- 5. Public Participation** – Watershed Copermittees shall implement a watershed-specific public participation mechanism within each watershed. A required component of the watershed-specific public participation shall be a minimum 30-day public review of the Watershed Workplan prior to submittal for acceptance by the Regional Board Executive Officer. Opportunity for the public to review and comment on the Watershed Workplan must occur before the workplan is implemented.
- 6. Watershed Workplan Review and Updates** – Watershed Copermittees shall review and update the Watershed Workplan annually to identify needed changes to the prioritized water quality problem(s) listed in the workplan. All updates to the Watershed Workplan shall be presented during an Annual Watershed Review Meeting. Annual Watershed Review Meetings shall occur once every calendar year and be conducted by the Watershed Copermittees. Annual Watershed Review Meetings shall be open to the public and adequately noticed. Individual Watershed Copermittees shall also review and modify their jurisdictional programs and JRMP

Annual Reports, as necessary, so that they are consistent with the updated Watershed Workplan.

7. Aliso Creek Watershed Runoff Management Plan (WRMP) Provisions

The following provisions apply to the Aliso Creek WRMP. Requirements in this subsection must supersede requirements prescribed by the Regional Board on October 18, 2005.²⁰

- a. Each Copermittee within the Aliso Creek Watershed must implement the monitoring and reporting program described in *Aliso Creek 13325 Directive, Revised Monitoring Program Design – Integration with NPDES Program*, December 2004 (Revised Aliso Creek Program).
- b. Each Copermittee must provide annual reports by March 1 of each year beginning in 2011 for the preceding annual period of January through December. The annual reports must contain the following information:
 - (1) Water quality data and assessment from the Revised Aliso Creek Program. Each municipality must implement the monitoring and reporting program described in the Revised Aliso Creek Program. All information submitted in the report must conform to a SWAMP-Compatible Quality Assurance Project Plan²¹. The report must contain an assessment of compliance with applicable water quality standards for each monitoring station. The report must include data in tabular and graphical form, and electronic data must be submitted to the Regional Board.
 - (2) Program Assessment. A description and assessment of each municipality's program implemented within the high-priority storm drain locations (as identified Revised Aliso Creek Program) to reduce discharges of indicator fecal bacteria/pathogens. Monitoring alone is not sufficient to assess progress of the municipal programs. Municipalities must demonstrate each year that their programs are effective and resulting in a reduction of bacteria sources.
 - (i) For structural and nonstructural management practices implemented, the assessment must contain a description of the

²⁰ On October 12, 2005, the Regional Board accepted proposed changes to the bacteria monitoring program that had been conducted since spring 2001 pursuant to an Investigative Order from the Regional Board's executive officer. The October 18, 2005, letter from the Regional Board's executive officer revised the Investigative Order and instituted the new monitoring and reporting requirements.

²¹ The State Water Resource Control Board (State Board) has prepared an electronic template for Quality Assurance Project Plans (QAPP) to assist in QAPP development, to provide a common format that will allow for review to be expedited, and to provide information on Surface Water Ambient Monitoring (SWAMP) consistency. Additional information and the template are available on-line at <http://www.waterboards.ca.gov/swamp/qapp.html>.

practice, capital and maintenance costs, expectations for effectiveness, date implemented, and any observed results.

- (ii) For structural and nonstructural management practices evaluated, the assessment must contain a description of the practice(s), conclusions from the evaluation, and whether and when the practice is planned for implementation by the municipality or group of municipalities.
- (3) Status Reports. Updates on high-priority storm drain areas. Status reports must be provided by each municipality that discuss the causes of impairment and subsequent management activities implemented within the reporting period in the high priority areas and the planned activities for the next reporting period.
- (4) Certification Statement. The technical reports submitted to the Regional Board must include the following certification statement signed by either the principal executive officer, ranking elected official, or duly authorized representative of that person:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

- c. The annual reports must be submitted until the Regional Board determines they are no longer warranted. If requested by a municipality, the monitoring program may be modified or reduced by the Regional Board. The monitoring program and annual reporting may be modified in response to adopted TMDLs and additional Clean Water Act 303(d) listings for impairment.
- d. Municipalities must continue meeting on a quarterly basis to discuss efforts to reduce bacteria in the Aliso Creek watershed.

H. FISCAL ANALYSIS

- 1. Secure Resources:** Each Copermittee must secure the resources necessary to meet all requirements of this Order.
- 2. Annual Analysis:** Each Copermittee must conduct an annual fiscal analysis of the necessary capital and operation and maintenance expenditures necessary to accomplish the activities of the programs required by this Order. The analysis must include estimated expenditures for the reporting period, the preceding period, and the next reporting period.
 - a.** Each analysis must include a description of the source of funds that are proposed to meet the necessary expenditures, including legal restrictions on the use of such funds.
 - b.** Each analysis must include a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items.
- 3. Annual Reporting:** Each Copermittee must submit its annual fiscal analysis with the annual JRMP report.

I. TOTAL MAXIMUM DAILY LOADS

The waste load allocations (WLAs) of fully approved and adopted TMDLs are incorporated as Water Quality Based Effluent Limitations on a pollutant by pollutant, watershed by watershed basis. Early TMDL requirements, including monitoring, may be required and inserted into this Order pursuant to Finding E.10

1. Baby Beach Bacterial Indicator TMDL Water Quality Based Effluent Limitations

- a. The Copermitees in the Baby Beach watershed shall implement BMPs capable of achieving the interim and final Bacterial Indicator Waste Load Allocations (WLAs) in discharges to Baby Beach as described in Table 6.

Table 6: TMDL Waste Load Reduction Milestones

<u>Action</u>	<u>Date</u>
Meet 50% wasteload reductions	3 years after effective date for dry weather
	7 years after effective date for wet weather
Meet 100% wasteload reductions	5 years after effective date for dry weather
	10 years after effective date for wet weather

- b. The Copermitees shall conduct necessary monitoring, as described in Attachment A to Resolution No. R9-2008-0027, and submit annual progress reports as part of their yearly reports.
- c. The following WLAs (Table 7) are to be met in Baby Beach receiving water by the end of the year 2019 for wet weather and 2014 for dry weather:

Table 7: Final Bacterial Indicator Waste Load Allocations for Baby Beach

<u>Bacterial Indicator</u>	<u>Waste Load Allocation</u>	
	Dry Weather (Billion MPN / Day)	Wet Weather (Billion MPN / 30 Days)
Total Coliform	0.86	3,254
Fecal Coliform	0.17	112
<i>Enterococcus</i>	0.03	114

MPN: Most Probable Number

- d. The Copermitees must meet the following Numeric Targets (Table 8) in Baby Beach receiving waters in order to meet the underlying assumptions of the TMDL. The Numeric Targets are to be met once 100 percent of the WLA reductions have been achieved (see Table 7 above).

Table 8: Final Bacterial Indicator Numeric Targets for Baby Beach

<u>Bacterial Indicator</u>	30-day geo mean (MPN / 100mL)	Single Sample Max (MPN / 100mL)
	Dry Weather only	Dry and Wet Weather
Total Coliform	1,000	10,000
Fecal Coliform	200	400
<i>Enterococcus</i>	35	104

MPN: Most Probable Number

J. PROGRAM EFFECTIVENESS ASSESSMENT AND REPORTING

1. Jurisdictional Program Effectiveness Assessments

a. OBJECTIVES OF EFFECTIVENESS ASSESSMENTS

Beginning with the Annual Report due in 2011, each Copermittee must annually assess the effectiveness of its Jurisdictional Runoff Management Program (JRMP) implementation at meeting the following objectives:

- (1) Objective for 303(d) Waterbodies: Reduce storm water pollutant loadings.
 - (a) Each Copermittee must establish annual assessment measures or methods specifically for reducing discharges of storm water pollutants from its MS4 into each downstream 303(d)-listed water body for which that waterbody is impaired. Assessment measures must be developed for each of the six outcome levels described by CASQA.²²
 - (b) Each Copermittee must annually conduct each established assessment measure or method and evaluate the outcome. Each outcome must then be used to assess the effectiveness of implemented management measures toward reducing MS4 discharges of the specific pollutants causing or contributing to conditions of impairment.
 - (c) The assessment measures must target both water quality outcomes and the results of municipal enforcement activities.
- (2) Objective for Environmentally-Sensitive Areas: Prevent storm water MS4 discharges from causing or contributing to conditions of pollution, nuisance, or contamination.
 - (a) Each Copermittee must establish annual measures or methods specifically for assessing the effectiveness of its management measures for protecting downstream ESAs from adverse effects caused by discharges from its MS4. Assessment measures must be developed for each of the six outcome levels described by CASQA.
 - (b) Each Copermittee must annually implement each established assessment measure or method and evaluate the outcome. Each outcome must be used to assess the effectiveness of implemented management measures toward reducing MS4 discharges of the specific pollutants causing or contributing to conditions of impairment.
 - (c) The assessment measures must target both water quality outcomes and the results of municipal enforcement activities.
- (3) Objectives for major program component outcomes: Determined by Each

²² Effectiveness assessment outcome levels as defined by CASQA are defined in Attachment C of this Order. See "*Municipal Stormwater Program Effectiveness Assessment Guidance*" (CASQA, May 2007) for guidance for assessing program activities at the various outcome levels.

Copermittee.

- (a) Each Copermittee must annually develop objectives for each program component in Section F and the overall JRMP. The objectives must be established as appropriate in response to program implementation and evaluation of water quality and management practices.
 - (b) Assessment approaches for program implementation must include a mix of specific activities, general program components, and water quality data.
 - (c) The assessment measures must target both water quality outcomes and the results of municipal enforcement activities.
- (4) Objectives for actions taken to protect receiving water limitations in accordance with this Order.
- (a) Each Copermittee must develop and implement an effectiveness assessment strategy for each measure conducted in response to a determination to implement the “iterative” approach to prevent or reduce any storm water pollutants that are causing or contributing to the exceedance of water quality standards as outlined in this Order

b. ASSESSMENT REVIEW

- (1) Based on the results of the effectiveness assessments, each Copermittee must annually review its jurisdictional activities and BMPs to identify modifications and improvements needed to maximize JRMP effectiveness, as necessary to achieve compliance with this Order.
- (2) Each Copermittee must develop and annually conduct an Integrated Assessment²³ of each effectiveness assessment objective above (Section J.1.a) and the overall JRMP using a combination of outcomes as appropriate to the objectives.²⁴

2. Program Modifications

- a. Each Copermittee must develop and implement a plan and schedule to address program modifications and improvements identified during annual effectiveness assessments.
- b. Jurisdictional activities/BMPs that are ineffective or less effective than other comparable jurisdictional activities/BMPs must be replaced or improved upon by implementation of more effective jurisdictional activities/BMPs. Where monitoring data exhibits persistent water quality problems that are caused or

²³ Integrated assessment is defined in Attachment C. It is the process of evaluating whether program implementation is resulting in the protection or improvement of water quality. Integrated assessment combines assessments of program implementation and water quality.

²⁴ Not all program components need be addressed at each of the six outcome levels.

contributed to by MS4 discharges, jurisdictional activities or BMPs applicable to the water quality problems must be modified and improved to correct the water quality problems.

3. Effectiveness Assessment and Program Response Reporting

- a. Each Copermittee must include a description and summary of its annual and long-term effectiveness assessments within each Annual Report. Beginning with the Annual Report due in 2011, the Program Effectiveness reporting must include:
- (1) 303(d) waterbodies: A description and results of the annual assessment measures or methods specifically for reducing discharges of storm water pollutants from its MS4 into each 303(d)-listed waterbody;
 - (2) ESAs: A description and results of the annual assessment measures or methods specifically for managing discharges of pollutants from its MS4 into each downstream ESA;
 - (3) Other Program Components: A description of the objectives and corresponding assessment measures and results used to evaluate the effectiveness of each general program component. The results must include findings from both program implementation and water quality assessment where applicable;
 - (4) Receiving water protection: A description and results of the annual assessment measures or methods employed specifically for actions taken to protect receiving water limitations in accordance with Section A.3 of this Order;
 - (5) A description of the steps taken to use dry-weather and wet-weather monitoring data to assess the effectiveness of the programs for 303(d) impairments, ESAs, and general program components;
 - (6) A description of activities conducted in response to investigations of illicit discharge and illicit connection activities, including how each investigation was resolved and the pollutant(s) involved;
 - (7) Responses to effectiveness assessments: A description of each program modification, made in response to the results of effectiveness assessments conducted pursuant to Section J.1.a, and the basis for determining (pursuant to Section J.2.b.) that each modified activity and/or BMP represents an improvement with respect to reducing the discharge of storm water pollutants from the MS4.
 - (8) A description of the steps that will be taken to improve the Copermittee's ability to assess program effectiveness using measurable targeted outcomes, assessment measures, assessment methods, and outcome levels 1-6. Include a time schedule for when improvement will occur; and
 - (9) A description of the steps that will be taken to identify aspects of the Copermittee's Jurisdictional Runoff Management Program that will be changed based on the results of the effectiveness assessment.

4. Work Plan

Each Copermittee must develop a work plan to address their high priority water quality problems in an iterative manner over the life of the permit. The goal of the work plan is to demonstrate a responsive and adaptive approach for the judicious and effective use of available resources to attack the highest priority problems. The work plan shall include, at a minimum, the following:

- a.** The problems and priorities identified during the assessment;
- b.** A list of priority pollutants and known or suspected sources;
- c.** A brief description of the strategy employed to reduce, eliminate or mitigate the negative impacts;
- d.** A description and schedule for new and/or modified BMPs. The schedule is to include dates for significant milestones;
- e.** A description of how the selected activities will address an identified high priority problem. This will include a description of the expected effectiveness and benefits of the new and/or modified BMPs;
- f.** A description of implementation effectiveness metrics;
- g.** A description of how efficacy results will be used to modify priorities and implementation; and
- h.** A review of past activities implemented, progress in meeting water quality standards, and planned program adjustments.

The Copermittee shall submit the work plan to the Regional Board within 365 days of adoption of the Order. Annual updates are also required and shall be included with the annual JRMP report. The Regional Board will assess the work plan for compliance with the specific and overall requirements of the Order. To increase effectiveness and efficiencies, Copermittees may combine their implementation efforts and work plans within a hydrologic area or sub area. Each Copermittee, however, maintains individual responsibility for developing and implementing an acceptable work plan.

K. REPORTING

The Copermittees may propose alternate reporting criteria and schedules, as part of their updated JRMP, for the Executive Officer's acceptance. The Copermittees shall submit the updated JRMP within 365 days after adoption of this Order.

1. Runoff Management Plans**a. JURISDICTIONAL RUNOFF MANAGEMENT PLANS**

- (1) Copermittees: The written account of the overall program to be conducted by each Copermittee to meet the jurisdictional requirements of section F of this Order is referred to as the Jurisdictional Runoff Management Plan (JRMP). Each Copermittee must revise and update its existing JRMP so that it describes all activities the Copermittee will undertake to implement the requirements of this Order. Each Copermittee must submit its updated and revised JRMP to the Regional Board 365 days after adoption of this Order.
- (2) At a minimum, each Copermittee's JRMP must be updated and revised to demonstrate compliance with each applicable section of this Order.

b. WATERSHED WORKPLANS

- (1) Copermittees: The written account of the program conducted by each watershed group of Copermittees is referred to as the Watershed Workplan. Copermittees within each watershed shall be responsible for updating and revising each Watershed Workplan. Each Watershed Workplan shall be updated and revised to describe any changes in water quality problems or priorities in the WMAs, and any necessary change to actions Copermittees will take to implement jurisdictional or watershed BMPs to address those identified.
- (2) Lead Watershed Copermittee: Each Lead Watershed Permittee shall be responsible for coordinating the production of the Watershed Workplan, as well as coordinating Annual Watershed Review Meetings and public participation/public noticing in accordance with the requirements of this Order. The Lead Watershed Permittee shall submit the Watershed Workplan to the Principal.
- (3) Principal Copermittee: The Principal Permittee shall assemble and submit the Watershed Workplan to the Regional Board no later than 365 days after adoption of this Order, and shall be prepared to implement the workplan within 60 days of the Regional Board Executive Officer deeming the workplan acceptable.

- (4) Each Watershed Workplan shall, at a minimum, include:
- (a) Identification of the Lead Watershed Permittee for the watershed.
 - (b) An updated watershed map.
 - (c) Identification and description of all applicable water quality data, reports, analyses, and other information to be used to assess receiving water quality.
 - (d) Assessment and analysis of the watershed's water quality data, reports, analyses, and other information, used during identification and prioritization of the watershed's water quality problems.
 - (e) A prioritized list of water quality problems within the WMA including rationale explaining the method/logic used to determine prioritization.
 - (f) Identification of the likely sources, pollutant discharges, and/or other factors causing the high priority water quality problems within the WMA.
 - (g) A description of the strategy to be used to guide Copermittee implementation of BMPs either jurisdictionally or on a watershed-wide basis to abate the highest water quality problems
 - (h) A list of criteria used to evaluate BMP effectiveness and how it was applied.
 - (i) A GIS map of BMPs implemented and BMPs scheduled for implementation.
 - (j) A description of the public participation mechanisms to be used and the parties anticipated to be involved during the development and implementation of the Watershed Workplan.
 - (k) A description of Copermittee collaboration to accomplish development of the Watershed Workplan, including a schedule for Watershed meetings.
 - (l) A description of how TMDLs and 303(d)-listed water bodies were considered during prioritization of watershed water quality problems
 - (m) A description of the strategy to model and monitor improvement in receiving water quality directly resulting from implementation of the BMPs described in the Watershed Workplan.
 - (n) A scheduled annual Watershed Workplan Review Meeting once every calendar year. This meeting shall be open to the public.

2. Other Required Reports and Plans

a. SSMP UPDATES

- (1) Copermittees must submit their updated model SSMP in accordance with the applicable requirements of section F.1 with the JRMP two years after adoption of this Order.
- (2) Within 180 days of determination that the Model SSMP is in compliance with this Permit's provisions, each Copermittee must update their own local SSMP, and amended ordinances consistent with the model SSMP, and shall submit both (local SSMP and amended ordinances) to the Regional Board.
- (3) For SSMP-related requirements of Section F.1 with subsequent

implementation due dates, updated SSMPs must be submitted with the JRMP annual report covering the applicable reporting period.

b. REPORT OF WASTE DISCHARGE

The Principal Copermittee must submit to the Regional Board, no later than 210 days in advance of the expiration date of this Order, a Report of Waste Discharge (ROWD) as an application for issuance of new waste discharge requirements. The fourth annual report for this Order may serve as the ROWD, provided it contains the minimum information below.

At a minimum, the ROWD must include the following: (1) Proposed changes to the Copermittees' runoff management programs; (2) Proposed changes to monitoring programs; (3) Justification for proposed changes; (4) Name and mailing addresses of the Copermittees; (5) Names and titles of primary contacts of the Copermittees; and (6) Any other information necessary for the reissuance of this Order.

3. Annual Reports

a. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM (JRMP) ANNUAL REPORTS

- (1) Copermittees: Each Copermittee must generate individual JRMP Annual Reports which cover implementation of its jurisdictional activities during the past annual reporting period. Each Annual Report must verify and document compliance with this Order as directed in this section. Each Copermittee must retain records through 2015, available for review, that document compliance with each requirement of this Order. Each Copermittee must submit to the Principal Copermittee its individual JRMP Annual Report by the date specified by the Principal Copermittee. The reporting period for these annual reports must be the previous fiscal year. For example, the report submitted September 30, 2010 must cover the reporting period July 1, 2009 to June 30, 2010.
- (2) Principal Copermittee: The Principal Copermittee is responsible for collecting and assembling each Copermittee's individual JRMP Annual Report. The Principal Copermittee must submit Unified JRMP Annual Reports to the Regional Board by September 30 of each year, beginning on September 30, 2011. The Unified JRMP Annual Report must contain the 13 individual JRMP Annual Reports.
- (3) Each JRMP Annual Report must contain, at a minimum, the following information:
 - (a) Information required to be reported annually in Section H (Fiscal Analysis) of this Order;

- (b) Information required to be reported annually in Section J (Program Effectiveness) of this Order;
- (c) The completed Reporting Checklist found in Attachment D, and
- (d) Information for each program component by watershed as described in the following Table 9:

Table 9. Annual Reporting Requirements

Program Component	Reporting Requirement
New Development	1. Updated relevant sections of the General Plan and environmental review process and a description of planned updates within the next annual reporting period, if applicable
	2. Revisions to the local SSMP, including where applicable: <ul style="list-style-type: none"> (a) Identification and summary of where the SSMP fails to meet the requirements of this Order; (b) Updated procedures for identifying pollutants of concern for each Priority Development Project; (c) Updated treatment BMP ranking matrix; and (d) Updated site design and treatment control BMP design standards;
	3. Verification that site design, source control, and treatment BMPs were required on all applicable Priority Development Projects;
	4. Description of the application of LID and site design BMPs in the planning and approval process;
	5. Description of projects subject to the local waiver provision for numeric sizing of treatment control BMP requirements;
	6. Description and summary of the LID site design BMP substitution program, if applicable;
	7. Description and summary of the process to verify compliance with SSMP requirements;
	8. Updates to the BMPs that are listed in the local SSMP as options for treatment control;
	9. Description of the treatment control maintenance tracking process and verification that the requirements of this Order were met during the reporting period; <ul style="list-style-type: none"> (a) Updated watershed-based database of approved treatment control BMPs and treatment control BMP maintenance within its jurisdiction, including updates to the list of high-priority treatment BMPs;
	10. Description of the process for identifying and evaluating hydrologic conditions of concern and requiring a suite of management measures within all Priority Development Projects to protect downstream beneficial uses and prevent adverse physical changes to downstream stream channels;
	11. Description of enforcement activities applicable to the new development and redevelopment component and a summary of the effectiveness of those activities;

Program Component	Reporting Requirement
Construction	1. Updated relevant ordinances and description of planned ordinance updates within the next annual reporting period, if applicable;
	2. A description of procedures used for identifying priorities for inspecting sites and enforcing control measures which consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality;
	3. Designated minimum and enhanced BMPs;
	4. Summary of the inspection program, including the following information: (a) Number and date of inspections conducted at each facility, including the facility address; (b) Number of facilities lacking adequate BMPs; (c) The BMP violations identified during the inspection by facility; (d) Number, date, and types of enforcement actions by facility; (e) Narrative description of inspection findings and follow-up activities for each facility;
Municipal	1. Updated source inventory;
	2. Changes to the designated municipal BMPs;
	3. Descriptions of procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies;
	4. Summary and assessment of BMPs implemented at retrofitted flood control structures, including: (a) List of projects with BMP retrofits; and (b) List and description of structures retrofitted without BMPs;
	5. Description and assessment of the municipal structural treatment control operations and maintenance activities, including: (a) Number of inspections and types of facilities; and (b) Summary of findings;
	6. Description of the municipal areas/facilities operations and maintenance activities, including: (a) Number and types of facilities maintained; (b) Amount of material removed and how that material was disposed; and (c) List of facilities planned for bi-annual inspections and the justification;
	7. Description of the municipal areas/programs inspection activities, including: (a) Number and date of inspections conducted at each facility; (b) Number of facilities lacking adequate BMPs; (c) The BMP violations identified during the inspection by facility; (d) Number, date and types of enforcement actions by facility; (e) Narrative description of inspection findings and follow-up activities for each facility;

Program Component	Reporting Requirement
	8. Description of activities implemented to address sewage infiltration into the MS4;
Commercial / Industrial	1. Annual inventory of commercial / industrial sources; 2. Summary of the inspection program, including the following information: (a) Number and date of inspections conducted at each facility including the facility address; (b) Number of facilities lacking adequate BMPs; (c) The BMP violations identified during the inspection by facility; (d) Number, date, and types of enforcement actions by facility; (e) Narrative description of inspection findings and follow-up activities for each facility; 3. Changes to designated minimum and enhanced BMPs; 4. A list of industrial sites, including each name, address, and SIC code, that the Copermittee suspects may require coverage under the General Industrial Permit, but has not submitted an NOI;
Residential	1. Updated minimum BMPs required for residential areas and activities;
	2. Quantification and summary of applicable runoff and storm water enforcement actions within residential areas and activities;
	3. Description of efforts to manage runoff and storm water pollution in common interest areas;
Illicit Discharge Detection and Elimination	1. Changes to the legal authority to implement Illicit Discharge Detection and Elimination activities; 2. Changes to the established investigation procedures; 3. Public reporting mechanisms, including phone numbers and web pages; 4. All data and assessments from the Dry Weather Effluent Analytical Monitoring activities; 5. Response criteria developed for water quality data and notifications; 6. Summaries of illicit discharges (including spills and water quality data events) and how each significant case was resolved; 7. A description of instances when field screening and analytical data exceeded action levels, but for which no investigation was conducted; 8. A description of enforcement actions taken in response to investigations of illicit discharges and a description of the effectiveness of those enforcement measures; 9. A description of controls to prevent infiltration of seepage from municipal sanitary sewers to municipal separate storm sewer systems;
Work Plan	Priorities, strategy, implementation schedule and effectiveness evaluation;

(4) Each JRMP Annual Report must also include the following information

regarding non-storm water discharges (see Section B.2. of this Order):

- (a) Identification of non-storm water discharge categories identified as a source of pollutants to waters of the U.S;
- (b) A description of ordinances, orders, or similar means to prohibit non-storm water discharge categories identified under section B.2 above ;
- (c) Identification of any control measures to be required and implemented for non-storm water discharge categories identified as needing said controls by the Regional Board; and
- (d) A description of a program to address pollutants from non-emergency fire fighting flows identified by the Copermittee to be significant sources of pollutants.

4. Interim Reporting Requirements

For the July 2009-June 2010 reporting period, the Jurisdictional RMP must be submitted on January 31, 2011. Each Jurisdictional RMP Annual Report submitted for this reporting period must, at a minimum, include comprehensive descriptions of all activities conducted to fully implement the Copermittees' Jurisdictional RMP documents, as those documents were developed to comply with the requirements of Order No. 2002-01. The Principal Copermittee must submit these documents in a unified manner, consistent with the unified reporting requirements of Order No. 2002-01.

5. Universal Reporting Requirements

All submittals must include an executive summary, introduction, conclusion, recommendations, and signed certified statement. Each Copermittee must submit a signed certified statement covering its responsibilities for each applicable submittal. The Principal Copermittee must submit a signed certified statement covering its responsibilities for each applicable submittal and the sections of the submittals for which it is responsible.

L. MODIFICATION OF PROGRAMS

Modifications of Jurisdictional Runoff Management Programs and/or Watershed Runoff Management Programs may be initiated by the Executive Officer of the Regional Board or by the Copermittees. Requests by Copermittees must be made to the Executive Officer, and must be submitted during the annual review process. Requests for modifications should be incorporated, as appropriate, into the Annual Reports or other deliverables required or allowed under this Order.

1. Minor Modifications: Minor modifications to Jurisdictional Runoff Management Programs, and/or Watershed Runoff Management Programs, may be accepted by the Executive Officer where the Executive Officer finds the proposed modification complies with all discharge prohibitions, receiving water limitations, and other requirements of this Order.
2. Modifications Requiring an Amendment to this Order: Proposed modifications that are not minor require amendment of this Order in accordance with this Order's rules, policies, and procedures.

M. PRINCIPAL COPERMITTEE RESPONSIBILITIES

Within 180 days of adoption of this Order, the Copermittees must designate the Principal Copermittee and notify the Regional Board of the name of the Principal Copermittee. The Principal Copermittee must, at a minimum:

1. Serve as liaison between the Copermittees and the Regional Board on general permit issues, and when necessary and appropriate, represent the Copermittees before the Regional Board.
2. Coordinate permit activities among the Copermittees and facilitate collaboration on the development and implementation of programs required under this Order.
3. Integrate individual Copermittee documents and reports into single unified documents and reports for submittal to the Regional Board as required under this Order.
4. Produce and submit documents and reports as required by section K of this Order and Receiving Waters and MS4 Discharge Monitoring and Reporting Program No. R9-2009-0002 in Attachment E of this Order.

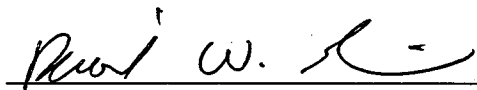

N. RECEIVING WATERS AND MS4 DISCHARGE MONITORING AND REPORTING PROGRAM

Pursuant to CWC section 13267, the Copermittees must comply with all the requirements contained in Receiving Waters and MS4 Discharge Monitoring and Reporting Program No. R9-2009-0002 in Attachment E of this Order.

O. STANDARD PROVISIONS, REPORTING REQUIREMENTS, AND NOTIFICATIONS

1. Each Copermittee must comply with Standard Provisions, Reporting Requirements, and Notifications contained in Attachment B of this Order. This includes 24 hour/5 day reporting requirements for any instance of non-compliance with this Order as described in section 5.e of Attachment B.
2. All plans, reports and subsequent amendments submitted in compliance with this Order must be implemented immediately (or as otherwise specified). All submittals by Copermittees must be adequate to implement the requirements of this Order.

I, David W. Gibson, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, San Diego Region, on December 16, 2009.

David W. Gibson
Executive Officer

CONSTITUTION OF THE STATE OF CALIFORNIA
Article XIII B. GOVERNMENT SPENDING LIMITATION

GO TO CALIFORNIA CODES ARCHIVE DIRECTORY

Cal Const, Art. XIII B § 6 (2016)

§ 6. Reimbursement for new programs and services

(a) Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service, except that the Legislature may, but need not, provide a subvention of funds for the following mandates:

(1) Legislative mandates requested by the local agency affected.

(2) Legislation defining a new crime or changing an existing definition of a crime.

(3) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.

(4) Legislative mandates contained in statutes within the scope of paragraph (7) of subdivision (b) of Section 3 of Article I. (b)

(1) Except as provided in paragraph (2), for the 2005-06 fiscal year and every subsequent fiscal year, for a mandate for which the costs of a local government claimant have been determined in a preceding fiscal year to be payable by the State pursuant to law, the Legislature shall either appropriate, in the annual Budget Act, the full payable amount that has not been previously paid, or suspend the operation of the mandate for the fiscal year for which the annual Budget Act is applicable in a manner prescribed by law.

(2) Payable claims for costs incurred prior to the 2004-05 fiscal year that have not been paid prior to the 2005-06 fiscal year may be paid over a term of years, as prescribed by law.

(3) Ad valorem property tax revenues shall not be used to reimburse a local government for the costs of a new program or higher level of service.

(4) This subdivision applies to a mandate only as it affects a city, county, city and county, or special district.

(5) This subdivision shall not apply to a requirement to provide or recognize any procedural or substantive protection, right, benefit, or employment status of any local government employee or retiree, or of any local government

employee organization, that arises from, affects, or directly relates to future, current, or past local government employment and that constitutes a mandate subject to this section. (c) A mandated new program or higher level of service includes a transfer by the Legislature from the State to cities, counties, cities and counties, or special districts of complete or partial financial responsibility for a required program for which the State previously had complete or partial financial responsibility.

HISTORY:

Adopted November 6, 1979. Amendment approved by voters, Prop. 1A, effective November 3, 2004; amendment approved by voters, Prop. 42, effective June 4, 2014.

CONSTITUTION OF THE STATE OF CALIFORNIA
Article XIII C. [VOTER APPROVAL FOR LOCAL TAX LEVIES]

GO TO CALIFORNIA CODES ARCHIVE DIRECTORY

Cal Const, Art. XIII C § 1 (2016)

§ 1. Definitions

As used in this article:

(a) "General tax" means any tax imposed for general governmental purposes.

(b) "Local government" means any county, city, city and county, including a charter city or county, any special district, or any other local or regional governmental entity.

(c) "Special district" means an agency of the state, formed pursuant to general law or a special act, for the local performance of governmental or proprietary functions with limited geographic boundaries including, but not limited to, school districts and redevelopment agencies.

(d) "Special tax" means any tax imposed for specific purposes, including a tax imposed for specific purposes, which is placed into a general fund.

(e) As used in this article, "tax" means any levy, charge, or exaction of any kind imposed by a local government, except the following:

(1) A charge imposed for a specific benefit conferred or privilege granted directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of conferring the benefit or granting the privilege.

(2) A charge imposed for a specific government service or product provided directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of providing the service or product.

(3) A charge imposed for the reasonable regulatory costs to a local government for issuing licenses and permits, performing investigations, inspections, and audits, enforcing agricultural marketing orders, and the administrative enforcement and adjudication thereof.

(4) A charge imposed for entrance to or use of local government property, or the purchase, rental, or lease of local

government property.

(5) A fine, penalty, or other monetary charge imposed by the judicial branch of government or a local government, as a result of a violation of law.

(6) A charge imposed as a condition of property development.

(7) Assessments and property-related fees imposed in accordance with the provisions of Article XIII D.

The local government bears the burden of proving by a preponderance of the evidence that a levy, charge, or other exaction is not a tax, that the amount is no more than necessary to cover the reasonable costs of the governmental activity, and that the manner in which those costs are allocated to a payor bear a fair or reasonable relationship to the payor's burdens on, or benefits received from, the governmental activity.

HISTORY:

Adopted by voters, Prop. 218 § 3, effective November 6, 1996. Amendment approved by voters, Prop. 26 § 3, effective November 3, 2010.

CONSTITUTION OF THE STATE OF CALIFORNIA
Article XIII C. [VOTER APPROVAL FOR LOCAL TAX LEVIES]

GO TO CALIFORNIA CODES ARCHIVE DIRECTORY

Cal Const, Art. XIII C § 2 (2016)

§ 2. Local government tax limitation

Notwithstanding any other provision of this Constitution:

(a) All taxes imposed by any local government shall be deemed to be either general taxes or special taxes. Special purpose districts or agencies, including school districts, shall have no power to levy general taxes.

(b) No local government may impose, extend, or increase any general tax unless and until that tax is submitted to the electorate and approved by a majority vote. A general tax shall not be deemed to have been increased if it is imposed at a rate not higher than the maximum rate so approved. The election required by this subdivision shall be consolidated with a regularly scheduled general election for members of the governing body of the local government, except in cases of emergency declared by a unanimous vote of the governing body.

(c) Any general tax imposed, extended, or increased, without voter approval, by any local government on or after January 1, 1995, and prior to the effective date of this article, shall continue to be imposed only if approved by a majority vote of the voters voting in an election on the issue of the imposition, which election shall be held within two years of the effective date of this article and in compliance with subdivision (b).

(d) No local government may impose, extend, or increase any special tax unless and until that tax is submitted to the electorate and approved by a two-thirds vote. A special tax shall not be deemed to have been increased if it is imposed at a rate not higher than the maximum rate so approved.

HISTORY:

Adopted by voters, Prop. 218 § 3, effective November 6, 1996.

CONSTITUTION OF THE STATE OF CALIFORNIA
Article XIII D. [ASSESSMENT AND PROPERTY RELATED FEE REFORM]

GO TO CALIFORNIA CODES ARCHIVE DIRECTORY

Cal Const, Art. XIII D § 2 (2016)

§ 2. Definitions

As used in this article:

(a) "Agency" means any local government as defined in subdivision (b) of Section 1 of Article XIII C.

