Notes

L = Likely, PO = Possible, UL= Unlikely

* The Municipal Permit lists a number of specific commercial categories. Other categories on this list were mainly created for industrial facilities, which the Municipal Permit mainly defines via a broad reference to the Code of Federal Regulations rather than listing specific categories. Some commercial categories not specifically listed in the Municipal Permit are also included.

** Heavy metals are a possible pollutant for any facility that has a parking lot.

This table is based on the field experience of D-Max Engineering and on tables in the Copermittees' Baseline LTEA. D-Max has conducted more than 1,000 industrial and commercial inspections during which it assessed the pollutant discharge potentials of the inspected facilities.

Nonstructural BMP's	Grounds Free of Precipitates, Powders, Debris, and Trash. Dumpster areas clean. Good Housekeeping Practices.	✔			
	Spill Response Kits Stocked, Visible, Accessible	✔			
Structural BMP's	Outdoor Material Storage Areas (Covered)			✔	
	Storm Water Treatment BMP's Operational / Maintained			✔	
	Containment Berms, Containers, Pallets, Structures Functioning			✔	

EVIDENCE OF DISCHARGES, SPILLS, LEAKS IN THE FOLLOWING AREA

	S	U	N/A	Comments
Catch Basins Wet, Stained, Odorous	✔			
Bins, Drums, Barrels, and Bottles Leaking onto Ground	✔			
Hardscape Stained, Corroded, Discolored	✔			
Storm Drain Outfall Points Dirty, Discolored, Residue	✔			
Shipping and Receiving Bays	✔			

COMMENTS: NOTES, FINDINGS, POTENTIAL FOR POLLUTED RUNOFF

Some rust colored stains from metal shed on ground near back of 6915 building. Nothing major.

For Storm Water Pollution Prevention Program use only

Enforcement Referral: Date: _____ Initials: _____

BEST MANAGEMENT PRACTICE IMPLEMENTATION AND FUNCTIONALITY

		S	U	N/A	Comments
Nonstructural BMP's	Grounds Free of Precipitates, Powders, Debris, and Trash. Dumpster areas clean. Good Housekeeping Practices.	✓			Need to clean around dumpster area
	Spill Response Kits Stocked, Visible, Accessible				
Structural BMP's	Outdoor Material Storage Areas (Covered)	✓			some area needs cover/shade but no threat of contamination to storm drain.
	Storm Water Treatment BMP's Operational / Maintained				
	Containment Berms, Containers, Pallets, Structures Functioning	✓			

EVIDENCE OF DISCHARGES, SPILLS, LEAKS IN THE FOLLOWING AREA

	S	U	N/A	Comments
Catch Basins Wet, Stained, Odorous	✓			
Bins, Drums, Barrels, and Bottles Leaking onto Ground	✓			
Hardscape Stained, Corroded, Discolored	✓			
Storm Drain Outfall Points Dirty, Discolored, Residue	✓			
Shipping and Receiving Bays	✓			

COMMENTS: NOTES, FINDINGS, POTENTIAL FOR POLLUTED RUNOFF

I told contact to perform housekeeping in and around dumpster area near the shipping and Receiving area.

For Storm Water Pollution Prevention Program use only

COMMENTS: NOTES, FINDINGS, POTENTIAL FOR POLLUTED RUNOFF

Facility utilizes a chiller on the north side of Building 2 (9603 Distribution Ave.) with a water storage tank nearby. The storage tank is not plumbed to sewer. Staff indicated that tank is rarely discharged, but when it is, a hose bib is utilized that drains the tank to the ground.

For Storm Water Pollution Prevention Program use only

☐ No exposure of facility's industrial activities, equipment, and materials to storm water

STORM WATER POLLUTION PREVENTION PLAN REVIEW

☐ No SWPPP

	S	U	N/A	Comments
Facility Site Map (Identified) • Storm Drains Inlets/Pipes, Discharge Points • Drainage Areas/Basins • Material Handling / Processing / Storage • Areas of Industrial Activities • Shipping / Receiving • Vehicle / Equipment Maintenance				SWPP dtd 6/2002; implemented by submitting an annual report.
Description of Industrial Activities including a list of materials, chemicals, and processes on site. Identify Potential Pollutants.				
Non Structural BMP's Identified • Housekeeping • Spill Response Plan • Employee / Contractor Training				
Structural BMP's Identified • Erosion Prevention • Overhead Coverage • Secondary Containment Structures / Berms • Treatment Systems / Filters				
Storm Water Inspection and Monitoring				
Record Keeping and Reporting				
Employee Training Records				
Quarterly Inspections Completed (4/yr)				
Storm Water Monitoring Completed (2/yr)				

INSPECTOR Jojo Delacruz

BEST MANAGEMENT PRACTICE IMPLEMENTATION AND FUNCTIONALITY

		S	U	N/A	Comments
Nonstructural BMP's	Grounds Free of Precipitates, Powders, Debris, and Trash. Dumpster areas clean. Good Housekeeping Practices.	√			
	Spill Response Kits Stocked, Visible, Accessible			√	
Structural BMP's	Outdoor Material Storage Areas (Covered)		√		See comments
	Storm Water Treatment BMP's Operational / Maintained	√			
	Containment Berms, Containers, Pallets, Structures Functioning	√			

EVIDENCE OF DISCHARGES, SPILLS, LEAKS IN THE FOLLOWING AREA

	S	U	N/A	Comments
Catch Basins Wet, Stained, Odorous			√	
Bins, Drums, Barrels, and Bottles Leaking onto Ground			√	
Hardscape Stained, Corroded, Discolored			√	
Storm Drain Outfall Points Dirty, Discolored, Residue			√	
Shipping and Receiving Bays	√			

COMMENTS: NOTES, FINDINGS, POTENTIAL FOR POLLUTED RUNOFF

There is an open area at the south portion of the production area. It had ungalvanized steel materials on deck. They were of different sizes.

For Storm Water Pollution Prevention Program use only

COMMENTS: NOTES, FINDINGS, POTENTIAL FOR POLLUTED RUNOFF

Shipment boxes are staged outside of the warehouse area in the parking lot to ease pickup. Items are not permanently stored and risk of polluted runoff appears to be minimal to none

For Storm Water Pollution Prevention Program use only

		S	U	N/A	Comments
Nonstructural BMP's	Grounds Free of Precipitates, Powders, Debris, and Trash. Dumpster areas clean. Good Housekeeping Practices.	✔			
	Spill Response Kits Stocked, Visible, Accessible	✔			
Structural BMP's	Outdoor Material Storage Areas (Covered)	✔			
	Storm Water Treatment BMP's Operational / Maintained	✔			
	Containment Berms, Containers, Pallets, Structures Functioning	✔			

EVIDENCE OF DISCHARGES, SPILLS, LEAKS IN THE FOLLOWING AREA

	S	U	N/A	Comments
Catch Basins Wet, Stained, Odorous	✔			
Bins, Drums, Barrels, and Bottles Leaking onto Ground	✔			
Hardscape Stained, Corroded, Discolored	✔			
Storm Drain Outfall Points Dirty, Discolored, Residue	✔			
Shipping and Receiving Bays	✔			

COMMENTS: NOTES, FINDINGS, POTENTIAL FOR POLLUTED RUNOFF

Rained during inspection, but generally clean. Small cooling tower appeared in use but did not seem to be connected to sewer (assuming system has bleed it must get discharged to ground). Facility has installed new boiler outside of building.

For Storm Water Pollution Prevention Program use only

CITY OF SAN DIEGO

STORM WATER COMPLIANCE INSPECTION FOR INDUSTRIAL AND COMMERCIAL FACILITIES

Inspected by D-MAX Engineering, Inc.

Inspector Name _____ Date____/____/_____Time_____AM / PM

Type of Inspection: ☐ Routine ☐ Follow-up ☐ Complaint Investigation

Result: ☐ Full Insp. ☐ Could not Contact ☐ Not Inventoried ☐ Moved, Vacant ☐ Refused ☐ Moved, Replaced by_____ ☐ Follow-up (i.e. not full) ☐ Out of Jurisdiction ☐ Duplicate of: _____ ☐ Mobile

A. CONTACT INFORMATION

Original	Changes
Business Name_____	Business Name_____
_____	_____
Street Address _____	Street Address_____
_____	☐ change _____
Responsible Person(s)_____	Responsible Person(s)_____
Title:_____	Business Telephone # **(**____**)** _____ **-**_____ext._____
Business Telephone # **(**____**)** _____ **-**_____ext._____	Business Fax # **(**_____**)** _____ **-** _____
Business Fax # **(**_____**)** _____ **-** _____	

Home Based? ☐ Yes ☐ No Mobile Business? ☐ Yes ☐ No **APN**:_____

Is this facility located in a multi-suite complex? ☐ Yes ☐ No

Facility personnel present:_____

B. FACILITY/SITE INFORMATION

Principal activity:_____

Assigned NAICS code(s) _____ _____ _____ _____ and/*or* SIC Code(s) _____ _____ _____ _____

Does NAICS Code best represent principal activity: ☐ Yes ☐ No SIC? ☐ Yes ☐ No

Recommended change of NAICS Code(s)?_____ _____ _____ _____ Of SIC? _____ _____ _____ _____

Existing NAICS code(s) _____ _____ _____ _____ *and* **SIC Code(s)** _____ _____ _____ _____

Status Update (if no longer active in City or does not need an inspection)**:** ☐ Moved/Out of Business ☐ Duplicate ☐ Not Inventoried ☐ Out of Jurisdiction

Does facility have a current business certificate? ☐ Yes ☐ No #_____ Exp._____

Is facility subject to CA Statewide General Industrial Permit? ☐ Mandatory ☐ Conditional ☐ No

Does facility have a Notice of Non-Applicability (NONA/NEC)? ☐ Yes ☐ No

Has facility filed a Notice of Intent (NOI) to obtain coverage? ☐ Yes ☐ No WDID: 9 37I0_____

Has facility filed a Notice Of Termination (NOT) for the WDID# listed above? ☐ Yes ☐ No Approval date: _____ month/yr

Does facility maintain SWPPP or BMP Plan? ☐ Yes ☐ No

Does facility have a storm water monitoring program? ☐ Yes ☐ No

C. INITIAL OBSERVATIONS

Approximate distance to receiving water body: ☐ < 200 ft. ☐ 200 – 1000 ft. ☐ > 1000 ft.

Discharge points: _____

_____

Approximate area covered by industrial or commercial activities:_____square feet

Approximate % impervious surface of this area_____%

Exposed areas of significant outdoor activity or storage? ☐ Permanent ☐ Occasional ☐ No

D. BMP ASSESSMENT

BMPs	No Corrections Required		Corrections Required		Comments	City BMP*
	N/A	Fully Implemented	Partially Implemented	Not Implemented		
D.1 General						
Keep site free of litter, debris, and sediment using dry methods						23
Keep parking lots, sidewalks, and streets free of sediment and debris using dry methods						20
Keep outdoor areas free of spills and leaks						5
Collect water from pressure washing or hosing and dispose of appropriately					☐ Unknown Performed by:	4
Direct roof downspouts away from areas of potential pollutants						11
Dispose of water from fire sprinkler maintenance activities appropriately					☐ Unknown Performed by:	10
Mark drains/inlets on site with “no dumping, drains to ocean” or similar signage						15
D.2 Landscaping						
Properly manage pesticides/fertilizer; use IPM when feasible					☐ Unknown Landscaping Co:	16
Employ adequate erosion prevention measures (vegetation or physical stabilization)						17
Eliminate over watering/over-irrigation						19
Properly store stockpiles to prevent material transport						17
Properly store and dispose of green waste					☐ Unknown	8
D.3 Materials and Wastes						
Protect trash area from contact with storm water						21
Keep trash area free of litter and debris, liquids, powders, sediment						24
Adequately cover materials stored outside						11
Prevent run-on from contacting materials stored outdoors						11
Properly label outdoor storage containers						13
Provide an accessible, functional spill response kit						6
Equip liquid storage containers with secondary containment						1
Keep secondary containment free of spills and rainwater						1
Properly store and dispose of hazardous materials						11
Maintain up-to-date inventory of hazardous materials						13
Keep loading and unloading areas, including drains, free of debris						23

BMPs	No Corrections Required		Corrections Required		Comments	City BMP*
	N/A	Fully Implemented	Partially Implemented	Not Implemented		
Dispose of water generated by processing activities appropriately						4
Dispose of pool, spa, fountain, and filter backwash water properly					☐ Unknown Performed by:	22
Clean floor mats in locations that do not drain to storm drain system						3
D.4 Equipment, Vehicles, and Outdoor Activities						
Conduct outdoor activities within contained areas (garage, under canopy, work shop)						12
Use drip pans to collect leaks/spills						2
Drain fluids from all non-operational vehicles stored outdoors						14
Provide materials (berm, mat, etc.) to protect storm drain inlets from spills and leaks						18
Perform vehicle/equipment washing in a contained area where runoff does not enter the MS4						7
D.5 Other						
Manage animals and animal waste in a manner that prevents animal waste from being transported in runoff						9
Identify and eliminate illicit connections and illegal discharges						28
Provide storm water training for appropriate employees						25
Develop a written procedure for spill prevention and response						26
Develop a written plan for identifying appropriate BMPs and describing proper implementation						27
D.6 ADDITIONAL REQUIRED ACTIONS						

☐ Based on inspection findings, it appears likely that significant levels of _____ would be present in storm water discharges from this site. Take action to reduce the levels of _____ to the maximum extent practicable. Treatment control BMPs are likely necessary.

Owner/operator has been notified of recommended corrective actions both verbally and by: ☐ Hand ☐ Mail ☐ Fax

*City BMP refers to the City's minimum required BMPs, as described in Appendix 10 of the City's Jurisdictional Urban Runoff Management Program. These BMPs can be found on the City's website: http://www.sandiego.gov/thinkblue/pdf/urmp/jurmpapp10.pdf

Please refer to http://www.sandiego.gov/thinkblue/programs/industrial.shtml for more information on BMP implementation options.

D.7 Additional Questions	Comments/Results
Are there any potential air sources that could contribute to atmospheric deposition of pollutants?	☐ Painting ☐ Sandblasting ☐ Fuel Distribution ☐ Dust dispersion or mineral processing ☐ Metal smelting ☐ Metal plating or anodizing ☐ Chemical production or mixing ☐ Large fuel burning device ☐ Incinerator

Are there any treatment control BMPs on site?	☐ Filter insert ☐ Hydrodynamic separator ☐ Debris screen ☐ Sewer diversion ☐ Vegetated swale ☐ Vegetated filter strip ☐ Biofiltration ☐ Detention/sedimentation basin ☐ Containment and evaporation or reuse ☐ Filtration
Are treatment control BMPs regularly maintained?	☐ Yes ☐ No ☐ Unknown ☐ N/A
What is the approximate percentage of the site that drains to the treatment control BMPs?	☐ N/A
Do major potential pollutant sources drain to treatment BMP(s)?	☐ All ☐ Some ☐ None ☐ N/A
If any illicit connections and/or illegal discharges were identified have the appropriate authorities been notified?	☐ Yes ☐ No ☐ N/A
If any illicit connections and/or illegal discharges were identified, were they eliminated during the site visit?	☐ Yes ☐ No ☐ N/A
Were any non IC/ID related corrective actions implemented during the site visit?	☐ Yes ☐ No ☐ N/A
Were any educational materials distributed?	NOI NONA/NEC IF IF-S SP SP-S IS IS-S AF AF-S DU DU-S MB

E. STATE GENERAL INDUSTRIAL PERMIT COMPLIANCE*

☐ Non-compliance with the State Industrial Storm Water General Permit noted.

☐ In the future, under a new Industrial Permit, which has not yet been adopted, this facility may be able to qualify for exemption from Permit coverage based on no outdoor exposure.

SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE*:

☐ File a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB) to obtain coverage under the Industrial Permit—see Attachment 3 of the Industrial Permit (www.waterboards.ca.gov/stormwtr/industrial.html).

☐ For "Conditional" facilities only: this site presently has outdoor exposure that requires filing for coverage under the Industrial Permit. If you implement all the recommended BMPs and eliminate outdoor exposure, you may be able to qualify for exemption from obtaining Industrial Permit coverage. Please contact the RWQCB for details.

☐ Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.

☐ Develop and implement a storm water monitoring program--see section B of the Industrial Permit for guidelines.

☐ Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC).

Additional notes and/or actions required:

F. CORRECTIVE ACTION SUMMARY

☐ **Corrective Actions Required.** Please refer to sections D.1-D.6 and E of this form and, if applicable, the Food Establishment Storm Water BMP Assessment form (if applicable, it is attached).

☐ No Corrective Actions Required at this Time.

G. RECOMMENDED CITY ACTIONS**

Follow Up Inspection Priority: ☐ **Priority 1** ☐ **Priority 2** ☐ **Priority 3** ☐ **None**

ASSESSMENT

Level of knowledge regarding stormwater issues: ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5

Level of cleanliness, BMP implementation, orderliness of site: ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5

*Please note that the Regional Water Quality Control Board (RWQCB) is the final arbiter of Industrial Permit compliance; please contact the RWQCB at (858) 467-2952 for details of what is necessary to comply with the Industrial Permit.

**Recommended City actions listed at the time of inspection are subject to change based on later review by office staff.

CITY OF SAN DIEGO
SWPPP/BMP PLAN AND/OR STORM WATER MONITORING PLAN ATTACHMENT

Inspected by D-MAX Engineering, Inc.

SWPPP REVIEW* **Does facility maintain a SWPPP/BMP Plan: ☐ Yes ☐ No ☐ Unknown ☐ Not Available**

*The SWPPP review portion of the inspection focuses mainly on proposed BMPs and monitoring practices. It is not intended to be a comprehensive assessment of compliance with all SWPPP-related requirements of the General Industrial Permit.

STORM WATER MONITORING PROGRAM

Does this facility have a storm water monitoring program? ☐ Yes ☐ No ☐ N/A

Was appropriate monitoring conducted during the most recent wet season? ☐ Yes ☐ No

If not, does the facility have documentation of no qualifying rain events? ☐ Yes ☐ No

If not, is the facility in a GMP and not scheduled for most recent year? ☐ Yes ☐ No

Do monitoring results show that existing BMPs are effective in removing pollutants? ☐ Yes ☐ No ☐ None Available

If not, were potential sources of the identified pollutants observed during the inspection? ☐ Yes ☐ No

If yes, list the potential sources and their associated pollutants: _____

_____

_____

Exceedances Noted (list dates, locations, constituent(s) and numeric value(s)):

BMPs	No Corrections Required		**Corrections Required**		Comments	City BMP*
	N/A	Fully Implemented	Partially Implemented	Not Implemented		
Keep grease bin and area surrounding grease bin free of grease stains/spills						5, 24
Keep storm drain inlets free of grease and other food debris						28

Additional Questions	**Comments**
Does facility have a grease trap or grease interceptor?	☐ No ☐ Grease Trap ☐ Grease Interceptor ☐ Unknown
What is the reported maintenance frequency for the grease trap or interceptor?	☐ Annual ☐ Every 6 mn ☐ Quarterly ☐ Monthly ☐ Every 2 wks ☐ Weekly ☐ > Weekly ☐ Unknown
How many grease fryers are at the facility? _____	
About how often is fryer oil replaced? ☐ Monthly ☐ Every 2 weeks ☐ Weekly ☐ Twice/week ☐ Daily ☐ Don't change	
How is used oil disposed of? ☐ Outside rendering service ☐ Sanitary sewer/sink ☐ Dumpster	
Do oil-recycling/grease bins have overhead coverage?	☐ Yes ☐ No
Do oil-recycling/grease bins have secondary containment?	☐ External containment ☐ Double-walled ☐ No
How are outdoor areas (patio, loading dock, parking lot, dumpster area, etc.) cleaned? (check all that apply)	
☐ Hose (If yes, see relevant question in Section D.1 of main form)	
☐ Sweep	
☐ Power wash (If yes, see relevant question in Section D.1 of main form)	
☐ Pick up trash	
☐ Outside company/property management	
☐ Do not clean	

CITY OF SAN DIEGO
SUPPLEMENTAL QUESTIONNAIRE
Inspected by D-MAX Engineering, Inc.

Business Name _____

Business Address: _____

TRAINING ☐ N/A, no training provided

How often are training sessions provided? ☐ Annually ☐ Every 6 months ☐ Quarterly ☐ Monthly ☐ Every 2 weeks ☐ Weekly ☐ > Weekly ☐ Unknown ☐ Declined to state

How many employees are provided storm water training in the period of one year? ☐ < 5 ☐ 5-20 ☐ 20-50 ☐ 50-100 ☐ > 100 ☐ Unknown ☐ Declined to state

Is specific educational material provided during training sessions? ☐ Yes ☐ No ☐ Unknown ☐ Declined to state

If yes, please list type:_____

Topic(s):_____

On average, how much does facility spend on training in a given year? ☐ < $100 ☐ $100-$1,000 ☐ $1,000-$5,000 ☐ $5,000-$10,000 ☐ $10,000-$25,000 ☐ > $25,000 ☐ Unknown ☐ Declined to state

BMP IMPLEMENTATION

Are roof downspouts directed to landscaped areas? ☐ All ☐ Some ☐ None ☐ N/A, no landscaping ☐ N/A, no roofs

Are heavy equipment and/or vehicles stored indoors or under cover? ☐ All ☐ Some ☐ None ☐ N/A

Are vehicle fueling areas covered? ☐ Completely ☐ Partially ☐ Not Covered ☐ N/A

On average, how much does facility spend on BMP implementation in a given year? ☐ < $100 ☐ $100-$1,000 ☐ $1,000-$10,000 ☐ $10,000-$25,000 ☐ $25,000-$50,000 ☐ > $50,000 ☐ Unknown ☐ Declined to state

On average, how much time per week does facility staff spend on BMP implementation? ☐ < 1 hour ☐ 1-4 hours ☐ 4-8 hours ☐ 8-20 hours ☐ 20-40 hours ☐ > 40 hours ☐ Unknown ☐ Declined to state

How often are outdoor areas swept? ☐ Annually ☐ Every 6 months ☐ Quarterly ☐ Monthly ☐ Every 2 weeks ☐ Weekly ☐ Daily ☐ > Daily ☐ Unknown ☐ N/A ☐ Declined to state

Approximately how much debris is removed from sweeping activities: _____lbs/cubic feet (circle one)

☐ N/A ☐ Declined to state ☐ Unknown Per sweeping/month/year
(circle one)

Smooth Jazz 98.1

MINDI ABAIR

A NOTE FROM MINDI ABAIR

I'm coming to San Diego for the Smooth Jazz 98.1 Gaslamp Festival on May 24th and I can't wait! It's one of my favorite events every year, and it's so much fun to hang with all of you on the streets of the Gaslamp Quarter! I patiently wait every year for them to rope off the streets downtown and just make it one big party!

Hosting it was fun last year, but playing it this year is going to be even better. I'll even be playing a bunch of new music from my new CD "Stars" which comes out 5/6. You can preorder it now at http://www.mindiabair.com so you can have it and know the words in time to sing along at the show!

I'll also be down in San Diego this Friday as a special guest DJ from 7 to 9am on "Mike V in the Morning." Plus, I'll be performing live on the air! Tune in as we hang out and have some fun as we get you to work!

I'll be coming in a bit early too to play the National Anthem at the Padres game on Thursday night as they take on the Giants! Go Padres!

I hope to see you at the Festival!!!

You can join Mindi along with stars like **George Benson**, **Dave Koz**, **Warren Hill**, **Nick Colionne**, **Nils** and many others on Saturday, May 24th in the Gaslamp. Tickets are going quicker than ever, so don't miss your opportunity.

Buy and print your tickets right now online!

The Smooth Jazz 98.1 Gaslamp Festival is presented by...

Subject: Mindi Abair Mini-Concert

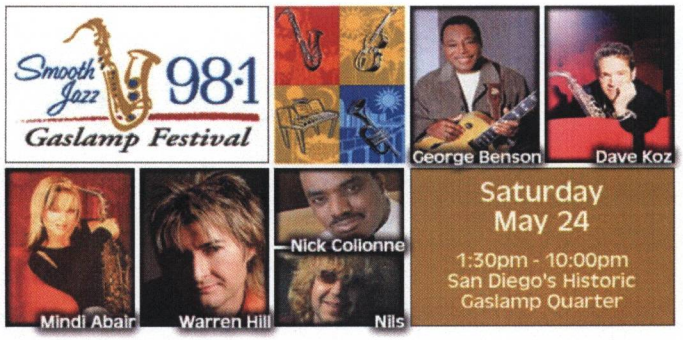
May 7, 2008

Dear KIM,

Join us for a FREE live performance and autograph signing by **Mindi Abair** this Tuesday, May 13th! We will be at the Borders Books and Music store in Mission Valley at 6:00pm.

Mindi's new album entitled "Stars" will be available inside Borders.

Mindi Abair will also be back in San Diego on May 24th to perform at the Smooth Jazz 98.1 Gaslamp Festival!



The Smooth Jazz 98.1 Gaslamp Festival is just a few short weeks away! On Saturday, May 24th we'll bring you some of the biggest stars in Smooth Jazz, including **George Benson**, **Dave Koz**, **Mindi Abair**, **Warren Hill**, **Nick Colionne** and more! Plus, many more amazing artists in more than 25 Gaslamp clubs and restaurants!

Tickets are selling fast, so be sure to get yours today! Tickets are ON SALE NOW, here online, or by calling 877-77-CLICK (25425).

We'll see you on May 24th to party in the streets of the Gaslamp!

THANK YOU

think BLUE
SAN DIEGO

On behalf of Smooth Jazz 98.1, I would like to thank the City of San Diego Think Blue Department for your partnership with our station and contributing to the success of the Smooth Jazz 98.1 Gaslamp Festival. The placement of all the "Think Blue" trash and recycle bins throughout the venue helped keep the Festival area free of debris.

Your commitment to professionalism and your pursuit of perfection has been an inspiration to be involved with! Thank you for the opportunity to work together – it's been a privilege. I hope to work with you again in 2009!

Sincerely,

Kim Torik

Smooth Jazz 98.1

METHODOLOGY

Think Blue San Diego, a program of the San Diego Storm Water Pollution Prevention Division, contracted with Goodwin Simon Victoria Research (GSVR) to conduct a telephone survey of adult residents living in San Diego. The purposes of the survey include:

- To explore attitudes about pollution of water in storm drains.
- To assess awareness of Think Blue outreach activities and the possible impact of these activities on reported pollution-causing behaviors.
- To explore barriers to behavioral change that might reduce storm water pollution.
- To assess different potential motivations for change, including those that address barriers, and
- To test ideas for improving Think Blue outreach activities.

This study was conducted between March 13 and March 22, 2008. GSVR conducted 800 telephone interviews with adult residents randomly identified from across the city using a random-digit-dial methodology, in which a random list of all active residential telephone numbers served as the sample.

The margin of error for citywide results is plus or minus 3.4% at a 95% confidence level. That is, if this survey were to be repeated exactly as it was originally conducted, then 95 out of 100 times the responses from the sample (expressed as proportions) would be within 3.4% of the actual population proportions.

Results were weighted slightly by age to match U.S. Census data. Interviews were conducted in both English and Spanish.

This report includes advanced statistical analysis provided by Action Research, our very able partner in the Think Blue research team.

Table 1: Methodology

Technique	Telephone interviewing
Interview Length	21 minutes
Universe	Adult residents of San Diego
Field Dates	March 13 to March 22, 2007
Sample	Random-digit-dial
Sample Size	800
Margin of Error	+/- 3.2% for the sample overall
Languages	English and Spanish

Many questions in this study were also asked in the survey we conducted for the city last year. However there are three factors to consider in comparing results from the 2007 and the 2008 studies:

First, we changed the screening methodology. In 2007, we simply asked potential respondents if they lived in San Diego or not. In 2008, those who said they did not live in San Diego were asked a follow-up question: "In what city do you live?" Those who mentioned locations that are in fact within the city of San Diego, such as Encanto, San Ysidro, or La Jolla were included in the study. In total, 8.3% of the respondents we included in the survey were included as a result of this follow-up question. Presumably, some or all of these people would have been excluded in 2007.

Second, we changed the sampling methodology to improve our ability to explore results by watershed (as defined by zip codes). Specifically, our sample included residents of all the zip codes in the watersheds (as defined by Think Blue staff), and we then screened residents to ensure that they lived in the city of San Diego. These two changes in sampling and screening resulted in a slightly different geographic distribution of respondents in 2008 compared to the 2007 survey.

