge potentials during site inspections, and that site-specific information is also reflected on the updated inventory where applicable. The information about which businesses are believed to be tributary to impaired water bodies and likely generating pollutants for which the downstream water bodies are impaired is still reported via a column titled "Likely Source", as in past years. For more details about the City's process for inventory management and prioritization, refer to Attachment 5.4.

5.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

Industrial and commercial businesses in the City are required to implement pollution prevention methods and other BMPs to reduce or potentially eliminate the generation of pollutants from business areas/activities. The City has established a set of minimum BMPs based on the CASQA Industrial and Commercial Handbook and the Caltrans Manual. The requirements include BMPs applicable to all facilities as well as activity-specific BMPs. The City's BMP requirements are included in Appendix C of the City's JURMP and have not changed since the adoption of the City's JURMP in March 2010.

Notably, the City has also taken an active role in the regional Industrial and Commercial Sources Workgroup. During 2010/2011, the City provided a specially formatted copy of its stationary industrial and commercial inventory to the workgroup so that regional and watershed-focused source analyses could be performed.

5.2.4 PROGRAM IMPLEMENTATION

Industrial and Commercial Inspections

During 2010/2011, the City conducted storm water compliance inspections at selected stationary industrial and commercial facilities. The inspected facilities were selected by using the following criteria:

- All high TTWQ facilities
- New businesses added to the inventory
- Time since last inspection

Table 5-1 provides a summary of industrial and commercial site visits that occurred during 2010/2011. The purpose of the City's inspection program is to confirm that the City's minimum BMPs are being implemented at stationary industrial and commercial facilities.

Table 5-1
Summary of Industrial and Commercial Inspections

Facility Category	Inventoried Stationary Sites	Full Inspections	Percentage Inspected
High TTWQ Sites	63*	63	100%
Additional Sites	459	78	17%
Totals	**530**	**141**	**26%**

*Number of High TTWQ sites found to be active during 2010/2011. Inventory at the beginning of the 2010/2011 reporting period included 71 High TTWQ sites, eight of which were no longer operating by the time of their inspection in 2010-2011 or were found to be duplicates of other businesses on the City's inventory.

Facility inspections were conducted in accordance with the protocol set in the City's JURMP. Inspections involved a thorough examination of the facility and all outdoor activities. A comprehensive training session including a field practical component was provided for staff conducting the City's industrial and commercial inspections. This training ensured the City met the Municipal Permit requirement for annual inspector training. More information about staff training is provided in Section 8 of this JURMP Annual Report.

BMP deficiencies and corrective actions were recorded on the City's industrial and commercial inspection form, which is included in the City's JURMP, and discussed with facility personnel present during the inspection. The City's industrial/commercial inspection form is included as Attachment 5.1. Table 5-2 provides a list of all facilities visited as part of the routine inspection program. The City completed full inspections at 141 facilities.

During the inspection process, the City checked Industrial Permit compliance status when applicable. The City also reviewed storm water pollution prevention plans (SWPPP) and monitoring results when applicable. Businesses observed to be in violation of the Industrial Permit are included in Table 5-3.

The City did not rely on third-party inspections to satisfy its industrial and commercial inspection requirements during the reporting period. The City does not presently maintain a third-party inspection program.

General Industrial Permit

As previously mentioned, Industrial Permit compliance status was evaluated during the inspection process. If the business was new and had not previously been inspected, or if the business had recently changed activities, the inspector gathered information about the business activities that occur on site and assigned or reassigned the business' standard industrial classification (SIC) code(s). The inspector then evaluated Industrial Permit subjectivity based on the assigned SIC code(s). Violations of any aspect of Industrial Permit requirements were recorded on the standard industrial and commercial inspection form and are presented in Table 5-3. The table includes businesses directed to file a Notice of Intent (NOI) and develop a SWPPP and monitoring program, as well as businesses that could potentially gain exemption from Industrial Permit requirements by completing Notice of Non-Applicability/No Exposure Certification (NONA/NEC) paperwork. Each business was notified of any Industrial Permit-related non-compliance by the inspector.

Education and Outreach

In addition to checking for compliance with the City's requirements and the Industrial Permit, inspections provide a venue to provide site-specific one-on-one education regarding storm water concepts and BMPs. Inspectors discussed a variety of topics such as watershed concepts and the City's BMP requirements. The main types of material distributed by inspectors were the Industrial and Commercial BMP brochure and the restaurant brochure. Educational materials distributed during the 2010/2011 industrial and commercial storm water compliance inspections are included as Attachment 5.2 and are discussed further in Section 8 of this report. Attachment 5.2 also includes other industrial and commercial outreach material that was used during 2010/2011. Section 8 provides a discussion of other educational efforts directed toward industrial and commercial businesses during 2010/2011.

Each inspected business that required corrective action was mailed a copy of the inspection form as a written record of the need for corrective actions observed at the time of inspection via post or electronic mail, as their preferences dictated. Most sites that required corrective actions had minor issues such as open dumpster lids or housekeeping issues. Facilities with more significant issues were recommended for follow-up; more information about these facilities is provided in the discussion below.

During 2010/2011, the City notified stationary businesses of the minimum BMP requirements, to ensure compliance with the JURMP requirement for business notification of minimum BMP requirements within three years of their adoption.

Enforcement

During 2010/2011, several industrial and commercial facilities were recommended for follow-up. Information about follow-up inspections is included in Table 5-2 with information about routine industrial and commercial inspections.

The City was able to work with 28 businesses that required a follow-up inspection to bring them into compliance to date. Follow-up and enforcement measures were taken at an additional ten businesses where further action and escalating enforcement measures will continue in 2011-2012 as needed until compliance is achieved.

In addition to the industrial and commercial storm water compliance inspection program, the City regulates industrial and commercial facilities through complaints received by City's storm water hotline. A total of three complaints regarding stationary industrial and commercial facilities were received by the City's storm water hotline. Each complaint was investigated and appropriate action was taken to bring about compliance. Details of all complaint investigations are included in the complaint log (Appendix B) and Section 4 of this Annual Report.

There were no instances of noncompliance at stationary businesses found to present a significant threat to human health or the environment observed during 2010/2011. Other than facilities observed to be out of compliance with the General Industrial Permit, discussed earlier in this section, no other businesses were reported to the RWQCB.

5.3 MOBILE SOURCES

5.3.1 BACKGROUND

Due to the nature of activities of most mobile businesses, a major area of concern tends to be the potential for illegal discharges. In general, mobile businesses can be hard to identify, as many may not have City business licenses. Additionally, because many mobile businesses may be home based and activities do not occur in one fixed location, inspections of such facilities are impractical.

5.3.2 SOURCE CHARACTERIZATION

Known mobile industrial and commercial businesses, as described in the City's JURMP, are included in Appendix A.5. Additionally, the Regional Industrial and Commercial Workgroup also developed a web-based mobile business database for use by all Copermittees. The goal of developing this database is to allow Copermittees to share information about mobile businesses, which may be active in more than one jurisdiction.

5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

BMPs for stationary industrial and commercial facilities, as discussed earlier in this section, are also required to be implemented for mobile activities, as applicable. BMPs applicable to mobile businesses, including key principles such as proper collection and disposal of any discharge, are discussed in the City's JURMP.

5.3.4 PROGRAM IMPLEMENTATION

The City continues to use business license records to identify mobile businesses located in or performing services within the City. Complaints received by the City's storm water hotline regarding mobile business activities also help the City identify mobile businesses. Complaints received by the storm water hotline regarding insufficient BMP implementation by mobile businesses are responded to by Code Compliance Officers or other City staff; educational materials are distributed as applicable. During 2010/2011, the City received one mobile business complaint. The complaint was investigated and it was determined that a pool cleaning and maintenance contractor had discharged filter wash water to the street. The resident was notified and removed the residue from the street. The contractor was also educated on proper disposal techniques. No further follow-up actions were necessary. Additional details regarding this complaint can be found in Attachment B.

Education and Outreach and Enforcement

During 2010/2011, the City also notified mobile businesses of the minimum BMP requirements, to ensure compliance with the JURMP requirement for business notification of minimum BMP requirements within three years of their adoption. The mailing materials included a summary letter as well as an educational flyer describing typical mobile business BMPs, which are available as Attachment 5.3.

Responses to mobile business complaints include City personnel discussing the BMP requirements of mobile businesses with the responsible party. Educational materials such as the Industrial and Commercial BMP brochure (Attachment 5.2) are also provided.

There were no instances of noncompliance of mobile businesses that were believed to present potential threats to human health or the environment observed during 2010/2011, so none were reported to the RWQCB.

5.4 INDUSTRIAL AND COMMERCIAL COMPONENT EFFECTIVENESS ASSESSMENT

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

5.5 PROGRAM REVIEW AND MODIFICATION

The City added the standard table of pollutant discharge potentials (JURMP Table 7-1) to its TTWQ prioritization process description for clarity (Attachment 5.4). The City also added two business categories that were not on the original JURMP table—vehicle dealers and auto supplies. The City did not make any other changes to its industrial and commercial inspection program or facility prioritization processes in 2010/2011.

Note that violations are based on inspection results. Businesses may have filed required paperwork with the RWQCB or taken other actions to remedy the violations noted subsequent to the inspection.

6.0 RESIDENTIAL COMPONENT

6.1 INTRODUCTION

Thirty-six percent of land use in the City of Poway is residential. Due to the large residential area, activities that take place in residential areas have the potential to affect the quality of receiving waters. Residential activities such as vehicle washing, over-irrigation, and home maintenance can potentially contribute pollutants to the City's MS4 if BMPs are not implemented. Additionally, improper disposal of household hazardous waste (HHW) can also contribute pollutants to the City's MS4. The City has worked to implement a range of programs to address these high TTWQ residential activities with the goal of reducing pollutant loads associated with such activities. Pollutants of concern for Poway's watersheds include bacteria, sediment, and nutrients.

6.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the residential component during the 2010/2011 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the residential component of its storm water program during the reporting period are provided in the remainder of Section 6.

- The City has a permanent HHW collection facility; 4,779 participants properly disposed of 265,903 pounds of HHW.
- The City's Used Oil Recycling Program collected 2,054 gallons of used motor oil.
- The City continued to distribute issues of the quarterly *Poway Today* newsletter to more than 17,000 households in the City.
- I Love A Clean San Diego (ILACSD) conducted several presentations for adults and youths about water conservation and general storm water concepts.
- The City continued to promote the use of the storm water hotline for residents to call in potential violations of the City's municipal storm water ordinance.

6.2 SOURCE CHARACTERIZATION

The City has identified high TTWQ residential areas within its jurisdiction and has designated various high TTWQ residential activities, which are discussed in the following subsections.

6.2.1 HIGH THREAT TO WATER QUALITY ACTIVITIES

During the 2010/2011 reporting period the City continued to identify the following residential activities as high TTWQ:

- Automobile repair and maintenance
- Automobile washing

- Automobile parking
- Home and garden care activities and product use
- Disposal of trash and pet waste

6.2.2 HIGH THREAT TO WATER QUALITY AREAS

In addition to high TTWQ activities, the City has identified several residential areas that pose a high TTWQ. High TTWQ residential areas are designated by considering complaint investigations, institutional knowledge, data from the City's Dry Weather Monitoring Program, and criteria as defined in the Municipal Permit. Residential areas that have not been designated as high TTWQ but may be sources of pollutants are also monitored by the City.

The City has mapped out areas identified as high TTWQ. The maps delineate the residential areas described below, and a series of smaller maps provide more detail about each individual area. The maps were printed and distributed to Public Works personnel, and large copies were posted in the Public Works office so staff can become familiar with high TTWQ areas and be vigilant to storm water issues that may arise in these areas. The maps are included as Attachment 6.1.

North Poway Residential Areas
North Poway includes a large part of the Multi Species Conservation Program and Biological Core and Linkage Area (BCLA). Sections of the Sycamore and Thompson Creeks fall within these areas. Runoff from residential streets bordering the BCLA eventually discharges at an outlet within the corridor at the northern end of Glen Arven Lane. Additionally, some rural roads located within the BCLA may discharge directly to the creeks.

Rattlesnake Canyon Cornerstone
This region is located approximately one mile east of the intersection of Twin Peaks Road and Espola Road, and is within a designated BCLA. Rattlesnake Creek flows from Rock Haven Cornerstone, down through Rattlesnake Canyon Cornerstone, and eventually to Poway Creek.

Rattlesnake Basin
This area includes the residential area south of Twin Peaks Road and West of Espola Road.

South Poway Cornerstone
South Poway Cornerstone consists of BCLA land that encompasses southern portions of the City south of Poway Creek and along the north side of Beeler Canyon Creek. Los Peñasquitos Creek passes through the east portion of the South Poway Cornerstone and joins Poway Creek. Small communities on the south end of Gate Drive, Calle Seco, Paseo Bonita, Welton Lane, and Shirra Avenue are potential contributors of runoff in this area.

Residential Areas Draining to the Blue Sky Ecological Reserve
This area is designated as an Environmentally Sensitive Area (ESA) and includes a portion of Sycamore Creek north of Lake Poway. The residential region in the vicinity of the Blue Sky Ecological Reserve is fairly low density, and the population is relatively small. Potential runoff sources may include residences located on Twisted Branch Road, Country Day Road, High Sierra Road, and Espola Road.

6.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City has continued to provide information regarding the implementation of pollution prevention measures, such as good housekeeping practices, for residential areas and activities. Section 8.3 of the City's JURMP includes the City's minimum BMP requirements for specific residential activities. General residential BMPs include conscientious automotive maintenance and care, erosion control, and good housekeeping measures, such as sweeping rather than hosing off driveways and sidewalks. Other residential BMPs include non-storm water discharge management, including elimination of IC/IDs. There have been no changes to the City's residential BMP requirements as discussed in Appendix C of the City's JURMP.

6.4 PROGRAM IMPLEMENTATION

The City's residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting are conducted to ensure that the required BMPs are implemented. This minimizes pollutants associated with residential activities and areas. The residential program has an education component so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities.

6.4.1 TRAINING, EDUCATION, AND OUTREACH

The City has continued to conduct training, education, and outreach activities for residents, which are described below.

***Poway Today* Newsletter Articles**
The City publishes storm water-related articles in the quarterly *Poway Today* newsletter. Three of the four newsletters published during the reporting period contained articles on storm water pollution prevention. A copy of each edition was provided to 17,382 residential addresses within the City. Each issue was also available on the City's website. The storm water-related articles published in 2010/2011 are summarized below. All newsletters published during the 2010/2011 reporting period are included as Attachment 6.2.

The Fall 2010 newsletter contained the following storm water-related articles and announcements:

- "WANT TO PREVENT POLLUTION? CONSERVE WATER" reminded residents that overwatering lawns and landscaping contributes to storm water pollution and discussed ways to reduce water use. The article also included the City's Hotline

number to report excess runoff and directed residents to the City website for more information.

- "HOW DOES YOUR GARDEN GROW?" highlighted the winners of the 2010 California-friendly landscape contest. Since 50% of Poway's water is used for irrigation, the contest challenged participants to create a more water-wise landscape. Residents were directed to the City website for more information on water conservation.
- "WATER CONSERVATION POSTER CONTEST" discussed participation by fourth graders in the water conservation poster contest. The top three entries will be featured in the 2011 water conservation calendar.

The Winter 2010 newsletter contained the following storm water-related articles and announcements:

- "UNDERSTANDING OUR WATERSHED" discussed the definition of a watershed, identified the watersheds that Poway is a part of, and highlighted the water quality concerns in these areas. The article concluded with a discussion of the difference between the storm drain and sanitary sewer system and reminded residents to do their part to keep the watersheds healthy.
- "A DAY WITHOUT A BAG" encouraged residents and businesses to participate in the upcoming 'A Day Without a Bag'. The article discussed how reusable bags help to protect the environment and reduce litter and directed readers to the City website for more information.

The Spring 2011 newsletter contained the following storm water-related articles and announcements:

- "SPRING CLEANUP EVENT" informed residents of the upcoming self-haul cleanup event sponsored by EDCO. Residents redeem their cleanup coupons to dispose of large items or unwanted household materials (not including HHW) free of charge.

Other Educational Outreach Materials and Activities

If Public Works crews notice storm water-related issues such as trash or animal waste in the vicinity of clean-out location, informational door hangers are distributed to residences in close proximity to the issue. During 2010/2011 a total of 32 door hangers were distributed to residents in the vicinity of observed storm water issues. The door hanger can be found as Attachment 6.3.

Educational materials were also distributed during community events to further encourage pollution prevention measures and to increase knowledge about storm water. Efforts further included adult and youth presentations on watershed issues, storm water pollution prevention, and recycling of used motor oil. Additionally, the City has continued to provide storm water information and contacts on its website (http://www.poway.org/). The City's storm water hotline also provides a medium for City residents and business owners to obtain storm water information and file storm water related complaints.

Residents were also encouraged to participate in local activities to improve water quality, such as clean-up events and recycling programs. Activities included the Adopt-A-Trail program and the Poway Spirit Day cleanup. More information regarding the City's public participation is included in Section 9 of this report. A California-Friendly Landscape class was offered to residents during 2010/2011. This workshop was designed to teach residents about choosing a water-smart landscape. General information on water conservation and water-efficient landscaping was distributed. More detailed information about the City's residential education program is included in Section 8 of this report. During 2010/2011 the City continued to work in concert with the Regional Residential Education Program.

6.4.1.1 PUBLIC EVENTS

HHW Events

The City maintains a permanent collection facility for HHW and electronic waste. The facility is open every Saturday from 9 a.m. to 3 p.m., with the exception of holiday weekends. A total of 265,903 pounds of HHW was collected at this facility. For disabled residents or residents over 65, door-to-door pickup services were provided. The City's five Used Oil Recycling Program collection centers reported that 2,054 gallons of used motor oil was collected during the 2010/2011 reporting year.

6.4.2 COMPLIANCE AND ENFORCEMENT

The City continues to implement compliance and enforcement measures by identifying potential sources of pollutants in residential areas from Dry Weather Monitoring Program data, complaints received by the storm water hotline, and observations made by the City's municipal personnel. If a potential to affect water quality is present, the City can provide a verbal warning, written warning, order to abate or correct, or monetary fines as applicable. If there was no active discharge seen during the complaint investigation, a courtesy notice along with educational material was left with the resident.

The City received 25 residential-related complaints during this reporting period. Seven courtesy notices were issued to residents and/or landlords in response to these complaints. Many of the verified complaints involved residents who were unaware of residential BMPs. City personnel distributed informational door hangers when observed storm water issues may be attributed to area residents (Attachment 6.3). City personnel also cleaned areas in the public right of way as necessary to resolve complaints received by the City's Public Works Department. The resolutions of all residential complaints are provided in Appendix B of this JURMP Annual Report.

6.5 RESIDENTIAL COMPONENT EFFECTIVENESS ASSESSMENT

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

6.6 PROGRAM REVIEW AND MODIFICATION

No changes to the residential component of the City's JURMP were made during the reporting period.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

In accordance with the September 10, 2008, RWQCB adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the 2010/2011 Illicit Discharge Detection and Elimination section and attachments to the RWQCB no later than December 15, 2011.

8.0 EDUCATION COMPONENT

8.1 INTRODUCTION

During 2010/2011, the City continued to provide education and outreach to a variety of audiences within the City. The City's education program targets municipal personnel, industrial and commercial businesses, construction site owners and operators, and residents. The City aims to reduce storm water pollution by increasing awareness about the storm water conveyance system and promoting the implementation of BMPs. Through education and outreach, the City works to foster change in both the attitude and behaviors of the regulated community.

8.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the education component during the 2010/2011 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the education component of its storm water program during the reporting period are provided in the remainder of Section 8.

- Municipal staff trainings had over 111 attendees during the reporting period.
- The City's quarterly newsletter, *Poway Today*, featured several articles highlighting storm water topics. These newsletters were distributed to 19,050 businesses and residents in the City.
- A California-friendly landscaping class for residents was provided.
- Presentations were provided for elementary and high-school children.

8.2 STAFF TRAINING ELEMENT

The City has provided extensive training and educational outreach to its municipal personnel. Many municipal personnel are out in the field on a daily basis, so it is important that they understand the importance of implementing BMPs. Additionally, municipal personnel are encouraged to report any IC/IDs observed to the appropriate City staff and to educate other municipal personnel and the general public about storm water pollution prevention. The City's Stormwater Program Administrator and Stormwater Inspector provided 10 training sessions to other City staff during the fiscal year. In addition to the formal training sessions, City storm water staff regularly provided guidance to other City staff on implementation of storm water requirements. One example of this type of training is the weekly meetings the Stormwater Program Administrator held with the City's land development engineers about SUSMP requirements. In addition to internal training, City staff also attended a number of other training events put on by consultants, statewide and national organizations, and CalEPA. Table 8-1 includes all training sessions that were provided for various municipal staff and departments during 2010/2011.

Table 8-1
Municipal Training Sessions

Date(s)	Event	Topic(s)	Number of Participants
6/6-6/8/2011	Construction Permit Training (QSD)	California General Construction Permit training	1
5/9-5/11/2011	Construction Permit Training (QSD)	California General Construction Permit training	2
5/4/2011	Training by D-Max Engineering, Inc.	Industrial and Commercial Annual Inspector Training including a field practical component	4
4/6/2011	Maintaining LID in San Diego	LID BMP Inspection and Maintenance Workshop	2
3/8/2011	The BMP Sizing Calculator Seminar	Training and Education of BMP Sizing Calculator for compliance with final hydromodification management requirements	2
12/14/2010	The BMP Sizing Calculator Seminar	Training and Education of BMP Sizing Calculator for compliance with final hydromodification management requirements	3
10/26/2010	Hydromodification Training	Overview of new hydromodification requirements	10
9/8/2010	Stormwater NPDES Training	Environmental Safety Class covering storm water NPDES, Asbestos and Leak Awareness, and Hazardous Waste regulations	75
9/27/2010	Sustainability Community Presentation	Municipal Permit Requirements and Sustainability training	7
9/23/2010	Construction Inspector Training	JURMP Construction BMP requirements, various construction topics and new inspection form	5

In addition to the training sessions discussed above, Public Works staff were provided maps of the high TTWQ residential areas, as discussed in Section 6 of this JURMP Annual Report. The maps are also posted in the Public Works office. These maps were displayed so staff can become familiar with high TTWQ areas and be vigilant to storm water issues that may arise in these areas. The maps are included as Attachment 6.1.

8.3 EDUCATIONAL OUTREACH ELEMENT

In addition to municipal staff, the City has continued to provide education and outreach to industrial and commercial businesses, construction site owners and developers, and residents. These efforts promote storm water awareness and BMP implementation and are discussed in the following subsections.

8.3.1 INDUSTRIAL AND COMMERCIAL BUSINESSES

As required by the Municipal Permit, the City inspects its inventoried businesses to evaluate compliance with the City's BMP requirements and provides site-specific education outreach to business owners and operators. Results of the inspections conducted in 2010/2011 are discussed in Section 5 of this report. Each facility inspected received verbal education on storm water issues and received inspection results by mail when corrective actions were necessary. At least 130 "Preventing Urban Runoff Pollution" brochures describing industrial and commercial storm water BMPs were distributed during inspections. Other materials addressing Integrated Pest Management (IPM) techniques, and BMPs for horses and livestock were distributed during inspections as applicable. Educational materials for industrial and commercial businesses are included as Attachment 5.2.

During the 2010/2011 reporting period, the City's quarterly *Poway Today* newsletter featured several storm water-related articles (Attachment 6.2). Several thousand of these newsletters were distributed to industrial and commercial facilities in the City. Details about the newsletters can be found in Section 6 of this report.

8.3.1.1 MOBILE BUSINESSES

Mobile businesses, such as mobile car detailers or power washers, may present threats to water quality due to the nature of their business activities and the possibility of prohibited non-storm water discharges if proper BMPs are not implemented. Mobile businesses are not confined to a single area and many may not have City business licenses, making them difficult to identify. The City keeps track of mobile businesses that are discovered through business licenses and during field inspections. In order to ensure that these mobile businesses are implementing appropriate BMPs, BMP handouts for power washers, concrete and mortar projects, and mobile auto detailing are distributed as necessary. In 2010/2011, a notification of the City's required BMPs was sent to mobile businesses, including a Mobile Business BMP Flyer (Attachment 5.3). BMP information about these activities may also be accessed on the City's website.

8.3.2 CONSTRUCTION SITE OWNERS AND DEVELOPERS

During the project design process, City Development Services staff work closely with developers and project engineers to ensure requirements are understood prior to and during the review process. SUSMP regulations and BMP information included in the City's JURMP are also made available on the City's website, and a copy of the JURMP is at the front counter of Development Services.

Due to the nature of activities, construction sites have the potential to discharge various types of pollutants to receiving waters if not managed properly. To ensure that construction site owners, contractors, and developers are abiding by regional and federal regulation, new development and redevelopment project proponents are required to attend a preconstruction meeting that includes education on storm water management topics. These meetings include federal, state, and local regulations, implementation of a SWPPP, if

required, and implementation and maintenance of BMPs. Project proponents view a video on proper BMP implementation for construction sites and sign an acknowledgement that they have received this information. Prior to the rainy season, the City also sends out a yearly letter to all parties responsible for construction projects which describes enhanced construction BMP requirements and storm water management requirements during the rainy season. At least 73 construction sites were sent this letter in September 2010.

8.3.3 RESIDENTIAL AREAS

Distribution of Educational Material

Since residential areas make up a large portion of Poway, the City understands the importance of reaching this particular audience through educational outreach programs. The City continued to send the quarterly *Poway Today* newsletter (Attachment 6.2) to residential addresses in the City. Four editions of *Poway Today* were distributed during 2010/2011: 19,050 copies for each of the four editions distributed. As detailed in Section 6, several storm water articles were included in the newsletters distributed in 2010/2011.

The City website, www.poway.org, is another way in which City residents can become familiar with the design and intended use of the storm drain system, minimum BMPs for various high TTWQ activities, information regarding volunteer opportunities, information about IPM techniques, and City contact information.

As mentioned in Section 6 of this report, if Public Works crews noticed storm water-related issues such as trash or animal waste during normal maintenance activities, informational door hangers were distributed to residences in close proximity to the issue. During 2010/2011, 12 door hangers were distributed to residents in the vicinity of a channel where vegetation and debris, including animal feces, had been removed. An additional 20 door hangers were distributed in various residential areas as needed by code compliance staff. The door hangers remind residents of general storm water BMPs and can be found as Attachment 6.3.

The City also distributed educational material to residents through public events such as Earth Day and Poway Days Festival. The City distributed educational materials, including BMP brochures, landscaping guides, magnets, pens, and other storm water-related information during these events. A detailed description of public participation events that took place in the City during 2010/2011 is provided in Section 9.

Training Events

A landscaping workshop was held in partnership with the City of San Diego in October 2010. The classes focused on choosing low water use/drought-resistant plants, installing efficient irrigation systems, and using fertilizers appropriately.

During 2010/2011, ILACSD provided presentations to students at five Poway schools. These presentations included a discussion of local water sources, water supply challenges, and ways to use water more efficiently such as low water-use landscaping. A total of 475 students attended these presentations. Table 8-3, below, includes the locations and number of presentations delivered to the select student groups.

Table 8-2
ILACSD Storm Water Presentations

Date	Location	Description
12/3/2010	Poway High School	2 youth presentations
3/18/2011	Garden Road Elementary	1 presentation for 4th graders
5/3/2011	Valley Elementary	1 presentation for 4th graders
5/4/2011	Midland Elementary	1 youth presentation
5/19/2011	Chaparral Elementary	1 presentation for 4th graders

8.3.4 UNDERSERVED COMMUNITIES

The City of Poway has not identified any underserved communities within City boundaries. There is no inner-city area within the City's jurisdiction, and the non-English speaking populations are very small in size.

8.3.5 COMPLAINT INVESTIGATIONS

To further aid the process of identifying illicit discharges, the City encourages the public and City staff to report IC/IDs to the City's storm water hotline. All complaints are investigated by City staff. If a representative for the reported business, residential address, or construction site is present, the inspector will provide one-on-one verbal education about the complaint and storm water in general. Pollution prevention concepts are emphasized, and educational materials are distributed as applicable.

8.4 OUTREACH COMPONENT EFFECTIVENESS ASSESSMENT

The estimated number of impressions made by the City's education and outreach efforts during 2010/2011 is presented and described below.

Impressions Made

As discussed in this section, the City has continued to provide storm water-related education to different audiences in the City through inspections, distribution, and mailing of educational materials, and during various events throughout the year. The City calculates an estimate of impressions based on the number and type of educational materials distributed. Estimates of impressions generated by the City's efforts allow for a more realistic evaluation of the effectiveness of the NPDES storm water program.

The estimated number of impressions was generated by multiplying each effort by the number of impressions thought to be generated by that particular effort. For example, inspections have been presumed to generate three impressions, with the exception of municipal inspections. Municipal inspections generally involve more people and are assumed to generate five impressions. Training sessions and cleanup events have been assumed to generate a number of impressions equal to four times the number of attendees

because it is likely that the attendees will discuss the content with others after the training session or event. Printed educational materials distributed are assumed to generate three impressions each. Table 8-4, below, details the number of impressions made by the City during this reporting year.

Table 8-3
Impressions Made by the City

Impression Type	Count	Unit	Estimated Impressions
Industrial/Commercial Inspections	131	Inspections	393
Municipal Inspections	29	Inspections	145
Municipal Staff Training Sessions	111	Attendees	444
Special Events and School Presentations	1,575	Attendees	6,300
Concrete and Mortar BMP Brochure	5	Brochures	15
EDCO Brochure	25	Brochures	75
Horse and Livestock BMPs Brochure	16	Brochures	48
Household Hazardous Waste and Universal Waste Flyer	200	Brochures	600
Industrial/Commercial Preventing Urban Runoff Pollution	118	Brochures	354
Low Water Use Landscaping guide	50	Brochures	150
NOI Paperwork	8	Brochures	24
NONA/NEC Paperwork	10	Brochures	30
Recycling Facility Brochures	50	Brochures	150
Restaurant BMP Trifold	42	Brochures	126
Yard and Garden Care Guide	25	Brochures	75
Storm Water Door Hangers	32	Door Hangers	96
Construction Seasonal Requirements Letter	73	Letters	219
Mobile Business BMP Letter and Flyer	91	Letters	273
Stationary Business BMP Letter	533	Letters	1,599
Poway Today Newsletter	57,150	Newsletters	171,450
Poway Water Bottles	50	Bottles	150
Chip Clips	50	Chip Clips	150
Magnets	25	Magnets	75
Household Hazardous Waste Pens	50	Pens	150
Total City Impressions			***183,091***

Please refer to Section 11 of this JURMP Annual Report for the remainder of the effectiveness assessment for this program component.

8.5 PROGRAM REVIEW AND MODIFICATION

No significant changes to the education component of the City's JURMP were made during 2010/2011.

9.0 PUBLIC PARTICIPATION COMPONENT

9.1 INTRODUCTION

The City encourages public participation in the City's JURMP as a means to develop storm water awareness and improve water quality. Public participation includes, but is not limited to, clean-up events, special community projects, reporting observed IC/IDs, and participating in City-hosted waste disposal and collection events. Collaboration between the City and the community should help foster a sense of shared responsibility in protecting water quality both locally and regionally. The City has encouraged public participation through the programs discussed in this section.

9.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the public participation component during the 2010/2011 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the public participation component of its storm water program during the reporting period are provided in the remainder of Section 9.

- Volunteers for the City's Adopt-a-Trail program, which involved residents keeping local parks and open spaces free of litter, logged over 899 hours.
- The City's year-round HHW collection facility received 265,903 pounds of HHW from approximately 4,779 visits by City residents.
- The City's collected 2,054 gallons of used motor oil at the HHW collection facility and verified participation of eight certified used oil collection centers.
- Bi-annual self-haul clean-up events were hosted by the City in conjunction with EDCO. The events allowed residents to dispose of large items, unwanted household materials (not including HHW), and green waste free of charge. A total of 1,650 households participated in these events and over 660 tons of material were collected.

9.2 PUBLIC PARTICIPATION ACTIVITIES

Adopt-a-Trail

The City's Adopt-a-Trail Program promotes cleanliness in the City by encouraging City residents to keep hiking trails, creeks, and open space safe and free of trash. Volunteers pick up trash and debris during activities such as daily walks. This program was advertised in the City's *Poway Today* newsletter (Attachment 6.2), which was circulated to tens of thousands of residential and business addresses in the City. During this reporting period, volunteers spent 899 hours removing trash from open space and trails.

Hazardous Waste Collection and Used Oil Recycling Program

The City's Community Hazardous Waste Collection and Electronic Waste Collection Programs encourage City residents and business owners to properly dispose of HHW and

miscellaneous electronic waste. Door-to-door pickup service was also provided for seniors over 65 and disabled residents. The City's Used Oil Recycling Program involves eight certified used oil centers within the City. In the 2010/2011 reporting period, the collection centers reported that 2,054 gallons of used motor oil was collected. Information about the used motor oil, HHW, and electronic waste collection facilities was advertised in *Poway Today* and on the City's website. A flyer advertising proper disposal of HHW and universal waste is included as Attachment 9.1.

Other Waste Disposal

The City hosts bi-annual self-haul cleanup events from October to December and April to June to encourage proper disposal of unwanted bulk items and other refuse. The City's waste hauler, EDCO Waste and Recycling Services, distributes coupons for disposal of large items, appliances, and yard waste to residents of Poway. These coupons allow residents to drop off any unwanted trash and debris, excluding HHW, free of charge. During these events, the transfer station remains open from 7 a.m. to 4:30 p.m. seven days a week. There were approximately 1,650 participants and 660 tons of waste was delivered to the collection facility in 2010/2011. The Spring Cleanup event was advertised in the *Poway Today* newsletter (Attachment 6.2).

Public Reporting

As discussed in Section 4, complaints are received through the City's storm water hotline and through the City's Public Works Department. The number for the hotline is advertised in articles published in the *Poway Today* newsletter, on various educational materials given out at public outreach events, and on the City's website. The residential, industrial and commercial, construction, and municipal communities are encouraged to use the hotline to report IC/IDs. The City investigates each complaint and tracks the complaint and follow-up actions, as applicable. A total of 55 complaints were made and responded to during 2010/2011.