(b) "Assessment" means any levy or charge upon real property by an agency for a special benefit conferred upon the real property. "Assessment" includes, but is not limited to, "special assessment," "benefit assessment," "maintenance assessment" and "special assessment tax."

(c) "Capital cost" means the cost of acquisition, installation, construction, reconstruction, or replacement of a permanent public improvement by an agency.

(d) "District" means an area determined by an agency to contain all parcels which will receive a special benefit from a proposed public improvement or property-related service.

(e) "Fee" or "charge" means any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property related service.

(f) "Maintenance and operation expenses" means the cost of rent, repair, replacement, rehabilitation, fuel, power, electrical current, care, and supervision necessary to properly operate and maintain a permanent public improvement.

(g) "Property ownership" shall be deemed to include tenancies of real property where tenants are directly liable to pay the assessment, fee, or charge in question.

(h) "Property-related service" means a public service having a direct relationship to property ownership.

(i) "Special benefit" means a particular and distinct benefit over and above general benefits conferred on real property located in the district or to the public at large. General enhancement of property value does not constitute "special benefit."

CONSTITUTION OF THE STATE OF CALIFORNIA
Article XIII D. [ASSESSMENT AND PROPERTY RELATED FEE REFORM]

GO TO CALIFORNIA CODES ARCHIVE DIRECTORY

Cal Const, Art. XIII D § 6 (2016)

§ 6. Property related fees and charges

(a) Procedures for New or Increased Fees and Charges. An agency shall follow the procedures pursuant to this section in imposing or increasing any fee or charge as defined pursuant to this article, including, but not limited to, the following:

(1) The parcels upon which a fee or charge is proposed for imposition shall be identified. The amount of the fee or charge proposed to be imposed upon each parcel shall be calculated. The agency shall provide written notice by mail of the proposed fee or charge to the record owner of each identified parcel upon which the fee or charge is proposed for imposition, the amount of the fee or charge proposed to be imposed upon each, the basis upon which the amount of the proposed fee or charge was calculated, the reason for the fee or charge, together with the date, time, and location of a public hearing on the proposed fee or charge.

(2) The agency shall conduct a public hearing upon the proposed fee or charge not less than 45 days after mailing the notice of the proposed fee or charge to the record owners of each identified parcel upon which the fee or charge is proposed for imposition. At the public hearing, the agency shall consider all protests against the proposed fee or charge. If written protests against the proposed fee or charge are presented by a majority of owners of the identified parcels, the agency shall not impose the fee or charge.

(b) Requirements for Existing, New or Increased Fees and Charges. A fee or charge shall not be extended, imposed, or increased by any agency unless it meets all of the following requirements:

(1) Revenues derived from the fee or charge shall not exceed the funds required to provide the property related service.

(2) Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed.

(3) The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel.

(4) No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question. Fees or charges based on potential or future use of a service are not permitted.

Standby charges, whether characterized as charges or assessments, shall be classified as assessments and shall not be imposed without compliance with Section 4.

(5) No fee or charge may be imposed for general governmental services including, but not limited to, police, fire, ambulance or library services, where the service is available to the public at large in substantially the same manner as it is to property owners.

Reliance by an agency on any parcel map, including, but not limited to, an assessor's parcel map, may be considered a significant factor in determining whether a fee or charge is imposed as an incident of property ownership for purposes of this article. In any legal action contesting the validity of a fee or charge, the burden shall be on the agency to demonstrate compliance with this article.

(c) Voter Approval for New or Increased Fees and Charges. Except for fees or charges for sewer, water, and refuse collection services, no property related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area. The election shall be conducted not less than 45 days after the public hearing. An agency may adopt procedures similar to those for increases in assessments in the conduct of elections under this subdivision.

(d) Beginning July 1, 1997, all fees or charges shall comply with this section.

TITLE 33. NAVIGATION AND NAVIGABLE WATERS
CHAPTER 26. WATER POLLUTION PREVENTION AND CONTROL
STANDARDS AND ENFORCEMENT

Go to the United States Code Service Archive Directory

33 USCS § 1311

§ 1311. Effluent limitations

(a) Illegality of pollutant discharges except in compliance with law. Except as in compliance with this section and sections 302, 306, 307, 318, 402, and 404 of this Act [33 USCS §§ 1312, 1316, 1317, 1328, 1342, 1344], the discharge of any pollutant by any person shall be unlawful.

(b) Timetable for achievement of objectives. In order to carry out the objective of this Act there shall be achieved--

(1) (A) not later than July 1, 1977, effluent limitations for point sources, other than publicly owned treatment works, (i) which shall require the application of the best practicable control technology currently available as defined by the Administrator pursuant to section 304(b) of this Act [33 USCS § 1314(b)], or (ii) in the case of a discharge into a publicly owned treatment works which meets the requirements of subparagraph (B) of this paragraph, which shall require compliance with any applicable pretreatment requirements and any requirements under section 307 of this Act [33 USCS § 1317]; and

(B) for publicly owned treatment works in existence on July 1, 1977, or approved pursuant to section 203 of this Act [33 USCS § 1283] prior to June 30, 1974 (for which construction must be completed within four years of approval), effluent limitations based upon secondary treatment as defined by the Administrator pursuant to section 304(d)(1) of this Act [33 USCS § 1314(d)(1)]; or,

(C) not later than July 1, 1977, any more stringent limitation, including those necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 510 [33 USCS § 1370]) or any other Federal law or regulation, or required to implement any applicable water quality standard established pursuant to this Act.

(2) (A) for pollutants identified in subparagraphs (C), (D), and (F) of this paragraph, effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which (i) shall require application of the best available technology economically achievable for such category or class, which will result in reasonable further progress toward the national goal of eliminating the discharge of all pollutants, as determined in accordance with regulations issued by the Administrator pursuant to section 304(b)(2) of this Act [33 USCS § 1314(b)(2)], which such effluent limitations shall require the elimination of discharges of all pollutants if the Administrator finds, on the basis of information available to him (including information developed pursuant to section 315 [33 USCS § 1325]), that such elimination is technologically and economically achievable for a category or class of point sources as determined in accordance with regulations issued by the Administrator pursuant to section 304(b)(2) of this Act [33 USCS § 1314(b)(2)], or (ii) in the case of the introduction of a pollutant into a publicly owned treatment works which meets the requirements of subparagraph (B) of this paragraph, shall require compliance with any applicable pretreatment requirements and any other requirement under section 307 of this Act [33 USCS § 1317];

(B) [Repealed]

(C) with respect to all toxic pollutants referred to in table 1 of Committee Print Numbered 95-30 of the Committee on Public Works and Transportation of the House of Representatives compliance with effluent limitations in ac-

33 USCS § 1311

cordance with subparagraph (A) of this paragraph as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 304(b) [33 USCS § 1314(b)], and in no case later than March 31, 1989;

(D) for all toxic pollutants listed under paragraph (1) of subsection (a) of section 307 of this Act [33 USCS § 1317] which are not referred to in subparagraph (C) of this paragraph compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable, but in no case later than three years after the date such limitations are promulgated under section 304(b) [33 USCS § 1314(b)], and in no case later than March 31, 1989;

(E) as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 304(b) [33 USCS § 1314(b)], and in no case later than March 31, 1989, compliance with effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which in the case of pollutants identified pursuant to section 304(a)(4) of this Act [33 USCS § 1314(a)(4)] shall require application of the best conventional pollutant control technology as determined in accordance with regulations issued by the Administrator pursuant to section 304(b)(4) of this Act [33 USCS § 1314(b)(4)]; and

(F) for all pollutants (other than those subject to subparagraphs (C), (D), or (E) of this paragraph) compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable but in no case later than 3 years after the date such limitations are established, and in no case later than March 31, 1989.

(3) (A) for effluent limitations under paragraph (1)(A)(i) of this subsection promulgated after January 1, 1982, and requiring a level of control substantially greater or based on fundamentally different control technology than under permits for an industrial category issued before such date, compliance as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 304(b) [33 USCS § 1314(b)], and in no case later than March 31, 1989; and

(B) for any effluent limitation in accordance with paragraph (1)(A)(i), (2)(A)(i), or (2)(E) of this subsection established only on the basis of section 402(a)(1) [33 USCS § 1342(a)(1)] in a permit issued after enactment of the Water Quality Act of 1987 [enacted Feb. 4, 1987], compliance as expeditiously as practicable but in no case later than three years after the date such limitations are established, and in no case later than March 31, 1989.

(c) Modification of timetable. The Administrator may modify the requirements of subsection (b)(2)(A) of this section with respect to any point source for which a permit application is filed after July 1, 1977, upon a showing by the owner or operator of such point source satisfactory to the Administrator that such modified requirements (1) will represent the maximum use of technology within the economic capability of the owner or operator; and (2) will result in reasonable further progress toward the elimination of the discharge of pollutants.

(d) Review and revision of effluent limitations. Any effluent limitation required by paragraph (2) of subsection (b) of this section shall be reviewed at least every five years and, if appropriate, revised pursuant to the procedure established under such paragraph.

(e) All point discharge source application of effluent limitations. Effluent limitations established pursuant to this section or section 302 of this Act [33 USCS § 1312] shall be applied to all point sources of discharge of pollutants in accordance with the provisions of this Act [33 USCS §§ 1251 et seq.].

(f) Illegality of discharge of radiological, chemical, or biological warfare agents, high-level radioactive waste or medical waste. Notwithstanding any other provisions of this Act [33 USCS §§ 1251 et seq.] it shall be unlawful to discharge any radiological, chemical, or biological warfare agent, any high-level radioactive waste, or any medical waste, into the navigable waters.

(g) Modifications for certain nonconventional pollutants.

(1) General authority. The Administrator, with the concurrence of the State, may modify the requirements of subsection (b)(2)(A) of this section with respect to the discharge from any point source of ammonia, chlorine, color, iron, and total phenols (4AAP) (when determined by the Administrator to be a pollutant covered by subsection (b)(2)(F)) and any other pollutant which the Administrator lists under paragraph (4) of this subsection.

(2) Requirements for granting modifications. A modification under this subsection shall be granted only upon a showing by the owner or operator of a point source satisfactory to the Administrator that--

(A) such modified requirements will result at a minimum in compliance with the requirements of subsection (b)(1)(A) or (C) of this section, whichever is applicable;

33 USCS § 1311

(B) such modified requirements will not result in any additional requirements on any other point or nonpoint source; and

(C) such modification will not interfere with the attainment or maintenance of that water quality which shall assure protection of public water supplies, and the protection and propagation of a balanced population of shellfish, fish, and wildlife, and allow recreational activities, in and on the water and such modification will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity or teratogenicity), or synergistic propensities.

(3) Limitation on authority to apply for subsection (c) modification. If an owner or operator of a point source applies for a modification under this subsection with respect to the discharge of any pollutant, such owner or operator shall be eligible to apply for modification under subsection (c) of this section with respect to such pollutant only during the same time period as he is eligible to apply for a modification under this subsection.

(4) Procedures for listing additional pollutants.

(A) General authority. Up on petition of any person, the Administrator may add any pollutant to the list of pollutants for which modification under this section is authorized (except for pollutants identified pursuant to section 304(a)(4) of this Act [33 USCS § 1314(a)(4)], toxic pollutants subject to section 307(a) of this Act [33 USCS § 1317(a)], and the thermal component of discharges) in accordance with the provisions of this paragraph.

(B) Requirements for listing.

(i) Sufficient information. The person petitioning for listing of an additional pollutant under this subsection shall submit to the Administrator sufficient information to make the determinations required by this subparagraph.

(ii) Toxic criteria determination. The Administrator shall determine whether or not the pollutant meets the criteria for listing as a toxic pollutant under section 307(a) of this Act [33 USCS § 1317(a)].

(iii) Listing as toxic pollutant. If the Administrator determines that the pollutant meets the criteria for listing as a toxic pollutant under section 307(a) [33 USCS § 1317(a)], the Administrator shall list the pollutant as a toxic pollutant under section 307(a) [33 USCS § 1317(a)].

(iv) Nonconventional criteria determination. If the Administrator determines that the pollutant does not meet the criteria for listing as a toxic pollutant under such section and determines that adequate test methods and sufficient data are available to make the determinations required by paragraph (2) of this subsection with respect to the pollutant, the Administrator shall add the pollutant to the list of pollutants specified in paragraph (1) of this subsection for which modifications are authorized under this subsection.

(C) Requirements for filing of petitions. A petition for listing of a pollutant under this paragraph--

(i) must be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under section 304 [33 USCS § 1314];

(ii) may be filed before promulgation of such guideline; and

(iii) may be filed with an application for a modification under paragraph (1) with respect to the discharge of such pollutant.

(D) Deadline for approval of petition. A decision to add a pollutant to the list of pollutants for which modifications under this subsection are authorized must be made within 270 days after the date of promulgation of an applicable effluent guideline under section 304 [33 USCS § 1314].

(E) Burden of proof. The burden of proof for making the determinations under subparagraph (B) shall be on the petitioner.

(5) Removal of pollutants. The Administrator may remove any pollutant from the list of pollutants for which modifications are authorized under this subsection if the Administrator determines that adequate test methods and sufficient data are no longer available for determining whether or not modifications may be granted with respect to such pollutant under paragraph (2) of this subsection.

(h) Modification of secondary treatment requirements. The Administrator, with the concurrence of the State, may issue a permit under section 402 [33 USCS § 1342] which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant from a publicly owned treatment works into marine waters, if the applicant demonstrates to the satisfaction of the Administrator that--

(1) there is an applicable water quality standard specific to the pollutant for which the modification is requested, which has been identified under section 304(a)(6) of this Act [33 USCS § 1314(a)(6)];

(2) the discharge of pollutants in accordance with such modified requirements will not interfere, alone or in combination with pollutants from other sources, with the attainment or maintenance of that water quality which assures pro-

33 USCS § 1311

tection of public water supplies and the protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife, and allows recreational activities, in and on the water;

(3) the applicant has established a system for monitoring the impact of such discharge on a representative sample of aquatic biota, to the extent practicable, and the scope of such monitoring is limited to include only those scientific investigations which are necessary to study the effects of the proposed discharge;

(4) such modified requirements will not result in any additional requirements on any other point or nonpoint source;

(5) all applicable pretreatment requirements for sources introducing waste into such treatment works will be enforced;

(6) in the case of any treatment works serving a population of 50,000 or more, with respect to any toxic pollutant introduced into such works by an industrial discharger for which pollutant there is no applicable pretreatment requirement in effect, sources introducing waste into such works are in compliance with all applicable pretreatment requirements, the applicant will enforce such requirements, and the applicant has in effect a pretreatment program which, in combination with the treatment of discharges from such works, removes the same amount of such pollutant as would be removed if such works were to apply secondary treatment to discharges and if such works had no pretreatment program with respect to such pollutant;

(7) to the extent practicable, the applicant has established a schedule of activities designed to eliminate the entrance of toxic pollutants from nonindustrial sources into such treatment works;

(8) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

(9) the applicant at the time such modification becomes effective will be discharging effluent which has received at least primary or equivalent treatment and which meets the criteria established under section 304(a)(1) of this Act [33 USCS § 1314(a)(1)] after initial mixing in the waters surrounding or adjacent to the point at which such effluent is discharged.

For the purposes of this subsection the phrase "the discharge of any pollutant into marine waters" refers to a discharge into deep waters of the territorial sea or the waters of the contiguous zone, or into saline estuarine waters where there is strong tidal movement and other hydrological and geological characteristics which the Administrator determines necessary to allow compliance with paragraph (2) of this subsection, and section 101(a)(2) of this Act [33 USCS § 1251(a)(2)]. For the purposes of paragraph (9), "primary or equivalent treatment" means treatment by screening, sedimentation, and skimming adequate to remove at least 30 percent of the biological oxygen demanding material and of the suspended solids in the treatment works influent, and disinfection, where appropriate. A municipality which applies secondary treatment shall be eligible to receive a permit pursuant to this subsection which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant from any treatment works owned by such municipality into marine waters. No permit issued under this subsection shall authorize the discharge of sewage sludge into marine waters. In order for a permit to be issued under this subsection for the discharge of a pollutant into marine waters, such marine waters must exhibit characteristics assuring that water providing dilution does not contain significant amounts of previously discharged effluent from such treatment works. No permit issued under this subsection shall authorize the discharge of any pollutant into saline estuarine waters which at the time of application do not support a balanced indigenous population of shellfish, fish and wildlife, or allow recreation in and on the waters or which exhibit ambient water quality below applicable water quality standards adopted for the protection of public water supplies, shellfish, fish and wildlife or recreational activities or such other standards necessary to assure support and protection of such uses. The prohibition contained in the preceding sentence shall apply without regard to the presence or absence of a causal relationship between such characteristics and the applicant's current or proposed discharge. Notwithstanding any other provisions of this subsection, no permit may be issued under this subsection for discharge of a pollutant into the New York Bight Apex consisting of the ocean waters of the Atlantic Ocean westward of 73 degrees 30 minutes west longitude and northward of 40 degrees 10 minutes north latitude.

(i) Municipal time extensions.

(1) Where construction is required in order for a planned or existing publicly owned treatment works to achieve limitations under subsection (b)(1)(B) or (b)(1)(C) of this section, but (A) construction cannot be completed within the time required in such subsection, or (B) the United States has failed to make financial assistance under this Act [33 USCS §§ 1251 et seq.] available in time to achieve such limitations by the time specified in such subsection, the owner or operator of such treatment works may request the Administrator (or if appropriate the State) to issue a permit pursuant to section 402 of this Act [33 USCS § 1342] or to modify a permit issued pursuant to that section to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after the

33 USCS § 1311

date of enactment of the Water Quality Act of 1987 [enacted Feb. 7, 1987]. The Administrator (or if appropriate the State) may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the publicly owned treatment works based on the earliest date by which such financial assistance will be available from the United States and construction can be completed, but in no event later than July 1, 1988, and shall contain such other terms and conditions, including those necessary to carry out subsections (b) through (g) of section 201 of this Act [33 USCS § 1281(b)-(g)], section 307 of this Act [33 USCS § 1317], and such interim effluent limitations applicable to that treatment works as the Administrator determines are necessary to carry out the provisions of this Act [33 USCS §§ 1251 et seq.].

(2) (A) Where a point source (other than a publicly owned treatment works) will not achieve the requirements of subsections (b)(1)(A) and (b)(1)(C) of this section and--

(i) if a permit issued prior to July 1, 1977, to such point source is based upon a discharge into a publicly owned treatment works; or

(ii) if such point source (other than a publicly owned treatment works) had before July 1, 1977, a contract (enforceable against such point source) to discharge into a publicly owned treatment works; or

(iii) if either an application made before July 1, 1977, for a construction grant under this Act [33 USCS §§ 1251 et seq.] for a publicly owned treatment works, or engineering or architectural plans or working drawings made before July 1, 1977, for a publicly owned treatment works, show that such point source was to discharge into such publicly owned treatment works,

and such publicly owned treatment works is presently unable to accept such discharge without construction, and in the case of a discharge to an existing publicly owned treatment works, such treatment works has an extension pursuant to paragraph (1) of this subsection, the owner or operator of such point source may request the Administrator (or if appropriate the State) to issue or modify such a permit pursuant to such section 402 [33 USCS § 1342] to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after the date of enactment of this subsection [enacted Dec. 27, 1977] or the filing of a request by the appropriate publicly owned treatment works under paragraph (1) of this subsection, whichever is later. If the Administrator (or if appropriate the State) finds that the owner or operator of such point source has acted in good faith, he may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the point source to achieve the requirements of subsections (b)(1)(A) and (C) of this section and shall contain such other terms and conditions, including pretreatment and interim effluent limitations and water conservation requirements applicable to that point source, as the Administrator determines are necessary to carry out the provisions of this Act [33 USCS §§ 1251 et seq.].

(B) No time modification granted by the Administrator (or if appropriate the State) pursuant to paragraph (2)(A) of this subsection shall extend beyond the earliest date practicable for compliance or beyond the date of any extension granted to the appropriate publicly owned treatment works pursuant to paragraph (1) of this subsection, but in no event shall it extend beyond July 1, 1988; and no such time modification shall be granted unless (i) the publicly owned treatment works will be in operation and available to the point source before July 1, 1988, and will meet the requirements of subsections (b)(1)(B) and (C) of this section after receiving the discharge from that point source; and (ii) the point source and the publicly owned treatment works have entered into an enforceable contract requiring the point source to discharge into the publicly owned treatment works, the owner or operator of such point source to pay the costs required under section 204 of this Act [33 USCS § 1284], and the publicly owned treatment works to accept the discharge from the point source; and (iii) the permit for such point source requires that point source to meet all requirements under section 307(a) and (b) [33 USCS § 1317(a), (b)] during the period of such time modification.

(j) Modification procedures.

(1) Any application filed under this section for a modification of the provisions of--

(A) subsection (b)(1)(B) under subsection (h) of this section shall be filed not later than [than] the 365th day which begins after the date of enactment of the Municipal Wastewater Treatment Construction Grant Amendments of 1981 [enacted Dec. 29, 1981], except that a publicly owned treatment works which prior to December 31, 1982, had a contractual arrangement to use a portion of the capacity of an ocean outfall operated by another publicly owned treatment works which has applied for or received modification under subsection (h), may apply for a modification of subsection (h) in its own right not later than 30 days after the date of the enactment of the Water Quality Act of 1987 [enacted Feb. 7, 1987], and except as provided in paragraph (5);

(B) subsection (b)(2)(A) as it applies to pollutants identified in subsection (b)(2)(F) shall be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under section 304 [33 USCS § 1314] or not later than 270 days after the date of enactment of the Clean Water Act of 1977 [enacted Dec. 27, 1977], whichever is later.

(2) Subject to paragraph (3) of this section, any application for a modification filed under subsection (g) of this section shall not operate to stay any requirement under this Act [33 USCS §§ 1251 et seq.], unless in the judgment of the Administrator such a stay or the modification sought will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity, or teratogenicity), or synergistic propensities, and that there is a substantial likelihood that the applicant will succeed on the merits of such application. In the case of an application filed under subsection (g) of this section, the Administrator may condition any stay granted under this paragraph on requiring the filing of a bond or other appropriate security to assure timely compliance with the requirements from which a modification is sought.

(3) Compliance requirements under subsection (g).

(A) Effect of filing. An application for a modification under subsection (g) and a petition for listing of a pollutant as a pollutant for which modifications are authorized under such subsection shall not stay the requirement that the person seeking such modification or listing comply with effluent limitations under this Act [33 USCS §§ 1251 et seq.] for all pollutants not the subject of such application or petition.

(B) Effect of disapproval. Disapproval of an application for a modification under subsection (g) shall not stay the requirement that the person seeking such modification comply with all applicable effluent limitations under this Act [33 USCS §§ 1251 et seq.].

(4) Deadline for subsection (g) decision. An application for a modification with respect to a pollutant filed under subsection (g) must be approved or disapproved not later than 365 days after the date of such filing; except that in any case in which a petition for listing such pollutant as a pollutant for which modifications are authorized under such subsection is approved, such application must be approved or disapproved not later than 365 days after the date of approval of such petition.

(5) Extension of application deadline.

(A) In general. In the 180-day period beginning on the date of the enactment of this paragraph [enacted Oct. 31, 1994], the city of San Diego, California, may apply for a modification pursuant to subsection (h) of the requirements of subsection (b)(1)(B) with respect to biological oxygen demand and total suspended solids in the effluent discharged into marine waters.

(B) Application. An application under this paragraph shall include a commitment by the applicant to implement a waste water reclamation program that, at a minimum, will--

- (i) achieve a system capacity of 45,000,000 gallons of reclaimed waste water per day by January 1, 2010; and
- (ii) result in a reduction in the quantity of suspended solids discharged by the applicant into the marine environment during the period of the modification.

(C) Additional conditions. The Administrator may not grant a modification pursuant to an application submitted under this paragraph unless the Administrator determines that such modification will result in removal of not less than 58 percent of the biological oxygen demand (on an annual average) and not less than 80 percent of total suspended solids (on a monthly average) in the discharge to which the application applies. A

(D) Preliminary decision deadline. The Administrator shall announce a preliminary decision on an application submitted under this paragraph not later than 1 year after the date the application is submitted.

(k) Innovative technology. In the case of any facility subject to a permit under section 402 [33 USCS § 1342] which proposes to comply with the requirements of subsection (b)(2)(A) or (b)(2)(E) of this section by replacing existing production capacity with an innovative production process which will result in an effluent reduction significantly greater than that required by the limitation otherwise applicable to such facility and moves toward the national goal of eliminating the discharge of all pollutants, or with the installation of an innovative control technique that has a substantial likelihood for enabling the facility to comply with the applicable effluent limitation by achieving a significantly greater effluent reduction than that required by the applicable effluent limitation and moves toward the national goal of eliminating the discharge of all pollutants, or by achieving the required reduction with an innovative system that has the potential for significantly lower costs than the systems which have been determined by the Administrator to be economically achievable, the Administrator (or the State with an approved program under section 402 [33 USCS § 1342], in consultation with the Administrator) may establish a date for compliance under subsection (b)(2)(A) or (b)(2)(E) of this section no later than two years after the date for compliance with such effluent limitation which would otherwise be applicable under such subsection, if it is also determined that such innovative system has the potential for industry-wide application.

33 USCS § 1311

(l) Toxic pollutants. Other than as provided in subsection (n) of this section, the Administrator may not modify any requirement of this section as it applies to any specific pollutant which is on the toxic pollutant list under section 307(a)(1) of this Act [33 USCS § 1317(a)(1)].

(m) Modification of effluent limitation requirements for point sources.

(1) The Administrator, with the concurrence of the State, may issue a permit under section 402 [33 USCS § 1342] which modifies the requirements of subsections (b)(1)(A) and (b)(2)(E) of this section, and of section 403 [33 USCS § 1343], with respect to effluent limitations to the extent such limitations relate to biochemical oxygen demand and pH from discharges by an industrial discharger in such State into deep waters of the territorial seas, if the applicant demonstrates and the Administrator finds that--

(A) the facility for which modification is sought is covered at the time of the enactment of this subsection [enacted Jan. 8, 1983] by National Pollutant Discharge Elimination System permit number CA0005894 or CA0005282;

(B) the energy and environmental costs of meeting such requirements of subsections (b)(1)(A) and (b)(2)(E) and section 403 [33 USCS § 1343] exceed by an unreasonable amount the benefits to be obtained, including the objectives of this Act [33 USCS §§ 1251 et seq.];

(C) the applicant has established a system for monitoring the impact of such discharges on a representative sample of aquatic biota;

(D) such modified requirements will not result in any additional requirements on any other point or nonpoint source;

(E) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

(F) the discharge is into waters where there is strong tidal movement and other hydrological and geological characteristics which are necessary to allow compliance with this subsection and section 101(a)(2) of this Act [33 USCS § 1251(a)(2)];

(G) the applicant accepts as a condition to the permit a contractual [contractual] obligation to use funds in the amount required (but not less than \$ 250,000 per year for ten years) for research and development of water pollution control technology, including but not limited to closed cycle technology;

(H) the facts and circumstances present a unique situation which, if relief is granted, will not establish a precedent or the relaxation of the requirements of this Act [33 USCS §§ 1251 et seq.] applicable to similarly situated discharges; and

(I) no owner or operator of a facility comparable to that of the applicant situated in the United States has demonstrated that it would be put at a competitive disadvantage to the applicant (or the parent company or any subsidiary thereof) as a result of the issuance of a permit under this subsection.

(2) The effluent limitations established under a permit issued under paragraph (1) shall be sufficient to implement the applicable State water quality standards, to assure the protection of public water supplies and protection and propagation of a balanced, indigenous population of shellfish, fish, fauna, wildlife, and other aquatic organisms, and to allow recreational activities in and on the water. In setting such limitations, the Administrator shall take into account any seasonal variations and the need for an adequate margin of safety, considering the lack of essential knowledge concerning the relationship between effluent limitations and water quality and the lack of essential knowledge of the effects of discharges on beneficial uses of the receiving waters.

(3) A permit under this subsection may be issued for a period not to exceed five years, and such a permit may be renewed for one additional period not to exceed five years upon a demonstration by the applicant and a finding by the Administrator at the time of application for any such renewal that the provisions of this subsection are met.

(4) The Administrator may terminate a permit issued under this subsection if the Administrator determines that there has been a decline in ambient water quality of the receiving waters during the period of the permit even if a direct cause and effect relationship cannot be shown: *Provided*, That if the effluent from a source with a permit issued under this subsection is contributing to a decline in ambient water quality of the receiving waters, the Administrator shall terminate such permit.

(n) Fundamentally different factors.

(1) General rule. The Administrator, with the concurrence of the State, may establish an alternative requirement under subsection (b)(2) or section 307(b) [33 USCS § 1317(b)] for a facility that modifies the requirements of national effluent limitation guidelines or categorical pretreatment standards that would otherwise be applicable to such facility, if the owner or operator of such facility demonstrates to the satisfaction of the Administrator that--

33 USCS § 1311

(A) the facility is fundamentally different with respect to the factors (other than cost) specified in section 304(b) or 304(g) and considered by the Administrator in establishing such national effluent limitation guidelines or categorical pretreatment standards;

(B) the application--

(i) is based solely on information and supporting data submitted to the Administrator during the rule-making for establishment of the applicable national effluent limitation guidelines or categorical pretreatment standard specifically raising the factors that are fundamentally different for such facility; or

(ii) is based on information and supporting data referred to in clause (i) and information and supporting data the applicant did not have a reasonable opportunity to submit during such rulemaking;

(C) the alternative requirement is no less stringent than justified by the fundamental difference; and

(D) the alternative requirement will not result in a nonwater quality environmental impact which is markedly more adverse than the impact considered by the Administrator in establishing such national effluent limitation guideline or categorical pretreatment standard.

(2) Time limit for applications. An application for an alternative requirement which modifies the requirements of an effluent limitation or pretreatment standard under this subsection must be submitted to the Administrator within 180 days after the date on which such limitation or standard is established or revised, as the case may be.

(3) Time limit for decision. The Administrator shall approve or deny by final agency action an application submitted under this subsection within 180 days after the date such application is filed with the Administrator.

(4) Submission of information. The Administrator may allow an applicant under this subsection to submit information and supporting data until the earlier of the date the application is approved or denied or the last day that the Administrator has to approve or deny such application.

(5) Treatment of pending applications. For the purposes of this subsection, an application for an alternative requirement based on fundamentally different factors which is pending on the date of the enactment of this subsection [enacted Feb. 7, 1987] shall be treated as having been submitted to the Administrator on the 180th day following such date of enactment [enacted Feb. 7, 1987]. The applicant may amend the application to take into account the provisions of this subsection.

(6) Effect of submission of application. An application for an alternative requirement under this subsection shall not stay the applicant's obligation to comply with the effluent limitation guideline or categorical pretreatment standard which is the subject of the application.

(7) Effect of denial. If an application for an alternative requirement which modifies the requirements of an effluent limitation or pretreatment standard under this subsection is denied by the Administrator, the applicant must comply with such limitation or standard as established or revised, as the case may be.

(8) Reports. By January 1, 1997, and January 1 of every odd-numbered year thereafter, the Administrator shall submit to the Committee on Environment and Public Works of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives a report on the status of applications for alternative requirements which modify the requirements of effluent limitations under section 301 or 304 of this Act [33 USCS § 1311 or 1314] or any national categorical pretreatment standard under section 307(b) of this Act [33 USCS § 1317(b)] filed before, on, or after such date of enactment [enacted Feb. 7, 1987].

(o) Application fees. The Administrator shall prescribe and collect from each applicant fees reflecting the reasonable administrative costs incurred in reviewing and processing applications for modifications submitted to the Administrator pursuant to subsections (c), (g), (i), (k), (m), and (n) of section 301, section 304(d)(4), and section 316(a) of this Act [33 USCS §§ 1311(c), (g), (i), (k), (m), (n), 1314(d)(4), 1316(a)]. All amounts collected by the Administrator under this subsection shall be deposited into a special fund of the Treasury entitled "Water Permits and Related Services" which shall thereafter be available for appropriation to carry out activities of the Environmental Protection Agency for which such fees were collected.

(p) Modified permit for coal remining operations.

(1) In general. Subject to paragraphs (2) through (4) of this subsection, the Administrator, or the State in any case which the State has an approved permit program under section 402(b) [33 USCS § 1342(b)], may issue a permit under section 402 [33 USCS § 1342] which modifies the requirements of subsection (b)(2)(A) of this section with respect to the pH level of any pre-existing discharge, and with respect to pre-existing discharges of iron and manganese from the remined area of any coal remining operation or with respect to the pH level or level of iron or manganese in any pre-existing discharge affected by the remaining operation. Such modified requirements shall apply the best available

33 USCS § 1311

technology economically achievable on a case-by-case basis, using best professional judgment, to set specific numerical effluent limitations in each permit.

(2) Limitations. The Administrator or the State may only issue a permit pursuant to paragraph (1) if the applicant demonstrates to the satisfaction of the Administrator or the State, as the case may be, that the coal remining operation will result in the potential for improved water quality from the remining operation but in no event shall such a permit allow the pH level of any discharge, and in no event shall such a permit allow the discharges of iron and manganese, to exceed the levels being discharged from the remined area before the coal remining operation begins. No discharge from, or affected by, the remining operation shall exceed State water quality standards established under section 303 of this Act [33 USCS § 1313].

(3) Definitions. For purposes of this subsection--

(A) Coal remining operation. The term "coal remining operation" means a coal mining operation which begins after the date of the enactment of this subsection [enacted Feb. 4, 1987] at a site on which coal mining was conducted before the effective date of the Surface Mining Control and Reclamation Act of 1977.

(B) Remined area. The term "remined area" means only that area of any coal remining operation on which coal mining was conducted before the effective date of the Surface Mining Control and Reclamation Act of 1977.

(C) Pre-existing discharge. The term "pre-existing discharge" means any discharge at the time of permit application under this subsection.

(4) Applicability of strip mining laws. Nothing in this subsection shall affect the application of the Surface Mining Control and Reclamation Act of 1977 to any coal remining operation, including the application of such Act to suspended solids.

TITLE 33. NAVIGATION AND NAVIGABLE WATERS
CHAPTER 26. WATER POLLUTION PREVENTION AND CONTROL
STANDARDS AND ENFORCEMENT

Go to the United States Code Service Archive Directory

33 USCS § 1313

§ 1313. Water quality standards and implementation plans

(a) Existing water quality standards.

(1) In order to carry out the purpose of this Act [33 USCS §§ 1251 et seq.], any water quality standard applicable to interstate waters which was adopted by any State and submitted to, and approved by, or is awaiting approval by, the Administrator pursuant to this Act as in effect immediately prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], shall remain in effect unless the Administrator determined that such standard is not consistent with the applicable requirements of this Act as in effect immediately prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972]. If the Administrator makes such a determination he shall, within three months after the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], notify the State and specify the changes needed to meet such requirements. If such changes are not adopted by the State within ninety days after the date of such notification, the Administrator shall promulgate such changes in accordance with subsection (b) of this section.