Third, we changed the wording or scale for some of the questions we asked in 2007 to improve the potential for advanced analysis by Action Research. In the report, we indicate those questions in which the wording or scale changed.

For these reasons, comparisons between the 2007 and 2008 study findings must be made with caution.

In this report, we break out results by watershed based on zip codes. Since watersheds do not correspond directly with zip codes, findings by watersheds are necessarily inexact. The following are the zip codes we used for each watershed:

Table 2: Watersheds by Zip Code

Watershed	Zip Code
San Diego Bay	91902, 91911, 91913, 91915, 91945, 91950, 91977, 92101, 92102, 92103, 92104, 92105, 92106, 92017, 92113, 92114, 92115, 92116, 92118, 92133, 92134, 92135, 92136 ,92139, 92140, 92152, 92154,
Tijuana River	91932, 92152, 91977, 92154, 92173
Mission Bay	92037, 92109, 92110, 92117, 92122, 92145
San Diego River	91942, 92020, 92103, 92108, 92111, 92115, 92119, 92120, 92123, 92124, 92145
Peñasquitos River	92014, 92064, 92121, 92126, 92128, 92129, 92130, 92131
San Dieguito River	92014, 92025, 92029, 92065, 92067, 92075, 92127, 92128

Note that some zip codes are found in more than one watershed.

This report presents results broken out by subgroups of adult residents (e.g., by men versus women or by zip code) only if the differences are both statistically significant using standard significance testing, and are of relevance.

EXECUTIVE SUMMARY

OVERVIEW AND RECOMMENDATIONS

The survey of 800 adult residents living in San Diego was conducted between March 13, and March 22, 2008, with a margin of error of plus or minus 3.4% at a 95% confidence level. We used a random digit dial sampling methodology and the survey was conducted in both English and Spanish.

At a most basic level, the survey demonstrates that San Diego residents have a high level of concern about storm water pollution and a general willingness to take actions to prevent it. More than 75% of residents say that pollution of the ocean, bay, and beaches is a "very important" issue facing the city. A similarly high percentage of residents also report that pollution in storm drains specifically is very important. These concerns rank at the top of the list of pressing local issues, rivaling concerns about the quality of public schools and deteriorating city infrastructure.

We also found that residents have a high willingness to take actions to help prevent storm water pollution. Ratings of willingness across six specific behaviors were rated higher than the scale's mid-point. Residents were especially willing to engage in such behaviors as sweeping instead of hosing sidewalks and driveways, fixing car leaks, fixing sprinklers, and picking up litter and trash. More than half of all residents said they would definitely take these actions (rated as a 10 on a 1 to 10 scale).

Residents also showed personal obligations toward doing the right thing to prevent storm water pollution. More than ninety percent of all residents agreed that it would bother them if they saw a neighbor doing something that caused pollution of storm drain water, and this same percentage agreed that they would be embarrassed if someone saw them personally doing something to pollute.

Despite a strong personal obligation to do the right thing, residents did not feel as strongly that others felt an obligation to do the right thing. More than half of residents believed that their neighbors wouldn't care if they were causing pollution of storm drains.

Despite concern for storm drain pollution, residents are not very knowledgeable about how the storm drain system works. Although 88% were familiar with the term "storm drain," only 9% knew that they lived in a watershed, and fewer than half (39%) knew that storm drain water is not treated. Although overall knowledge was low, the highest level of knowledge was among men over 50. This is the same pattern seen in the 2007 survey.

The survey also showed that residents continue to give the city moderate ratings for the job it is doing in preventing pollution of storm water and pollution of the beaches. The mean rating for the city's work in these areas is about 5, on a scale of 1 to 10. Ratings in these areas did not change significantly from the 2007 survey.

The survey also shows a high level of market penetration for messages about storm water pollution, and evidence that outreach activities by the city's storm water division are getting through. Sixty-percent of residents reported they saw or heard something in 2007 about steps the city is taking to prevent storm drain pollution. Forty-five percent say they have heard the slogan "Think Blue San Diego" – about the same as in 2007. The largest increases in familiarity with the slogan were seen among seniors, people without college degrees, and Latinos.

The survey suggests that Think Blue activities have a positive impact: 46% of those who said they had heard about the Think Blue campaign knew that storm water is not treated, compared to 34% who had not heard about Think Blue. Another example is that residents who saw the TV commercial with the yellow ducks going down into the storm drain rated litter, sewage spills, and grass clippings as significantly more serious than did those who did not see the commercial

Although a sizable number of residents engage in some type of polluting behavior, the percentage of residents engaging in any one type of behavior is relatively small. The most frequently reported behavior was car washing, but less than half of residents reported that they wash their cars at home. From the 2007 survey, there was a 5% decrease in the percentage of residents who hose down their driveway and a 2% decrease in residents using pesticide or weed killers. We also see a small (3%) increase in dog ownership from 2007. However, none of these differences are statistically significant.

Sizable proportions report seeing car washing, dog waste, yard waste, and litter in their neighborhoods. Although the frequency of observed car washing on driveways

decreased slightly from 2007 (by 9%), reported levels of visible community litter increased by nearly 16%.

The overall barriers to preventing storm water pollution are low, with less than 50% of residents reported that any of the listed barriers applied to them. The primary barriers to engaging in preventative action appear to be a belief that government should take care of the problem, lack of time, and lack of information. Interestingly, while we have seen that most people want to do the right thing and care about storm water pollution prevention, about 30% of residents believe that no one else is doing anything to prevent pollution. The top rated barriers did not change much from 2007, with the exception of the belief about government responsibility – this was a new item added in the 2008 survey, so no comparisons can be made on this topic.

As in 2007, we see in general stronger interest in undertaking efforts to reduce storm water pollution among women than men, among Latinos compared to whites, and among renters and less educated residents compared to homeowners and more educated residents. At the same time, we often see lower levels of knowledge and higher levels of polluting behavior among these populations. This suggests a sizable payoff for focusing efforts on minority and lower income communities, and on renters.

We know that the "Think Blue" television ads are recognized by more than half of all residents. The majority of residents who had heard about "Think Blue" had seen it on television. While the "Think Blue" message is getting out, there is evidence to suggest that the messaging needs to include a specific call to action regarding the desired pollution prevention behaviors. Only about one in four residents had heard the term Think Blue and knew that it had something to do with water pollution or storm drains. Only about 4% overall correctly linked Think Blue with storm drain pollution. About 5% falsely believed it was a call to conserve water.

Encouraging behaviors such as picking up litter, fixing oil leaks, fixing sprinklers, and sweeping up driveways seem most appropriate for public education. While there is widespread reporting of improper car washing, there also seems to be a lot of resistance to altering this behavior. For example, only 22% think that runoff from washing cars is a very serious source of storm drain water pollution, and about the same percentage think that water washed from driveways into the street is a serious

pollutant. Even fewer think that overwatering of lawns, yard trimmings, and dirt from property are serious sources of pollution.

The most powerful motivation for taking action to reduce storm water pollution were concerns about the consequences for children, future generations in San Diego, and health. The lowest rated motivations were concerns for visitors to San Diego and migrating birds.

We know that most residents already see pollution of the ocean as an important problem. We also know that residents recognize that pollution of neighborhood storm drains contributes to pollution of the ocean. But, the motivations for their concern differ and messages should be targeted to address these differences. In particular, we know that women are more likely to be motivated by biospheric concerns (e.g., concern for living things) whereas men are more likely to be motivated by altruistic concerns (e.g., children, future generations). Messages should also address the perceived barriers of lack of time and lack of information.

Finally, residents strongly prefer the taglines "a cleaner San Diego starts at your door" and "you are the solution to storm drain pollution." We find little variability across groups in preference for the different messages. Overall, the messages are rated highest by those with biospheric environmental concern and Latinos.

KEY FINDINGS

Strong Awareness of Storm Water Pollution

- Similar to 2007, the survey shows clearly that residents of San Diego take storm water pollution quite seriously, and see it as a major problem facing the city. Fully 76% say that pollution of the city's oceans, bays, and beaches is a "very important" issue, and 77% say that polluted water in storm drains is an important problem. These figures are nearly equivalent to concerns about the quality of public education and far exceed the proportion who said that traffic was a very important issue for the city.

- Women, Latinos, those with less education, and non-whites appear to be most concerned about storm water pollution.

Broken Water and Sewer Pipes Also Major Issue

- Eighty-one percent consider "deteriorating and broken city water and sewer pipes" to be a very important issue facing the city – equivalent to concerns about public education.

Moderate Ratings for the City on Storm Water Pollution Prevention

- The survey also showed that residents continue to give the city moderate ratings for the job it is doing in preventing pollution of storm water and pollution of the beaches. The mean rating for the city's work in these areas is about 5, on a scale of 1 to 10. Ratings in these areas did not change significantly from the 2007 survey.

- Only 20% rate the city as a 1, 2, or 3 (the lowest ratings) when it comes to preventing pollution in storm drains, while 15% rate the city as an 8, 9, or 10 (the highest ratings) in this area.

- There is no significant difference in ratings for the city between those familiar with the Think Blue campaign and those who have not heard of it.

Residents Engage in Polluting Behaviors

- Nearly half of residents, 45%, say they wash a vehicle at home. This includes more homeowners than renters, as well as those who engage in construction or landscaping projects.

- More than a third (35%) have a dog at home. Dog ownership may have increased slightly from 2007 and owners are most likely to be under age 65, whites compared to African Americans and Asians, and homeowners compared to renters.

- Almost one-third (31%) of single family home dwellers say they use pesticides or weed-killers on their gardens, especially men aged 50+, residents of the San Dieguito River watershed, and those who do construction or landscaping projects at home.

- From the 2007 survey, there was a 5% decrease in the percentage of residents who hose down their driveway, and a 2% decrease in residents using pesticide or weed killers. We also see a small (3%) increase in dog ownership from 2007. These figures are not, however, statistically significant.

Polluting Behaviors Observed

- The most frequently observed behaviors are people washing their cars on the driveway or in the street, dog waste being left on the sidewalk, yard waste, and litter in the neighborhood.

- The least observed behaviors are soil being washed onto the street and pesticide use.

- These behaviors are most often seen by residents under 50 and those who had heard the "Think Blue San Diego" slogan

Lack of Knowledge Prevalent on Storm Water Issues

- Few residents of San Diego – just 8% -- know that they live in a watershed.

- The majority of residents – 88% -- know the term "storm drain."

- Only 15% say that storm drain water is treated, compared to 17% in 2007. Just over one-third (39%) knew that storm water was not treated. This is significantly lower than the 2007 figure in which nearly half (46%) of residents knew. In general, women, younger residents, and residents with less education were more likely not to know that storm water is not treated.

- Many residents are aware that neighborhood storm drains contribute to pollution of San Diego's creeks and ocean. Forty-five percent of residents mentioned some impact on the bay, beach, or ocean as a main problem caused by pollution entering a storm drain. This figure indicates awareness among residents that the storm drain is connected to these bodies of water.

Awareness of Efforts to Reduce Storm Drain Pollution

- Just over one-third (35%) said that in 2008 they saw or heard something about the steps the city was taking to prevent pollution of storm water, a figure nearly identical to that found in the 2007 survey (36%). Awareness is lower among younger residents, women, and Latinos.

- Forty-five percent said they had heard the slogan "Think Blue San Diego." This is down slightly from the 54% who said they had heard this slogan in the 2004 survey, but almost equal to what was reported in the 2007 survey. Awareness is lower among younger residents.

- Awareness of Think Blue increased from 2007 among seniors, people without college degrees, and Latinos.

Preferred Slogans/Tag Lines for Think Blue: A Cleaner San Diego Starts at Your Door, You're the Solution to Storm Drain Pollution, and Change for the Better Begins with You

- The survey tested six potential tag lines, and all the tested messages were rated above the midpoint

- "A Cleaner San Diego Starts at Your Door," "You're the Solution to Storm Drain Pollution, " and "Change for the Begins with You" were the highest rated messages. These messages were particularly popular among Latinos and women.

- Residents concerned about the consequences of pollution for the effect on living things (biospheric concerns) rated all of the tested messages more positively than those with other concerns.

TV Commercials are Most Memorable

- More than half of residents recalled seeing the commercial with yellow ducks going down the storm drains. Latinos and residents between 35 and 64 were most likely to remember this commercial.

- Eighty percent of residents who heard the "Think Blue San Diego" slogan saw it on TV.

- Think Blue messages were seen on mobile billboards were seen by one-third of residents. This media outlet was particularly memorable among Latinos and residents of the Tijuana River watershed.

- Only 8% remembered seeing the "Think Blue" website. Latino men were the most likely group to have seen the website.

Strong Personal Obligation to Do the Right Thing Reduce Storm Water Pollution

- Over 90% of residents felt a strong personal obligation to do the right thing to prevent storm water pollution. More than ninety percent of all residents agreed that it would bother them if they saw a neighbor doing something that caused pollution of storm drain water, and this same proportion agreed that they would be embarrassed if someone saw them personally doing something to pollute. But 54% said that their neighbors would not care if they were causing pollution of water in storm drains.

Strong Willingness to Take Actions to Reduce Storm Water Pollution

- The majority of residents said they would definitely be willing to take the specific actions we listed to reduce pollution of storm drains. Those actions that residents were most likely to take include sweeping instead of hosing, fixing car leaks, fixing sprinklers, and picking up litter.

- There was considerably less willingness to take the car to a carwash or to pick up other people's dog waste.

- In general, women reported a stronger willingness to undertake these actions. Asians and African Americans are very unwilling to pick up dog waste from the front of their home.

Government Responsibility, Lack of Time and Information Top Barriers to Participation

- We asked residents about seven possible barriers to taking action to stop storm water pollution. The top barriers were a belief that it is a problem for government to take care of, lack of time, and lack of knowledge. These barriers were particularly strong among younger residents. Seniors were more likely to believe that pollution prevention behaviors were a hassle.

- Lack of time and lack of information were top rated barriers in the 2007 survey as well.

Protecting Children, Future Generations, and Health are Top Motivations for Taking Action

- The most powerful motivation for taking action to reduce storm water pollution were concerns about the consequences for "children" (a mean of 9.0 out of 10), "future generations in San Diego" (a mean of 8.8), and "health" (a mean of 8.7). The lowest rated motivations were concerns for "visitors to San Diego" (7.4) and "migrating birds" (7.5)

- More women than men were motivated by environmental concerns, like pollution causing harm to animals and marine life.

DETAILED FINDINGS

A. Order of Findings

This report presents results in the following order:

- We begin by showing the familiarity of residents with "Think Blue" prior to hearing any of the survey items.
- Next, we look at how San Diego residents rank the importance of different issues facing the city, including storm water pollution.
- We then show how residents rate the job the city is doing in preventing storm water pollution.
- We then ask residents if they currently participate in activities that might cause storm water pollution, and then if they have observed pollution-causing behaviors in their neighborhoods.
- The next set of questions focuses on the level of knowledge residents have about storm water pollution and the city's efforts to address it.
- We then ask about familiarity and liking for specific Think Blue message strategies and slogans.
- The next set of questions asks about the seriousness of various pollutants.
- We then explore the personal obligations held by residents with regards to storm water pollution.
- We move to identifying specific barriers to participating in activities that might reduce storm water pollution.
- Finally, we rate responses to different environmental motivations for reducing storm water pollution.

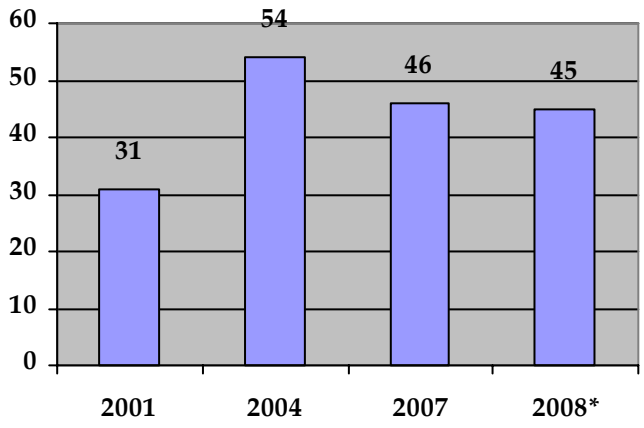
B. Familiarity with "Think Blue San Diego"

1. Have you seen or heard the slogan?

Prior to asking any other questions specific to the environment, storm drains, or storm water pollution, we asked residents if they had heard the "Think Blue San Diego" slogan in the past year.

Forty-five percent of residents said that they had heard the slogan "Think Blue San Diego" in the last year. This figure is similar to that obtained in the 2007 survey in which 46% said they had heard the slogan. Although this is still lower than the 54% found in the 2004 survey, it well above the 31% found in the 2001 survey.

Figure 1: Ever Heard the Slogan "Think Blue San Diego?"



*Note that the 2007 survey asked whether residents had *ever* heard the term, whereas the 2008 survey provided a one-year frame of reference.

Awareness of the Think Blue slogan varies as following:

- It is lowest among residents under 35 years of age (36%) compared to older residents (about 50%)

- It is lowest among residents of the San Dieguito River (37%) and Peñasquitos River (35%) watersheds

- It is higher among white renters (51%) than Latino renters (36%)

- It is higher among those who know that storm water is not treated (52%) compared to about 40% of those who didn't know this.

Variation of awareness about the Think Blue logo changed slightly from the 2007 survey. As seen in Table 3 below, the greatest increases in awareness from the 2007 survey include seniors, people without college degrees, and Latinos.

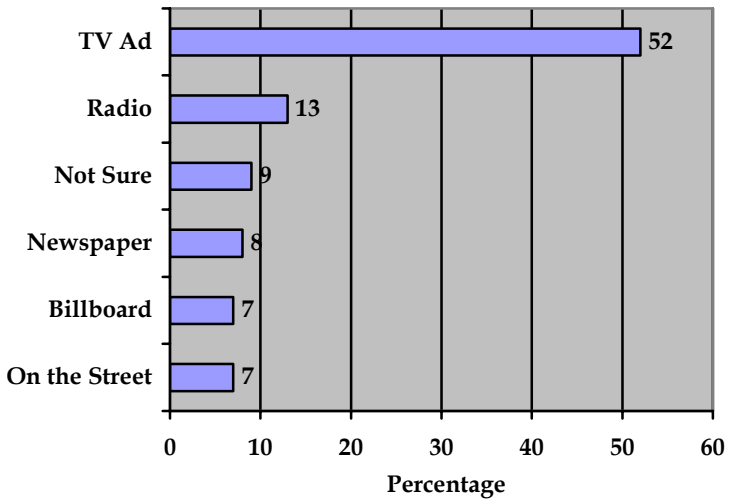
Table 3: Have You Ever Heard the Slogan Think Blue San Diego?

	2007	2008
Men	46	44
Women	46	45
18-34	44	42
35-49	49	46
50-64	51	45
65+	38	43
Men 18-49	46	36
Men 50+	47	53
Women 18-49	47	49
Women 50+	45	46
San Diego Bay watershed	48	48
San Diego River watershed	49	53
Mission Bay watershed	42	44
Tijuana River watershed	50	43
San Dieguito River watershed	44	37
Penasquitos River watershed	47	35
Less than college	36	44
Some college	55	45
College grad	46	48
Post college	45	38
White	50	48
Black	49	49
Asian	35	36
Latino	37	43
Homeowners	50	48
Renters	42	42
Single family home dweller	51	47
Apartment/condo dweller	42	42

2. Where people saw or heard the Think Blue slogan:

The majority of people recalled seeing the message on television (52%), and 13% heard the slogan on the radio. Other frequently reported sources were billboards (7%), newspaper (8%), and on the street drains, curbs, etc. (7%). Nine percent could not remember where they saw or heard the message.

Figure 2: Where People Saw/Heard "Think Blue San Diego?"



The groups most likely to see the "Think Blue San Diego" slogan on television are:

- People who know storm water is not treated (27%) compared to people who believe that it is treated
- People without college degrees (25%)
- Residents of the San Diego Bay (26%) and San Diego River (25%) watersheds.

The groups most likely to hear the "Think Blue San Diego" slogan on the radio are:

- White (9%)
- Those in the 35 – 49 age group (9%) compared to the 18 – 34 age group (4%)

- People between the ages of 18 and 35 (9%) compared to people over 35 or under 18 (5% or less).

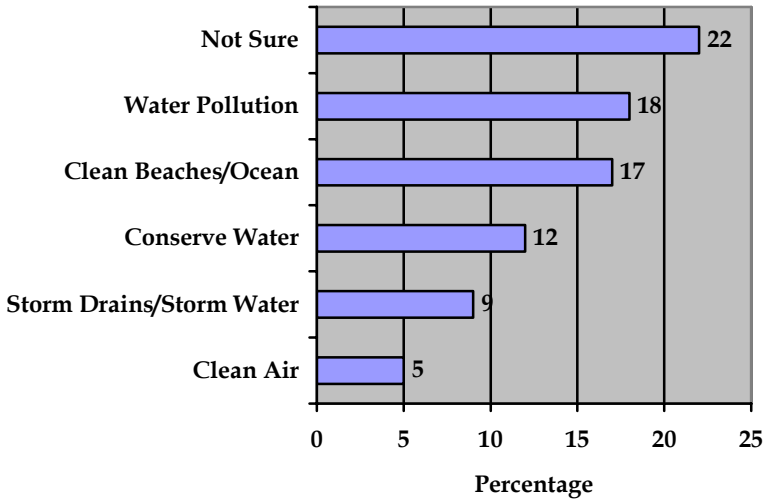
3. What is the "Think Blue San Diego" slogan asking you to do?

Respondents were asked to describe what they believed the "Think Blue San Diego" slogan is asking them to do. In other words, what call to action is conveyed by the message?

Twenty-two percent (22%) were not sure what the slogan is asking them to do. Several people believed the slogan wanted them do to something about water pollution (18%) or clean beaches/ocean (17%) specifically, or the environment more generally (17%).

Only 9% of people believed that the "Think Blue San Diego" slogan wanted them to do something specifically about storm drains or storm water. Yet, 12% of people believed it was a call to conserve water. This is an important finding and highlights the importance of including a specific call to action in future messaging.

Figure 3: What is "Think Blue San Diego" Asking You To Do?"



After we described the Think Blue program to respondents (as "the City of San Diego's program to reduce pollution of the water in the city's storm drains, creeks,

and our beaches and oceans"), we then asked a second time if they had heard b out the program before the call. Now 55% say they remember the program, including 25% of those who initially said they did not recall it.

C. Importance Of Issues Facing San Diego

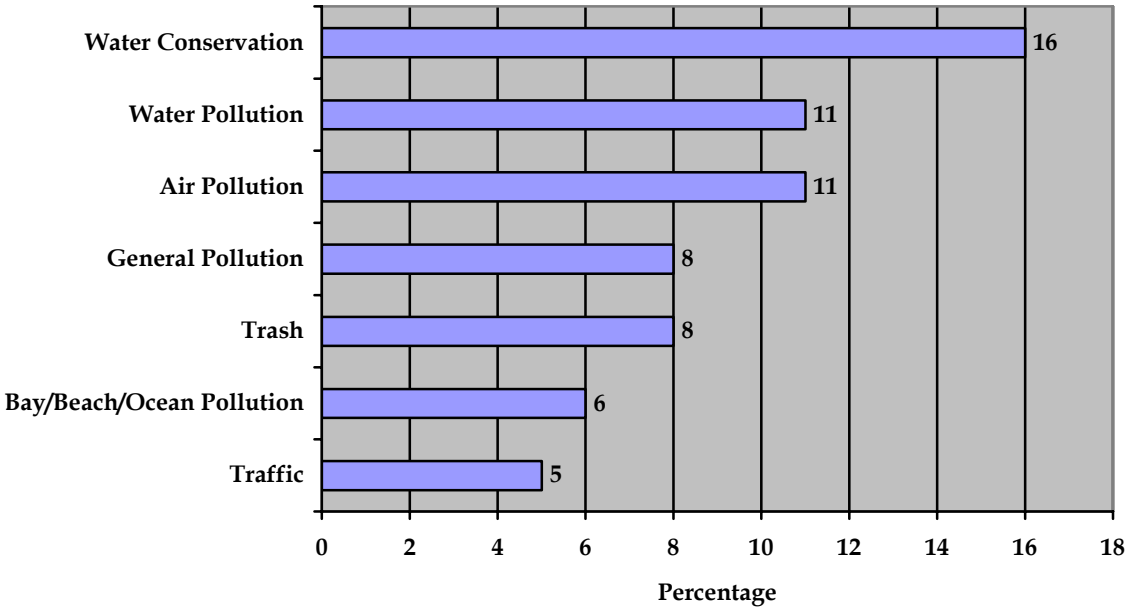
1. Most Important Environmental Problem In San Diego

Following the introductory items, we presented an open-ended item which asked residents to name what they believed was the most important environmental problem facing San Diego. Open-ended responses were coded into discrete categories.

The top environmental concerns of San Diego residents were water conservation/drought (16%), water pollution generally (11%), smog/air pollution (11%), general pollution (8%), trash (8%), and bay, beach, or ocean pollution specifically (6%).

A combined 18% mentioned some type of water pollution, suggesting that this is a salient issue among San Diegans. Of the people who named water pollution as the most important problem, one-third mentioned bay, beach, or ocean pollution specifically.

Figure 4: What Is The Most Important Environmental Issue Facing San Diego?



The groups most likely to mention bay, beach, or ocean pollution as a significant environmental problem are:

- Residents of the San Diego River (7%) and San Diego Bay (6%) compared to residents of the Tijuana River (2%)
- Non-Latinos (7%) more than Latinos (3%).

The groups most likely to mention water pollution in general as a significant environmental problem are:

- Men with college degrees (15%) compared to men without college degrees (8%)
- Residents between the ages of 35-49 compared to older residents (9%)
- White men (13%) more than Latino men (5%).

2. Importance Of Other Specific Issues In San Diego

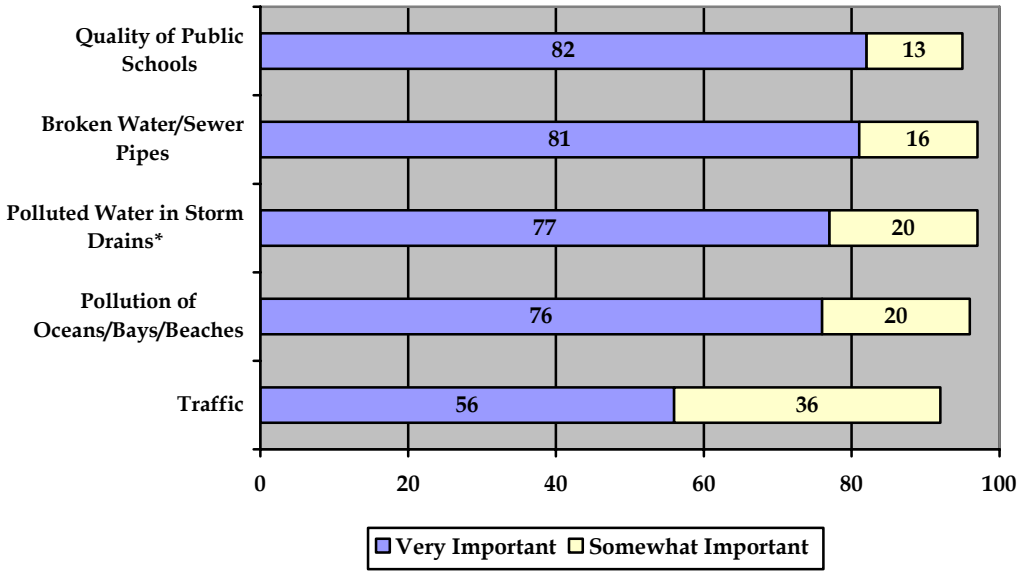
Next, we presented a battery of questions that asked residents to rate the importance of seven issues facing the city. The results show that residents see broken water and sewer pipes as a very important problem. Concern about pollution of the city's oceans, bays, and streams remained relatively stable from 2007 (77%) to 2008 (76%) whereas concern over schools and deteriorating infrastructure increased (from 77% in 2007 to about 82% in 2008). The increase in these figures is an indication of the high level of attention these issues have received among San Diego residents.

The important point is that residents rate issues such as polluted water in storm drains and pollution of oceans, bays, and beaches as a significantly important problem that rival concerns about the quality of public schools. Moreover, the level of concern for these issues far exceeds concern about traffic congestion.

This is a very important finding because it suggests that residents are greatly concerned about pollution of local waters. They are not only aware that the problem exists, but they rate it high in importance suggesting that there is a willingness to do something about it.

As shown in Figure 5, fully 76% of residents said that pollution of San Diego's ocean, bays, and beaches is a very serious problem, with another 20% rating it as a somewhat serious problem.