9.3 OUTREACH EVENTS

The City has continued to provide educational outreach programs for a variety of different communities in the City. Since it is an effective way of reaching large numbers of individuals, educational outreach is typically associated with an event. Other outreach events in the City include distributing educational materials to commercial businesses and the City's participation in regional meetings and events.

Poway Days Festival

On September 19, 2010, The City of Poway hosted a community celebration, the Poway Days Festival, which is a free event with entertainment, booths of local businesses, and activities. I Love A Clean San Diego (ILACSD) staffed a booth at the event. Staff distributed City of Poway brochures regarding recycling, waste management, yard and garden care, integrated pest management, and composting. Best management practices guides for horses/livestock and contractors were also distributed. Various giveaway items were

distributed including ILACSD chip clips and pens, and Poway Public Works magnets. Approximately 250 people visited the booth and interacted with ILACSD staff members.

Coastal Cleanup Day
On September 25, 2010, Poway Community Park was selected for cleanup as part of the statewide California Coastal Cleanup Day event. The event was sponsored by ILACSD and San Diego Coastkeeper, and is the largest volunteer event held in the state. Poway Community Park includes portions of both Rattlesnake Creek and Poway Creek. Approximately 140 lbs of trash and 28 lbs of recyclable material were removed from the park's 2 square miles by 167 participating volunteers.

Day Without A Bag
On December 16, 2010, the City participated in a region-wide effort to encourage the use of reusable shopping bags. The event included free reusable bag giveaways along with tips for remembering to bring reusable bags when shopping. Six retailers in the City of Poway and the Poway Community Library participated in the event, and distributed either their own signature reusable bags or bags donated by EDCO or the "Think Blue" San Diego Region (Copermittee Regional Education Workgroup). This event promoted storm water pollution prevention and waste reduction in the Poway community.

Earth Day/Spring Street Fair
On April 10, 2011, the City of Poway hosted an environmental awareness street fair held at the Blue Sky Ecological Reserve. ILACSD displayed the "Operation Cleanup", an interactive watershed model for children where pollutants are located and removed from the model. This allowed for explanation of storm water pollution concepts, emphasizing the importance of keeping waterways clean to promote a healthy environment. Approximately 500 people participated at the booth and interacted with the ILACSD staff members. The ILACSD booth also provided information to Poway residents on the City's HHW, recycling, and water conservation programs as well as ILACSD's one-stop recycling resource and Creek to Bay Cleanup. General information on water conservation and water-efficient landscaping was also distributed.

Poway Spirit Day
On April 16, 2011, the City hosted a community service event at the Poway Boys and Girls Club. The public was invited to participate in outdoor cleaning, gardening, and maintenance to restore the playground and park area.

San Diego County Fair
On June 18, 2011, the City hosted an educational booth at the San Diego County Fair. City staff collected surveys and distributed re-usable shopping bags, doggie bag holders, and coloring books and pencils for children.

Storm Water Copermittee Meetings and Other City Participation
City personnel attended and were active in various storm water Copermittee workgroups during 2010/2011. The workgroups provide a forum for representatives from various jurisdictions within San Diego County and other interested parties, including the general public, to exchange information and ideas regarding the management of storm water

programs. The City participated in many Copermittee meetings and workgroups. These meetings will continue to be attended by City personnel during the 2011/2012 reporting period. The City is also a member of the stakeholder advisory group for the development of the Los Penasquitos Watershed Sediment TMDL, which includes representatives of Caltrans, the Los Penasquitos Lagoon Foundation, Coastkeeper, and California State Parks in addition to municipal Copermittees.

9.4 Public Participation Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

9.5 Program Review and Modification

No changes were made to the public participation component of the City's JURMP during the reporting period.

10.0 FISCAL ANALYSIS

10.1 INTRODUCTION

The City continued to collect a Storm Water Fee to provide a dedicated source of funds for its Storm Water Pollution Prevention Program. Developer and inspection fees funded services tied to a specific permit. A Used Oil Block Grant funded portions of the Education and Public Participation Programs. AB939 trash fee funds supported the HHW Program. Portions of the City's Program that benefit only City-owned properties or undeveloped properties were funded by the City's General Fund.

During 2009/2010, a fiscal analysis reporting template was developed collectively by the Copermittees. Fiscal information from 2010/2011 is reported in the tables below, which follow the standard format adopted by the Copermittees.

Table 10-1
Expenditure Summary

JURISDICTIONAL COMPONENTS	
Administration	$285,397
Development Planning	$36,741
Construction	$33,754
Municipal	$1,004,801
Industrial and Commercial	$63,294
Residential	$226,777
IDDE	$52,000
Education	$7,480
Public Participation	$1,260
Special Investigations	$0
Non-Emergency Firefighting	$0
Jurisdictional Total	**$1,711,504**

WATERSHED	
Los Peñasquitos	$20,804
San Dieguito	$13,604
Watershed Total	**$34,408**

REGIONAL	**$95,298**

TOTAL COSTS	**$1,841,210**

Table 10-2
Fund Summary

FUNDING BY SOURCE	
General Fund	$224,570
Storm Water Fee	$1,340,000
Developer Deposits and Fees	$17,920
Registration and Inspection Fees	$2,180
Grant Funds	$13,000
Other	$243,540
Total	**$1,841,210**

Table 10-3
Watershed Urban Runoff Management Program (WURMP) Expenses

	Los Peñasquitos	San Dieguito
Administration (1)	$9,704	$9,704
Cost Share Contribution	$10,850	$3,900
Watershed Activities	$250	$0
Other	$0	$0
TOTAL	**$20,804**	**$13,604**

(1) Administration – includes Watershed strategic planning, management, mapping, assessment, and reporting.

Table 10-4
Regional Urban Runoff Management Program (RURMP) Expenses

Regional Programs	Jurisdictional Cost
Administration (1)	$24,298
Cost Share Contribution	$71,000
Other (2)	$0
TOTAL	**$95,298**

(1) Administration – includes assessment, reporting, management, etc.
(2) Other – examples include regional and special studies.

11.0 EFFECTIVENESS ASSESSMENT

11.1 INTRODUCTION

The City regularly evaluates its storm water program to make it as effective as possible at reducing discharges of urban runoff related pollution to the MEP. The overall structure of the City's storm water program has three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes. Next, the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique.

Based on participation in regional efforts and its experience implementing its JURMP, the City has identified a variety of metrics to assess progress toward targeted outcomes. At the end of each reporting year, the City uses selected metrics to assess the effectiveness of its program implementation. Example metrics were provided in Section 13 of the City's 2008 JURMP, and the City has refined those metrics in the reporting periods since then.

The effectiveness assessment approach developed by the Copermittees during the last permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

11.2 EFFECTIVENESS ASSESSMENT RESULTS

The Municipal Permit requires the City to assess the effectiveness of each significant activity for each program component, for each program component as a whole, and for the storm water program as a whole. Level 1, Level 5, and Level 6 outcomes are discussed in Section 11.2.1. At this time the City is not able to assess Level 5 or Level 6 outcomes for individual

program activities or individual programs. As has been noted in CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

11.2.1 OUTCOME LEVEL ASSESSMENTS

Level 1

Level 1 outcomes are essentially measures of Municipal Permit compliance. The component-specific sections in this JURMP Annual Report provide details of programmatic actions taken to comply with the applicable Municipal Permit requirements. Appendix C of this JURMP Annual Report also includes a checklist that matches the Municipal Permit's annual reporting requirements with the section(s) or appendix of this report that addresses each requirement.

The Storm Water Program Administrator is responsible for coordinating with various staff in the City who have storm water responsibilities, such as engineers, planners, and Public Works maintenance staff. Modifications have been made to improve the effectiveness of the implementation of several components of the City's storm water program since the Storm Water Program Administrator was hired.

Levels 2 and 3

See Tables 11-1 through 11-8 at the end of this section for discussions of Level 2 and Level 3 outcomes for significant activities within each program component. Please note that only a Level 1 assessment applies to fiscal analysis, so no table for fiscal analysis is included. For example, see Figure 11-1 and Figure 11-2 for industrial and commercial business assessments of knowledge and BMP implementation, respectively.

Level 4

The tables at the end of this section provide information for Level 4 assessments where feasible. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning. For most other programs, reliable load estimation methods have not yet been developed.

Level 5

The Dry Weather Monitoring Program is the City's primary mechanism of measuring the quality of discharges. Figure 11-3 presents historical average values from field tests. Trends in ammonia-nitrogen concentrations are shown in Figure 11-4. Ammonia-nitrogen is one of the constituents with the longest historical data record and has shown a general decreasing trend over the course of the program. Results for fecal coliform bacteria and *Enterococcus* bacteria analyses are displayed in Figure 11-5. Median fecal coliform levels show a declining trend over time. Heavy metals and organophosphate pesticides have rarely been detected since testing for them began in 2002.

The City has also completed several years of inflow and outflow monitoring of its retrofitted detention basins to assess their effectiveness. The studies have indicated the basins have a significant positive effect on water quality. See Attachment 11.1 for details.

Level 6

The City recognizes the importance of protecting water quality of receiving water bodies in and around the City, and continues to participate in regional monitoring efforts. The long-term trend monitoring station in the Peñasquitos Watershed, referred to as a mass loading station (MLS), is well downstream of the City, and the MLS in the San Dieguito Watershed is downstream of Lake Hodges. Lake Hodges typically retains runoff from upstream areas, including the City of Poway, so results from the downstream MLS are unlikely to be representative of runoff from areas upstream of Lake Hodges. Temporary watershed assessment stations were located closer to the City in both the San Dieguito and Peñasquitos watershed in 2007/2008, and data from these stations showed relatively low levels of pollution. Those two stations were scheduled to be monitored again during 2010/2011. Data from the upcoming regional monitoring report may provide additional insight into receiving water conditions in the general area around Poway.

11.2.2 OVERALL COMPONENT ASSESSMENTS

Development Planning

The operation and maintenance verification program, which requires responsible parties to certify that their BMPs have been maintained properly, along with site inspections, has increased the responsible parties' understanding of the requirements. As a result of this contact with the City, many sites have contracted with outside parties to maintain their BMPs or set regular schedules for in-house staff to complete the maintenance.

The City has retrofitted five detention basins for use as shared treatment control BMPs, which provides effective treatment to SUSMP projects that drain to the basins and non-SUSMP projects that are also in the basins' drainage areas. Annual effectiveness assessment monitoring of these basins has been conducted. The monitoring results have demonstrated notable reductions in the levels of many different pollutants; see Attachment 11.1 for details.

During 2009/2010 the City received an NOV for past noncompliance related to BMP design and implementation at previously constructed projects. City land development engineers worked to address these deficiencies in 2009/2010, resolving all but one. The previously noted deficiency at the remaining deficient project was resolved during 2010/2011. City land development engineers and the Storm Water Program Administrator regularly coordinated during the reporting period regarding SUSMP implementation, and City staff also attended three external training sessions related to the newly adopted hydromodification management requirements.

Construction

The available data indicate that on the whole the City's construction program is effective in requiring BMP implementation at both public and private construction sites. Any BMP deficiencies noted are typically remedied promptly. Since 2009/2010, reporting and record-keeping procedures have been improved to increase the ability of the City to effectively track active construction sites. The City also stopped work and halted poor BMP implementation at multiple sites that were discovered to be conducting illegal grading without permits, as shown in Appendix B. The City will continue its efforts to notify project

proponents and homeowners of the City's BMP requirements. The City's engineers and inspectors attended several training sessions, including two sessions about the new General Construction Permit that went into effect on July 1, 2010, and one session about the City's construction BMP requirements.

Municipal

The City's municipal activities effectively implement BMPs and reduce pollutant loading. The City's municipal staff are regularly trained on storm water issues, and the City's MS4 cleaning and street sweeping programs meet or exceed minimum Municipal Permit frequency requirements. The City also continues to repair and clean sewer lines in an effort to prevent SSOs.

Industrial and Commercial

The City has a comprehensive inspection program and tracks inspection results using the TRAKiT permit tracking software. The City continued to utilize BMP implementation and knowledge scores to assess the level of BMP implementation and level of knowledge at inspected facilities. These scores help the City understand which categories of businesses are most in need of education outreach and which will require additional attention during inspections.

Residential

The City's residential component achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. City staff that conduct routine maintenance in residential areas are trained to observe and respond to potential storm water issues such as pet waste and minor trash and debris with educational material. During 2010/2011 City staff distributed 32 educational door hangers to residents. Internal distribution of maps showing high TTWQ residential areas to Public Works staff has increased staff awareness of the location and sensitivity of these areas.

Illicit Discharge Detection and Elimination

The City's IDDE program has effectively responded to complaints. No IC/IDs were identified during the 2011 Dry Weather Monitoring Program. There were three SSOs during the reporting period, which occurred during heavy rain events and were reported through CIWQS to the RWQCB. Sanitary sewer system maintenance efforts and FOG inspection enforcement were adjusted in response to the SSOs. The City will continue to take action to prevent and eliminate IC/IDs.

Education

During 2010/2011, the City has continued to educate various audiences on storm water concepts and BMPs. The estimated number of impressions made thorough the City's education component during 2010/2011 was similar to those seen in previous years.

Public Participation

The City will continue looking for new opportunities for public involvement, while continuing the existing clean-up and recycling events. Attendance at public events was slightly higher as compared to that of previous years.

11.3 PROGRAM REVIEW AND MODIFICATION

No significant changes to the effectiveness assessment component of the City's JURMP were made during the reporting period.

Table 11-1
Development Planning Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review and approve project plans	External A relatively small number of projects submitted reports during 2009/2010. Based on meetings with applicants and BMPs proposed, it appears that the level of knowledge is increasing. Internal City storm water staff provided training for engineers and planners on SUSMP requirements. Storm water staff and engineers have weekly SUSMP requirements coordination meetings. City personnel also attended training sessions—see sections 2 and 8.	Percent of approved projects implementing BMPs with high or medium removal efficiencies for key pollutants of concern	86%	N/A, addressed through other significant activities for this component
Verify proposed BMPs are implemented	External N/A, knowledge is evaluated by appropriate implementation of BMPs as shown in Level 3 Internal The City contracts with a qualified consultant to perform treatment control BMP inspections.	Percent of inspected projects requiring follow-up	70%	BMP implementation is likely to have reduced pollutant loads.
		Resolution status of enforcement actions	See Section 2	
Verify BMPs are properly maintained	External Contacting responsible parties increased their awareness of the need for BMP maintenance. Internal N/A, City staff are aware of the need for BMP maintenance.	Percent of sites returning verification forms	100%	Additional load reduction could be achieved through improved BMP maintenance.
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-2
Construction Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review proposed plans and BMPs	External Projects submit plans for construction BMP implementation for their projects; the level of awareness of construction BMP requirements is fairly high. Internal Training for City staff is described in Section 8. City staff are familiar with relevant construction BMPs.	BMPs proposed for construction projects generally meet requirements; no significant problems have been noted.		Proper pre-project planning is likely to have reduced pollutant loading.
Verify proposed BMPs are implemented	External Grading projects implement BMPs as required by their permits, and contractors are familiar with the City's requirements. Internal Training for City staff is described in Section 8. City inspectors are familiar with relevant construction BMPs.	Percent of projects implementing required BMPs by end of reporting period	97%	Proper BMP implementation is likely to have reduced pollutant loading.
		Percent of projects in compliance with BMP requirements during all inspections	72%	
		Resolution status of enforcement actions	See Section 3	
		Number of dry weather monitoring exceedances traced to construction sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-3
Municipal Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Verify proposed BMPs are implemented at facilities	City staff are regularly trained on BMP implementation; see sections 4 and 8. Public Works staff attended annual training sessions in 2010/2011, ensuring that they maintain a high level of storm water knowledge.	Percent of inspected facilities/activities in compliance with BMP requirements	100%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of sites requiring follow-up inspections	N/A, see Section 4	Number of pet waste bags distributed	144,000
		Number of dry weather monitoring exceedances traced to municipal sites	0	Amount of pet waste removed through pet waste bag use*	28,800 lbs
Sweep streets and parking facilities		N/A, streets and parking facilities are swept as often as directed by management.		Amount of sediment and debris removed (weight or volume)	728 tons
				Amount of sediment and debris removed per length of street swept (weight or volume per curb mile)	12 lbs/ curb mile
Maintain and clean out MS4		N/A, MS4 structures are maintained as often as directed by management.		Amount of sediment and debris removed (weight or volume)	1990.7 cubic yards
Maintain sanitary sewer system		N/A, the sanitary sewer system is maintained as often as directed by management.		Total volume of SSO recovered from MS4 (gallons)	210
Maintain municipal treatment control BMPs		N/A, treatment control BMPs are maintained as often as directed by management.		Amount of debris removed from treatment BMPs (detention basins)	1.5 cubic yards
				BMP effectiveness studies	Attachment 11.1
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

*Based on studies conducted by the County of San Diego, approximately 0.2 pounds of pet waste is collected per bag used. A separate literature search performed by the San Diego County Regional Airport Authority found a figure of 0.25 pounds per bag (San Diego Bay Copermittees, 2010). To be conservative, the estimate in this table is based the smaller of the two numbers.

Table 11-4
Industrial and Commercial Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Require BMP implementation	External Knowledge assessment scores indicated a slightly low level of understanding of relevant storm water concepts. See Figure 11-1 on the following page for a score distribution. See Section 8 for more detail on educational materials and other outreach efforts. Internal The City contracts with a qualified consultant to perform industrial and commercial inspections. Staff were also provided an inspection refresher training in the field during 2010/2011 to ensure a high level of knowledge.	Percent of inspected sites requiring follow-up	26%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of enforcement actions	See Section 5		
		Number of dry weather monitoring exceedances traced to industrial or commercial sources	0	Number of IC/IDs eliminated (inspections and complaint investigations)	15
		The City revisits businesses with low BMP assessment scores. See Figure 11-2 on the following page for a score distribution.			
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Figure 11-1
Knowledge Assessment Scores

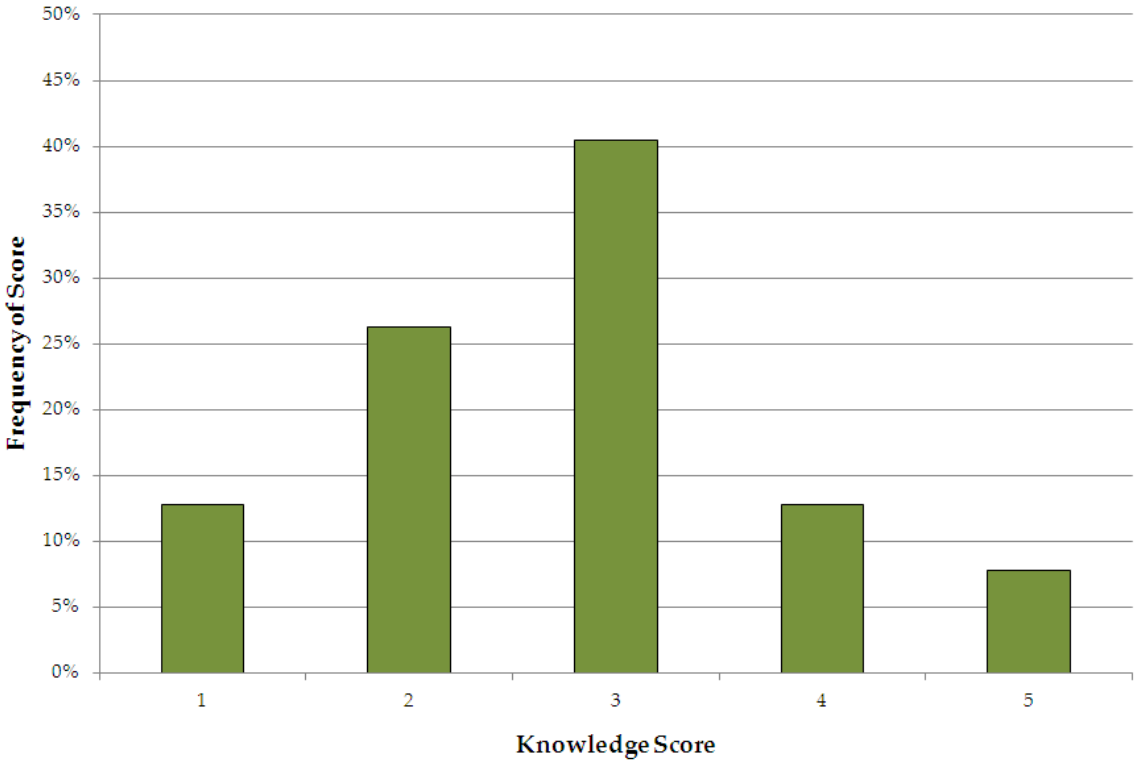

Figure 11-2
BMP Assessment Scores

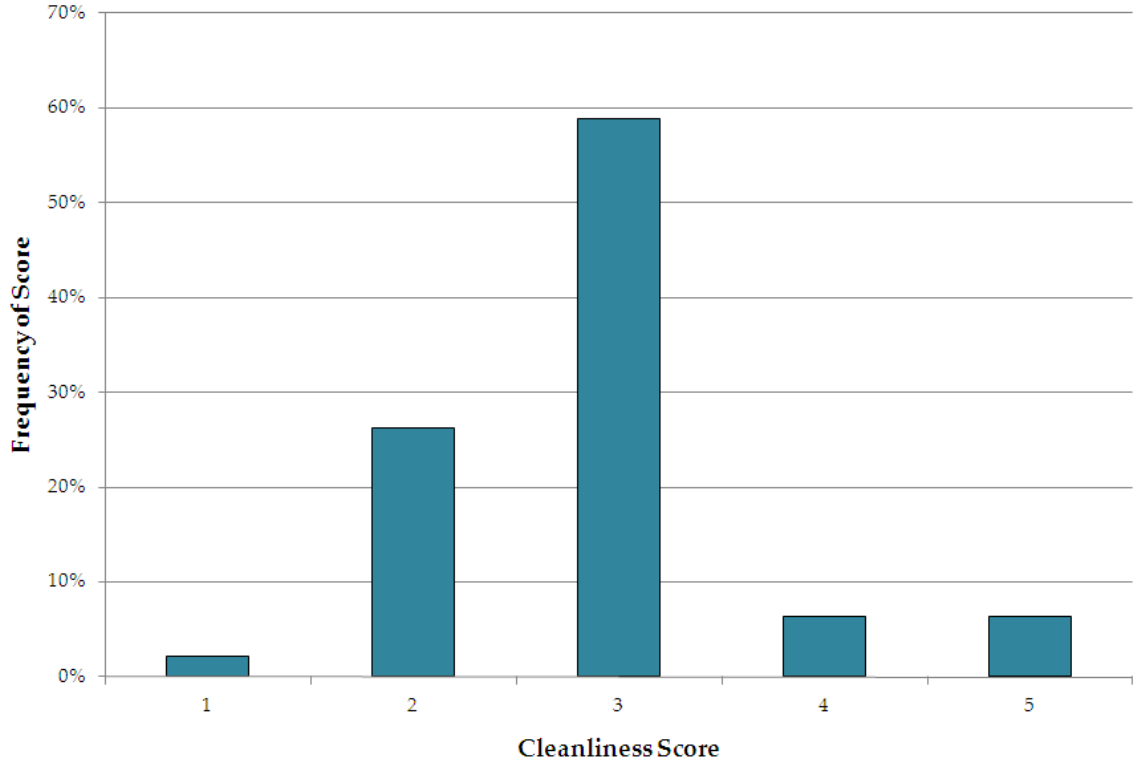

Table 11-5: Residential Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Require BMP implementation	External Residents were educated in a variety of ways in 2010/2011; see sections 6 and 8 for details. Internal Maps of high TTWQ residential areas were created and distributed to Public Works staff to increase their awareness of the location and sensitivity of these areas. The City's Storm Water Program Administrator is heavily involved in the implementation of the residential component.	Number of residential incidents reported to storm water hotline	25	Resolution of residential incidents reported to the hotline likely resulted in a decrease in pollutant loading through improved BMP implementation.
		Resolution of enforcement actions	See Section 6	
		Number of dry weather monitoring exceedances traced to residential sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-6: Illicit Discharge Detection and Elimination Component Assessment Measures

Significant Activity	Level 2	Level 3	Level 4
Conduct Dry Weather Monitoring Program	The City contracts with a qualified consultant to perform its Dry Weather Monitoring Program.	N/A, personnel conduct monitoring as directed by management.	No significant, long-term IC/IDs were eliminated, so a reliable estimate of load reduction cannot be made.
Respond to incidents reported to storm water hotline	The City's Storm Water Program Administrator trains City staff as needed. See sections 4 and 8. City staff were responsible for many of the reports made to the hotline, as shown in Appendix B.	N/A, personnel respond to incidents as directed by management.	Resolution of the incidents reported to the hotline and listed in Appendix B are likely to have resulted a pollutant loading reduction.
Respond to and clean up SSOs	City staff are thoroughly trained on how to respond to SSOs.	The City conducts additional preventive inspections and maintenance in areas with a higher history of problems. See Section 4 for details.	210 gallons of sewage were recovered after SSOs during rain events in 2010/2011.

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-7: Education Component Assessment Measures

Significant Activity	Level 2		Level 3	Level 4
Provide storm water education to the public	External The City actively educates the various audiences in its jurisdiction. See Section 8 for details.		See Level 3 outcomes for other program components for information about behavior change.	Sufficient data to estimate load reductions due to educational efforts is not available for 2010/2011.
	Estimated number of impressions made	183,091		

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-8: Public Participation Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Involve the public in activities that relate to storm water protection	External The City and City partners put on a number of opportunities for the public to participate. See section 9 for details.	Number of attendees at events	1,575	Amount of trash and debris collected at cleanup events (including large item disposal event)	More than 660 tons
		Number of drop-offs of large items and HHW to the City's recycling facility	4,779		
		Number of complaints received (see Appendix B for details)	55	Amount of HHW collected	265,903 pounds of HHW, 2,054 gallons of used oil

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

12.0 SPECIAL INVESTIGATIONS

The City takes a proactive approach to storm water management in an attempt not only to protect receiving water quality, but also to improve the quality of water that is discharged from the City's MS4. Data collected through the City's various monitoring and inspection programs are used to identify locations within the City that may be contributing to storm water contamination. Source identification investigations are then initiated to pinpoint the exact cause of detected pollution. Aside from upstream investigations conducted as part of the dry weather monitoring and sampling program (to be reported as part of the Illicit Discharge Detection and Elimination component in December), no special investigations were needed or conducted during this reporting period.

13.0 NON-EMERGENCY FIRE FIGHTING

A program of BMPs for non-emergency fire fighting flows was adopted in March 2008 as Section 3.4 of the City's JURMP. These BMPs are implemented during regular maintenance of fire and emergency vehicles and equipment, training exercises, facilities maintenance, and post-emergency rehabilitation of response equipment. No significant changes to the program presented in the City's JURMP have been made since the submittal of that document.

In response to municipal facility inspections performed during 2010/2011, the City provided an additional training session for fire-fighting staff in August 2011.

14.0 JURMP REVISIONS

Changes to the JURMP made during the reporting period are discussed in the individual "Program Review and Modification" subsections in the preceding sections in this JURMP Annual Report.

15.0 CONCLUSIONS AND RECOMMENDATIONS

During 2010/2011, the City of Poway continued to implement its storm water program based on its 2008 JURMP. During this time, the City identified several elements in the JURMP that required changes to improve program implementation. Updates to the City's program were made as necessary and are discussed in each individual section of this Annual Report. One highlight of the City's storm water program for 2010/2011 was the continued trend of increasing public participation through cleanup events, HHW waste recycling, and reporting storm water concerns to the City's hotlines. One notable programmatic change included the update of the City's municipal code to include hydromodification management plan requirements.

Additionally, the City continued to work collaboratively with the other Copermittees to facilitate sharing of information about how best to run these programs and to provide regional guidance on standardized implementation where applicable. The City will continue to refine and improve its storm water program based on information made available by these collaborative efforts.

Notes

TTWQ – Threat to Water Quality

Likely Source – Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with the receiving water.

L = Likely, PO = Possible, UL= Unlikely

* Discharge of heavy metals and oil and grease is possible if the facility has on-site parking

** Sediment and oxygen demanding substances are possible pollutants for earthen or natural conveyances. Bacteria, but generally not viruses and other pathogens, may regrow in MS4s under certain conditions. While other pollutants may be discharged from the MS4, the MS4 itself is not a direct source of those pollutants.

*** The sanitary sewer system is only a potential source of pollutants in the event of sewer line breaks or SSOs.

[1] This facility is covered by the General Industrial Permit and is also included on the City's industrial and commercial inventory.

Notes

TTWQ – Threat to Water Quality

SIC –Standard Industrial Classification Code

Likely Source – Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with the receiving water. Where a facility has a "Likely" pollutant discharge potential for a specific pollutant, a "Yes" is placed in the appropriate column.

[1] The Material Handling Yard is a municipal facility that is covered by the General Industrial Permit and is therefore included on both the City's industrial/commercial inventory and the City's municipal inventory.

Notes

TTWQ – Threat to Water Quality

SIC –Standard Industrial Classification Code

* Due to the nature of mobile businesses, it is possible that work may be performed in any portion of the City. Therefore, if a business has a pollutant discharge potential of "Likely" for one or more pollutants of concern associated with any receiving water within the City of Poway, they will be marked as a Likely Source.

APPENDIX B

Appendix B
Complaint Log

#	Date	Location	Complaint Type	Complaint	Resolution
1	7/9/2010	Arbolitos Dr	Municipal	Report of an odor in a residential area emanating from a storm drain.	Storm drain was flushed and cleaned with the vactor truck. No further action was necessary.
2	7/26/2010	13143 Coyotero Dr	Residential	Report of a paint spill discharge.	Resident power washed the gutter and removed all residual material. No further action was necessary.
3	7/27/2010	12617 Pinebrook Ct	Residential	Report of pool filter wash water discharge to street.	Notice to clean residue left at residence. Resident removed all residual material from the street and determined how to properly dispose of filter wash water in the future. No further action was necessary.
4	7/29/2010	Sycamore Canyon Road	Construction	Construction activity without appropriate BMPs and without a permit.	Stop Work Notice issued. Site re-inspected and noted to be in compliance.
5	8/2/2010	Whitewater Dr and Cinchring Dr intersection	Residential	Report of green substance in gutter, believed to be algae.	Source could not be determined. Public Works crew removed the substance. No further action was necessary.
6	8/4/2010	Metate Ln	Municipal	Request for channel debris and vegetation clearing.	Channel maintenance is performed annually and will be completed at the location shortly.
7	8/5/2010	Tobiasson Rd	Municipal	Report of trash and debris blocking storm drain.	Crews removed half a bag of trash from two drains in the area. No further action was necessary.
8	8/9/2010	13617 Carriage Rd	Residential	Report of vehicle leaking oil into street.	Educational materials delivered to resident. Instructions on mitigation given. Resident moved car to private driveway and placed a container beneath the vehicle to catch all leaking oil until repairs can be made. No further action was necessary.
9	8/13/2010	Rock Creek Rd	Municipal	Report of a tree in the City's easement threatening a home.	Crews removed the tree, and also a table and chairs that were discovered in the creek. No further action was necessary.
10	8/16/2010	Old Pomerado Rd	Residential	Report of bamboo growing in culvert.	Bamboo was sprayed. No further action was necessary.

Appendix B (Continued)
Complaint Log

#	Date	Location	Complaint Type	Complaint	Resolution
11	8/25/2010	Vendor Pl	Municipal	Report of an odor in a residential area emanating from an outlet.	Storm drain was flushed and cleaned with the vactor truck.
12	8/25/2010	Bronco Wy	Municipal	Report of trash and debris in storm drain.	Crews removed 1 bag of trash from the storm drain. No further action was necessary.
13	9/13/2010	14721 Pomerado Rd	Commercial	Report of wash water discharge to storm drain from interior restaurant power washing activities.	Educational materials delivered to power washing contractor. Discharge was stopped and improved BMPs were discussed. No further action was necessary.
14	9/13/2010	12533 Taunt Rd	Residential	Report of RV sewer discharge to street.	Resident was contacted and indicated there was a small leak in the water tank but that no discharge had occurred. Discussed proper sewage discharge procedures, and no evidence of sewage discharge was observed. Educational materials were left with the resident. No further action was necessary.
15	10/8/2010	13550 Summit Cir	Residential	Report of consistent flow into brow ditch and street.	Resident was contacted and determined the source of water was a broken pool overflow valve. The resident had the valve repaired and the leak ceased. No further action was necessary.
16	10/11/2010	14619 Fairburn St	Residential	Report of stagnant, odorous water pool from residential discharge.	Notice was left at residence. Resident called to indicate that the water flows from landscape drains, and that the recent rains caused the excess flow and pooling. The resident cleaned the pipe where the odor was emanating, and will monitor the area for pooling. No discharge to the City's MS4 occurred, and no further action was necessary.
17	10/13/2010	15102 Skyridge Rd	Residential	Report of soil erosion.	Erosion was verified during rain event. Discussed erosion control BMP installation with resident. Sand bags were installed on the property by the resident. No further action was necessary.

Appendix B (Continued)
Complaint Log

#	Date	Location	Complaint Type	Complaint	Resolution
18	10/19/2010	Skyridge Rd	Residential	Report of soil erosion.	Erosion was verified during rain event. Public Works removed sediment from the street and storm drain inlet. Letter was sent to the property owner, who placed sandbags along the street edge to prevent further erosion. No further action was necessary.
19	10/20/2010	Helen Park	Municipal	Report of soil erosion.	Erosion did not reach the City's MS4. Issue is being dealt with between resident and SDG&E. No further action was necessary.
20	10/20/2010	12352 Poway Rd	Residential	Report of RV sewer discharge to street.	Site was investigated and the RV's storage tank caps were noted to be off and black water appeared to have been dumped in the storm drain inlet. No resident was present and a notice to remove the vehicle was left on the RV. The property manager was directed to perform clean-up. Upon reinspection, the RV and spills in the parking area and drain had been removed. No further action was necessary.
21	10/20/2010	14247 Jerome Dr	Residential	Report of erosion into neighbor's pool and manure discharge.	Property owner was contacted and the issues were discussed. The source of manure and sediment could not be identified and there was no discharge to the City's MS4. The slope will be monitored for erosion. No further action was necessary.
22	10/25/2010	14033 Frame Rd	Residential	Reports of RV sewer discharge to street.	Resident was contacted and was unaware of discharge. Reported dumping grey water in rear landscape, where a landscape drain was located. Grey water discharged to street and was removed by a rain event. Proper grey water disposal methods were discussed with resident. No further action was necessary.