(2) Any State which, before the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], has adopted, pursuant to its own law, water quality standards applicable to intrastate waters shall submit such standards to the Administrator within thirty days after the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972]. Each such standard shall remain in effect, in the same manner and to the same extent as any other water quality standard established under this Act [33 USCS §§ 1251 et seq.] unless the Administrator determines that such standard is inconsistent with the applicable requirements of this Act as in effect immediately prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972]. If the Administrator makes such a determination he shall not later than the one hundred and twentieth day after the date of submission of such standards, notify the State and specify the changes needed to meet such requirements. If such changes are not adopted by the State within ninety days after such notification, the Administrator shall promulgate such changes in accordance with subsection (b) of this section.

(3) (A) Any State which prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972] has not adopted pursuant to its own laws water quality standards applicable to intrastate waters shall, not later than one hundred and eighty days after the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], adopt and submit such standards to the Administrator.

(B) If the Administrator determines that any such standards are consistent with the applicable requirements of this Act as in effect immediately prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], he shall approve such standards.

(C) If the Administrator determines that any such standards are not consistent with the applicable requirements of

this Act as in effect immediately prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], he shall, not later than the ninetieth day after the date of submission of such standards, notify the State and specify the changes to meet such requirements. If such changes are not adopted by the State within ninety days after the date of notification, the Administrator shall promulgate such standards pursuant to subsection (b) of this section.

(b) Proposed regulations.

(1) The Administrator shall promptly prepare and publish proposed regulations setting forth water quality standards for a State in accordance with the applicable requirements of this Act as in effect immediately prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], if--

(A) the State fails to submit water quality standards within the times prescribed in subsection (a) of this section.

(B) a water quality standard submitted by such State under subsection (a) of this section is determined by the Administrator not to be consistent with the applicable requirements of subsection (a) of this section.

(2) The Administrator shall promulgate any water quality standard published in a proposed regulation not later than one hundred and ninety days after the date he publishes any such proposed standard, unless prior to such promulgation, such State has adopted a water quality standard which the Administrator determines to be in accordance with subsection (a) of this section.

(c) Review; revised standards; publication.

(1) The Governor of a State or the State water pollution control agency of such State shall from time to time (but at least once each three year period beginning with the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972]) hold public hearings for the purpose of reviewing applicable water quality standards and, as appropriate, modifying and adopting standards. Results of such review shall be made available to the Administrator.

(2) (A) Whenever the State revises or adopts a new standard, such revised or new standard shall be submitted to the Administrator. Such revised or new water quality standard shall consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses. Such standards shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of this Act [33 USCS §§ 1251 et seq.]. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.

(B) Whenever a State reviews water quality standards pursuant to paragraph (1) of this subsection, or revises or adopts new standards pursuant to this paragraph, such State shall adopt criteria for all toxic pollutants listed pursuant to section 307(a)(1) of this Act [33 USCS § 1317(a)(1)] for which criteria have been published under section 304(a) [33 USCS § 1314(a)], the discharge or presence of which in the affected waters could reasonably be expected to interfere with those designated uses adopted by the State, as necessary to support such designated uses. Such criteria shall be specific numerical criteria for such toxic pollutants. Where such numerical criteria are not available, whenever a State reviews water quality standards pursuant to paragraph (1), or revises or adopts new standards pursuant to this paragraph, such State shall adopt criteria based on biological monitoring or assessment methods consistent with information published pursuant to section 304(a)(8) [33 USCS § 1314(a)(8)]. Nothing in this section shall be construed to limit or delay the use of effluent limitations or other permit conditions based on or involving biological monitoring or assessment methods or previously adopted numerical criteria.

(3) If the Administrator, within sixty days after the date of submission of the revised or new standard, determines that such standard meets the requirements of this Act [33 USCS §§ 1251 et seq.], such standard shall thereafter be the water quality standard for the applicable waters of that State. If the Administrator determines that any such revised or new standard is not consistent with the applicable requirements of this Act [33 USCS §§ 1251 et seq.], he shall not later than the ninetieth day after the date of submission of such standard notify the State and specify the changes to meet such requirements. If such changes are not adopted by the State within ninety days after the date of notification, the Administrator shall promulgate such standard pursuant to paragraph (4) of this subsection.

(4) The Administrator shall promptly prepare and publish proposed regulations setting forth a revised or new water

quality standard for the navigable waters involved--

(A) if a revised or new water quality standard submitted by such State under paragraph (3) of this subsection for such waters is determined by the Administrator not to be consistent with the applicable requirements of this Act [33 USCS §§ 1251 et seq.], or

(B) in any case where the Administrator determines that a revised or new standard is necessary to meet the requirements of this Act [33 USCS §§ 1251 et seq.].

The Administrator shall promulgate any revised or new standard under this paragraph not later than ninety days after he publishes such proposed standards, unless prior to such promulgation, such State has adopted a revised or new water quality standard which the Administrator determines to be in accordance with this Act [33 USCS §§ 1251 et seq.].

(d) Identification of areas with insufficient controls; maximum daily load; certain effluent limitations revision.

(1) (A) Each State shall identify those waters within its boundaries for which the effluent limitations required by section 301(b)(1)(A) and section 301(b)(1)(B) [33 USCS § 1311(b)(1)(A), (B)] are not stringent enough to implement any water quality standard applicable to such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters.

(B) Each State shall identify those waters or parts thereof within its boundaries for which controls on thermal discharges under section 301 [33 USCS § 1311] are not stringent enough to assure protection and propagation of a balanced indigenous population of shellfish, fish, and wildlife.

(C) Each State shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, the total maximum daily load, for those pollutants which the Administrator identifies under section 304(a)(2) [33 USCS § 1314(a)(2)] as suitable for such calculation. Such load shall be established at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.

(D) Each State shall estimate for the waters identified in paragraph (1)(B) of this subsection the total maximum daily thermal load required to assure protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife. Such estimates shall take into account the normal water temperatures, flow rates, seasonal variations, existing sources of heat input, and the dissipative capacity of the identified waters or parts thereof. Such estimates shall include a calculation of the maximum heat input that can be made into each such part and shall include a margin of safety which takes into account any lack of knowledge concerning the development of thermal water quality criteria for such protection and propagation in the identified waters or parts thereof.

(2) Each State shall submit to the Administrator from time to time, with the first such submission not later than one hundred and eighty days after the date of publication of the first identification of pollutants under section 304(a)(2)(D) [33 USCS § 1314(a)(2)(D)], for his approval the waters identified and the loads established under paragraphs (1)(A), (1)(B), (1)(C), and (1)(D) of this subsection. The Administrator shall either approve or disapprove such identification and load not later than thirty days after the date of submission. If the Administrator approves such identification and load, such State shall incorporate them into its current plan under subsection (e) of this section. If the Administrator disapproves such identification and load, he shall not later than thirty days after the date of such disapproval identify such waters in such State and establish such loads for such waters as he determines necessary to implement the water quality standards applicable to such waters and upon such identification and establishment the State shall incorporate them into its current plan under subsection (e) of this section.

(3) For the specific purpose of developing information, each State shall identify all waters within its boundaries which it has not identified under paragraph (1)(A) and (1)(B) of this subsection and estimate for such waters the total maximum daily load with seasonal variations and margins of safety, for those pollutants which the Administrator identifies under section 304(a)(2) [33 USCS § 1314(a)(2)] as suitable for such calculation and for thermal discharges, at a level that would assure protection and propagation of a balanced indigenous population of fish, shellfish and wildlife.

(4) Limitations on revision of certain effluent limitations.

(A) Standard not attained. For waters identified under paragraph (1)(A) where the applicable water quality standard has not yet been attained, any effluent limitation based on a total maximum daily load or other waste load allocation established under this section may be revised only if (i) the cumulative effect of all such revised effluent limitations based on such total maximum daily load or waste load allocation will assure the attainment of such water quality

standard, or (ii) the designated use which is not being attained is removed in accordance with regulations established under this section.

(B) Standard attained. For waters identified under paragraph (1)(A) where the quality of such waters equals or exceeds levels necessary to protect the designated use for such waters or otherwise required by applicable water quality standards, any effluent limitation based on a total maximum daily load or other waste load allocation established under this section, or any water quality standard established under this section, or any other permitting standard may be revised only if such revision is subject to and consistent with the antidegradation policy established under this section.

(e) Continuing planning process.

(1) Each State shall have a continuing planning process approved under paragraph (2) of this subsection which is consistent with this Act [33 USCS §§ 1251 et seq.].

(2) Each State shall submit not later than 120 days after the date of the enactment of the Water Pollution Control Amendments of 1972 [enacted Oct. 18, 1972] to the Administrator for his approval a proposed continuing planning process which is consistent with this Act [33 USCS §§ 1251 et seq.]. Not later than thirty days after the date of submission of such a process the Administrator shall either approve or disapprove such process. The Administrator shall from time to time review each State's approved planning process for the purpose of insuring that such planning process is at all times consistent with this Act [33 USCS §§ 1251 et seq.]. The Administrator shall not approve any State permit program under title IV of this Act [33 USCS §§ 1341 et seq.] for any State which does not have an approved continuing planning process under this section.

(3) The Administrator shall approve any continuing planning process submitted to him under this section which will result in plans for all navigable waters within such State, which include, but are not limited to, the following:

(A) effluent limitations and schedules of compliance at least as stringent as those required by section 301(b)(1), section 301(b)(2), section 306, and section 307 [33 USCS §§ 1311(b)(1), (2), 1316, 1317], and at least as stringent as any requirements contained in any applicable water quality standard in effect under authority of this section;

(B) the incorporation of all elements of any applicable area-wide waste management plans under section 208 [33 USCS § 1288], and applicable basin plans under section 209 of this Act [33 USCS § 1289];

(C) total maximum daily load for pollutants in accordance with subsection (d) of this section;

(D) procedures for revision;

(E) adequate authority for intergovernmental cooperation;

(F) adequate implementation, including schedules of compliance, for revised or new water quality standards, under subsection (c) of this section;

(G) controls over the disposition of all residual waste from any water treatment processing;

(H) an inventory and ranking, in order of priority, of needs for construction of waste treatment works required to meet the applicable requirements of sections 301 and 302 [33 USCS §§ 1311, 1312].

(f) Earlier compliance. Nothing in this section shall be construed to affect any effluent limitation, or schedule of compliance required by any State to be implemented prior to the dates set forth in sections 301(b)(1) and 301(b)(2) [33 USCS § 1311(b)(1), (2)] nor to preclude any State from requiring compliance with any effluent limitation or schedule of compliance at dates earlier than such dates.

(g) Heat standards. Water quality standards relating to heat shall be consistent with the requirements of section 316 of this Act [33 USCS § 1326].

(h) Thermal water quality standards. For the purposes of this Act [33 USCS §§ 1251 et seq.] the term "water quality standards" includes thermal water quality standards.

(i) Coastal recreation water quality criteria.

(1) Adoption by States.

(A) Initial criteria and standards. Not later than 42 months after the date of the enactment of this subsection [enacted Oct. 10, 2000], each State having coastal recreation waters shall adopt and submit to the Administrator water quality

criteria and standards for the coastal recreation waters of the State for those pathogens and pathogen indicators for which the Administrator has published criteria under section 304(a) [33 USCS § 1314(a)].

(B) New or revised criteria and standards. Not later than 36 months after the date of publication by the Administrator of new or revised water quality criteria under section 304(a)(9) [33 USCS § 1314(a)(9)], each State having coastal recreation waters shall adopt and submit to the Administrator new or revised water quality standards for the coastal recreation waters of the State for all pathogens and pathogen indicators to which the new or revised water quality criteria are applicable.

(2) Failure of States to adopt.

(A) In general. If a State fails to adopt water quality criteria and standards in accordance with paragraph (1)(A) that are as protective of human health as the criteria for pathogens and pathogen indicators for coastal recreation waters published by the Administrator, the Administrator shall promptly propose regulations for the State setting forth revised or new water quality standards for pathogens and pathogen indicators described in paragraph (1)(A) for coastal recreation waters of the State.

(B) Exception. If the Administrator proposes regulations for a State described in subparagraph (A) under subsection (c)(4)(B), the Administrator shall publish any revised or new standard under this subsection not later than 42 months after the date of the enactment of this subsection [enacted Oct. 10, 2000].

(3) Applicability. Except as expressly provided by this subsection, the requirements and procedures of subsection (c) apply to this subsection, including the requirement in subsection (c)(2)(A) that the criteria protect public health and welfare.

HISTORY:

(June 30, 1948, ch 758, Title III, § 303, as added Oct. 18, 1972, P.L. 92-500, § 2, 86 Stat. 846; Feb. 4, 1987, P.L. 100-4, Title III, § 308(d), Title IV, § 404(b), 101 Stat. 39, 68; Oct. 10, 2000, P.L. 106-284, § 2, 114 Stat. 870.)

33 USCS § 1319

§ 1319. Enforcement

(a) State enforcement; compliance orders.

(1) Whenever, on the basis of any information available to him, the Administrator finds that any person is in violation of any condition or limitation which implements section 301, 302, 306, 307, 308, 318, or 405 of this Act [33 USCS § 1311, 1312, 1316, 1317, 1318, 1328, or 1345] in a permit issued by a State under an approved permit program under section 402 or 404 of this Act [33 USCS § 1342 or 1344], he shall proceed under his authority in paragraph (3) of this subsection or he shall notify the person in alleged violation and such State of such finding. If beyond the thirtieth day after the Administrator's notification the State has not commenced appropriate enforcement action, the Administrator shall issue an order requiring such person to comply with such condition or limitation or shall bring a civil action in accordance with subsection (b) of this section.

(2) Whenever, on the basis of information available to him, the Administrator finds that violations of permit conditions or limitations as set forth in paragraph (1) of this subsection are so widespread that such violations appear to result from a failure of the State to enforce such permit conditions or limitations effectively, he shall so notify the State. If the Administrator finds such failure extends beyond the thirtieth day after such notice, he shall give public notice of such finding. During the period beginning with such public notice and ending when such State satisfies the Administrator that it will enforce such conditions and limitations (hereafter referred to in this section as the period of "federally assumed enforcement"), except where an extension has been granted under paragraph (5)(B) of this subsection, the Administrator shall enforce any permit condition or limitation with respect to any person--

(A) by issuing an order to comply with such condition or limitation, or

(B) by bringing a civil action under subsection (b) of this section.

(3) Whenever on the basis of any information available to him the Administrator finds that any person is in violation of section 301, 302, 306, 307, 308, 318, or 405 of this Act [33 USCS § 1311, 1312, 1316, 1317, 1318, 1328, or 1345], or is in violation of any permit condition or limitation implementing any of such sections in a permit issued under section 402 of this Act [33 USCS § 1342] by him or by a State or in a permit issued under section 404 of this Act [33 USCS § 1344] by a State, he shall issue an order requiring such person to comply with such section or requirement, or he shall bring a civil action in accordance with subsection (b) of this section.

(4) A copy of any order issued under this subsection shall be sent immediately by the Administrator to the State in which the violation occurs and other affected States. In any case in which an order under this subsection (or notice to a violator under paragraph (1) of this subsection) is issued to a corporation, a copy of such order (or notice) shall be served on any appropriate corporate officers. An order issued under this subsection relating to a violation of section 308 of this Act [33 USCS § 1318] shall not take effect until the person to whom it is issued has had an opportunity to confer

with the Administrator concerning the alleged violation.

(5) (A) Any order issued under this subsection shall be by personal service, shall state with reasonable specificity the nature of the violation, and shall specify a time for compliance not to exceed thirty days in the case of a violation of an interim compliance schedule or operation and maintenance requirement and not to exceed a time the Administrator determines to be reasonable in the case of a violation of a final deadline, taking into account the seriousness of the violation and any good faith efforts to comply with applicable requirements.

(B) The Administrator may, if he determines (i) that any person who is a violator of, or any person who is otherwise not in compliance with, the time requirements under this Act [33 USCS §§ 1251 et seq.] or in any permit issued under this Act [33 USCS §§ 1251 et seq.], has acted in good faith, and has made a commitment (in the form of contracts or other securities) of necessary resources to achieve compliance by the earliest possible date after July 1, 1977, but not later than April 1, 1979; (ii) that any extension under this provision will not result in the imposition of any additional controls on any other point or nonpoint source; (iii) that an application for a permit under section 402 of this Act [33 USCS § 1342] was filed for such person prior to December 31, 1974; and (iv) that the facilities necessary for compliance with such requirements are under construction, grant an extension of the date referred to in section 301(b)(1)(A) [33 USCS § 1311(b)(1)(A)] to a date which will achieve compliance at the earliest time possible but not later than April 1, 1979.

(6) Whenever, on the basis of information available to him, the Administrator finds (A) that any person is in violation of section 301(b)(1)(A) or (C) of this Act [33 USCS § 1311(b)(1)(A), (C)], (B) that such person cannot meet the requirements for a time extension under section 301(i)(2) of this Act [33 USCS § 1311(i)(2)], and (C) that the most expeditious and appropriate means of compliance with this Act [33 USCS §§ 1251 et seq.] by such person is to discharge into a publicly owned treatment works, then, upon request of such person, the Administrator may issue an order requiring such person to comply with this Act [33 USCS §§ 1251 et seq.] at the earliest date practicable, but not later than July 1, 1983, by discharging into a publicly owned treatment works if such works concur with such order. Such order shall include a schedule of compliance.

(b) Civil actions. The Administrator is authorized to commence a civil action for appropriate relief, including a permanent or temporary injunction, for any violation for which he is authorized to issue a compliance order under subsection (a) of this section. Any action under this subsection may be brought in the district court of the United States for the district in which the defendant is located or resides or is doing business, and such court shall have jurisdiction to restrain such violation and to require compliance. Notice of the commencement of such action shall be given immediately to the appropriate State.

(c) Criminal penalties.

(1) Negligent violations. Any person who--

(A) negligently violates section 301, 302, 306, 307, 308, 311(b)(3), 318, or 405 of this Act [33 USCS § 1311, 1312, 1316, 1317, 1318, 1321(b)(3), 1328, or 1345], or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of this Act [33 USCS § 1342] by the Administrator or by a State, or any requirement imposed in a pretreatment program approved under section 402(a)(3) or 402(b)(8) of this Act [33 USCS § 1342(a)(3) or (b)(8)] or in a permit issued under section 404 of this Act [33 USCS § 1344] by the Secretary of the Army or by a State; or

(B) negligently introduces into a sewer system or into a publicly owned treatment works any pollutant or hazardous substance which such person knew or reasonably should have known could cause personal injury or property damage or, other than in compliance with all applicable Federal, State, or local requirements or permits, which causes such treatment works to violate any effluent limitation or condition in any permit issued to the treatment works under section 402 of this Act [33 USCS § 1342] by the Administrator or a State;

shall be punished by a fine of not less than \$ 2,500 nor more than \$ 25,000 per day of violation, or by imprisonment for not more than 1 year, or by both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment shall be by a fine of not more than \$ 50,000 per day of violation, or by imprisonment of not more than 2 years, or by both.

(2) Knowing violations. Any person who--

(A) knowingly violates section 301, 302, 306, 307, 308, 311(b)(3), 318, or 405 of this Act [33 USCS § 1311, 1312, 1316, 1318, 1321(b)(3), 1328, or 1345], or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of this Act [33 USCS § 1342] by the Administrator or by a State, or any requirement imposed in a pretreatment program approved under section 402(a)(3) or 402(b)(8) of this Act [33 USCS § 1342(a)(3) or (b)(8)] or in a permit issued under section 404 of this Act [33 USCS § 1344] by the Secretary of the Army or by a State;

or
(B) knowingly introduces into a sewer system or into a publicly owned treatment works any pollutant or hazardous substance which such person knew or reasonably should have known could cause personal injury or property damage or, other than in compliance with all applicable Federal, State, or local requirements or permits, which causes such treatment works to violate any effluent limitation or condition in a permit issued to the treatment works under section 402 of this Act [33 USCS § 1342] by the Administrator or a State;

shall be punished by a fine of not less than \$ 5,000 nor more than \$ 50,000 per day of violation, or by imprisonment for not more than 3 years, or by both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment shall be by a fine of not more than \$ 100,000 per day of violation, or by imprisonment of not more than 6 years, or by both.

(3) Knowing endangerment.

(A) General rule. Any person who knowingly violates section 301, 302, 303, 306, 307, 308, 311(b)(3), 318, or 405 of this Act [33 USCS § 1311, 1312, 1313, 1316, 1317, 1318, 1321(b)(3), 1328, or 1345], or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of this Act [33 USCS § 1342] by the Administrator or by a State, or in a permit issued under section 404 of this Act [33 USCS § 1344] by the Secretary of the Army or by a State, and who knows at that time that he thereby places another person in imminent danger of death or serious bodily injury, shall, upon conviction, be subject to a fine of not more than \$ 250,000 or imprisonment of not more than 15 years, or both. A person which is an organization shall, upon conviction of violating this subparagraph, be subject to a fine of not more than \$ 1,000,000. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, the maximum punishment shall be doubled with respect to both fine and imprisonment.

(B) Additional provisions. For the purpose of subparagraph (A) of this paragraph--

(i) in determining whether a defendant who is an individual knew that his conduct placed another person in imminent danger of death or serious bodily injury--

(I) the person is responsible only for actual awareness or actual belief that he possessed; and

(II) knowledge possessed by a person other than the defendant but not by the defendant himself may not be attributed to the defendant;

except that in proving the defendant's possession of actual knowledge, circumstantial evidence may be used, including evidence that the defendant took affirmative steps to shield himself from relevant information;

(ii) it is an affirmative defense to prosecution that the conduct charged was consented to by the person endangered and that the danger and conduct charged were reasonably foreseeable hazards of--

(I) an occupation, a business, or a profession; or

(II) medical treatment or medical or scientific experimentation conducted by professionally approved methods and such other person had been made aware of the risks involved prior to giving consent;

and such defense may be established under this subparagraph by a preponderance of the evidence;

(iii) the term "organization" means a legal entity, other than a government, established or organized for any purpose, and such term includes a corporation, company, association, firm, partnership, joint stock company, foundation, institution, trust, society, union, or any other association of persons; and

(iv) the term "serious bodily injury" means bodily injury which involves a substantial risk of death, unconsciousness, extreme physical pain, protracted and obvious disfigurement, or protracted loss or impairment of the function of a bodily member, organ, or mental faculty.

(4) False statements. Any person who knowingly makes any false material statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained under this Act [33 USCS §§ 1251 et seq.] or who knowingly falsifies, tampers with, or renders inaccurate any monitoring device or method required to be maintained under this Act [33 USCS §§ 1251 et seq.], shall upon conviction, be punished by a fine of not

more than \$ 10,000, or by imprisonment for not more than 2 years, or by both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment shall be by a fine of not more than \$ 20,000 per day of violation, or by imprisonment of not more than 4 years, or by both.

(5) Treatment of single operational upset. For purposes of this subsection, a single operational upset which leads to simultaneous violations of more than one pollutant parameter shall be treated as a single violation.

(6) Responsible corporate officer as "person". For the purpose of this subsection, the term "person" means, in addition to the definition contained in section 502(5) of this Act [33 USCS § 1365(5)], any responsible corporate officer.

(7) Hazardous substance defined. For the purpose of this subsection, the term "hazardous substance" means (A) any substance designated pursuant to section 311(b)(2)(A) of this Act [33 USCS § 1321(b)(2)(A)], (B) any element, compound, mixture, solution, or substance designated pursuant to section 102 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 [42 USCS § 9602], (C) any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act [42 USCS § 6921] (but not including any waste the regulation of which under the Solid Waste Disposal Act [42 USCS §§ 6901 et seq.] has been suspended by Act of Congress), (D) any toxic pollutant listed under section 307(a) of this Act [33 USCS § 1317(a)], and (E) any imminently hazardous chemical substance or mixture with respect to which the Administrator has taken action pursuant to section 7 of the Toxic Substances Control Act [15 USCS § 2606].

(d) Civil penalties; factors considered in determining amount. Any person who violates section 301, 302, 306, 307, 308, 318, or 405 of this Act [33 USCS § 1311, 1312, 1316, 1317, 1318, 1328, or 1345], or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of this Act [33 USCS § 1342] by the Administrator, or by a State, or in a permit issued under section 404 of this Act [33 USCS § 1344] by a State[,], or any requirement imposed in a pretreatment program approved under section 402(a)(3) or 402(b)(8) of this Act [33 USCS § 1342(a)(3) or (b)(8)], and any person who violates any order issued by the Administrator under subsection (a) of this section, shall be subject to a civil penalty not to exceed \$ 25,000 per day for each violation. In determining the amount of a civil penalty the court shall consider the seriousness of the violation or violations, the economic benefit (if any) resulting from the violation, any history of such violations, any good-faith efforts to comply with the applicable requirements, the economic impact of the penalty on the violator, and such other matters as justice may require. For purposes of this subsection, a single operational upset which leads to simultaneous violations of more than one pollutant parameter shall be treated as a single violation.

(e) State liability for judgments and expenses. Whenever a municipality is a party to a civil action brought by the United States under this section, the State in which such municipality is located shall be joined as a party. Such State shall be liable for payment of any judgment, or any expenses incurred as a result of complying with any judgment, entered against the municipality in such action to the extent that the laws of that State prevent the municipality from raising revenues needed to comply with such judgment.

(f) Wrongful introduction of pollutants into treatments works. Whenever, on the basis of any information available to him, the Administrator finds that an owner or operator of any source is introducing a pollutant into a treatment works in violation of subsection (d) of section 307 [33 USCS § 1317(d)], the Administrator may notify the owner or operator of such treatment works and the State of such violation. If the owner or operator of the treatment works does not commence appropriate enforcement action within 30 days of the date of such notification, the Administrator may commence a civil action for appropriate relief, including but not limited to, a permanent or temporary injunction, against the owner or operator of such treatment works. In any such civil action the Administrator shall join the owner or operator of such source as a party to the action. Such action shall be brought in the district court of the United States in the district in which the treatment works is located. Such court shall have jurisdiction to restrain such violation and to require the owner or operator of the treatment works and the owner or operator of the source to take such action as may be necessary to come into compliance with this Act [33 USCS §§ 1251 et seq.]. Notice of commencement of any such action shall be given to the State. Nothing in this subsection shall be construed to limit or prohibit any other authority the Administrator may have under this Act [33 USCS §§ 1251 et seq.].

(g) Administrative penalties.

(1) Violations. Whenever on the basis of any information available--

(A) the Administrator finds that any person has violated section 301, 302, 306, 307, 308, 318, or 405 of this Act [33 USCS § 1311, 1312, 1316, 1317, 1318, 1328, or 1345], or has violated any permit condition or limitation implementing any of such sections in a permit issued under section 402 of this Act [33 USCS § 1342] by the Administrator or by a State, or in a permit issued under section 404 [33 USCS § 1344] by a State, or

(B) the Secretary of the Army (hereinafter in this subsection referred to as the "Secretary") finds that any person has violated any permit condition or limitation in a permit issued under section 404 of this Act [33 USCS § 1344] by the Secretary,

the Administrator or Secretary, as the case may be, may, after consultation with the State in which the violation occurs, assess a class I civil penalty or a class II civil penalty under this subsection.

(2) Classes of penalties.

(A) Class I. The amount of a class I civil penalty under paragraph (1) may not exceed \$ 10,000 per violation, except that the maximum amount of any class I civil penalty under this subparagraph shall not exceed \$ 25,000. Before issuing an order assessing a civil penalty under this subparagraph, the Administrator or the Secretary, as the case may be, shall give to the person to be assessed such penalty written notice of the Administrator's or Secretary's proposal to issue such order and the opportunity to request, within 30 days of the date the notice is received by such person, a hearing on the proposed order. Such hearing shall not be subject to section 554 or 556 of title 5, United States Code, but shall provide a reasonable opportunity to be heard and to present evidence.

(B) Class II. The amount of a class II civil penalty under paragraph (1) may not exceed \$ 10,000 per day for each day during which the violation continues; except that the maximum amount of any class II civil penalty under this subparagraph shall not exceed \$ 125,000. Except as otherwise provided in this subsection, a class II civil penalty shall be assessed and collected in the same manner, and subject to the same provisions, as in the case of civil penalties assessed and collected after notice and opportunity for a hearing on the record in accordance with section 554 of title 5, United States Code. The Administrator and the Secretary may issue rules for discovery procedures for hearings under this subparagraph.

(3) Determining amount. In determining the amount of any penalty assessed under this subsection, the Administrator or the Secretary, as the case may be, shall take into account the nature, circumstances, extent and gravity of the violation, or violations, and, with respect to the violator, ability to pay, any prior history of such violations, the degree of culpability, economic benefit or savings (if any) resulting from the violation, and such other matters as justice may require. For purposes of this subsection, a single operational upset which leads to simultaneous violations of more than one pollutant parameter shall be treated as a single violation.

(4) Rights of interested persons.

(A) Public notice. Before issuing an order assessing a civil penalty under this subsection the Administrator or Secretary, as the case may be, shall provide public notice of and reasonable opportunity to comment on the proposed issuance of such order.

(B) Presentation of evidence. Any person who comments on a proposed assessment of a penalty under this subsection shall be given notice of any hearing held under this subsection and of the order assessing such penalty. In any hearing held under this subsection, such person shall have a reasonable opportunity to be heard and to present evidence.

(C) Rights of interested persons to a hearing. If no hearing is held under paragraph (2) before issuance of an order assessing a penalty under this subsection, any person who commented on the proposed assessment may petition, within 30 days after the issuance of such order, the Administrator or Secretary, as the case may be, to set aside such order and to provide a hearing on the penalty. If the evidence presented by the petitioner in support of the petition is material and was not considered in the issuance of the order, the Administrator or Secretary shall immediately set aside such order and provide a hearing in accordance with paragraph (2)(A) in the case of a class I civil penalty and paragraph (2)(B) in the case of a class II civil penalty. If the Administrator or Secretary denies a hearing under this subparagraph, the Administrator or Secretary shall provide to the petitioner, and publish in the Federal Register, notice of and the reasons for such denial.

(5) Finality of order. An order issued under this subsection shall become final 30 days after its issuance unless a

petition for judicial review is filed under paragraph (8) or a hearing is requested under paragraph (4)(C). If such a hearing is denied, such order shall become final 30 days after such denial.

(6) Effect of order.

(A) Limitation on actions under other sections. Action taken by the Administrator or the Secretary, as the case may be, under this subsection shall not affect or limit the Administrator's or Secretary's authority to enforce any provision of this Act [33 USCS §§ 1251 et seq.]; except that any violation--

(i) with respect to which the Administrator or the Secretary has commenced and is diligently prosecuting an action under this subsection,

(ii) with respect to which a State has commenced and is diligently prosecuting an action under a State law comparable to this subsection, or

(iii) for which the Administrator, the Secretary, or the State has issued a final order not subject to further judicial review and the violator has paid a penalty assessed under this subsection, or such comparable State law, as the case may be,

shall not be the subject of a civil penalty action under subsection (d) of this section or section 311(b) or section 505 of this Act [33 USCS § 1321(b) or 1365].

(B) Applicability of limitation with respect to citizen suits. The limitations contained in subparagraph (A) on civil penalty actions under section 505 of this Act [33 USCS § 1365] shall not apply with respect to any violation for which--

(i) a civil action under section 505(a)(1) of this Act [33 USCS § 1365(a)(1)] has been filed prior to commencement of an action under this subsection, or

(ii) notice of an alleged violation of section 505(a)(1) of this Act [33 USCS § 1365(a)(1)] has been given in accordance with section 505(b)(1)(A) [33 USCS § 1365(b)(1)(A)] prior to commencement of an action under this subsection and an action under section 505(a)(1) [33 USCS § 1365(a)(1)] with respect to such alleged violation is filed before the 120th day after the date on which such notice is given.

(7) Effect of action on compliance. No action by the Administrator or the Secretary under this subsection shall affect any person's obligation to comply with any section of this Act [33 USCS §§ 1251 et seq.] or with the terms and conditions of any permit issued pursuant to section 402 or 404 of this Act [33 USCS § 1342 or 1344].

(8) Judicial review. Any person against whom a civil penalty is assessed under this subsection or who commented on the proposed assessment of such penalty in accordance with paragraph (4) may obtain review of such assessment--

(A) in the case of assessment of a class I civil penalty, in the United States District Court for the District of Columbia or in the district in which the violation is alleged to have occurred, or

(B) in the case of assessment of a class II civil penalty, in United States Court of Appeals for the District of Columbia Circuit or for any other circuit in which such person resides or transacts business,

by filing a notice of appeal in such court within the 30-day period beginning on the date the civil penalty order is issued and by simultaneously sending a copy of such notice by certified mail to the Administrator or the Secretary, as the case may be, and the Attorney General. The Administrator or the Secretary shall promptly file in such court a certified copy of the record on which the order was issued. Such court shall not set aside or remand such order unless there is not substantial evidence in the record, taken as a whole, to support the finding of a violation or unless the Administrator's or Secretary's assessment of the penalty constitutes an abuse of discretion and shall not impose additional civil penalties for the same violation unless the Administrator's or Secretary's assessment of the penalty constitutes an abuse of discretion.

(9) Collection. If any person fails to pay an assessment of a civil penalty--

(A) after the order making the assessment has become final, or

(B) after a court in an action brought under paragraph (8) has entered a final judgment in favor of the Administrator or the Secretary, as the case may be,

the Administrator or the Secretary shall request the Attorney General to bring a civil action in an appropriate district court to recover the amount assessed (plus interest at currently prevailing rates from the date of the final order or the date of the final judgment, as the case may be). In such an action, the validity, amount, and appropriateness of such penalty shall not be subject to review. Any person who fails to pay on a timely basis the amount of an assessment of a civil penalty as described in the first sentence of this paragraph shall be required to pay, in addition to such amount and interest, attorneys fees and costs for collection proceedings and a quarterly nonpayment penalty for each quarter during

which such failure to pay persists. Such nonpayment penalty shall be in an amount equal to 20 percent of the aggregate amount of such person's penalties and nonpayment penalties which are unpaid as of the beginning of such quarter.

(10) Subpoenas. The Administrator or Secretary, as the case may be, may issue subpoenas for the attendance and testimony of witnesses and the production of relevant papers, books, or documents in connection with hearings under this subsection. In case of contumacy or refusal to obey a subpoena issued pursuant to this paragraph and served upon any person, the district court of the United States for any district in which such person is found, resides, or transacts business, upon application by the United States and after notice to such person, shall have jurisdiction to issue an order requiring such person to appear and give testimony before the administrative law judge or to appear and produce documents before the administrative law judge, or both, and any failure to obey such order of the court may be punished by such court as a contempt thereof.

(11) Protection of existing procedures. Nothing in this subsection shall change the procedures existing on the day before the date of the enactment of the Water Quality Act of 1987 [enacted Feb. 4, 1987] under other subsections of this section for issuance and enforcement of orders by the Administrator.

TITLE 33. NAVIGATION AND NAVIGABLE WATERS
CHAPTER 26. WATER POLLUTION PREVENTION AND CONTROL
PERMITS AND LICENSES

Go to the United States Code Service Archive Directory

33 USCS § 1342

§ 1342. National pollutant discharge elimination system

(a) Permits for discharge of pollutants.