Figure 5: Percent Rating Each Problem as Very or Somewhat Serious



*Note that this item was modified from the 2007 survey which asked about "pollution of storm drains" instead of "polluted water entering storm drains."

a. Broken or deteriorating city water and sewer pipes (81% very important)

The groups most likely to say that broken water and sewer pipes are a very serious problem are:

- Women (84%) compared to men (79%)
- African-Americans (91%) compared to whites (79%)
- Residents age 65 and older (90%) compared to younger residents (about 80%)
- Residents of the San Diego River watershed (87%)
- White homeowners (83%) compared to white renters (72%).

This pattern of results can be compared to the 2007 survey in which an identical question was asked. In 2007, 77% said that broken pipes were a very important problem and 18% believed it was a somewhat important problem. Although the

overall proportion increased in 2008, the characteristics of people for whom this is a serious problem are similar.

b. Pollution of storm drains in San Diego (77% very important)

The groups most likely to say that pollution of storm drains is a serious problem include:

- Women (83%) more than men (71%)
- Latinos (87%) more than non-Latinos (73%)
- Whites (70%) significantly less than all other ethnic groups
- Those without a college degree (81%) compared to those with a college degree (71%)
- Educated men (61%) significantly less than all other groups
- Residents under age 35 (82%)
- White men least often.

This pattern of results is comparable to the results of the 2007 survey, with one exception. In 2008, all Latinos (regardless of home ownership or gender) were more likely to say that pollution of storm drains was a serious problem than were whites. In the 2007 survey, the differences were seen only among Latino renters and Latino women. Note that the 2008 survey asked about the importance of "polluted water entering storm drains" whereas the 2007 survey asked about "pollution of storm drains" or "pollution of storm water." As a result, these comparisons should be made with caution.

c. Pollution of San Diego's oceans, bays, and beaches (76% very important)

The rating for pollution of the city's oceans, bays, and beaches can be compared to results from the 2004 and 2007 surveys, in which an identical question was asked. There was virtually no change in results, with 77% in both the 2004 and 2007 surveys who rated this as a very serious problem, and 19 and 20% respectively who rated it as a somewhat serious problem.

The groups most likely to say that pollution of the city's ocean, bays, and beaches is very important are:

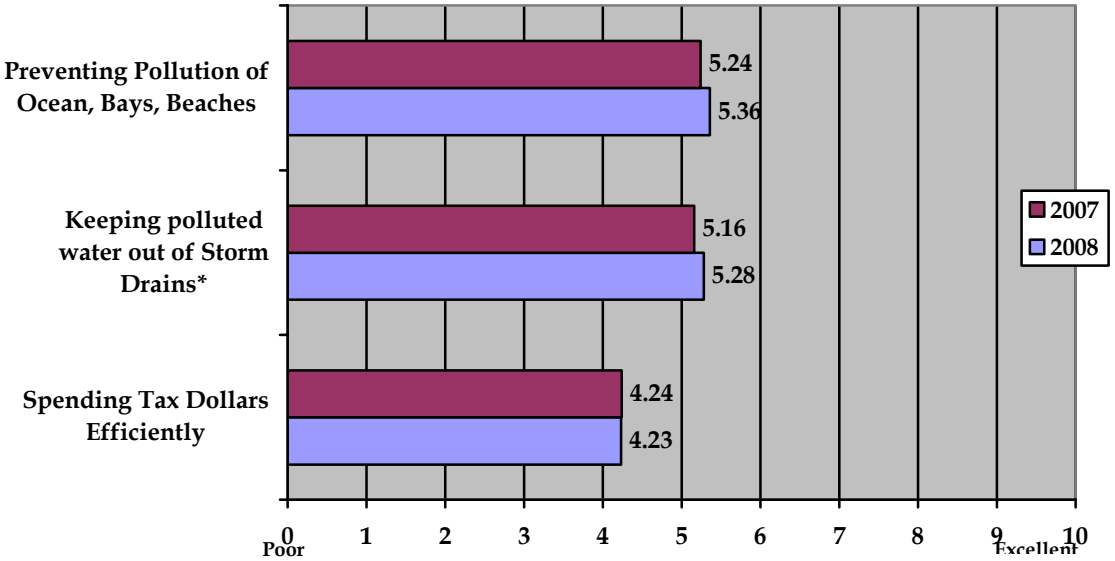
- Latinos (85%) compared to non-Latinos (72%)
- African Americans (87%) compared to whites (70%) or Asians (68%)
- Residents under the age of 35 (84%) compared to older residents (about 72%). Note that this pattern is the reverse of that found in the 2007 survey in which 82% of residents age 50 and older believed this issue was very important compared to 71% of younger residents.
- Both men (67%) and women (71%); the 2007 survey also showed no differences by gender except for white women who were more concerned than white men.
- Those with no college degree (81%) compared to those with advanced degrees (66%)
- Residents of the Tijuana River watershed (84%).

D. Rating the City on Storm Water Issues

We asked a battery of three questions asking residents to rate how the city is doing in preventing pollution in storm drains, in preventing pollution of San Diego's ocean, bays, and beaches, and as a contrast, in how the city is doing in spending tax dollars efficiently.

The question asked residents to rate each area on a scale of one to ten, where one meant that the city was doing a very poor job and a ten meant the city was doing an excellent job. In Figure 6, we present mean score results.

Figure 6: Rating the Job the City is Doing on 1-10 Scale



*Note that this item was modified from the 2007 survey which asked about "preventing pollution in storm drains."

As in the 2007 survey, the mean scores for pollution prevention are in the 5s, indicating that about as many residents think the city is doing a good job as think the city is doing a poor job. In fact, the results are generally clustered around the midpoint.

Only 20% rate the city with a 1, 2, or 3 (the lowest scores) when it comes to preventing pollution in storm drains, with only 15% who rate the city with an 8, 9, or 10 (the highest scores) in this area. Nine percent were not sure. In 2007, 13% rated the city with an 8, 9, or 10 and 11% were not sure.

Only 19% rate the city with a 1, 2, or 3 for preventing pollution of the city's oceans, bays, and beaches, and 16% gave the city an 8, 9, or 10 in this area. Five percent weren't sure. By comparison, in 2007, 20%, rated the city with a 1, 2, or 3 and 14% gave the city an 8, 9, or 10 rating for this.

Ratings for these two pollution prevention efforts are showing a small positive trend with increases in the percentage who gave the city an 8, 9, or 10 in these two areas. The percentage of people who rate the city with a 1, 2, or 3 has remained relatively stable, but the percentage of unsure responses has decreased.

Ratings for the city's performance in these areas continue to outperform views of how well the city spends money. In both 2007 and 2008, 38% rated the city with a 1, 2, or 3 in this area.

1. Preventing pollution in storm drains (5.28 mean score)

Despite minor changes in the wording of the item, beliefs about how well the city is doing in preventing pollution in storm drains did not change significantly from 2007. Ratings are as follows:

- They are significantly more positive among those under age 50 (a mean score of 5.5) than among older residents (a mean score of 4.8)
- They are significantly more positive among those with no college degree (5.5) compared to those with a college degree (4.9)
- They are significantly higher among Latinos (5.9) compared to non-Latinos (5.0)
- They are significantly higher among those who think that storm water is treated (5.6) compared to those who know it is not treated (5.1)
- They are significantly less positive in the San Dieguito River watershed (4.8); in 2007, the lowest ratings came from the San Diego River and Mission Bay watersheds.
- There is no difference in ratings for those who have and have not heard of the Think Blue campaign.

2. Preventing pollution of San Diego's ocean, bays, and beaches (5.24)

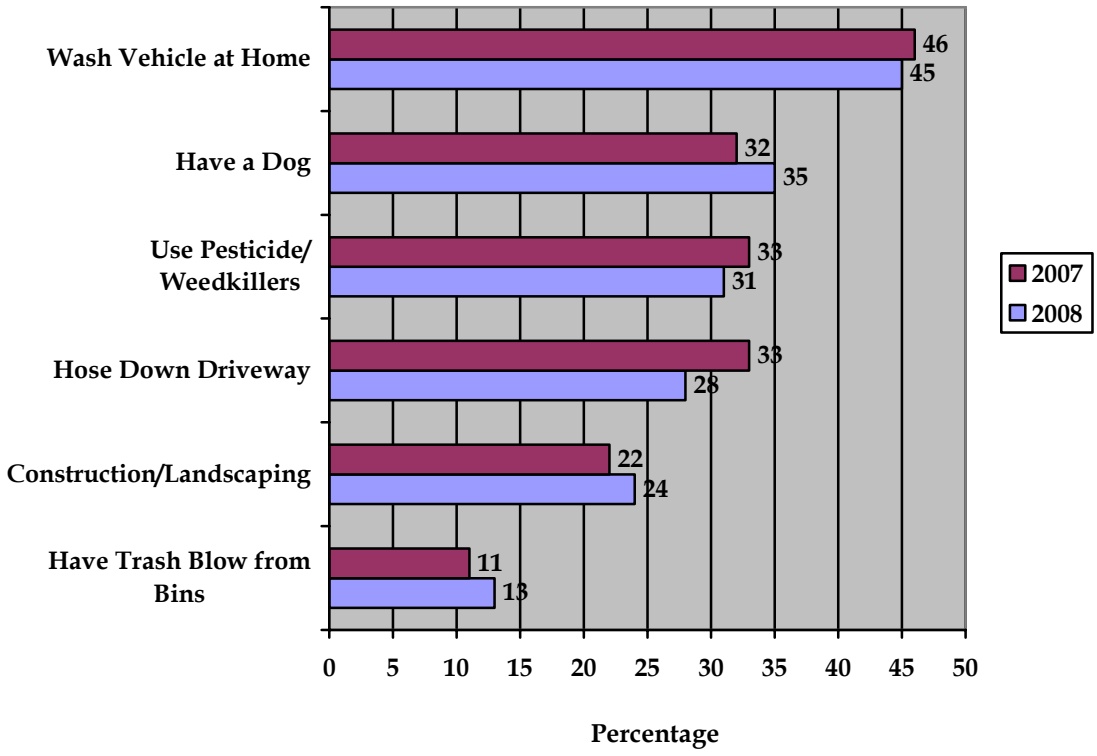
Ratings for how well the city is doing in preventing pollution of the city's oceans, bays, and beaches divides in similar fashion with one exception -- ratings are significantly less positive Mission Bay (4.8) and San Diego Bay (5.2) watersheds.

E. Polluting Behaviors

The survey asked residents about eight activities that might result in storm drain pollution. We found that sizable proportions of residents wash their vehicle at home, have a dog at home, use pesticides or weed-killers, and hose down their sidewalk or driveway. Smaller proportions say that they have yard waste or trash blowing from their garbage bins or have had major construction or landscaping at their home.

Figure 7 shows the percentage of residents participating in polluting behaviors in the 2007 survey compared to the 2008 survey. The 2008 results show a 5% decrease in the percentage of residents who hose down their driveway, and a 2% decrease in residents using pesticide or weed killers. We also see a small (3%) increase in dog ownership from 2007. These differences are not statistically significant.

Figure 7: Percent Participating in Potentially Polluting Behaviors



The overall pattern of findings mirrors that obtained in the 2007 survey.

1. **We find the highest proportions that wash their vehicles at home among:**

   - Homeowners (57%) compared to renters (22%); in particular Latino homeowners (67%) followed by white homeowners (53%)
   - Latino women (52%) and white men (48%) compared to white women (36%)
   - Single family home dwellers (58%) compared to apartment/condo dwellers (17%)
   - Residents in the Tijuana River (52%) and San Dieguito River (54%) watersheds. In 2007, the highest proportion was limited to residents in the Tijuana River watershed (68%)
   - Those who also have construction projects (62%)
   - Asians (56%) compared to African Americans (37%).

2. **We find the highest proportion of dog ownership among:**

   - Those age 35 – 64 (42%) compared to seniors (23%) or those under 35 (30%)
   - Whites (42%) compared to African Americans (20%) and Asians (18%)
   - Homeowners (46%) compared to renters (17%) and single family home dwellers (47%) compared to apartment/condo dwellers (16%).

3. **We find the highest proportion of those who report having trash and yard waste blow from their bins onto the street among:**

   - Men (14%) and women (12%) almost equally; in 2007 men reported this more often than women
   - Across all age groups equally; in 2007 those under age 50 reported this more often than older residents
   - Across all home types equally; in 2007, apartment/condo dwellers (16%) reported this more often than single family home dwellers (9%)

- Men with no college degree (17%)

- Residents in the San Diego Bay watershed (16%); in 2007 the highest proportion was among those living in the Tijuana River watershed (34%).

The following items were asked only of single family home dwellers.

4. We find the highest proportion of those who use pesticides and weed-killers among:

- Men over 50 (39%) compared to younger men

- Residents of the San Dieguito River (41%) and Penasquitos watersheds (42%)

- Those with a college degree (about 50%) compared to 23% of those with no college experience

- Whites (38%) compared to Asians (16%)

- People who are unsure what to do to prevent storm water pollution (37%)

- Those who have construction or landscaping projects at home (100%)

5. We find the highest proportions of those who hose down the driveway or sidewalk in front of their home among:

- Residents in the Penasquitos (37%) and San Dieguito (34%) watersheds

- Those who did not recall the "Think Blue" slogan (31%) compared to those who did (24%)

- Those who are unsure what to do to prevent storm water pollution (38%).

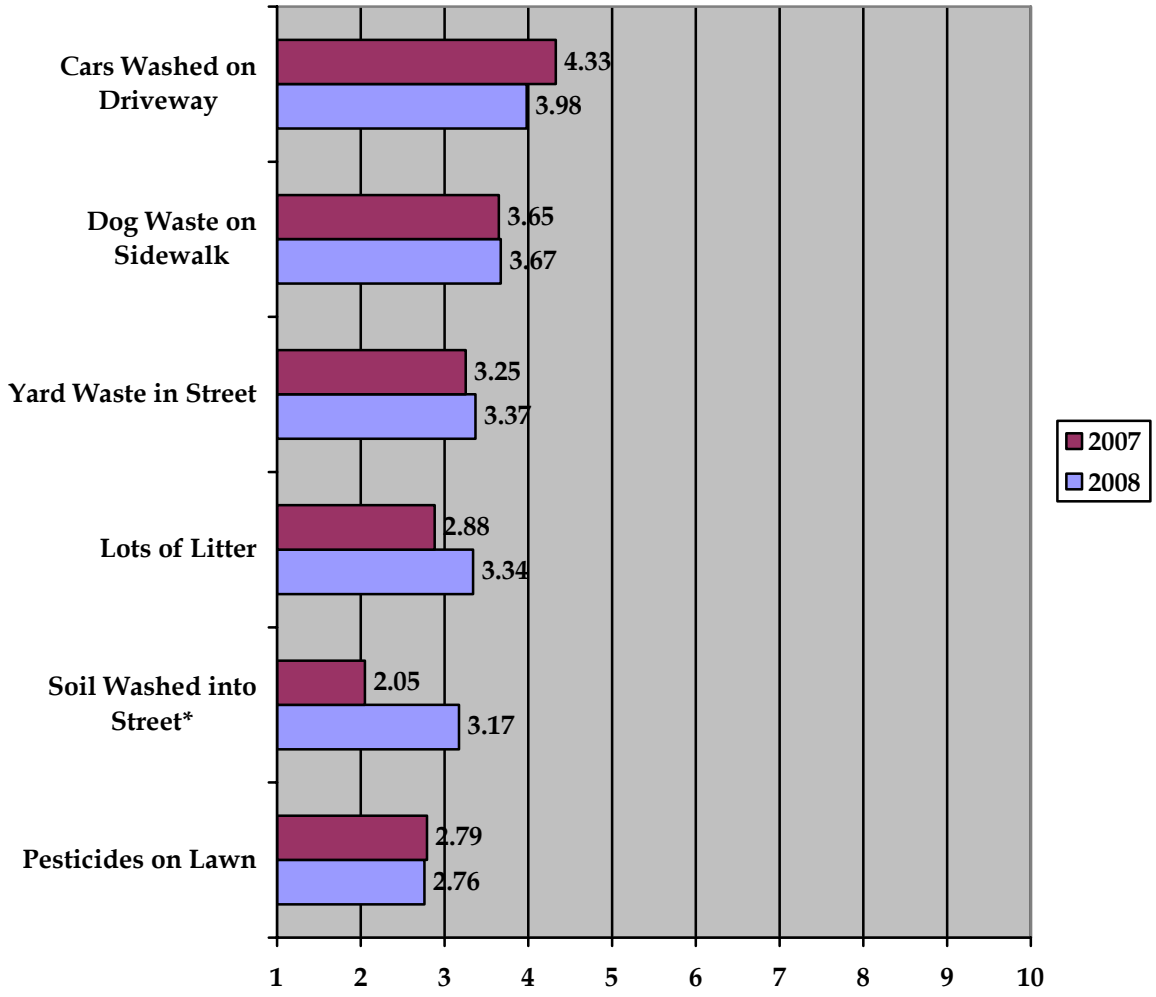
6. As in the 2007 survey, we find little significant variation in the proportion reporting construction or major landscaping projects at their homes. Higher proportions exist among:

- Residents of the San Diego River watershed (48%)

F. Frequency Of Seeing Polluting Behavior In The Neighborhood

We then asked residents how often they see various pollution-causing behaviors in their neighborhoods. The six items were drawn from a larger list of 12 behaviors used in the 2007 survey. Responses to the items were ranked on a scale of 1 (never see the behavior) to 10 (frequently see the behavior). The results are presented in Figure 8 using a mean score.

Figure 8: Frequency of Observing Polluting Behaviors (Mean Score on 1-10 Scale)



*Note that this item was modified from the 2007 survey which asked about "manure or soil being washed from lawns into the street" instead of "soil or dirt being washed into the street."

Although the average frequency of all of the behaviors is low (less than 4 on a 10 point scale), the most frequently observed behaviors are people washing their cars on the driveway or in the street, and dog waste being left on the sidewalk. A second tier of frequency is yard waste being blown into the street, lots of litter in the neighborhood, and soil being washed into the street. While the frequency of car washing on driveways decreased slightly from 2007, the frequent presence of litter increased a bit.

Although it appears that there was a large increase in the amount of soil observed being washed into the street, this increase is very likely due to a change in the wording of the question from the 2007 to the 2008 survey. Specifically, the 2007 survey asked about the frequency of "manure or soil being washed from lawns into the street" whereas the 2008 survey asked more generally about "soil or dirt being washed into the street." The proportions most likely to see each behavior in their neighborhood were similar to the pattern obtained in 2007.

1. **Those most likely to observe cars being washed on the driveway or on the street include:**

    - Those under 50 (mean score of about 4.2) compared to older residents (about 3.4)
    - African Americans (4.6) compared to whites (3.6)
    - Homeowners (4.2) compared to renters (3.5)
    - Latinos (4.3) compared to non-Latinos (3.6).

Only 21% say they never see this in their neighborhood.

2. **Those most likely to observe dog waste being left on or near the sidewalk include:**

    - Those under age 50 (4.3) somewhat more than older residents (3.4)
    - The San Diego River watershed (6.34); in 2007, the highest frequency was in the San Diego Bay Watershed (4.0 in 2007 and 3.9 in 2008)

About one in three (36%) say they never see this in their neighborhood.

3. **Those most likely to observe yard waste or litter being washed or blown into the street include:**

- People who saw/heard the "Think Blue" slogan (3.8) compared to those who did not (3.3).

Thirty-eight percent (38%) say they never see this in their neighborhood.

4. **Those most likely to observe lots of litter in their neighborhood include:**

- Those under age 50 (3.5)
- Residents in the Tijuana River (4.12) and San Diego Bay watersheds (3.9)
- Those who heard the "Think Blue" slogan (3.72).

About one in three 35% say they have never seen this in their neighborhood.

5. **Those most likely to observe pesticide and weed-killers being used on lawns and gardens include:**

- Latinos (3.2) compared to non-Latinos (2.53).

Forty-seven percent say they never see this in their neighborhood.

6. **Those most likely to say they have seen soil or dirt being washed into the street are:**

- Latino men (3.5)
- Residents in the San Diego Bay watershed (3.4)
- Those who heard the "Think Blue" slogan (3.5) compared to those who didn't (3.0).

Forty-one percent say they have never seen this in their neighborhood.

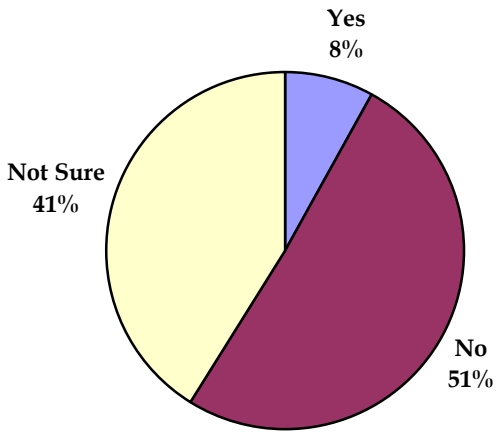
G. Familiarity With Issues Related To Storm Water Pollution

The survey asked four questions intended to gauge resident familiarity with issues related to storm water pollution. The first asked residents if they live in a watershed or not.

1. Do You Live in a Watershed?

Only 8% of adults in the city said they lived in a watershed. As shown in Figure 9, 51% percent said they did not live in a watershed, and 41% were not sure. This is the same pattern seen in the 2007 survey in which only 9% said they lived in a watershed, 45% said they did not, and 41% were not sure.

Figure 9: Do You Live in a Watershed or Not?



As seen in Table 4, the 2008 survey showed significant differences in awareness by: gender (men more than women), age (under 35 were less likely to know and men over 50 were more likely to know), and education (post college grads were more aware).

In 2007, the only significant differences in awareness of living in a watershed were by education level and among residents of Mission Bay (at 16%).

Table 4: Do You Live in a Watershed?

	2007 Survey	2008 Survey
	% Yes	% Yes
Men	10	11
Women	7	5
18-34	8	4
35-49	9	9
50-64	9	13
65+	10	10
Men 18-49	9	7
Men 50+	11	19

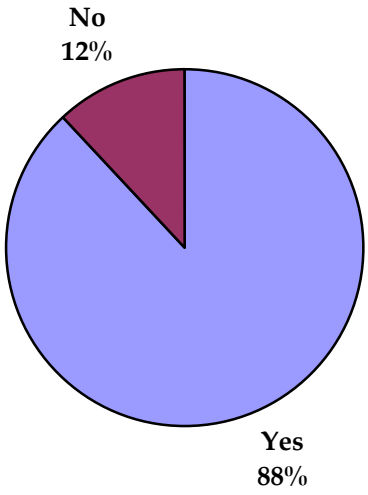
Asian	10	0
Latino	7	5
Homeowners	10	13
Renters	7	4
Single family home dwellers	11	11
Apartment/condo dwellers	5	4

2. Familiarity with Term "Storm Drain"

As shown in Figure 10, 88% said they had heard the term "storm drain" before the survey call. This figure is down slightly from 2007, where 91% said they had heard the term.

Figure 10: Have You Heard the Term "Storm Drain" Before this Call?



Although the majority of people had heard the term before the call, Table 5 shows that there are significant differences across groups in familiarity with storm drains.

- Men (91%) were more familiar with the term than were women (85%)
- Ninety-two percent of people who heard the "Think Blue" slogan were familiar with the term compared to 85% of people who had not heard it
- Among those under 35, only 79% were familiar with it and 21% were not
- In the Tijuana River watershed, only 81% were familiar with it (19% were not); this is an increase in knowledge from 2007 where 28% were unfamiliar
- In the San Dieguito River watershed, 92% were familiar with the term; this is an increase from 2007 where only 75% were familiar with it and 25% were not
- Among those with no college, only 77% were familiar with it and 23% were not; those with any amount of college were significantly more likely to be familiar with the term
- Among Latinos, 21% were not familiar with this term; we also see that 42% of Asians were not familiar with it

- As in 2007, more single family home dwellers (92%) knew the term compared to 80% of apartment and condo dwellers.

Table 5: Before This Call, Were You Familiar with the Term "Storm Drain?"

	% Yes	% No
Men	91	9
Women	85	15
18-34	79	21
35-49	92	8
50-64	94	6

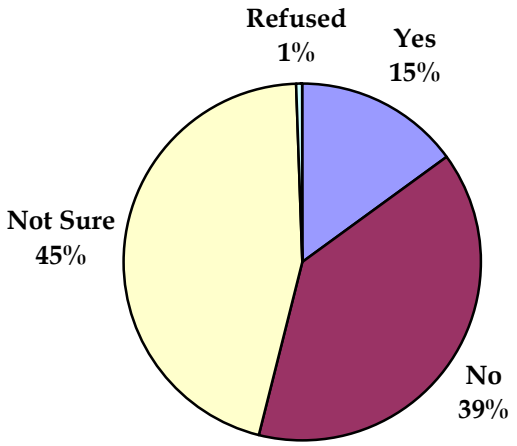
Black	91	9
Asian	58	42
Latino	79	21
Homeowners	92	8
Renters	80	20
Single family home dwellers	92	9
Apartment/condo dwellers	87	13

3. Is Storm Water Treated?

We asked residents if water in storm drains in San Diego goes "to a sewage treatment plant before it is released, or [if] it is released into creeks or the ocean

without treatment." Just over one-third (39%) knew that the water was not treated. This is significantly lower than the 2007 figure in which nearly half (46%), of respondents knew. However, the percentage that believed the water was treated was 15% (compared to 17% in 2007). In 2008, a greater percentage of people reported that they were unsure (45%) about whether or not the water was treated.

Figure 11: Is Storm Water Treated or Not?



There were significant variations in knowledge on this subject. As shown in Table 6, we see sizable differences by the following:

- Gender, with men (46% say storm water is not treated) better informed than women (32%)

- Age, with those under 35 (23%) more likely believe it is treated than older residents (about 12%); in 2007, those 65 and over were significantly less informed than middle aged residents. This difference was not evident in 2008, and only 15% believed that storm water was treated compared to 20% in 2007

- Watershed, with those in the Mission Bay watershed (53%) far more informed than the others, followed by residents of the San Diego River (44%) and Penasquitos (46%) watersheds

- Education, with awareness rising from 23% of those with no college to 58% of those with a post-college degree

- Race/ethnicity, with whites (53%) more likely to know that storm water is untreated compared to African Americans (26%), Asians (14%), or Latinos (25%).

Table 6: Is Storm Water Treated?

	%Treated/ Not Sure	% Not Treated
Men	53	46
Women	68	32
18-34	79	21
35-49	48	52
50-64	48	51
65+	57	43
Men 18-49	59	41
Men 50+	41	58
Women 18-49	70	30
Women 50+	61	38
San Diego Bay watershed	60	39
San Diego River watershed	55	44
Mission Bay watershed	47	53
Tijuana River watershed	75	24
San Dieguito River watershed	61	38
Penasquitos River watershed	54	36
Less than college	67	23
Some college	63	37
College grad	53	47
Post college	42	58
White	47	53
Black	74	26
Asian	86	14
Latino	75	25
Homeowners	55	44
Renters	72	28
Single family home dwellers	54	45
Apartment/condo dwellers	72	28

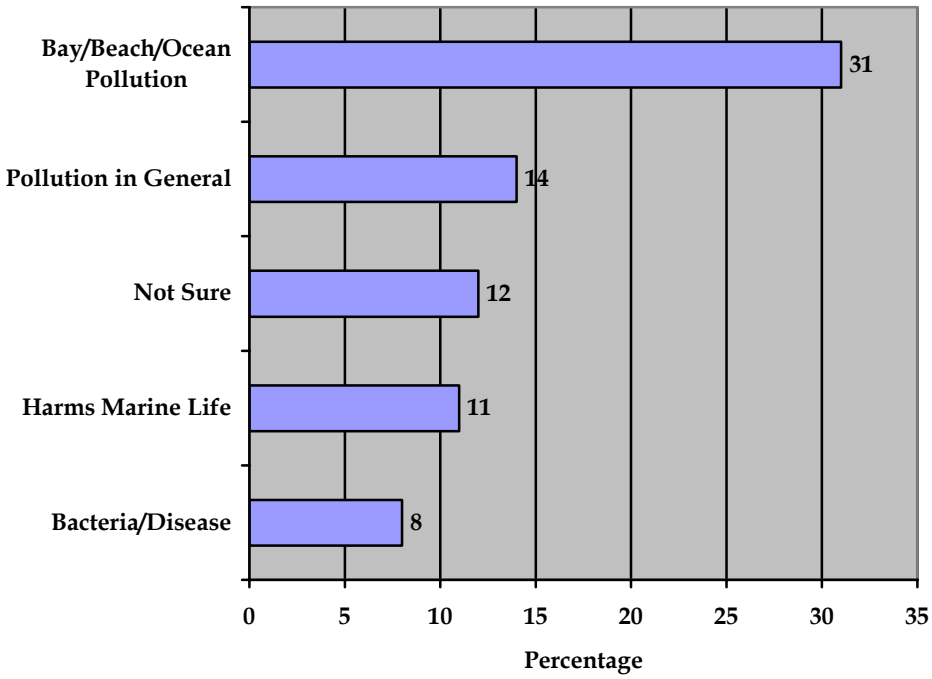
In addition, among those who said that in 2008 they had heard about the steps the city was taking to prevent storm water pollution, nearly half (48%) knew that storm water was not treated, compared to 35% who had not heard anything. Similarly,

46% of those who said they had heard about the Think Blue campaign knew that storm water was not treated compared to 34% who had not heard about Think Blue. These figures are similar to those reported in 2007, and suggest that the Think Blue campaign continues to be successful at transmitting information to residents.