Appendix B (Continued)
Complaint Log

#	Date	Location	Complaint Type	Complaint	Resolution
23	10/26/2010	14961 Amso St	Residential	Report of concrete slurry discharge to curb.	Delivered educational materials and a notice to clean. Site was re-inspected and all residual material had been removed. No further action was necessary.
24	12/9/2010	13760 Poway Rd	Commercial	Report of overspray from a wash bay entering a storm drain inlet.	Overspray was noted flowing to curb, but not entering any inlet. A corrugated metal berm was attached to the wash bay and effectively prevented water discharge. No further action was necessary.
25	12/20/2010	13173 Wanesta Drive	Construction	Residential construction activity without appropriate BMPs and without a permit	Stop Work Notice and Correct Work Notices were issued. Site re-inspected and noted to be in compliance.
26	12/22/2010	Midland Rd	Municipal	SDG&E reported a mineral oil spill due to a tree knocking over a transformer.	Spilled oil was unrecoverable, SDG&E performed cleanup. No further action was necessary.
27	12/23/2010	Kirkham Rd	Municipal	Report of fuel spill resulting from a traffic accident.	Fuel was successfully prevented from entering the storm drain by the fire crew onsite through use of an earthen berm. Public Works provided additional materials to protect the inlet, and the San Diego County Hazardous Incident Response Team (HIRT) assisted by developing a mitigation plan for this incident. HIRT provided the responsible party with a list of State and/or County approved Hazardous Material mitigation companies. The fire crew cleared the scene and additional on-site cleanup evaluation was conducted by a representative of Safety Services.
28	12/29/2010	Calvary Rd	Municipal	Report of sinkhole formation.	Site investigated and the complaint was determined to be unfounded.
29	12/31/2010	Robles Ranch Rd	Residential	Report of hillside slide into a drain culvert.	Delivered sandbags to location. Sediment removed from private brow ditch by property owner. No further action was necessary.

Appendix B (Continued)
Complaint Log

#	Date	Location	Complaint Type	Complaint	Resolution
30	1/10/2011	Montauk St	Municipal	Report of debris blocking inlet.	Debris was removed. No further action was necessary.
31	1/14/2011	Stone Canyon Rd	Municipal	Report of standing water in street.	Case was referred to the streets division.
32	1/14/2011	Poway Rd	Municipal	Report of standing water in creek.	Creek was observed to be flowing naturally. No further action was necessary.
33	1/19/2011	14140 Donart Drive	Construction	Residential construction activity without appropriate BMPs and without a permit	Correct Work Notices issued. Referred to Land Development for further action.
34	1/26/2011	15136 Larry St	Residential	Report of vehicle leaking oil into street.	Resident removed spilled oil with absorbent, moved the vehicle to the driveway, and is utilizing a drip pan until repairs can be made. No further action was necessary.
35	2/8/2011	Acton Ave	Residential	Report of continual flow from curb outlet.	Drain determined to come from a private landscape drain. No further action was necessary.
36	2/10/2011	Summer Sage Rd	Municipal	Reported vegetation growing in drainage channel and overgrown around right-of-way entrance.	Crews removed vegetation and sprayed remaining palms and poison oak. No further action was necessary.
37	2/14/2011	14556 High Pine St	Residential	Report of vehicle leaking oil into street.	Spoke to property owner who indicated the staining was from an old leak. The vehicle had already been repaired and the owner will utilize a drip pan and absorbent for future leaks. No further action was necessary.
38	3/1/2011	14938 White Butte Dr	Residential	Report of outdoor shower discharging to street.	Resident was contacted and storm water regulations were discussed. Site was reinspected and the area has been cleaned and the connection rerouted to prevent future discharges. No further action was necessary.

Appendix B (Continued)
Complaint Log

#	Date	Location	Complaint Type	Complaint	Resolution
39	3/2/2011	13938 Lake View Road	Construction	Construction activity without appropriate BMPs and without a permit	Stop Work Notice issued. Site re-inspected and noted to be in compliance.
40	3/9/2011	13703 Paseo Valle Alto	Residential	Storm water violations observed.	Letter sent to home owner. Case was forwarded to the Land Development Department who continues to work with the property owner to address deficiencies. To date, a study has been performed and is pending review.
41	3/9/2011	13210 Highlands Ranch Rd	Residential	Treatment control BMP violations observed.	Letter of deficiency sent to homeowner. The property owner had addressed the deficiencies at the time of the follow-up inspection.
42	3/21/2011	14111 Roaring Camp Rd	Construction	Report of concrete wash out discharge from a residential construction project.	Resident contacted and confirmed washing of an empty concrete mixer into street. Rain event had washed residue away. Discussed proper disposal methods. No further action was necessary.
43	3/23/2011	14930 Eastvale Road	Construction	Residential construction activity without appropriate BMPs and without a permit	Stop Work Notice issued. Referred to Land Development for further action.
44	4/11/2011	Bowron Rd	Municipal	Report of shopping carts in Poway Creek.	Four shopping carts were removed from Poway Creek and returned to the issuing store.
45	4/12/2011	Roberto Wy	Residential	Report of an odor in a residential area emanating from a diversion channel.	Crews cleared diversion channel of vegetation, debris, and animal feces. Distributed educational materials to area residents. No further action was necessary.
46	4/13/2011	Old Winery Rd	Municipal	Report of numerous bags of trash abandoned on the street.	Bags of trash were removed. No further action was necessary.
47	4/18/2011	Poway Rd	Municipal	Report of debris in turnout.	Removed 14 tires from turnout. No further action was necessary.

Appendix B (Continued)
Complaint Log

#	Date	Location	Complaint Type	Complaint	Resolution
48	4/20/2011	14785 Deerwood St	Mobile	Report of pool filter wash water discharge to street.	Resident contacted and indicated the pool maintenance contractor had performed the washing. Resident will instruct contractor on proper disposal methods and remove residue from street. No further action was necessary.
49	4/21/2011	Buckskin Tr	Municipal	Report of an odor in a residential area emanating from a storm drain.	Line was flushed and the odor was removed. Water was reclaimed by vactor truck.
50	5/2/2011	Tarascan Dr	Municipal	Report of graffiti in creek.	Graffiti was pressure-washed and the wash water contained. No further action was necessary.
51	5/4/2011	Scripps Poway Pkwy and Danielson St intersection	Municipal	Report of motor oil and transmission fluid spill resulting from a traffic accident.	Fire crew created a dike around the nearest storm drain and absorbent was used to remove the remaining material. Public Works provided additional absorbent. No more than 2 quarts of non-recoverable oil was reported to have entered the storm drain.
52	5/16/2011	12603 Orohaven Ln	Residential	Report of vehicle leaking oil into street.	Resident was contacted and indicated the vehicle had been repaired. The oil on the street had been removed with absorbent. No further action was necessary.
53	5/19/2011	13055 Papago Dr	Residential	Report of vehicle leaking oil into street.	Site was investigated and no leaking vehicles were found. The complaint appears unfounded.
54	6/7/2011	13424 Olive Tree Ln	Residential	Report of vehicle leaking oil into street.	Letter was sent to the owner. Absorbent was used to remove the oil from the street and the truck was removed.
55	6/23/2011	12160 Community Rd	Commercial	Storm water violations observed.	Notice was sent to business and property owners. Investigation is ongoing and will be completed in FY12.

APPENDIX C

Appendix C
JURMP Annual Report Requirements Checklist

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	Location in Report
i. A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.	2.2, 2.3, 2.4
ii. Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.	2.4.4.2
iii. A listing of the development projects to which SUSMP requirements were applied.	Table 2-4
iv. Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.	Table 2-3, Table 2-4, 2.4.4.2
v. At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.	2.4.4.2
vi. A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.	2.4.4.2
vii. An updated treatment control BMP inventory.	2.4.4.3, Appendix A.1
viii. The number of treatment control BMPs inspected, including a summary of inspection results and findings.	2.4.4.3, Table 2-1, Table 2-7
ix. A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.	2.4.4.3
x. Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.	2.4.4.2
xi. A listing of any projects which received a SUSMP waiver.	2.4.4.2
xii. A description of implementation of any SUSMP waiver mitigation program.	2.4.4.2
xiii. A description of Hydromodification Management Plan (HMP) development collaboration and participation.	2.4.4.2
xiv. A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.	Table 2-4, 2.4.4.2
xv. A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.	Table 2-4, 2.4.4.2

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	**Location in Report**
xvi. A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.	2.4.4.2
xvii. The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	2.4.4.3, Table 2-2, Table 2-7
xviii. A description of notable activities conducted to manage urban runoff from development projects.	2.1.1

Construction

Permit Annual Reporting Requirement—Section J.3.a.(3).(b)	**Location in Report**
i. Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.	3.5.2
ii. Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.	3.2
iii. A description of modifications made to the construction and grading ordinances and approval processes.	3.3
iv. Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.	3.5.3
v. Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.	3.5.2
vi. A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.	3.5.2
vii. For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.	3.5, Appendix A.2
viii. A description of the general results of the inspections.	3.5.3
ix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	3.5.4
x. The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	3.5.4, Table 3-1
xi. A description of notable activities conducted to manage urban runoff from construction sites.	3.1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
i. Any updates to the municipal inventory and prioritization.	Appendix A.3 (inventory)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.	4.2.4, 4.3.4, 4.4.4, 4.5.4, 4.6.4, 4.7.4
iii. A description of inspections and maintenance conducted for municipal treatment controls.	2.4.4.2, 4.4.4
iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.	4.4.2, 4.4.4 Table 4-2
v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.	4.4.2, 4.4.4, Table 4-2
vi. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.	4.4.4, Table 4-2
vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.	4.4.4, Table 4-2
viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.	(N/A for 2010-2011)
ix. Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.	4.2.3
x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1
xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1
xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
xiii. Identification of the total distance of curb-miles swept.	4.3.4, Table 4-1
xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.	4.3.4, Table 4-1
xv. Amount of material (tons) collected from street and parking lot sweeping.	4.3.4, Table 4-1
xvi. A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4	4.5.4
xvii. Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.	4.2.4, 4.3.4, Table 4-3
xviii. A description of the general results of the inspections.	Table 4-3
xix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	4.2.4
xx. The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	4.2.4
xxi. A description of notable activities conducted to manage urban runoff from municipal areas and activities.	Throughout Section 4

Industrial and Commercial

Permit Annual Reporting Requirement—Section J.3.a.(3).(d)	**Location in Report**
i. Any updates to the industrial and commercial inventory.	5.2.2 (stationary), 5.3.4 (mobile), Appendices A.4, A.5 (inventory)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.	5.2.4, 5.3.4
iii. A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.	5.2.4, 5.3.4
iv. Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.	5.2.2, 5.3.2; 5.2.4, 5.3.4; Table 5-1; Appendices A.4, A.5
v. Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.	5.2.4
vi. Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.	5.2.4
vii. Identification of the number of third party inspections conducted.	5.2.4
viii. Identification of efforts conducted to verify third party inspection effectiveness.	5.2.4
ix. A description of efforts implemented to address mobile businesses.	5.3.4
x. The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	5.2.4, 5.3.4, Table 5-2
xi. A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.	5.2.4, Table 5-3
xii. A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.	Throughout Section

Residential

Permit Annual Reporting Requirement—Section J.3.a.(3).(e)	**Location in Report**
i. Identification of the high threat to water quality residential areas and activities that were focused on.	6.2
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.	6.4
iii. A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.	6.4
iv. Types and amounts of household hazardous wastes collected, if applicable.	6.4.1
v. A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of the evaluation.	6.4.2 (see discussion in JURMP)
vi. The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	6.4; Appendix B
vii. A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.	6.4.1
viii. A description of notable activities conducted to manage urban runoff from residential areas and activities.	6.4

ATTACHMENT 2.1

JANUARY 2011 MUNICIPAL CODE UPDATE TO INCORPORATE NEW HYDROMODIFICATION MANAGEMENT REQUIREMENTS

ORDINANCE NO. 712

AN ORDINANCE OF THE CITY OF POWAY, CALIFORNIA, AMENDING SECTION 16.103.050 OF THE POWAY MUNICIPAL CODE REGARDING HYDROMODIFICATION MANAGEMENT

WHEREAS, on February 21, 2001, the California Regional Water Quality Control Board, San Diego Region (SDRWQCB) issued Order No. 2001-01, National Pollutant Discharge Elimination System (NPDES) Permit No. CAS0108758, naming the City of Poway and other Copermittees responsible for the implementation of a Countywide Stormwater Management Program; and

WHEREAS, on January 24, 2007, the SDRWQCB issued Order No. 2007-0001, which revised the requirements of the 2001 Permit; and

WHEREAS, Order No. 2007-0001 requires all Copermittees, including the City of Poway, to develop and implement a Hydromodification Management Plan; and

WHEREAS, the Hydromodification Management Plan is intended to manage increases in runoff discharge rates and durations from all Priority Development Projects to protect the environment;

WHEREAS, as Title 16, Division VI of the Poway Municipal Code has been updated to comply with Permit Order No. 2007-0001.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF POWAY DOES ORDAIN AS FOLLOWS:

Section 1: The City Council finds that this Ordinance is exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15061(b)(3) of the CEQA Guidelines, as it entails State-mandated updates to current City regulations, and there is no possibility that this will have a significant effect on the environment.

Section 2: Section 16.103.050, entitled "Identifying conditions of concern in receiving waters" is amended to read as follows:

A. Common impacts to the hydrologic regime resulting from development typically include increased runoff volume and velocity; reduced infiltration; increased flow frequency, duration, and peaks; faster time to reach peak flow; and water quality degradation. These changes have the potential to permanently impact downstream channels and habitat integrity. A change to a priority project site's hydrologic regime would be considered a condition of concern if the change would impact downstream channels and habitat integrity. Because of these potential impacts, the following steps shall be followed by each priority project:

1. Evaluate the project's conditions of concern in a drainage study report prepared by a registered civil engineer in the State of California with experience in fluvial geomorphology and water resources management.

The report shall consider the project area's location (from the larger watershed perspective), topography, soil and vegetation conditions, percent impervious area, natural and infrastructure drainage features, and any other relevant hydrologic and environmental factors to be protected specific to the project area's watershed.

2. As part of the drainage study, a qualified, licensed professional shall provide a report on proposed infiltration techniques (trenches, basins, dry wells, permeable pavements with underground reservoir for infiltration) regarding any potential adverse geotechnical concerns. Geotechnical conditions such as slope stability, expansive soils, compressible soils, seepage, groundwater depth, and loss of foundation or pavement subgrade strength should be addressed, and mitigation measures provided.

3. As part of the drainage study, the civil engineer shall conduct a field reconnaissance to observe and report on downstream conditions, including undercutting erosion, slope stability, vegetative stress (due to flooding, erosion, water quality degradation, or loss of water supplies) and the area's susceptibility to erosion or habitat alteration as a result of an altered flow regime.

4. The drainage study shall compute rainfall runoff characteristics from the project area including, at a minimum, peak flow rate, flow velocity, runoff volume, time of concentration, and retention volume. These characteristics shall be developed for the two-year and 10-year frequency, Type I storm, of six-hour or 24-hour duration (whichever is the closer approximation of the site's time of concentration), during critical hydrologic conditions for soil and vegetative cover. The drainage study shall report the project's conditions of concern based on the hydrologic and downstream conditions discussed above. Where downstream conditions of concern have been identified, the drainage study shall establish that pre-project hydrologic conditions affecting downstream conditions of concern would be maintained by the proposed project, satisfactory to the Director of Development Services, by incorporating the site design, source control, and treatment control requirements identified in this division.

B. Priority development projects are subject to the City's Hydromodification Management Plan (HMP) as incorporated in the Poway Local SUSMP. The HMP shall demonstrate how priority projects will manage increases in runoff discharge rates and durations where such increased rates and durations are likely to cause increased erosion of channel beds and banks, sediment pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force. Projects will be required to utilize a continuous hydrological simulation and the results of a hydromodification management analysis must adhere to the following criteria:

1. For flow rates between the pre-project lower flow threshold and the pre-project 10-year runoff event, the post-project discharge rates and durations may not deviate above the pre-project discharge rates and durations by more than 10 percent over more than 10 percent of the length of the flow duration curve.

2. Lower flow thresholds may be determined using the tools provided in the local SUSMP along with a critical flow calculator and channel screening tools developed by the Southern California Coastal Water Research Project (SCCWRP). These methods identify lower flow thresholds for a range of channel conditions. The critical flow calculator recommends a lower flow value of 0.1Q2, 0.3Q2 or 0.5Q2 dependent on the receiving channel material and dimensions, where Q2 is defined as the 2-year runoff event. This value will be compared to channel susceptibility rating (High, Medium or Low) as determined from the most recent SCCWRP screening tools to determine the final lower flow threshold.

3. The lower flow threshold may alternately be determined as 10 percent of the pre-project 2-year runoff event or 0.1Q2. This approach is available if the project applicant chooses not to complete the channel screening analysis.

C. Priority Development Projects are required to implement hydromodification mitigation measures so that post-project runoff flow rates and durations do not exceed pre-project flow rates and durations. Hydromodification mitigation can be provided as follows:

1. Demonstrate no post-project increase in impervious area and resultant peak flow rates as compared to pre-project conditions.

2. Installation of LID BMPs such as bioretention facilities to control runoff flows and durations from new impervious areas.

3. Mitigation of flow and durations through implementation of extended detention flow duration control basins.

4. Preparation of continuous simulation hydrologic models and comparison of the pre-project and mitigated post-project runoff peaks and durations (with hydromodification flow controls) until compliance is achieved.

5. Implementation of in-stream rehabilitation controls to demonstrate that projected increases in runoff peaks and/or durations would not accelerate erosion to the rehabilitated receiving stream reach.

D. Priority development projects shall be exempt from the HMP criteria under the following conditions.

1. If the proposed project does not increase the impervious area or peak flows to any discharge location.

2. If the proposed project discharges runoff directly to an exempt receiving water such as the Pacific Ocean, an exempt river reach, an exempt reservoir, or a tidally influenced area.

3. If the proposed project discharges to a stabilized conveyance system that extends to the Pacific Ocean, a tidally influenced area, an exempt river reach or reservoir.

4. If the contributing watershed area to which the project discharges has an impervious area percentage greater than 70 percent.

5. If an urban infill project discharges to an existing hardened or rehabilitated conveyance system that extends beyond the "domain of analysis", the potential for cumulative impacts in the watershed are low, and the ultimate receiving channel has a low susceptibility to erosion as defined in the SCCWRP channel assessment tool.

E. LID facilities must be designed to be practically built and maintained within the urban environment. Projects are encouraged to use LID design approaches to provide both treatment for the 85th percentile water quality event as well as flow control to meet hydromodification criteria. To assure compliance with hydromodification flow control requirements, design criteria, specifications, and long-term operations and maintenance requirements have been provided in the local SUSMP for a variety of LID-based flow control methods including bioretention basins, flow-through planter boxes, and bioretention systems in combination with cisterns and vaults. Sizing factor development shall include the use of continuous simulation of runoff from the long-term rainfall record.

F. Proof of a long-term maintenance responsibility and mechanism will be required for all post-construction BMP and flow control facilities. If not properly designed or maintained, hydromodification flow control devices may create a habitat for vectors such as mosquitoes or rodents. Maintenance activities for flow control and LID devices shall be specified in the proposed Project Submittal.

G. The local SUSMP outlines the monitoring program to assess the effectiveness of hydromodification management facilities. Monitoring activities will include inflow and outflow monitoring from BMPs, baseline cross section monitoring, and flow-based sediment monitoring.

Section 3: This Ordinance shall be codified.

EFFECTIVE DATE: This Ordinance shall take effect and be in force on January 14, 2011; and before the expiration of fifteen (15) days after its passage, it shall be published once with the names of members voting for and against the same in the *Poway News Chieftain*, a newspaper of general circulation published in the City of Poway.

Introduced and first read at a Regular Meeting of the City Council of the City of Poway held the 16th day of November 2010, and thereafter PASSED AND ADOPTED at a regular meeting of said City Council held the 7th day of December 2010.

Don Higginson, Mayor

ATTEST:

Linda A. Troyan, MMC, City Clerk

STATE OF CALIFORNIA)
) ss.
COUNTY OF SAN DIEGO)

I, Linda A. Troyan, City Clerk of the City of Poway, do hereby certify that the foregoing Ordinance No. 712, was duly adopted by the City Council at a meeting of said City Council held on the 7th day of December 2010, and that it was so adopted by the following vote:

AYES: BOYACK, GROSCH, MULLIN, CUNNINGHAM, HIGGINSON

NOES: NONE

ABSTAIN: NONE

DISQUALIFIED: NONE

September 1, 2010

**** EROSION CONTROL NOTICE ****

The City of Poway Municipal Code (PMC) requires that the attached erosion/sediment control measures be implemented on all projects by the beginning of the wet season on October 1, 2010. These wet season erosion/sediment control measures are in addition to the basic measures required year-round. **Please contact your inspector as soon as possible to discuss your erosion/sediment control measures. Early coordination with your inspector is very important. Maintenance will be closely monitored.**

If you fail to implement adequate measures by October 1, 2010, the City may find it necessary to hire a contractor to do so at your expense. You are also expected to maintain these facilities, including cleanup of any off-site siltation, through the end of the wet season on April 30, 2011. These requirements are in place to protect public and private properties, and are secured by cash deposits and grading securities. The permittee shall be responsible for all fines assessed by any outside agencies.

Discharges of pollutants and sediment from your site are prohibited under PMC Title 16, PMC Chapter 13.09, and your grading permit. They are also prohibited under State law (California Water Code), Federal law (Clean Water Act), and the statewide National Pollutant Discharge Elimination System (NPDES) General Construction Storm Water Permit. Violators are subject to enforcement action, including significant monetary penalties. **If your construction site is one acre or larger and you have not obtained coverage under the statewide NPDES General Construction Storm Water Permit, you should contact the California Regional Water Quality Control Board (CRWQCB) at (858) 467-2952 immediately.**

Sincerely,

DEVELOPMENT SERVICES DEPARTMENT

Steve Crosby
Acting City Engineer

Staff

5.4.1.1 SEASONAL SITE MANAGEMENT REQUIREMENTS

Construction sites are required to implement all minimum construction BMPs as necessary to prevent pollution discharges to the Maximum Extent Practicable regardless of the season. The City does, however, maintain different requirements for some erosion and sediment control BMPs between the wet and dry seasons as described below:

Dry Season (May 1st through September 30th)

- All exposed disturbed areas including building pads, unfinished roads, and slopes must have erosion prevention controls properly installed (slopes greater than 33.3% or 3:1 vertical vs. horizontal may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement, but all slopes must be covered before rough grade approval will be given).
- Adequate perimeter protection BMPs must be installed and maintained.
- Adequate sediment control BMPs must be installed and maintained.
- Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.
- At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and prevent sediment discharges must be stored on the site.
- An approved Weather-Triggered Action Plan must be prepared at the start of each project and updated in the event that a predicted storm event has a 50% chance of rain. The proponent must have the capacity to deploy the standby BMPs within 48 hours of the predicted storm event.
- All slopes must be equipped with erosion prevention BMPs as soon as slopes are completed for any portion of the site.
- The amount of cleared or graded areas left exposed at any given time is limited to 17 acres or to the alternate maximum area approved by the City in writing (see Section 5.4.3).

Wet Season (October 1st through April 30th)

All dry season requirements are required in addition to the following:

- Perimeter protection and sediment control BMPs must be upgraded if necessary to provide sufficient protection for storms.
- Adequate erosion prevention BMPs must be installed and established for all completed slopes prior to October 1 and maintained throughout the wet season. If a BMP fails, it must be repaired, improved or replaced with an acceptable alternate as soon as it is safe to do so.
- Standby erosion and sediment control BMPs must be able to protect all exposed soil areas. An incomplete disturbed area that is not being actively graded must be fully protected from erosion if left for 10 days or more.

MUNICIPAL FACILITY BMP CHECKLISTS

Monthly Compliance and Maintenance Duties

Crosthwaite Material Handling Yard

Five divisions in the public works department currently use Crosthwaite Material Handling Yard. Drainage/Storm Water, Parks, Water, Wastewater, and Streets are the major users of the yard and are responsible for compliance maintenance, courtesy maintenance and upkeep.

In addition to regular duties, each month one division will be responsible for compliance inspection, compliance maintenance, up-keep, and documentation. Duties include:

- Vacuum all four inlet filters. Once a month
- Pressure wash batch plant and surrounding area (Vactor or graffiti trailer). Once a month
- Pick up trash and loose debris throughout yard. Once a week
- Load green waste dumpsters. Monday and Wednesday
- Load trash from K-rail to dumpsters. Twice a week
- Empty trash can outside lounge. Once a week
- Inspect and remove excessive debris from perimeter brow ditch. Once a month
- Sweep or blow off excessive debris from all concrete and asphalt surfaces. Once a week
- Inspect and replace rock bags, straw waddles and tarps. As needed
- Incidental compliance issues. As needed

This list with a job order shall be completed by the responsible division each month. If for any reason the list and job order can't be completed by the end of the month, the duties of Crosthwaite Material Handling yard shall remain with that division until the tasks are done. Failure to complete the duties jeopardizes the City's NPDES compliance and the harmonious use of Crosthwaite Material Handling Yard. If assistance is needed contact the Storm Water Supervisor, Public Works Manager, or the Utilities Manager. The storm water supervisor shall complete the compliance inspection and documentation each month.

B. FACILITY/SITE INFORMATION

Principal activity:_____

Assigned JURMP Classification: ☐ High ☐ Medium ☐ Low ☐ Unassigned

New JURMP Classification (if applicable)?_____

Is facility subject to CA Statewide General Industrial Permit? ☐ Mandatory ☐ Conditional ☐ No

If yes, has facility filed a Notice of Intent (NOI) to comply? ☐ Yes ☐ No WDID#_____

If no, does facility have a Notice of Non-Applicability (NONA/NEC)? ☐ Yes ☐ No

Does facility maintain SWPPP or BMP Plan? ☐ Yes ☐ No

Does facility have a storm water monitoring program? ☐ Yes ☐ No

C. INITIAL OBSERVATIONS

Nearest conveyances or water bodies: _____ Hydrologic Area _____ ____

Approximate distance to receiving water bodies: ☐ < 200 ft. ☐ 200 – 1,000 ft. ☐ > 1,000 ft.

Sensitivity of receiving waters: ☐ Sensitive (ESA, 303(d), or other) ☐ Non-sensitive

Discharge points: _____
_____

Discharge observed: ☐ Yes ☐ No

If yes, describe: _____

Estimated area covered by municipal facility: _____square feet

Estimated % impervious surface of this area: _____%

Exposed areas of intensive outdoor activity: _____

D. BMP ASSESSMENT

D.1 General

BMPs	N/A	Yes	No	Comments
Is the site free of excessive litter and debris?				
Are discharge locations free of excessive sediment and debris?				
Are parking lots, sidewalks and streets free of excessive sediment and debris?				
Is wash water from pressure washing/hosing managed appropriately?				
Are roof downspouts directed away from areas of potential pollutants?				
Are employees trained in storm water management, pollution prevention and good housekeeping measures?				
D.2 Landscaping				
Are adequate erosion prevention measures employed? (vegetation or physical stabilization)				
Are irrigation systems programmed to minimize over-watering and runoff?				
Are stockpiles of soil or landscape waste contained to prevent runoff transport?				
Are pesticides, herbicides, and fertilizers managed in accordance with the JURMP BMPs?				
D.3 Materials and Wastes				
Are adequate trash containers provided?				
Are adequate recycling containers provided?				
Is the trash/recycling area enclosed and free of litter and debris?				
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?				
Are outdoor material storage areas adequate (covered area with secondary containment)?				
Are outdoor storage containers properly labeled?				
Is there an accessible spill response kit?				
Are outdoor storage containers equipped with secondary containment?				
Is secondary containment free of spills and rainwater?				
Are loading and unloading areas free of spills and debris?				
D.4 Equipment and Vehicles				
Are exposed parking areas free of significant spills and leaks?				
Are heavy equipment and vehicles stored in garages or under canopies?				
Are vehicle maintenance activities conducted within contained areas (garage, canopy, work shop)?				
Are vehicle-fueling areas covered and are storm drain inlets in/around the fueling area protected from spills and leaks?				
Is vehicle washing performed in a contained area where runoff does not enter the MS4?				

D.5 Building Repair/Construction /Structural BMPs

BMPs	N/A	Yes	No	Comments
Are adequate erosion prevention measures employed throughout the site? (vegetation or physical stabilization)				
Are adequate sediment control BMPs employed throughout the site? (gravel bags, inlet filters etc.)				
Are impervious areas free of debris and spills from painting, scraping, and/or sandblasting activities?				
Are structural BMPs adequately maintained? (NA if no structural BMPs at facility)				
D.6 Non-Storm Water Management				
Is the site free of evidence of illicit connections and illegal discharges?				
Is the site free of evidence of unauthorized releases to storm drains?				
If not, have the appropriate authorities been notified?				
D.7 Other				
Are appropriate signs/stenciling present at the facility?				
Are there any other potential storm water pollution issues or concerns? If yes, explain below.				
Are all applicable activity-specific BMPs being implemented?				
Does this facility have a fire sprinkler system?				

D.8 BMP Summary/Additional Comments

E. RECOMMENDED CORRECTIVE ACTION

Is corrective action needed? ☐ Yes ☐ No

If **BMP-related** corrective action is required, describe below. If other corrective action, check the appropriate box in section G.

Owner/operator has been notified of recommended corrective actions both verbally and by: ☐ Hand Delivery ☐ Mail ☐ Fax

F. VIOLATIONS

☐ No violations have been noted at this time

☐ No violations have been noted, but recommend taking corrective action described in Section F.

☐ **Violation of the City's storm water ordinance:**

- ☐ Prohibited discharge(s) of pollutants to the storm drain system or to receiving waters
  Description_____
- ☐ Illicit connection(s) to the storm drain system
  Location_____
- ☐ Littering
- ☐ Improper Implementation of Required BMPs
- ☐ Failure to comply with the storm water monitoring requirements for high priority industrial facilities.

☐ **Failure to comply with the requirements of the State Industrial Storm Water General Permit.**

- ☐ In the future, under a new Industrial Permit which has not yet been adopted, this facility may be able to qualify for a No Exposure Certification (NEC) and exemption from Permit coverage.

☐ **Other Violation**_____

SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE:

☐ Implement the recommended corrective actions listed in Section F.

☐ File a Notice of Intent (NOI) with the State Water Resources Control Board to obtain coverage under the Industrial Permit - see Attachment 3 of the Industrial Permit (http://www.waterboards.ca.gov/stormwtr/industrial.html).

- ☐ For "Conditional" facilities only: if you implement all the recommended BMPs and eliminate outdoor exposure, contact the City to request a re-inspection. If it is determined that you qualify, NONA/NEC paperwork will be provided for you to complete, and you will not have to file an NOI.

☐ Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.

☐ Develop and implement a storm water monitoring program—see section B of the Industrial Permit for guidelines.

☐ Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC). Retain one copy of each onsite, and send additional copies to the City of Poway and the State Water Resources Control Board. (See attached instructions provided with the documents.)

Additional actions required:

G. ADDITIONAL RECOMMENDED CITY ACTIONS*

Is a follow-up inspection recommended for this business? ☐ **Yes** ☐ **No**

ASSESSMENT

Level of knowledge regarding stormwater issues:	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
Level of cleanliness, BMP implementation, orderliness of site:	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5

*Recommended City Actions listed at the time of inspection are subject to change based on later review by office staff.

CONDITIONS OF APPROVAL

1. The site shall be developed in accordance with the approved site plan on file in the Planning Department, except as may otherwise by provided herein, prior to commencement of the activity.

2. The Building, Fire, and County Sheriff's Departments shall be contacted for approprate permits and inspections prior to the commencement of the activity.

3. Use of signs shall first be reviewed by the Planning Services Department for compliance with the sign ordinance prior to installation.

4. Approval of this activity shall not excuse compliance with all other sections of the Zoning Ordinance and all other applicable City ordinances presently in effect.

5. Date this approval shall become null and void:_____, 200_, On this date the site shall be restored to its original condition.

6. A vendor's license shall be obtained from the Customer Services Department for all temporary sales locations, including, but not limited to to Christmas tree lots and other holiday and special event sales.

7. No person shall discharge any material and or liquid into storm drains. For special events, storms drains shall be covered and or protected to the maximum extent practicable. Best Management Practices may be required to ensure that trash is contained and disposed of appropriately. Liquids shall be placed in secondary containment and covered prior to a rain event. Pet waste shall be collected and placed in trash cans.

8. Approval by the San Diego County Department of Environmental Health, Food, and Housing Divsion, shal be obtained prior to the sale of any food itmes. Evidence of such approval shall be available for inspection at the event.

OWNER CERTIFICATION

I, _____, certify that I am the owner of the property described herein. Further, I agree to permit the proposed activity to be conducted on said property for the length of time specified herein.

SIGNATURE_____ DATE _____

APPLICANT CERTIFICATION

I, _____, certify that I am the applicant for the activity described herein. Further, I acknowledge the filing of this permit application, certify that all of the information contained herein is true and accurate, and shall comply with the conditions of approval stated herein above.

Notes

L = Likely, PO = Possible, UL= Unlikely

* Discharge of heavy metals and oil and grease is possible if the facility has on-site parking

** Sediment and oxygen demanding substances are possible pollutants for earthen or natural conveyances. Bacteria, but generally not viruses and other pathogens, may regrow in MS4s under certain conditions. While other pollutants may be discharged from the MS4, the MS4 itself is not a direct source of those pollutants.