(1) Except as provided in sections 318 and 404 of this Act [33 USCS §§ 1328, 1344], the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 301(a) [33 USCS § 1311(a)], upon condition that such discharge will meet either (A) all applicable requirements under sections 301, 302, 306, 307, 308, and 403 of this Act [33 USCS §§ 1311, 1312, 1316, 1317, 1318, 1343], (B) or prior to the taking of necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this Act [33 USCS §§ 1251 et seq.].

(2) The Administrator shall prescribe conditions for such permits to assure compliance with the requirements of paragraph (1) of this subsection, including conditions on data and information collection, reporting, and such other requirements as he deems appropriate.

(3) The permit program of the Administrator under paragraph (1) of this subsection, and permits issued thereunder, shall be subject to the same terms, conditions, and requirements as apply to a State permit program and permits issued thereunder under subsection (b) of this section.

(4) All permits for discharges into the navigable waters issued pursuant to section 13 of the Act of March 3, 1899 [33 USCS § 407], shall be deemed to be permits issued under this title [33 USCS §§ 1341 et seq.], and permits issued under this title [33 USCS §§ 1341 et seq.] shall be deemed to be permits issued under section 13 of the Act of March 3, 1899 [33 USCS § 407], and shall continue in force and effect for their term unless revoked, modified, or suspended in accordance with the provisions of this Act [33 USCS §§ 1251 et seq.].

(5) No permit for a discharge into the navigable waters shall be issued under section 13 of the Act of March 3, 1899 [33 USCS § 407], after the date of enactment of this title [enacted Oct. 18, 1972]. Each application for a permit under section 13 of the Act of March 3, 1899 [33 USCS § 407], pending on the date of enactment of this Act [enacted Oct. 18, 1972], shall be deemed to be an application for a permit under this section. The Administrator shall authorize a State, which he determines has the capability of administering a permit program which will carry out the objective of this Act [33 USCS §§ 1251 et seq.], to issue permits for discharges into the navigable waters within the jurisdiction of such State. The Administrator may exercise the authority granted him by the preceding sentence only during the period which begins on the date of enactment of this Act [enacted Oct. 18, 1972] and ends either on the ninetieth day after the date of the first promulgation of guidelines required by section 304(h)(2) [304(i)(2)] of this Act [33 USCS § 1314(i)(2)], or the date of approval by the Administrator of a permit program for such State under subsection (b) of this section whichever date first occurs, and no such authorization to a State shall extend beyond the last day of such period. Each

such permit shall be subject to such conditions as the Administrator determines are necessary to carry out the provisions of this Act [33 USCS §§ 1251 et seq.]. No such permit shall issue if the Administrator objects to such issuance.

(b) State permit programs. At any time after the promulgation of the guidelines required by subsection (h)(2) of section 304 [304(i)(2)] of this Act [33 USCS § 1314(i)(2)], the Governor of each State desiring to administer its own permit program for discharges into navigable waters within its jurisdiction may submit to the Administrator a full and complete description of the program it proposes to establish and administer under State law or under an interstate compact. In addition, such State shall submit a statement from the attorney general (or the attorney for those State water pollution control agencies which have independent legal counsel), or from the chief legal officer in the case of an interstate agency, that the laws of such State, or the interstate compact, as the case may be, provide adequate authority to carry out the described program. The Administrator shall approve each such submitted program unless he determines that adequate authority does not exist:

(1) To issue permits which--

(A) apply, and insure compliance with, any applicable requirements of sections 301, 302, 306, 307, and 403 [33 USCS §§ 1311, 1312, 1316, 1317, 1343];

(B) are for fixed terms not exceeding five years; and

(C) can be terminated or modified for cause including, but not limited to, the following:

(i) violation of any condition of the permit;

(ii) obtaining a permit by misrepresentation, or failure to disclose fully all relevant facts;

(iii) change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge;

(D) control the disposal of pollutants into wells;

(2) (A) To issue permits which apply, and insure compliance with, all applicable requirements of section 308 of this Act [33 USCS § 1318] or

(B) To inspect, monitor, enter, and require reports to at least the same extent as required in section 308 of this Act [33 USCS § 1318];

(3) To insure that the public, and any other State the waters of which may be affected, receive notice of each application for a permit and to provide an opportunity for public hearing before a ruling on each such application;

(4) To insure that the Administrator receives notice of each application (including a copy thereof) for a permit;

(5) To insure that any State (other than the permitting State), whose waters may be affected by the issuance of a permit may submit written recommendations to the permitting State (and the Administrator) with respect to any permit application and, if any part of such written recommendations are not accepted by the permitting State, that the permitting State will notify such affected State (and the Administrator) in writing of its failure to so accept such recommendations together with its reasons for so doing;

(6) To insure that no permit will be issued if, in the judgment of the Secretary of the Army acting through the Chief of Engineers, after consultation with the Secretary of the department in which the Coast Guard is operating, anchorage and navigation of any of the navigable waters would be substantially impaired thereby;

(7) To abate violations of the permit or the permit program, including civil and criminal penalties and other ways and means of enforcement;

(8) To insure that any permit for a discharge from a publicly owned treatment works includes conditions to require the identification in terms of character and volume of pollutants of any significant source introducing pollutants subject to pretreatment standards under section 307(b) of this Act [33 USCS § 1317(b)] into such works and a program to assure compliance with such pretreatment standards by each such source, in addition to adequate notice to the permitting agency of (A) new introductions into such works of pollutants from any source which would be a new source as defined in section 306 [33 USCS § 1316] if such source were discharging pollutants, (B) new introductions of pollutants into such works from a source which would be subject to section 301 [33 USCS § 1311] if it were discharging such pollutants, or (C) a substantial change in volume or character of pollutants being introduced into such works by a source introducing pollutants into such works at the time of issuance of the permit. Such notice shall include information on the quality and quantity of effluent to be introduced into such treatment works and any anticipated impact of such change in the quantity or quality of effluent to be discharged from such publicly owned treatment works; and

(9) To insure that any industrial user of any publicly owned treatment works will comply with sections 204(b), 307, and 308 [33 USCS §§ 1284(b), 1317, 1318].

(c) Suspension of Federal program upon submission of State program; withdrawal of approval of State program; return of State program to Administrator.

(1) Not later than ninety days after the date on which a State has submitted a program (or revision thereof) pursuant to subsection (b) of this section, the Administrator shall suspend the issuance of permits under subsection (a) of this section as to those discharges subject to such program unless he determines that the State permit program does not meet the requirements of subsection (b) of this section or does not conform to the guidelines issued under section 304(h)(2) [304(i)(2)] of this Act [33 USCS § 1314(i)(2)]. If the Administrator so determines, he shall notify the State of any revisions or modifications necessary to conform to such requirements or guidelines.

(2) Any State permit program under this section shall at all times be in accordance with this section and guidelines promulgated pursuant to section 304(h)(2) [304(i)(2)] of this Act [33 USCS § 1314(i)(2)].

(3) Whenever the Administrator determines after public hearing that a State is not administering a program approved under this section in accordance with requirements of this section, he shall so notify the State and, if appropriate corrective action is not taken within a reasonable time, not to exceed ninety days, the Administrator shall withdraw approval of such program. The Administrator shall not withdraw approval of any such program unless he shall first have notified the State, and made public, in writing, the reasons for such withdrawal.

(4) Limitations on partial permit program returns and withdrawals. A State may return to the Administrator administration, and the Administrator may withdraw under paragraph (3) of this subsection approval, of--

(A) a State partial permit program approved under subsection (n)(3) only if the entire permit program being administered by the State department or agency at the time is returned or withdrawn; and

(B) a State partial permit program approved under subsection (n)(4) only if an entire phased component of the permit program being administered by the State at the time is returned or withdrawn.

(d) Notification of Administrator.

(1) Each State shall transmit to the Administrator a copy of each permit application received by such State and provide notice to the Administrator of every action related to the consideration of such permit application, including each permit proposed to be issued by such State.

(2) No permit shall issue (A) if the Administrator within ninety days of the date of his notification under subsection (b)(5) of this section objects in writing to the issuance of such permit, or (B) if the Administrator within ninety days of the date of transmittal of the proposed permit by the State objects in writing to the issuance of such permit as being outside the guidelines and requirements of this Act [33 USCS §§ 1251 et seq.]. Whenever the Administrator objects to the issuance of a permit under this paragraph such written objection shall contain a statement of the reasons for such objection and the effluent limitations and conditions which such permit would include if it were issued by the Administrator.

(3) The Administrator may, as to any permit application, waive paragraph (2) of this subsection.

(4) In any case where, after the date of enactment of this paragraph [enacted Dec. 27, 1977], the Administrator, pursuant to paragraph (2) of this subsection, objects to the issuance of a permit, on request of the State, a public hearing shall be held by the Administrator on such objection. If the State does not resubmit such permit revised to meet such objection within 30 days after completion of the hearing, or, if no hearing is requested within 90 days after the date of such objection, the Administrator may issue the permit pursuant to subsection (a) of this section for such source in accordance with the guidelines and requirements of this Act [33 USCS §§ 1251 et seq.].

(e) Waiver of notification requirement. In accordance with guidelines promulgated pursuant to subsection (h)(2) of section 304 [304(i)(2)] of this Act [33 USCS § 1314(i)(2)], the Administrator is authorized to waive the requirements of subsection (d) of this section at the time he approves a program pursuant to subsection (b) of this section for any category (including any class, type, or size within such category) of point sources within the State submitting such program.

(f) Point source categories. The Administrator shall promulgate regulations establishing categories of point sources which he determines shall not be subject to the requirements of subsection (d) of this section in any State with a program approved pursuant to subsection (b) of this section. The Administrator may distinguish among classes, types, and sizes within any category of point sources.

(g) Other regulations for safe transportation, handling, carriage, storage, and stowage of pollutants. Any permit issued under this section for the discharge of pollutants into the navigable waters from a vessel or other floating craft shall be subject to any applicable regulations promulgated by the Secretary of the department in which the Coast Guard is operating, establishing specifications for safe transportation, handling, carriage, storage, and stowage of pollutants.

(h) Violation of permit conditions; restriction or prohibition upon introduction of pollutant by source not previously utilizing treatment works. In the event any condition of a permit for discharges from a treatment works (as defined in section 212 of this Act [33 USCS § 1292]) which is publicly owned is violated, a State with a program approved under subsection (b) of this section or the Administrator, where no State program is approved or where the Administrator determines pursuant to section 309(a) of this Act [33 USCS § 1319(a)] that a State with an approved program has not commenced appropriate enforcement action with respect to such permit, may proceed in a court of competent jurisdiction to restrict or prohibit the introduction of any pollutant into such treatment works by a source not utilizing such treatment works prior to the finding that such condition was violated.

(i) Federal enforcement not limited. Nothing in this section shall be construed to limit the authority of the Administrator to take action pursuant to section 309 of this Act [33 USCS § 1319].

(j) Public information. A copy of each permit application and each permit issued under this section shall be available to the public. Such permit application or permit, or portion thereof, shall further be available on request for the purpose of reproduction.

(k) Compliance with permits. Compliance with a permit issued pursuant to this section shall be deemed compliance, for purposes of sections 309 and 505 [33 USCS §§ 1319, 1365], with sections 301, 302, 306, 307, and 403 [33 USCS §§ 1311, 1312, 1316, 1317, 1343], except any standard imposed under section 307 [33 USCS § 1317] for a toxic pollutant injurious to human health. Until December 31, 1974, in any case where a permit for discharge has been applied for pursuant to this section, but final administrative disposition of such application has not been made, such discharge shall not be a violation of (1) section 301, 306, or 402 of this Act [33 USCS § 1311, 1316, or 1342], or (2) section 13 of the Act of March 3, 1899 [33 USCS § 407], unless the Administrator or other plaintiff proves that final administrative disposition of such application has not been made because of the failure of the applicant to furnish information reasonably required or requested in order to process the application. For the 180-day period beginning on the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], in the case of any point source discharging any pollutant or combination of pollutants immediately prior to such date of enactment which source is not subject to section 13 of the Act of March 3, 1899 [33 USCS § 407], the discharge by such source shall not be a violation of this Act [33 USCS §§ 1251 et seq.] if such a source applies for a permit for discharge pursuant to this section within such 180-day period.

(l) Limitation on permit requirement.

(1) Agricultural return flows. The Administrator shall not require a permit under this section for discharges composed entirely of return flows from irrigated agriculture, nor shall the Administrator directly or indirectly, require any State to require such a permit.

(2) Stormwater runoff from oil, gas, and mining operations. The Administrator shall not require a permit under this section, nor shall the Administrator directly or indirectly require any State to require a permit, for discharges of stormwater runoff from mining operations or oil and gas exploration, production, processing, or treatment operations or transmission facilities, composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and

which are not contaminated by contact with, or do not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations.

(3) Silvicultural activities.

(A) NPDES permit requirements for silvicultural activities. The Administrator shall not require a permit under this section nor directly or indirectly require any State to require a permit under this section for a discharge from runoff resulting from the conduct of the following silviculture activities conducted in accordance with standard industry practice: nursery operations, site preparation, reforestation and subsequent cultural treatment, thinning, prescribed burning, pest and fire control, harvesting operations, surface drainage, or road construction and maintenance.

(B) Other requirements. Nothing in this paragraph exempts a discharge from silvicultural activity from any permitting requirement under section 404 [33 USCS § 1344], existing permitting requirements under section 402 [33 USCS § 1342], or from any other federal law.

(C) The authorization provided in Section 505(a) [33 USCS § 1365(a)] does not apply to any non-permitting program established under 402(p)(6) [33 USCS § 1342(p)(6)] for the silviculture activities listed in 402(l)(3)(A) [33 USCS § 1342(l)(3)(A)], or to any other limitations that might be deemed to apply to the silviculture activities listed in 402(l)(3)(A) [33 USCS § 1342(l)(3)(A)].

(m) Additional pretreatment of conventional pollutants not required. To the extent a treatment works (as defined in section 212 of this Act [33 USCS § 1292]) which is publicly owned is not meeting the requirements of a permit issued under this section for such treatment works as a result of inadequate design or operation of such treatment works, the Administrator, in issuing a permit under this section, shall not require pretreatment by a person introducing conventional pollutants identified pursuant to section 304(a)(4) of this Act [33 USCS § 1314(a)(4)] into such treatment works other than pretreatment required to assure compliance with pretreatment standards under subsection (b)(8) of this section and section 307(b)(1) of this Act [33 USCS § 1317(b)(1)]. Nothing in this subsection shall affect the Administrator's authority under sections 307 and 309 of this Act [33 USCS §§ 1317, 1319], affect State and local authority under sections 307(b)(4) and 510 of this Act [33 USCS §§ 1317(b)(4), 1370], relieve such treatment works of its obligations to meet requirements established under this Act [33 USCS §§ 1251 et seq.], or otherwise preclude such works from pursuing whatever feasible options are available to meet its responsibility to comply with its permit under this section.

(n) Partial permit program.

(1) State submission. The Governor of a State may submit under subsection (b) of this section a permit program for a portion of the discharges into the navigable waters in such State.

(2) Minimum coverage. A partial permit program under this subsection shall cover, at a minimum, administration of a major category of the discharges into the navigable waters of the State or a major component of the permit program required by subsection (b).

(3) Approval or major category partial permit programs. The Administrator may approve a partial permit program covering administration of a major category of discharges under this subsection if--

(A) such program represents a complete permit program and covers all of the discharges under the jurisdiction of a department or agency of the State; and

(B) the Administrator determines that the partial program represents a significant and identifiable part of the State program required by subsection (b).

(4) Approval of major component partial permit programs. The Administrator may approve under this subsection a partial and phased permit program covering administration of a major component (including discharge categories) of a State permit program required by subsection (b) if--

(A) the Administrator determines that the partial program represents a significant and identifiable part of the State program required by subsection (b); and

(B) the State submits, and the Administrator approves, a plan for the State to assume administration by phases of the remainder of the State program required by subsection (b) by a specified date not more than 5 years after submission of the partial program under this subsection and agrees to make all reasonable efforts to assume such administration by such date.

(o) Anti-backsliding.

(1) General prohibition. In the case of effluent limitations established on the basis of subsection (a)(1)(B) of this section, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under section 304(b) [33 USCS § 1314(b)] subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit. In the case of effluent limitations established on the basis of section 301(b)(1)(C) or section 303 (d) or (e) [33 USCS § 1311(b)(1)(C) or 1313(d) or (e)], a permit may not be renewed, reissued, or modified to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit except in compliance with section 303(d)(4) [33 USCS § 1313(d)(4)].

(2) Exceptions. A permit with respect to which paragraph (1) applies may be renewed, reissued, or modified to contain a less stringent effluent limitation applicable to a pollutant if--

(A) material and substantial alterations or additions to the permitted facility occurred after permit issuance which justify the application of a less stringent effluent limitation;

(B) (i) information is available which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of a less stringent effluent limitation at the time of permit issuance; or

(ii) the Administrator determines that technical mistakes or mistaken interpretations of law were made in issuing the permit under subsection (a)(1)(B);

(C) a less stringent effluent limitation is necessary because of events over which the permittee has no control and for which there is no reasonably available remedy;

(D) the permittee has received a permit modification under section 301(c), 301(g), 301(h), 301(i), 301(k), 301(n), or 316(a) [33 USCS § 1311(c), (g), (h), (i), (k), (n), or 1326(a)]; or

(E) the permittee has installed the treatment facilities required to meet the effluent limitations in the previous permit and has properly operated and maintained the facilities but has nevertheless been unable to achieve the previous effluent limitations, in which case the limitations in the reviewed, reissued, or modified permit may reflect the level of pollutant control actually achieved (but shall not be less stringent than required by effluent guidelines in effect at the time of permit renewal, reissuance, or modification).

Subparagraph (B) shall not apply to any revised waste load allocations or any alternative grounds for translating water quality standards into effluent limitations, except where the cumulative effect of such revised allocations results in a decrease in the amount of pollutants discharged into the concerned waters, and such revised allocations are not the result of a discharger eliminating or substantially reducing its discharge of pollutants due to complying with the requirements of this Act [33 USCS §§ 1251 et seq.] or for reasons otherwise unrelated to water quality.

(3) Limitations. In no event may a permit with respect to which paragraph (1) applies be renewed, reissued, or modified to contain an effluent limitation which is less stringent than required by effluent guidelines in effect at the time the permit is renewed, reissued, or modified. In no event may such a permit to discharge into waters be renewed, reissued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under section 303 [33 USCS § 1313] applicable to such waters.

(p) Municipal and industrial stormwater discharges.

(1) General rule. Prior to October 1, 1994, the Administrator or the State (in the case of a permit program approved under section 402 of this Act [this section]) shall not require a permit under this section for discharges composed entirely of stormwater.

(2) Exceptions. Paragraph (1) shall not apply with respect to the following stormwater discharges:

(A) A discharge with respect to which a permit has been issued under this section before the date of the enactment of this subsection [enacted Feb. 4, 1987].

(B) A discharge associated with industrial activity.

(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.

(E) A discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(3) Permit requirements.

(A) Industrial discharges. Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and section 301 [33 USCS § 1311].

(B) Municipal discharge. Permits for discharges from municipal storm sewers--

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.

(4) Permit application requirements.

(A) Industrial and large municipal discharges. Not later than 2 years after the date of the enactment of this subsection [enacted Feb. 4, 1987], the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after such date of enactment [enacted Feb. 4, 1987]. Not later than 4 years after such date of enactment [enacted Feb. 4, 1987], the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(B) Other municipal discharges. Not later than 4 years after the date of the enactment of this subsection [enacted Feb. 4, 1987], the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after such date of enactment [enacted Feb. 4, 1987]. Not later than 6 years after such date of enactment [enacted Feb. 4, 1987], the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(5) Studies. The Administrator, in consultation with the States, shall conduct a study for the purposes of--

(A) identifying those stormwater discharges or classes of stormwater discharges for which permits are not required pursuant to paragraphs (1) and (2) of this subsection;

(B) determining, to the maximum extent practicable, the nature and extent of pollutants in such discharges; and

(C) establishing procedures and methods to control stormwater discharges to the extent necessary to mitigate impacts on water quality.

Not later than October 1, 1988, the Administrator shall submit to Congress a report on the results of the study described in subparagraphs (A) and (B). Not later than October 1, 1989, the Administrator shall submit to Congress a report on the results of the study described in subparagraph (C).

(6) Regulations. Not later than October 1, 1993, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate.

(q) Combined sewer overflows.

(1) Requirement for permits, orders, and decrees. Each permit, order, or decree issued pursuant to this Act [33 USCS §§ 1251 et seq.] after the date of enactment of this subsection [enacted Dec. 21, 2000] for a discharge from a municipal combined storm and sanitary sewer shall conform to the Combined Sewer Overflow Control Policy signed by the Administrator on April 11, 1994 (in this subsection referred to as the "CSO control policy").

(2) Water quality and designated use review guidance. Not later than July 31, 2001, and after providing notice and

opportunity for public comment, the Administrator shall issue guidance to facilitate the conduct of water quality and designated use reviews for municipal combined sewer overflow receiving waters.

(3) Report. Not later than September 1, 2001, the Administrator shall transmit to Congress a report on the progress made by the Environmental Protection Agency, States, and municipalities in implementing and enforcing the CSO control policy.

(r) Discharges incidental to the normal operation of recreational vessels. No permit shall be required under this Act [33 USCS §§ 1251 et seq.] by the Administrator (or a State, in the case of a permit program approved under subsection (b)) for the discharge of any graywater, bilge water, cooling water, weather deck runoff, oil water separator effluent, or effluent from properly functioning marine engines, or any other discharge that is incidental to the normal operation of a vessel, if the discharge is from a recreational vessel.

HISTORY:

(June 30, 1948, ch 758, Title IV, § 402, as added Oct. 18, 1972, P.L. 92-500, § 2, 86 Stat. 880; Dec. 27, 1977, P.L. 95-217, §§ 33(c), 54(c)(1), 65, 66, 91 Stat. 1577, 1591, 1599, 1600; Feb. 4, 1987, P.L. 100-4, Title IV, §§ 401-403, 404(a), (c) [(d)], 405, 101 Stat. 65-69; Oct. 31, 1992, P.L. 102-580, Title III, § 364, 106 Stat. 4862; Dec. 21, 1995, P.L. 104-66, Title II, Subtitle B, § 2021(e)(2), 109 Stat. 727; Dec. 21, 2000, P.L. 106-554, § 1(a)(4), 114 Stat. 2763; July 30, 2008, P.L. 110-288, § 2, 122 Stat. 2650.)

TITLE 33. NAVIGATION AND NAVIGABLE WATERS
CHAPTER 26. WATER POLLUTION PREVENTION AND CONTROL
GENERAL PROVISIONS

Go to the United States Code Service Archive Directory

33 USCS § 1362

§ 1362. Definitions

Except as otherwise specifically provided, when used in this Act [33 USCS §§ 1251 et seq.]:

- (1) The term "State water pollution control agency" means the State agency designated by the Governor having responsibility for enforcing State laws relating to the abatement of pollution.
- (2) The term "interstate agency" means an agency of two or more States established by or pursuant to an agreement or compact approved by the Congress, or any other agency of two or more States, having substantial powers or duties pertaining to the control of pollution as determined and approved by the Administrator.
- (3) The term "State" means a State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, and the Trust Territory of the Pacific Islands.
- (4) The term "municipality" means a city, town, borough, county, parish, district, association, or other public body created by or pursuant to State law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of this Act [33 USCS § 1288].
- (5) The term "person" means an individual, corporation, partnership, association, State, municipality, commission, or political subdivision of a state, or any interstate body.
- (6) The term "pollutant" means dredged spoil, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt and industrial, municipal, and agricultural waste discharged into water. This term does not mean (A) "sewage from vessels or a discharge incidental to the normal operation of a vessel of the Armed Forces" within the meaning of section 312 of this Act [33 USCS § 1322]; or (B) water, gas, or other material which is injected into a well to facilitate production of oil or gas, or water derived in association with oil or gas production and disposed of in a well, if the well used either to facilitate production or for disposal purposes is approved by authority of the State in which the well is located, and if such State determines that such injection or disposal will not result in the degradation of ground or surface water resources.
- (7) The term "navigable waters" means the waters of the United States, including the territorial seas.
- (8) The term "territorial seas" means the belt of the seas measured from the line of ordinary low water along that portion of the coast which is in direct contact with the open sea and the line marking the seaward limit of inland waters, and extending seaward a distance of three miles.
- (9) The term "contiguous zone" means the entire zone established or to be established by the United States under article 24 of the Convention of the Territorial Sea and the Contiguous Zone [15 UST § 1606].

(10) The term "ocean" means any portion of the high seas beyond the contiguous zone.

(11) The term "effluent limitation" means any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.

(12) The term "discharge of a pollutant" and the term "discharge of pollutants" each means (A) any addition of any pollutant to navigable waters from any point source, (B) any addition of any pollutant to the waters of the contiguous zone or the ocean from any point source other than a vessel or other floating craft.

(13) The term "toxic pollutant" means those pollutants, or combinations of pollutants, including disease-causing agents, which after discharge and upon exposure, ingestion, inhalation or assimilation into any organism, either directly from the environment or indirectly by ingestion through food chains, will, on the basis of information available to the Administrator, cause death, disease, behavioral abnormalities, cancer, genetic mutations, physiological malfunctions (including malfunctions in reproduction) or physical deformations, in such organisms or their offspring.

(14) The term "point source" means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include agricultural stormwater discharges and return flows from irrigated agriculture.

(15) The term "biological monitoring" shall mean the determination of the effects on aquatic life, including accumulation of pollutants in tissue, in receiving waters due to the discharge of pollutants (A) by techniques and procedures, including sampling of organisms representative of appropriate levels of the food chain appropriate to the volume and the physical, chemical, and biological characteristics of the effluent, and (B) at appropriate frequencies and locations.

(16) The term "discharge" when used without qualification includes a discharge of a pollutant, and a discharge of pollutants.

(17) The term "schedule of compliance" means a schedule of remedial measures including an enforceable sequence of actions or operations leading to compliance with an effluent limitation, other limitation, prohibition, or standard.

(18) The term "industrial user" means those industries identified in the Standard Industrial Classification Manual, Bureau of the Budget, 1967, as amended and supplemented, under the category "Division D--Manufacturing" and such other classes of significant waste producers as, by regulation, the Administrator deems appropriate.

(19) The term "pollution" means the man-made or man-induced alteration of the chemical, physical, biological, and radiological integrity of water.

(20) The term "medical waste" means isolation wastes; infectious agents; human blood and blood products; pathological wastes; sharps; body parts; contaminated bedding; surgical wastes and potentially contaminated laboratory wastes; dialysis wastes; and such additional medical items as the Administrator shall prescribe by regulation.

(21) Coastal recreation waters.

(A) In general. The term "coastal recreation waters" means--

(i) the Great Lakes; and

(ii) marine coastal waters (including coastal estuaries) that are designated under section 303(c) [33 USCS § 1313(c)] by a State for use for swimming, bathing, surfing, or similar water contact activities.

(B) Exclusions. The term "coastal recreation waters" does not include--

(i) inland waters; or

(ii) waters upstream of the mouth of a river or stream having an unimpaired natural connection with the open sea.

(22) Floatable material.

(A) In general. The term "floatable material" means any foreign matter that may float or remain suspended in the water column.

(B) Inclusions. The term "floatable material" includes--

(i) plastic;

(ii) aluminum cans;

(iii) wood products;

(iv) bottles; and

(v) paper products.

(23) Pathogen indicator. The term "pathogen indicator" means a substance that indicates the potential for human infectious disease.

(24) Oil and gas exploration and production. The term "oil and gas exploration, production, processing, or treatment operations or transmission facilities" means all field activities or operations associated with exploration, production, processing, or treatment operations, or transmission facilities, including activities necessary to prepare a site for drilling and for the movement and placement of drilling equipment, whether or not such field activities or operations may be considered to be construction activities.

(25) Recreational vessel.

(A) In general. The term "recreational vessel" means any vessel that is--

- (i) manufactured or used primarily for pleasure; or
- (ii) leased, rented, or chartered to a person for the pleasure of that person.

(B) Exclusion. The term "recreational vessel" does not include a vessel that is subject to Coast Guard inspection and that--

- (i) is engaged in commercial use; or
- (ii) carries paying passengers.

(26) Treatment works. The term "treatment works" has the meaning given the term in section 212 [33 USCS § 1292].

HISTORY:

(June 30, 1948, ch 758, Title V, § 502, as added Oct. 18, 1972, P.L. 92-500, § 2, 86 Stat. 886; Dec. 27, 1977, P.L. 95-217, § 33(b), 91 Stat. 1577; Feb. 4, 1987, P.L. 100-4, Title V, §§ 502(a), 503, 101 Stat. 75; Nov. 18, 1988, P.L. 100-688, Title III, Subtitle B, § 3202(a), 102 Stat. 4154; Feb. 10, 1996, P.L. 104-106, Div A, Title III, Subtitle C, § 325(c)(3), 110 Stat. 259; Oct. 10, 2000, P.L. 106-284, § 5, 114 Stat. 875; Aug. 8, 2005, P.L. 109-58, Title III, Subtitle C, § 323, 119 Stat. 694; July 30, 2008, P.L. 110-288, § 3, 122 Stat. 2650.)

(As amended June 10, 2014, P.L. 113-121, Title V, Subtitle B, § 5012(b), 128 Stat. 1328.)

TITLE 33. NAVIGATION AND NAVIGABLE WATERS
CHAPTER 26. WATER POLLUTION PREVENTION AND CONTROL
GENERAL PROVISIONS

Go to the United States Code Service Archive Directory

33 USCS § 1365

§ 1365. Citizen suits

(a) Authorization; jurisdiction. Except as provided in subsection (b) of this section and section 309(g)(6) [33 USCS § 1319(g)(6)], any citizen may commence a civil action on his own behalf--

(1) against any person (including (i) the United States, and (ii) any other governmental instrumentality or agency to the extent permitted by the eleventh amendment to the Constitution) who is alleged to be in violation of (A) an effluent standard or limitation under this Act [33 USCS §§ 1251 et seq.] or (B) an order issued by the Administrator or a State with respect to such a standard or limitation, or

(2) against the Administrator where there is alleged a failure of the Administrator to perform any act or duty under this Act [33 USCS §§ 1251 et seq.] which is not discretionary with the Administrator.

The district courts shall have jurisdiction, without regard to the amount in controversy or the citizenship of the parties, to enforce such an effluent standard or limitation, or such an order, or to order the Administrator to perform such act or duty, as the case may be, and to apply any appropriate civil penalties under section 309(d) of this Act [33 USCS § 1319(d)].

(b) Notice. No action may be commenced--

(1) under subsection (a)(1) of this section--

(A) prior to sixty days after the plaintiff has given notice of the alleged violation (i) to the Administrator, (ii) to the State in which the alleged violation occurs, and (iii) to any alleged violator of the standard, limitation, or order, or

(B) if the Administrator or State has commenced and is diligently prosecuting a civil or criminal action in a court of the United States, or a State to require compliance with the standard, limitation, or order, but in any such action in a court of the United States any citizen may intervene as a matter of right.

(2) under subsection (a)(2) of this section prior to sixty days after the plaintiff has given notice of such action to the Administrator,

except that such action may be brought immediately after such notification in the case of an action under this section respecting a violation of sections 306 and 307(a) of this Act [33 USCS §§ 1316, 1317(a)]. Notice under this subsection shall be given in such manner as the Administrator shall prescribe by regulation.

(c) Venue; intervention by Administrator; United States interests protected.

(1) Any action respecting a violation by a discharge source of an effluent standard or limitation or an order respecting

such standard or limitation may be brought under this section only in the judicial district in which such source is located.

(2) In such action under this section, the Administrator, if not a party, may intervene as a matter of right.

(3) Protection of interests of United States. Whenever any action is brought under this section in a court of the United States, the plaintiff shall serve a copy of the complaint on the Attorney General and the Administrator. No consent judgment shall be entered in an action in which the United States is not a party prior to 45 days following the receipt of a copy of the proposed consent judgment by the Attorney General and the Administrator.

(d) Litigation costs. The court, in issuing any final order in any action brought pursuant to this section, may award costs of litigation (including reasonable attorney and expert witness fees) to any prevailing or substantially prevailing party, whenever the court determines such award is appropriate. The court may, if a temporary restraining order or preliminary injunction is sought, require the filing of a bond or equivalent security in accordance with the Federal Rules of Civil Procedure.

(e) Statutory or common law rights not restricted. Nothing in this section shall restrict any right which any person (or class of persons) may have under any statute or common law to seek enforcement of any effluent standard or limitation or to seek any other relief (including relief against the Administrator or a State agency).

(f) Effluent standard or limitation. For purposes of this section, the term "effluent standard or limitation under this Act" means (1) effective July 1, 1973, an unlawful act under subsection (a) of section 301 of this Act [33 USCS § 1311(a)]; (2) an effluent limitation or other limitation under section 301 or 302 of this Act [33 USCS § 1311 or 1312]; (3) standard of performance under section 306 of this Act [33 USCS § 1316]; (4) prohibition, effluent standard or pretreatment standards under section 307 of this Act [33 USCS § 1317]; (5) certification under section 401 of this Act [33 USCS § 1341]; (6) a permit or condition thereof issued under section 402 of this Act [33 USCS § 1342], which is in effect under this Act [33 USCS §§ 1251 et seq.] (including a requirement applicable by reason of section 313 of this Act [33 USCS § 1323]); or (7) a regulation under section 405(d) of this Act [33 USCS § 1345(d)],.

(g) "Citizen" defined. For the purposes of this section the term "citizen" means a person or persons having an interest which is or may be adversely affected.

(h) Civil action by State Governors. A Governor of a State may commence a civil action under subsection (a), without regard to the limitations of subsection (b) of this section, against the Administrator where there is alleged a failure of the Administrator to enforce an effluent standard or limitation under this Act [33 USCS §§ 1251 et seq.] the violation of which is occurring in another State and is causing an adverse effect on the public health or welfare in his State, or is causing a violation of any water quality requirement in his State.

HISTORY:

(June 30, 1948, ch 758, Title V, § 505, as added Oct. 18, 1972, P.L. 92-500, § 2, 86 Stat. 888; Feb. 4, 1987, P.L. 100-4, Title III, § 314(c), Title IV, § 406(d)(2), Title V, §§ 504, 505(c), 101 Stat. 49, 73, 75, 76.)

33 USCS § 1370

§ 1370. State authority

Except as expressly provided in this Act [33 USCS §§ 1251 et seq.], nothing in this Act [33 USCS §§ 1251 et seq.] shall (1) preclude or deny the right of any State or political subdivision thereof or interstate agency to adopt or enforce (A) any standard or limitation respecting discharges of pollutants, or (B) any requirement respecting control or abatement of pollution; except that if an effluent limitation, or other limitation, effluent standard, prohibition, pretreatment standard, or standard of performance is in effect under this Act [33 USCS §§ 1251 et seq.], such State or political subdivision or interstate agency may not adopt or enforce any effluent limitation, or other limitation, effluent standard, prohibition, pretreatment standard, or standard of performance which is less stringent than the effluent limitation, or other limitation, effluent standard, prohibition, pretreatment standard, or standard of performance under this Act [33 USCS §§ 1251 et seq.]; or (2) be construed as impairing or in any manner affecting any right or jurisdiction of the States with respect to the waters (including boundary waters) of such States.