4. Awareness of Problems Caused by Pollution in Storm Drains

We asked residents to report what they believed was the main problem caused by polluted water entering storm drains. Open-ended responses were coded into categories. As shown in Figure 12 below, 31% of residents made specific mention of bay, beach, or ocean pollution. Another 11% mentioned some impact on marine life, and 3% (not shown) mentioned some harm to swimmers in the ocean. So in total 45% made some reference to the impact of storm water pollution on the ocean.

Figure 12: What is the Main Problem Caused by Polluted Water Entering Storm Drains?



Those who mentioned that polluted water in storm drains causes bay, beach, or ocean pollution were:

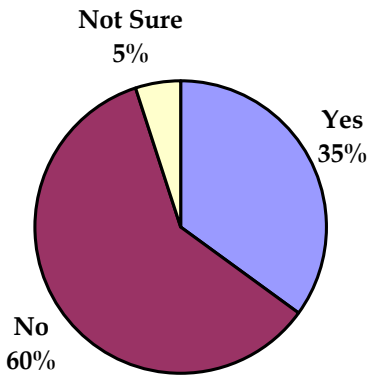
- Single family home dwellers (35%)

- People who know that storm water is not treated (41%)
- People who are aware that the city is taking steps to reduce storm water pollution (37%)
- People who saw the television ad with the yellow ducks being washed down the street (35%)
- Whites (39%) and Non-Latinos (34%); This problem was reported by 44% of white men and only 18% of Latino men.
- Men over 50 (43%); Residents between the ages of 18 and 34 were the least likely to mention this as a problem
- Residents of the Tijuana River (20%) were least likely to mention this problem.

5. Familiarity with San Diego City Actions to Prevent Storm Water Pollution

Thirty-five percent of residents said that in the 2008 survey that they saw or heard something about steps the city of San Diego was taking to prevent pollution of storm water. This is comparable to the 2007 survey results in which 36% reported hearing this information.

Figure 13: In 2007, Did You See or Hear Anything About Steps the City is Taking to Prevent Storm Water Pollution?



We see variations in awareness of steps the city is taking as follows:

- Only 22% of those under age 35 are aware of such steps, compared to about 43% of older residents

- White men (47%) were more familiar with these steps than women (31%) or Latino men (29%)

- Among those familiar with the Think Blue slogan, 42% have heard of steps the city is taking, compared to 30% of those not familiar with the slogan

- Among single family home dwellers, 37% are familiar with the city's efforts, compared to 30% of apartment/condo dwellers

- Non-Latino residents (38%) are more aware than Latinos (28%)

- Forty-five percent (45%) of college graduates compared to those without college degrees (33%) or with post graduate degrees (33%).

Overall, these variations mirror those obtained in the 2007 survey.

H. Familiarity with Specific "Think Blue" Messages

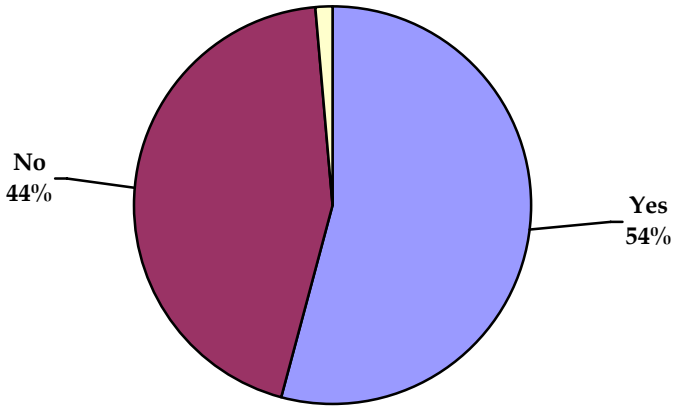
The next set of questions revisited the "Think Blue" program and asked residents about their familiarity with a variety of media efforts. In addition, we also asked residents to report their response to a series of existing and potential "Think Blue" taglines.

1. Familiarity with the "Yellow Ducks" Commercial

We asked residents to report whether they recalled seeing television commercials on storm water pollution prevention that featured yellow ducks being washed down the storm drains.

Fifty-four percent of residents said that they recalled this commercial.

Figure 14: Do You Recall Seeing Any Television Commercials With Yellow Ducks?



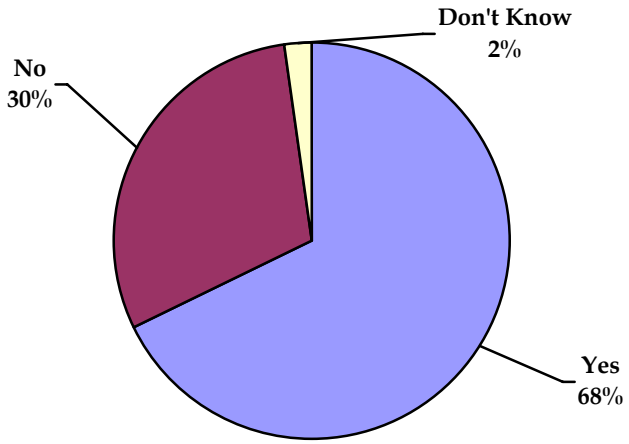
The groups most likely to recall seeing the "yellow ducks" commercial are:

- Latinos (60%) compared to Non-Latinos (51%)
- Residents between the ages of 35 and 64 (about 62%) compared to those under 35 (47%) and seniors (49%)
- Residents of the Tijuana River watershed (65%).

2. Familiarity with "Keep Mission Bay Clean and Safe"

We asked residents to report whether they recalled seeing or hearing any messages that said "Keep Mission Bay Clean and Safe." Sixty-one percent of residents recalled hearing this message.

Figure 15: Do You Recall Seeing Or Hearing "Keep Mission Bay Clean and Safe?"



The groups most likely to recall seeing or hearing the "Mission Bay" messages are:

- Women (65%) more than men (57%); in particular, white women (67%) more than white men (53%)
- People who were familiar with the "Think Blue" slogan (68%) compared to those who weren't (55%)
- Residents who believe that storm water is treated (76%)
- Asians (77%) more often than whites (59%).

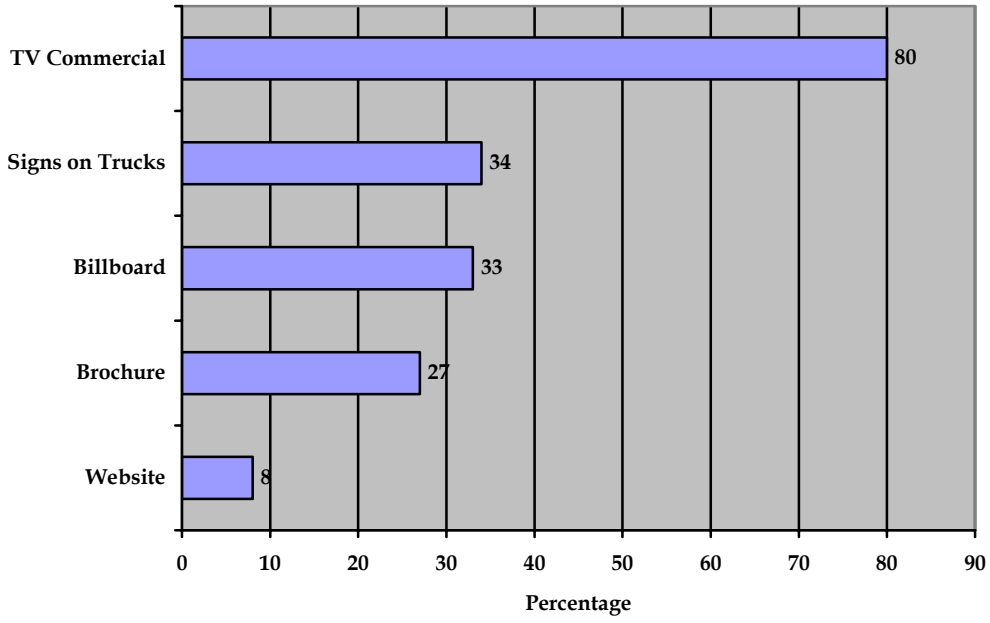
There were no differences across watershed in the proportion of people who recalled hearing the message.

3. Familiarity With Specific Think Blue Elements

Prior to completing the next set of survey items, residents were provided with a brief description of the "Think Blue" program. Following this description, residents were asked whether they had heard about the "Think Blue" program before the call. Residents who answered that they had heard of the program (55%) were asked whether or not they had seen each of five specific program elements.

As seen in Figure 16 below, 80% of residents who had heard of "Think Blue" saw a TV commercial, and about one-third saw brochures, signs on trucks, and billboards. Importantly, only 8% had seen the Think Blue website.

Figure 16: Have You Seen Any Of The Following From The Think Blue program?



There was not much variation among those who saw TV commercials, billboards, brochures, or the website

The groups most likely to have seen a TV commercial were:

- Residents of the Tijuana River watershed (92%)

- White renters (89%) compared to white homeowners (77%).

The groups most likely to have seen a billboard were:

- Residents under 50 (38%) compared to seniors (24%)
- Latino women (49%) compared to white men (31%) and white women (32%)
- Latino renters (50%) compared to white homeowners (29%).

The groups most likely to have seen a brochure were:

- Single family home dwellers (31%) compared to residents of condos or townhomes (16%)
- Residents over 50 (35%) compared to younger residents (24%).

The groups most likely to have the website were:

- Latinos (14%) more than non-Latinos (5%); in particular, Latino men (18%) compared to white men (6%) and white women (6%).

The largest amount of variation across groups was in residents who reported seeing signs on the sides of trucks.

The groups most likely to have seen signs on the sides of trucks were:

- Those who believed storm water was treated (49%) compared to those who knew it was not treated (31%)
- Latinos (47%) compared to non-Latinos (29%)
- Latinos without college degrees (51%) compared to whites with degrees (20%)
- Residents under 35 (41%) and over 65 (42%) compared to those between 35 and 64 (29%)
- Least likely to be white women (21%) compared to 48% of Latino women, 45% of Latino men, and 34% of white women

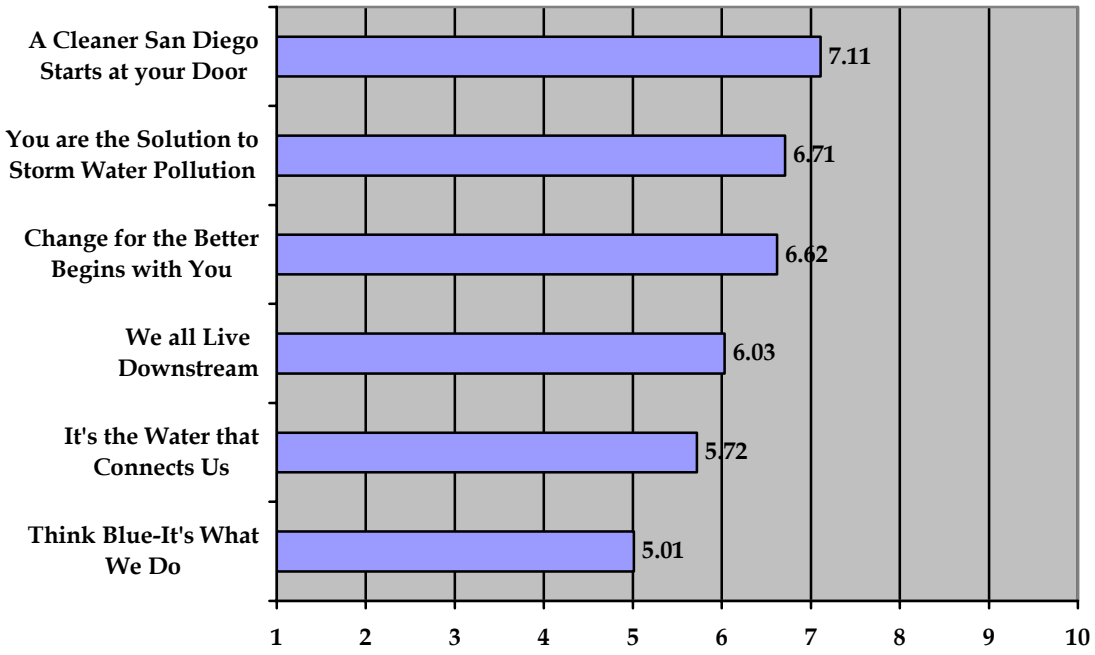
- Twice as likely to be residents of the Tijuana River watershed (52%) compared to 21 – 28% of residents from other watersheds.

I. Persuasiveness of Think Blue Taglines

The next set of items asked residents to rate the persuasiveness of six existing or potential slogans for the Think Blue program. Items were rated in terms of the likelihood that they would persuade the respondent to keep pollution out of storm drains. Each item was rate on a scale from 1 (not at all persuasive) to 10 (very persuasive). The order in which the items were presented was rotated to adjust for potential order effects.

Figure 17 shows the mean score of each of the six items. Overall, all of the messages were viewed as somewhat persuasive as the mean scores for all six messages were above the midpoint. Mean scores fell between 5 and 7 on a 10-point scale.

Figure 17: Persuasiveness of Think Blue Slogans for Keeping Pollution out of Storm Drains.



Across all messages, residents with college degrees rated the messages as less persuasive than residents without college degrees. White men also rated the messages lower in persuasiveness. There were no differences in the perceived persuasiveness of the messages across age groups.

1. A Cleaner San Diego Starts at Your Door (Mean = 7.11)

The groups who rated this rated this message as most persuasive were:

- Latinos (8.0) compared to Non-Latinos (6.5); and African Americans (7.8) compared to whites (6.6)

- Residents of the Tijuana River (8.0) and San Diego Bay (7.2) watersheds.

Fifty-eight percent of women rated this message as an 8, 9, or 10 (high persuasiveness) compared to 44% of men; 15% of men rated the message as a 1, 2, or 3 (low persuasiveness) compared to just 9% of women.

2. You Are the Solution to Storm Water Pollution (Mean = 6.71)

The groups who rated this rated this message as most persuasive were:

- Latinos (7.4) compared to Non-Latinos (6.3); and African Americans (7.5) compared to whites (6.4).

Fifty-three percent of residents who rated this message as an 8, 9, or 10 were familiar with the Think Blue slogan compared to 40% who were not familiar with it. Fifty-two percent of women rated the message as an 8, 9, or 10 compared to just 39% of men.

3. A Change for the Better Begins With You – Think Blue (Mean = 6.62)

The groups who rated this rated this message as most persuasive were:

- Latinos (7.6) compared to Non-Latinos (5.9); and African Americans (7.5) and Asians (7.3) compared to whites (6.0)

- Residents of the Tijuana River (7.6) and San Diego Bay (6.7) watersheds.

Fifty-five percent of women rated this as an 8, 9, or 10 compared to just 37% of men; 21% of men rated this item as a 1, 2, or 3 compared to 13% of women. Over half (51%) of the residents who rated this message 8 – 10 were familiar with Think Blue.

4. Because We All Live Downstream (Mean = 6.03)

There was no significant variation in response to this message.

Forty-two percent of people who rated this message as an 8, 9, or 10 (high persuasiveness) had heard the Think Blue slogan prior to the call.

5. It's the Water that Connects Us (Mean = 5.72)

The groups who rated this rated this message as most persuasive were:

- Latinos (6.5) compared to non-Latinos (5.0), and African Americans (5.94) more than whites (5.1)

- Residents of the Tijuana River watershed (6.5).

There was a significant difference in the way this message was perceived by residents in different home types. Specifically, 28% of single family home dwellers rated this message as a 1, 2, or 3 (low persuasiveness) compared to 19% of apartment/condo dwellers. Thirty-eight percent of apartment/condo dwellers rated this message as an 8, 9, or 10.

6. Think Blue – It's What We Do (Mean = 5.01)

The groups who rated this rated this message as most persuasive were:

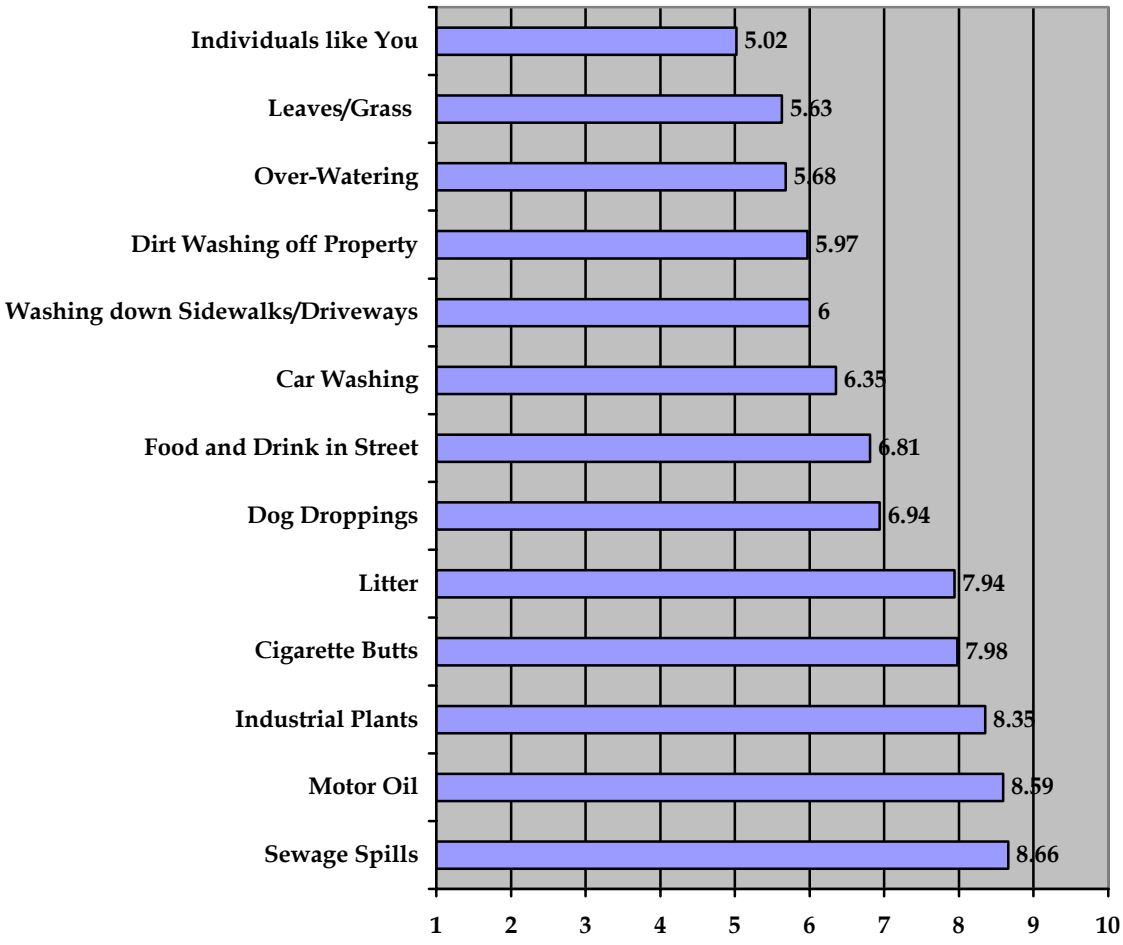
- Latinos (5.8) compared to non-Latinos (4.4), and African Americans (5.9) and Asians (5.7) more than whites (4.5).

J. Perceived Sources of Pollution

The next set of questions was aimed at identifying what items residents perceived as being a source of pollution in storm drains in San Diego. A total of 13 items were rated on a scale from 1 (not a serious source of pollution) to 10 (a very serious source of pollution).

As seen in Figure 18, sewage spills (Mean = 8.66), motor oil (8.59), and industrial plants (8.35) were perceived as being the most serious sources of pollution in storm drains whereas over-watering of lawns (Mean = 5.68), leaves or grass clippings (5.63), and "individuals like you" (5.02) were viewed as the least serious.

Figure 18: Seriousness of Storm Drain Pollutants



There were very few differences by group as a function of the pollutant. However, a few clear patterns emerged from the data:

- **Women.** Across all 13 items, women were significantly more likely than men to rate these sources of pollution as a very serious problem

- **Yellow Ducks.** Residents who saw the TV commercial with the yellow ducks going down the street into the storm drain rated litter, sewage spills, and grass clippings as significantly more serious than did those who did not see the commercial

- **Familiarity with Think Blue.** With the exception of "grass clippings" and "individuals like you," residents who had heard of Think Blue rated each of the pollutants as more serious than those who had not heard of Think Blue

- **Men over 50.** Men over 50 rated most pollutants as less serious than men and women in other age groups

- **Tijuana River Watershed.** Dog droppings, grass clippings, washing sidewalks/driveways, and dirt washing into street were rated of highest seriousness by residents of the Tijuana River watershed

- **Latinos.** With the exception of cigarette butts, Latinos rated the pollutants as more serious than non-Latinos.

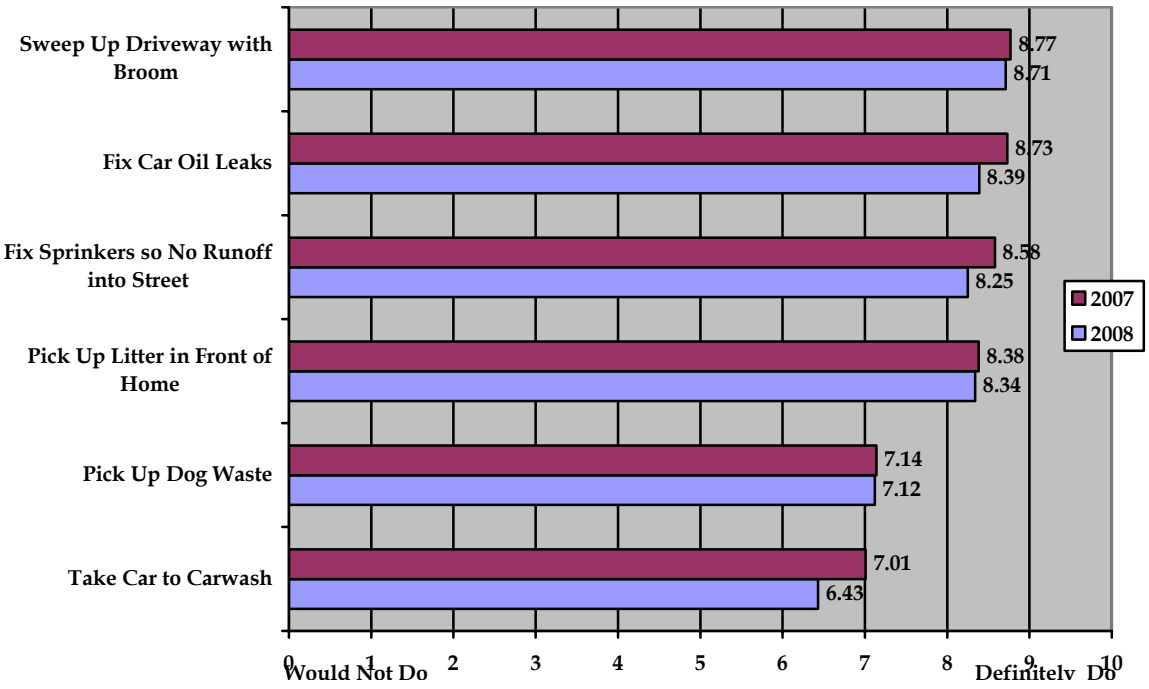
K. Actions to Reduce Storm Water Pollution

After asking about the seriousness of a variety of pollutants, we presented a series of questions designed to assess willingness among San Diego residents to take 6 specific actions to prevent storm water pollution. We asked them to rate their willingness on a scale of 1 to 10, where 1 meant it was something they would not do, and 10 meant it was something they definitely would do to help prevent pollution. (Note that some items were asked only of single family home dwellers and one was asked only of home vehicle washers).

The mean score results are displayed in Figure 19.

Overall, we see high levels of potential cooperation for most of the actions described in the poll. Indeed the ratings across all 6 behaviors are a full point or higher above the scale's mid-point. As in 2007, we found a strong willingness among homeowners to "sweep up your driveway or sidewalk with a broom instead of hosing it down with water." Fifty-eight percent rated this as a 10. Although the 2008 survey listed fewer actions than the 2007 survey, the behaviors were ranked similarly across the two years. At the bottom of the list, and almost a full point lower, is going to a car wash.

Figure 19: Willingness to Take Actions to Prevent Pollution (Mean Scores on 1-10 Scale)



1. Sweep up your driveway or sidewalk with a broom instead of hosing it down with water

Of the single family home dwellers asked this question, 58% rated their willingness to do this with a 10, especially:

- Women (67%) compared to men (49%)
- Residents in the Tijuana River watershed (68%) and Mission Bay (68%) watershed compared to San Dieguito Bay or Penasquitos River.

2. Fix your car immediately if you notice any oil stains on your driveway or under your car

Fifty-three percent rated their response to this item as a 10.

- Women (61%) compared to men (46%) and especially men under 50 (43%).

- Blacks (60%) compared to whites (48%) and Asians (42%) and Latinos (55%) compared to white males (39%).

3. Fix your sprinklers so they don't wash soil or manure onto the street

Of the single family home dwellers asked this question, 52% rated their response as a 10, and especially:

- Women (62%) compared to men (43%);
- Residents between 35 and 64 (58%) compared to those under 35 (43%).

4. Pick up litter and trash that is in the gutter in front of your home

Fifty-five percent rated their response as a 10, and especially:

- Women (61%) compared to men (49%)
- Those who had heard about Think Blue (60%) compared to those who did not (51%)
- Single family home dwellers (61%) compared to apartment/condo dwellers (40%)
- Those over age 34 (71%) compared to those younger (46%)
- Latino homeowners (65%) compared to Latino renters (49%) or white renters (50%)
- Latinos (63%) and whites (64%) with college degrees compared to those without (29%).

5. Pick up dog waste in front of your home and put it in the trash, even if it is not from your dog

Overall, 45% rated this item as a 10, especially:

- Single family home dwellers (54%) compared to duplex/townhome dwellers (35%) and apartment/condo dwellers (29%)

- Those who have heard of city programs to prevent storm water pollution (51%)

- Whites (49%) compared to African Americans (28%) and Asians (32%)

- Those over 34 (75%) compared to those under (33%)

- White women (56%) compared to white men (42%)

- Latino (53%) and white (58%) homeowners compared to white renters (28%).