*** The sanitary sewer system is only a potential source of pollutants in the event of sewer line breaks or SSOs.

This table is based on the field experience of D-MAX Engineering and on tables in the Copermittees' Baseline LTEA.

Standard Industrial Classification (SIC):
Assigned SIC Code(s): _____ _____
Revised SIC Code(s): _____ _____

CA Statewide General Industrial Permit Compliance:

☐ **Mandatory**
- Notice of Intent (NOI) Filed? ☐ Yes ☐ No
- WDID#_____
- SWPPP or BMP Plan maintained? ☐ Yes ☐ No
- Monitoring programs conducted? ☐ Yes ☐ No

☐ **Conditional**
- Exterior exposure present? ☐ Yes* ☐ No
- * If yes, see mandatory requirements
- Notice of Non-Applicability (NONA/NEC) Filed? ☐ Yes ☐ No

☐ **N/A**

Threat to Water Quality (TTWQ):

☐ High ☐ Medium ☐ Low ☐ Unassigned Revised TTWQ: _____

Hydrologic Area _____ Nearest Water Body: _____

Distance to water bodies: ☐ < 200 ft. ☐ > 200 ft

Sensitivity of receiving waters: ☐ Sensitive (ESA, 303(d), or other) ☐ Non-sensitive

Size of facility: ☐ < 5 ac. ☐ > 5 ac. < 10 ac. ☐ > 10 ac.

Significant amount of exposed outdoor storage and/or activities? ☐ Yes ☐ No

Discharge points along perimeter: _____

General BMPs ☐ Yes ☐ No ☐ Not Applicable

- ☐ Litter
- ☐ Sediment & vegetative debris present
- ☐ Discharge locations blocked
- ☐ Downspouts directed into pollutants
- ☐ Improper exterior storage
- ☐ Wash water not captured or inappropriately disposed
- ☐ Evidence of illicit connections/illegal discharges
  - ☐ Appropriate authorities to be notified
- ☐ Other potential storm water pollution issues or concerns -see below

Comments/Recommended Corrective Action:

Landscaping ☐ Yes ☐ No ☐ Not Applicable

- ☐ Erosion control lacking
- ☐ Over-watering evident
- ☐ Stockpile inappropriately stored
- ☐ Fertilizer or pesticide inappropriately used

Comments/Recommended Corrective Action:

Materials & Waste ☐ Yes ☐ No ☐ Not Applicable

- ☐ Dumpster lids open
- ☐ Trash/recycling containers inadequate
- ☐ Litter & debris present in trash/recycling area
- ☐ Trash/recycling containers overflowing
- ☐ Secondary containment missing
- ☐ Spill response kit missing
- ☐ Secondary containment full or in disrepair
- ☐ Spills/ debris present in loading areas

Comments/Recommended Corrective Action:

- ☐ Please keep dumpster lids closed

Equipment & Vehicles ☐ Yes ☐ No ☐ Not Applicable

- ☐ Significant spills/leaks present
- ☐ Heavy equipment/vehicles storage exposed
- ☐ Vehicle maintenance activities conducted in exposed area
- ☐ Vehicle-fueling areas exposed
- ☐ Vehicle washing performed in an exposed area

Comments/Recommended Corrective Action:

Food Establishments ☐ Yes ☐ No ☐ Not Applicable

- ☐ Grease trap/interceptor improperly maintained
- ☐ Improper grease bin storage
- ☐ Improper oil disposal
- ☐ Improper wash water disposal
- ☐ Power washing without capturing wash water
- ☐ Improper floor mat cleaning

Comments/Recommended Corrective Action:

SWPPP Review ☐ Yes ☐ No ☐ Not Applicable

- ☐ Monitoring not conducted
- ☐ Monitoring results show ineffective BMPs

Comments/Recommended Corrective Action:

INDUSTRIAL AND COMMERCIAL EDUCATIONAL MATERIALS

What's the difference?

Sanitary Sewer vs. Storm Drain

The water that drains down a sink or toilet in a home or business flows to the sanitary sewer and is treated by the City of San Diego at a wastewater treatment plant.

The storm drain system, on the other hand, is designed to carry rainwater from City streets and driveways to prevent flooding. This water does not receive any treatment. It flows directly to creeks and rivers – terminating at the Pacific Ocean!

Unfortunately, as rainfall flows over the ground it picks up debris and pollutants and deposits them into our watersheds.

ONLY RAIN DOWN THE STORM DRAIN

Urban storm water runoff is the **largest contributor** to **watershed pollution** in San Diego County.

Your business is **required** to prevent urban runoff pollution by implementing **B**est **M**anagement **P**ractices (**BMPs**).

The City conducts inspections to ensure that BMPs are being used and water quality is protected.

Pollutants of Concern

As rainfall flows over the ground, it picks up a variety of pollutants and deposits them into our watersheds. The following pollutants are commonly transported in the storm drain system and have been found to degrade water quality.

- Sediments
- Fertilizers
- Metals
- Detergents
- Pesticides
- Organic Compounds (solvents)
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

The following **B**est **M**anagement **P**ractices (**BMPs**) are required to be used at all industrial and commercial businesses, where applicable, to reduce urban runoff pollution in our streams and waterways. To do your part in protecting our water quality, please implement the following BMPs, where applicable or noted by the City inspector.

General

- ❑ Regularly sweep around site, **do not use a hose.** Collect and dispose of debris in trash.
- ❑ Train all employees to consider urban runoff pollution before performing any outdoor activities.
- ❑ Never dispose of wash water to the storm drain system. Properly dispose of it in the sanitary sewer (sink or toilet).
- ❑ Report any illegal dumping into the storm drain system by calling (858) 668-4668 during business hours.

Landscaping

- ❑ Only irrigate during early morning or late evening to avoid evaporation.
- ❑ Aim sprinklers to avoid watering other areas.
- ❑ Time sprinklers to avoid over-watering and causing runoff.
- ❑ Minimize use of pesticides, herbicides, and fertilizer, which are harmful to animals downstream.
- ❑ Hand pull weeds instead of using herbicides.
- ❑ Do not use pesticides that eliminate beneficial insects (i.e., Integrated Pest Management).

Outdoor Material Storage

- ❑ Store all potential pollutants indoors or under a covered area not exposed to rain.
- ❑ Clean up all spills immediately using absorbent materials. Properly dispose of used absorbents.
- ❑ Keep lids on all outdoor storage containers.
- ❑ Label all material storage containers.
- ❑ Regularly sweep and clean all outdoor storage areas to remove any sediment (dirt) and debris.

Waste Management

- ❑ Keep the ground around all outdoor garbage and dumpster areas free of trash, sediment, and debris.
- ❑ Keep lids on dumpsters and trash cans whenever possible.
- ❑ Fix any leaks in garbage cans or dumpsters.
- ❑ Clean up all spills immediately.

Vehicle /Equipment Maintenance

- ❑ Perform all vehicle maintenance indoors when possible.
- ❑ Use drip-pans to collect fluids from leaky vehicles.
- ❑ Clean up spills immediately using absorbent materials. Properly dispose of used absorbents.

Vehicle /Equipment Washing

- ❑ Wash vehicles at a commercial car wash when possible. (Commercial car washes recycle water and drain to the sanitary sewer, not to the storm drain.)
- ❑ Wash vehicles over a pervious (absorbent) surface such as dirt, gravel, or grass to prevent runoff.
- ❑ Minimize the use of soaps and water while washing.
- ❑ Drain excess wash water to the sanitary sewer (sink or toilet), not to storm drains.

General Cleaning

- ❑ Perform washing over a pervious surface or where water drains to sanitary sewer.
- ❑ Minimize use of cleaning agents.
- ❑ Dispose of used wash water to sanitary sewer, not to storm drains.

Construction

- ❑ Minimize the amount of exposed soils to prevent erosion from wind or water.
- ❑ Cover construction material stockpiles with tarps or plastic liners to prevent sediment from blowing or washing away.
- ❑ Use gravel bags around site perimeter to capture any sediment (dirt) washed away in runoff.
- ❑ Protect nearby storm drains with gravel bags.
- ❑ Regularly inspect and clean equipment, vehicles, and storage areas.
- ❑ Keep lids secured on all material storage containers.
- ❑ Store materials where not exposed to rain.

A Clean Environment is Important to All of Us!

In the City of Poway, storm drains flow directly into our creeks, lakes, and the ocean without treatment.

In recent years, sources of water pollution, like industrial wastes from factories have been greatly reduced. However, the majority of water pollution now occurs from things like cars leaking oil, wash water from restaurants, fertilizers from farms, lawns and gardens, failing septic tanks, residential car washing, and pet waste washing into the storm drains and into waterways and the ocean.

All these sources add up to a pollution problem! But each of us can do small things to help clean up our water too—and that adds up to a pollution solution!

The City of Poway is committed to improving water quality and reducing the amount of pollutants that enter our precious waterways.

A Word About "Biodegradable" Soaps

"Biodegradable" is a popular marketing term that can be misleading. Because a product is labeled as biodegradable doesn't mean that it is non-toxic. Some products are more toxic than others, but none are harmless to aquatic life. Soapy water entering the storm drain system can impact fish and other wildlife within hours.

ONLY RAIN DOWN THE STORM DRAIN!

This brochure is one of a series of pamphlets describing storm drain protection measures, which are available at the Development Services Department at City Hall, or online at www.ci.poway.ca.us.

Other pamphlets include:

- **Home Repair and Remodeling BMPs**
- **Restaurant BMPs**
- **Concrete & Mortar Project BMPs**
- **Horses & Livestock BMPs**
- **Mobile Auto Detailing BMPs**

Best Management Practices for POWER WASHING

Mobile and Surface Cleaning

What is Power Washing?

Power washing is any activity that uses a water pressure system, including steam cleaning, to clean vehicles, equipment, sidewalks, buildings, dumpsters, or other impervious surfaces. In addition to water, detergents, degreasers and other products may be used in commercial power washing.

What's the Problem with Power Washing?

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. **Wash water from power washing activities may contain significant quantities of oil, grease, chemicals, dirt, and detergents that could end up in our creeks, rivers, lakes, and the ocean.** Disposing of these materials into storm drains causes serious ecological problems—and is PROHIBITED by law.

Best Management Practices

Best Management Practices, or BMP's, are procedures that help to prevent pollutants from entering our storm drains. Each of us can do our part to keep storm water clean. Using BMP's adds up to a pollution solution!

Use Dry Clean-up Methods

- Instead of pressure washing, determine what alternative dry methods are available.
- Use mops, brooms, rags or wire brushes to clean pavement, buildings, and equipment as much as possible.
- Use vacuums or other machines to remove and collect loose debris before applying water.

Location, Location, Location!

- Prior to a washing, block all storm drains with an impervious barrier such as gravel bags or berms, or seal private storm drains with plugs or rubber mats. Make sure this practice does not flood the area or adversely affect vehicle or pedestrian traffic.
- **Never dispose of wash water into the street, storm drains, landscape drains, drainage ditches, or streams.**
- Wash vehicles and equipment on grassy or gravel areas so that the wash water can seep into the ground.
- **Create** a containment area with berms and tarps or take advantage of low ground to keep wash water contained.
- **Check** that the wash water is not leaking through and add more berms or barriers to contain the wash water.

Just Enough for the Job!

- Minimize water use by using high pressure, low volume nozzles.
- Use the minimal amount and least toxic detergents and degreasers you will need to complete the job. Try phosphate free detergents.
- Use a mop or rags to clean heavily soiled areas before power washing.

Only Rain Down the Storm Drain!

- Do not wash equipment or vehicles outdoors on saturated ground or on days when rain is probable.
- Pump or vacuum up <u>all</u> wash water in the contained area.
- With property owners permission, pump or pour the wash water to landscaped areas that will not run off to a storm drain; or drain it to the sanitary sewer through an interior building drain, sink, or private sewer clean-out. Discharges to the sewer **<u>should not</u>** contain hazardous materials, grease, grit, or any material that could clog piping.
- Sediments and other solids remaining on the ground should be swept or vacuumed up immediately so they don't wash into the storm drain system.

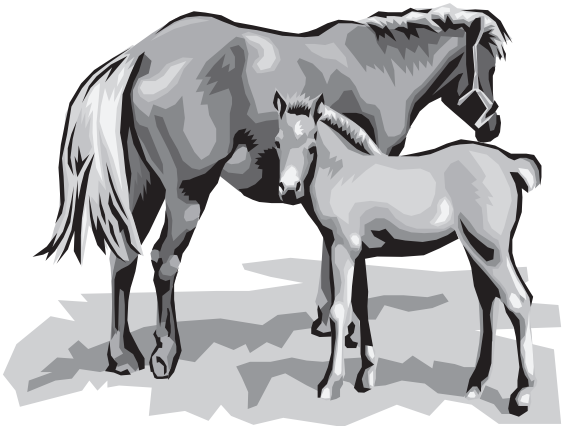
The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for Horses & Livestock



Storm Water and Horses & Livestock

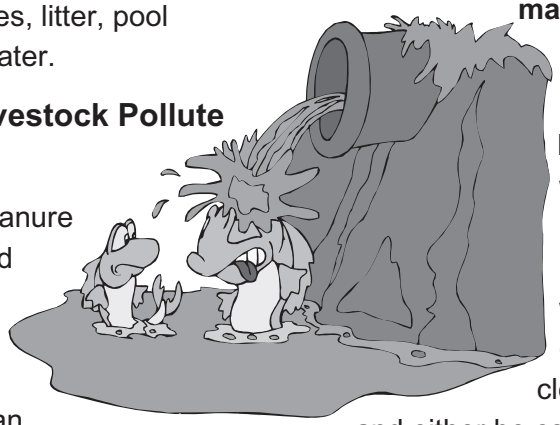
What is Stormwater Pollution?

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. However, this water is not filtered or treated and all the contaminants it contains eventually flow to our streams, lakes, and ocean where we swim and fish.

Once there, polluted runoff can harm wildlife and habitats. Horses and livestock wastes are among the many common storm water pollutants that can degrade water quality. Other examples include paint, oil and automotive fluids, construction debris, pesticides, litter, pool chemicals, and dirty wash water.

How do Horses and Livestock Pollute Stormwater?

During rainfall, uncovered manure and sediment can be washed from barns, pastures, and stables. These wastes end up flowing directly into streams, lakes, and the ocean where they can harm human health and the environment.



Stormwater runoff has been found to contain high concentrations of pathogens such as bacteria, parasites, and viruses.

When they wash into our recreational waters they can make people sick with sore throats, intestinal problems, rashes, nausea, and eye and ear infections.

Manure also contains nutrients, such as phosphorus and nitrogen, that fertilize aquatic algae. When these nutrients are too abundant they cause algae to grow very rapidly, and as a result, deplete oxygen in the water which kills fish and plant life.

Sediment is also harmful to our waters. In addition to causing flooding, sediment washed from pastures and livestock facilities can also harm aquatic life by clogging the gills of fish, blocking light transmission, lowering water temperatures, and preventing the production of oxygen by plants.

Poway Municipal Code section 13.09.080G has specific requirements for the management of manure and pet maintenance:

1. Manure deposited by horses and large animals within an enclosure or on uncovered areas, from which runoff could enter receiving waters or the storm water conveyance systems, must be cleaned up at least once weekly and either be composted, or be stored prior to disposal in a manner that prevents contact with runoff to receiving waters or the storm water conveyance system.
2. Areas used for composting such manure must be located, configured or managed to prevent runoff to receiving waters or the storm water conveyance system.
3. Pet waste shall not be disposed to the storm water conveyance system or receiving waters.

Best Management Practices

- Put barns, corrals, and fences in areas that drain away from creeks or streams or other storm drain conveyance systems.
- Keep livestock away from wet fields when possible. During rain events, cover manure stockpiles with a tarp or visqueen to reduce pollutant runoff.
- Cover dirt areas with loose hay or plant fast-growing grasses to shield and bind the soil to prevent erosion.
- Collect soiled bedding and manure from stalls and paddocks daily, and store them in sturdy, insect-resistant, and seepage free units.
- When grooming animals, use less toxic alternatives.
- If you must use pesticides, always read the label and use the products as directed.

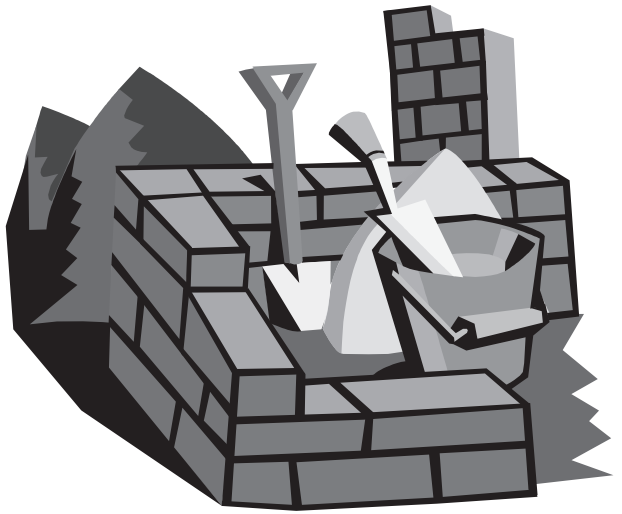
The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for Concrete and Mortar Projects



Pollution Prevention is up to YOU!

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. Untreated pollutants such as concrete and mortar flow directly into creeks, rivers, lakes, and the ocean and are toxic to fish and other wildlife. Disposing of these materials into storm drains causes serious ecological problems—and is PROHIBITED by law.

Do the Job Right!

This brochure was designed for do-it-yourself remodelers, masons and bricklayers, contractors, and anyone else who uses concrete or mortar to complete a construction project. Keep storm water protection in mind whenever you, or people you hire, work on your house or property.

Best Management Practices

Best Management Practices, or BMPs, are procedures and practices that help to prevent pollutants such as chemicals, concrete, mortar, pesticides, waste, paint, and other hazardous materials from entering our storm drains. All these sources add up to a pollution problem.

But each of us can do our part to keep storm water clean. These efforts add up to a pollution solution!

What YOU Can Do:

- **Always** store both dry and wet materials under cover, protected from rainfall and runoff and away from storm drains or waterways.
- **Keep all construction debris away from the street, gutter and storm drains.**
- **Never dispose of washout into the street, storm drains, landscape drains, drainage ditches, or streams.**
- Look for and clean up material that may have traveled away from your property after each days work.
- If you or your contractor keep a dumpster at your site, be sure it is securely covered with a lid or tarp when not in use.
- **Don't** mix up more fresh concrete or mortar than you will need for a project.
- Set up and operate small mixers on tarps or heavy plastic drop cloths.
- **Protect** applications of fresh concrete and mortar from rainfall and runoff until the material has dried.
- **Protect** dry materials from wind. Secure bags of concrete mix and mortar after they are open. **Don't allow dry products to blow into driveways, sidewalks, streets, gutters, or storm drains.**
- Empty mixing containers and wash out chutes onto dirt or other landscaped areas that do not flow to streets, drains or waterways, or allow material to dry and dispose of properly.
- **Never wash excess material from bricklaying, patio, driveway or sidewalk construction into a street or storm drain.**
- Sweep up and dispose of small amounts of excess dry concrete, grout, and mortar in the trash.
- Wash concrete or brick areas only when the wash water can flow onto a dirt area without further runoff or drain onto a surface which has been bermed so that the water and solids can be pumped off or vacuumed up for proper disposal.
- **Don't** place fill material, soil or compost piles on the sidewalk or street.
- During cleanup, check the street and gutters for sediment, refuse, or debris. Look around the corner or down the street and clean up any materials that may have already traveled away from your property.

Who Can You Contact?

For more information, please call (858) 668-4636

Report Illegal Dumping to:
Poway Code Compliance (during business hours, 8 a.m. to 5 p.m.) at (858) 668-4663 or (858) 668-4664, press "0" for immediate assistance
Or
Poway Sheriff's Station (after 5 p.m.) at (858) 513-2800

A Clean Environment is Important to All of Us!

In the City of Poway, storm drains flow directly into our creeks, lakes, and the ocean without treatment.

In recent years, sources of water pollution, like industrial wastes from factories have been greatly reduced. However, the majority of water pollution now occurs from things like cars leaking oil, wash water from restaurants, fertilizers from farms, lawns and gardens, failing septic tanks, residential car washing, and pet waste washing into the storm drains and into waterways and the ocean.

All these sources add up to a pollution problem! But each of us can do small things to help clean up our water too—and that adds up to a pollution solution!

The City of Poway is committed to improving water quality and reducing the amount of pollutants that enter our precious waterways to protect our water quality for future generations.

A Word About "Biodegradable" Soaps

"Biodegradable" is a popular marketing term that can be misleading. Because a product is labeled as biodegradable doesn't mean that it is non-toxic. Some products are more toxic than others, but none are harmless to aquatic life. Soapy water entering the storm drain system can impact fish and other wildlife within hours.

ONLY RAIN DOWN THE STORM DRAIN!

This brochure is one of a series of pamphlets describing storm drain protection measures, which are available at the Development Services Department at City Hall, or online at http://www.ci.poway.ca.us/env/env_issues.html

Other pamphlets include:

- **Home Repair and Remodeling BMPs**
- **Concrete and Mortar Projects BMPs**
- **Restaurant BMPs**
- **Power Washing BMPs**
- **Horses & Livestock BMPs**

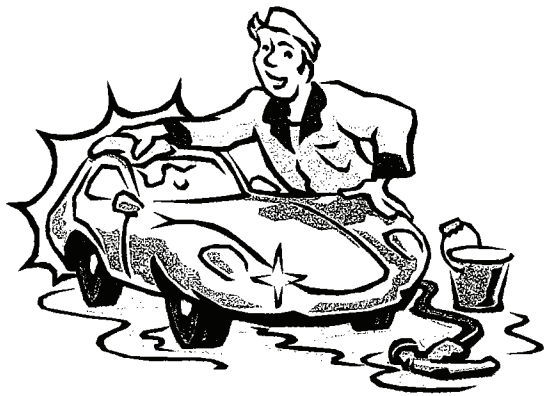
The City of Poway Preventing Urban Runoff Pollution

Best Management Practices for Mobile Auto Detailing



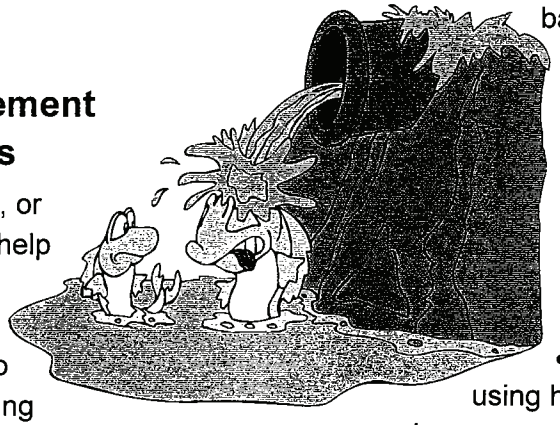
Mobile Detailing Procedures

What's the Problem with Mobile Detailing?

Did you know that storm drains are NOT connected to sanitary sewer systems or treatment plants? The primary purpose of storm drains is to carry rainwater away from developed areas to prevent flooding. **Wash water from mobile detailing activities may contain significant quantities of oil, residues from exhaust fumes, brake dust, grease, and other chemicals that could end up in our creeks, rivers, lakes, and the ocean.** Disposing of these materials into storm drains causes serious ecological problems—and is PROHIBITED by law.

Best Management Practices

Best Management Practices, or BMP's, are procedures that help to prevent pollutants from entering our storm drains. Each of us can do our part to keep storm water clean. Using BMP's adds up to a pollution solution!



Location, Location, Location!

- Prior to a washing, block all storm drains with an impervious barrier such as gravel bags or berms, or seal private storm drains with plugs or rubber mats. Make sure this practice does not flood the area or adversely affect vehicle or pedestrian traffic.
- **Never dispose of wash water into the street, storm drains, landscape drains, drainage ditches, or streams.**
- Select a site and wash vehicles on grassy or gravel areas so the wash water can filter through the vegetation and/or soil.
- **Create** a containment area with berms and tarps or take advantage of low ground to keep wash water contained so that it can evaporate.
- **Check** that the wash water is not leaking through gravel bags or other containment measure, and if necessary add more berms or barriers to keep the wash water contained.

Just Enough for the Job!

- Minimize water use by using high pressure, low volume nozzles.
- Use the minimal amount and least toxic detergents you will need to complete the job. Try phosphate free detergents. The safest products for the environment are vegetable-based or citrus-based soaps.

Only Rain Down the Storm Drain!

- Do not wash vehicles outdoors on saturated ground or on days when rain is probable.
- Pump or vacuum up <u>all</u> wash water in the contained area.

Pollution Prevention is up to you!

- With property owners permission, pump or pour the wash water to landscaped areas that will not run off to a storm drain; or drain it to the sanitary sewer through an interior building drain, sink, or private sewer clean-out. Discharges to the sewer **<u>should not</u>** contain hazardous materials, grease, grit, or any material that could clog piping.
- Sediments and other solids remaining on the ground should be swept or vacuumed up immediately so they don't wash into the storm drain system during the next rain.
- Shake car mats into a trash can or vacuum them. Do not shake dirt from car mats directly to the ground.
- Don't forget to properly dispose of any used gravel bags!

Who Can You Contact?

For more information, please call (858) 668-4636
Report Illegal Dumping to:
Poway Code Compliance (during business hours, 8 a.m. to 5 p.m.) at (858) 668-4663 or (858) 668-4664, press "0" for immediate assistance
Or
Poway Sheriff's Station (after 5 p.m.) at (858) 513-2800

Dispose of Fat, Oil, and Grease Properly

One of the most important sources of water pollution is sewer spills caused by fat, oil, and grease (FOG) blocking the pipes. These spills damage the environment and can create property damage and health hazards leading to expensive repairs, health code violations, or restaurant closure.

The City has created the FOG Program, which works with local food establishments by providing information and inspections to help you avoid the negative impacts of sewer spills. The FOG Program can:

- Issue your Food Establishment Wastewater Discharge (FEWD) Permit (this free permit is required for all food establishments)
- Show you Best Management Practices for handling FOG
- Evaluate your grease traps, interceptors, and other facilities so you can be sure they are adequate

To obtain your FEWD Permit or receive additional information on the FOG Program, please call the City of Poway Wastewater Division at (858) 668-4719.

ONLY RAIN DOWN THE STORM DRAIN

Remember, storm drains are NOT connected to sanitary sewer systems and treatment plants. Anything that goes into the storm drains flows directly into our creeks, rivers, and ocean without any filtering or treatment. Please do your part to help keep our water clean by using Best Management Practices and making sure that nothing but rain goes down the storm drain.

Best Management Practices for RESTAURANTS

A Clean Environment is Important to All of Us!

Best Management Practices

Restaurants contribute to storm water pollution through improper cleaning practices that allow food particles, oil, grease, trash, and cleaning products to flow into the street, gutter, or storm drain. These discharges pollute our creeks, rivers, and ocean and are **PROHIBITED BY LAW**. Below are recommended Best Management Practices (BMPs) for restaurants.

- **NEVER** pour wash water outside or into a street, gutter, or storm drain.
- **NEVER** pour grease or oil into a sink, floor drain, storm drain, or dumpster.
- Sweep, mop, or vacuum instead of using a hose to clean outdoor areas.
- **Always** clean equipment including floor mats, grease filters, grills, and garbage cans indoors or in a covered outdoor wash area that is plumbed to the sanitary sewer.
- Clean equipment in a mop sink if possible (never in a food preparation sink).

- If your restaurant does not have a mop sink, dedicate an indoor cleaning area where there is a drain that is plumbed to the sanitary sewer.
- Discharges to the sewer **must not** contain hazardous materials, grease, grit, or any material that could clog piping.
- All wastewater containing oil and grease must be disposed of in a grease trap or interceptor. Concentrated waste oil and grease must be collected in a grease bin and disposed of by a certified waste grease hauler.
- Major cleaning of exterior surfaces must include capturing wash water and disposing it in the sanitary sewer in compliance with local regulations.
- **Wash water must not be allowed to enter the street gutter or storm drain**.
- All mop water from cleaning floors must be disposed of indoors in a mop sink, toilet, or other drain that is plumbed to the sanitary sewer.
- **Dry sweep pavement** areas, including "drive-through" areas, parking lots, outdoor eating areas, and dumpster or grease bin areas frequently. If you must use water for cleaning, use a mop and bucket and dispose of wash water in a mop sink or floor drain that is plumbed to the sanitary sewer.

Sweep, mop or vacuum instead of using a hose to clean outdoor areas.

- Use dry methods for spill cleanup. Rags or absorbents can be used to pick up liquids or grease. Sweep up the absorbent, seal it in a plastic bag, and dispose of it in the trash.
- Keep outside areas free of trash and debris. Clean outdoor eating areas frequently using dry cleaning methods such as sweeping or vacuuming.
- **Never** wash down dumpsters or grease bins with a hose. Check dumpsters regularly for leaks. If a dumpster or tallow bin must be cleaned or repaired, contact the leasing company.

MOBILE BUSINESS BMP NOTIFICATION

HIGGINSON, Mayor
JIM CUNNINGHAM, Deputy Mayor
MERRILEE BOYACK, Councilmember
DAVE GROSCH, Councilmember
JOHN MULLIN, Councilmember

CITY OF POWAY

Subject: **Stormwater Pollution Prevention Requirements for Your Mobile Business**

Dear Business Owner/Operator,

As part of local water quality regulations, municipalities in the San Diego region are required to work with businesses conducting mobile operations to prevent stormwater pollution. Best Management Practices, commonly referred to as "BMPs", are operational efforts consisting of housekeeping practices, spill control and prevention, and proper use and storage of materials that are designed to reduce the environmental impact from certain activities. Using BMPs will help prevent pollution from your business. Proper implementation and maintenance of BMPs are critical to their effectiveness.

You have been identified as a mobile businesses operating in the Poway region. Your business is required to implement the following regional BMPs during your business operations to prevent pollution.

- Perform Stormwater Training of Staff
- Contain and Clean Up Spills (Have Spill Kits Available)
- Properly Handle All Waste (Solid, Liquid, and Hazardous)
- Protect Stormwater Conveyance System (Including Streets, Gutters, and Alleys)
- Provide Proper Handling and Containment of Materials
- Provide an Equipment Washout Area if Applicable

The enclosed document provides details on how to properly implement each of the required BMPs. Additional details about BMPs for mobile businesses are available on the "Project Clean Water Toolbox" website at http://www.projectcleanwater.org/bmp/. Please evaluate and revise your practices as necessary to ensure that you do your part in preventing stormwater pollution.

Should you have any questions and or concerns, please feel free to contact me at (858) 668-4653.

Sincerely,

Malik Tamimi
Stormwater Program Administrator

Enclosure: Required Minimum BMPs for Mobile Businesses

City Hall Located at 13325 Civic Center Drive
Mailing Address: P.O. Box 789, Poway, California 92074-0789
www.poway.org

Required Minimum BMPs For Mobile Businesses

1) Perform Stormwater Training of Staff:

Proper training is required to prevent the discharge of pollutants into the stormwater conveyance system. Train all workers to properly identify, transport, and manage materials to prevent a discharge to the stormwater conveyance system. Train all employees on discharge prohibitions, stormwater best management practices (BMPs), pollution prevention, and methods to control, contain, and clean up spills.

2) Contain and Clean Up Spills (Have Spill Kits Available):

Keep written spill procedures and cleanup materials in each vehicle. Spill kits must be appropriate for materials used in the business activities. In the event of a spill, immediately contain the spill on site. Use appropriate equipment and/or materials to clean up the spill. Immediately report any spill that cannot be completely contained to the jurisdiction where the spill occurred. Sweep up the material and dispose of it properly. If the spill is hazardous, contact the appropriate reporting agency and take appropriate clean-up and disposal actions.

3) Properly Handle All Waste (Solid, Liquid, and Hazardous):

Before starting a job consider the weather conditions and determine how to dispose of all waste. Properly remove all waste from the worksite or place in proper waste containers with lids. Never pour liquids into trashcans, dumpsters or storm drains. Liquid non-hazardous waste may be disposed of into the sanitary sewer, if appropriate, or placed in sealed containers, removed from the worksite and disposed of properly. Inspect and label all hazardous waste containers prior to removal. For details on the management and disposal of specific chemical waste contact the County Hazardous Materials Division at (619) 338-2231.

4) Protect Stormwater Conveyance System (Including Streets, Gutters, and Alleys):

The stormwater conveyance system is a direct connection to creeks, rivers, bays, and the ocean. At the work site, locate the probable pollutant discharge points and install appropriate materials to contain the pollutants. Capture and remove pollutants from your activity as close to the work area as possible. Properly dispose of any collected liquid waste. Check with your local jurisdiction to determine if permits are required prior to disposing of liquid wastes into the sanitary sewer system (mop sink, toilet, etc.) or whether they can be directed to landscaped areas that will not run off into the stormwater conveyance system.

5) Provide Proper Handling and Containment of Materials:

To prevent spills or discharges, all materials must be properly contained during use and transport. Provide secondary containment, to the maximum extent practicable, for all liquids in the event of spills, punctures, or leaks during use and transport. Store materials and equipment securely in the vehicle to prevent loss. Provide leak-proof lids for liquids and cover all materials and waste while not in use and during transport. Maintain a materials inventory and material safety data sheet (MSDS) if hazardous materials are being used or transported. Inspect and label all chemical containers.

6) Provide Equipment Washout Area if Applicable:

Equipment washout areas should be located away from any storm drain inlets or open drainage facilities. The washout area can be a container, a berm, or a liner to collect and contain liquids and prevent runoff. Remove washout waste from the job site and dispose of properly.

For additional details on mobile business best management practices consult:

- Project Clean Water Tool Box at **www.projectcleanwater.org/bmp**
- California Storm Water BMP Handbook at **www.cabmphandbooks.com**

These practices represent the minimum requirements. Contact the local jurisdiction where the job is located, as there may be more stringent requirements.