HISTORY:

(June 30, 1948, ch. 758, Title V, § 510, as added, Oct. 18, 1972, P.L. 92-500, § 2, 86 Stat. 893.)

TITLE 40 -- PROTECTION OF ENVIRONMENT
CHAPTER I -- ENVIRONMENTAL PROTECTION AGENCY
SUBCHAPTER D -- WATER PROGRAMS
PART 123 -- STATE PROGRAM REQUIREMENTS
SUBPART A -- GENERAL

Go to the CFR Archive Directory

40 CFR 123.1

§ 123.1 Purpose and scope.

(a) This part specifies the procedures EPA will follow in approving, revising, and withdrawing State programs and the requirements State programs must meet to be approved by the Administrator under sections 318, 402, and 405(a) (National Pollutant Discharge Elimination System -- NPDES) of the CWA. This part also specifies the procedures EPA will follow in approving, revising, and withdrawing State programs under section 405(f) (sludge management programs) of the CWA. The requirements that a State sewage sludge management program must meet for approval by the Administrator under section 405(f) are set out at 40 CFR part 501.

(b) These regulations are promulgated under the authority of sections 304(i), 101(e), 405, and 518(e) of the CWA, and implement the requirements of those sections.

(c) The Administrator will approve State programs which conform to the applicable requirements of this part. A State NPDES program will not be approved by the Administrator under section 402 of CWA unless it has authority to control the discharges specified in sections 318 and 405(a) of CWA. Permit programs under sections 318 and 405(a) will not be approved independent of a section 402 program.

(d)(1) Upon approval of a State program, the Administrator shall suspend the issuance of Federal permits for those activities subject to the approved State program. After program approval EPA shall retain jurisdiction over any permits (including general permits) which it has issued unless arrangements have been made with the State in the Memorandum of Agreement for the State to assume responsibility for these permits. Retention of jurisdiction shall include the processing of any permit appeals, modification requests, or variance requests; the conduct of inspections, and the receipt and review of self-monitoring reports. If any permit appeal, modification request or variance request is not finally resolved when the federally issued permit expires, EPA may, with the consent of the State, retain jurisdiction until the matter is resolved.

(2) The procedures outlined in the preceding paragraph (d)(1) of this section for suspension of permitting authority and transfer of existing permits will also apply when EPA approves an Indian Tribe's application to operate a State program and a State was the authorized permitting authority under § 123.23(b) for activities within the scope of the newly approved program. The authorized State will retain jurisdiction over its existing permits as described in

paragraph (d)(1) of this section absent a different arrangement stated in the Memorandum of Agreement executed between EPA and the Tribe.

(e) Upon submission of a complete program, EPA will conduct a public hearing, if interest is shown, and determine whether to approve or disapprove the program taking into consideration the requirements of this part, the CWA and any comments received.

(f) Any State program approved by the Administrator shall at all times be conducted in accordance with the requirements of this part.

(g)(1) Except as may be authorized pursuant to paragraph (g)(2) of this section or excluded by § 122.3, the State program must prohibit all point source discharges of pollutants, all discharges into aquaculture projects, and all disposal of sewage sludge which results in any pollutant from such sludge entering into any waters of the United States within the State's jurisdiction except as authorized by a permit in effect under the State program or under section 402 of CWA. NPDES authority may be shared by two or more State agencies but each agency must have Statewide jurisdiction over a class of activities or discharges. When more than one agency is responsible for issuing permits, each agency must make a submission meeting the requirements of § 123.21 before EPA will begin formal review.

(2) A State may seek approval of a partial or phased program in accordance with section 402(n) of the CWA.

(h) In many cases, States (other than Indian Tribes) will lack authority to regulate activities on Indian lands. This lack of authority does not impair that State's ability to obtain full program approval in accordance with this part, i.e., inability of a State to regulate activities on Indian lands does not constitute a partial program. EPA will administer the program on Indian lands if a State (or Indian Tribe) does not seek or have authority to regulate activities on Indian lands.

NOTE: States are advised to contact the United States Department of the Interior, Bureau of Indian Affairs, concerning authority over Indian lands.

(i) Nothing in this part precludes a State from:

(1) Adopting or enforcing requirements which are more stringent or more extensive than those required under this part;

(2) Operating a program with a greater scope of coverage than that required under this part. If an approved State program has greater scope of coverage than required by Federal law the additional coverage is not part of the Federally approved program.

NOTE: For example, if a State requires permits for discharges into publicly owned treatment works, these permits are not NPDES permits.

40 CFR 122.26

§ 122.26 Storm water discharges (applicable to State NPDES programs, see § 123.25).

(a) Permit requirement. (1) Prior to October 1, 1994, discharges composed entirely of storm water shall not be required to obtain a NPDES permit except:

- (i) A discharge with respect to which a permit has been issued prior to February 4, 1987;
- (ii) A discharge associated with industrial activity (see § 122.26(a)(4));
- (iii) A discharge from a large municipal separate storm sewer system;
- (iv) A discharge from a medium municipal separate storm sewer system;

(v) A discharge which the Director, or in States with approved NPDES programs, either the Director or the EPA Regional Administrator, determines to contribute to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States. This designation may include a discharge from any conveyance or system of conveyances used for collecting and conveying storm water runoff or a system of discharges from municipal separate storm sewers, except for those discharges from conveyances which do not require a permit under paragraph (a)(2) of this section or agricultural storm water runoff which is exempted from the definition of point source at § 122.2.

The Director may designate discharges from municipal separate storm sewers on a system-wide or jurisdiction-wide basis. In making this determination the Director may consider the following factors:

- (A) The location of the discharge with respect to waters of the United States as defined at 40 CFR 122.2.
- (B) The size of the discharge;
- (C) The quantity and nature of the pollutants discharged to waters of the United States; and
- (D) Other relevant factors.

(2) The Director may not require a permit for discharges of storm water runoff from the following:

(i) Mining operations composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and which are not contaminated by contact with or that have not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations, except in accordance with paragraph (c)(1)(iv) of this section.

(ii) All field activities or operations associated with oil and gas exploration, production, processing, or treatment operations or transmission facilities, including activities necessary to prepare a site for drilling and for the movement and placement of drilling equipment, whether or not such field activities or operations may be considered to be construction activities, except in accordance with paragraph (c)(1)(iii) of this section. Discharges of sediment from construction activities associated with oil and gas exploration, production, processing, or treatment operations or transmission facilities are not subject to the provisions of paragraph (c)(1)(iii)(C) of this section.

Note to paragraph (a)(2)(ii): EPA encourages operators of oil and gas field activities or operations to implement and maintain Best Management Practices (BMPs) to minimize discharges of pollutants, including sediment, in storm water both during and after construction activities to help ensure protection of surface water quality during storm events. Appropriate controls would be those suitable to the site conditions and consistent with generally accepted engineering design criteria and manufacturer specifications. Selection of BMPs could also be affected by seasonal or climate conditions.

(3) Large and medium municipal separate storm sewer systems. (i) Permits must be obtained for all discharges from large and medium municipal separate storm sewer systems.

(ii) The Director may either issue one system-wide permit covering all discharges from municipal separate storm sewers within a large or medium municipal storm sewer system or issue distinct permits for appropriate categories of discharges within a large or medium municipal separate storm sewer system including, but not limited to: all discharges owned or operated by the same municipality; located within the same jurisdiction; all discharges within a system that discharge to the same watershed; discharges within a system that are similar in nature; or for individual discharges from municipal separate storm sewers within the system.

(iii) The operator of a discharge from a municipal separate storm sewer which is part of a large or medium municipal separate storm sewer system must either:

(A) Participate in a permit application (to be a permittee or a co-permittee) with one or more other operators of discharges from the large or medium municipal storm sewer system which covers all, or a portion of all, discharges from the municipal separate storm sewer system;

(B) Submit a distinct permit application which only covers discharges from the municipal separate storm sewers for which the operator is responsible; or

(C) A regional authority may be responsible for submitting a permit application under the following guidelines:

(1) The regional authority together with co-applicants shall have authority over a storm water management program that is in existence, or shall be in existence at the time part 1 of the application is due;

(2) The permit applicant or co-applicants shall establish their ability to make a timely submission of part 1 and part 2 of the municipal application;

(3) Each of the operators of municipal separate storm sewers within the systems described in paragraphs (b)(4) (i), (ii), and (iii) or (b)(7) (i), (ii), and (iii) of this section, that are under the purview of the designated regional authority,

shall comply with the application requirements of paragraph (d) of this section.

(iv) One permit application may be submitted for all or a portion of all municipal separate storm sewers within adjacent or interconnected large or medium municipal separate storm sewer systems. The Director may issue one system-wide permit covering all, or a portion of all municipal separate storm sewers in adjacent or interconnected large or medium municipal separate storm sewer systems.

(v) Permits for all or a portion of all discharges from large or medium municipal separate storm sewer systems that are issued on a system-wide, jurisdiction-wide, watershed or other basis may specify different conditions relating to different discharges covered by the permit, including different management programs for different drainage areas which contribute storm water to the system.

(vi) Co-permittees need only comply with permit conditions relating to discharges from the municipal separate storm sewers for which they are operators.

(4) Discharges through large and medium municipal separate storm sewer systems. In addition to meeting the requirements of paragraph (c) of this section, an operator of a storm water discharge associated with industrial activity which discharges through a large or medium municipal separate storm sewer system shall submit, to the operator of the municipal separate storm sewer system receiving the discharge no later than May 15, 1991, or 180 days prior to commencing such discharge: the name of the facility; a contact person and phone number; the location of the discharge; a description, including Standard Industrial Classification, which best reflects the principal products or services provided by each facility; and any existing NPDES permit number.

(5) Other municipal separate storm sewers. The Director may issue permits for municipal separate storm sewers that are designated under paragraph (a)(1)(v) of this section on a system-wide basis, jurisdiction-wide basis, watershed basis or other appropriate basis, or may issue permits for individual discharges.

(6) Non-municipal separate storm sewers. For storm water discharges associated with industrial activity from point sources which discharge through a non-municipal or non-publicly owned separate storm sewer system, the Director, in his discretion, may issue: a single NPDES permit, with each discharger a co-permittee to a permit issued to the operator of the portion of the system that discharges into waters of the United States; or, individual permits to each discharger of storm water associated with industrial activity through the non-municipal conveyance system.

(i) All storm water discharges associated with industrial activity that discharge through a storm water discharge system that is not a municipal separate storm sewer must be covered by an individual permit, or a permit issued to the operator of the portion of the system that discharges to waters of the United States, with each discharger to the non-municipal conveyance a co-permittee to that permit.

(ii) Where there is more than one operator of a single system of such conveyances, all operators of storm water discharges associated with industrial activity must submit applications.

(iii) Any permit covering more than one operator shall identify the effluent limitations, or other permit conditions, if any, that apply to each operator.

(7) Combined sewer systems. Conveyances that discharge storm water runoff combined with municipal sewage are point sources that must obtain NPDES permits in accordance with the procedures of § 122.21 and are not subject to the provisions of this section.

(8) Whether a discharge from a municipal separate storm sewer is or is not subject to regulation under this section shall have no bearing on whether the owner or operator of the discharge is eligible for funding under title II, title III or title VI of the Clean Water Act. See 40 CFR part 35, subpart I, appendix A(b)H.2.j.

(9)(i) On and after October 1, 1994, for discharges composed entirely of storm water, that are not required by paragraph (a)(1) of this section to obtain a permit, operators shall be required to obtain a NPDES permit only if:

(A) The discharge is from a small MS4 required to be regulated pursuant to § 122.32;

(B) The discharge is a storm water discharge associated with small construction activity pursuant to paragraph (b)(15) of this section;

(C) The Director, or in States with approved NPDES programs either the Director or the EPA Regional Administrator, determines that storm water controls are needed for the discharge based on wasteload allocations that are part of "total maximum daily loads" (TMDLs) that address the pollutant(s) of concern; or

(D) The Director, or in States with approved NPDES programs either the Director or the EPA Regional Administrator, determines that the discharge, or category of discharges within a geographic area, contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(ii) Operators of small MS4s designated pursuant to paragraphs (a)(9)(i)(A), (a)(9)(i)(C), and (a)(9)(i)(D) of this section shall seek coverage under an NPDES permit in accordance with §§ 122.33 through 122.35. Operators of non-municipal sources designated pursuant to paragraphs (a)(9)(i)(B), (a)(9)(i)(C), and (a)(9)(i)(D) of this section shall seek coverage under an NPDES permit in accordance with paragraph (c)(1) of this section.

(iii) Operators of storm water discharges designated pursuant to paragraphs (a)(9)(i)(C) and (a)(9)(i)(D) of this section shall apply to the Director for a permit within 180 days of receipt of notice, unless permission for a later date is granted by the Director (see § 124.52(c) of this chapter).

(b) Definitions. (1) Co-permittee means a permittee to a NPDES permit that is only responsible for permit conditions relating to the discharge for which it is operator.

(2) Illicit discharge means any discharge to a municipal separate storm sewer that is not composed entirely of storm water except discharges pursuant to a NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer) and discharges resulting from fire fighting activities.

(3) Incorporated place means the District of Columbia, or a city, town, township, or village that is incorporated under the laws of the State in which it is located.

(4) Large municipal separate storm sewer system means all municipal separate storm sewers that are either:

(i) Located in an incorporated place with a population of 250,000 or more as determined by the 1990 Decennial Census by the Bureau of the Census (Appendix F of this part); or

(ii) Located in the counties listed in appendix H, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or

(iii) Owned or operated by a municipality other than those described in paragraph (b)(4)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph (b)(4)(i) or (ii) of this section. In making this determination the Director may consider the following factors:

(A) Physical interconnections between the municipal separate storm sewers;

(B) The location of discharges from the designated municipal separate storm sewer relative to discharges from municipal separate storm sewers described in paragraph (b)(4)(i) of this section;

(C) The quantity and nature of pollutants discharged to waters of the United States;

(D) The nature of the receiving waters; and

(E) Other relevant factors; or

(iv) The Director may, upon petition, designate as a large municipal separate storm sewer system, municipal separate storm sewers located within the boundaries of a region defined by a storm water management regional authority based on a jurisdictional, watershed, or other appropriate basis that includes one or more of the systems described in paragraph (b)(4)(i), (ii), (iii) of this section.

(5) Major municipal separate storm sewer outfall (or "major outfall") means a municipal separate storm sewer outfall that discharges from a single pipe with an inside diameter of 36 inches or more or its equivalent (discharge from a single conveyance other than circular pipe which is associated with a drainage area of more than 50 acres); or for municipal separate storm sewers that receive storm water from lands zoned for industrial activity (based on comprehensive zoning plans or the equivalent), an outfall that discharges from a single pipe with an inside diameter of 12 inches or more or from its equivalent (discharge from other than a circular pipe associated with a drainage area of 2 acres or more).

(6) Major outfall means a major municipal separate storm sewer outfall.

(7) Medium municipal separate storm sewer system means all municipal separate storm sewers that are either:

(i) Located in an incorporated place with a population of 100,000 or more but less than 250,000, as determined by the 1990 Decennial Census by the Bureau of the Census (Appendix G of this part); or

(ii) Located in the counties listed in appendix I, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or

(iii) Owned or operated by a municipality other than those described in paragraph (b)(7)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph (b)(7)(i) or (ii) of this section. In making this determination the Director may consider the following factors:

(A) Physical interconnections between the municipal separate storm sewers;

(B) The location of discharges from the designated municipal separate storm sewer relative to discharges from municipal separate storm sewers described in paragraph (b)(7)(i) of this section;

(C) The quantity and nature of pollutants discharged to waters of the United States;

(D) The nature of the receiving waters; or

(E) Other relevant factors; or

(iv) The Director may, upon petition, designate as a medium municipal separate storm sewer system, municipal separate storm sewers located within the boundaries of a region defined by a storm water management regional authority based on a jurisdictional, watershed, or other appropriate basis that includes one or more of the systems described in paragraphs (b)(7)(i), (ii), (iii) of this section.

(8) Municipal separate storm sewer means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States;

(ii) Designed or used for collecting or conveying storm water;

(iii) Which is not a combined sewer; and

(iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

(9) Outfall means a point source as defined by 40 CFR 122.2 at the point where a municipal separate storm sewer discharges to waters of the United States and does not include open conveyances connecting two municipal separate storm sewers, or pipes, tunnels or other conveyances which connect segments of the same stream or other waters of the United States and are used to convey waters of the United States.

(10) Overburden means any material of any nature, consolidated or unconsolidated, that overlies a mineral deposit, excluding topsoil or similar naturally-occurring surface materials that are not disturbed by mining operations.

(11) Runoff coefficient means the fraction of total rainfall that will appear at a conveyance as runoff.

(12) Significant materials includes, but is not limited to: raw materials; fuels; materials such as solvents, detergents, and plastic pellets; finished materials such as metallic products; raw materials used in food processing or production; hazardous substances designated under section 101(14) of CERCLA; any chemical the facility is required to report pursuant to section 313 of title III of SARA; fertilizers; pesticides; and waste products such as ashes, slag and sludge that have the potential to be released with storm water discharges.

(13) Storm water means storm water runoff, snow melt runoff, and surface runoff and drainage.

(14) Storm water discharge associated with industrial activity means the discharge from any conveyance that is used for collecting and conveying storm water and that is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. The term does not include discharges from facilities or activities excluded from the NPDES program under this part 122. For the categories of industries identified in this section, the term includes, but is not limited to, storm water discharges from industrial plant yards; immediate access roads and rail lines used or traveled by carriers of raw materials, manufactured products, waste material, or by-products used or created by the facility; material handling sites; refuse sites; sites used for the application or disposal of process waste waters (as defined at part 401 of this chapter); sites used for the storage and maintenance of material handling equipment; sites used for residual treatment, storage, or disposal; shipping and receiving areas; manufacturing buildings; storage areas (including tank farms) for raw materials, and intermediate and final products; and areas where industrial activity has taken place in the past and significant materials remain and are exposed to storm water. For the purposes of this paragraph, material handling activities include storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, final product, by-product or waste product. The term excludes areas located on plant lands separate from the plant's industrial activities, such as office buildings and accompanying parking lots as long as the drainage from the excluded areas is not mixed with storm water drained from the above described areas. Industrial facilities (including industrial facilities that are federally, State, or municipally owned or operated that meet the description of the facilities listed in paragraphs (b)(14)(i) through (xi) of this section) include those facilities designated under the provisions of paragraph (a)(1)(v) of this section. The following categories of facilities are considered to be engaging in "industrial activity" for purposes of paragraph (b)(14):

(i) Facilities subject to storm water effluent limitations guidelines, new source performance standards, or toxic pollutant effluent standards under 40 CFR subchapter N (except facilities with toxic pollutant effluent standards which

are exempted under category (xi) in paragraph (b)(14) of this section);

(ii) Facilities classified within Standard Industrial Classification 24, Industry Group 241 that are rock crushing, gravel washing, log sorting, or log storage facilities operated in connection with silvicultural activities defined in 40 CFR 122.27(b)(2)-(3) and Industry Groups 242 through 249; 26 (except 265 and 267), 28 (except 283), 29, 311, 32 (except 323), 33, 3441, 373; (not included are all other types of silviculture facilities);

(iii) Facilities classified as Standard Industrial Classifications 10 through 14 (mineral industry) including active or inactive mining operations (except for areas of coal mining operations no longer meeting the definition of a reclamation area under 40 CFR 434.11(1) because the performance bond issued to the facility by the appropriate SMCRA authority has been released, or except for areas of non-coal mining operations which have been released from applicable State or Federal reclamation requirements after December 17, 1990) and oil and gas exploration, production, processing, or treatment operations, or transmission facilities that discharge storm water contaminated by contact with or that has come into contact with, any overburden, raw material, intermediate products, finished products, byproducts or waste products located on the site of such operations; (inactive mining operations are mining sites that are not being actively mined, but which have an identifiable owner/operator; inactive mining sites do not include sites where mining claims are being maintained prior to disturbances associated with the extraction, beneficiation, or processing of mined materials, nor sites where minimal activities are undertaken for the sole purpose of maintaining a mining claim);

(iv) Hazardous waste treatment, storage, or disposal facilities, including those that are operating under interim status or a permit under subtitle C of RCRA;

(v) Landfills, land application sites, and open dumps that receive or have received any industrial wastes (waste that is received from any of the facilities described under this subsection) including those that are subject to regulation under subtitle D of RCRA;

(vi) Facilities involved in the recycling of materials, including metal scrapyards, battery reclaimers, salvage yards, and automobile junkyards, including but limited to those classified as Standard Industrial Classification 5015 and 5093;

(vii) Steam electric power generating facilities, including coal handling sites;

(viii) Transportation facilities classified as Standard Industrial Classifications 40, 41, 42 (except 4221-25), 43, 44, 45, and 5171 which have vehicle maintenance shops, equipment cleaning operations, or airport deicing operations. Only those portions of the facility that are either involved in vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling, and lubrication), equipment cleaning operations, airport deicing operations, or which are otherwise identified under paragraphs (b)(14) (i)-(vii) or (ix)-(xi) of this section are associated with industrial activity;

(ix) Treatment works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge that are located within the confines of the facility, with a design flow of 1.0 mgd or more, or required to have an approved pretreatment program under 40 CFR part 403. Not included are farm lands, domestic gardens or lands used for sludge management where sludge is beneficially reused and which are not physically located in the confines of the facility, or areas that are in compliance with section 405 of the CWA;

(x) Construction activity including clearing, grading and excavation, except operations that result in the disturbance of less than five acres of total land area. Construction activity also includes the disturbance of less than five acres of total land area that is a part of a larger common plan of development or sale if the larger common plan will ultimately disturb five acres or more;

(xi) Facilities under Standard Industrial Classifications 20, 21, 22, 23, 2434, 25, 265, 267, 27, 283, 285, 30, 31 (except 311), 323, 34 (except 3441), 35, 36, 37 (except 373), 38, 39, and 4221-25;

(15) Storm water discharge associated with small construction activity means the discharge of storm water from:

(i) Construction activities including clearing, grading, and excavating that result in land disturbance of equal to or greater than one acre and less than five acres. Small construction activity also includes the disturbance of less than one acre of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb equal to or greater than one and less than five acres. Small construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of the facility. The Director may waive the otherwise applicable requirements in a general permit for a storm water discharge from construction activities that disturb less than five acres where:

(A) The value of the rainfall erosivity factor ("R" in the Revised Universal Soil Loss Equation) is less than five during the period of construction activity. The rainfall erosivity factor is determined in accordance with Chapter 2 of Agriculture Handbook Number 703, Predicting Soil Erosion by Water: A Guide to Conservation Planning with the Revised Universal Soil Loss Equation (RUSLE), pages 21-64, dated January 1997. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained at EPA's Water Docket, 1200 Pennsylvania Avenue NW, Washington, DC 20460. For information on the availability of this material at National Archives and Records Administration, call 202-741-6030, or go to: <http://www.archives.gov/federal/register/codeofregulations/ibr/locations.html>. An operator must certify to the Director that the construction activity will take place during a period when the value of the rainfall erosivity factor is less than five; or

(B) Storm water controls are not needed based on a "total maximum daily load" (TMDL) approved or established by EPA that addresses the pollutant(s) of concern or, for non-impaired waters that do not require TMDLs, an equivalent analysis that determines allocations for small construction sites for the pollutant(s) of concern or that determines that such allocations are not needed to protect water quality based on consideration of existing in-stream concentrations, expected growth in pollutant contributions from all sources, and a margin of safety. For the purpose of this paragraph, the pollutant(s) of concern include sediment or a parameter that addresses sediment (such as total suspended solids, turbidity or siltation) and any other pollutant that has been identified as a cause of impairment of any water body that will receive a discharge from the construction activity. The operator must certify to the Director that the construction activity will take place, and storm water discharges will occur, within the drainage area addressed by the TMDL or equivalent analysis.

(C) As of December 21, 2020 all certifications submitted in compliance with paragraphs (b)(15)(i)(A) and (B) of this section must be submitted electronically by the owner or operator to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, owners or operators may be required to report electronically if specified by a particular permit or if required to do so by state law.

(ii) Any other construction activity designated by the Director, or in States with approved NPDES programs either the Director or the EPA Regional Administrator, based on the potential for contribution to a violation of a water quality standard or for significant contribution of pollutants to waters of the United States.

EXHIBIT 1 TO § 122.26(b)(15).--SUMMARY OF COVERAGE
OF "STORM WATER DISCHARGES ASSOCIATED WITH SMALL
CONSTRUCTION ACTIVITY" UNDER THE NPDES STORM WATER PROGRAM

Automatic Designation: . Construction activities that result in a
Required Nationwide land disturbance of equal to or greater

Coverage	than one acre and less than five acres. . Construction activities disturbing less than one acre if part of a larger common plan of development or sale with a planned disturbance of equal to or greater than one acre and less than five acres. (see § 122.26(b)(15)(i).)
Potential Designation: Optional Evaluation and Designation by the NPDES Permitting Authority or EPA Regional Administrator.	. Construction activities that result in a land disturbance of less than one acre based on the potential for contribution to a violation of a water quality standard or for significant contribution of pollutants. (see § 122.26(b)(15)(ii).)
Potential Waiver: Waiver from Requirements as Determined by the NPDES Permitting Authority.	Any automatically designated construction activity where the operator certifies: (1) A rainfall erosivity factor of less than five, or (2) That the activity will occur within an area where controls are not needed based on a TMDL or, for non-impaired waters that do not require a TMDL, an equivalent analysis for the pollutant(s) of concern. (see § 122.26(b)(15)(i).)

(16) Small municipal separate storm sewer system means all separate storm sewers that are:

(i) Owned or operated by the United States, a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States.

(ii) Not defined as "large" or "medium" municipal separate storm sewer systems pursuant to paragraphs (b)(4) and (b)(7) of this section, or designated under paragraph (a)(1)(v) of this section.

(iii) This term includes systems similar to separate storm sewer systems in municipalities, such as systems at military bases, large hospital or prison complexes, and highways and other thoroughfares. The term does not include separate storm sewers in very discrete areas, such as individual buildings.

(17) Small MS4 means a small municipal separate storm sewer system.

(18) Municipal separate storm sewer system means all separate storm sewers that are defined as "large" or "medium" or "small" municipal separate storm sewer systems pursuant to paragraphs (b)(4), (b)(7), and (b)(16) of this section, or designated under paragraph (a)(1)(v) of this section.

(19) MS4 means a municipal separate storm sewer system.

(20) Uncontrolled sanitary landfill means a landfill or open dump, whether in operation or closed, that does not meet the requirements for runoff or runoff controls established pursuant to subtitle D of the Solid Waste Disposal Act.

(c) Application requirements for storm water discharges associated with industrial activity and storm water discharges associated with small construction activity -- (1) Individual application. Dischargers of storm water associated with industrial activity and with small construction activity are required to apply for an individual permit or seek coverage under a promulgated storm water general permit. Facilities that are required to obtain an individual permit, or any discharge of storm water which the Director is evaluating for designation (see 124.52(c) of this chapter) under paragraph (a)(1)(v) of this section and is not a municipal storm sewer, shall submit an NPDES application in accordance with the requirements of § 122.21 as modified and supplemented by the provisions of this paragraph.

(i) Except as provided in § 122.26(c)(1)(ii)-(iv), the operator of a storm water discharge associated with industrial activity subject to this section shall provide:

(A) A site map showing topography (or indicating the outline of drainage areas served by the outfall(s) covered in the application if a topographic map is unavailable) of the facility including: each of its drainage and discharge structures; the drainage area of each storm water outfall; paved areas and buildings within the drainage area of each storm water outfall, each past or present area used for outdoor storage or disposal of significant materials, each existing structural control measure to reduce pollutants in storm water runoff, materials loading and access areas, areas where pesticides, herbicides, soil conditioners and fertilizers are applied, each of its hazardous waste treatment, storage or disposal facilities (including each area not required to have a RCRA permit which is used for accumulating hazardous waste under 40 CFR 262.34); each well where fluids from the facility are injected underground; springs, and other surface water bodies which receive storm water discharges from the facility;

(B) An estimate of the area of impervious surfaces (including paved areas and building roofs) and the total area drained by each outfall (within a mile radius of the facility) and a narrative description of the following: Significant materials that in the three years prior to the submittal of this application have been treated, stored or disposed in a manner to allow exposure to storm water; method of treatment, storage or disposal of such materials; materials management practices employed, in the three years prior to the submittal of this application, to minimize contact by these materials with storm water runoff; materials loading and access areas; the location, manner and frequency in which pesticides, herbicides, soil conditioners and fertilizers are applied; the location and a description of existing structural and non-structural control measures to reduce pollutants in storm water runoff; and a description of the treatment the storm water receives, including the ultimate disposal of any solid or fluid wastes other than by discharge;

(C) A certification that all outfalls that should contain storm water discharges associated with industrial activity have been tested or evaluated for the presence of non-storm water discharges which are not covered by a NPDES permit; tests for such non-storm water discharges may include smoke tests, fluorometric dye tests, analysis of accurate schematics, as well as other appropriate tests. The certification shall include a description of the method used, the date of any testing, and the on-site drainage points that were directly observed during a test;

(D) Existing information regarding significant leaks or spills of toxic or hazardous pollutants at the facility that have taken place within the three years prior to the submittal of this application;

(E) Quantitative data based on samples collected during storm events and collected in accordance with § 122.21 of this part from all outfalls containing a storm water discharge associated with industrial activity for the following parameters:

(1) Any pollutant limited in an effluent guideline to which the facility is subject;

(2) Any pollutant listed in the facility's NPDES permit for its process wastewater (if the facility is operating under

an existing NPDES permit);

(3) Oil and grease, pH, BOD5, COD, TSS, total phosphorus, total Kjeldahl nitrogen, and nitrate plus nitrite nitrogen;

(4) Any information on the discharge required under § 122.21(g)(7) (vi) and (vii);

(5) Flow measurements or estimates of the flow rate, and the total amount of discharge for the storm event(s) sampled, and the method of flow measurement or estimation; and

(6) The date and duration (in hours) of the storm event(s) sampled, rainfall measurements or estimates of the storm event (in inches) which generated the sampled runoff and the duration between the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event (in hours);

(F) Operators of a discharge which is composed entirely of storm water are exempt from the requirements of § 122.21 (g)(2), (g)(3), (g)(4), (g)(5), (g)(7)(iii), (g)(7)(iv), (g)(7)(v), and (g)(7)(viii); and

(G) Operators of new sources or new discharges (as defined in § 122.2 of this part) which are composed in part or entirely of storm water must include estimates for the pollutants or parameters listed in paragraph (c)(1)(i)(E) of this section instead of actual sampling data, along with the source of each estimate. Operators of new sources or new discharges composed in part or entirely of storm water must provide quantitative data for the parameters listed in paragraph (c)(1)(i)(E) of this section within two years after commencement of discharge, unless such data has already been reported under the monitoring requirements of the NPDES permit for the discharge. Operators of a new source or new discharge which is composed entirely of storm water are exempt from the requirements of § 122.21 (k)(3)(ii), (k)(3)(iii), and (k)(5).

(ii) An operator of an existing or new storm water discharge that is associated with industrial activity solely under paragraph (b)(14)(x) of this section or is associated with small construction activity solely under paragraph (b)(15) of this section, is exempt from the requirements of § 122.21(g) and paragraph (c)(1)(i) of this section. Such operator shall provide a narrative description of:

(A) The location (including a map) and the nature of the construction activity;

(B) The total area of the site and the area of the site that is expected to undergo excavation during the life of the permit;

(C) Proposed measures, including best management practices, to control pollutants in storm water discharges during construction, including a brief description of applicable State and local erosion and sediment control requirements;

(D) Proposed measures to control pollutants in storm water discharges that will occur after construction operations have been completed, including a brief description of applicable State or local erosion and sediment control requirements;

(E) An estimate of the runoff coefficient of the site and the increase in impervious area after the construction addressed in the permit application is completed, the nature of fill material and existing data describing the soil or the quality of the discharge; and

(F) The name of the receiving water.

(iii) The operator of an existing or new discharge composed entirely of storm water from an oil or gas exploration, production, processing, or treatment operation, or transmission facility is not required to submit a permit application in accordance with paragraph (c)(1)(i) of this section, unless the facility:

(A) Has had a discharge of storm water resulting in the discharge of a reportable quantity for which notification is or was required pursuant to 40 CFR 117.21 or 40 CFR 302.6 at anytime since November 16, 1987; or

(B) Has had a discharge of storm water resulting in the discharge of a reportable quantity for which notification is or was required pursuant to 40 CFR 110.6 at any time since November 16, 1987; or

(C) Contributes to a violation of a water quality standard.

(iv) The operator of an existing or new discharge composed entirely of storm water from a mining operation is not required to submit a permit application unless the discharge has come into contact with, any overburden, raw material, intermediate products, finished product, byproduct or waste products located on the site of such operations.

(v) Applicants shall provide such other information the Director may reasonably require under § 122.21(g)(13) of this part to determine whether to issue a permit and may require any facility subject to paragraph (c)(1)(ii) of this section to comply with paragraph (c)(1)(i) of this section.

(2) [Reserved]

(d) Application requirements for large and medium municipal separate storm sewer discharges. The operator of a discharge from a large or medium municipal separate storm sewer or a municipal separate storm sewer that is designated by the Director under paragraph (a)(1)(v) of this section, may submit a jurisdiction-wide or system-wide permit application. Where more than one public entity owns or operates a municipal separate storm sewer within a geographic area (including adjacent or interconnected municipal separate storm sewer systems), such operators may be a coapplicant to the same application. Permit applications for discharges from large and medium municipal storm sewers or municipal storm sewers designated under paragraph (a)(1)(v) of this section shall include;

(1) Part 1. Part 1 of the application shall consist of;

(i) General information. The applicants' name, address, telephone number of contact person, ownership status and status as a State or local government entity.

(ii) Legal authority. A description of existing legal authority to control discharges to the municipal separate storm sewer system. When existing legal authority is not sufficient to meet the criteria provided in paragraph (d)(2)(i) of this section, the description shall list additional authorities as will be necessary to meet the criteria and shall include a schedule and commitment to seek such additional authority that will be needed to meet the criteria.

(iii) Source identification. (A) A description of the historic use of ordinances, guidance or other controls which limited the discharge of non-storm water discharges to any Publicly Owned Treatment Works serving the same area as the municipal separate storm sewer system.

(B) A USGS 7.5 minute topographic map (or equivalent topographic map with a scale between 1:10,000 and 1:24,000 if cost effective) extending one mile beyond the service boundaries of the municipal storm sewer system covered by the permit application. The following information shall be provided:

(1) The location of known municipal storm sewer system outfalls discharging to waters of the United States;

(2) A description of the land use activities (e.g. divisions indicating undeveloped, residential, commercial, agricultural and industrial uses) accompanied with estimates of population densities and projected growth for a ten year period within the drainage area served by the separate storm sewer. For each land use type, an estimate of an average runoff coefficient shall be provided;

(3) The location and a description of the activities of the facility of each currently operating or closed municipal landfill or other treatment, storage or disposal facility for municipal waste;

(4) The location and the permit number of any known discharge to the municipal storm sewer that has been issued a NPDES permit;

(5) The location of major structural controls for storm water discharge (retention basins, detention basins, major infiltration devices, etc.); and

(6) The identification of publicly owned parks, recreational areas, and other open lands.