6. Take your car to a carwash instead of doing it yourself

Of those who said they wash their car at home, only 26% rated their willingness to take the car to a carwash as a 10. This included in particular:

- People who did not hear about Think Blue (30%) compared to those who did (20%)

- Latinos (36%) compared to non-Latinos (21%)

- Women with no college degree (37%) compared to men with college degrees (37%)

- Residents over 35 (75%)

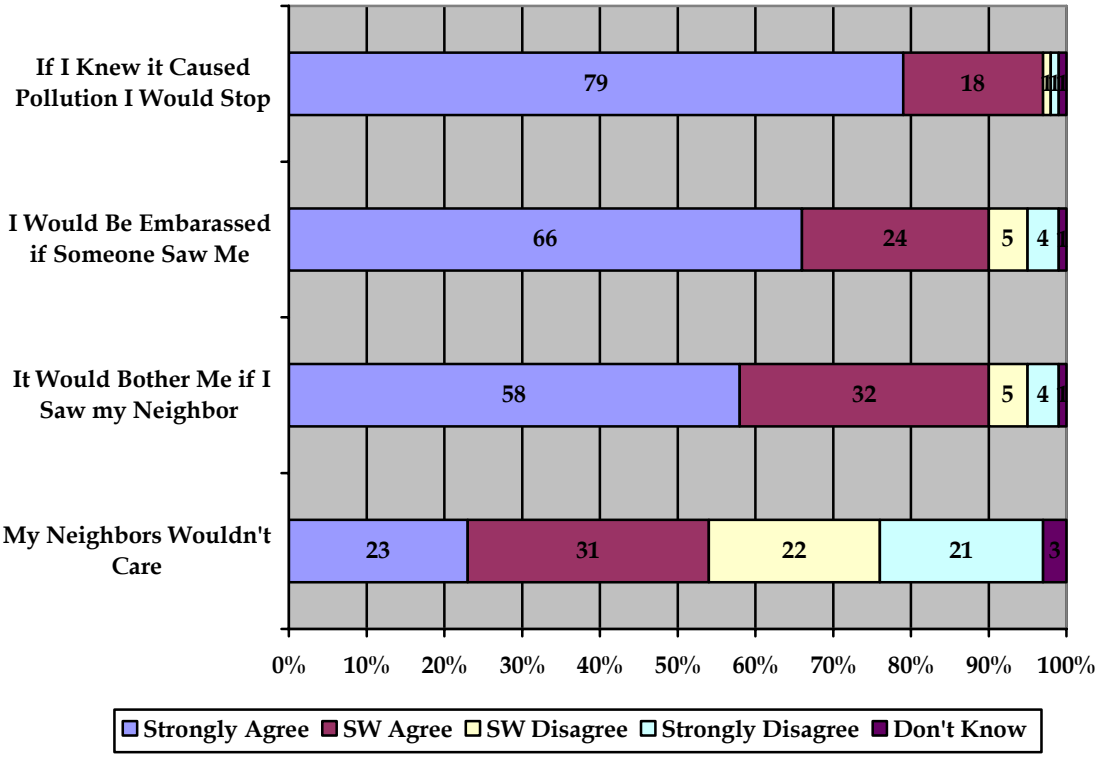
- Residents of the Tijuana River watershed (34%) and Mission Bay watershed (44%) compared to residents of the San Dieguito watershed

- Latino renters (46%) compared to white homeowners (19%).

K. Personal Norms

We asked residents to respond to four questions that assessed the extent to which they felt a personal obligation to prevent storm water pollution. Overall, residents felt a strong personal obligation to do the right thing, but did not feel strongly that others felt a similar obligation.

Figure 20: Norms



1. It would really bother me if I saw a neighbor doing something that causes pollution of storm drain water.

Ninety percent of residents agreed somewhat or strongly with this statement. This was particularly true for women over 50 (92%), men under 50 (93%), and Latinos with a college degree (98%). Men over 50 were most likely to disagree with this statement (12%).

2. I would be really embarrassed if someone saw me doing something that causes pollution of storm drain water.

Ninety-one percent of residents agreed somewhat or strongly with this statement. This was particularly true for women (93%), apartment/condominium dwellers (95%), Latino women (96%), Latino renters (100%), and Latinos with a college degree (100%). Men without college degrees (11%) and men under 50 (10%), and white men (9%) were most likely to disagree with this statement.

3. If I knew that something I was doing causes pollution of storm drain water, I would stop doing it immediately if I could.

Fully 98% of residents agreed with this statement. This was particularly true of townhome (100%) and apartment dwellers (99%), residents under 50 (99%), and Latino renters (100%).

4. Most of my neighbors probably wouldn't care if something they normally do was causing pollution of storm drain water.

This item brought the greatest amount of variability. Just over half of all residents (54%) believed that their neighborhoods wouldn't care if something they normally do was causing pollution of storm drain water.

The highest proportion of people agreeing with this statement included:

- Those who have not heard about city programs to prevent pollution (59%)
- Those not sure what to do to prevent storm water pollution (61%)
- Latinos (64%) and Asians (62%)
- Residents under 35 (63%)
- Residents of the Tijuana River watershed (69%).

The highest proportion of people disagreeing with this statement included:

- Non-Latinos (50%)
- Those with college degrees (50%)

- Residents between 35 and 64 (49%) compared to those under 35 (36%)
- Those in watersheds besides San Diego Bay and Tijuana River.

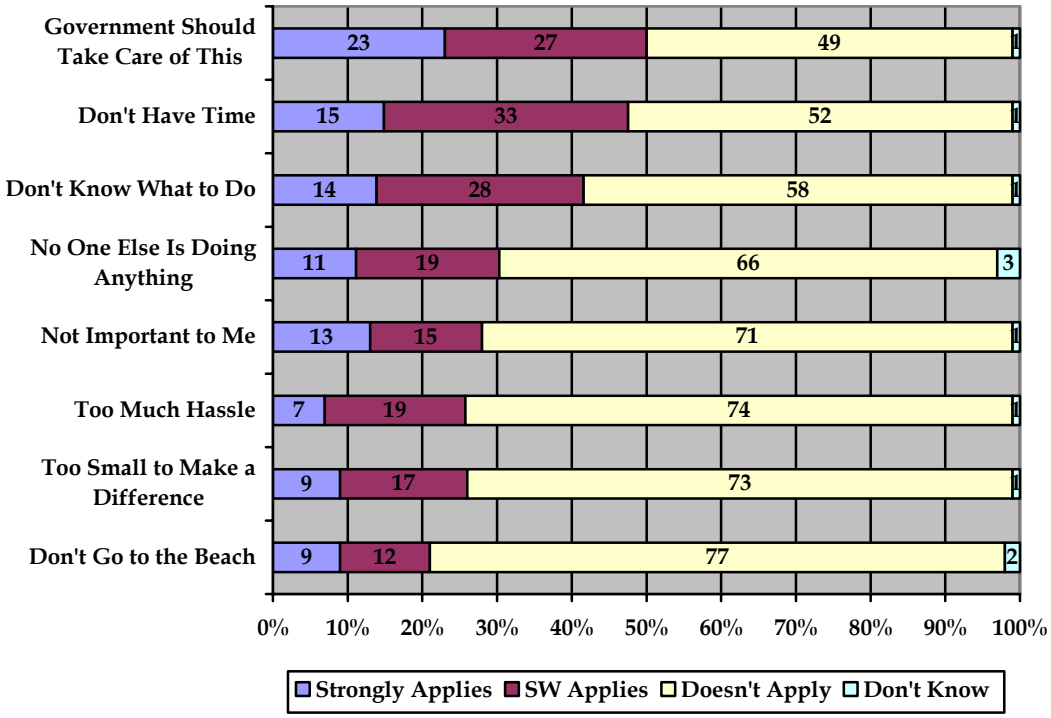
L. Barriers to Action

We asked residents to respond to a set of items designed to explore barriers to taking action to stop storm water pollution. Specifically, we asked residents whether each of 8 possible reasons to not do more to help stop storm water pollution applies to them, or not.

As shown in Figure 21, the most commonly given reasons are that it is something government should take care of (50%), lack of time (48%), and don't know what to do (41%). Lack of time was also rated at the top in the 2007 survey (44%). Note that the item about government responsibility was not asked in the 2007 survey.

A smaller proportion (31%) said that they did not believe others are doing anything, and 28% said that stopping storm water pollution is simply not that important to them. Twenty-six percent cited too much hassle or feeling what they do is too small to make a difference and 21% said pollution did not affect them because they don't go to the beach.

Figure 21: Percent Saying Each Reason Applies to Them



Primary Barriers

1. Government should take care of this (50%)

- Age: This applies more to residents under 35 (67%)
- Location: This applies to 57% in the Tijuana River watershed and 56% in the San Diego Bay watershed
- Race/Ethnicity: This applies to more Latinos (59%) and African Americans (71%)
- Home Type: This applies to more to single family home dwellers (64%).

2. I would like to do more but I just don't have time (44%)

- Age: This applies more to younger residents compared to 50+ residents
- Area: This applies to 59% in the Tijuana River watershed
- Education: This applies more to those with lower education levels – about 58% of those with no college degree compared to about 45% of those with a college degree
- Race/Ethnicity: This applies to 76% of Asians and 61% of African Americans compared to just 40% of whites
- Gender: This applies more to men (52%) than women (43%)
- Knowledge: This applies more to people who never heard of Think Blue (53%).

3. I do not know that much about what to do (41%)

- Race/Ethnicity: This applies more to African Americans (54%) and Asians (54%) than to whites (37%)

- Own/Rent: This applies more to Latino renters (51%) than to Latino homeowners (34)

- Gender: This applies more to women under 50 (48%).

Secondary Barriers

4. No one else I know is doing anything (31%)

- Education: This applies least to women with college degrees (18%)

- Age: This applies most to residents under 35 (39%)

- Location: Tijuana River watershed residents (43%) are more likely than others to say this applies to them

- Home Type: Apartment/condo dwellers (38%) are more likely to say this applies to them than single family home dwellers (27%); Latino homeowner (42%) are more likely than white homeowners (23%) to say this applies.

- Race/Ethnicity: This applies more to Latinos (38%) and Asians (49%).

5. It is not something that is honestly that important to me (28%)

City programs: People not aware of city programs to address storm water pollution are more likely (32%) to say this is not important to them compared to those aware of the programs (20%).

- Not sure what to do: This is also more likely to be applicable to those who say they don't know what to do to prevent pollution (39%) compared to 19% of others.

- Gender/Education: Men with no college degree are more likely (34%) than others to say this is not important to them.

- Watershed: Tijuana River watershed residents (34%) are most likely to say this is not important to them.

6. It's too much hassle to do a lot of this (26%)

- Gender: This applies to men (30%) more than women (22%); it applies least to women over 50 (16%)

- Age: This applies much more to seniors (45%) than to others, and especially to older men

- Race/Ethnicity: This applies to 37% of African Americans and 45% of Asians compared to 22% of whites.

- Location: This applies most to residents of the Tijuana River (29%) and the San Diego Bay (25%) watershed compared to residents of Mission Bay (16%).

7. What I do is too small to make a difference (26%)

- Age: This applies much more to seniors (28%) and those under 35 (31%) compared to others

- Location: This is least likely to apply to residents of the San Dieguito watershed (11%)

- Home Ownership: This is least likely to apply to white renters (8%) compared to others (about 30%)

- Education: This applies much more to those with no college (30%) than to college graduates (19%)

- Race/Ethnicity: This applies to 49% of Asians compared to 20% of whites and 27% of African Americans.

8. I don't go to the beach so the pollution does not affect me (21%)

- Home Ownership: This applies more to Latino homeowners (26%) than to white homeowners (6%)

- Race/Ethnicity: Applies more to Asians (37%) than whites (19%); Applies especially to Latino men (33%) compared to others (about 16%).

- Location: Apples most to those in the San Diego Bay watershed (25%)

M. Motivations for Environmental Concern

The following analysis was prepared by Action Research.

The final set of substantive items asked residents to rate their motivations for environmental concern based on the consequences of polluted water in storm drains for various groups. The scale is based on a psychological theory which suggests that values provide the source of concern for environmental issues and for pro-environmental behavior.

Academic research has identified three sets of values associated with environmental attitudes: egoistic, altruistic, and biospheric. Egoistic values are focused on self, and self-oriented goals (e.g., wealth, personal success). Altruistic values focus on other people (e.g. community, humanity), and biospheric values focus on the well-being of living things (e.g., plants, animals). Conceptually, each of these sets of values can lead to concern for environmental issues, and ultimately to behavior when activated.

The twelve-item scale consisted of biospheric, egoistic, and altruistic environmental motives. Each item was ranked from 1 (no concern) to 10 (a great deal of concern):

- **Biospheric** motives were: land animals, marine life, local habitats, and migrating birds.

- **Egoistic** motives were: your health, your property values, your safety, and your lifestyle.

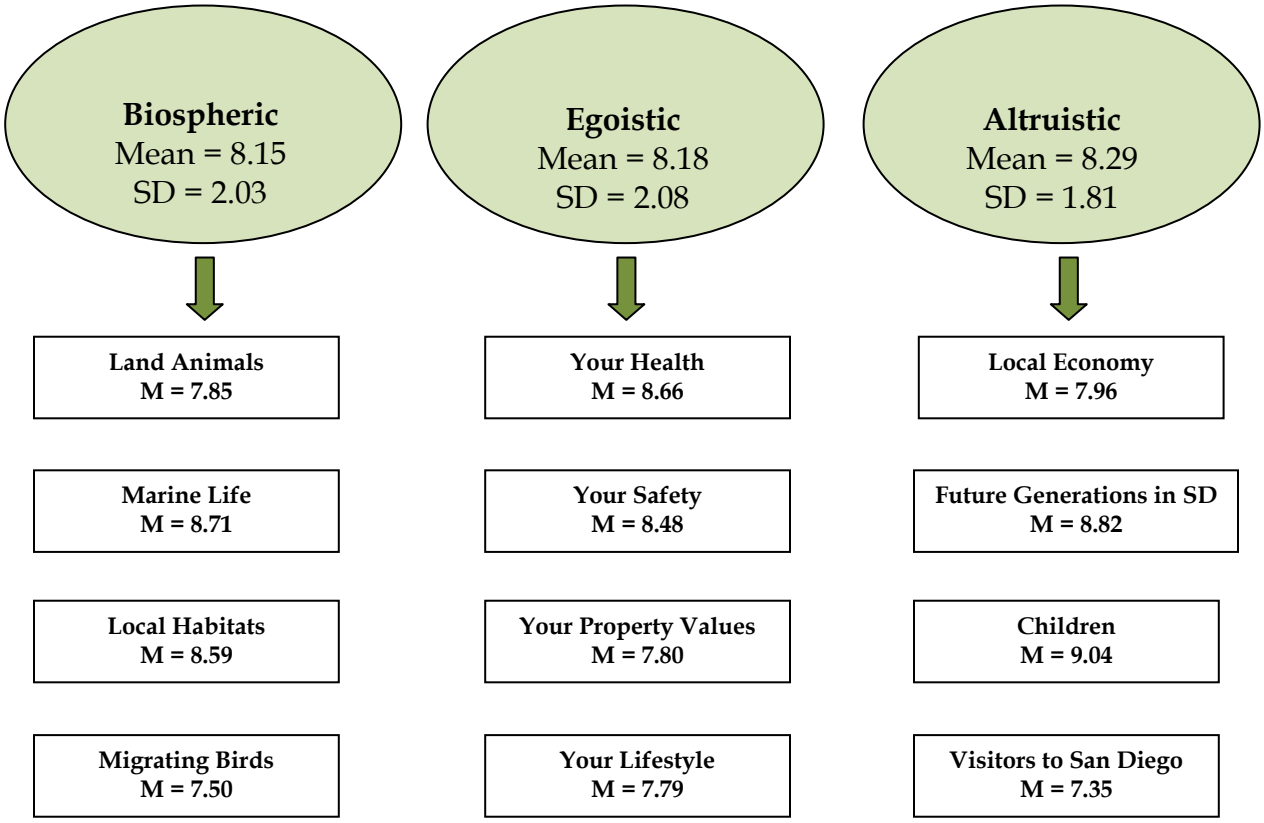
- **Altruistic** motives were: local economy, future generations in San Diego, children, and visitors to San Diego.

Figure 22 shows the mean scores across the three value sets, as well as mean scores for concern about the individual items on the scale. Overall concern about the consequences of storm water pollution was high (Biospheric: Mean = 8.15, Egoistic: Mean = 8.18, and Altruistic: Mean = 8.29 on a 10-point scale).

When classified into one of the three primary types, the largest grouping were "biospheric" concerns (45%). Among the specific items, the strongest motivation for taking action to reduce storm water pollution were concerns about the consequences

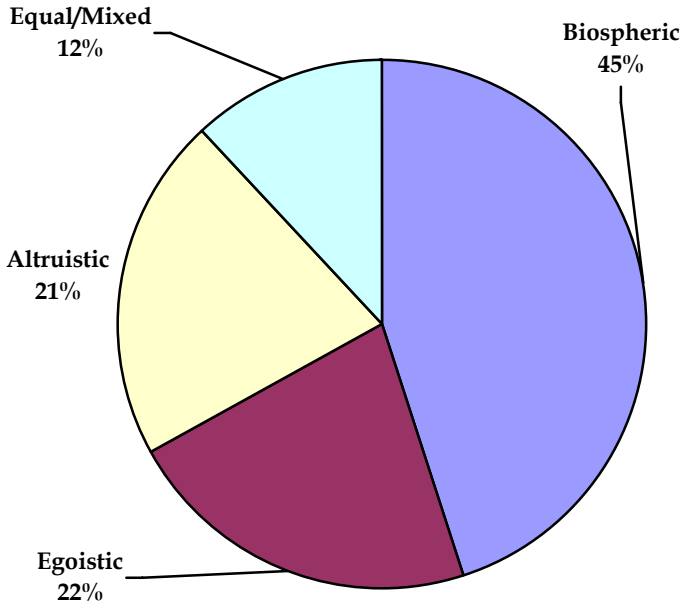
for "children" (Mean = 9.0), "future generations in San Diego" (Mean = 8.8), and "health" (Mean = 8.7). The lowest rated motivations were concerns for "visitors to San Diego" (Mean = 7.4) and "migrating birds" (Mean = 7.5)

Figure 22: Mean Motives for Environmental Concern



Residents were categorized based on their highest ranked motivations. As seen in Figure 23, most residents rated biospheric concerns highest.

Figure 23: Residents by Primary Environmental Concern



Residents highest in biospheric environmental concern were:

- Women (57%) compared to men (45%); this is particularly true of women over 50 (64% ranked biospheric concerns highest) compared to younger men (41%)
- Age 50 and over (58%) compared to younger residents (47%)
- Least likely to be Asian (30%) compared to other ethnic groups (over 40%); Sixty-nine percent (69%) of Native Americans were classified as biospheric
- More likely to have heard about Think Blue (59%) compared to those who did not (44%)
- More likely to know what a storm drain was (53%) compared to those who did not know (35%)

- More likely to know that storm water is not treated (56%).

Residents highest in egoistic environmental concern were:

- Less likely to have heard about Think Blue (20%) compared to those who did hear about it (29%)

- African American (35%) and white (24%) compared to other ethnic groups.

Residents with altruistic environmental concern were:

- Less likely to have heard about Think Blue (20%) compared to those who did hear about it (27%)

- Less likely to have heard the term storm drain (20%) compared to those who heard it (27%)

- Asian (52%)

- Men under 50 (32%)

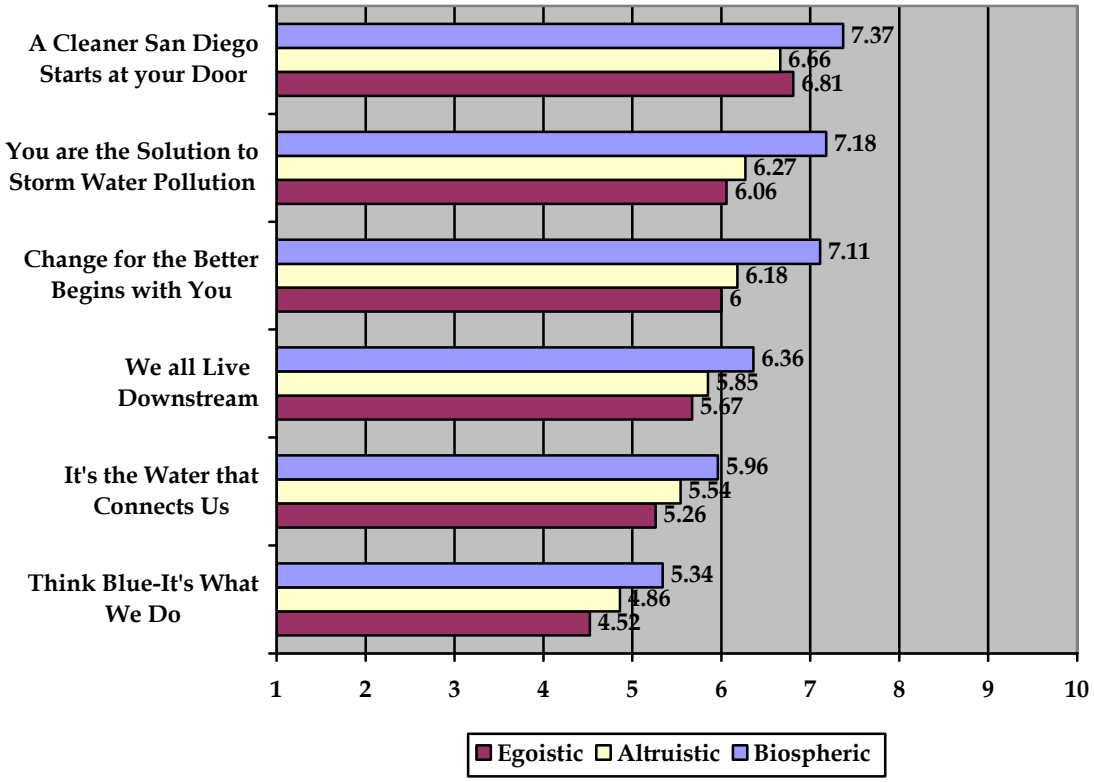
- Residents who believed that storm water was treated (36%) compared to those who knew it was not treated (20%).

There were no differences in education, watershed, or home type across the three groups. In addition, Latinos were equally distributed across the groups.

Rating of "Think Blue" slogans

Residents with biospheric environmental motives consistently rated the existing and potential "Think Blue" slogans significantly higher than the other groups. Residents with egoistic environmental concerns rated the messages lowest.

Figure 24: Liking for "Think Blue" Messages by Environmental Concern



The results of these analyses can be useful in the development of new messaging, public services announcements, and other outreach activities. The analyses showed that San Diego residents can be divided into three distinct groups, each of whom has a unique value basis for their environmental concern. In particular, we found that the largest group of San Diego residents was concerned about storm water pollution because of its consequences for living things (biospheric concerns) suggesting that broad campaign strategies would be most effective when highlighting these concerns over altruistic or egoistic concerns (i.e., children or personal lifestyle).

The findings also allow us to go beyond traditional demographic profiles (e.g., gender, age, etc.) in the development of audience-specific messaging. Even within these different demographic profiles, there is considerable variation in the specific value basis for environmental concern. Based on the results of our analyses, appeals can be designed specifically to target the three unique sets of values. For example:

- We found that 64% women over 50 were high on biospheric concern. This finding tells us that for this group, messages that address the environmental consequences of storm water pollution for children and future generations (altruistic), or personal health (egoistic) would be less effective than messages that showed the effects of storm water pollution on marine life or local habitats.

- Conversely, we found that Asians (52%) were highest in altruistic motives (e.g., future generations and children). We also found that 56% of Asians in San Diego wash their car at home. Taken together, these findings suggest that Asians might be targeted with a message that links car washing behavior to the environmental consequences that will be experienced by future generations.

[ ] e. Signs on the sides of trucks from Think Blue	34	64	3

ASK EVERYONE

19. I'd like to read you a couple of slogans for the Think Blue program. Please rate each one on a scale of 1 to 10. Use a 1 if the slogan would not persuade you at all to keep pollution out of storm drains, and a 10 if the slogan would be very persuasive to you to keep pollution out of storm drains. Or use any number in between. **(ROTATE)**

		NOT AT ALL 1	2	3	4	5	6	7	8	9	VERY 10	DK 99	MEAN
[ ] a.	It's the water that connects us	10%	9%	7%	8%	14%	10%	10%	11%	5%	15%	1%	5.72
[ ] b.	Because we all live downstream	10	5	5	7	16	8	13	15	6	15	1	6.03
[ ] c.	A cleaner San Diego starts at your door	5	4	3	3	13	7	13	15	10	26	0	7.11
[ ] d.	You are the solution to storm water pollution	7	4	4	6	12	9	13	16	8	22	0	6.71
[ ] e.	A change for the better begins with you, Think Blue	6	5	7	7	14	7	9	13	9	24	1	6.62
[ ] f.	Think Blue – it's what we do	17	9	9	9	17	7	8	10	3	12	1	5.01

20. Now, I want to read you a brief list of items that may pollute water in storm drains in San Diego. Please rate each item on a scale of 1 to 10. Use a 1 if you think it is NOT a serious source of pollution, and a 10 if you think it is a VERY SERIOUS source of pollution of water in storm drains. Or you can use any number in between. **(ROTATE)**

		NOT 1	2	3	4	5	6	7	8	9	VERY SER 10	DK 99	MEAN

My supervisor may be calling you to confirm that this interview took place. May I have your first name so she can call and ask for you?

Name _____ Telephone # _____

That's all the questions I have. Thank you very much for participating in the survey.

CALCULATE AND RECORD INTERVIEW LENGTH. RECORD GENDER ON THE FIRST PAGE.

I AFFIRM THAT THE ABOVE INFORMATION IS ACCURATELY RECORDED FROM THE RESPONDENT'S STATEMENTS.

Interviewer's Signature _____ Date _____

English ----------97%
Spanish ---------- 3

Activity 1 – Municipal Parking Lot Sweeping: Assess the Efficiency of Parking Lot Sweeping	
Component - Municipal	
Management Questions	• What is the optimal frequency of parking lot sweeping (point of diminishing returns)?
Targeted Measurable Outcome(s)	• Achieve load reduction of debris (any amount) from parking lot sweeping • Achieve optimized rate of sweeping, reducing cost while increasing debris swept
Proposed Assessment Approach	• Select sub-set of representative parking lots (based on size, use frequency, location, etc). There should be at least three (3) parking lots per group. • Remove the effects of confounding variables (such as size, use frequency, location, etc) by comparing results within groups of parking lots that are similar • Collect data specific to each parking lot, including the debris swept, time since last sweeping event, size of parking lot, device used for sweeping • If interested, also collect information on the type of debris collected (trash, dirt, analytic characteristics, etc) • At the end of one year, plot debris removed vs. time since last sweeping event (for all three (3) lots of each group). Examine results for an inflection point, where the amount of debris does not increase as the frequency of sweeping increases. Examine the results for correlations between lot size and debris amount, or differences between parking lot groups.  • Use the optimal frequency results to make program changes, and estimate expected load reductions and efficiency
Assessment Method(s)	• Quantification (e.g., use frequency of sweeping and tons of debris to calculate estimated load reduction) • Monitoring (e.g., collect special study information on concentrations and runoff flows to estimate load reduction) • Tabulation (e.g., amount of money spent on program) • Reporting (e.g., estimates of load reduction for sweeping)
Assessment Measures, Assessment Outcome Levels & Data:	• Amount of money spent on parking lot sweeping (Outcome Level 1) • Tons of debris collected at each lot for each event (Outcome Level 4) • Surface area of parking lots swept (sq ft) (Outcome Level 1) • Frequency of parking lot sweeping for each lot (Outcome Level 1) • Time between sweeping events at each lot (Outcome Level 1) • Total number and location (X,Y) of all municipal parking lots (Outcome Level 1)

Activity 2 – Municipal Storm Drain Cleaning: Assess the Efficiency of Storm Drain Inlet/Catch Basin Inspections and Cleaning	
Component - Municipal	
Management Questions	• What is the optimal frequency of storm drain system inspection (point of diminishing returns)? • What is the optimal frequency of storm drain system cleaning (point of diminishing returns)?
Targeted Measurable Outcome(s)	• Achieve load reduction of debris (any amount) from storm drain cleaning

Proposed Assessment Approach	• Assessment for this activity is divided into two parts; assessment of the inspection program and assessment of storm drain cleaning. The two programs are linked, but the end result is the number of storm drains cleaned. In essence, the question becomes: is it more efficient to first inspect the storm drains (and at what frequency) or to clean storm drains at a pre-set frequency. If storm drains are cleaned on a set schedule, does this negate the inspection program? Does the likelihood of missing a storm drain cleaning increase as inspections decrease?
	• A sub-set of municipal storm drain systems will be selected for participation in the activity. The systems should be divided into groups based on similar use, size, etc. In this case, each group should be further sub-divided into three groups: control, inspections only, and cleaning only. The following sub-questions will be answered:
	  ○ Does the likelihood of assigning a storm drain for cleaning increase as inspections increase? Is there an inflection point?
	  ○ Does the amount of debris collected during storm drain cleaning increase as frequency of cleanings increase? Is there an inflection point?
	  ○ Is it more efficient to clean storm drains on a set schedule, or to use inspections as the first step before assigning a storm drain for cleaning
	• Storm drain inspection program assessment can be completed by tracking the number and frequency of inspections performed, and the resulting number of storm drain cleanings. The amount of debris collected from each cleaning and frequency of cleaning should also be tracked
	• The debris removal associated with each inspection will also be tracked; it may be zero if the inspection resulted in no cleaning.
	• The frequency of inspection can be plotted vs. the amount of debris removed, and the frequency of cleaning can be plotted vs. the amount of debris removed. The inflection points for both relationships can then be determined. The number and frequency of inspections vs. the number of resulting storm drain cleanings can also be plotted, to determine the relationship between inspections and cleanings.