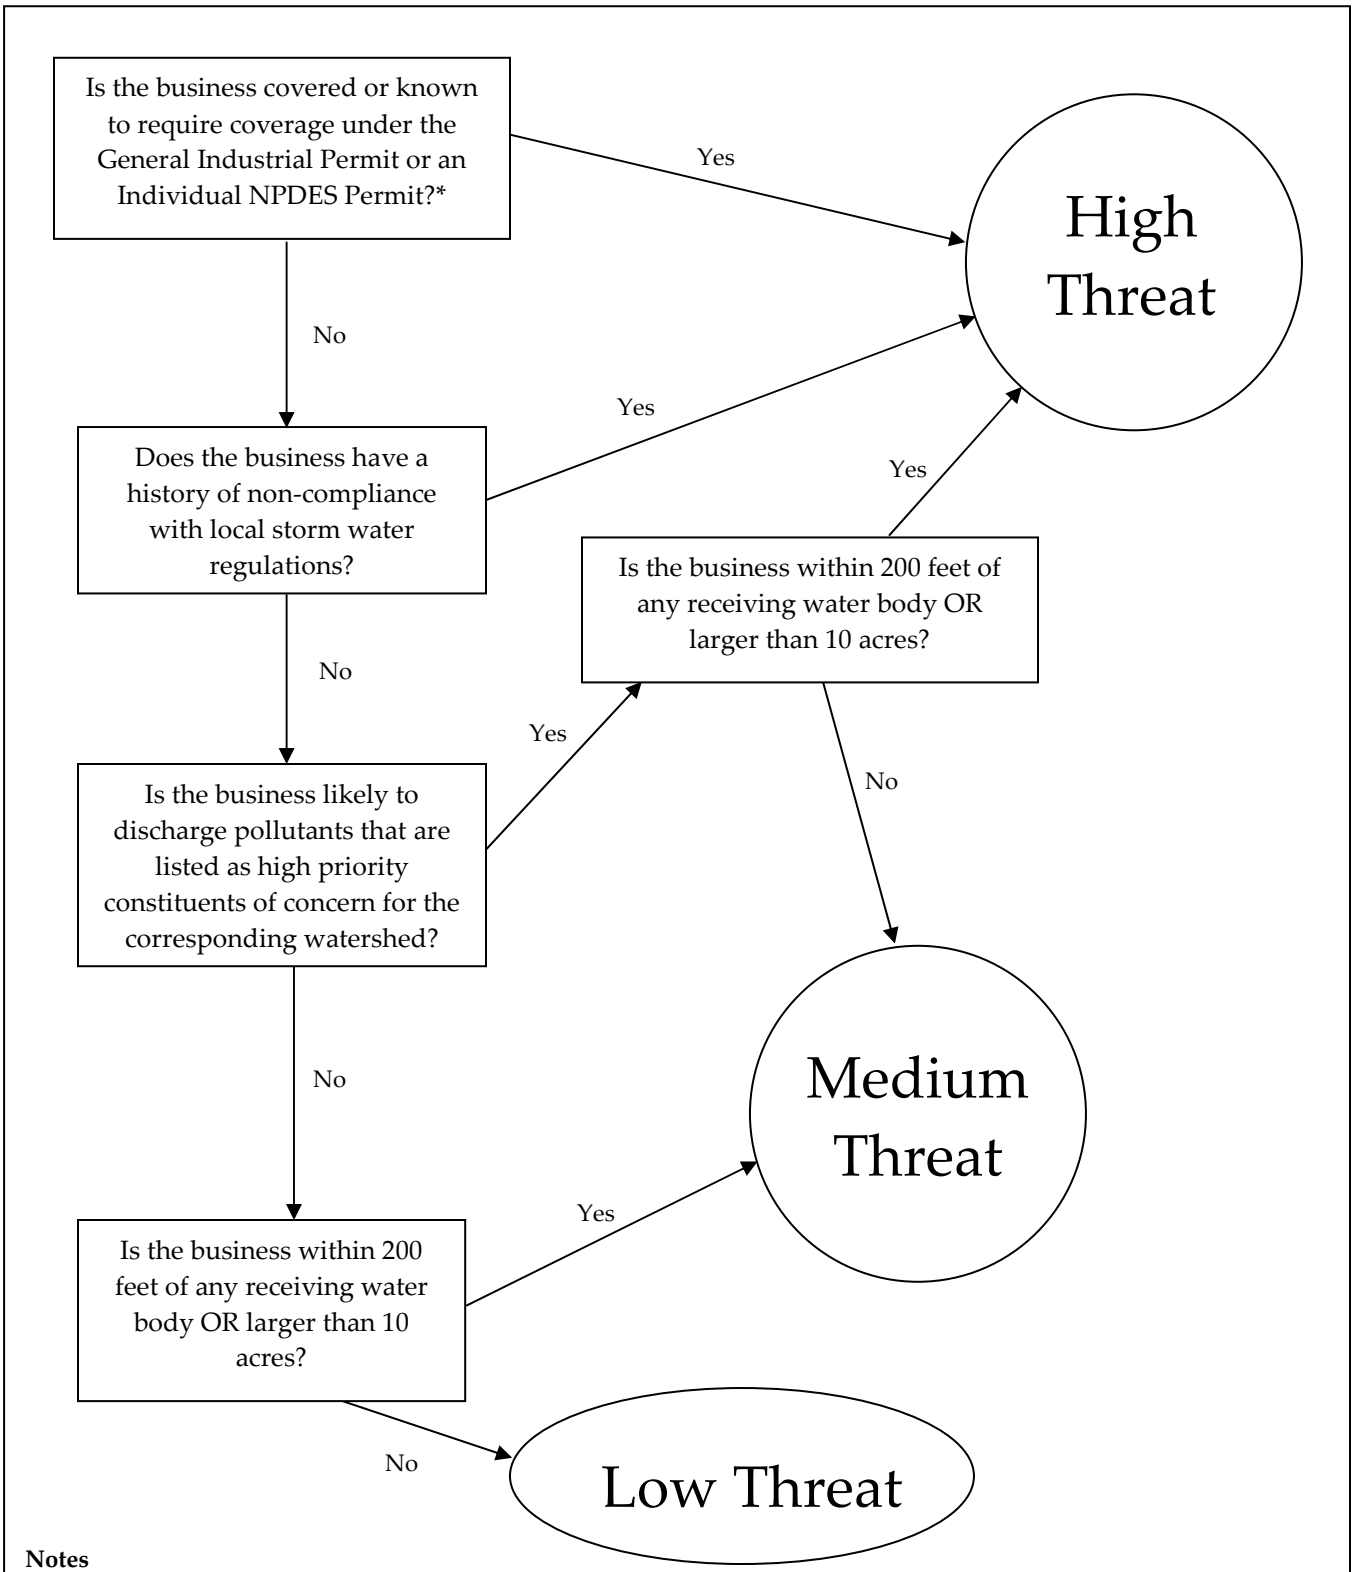
TTWQ PRIORITIZATION PROCESS FOR INDUSTRIAL AND COMMERCIAL SOURCES

Figure 7-1
TTWQ Prioritization Process for Industrial and Commercial Sources



Notes

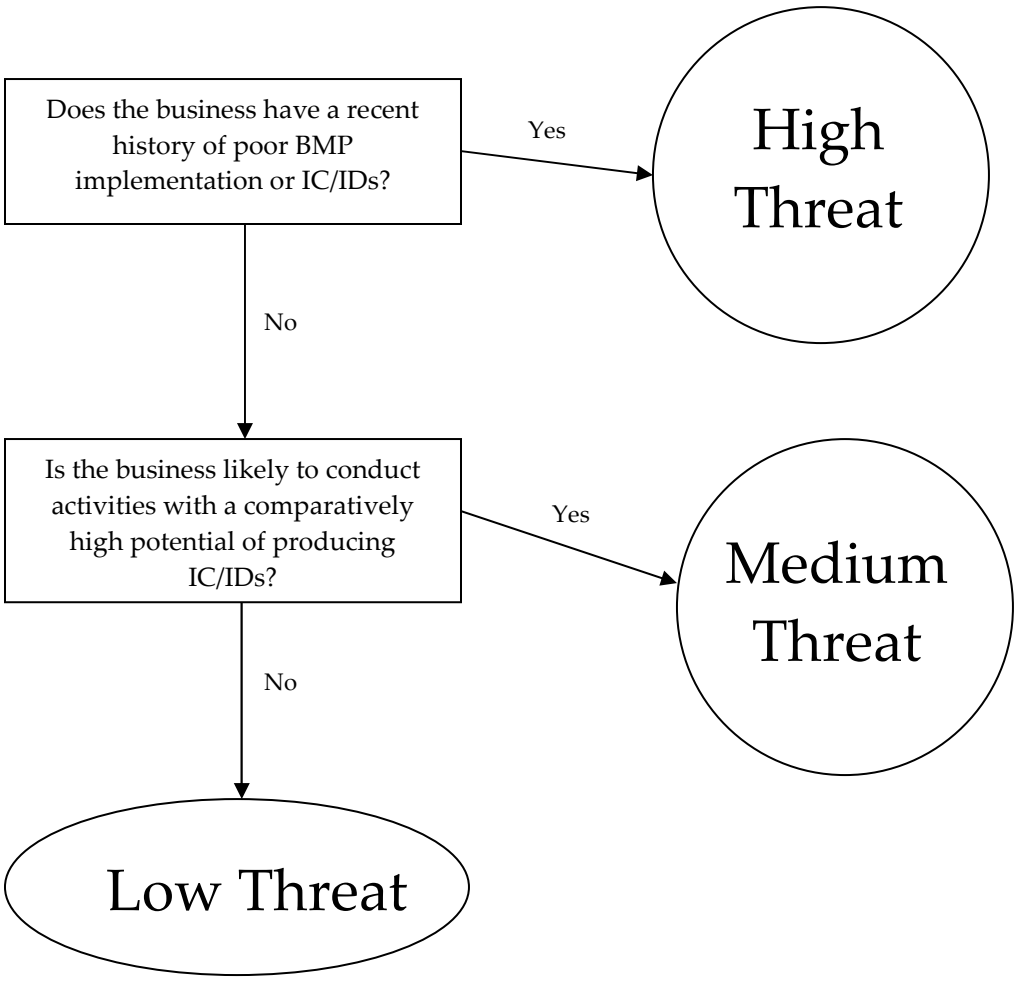
*If the facility is either unconditionally subject to the General Industrial Permit (Order No. 97-03-DWQ), or conditionally subject to the General Industrial Permit and not eligible for NONA/NEC certification.

The City reserves the right to assign higher TTWQ ratings than those dictated by this flow chart if deemed appropriate based on field observations during inspections or other investigations.

Figure 7-1
TTWQ Prioritization Process for Industrial and Commercial Sources

#	Criterion	Description
1	Is the business covered or known to require coverage under the General Industrial Permit or an Individual NPDES Permit?*	If the facility has existing coverage under the General Industrial Permit (Order No. 97-03-DWQ) or an individual NPDES Permit or if the facility does not have coverage but is either unconditionally subject to the General Industrial Permit or conditionally subject to the General Industrial Permit and not eligible for NONA/NEC certification.
2	Does the business have a history of non-compliance with local storm water regulations?	Based on results from the last inspection at the business: businesses that were marked as needed a follow-up inspection.
3	Is the business larger than 10 acres?	If site area is greater than 10 acres.
4	Is the business within 200 feet of any receiving water body?	If the site is within 200 feet of a receiving water body. Only major streams (Poway Creek, Rattlesnake Creek, Pomerado, Green Valley, Sycamore, etc.) were considered, not the unnamed tributaries. When distance to the water body is determined by GIS analysis based off geocoding based on street segments (which places the address point on the street), businesses with a GIS-measured distance of less than 500 feet were considered to be less than 200 feet to be conservative. This is because it is possible for a stream to pass behind a business such that the business parcel is less than 200 feet from the stream, but the geocoded point in the street in front of the business is more than 200 feet away from the stream.
5	Is the business likely to discharge pollutants that are listed as high priority constituents of concern for the corresponding watershed?	Pollutant discharge component: if inspected in the past, based on most recent PDP score; if not inspected before, based on PDP rating in the standard table of category based PDP ratings (Table 7-1 in JURMP). A site is considered likely to discharge a pollutant ("yes") if it has a Table 7-1 rating of "L" (likely). Note that businesses with an "L" for either oxygen-demanding substances or pH are considered to generated "gross pollutants." Pollutants of concern: • Peñasquitos Watershed: bacteria, sediment, and nutrients • San Dieguito Watershed: bacteria

FIGURE 7-2
TTWQ PRIORITIZATION PROCESS FOR MOBILE INDUSTRIAL AND COMMERCIAL SOURCES



Note: The City reserves the right to assign higher TTWQ ratings than those dictated by this flow chart if deemed appropriate based on field observations during inspections or other investigations.
IC/ID = Illicit Connection or Illegal Discharge

FIGURE 7-2

TTWQ PRIORITIZATION PROCESS FOR MOBILE INDUSTRIAL AND COMMERCIAL SOURCES

#	Criterion	Description
1	Does the business have a recent history of poor BMP implementation or IC/IDs?	Based on results from the last inspection at the business: any IC/ID recorded or a BMP score of 1 or 2.
2	Is the business likely to conduct activities with a comparatively high potential of producing IC/IDs?	Based on business category. Categories were marked as those with a comparatively high potential of producing IC/IDs based on best professional judgment. The categories are as follows: Vehicle Washing, Carpet/Furniture Cleaning, Cement Mixing/Cutting, Masonry, Painting/Coating, Pool/Fountain Cleaning, and Power Washing.

* The Municipal Permit lists a number of specific commercial categories. Other categories on this list were mainly created for industrial facilities, which the Municipal Permit mainly defines via a broad reference to the Code of Federal Regulations rather than listing specific categories. Some commercial categories not specifically listed in the Municipal Permit are also included.

** Heavy metals are a possible pollutant for any facility that has a parking lot.

This table is based on the field experience of D-MAX Engineering and on tables in the Copermittees' Baseline LTEA.

POWAY TODAY NEWSLETTERS

www.poway.org

POWAY Today

A Quarterly Municipal Newsletter for the Residents of Poway, California

Fall 2010

City Balances Budget

and Preserves Essential Community Services

On June 15, 2010 the City Council approved the fiscal year 2010-11 City of Poway and Poway Redevelopment Agency budgets. This year's budget, which can be viewed online at www.poway.org, has been reformatted for simplicity and ease of use for our residents.

The "Great Recession," a term economists now use to define this period in history, has had a profound effect on the City's financial outlook. Although the national economy is showing signs of recovery, unemployment remains high and sales tax revenues in Poway are projected to be relatively flat this year. In addition, the City's Redevelopment Agency (RDA) was forced to turn over $13.7 million to the State in May of this year. Taking this funding crippled our redevelopment efforts in the City of Poway.

In light of these challenges, the City has taken necessary steps over the last few years to strengthen the General Fund to adapt to what would be a slow economic recovery. With revenues from sales and property tax projected to be unchanged from last year, the City continues to adjust expenditures to better match revenue projections. This has forced Poway to take an even harder look at the way the City does business and how it provides services to its residents. The City must find a sustainable course.

A fundamental shift in the way the City provides service to its residents began on July 26, 2010, as all employees moved to a fixed compressed work week schedule with City Hall, Fire Administration, and Public Works closed every other Friday. Since 2006, City staffing has been reduced by nearly 15% through attrition and layoffs. This reduction in workforce has made it increasingly difficult to provide adequate service in many departments and work areas. As staffing has thinned, employees have moved to a variety of work schedules in an attempt to provide adequate coverage Monday through Friday.

To that end, the City is providing extended business hours Monday through Thursday, 7:30a.m. to 5:30p.m., to mitigate the alternate Friday closures. Additionally, it will increase efficiency by consolidating alternate schedules into one consistently staffed workforce.

General Fund Reserves Strong

The overall budget for the City of Poway is $76 million with General Fund expenditures of $32.1 million. Redevelopment and Housing composes $6.6 million of the overall budget. The utility funds are balanced for the upcoming fiscal year. The Street Maintenance Fund has been built over the past three years with transfers of unexpended funds to its current balance of $3 million. The City programmed $1.42 million from the fund this year, to offset the cost of our robust $3 million street maintenance program.

The City currently has $15.5 million in General Fund reserves and $3.1 million in the State Economic Uncertainty Fund. These reserves represent 58% of our FY 2010-11 General Fund operating expenditures and substantially exceed the 25% minimum called for in the City's Financial Policy.

Some have asked why the City has not yet tapped its significant financial reserves to fill in the budget gaps. There are a number of reasons behind its reluctance to recommend doing so. Reserve funds can only be used once and when they are spent, they are gone. Reserves are there to be used in times of emergencies and shock losses such as the Witch Creek Fire. Additionally, the reserves generate interest income that would also be lost if we spent them down.

The City of Poway will face many more challenges in the coming months, but considers itself well-prepared. To that end, some key goals for the City in the upcoming fiscal year include:

- **Continuing emphasis on strong financial planning;**
- **Advocating at the State and federal levels for protection of revenues, local control, and redevelopment capability;**
- **Initiating a comprehensive update to the General Plan;**
- **Remaining the safest community in San Diego County;**
- **Continuing to strengthen the City's Disaster Preparedness Systems;**
- **Developing workforce housing; and**
- **Strengthening organizational development, including improved integration of management systems and employee development initiatives.**

City Hall Begins New Extended Hours – Closed every other Friday

Effective July 26, 2010
City Hall business hours are:
7:30 a.m. - 5:30 p.m. Monday – Thursday
8:00 a.m. - 5:00 p.m. Fridays
Closed every other Friday

Offsite City facilities such as Lake Poway, the Performing Arts Center, Old Poway Park, and Community Park will not be affected by this change.Their hours of operation will remain the same.

www.poway.org/hours

November Election Update

Over the past several years, the State has passed budgets that have diverted or borrowed billions of dollars in local government, transportation and redevelopment funds. This year's take by the State will have significant short and long-term effects on local governments. The State's take of $2.05 billion in redevelopment funds throughout the State has effectively stalled one of the strongest job creating engines at a time when jobs and economic development are desperately needed.

This November, voters will be asked to decide among several important ballot initiatives that will be placed on California's 2010 statewide ballot. Among the group is Proposition 22, the Local Taxpayer, Public Safety and Transportation Protection Act. If passed, this constitutional amendment would prevent the State from diverting, borrowing or taking funds that are currently dedicated to local governments. Following are the implications of the constitutional amendment:

If the amendment passes –

- The State's ability to borrow local government property tax funds would be revoked (currently authorized by 2004 Prop 1A).
- The State would be prohibited from borrowing Prop. 42 funds (fuel tax) which voters have dedicated to transportation and mass transit.
- The State would be prohibited from taking or borrowing the Highway User Tax on gasoline (HUTA), which currently fund city, county and state road, highway, transit and other transportation improvements and services.

If the amendment fails –

- The State's current authority over fuel tax, local property tax revenues, and redevelopment funds would not be affected.
- To balance its budget, the State may continue to shift, borrow, or otherwise take local funds, consistent with the provisions of Prop 1A.

Prepared for Wildfire Season?

There are several resources available to help residents prepare against the risk of wildfire.

Poway's Department of Safety Services has comprehensive information available to assist in wildfire prevention, preparation, and planning. ***Before the Threat*** is a free DVD with supporting materials that is available at all three Poway Fire Stations.

The San Diego Burn Institute has an excellent publication titled Living with Wildfire that can be easily viewed and downloaded from the City's website at **www.poway.org.**

The City also has a Wildfire Defensible Space Program, which involves the reduction of flammable vegetation around structures. Providing for defensible space is an effective, efficient, proven, and practical action that everyone can take part in to reduce our wildfire risk. Contact the Wildfire Defensible Space Hotline for additional information at (858) 668-4611.

Recreational FIRES

What could be more enjoyable than sitting around a fire pit, keeping the chill of the evening at bay while enjoying the night sky? Many Powegians safely enjoy these "recreational fires" year round. However, improperly conducted recreational fires can increase a homeowner's and community's fire risk. Remember the Montecito fires in Santa Barbara County earlier this year? This is just one of the many examples of a recreational fire getting out of hand and causing great damage and personal suffering.

Outdoor recreational fires can be fun and safe when properly conducted. Take extra care and make sure the fires are completely out before retiring for the evening. Ultimately, the homeowner is legally and financially responsible for any fire that may result from recreational fire use.

Six things you should know:

1. Recreational fires are regulated by State and local fire codes.
2. Exterior wood- or gas-fired fireplaces constructed with masonry and/ or steel (not pits) with spark arrestors are permitted throughout the City.
3. All recreational fire pits located within the City's very high fire hazard area are required to be the gas-fired/ lava-rock type. Burning of ordinary wood products is not permitted in these areas due to the extra hazard that wood fires present. Residents can locate the very high fire hazard area map on the City's web site **www.poway.org** under the E-zoning section.
4. For those areas not located within the very high fire hazard area, recreational fire pits must not exceed three feet in diameter by two feet in height. Wood combustibles are permitted for burning and spark arrestors are required to limit ember production and large sparks. Burning of garbage or refuse is not permitted.
5. All recreational fires must have 25 feet of clearance from any structure or other combustible materials, and you must have an agent (garden hose, fire extinguisher) readily available for use at burning sites.
6. Recreational fires need adult supervision! An attendant of at least 18 years of age is required until the fire has been completely extinguished.

For more information, contact Kevin Kitch, Fire Marshal Phone: 858-668-4462

Captain's Corner

When Do You Yield the Right-of-Way to Emergency Vehicles?

It is a summer evening. You and your family are driving down the road. You realize that you can hear sirens over the clamor of happy voices and then you see red and blue lights approaching in the rearview mirror. The emergency vehicles are directly behind you and the sound of the siren is deafening. You know that you should pull to the right side of the road, but your destination is just ahead on the left. As you pull into the left-turn pocket to enter the parking lot, one of the emergency vehicles follows your vehicle. The deputy asks for your license, registration, and proof of insurance. You ask the deputy what you did wrong and he explains that the emergency vehicles were attempting to pass you when you turned left.

The deputy then asks you THE QUESTION: "What should you do when an emergency vehicle is behind you with emergency lights and siren?"

Stopping in the center median, turning left across traffic, or stopping in the middle of the traffic lane are extremely dangerous actions during the approach of emergency vehicles. These actions are also violations of the law. Whether the emergency vehicle is a fire truck, ambulance, or police car, as a driver you are required to pull to the right curb even when it may be inconvenient, interrupt your trip, or cause you to travel to the next intersection to return to your destination. It is far safer for you, your passengers, and emergency personnel if you pull to the right curb and allow emergency vehicles to pass safely.

The California Vehicle Code requires that all drivers immediately drive to the right-hand edge or curb of the road or highway as safely as possible when emergency vehicles are approaching.

Poway Days **Parade**

Mark your calendars for the 46th Annual Poway Days Heritage Parade on **Saturday, September 18 at 9:00 am.** The Poway Community Association (PCA) is pleased to announce this year's theme – "An Old-Fashioned Parade & Picnic." In response to requests for an after-parade event, PCA will host an old-fashioned picnic. The picnic will have lots of food and fun, and will be a fundraiser for Poway's non-profit organizations. ***Look for more information on the PCA website at www.powayca.org or call: (858) 395-9899.***

Want to prevent pollution?

Conserve Water

Overwatering lawns and landscaping doesn't just waste water and cost you money, it causes pollution of our creeks, lakes, and ocean. Remember, what goes into our storm drains and drainage ditches flows untreated into our creeks, lakes, and ocean.

Water that soaks into vegetated areas is filtered naturally by the plants' root systems and by the soil. But overspray, or excess water that runs off the landscaping into the gutters and street, can carry fertilizer, pesticides, and other pollutants into the storm drain system. It can also cause erosion, carrying dirt into storm drains and creeks where it can smother aquatic life, cut off light to underwater plants, block waterways, and cause flooding.

To help conserve water and prevent pollution, adjust your sprinkler system so that all the water stays on your landscaping where it belongs, and don't water more often than necessary.

If you see excess runoff, you can report it using the City's hotline at (858) 668-1215 or by using the automated reporting form on the City's website at **www.poway.org**.

Conserving water isn't just good for our water supply and your wallet, it's good for the environment. If you would like more information on preventing water pollution, please contact the Development Services Department at (858) 668-4668 or visit the City's website at **www.poway.org.**

Have you P.L.A.Y.ed today?

Come play with us!

Poway Leisure Assistance for Youth

Research shows that children who participate in recreational programming develop a lifelong appreciation for adventure, make healthy life choices, and develop good physical skills. In order to ensure that all children in our community have access to recreational opportunities, the City of Poway created the **P.L.A.Y. scholarship.** P.L.A.Y. stands for Poway Leisure Assistance for Youth. Qualified low-to-moderate income families can apply for a $40.00 scholarship towards a recreation or swim class. Families may apply once per season for each child. That is a potential savings of $160.00 per year, per child!

To be eligible, applicants must provide proof of residency in the City of Poway and show proof of income that falls within the U.S. Dept. of Housing and Urban Development guidelines. Scholarships are available for children ages 17 years and younger, and for developmentally disabled individuals of any age.

Starting in the fall of 2010, the application process has been streamlined to an annual assistance coupon that can be applied to four consecutive seasons. Income verification would only be required once a year. After the coupon has been issued, P.L.A.Y. participants will be able to register online! This means fewer trips to City Hall, saving Poway families time and money.

The annual application and proof of income must be submitted in person to City Hall, Community Services Department, located at 13325 Civic Center Drive. To learn more about P.L.A.Y. or to download an application, visit the City's website at www.poway.org/play. Applications can be obtained at City Hall. For more information, please contact us at (858) 668-4570.

For more information, visit www.poway.org/play

Affordable Housing & Quality of Life

How does Poway affordable housing impact our community? The City of Poway, along with Community HousingWorks, San Diego Interfaith Housing Foundation and Wakeland Housing Group, recently commissioned a University of California, San Diego research team to study the impacts of Poway affordable housing.

The study found that Poway affordable housing is high-quality housing that is well maintained, well managed, and strongly integrated into the community.

The research highlights that the overwhelming majority of affordable housing residents have close ties to Poway.

- Approximately 74% were born or raised in Poway or have family here.
- 53% lived elsewhere within Poway prior to moving into their current homes.
- 37% also work in Poway – a much higher rate than the City of Poway's average of 24%.

The results of the study show that affordable housing helps locals remain in town, close to loved ones. Affordable housing makes it possible for people to stay close to work, spending less time traveling and reducing commuter traffic.

Detailed study results and more information on Poway's affordable housing communities can be found at **www.powayhousingsolutions.org.**

FACES OF AFFORDABLE HOUSING

Alma Doogan

Along time Poway resident, Alma Doogan is able to remain in the City near her children and grandchildren thanks to the affordable housing opportunity provided by Brookview Village. Alma moved to this affordable senior community located on Pomerado Road three years ago. She enjoys the friendly people, the relaxed atmosphere, and the activities offered at the community building. Alma especially loves that Brookview Village is so close to shopping markets, her doctor's office, and her hair salon.

School Detectives

The Poway Sheriff's Station has two School Resource Detectives who are assigned to law enforcement duties at elementary, middle and high schools in the City. Detectives Warren Voth and Mike Farrell say the single largest problem they encounter is theft. Items stolen consist of cell phones, MP3 players, money and other miscellaneous items. In most cases, the valuables are taken from unattended backpacks. The detectives have been working with school staff, taking proactive measures to address the problem. In many cases, the deputies are able to make arrests. Meadowbrook Middle School has a higher than average number of thefts and now broadcasts a ten-minute television show to the students once a week in an attempt to combat this ongoing problem.

There has been some improvement in the area of controlled substance abuse throughout the schools in Poway. While drugs from marijuana to heroin are still found on campuses, the overall amounts are less than in 2009. One of the highest risk drugs for young people continues to be Oxycontin. Detectives Voth and Farrell have presented the "Oxycontin Epidemic" video, along with a question and answer period, to staff members at Twin Peaks Middle School, Abraxas and Poway High Schools. The staff members have been very receptive of the presentation, which always generates a great deal of interest.

In most cases, the valuables are taken from unattended backpacks.

Tell US How It is?

The City of Poway would like to hear from you. What do you think about the services and facilities provided in the community? What could we do to better serve you?

This cutout form is provided twice a year for comments, suggestions, and service requests. Clip out the form, and mail it or deliver it in person to City Hall at: 13325 Civic Center Drive.

All comments will be reviewed by the City Manager's Office and referred to the appropriate City department. Please be specific with your comments and the location of services, so that we can better serve you.

How Does Your Garden Grow?

California-Friendly Landscape Contest

"California-friendly" landscaping requires less water using plants that thrive in San Diego's mild winters and warm, dry summers. Judging criteria included attractiveness, design, plant selection, irrigation efficiency, and maintenance. Winners were selected in two categories: Self-Designed and Installed and Professionally-Designed and Installed.

It is estimated that more than 50% of Poway's water supply is used for outdoor irrigation. Residents can reduce their water bills by changing their landscaping to a more water-wise design, using plants that are less thirsty than lawn and efficient irrigation systems.

For more information on California-friendly landscaping, including plant lists, garden photos, a watering schedule calculator, and more, visit **poway.org/waterconservation.**

Six homeowners were recognized at the May 18, 2010, Poway City Council meeting for their beautiful, water-wise landscaping as part of the City of Poway's 2010 California-Friendly Landscape Contest. The winners are as follows:

Professionally-Designed & Installed

First Place: Marcia Harrod of Arikara Dr.
Second Place: Mike & Lynn Tex of Lolin Ln.
Third Place: Norm & Candi Leonard of Pequot Dr.

Self-Designed & Installed

First Place: Mr. & Mrs. Kronheimer of Cayuga Dr.
Second Place: Neighbors Nancy Datte & Kathleen Fischer of Quiet Valley Ln.
Third Place: Juana Baca of Buckskin Trail

Purchasing Tickets Has Never Been So Easy!

The 2010-11 Poway Center for the Performing Arts (PCPA) lineup will feature everything from major plays and concerts to appearances by nationally-acclaimed artists. It's a close-to-home venue and a great way to experience high-quality theater. Now, it is easy and cost-effective to purchase your tickets over the internet.

On July 1, the City installed new ticket and information kiosks at three locations:

- PCPA lobby
- Old Poway Park
- Community Services lobby at City Hall

The user-friendly kiosks allow patrons easy internet access to view upcoming performances, and purchase and print tickets. **Tickets can also be purchased at any location with an internet-capable computer and printer; which means, you can purchase and print tickets from the comfort of your own home.** All tickets will be scanned at the door.

In addition to reasonably-priced tickets, the internet ticket handling fee has been reduced to just $3 per ticket. Tickets purchased at our Box Office or over the phone are subject to a $5 per ticket handling fee. Visit our website at **www.powaycenter.com** to learn more about our professional performance series and a variety of quality events for all ages and interests. What are you waiting for? Purchase your tickets online or at one of our new kiosks today. See you at the show!

Water Conservation Poster Contest

Poway fourth-graders recently participated in a water conservation poster contest. The top three posters will be featured in the 2010 water conservation calendar, prepared jointly by 13 water agencies of North San Diego County. Winners were recognized at a City Council meeting in May 2010, as part of Water Awareness Month. The first-place Poway poster this year was submitted by **Tara Gulati-Brown** from Mrs. Carter's fourth-grade class at Tierra Bonita Elementary school.

City of Poway Environmental Programs Manager

On June 2, the City of Poway welcomed John Helminski to the Public Works Department as its new Environmental Programs Manager. John brings us more than twenty years of engineering, project and program management experience. His background in energy efficiency, renewable energy projects, park development, and capital development of public facilities is a big plus for Poway.

In addition to environmental programs, John manages the Parks, Trails and Landscape Maintenance Division, the Facilities Maintenance Division, and the Special Districts and Contract Services Division. Before coming to Poway, John worked as the City of San Diego's Emerging and Renewable Technologies Program Manager where he was responsible for developing energy strategies to deliver cost-effective renewable power and increasing energy efficiency for city facilities.

"One aspect of my job that is exciting is to realize resource conservation cost savings, both directly and through cost avoidance."

Winter 2010

Veterans Park Dedication

A memorable celebration for the history books!

On November 11, 2010, Veterans Park was dedicated to the public in grand fashion. With an estimated two thousand veteran supporters on hand, the City of Poway, together with the Poway Veterans Committee, delivered an historic dedication ceremony. The dream and vision of Veterans Park, located on Midland Road and Adrian Street, is officially open to the public.

Highlights of the dedication ceremony included the raising of the flags by veterans from each branch of the military, as well as a skydiving show by the Navy Leap Frog team.

The dedication ceremony, which coincided with Veterans Day, kicked-off with the ringing of an 1874 freedom bell and the firing of an 1864 cannon. The list of distinguished guests included uniformed active military personnel, as well as our community's honorable veterans! As the event unfolded, each of the branches of the military participated in a ceremonial raising of the flags and presentation of the colors. The six service flags (Army, Marines, Navy, Air Force, Coast Guard, and Merchant Seaman) along with the United States, Prisoner of War, California and Poway flags were respectfully honored.

The Navy Leap Frog team was a fitting tribute and one highlight of the morning. As the team soared in from 8,000 feet to hand deliver the Navy flag, the crowd watched in amazement at the precision landing and teamwork. The event culminated in an emotional unveiling of the "Wall of Honor." Hundreds of tiles, displaying the names of friends and family, adorn the wall.

The design of the Park was inspired by the ceremonies that will take place there. The parking lot was placed at the back of the site to move the cars from the line of sight from Midland Road, but also to allow the ceremonial color guard a place to stage prior to its entrance into the Park. The trees and shrubs on the east side of the plaza function to hide the color guard prior to entrance, giving the illusion that the color guard has just appeared. The circular form of the plaza is symbolic of the nature of time, that it is never ending. This monument will always serve as a reminder of the sacrifices of the past.

To learn more about the Poway Veterans Park, including how to order tiles for the "Wall of Honor," please visit www.poway.org.