(iv) Discharge characterization. (A) Monthly mean rain and snow fall estimates (or summary of weather bureau data) and the monthly average number of storm events.

(B) Existing quantitative data describing the volume and quality of discharges from the municipal storm sewer, including a description of the outfalls sampled, sampling procedures and analytical methods used.

(C) A list of water bodies that receive discharges from the municipal separate storm sewer system, including downstream segments, lakes and estuaries, where pollutants from the system discharges may accumulate and cause water degradation and a brief description of known water quality impacts. At a minimum, the description of impacts shall include a description of whether the water bodies receiving such discharges have been:

(1) Assessed and reported in section 305(b) reports submitted by the State, the basis for the assessment (evaluated or monitored), a summary of designated use support and attainment of Clean Water Act (CWA) goals (fishable and swimmable waters), and causes of nonsupport of designated uses;

(2) Listed under section 304(l)(1)(A)(i), section 304(l)(1)(A)(ii), or section 304(l)(1)(B) of the CWA that is not expected to meet water quality standards or water quality goals;

(3) Listed in State Nonpoint Source Assessments required by section 319(a) of the CWA that, without additional action to control nonpoint sources of pollution, cannot reasonably be expected to attain or maintain water quality standards due to storm sewers, construction, highway maintenance and runoff from municipal landfills and municipal sludge adding significant pollution (or contributing to a violation of water quality standards);

(4) Identified and classified according to eutrophic condition of publicly owned lakes listed in State reports required under section 314(a) of the CWA (include the following: A description of those publicly owned lakes for which uses are known to be impaired; a description of procedures, processes and methods to control the discharge of pollutants from municipal separate storm sewers into such lakes; and a description of methods and procedures to restore the quality of such lakes);

(5) Areas of concern of the Great Lakes identified by the International Joint Commission;

(6) Designated estuaries under the National Estuary Program under section 320 of the CWA;

(7) Recognized by the applicant as highly valued or sensitive waters;

(8) Defined by the State or U.S. Fish and Wildlife Services's National Wetlands Inventory as wetlands; and

(9) Found to have pollutants in bottom sediments, fish tissue or biosurvey data.

(D) Field screening. Results of a field screening analysis for illicit connections and illegal dumping for either selected field screening points or major outfalls covered in the permit application. At a minimum, a screening analysis shall include a narrative description, for either each field screening point or major outfall, of visual observations made during dry weather periods. If any flow is observed, two grab samples shall be collected during a 24 hour period with a minimum period of four hours between samples. For all such samples, a narrative description of the color, odor, turbidity, the presence of an oil sheen or surface scum as well as any other relevant observations regarding the potential

presence of non-storm water discharges or illegal dumping shall be provided. In addition, a narrative description of the results of a field analysis using suitable methods to estimate pH, total chlorine, total copper, total phenol, and detergents (or surfactants) shall be provided along with a description of the flow rate. Where the field analysis does not involve analytical methods approved under 40 CFR part 136, the applicant shall provide a description of the method used including the name of the manufacturer of the test method along with the range and accuracy of the test. Field screening points shall be either major outfalls or other outfall points (or any other point of access such as manholes) randomly located throughout the storm sewer system by placing a grid over a drainage system map and identifying those cells of the grid which contain a segment of the storm sewer system or major outfall. The field screening points shall be established using the following guidelines and criteria:

(1) A grid system consisting of perpendicular north-south and east-west lines spaced 1/4 mile apart shall be overlaid on a map of the municipal storm sewer system, creating a series of cells;

(2) All cells that contain a segment of the storm sewer system shall be identified; one field screening point shall be selected in each cell; major outfalls may be used as field screening points;

(3) Field screening points should be located downstream of any sources of suspected illegal or illicit activity;

(4) Field screening points shall be located to the degree practicable at the farthest manhole or other accessible location downstream in the system, within each cell; however, safety of personnel and accessibility of the location should be considered in making this determination;

(5) Hydrological conditions; total drainage area of the site; population density of the site; traffic density; age of the structures or buildings in the area; history of the area; and land use types;

(6) For medium municipal separate storm sewer systems, no more than 250 cells need to have identified field screening points; in large municipal separate storm sewer systems, no more than 500 cells need to have identified field screening points; cells established by the grid that contain no storm sewer segments will be eliminated from consideration; if fewer than 250 cells in medium municipal sewers are created, and fewer than 500 in large systems are created by the overlay on the municipal sewer map, then all those cells which contain a segment of the sewer system shall be subject to field screening (unless access to the separate storm sewer system is impossible); and

(7) Large or medium municipal separate storm sewer systems which are unable to utilize the procedures described in paragraphs (d)(1)(iv)(D) (1) through (6) of this section, because a sufficiently detailed map of the separate storm sewer systems is unavailable, shall field screen no more than 500 or 250 major outfalls respectively (or all major outfalls in the system, if less); in such circumstances, the applicant shall establish a grid system consisting of north-south and east-west lines spaced 1/4 mile apart as an overlay to the boundaries of the municipal storm sewer system, thereby creating a series of cells; the applicant will then select major outfalls in as many cells as possible until at least 500 major outfalls (large municipalities) or 250 major outfalls (medium municipalities) are selected; a field screening analysis shall be undertaken at these major outfalls.

(E) Characterization plan. Information and a proposed program to meet the requirements of paragraph (d)(2)(iii) of this section. Such description shall include: the location of outfalls or field screening points appropriate for representative data collection under paragraph (d)(2)(iii)(A) of this section, a description of why the outfall or field screening point is representative, the seasons during which sampling is intended, a description of the sampling equipment. The proposed location of outfalls or field screening points for such sampling should reflect water quality concerns (see paragraph (d)(1)(iv)(C) of this section) to the extent practicable.

(v) Management programs. (A) A description of the existing management programs to control pollutants from the municipal separate storm sewer system. The description shall provide information on existing structural and source controls, including operation and maintenance measures for structural controls, that are currently being implemented. Such controls may include, but are not limited to: Procedures to control pollution resulting from construction activities;

floodplain management controls; wetland protection measures; best management practices for new subdivisions; and emergency spill response programs. The description may address controls established under State law as well as local requirements.

(B) A description of the existing program to identify illicit connections to the municipal storm sewer system. The description should include inspection procedures and methods for detecting and preventing illicit discharges, and describe areas where this program has been implemented.

(vi) Fiscal resources. (A) A description of the financial resources currently available to the municipality to complete part 2 of the permit application. A description of the municipality's budget for existing storm water programs, including an overview of the municipality's financial resources and budget, including overall indebtedness and assets, and sources of funds for storm water programs.

(2) Part 2. Part 2 of the application shall consist of:

(i) Adequate legal authority. A demonstration that the applicant can operate pursuant to legal authority established by statute, ordinance or series of contracts which authorizes or enables the applicant at a minimum to:

(A) Control through ordinance, permit, contract, order or similar means, the contribution of pollutants to the municipal storm sewer by storm water discharges associated with industrial activity and the quality of storm water discharged from sites of industrial activity;

(B) Prohibit through ordinance, order or similar means, illicit discharges to the municipal separate storm sewer;

(C) Control through ordinance, order or similar means the discharge to a municipal separate storm sewer of spills, dumping or disposal of materials other than storm water;

(D) Control through interagency agreements among coapplicants the contribution of pollutants from one portion of the municipal system to another portion of the municipal system;

(E) Require compliance with conditions in ordinances, permits, contracts or orders; and

(F) Carry out all inspection, surveillance and monitoring procedures necessary to determine compliance and noncompliance with permit conditions including the prohibition on illicit discharges to the municipal separate storm sewer.

(ii) Source identification. The location of any major outfall that discharges to waters of the United States that was not reported under paragraph (d)(1)(iii)(B)(1) of this section. Provide an inventory, organized by watershed of the name and address, and a description (such as SIC codes) which best reflects the principal products or services provided by each facility which may discharge, to the municipal separate storm sewer, storm water associated with industrial activity;

(iii) Characterization data. When "quantitative data" for a pollutant are required under paragraph (d)(2)(iii)(A)(3) of this section, the applicant must collect a sample of effluent in accordance with § 122.21(g)(7) and analyze it for the pollutant in accordance with analytical methods approved under part 136 of this chapter. When no analytical method is approved the applicant may use any suitable method but must provide a description of the method. The applicant must provide information characterizing the quality and quantity of discharges covered in the permit application, including:

(A) Quantitative data from representative outfalls designated by the Director (based on information received in part 1 of the application, the Director shall designate between five and ten outfalls or field screening points as representative of the commercial, residential and industrial land use activities of the drainage area contributing to the system or, where there are less than five outfalls covered in the application, the Director shall designate all outfalls) developed as follows:

(1) For each outfall or field screening point designated under this subparagraph, samples shall be collected of storm water discharges from three storm events occurring at least one month apart in accordance with the requirements at § 122.21(g)(7) (the Director may allow exemptions to sampling three storm events when climatic conditions create good cause for such exemptions);

(2) A narrative description shall be provided of the date and duration of the storm event(s) sampled, rainfall estimates of the storm event which generated the sampled discharge and the duration between the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event;

(3) For samples collected and described under paragraphs (d)(2)(iii) (A)(1) and (A)(2) of this section, quantitative data shall be provided for: the organic pollutants listed in Table II; the pollutants listed in Table III (toxic metals, cyanide, and total phenols) of appendix D of 40 CFR part 122, and for the following pollutants:

Total suspended solids (TSS)

Total dissolved solids (TDS)

COD

BOD₅

Oil and grease

Fecal coliform

Fecal streptococcus

pH

Total Kjeldahl nitrogen

Nitrate plus nitrite

Dissolved phosphorus

Total ammonia plus organic nitrogen

Total phosphorus

(4) Additional limited quantitative data required by the Director for determining permit conditions (the Director may require that quantitative data shall be provided for additional parameters, and may establish sampling conditions such as the location, season of sample collection, form of precipitation (snow melt, rainfall) and other parameters necessary to insure representativeness);

(B) Estimates of the annual pollutant load of the cumulative discharges to waters of the United States from all identified municipal outfalls and the event mean concentration of the cumulative discharges to waters of the United States from all identified municipal outfalls during a storm event (as described under § 122.21(c)(7)) for BOD₅, COD, TSS, dissolved solids, total nitrogen, total ammonia plus organic nitrogen, total phosphorus, dissolved phosphorus, cadmium, copper, lead, and zinc. Estimates shall be accompanied by a description of the procedures for estimating constituent loads and concentrations, including any modelling, data analysis, and calculation methods;

(C) A proposed schedule to provide estimates for each major outfall identified in either paragraph (d)(2)(ii) or (d)(1)(iii)(B)(1) of this section of the seasonal pollutant load and of the event mean concentration of a representative

storm for any constituent detected in any sample required under paragraph (d)(2)(iii)(A) of this section; and

(D) A proposed monitoring program for representative data collection for the term of the permit that describes the location of outfalls or field screening points to be sampled (or the location of instream stations), why the location is representative, the frequency of sampling, parameters to be sampled, and a description of sampling equipment.

(iv) Proposed management program. A proposed management program covers the duration of the permit. It shall include a comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate. The program shall also include a description of staff and equipment available to implement the program. Separate proposed programs may be submitted by each coapplicant. Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. Proposed programs will be considered by the Director when developing permit conditions to reduce pollutants in discharges to the maximum extent practicable. Proposed management programs shall describe priorities for implementing controls. Such programs shall be based on:

(A) A description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls. At a minimum, the description shall include:

(1) A description of maintenance activities and a maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from municipal separate storm sewers;

(2) A description of planning procedures including a comprehensive master plan to develop, implement and enforce controls to reduce the discharge of pollutants from municipal separate storm sewers which receive discharges from areas of new development and significant redevelopment. Such plan shall address controls to reduce pollutants in discharges from municipal separate storm sewers after construction is completed. (Controls to reduce pollutants in discharges from municipal separate storm sewers containing construction site runoff are addressed in paragraph (d)(2)(iv)(D) of this section;

(3) A description of practices for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems, including pollutants discharged as a result of deicing activities;

(4) A description of procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies and that existing structural flood control devices have been evaluated to determine if retrofitting the device to provide additional pollutant removal from storm water is feasible;

(5) A description of a program to monitor pollutants in runoff from operating or closed municipal landfills or other treatment, storage or disposal facilities for municipal waste, which shall identify priorities and procedures for inspections and establishing and implementing control measures for such discharges (this program can be coordinated with the program developed under paragraph (d)(2)(iv)(C) of this section); and

(6) A description of a program to reduce to the maximum extent practicable, pollutants in discharges from municipal separate storm sewers associated with the application of pesticides, herbicides and fertilizer which will include, as appropriate, controls such as educational activities, permits, certifications and other measures for commercial applicators and distributors, and controls for application in public right-of-ways and at municipal facilities.

(B) A description of a program, including a schedule, to detect and remove (or require the discharger to the municipal separate storm sewer to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer. The proposed program shall include:

(1) A description of a program, including inspections, to implement and enforce an ordinance, orders or similar means to prevent illicit discharges to the municipal separate storm sewer system; this program description shall address all types of illicit discharges, however the following category of non-storm water discharges or flows shall be addressed where such discharges are identified by the municipality as sources of pollutants to waters of the United States: water line flushing, landscape irrigation, diverted stream flows, rising ground waters, uncontaminated ground water infiltration (as defined at 40 CFR 35.2005(20)) to separate storm sewers, uncontaminated pumped ground water, discharges from potable water sources, foundation drains, air conditioning condensation, irrigation water, springs, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, flows from riparian habitats and wetlands, dechlorinated swimming pool discharges, and street wash water (program descriptions shall address discharges or flows from fire fighting only where such discharges or flows are identified as significant sources of pollutants to waters of the United States);

(2) A description of procedures to conduct on-going field screening activities during the life of the permit, including areas or locations that will be evaluated by such field screens;

(3) A description of procedures to be followed to investigate portions of the separate storm sewer system that, based on the results of the field screen, or other appropriate information, indicate a reasonable potential of containing illicit discharges or other sources of non-storm water (such procedures may include: sampling procedures for constituents such as fecal coliform, fecal streptococcus, surfactants (MBAS), residual chlorine, fluorides and potassium; testing with fluorometric dyes; or conducting in storm sewer inspections where safety and other considerations allow. Such description shall include the location of storm sewers that have been identified for such evaluation);

(4) A description of procedures to prevent, contain, and respond to spills that may discharge into the municipal separate storm sewer;

(5) A description of a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from municipal separate storm sewers;

(6) A description of educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials; and

(7) A description of controls to limit infiltration of seepage from municipal sanitary sewers to municipal separate storm sewer systems where necessary;

(C) A description of a program to monitor and control pollutants in storm water discharges to municipal systems from municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA), and industrial facilities that the municipal permit applicant determines are contributing a substantial pollutant loading to the municipal storm sewer system. The program shall:

(1) Identify priorities and procedures for inspections and establishing and implementing control measures for such discharges;

(2) Describe a monitoring program for storm water discharges associated with the industrial facilities identified in paragraph (d)(2)(iv)(C) of this section, to be implemented during the term of the permit, including the submission of quantitative data on the following constituents: Any pollutants limited in effluent guidelines subcategories, where applicable; any pollutant listed in an existing NPDES permit for a facility; oil and grease, COD, pH, BOD5, TSS, total phosphorus, total Kjeldahl nitrogen, nitrate plus nitrite nitrogen, and any information on discharges required under § 122.21(g)(7) (vi) and (vii).

(D) A description of a program to implement and maintain structural and non-structural best management practices to reduce pollutants in storm water runoff from construction sites to the municipal storm sewer system, which shall

include:

(1) A description of procedures for site planning which incorporate consideration of potential water quality impacts;

(2) A description of requirements for nonstructural and structural best management practices;

(3) A description of procedures for identifying priorities for inspecting sites and enforcing control measures which consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality; and

(4) A description of appropriate educational and training measures for construction site operators.

(v) Assessment of controls. Estimated reductions in loadings of pollutants from discharges of municipal storm sewer constituents from municipal storm sewer systems expected as the result of the municipal storm water quality management program. The assessment shall also identify known impacts of storm water controls on ground water.

(vi) Fiscal analysis. For each fiscal year to be covered by the permit, a fiscal analysis of the necessary capital and operation and maintenance expenditures necessary to accomplish the activities of the programs under paragraphs (d)(2)(iii) and (iv) of this section. Such analysis shall include a description of the source of funds that are proposed to meet the necessary expenditures, including legal restrictions on the use of such funds.

(vii) Where more than one legal entity submits an application, the application shall contain a description of the roles and responsibilities of each legal entity and procedures to ensure effective coordination.

(viii) Where requirements under paragraph (d)(1)(iv)(E), (d)(2)(ii), (d)(2)(iii)(B) and (d)(2)(iv) of this section are not practicable or are not applicable, the Director may exclude any operator of a discharge from a municipal separate storm sewer which is designated under paragraph (a)(1)(v), (b)(4)(ii) or (b)(7)(ii) of this section from such requirements. The Director shall not exclude the operator of a discharge from a municipal separate storm sewer identified in appendix F, G, H or I of part 122, from any of the permit application requirements under this paragraph except where authorized under this section.

(e) Application deadlines. Any operator of a point source required to obtain a permit under this section that does not have an effective NPDES permit authorizing discharges from its storm water outfalls shall submit an application in accordance with the following deadlines:

(1) Storm water discharges associated with industrial activity. (i) Except as provided in paragraph (e)(1)(ii) of this section, for any storm water discharge associated with industrial activity identified in paragraphs (b)(14)(i) through (xi) of this section, that is not part of a group application as described in paragraph (c)(2) of this section or that is not authorized by a storm water general permit, a permit application made pursuant to paragraph (c) of this section must be submitted to the Director by October 1, 1992;

(ii) For any storm water discharge associated with industrial activity from a facility that is owned or operated by a municipality with a population of less than 100,000 that is not authorized by a general or individual permit, other than an airport, powerplant, or uncontrolled sanitary landfill, the permit application must be submitted to the Director by March 10, 2003.

(2) For any group application submitted in accordance with paragraph (c)(2) of this section:

(i) Part 1. (A) Except as provided in paragraph (e)(2)(i)(B) of this section, part 1 of the application shall be submitted to the Director, Office of Wastewater Enforcement and Compliance by September 30, 1991;

(B) Any municipality with a population of less than 250,000 shall not be required to submit a part 1 application

before May 18, 1992.

(C) For any storm water discharge associated with industrial activity from a facility that is owned or operated by a municipality with a population of less than 100,000 other than an airport, powerplant, or uncontrolled sanitary landfill, permit applications requirements are reserved.

(ii) Based on information in the part 1 application, the Director will approve or deny the members in the group application within 60 days after receiving part 1 of the group application.

(iii) Part 2. (A) Except as provided in paragraph (e)(2)(iii)(B) of this section, part 2 of the application shall be submitted to the Director, Office of Wastewater Enforcement and Compliance by October 1, 1992;

(B) Any municipality with a population of less than 250,000 shall not be required to submit a part 1 application before May 17, 1993.

(C) For any storm water discharge associated with industrial activity from a facility that is owned or operated by a municipality with a population of less than 100,000 other than an airport, powerplant, or uncontrolled sanitary landfill, permit applications requirements are reserved.

(iv) Rejected facilities. (A) Except as provided in paragraph (e)(2)(iv)(B) of this section, facilities that are rejected as members of the group shall submit an individual application (or obtain coverage under an applicable general permit) no later than 12 months after the date of receipt of the notice of rejection or October 1, 1992, whichever comes first.

(B) Facilities that are owned or operated by a municipality and that are rejected as members of part 1 group application shall submit an individual application no later than 180 days after the date of receipt of the notice of rejection or October 1, 1992, whichever is later.

(v) A facility listed under paragraph (b)(14) (i)-(xi) of this section may add on to a group application submitted in accordance with paragraph (e)(2)(i) of this section at the discretion of the Office of Water Enforcement and Permits, and only upon a showing of good cause by the facility and the group applicant; the request for the addition of the facility shall be made no later than February 18, 1992; the addition of the facility shall not cause the percentage of the facilities that are required to submit quantitative data to be less than 10%, unless there are over 100 facilities in the group that are submitting quantitative data; approval to become part of group application must be obtained from the group or the trade association representing the individual facilities.

(3) For any discharge from a large municipal separate storm sewer system;

(i) Part 1 of the application shall be submitted to the Director by November 18, 1991;

(ii) Based on information received in the part 1 application the Director will approve or deny a sampling plan under paragraph (d)(1)(iv)(E) of this section within 90 days after receiving the part 1 application;

(iii) Part 2 of the application shall be submitted to the Director by November 16, 1992.

(4) For any discharge from a medium municipal separate storm sewer system;

(i) Part 1 of the application shall be submitted to the Director by May 18, 1992.

(ii) Based on information received in the part 1 application the Director will approve or deny a sampling plan under paragraph (d)(1)(iv)(E) of this section within 90 days after receiving the part 1 application.

(iii) Part 2 of the application shall be submitted to the Director by May 17, 1993.

(5) A permit application shall be submitted to the Director within 180 days of notice, unless permission for a later date is granted by the Director (see § 124.52(c) of this chapter), for:

(i) A storm water discharge that the Director, or in States with approved NPDES programs, either the Director or the EPA Regional Administrator, determines that the discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States (see paragraphs (a)(1)(v) and (b)(15)(ii) of this section);

(ii) A storm water discharge subject to paragraph (c)(1)(v) of this section.

(6) Facilities with existing NPDES permits for storm water discharges associated with industrial activity shall maintain existing permits. Facilities with permits for storm water discharges associated with industrial activity which expire on or after May 18, 1992 shall submit a new application in accordance with the requirements of 40 CFR 122.21 and 40 CFR 122.26(c) (Form 1, Form 2F, and other applicable Forms) 180 days before the expiration of such permits.

(7) The Director shall issue or deny permits for discharges composed entirely of storm water under this section in accordance with the following schedule:

(i)(A) Except as provided in paragraph (e)(7)(i)(B) of this section, the Director shall issue or deny permits for storm water discharges associated with industrial activity no later than October 1, 1993, or, for new sources or existing sources which fail to submit a complete permit application by October 1, 1992, one year after receipt of a complete permit application;

(B) For any municipality with a population of less than 250,000 which submits a timely Part I group application under paragraph (e)(2)(i)(B) of this section, the Director shall issue or deny permits for storm water discharges associated with industrial activity no later than May 17, 1994, or, for any such municipality which fails to submit a complete Part II group permit application by May 17, 1993, one year after receipt of a complete permit application;

(ii) The Director shall issue or deny permits for large municipal separate storm sewer systems no later than November 16, 1993, or, for new sources or existing sources which fail to submit a complete permit application by November 16, 1992, one year after receipt of a complete permit application;

(iii) The Director shall issue or deny permits for medium municipal separate storm sewer systems no later than May 17, 1994, or, for new sources or existing sources which fail to submit a complete permit application by May 17, 1993, one year after receipt of a complete permit application.

(8) For any storm water discharge associated with small construction activities identified in paragraph (b)(15)(i) of this section, see § 122.21(c)(1). Discharges from these sources require permit authorization by March 10, 2003, unless designated for coverage before then.

(9) For any discharge from a regulated small MS4, the permit application made under § 122.33 must be submitted to the Director by:

(i) March 10, 2003 if designated under § 122.32(a)(1) unless your MS4 serves a jurisdiction with a population under 10,000 and the NPDES permitting authority has established a phasing schedule under § 123.35(d)(3) (see § 122.33(c)(1)); or

(ii) Within 180 days of notice, unless the NPDES permitting authority grants a later date, if designated under § 122.32(a)(2) (see § 122.33(c)(2)).

(f) Petitions. (1) Any operator of a municipal separate storm sewer system may petition the Director to require a separate NPDES permit (or a permit issued under an approved NPDES State program) for any discharge into the

municipal separate storm sewer system.

(2) Any person may petition the Director to require a NPDES permit for a discharge which is composed entirely of storm water which contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(3) The owner or operator of a municipal separate storm sewer system may petition the Director to reduce the Census estimates of the population served by such separate system to account for storm water discharged to combined sewers as defined by 40 CFR 35.2005(b)(11) that is treated in a publicly owned treatment works. In municipalities in which combined sewers are operated, the Census estimates of population may be reduced proportional to the fraction, based on estimated lengths, of the length of combined sewers over the sum of the length of combined sewers and municipal separate storm sewers where an applicant has submitted the NPDES permit number associated with each discharge point and a map indicating areas served by combined sewers and the location of any combined sewer overflow discharge point.

(4) Any person may petition the Director for the designation of a large, medium, or small municipal separate storm sewer system as defined by paragraph (b)(4)(iv), (b)(7)(iv), or (b)(16) of this section.

(5) The Director shall make a final determination on any petition received under this section within 90 days after receiving the petition with the exception of petitions to designate a small MS4 in which case the Director shall make a final determination on the petition within 180 days after its receipt.

(g) Conditional exclusion for "no exposure" of industrial activities and materials to storm water. Discharges composed entirely of storm water are not storm water discharges associated with industrial activity if there is "no exposure" of industrial materials and activities to rain, snow, snowmelt and/or runoff, and the discharger satisfies the conditions in paragraphs (g)(1) through (g)(4) of this section. "No exposure" means that all industrial materials and activities are protected by a storm resistant shelter to prevent exposure to rain, snow, snowmelt, and/or runoff. Industrial materials or activities include, but are not limited to, material handling equipment or activities, industrial machinery, raw materials, intermediate products, by-products, final products, or waste products. Material handling activities include the storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, final product or waste product.

(1) Qualification. To qualify for this exclusion, the operator of the discharge must:

(i) Provide a storm resistant shelter to protect industrial materials and activities from exposure to rain, snow, snow melt, and runoff;

(ii) Complete and sign (according to § 122.22) a certification that there are no discharges of storm water contaminated by exposure to industrial materials and activities from the entire facility, except as provided in paragraph (g)(2) of this section;

(iii) Submit the signed certification to the NPDES permitting authority once every five years. As of December 21, 2020 all certifications submitted in compliance with this section must be submitted electronically by the owner or operator to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, owners or operators may be required to report electronically if specified by a particular permit or if required to do so by state law.

(iv) Allow the Director to inspect the facility to determine compliance with the "no exposure" conditions;

(v) Allow the Director to make any "no exposure" inspection reports available to the public upon request; and

(vi) For facilities that discharge through an MS4, upon request, submit a copy of the certification of "no exposure" to the MS4 operator, as well as allow inspection and public reporting by the MS4 operator.

(2) Industrial materials and activities not requiring storm resistant shelter. To qualify for this exclusion, storm resistant shelter is not required for:

(i) Drums, barrels, tanks, and similar containers that are tightly sealed, provided those containers are not deteriorated and do not leak ("Sealed" means banded or otherwise secured and without operational taps or valves);

(ii) Adequately maintained vehicles used in material handling; and

(iii) Final products, other than products that would be mobilized in storm water discharge (e.g., rock salt).

(3) Limitations. (i) Storm water discharges from construction activities identified in paragraphs (b)(14)(x) and (b)(15) are not eligible for this conditional exclusion.

(ii) This conditional exclusion from the requirement for an NPDES permit is available on a facility-wide basis only, not for individual outfalls. If a facility has some discharges of storm water that would otherwise be "no exposure" discharges, individual permit requirements should be adjusted accordingly.

(iii) If circumstances change and industrial materials or activities become exposed to rain, snow, snow melt, and/or runoff, the conditions for this exclusion no longer apply. In such cases, the discharge becomes subject to enforcement for un-permitted discharge. Any conditionally exempt discharger who anticipates changes in circumstances should apply for and obtain permit authorization prior to the change of circumstances.

(iv) Notwithstanding the provisions of this paragraph, the NPDES permitting authority retains the authority to require permit authorization (and deny this exclusion) upon making a determination that the discharge causes, has a reasonable potential to cause, or contributes to an instream excursion above an applicable water quality standard, including designated uses.

(4) Certification. The no exposure certification must require the submission of the following information, at a minimum, to aid the NPDES permitting authority in determining if the facility qualifies for the no exposure exclusion:

(i) The legal name, address and phone number of the discharger (see § 122.21(b));

(ii) The facility name and address, the county name and the latitude and longitude where the facility is located;

(iii) The certification must indicate that none of the following materials or activities are, or will be in the foreseeable future, exposed to precipitation:

(A) Using, storing or cleaning industrial machinery or equipment, and areas where residuals from using, storing or cleaning industrial machinery or equipment remain and are exposed to storm water;

(B) Materials or residuals on the ground or in storm water inlets from spills/leaks;

(C) Materials or products from past industrial activity;

(D) Material handling equipment (except adequately maintained vehicles);

(E) Materials or products during loading/unloading or transporting activities;

(F) Materials or products stored outdoors (except final products intended for outside use, e.g., new cars, where exposure to storm water does not result in the discharge of pollutants);

(G) Materials contained in open, deteriorated or leaking storage drums, barrels, tanks, and similar containers;

(H) Materials or products handled/stored on roads or railways owned or maintained by the discharger;

(I) Waste material (except waste in covered, non-leaking containers, e.g., dumpsters);

(J) Application or disposal of process wastewater (unless otherwise permitted); and

(K) Particulate matter or visible deposits of residuals from roof stacks/vents not otherwise regulated, i.e., under an air quality control permit, and evident in the storm water outflow;

(iv) All "no exposure" certifications must include the following certification statement, and be signed in accordance with the signatory requirements of § 122.22: "I certify under penalty of law that I have read and understand the eligibility requirements for claiming a condition of "no exposure" and obtaining an exclusion from NPDES storm water permitting; and that there are no discharges of storm water contaminated by exposure to industrial activities or materials from the industrial facility identified in this document (except as allowed under paragraph (g)(2)) of this section. I understand that I am obligated to submit a no exposure certification form once every five years to the NPDES permitting authority and, if requested, to the operator of the local MS4 into which this facility discharges (where applicable). I understand that I must allow the NPDES permitting authority, or MS4 operator where the discharge is into the local MS4, to perform inspections to confirm the condition of no exposure and to make such inspection reports publicly available upon request. I understand that I must obtain coverage under an NPDES permit prior to any point source discharge of storm water from the facility. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

40 CFR 122.41

§ 122.41 Conditions applicable to all permits (applicable to State programs, see § 123.25).

The following conditions apply to all NPDES permits. Additional conditions applicable to NPDES permits are in § 122.42. All conditions applicable to NPDES permits shall be incorporated into the permits either expressly or by reference. If incorporated by reference, a specific citation to these regulations (or the corresponding approved State regulations) must be given in the permit.

(a) Duty to comply. The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the Clean Water Act and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or denial of a permit renewal application.

(1) The permittee shall comply with effluent standards or prohibitions established under section 307(a) of the Clean Water Act for toxic pollutants and with standards for sewage sludge use or disposal established under section 405(d) of the CWA within the time provided in the regulations that establish these standards or prohibitions or standards for sewage sludge use or disposal, even if the permit has not yet been modified to incorporate the requirement.

(2) The Clean Water Act provides that any person who violates section 301, 302, 306, 307, 308, 318 or 405 of the Act, or any permit condition or limitation implementing any such sections in a permit issued under section 402, or any requirement imposed in a pretreatment program approved under sections 402(a)(3) or 402(b)(8) of the Act, is subject to a civil penalty not to exceed \$ 25,000 per day for each violation. The Clean Water Act provides that any person who negligently violates sections 301, 302, 306, 307, 308, 318, or 405 of the Act, or any condition or limitation implementing any of such sections in a permit issued under section 402 of the Act, or any requirement imposed in a pretreatment program approved under section 402(a)(3) or 402(b)(8) of the Act, is subject to criminal penalties of \$ 2,500 to \$ 25,000 per day of violation, or imprisonment of not more than 1 year, or both. In the case of a second or subsequent conviction for a negligent violation, a person shall be subject to criminal penalties of not more than \$ 50,000 per day of violation, or by imprisonment of not more than 2 years, or both. Any person who knowingly violates such sections, or such conditions or limitations is subject to criminal penalties of \$ 5,000 to \$ 50,000 per day of violation, or imprisonment for not more than 3 years, or both. In the case of a second or subsequent conviction for a knowing violation, a person shall be subject to criminal penalties of not more than \$ 100,000 per day of violation, or

imprisonment of not more than 6 years, or both. Any person who knowingly violates section 301, 302, 303, 306, 307, 308, 318 or 405 of the Act, or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of the Act, and who knows at that time that he thereby places another person in imminent danger of death or serious bodily injury, shall, upon conviction, be subject to a fine of not more than \$ 250,000 or imprisonment of not more than 15 years, or both. In the case of a second or subsequent conviction for a knowing endangerment violation, a person shall be subject to a fine of not more than \$ 500,000 or by imprisonment of not more than 30 years, or both. An organization, as defined in section 309(c)(3)(B)(iii) of the CWA, shall, upon conviction of violating the imminent danger provision, be subject to a fine of not more than \$ 1,000,000 and can be fined up to \$ 2,000,000 for second or subsequent convictions.

(3) Any person may be assessed an administrative penalty by the Administrator for violating section 301, 302, 306, 307, 308, 318 or 405 of this Act, or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of this Act. Administrative penalties for Class I violations are not to exceed \$ 10,000 per violation, with the maximum amount of any Class I penalty assessed not to exceed \$ 25,000. Penalties for Class II violations are not to exceed \$ 10,000 per day for each day during which the violation continues, with the maximum amount of any Class II penalty not to exceed \$ 125,000.

(b) Duty to reapply. If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee must apply for and obtain a new permit.

(c) Need to halt or reduce activity not a defense. It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

(d) Duty to mitigate. The permittee shall take all reasonable steps to minimize or prevent any discharge or sludge use or disposal in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

(e) Proper operation and maintenance. The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems which are installed by a permittee only when the operation is necessary to achieve compliance with the conditions of the permit.

(f) Permit actions. This permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any permit condition.

(g) Property rights. This permit does not convey any property rights of any sort, or any exclusive privilege.

(h) Duty to provide information. The permittee shall furnish to the Director, within a reasonable time, any information which the Director may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit or to determine compliance with this permit. The permittee shall also furnish to the Director upon request, copies of records required to be kept by this permit.

(i) Inspection and entry. The permittee shall allow the Director, or an authorized representative (including an authorized contractor acting as a representative of the Administrator), upon presentation of credentials and other documents as may be required by law, to:

(1) Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;

(2) Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;

(3) Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit; and

(4) Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the Clean Water Act, any substances or parameters at any location.

(j) Monitoring and records. (1) Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.

(2) Except for records of monitoring information required by this permit related to the permittee's sewage sludge use and disposal activities, which shall be retained for a period of at least five years (or longer as required by 40 CFR part 503), the permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least 3 years from the date of the sample, measurement, report or application. This period may be extended by request of the Director at any time.