Assessment Method(s)	• Tabulation (e.g., number of storm drains cleaned, number of inspections performed) • Quantification (e.g., tons of debris collected) • Monitoring (e.g., collect special study information on debris removed)
Assessment Measures, Assessment Outcome Levels & Data	• Total number and location (X,Y) of storm drains (Outcome Level 1) • Total number and location (X,Y) of storm drains inspected (Outcome Level) • Total number and location (X,Y) of storm drains cleaned (Outcome Level 1) • Frequency of storm drain system inspections for each storm drain (Outcome Level 1) • Tons of debris removed from each storm drain (Outcome Level 4) • Money spent on storm drain cleaning (Outcome Level 1 and 2)

Activity 3 – Inspection of Construction BMPs: Determine the Optimal Inspection and Enforcement Combination for Inspection of Construction BMPs	
Component – Development Planning	

Management Questions:	• What is the optimal frequency and method of inspection of construction sites (point of diminishing returns)?
	• What is the optimal frequency and method of enforcement (point of diminishing returns)?
	  ○ Do inspections increase rate of BMP implementation?
	  ○ Does increased rate of BMP implementation affect load reduction?
	  ○ Are spot inspections more effective than scheduled inspections?
	  ○ Does education increase rate of BMP implementation?
	  ○ Does enforcement increase rate of BMP implementation?

Targeted Measurable Outcome(s)	• Achieve load reduction from optimized inspection rate and method • Achieve load reduction from optimized enforcement rate and method
Proposed Assessment Approach	• Select a subset of construction sites as part of a special study or pilot project. The sites should be of similar size and scope (so that a common set of BMPs would be required for stormwater compliance). The group of sites may be rotated over the course of several years to gather information about several different types of construction sites. • Divide the sites into two groups to test whether spot or scheduled inspections result in higher BMP compliance rates. • Set differing inspection frequencies to determine whether or not a point of diminishing returns can be reached • Ensure that inspectors are trained in the number and type of required BMPs, so that they will correctly report rate of BMP implementation. • Track the type of enforcement used (education, notice of violation, or citation) at each construction site for both groups (spot and scheduled). • Answer the following questions: is the BMP implementation rate different between the spot and scheduled groups? Of sites out of compliance, which enforcement action resulted in the most improved BMP implementation rate? How many inspections were required before sites were in compliance? Is it possible that construction sites are in compliance without a follow-up visit?
Assessment Method(s)	• Inspections (e.g., track number of BMPs implemented, increased number of BMPs, number of follow-up inspections) • Quantification (e.g., use frequency of BMP implementation to calculate estimated load reduction) • Tabulation (e.g., amount of money spent on inspections, enforcement, and educational materials) • Quantification (e.g., special study to model loads of index sites with no BMPs in place. Sites will be chosen from random stratified categories of construction sites)

Assessment Measures, Assessment Outcome Levels & Data:	• Number of inspections (spot and scheduled) (Outcome Level 1) • Number of satisfactory inspections (Outcome Level 1) • Number of deficient inspections (Outcome Level 1) • Number of follow-up inspections (Outcome Level 1) • Number of enforcement actions and/or stop work orders (Outcome Level 1) • Number of educational information items passed out per site (Outcome Level 1) • How much money spent on inspections, enforcement/stop work, and education? (Outcome Level 1) • Literature review or other information to provide data to estimate load reductions from BMPs (Outcome Level 4) • % of BMPs implemented in compliance with Permit at each site (Level 3) • Load estimate of each construction site (based on % implementation x estimated load of no BMP implementation from special study) (Level 4)

Activity 4 - Industrial and Commercial BMP Inspections: Determine The Optimal Inspection and Enforcement Combination for Industrial and Commercial BMP Inspections	
Component - Industrial/Commercial	

Management Questions:	• What is the optimal frequency and method of inspection (point of diminishing returns)?
	• What is the optimal frequency and method of enforcement (point of diminishing returns)?
	  ○ Do inspections increase rate of BMP implementation?
	  ○ Does increased rate of BMP implementation affect load reduction?
	  ○ Are spot inspections more effective than scheduled inspections?
	  ○ Does enforcement increase the implementation of BMPs?
	  ○ Does education increase rate of BMP implementation (long term question)?
	  ○ Is there a correlation between the Industrial inspection questionnaire results and BMP implementation?

Targeted Measurable Outcome(s)	• Achieve load reduction from optimized inspection rate and method • Achieve load reduction from optimized enforcement rate and method
Proposed Assessment Approach	• Select a subset of industrial/commercial sites as part of a special study or pilot project. The sites should be of similar size and activity (so that a common set of BMPs would be required for stormwater compliance). The group of sites may be rotated over the course of several years to gather information about several different types of construction sites. • Divide the sites into two groups to test whether spot or scheduled inspections result in higher BMP compliance rates. • Set differing inspection frequencies to determine whether or not a point of diminishing returns can be reached • Ensure that inspectors are trained in the number and type of required BMPs, so that they will correctly report rate of BMP implementation. • Track the type of enforcement used (education, notice of violation, or citation) at each industrial/commercial site for both groups (spot and scheduled). • Answer the following questions: is the BMP implementation rate different between the spot and scheduled groups? Of sites out of compliance, which enforcement action resulted in the most improved BMP implementation rate? How many inspections were required before sites were in compliance? Is it possible that industrial/commercial sites are in compliance without a follow-up visit?
Assessment Method(s)	• Inspections (e.g., track number of BMPs implemented, increased number of BMPs, number of follow-up inspections) • Quantification (e.g., use frequency of BMP implementation to calculate estimated load reduction) • Monitoring (e.g., collect special study information to collect concentrations and flows to estimate load reduction) • Tabulation (e.g., amount of money spent on inspections, enforcement, and educational materials) • Reporting (e.g., 3rd party data estimates of load reduction for BMP)

Assessment Measures, Assessment Outcome Levels & Data:	• Number of industrial inspections (spot and scheduled) (Outcome Level 1) • Number of follow-up inspections at industrial sites (Outcome Level 1) • Number of BMPs implemented at industrial sites (Outcome Level 1) • Number of BMPs implemented at industrial sites pre and post-education (Outcome Level 3) • Number of enforcement actions at industrial sites (Outcome Level 1) • Number of educational information items passed out at each industrial site (Outcome Level 1) • How much money spent on inspections, follow ups, enforcement, and education? (Outcome Level 1) • How much money was spent on BMP implementation? (Outcome Level 1) • Literature review or other information to provide data to estimate load reductions from BMPs at industrial sites (Outcome Level 4) • Number of questionnaire respondents who understand storm water pollution prevention and implement BMPs (Outcome Level 2 and 3)

Activity 5 - IDDE Sampling: Determine the Optimal Sampling Rates and Locations for the IDDE Program	
Component – Illicit Discharge Detection and Elimination	
Management Questions:	• What is the optimal frequency and location of sampling events?
Targeted Measurable Outcome(s)	• Increased load reduction to cost ratio for the IDDE program
Proposed Assessment Approach	• Using data collected from the dry weather monitoring, MS4, and source id programs, determine geographic areas with the highest rate of illicit discharges found each fiscal year (through these programs). • Cross-check the locations against the response to hotline calls and referrals from the Codes Enforcement database (for each pollutant category) • Use the information to determine if the sampling rates and locations from the Permit programs are effective for detecting illicit discharges (when compared to Enforcement actions) • Check the dates of hotline calls, referrals, and actions against the sampling dates from the Permit programs to determine if temporal gaps in the Permit programs coincide with increased rates of hotline calls and referrals • Determine if more illicit discharges are detected and abated through the enforcement or IDDE program, per the effort made to find and abate illicit discharges per fiscal year • Estimate the load reduction for each abated incident to determine the efficiency of abatement • Use the information regarding sample dates (for both Permit and Enforcement activities) to determine if the sampling frequency should be increased. Use the same information to determine if certain times of the year require increased sampling frequency • Use the information regarding illicit discharge locations to determine if sampling should be increased in particular geographic regions • During the next fiscal year, increase the rate of sampling for the identified time periods or locations. Track the results of sampling, and compare to the prior year. During the next fiscal year, increase rates of sampling in the identified areas. Continue to track and increase sampling over time until the a decrease in illicit discharges is found when increasing sampling effort
Assessment Method(s)	• Quantification (e.g., count number of illicit discharges) • Monitoring (e.g., collect concentrations and flows to estimate load reduction) • Tabulation (e.g., amount of money spent on implementation, amount of money spent on educational materials)
Assessment Measures, Assessment Outcome Levels & Data:	• Number of ICID events (Outcome Level 1) • Number of illicit discharges abated (Outcome Level 1) • How much money spent on ICID sampling, enforcement, and education (Outcome Level 1) • Estimated load reduction from abated illicit discharges (concentrations of COCs and flow) (Outcome Level 4)

Activity 6 – Enforcement Inspections and Follow Ups: Assess the Efficiency of the Enforcement Program	
Component – Enforcement	
Management Questions:	• What is the most efficient enforcement method for the different source types? • Is it more efficient to respond to reported discharges or patrol for discharges?
Targeted Measurable Outcome(s)	• Load reduction due to enforcement • Load reductions in target source types
Proposed Assessment Approach	• Using Codes data, determine whether more illicit discharges are detected through referrals and calls or by actively searching for illicit discharges (patrolling). This can be determined by comparing the number of abatements resulting from referrals/hotline calls vs. active search • Determine if the rate of incidence for illicit discharge source types is different when comparing referred illicit discharges and actively detected illicit discharges (this should result in a recommendation for detection methods for each source type) • Using Codes data, track the enforcement action (education, notice of violation, or citation) with the source types • Using Codes data, determine if there is a relationship between source type and enforcement action necessary to abate an illicit discharge
Assessment Method(s)	• Quantification (e.g., use number of enforcement actions to calculate estimated load reduction) • Monitoring (e.g., collect concentrations and flows to estimate load reduction) • Tabulation (e.g., amount of money spent on implementation, amount of money spent on educational materials
Assessment Measures, Assessment Outcome Levels & Data:	• Number, type, and location of hotline calls (Outcome Level 1) • Estimated load reduction from each abated discharge (Outcome Level 4) • Money spent on enforcement (Outcome Level 1) • Number, type, and location of abated sources in the special study (Outcome Level 1)

Activity 7 – Public Outreach: Determine the Most Efficient Methods to Increase Public Participation for Reporting Discharges to the Hotline	
Component – Education/Public Outreach	
Management Questions:	• Which public outreach method results in the most reported discharges per dollar? • Which outreach method results in most abated discharges per dollar?
Targeted Measurable Outcome(s)	• Achieve increased rate of hotline calls from public outreach efforts • Achieve increased rate of illicit discharge abatement
Proposed Assessment Approach	• Use information collected from hotline calls to determine where the caller found out about the hotline number. This information should be tracked when callers phone in an illicit discharge. • Track the number of abatements as a result of hotline calls (per each outreach method reported from the callers) • Focus future outreach methods based on the results of the analysis
Assessment Method(s)	• Quantification (e.g., use frequency of hotline calls and associated abatements to estimate load reduction) • Tabulation (e.g., amount of money spent on inspections/enforcement, amount of money spent on educational materials and outreach) • Reporting (e.g., use enforcement data to estimate load reductions for each public outreach method)
Assessment Measures, Assessment Outcome Levels & Data:	• Number and type of outreach performed (Outcome Level 1) • How much money spent on public outreach (per number reached) (Outcome Level 1) • # hotline calls received per public outreach method (Outcome Level 1) • # of hotline calls resulting in a discharge abatement per public outreach method (Outcome Level 1) • Total number of hotline calls received (Outcome Level 1) • Estimated load reductions from abated discharge (Outcome Level 4)

	No.	Compliance Item	Outcome Level	Assessment Method	Confirmation and/or result	Section / Appendix
Development Planning	1	A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.	1	Confirmation	Completed changes in FY 2008	2.2.1
	2	Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.	1	Confirmation	Confirmed	2.4.3
	3	A listing of the development projects to which SUSMP requirements were applied.	1	Confirmation	See Appendix A for listing	
	4	Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.	1	Confirmation	Confirmed	2.4.3
	5	At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.	1	Confirmation	See Appendix B for example	
	6	A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.	1	Confirmation	None	
	7	An updated treatment control BMP inventory.	1	Confirmation	See Appendices C & D	
	8	The number of treatment control BMPs inspected, including a summary of inspection results and findings.	1	Confirmation	668 BMPs inspected	2.4.3
	9	A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.	1	Confirmation	See Section 2.4.3	
	10	Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.	1	Confirmation	Not applicable for the reporting period	
	11	A listing of any projects which received a SUSMP waiver.	1	Confirmation	No Waiver Program In Place - No waivers issued	
	12	A description of implementation of any SUSMP waiver mitigation program.	1	Confirmation		
	13	A description of Hydromodification Management Plan (HMP) development collaboration and participation.	1	Confirmation	See Section 2.4.3	
	14	A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.	1	Confirmation	Since the interim HMP requirements took effect, there have been no development projects that trigger HMP requirements	
	15	A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.	1	Confirmation		
	16	A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.	1	Confirmation		
	17	The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	1	Confirmation / Tabulation	NOV = 1	2.4.3

	No.	Compliance Item	Outcome Level	Assessment Method	Confirmation and/or result	Section / Appendix
Construction	1	Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.	1	Confirmation	Confirmed	3.4.1
	2	Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.	1	Confirmation	Confirmed	3.2
	3	A description of modifications made to the construction and grading ordinances and approval processes.	1	Confirmation	Completed changes in FY 2008	3.3
	4	Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.	1	Confirmation	Confirmed	3.4.2
	5	Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.	1	Confirmation	Since the maximum disturbed area and advanced treatment requirements took effect, no projects have triggered	3.4.3
	6	A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.	1	Confirmation		3.5.4
	7	For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.	1 & 3	Confirmation / Tabulation / Inspection	See Section 3.4.5. and Appendices F & G	
	8	A description of the general results of the inspections.	1	Confirmation	Confirmed	3.4.5
	9	Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	1	Confirmation	Confirmed	3.4.5
	10	The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	1	Confirmation / Tabulation	NOV = 41 Citation = 14 Civil Penatly = 26	3.4.6

Miscellaneous	1	A description of public participation efforts conducted.	1	Confirmation	Section 9
	2	An assessment of the effectiveness of the Jurisdictional Urban Runoff Management Program	1	Confirmation	Section 12
	3	A fiscal analysis of the Copermittee's urban runoff management programs	1	Confirmation	Section 10
	4	A description of any special investigations conducted.	1	Confirmation	Section 11 - Special Projects the City conducted
	5	A description of any efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.	1	Confirmation	Section 4.6
	6	A description of any proposed revisions to the JURMP.	1	Confirmation	Section 13

4.0 Development Planning Component

4.1 Introduction

The goal of this section is to reduce the impacts of new development and redevelopment in the City of San Diego on water quality in the San Diego region. This section is primarily applicable to the City Planning and Community Investment Department (CPCI), Development Services Department, Engineering and Capital Projects Department, and the Storm Water Pollution Prevention Division.

4.2 Land Use Planning

4.2.1 Background

The goal of the Land Use Planning Section is to reduce the impacts of new development and redevelopment on storm water quality in the City by incorporating water quality and watershed protection principles into the City's land use planning policies. This Section is applicable to the CPCI.

The City's program must meet the requirements of the Municipal Storm Water Permit ("Municipal Permit", Order R9-2007-0001, see Appendix I), as described in Table 4-1.

Table 4-1. Municipal Permit requirements – Land Use Planning.

URMP Section	Municipal Permit Section	Requirement (Summary)
4.2.3	(Pg. 16) D. 1. a.	Description of the water quality and watershed protection principles that have been or will be addressed in the Copermittee's land use planning process.
4.2.4	(Pg. 28) D.2.a	Revise General, community, and watershed plans to provide water quality and watershed protection principles.
4.2.4 and Appendix XIII "Annual Report Form Questions"	(Pg. 46) D. 5. b. (1) (d); (Pg. 46) D.5.(2); (Pg. 67) J. 3. (c, g, j); (Pg. 51) G. 3	Implement and designate an educational program for all City personnel. Track and submit data for Annual Report Forms, track and report anticipated and actual fiscal year budget expenditures.

4.2.2 Best Management Practice Requirements

1. General Plan Update

General Plan and the City of Villages Strategy

The City of San Diego's General Plan is its constitution for development. It is the foundation upon which all land use decisions in the City are based. It expresses community vision and values, and it embodies public policy for the distribution of future land use, both public and private.

The City's General Plan addresses State of California requirements through the following ten elements: Land Use and Community Planning; Mobility; Economic Prosperity; Public Facilities; Services and Safety; Urban Design; Recreation; Historic Preservation; Conservation; Noise; and Housing.

The City of Villages strategy is a "smart growth" sub-component and incentive program under the General Plan. The goal is to direct compact growth in limited areas that are served by transit and is, in itself, a conservation strategy. The City of Villages strategy promotes efficient use of urban land that reduces the need to develop outlying areas and creates an urban form where transit, walking, and bicycling are more viable alternatives to automobile travel. Reducing dependence on automobiles reduces vehicle miles traveled, which, in turn, lowers greenhouse gas emissions. Additionally, it improves water quality by decreasing automobile-related oil and gas leaks and atmospheric deposition of heavy metals that pollute water bodies throughout the region.

Planning Division staff, with assistance from Storm Water Pollution Prevention Division staff, has incorporated water quality and watershed protection principles into the "Urban Runoff Management" section within the Conservation Element, as well as the "Storm Water Infrastructure" within the Public Facilities element of the General Plan. The following general policy recommendations address water quality and watershed protection:

Water Quality Improvement Policies in the General Plan

- Develop and employ Master Drainage Plans for the City's watersheds to foster a comprehensive approach to storm water infrastructure improvements.
- Identify partnerships and collaborative efforts to sponsor and coordinate pollution prevention BMPs that benefit storm water infrastructure maintenance and improvements.
- Continue to develop and implement public education programs.
- Apply water quality protection measures to land development projects during project design, permitting, construction, and operations in order to minimize the

quantity of runoff generated on-site, the disruption of natural water flows, and the contamination of storm water runoff.

- Require contractors for all projects to comply with storm water pollution prevention planning practices in the City's Storm Water Standards[1] (see Appendix IX).

- Continue to participate in the development and implementation of Watershed Management Plans for water quality and habitat protection.

- Assure that City departments continue to use best management practices (BMPs) procedures so that water quality objectives are routinely implemented.

- Continue to encourage "Pollution Prevention" measures to promote the proper collection and disposal of pollutants at the source, rather than allowing them to enter the storm drain system.

- Manage floodplains to address their multi-purpose use, including natural drainage, habitat preservation, and open space and passive recreation, while also protecting public health and safety.

- Ensure that all storm drain systems, structures, and maintenance practices are consistent with federal Clean Water Act and California Regional Water Quality Control Board NPDES Permit standards.

- Install infrastructure that, where feasible, includes components to capture, minimize, and prevent pollutants in urban runoff from reaching receiving waters and potable water supplies.

- Meet, and preferably exceed, regulatory mandates to protect water quality in a cost-effective manner monitored through performance measures.

- Identify and implement BMPs for projects that repair, replace, extend or otherwise affect the storm drain system. These projects should also include design considerations for maintenance, inspection, and, as applicable, water quality monitoring.

2. Multiple Species Conservation Program

The Multiple Species Conservation Program (MSCP) is a regional effort between local jurisdictions, federal, and state agencies to develop a comprehensive habitat conservation planning program. It addresses multiple species habitat needs and the preservation of native vegetation communities in southwestern San Diego County. The

[1] See http://www.sandiego.gov/development-services/news/pdf/stormwatermanual.pdf

City of San Diego MSCP Subarea Plan has been prepared pursuant to the overall MSCP guidelines to address habitat conservation goals within the City boundaries.

The Multiple Habitat Planning Area (MHPA) identifies areas of the City's subarea within which conservation of habitat areas and linkages will occur in addition to limited development. In association with management of MHPA lands, the City MSCP Subarea Plan contains guidelines for minimizing impacts of urban development on upland and wetland ecosystems and water quality. All developments proposed adjacent to the MHPA must conform to the Land Use Adjacency Guidelines of the City MSCP Subarea Plan, which require that all new and proposed parking lots and developed areas in and adjacent to the MHPA must not drain directly into the MHPA. All developed and paved areas must protect against the release of toxins, chemicals, petroleum products, exotic plant materials, and other elements that might degrade or harm the natural environment. The MSCP recommends that potential impacts can be minimized through the use of a variety of measures including natural detention basins, grass swales or mechanical trapping devices. The MSCP also requires that these systems are maintained routinely throughout the life of a project.

The City MSCP Subarea Plan also requires that land uses, such as recreation and agriculture, that use chemicals or generate potentially toxic byproducts incorporate storm water BMPs to reduce impacts caused by the application and/or drainage of such materials into the MHPA. Where applicable, the requirement to minimize impacts to water quality is also incorporated into leases on publicly-owned property as leases come up for renewal.

The City MSCP Subarea Plan provides specific management directives requiring that restoration of native riparian habitat take place within many of the important drainage systems and watersheds within the City. For example, the portion of the Los Peñasquitos Watershed located within the City of San Diego is addressed in the City MSCP Subarea Plan. Major drainages within the Los Peñasquitos watershed including Los Peñasquitos Canyon, Lopez Canyon, Carmel Creek, and portions of Carroll Canyon are located within the MHPA. The guidelines and Specific Management Policies of the City MSCP Subarea Plan require that enhancement of these drainages take place, where appropriate. The Subarea Plan also requires restoration and enhancement of native riparian lands within the Otay River Valley, Tijuana River Valley, and several smaller urban canyons within the central and southern portions of the City. Many of these drainages are surrounded by urban development and restoration of native riparian areas is intended to minimize impacts from urban runoff to receiving waters as well as provide habitat for animal and plant species.

4.2.3 Program Implementation

The implementation of the General Plan and MSCP storm water policies described in 4.2.3 is the responsibility of City staff who oversee the development project environmental review, approval, and verification processes (see Sections 4.3 and 4.4).

Updates to the General Plan and MSCP occur periodically and are the responsibility of CPCI staff, along with support and input from the Storm Water Pollution Prevention Division and participating stakeholders. Storm water public outreach and annual reporting activities performed by the CPCI staff are covered in Sections 4.5 and 4.6.

4.3 Environmental Review Process

This section is applicable to the Development Services Department (DSD), which is responsible for administering the environmental review process on all (public and private) development projects within the City. With the adoption of the City's Standard Urban Storm Water Mitigation Plan (SUSMP) in 2002, there are new storm water requirements to implement one or a combination of storm water BMPs including, 1) Low Impact Development BMPs, 2) source control BMPs, and 3) structural treatment BMPs. For this section, the term "development" refers to any project that requires construction permits, development permits/approvals, and subdivision approvals from the City of San Diego.

The Environmental Analysis Section (EAS) in the Development Services Department is responsible for using the California Environmental Quality Act (CEQA) Initial Study checklist and consultation with other project review staff to identify projects that may result in water quality impacts during and/or after construction. EAS reviews proposed projects subject to environmental review under CEQA, including City capital improvement projects, to independently determine where proposed projects may have potentially significant impacts on the environment. To assist in identifying appropriate measures to mitigate potentially significant storm water quality impacts to below a level of significance, EAS staff consults with DSD engineering staff to determine what storm water BMP requirements have been identified by engineering staff. DSD Engineering staff reviews and approves the storm water BMPs that are proposed by project applicants.

4.4 Development Project Approval and Verification Process

4.4.1 Background

The City of San Diego's Storm Water Standards are published in the Land Development Manual and enforceable via the San Diego Stormwater Management and Discharge Control Ordinance ("Storm Water Ordinance") Sections 43.03 and 142.02. The standards require new development and redevelopment projects to incorporate into project plans and permit conditions the necessary storm water BMPs to control storm water pollution during construction and throughout the use of a developed site prior to issuance of any applicable discretionary (development permits/approvals, subdivision approvals or policy approvals) or ministerial (construction permits and some subdivision approvals) permits. The post-construction, or "permanent" BMPs that are required are site-specific and vary based on the project's potential impact to storm water and receiving waters.

The City's program must meet the requirements of the Municipal Permit, as described in Table 4-3.

Table 4-3. Municipal Permit Requirements – Development Project Approval and Verification Process.

Section	Municipal Permit Section	Requirement (Summary)
4.4.1	(Pg. 28) D.1.h	Enforcement of development sites (ordinance basis for authority)
4.4.3	(Pg. 16) D.1c; (Pg. 17) D.1.d (4-7)	Permanent BMP requirements for all sites (Priority Development Projects and Standard Projects)
4.4.3.1	(Pg. 33) D.3.a (2) (d)	Evaluate existing flood control devices to determine if retrofit will provide additional pollutant removal
4.4.4.1	(Pg. 16) D.1.c	Public project (CIP) approval process
4.4.4.2	(Pg. 16) D.1.c	Private project approval process
4.4.4.3	(Pg. 17) D.1.d	Model and local SUSMP updates
4.4.4.4	(Pg. 24) D.1.e	Treatment control BMP maintenance tracking
4.4.4.5	(Pg. 25) D.1.f	Inspection and enforcement of BMPs
4.4.4.6	(Pg. 25) D.1.g	Collaboration on developing a Hydromodification Management Plan and interim criteria.
4.6 and Appendix XIII "Annual Report Form Questions"	(Pg. 67) J. 3. (c, g, j); (Pg. 51) G. 3	Track and submit data for Annual Report Forms, track and report anticipated and actual fiscal year budget expenditures.

4.4.2 Source Characterization

Chapter III of the Storm Water Standards identifies the anticipated pollutant from different land use types. Furthermore, the Storm Water Standards Manual identifies categories of project types that are likely to generate significant pollutants. The definition of Priority Projects was updated in Chapter III of the Storm Water Standards to conform to the new Municipal Permit's section D.1.d(2). The Storm Water Standards requires priority projects to identify the pollutants of concern in receiving waters and requires that priority projects identify conditions of concern such as topography, site soils and vegetation conditions, percent impervious area among others.

4.4.3 Best Management Practices Requirements

The Storm Water BMP Performance Standards as described in Chapter III of the Storm Water Standards are applicable for all projects including standard and priority projects within the City. These performance standards have been updated to ensure compliance with the BMP implementation requirements described in Municipal Permit section D.1.d (4-7) for priority development projects. The update to BMP performance standards included updates to SUSMP requirements such as the addition of low-impact development (LID) BMPs, and updates to source control and treatment control BMPs.

Other updates included revision to the downstream erosion criteria for priority development projects to include interim hydromodification criteria, as required in Municipal Permit section D.1.g(6), and updates to infiltration and groundwater protection restrictions on the use of treatment control BMPs that are designed to primarily function as infiltration devices, to conform with new requirements in Municipal Permit section D.1.d(12).

4.4.3.1 Best Management Practices for Public Flood Control Projects

The City of San Diego is performing a master planning study of the entire drainage network, which will include establishing criteria for BMP retrofits to flood control devices for the purposes of improving water quality as it relates to TMDL compliance. The Storm Water Pollution Prevention Division is facilitating the program to establish retrofit criteria. ECP will follow and apply the criteria during the planning stage of any CIP projects that propose replacement or improvements to an existing flood control device.

4.4.4 Program Implementation

In December 2002, the City began implementation of the Storm Water Standards for both private and public projects. To help simplify the process (and thereby improve the implementation of the requirements), all of the City's storm water-related requirements for land development projects are included in the Storm Water Standards. As an implementation manual to the City's Storm Water Ordinance, the Storm Water Standards benefits from the unique position of being fully enforceable and "updateable" as new innovations occur or state construction or permanent BMP requirements change. During the project planning and design review phase of development, the permanent and construction BMP requirements in the Storm Water Standards are applied to development projects as further described below.

4.4.4.1 Public Construction Project CIP Approval Process

ECP is responsible for planning, design and construction of all capital improvement projects. All project managers of capital improvements program (CIP) projects are required to incorporate the applicable permanent BMP requirements set forth in the Storm Water Standards into the project (specifications and plans) during the design and contract award phases to ensure that storm water BMPs have been sufficiently incorporated into the project's permanent design. To assist project managers, storm water language was included in the CIP contract document (boilerplate) specifications along with standard drawing details. Drawings are routed internally (within the design sections) as part of a process termed "peer plan check" for a check on water quality design measures. Revisions are made to the design and then the project is routed to the Storm Water Division staff for a more detailed and formal review. If permanent treatment BMPs are required, the design is discussed and coordinated with the department that will be maintaining the permanent BMP facility after it is built. This phase of the project is being completed at about the 75% or 90% design levels. The drawings are simultaneously routed to the Field Engineering Division of the ECP for a

constructability review. All ensuing comments are routed back to the project managers for revision prior to City Manager (Mayor) or Council approval and the advertisement of the contract documents.