City Reports Good Financial News

Poway Closes Out Last Fiscal Year with a Surplus

After closing out the books on the fiscal year ending June 30, general fund revenues exceeded expenses by approximately $800,000, and the City took in $1.8 million in one-time revenues.

City Manager Penny Riley will recommend that the Council put $542,120 of the general fund operating surplus into a facility maintenance fund, and that the remaining $2.1million be assigned to the general fund reserves. The City's general fund reserve will grow to $18.1 million, with an additional $3.1 million in an "economic uncertainty" fund and $4.5 million in a street maintenance fund. "We feel fortunate to have closed the year out strong. However, we will continue to pay close attention to our projected revenues and contain our expenses where possible," said Riley.

General fund expenditures were lower than projected at mid-year, with part of the savings being attributed to reduced overtime expenditures in the fire department and savings in salaries and benefits from vacant positions. Employee contributions to pension expenses also saved about $250,000 to the general fund.

One-time, unexpected revenues included a mortgage fund loan repayment of a $473,898 by the former City Manager. Other payments included $835,218 in insurance reimbursements and state funds for recovery from the Witch Creek fire, and $398,239 in savings from completed capital projects.

The staff report to the City Council on November 16, 2010 contains additional details and can be viewed at www.poway.org.

Poway Skate Park improves safety

New security measures have been added to the Poway Skate Park with the renewed emphasis of being a safe place for all skaters to enjoy. The improvements include a new turnstile, additional surveillance cameras, and an automated access system that requires skate park users to be registered. The feedback from the skate community has been tremendous!

Nearly 900 skaters are currently registered in the system. The registration process requires skaters (and parents for skaters 12 or younger) to complete an application and waiver form, and to have two fingerprints scanned into a software program. The software does not store the fingerprint; instead it translates the print into a numeric value based on specific match points on each finger. The match points, not the fingerprint, are stored in the database. To enter the park, the finger that was used to develop the match points is scanned at the turnstile and verified. Once verified, park access is granted.

Now, more young skaters and their families are enjoying this popular facility. Parents appreciate the more welcoming environment and the City is spending less money and time repairing the park. Graffiti cleanup and vandalism has decreased dramatically. The prohibited use of bicycles in the park also decreased.

For more information on the park and the improvements, visit the Skate Park web page at www.poway.org/communitypark. To register for the Skate Park, visit the Community Park office during business hours: Monday-Saturday, 8:00am to 9:00pm, and Sunday, 12:00pm to 9:00pm.

Skate Park Hours:

Saturday–Thursday, 8:00am-8:00pm
Fridays, 8:00am-5:30pm

Supervised skate session for youth 14 and younger *(parent/guardian required):*
Fridays, 6:00pm-8:00pm

Coming Soon: Brighton Place

Poway's newest affordable housing community, Brighton Place, is starting to take shape! After careful planning and community input, a groundbreaking ceremony in early September launched the start of construction. Many low-income working families and seniors have been eagerly awaiting this project, as have local building professionals who look forward to the 321 new construction jobs the project is expected to generate.

The craftsman-style architecture of Brighton's townhomes will complement the historic area near Old Poway Park. Not only will this multi-family development enhance the "city in the country" feel of Poway, and revitalize this previously underused property, but these homes will include numerous water and energy saving features. Solar technology, drought tolerant landscaping, tankless water heaters, rain harvesting systems, and well water for landscaping will make Brighton a highly energy-efficient place to live. The design includes two "tot lots" for resident children, and a community room with a fully staffed learning center, which will provide educational programs and resident support services.

This $20.4 million development is being funded by a grant from the Federal Home Loan Bank, a mortgage from California Community Reinvestment Corporation, a private equity investment, and a long-term ground lease from the Poway Redevelopment Agency.

Development of Brighton Place is expected to be complete by spring of 2012. The qualifying income range for a family of four is $23,550-$47,100, with rents ranging from approximately $491-$1,086 depending on income. To be included on the Brighton Place interest list or to find out more about this exciting project, please contact San Diego Interfaith Housing Foundation at (619) 668-1532 ext. 306.

Online Geographic Information System & updated Aerial Photos

The City's online Geographic Information System (GIS) allows users to search for a property by address, parcel number, or street intersection and display the associated information for that area. Users can also produce a parcel Property Report that contains zoning and specific plan designations, setback information, lot coverage, fire zone designation and updated Aerial Imagery.

In 2009, most North San Diego County Cities and Water Agencies, including the City of Poway, worked together on a project to acquire this high-resolution imagery. Contracting for aerial imagery over larger land areas lowered the overall cost that was allocated to each agency.

This new imagery is accurate to 4 inches, which provides a much higher resolution image than what is found on other web sites such as Google and Bing Maps, allowing users to zoom in and see more detail.

Having this updated detailed information not only allows the public to view details about their property, but also lets City staff see areas that, in the past, would have required a trip out to the site.

Users can view this imagery by going to www.poway.org and starting e-Zoning from the Online Services area of the web site. Once in the application, users can zoom to their area of interest, click on the Layers tab at the top of the screen, and then turn on the 2009 Imagery layer.

Looking For Affordable Housing?

Poway's HomeShare program matches adults who may be at risk for homelessness, with seniors who are in need of extra income or who need help to remain living in their own homes. The program, supported by federal grants and the City of Poway, adds a tremendous value to the community by preventing costly transitional housing and delaying expensive nursing home costs. In addition, the program can increase a senior's income, helping them become more financially stable.

Before a HomeShare match is made, the Program Coordinator conducts in-home assessments, along with reference checks for prospective candidates. In addition to making housing matches, HomeShare provides referrals for regional social services. If you, or someone you know, is interested in the HomeShare program, please contact Sunita Upchurch with ElderHelp at (858) 748-9675, or you can visit the local HomeShare office located at the Poway Senior Center in Community Park.

ELDERHELP

Community Emergency Response Team

Training Program begins in January 2011

California is no stranger to disaster. Earthquakes, floods, and wildfires have resulted in the loss of life, property, as well as environmental damage. During a disaster, emergency resources can be overwhelmed. The value of emergency preparedness, possession of basic self-survival skills, and the concept of neighbors helping neighbors quickly becomes evident.

CERT is a concept that was first developed by the Los Angeles County Fire Department in the late 1980s due to concerns about its community's ability to react during an earthquake or other large-scale disaster. They recognized that civilians should be trained to provide for the safety and survival needs of themselves, their families, and their neighborhoods during times when the traditional emergency response system may be overwhelmed.

Poway CERT was organized in 2006 using a $5,000 grant from the San Diego County Office of Emergency Services. It consists of volunteers from throughout the community who must first complete the CERT Academy. The classes are conducted once a year in cooperation with Palomar College using City of Poway's facilities and firefighter/instructors. CERT students receive 24 hours of training including first aid, fire suppression, search and rescue, terrorist situations, emergency preparedness, and disaster psychology. They participate in a manipulative drill where they apply the skills they have learned. Upon graduation, students may apply to join Poway CERT where they will participate in bimonthly training drills, attend twice-a-year countywide drills, and promote preparedness within their communities and neighborhoods. During an emergency incident, Poway CERT members may be called upon to provide support to the City's Emergency Operations Center, assist with various operations, and/or serve as care and shelter workers.

Currently, Poway has 63 CERT volunteers, and now is your chance to join the team. In January 2011, the Poway Fire Department and Palomar College will offer the CERT classes. During this ten-week program, participants learn what they need to know to become CERT volunteers in their communities so that they can help themselves, their neighbors, and their cities during disaster situations when fire and law enforcement may not immediately be able to meet the demand for service.

A basic overview of the CERT training schedule is listed below. Please call (858) 668-4460 to sign up or get more information about participating in this program.

CLASS TOPIC	DATE
Preparedness	1/15/11
Fire Safety	1/22/11
Organization	1/29/11
First Aid 1	2/5/11
First Aid 2	2/12/11
Search and Rescue	2/19/11
Psychology	2/26/11
Terrorism	3/5/11
Wildland Urban Interface	3/12/11
(Optional) Disaster Drill	3/19/11

Graduation Day!!

New Command Staff at the Poway Sheriff's Station

In July 2010, the City of Poway welcomed Captain Mark Elvin to the Poway Sheriff's Station to replace Captain Todd Frank. In August, Lieutenant Tony Giammarino was also added to the station to replace Lieutenant Lori Ross.

Captain Mark Elvin

Captain Elvin started his career with the San Diego County Sheriff's Department 21 years ago. When he was promoted to Lieutenant, he worked a number of assignments including opening the new 4-S Ranch Sheriff's Substation and the Emergency Services Division, which includes Sheriff's SWAT, ASTREA, and the Bomb/Arson units. Promoted to Captain, he worked for the Sheriff's Human Resource Services Bureau where he was responsible for training (both new recruits as well as in-service training for tenured deputy sheriffs), risk management, and payroll. When Captain Elvin transferred to Poway in July 2010, he was happily returning to the City in the Country—Captain Elvin was specifically assigned to the City of Poway's Emergency Operation Center as the law enforcement branch liaison during the 2007 Witch Creek Fire. Captain Elvin received a bachelor of science degree from Northern Arizona University and a master of arts degree in Organizational Leadership from Azusa Pacific University.

Lieutenant Anthony Giammarino is a 20-year veteran of the Sheriff's Department. He previously worked as a patrol sergeant in Poway from 2002 to 2005 and now returns to the Poway Sheriff's Station as its second in command. Originally an electronics engineer, the Lieutenant brings a unique perspective to law enforcement. "I'm frequently tapped for various technological projects and problem-solving techniques through computer applications. I'm also excited to be able to serve the very community I live in," says Lt. Giammarino. Before being assigned to Poway, Lt. Giammarino worked at the Sheriff's Headquarters Law Enforcement Services Bureau, the Communications Center, Risk Management, and Personnel. He also worked at the Ramona Substation and at three of the department's detention facilities. One of Lt. Giammarino's goals is to help maintain the City of Poway as one of the safest cities in the County, and he looks forward to the law enforcement challenges that lie ahead of him.

Lieutenant Anthony Giammarino

The City of Poway is fortunate to have two experienced, veteran San Diego County Sheriff's Department officers work in our City. Welcome Captain Elvin and Lt. Giammarino.

Emergency Care & Shelter

Poway reaches goal of increasing emergency shelter capacity

In September 2010, the City of Poway reached its goal to increase the number of evacuees that can be cared for and sheltered during the first 72-hours of a disaster. Poway now has the supplies, and the trained volunteers in place, to support over 1,900 displaced residents during a wildfire, earthquake, or other type of large-scale disaster.

During the 2007 wildfires, high demand was placed on the American Red Cross to activate care and shelter centers throughout Southern California. Locally, the American Red Cross was quickly overwhelmed and unable to support all of San Diego County's needs. Thankfully, just months before the disastrous wildfires struck, the American Red Cross and City of Poway had partnered to train staff from the Community Services Department on care and shelter management. Because of this, the City was able to open the Community Park Senior Center for 72-hours to provide care and shelter to 900 evacuees from Poway and nearby communities.

After the smoke cleared, City staff recognized that more could be done to enhance the care and shelter of evacuees. With support from the San Diego County Office of Emergency Services and the American Red Cross, the City of Poway embarked on a creative, cost-effective way to meet the goal of caring and sheltering over 1,900 evacuees.

In 2009, the American Red Cross awarded Poway $80,000 to partner with local faith-based organizations to support the needs of 900 additional evacuees. These funds have been used to partner with St. Michael's Catholic Church, The Connection, and The Community Church of Poway, providing each church with a 20-foot sea-container filled with supplies to support 300 evacuees. Supplies include cots, blankets, pillows, flashlights, and personal care items. In addition, each organization is equipped with the logistical supplies needed to open and operate a care and shelter program at its facility. A cadre of volunteers trained in care and shelter management operations has been created. Seventy congregation members, City staff, and members of Poway's Community Emergency Response Team are available to support any one of the City's four care and shelter facilities.

For more information, contact the Safety Services Department at (858) 668-4460.

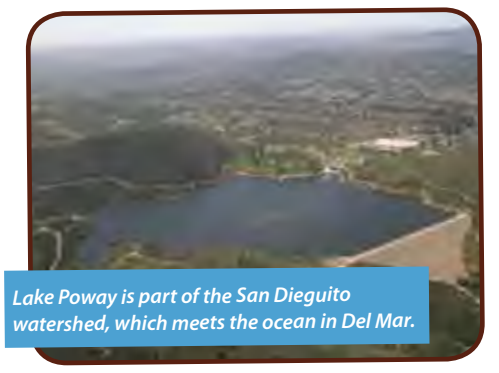
Understanding Our WATERSHED

Aside from the political boundaries (city, state, country) we are all accustomed to understanding, our landscape is defined by natural boundaries such as watersheds. Watersheds are areas in which all sources of water, groundwater and surface flow, drain to the same place (creeks, rivers, and tributaries) and eventually the Pacific Ocean.

In the City of Poway, almost all runoff from storm drains flows through one of two watersheds: Los Peñasquitos and San Dieguito. A small portion of Iron Mountain flows to the San Diego River.

Because each watershed can be thought of as a self-contained unit, water quality issues will vary by watershed. Most of northern Poway drains to the San Dieguito Lagoon. In this watershed, high-priority water quality issues include bacteria and nutrients such as fertilizers. The southern portion of Poway drains to Los Peñasquitos Lagoon. High-priority issues in this watershed include sediment and nutrients.

It is very important to understand that the storm drain system is completely separate from the sewer system. Wastewater that enters the sewer system is treated to make it safe before it is eventually released into the ocean. But, anything that enters a storm drain runs directly into our creeks and ultimately into the ocean without treatment. The actions of every individual add up when it comes to clean water. Together, the residents of Poway can protect this precious resource. Our watersheds not only provide clean water to residents, but also are home to birds, animals, and sensitive plant species. The protection and preservation of our watersheds depends on you!



Lake Poway is part of the San Dieguito watershed, which meets the ocean in Del Mar.

Smart Meters Debut in Poway

SDG&E completed the installation of smart meters for Poway residents in May 2010. Smart meters are digital devices that collect energy-use data and, unlike traditional meters, transmit and receive data. Electric energy use will be recorded every hour at your home and every 15 minutes at your business. Because smart meters send information electronically to SDG&E on a daily basis, it will no longer be necessary for SDG&E meter readers to enter your property. The meters also enable SDG&E to identify and fix power outages more quickly.

In the future, SDG&E predicts smart meters will (with customer permission) communicate with and adjust devices in your home to help reduce energy use. These devices could include air conditioning, pool pumps and other appliances. This will help customers gain better control over their energy use and costs.

Google Power Meter has teamed up with SDG&E to provide an energy monitoring tool that allows you to view your home's energy consumption from anywhere online. The information collected by your smart meter will allow you to make decisions about reducing your energy use whenever possible. To take advantage of these online tools, customers will need to setup an online "My Account" at www.sdge.com, and also setup a Gmail account with Google. Once a customer has setup both of these free services, they can visit www.sdge.com/smartmeter to learn more and setup the online metering option.

"A Day Without A Bag"

On Thursday, December 16, 2010, give reusable bags a try! Find out how this simple and direct action is an easy way to protect the environment and save taxpayer dollars on litter clean-up. Poway residents and businesses are encouraged to participate in "A Day Without a Bag" by utilizing reusable bags for one day instead of the usual plastic and paper bags.

Each year nearly 25 million plastic bags are used in Poway alone, which equals approximately 500 bags per person annually. While plastic bags are convenient and can be recycled at all major grocery stores and pharmacies, less than 5% of plastic bags are actually placed in recycling containers. Even though paper bags can be recycled in the City's curbside recycling program, single-use of any disposable bag is not the highest and best use of natural resources.

More details will become available on www.poway.org under Public Works Department/Sustainability. If you are interested in getting involved with Poway's "A Day Without A Bag" effort, please contact Annette Gonzalez: agonzalez@poway.org.

SPRING 2011

Registration begins MARCH 8
for Poway Residents & Nonresidents

FREE Band Festival & Arts & Crafts Market

Concert bands from near and far will offer a **FREE** weekend of music at Old Poway Park. The 17th Annual California Band Festival & Arts & Crafts Market is hosted by the Pomerado Community Band, an Old Poway Park Action Committee member, and honors the Armed Forces and their families. Military bands finish each day's lineup. Arts and crafts market, refreshments, and train rides available for a nominal fee. Information: (858) 668-4576.

Saturday, May 14, 10:30am-7:30pm
Sunday, May 15, 10:30am-7:30pm
FREE for All Ages

"Old Poway 1900" Flower Show

Old Poway Park Action Committee member, Poway Valley Garden Club, will host the 33rd Annual Standard Flower Show at Old Poway Park on April 16. This year's theme is Old Poway 1900. All ages are welcome to enjoy this FREE, fun-filled day of gardening ideas, plant sales, and more.

Participate and win a prize for your flowers or designs! The registration deadline for flower arrangements is April 1, and no registration is required for horticulture entries. Entries will be accepted at Old Poway Park on Thursday, April 14, from 5:00 to 7:30pm and Friday, April 15, from 7:30 to 9:30am. Information: (858) 672-2593.

Saturday, April 16
from 9:00am-3:00pm
FREE for the whole Family!

Upcoming Summer Events

Summer Concert in the Park Series

Some of the best local entertainment and summer fun returns to Poway with the Summer Concert in the Park Series! Bring your blanket or chair, picnic dinner or snack, and have a great time with family and friends. Starting June 26 with a finale on August 14, the concerts take place every Sunday from 5:30 to 7:00 pm, with the exception of the July 4 weekend. The entertainment schedule will be advertised in the Summer Poway Today and on our website: www.poway.org. Information: (858) 668-4771.

Old-Fashioned Fourth of July

Bring your family and friends and celebrate our country's independence "turn-of-the-20th-century-style" in Old Poway Park. This FREE event features patriotic entertainment and displays, mock gunfights and train robbery reenactments, face painting, old-fashioned games, an authentic arts and crafts market, model railroad displays, and iron working demonstrations. Train rides, pictures with Uncle Sam, picnic lunch, sweet treats, and ice cream will all be available for a nominal charge. Information: (858) 668-4576.

Monday, July 4th
10:00am-4:00pm

Fireworks Show
Poway High School
7:00pm-10:00pm

Family-Fun Activities at Community Park

Join us for FREE, family-fun activities beginning this SPRING at Community Park!

- *Art in the Park: Mar 9, Apr 11, May 11*
- *Sunday Fun Day Afternoons: Mar 20, Apr 3*
- *Parents Night Out: Apr 9*
- *Contract Class and Summer Camp Fair: May 7*
- *Fun Flicks Movie in the Park Series: July 23, Aug 20, Sept 3*

Children's Activities

Information: www.poway.org/classes

NEW! My First Art Class ✸ | Ages 20 months-2 years

For the truly beginner artist! This is a special art class for toddlers and parents (or their helpers). Little fingers experiment with painting, gluing, sticking, printing, and creating while developing fine motor, language, and self-help skills. This is an "I can do it!" class that is fun and creative. Children are introduced to color, shape, texture, and art materials with new lessons each session.

Instructor: Abrakadoodle
Location: Community Park Youth Activity Room

			RES/NON
4011.422	Wed 10:00-10:45am	Mar 23-Apr 13	$48/$58
4011.423	Wed 10:00-10:45am	Apr 27-May 18	$48/$58

NEW! Abrakadoodle Art Adventures ✸ | Ages 3-5

Learn about artists and techniques, and create a new masterpiece each week! Children explore their creativity through carefully designed lessons that ignite the imagination and encourage skill development. Each class introduces a new artist or art technique and each child leaves class with a framed piece of art. Using real artists' materials, children sculpt, paint, draw, and print to create artwork that is truly unique.

Instructor: Abrakadoodle
Location: Community Park Youth Activity Room

			RES/NON

Dance | Youth & Teen

Information: www.poway.org/classes

Due to preparations for our annual dance recital June 15 and 16 at the Poway Center for the Performing Arts, no new dance students will be accepted during the spring session for the following classes: ***Dance for Children, Tap & Ballet, Dance Production, Ballet for Kids, Teen Lyrical Ballet, and Fun 'n Funky Jazz for Kids.*** *Only continuing students may re-enroll. Students interested in attending these classes next season should watch for the summer Poway Today class schedule.*

"The Snow White performance was amazing! I can't wait to see next year's production!"

Don't miss the 22nd Annual Dance Recital! Ms. Debbora presents "Alice in Wonderland" and Dance Showcase 2011 on **June 15 and 16 at 6:30pm** at the Poway Center for the Performing Arts! Tickets are available at the door, prior to each show. For more information, contact Debbora Childress or Kellie Childress-Nichols at (760) 747-9777, or debbora@cox.net or kchildress04@yahoo.com.

Leaps & Turns – Dance Team Technique | Ages 12-18
Are you trying out for a Dance Team? Even if you're already part of the team, this is a great class for you! You will learn great technique and terminology, and all of the things that you need to know for audition success! Learn new leaps, and fun turns in an advanced, yet non-competitive, atmosphere. This class will help prepare you for the upcoming season! Parent watching days are the last class of each month. Dance clothes and black leather jazz shoes are required for class.
Instructor: Kellie Childress-Nichols
Location: Community Park Auditorium
No Class: Apr 5 and May 31

			RES/NON
5121.407	Tue 6:00-6:45pm	Mar 22-Jun 7	$89/$99

Special Needs

Bowling | Ages 13+
This bowling class provides unlimited fun for everyone! Awards and a party conclude our last meeting. If the participant needs one-to-one attention or has special needs, provide a description of the situation to the instructor. Depending on the circumstances, an aide may be required to accompany the participant. **All participants must be picked up by 3:30pm.**
Instructor: Sarah D'Agostino
Location: Poway Fun Bowl, 12941 Poway Road
No Class: Apr 8

CAMP! Art Start: Spring Break Art Camp Full-Day
Ages 8-14

This camp is designed for the enthusiastic student with a passion for art. In addition to enjoying all the activities of the half-day camp, students in the full-day camp will have the opportunity for more one-on-one instruction. They can delve more intensely into projects such as painting on canvas, printmaking, silk painting, making duct tape wallets or creating mosaics. Quality art materials and snack will be provided. All full-day campers should bring a sack lunch each day. Bring a washed, cotton T-shirt to the first class.

Expressive Writing Workshop | Ages 16+

Express yourself! Come explore the world of words by joining this fun and inspiring workshop. Have you ever wondered how to begin your life story? Everyone has a story, so begin to write it down here. Trying to think of words to go with a tune you've been working on? And, what is poetry about anyway? Bring your favorite music, photographs, and art as prompts to awaken the muses. A variety of methods will be used to "approach the page." Create written images from memory, thoughts, and feelings. This is also an opportunity to improve your writing skills, but there are no grades - just fun! Sharing the writi ng developed in the workshop is encouraged, but not required. The only real requirement for this gathering is simply the willingness to create by scratching words down on paper!
Instructor: Cori Brown, The Writing Center in Poway

Poway Swim Center

Information: www.poway.org/swim

The Poway Community Swim Center

is located at 13094 Civic Center Drive, within the Poway Community Park. The Swim Center includes a 50-meter by 25-yard pool with an attached diving well and shallow children's area. During open pool hours, swimmers can enjoy the one- and three-meter diving boards, open swimming areas, and lap swimming lanes. A one-foot depth wading pool is available in the spring, summer, and fall for children under 7 years. Shower and dressing areas are available. Water temperature: 81 to 84 degrees. Information regarding pool hours and fees: (858) 668-4680. Swimmers may be required to show proof of residency in order to be eligible for resident rates.

MAKE A SPLASH ON YOUR B-DAY!

Birthday Party Package:

Why not host your next Birthday at the pool? Included in the party package is a reserved poolside picnic area for two hours, public pool use for a maximum of 25 persons, and a half-hour of games with a certified lifeguard. Birthday Party Packages are available on weekends only during open pool hours. Sign up for a birthday party at the pool during business hours. Information: (858) 668-4680.

Costs:

Daily Admission	RES/NON
Adults (Ages 18+)	$2.50/$5.00
Youth	$2.00/$4.00
Seniors (Ages 60+)	$2.00/$4.00

A responsible adult who has paid the admission fee must accompany children under 7 in the water.

Season and Yearly Passes

Season and yearly passes can be purchased at the pool during business hours. Family passes include two adults (18 and over) and all immediate family members 17 and under residing in the same household. Season passes are valid for 3 months from date of purchase.

Season Pass Rates	RES/NON
Adults (Ages 18+)	$94/$125
Youth	$73/$105
Seniors (Ages 60+)	$73/$105
Family	$157/$256

Yearly Pass Rates	
Adults (Ages 18+)	$225/$355
Youth	$183/$261
Seniors (Ages 60+)	$183/$261
Family	$392/$643

Please Note: **Pass holders must stop and have their cards scanned prior to entering the facility.**

Aquatic Safety

Staff is available to give presentations on aquatic safety to schools, scout troops, and organizations. Information: (858) 668-4680.

Hours:

Winter (Through Apr 3, 2011)

Monday-Friday	11:00am-1:30pm / 3:00-7:00pm
Saturday/Sunday	CLOSED

Spring (Apr 4-June 12, 2011)

Monday/Wednesday/Friday	10:30am-7:30pm
Tuesday/Thursday	8:00am-7:30pm
Saturday/Sunday	10:30am-5:00pm

Long Course (offered through May 26, 2011)

Tuesday/Thursday	8:00am-1:30pm

Pool Closed

Friday, June 10	Youth Day

Lap Swimming Hours

During open recreational swim, lanes will be set aside for those interested in swimming laps. Some open recreational swim times will be shared with swim lessons and swim clubs. Portions of the pool may not be available for use by the public during these times. Kick boards and pull buoys are available for lap swimmers use.

Family Swim –Begins April 9th!

Family swim is a time reserved for families to come take advantage of the additional fun activities that can make a pool enjoyable. Families are encouraged to bring toys, rafts, fins, masks, snorkels, and inner tubes, but are not provided by the Center.

		RES/NON
Sat/Sun	10:30am-1:00pm	$8.00/$11.00 per Family

Swim Lessons

Information: www.poway.org/swim

****Classes held from May 9 - June 3 will not have class on Monday, May 30 due to the Memorial Day Holiday. Class will be held on Friday, June 3 instead.**

WAITLISTS: Can't find space in the class you're looking for? Contact us by calling (858) 668-4680 or email us at swimwaitlist@poway.org and ask to be placed on a waitlist for no charge. If space becomes available, we will attempt to fill it from the waitlist. Make sure to include the participants name and age, the activity number of the class you're interested in, and a phone number. The Swim Center will call if a space becomes available.
** New Classes may be created based on instructor avaiability and pool space.*

Spring Swim Lesson Assessment | All Ages

Thinking of enrolling you or a family member in swim lessons? Make an appointment to have a swim lesson assessment with one of our instructors. This service is free of charge and highly recommended for determining the appropriate placement level for participants. Call (858) 668-4680 for availability.

Parent/Child | Ages 6-24 months

This class, equivalent to the American Red Cross "Preschool" level, develops a comfort for the water and introduces basic water skills. This class does not teach children to be accomplished swimmers nor to survive in the water. Parents must accompany their children in the water.

SESSION 1			RES/NON
0020.400	MWF 9:30-10:00am	Apr 11-Apr 22	$39/$49

Open Trout Derby

March 12 at Lake Poway!!

The Lake will be stocked with 3,000 pounds of rainbow trout and prizes will be awarded. For more information, visit our website at www.poway.org/lakepoway or call (858) 668-4770.

No State Fishing License Required!

Lake Poway is a great place for families to share the experience of catching fish. In an effort to provide reasonably-priced family fun, State fishing licenses are no longer required to fish at Lake Poway. Daily fishing permits are still required: $6 for adults, $3 for youths ages 8-15, $3 for seniors (55+), $4 for military (with I.D.) and children ages 7 and under fish free with a paid adult. Bring the whole family out for a day of boating and fishing fun at Lake Poway. For the most up-to-date fishing conditions and tips, sign up for our weekly fishing report at: **www.poway.org/lakepoway.**

Family Campout – Adventure Series | All Ages

Are you a Lake Poway Family Campout Veteran? Itching for a pre-summer camping trip? Then the Lake Poway Family Campout – Adventure Series is for you! Come try casting your line under the full moon to land a trophy-sized trout or some record breaking bass. This campout includes: camping for four in the bowl area, one motor boat rental after sunset, four fishing permits, and campfire with hot coffee or hot chocolate. Night fishing: 7:30pm to 11:30pm. Rain or shine! No alcohol permitted. Up to four persons per family; **limited to a maximum of 40 families**. Information: (858) 668-4772 or LakeRanger@poway.org.

			COST
9039.103	Sat-Sun 5pm-9am	Apr 16-17	$40

Family Campouts

Bring the entire family for a magical night under the stars at Lake Poway. The campouts are perfect for the first-time camper with easy round-the-clock vehicle access and planned activities. Activities include: Blue Sky docent-led night hikes and nature program, campfire, and pedal boating. Families need to bring their own camping equipment and dinner supplies to barbecue. Grills will be available, but you are encouraged to bring your own. Charcoal provided along with Smore's around the campfire. Families may start setting up their campsites at 7 a.m. No alcohol is permitted. Up to 5 persons per family. $10 for each additional family member. Information: (858) 668-4781.

Historical Tours

We offer easy, inexpensive, educational field trips that will exceed your expectations. Reservations are accepted for Tuesday through Thursday for just $4 per participant. We can present to groups of 20 or more and tailor presentations to meet any need. Our tours are appropriate for any age or grade level, and meet the curriculum needs of third through fifth, and eighth grades. Experience the Nelson House, Heritage Museum, a train safety presentation, and a train ride aboard the Poway-Midland Railroad. Tours are great for schools, ESS, and adult daycares. Information: www.poway.org/oldpowaypark or (858) 668-4576.

Folk Concerts in the Park

San Diego Folk Heritage is pleased to present music for all ages. Phil Boroff will perform Blues Guitar in Templars Hall on Saturday, April 30 at 7:00 pm. Admission is $15 for San Diego Folk Heritage members and $18 for non-members. Information and advance ticket purchases: (858) 566-4040.

Date	Performer	Musical Style
Saturday, Apr 30	Phil Boroff	Blues Guitar

Sam Hinton Folk Festival

Old Poway Park Action Committee member, San Diego Folk Heritage, will host the Annual Sam Hinton Folk Festival at Old Poway Park on Saturday, June 4, from 10:30 am to 5:00 pm. This FREE event includes musical performances, storytelling, music workshops, a family country dance, and an open-mike stage. A variety of music styles can be heard including Bluegrass, Olde Time, Irish music, and much more. Complete schedule of events & information: (858) 566-4040.

The Farmers Market

Flowers! Fresh Food! Fun! It's spring, so leap outdoors and enjoy Poway's Certified Farmers Market every Saturday from 8:00 am to 11:30 am at Old Poway Park. Choose from garden-fresh fruits, citrus, tomatoes, vegetables, and more. All produce is certified and inspected by the agricultural commission and is brought to you directly from the grower. The spring market offers beautiful, newly-picked flower bouquets to brighten your home, homemade tamales, kettle corn, and salsas. If you are looking for some of the finest produce, unique foods, and a great "City in the country" atmosphere, the Farmers Market is it! Information: (858) 668-4576.

Kumeyaay-Ipai Interpretive Center

Information: www.poway.org/kiic

Location:
13104 Ipai Waaypuk Trail (formerly Silver Lake Rd)

Information:
(858) 668-1292

A chill may still be in the air, but spring blooms are beginning to emerge at the Kumeyaay-Ipai Interpretive Center. Come join us for a Saturday morning hike and view the more than 50 native plants onsite, all of which are water efficient. Specially-trained docents can lead you on a hike or engage you in a lecture filled with information about the foods, medicines, and culture of Poway's first residents.

The City of Poway manages the park with support from the volunteers of the Friends of the Kumeyaay. Information and docent volunteer opportunities: (858) 668-1292

This ancient five-acre, archaeological reserve is located off Ipai Waaypuk Trail (formerly Silver Lake Road). Free docent-led tours of this two-thousand-year-old American Indian village are available Saturday mornings from 9:00 am to 11:30 am. Visitors may request that a tour emphasize botany, history, or culture.

Comfortable shoes are recommended and pets are not permitted at the site. School tours are available for third grade students on Wednesday, Thursday, and Friday mornings throughout the school year. **Fee: $4 per student.** Reservation forms can be found on the City website at: www.poway.org/kiic

Blue Sky Ecological Reserve

Information: www.poway.org/bluesky

photo: Brad Petersen

Location:
Espola Road, 1 mile north of Lake Poway Road

Reserve Hours:
Daily, Sunrise-Sunset

Information:
(858) 668-4781

Blue Sky is a 700-acre ecological reserve in Poway on Espola Road, less than one mile north of Lake Poway Road. Trails are open to the public during daylight hours. The City of Poway, California Department of Fish and Game, and County of San Diego Department of Parks and Recreation manage the Reserve, with support from the nonprofit Friends of Blue Sky Canyon.

Nature Walks

For up-to-date information on dates and times of docent-led nature walks please visit the City of Poway's website at: **www.poway.org/bluesky** to download our latest Activities Schedule, or pick up a copy at Blue Sky's onsite kiosk, Community Services, Poway Library, or Lake Poway. Please wear comfortable shoes, a hat, and carry your own water. Binoculars are recommended. Scout and group tours are available by reservation. Walks are FREE. .