(3) Records of monitoring information shall include:

(i) The date, exact place, and time of sampling or measurements;

(ii) The individual(s) who performed the sampling or measurements;

(iii) The date(s) analyses were performed;

(iv) The individual(s) who performed the analyses;

(v) The analytical techniques or methods used; and

(vi) The results of such analyses.

(4) Monitoring must be conducted according to test procedures approved under 40 CFR Part 136 unless another method is required under 40 CFR subchapters N or O.

(5) The Clean Water Act provides that any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this permit shall, upon conviction, be punished by a fine of not more than \$ 10,000, or by imprisonment for not more than 2 years, or both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment is a fine of not more than \$ 20,000 per day of violation, or by imprisonment of not more than 4 years, or both.

(k) Signatory requirement. (1) All applications, reports, or information submitted to the Director shall be signed and certified. (See § 122.22)

(2) The CWA provides that any person who knowingly makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this permit, including monitoring reports or reports of compliance or non-compliance shall, upon conviction, be punished by a fine of not more than \$ 10,000 per violation, or by imprisonment for not more than 6 months per violation, or by both.

(l) Reporting requirements. (1) Planned changes. The permittee shall give notice to the Director as soon as possible of any planned physical alterations or additions to the permitted facility. Notice is required only when:

(i) The alteration or addition to a permitted facility may meet one of the criteria for determining whether a facility is a new source in § 122.29(b); or

(ii) The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants which are subject neither to effluent limitations in the permit, nor to notification requirements under § 122.42(a)(1).

(iii) The alteration or addition results in a significant change in the permittee's sludge use or disposal practices, and such alteration, addition, or change may justify the application of permit conditions that are different from or absent in the existing permit, including notification of additional use or disposal sites not reported during the permit application process or not reported pursuant to an approved land application plan;

(2) Anticipated noncompliance. The permittee shall give advance notice to the Director of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements.

(3) Transfers. This permit is not transferable to any person except after notice to the Director. The Director may require modification or revocation and reissuance of the permit to change the name of the permittee and incorporate such other requirements as may be necessary under the Clean Water Act. (See § 122.61; in some cases, modification or revocation and reissuance is mandatory.)

(4) Monitoring reports. Monitoring results shall be reported at the intervals specified elsewhere in this permit.

(i) Monitoring results must be reported on a Discharge Monitoring Report (DMR) or forms provided or specified by the Director for reporting results of monitoring of sludge use or disposal practices. As of December 21, 2016 all reports and forms submitted in compliance with this section must be submitted electronically by the permittee to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, permittees may be required to report electronically if specified by a particular permit or if required to do so by state law.

(ii) If the permittee monitors any pollutant more frequently than required by the permit using test procedures approved under 40 CFR Part 136, or another method required for an industry-specific waste stream under 40 CFR subchapters N or O, the results of such monitoring shall be included in the calculation and reporting of the data submitted in the DMR or sludge reporting form specified by the Director.

(iii) Calculations for all limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified by the Director in the permit.

(5) Compliance schedules. Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this permit shall be submitted no later than 14 days following each schedule date.

(6) Twenty-four hour reporting. (i) The permittee shall report any noncompliance which may endanger health or the environment. Any information shall be provided orally within 24 hours from the time the permittee becomes aware of the circumstances. A report shall also be provided within 5 days of the time the permittee becomes aware of the circumstances. The report shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times), and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance. For noncompliance events related to combined sewer overflows, sanitary sewer overflows, or bypass events, these reports must include the data described above (with the exception of time of discovery) as well as the type of event (combined sewer overflows, sanitary sewer overflows, or bypass events), type of sewer overflow structure (e.g., manhole, combine sewer overflow outfall), discharge volumes untreated by the treatment works treating domestic sewage, types of human

health and environmental impacts of the sewer overflow event, and whether the noncompliance was related to wet weather. As of December 21, 2020 all reports related to combined sewer overflows, sanitary sewer overflows, or bypass events submitted in compliance with this section must be submitted electronically by the permittee to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, permittees may be required to electronically submit reports related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section by a particular permit or if required to do so by state law. The Director may also require permittees to electronically submit reports not related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section.

(ii) The following shall be included as information which must be reported within 24 hours under this paragraph.

(A) Any unanticipated bypass which exceeds any effluent limitation in the permit. (See § 122.41(g).

(B) Any upset which exceeds any effluent limitation in the permit.

(C) Violation of a maximum daily discharge limitation for any of the pollutants listed by the Director in the permit to be reported within 24 hours. (See § 122.44(g).)

(iii) The Director may waive the written report on a case-by-case basis for reports under paragraph (1)(6)(ii) of this section if the oral report has been received within 24 hours.

(7) Other noncompliance. The permittee shall report all instances of noncompliance not reported under paragraphs (1)(4), (5), and (6) of this section, at the time monitoring reports are submitted. The reports shall contain the information listed in paragraph (1)(6). For noncompliance events related to combined sewer overflows, sanitary sewer overflows, or bypass events, these reports shall contain the information described in paragraph (1)(6) and the applicable required data in appendix A to 40 CFR part 127. As of December 21, 2020 all reports related to combined sewer overflows, sanitary sewer overflows, or bypass events submitted in compliance with this section must be submitted electronically by the permittee to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, permittees may be required to electronically submit reports related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section by a particular permit or if required to do so by state law. The Director may also require permittees to electronically submit reports not related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section.

(8) Other information. Where the permittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the Director, it shall promptly submit such facts or information.

(9) Identification of the initial recipient for NPDES electronic reporting data. The owner, operator, or the duly authorized representative of an NPDES-regulated entity is required to electronically submit the required NPDES information (as specified in appendix A to 40 CFR part 127) to the appropriate initial recipient, as determined by EPA, and as defined in § 127.2(b) of this chapter. EPA will identify and publish the list of initial recipients on its Web site and in the Federal Register by state and by NPDES data group [see § 127.2(c) of this chapter]. EPA will update and maintain this listing.

(m) Bypass -- (1) Definitions. (i) Bypass means the intentional diversion of waste streams from any portion of a treatment facility.

(ii) Severe property damage means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably

be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

(2) Bypass not exceeding limitations. The permittee may allow any bypass to occur which does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions of paragraphs (m)(3) and (m)(4) of this section.

(3) Notice --(i) Anticipated bypass. If the permittee knows in advance of the need for a bypass, it shall submit prior notice, if possible at least ten days before the date of the bypass. As of December 21, 2020 all notices submitted in compliance with this section must be submitted electronically by the permittee to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, permittees may be required to report electronically if specified by a particular permit or if required to do so by state law.

(ii) Unanticipated bypass. The permittee shall submit notice of an unanticipated bypass as required in paragraph (1)(6) of this section (24-hour notice).

(4) Prohibition of bypass. (i) Bypass is prohibited, and the Director may take enforcement action against a permittee for bypass, unless:

(A) Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;

(B) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and

(C) The permittee submitted notices as required under paragraph (m)(3) of this section.

(ii) The Director may approve an anticipated bypass, after considering its adverse effects, if the Director determines that it will meet the three conditions listed above in paragraph (m)(4)(i) of this section.

(n) Upset -- (1) Definition. Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

(2) Effect of an upset. An upset constitutes an affirmative defense to an action brought for noncompliance with such technology based permit effluent limitations if the requirements of paragraph (n)(3) of this section are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.

(3) Conditions necessary for a demonstration of upset. A permittee who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:

(i) An upset occurred and that the permittee can identify the cause(s) of the upset;

(ii) The permitted facility was at the time being properly operated; and

(iii) The permittee submitted notice of the upset as required in paragraph (1)(6)(ii)(B) of this section (24 hour notice).

(iv) The permittee complied with any remedial measures required under paragraph (d) of this section.

(4) Burden of proof. In any enforcement proceeding the permittee seeking to establish the occurrence of an upset has the burden of proof.

HISTORY: [48 FR 14153, Apr. 1, 1983, as amended at 48 FR 39620, Sept. 1, 1983; 49 FR 38049, Sept. 26, 1984; 50 FR 4514, Jan. 31, 1985; 50 FR 6940, Feb. 19, 1985; 54 FR 255, Jan. 4, 1989; 54 FR 18783, May 2, 1989; 65 FR 30886, 30908, May 15, 2000; 72 FR 11200, 11211, Mar. 12, 2007; 80 FR 64064, 64097, Oct. 22, 2015]

40 CFR 122.44

§ 122.44 Establishing limitations, standards, and other permit conditions (applicable to State NPDES programs, see § 123.25).

In addition to the conditions established under § 122.43(a), each NPDES permit shall include conditions meeting the following requirements when applicable.

(a)(1) Technology-based effluent limitations and standards based on: effluent limitations and standards promulgated under section 301 of the CWA, or new source performance standards promulgated under section 306 of CWA, on case-by-case effluent limitations determined under section 402(a)(1) of CWA, or a combination of the three, in accordance with § 125.3 of this chapter. For new sources or new dischargers, these technology based limitations and standards are subject to the provisions of § 122.29(d) (protection period).

(2) Monitoring waivers for certain guideline-listed pollutants.

(i) The Director may authorize a discharger subject to technology-based effluent limitations guidelines and standards in an NPDES permit to forego sampling of a pollutant found at 40 CFR Subchapter N of this chapter if the discharger has demonstrated through sampling and other technical factors that the pollutant is not present in the discharge or is present only at background levels from intake water and without any increase in the pollutant due to activities of the discharger.

(ii) This waiver is good only for the term of the permit and is not available during the term of the first permit issued to a discharger.

(iii) Any request for this waiver must be submitted when applying for a reissued permit or modification of a reissued permit. The request must demonstrate through sampling or other technical information, including information generated during an earlier permit term that the pollutant is not present in the discharge or is present only at background levels from intake water and without any increase in the pollutant due to activities of the discharger.

(iv) Any grant of the monitoring waiver must be included in the permit as an express permit condition and the

reasons supporting the grant must be documented in the permit's fact sheet or statement of basis.

(v) This provision does not supersede certification processes and requirements already established in existing effluent limitations guidelines and standards.

(b)(1) Other effluent limitations and standards under sections 301, 302, 303, 307, 318 and 405 of CWA. If any applicable toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under section 307(a) of CWA for a toxic pollutant and that standard or prohibition is more stringent than any limitation on the pollutant in the permit, the Director shall institute proceedings under these regulations to modify or revoke and reissue the permit to conform to the toxic effluent standard or prohibition. See also § 122.41(a).

(2) Standards for sewage sludge use or disposal under section 405(d) of the CWA unless those standards have been included in a permit issued under the appropriate provisions of subtitle C of the Solid Waste Disposal Act, Part C of Safe Drinking Water Act, the Marine Protection, Research, and Sanctuaries Act of 1972, or the Clean Air Act, or under State permit programs approved by the Administrator. When there are no applicable standards for sewage sludge use or disposal, the permit may include requirements developed on a case-by-case basis to protect public health and the environment from any adverse effects which may occur from toxic pollutants in sewage sludge. If any applicable standard for sewage sludge use or disposal is promulgated under section 405(d) of the CWA and that standard is more stringent than any limitation on the pollutant or practice in the permit, the Director may initiate proceedings under these regulations to modify or revoke and reissue the permit to conform to the standard for sewage sludge use or disposal.

(3) Requirements applicable to cooling water intake structures under section 316(b) of the CWA, in accordance with part 125, subparts I, J, and N of this chapter.

(c) Reopener clause: For any permit issued to a treatment works treating domestic sewage (including "sludge-only facilities"), the Director shall include a reopener clause to incorporate any applicable standard for sewage sludge use or disposal promulgated under section 405(d) of the CWA. The Director may promptly modify or revoke and reissue any permit containing the reopener clause required by this paragraph if the standard for sewage sludge use or disposal is more stringent than any requirements for sludge use or disposal in the permit, or controls a pollutant or practice not limited in the permit.

(d) Water quality standards and State requirements: any requirements in addition to or more stringent than promulgated effluent limitations guidelines or standards under sections 301, 304, 306, 307, 318 and 405 of CWA necessary to:

(1) Achieve water quality standards established under section 303 of the CWA, including State narrative criteria for water quality.

(i) Limitations must control all pollutants or pollutant parameters (either conventional, nonconventional, or toxic pollutants) which the Director determines are or may be discharged at a level which will cause, have the reasonable potential to cause, or contribute to an excursion above any State water quality standard, including State narrative criteria for water quality.

(ii) When determining whether a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above a narrative or numeric criteria within a State water quality standard, the permitting authority shall use procedures which account for existing controls on point and nonpoint sources of pollution, the variability of the pollutant or pollutant parameter in the effluent, the sensitivity of the species to toxicity testing (when evaluating whole effluent toxicity), and where appropriate, the dilution of the effluent in the receiving water.

(iii) When the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above the allowable

ambient concentration of a State numeric criteria within a State water quality standard for an individual pollutant, the permit must contain effluent limits for that pollutant.

(iv) When the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above the numeric criterion for whole effluent toxicity, the permit must contain effluent limits for whole effluent toxicity.

(v) Except as provided in this subparagraph, when the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, toxicity testing data, or other information, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above a narrative criterion within an applicable State water quality standard, the permit must contain effluent limits for whole effluent toxicity. Limits on whole effluent toxicity are not necessary where the permitting authority demonstrates in the fact sheet or statement of basis of the NPDES permit, using the procedures in paragraph (d)(1)(ii) of this section, that chemical-specific limits for the effluent are sufficient to attain and maintain applicable numeric and narrative State water quality standards.

(vi) Where a State has not established a water quality criterion for a specific chemical pollutant that is present in an effluent at a concentration that causes, has the reasonable potential to cause, or contributes to an excursion above a narrative criterion within an applicable State water quality standard, the permitting authority must establish effluent limits using one or more of the following options:

(A) Establish effluent limits using a calculated numeric water quality criterion for the pollutant which the permitting authority demonstrates will attain and maintain applicable narrative water quality criteria and will fully protect the designated use. Such a criterion may be derived using a proposed State criterion, or an explicit State policy or regulation interpreting its narrative water quality criterion, supplemented with other relevant information which may include: EPA's Water Quality Standards Handbook, October 1983, risk assessment data, exposure data, information about the pollutant from the Food and Drug Administration, and current EPA criteria documents; or

(B) Establish effluent limits on a case-by-case basis, using EPA's water quality criteria, published under section 304(a) of the CWA, supplemented where necessary by other relevant information; or

(C) Establish effluent limitations on an indicator parameter for the pollutant of concern, provided:

(1) The permit identifies which pollutants are intended to be controlled by the use of the effluent limitation;

(2) The fact sheet required by § 124.56 sets forth the basis for the limit, including a finding that compliance with the effluent limit on the indicator parameter will result in controls on the pollutant of concern which are sufficient to attain and maintain applicable water quality standards;

(3) The permit requires all effluent and ambient monitoring necessary to show that during the term of the permit the limit on the indicator parameter continues to attain and maintain applicable water quality standards; and

(4) The permit contains a reopener clause allowing the permitting authority to modify or revoke and reissue the permit if the limits on the indicator parameter no longer attain and maintain applicable water quality standards.

(vii) When developing water quality-based effluent limits under this paragraph the permitting authority shall ensure that:

(A) The level of water quality to be achieved by limits on point sources established under this paragraph is derived from, and complies with all applicable water quality standards; and

(B) Effluent limits developed to protect a narrative water quality criterion, a numeric water quality criterion, or both, are consistent with the assumptions and requirements of any available wasteload allocation for the discharge

prepared by the State and approved by EPA pursuant to 40 CFR 130.7.

(2) Attain or maintain a specified water quality through water quality related effluent limits established under section 302 of CWA;

(3) Conform to the conditions to a State certification under section 401 of the CWA that meets the requirements of § 124.53 when EPA is the permitting authority. If a State certification is stayed by a court of competent jurisdiction or an appropriate State board or agency, EPA shall notify the State that the Agency will deem certification waived unless a finally effective State certification is received within sixty days from the date of the notice. If the State does not forward a finally effective certification within the sixty day period, EPA shall include conditions in the permit that may be necessary to meet EPA's obligation under section 301(b)(1)(C) of the CWA;

(4) Conform to applicable water quality requirements under section 401(a)(2) of CWA when the discharge affects a State other than the certifying State;

(5) Incorporate any more stringent limitations, treatment standards, or schedule of compliance requirements established under Federal or State law or regulations in accordance with section 301(b)(1)(C) of CWA;

(6) Ensure consistency with the requirements of a Water Quality Management plan approved by EPA under section 208(b) of CWA;

(7) Incorporate section 403(c) criteria under part 125, subpart M, for ocean discharges;

(8) Incorporate alternative effluent limitations or standards where warranted by "fundamentally different factors," under 40 CFR part 125, subpart D;

(9) Incorporate any other appropriate requirements, conditions, or limitations (other than effluent limitations) into a new source permit to the extent allowed by the National Environmental Policy Act, 42 U.S.C. 4321 et seq. and section 511 of the CWA, when EPA is the permit issuing authority. (See § 122.29(c)).

(e) Technology-based controls for toxic pollutants. Limitations established under paragraphs (a), (b), or (d) of this section, to control pollutants meeting the criteria listed in paragraph (e)(1) of this section. Limitations will be established in accordance with paragraph (e)(2) of this section. An explanation of the development of these limitations shall be included in the fact sheet under § 124.56(b)(1)(i).

(1) Limitations must control all toxic pollutants which the Director determines (based on information reported in a permit application under § 122.21(g)(7) or in a notification under § 122.42(a)(1) or on other information) are or may be discharged at a level greater than the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under § 125.3(c) of this chapter; or

(2) The requirement that the limitations control the pollutants meeting the criteria of paragraph (e)(1) of this section will be satisfied by:

(i) Limitations on those pollutants; or

(ii) Limitations on other pollutants which, in the judgment of the Director, will provide treatment of the pollutants under paragraph (e)(1) of this section to the levels required by § 125.3(c).

(f) Notification level. A "notification level" which exceeds the notification level of § 122.42(a)(1)(i), (ii) or (iii), upon a petition from the permittee or on the Director's initiative. This new notification level may not exceed the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under § 125.3(c)

(g) Twenty-four hour reporting. Pollutants for which the permittee must report violations of maximum daily

discharge limitations under § 122.41(1)(6)(ii)(C) (24-hour reporting) shall be listed in the permit. This list shall include any toxic pollutant or hazardous substance, or any pollutant specifically identified as the method to control a toxic pollutant or hazardous substance.

(h) Durations for permits, as set forth in § 122.46.

(i) Monitoring requirements. In addition to § 122.48, the following monitoring requirements:

(1) To assure compliance with permit limitations, requirements to monitor:

(i) The mass (or other measurement specified in the permit) for each pollutant limited in the permit;

(ii) The volume of effluent discharged from each outfall;

(iii) Other measurements as appropriate including pollutants in internal waste streams under § 122.45(i); pollutants in intake water for net limitations under § 122.45(f); frequency, rate of discharge, etc., for noncontinuous discharges under § 122.45(e); pollutants subject to notification requirements under § 122.42(a); and pollutants in sewage sludge or other monitoring as specified in 40 CFR part 503; or as determined to be necessary on a case-by-case basis pursuant to section 405(d)(4) of the CWA.

(iv) According to sufficiently sensitive test procedures (i.e., methods) approved under 40 CFR part 136 for the analysis of pollutants or pollutant parameters or required under 40 CFR chapter I, subchapter N or O.

(A) For the purposes of this paragraph, a method is "sufficiently sensitive" when:

(1) The method minimum level (ML) is at or below the level of the effluent limit established in the permit for the measured pollutant or pollutant parameter; or

(2) The method has the lowest ML of the analytical methods approved under 40 CFR part 136 or required under 40 CFR chapter I, subchapter N or O for the measured pollutant or pollutant parameter.

Note to paragraph (i)(1)(iv)(A): Consistent with 40 CFR part 136, applicants or permittees have the option of providing matrix or sample specific minimum levels rather than the published levels. Further, where an applicant or permittee can demonstrate that, despite a good faith effort to use a method that would otherwise meet the definition of "sufficiently sensitive", the analytical results are not consistent with the QA/QC specifications for that method, then the Director may determine that the method is not performing adequately and the Director should select a different method from the remaining EPA-approved methods that is sufficiently sensitive consistent with 40 CFR 122.44(i)(1)(iv)(A). Where no other EPA-approved methods exist, the Director should select a method consistent with 40 CFR 122.44(i)(1)(iv)(B).

(B) In the case of pollutants or pollutant parameters for which there are no approved methods under 40 CFR part 136 or methods are not otherwise required under 40 CFR chapter I, subchapter N or O, monitoring shall be conducted according to a test procedure specified in the permit for such pollutants or pollutant parameters.

(2) Except as provided in paragraphs (i)(4) and (5) of this section, requirements to report monitoring results shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge, but in no case less than once a year. For sewage sludge use or disposal practices, requirements to monitor and report results shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the sewage sludge use or disposal practice; minimally this shall be as specified in 40 CFR part 503 (where applicable), but in no case less than once a year. All results must be electronically reported in compliance with 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127.

(3) Requirements to report monitoring results for storm water discharges associated with industrial activity which

are subject to an effluent limitation guideline shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge, but in no case less than once a year.

(4) Requirements to report monitoring results for storm water discharges associated with industrial activity (other than those addressed in paragraph (i)(3) of this section) shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge. At a minimum, a permit for such a discharge must require:

(i) The discharger to conduct an annual inspection of the facility site to identify areas contributing to a storm water discharge associated with industrial activity and evaluate whether measures to reduce pollutant loadings identified in a storm water pollution prevention plan are adequate and properly implemented in accordance with the terms of the permit or whether additional control measures are needed;

(ii) The discharger to maintain for a period of three years a record summarizing the results of the inspection and a certification that the facility is in compliance with the plan and the permit, and identifying any incidents of non-compliance;

(iii) Such report and certification be signed in accordance with § 122.22; and

(iv) Permits for storm water discharges associated with industrial activity from inactive mining operations may, where annual inspections are impracticable, require certification once every three years by a Registered Professional Engineer that the facility is in compliance with the permit, or alternative requirements.

(5) Permits which do not require the submittal of monitoring result reports at least annually shall require that the permittee report all instances of noncompliance not reported under § 122.41(l) (1), (4), (5), and (6) at least annually.

(j) Pretreatment program for POTWs. Requirements for POTWs to:

(1) Identify, in terms of character and volume of pollutants, any Significant Industrial Users discharging into the POTW subject to Pretreatment Standards under section 307(b) of CWA and 40 CFR part 403.

(2)(i) Submit a local program when required by and in accordance with 40 CFR part 403 to assure compliance with pretreatment standards to the extent applicable under section 307(b). The local program shall be incorporated into the permit as described in 40 CFR part 403. The program must require all indirect dischargers to the POTW to comply with the reporting requirements of 40 CFR part 403.

(ii) Provide a written technical evaluation of the need to revise local limits under 40 CFR 403.5(c)(1), following permit issuance or reissuance.

(3) For POTWs which are "sludge-only facilities," a requirement to develop a pretreatment program under 40 CFR part 403 when the Director determines that a pretreatment program is necessary to assure compliance with Section 405(d) of the CWA.

(k) Best management practices (BMPs) to control or abate the discharge of pollutants when:

(1) Authorized under section 304(e) of the CWA for the control of toxic pollutants and hazardous substances from ancillary industrial activities;

(2) Authorized under section 402(p) of the CWA for the control of storm water discharges;

(3) Numeric effluent limitations are infeasible; or

(4) The practices are reasonably necessary to achieve effluent limitations and standards or to carry out the purposes and intent of the CWA.

NOTE TO PARAGRAPH (k)(4): Additional technical information on BMPs and the elements of BMPs is contained in the following documents: Guidance Manual for Developing Best Management Practices (BMPs), October 1993, EPA No. 833/B-93-004, NTIS No. PB 94-178324, ERIC No. W498); Storm Water Management for Construction Activities: Developing Pollution Prevention Plans and Best Management Practices, September 1992, EPA No. 832/R-92-005, NTIS No. PB 92-235951, ERIC No. N482); Storm Water Management for Construction Activities, Developing Pollution Prevention Plans and Best Management Practices: Summary Guidance, EPA No. 833/R-92-001, NTIS No. PB 93-223550; ERIC No. W139; Storm Water Management for Industrial Activities, Developing Pollution Prevention Plans and Best Management Practices, September 1992; EPA 832/R-92-006, NTIS No. PB 92-235969, ERIC No. N477; Storm Water Management for Industrial Activities, Developing Pollution Prevention Plans and Best Management Practices: Summary Guidance, EPA 833/R-92-002, NTIS No. PB 94-133782; ERIC No. W492. Copies of those documents (or directions on how to obtain them) can be obtained by contacting either the Office of Water Resource Center (using the EPA document number as a reference) at (202) 260-7786; or the Educational Resources Information Center (ERIC) (using the ERIC number as a reference) at (800) 276-0462. Updates of these documents or additional BMP documents may also be available. A list of EPA BMP guidance documents is available on the OWM Home Page at <http://www.epa.gov/owm>. In addition, States may have BMP guidance documents.

These EPA guidance documents are listed here only for informational purposes; they are not binding and EPA does not intend that these guidance documents have any mandatory, regulatory effect by virtue of their listing in this note.

(1) Reissued permits. (1) Except as provided in paragraph (1)(2) of this section when a permit is renewed or reissued, interim effluent limitations, standards or conditions must be at least as stringent as the final effluent limitations, standards, or conditions in the previous permit (unless the circumstances on which the previous permit was based have materially and substantially changed since the time the permit was issued and would constitute cause for permit modification or revocation and reissuance under § 122.62.)

(2) In the case of effluent limitations established on the basis of Section 402(a)(1)(B) of the CWA, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under section 304(b) subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit.

(i) Exceptions -- A permit with respect to which paragraph (1)(2) of this section applies may be renewed, reissued, or modified to contain a less stringent effluent limitation applicable to a pollutant, if --

(A) Material and substantial alterations or additions to the permitted facility occurred after permit issuance which justify the application of a less stringent effluent limitation;

(B)(1) Information is available which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of a less stringent effluent limitation at the time of permit issuance; or

(2) The Administrator determines that technical mistakes or mistaken interpretations of law were made in issuing the permit under section 402(a)(1)(b);

(C) A less stringent effluent limitation is necessary because of events over which the permittee has no control and for which there is no reasonably available remedy;

(D) The permittee has received a permit modification under section 301(c), 301(g), 301(h), 301(i), 301(k), 301(n), or 316(a); or

(E) The permittee has installed the treatment facilities required to meet the effluent limitations in the previous permit and has properly operated and maintained the facilities but has nevertheless been unable to achieve the previous

effluent limitations, in which case the limitations in the reviewed, reissued, or modified permit may reflect the level of pollutant control actually achieved (but shall not be less stringent than required by effluent guidelines in effect at the time of permit renewal, reissuance, or modification).

(ii) Limitations. In no event may a permit with respect to which paragraph (l)(2) of this section applies be renewed, reissued, or modified to contain an effluent limitation which is less stringent than required by effluent guidelines in effect at the time the permit is renewed, reissued, or modified. In no event may such a permit to discharge into waters be renewed, issued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under section 303 applicable to such waters.

(m) Privately owned treatment works. For a privately owned treatment works, any conditions expressly applicable to any user, as a limited co-permittee, that may be necessary in the permit issued to the treatment works to ensure compliance with applicable requirements under this part. Alternatively, the Director may issue separate permits to the treatment works and to its users, or may require a separate permit application from any user. The Director's decision to issue a permit with no conditions applicable to any user, to impose conditions on one or more users, to issue separate permits, or to require separate applications, and the basis for that decision, shall be stated in the fact sheet for the draft permit for the treatment works.

(n) Grants. Any conditions imposed in grants made by the Administrator to POTWs under sections 201 and 204 of CWA which are reasonably necessary for the achievement of effluent limitations under section 301 of CWA.

(o) Sewage sludge. Requirements under section 405 of CWA governing the disposal of sewage sludge from publicly owned treatment works or any other treatment works treating domestic sewage for any use for which regulations have been established, in accordance with any applicable regulations.

(p) Coast Guard. When a permit is issued to a facility that may operate at certain times as a means of transportation over water, a condition that the discharge shall comply with any applicable regulations promulgated by the Secretary of the department in which the Coast Guard is operating, that establish specifications for safe transportation, handling, carriage, and storage of pollutants.

(q) Navigation. Any conditions that the Secretary of the Army considers necessary to ensure that navigation and anchorage will not be substantially impaired, in accordance with § 124.59 of this chapter.

(r) Great Lakes. When a permit is issued to a facility that discharges into the Great Lakes System (as defined in 40 CFR 132.2), conditions promulgated by the State, Tribe, or EPA pursuant to 40 CFR part 132.

(s) Qualifying State, Tribal, or local programs. (1) For storm water discharges associated with small construction activity identified in § 122.26(b)(15), the Director may include permit conditions that incorporate qualifying State, Tribal, or local erosion and sediment control program requirements by reference. Where a qualifying State, Tribal, or local program does not include one or more of the elements in this paragraph (s)(1), then the Director must include those elements as conditions in the permit. A qualifying State, Tribal, or local erosion and sediment control program is one that includes:

(i) Requirements for construction site operators to implement appropriate erosion and sediment control best management practices;

(ii) Requirements for construction site operators to control waste such as discarded building materials, concrete truck washout, chemicals, litter, and sanitary waste at the construction site that may cause adverse impacts to water quality;

(iii) Requirements for construction site operators to develop and implement a storm water pollution prevention plan. (A storm water pollution prevention plan includes site descriptions, descriptions of appropriate control measures,

copies of approved State, Tribal or local requirements, maintenance procedures, inspection procedures, and identification of non-storm water discharges); and

(iv) Requirements to submit a site plan for review that incorporates consideration of potential water quality impacts.

(2) For storm water discharges from construction activity identified in § 122.26(b)(14)(x), the Director may include permit conditions that incorporate qualifying State, Tribal, or local erosion and sediment control program requirements by reference. A qualifying State, Tribal or local erosion and sediment control program is one that includes the elements listed in paragraph (s)(1) of this section and any additional requirements necessary to achieve the applicable technology-based standards of "best available technology" and "best conventional technology" based on the best professional judgment of the permit writer.

TITLE 40 -- PROTECTION OF ENVIRONMENT
CHAPTER I -- ENVIRONMENTAL PROTECTION AGENCY
SUBCHAPTER D -- WATER PROGRAMS
PART 130 -- WATER QUALITY PLANNING AND MANAGEMENT

Go to the CFR Archive Directory

40 CFR 130.2

§ 130.2 Definitions.

- (a) The Act. The Clean Water Act, as amended, 33 U.S.C. 1251 et seq.
- (b) Indian Tribe. Any Indian Tribe, band, group, or community recognized by the Secretary of the Interior and exercising governmental authority over a Federal Indian reservation.
- (c) Pollution. The man-made or man-induced alteration of the chemical, physical, biological, and radiological integrity of water.
- (d) Water quality standards (WQS). Provisions of State or Federal law which consist of a designated use or uses for the waters of the United States and water quality criteria for such waters based upon such uses. Water quality standards are to protect the public health or welfare, enhance the quality of water and serve the purposes of the Act.
- (e) Load or loading. An amount of matter or thermal energy that is introduced into a receiving water; to introduce matter or thermal energy into a receiving water. Loading may be either man-caused (pollutant loading) or natural (natural background loading).
- (f) Loading capacity. The greatest amount of loading that a water can receive without violating water quality standards.
- (g) Load allocation (LA). The portion of a receiving water's loading capacity that is attributed either to one of its existing or future nonpoint sources of pollution or to natural background sources. Load allocations are best estimates of the loading, which may range from reasonably accurate estimates to gross allotments, depending on the availability of data and appropriate techniques for predicting the loading. Wherever possible, natural and nonpoint source loads should be distinguished.
- (h) Wasteload allocation (WLA). The portion of a receiving water's loading capacity that is allocated to one of its existing or future point sources of pollution. WLAs constitute a type of water quality-based effluent limitation.
- (i) Total maximum daily load (TMDL). The sum of the individual WLAs for point sources and LAs for nonpoint sources and natural background. If a receiving water has only one point source discharger, the TMDL is the sum of that

point source WLA plus the LAs for any nonpoint sources of pollution and natural background sources, tributaries, or adjacent segments. TMDLs can be expressed in terms of either mass per time, toxicity, or other appropriate measure. If Best Management Practices (BMPs) or other nonpoint source pollution controls make more stringent load allocations practicable, then wasteload allocations can be made less stringent. Thus, the TMDL process provides for nonpoint source control tradeoffs.

(j) Water quality limited segment. Any segment where it is known that water quality does not meet applicable water quality standards, and/or is not expected to meet applicable water quality standards, even after the application of the technology-based effluent limitations required by sections 301(b) and 306 of the Act.

(k) Water quality management (WQM) plan. A State or areawide waste treatment management plan developed and updated in accordance with the provisions of sections 205(j), 208 and 303 of the Act and this regulation.

(l) Areawide agency. An agency designated under section 208 of the Act, which has responsibilities for WQM planning within a specified area of a State.

(m) Best Management Practice (BMP). Methods, measures or practices selected by an agency to meet its nonpoint source control needs. BMPs include but are not limited to structural and nonstructural controls and operation and maintenance procedures. BMPs can be applied before, during and after pollution-producing activities to reduce or eliminate the introduction of pollutants into receiving waters.

(n) Designated management agency (DMA). An agency identified by a WQM plan and designated by the Governor to implement specific control recommendations.

Cal Wat Code § 13000 (2016)

§ 13000. Legislative findings and declarations

The Legislature finds and declares that the people of the state have a primary interest in the conservation, control, and utilization of the water resources of the state, and that the quality of all the waters of the state shall be protected for use and enjoyment by the people of the state.

The Legislature further finds and declares that activities and factors which may affect the quality of the waters of the state shall be regulated to attain the highest water quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible.

The Legislature further finds and declares that the health, safety and welfare of the people of the state requires that there be a statewide program for the control of the quality of all the waters of the state; that the state must be prepared to exercise its full power and jurisdiction to protect the quality of waters in the state from degradation originating inside or outside the boundaries of the state; that the waters of the state are increasingly influenced by interbasin water development projects and other statewide considerations; that factors of precipitation, topography, population, recreation, agriculture, industry and economic development vary from region to region within the state; and that the statewide program for water quality control can be most effectively administered regionally, within a framework of statewide coordination and policy.

Chapter 5.5. Compliance With the Provisions of the Federal Water Pollution Control Act as Amended in 1972

GO TO CALIFORNIA CODES ARCHIVE DIRECTORY

Cal Wat Code § 13370 (2016)

§ 13370. Public interest in state implementation of provisions of federal act, etc.

The Legislature finds and declares as follows:

(a) The Federal Water Pollution Control Act (33 U.S.C. Sec. 1251 et seq.), as amended, provides for permit systems to regulate the discharge of pollutants and dredged or fill material to the navigable waters of the United States and to regulate the use and disposal of sewage sludge.

(b) The Federal Water Pollution Control Act, as amended, provides that permits may be issued by states which are authorized to implement the provisions of that act.