The design drawings go through City-wide plans check at multiple milestones prior to design completion. As to the storm water runoff reviews, the project managers are required to fill out the storm water requirement applicability checklist (Form DS 560) when they submit the project for environmental review at 30% design. At the 90% design level, the project managers are required to fill out a certification form for the Storm Water Pollution Prevention Program. It is required that this form be signed by a registered civil engineer.

The mandatory review by the Storm Water Division provides review of CIP projects for compliance with the City's Storm Water Standards. In addition to the plans, the Storm Water Division's engineering review staff often reviews Water Quality Technical Reports (WQTR), Storm Water Pollution Prevention Plans (SWPPP), and Water Pollution Control Plans (WPCP), and Water Quality Studies. A Water Quality Study is required for standard projects. It documents the applicant's consideration of site design and source control BMPs for a proposed project. After each review, a memo is sent to the City project manager informing him or her whether or not the project has met the requirements of the City's Storm Water Standards and, if needed, what additional documents, plan revisions, etc. are required in order for those requirements to be met.

4.4.4.2 Private Development Construction Project Approval Process

Conceptual permanent BMPs are reviewed by DSD for conformance with the Storm Water Standards during discretionary review, and reviewed in greater detail during ministerial review. Conceptual BMPs accepted as part of discretionary review are enforced during ministerial review. The Storm Water Applicability Checklist is a submittal requirement for both discretionary and ministerial permit applications. A Water Quality Technical Report is required for all Priority Development Projects.

4.4.4.3 Model and Local SUSMP updates

The regional Model SUSMP identifies specific post-construction site design, source control and treatment control storm water BMPs that must be implemented on land development projects that meet the criteria for definition of a priority development project. These SUSMP requirements are adopted locally through updates to the Storm Water Standards.

The City of San Diego has cooperated with the other Copermittees to update the regional Model SUSMP, as required by Municipal Permit section D.1.d(8)(a). The updated Model SUSMP will be submitted to the San Diego Regional Water Control Board (Regional Board) by June 2008, as required in Municipal Permit section D.1.d(8)(b). Within 365 days of the Regional Board acceptance of the updated Model

SUSMP, the updated requirements will be adopted locally via revisions to the Storm Water Standards.

4.4.4.4 Treatment Control BMP Maintenance Tracking

A watershed-based database has been implemented to track and inventory treatment control BMPs and maintenance within the jurisdiction. DSD and ECP annually provide an updated inventory of approved treatment control BMPs. The database will be used to verify that treatment control BMPs are regularly maintained by the parties responsible. The Storm Water Pollution Prevention Division runs and maintains the inspection program. All treatment control BMPs will be prioritized based on its treatment efficiency; the BMP priority will determine the inspection frequency. All drainage insert treatment control BMPs have a medium prioritization at a minimum. All of the treatment control BMPs that have a high priority ranking are inspected on an annual basis. At least 50% of projects with drainage insert treatment control BMPs are inspected annually. At a minimum, 20% of all approved treatment control BMPs are inspected annually and a maximum of 200% of the average number of projects with treatment control BMPs approved per year are inspected annually. Non-complaint sites will be reinspected or elevated to enforcement action. The City of San Diego's Code Compliance Officers have authority to issue citations and civil penalties to entities that are not effectively managing storm water pollutants (see Component 9, "Illicit Discharge Detection and Elimination." Table 4-4 summarizes the inspection frequencies.

Table 4-4. Treatment Control BMP Inspection Frequency.

BMP Prioritization	Inspection Frequency	Percentage of BMPs Inspected
Approved Treatment Control BMPs	Annually	Minimum 20%
High	Annually	100%
Medium-drainage inserts	Annually	50% of drainage inserts
Medium	As needed	NA
Low	As needed	NA

4.4.4.5 Inspection and Enforcement of BMPs

Resident Engineers in the Field Engineering Division inspect the construction and installation of BMPs that are associated with engineering permits (grading permits and public improvement permits) and CIP projects. The Resident Engineers ensure that the project is in compliance with the discharge permit and the storm water ordinances. Inspections are also conducted by private Construction Management firms hired by the City to supplement staff. For CIPs that are priority development projects, enforcement will be withholding operational acceptance or notification of completion until it is verified that post-construction BMPs are installed.

Building Inspectors in DSD inspect the construction and installation of construction and permanent BMPs that are associated with private development that requires a demolition or building permit. For priority development projects that are private

developments, the Certificate of Occupancy will not be issued unless the BMPs have been inspected and signed off. Table 4-5 summarizes the departments responsibilities regarding BMPs and discharge enforcement at construction sites.

Table 4-5. BMPs and Discharge Enforcement at Construction Sites.

	Development Services Department (DSD) - Building Inspection	Engineering and Capital Projects - Field Engineering	General Services - Storm Water Pollution Prevention Division (SWPP)	DSD/Neighborhood Code Compliance Department (NCCD)
Demolition Permit Issued	While demolition is active. After demolition ends, site is inactive.	None	None	None
Public Improvements (PI)/Grading Permit (PI/G) Issued	After PIs are "accepted," substantially complete, any portion of the site is active due to issuance of the Building permit and building construction is underway.	While any portion of the construction project is active under PI/G permit. Before Public Improvements "accepted" substantially complete, site active or inactive.	After PIs are "accepted," substantially complete, any portion of the site is inactive due to the Engineering permit being signed-off with NO Building permit issued.	None
Building Permits Issued: No Public Improvement No Grading Permits	After construction begins and until "Certificate of Occupancy" issued.	None	When construction ends and certificate of occupancy is issued.	None
Public Improvement/ Grading or Building Permits Expired	If work is occurring in violation of building codes.	If work is occurring in violation of public improvement/grading code(s).	If NO work is occurring in violation of Public Improvement/Grading or building code(s).	None
Other	None	None	Construction does not require Building or Public Improvement/Grading permits. Certificate or occupancy issued. All bonds released, site work complete.	No active permit to apply - illegal grading.
Discharge to City Owned and Non-City Owned Conveyance Systems	Capture photo documentation, and other key information. Call SWPPD-Codes. Identify yourself as City Staff with an active discharge to report.	Capture photo documentation, and other key information. Call SWPPD-Codes. Identify yourself as City Staff with an active discharge to report.	**All calls to (619) 235-1000, Think Blue Hotline.**	None

4.4.4.6 Hydromodification

The City participated in the Copermittee Workgroup responsible for establishing interim Hydromodification Management Plan (HMP) criteria that was implemented March 24, 2008, and a HMP that will be submitted to the Regional Water Quality Control Board for review in January 2009. After the Regional Board approves the HMP, the City will have 180 days to incorporate the requirements into the Storm Water Standards.

4.4.4.7 Flood Control Devices

The Storm Water Pollution Prevention Division conducted evaluations of existing flood control devices to determine if retrofitting these devices will reduce pollutants in the storm drain system. Performance criteria were developed to apply to existing and proposed flood control devices. Those existing flood control devices which meet the criteria will be proposed for retrofit. ECP will follow and apply the performance criteria during the planning stage of a project to incorporate permanent pollution removal measures into proposed flood control devices to the maximum extent practicable.

4.5 Education and Training

This sub-section is applicable to CPCI, DSD, and ECP.

The Municipal Permit identifies five target communities to receive education using all media as appropriate.

- Municipal Departments and Personnel
- Construction Site Owners and Developers
- Industrial Owners and Operators
- Commercial Owners and Operators
- Residential Community, General Public, and School Children

The Municipal Permit requires that the goals of education and outreach activities to targeted communities be two-fold:

1. To measurably increase the knowledge base and;
2. To measurably change the behavior(s) of the target audiences with regards to storm water pollutants found in the storm drain system.

For more comprehensive information on the roles of the Storm Water Pollution Division and other City Departments see Table 10-2 in Section 10.0, “Education.”

4.5.1 General Storm Water Training

This section describes City-wide trainings provided by the Storm Water Pollution Prevention Division.

New Employees

The Storm Water Pollution Prevention Division is responsible for developing and providing all new employee trainings. All new staff will receive a basic introduction to storm water issues via a “Storm Water and You” training module presented at the “New Employee Orientation” workshop. Staff that do not take the “New Employee Orientation” workshop (e.g. seasonal, part-time, etc.) will receive general storm water training as part of their employee orientation within their department.

Existing Employees

Existing employees with regular access to a computer will be mandated to receive “refresher” training in storm water pollution prevention every two years via a City-wide training element developed by the Storm Water Pollution Prevention Division. Additionally, knowledge assessment via “e-tests” for randomly selected City employees with regular computer access will occur periodically between the mandated “refresher” courses. Finally, the Storm Water Pollution Prevention Division will develop a computer-based training (CBT) module addressing common activities shared by multiple field crews throughout the City.

4.5.2 Activity-Specific Training

Municipal Departments

This section describes activity-specific trainings provided by DSD and ECP. These departments will create, execute and fund activity-specific training sessions that incorporate the minimum storm water BMPs in Table 4-6. The Storm Water Pollution Prevention Division can assist departments with the development of training materials at their request.

Table 4-6. Activity-specific BMP Training(s) Provided by DSD and ECP.

Training Module/Item	Staff Level	Available
DSD		
1. staff meetings to discuss storm water requirements such as Federal, state and local water quality laws; connection between land use decisions and water quality; LID BMP requirements; and methods to minimize impacts to receiving waters from development	All	ongoing
2. educate staff and ensure that the in-house standards for the review of WQTRs are followed	All	ongoing
Field Engineering Division		
3. Storm water activity-specific training before the start of the wet weather seasons	Resident Engineers	Annually prior to October 1st
4. Storm water topics are discussed at the monthly meeting of resident engineers	Resident Engineers	As needed

Note: the completion dates listed are estimated. Actual completion dates may vary depending upon other program factors.

Deleted: s needed

4.5.3 Department Education and Outreach to the Public

This section identifies the various public education and outreach activities to be performed by CPCI, DSD, and ECP in consultation with the Storm Water Pollution Prevention Division (e.g., including the Think Blue logo on materials). Table 4-7 lists the activities, specific targeted communities, and the anticipated completion dates.

Table 4-7. Department External Outreach Activities by Target Audience.

Dept/Division Activity	Target Audience(s) 1. Construction Site Owners and Developers 2. Industrial Owners and Operators 3. Commercial Owners and Operators 4. Residential Community, General Public, and School Children 5. Under-represented audiences in 1-4	Available
City Planning and Community Development		
Storm Water related information on Department Web site	1,4	ongoing
Storm Water Pollution Prevention Division materials in business licenses and renewals.	2,3	ongoing
DSD		
Distribute *Standard Urban Storm Water Mitigation Plan* Fact Sheet	1	ongoing
Distribute *Grading: Doing It Right* brochures and video which provides information about proper storm water pollution prevention practices. These resources were provided to the public and aired regularly on City TV 24.	1-5	ongoing
Construction poster and brochure promoting proper storm water pollution prevention practices at construction sites.	1	ongoing
"Development Process: Step-by-Step" web site, which references both the *Storm Water Applicability Checklist* as well as the *Storm Water Standards*.	1	ongoing
New section of the DSD web site focusing on grading which includes visual examples and a "Frequently Asked Questions" page.	1	ongoing
Holds quarterly coordination meetings with the construction industry with water quality as a standing topic.	1	ongoing
DSD (Building Inspection)		
Provides individualized training to construction industry members on proper storm water pollution prevention and BMP techniques.	2	ongoing

Note: the completion dates listed are estimated. Actual completion dates may vary depending upon other program factors.

4.6 Annual Report Forms

The Municipal Permit requires the City to report on its storm water activities by September 30 each year beginning in September 2008. Also, each fiscal year a budget is developed and maintained by CPCI, DSD, and ECP to track expenditures for designing, developing, and implementing BMPs and educational activities. The departments' annual report information will be submitted in one report to the Storm Water Pollution Prevention Division on or before July 21 each year. See Appendix XIII, "Annual Report Form Questions" for department-specific reporting requirements.

5.0 Construction Section

5.1 Introduction

The goal of this section is to reduce or eliminate pollutants from entering into the City's storm drain system or receiving waters due to construction activities. Storm water requirements are contained in the San Diego Municipal Code (clerkdoc.sannet.gov/Website/mc/mc.html) as follows:

Chapter 4 Article 3 Division 3 – Storm Water Management and Discharge Control
Chapter 14 Article 2 Division 1 – Grading Regulations
Chapter 14 Article 2 Division 2 – Drainage Regulations

Referenced in the Municipal Code is the Land Development Manual which includes the Storm Water Standards (http://www.sandiego.gov/development-services/news/pdf/stormwatermanual.pdf). The Storm Water Standards Manual contains the City's construction BMP requirements.

All City departments responsible for inspecting construction projects are responsible for ensuring that adequate storm water BMPs are installed and maintained by the owner or contractor. The Field Engineering Division in the Engineering and Capital Projects Department is the primary department responsible for inspecting grading permits, and the Inspection Services Division in the Development Services Department is primarily responsible for inspecting building permits. The Storm Water Pollution Prevention Division assists these departments in implementing the storm water requirements contained in section D.2 of the Municipal Storm Water Permit (Order No.R9-2007-0001, "Municipal Permit", see Appendix I), as described in Table 5-1.

Table 5-1. Municipal Permit Requirements – Construction.

URMP Section	Municipal Permit Section	Requirement (Summary)
5.2.1	(Pg. 29) D. 2. b	Maintain, and update monthly, an inventory of construction sites.
5.3	(Pg. 28) D. 2. a	Update ordinances
5.4	(Pg. 29) D. 2. c	BMP Requirements
5.5.1	(Pg 29) D. 2. a	Ensuring construction requirements through the project authorization or approval process
5.5.2	(Pg. 30) D. 2. d	Site inspection process and frequency of inspections.
5.5.3	(Pg. 32) D. 2. e	Enforcement of construction sites
5.5.4	(Pg. 32) D. 2. f (1)(b,d)	When San Diego Regional Water Quality Control Board ("Regional Board") notification is required
5.5.5	(Pg. 45) D. 5. (b, d); (Pg. 61) J.1.a. (1) (i)	Implement and designate an educational program for all City personnel.

URMP Section	Municipal Permit Section	Requirement (Summary)
5.5.6 and Appendix XIII "Annual Report Form Questions"	(Pg. 67) J. 3. (c, g, j); (Pg. 51) G. 3	Track and submit data for Annual Report Forms, track and report anticipated and actual fiscal year budget expenditures.

5.2 Source Characterization

Construction sites include any site where an activity such as grading, excavation, clearing, structure and road construction, or demolition results in a disturbance of soil. Sources identified by the City of San Diego include: City-issued Construction Permits, and Capital Improvement Program (CIP) projects.

5.2.1 Site Inventory

A watershed-based inventory of construction sites is updated monthly as required by Municipal Permit Section D.2.b. The Engineering and Capital Projects Department (ECP) Field Engineering Division and the Development Services Department (DSD) individually maintain the inventory of construction sites that are under their inspection domain. The current inventory is provided as Appendix VI, "Construction Project Inventory."

5.2.2 Inventory Updates

Updates to the construction site inventory are managed by the DSD and the ECP Field Engineering Division as described below.

5.2.2.1 Development Services Department Process for Inventory Updates

DSD maintains an inventory of construction permits in the Project Tracking System (PTS). This is updated as new permits are issued and when permits are closed out. The building inspectors also provide updates to this inventory based on inspection of sites. The two departments provide Storm Water Pollution Prevention Division verification of updates inventory on a monthly basis.

5.2.2.2 Field Engineering Process for Inventory Updates

The project managers in the ECP maintain an inventory of CIP projects that are in construction using the "CityWorks" program. The supervisors at the Field Engineering Division maintain a paper inventory that contains the most current information on when a site was last inspected and the current construction status including priority

adjustments. This paper record is updated through weekly reports from the Resident Engineers and the information is routinely transferred into a reporting spreadsheet.

5.3 Ordinance Updates

Construction sites are required by the Storm Water Ordinance to conform to the Construction Storm Water best management practices (BMP) Performance Standards described in Chapter IV of the Storm Water Standards. These standards are updated when needed to ensure effectiveness and compliance with current Regional Board requirements. Updates to these standards are described in the following section.

5.4 Best Management Practices Requirements

The Construction Storm Water BMP Performance Standards described in Chapter IV of the Storm Water Standards are applicable to all construction sites within the jurisdiction. These performance standards have been updated to ensure compliance with the BMP implementation requirements described in Municipal Permit section D.2.c, and include requirements specific to the wet and dry season, and protective measures for rain events that occur in the dry season.

5.4.1 Updated BMP Requirements

Chapter IV of the Storm Water Standards provides a listing of the minimum BMPs for both general site management, erosion, and sediment controls, as required in Municipal Permit section D.2.a(2).

5.4.2 Additional Controls for Construction Sites

To ensure compliance with Municipal Permit section D.2.c(4), Chapter IV of the Storm Water Standards has been updated to include additional controls for construction sites that are located such that they could result in a discharge of sediment directly to 303(d) listed water bodies impaired for sediment, coastal lagoons, and water bodies on environmentally sensitive lands.

5.4.3 Maximum Disturbed Area for Erosion Controls

To ensure compliance with Municipal Permit section D.2.c(1)(a)vi, Chapter IV of the Storm Water Standards has been updated to specify the maximum size of disturbed area that can be created at a grading site prior to implementation of erosion controls. The updated standards also outline conditions in which an increase to the maximum disturbed area may be allowed.

5.4.4 Advanced Treatment Methods

To ensure compliance with Municipal Permit section D.2.c(2), Chapter IV of the Storm Water Standards has been updated to specify what conditions will trigger a requirement to implement advanced treatment for sediment using factors described in the Municipal Permit.

5.5 Program Implementation

5.5.1 Authorization Prior to Construction of Capital Improvement Program Projects

ECP is responsible for planning, design and construction of all of the City's CIP projects. All project managers of CIP projects are required to incorporate the construction requirements set forth in the Storm Water Standards Manual. These requirements must be incorporated into the project specifications and plans prior to approval in order to fund the construction of the project. To assist project managers in assuring consistency, storm water language is included in the boilerplate CIP Standard Specifications. Standard drawings are used in conjunction with project specific drawings where appropriate. Drawings are routed internally (within the design sections) as a "peer plan check" to ensure adequate inclusion of construction BMP measures. Additional details on the City's process of conditioning CIP projects prior to approval of construction funds is provided in Chapter 4.

5.5.2 Construction and Grading Approval Process for Private Projects

DSD is responsible for reviewing construction and development projects for private development in the City of San Diego. Projects are reviewed by DSD staff to ensure conformance to Chapter IV of the Storm Water Standards prior to issuance of any construction permits. All projects are required to incorporate construction BMPs on the plans and in the appropriate construction storm water plan (Water Pollution Control Plans for projects that are not subject to the State Construction National Pollutant Discharge Elimination System (NPDES) Permit, and Storm Water Pollution Prevention Plans for projects that are subject to the State Construction NPDES permit). The review staff also verifies enrollment under the statewide General NPDES permit for Construction.

5.5.2 Site Inspection Process and Frequency

Inspections performed by the City (by City staff or Construction Management (CM) firms managed by the City) provide verification that each site is in conformance to Chapter IV of the Storm Water Standards. The inspections are tracked to ensure that inspections meet the minimum inspection frequencies provided in the table below. Definitions for site priority are found in the Storm Water Standards.

Table 5-2. Inspection Frequencies.

Site Priority	Wet Season	Dry Season
High Priority - Active	Bi-weekly	As-Needed
High Priority - Inactive	Bi-weekly	As-Needed
Medium Priority	Monthly	As-Needed
Low Priority	As-Needed	As-Needed

As required by Municipal Permit section D.2.d(6), all inspections at a minimum include:

a. A check for coverage under the General Construction Permit (Notice of Intent (NOI) and/or Waste Discharge Identification No.) during initial inspections;
b. Assessment of compliance with the Construction Storm Water BMP Performance Standards located in Chapter IV of the City of San Diego Storm Water Standards (and enforceable by San Diego Stormwater Management and Discharge Control Ordinance ("Storm Water Ordinance") Section 43.04, et seq.);
c. Assessment of BMP effectiveness;
d. Visual observations for non-storm water discharges, potential illicit connections, and potential discharge of pollutants in storm water runoff;
e. Education and outreach on storm water pollution prevention, as needed, and
f. Creation of a written inspection report.

To ensure compliance with Municipal Permit section D.2.d (7), the inspection supervisors oversee the tracking of storm water inspections to ensure that the minimum frequencies are met. The inspection supervisors also maintain records necessary to ensure compliance with all of the reporting requirements located in Municipal Permit section J.3.a(3)(b). Table 5-3 summarizes the departments' responsibilities regarding BMPs and discharge enforcement at construction sites.

Table 5-3. BMPs and Discharge Enforcement at Construction Sites.

	Development Services Department (DSD) - Building Inspection	Engineering and Capital Projects - Field Engineering	General Services - Storm Water Pollution Prevention Division (SWPP)	DSD/Neighborhood Code Compliance Department (NCCD)
Demolition Permit Issued	While demolition is active. After demolition ends, site is inactive.	None	None	None
Public Improvements (PI)/Grading Permit (PI/G) Issued	After PIs are "accepted," substantially complete, any portion of the site is active due to issuance of the Building permit and building construction is underway.	While any portion of the construction project is active under PI/G permit. Before Public Improvements "accepted" substantially complete, site active or inactive.	After PIs are "accepted," substantially complete, any portion of the site is inactive due to the Engineering permit being signed-off with **NO** Building permit issued.	None
Building Permits Issued: No Public Improvement No Grading Permits	After construction begins and until "Certificate of Occupancy" issued.	None	When construction ends and certificate of occupancy is issued.	None
Public Improvement/ Grading or Building Permits Expired	If work is occurring in violation of building codes.	If work is occurring in violation of public improvement/grading code(s).	If **NO** work is occurring in violation of Public Improvement/Grading or building code(s).	None
Other	None	None	Construction does not require Building or Public Improvement/Grading permits. Certificate or occupancy issued. All bonds released, site work complete.	No active permit to apply - illegal grading.
Discharge to City Owned and Non-City Owned Conveyance Systems	Capture photo documentation, and other key information. Call SWPPD-Codes. Identify yourself as City Staff with an active discharge to report.	Capture photo documentation, and other key information. Call SWPPD-Codes. Identify yourself as City Staff with an active discharge to report.	**All calls to (619) 235-1000, Think Blue Hotline.**	None

5.5.2.1 Field Engineering Division's Process for Construction Site Inspections

Resident Engineers in the Field Engineering Division inspect BMPs associated with engineering permits and CIP projects. Inspections of BMPs are also performed by CM firms when hired to supplement staffing needs. Field Engineering staff manage all of the City's contracts with CM firms.

5.5.2.2 Development Services Department's Process for Construction Site Inspections

DSD inspects building sites routinely for compliance with storm water requirements. Inspectors are assigned to a district and are responsible for monitoring projects in that area. Each inspector routinely monitors his/her district on a daily basis. Sites are also inspected at the request of another department or in response to complaints. A special correction notice pertaining to storm water pollution prevention measures is used by inspectors to provide immediate written notice to contractors requiring immediate correction of BMPs.

5.5.3 Enforcement of Construction Sites

All construction sites found to be not in compliance with the Construction Storm Water BMP Performance Standards are issued a notice and stronger measures as deemed necessary. The enforcement procedures followed by Field Engineering Division and the Development Services Department are outlined below.

5.5.3.1 Field Engineering Division's Enforcement Process

As the single point of contact with the contractor, the Resident Engineer is responsible for identifying any storm water issues or potential violations. If issues are not resolved through storm water notices, and violations still occur, then stop work orders are generally issued and all work is halted except those activities necessary to bring the site into compliance with storm water regulations. Stop work orders are issued based on documentation, consultation with a supervisor, and the Deputy Director's approval. A re-inspection is required to be conducted by Field Engineering Division personnel prior to lifting a stop work order.

For sites that have no activity occurring and the issuance of a stop work order would not provide sufficient influence to the contractor to remedy deficiencies, the site is referred to the Storm Water Pollution Prevention Division for enforcement during rain events or discharges.

The Field Engineering Division also coordinates with the inspectors from DSD. For example, a site that may have a grading permit for which the grading has been

completed but the contractor continues to work under a building permit. Any storm water violations can be referred to DSD for further enforcement action.

5.5.3.2 Development Services Department's Enforcement Process

For egregious or repeat issues, inspectors have been trained to issue re-inspection notices, which effectively stops work on the site until the corrections are made and the site is re-inspected.

For sites that have no activity occurring and the issuance of a re-inspection notice would not provide sufficient influence to the contractor to remedy deficiencies, the site is referred to the Storm Water Pollution Prevention Division for enforcement during rain events or discharges.

The inspectors from DSD also coordinate with the inspectors from the Field Engineering Division when the currently active permit is within the Field Engineering Division's inspection domain.

5.5.4 Pollutant Discharge Notification

As required by 40 CFR Section 122.41(1)(6), when a construction manager or inspector, employed by the City or hired to represent the City, determines that a discharge poses a significant threat to water quality or human health, they will notify the Regional Board by facsimile within 24 hours of the discharge event using the Chemical Release Reporting Form 304 available in Appendix XV and also on the City's website at http://www.sandiego.gov/thinkblue/resources/index.shtml. A copy of the form must also be forwarded to the City's Storm Water Pollution Prevention Division for record keeping purposes. Additionally, a more detailed written report of the event and follow up actions must be sent by the construction manager or inspector to the Regional Board within five working days of the day the event was identified. The construction manager or inspector will also notify other regulatory agencies as required on Form 304.

In addition, the Regional Board will also be notified at any time that a stop work order or other high level enforcement action is taken to address a storm water violation.

5.5.5 Education and Training

The Municipal Permit identifies five target communities to receive education using all media as appropriate:

- Municipal Departments and Personnel
- Construction Site Owners and Developers
- Industrial Owners and Operators
- Commercial Owners and Operators
- Residential Community, General Public, and School Children

The Municipal Permit requires that the goals of education and outreach activities to targeted communities be two-fold:

1. To measurably increase the knowledge base and;
2. To measurably change the behavior(s) of the target audiences with regards to storm water pollutants found in the storm drain system.

For more comprehensive information on the roles of the Storm Water Pollution Division and other City Departments see Table 10-2 in Section 10.0 “Education.”

5.5.5.1 General Storm Water Training

This section describes City-wide trainings provided by the Storm Water Pollution Prevention Division.

New Employees

The Storm Water Pollution Prevention Division is responsible for developing and providing all new employee trainings. All new staff will receive a basic introduction to storm water issues via a “Storm Water and You” training module presented at the “New Employee Orientation” workshop. Staff that do not take the “New Employee Orientation” workshop (e.g. seasonal, part-time, etc.) will receive general storm water training as part of their employee orientation within their department.

Existing Employees

Existing employees with regular access to a computer will be mandated to receive “refresher” training in storm water pollution prevention every two years via a City-wide training element developed by the Storm Water Pollution Prevention Division. Additionally, knowledge assessment via “e-tests” for randomly selected City employees with regular computer access will occur periodically between the mandated “refresher” courses. Finally, the Storm Water Pollution Prevention Division will develop a computer-based training (CBT) module addressing common activities shared by multiple field crews throughout the City.

5.5.5.2 Activity-Specific Training

Municipal Departments

This section describes activity-specific trainings provided by DSD and ECP Field Engineering Division. DSD and ECP Field Engineering Division will create, execute, and fund activity-specific training sessions that incorporate the minimum storm water BMPs in Table 5-4. The Storm Water Pollution Prevention Division can assist departments with the development of training materials at their request.

Table 5-4. Activity-specific BMP Training(s) Provided by the DSD and ECP.