School Tours

The outdoor nature program at Blue Sky Ecological Reserve emphasizes observational skills, resource protection, and identification of our plants and animals. Tours are led by fully-trained docents. Tours are available on Wednesday and Friday mornings, for up to 30 students per visit. For reservations, call the Blue Sky office at (858) 668-4781. Please provide at least four weeks advance notice. Additional information is available at www.poway.org/bluesky. **Fee: $4 per student.**

Join Our Invasive Removal Team

Do you have a couple of hours on the second Saturday morning of each month to join us in this worthwhile cause? Keeping Blue Sky beautiful and free of nonnative plants is achieved through the dedication and effort of volunteers. Spring is the season of prolific weed growth and help is needed the most between March and June. If you would like to join us, please email aransom@poway.org, or call (858) 668-4781

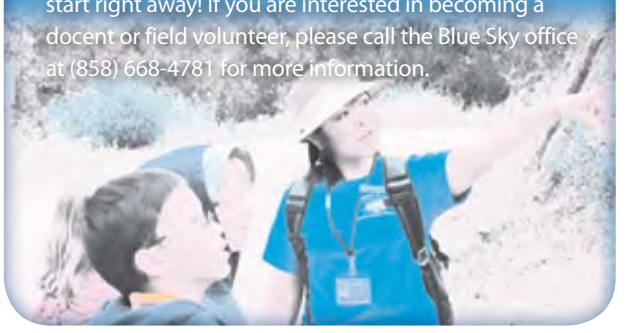
Wanted! Blue Sky Docents & Field Volunteers

Do you love nature and being outdoors? Do you have an enthusiastic attitude towards people? Become a docent at Blue Sky Ecological Reserve!

Docents perform a variety of tasks including leading guided nature walks, restoring damaged habitat, minor trail maintenance, assisting at interpretive programs, foot patrols, and maintaining kiosk displays.

Some prior knowledge of natural history is desirable, but a willingness to learn is all that is required. Training begins on Wednesday, March 2, 2011. This fun, educational eight-week training course consists of Wednesday evening class sessions at Lake Poway from 7:00 pm to 9:00 pm, followed by Saturday morning field visits to the Reserve from 8:00 am to 11:00 am. There is no training Easter week.

Field Volunteers perform all of the above with the exception of leading nature walks. Field volunteers are not required to participate in docent training, and can start right away! If you are interested in becoming a docent or field volunteer, please call the Blue Sky office at (858) 668-4781 for more information.



Sycamore Canyon Goodan Ranch

Location:
16281 Sycamore Canyon Road
Poway, California 92064

Information:
(858) 513-4737
For a complete schedule of activities at Goodan Ranch, visit: www.sdparks.org

The Goodan staging area is accessed from Poway Road east on Garden Road, then south on Sycamore Canyon Road, which ends at the staging area. Highway 67 staging area accessed through SOUTHBOUND HIGHWAY 67 ONLY, half-mile south of Scripps Poway Parkway. All events are free. Information & Reservations: (858) 513-4737 or email Justin.Gibbons@sdcounty.ca.gov.

Over ten miles of trails and service roads open to hiking, mountain biking, and equestrian use. Preserve visitors are welcome to visit our new visitor center. Live animals and exhibits on Goodan History, Cedar Fire, Kumeyaay, and the MSCP are on display.

Events, hikes, and programs start at various Preserve locations. Some require a one-mile walk from Goodan Ranch staging to the visitor center. Please check descriptions closely. No vehicular traffic is permitted in the Preserve. Transportation for those with disabilities can be arranged, by calling the ranger at (858) 513-4737.

(Cancelled if raining or cloudy)

Birding Walk
Saturday, May 14 | 9:00 – 11:00am
(Cancelled if raining or muddy)

City of Poway News & Events

Business Leaders Come Together at Poway's Business Summit 2011

On January 26, 2011, 70 members of Poway's business community gathered for the Poway Business Summit at the Hampton Inn & Suites to brainstorm creative ideas that will help develop and support local businesses. The topics discussed were the result of an exciting collaboration between the City of Poway and local businesses to gather direct feedback from the business community.

Businesses in attendance included large and small companies alike. The round-table format was designed to tackle issues that mattered most to the audience, while also providing time for networking between members of the business community.

Business leaders discussed ways to strengthen communication between the City, the Poway Chamber of Commerce and the business community. The small groups also discussed ways to create more business-to-business opportunities, marketing and outreach programs of benefit; and ways to identify workforce development and training opportunities.

The Poway City Council, also in attendance at the Summit, reaffirmed its commitment to its business outreach and retention program and support of local businesses. Staff will produce a complete summary of the feedback received during the Summit. The City and the Chamber will also host a series of upcoming focus groups with Poway businesses to determine the best plan of action for future economic development efforts. If you are interested in scheduling a business retention visit with the City of Poway, please contact Tony Winney at (858) 668-4552 or twinney@poway.org.

Poway Turns 30!

30+ Year Employees Celebrate Anniversary of the City's Incorporation

December 1, 2010 marked the 30th anniversary since Poway's incorporation in 1980. The newly-formed City absorbed both the Poway Municipal Water District and the Pomerado County Water District making their employees instant City workers. Last year, as the City commemorated 30 years of cityhood, ten City employees celebrated 30 or more years of service to Poway residents.

(L to R) John Walters, Tom Howard, Kevin O'Reilly, Robert Willcox, David Vigliotti

Those who have worked for the City since incorporation or earlier include Assessment District Specialist Robert Willcox, Director of Safety Services Mark Sanchez, Fire Captains Tim Carle and Bob Stanberry, Fire Engineers Bill Cummins and Steve Harrison, Senior Planner Jim Lyon, Utilities Manager Tom Howard, Wastewater Utilities Crew Leader David Vigliotti, and Water Treatment Plant Supervisor Kevin O'Reilly.

With 37 years of service, Fire Captain **Bob Stanberry** has the distinction of being with the City the longest. He started with the Poway Municipal Water District in October 1973. Honorable mention goes to John Walters who, while not an employee at the beginning, had previously worked for the Poway Municipal Water District and joined the City two months after incorporation.

Mark Sanchez has spent his 36-year career in the fire service with Poway. Mark quickly rose through the ranks and for more than 20 of those years he has been the Director of Safety Services. He fondly remembers one of the highlights of his career as being selected to attend paramedic training to become part of the first paramedic team to serve Poway. Mark says, "We watch out for each other to stay safe, and remember that this is the best job in the world."

Robert Willcox began his career with Poway when he took a part-time job as a Park Ranger with the Poway Municipal Water District over 31 years ago. He never imagined that it would eventually lead to a career. Robert had grown up and gone to school here, so he felt it was natural to stay and grow with the City. Looking back, Robert says "I can't imagine doing anything else." What he has enjoyed the most about working here is the work itself. "The work has always been interesting, challenging, and you can make a difference. At the end of the day, it feels that you are a part of Poway," he adds.

Thanks to all of these employees for their many contributions and for choosing to spend their careers with Poway!

Poway's First Baby!

Meet Niahni, the first baby of 2011

The City of Poway would like to welcome Niahni Kailani Kahlea Heath-Kaihewalu. She was born at 10:45 a.m. on January 2, 2011, at Pomerado Hospital, making her the first Poway baby born in the New Year. Niahni was welcomed by her mother Shaunna and father Kawika. She weighed 7 lbs, 12 oz, and was 19 ½ inches at birth.

As part of the City's First Baby Program, a $200 gift certificate was presented to her family.

Meet John French

Poway's New Director of Administrative Services

On November 29, 2010, the City of Poway welcomed John French as its new Director of Administrative Services. John has a bachelor's degree in Accounting, as well as a masters degree in Public Administration from California State University, Stanislaus. He comes to Poway from Atwater, CA where he once held the position of Administrative Services Director. John has also served other California cities as the City Manager for the City of Newman, and most recently as the Assistant City Manager for the City of Turlock.

As Director of Administrative Services, John oversees the divisions responsible for budget preparation, economic forecasting, administration of water and sewer billing, municipal insurance and risk management, and information technology. John views this assignment as a terrific fit for his expertise--and the timing for his family was perfect. Since starting his new job, John has observed that the staff at Poway have an optimistic attitude with a "positive expectation of good outcomes," which he finds refreshing.

John moved to the area in November and his family plans to join him from the Central Valley when his son graduates from high school in June. His family is familiar with the San Diego area and is very excited about the move. John enjoys outdoor activities that include sailing, kayaking, mountain biking and backpacking. He owns a sailboat that he hopes to soon put to good use. John has spoken with people across the country who would love to come to Poway, and he is happy to be here.

Since starting his new job, John has observed that the staff at Poway have an optimistic attitude with a "positive expectation of good outcomes"

The Poway Center for the Performing Arts (PCPA) hosts professional performances ranging from major plays and concerts to appearances by nationally-acclaimed artists. The PCPA also encourages performing arts in the area by providing first-class performance space for the Poway Unified School District students and community-based productions. Consider the Poway Center for the Performing Arts for your upcoming event. This state-of-the art, 809-seat theatre was designed for professional performances and community-based productions. Owned and operated by the City of Poway, the PCPA staff will do everything possible to ensure your event runs smoothly and successfully.

POWAY CENTER *for the* PERFORMING ARTS

Purchase Tickets the Easy Way!

Tickets can be purchased at any location with an internet-capable computer and printer. You can easily purchase and print your tickets at home. There are also three convenient locations where you can purchase tickets: the PCPA Lobby, Community Services Department at City Hall, and the Old Poway Park office. View upcoming shows and purchase tickets online at our website: **powaycenter.com.**

Get Involved!

Become a part of the theatre world without ever stepping on stage! Our team of volunteer ushers provides valuable show services, such as taking tickets and assisting patrons to their seats. Sign-ups occur throughout the year and volunteers earn free tickets to our productions. Information: **www.powaycenter.com.** or (858) 668-4795.

POWAY Community Services

Sports | Recreation | Aquatics | Fitness | Nature | Teens | Community Events

REGISTRATION

Registration begins **MARCH 8** for Poway Residents & Nonresidents

There are 3 convenient ways to register for classes:

1. Mail-In

Mail-in registration may be paid by check or credit card (MasterCard or VISA). Checks should be made payable to the City of Poway. Cash will not be accepted. Please submit a separate check for each class requested. If space is not available in a class, that specific check will be returned to you without delaying your registration for any other classes.

Mail to: P.O. Box 789, Poway, CA 92074-0789

2. Walk-In

Walk-in registration is available at the Community Services Department during business hours.

Location:
13325 Civic Center Drive

Extended Hours:
Mon-Thurs 7:30am-5:30pm
Fri 8:00am-5:00pm (Closed every other Friday)

3. Online

Online registration is available by visiting the City of Poway web site below. A $1.50 convenience fee will be charged per class registration or waitlist request. Payment must be made by credit card only (MasterCard or VISA).

Website:
www.poway.org/classes

REFUNDS Should you withdraw from a class, you will be charged a $15.00 administrative fee, which will be deducted from the refund amount. Full refunds will be issued for all classes canceled or overbooked by the City of Poway and/or the Independent Contract Instructor. Refunds after the start of the second class require written verification of an emergency/extended illness. Refunds approved after the second class will be prorated and the $15 administrative fee will be applied. Requests may be mailed or submitted in person to the Community Services Department, located at 13325 Civic Center Drive. If a refund is approved, a check or credit will be issued within three to four weeks from the date of approval. Credit card accounts will be credited.

SWIM LESSON REGISTRATION
Please note the age and skill level requirements for each class. If you are unsure which level to enroll in, skill assessments are available at the Swim Center by appointment. Students who are enrolled either above or below their ability level may be dropped if unable to transfer into an appropriate class. If you cannot make the first day of class, please call Mike Varga at (858) 668-4683, prior to the start of the class to ensure that you are not dropped. Waitlists will be contacted, by phone, in the order they were received. Attending the first day of class does NOT increase your chances of being added from the waitlist.

FACILITY ACCESS for all participants is important to the City of Poway and we work to ensure that all participants, including the physically challenged, have equal access to all facilities and programs. If you require assistance or have any questions, please call (858) 668-4581.

CLASS INSTRUCTION for most classes is taught by independent instructors contracted by the City of Poway. Class content, scheduling issues, and other concerns should be directed to the instructor. If your issue is unresolved, please contact Community Services at (858) 668-4595.

POWAY RESIDENTS are defined as those persons who live within the City limits of Poway. All programs are audited for compliance with the residency policies set by the City of Poway. Proof of residency may be required at the time of registration.

ENROLLMENT PRIORITY is determined on a first-come, first-served basis. Online and walk-in registrations are posted with the date and time of the transaction. Registrations received by mail will be posted in order of the date received by the City of Poway once the registration period opens.

FINANCIAL ASSISTANCE – P.L.A.Y. (Poway Leisure Assistance for Youth) Did you know that developmentally disabled individuals and youth might be eligible to receive up to $40 worth of City-sponsored recreation classes each season at no cost to you? To find out more, please visit our web site at www.poway.org/play. **A huge Thank You to our 2011 P.L.A.Y. scholarship sponsors!**

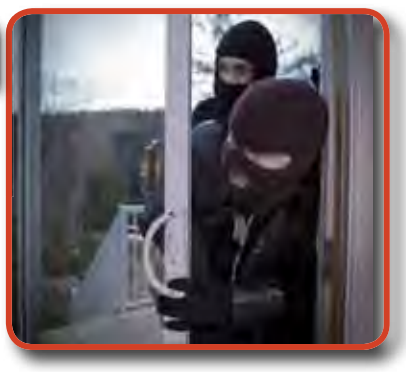
City of Poway Resident Services

Preventing Residential and Auto Burglaries



Although Poway continues to enjoy a low crime rate compared to other communities in San Diego County, the prevalence of residential and auto burglaries is a challenge for both the Sheriff's Department and the citizens of Poway. According to the Poway Sheriff Station's Crime Prevention Unit, many of these are crimes of opportunity where the criminal had easy access to the residence and to the property inside the vehicle.

There are crime prevention measures that can be implemented to reduce the risk of these two types of crimes from affecting the quality of life of Poway's residents. There are certainly advantages to living in a low crime community such as Poway, but this can also create a false sense of security. Simple and easy steps such as locking one's home and vehicle, closing the garage, and never leaving property in one's vehicle are often overlooked.

Making your home safer can begin with the following crime prevention practices:

- *Always lock your doors and windows (including sliding glass doors & second story windows) when leaving your home. Be sure the locks are strong and reliable. Consider keeping doors and windows locked even when you are at home.*
- *Keep the garage door closed especially when you are away or overnight. Many residential burglaries occur because garage doors are left open either intentionally or accidentally. Be sure to lock the doors that lead into the garage from the side yard and from the garage into the home. Install and use an alarm system.*
- *Put timers on lights and a radio or a TV when you are away from your home.*
- *Don't let newspapers accumulate on your property*
- *Keep your lawn maintained. Landscaping should provide maximum visibility to and from your home.*

Vehicle burglaries continue to be a very common crime in Poway due in part to a false sense of security, lack of awareness, and carelessness. It is the goal of the Poway Sheriff's Station for the community to take this crime seriously and to make every effort to reduce this very preventable crime. Minimize your chances of becoming a victim by following these tips:

- *Close all the windows (even in hot weather) and lock the doors. Many vehicle thefts are from unlocked vehicles.*
- *Always remove your property (including satellite radios and GPS systems) from your vehicle, especially anything that is in plain view. Most vehicle burglaries occur because the thief sees something of value in the vehicle.*
- *If possible, park your vehicle inside the garage rather than in the driveway or on the street. Otherwise, park in open, well-lighted areas and use reliable anti-theft devices.*

Be aware of your surroundings and report suspicious activity to the Sheriff's Department Communications Center (858) 565-5200. For other Crime Prevention information, including Neighborhood Watch, please call (858) 513-2807.

Spring Clean Up

EDCO Waste and Recycling Services is sponsoring two self-haul clean up events for Poway customers this year, providing the opportunity to plan both a spring and fall "clean up day". The spring event will start with EDCO mailing a coupon to residential customers at the end of March, which is good for FREE disposal of one load of household bulky items at either the Ramona Transfer Station or the Escondido Transfer Station. The transfer stations are open every day (Ramona transfer station is closed on Sundays) between 7:00 a.m. and 4:30 p.m., giving you the flexibility to use the coupon at your convenience between April and June.

Items Accepted:

- ***Furniture***
- ***Appliances (charges apply for appliances containing freon)***
- ***Residential wood waste***
- ***Yard waste***
- ***Scrap metal***

Directions and more information are provided on the coupon. Please be sure to have your coupon with you and present a picture I.D. with the current address (or a copy of an EDCO trash bill that corresponds to the service address listed on the reverse side of the coupon) to qualify for FREE disposal and avoid a disposal fee.

Items NOT ACCEPTED: hazardous waste, tires, computer monitors, televisions, contractor waste, large trailer loads, and commercial truckloads of debris.

Residents and contractors performing a major renovation or property clean up may contact EDCO at (858)748-7769 to request temporary bin service.

Summer 2011

Poway Participates in Energy Upgrade California Rebate Program

Reduce energy use.
Save money.
Create jobs.

When it comes to energy, your home is a system with interdependent parts. For example, a top-of-the-line heating, ventilation, and air conditioning (HVAC) system will waste energy if the ducts, walls, attic and windows are not properly sealed and insulated. Taking a "whole-house" approach to energy savings will improve your home's comfort and efficiency.

A new statewide energy efficiency program, known as Energy Upgrade California™, has been created to help consumers take a whole-house approach to saving energy and to offset the cost of making energy efficiency upgrades to their homes. It is a one-stop-shop website designed to inform consumers about the many energy and water efficiency programs offered, financing options, incentives and rebates available for each, as well as a list of certified contractors in the program. Energy upgrade rebates for San Diego County are administered by San Diego Gas & Electric (SDG&E).

The City of Poway is participating in this program, along with SDG&E, to provide additional rebates up to $300 to Poway residents for the installation of 2- speed and variable-speed pool pumps and upgrades for residential air conditioning.

Energy Upgrade California™ is funded by the American Recovery and Reinvestment Act (ARRA, also known as federal stimulus funds), California utility ratepayers, and private contributions. The City of Poway's rebate offer is funded with $50,000 from an Energy Efficiency Community Block Grant from the Department of Energy. The rebates will be offered through June 30, 2012, or until the funds are expended; whichever occurs sooner.

For more information about the Energy Upgrade California Program go to **www.energyupgradeca.org.**

For more information about the City of Poway's additional rebate offer, go to **www.poway.org.**

Practical Advice for Grading and Excavation Permits

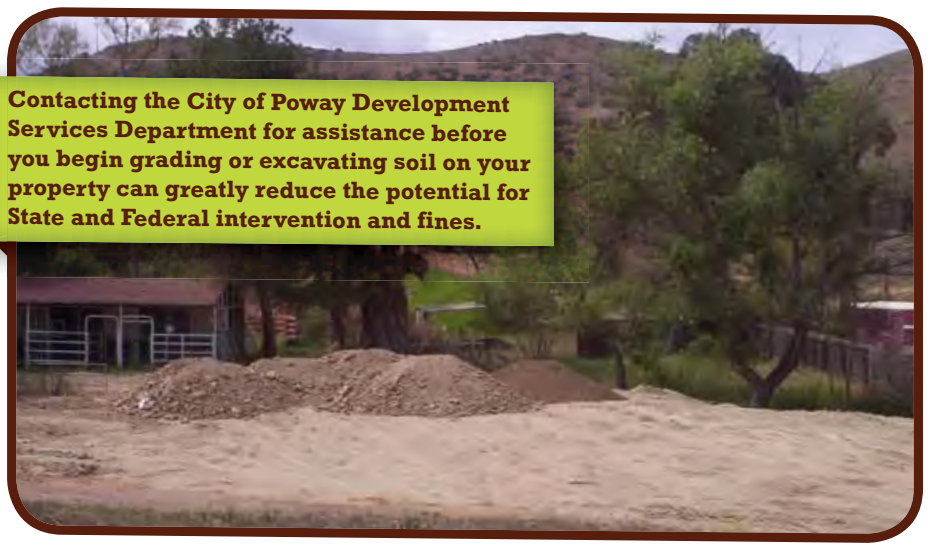
Even the installation of a simple retaining wall may trigger the need for a grading permit. If you are contemplating any grading, excavation or clearing, even a small amount, please contact the Development Services Department and let one of our staff members assist you determining whether you need a permit. Our engineering staff can be reached at (858) 668-4600, or by email at lclapp@poway.org.

The City has seen an increase in unauthorized grading activity over the past year. Some of the work has occurred in environmentally sensitive areas and has led to the involvement of State and Federal resource agencies. Fines by the resource agencies can amount to tens of thousands of dollars.

If you commence grading prior to issuance of a permit, the permit fee is doubled and an immediate cash deposit is required for full cost recovery of plan check and inspections. Add to this the cost of potential fines from resource agencies, court and attorney costs if the City has to prosecute the violation to obtain compliance, and any corrective work the City may have to undertake, and the costs start to add up. A simple phone call can potentially save you thousands of dollars.

The City of Poway is committed to protecting our environment and the quality of life we all enjoy. Please help us by contacting staff and let us assist you in determining if any permits are required for work you may be considering.

To report illegal grading activity, please contact the Engineering Inspection Division at (858) 668-4668, or dsharp@poway.org.



Contacting the City of Poway Development Services Department for assistance before you begin grading or excavating soil on your property can greatly reduce the potential for State and Federal intervention and fines.

The City of Poway developed P.L.A.Y. (Poway Leisure Assistance for Youth) to create recreational opportunities for developmentally disabled youth and economically-challenged families. Each year, several hundred eligible individuals are able to participate in activities like dance, summer day camps, martial arts, Learn-to Swim, and Special Needs classes thanks to these scholarships. P.L.A.Y. ensures that more children have the chance to learn important life skills such as teamwork, conflict resolution, and cooperation through a quality experience.

The City budgets $12,000 for the P.L.A.Y. Scholarship Program each year. Due to the current economic climate, the need for scholarships is greater than ever. In 2011, an additional $10,000 in funding is necessary to keep pace with the demand. In January, the City launched the P.L.A.Y. For Life campaign to seek local business and service organization partners to join the fundraising effort. Cox Communications, Poway Kiwanis, Toyota of Poway, and the Poway High School Key Club have generously contributed a total of $6,600. We are just $3,400 away from our goal! Can you help Poway kids P.L.A.Y.?

P.L.A.Y. gives all Poway kids the chance to participate in activities like Art in the Park.

Donors will be prominently recognized through a number of opportunities, including the quarterly Poway Today publication, the City's website, and with sponsor banners at City events, depending on the level of giving. Donations can easily be made online at www.poway.org/play or sent to the City of Poway P.L.A.Y. Scholarship Fund, P.O. Box 789, Poway, CA 92074. For donor recognition details or more information, contact June Dudas, Assistant Director of Community Services, at (858) 668-4581.

Continued Focus on Enhancing Poway's Business Environment

On March 10, 2011, the City of Poway and Poway Chamber of Commerce teamed up to host a meeting for manufacturing and distribution business leaders. The luncheon, at SYSCO Foods in the Poway Business Park, was part of a larger effort to reach out to local businesses and strengthen Poway's pro-business environment by understanding and responding to local business needs.

The meeting was well attended, with representatives from 13 manufacturing and distribution companies present. Topics of discussion included City and Chamber communication with local businesses, business-to-business opportunities, and employee training. Commercial property owners, retailers, real estate brokers, and leaders from Poway's largest companies were also invited to attend focus group meetings.

To complement the City's outreach effort, a group of senior business students at California State University San Marcos (CSUSM) will compile information to create a comprehensive directory of Poway businesses. The information will be used to identify business clusters that exist in the community, which could also assist with facilitation of future business-to-business opportunities.

The combined feedback obtained through the Poway Business Summit held in January, Poway Business Survey previously available on the City's website, and the focus group meetings will be used to enhance the City's business outreach and retention program. For more information about upcoming focus group meetings or the City's business outreach and retention program, please contact Tina White at (858) 668-4501 or twhite@poway.org.

Focus Groups hosted by the City of Poway and the Poway Chamber of Commerce aim to bring better understanding of local business needs.

Clear Access to Water Meters = Efficient City Services

Obstructed water meters cost the city time and efficiency

Efficiency and safety are top priorities for the City of Poway. Residents can help the City with both goals by maintaining clear access to the water meter.

Each year, a small team of meter readers read just under 14,000 meters six times a year. This comes to nearly 84,000 water meters annually. Most water meters are easily accessible and reading them takes just a few seconds. However, about 400 of the meters in Poway are difficult to access and, in some cases, unsafe. Instead of seconds, reading obstructed meters can take up to 20 minutes, leading to a loss of over 100 hours of productivity each year.

Maintaining clear passage to the meter box is also helpful to homeowners. Doing so enables quick, easy access to the customer shut-off valve, which is inside the meter box. Turning it will quickly shut-off water to the entire property, which could be useful in the event of a water emergency with a plumbing fixture or appliance.

The most common barriers blocking water meters are overgrown shrubs and walls or fences built directly on top of or adjacent to the meter. Meter readers also encounter unleashed dogs when accessing meters inside gated yards. This presents a safety issue for the reader and the dog, because you don't want your pet to escape when the meter reader needs access.

The Poway Municipal Code requires clear access to water meters. Clear access to the meter means no barriers within two feet in all directions. Fences or walls over the meter are only allowed with an encroachment permit. Please evaluate access to your water meter. By keeping it clear, you are helping to keep City operations efficient and cost-effective.

For additional information, please call (858) 668-4707.

REDEVELOPMENT...

WHAT IT MEANS IN OUR COMMUNITY

Driving through Poway, you can see first-hand how redevelopment dollars have helped shape our community. The Poway Redevelopment Agency was formed in 1983, with the adoption of the 8,200-acre Paguay Redevelopment Project Area. Since its formation, the Agency has invested several hundred million dollars in the local community with the creation of new parks and community facilities, improved roadways and infrastructure, commercial and industrial revitalization, enhanced school facilities, and affordable housing developments. The Agency's main goal is to help build and preserve our community so future generations can enjoy the same quality of life that Poway residents enjoy today.

For more information about the Poway Redevelopment Agency, please visit the City's website at www.poway.org.

REDEVELOPMENT IN POWAY...

- Reinvests local tax dollars into the community to provide amenities that residents value as part of life in Poway
- Creates a vibrant, diverse, and self-sustaining economy
- Maintains and enhances quality of life for all residents
- Provides housing opportunities for working families and seniors
- Provides improved roadways and infrastructure
- Partners with Poway Unified School District to build and enhance school fields and facilities
- Eliminates blight and revitalizes neighborhoods in target areas of the community

Redevelopment housing projects like Solara in Poway are able to provide residents with affordable housing while also reducing energy and water use.

Update to City Sign Regulation Underway

The purpose of our sign regulations is to make the City attractive to residents, visitors and commercial, industrial and professional businesses while maintaining economic stability through an attractive signing program. The City also recognizes that signing is an important design element and these regulations must be consistent with the goals and objectives of the community to ensure that the rural character and image the community is striving for, can be attained.

At a recent business summit held by the City, local business representatives identified the need to review and revise the City's sign regulations. Responses to an online business survey raised similar issues.

City staff is currently working to update sign regulations to address the issues raised by the business community. The update process will provide an opportunity for input from residents and businesses, to ensure that the proper balance is maintained. Ultimately, proposed changes to the sign regulations will be brought to the City Council as an Ordinance to change the Municipal Code. It is expected that this process will be completed this year.

For information on this proposal, please visit the City's website at www.poway.org or contact the Development Services Department at (858) 668-4668.

Introducing Poway's New Director of Community Services

The City of Poway is proud to announce the appointment of Robin Bettin to the position of Director of Community Services. Robin has more than 25 years of experience in Community Services. She earned her undergraduate degree in Recreation Administration from San Diego State University, and a Master's of Art in Management from the University of Redlands.

Robin most recently served as the Assistant Director of Community Services in Escondido where she was responsible for recreation, older adults division, and park development. Robin also brings with her a wealth of experience working with a variety of commissions, committees and volunteer groups.

Ms. Bettin states, "I am excited to be joining the Poway team. I have spent my career working in the Park and Recreation field and I am very fortunate to be joining a City that offers such wonderful recreational amenities for their citizens. Poway has a reputation for providing outstanding customer service and I look forward to being a part of the organization."

Poway's Community Services Department has a staff of 22 full-time employees and a total budget of $4.7 million. The Community Services Department provides the following community services:

- Recreation services and programs;
- Year-round boating, fishing, and outdoor recreational opportunities at Lake Poway Recreational Area;
- An 800-seat professional performing arts center; and
- Diverse range of aquatic programs at the Community Park pool.

City Manager Penny Riley said, "Robin Bettin is well-known in the San Diego region as an exceptional manager with a vast range of experience in the field of Community Services. Robin will offer the Community Services Department excellent leadership and is a welcomed addition to the management team."

"I am excited to be joining the Poway team. I have spent my career working in the Park and Recreation field and I am very fortunate to be joining a City that offers such wonderful recreational amenities for their citizens. Poway has a reputation for providing outstanding customer service and I look forward to being a part of the organization."

- Robin Bettin, Poway Director of Community Services

Become a Trauma Intervention Volunteer

The Trauma Intervention Programs (TIP) of San Diego County, Inc. is seeking Poway area volunteers to be trained to help fellow citizens who are in distress as a result of a traumatic event. Volunteers are called to the scene by law enforcement or firefighters to assist citizens who are family members and friends of a victim following a natural or unexpected death by fire, crime, or other crisis situations.

The first few hours following a crisis are very confusing for everyone involved. The TIP volunteers provide the necessary emotional first aid and other temporary support until the people involved in the crisis are able to depend on family, friends, and others. This allows the emergency providers to return to service more quickly and feel confident that the victim will receive the assistance needed. Among other activities, TIP volunteers can provide support to victims or survivors; arrange food, shelter, clothing, and transportation; notify family members and friends; and serve as a liaison between the victims and emergency services personnel.

All adult and teen volunteers are required to attend a 50-hour training class that is usually scheduled over a two-week period. No prior experience is necessary to attend training or to become a volunteer. However, volunteers must be at least 16 years of age, have automobile transportation, and live in the Poway area. Join an organization whose mission supports compassion and caring for others. For more information, contact the TIP office at (760) 931-2104 or check the website at www.tipsandiego.org.

STORM WATER DOOR HANGER

Dear Resident:

The City of Poway's storm drain system collects water run off and drainage from rainfall. The storm drain system is not connected to the sewer system, which means this water is untreated as it is channeled through local creeks to an intricate storm water conveyance system that ultimately leads to the ocean.

Most of the time, pollutants unknowingly and unintentionally flow into storm drains every time it rains or when water flows out of yards. Sometimes pollutants such as pesticides, fertilizers, pet waste, litter and oil are inadvertently disposed in storm drains. In both cases pollution of the storm water system can have harmful effects on our recreational areas, waterways and wildlife.

Please see reverse side for tips on how you can play an important part in storm water pollution prevention.

Improper disposal of automotive fluids and other hazardous substances is a violation of the Federal Clean Water Act and the Poway Municipal Code. To report illegal dumping of automotive fluids and other hazardous substances in storm drains please call:

Poway Code Compliance (during business hours) at (858) 668-4663 or 668-4664, press "0" for immediate assistance

Or

Poway Sheriff's Station (after regular business hours) at (858) 513-2800.

Sincerely,

City of Poway
PUBLIC WORKS DEPARTMENT
(858) 668-4707

Helpful & Inexpensive Tips for Storm Water Pollution Prevention

- When using hazardous substances such as paints, solvents, and cleaners, buy only what you need and use it all up.
- Properly dispose of unwanted household hazardous waste (HHW) at the **Poway HHW collection facility.** Please call **(858) 668-4710** for location and hours of operation.
- For water-based paints, rinse paint brushes in the sink. For oil-based paints, filter and reuse paint thinner. Dispose of all unwanted paints and materials at the Poway HHW collection facility.
- If you are working on a home improvement project, dispose of small amounts of drywall, concrete and mortar in the trash after it is dry.
- Dispose of pet waste in the toilet or deposit in a bag in a trash receptacle.
- Use pesticides or fertilizers sparingly. Avoid using them if the forecast calls for rain within the next week.
- Use mulch as a substitute for herbicides to prevent weeds from growing and to help absorb water.
- Do not over water your lawn and water during the cooler times of the day.
- Drain swimming pools only when advised to by professionals, and take steps to ensure water will not harm our environment.
- Sweep and pick up leaves and debris from your driveway instead of hosing it down into the storm drain.
- If you wash your own car, use a shutoff nozzle on your hose, and use mild detergents and water sparingly.
- When changing fluids from your car, drain in a clean container (e.g., an empty milk jug) and seal. Take used oil and oil filters to a **used oil collection center** in Poway. Call **1-800-CLEANUP** for locations.

ATTACHMENT 6.4

RESIDENTIAL STORM WATER BROCHURE

City of Poway Storm Water Program
(858) 668-4707

Only Rain Down the Storm Drain!

Only Rain Down the Storm Drain!

Easy Steps to Clean Water

Sweep or Rake

Conserve water.
Do not use a hose to wash off sidewalks, driveways, and patios. Sweep up debris and put it in a trash can. Rake up yard waste to compost or recycle.

Reduce the Use of Landscape Chemicals

Decrease the use of lawn and garden care products such as pesticides, weed killers, and chemical fertilizers. Consider using non-toxic pest control methods. Avoid over watering which may wash these products into the gutter and storm drains.

Buy Non-Toxic Products

When possible, use non-toxic products for household cleaning. If you must use a toxic cleaning product, buy small quantities, use it sparingly and properly dispose of unused portions. You should dispose of your toxic products at the Poway Household Hazardous Waste Collection Facility. Please call (858) 668-4710 for the location and hours of operation.

Recycle Used Motor Oil and Earn $$

Certified used oil collection centers will pay a few cents per gallon for used oil. Collect used oil in sealed containers and take it to a certified center. For the certified center nearest you, call 1-800-CLEANUP
1 (800) 253-2687
or visit the City of Poway's website at www.ci.poway.ca.us

Dispose of Yard Waste Frequently

By disposing of grass, leaves, shrubs, and other organic matter more frequently, less will wash into storm drains. Recycle or compost your yard waste.

Clean up After Your Pets

Take a bag when you walk your pets and always clean up after them. Flush pet waste down the toilet or dispose of it in a sealed plastic bag and throw it in the trash.

Care for Your Vehicles

Change your oil routinely. Fix fluid leaks immediately. Keep your vehicles tuned up. If possible, wash your vehicle at home on an unpaved area, such as lawn or gravel. Use very little soap. Pour remaining soapy water into an indoor sink or toilet. Conserve water by using a shutoff nozzle. Consider using a car wash designed to collect the wash water.

For more information on how you can prevent the pollution of our creeks, rivers, lakes, and ocean visit **www.ci.poway.ca.us** or **www.projectcleanwater.org**
To report illegal dumping of automotive fluids and other substances into storm drains please call: Poway Code Compliance (during business hours 8 a.m. to 5 p.m.) at (858) 668-4663 or (858) 668-4664, press "0" for immediate assistance; or Poway Sheriff's Station (after regular business hours) at (858) 513-2800.

City of Poway Stormwater Management and Discharge Control Ordinance, Chapter 13.09, prohibits the discharge of pollutants to the storm water conveyance system.

FUNDED BY A GRANT FROM THE CALIFORNIA INTEGRATED WASTE MANAGEMENT BOARD

03/05

Only Rain Down the Storm Drain!

Clean Water is Important to All of Us!

When rain flows over streets and other surfaces, it picks up pollutants and carries them into the storm water conveyance ("storm drain") system.

Did you know that storm drains are **NOT** connected to sanitary sewer systems and treatment plants?

The storm drain system is designed to prevent flooding by transporting water away from developed areas.

However, this water is not filtered or treated, and all the contaminants it contains eventually flow to our creeks, lakes, and the ocean where we swim and fish.

Once there, polluted runoff can harm wildlife and habitats. In some cases, it can even cause beach closures or make our fish and shellfish unsafe to eat.

Why do we need Clean Water?

Clean water is essential for every aspect of life. In addition to sustaining our local water resources, it ensures economic growth and prosperity. Population growth has impacted water quality and placed increasing pressure on supplies. Controlling pollution is critical to preserving our aquatic resources and the economic viability of our region.

How you can help keep our water clean...

Poway residents can make a difference. Becoming aware of ways to prevent storm water pollution is the first step toward having cleaner water for drinking, swimming, boating, and fishing.

ATTACHMENT 9.1

HHW AND UNIVERSAL WASTE FLYER

CITY OF POWAY'S

Household Hazardous Waste Collection Facility

12325 Crosthwaite Circle (off Stowe Drive) in
the South Poway Business Park, Poway, CA

Hours of Operation:

9:00 a.m.- 3:00 p.m. Saturdays Only

(Closed on Sundays, weekdays, and holiday weekends)
For recorded information call: **(858) 668-4710**

Household Hazardous Waste includes:

- Aerosol cans, non-empty
- All Purpose Cleaners
- Auto Batteries
- Auto Fluids, Oil & Filters
- Batteries
- Cooking Oil, Residential
- Disinfectants
- Drain Opener
- Electronics: Computer CPU, Monitor, Printer, TV, VCR, Wireless Phone, Microwave Oven
- Fertilizers
- Fluorescent Tubes and Bulbs & Other Mercury-Containing Lamps
- Furniture Polish
- Gasoline (w/ container)
- Latex (water based) Paint
- Lighter Fluid
- Oil-Based Paint
- Oven Cleaner
- Pesticides
- Pool Chemicals
- Propane Canisters
- Sharps in rigid, sealed containers labeled "Sharps"
- Solvents & Thinners
- Thermometers
- Thermostats
- Varnishes

To reduce the amount of Household Hazardous Waste you generate, please buy only what you need and use it up. Choose less toxic alternatives and recyclables.

1/2009

HOUSEHOLD HAZARDOUS WASTE is unused or leftover portions of products containing hazardous chemicals used to maintain your residence. Products labeled *Caution, Warning, Danger, Poison, Toxic, Flammable or Corrosive* are considered hazardous.

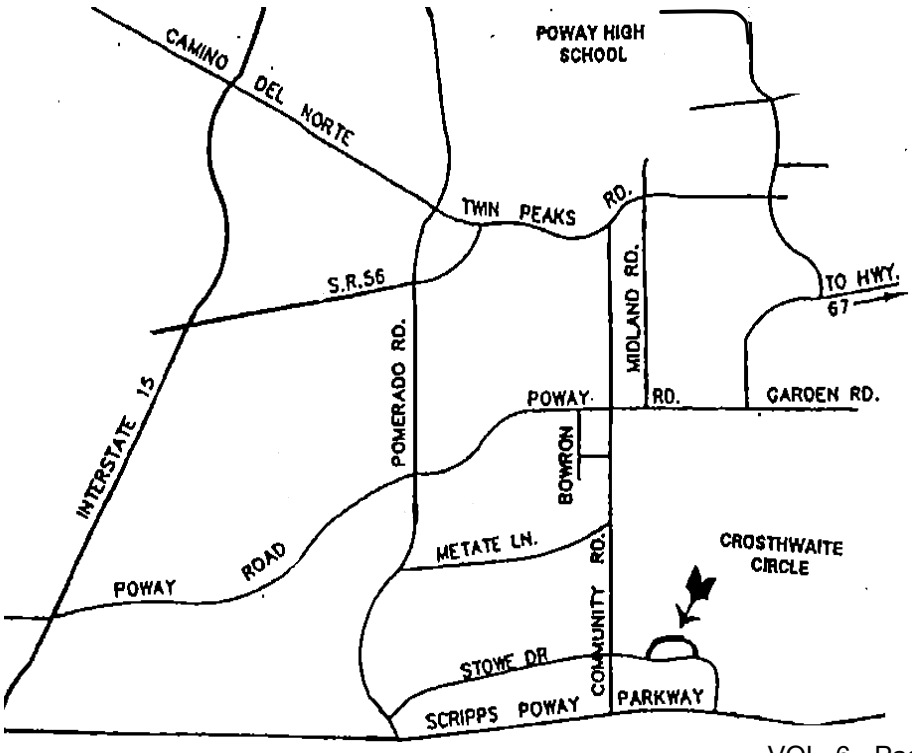
PROPER DISPOSAL: It is dangerous and illegal to discard household hazardous waste into the trash, a storm drain, or down the sewer drain. Instead, use up the product as intended or take the unused portion to a Household Hazardous Waste Collection Facility. Uncontaminated used oil, oil filters, antifreeze, and automotive batteries may also be taken to a certified collection center.

TRANSPORTATION AND WEIGHT LIMITS: Leave products in the original container with lids on tight so they will not leak. Transport containers in the trunk or in the back of the vehicle away from passengers. **DO NOT** transport more than 15 gallons or 125 pounds at a time in containers no larger than a 5-gallon bucket.

CONSTRUCTION WASTE: Hazardous waste from a home remodeling project where a commercial contractor was used is commercial waste. The disposal is the responsibility of the contractor.

DO NOT BRING: **BUSINESS WASTE, TIRES, EXPLOSIVES, RADIOACTIVE MATERIAL or MEDICAL WASTE except sharps.**

Funded by the City of Poway, participating agencies, and grants provided by the California Integrated Waste Management Board.



Universal Waste

Universal waste (U-waste) is hazardous waste that comes from a wide variety of generators, including residences and businesses. Under California's "Universal Waste Rule," U-waste cannot go in the trash, and must be taken to a collection location where it is then sent for recycling or proper disposal.

Examples of Universal Waste

- Common Batteries (AA, AAA, C cells, D cells and button cell batteries)
- Electronic Devices such as: Computer and television monitors, wireless phones, computer processing units, printers, VCRs and microwave ovens
- Fluorescent light tubes and bulbs
- High intensity discharge lamps
- Mercury switches
- Mercury thermometers
- Mercury thermostats
- Non-empty aerosol cans

How To Dispose of U-waste

- Retailers that sell rechargeable batteries should have a take back service. Rechargeable batteries and cell phones are accepted at retail sites participating in the Rechargeable Battery Recycling Corp. Program.
- Poway Residents may take their waste to the Poway HHW Collection Facility along with their other HHW.

For additional information about universal waste go to:
http://www.calrecycle.ca.gov/HomeHazWaste/Uwaste/

www.ciwmb.ca.gov/HHW/Uwaste

Poway, CA 92064-0789

Re: Results of 2010/2011 Water Quality Monitoring, Flood Control Detention Basins, Poway, California

Dear Mr. Tamimi:

During the storm event in the Poway area on February 26th 2011, D-MAX Engineering, Inc. (D-MAX) conducted sampling and analyses of selected parameters for the detention basins located at Stotler Court, Stowe Drive, Community Road, Kirkham Way, and Gate Drive. The sampling was conducted in order to evaluate the effectiveness of City of Poway (City) retrofitted flood control detention basins in removing pollutants from storm water. These sites were revisited approximately three days later on March 1 2011, to sample the water released from the basins. This letter summarizes our sampling procedure and the results of the analyses.

Background

The City of Poway has retrofitted five flood control detention basins for use as regional storm water best management practices (BMP). All basins were modified to capture and mitigate the volume of runoff produced by an 85th percentile, 24-hour rain event. The City modified these basins to serve as shared BMPs for Priority Development Projects within their drainage areas. These shared BMPs are less expensive for developments subject to the City's Standard Urban Stormwater Mitigation Plan (SUSMP), and they also treat runoff from other parcels within the basins' drainage areas that were not subject to SUSMP and would not have received any treatment if a standard SUSMP design approach of installing BMPs only on the Priority Development Project site was used.

The City has conducted analyses of inflow to and outflow from the basins to assess their effectiveness since 2004. Based on the anticipated and potential pollutants generated by the land use types upstream of the detention basins, the parameters on the following page were selected for analyses.

Field Analyses

- Temperature
- pH
- Specific Conductance

Laboratory Analyses

- Total Hardness
- Total Suspended Solids (TSS)
- Total Organic Carbon
- Oil and Grease
- Nitrate Nitrogen
- Ammonia Nitrogen
- Orthophosphate Phosphorus
- Total Phosphorus
- Total and Dissolved Copper
- Total and Dissolved Lead
- Total and Dissolved Zinc
- Total and Dissolved Cadmium
- Surfactants (MBAS)
- Specific Conductance
- Turbidity
- Total Coliform Bacteria
- Fecal Coliform Bacteria
- *Enterococcus* Bacteria

Sampling Procedure

Sampling was conducted for a rain event beginning at 2 in the morning on February 26th, 2011. According to information from the County of San Diego rain gauge station in Poway, the sampled storm generated 1.41 inches of rain. The D-MAX field crew arrived at approximately 2:00 AM and concluded sampling at approximately 11:30 AM. Once sufficient rain had fallen to produce runoff at the sampling locations, time weighted composite samples were taken by collecting equal volumes of samples from the inlets of all detention basins at regular time intervals. Samples were taken every 30 minutes for all basins except at Community, where samples were collected every 20 minutes. The Community basin has a largely pervious drainage area and thus does not see a runoff response until later in the storm. More frequent sampling is therefore conducted to ensure that sufficient volume is collected to meet laboratory analysis requirements. At each basin samples were collected and kept in a 2.5 gallon glass jar.

At the Gate basin, samples were taken from two different inlets to the basin- in the past it was thought that there was only one inlet but field investigation prior to the 2011 monitoring found a second outfall to the basin. Each of the points was sampled according to the procedure described above, and then the composited samples from each of the two basin inlets were combined at a 2:1 ratio: two parts from the west basin inlet and one part from the east inlet. This combined sample was then submitted to the lab for analysis. The 2:1 ratio was determined by delineating the upstream drainage area for each outfall based on the most recent available storm drain map from the City. The land use within both areas was approximately equivalent, and the drainage area associated with the western basin inlet was about twice the size of the drainage area for the eastern inlet.

In the field, temperature, pH, and specific conductance were measured for all composite samples using calibrated meters. In accordance with standard sampling procedure, grab samples were taken in the middle of the rain event and promptly sent to the lab for analyses of the three types of bacterial indicators and oil and grease. The samples for all other constituents were collected as composites in a 2.5 gallon glass jar and preserved on ice

until they were delivered to EnviroMatrix Analytical Laboratory to be analyzed for the remainder of the parameters listed above. The samples were delivered within the appropriate holding times, and strict chain-of-custody procedures were followed.

Runoff from this rain event was kept in the basins for approximately three days before being released. When the captured runoff was released, another set of samples was collected from the outfall of each basin. Temperature, pH, and specific conductance were measured again in the field for the outflow samples. The collected samples were then sent to the laboratory for analysis of the same parameters as the inflow samples. The laboratory analytical reports for the inflow and outflow samples are attached to this report.

Results and Discussion

The drainage area for the Community detention basin is much less impervious than the drainage areas for the other four basins and is also relatively flat. As a result, the runoff response for this basin typically comes much later in rain events for this basin than the other basins, and during smaller rain events essentially no runoff reaches the detention basin. This year enough runoff was produced to collect inflow and outflow samples for all five basins, including the Community basin. The locations of all five basins and their drainage areas are shown in Figure 1.

Tables 1 through 5 present the results of the sampling and analysis for each basin. Table 6 presents an overall summary of the results, indicating the change in each parameter (increase, decrease, or no change) from inflow to outflow as well as the outflow value. Table 7 summarizes the percent reductions for the parameters tested at all five basins. Table 8 presents overall median and average values for the inflow and outflow values, as well as percent reductions based on the overall averages and medians presented in the table.

In general, most parameters either had lower concentrations in the outflow than in the inflow or were not detected in both the inflow and the outflow. In all five basins, total zinc, turbidity, total suspended solids, fecal coliforms and enterococci were significantly reduced. Total and dissolved copper, dissolved lead, and dissolved zinc had higher outflow concentrations in some, but not all, basins. Dissolved copper , lead and zinc were only a few micrograms per liter higher in the outflow sample, and the outflow values were still below the California Toxics Rule Criterion Continuous Concentration (the more stringent of the two applicable numeric limits).

At four of the detention basins total hardness and specific conductance increased, likely due to the fact that captured runoff was subject to evaporation prior to the outfall sampling. Hardness and specific conductance measure dissolved ions in a particular solution. These ions do not settle out of solution and the ratio of dissolved solids to water increases as water evaporates. As a result, there is usually an increase in total hardness as well as specific conductance. An opposite trend was noted at the Community basin. The drainage area for Community is much less impervious the other basins' drainage areas. Rain water typically has low specific conductance and hardness, but this effect is more pronounced for highly impervious drainage areas because runoff has little opportunity to pick up dissolved minerals from contact with soil. The inflow specific conductance and hardness values for the community basin, which mainly reflect levels of dissolved minerals, were about five times higher at the Community basin than at the other four basins. This explains why the inflow specific conductance was higher at the Community basin, but the reason for outflow value decreasing with respect to the inflow value at this basin is unknown.

Reductions in fecal coliforms ranging from 37 percent to nearly 100 percent were observed in all basins. Four of the five basins had outflow fecal coliform levels below the bacteria total maximum daily load (TMDL) wet weather quality standard. Reductions in enterococci were observed in four of the five basins. The Gate detention basin was the only basin at which an increase was observed, but the reason for the increase is uncertain. Of the five basins, one basin had an outflow enterococci count below the TMDL standard.

Total coliforms, which are less likely to be related to fecal sources than the other two groups of bacteria measured and are generally considered poor public health indicators, decreased at four of the five basins. Decomposing organic material in the Gate detention basin is the most likely source of the total coliform increases observed there.

Mixed results were observed with nutrient levels. Nitrate nitrogen levels decreased from inflow to outflow at two of the five basins; the Stowe, Kirkham and Gate basins each had a moderate increase. Ammonia nitrogen levels increased at three of the five basins. For all the basins both ammonia and nitrate nitrogen inflow and outflow values were lower than last year's results. Organophosphate phosphorus decreased at all basins but Gate, and total phosphorus decreased all at basins but Gate and Kirkham. The outflow values for orthophosphate phosphorus and total phosphorus were fairly similar at all basins though, and it appears that inflow concentration variation is the main reason for the differences in removal rates. As shown in Table 8, overall nitrate nitrogen and total phosphorus decreased, but more mixed results were seen for orthophosphate phosphorus and ammonia nitrogen depending on whether the average or median values were used. In these cases it appears the average is more strongly influenced by a single value well above or below the rest of the values, and the median is likely a more representative measure.

Among other constituents, surfactants and oil and grease were never detected.

Summary of Findings

A summary of the main findings of the 2011 detention basin monitoring program is presented below.

- Reductions in levels of fecal coliforms and enterococci were observed in five and four of the five basins, respectively. Where reductions were observed, reduction rates ranged from 20 percent to nearly 100 percent. Outflow samples were below the bacteria TMDL standards for fecal coliform at four basins and below the enterococci standard at one basin.
- Metals generally were not detected, or had relatively low outflow concentrations
- Turbidity reductions of 40 to nearly 100 percent were observed at all basins, and TSS reductions of at least 80 percent were observed at all basins. TSS levels were all below the minimum reporting limit and only slightly above the minimum detection limit in the outflow of each of the five basins. All outflow turbidity levels were below the Basin Plan water quality objective of 20 NTU.
- Surfactants and oil and grease were not detected in any of the samples.
- Total hardness and specific conductance were higher in the outflow for most basins. This is consistent with past years and is likely due to the effect of evaporation during the period that water is detained in the basins.

- Mixed results were observed with nutrients, with some increases and some decreases observed. In general, lower levels of nitrate and ammonia nitrogen and total phosphorus were observed compared to last year.

It has been our pleasure working with the City of Poway on this interesting project. If you have any questions regarding this report, please give me a call at (858) 586-6600 ext. 22.

Sincerely,
D-MAX Engineering, Inc.

	Outflow	220	300	40	230	1,300	230

Notes

↓ Indicates the outflow value was lower than the inflow value

↑ Indicates the outflow value was higher than the inflow value

- Indicates the parameter was detected in the inflow and outflow, but no change was observed

ND Indicates the parameter was not detected in either the inflow or the outflow

Outflow is the outflow value measured for the parameter

*Overall column shows the median outflow value for the parameter across all monitored basins and the net increase or decrease across the basins. A value of "<[detection limit]" was entered where a large number of non-detect results brought the median below the reporting limit. The net increase or decrease is the number of increases minus the number of decreases. For example, two increases and one decrease is represented by showing one increase arrow.

Table 7: Pollutant Removal Percentages at All Basins

Parameters	Stotler	Stowe	Community	Kirkham	Gate
Total Cadmium (mg/l)	NA	NA	NA	50%	75%
Total Copper (mg/l)	25%	0%	-86%	-100% **	-13%

Turbidity (NTU)	82%	40%	58%	43%	100%
Temperature (^{o}C)*	-22%	-10%	-16%	17%	-3%
pH*	-15%	-10%	-6%	4%	-2%
Field Specific Conductance (µmhos/cm)	-175%	-414%	24%	-117%	-400%
Total Coliforms (MPN/100mL)	99%	63%	100% **	77%	-60%
Fecal Coliforms (MPN/100mL)	98%	66%	100% **	92%	38%
Enterococci (MPN/100mL)	87%	57%	100% **	21%	-645%

Notes

NA = not detected in both inflow and outflow

* These parameters were measured in the field.

** Because analytical methods do not have detection limits of zero, a removal rate of exactly 100% cannot be stated. However, all values in this table are rounded to the nearest full percentage point, so values above 99.5% are shown as 100%.

Negative percentages indicate the outflow value was higher than the inflow.

Table 8: Statistical Summary of Pollutant Removal: All Basins

Parameters	Inflow		Outflow		Percent Reduction	
	Average	Median	Average	Median	Average	Median
Total Cadmium (mg/l)	<0.001	<0.001	<0.001	<0.001	NA	NA

Dissolved Cadmium (mg/l)	<0.001	<0.001	<0.001	<0.001	0%	0%
Dissolved Copper (mg/l)	0.003	0.003	0.004	0.004	-6%	-33%
Dissolved Lead (mg/l)	<0.001	<0.001	0.002	0.002	NA	NA
Dissolved Zinc (mg/l)	0.018	0.018	0.017	0.016	4%	14%
Ammonia Nitrogen (mg/l)	0.050	0.050	0.150	0.170	-200%	-240%
Specific Conductance (µmhos/cm)	176	94	320	357	-82%	-280%
Total Hardness (mg/l)	<10	<10	72.4	71.0	0%	0%
Surfactants (mg/l)	<0.5	<0.5	<0.5	<0.5	NA	NA
Nitrate Nitrogen (mg/l)	0.6	0.2	0.3	0.2	52%	-10%
Oil and Grease (mg/l)	<5	<5	<5	<5	NA	NA
Orthophosphate as P (mg/l)	0.238	0.070	0.074	0.080	69%	-14%
Total Phosphorus (mg/l)	0.320	0.140	0.132	0.130	59%	7%
Total Suspended Solids (mg/l)	11.8	15.0	2.0	2.0	83%	87%
Total Organic Carbon (mg/l)	9.1	5.0	7.8	7.2	14%	-44%
Turbidity (NTU)	10.4	9.9	3.7	3.7	64%	62%
Temperature (oC)*	12	12	13	13	-7%	-8%
pH*	6.6	6.6	6.9	6.7	-5%	-2%
Field Specific Conductance (mS/cm)*	0.13	0.07	0.25	0.32	-92%	-357%
Total Coliforms (MPN/100mL)	55,800	13,000	2,926	3,000	95%	77%
Fecal Coliforms (MPN/100mL)	10,640	800	212	230	98%	71%
Enterococci (MPN/100mL)	3,972	700	418	230	89%	67%

Notes

NA = not detected in both inflow and outflow

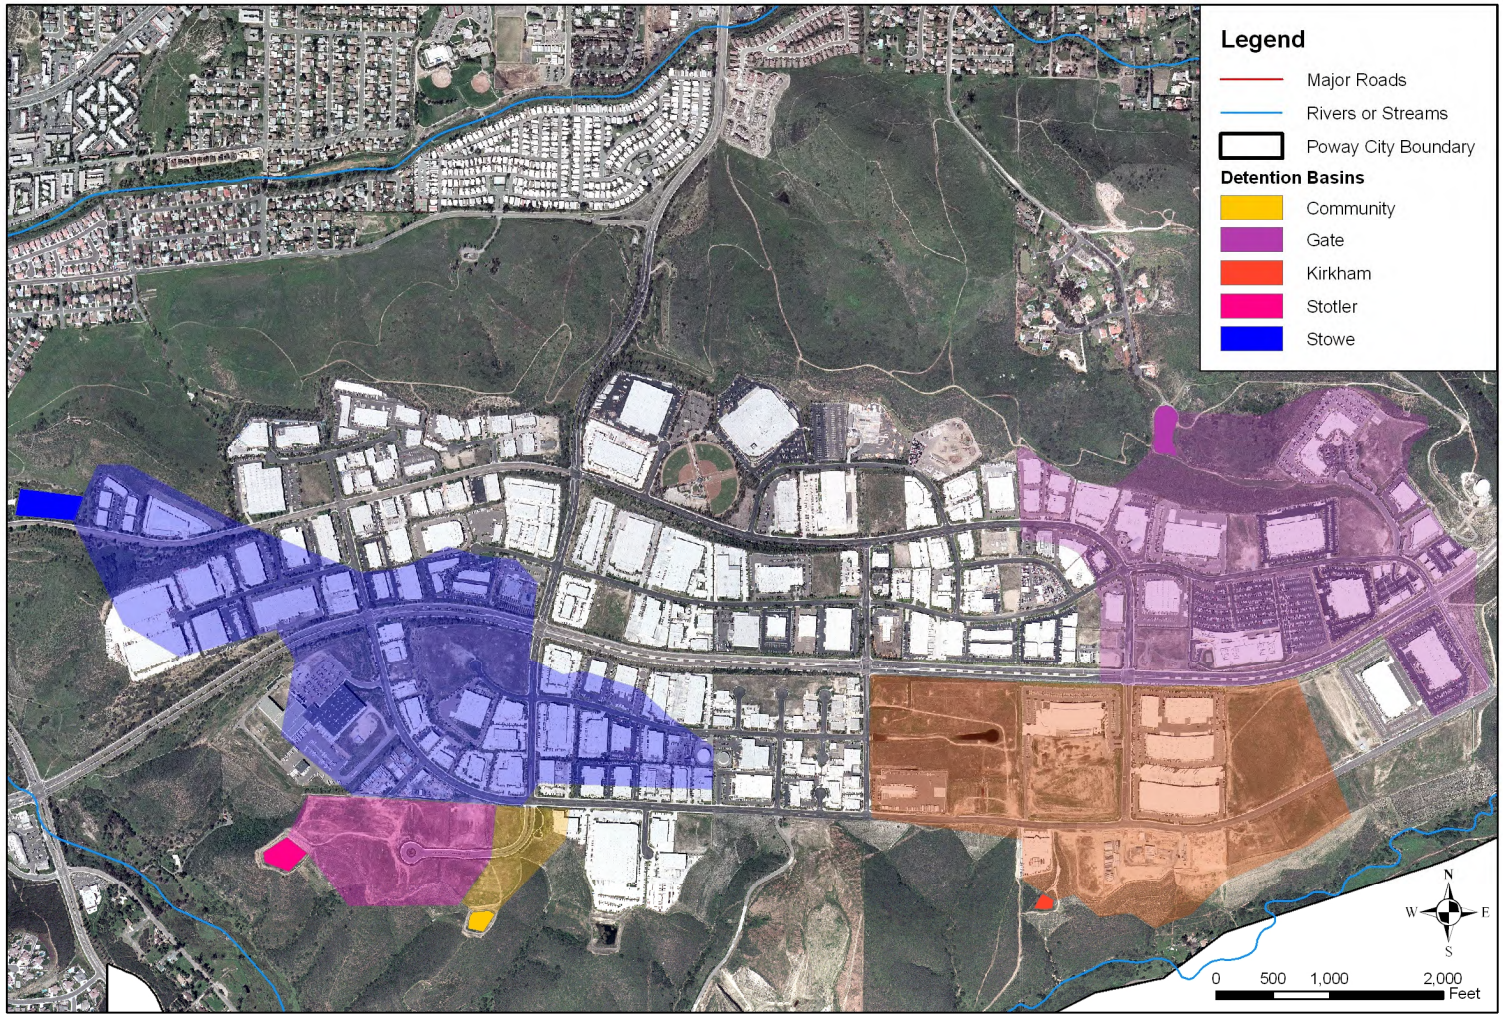
* These parameters were measured in the field.

** Oil and grease and total suspended solids were detected in only a few inflow samples and no outflow samples. Statistically the medians for inflow and outflow were both equal, but the inflow averages were higher than the outflow averages.

One half the reporting limit was substituted for non-detect ("ND") values in statistical calculations.

Negative percentages indicate the outflow value was higher than the inflow. While the number of decimal places to which data is shown on the table is limited for significant figure reasons, the percentages shown were calculated based on the full calculated numbers before applying rounding for significant figure purposes.

Figure 1
South Poway Retrofitted Detention Basins and Corresponding Drainage Areas



Base Data Sources: USGS, SanGIS, SANDAG. Aerial photos are from 2004. The basins themselves are shown in darker colors, and corresponding drainage areas are the slightly lighter, transparent areas.

Notes and Definitions

W-02	The sample for nitrate analysis was preserved with H2SO4 after the nitrite portion of the analysis was completed to extend the holding time for the sample. Nitrate results are corrected for the nitrite contribution per the method.
QR-04	The RPD between the sample and sample duplicate is not valid since both results are below the reporting limit for this analyte.
QR-02	The RPD result exceeded the QC limits due to non-homogeneity of sample.
QM-06	Due to noted non-homogeneity of the QC sample matrix, the MS/MSD did not provide reliable results for accuracy and precision. Sample results for the QC batch were accepted based on LCS/LCSD percent recoveries and RPD values.
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Enclosed with this letter are the test results performed by subcontract laboratory for the following analyses:

- TOC – Liquid by SM5310B

The samples were received by EnviroMatrix Analytical, Inc. intact and with chain-of-custody documentation. The test results and pertinent quality assurance/quality control data are listed on the attached tables.

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hard copy data report has been authorized by the following signature.

Dan Verdon
Laboratory Director

Clinical Laboratory of San Bernardino, Inc.

07 March 2011 Clinical Lab No.: 11C0140

Louis Luick
EnviroMatrix Analytical, Inc.
4340 Viewridge., Ste. A
San Diego, CA 92123

Project Name: TOC Analysis
Sub Project: 11B0679

Enclosed are the results of the analyses for samples received at the laboratory on 03/01/11 . Samples were received within temperature range, in correct containers and preservation.

Analyses were performed pursuant to client's chain of custody, within hold times, utilizing EPA or other ELAP approved methodologies.

I certify that the results are within compliance both technically and for completeness. Analytical results are attached to this letter. Please call if any additional information and or assistance are needed.

Thank you for choosing Clinical Laboratory of San Bernardino for your analytical needs.

Sincerely,

Stephen Kavousy

Notes and Definitions

W-02	The sample for nitrate analysis was preserved with H2SO4 after the nitrite portion of the analysis was completed to extend the holding time for the sample. Nitrate results are corrected for the nitrite contribution per the method.
QR-04	The RPD between the sample and sample duplicate is not valid since both results are below the reporting limit for this analyte.
QR-02	The RPD result exceeded the QC limits due to non-homogeneity of sample.
QM-06	Due to noted non-homogeneity of the QC sample matrix, the MS/MSD did not provide reliable results for accuracy and precision. Sample results for the QC batch were accepted based on LCS/LCSD percent recoveries and RPD values.
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis (if indicated in units column)
RPD	Relative Percent Difference
MDL	Method detection limit (indicated per client's request)

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Enclosed with this letter are the test results performed by subcontract laboratory for the following analyses:

- TOC – Liquid by SM5310B

The samples were received by EnviroMatrix Analytical, Inc. intact and with chain-of-custody documentation. The test results and pertinent quality assurance/quality control data are listed on the attached tables.

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hard copy data report has been authorized by the following signature.

Dan Verdon
Laboratory Director

Clinical Laboratory of San Bernardino, Inc.

07 March 2011 Clinical Lab No.: 11C0290

Louis Luick
EnviroMatrix Analytical, Inc.
4340 Viewridge., Ste. A
San Diego, CA 92123

Project Name: TOC Analysis
Sub Project: 11C0017

Enclosed are the results of the analyses for samples received at the laboratory on 03/02/11 . Samples were received within temperature range, in correct containers and preservation.

Analyses were performed pursuant to client's chain of custody, within hold times, utilizing EPA or other ELAP approved methodologies.

I certify that the results are within compliance both technically and for completeness. Analytical results are attached to this letter. Please call if any additional information and or assistance are needed.

Thank you for choosing Clinical Laboratory of San Bernardino for your analytical needs.

Sincerely,

Stephen Kavousy

EXECUTIVE SUMMARY

In January 2007, the San Diego Regional Water Quality Control Board (RWQCB) issued Order No. R9-2007-0001 (Municipal Permit), a National Pollutant Discharge Elimination System (NPDES) permit regulating discharges to the storm drain system within 18 municipalities in San Diego County, the County of San Diego, the San Diego County Regional Airport Authority, and the San Diego Unified Port District (collectively referred to as "Copermittees"). As required by the Municipal Permit, the City of Poway (City) has developed and maintains a Jurisdictional Urban Runoff Management Program (JURMP) intended to minimize the amount of pollutants present in runoff that may be generated within the City's jurisdiction.

Through the development and implementation of the City's JURMP, the City strives to improve the water quality of local receiving water bodies and to protect human and aquatic health from potentially harmful pollutants such as bacteria/viruses, organic compounds, oil & grease, etc.

The City of Poway's JURMP includes Best Management Practice (BMP) standards for internal activities, industrial and commercial businesses, construction and development projects, and residents. It also incorporates programs for water quality monitoring, public participation, and educational outreach.

This JURMP Annual Report presents the City's activities implemented as its JURMP during the 2011/2012 fiscal year, which began on July 1, 2011, and ended on June 30, 2012. Each section of this JURMP Annual Report discusses the City's efforts to protect and enhance storm water quality during the current reporting period and how those efforts met the requirements of the Municipal Permit. Significant activities conducted for the major components of the City's JURMP are summarized below.

Development Planning Component

The City inspected all high priority projects prior to October 1, 2011, as required by the Municipal Permit. Twenty-seven percent of all inventoried sites with treatment control BMPs were also inspected, which surpasses the Municipal Permit requirement of 20 percent. Five of the sites inspected required a follow-up inspection for BMP deficiencies; in all cases the deficiencies have been corrected. Maintenance verification was provided to the City by responsible parties, and no Notices of Violations (NOVs) were issued during 2011/2012.

All Standard Urban Storm Water Mitigation Plan (SUSMP) projects approved by the City proposed medium or high removal efficiency treatment control BMPs and no projects received a SUSMP waiver. The City continues to maintain its retrofitted detention basins, which provide treatment for many SUSMP projects in the South Poway Business Park area, as well as neighboring projects completed prior to SUSMP regulations that otherwise would not receive any treatment. Several years of inflow and outflow monitoring of the detention basin has indicated the basins have a significant positive effect on water quality, such as the reduction of indicator bacteria discharged during the 2011 monitoring.

Construction Component

City staff successfully worked with construction project proponents to ensure parties were knowledgeable of storm water concepts and of the City's minimum BMPs during the pre-planning process. As a result, it was unnecessary to issue any NOVs during 2011/2012. During 2011/2012, the City had 73 active construction sites, prioritized as 7 high threat to water quality (TTWQ), 19 medium TTWQ, and 47 low TTWQ. The City conducted checks of erosion control plans to make certain construction projects complied with the City's minimum BMP requirements. The City conducted 167 formal inspections to verify BMP implementation, and issued 26 Correct Work Notices to 21 construction sites that were not in compliance with City requirements. Fourteen of these sites were compliant by the end of 2011/2012, an additional three have come into compliance since the end of the reporting period, and four have been referred for escalated enforcement or are being followed up on a path to compliance.

Municipal Component

The City inspected all high TTWQ municipal fixed facilities during 2011/2012 and no facilities required follow-up inspections. The City also continued its rigorous street sweeping and Municipal Separate Storm Sewer System (MS4) maintenance programs. A total of 1,557 tons of trash and debris was removed through street sweeping activities, and 2,273 cubic yards of debris were removed during routine MS4 maintenance activities. The City also inspected and cleaned 87 miles of sewer line and continued to maintain its sanitary sewer system to decrease the potential for a sanitary sewer overflow (SSO). City personnel were regularly trained regarding Storm Water Pollution Prevention (SWPP) concepts and practices.

Industrial and Commercial Component