Dept Division Activity	Staff Level	Schedule
DSD		
1. Staff meetings to discuss storm water requirements such as Federal, state and local water quality laws; connection between construction activities and water quality; construction BMP requirements; and methods to minimize impacts to receiving waters from construction sites	All	ongoing
2. Educate staff and ensure that the in-house standards for the review of WQTRs are followed	All	ongoing
DSD, Storm Water Department, and Field Engineering Division		
3. Storm water activity-specific annual training before the start of the wet weather season. Topics to be covered include Federal, state and local water quality laws, connection between construction activities and water quality, proper implementation of BMPs, the City's inspection, plan review, and enforcement policies, current advancements in BMP technologies, and SUSMP requirements.	Inspectors, Code Enforcement Officers, Project Engineers, and Resident Engineers	Annually prior to October 1st
Field Engineering Division		
4. Storm water topics are discussed at the monthly meeting of resident engineers	Resident Engineers	As needed

Note: the completion dates listed are estimated. Actual completion dates may vary depending upon other program factors.

5.5.5.3 Department Education and Outreach to the Public

This section identifies the various public education and outreach activities to be performed by the DSD and ECP Field Engineering Division in consultation with the Storm Water Pollution Prevention Division (e.g., including the Think Blue logo on materials). Table 5-5 lists the activities, specific targeted communities, and the anticipated completion dates.

Table 5-5. Department External Outreach Activities by Target Audience.

Dept Division Activity	Target Audience(s) 1. Construction Site Owners and Developers 2. Industrial Owners and Operators 3. Commercial Owners and Operators 4. Residential Community, General Public, and School Children 5. Under-represented audiences in 1-4	Available
DSD		

Dept Division Activity	Target Audience(s) 1. Construction Site Owners and Developers 2. Industrial Owners and Operators 3. Commercial Owners and Operators 4. Residential Community, General Public, and School Children 5. Under-represented audiences in 1-4	Available
Distribute *Standard Urban Storm Water Mitigation Plan* Fact Sheet	1	ongoing
Distribute *Grading: Doing It Right* brochures and video which provides information about proper storm water pollution prevention practices. These resources were provided to the public and aired regularly on City TV 24.	1-5	ongoing
Construction poster and brochure promoting proper storm water pollution prevention practices at construction sites.	1	ongoing
"Development Process: Step-by-Step" web site, which references both the *Storm Water Applicability Checklist* as well as the *Storm Water Standards Manual*.	1	ongoing
New section of the DSD web site focusing on grading which includes visual examples and a "Frequently Asked Questions" page.	1	ongoing
Quarterly coordination meetings with the construction industry with water quality as a standing topic.	1	ongoing
DSD (Building Inspection)		
Individualized training to construction industry members on proper storm water pollution prevention and BMP techniques.	2	ongoing

5.5.6 Annual Report Forms

The Municipal Permit requires the City to report on its storm water activities by September 30 each year beginning in September 2008. Also, each fiscal year a budget is developed and maintained by DSD and the ECP Field Engineering Division to track expenditures for designing, developing, and implementing BMPs and educational activities. The departments' annual report information will be submitted to the Storm Water Pollution Prevention Division on or before July 21 each year. See Appendix XIII, "Annual Report Form Questions" for department-specific reporting requirements.

6.11 Solid Waste Management

6.11.1 Background

This section is applicable to the Environmental Services Department (ESD) which operates and manages the collection, reduction, and disposal of solid waste within the City of San Diego. Services provided by ESD include the collection of refuse and recyclable wastes, solid waste and hazardous waste code enforcement activities, and educating the public and businesses on recycling options. Additionally, ESD is responsible for operating and maintaining the Miramar Landfill and seven inactive landfills. The goal of this section is to reduce the impact of the ESD's operations and maintenance activities on storm water quality and provide guidance for the protection of water quality and receiving waters. This section contains the storm water best management practices (BMPs) the ESD will implement during department operations and maintenance activities, in addition to inventory, inspection, pollutant discharge reporting, education, and annual reporting requirements.

ESD's facilities operation and maintenance programs must meet the requirements of the Municipal Storm Water Permit (Order R9-2007-0001, "Municipal Permit," see Appendix I), as described in Table 6.11-1.

Table 6.11-1. Municipal Permit requirements – Solid Waste Management.

URMP Section	Municipal Permit Section	Requirement (Summary)
6.11.2	(Pg. 32) D. 3. a. (1)	Inventory municipal areas, activities and potential sources of pollutants.
6.11.3	(Pg. 32-34) D. 3. a. (2,3,4,5)	Implement and maintain BMPs.
6.11.4.1	(Pg. 35) D. 3. a. (7)	Inspect municipal areas, activities and implement any necessary follow up actions.
6.11.4.2	(Pg B-6) Attachment B. 5. (e)	Report pollutant discharges to the storm drain system or receiving waters.
6.11.4.3	(Pg. 45) D. 5. (b, d);	Implement and designate an educational program for all City personnel.
6.11.4.4 and Appendix XIII "Annual Report Form Questions"	(Pg. 67) J. 3. (c, g, j); (Pg. 51) G. 3	Track and submit data for Annual Report Forms, track and report anticipated and actual fiscal year budget expenditures.

6.11.2 Source Characterization

The Environmental Services facilities inventory includes the "Green" Ridgehaven building, inactive and active landfills, and Miramar Place (see Appendix III, "Municipal Inventory"). ESD activities, their associated potential pollutants, and designated BMPs are listed in Table 6.11.2. ESD will update any changes to the inventory, activities,

and/or BMPs on an annual basis as part of the reporting process described in Section 6.11.4.4, “Annual Report Forms.”

6.11.3 Best Management Practice Requirements

6.11.3.1 Updated BMP Requirements

The BMPs identified in Sections 6.11.3.1.1 to 6.11.3.1.2 below are the ESD’s BMPs for operations and maintenance for solid waste activities. The minimum and activity-specific BMPs identified in this section are documented and implemented via ESD’s standard operating procedures (SOPs).

If ESD determines that a municipal activity or procedure does or could result in a significant pollutant discharge in violation of Section 43.03 of the San Diego Storm Water Management and Discharge Control Ordinance (“Storm Water Ordinance”),, ESD will modify its activities or enhance BMPs to reduce the potential for future significant pollutant discharges. Whenever the BMPs are improved or revised, ESD will provide updates to its SOPs to the Storm Water Pollution Prevention Division with the annual report form (see Section 6.11.4.4). It is important to note that collectively, these BMPs represent the Maximum Extent Practicable (MEP) Standard required by the Municipal Permit. Therefore, if any BMPs are eliminated or modified, the replacement set of BMPs must collectively provide equal or greater storm water quality protection. For information on enforcement see Section 9.5 in “Illicit Discharge Detection and Elimination.”

6.11.3.1.1 Minimum BMPs

ESD will ensure that all City staff implements the following minimum BMPs, as applicable.

1. Prior to starting activities, locate storm drain system and prevent pollutants from entering. Activity-specific BMPs are listed in Table 6.11-2.
2. Only clean rainwater can be discharged to the storm drain system. See Storm Water Ordinance Section 43.0305 “Exemptions from Discharge Prohibition” for allowable discharges.[1]
3. Sweep up municipal areas after activities and/or spills. Hosing down pollutants into the storm drain is prohibited by Storm Water Ordinance Section 43.03. Use a broom, shovel, or other mechanical means to collect solids for reuse or disposal. Use absorbents to reduce the spread of liquids and absorb or pump up liquids for reuse or disposal. Dispose of hazardous waste as required by law or contact the Environmental Services Department, Hazardous Materials Management Program (ESD-HMMP) for assistance.
4. Annually inspect and clear all storm drain system catch basins and drop inlets of debris or other foreign material at locations listed in the municipal facility inventory

[1] http://clerkdoc.sannet.gov/RightSite/getcontent/local.pdf?DMW_OBJECTID=09001451800870fc

(see Appendix III) according the "Storm Drain Inspection/Cleaning Schedule" in Table 6.3-2, "Buildings/Parking/Landscaping." Annually inspect and clear open channels in a timely manner.

5. Keep lids closed on trash cans and dumpsters to prevent rainwater from entering, as applicable, and ensure that trash is picked up around the cans and dumpsters at all times. Provide enough trash cans/dumpsters in all appropriate areas.
6. Keep materials and waste piles covered and, if possible, off the ground. Materials and waste stockpiles must be protected to prevent contact with rainwater and any runoff. Check materials and stockpiles on a regular basis to verify the BMPs (such as roof covering, tarps, silt fences, palettes, etc.) are in good condition.
7. Routinely inspect vehicles for leaks, and service immediately if necessary. If vehicle is leaking, until vehicle is repaired use drip pans for all vehicle leaks and/or clean up with dry methods and dispose of as a regulated waste. Contact ESD-HMMP for assistance.
8. Capture and properly dispose of all power washing water. See fact sheet at http://www.sandiego.gov/thinkblue/pdf/mobilebusinessbrochure.pdf for proper power washing methods and disposal requirements.
9. Stencil storm drains in the Division's municipal inventory (Appendix III) with "No Dumping—Goes to Ocean/No Tire nada—Llega al Mar/Think Blue", as appropriate. Check stencil legibility, and if necessary, re-stencil before September 30 of each year. Stencils and asphalt paint (blue on sidewalks/white on asphalt) are available from the Storm Water Pollution Prevention Division.
10. Eliminate over-irrigation as a means of minimizing the volume of potentially contaminated water entering the storm drain system.

It is ultimately ESD's responsibility to prevent pollutant discharges to the storm drain system. Therefore, ESD will identify and implement any combination of the above minimum BMPs and/or any additional BMPs to avoid discharging pollutants into the storm drain system.

ESD will coordinate with the Purchasing and Contracting Department to ensure that as operations and maintenance contracts are initiated or renewed, references to the Storm Water Ordinance and the most current minimum BMP requirements are written into the contract (see Appendix IX, "Municipal Operations and Maintenance Contract Language" for current language as of January 25, 2008).

6.11.3.1.2 Activity-Specific BMPs

In addition to the minimum BMPs listed above, the following BMPs listed in Table 6.11-2 will be implemented by ESD in its operations and maintenance of solid waste management activities.

Table 6.11-2. BMPs designated for areas and activities associated with Solid Waste Management.

Activity	Potential Pollutants	Best Management Practices
Community Cleanup Events	trash and debris, oxygen demanding substances, oil and grease, pesticides	• Curb Style Events – Code Enforcement and supervisory staff will carry spill kits on their vehicles. • Bin Style Events – move material private vehicle to bin or packer. Return site to original condition when finished. • Survey area after the event and dispose of any trash or debris to the landfill.
Christmas Tree Recycling	trash and debris, oxygen demanding substances	• Use bags and straw wattles protect storm drains inlets. • When servicing sites, maintain and return to original condition.
Hazardous Waste Storage Area	nutrients, trash, oil and grease, pesticides, metals	• Store wastes are stored inside a designated chemical storage area, if inside. • Store wastes in secondary containment, designated storage area, or on pallets and covered as necessary if outside during the rainy season.
Hazardous Materials Storage Area	nutrients, trash, oil and grease, pesticides, oxygen demanding compounds, metals	• Store materials in a Connex box or covered.

<table>
<tr><th>Activity</th><th>Potential Pollutants</th><th>Best Management Practices</th></tr>
<tr><td>Storm Drain System Inspection and Cleaning</td><td>trash and debris</td><td>

Remove trash and debris from open channels and inlets and properly dispose of these materials.
Conduct annual visual inspections during the dry season especially if there are problem storm drain inlets where sediment/trash or other pollutants accumulate.
Conduct field investigations to detect and eliminate improper disposal of pollutants into the storm drain system (e.g., identify problem areas where discharges or illegal connections may occur and follow up stream to determine the source(s)).
Inspect and clear drainage facilities as needed during wet weather.
At a minimum, inspect and clean all storm drain facilities (catch basins, storm drain inlets, open channels, etc.) of debris or other foreign material according to the schedule below. When practical, work is to be done when conditions are dry. Dispose of materials properly.

Storm Drain Inspection/Cleaning Schedule
<table>
<tr><th>Debris Volume</th><th>Frequency*</th></tr>
<tr><td>1. High (e.g., tends to clog during rains)</td><td>Annually, between May 1 and September 30.**</td></tr>
<tr><td>2. Medium (e.g., tends to collect measurable debris without clogging)</td><td>Annually at any time during the year.**</td></tr>
<tr><td>3. Low (e.g., generally free of debris)</td><td>Annually at any time during the year for Fiscal Year 2008 and 2009. Every other year thereafter.</td></tr>
<tr><td colspan="2">* Any storm drain facility that is designed to be self-cleaning must be cleaned of any accumulated debris observed during an inspection immediately. Anthropogenic litter observed in open channels must be cleaned in a timely manner after obtaining all appropriate environmental clearances.

** Following two fiscal years of inspections, any storm drain facility that does not contain debris may be re-classified as a “Low” priority facility and may be inspected as needed, but not less than every other year.</td></tr>
</table>
</td></tr>
<tr><td>Refuse Dumpsters</td><td>trash and debris</td><td>

See this activity’s BMP in Table 6.3-2, Section 6.3, “Buildings/Parking/Landscaping”.

</td></tr>
</table>

Activity	Potential Pollutants	Best Management Practices
Landscaping	pesticides, nutrients, sediments	• Schedule chemical application at times when rain is not predicted and irrigation is not scheduled. • Apply and handle pesticides and keep detailed records in accordance with existing state regulations (California Title 3, Division 6, "Pesticides and Pest Control Operations"). • Collect and dispose of unused chemicals as a regulated waste.[2] • Use native plants when possible. • Keep removed vegetation, including clippings, chips, loose soils, and pruning debris away from storm drain inlets and watercourses. • Consider applying compost instead of chemical fertilizers. • Rely on integrated pest management methods, including: o No controls o Physical/mechanical controls o Environmental controls (mulching, pest-resistant vegetation, prescribed burns) o Biological controls (predators, parasites, etc.) o Less toxic chemical controls (e.g., soaps and oils) and/or hot water • If absolutely necessary, use the least toxic chemicals that will do the job (e.g., biodegradable products). Avoid use of copper-based pesticides.
Parking Lot/Structure Maintenance	trash and debris, oil and grease	• Sweep and/or vacuum parking lot 1 x month • Use drip pans for all vehicle leaks and/or clean up with dry methods and dispose of as a regulated waste.[3] • Keep lids closed on solid waste cans and dumpsters at all times. Provide enough solid waste cans/dumpsters in all appropriate areas. • Use plastic liners in trash and recycling receptacles in front of building.
Last Chance Recycling	trash and debris, metals, oxygen demanding substances	• Protect storm drain inlets with straw wattles. • Use all weather treatment for tipping deck and vehicular ingress/egress surfaces.
Fire Sprinkler Flushing	sediments, nutrients	• Collect water in 5 gallon buckets and dispose of in sewer system.
Heavy Equipment at Landfill	oil and grease	• See Landfill Equipment Fluid Releases; Fueling Nozzle Leaks; and Hazardous Materials Spill Response and Reporting SOPs in Appendix XIX. • Use drip pans and absorbent pads. • Maintenance contractor maintains regulatory compliance and practices good housekeeping techniques.

[2] Contact ESD HMMP for instructions.
[3] Contact ESD-HMMP for disposal options.

Activity	Potential Pollutants	Best Management Practices
Landfill Operations	sediments, nutrients, trash and debris and oil and grease, bacteria and viruses	• Compact all solid waste cover daily. No water is allowed to stand on any landfill cover. • Apply mulch onto slope, intermediate cover areas, and stockpiles. • Revegetate when operationally feasible. • Pump down sedimentation basin between storm events. • Apply tackifier to exposed cut/fill areas. • See "Inclement Weather; General Site Maintenance; Litter Control; and Leachate Disposal SOPs" in Appendix XIX.
Greenery Operations	sediments, nutrients, trash and debris and oil and grease, bacteria and viruses	• Divert run-on around the site. • Cover bare areas with mulch/compost. • Haul trash contaminated or unsuitable materials to the landfill. • Maintain adequate windrow temperatures and moisture content. • Finished product is stored upgradient of raw product. • Ensure equipment that is used to handle finished product is free of any residue of raw product. • See "Inclement Weather; General Site Maintenance; Litter Control; Windrow Building Operations; and Fecal Contamination Prevention SOPs" in Appendix XIX.
Leaf Collections		• If sweeping: o Sweep leaves in a pile, use dustpan, shovel or other suitable tool to pick up leaves. o Place leaves in a green recycling bin. o Place debris in trash can or dumpster • If power blowing: o Cover all storm drains in the vicinity with a mat to prevent debris from accidentally entering the storm drain. o Blow leaves into a pile, use dustpan, shovel or other suitable tool to pick up leaves. o Place leaves in a green recycling bin. o Place debris in trash can or dumpster. • If vacuuming: o Vacuum leaves up and empty contents of bag into a green recycling bin
Landfill Gas Collection	sediment, metals, organic compounds	• Systems maintained to collect and properly dispose of landfill gas condensate. • Materials for maintenance are stored in Connex box or covered.
Inactive landfills	sediments, nutrients, trash and debris	• Cover bare spots with mulch/compost. • Install silt fences, wattles, geotextiles, rock rip rap, energy dissipaters or other BMPs as applicable. • Revegetate as necessary. • Maintain deck and slope surfaces for proper drainage. • See "Minor and Major Grading and NPDES – Drainage Improvements SOPs" in Appendix XIX.
Native Plant Nursery	sediments, nutrients, pesticides	• Utilize computerized watering system, and closely monitor hand watering to avoid water run off.
Material Loading/Unloading		• See this activity's BMP in Table 6.3-2, Section 6.3, "Buildings/Parking/Landscaping"

Formatted: Bullets and Numbering

Formatted: Bullets and Numbering

Formatted: Bullets and Numbering

Activity	Potential Pollutants	Best Management Practices
Material Handling/Storage and Disposal		• See this activity's BMP in Table 6.3-2, Section 6.3, "Buildings/Parking/Landscaping"
Irrigation Repair		• See this activity's BMP in Table 6.3-2, Section 6.3, "Buildings/Parking/Landscaping"
Vehicle and Equipment Fuel Dispensing Areas		• See this activity's BMPs in Table 6.15-2 Section 6.15, "Vehicle Maintenance/Operations Yards."

6.11.3.2 Additional Controls fro Municipal Area and Activities

In addition, the Municipal Permit requires that the City implement additional BMPs at municipal facilities that discharge to, or are tributary to, a 303(d) listed water body, lagoon, or water body on environmentally sensitive lands (all City facilities are subject to this requirement). To meet this additional BMP requirement, each City facility will conduct a second facility inspection as described in detail in Section 6.11.4.1 "Facilities Inspections and Improvements."

6.11.4 Program Implementation

The previous sections described the minimum and activity-specific BMPs that must be implemented. This section describes the administrative steps that departments will undertake to prepare for and verify the implementation of those BMPs including facility inspections, discharge notifications, education and training, and annual reporting. In addition, departments will maintain a storm water representative responsible for overseeing the departments implementation efforts. The Storm Water Pollution Prevention Division will meet periodically with each department's storm water representative to assist with the implementation efforts.

6.11.4.1 Facility Inspections and Improvements

This section applies to ESD which maintains its own buildings, grounds and the active and inactive landfills. The Municipal Permit requires that the City inspect all municipal facilities annually. The purpose of the facility inspections is to evaluate the adequacy of existing BMPs, modify and improve BMPs where necessary and identify any potential pollutant discharges (Note: see Section 6.11.4.2, "Pollutant Discharge Notification" below for reporting requirements).

In addition, the Municipal Permit requires that the City implement additional BMPs at municipal facilities that discharge to, or are tributary to, a 303(d) listed water body, lagoon, or water body on environmentally sensitive lands (all City facilities are subject to this requirement). To meet this additional BMP requirement, each City facility will conduct a second facility inspection. As shown in Table 6.11-3, the first inspection will occur before the beginning of the rainy season (during September) and the second

inspection will occur during the rainy season (preferably during January, but prior to the end of April).

Table 6.11-3. Municipal Facility Inspection Requirements.

Inspection	Timeframe
First	September
Second	January - April

If as a result of the inspection ESD determines that improvements to its BMPs are required, ESD will perform the action (e.g., repair a structural BMP and/or update the SOPs), and subsequently conduct a follow-up inspection of the BMPs to verify that the original issues have been resolved (Note: if repairs, modifications or improvements to the BMPs are necessary, those follow-up actions and re-inspections will not count as the second inspection). If ESD determines that the modifications require additional time or funds to implement, ESD will develop an anticipated schedule for when the modification will be completed. Record of any changes/improvements instituted as part of the municipal facility inspection process will be included in the annual report forms provided to the Storm Water Pollution Prevention Division each year.

The Municipal Facility Inspection Forms are attached as Appendix XIV, “Inspection Forms” and are also located on the City’s website at http://www.sandiego.gov/thinkblue/resources/index.shtml.

6.11.4.2 Pollutant Discharge Notification

Certain non-storm water discharges, because of their nature or magnitude, require timely reporting to the San Diego Regional Water Quality Control Board (Regional Board). A significant threat to water quality or human health is determined on a case-by-case basis by ESD and depends on the type of pollutant, the degree of the violation (i.e., the amount of pollutant discharged into the municipal storm drain system), the proximity to receiving water bodies, the potential for exposure to the public, and the potential for environmental damage. Generally, for a discharge to be considered a significant threat to water quality or human health, the discharge must contain a non-storm water substance and enter the storm drain system. See Storm Water Ordinance Section 43.0305 “Exemptions from Discharge Prohibition” to review the list of allowable non-storm water discharges (Appendix II). Please be aware that the 24-Hour reporting process is designed to address significant discharges as a result of significant accidents, not day-to-day operations or activities, or even minor accidents. A small water line break, for example, that occurs in a natural area but causes little or no environmental damage, would generally not be considered a significant event that would require reporting through the 24-Hour reporting process. In another example, a fuel spill that is contained and removed from a paved parking lot, without any of the substance entering the storm drain system or receiving waters, would not be considered a significant reportable discharge.

When ESD determines that a discharge poses a significant threat to water quality or human health, ESD must notify the Regional Board by facsimile within 24 hours of the discharge event using the Chemical Release Reporting Form 304 available in Appendix XV and also on the City's website at http://www.sandiego.gov/thinkblue/resources/index.shtml. A copy of the form must also be forwarded to the City's Storm Water Pollution Prevention Division for record keeping purposes. Additionally, a more detailed written report of the event and follow up actions must be sent by the ESD to the Regional Board within five working days of the day the event was identified.

ESD will also notify other regulatory agencies as required on Form 304.

6.11.4.3 Education and Training

The Municipal Permit identifies five target communities to receive education using all media as appropriate:

- Municipal Departments and Personnel
- Construction Site Owners and Developers
- Industrial Owners and Operators
- Commercial Owners and Operators
- Residential Community, General Public, and School Children

The Municipal Permit requires that the goals of education and outreach activities to targeted communities be two-fold:

1. To measurably increase the knowledge base and;
2. To measurably change the behavior(s) of the target audiences with regards to storm water pollutants found in the storm drain system.

For more comprehensive information on the roles of the Storm Water Pollution Division and other City Departments see Table 10-2 in Section 10.0, "Education."

6.11.4.3.1 General Storm Water Training

This section describes City-wide trainings provided by the Storm Water Pollution Prevention Division.

New Employees

The Storm Water Pollution Prevention Division is responsible for developing and providing all new employee trainings. All new staff will receive a basic introduction to storm water issues via a "Storm Water and You" training module presented at the "New Employee Orientation" workshop. Staff that do not take the "New Employee Orientation"

workshop (e.g. seasonal, part-time, etc.) will receive general storm water training as part of their employee orientation within their department.

Existing Employees

Existing employees with regular access to a computer will be mandated to receive "refresher" training in storm water pollution prevention every two years via a City-wide training element developed by the Storm Water Pollution Prevention Division. Additionally, knowledge assessment via "e-tests" for randomly selected City employees with regular computer access will occur periodically between the mandated "refresher" courses. Finally, the Storm Water Pollution Prevention Division will develop a computer-based training (CBT) module addressing common activities shared by multiple field crews throughout the City.

6.11.4.3.2 Activity-Specific Training

Municipal Departments

This section describes activity-specific trainings provided by ESD. ESD will create, execute and fund activity-specific training sessions that incorporate the minimum storm water BMPs in Table 6.11-4. The Storm Water Pollution Prevention Division can assist departments with the development of training materials at their request.

Table 6.11-4. Activity-Specific BMP Training(s) Provided by ESD.

Training Module/Item	Staff Level (i.e., Supervisor, Crew, etc.)	Schedule
Support Services		
Hazardous Material Handling	Supervisor, Crew	Annual
CRT Management and Handling	Supervisor, Crew	Ongoing
Handling and Management of Universal Waste	Supervisor, Crew	Ongoing
Managing Materials Associated with Community Cleanups	Supervisor, Crew	Ongoing
Management of Vehicle Batteries (illegal dump and community cleanups)	Supervisor, Crew	Ongoing
HSET		
Review BMPs for hazardous waste storage area	Supervisor, Crew	6/13/07
Facility Maintenance Staff And Vendors		
Storm Drain Maintenance (internal staff and vendor)	Supervisor, Crew	Spring 2008
Parking Lot Maintenance (internal staff and vendor)	Supervisor, Crew	Spring 2008
Litter and Recycling Container Storage Area Maintenance (internal staff)	Supervisor, Crew	Spring 2008
Proper Fire Sprinkler Flushing Disposal (vendor)	Supervisor, Crew	Spring 2008
Landscape and Irrigation Maintenance (vendor)	Supervisor, Crew	Spring 2008
Fountain Maintenance (internal staff)	Supervisor, Crew	Spring 2008
Disposal Staff		
Standard Operating Procedures (SOPs)	Supervisor, EMS manager	Ongoing
BMP installation	Supervisor	Ongoing
Nursery operations	Supervisor	Ongoing

Note: the completion dates listed are estimated. Actual completion dates may vary depending upon other program factors.

6.11.4.3.3 Department Education and Outreach to the Public

This section identifies the various public education and outreach activities to be performed by ESD in consultation with the Storm Water Pollution Prevention Division (e.g., including the Think Blue logo on materials). Table 6.11-5 lists the activities, specific targeted communities, and the anticipated completion dates.

Table 6.11-5. Department External Outreach Activities by Target Audience.

Department/Division Activity	Target Audience(s) 1. Construction Site Owners and Developers 2. Industrial Owners and Operators 3. Commercial Owners and Operators 4. Residential Community, General Public, and School Children 5. Under-represented audiences in 1-4	Available
Think Blue informational materials on display in Environmental Services Foyer information rack	1,2,3,4,5	Summer 2008
Storm Water related article placement in *Curbsider Newsletter*	1,2,3,4,5	Winter 2008

6.11.4.4 Annual Report Forms

The Municipal Permit requires the City to report on its storm water activities by September 30 each year beginning in September 2008. Also, each fiscal year a budget is developed and maintained by Environmental Services Department to track expenditures for designing, developing, and implementing BMPs and educational activities. ESD's annual report information will be submitted to the Storm Water Pollution Prevention Division on or before July 21 each year. See Appendix XIII, "Annual Report Form Questions" for department-specific reporting requirements.

DECLARATION OF SERVICE BY EMAIL

I, the undersigned, declare as follows:

I am a resident of the County of Sacramento and I am over the age of 18 years, and not a party to the within action. My place of employment is 980 Ninth Street, Suite 300, Sacramento, California 95814.

On March 29, 2024, I served the:

- **Current Mailing List dated March 28, 2024**
- **Notice of Waiver of Procedural Requirements, Extension Request Approval, and Postponement of Hearing issued March 29, 2024**
- **Claimants' Comments on the Draft Proposed Decision and Parameters and Guidelines (Volumes 1-14) filed February 20, 2024**

  San Diego Regional Water Quality Control Board Order No. R9-2007-0001, Permit CAS0108758, Parts D.3.a.(3)(b)(iii), D.5.a.(1), D.5.a.(2), D.5.b.(1)(a), D.5.b.(1)(b)(iii-vi), D.5.b.(1)(c), D.5.b.(1)(d), D.5.b.(2), D.5.b.(3), E.2.f., E.2.g., F.1., F.2., F.3., I.1., I.2., I.5., J.3.a.(3)(c)(iv)-(viii), (x)-(xv), the first sentence of L.1. as it applies to the newly mandated activities, and L.1.a.(3)-(6), 07-TC-09-R County of San Diego, Cites of Carlsbad, Del Mar, Imperial Beach, Lemon Grove, Poway, San Marcos, Santee, Solana Beach, Chula Vista, Coronado, Del Mar, El Cajon, Encinitas, Escondido, Imperial Beach, La Mesa, Lemon Grove, National City, Oceanside, San Diego, and Vista, Claimants

by making it available on the Commission's website and providing notice of how to locate it to the email addresses provided on the attached mailing list.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct, and that this declaration was executed on March 29, 2024 at Sacramento, California.