(c) It is in the interest of the people of the state, in order to avoid direct regulation by the federal government of persons already subject to regulation under state law pursuant to this division, to enact this chapter in order to authorize the state to implement the provisions of the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto, and federal regulations and guidelines issued pursuant thereto, provided, that the state board shall request federal funding under the Federal Water Pollution Control Act for the purpose of carrying out its responsibilities under this program.

GOVERNMENT CODE
Title 2. Government of the State of California
Division 4. Fiscal Affairs
Part 7. State-Mandated Local Costs
Chapter 1. Legislative Intent

GO TO CALIFORNIA CODES ARCHIVE DIRECTORY

Cal Gov Code § 17500 (2016)

§ 17500. Legislative findings and declarations

The Legislature finds and declares that the existing system for reimbursing local agencies and school districts for the costs of state-mandated local programs has not provided for the effective determination of the state's responsibilities under Section 6 of Article XIII B of the California Constitution. The Legislature finds and declares that the failure of the existing process to adequately and consistently resolve the complex legal questions involved in the determination of state-mandated costs has led to an increasing reliance by local agencies and school districts on the judiciary and, therefore, in order to relieve unnecessary congestion of the judicial system, it is necessary to create a mechanism which is capable of rendering sound quasi-judicial decisions and providing an effective means of resolving disputes over the existence of state-mandated local programs.

It is the intent of the Legislature in enacting this part to provide for the implementation of Section 6 of Article XIII B of the California Constitution. Further, the Legislature intends that the Commission on State Mandates, as a quasi-judicial body, will act in a deliberative manner in accordance with the requirements of Section 6 of Article XIII B of the California Constitution.

TITLE 2. ADMINISTRATION
DIVISION 2. FINANCIAL OPERATIONS
CHAPTER 2.5. COMMISSION ON STATE MANDATES
ARTICLE 3. TEST CLAIMS

Go to the California Administrative Code Archive Directory

2 CCR 1183.1 (2016)

§ 1183.1. Test Claim Filing

(a) In order to obtain a mandate determination, a local agency or school district shall file a test claim with the Commission. A local agency or school district may file a test claim as follows:

(1) A county auditor, auditor-controller, or director of finance who has assumed the duties of controller, may file on behalf of a county.

(2) A city manager, director of finance, or other officer with a delegation by ordinance or resolution from the city council, may file on behalf of a city.

(3) A district superintendent may file on behalf of a school district.

(4) A chancellor, vice chancellor, director of finance, or other officer with authority delegated by the governing body by ordinance or resolution, may file on behalf of a community college district.

(5) A general manager or other officer with authority delegated by the governing body by ordinance or resolution may file on behalf of a special district.

(b) Claimants may agree to submit a test claim as a joint effort, as provided in section 1183.1(g) of these regulations. Otherwise, the first claim filed on a statute or executive order by a similarly situated claimant is the test claim and no duplicate test claims will be accepted by the Commission. Other similarly situated affected agencies may participate in the process by submitting comments in writing on any agenda item as provided in section 1181.10 of these regulations, and may attend any Commission hearing on the test claim and provide written or oral comments to the Commission. Affected agencies that are not similarly situated, meaning that test claim statutes affect them differently, may file a test claim on the same statutes as the first claim, but must demonstrate how and why they are affected differently.

(c) Except as provided in Government Code sections 17573 and 17574, any test claim or amendment filed with the Commission must be filed not later than 12 months following the effective date of a statute or executive order, or within 12 months of first incurring increased costs as a result of a statute or executive order, whichever is later. For purposes of claiming based on the date of first incurring costs, "within 12 months" means by June 30 of the fiscal year following the fiscal year in which increased costs were first incurred by the test claimant.

(d) All test claims, or amendments thereto, shall be filed on a form developed by the executive director and shall contain all of the elements and supplemental documents required by statute, regulation and the form. When an omnibus bill is pled, claimant shall file only the relevant pages of the statute, including the Legislative Counsel's Digest and the specific statutory changes at issue.

(e) The claimant shall file the test claim, or amendment thereto, and accompanying documents with the Commission in accordance with section 1181.3 of these regulations.

(f) Within 10 days of receipt of a test claim, or amendment thereto, Commission staff shall notify the claimant if the test claim is complete or incomplete. Test claims will be considered incomplete if any of the elements required in subdivisions (c) and (d) of this section are illegible or are not included. If a complete test claim is not received within 30 calendar days from the date the incomplete test claim was returned, the executive director may disallow the original test claim filing date. A new test claim may be accepted on the same statute or executive order alleged to impose a reimbursable state-mandated program.

(g) Test claims may be prepared as a joint effort between two or more claimants and filed with the Commission if the claimants attest to all of the following in the test claim filing:

- (1) The claimants allege state-mandated costs result from the same statute or executive order;
- (2) The claimants agree on all issues of the test claim; and
- (3) The claimants have designated one contact person to act as the resource for information regarding the test claim.

(h) Any test claim, or portion of a test claim, that the Commission lacks jurisdiction to hear for any reason may be dismissed by the executive director with a written notice stating the reason for dismissal.

(i) Any party may appeal to the Commission for review of the actions and decisions of the executive director under this section pursuant to section 1181.1 of these regulations.

AUTHORITY:

Note: Authority cited: Sections 17527(g) and 17553, Government Code. Reference: Sections 17521, 17530, 17551, 17553, 17557(e), 17573, 17574, 24000, 24300.5, 26881, 26900, 26970, 26972, 34852, 35034, 35035, 37209, 40805.5 and 56723, Government Code.

HISTORY:

1. Amendment of section heading, section and Note filed 7-23-96; operative 7-23-96. Submitted to OAL for printing only (Register 96, No. 30).
2. Amendment of section heading, section and Note filed 9-6-2005; operative 9-6-2005. Exempt from OAL review and submitted to OAL for printing only pursuant to Government Code section 17527(g) (Register 2005, No. 36).
3. New article 3 (sections 1183.1-1183.18) and repealer and new section filed 5-19-2014; operative 7-1-2014 pursuant to Government Code section 11343.4(a)(3). Exempt from OAL review and submitted to OAL for printing only pursuant to Government Code section 17527 (Register 2014, No. 21).
4. Amendment of subsection (a), including redesignation of portion of former subsection (a) as new subsection (b) and subsection relettering, new subsections (a)(1)-(5) and amendment of Note filed 9-24-2015; operative 10-1-2015 pursuant to Government Code section 11343.4(b)(3). Exempt from OAL review and submitted to OAL for filing and printing only pursuant to Government Code section 17527(g) (Register 2015, No. 39).

JUDGES: O'CONNOR, J., delivered the opinion of the Court, in which REHNQUIST, C. J., and BLACKMUN, STEVENS, KENNEDY, SOUTER, and GINSBURG, JJ., joined. STEVENS, J., filed a concurring opinion, post, p. 723. THOMAS, J., filed a dissenting opinion, in which SCALIA, J., joined, post, p. 724.

OPINION BY: O'CONNOR

OPINION

[*703] [***723] [**1905] JUSTICE O'CONNOR delivered the opinion of the Court.

[***LEdHR1A] Petitioners, a city and a local utility district, want to build a hydroelectric project on the Dosewallips River in Washington State. We must decide whether respondent state environmental agency (hereinafter respondent) properly conditioned a permit for the project on the maintenance of specific minimum stream flows to protect salmon and steelhead runs.

[*704] I

This case involves the complex statutory and

regulatory scheme that governs our Nation's waters, a scheme that implicates both federal and state administrative responsibilities. The Federal Water Pollution Control Act, commonly known as the Clean Water Act, 86 Stat. 816, as amended, 33 U.S.C. § 1251 *et seq.*, is a comprehensive water quality statute designed to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." § 1251(a). The Act also seeks to attain "water quality which provides for the protection and propagation of fish, shellfish, and wildlife." § 1251(a)(2).

To achieve these ambitious goals, the Clean Water Act establishes distinct roles for the Federal and State Governments. Under the Act, the Administrator of the Environmental Protection Agency (EPA) is required, among other things, to establish and enforce technology-based limitations on individual discharges into the country's navigable waters from point sources. See §§ 1311, 1314. Section 303 of the Act also requires each State, subject to federal approval, to institute comprehensive water quality standards establishing water quality goals for all intrastate waters. §§ 1311(b) (1)(C), 1313. These state water quality standards provide "a supplementary basis . . . so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels." *EPA v. California ex rel. State Water Resources Control Bd.*, 426 U.S. 200, 205, n. 12, 48 L. Ed. 2d 578, 96 S. Ct. 2022 (1976).

A state water quality standard "shall consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." 33 U.S.C. § 1313(c)(2)(A). In setting standards, the State must comply with the following broad requirements:

"Such standards shall be such as to protect the public health or welfare, enhance the quality of water and [*705] serve the purposes of this chapter. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational [and other purposes.]" *Ibid.*

See also § 1251(a)(2).

A 1987 amendment to the Clean Water Act makes clear that § 303 also contains an "antidegradation policy" -- that is, a policy requiring [**1906] that state standards be sufficient to maintain existing beneficial uses of navigable waters, preventing their further degradation. Specifically, the Act permits the revision of certain effluent limitations or water quality [***724] standards "only if such revision is subject to and consistent with the antidegradation policy established under this section." § 1313(d)(4)(B). Accordingly, EPA's regulations implementing the Act require that state water quality standards include "a statewide antidegradation policy" to ensure that "existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected." 40 CFR § 131.12 (1993). At a minimum, state water quality standards must satisfy these conditions. The Act also allows States to impose more stringent water quality controls. See 33 U.S.C. §§ 1311(b)(1)(C), 1370. See also 40 CFR § 131.4(a) (1993) ("As recognized by section 510 of the Clean Water Act[, 33 U.S.C. § 1370], States may develop water quality standards more stringent than required by this regulation").

The State of Washington has adopted comprehensive water quality standards intended to regulate all of the State's navigable waters. See Washington Administrative Code (WAC) 173-201-010 to 173-201-120 (1986). The State created an inventory of all the State's waters, and divided the waters into five classes. 173-201-045. Each individual fresh surface water of the State is placed into one of these classes. 173-201-080. The Dosewallips River is classified AA, extraordinary. 173-201-080(32). The water quality [*706] standard for Class AA waters is set forth at 173-201-045(1). The standard identifies the designated uses of Class AA waters as well as the criteria applicable to such waters.¹

¹ WAC 173-201-045(1) (1986) provides in pertinent part:

"(1) Class AA (extraordinary).

"(a) General characteristic. Water quality of this class shall markedly and uniformly exceed the requirements for all or substantially all uses.

"(b) Characteristic uses. Characteristic uses shall include, but not be limited to, the following:

"(i) Water supply (domestic, industrial,

agricultural).

"(ii) Stock watering.

"(iii) Fish and shellfish:

"Salmonid migration, rearing, spawning, and harvesting.

"Other fish migration, rearing, spawning, and harvesting.

...

"(iv) Wildlife habitat.

"(v) Recreation (primary contact recreation, sport fishing, boating, and aesthetic enjoyment).

"(vi) Commerce and navigation.

"(c) Water quality criteria

"(i) Fecal coliform organisms.

"(A) Freshwater -- fecal coliform organisms shall not exceed a geometric mean value of 50 organisms/100 mL, with not more than 10 percent of samples exceeding 100 organisms/100 mL.

"(B) Marine water -- fecal coliform organisms shall not exceed a geometric mean value of 14 organisms/100 mL, with not more than 10 percent of samples exceeding 43 organisms/100 mL.

"(ii) Dissolved oxygen [shall exceed specific amounts].

...

"(iii) Total dissolved gas shall not exceed 110 percent of saturation at any point of sample collection.

"(iv) Temperature shall not exceed [certain levels].

...

"(v) pH shall be within [a specified range].

"(vi) Turbidity shall not exceed [specific levels].

"(vii) Toxic, radioactive, or deleterious material concentrations shall be less than those which may affect public health, the natural aquatic environment, or the desirability of the water for any use.

"(viii) Aesthetic values shall not be impaired by the presence of materials or their effects, excluding those of natural origin, which offend the senses of sight, smell, touch, or taste."

[*707] In addition to these specific standards applicable to Class AA waters, the State has adopted a statewide [***725] antidegradation policy. That policy provides:

"(a) Existing beneficial uses shall be maintained and protected and no further degradation which would interfere with or become injurious to existing beneficial uses will be allowed.

"(b) No degradation will be allowed of waters lying in national parks, national recreation areas, national wildlife refuges, national scenic rivers, and other areas of national ecological importance.

...

"(f) In no case, will any degradation of water quality be allowed if this degradation interferes with or becomes injurious to existing water uses and causes long-term [**1907] and irreparable harm to the environment." 173-201-035(8).

As required by the Act, EPA reviewed and approved the State's water quality standards. See 33 U.S.C. § 1313(c)(3); 42 Fed. Reg. 56792 (1977). Upon approval by EPA, the state standard became "the water quality standard for the applicable waters of that State." 33 U.S.C. § 1313(c)(3).

States are responsible for enforcing water quality standards on intrastate waters. § 1319(a). In addition to these primary enforcement responsibilities, § 401 of the Act requires States to provide a water quality certification before a federal license or permit can be issued for activities that may result in any discharge into intrastate navigable waters. 33 U.S.C. § 1341. Specifically, § 401

requires an applicant for a federal license or permit to conduct any activity "which may result in any discharge into the navigable waters" to obtain from the State a certification "that any such discharge will comply with the applicable provisions of sections [1311, 1312, 1313, 1316, and 1317 of this title]." 33 U.S.C. § 1341(a). Section 401(d) further provides that "any certification [*708] . . . shall set forth any effluent limitations and other limitations, and monitoring requirements necessary to assure that any applicant . . . will comply with any applicable effluent limitations and other limitations, under section [1311 or 1312 of this title] . . . and with any other appropriate requirement of State law set forth in such certification." 33 U.S.C. § 1341(d). The limitations included in the certification become a condition on any federal license. *Ibid.* ²

² Section 401, as set forth in 33 U.S.C. § 1341, provides in relevant part:

"(a) Compliance with applicable requirements; application; procedures; license suspension

"(1) Any applicant for a Federal license or permit to conduct any activity including, but not limited to, the construction or operation of facilities, which may result in any discharge into the navigable waters, shall provide the licensing or permitting agency a certification from the State . . . that any such discharge will comply with the applicable provisions of sections 1311, 1312, 1313, 1316, and 1317 of this title.

...

"(d) Limitations and monitoring requirements of certification

"Any certification provided under this section shall set forth any effluent limitations and other limitations, and monitoring requirements necessary to assure that any applicant for a Federal license or permit will comply with any applicable effluent limitations and other limitations, under section 1311 or 1312 of this title, standard of performance under section 1316 of this title, or prohibition, effluent standard, or pretreatment standard under section 1317 of this title, and with any other appropriate requirement of State law set forth in such certification, and

shall become a condition on any Federal license or permit subject to the provisions of this section."

[***726] II

Petitioners propose to build the Elkhorn Hydroelectric Project on the Dosewallips River. If constructed as presently planned, the facility would be located just outside the Olympic National Park on federally owned land within the Olympic National Forest. The project would divert water from a 1.2-mile reach of the river (the bypass reach), run the [*709] water through turbines to generate electricity and then return the water to the river below the bypass reach. Under the Federal Power Act (FPA), 41 Stat. 1063, as amended, 16 U.S.C. § 791a *et seq.*, the Federal Energy Regulatory Commission (FERC) has authority to license new hydroelectric facilities. As a result, petitioners must get a FERC license to build or operate the Elkhorn Project. Because a federal license is required, and because the project may result in discharges into the Dosewallips River, petitioners are also required to obtain state certification of the project pursuant to § 401 of the Clean Water Act, 33 U.S.C. § 1341.

The water flow in the bypass reach, which is currently undiminished by appropriation, ranges seasonally between 149 and 738 cubic feet per second (cfs). The Dosewallips supports two species of salmon, coho and chinook, as well as steelhead trout. As originally proposed, the project was to include a diversion dam which would completely block [**1908] the river and channel approximately 75% of the river's water into a tunnel alongside the streambed. About 25% of the water would remain in the bypass reach, but would be returned to the original riverbed through sluice gates or a fish ladder. Depending on the season, this would leave a residual minimum flow of between 65 and 155 cfs in the river. Respondent undertook a study to determine the minimum stream flows necessary to protect the salmon and steelhead fishery in the bypass reach. On June 11, 1986, respondent issued a § 401 water quality certification imposing a variety of conditions on the project, including a minimum stream flow requirement of between 100 and 200 cfs depending on the season.

A state administrative appeals board determined that the minimum flow requirement was intended to enhance, not merely maintain, the fishery, and that the certification condition therefore exceeded respondent's authority under state law. App. to Pet. for Cert. 55a-57a. On appeal, the

[*710] State Superior Court concluded that respondent could require compliance with the minimum flow conditions. *Id.*, at 29a-45a. The Superior Court also found that respondent had imposed the minimum flow requirement to protect and preserve the fishery, not to improve it, and that this requirement was authorized by state law. *Id.*, at 34a.

The Washington Supreme Court held that the antidegradation provisions of the State's water quality standards require the imposition of minimum stream flows. 121 Wash. 2d 179, 186-187, 849 P.2d 646, 650 (1993). [***727] The court also found that § 401(d), which allows States to impose conditions based upon several enumerated sections of the Clean Water Act and "any other appropriate requirement of State law," 33 U.S.C. § 1341(d), authorized the stream flow condition. Relying on this language and the broad purposes of the Clean Water Act, the court concluded that § 401(d) confers on States power to "consider all state action related to water quality in imposing conditions on section 401 certificates." 121 Wash. 2d at 192, 849 P.2d at 652. We granted certiorari, 510 U.S. 810 (1993), to resolve a conflict among the state courts of last resort. See 121 Wash. 2d 179, 849 P.2d 646 (1993); *Georgia Pacific Corp. v. Dept. of Environmental Conservation*, 159 Vt. 639, 628 A.2d 944 (1992) (table); *Power Authority of New York v. Williams*, 60 N.Y.2d 315, 457 N.E.2d 726, 469 N.Y.S.2d 620 (1983). We now affirm.

III

[***LEdHR1A] The principal dispute in this case concerns whether the minimum stream flow requirement that the State imposed on the Elkhorn Project is a permissible condition of a § 401 certification under the Clean Water Act. To resolve this dispute we must first determine the scope of the State's authority under § 401. We must then determine whether the limitation at issue here, the requirement that petitioners maintain minimum stream flows, falls within the scope of that authority.

[*711] A

There is no dispute that petitioners were required to obtain a certification from the State pursuant to § 401. Petitioners concede that, at a minimum, the project will result in two possible discharges -- the release of dredged and fill material during the construction of the project, and the discharge of water at the end of the tailrace after the water has been used to generate electricity. Brief for

Petitioners 27-28. Petitioners contend, however, that the minimum stream flow requirement imposed by the State was unrelated to these specific discharges, and that as a consequence, the State lacked the authority under § 401 to condition its certification on maintenance of stream flows sufficient to protect the Dosewallips fishery.

[***LEdHR2A] If § 401 consisted solely of subsection (a), which refers to a state certification that a "discharge" will comply with certain provisions of the Act, petitioners' assessment of the scope of the State's certification authority would have considerable force. Section 401, however, also contains subsection (d), which expands the State's authority to impose conditions on the certification of a [**1909] project. Section 401(d) provides that any certification shall set forth "any effluent limitations and other limitations . . . necessary to assure that *any applicant*" will comply with various provisions of the Act and appropriate state law requirements. 33 U.S.C. § 1341(d) (emphasis added). The language of this subsection contradicts petitioners' claim that the State may only impose water quality limitations specifically tied to a "discharge." The text refers to the compliance of the applicant, not the discharge. Section 401(d) thus allows the State to impose "other limitations" on the project in general to assure compliance with various provisions of the Clean Water Act and with "any other appropriate [***728] requirement of State law." Although the dissent asserts that this interpretation of § 401(d) renders § 401(a)(1) superfluous, *post*, at 726, we see no such anomaly. Section 401(a)(1) identifies the category of activities [*712] subject to certification -- namely, those with discharges. And § 401(d) is most reasonably read as authorizing additional conditions and limitations on the activity as a whole once the threshold condition, the existence of a discharge, is satisfied.

Our view of the statute is consistent with EPA's regulations implementing § 401. The regulations expressly interpret § 401 as requiring the State to find that "there is a reasonable assurance that the *activity* will be conducted in a manner which will not violate applicable water quality standards." 40 CFR § 121.2(a)(3) (1993) (emphasis added). See also EPA, *Wetlands and 401 Certification* 23 (Apr. 1989) ("In 401(d), the Congress has given the States the authority to place any conditions on a water quality certification that are necessary to assure that the applicant will comply with effluent limitations, water quality standards, . . . and with 'any other appropriate requirement of State law'"). EPA's

conclusion that *activities* -- not merely discharges -- must comply with state water quality standards is a reasonable interpretation of § 401, and is entitled to deference. See, e. g., *Arkansas v. Oklahoma*, 503 U.S. 91, 110, 117 L. Ed. 2d 239, 112 S. Ct. 1046 (1992); *Chevron U.S. A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984).

[***LEdHR3A] Although § 401(d) authorizes the State to place restrictions on the activity as a whole, that authority is not unbounded. The State can only ensure that the project complies with "any applicable effluent limitations and other limitations, under [33 U.S.C. §§ 1311, 1312]" or certain other provisions of the Act, "and with any other appropriate requirement of State law." 33 U.S.C. § 1341(d). The State asserts that the minimum stream flow requirement was imposed to ensure compliance with the state water quality standards adopted pursuant to § 303 of the Clean Water Act, 33 U.S.C. § 1313.

[***LEdHR2A] [***LEdHR3A] We agree with the State that ensuring compliance with § 303 is a proper function of the § 401 certification. Although § 303 is not one of the statutory provisions listed in § 401(d), [*713] the statute allows States to impose limitations to ensure compliance with § 301 of the Act, 33 U.S.C. § 1311. Section 301 in turn incorporates § 303 by reference. See 33 U.S.C. § 1311(b)(1)(C); see also H. R. Conf. Rep. No. 95-830, p. 96 (1977) ("Section 303 is always included by reference where section 301 is listed"). As a consequence, state water quality standards adopted pursuant to § 303 are among the "other limitations" with which a State may ensure compliance through the § 401 certification process. This interpretation is consistent with EPA's view of the statute. See 40 CFR § 121.2(a)(3) (1992); EPA, *Wetlands and 401 Certification*, *supra*. Moreover, limitations to assure compliance with state water quality standards are also permitted by § 401(d)'s reference to "any other appropriate requirement of State law." We do not speculate on what additional state laws, if any, might be incorporated by this language. ³ [***729] [**1910] But at a minimum, limitations imposed pursuant to state water quality standards adopted pursuant to § 303 are "appropriate" requirements of state law. Indeed, petitioners appear to agree that the State's authority under § 401 includes limitations designed to ensure compliance with state water quality standards. Brief for Petitioners 9, 21.

3 The dissent asserts that § 301 is concerned solely with discharges, not broader water quality standards. *Post*, at 730, n. 2. Although § 301 does make certain discharges unlawful, see 33 U.S.C. § 1311(a), it also contains a broad enabling provision which requires States to take certain actions, to wit: "In order to carry out the objective of this chapter [viz. the chemical, physical, and biological integrity of the Nation's water] there shall be achieved . . . not later than July 1, 1977, any more stringent limitation, including those necessary to meet water quality standards, . . . established pursuant to any State law or regulations . . ." 33 U.S.C. § 1311(b)(1)(C). This provision of § 301 expressly refers to state water quality standards, and is not limited to discharges.

B

[***LEdHR1A] [***LEdHR4A] Having concluded that, pursuant to § 401, States may condition certification upon any limitations necessary to ensure [*714] compliance with state water quality standards or any other "appropriate requirement of State law," we consider whether the minimum flow condition is such a limitation. Under § 303, state water quality standards must "consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." 33 U.S.C. § 1313(c)(2)(A). In imposing the minimum stream flow requirement, the State determined that construction and operation of the project as planned would be inconsistent with one of the designated uses of Class AA water, namely "salmonid [and other fish] migration, rearing, spawning, and harvesting." App. to Pet. for Cert. 83a-84a. The designated use of the river as a fish habitat directly reflects the Clean Water Act's goal of maintaining the "chemical, physical, and biological integrity of the Nation's waters." 33 U.S.C. § 1251(a). Indeed, the Act defines pollution as "the man-made or man induced alteration of the chemical, physical, biological, and radiological integrity of water." § 1362(19). Moreover, the Act expressly requires that, in adopting water quality standards, the State must take into consideration the use of waters for "propagation of fish and wildlife." § 1313(c)(2)(A).

Petitioners assert, however, that § 303 requires the State to protect designated uses solely through implementation of specific "criteria." According to

petitioners, the State may not require them to operate their dam in a manner consistent with a designated "use"; instead, say petitioners, under § 303 the State may only require that the project comply with specific numerical "criteria."

[***LEdHR4A] We disagree with petitioners' interpretation of the language of § 303(c)(2)(A). Under the statute, a water quality standard must "consist of the designated uses of the navigable waters involved *and* the water quality criteria for such waters based upon such uses." 33 U.S.C. § 1313(c)(2)(A) (emphasis added). The text makes it plain that water quality standards contain two components. We think the language [*715] of § 303 is most naturally read to require [***730] that a project be consistent with *both* components, namely, the designated use *and* the water quality criteria. Accordingly, under the literal terms of the statute, a project that does not comply with a designated use of the water does not comply with the applicable water quality standards.

Consequently, pursuant to § 401(d) the State may require that a permit applicant comply with both the designated uses and the water quality criteria of the state standards. In granting certification pursuant to § 401(d), the State "shall set forth any . . . limitations . . . necessary to assure that [the applicant] will comply with any . . . limitations under [§ 303] . . . and with any other appropriate requirement of State law." A certification requirement that an applicant operate the project consistently with state water quality standards -- *i. e.*, consistently with the designated uses of the water body and the water quality criteria -- is both a "limitation" to assure "compl[iance] with . . . [**1911] limitations" imposed under § 303, and an "appropriate" requirement of state law.

EPA has not interpreted § 303 to require the States to protect designated uses exclusively through enforcement of numerical criteria. In its regulations governing state water quality standards, EPA defines criteria as "*elements* of State water quality standards, expressed as constituent concentrations, levels, or narrative statements, representing a quality of water that supports a particular use." 40 CFR § 131.3(b) (1993) (emphasis added). The regulations further provide that "when criteria are met, water quality will *generally* protect the designated use." *Ibid.* (emphasis added). Thus, the EPA regulations implicitly recognize that in some circumstances, criteria

alone are insufficient to protect a designated use.

Petitioners also appear to argue that use requirements are too open ended, and that the Act only contemplates enforcement of the more specific and objective "criteria." But this argument is belied by the open-ended nature of the criteria [*716] themselves. As the Solicitor General points out, even "criteria" are often expressed in broad, narrative terms, such as "there shall be no discharge of toxic pollutants in toxic amounts." Brief for United States as *Amicus Curiae* 18. See *American Paper Institute, Inc. v. EPA*, 302 U.S. App. D.C. 80, 996 F.2d 346, 349 (CADC 1993). In fact, under the Clean Water Act, only one class of criteria, those governing "toxic pollutants listed pursuant to section 1317(a)(1)," need be rendered in numerical form. See 33 U.S.C. § 1313(c)(2)(B); 40 CFR § 131.11(b)(2) (1993).

Washington's Class AA water quality standards are typical in that they contain several open-ended criteria which, like the use designation of the river as a fishery, must be translated into specific limitations for individual projects. For example, the standards state that "toxic, radioactive, or deleterious material concentrations shall be less than those which may affect public health, the natural aquatic environment, or the desirability of the water for any use." WAC 173-201-045(1)(c)(vii) (1986). Similarly, the state standards specify that "aesthetic values shall not be impaired by the presence of materials or their effects, excluding those of natural origin, which offend the senses of sight, smell, touch, or taste." 173-201-045(1)(c)(viii). We think petitioners' [***731] attempt to distinguish between uses and criteria loses much of its force in light of the fact that the Act permits enforcement of broad, narrative criteria based on, for example, "aesthetics."

Petitioners further argue that enforcement of water quality standards through use designations renders the water quality criteria component of the standards irrelevant. We see no anomaly, however, in the State's reliance on both use designations and criteria to protect water quality. The specific numerical limitations embodied in the criteria are a convenient enforcement mechanism for identifying minimum water conditions which will generally achieve the requisite water quality. And, in most circumstances, satisfying the criteria will, as EPA recognizes, be sufficient to maintain the [*717] designated use. See 40 CFR § 131.3(b) (1993). Water quality standards, however, apply to an entire class of

water, a class which contains numerous individual water bodies. For example, in the State of Washington, the Class AA water quality standard applies to 81 specified fresh surface waters, as well as to all "surface waters lying within the mountainous regions of the state assigned to national parks, national forests, and/or wilderness areas," all "lakes and their feeder streams within the state," and all "unclassified surface waters that are tributaries to Class AA waters." WAC 173-201-070 (1986). While enforcement of criteria will in general protect the uses of these diverse waters, a complementary requirement that activities also comport with designated uses enables the States to ensure that each activity -- even if not foreseen by the criteria -- will be consistent with the specific uses and attributes of a particular body of water.

Under petitioners' interpretation of the statute, however, if a particular criterion, such as turbidity, were missing from the list [**1912] contained in an individual state water quality standard, or even if an existing turbidity criterion were insufficient to protect a particular species of fish in a particular river, the State would nonetheless be forced to allow activities inconsistent with the existing or designated uses. We think petitioners' reading leads to an unreasonable interpretation of the Act. The criteria components of state water quality standards attempt to identify, for all the water bodies in a given class, water quality requirements generally sufficient to protect designated uses. These criteria, however, cannot reasonably be expected to anticipate all the water quality issues arising from every activity that can affect the State's hundreds of individual water bodies. Requiring the States to enforce only the criteria component of their water quality standards would in essence require the States to study to a level of great specificity each individual surface water to ensure that the criteria applicable to that water are sufficiently detailed and individualized to fully protect the [*718] water's designated uses. Given that there is no textual support for imposing this requirement, we are loath to attribute to Congress an intent to impose this heavy regulatory burden on the States.

The State also justified its minimum stream flow as necessary to implement the "antidegradation policy" of § 303, 33 U.S.C. § 1313(d)(4)(B). When the Clean Water Act was enacted in 1972, the water quality standards of [***732] all 50 States had antidegradation provisions. These provisions were required by federal law. See U.S.

Dept. of Interior, Federal Water Pollution Control Administration, Compendium of Department of Interior Statements on Non-degradation of Interstate Waters 1-2 (Aug. 1968); see also Hines, A Decade of Nondegradation Policy in Congress and the Courts: The Erratic Pursuit of Clean Air and Clean Water, 62 Iowa L. Rev. 643, 658-660 (1977). By providing in 1972 that existing state water quality standards would remain in force until revised, the Clean Water Act ensured that the States would continue their antidegradation programs. See 33 U.S.C. § 1313(a). EPA has consistently required that revised state standards incorporate an antidegradation policy. And, in 1987, Congress explicitly recognized the existence of an "antidegradation policy established under [§ 303]." § 1313(d)(4)(B).

EPA has promulgated regulations implementing § 303's antidegradation policy, a phrase that is not defined elsewhere in the Act. These regulations require States to "develop and adopt a statewide antidegradation policy and identify the methods for implementing such policy." 40 CFR § 131.12 (1993). These "implementation methods shall, at a minimum, be consistent with the . . . existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected." *Ibid.* EPA has explained that under its antidegradation regulation, "no activity is allowable . . . which could partially or completely eliminate any existing use." EPA, Questions and [*719] Answers on Antidegradation 3 (Aug. 1985). Thus, States must implement their antidegradation policy in a manner "consistent" with existing uses of the stream. The State of Washington's antidegradation policy in turn provides that "existing beneficial uses shall be maintained and protected and no further degradation which would interfere with or become injurious to existing beneficial uses will be allowed." WAC 173-201-035(8)(a) (1986). The State concluded that the reduced stream flows would have just the effect prohibited by this policy. The Solicitor General, representing EPA, asserts, Brief for United States as *Amicus Curiae* 18-21, and we agree, that the State's minimum stream flow condition is a proper application of the state and federal antidegradation regulations, as it ensures that an "existing instream water use" will be "maintained and protected." 40 CFR § 131.12(a)(1) (1993).

Petitioners also assert more generally that the Clean Water Act is only concerned with water "quality," and does not allow the regulation of water "quantity." This is

an artificial distinction. In many cases, water quantity is closely related to water quality; a sufficient lowering of the [**1913] water quantity in a body of water could destroy all of its designated uses, be it for drinking water, recreation, navigation or, as here, as a fishery. In any event, there is recognition in the Clean Water Act itself that reduced stream flow, *i. e.*, diminishment of water quantity, can constitute water pollution. First, the Act's definition of pollution as "the man-made or man induced alteration of the chemical, physical, biological, and radiological integrity of water" encompasses the effects of reduced water quantity. 33 U.S.C. § 1362(19). This broad conception of pollution -- one which [***733] expressly evinces Congress' concern with the physical and biological integrity of water -- refutes petitioners' assertion that the Act draws a sharp distinction between the regulation of water "quantity" and water "quality." Moreover, § 304 of the Act expressly recognizes that water "pollution" may result from "changes [*720] in the movement, flow, or circulation of any navigable waters . . ., including changes caused by the construction of dams." 33 U.S.C. § 1314(f). This concern with the flowage effects of dams and other diversions is also embodied in the EPA regulations, which expressly require existing dams to be operated to attain designated uses. 40 CFR § 131.10(g)(4) (1992).

Petitioners assert that two other provisions of the Clean Water Act, §§ 101(g) and 510(2), 33 U.S.C. §§ 1251(g) and 1370(2), exclude the regulation of water quantity from the coverage of the Act. Section 101(g) provides "that the authority of each State to allocate quantities of water within its jurisdiction shall not be superseded, abrogated or otherwise impaired by this chapter." 33 U.S.C. § 1251(g). Similarly, § 510(2) provides that nothing in the Act shall "be construed as impairing or in any manner affecting any right or jurisdiction of the States with respect to the waters . . . of such States." 33 U.S.C. § 1370. In petitioners' view, these provisions exclude "water quantity issues from direct regulation under the federally controlled water quality standards authorized in § 303." Brief for Petitioners 39 (emphasis deleted).

This language gives the States authority to allocate water rights; we therefore find it peculiar that petitioners argue that it prevents the State from regulating stream flow. In any event, we read these provisions more narrowly than petitioners. Sections 101(g) and 510(2) preserve the authority of each State to allocate water

quantity as between users; they do not limit the scope of water pollution controls that may be imposed on users who have obtained, pursuant to state law, a water allocation. In *California v. FERC*, 495 U.S. 490, 498, 109 L. Ed. 2d 474, 110 S. Ct. 2024 (1990), construing an analogous provision of the Federal Power Act, ⁴ we explained that "minimum stream [*721] flow requirements neither reflect nor establish 'proprietary rights' to water. Cf. *First Iowa Hydro-Electric Cooperative v. FPC*, 328 U.S. 152, 176, 90 L. Ed. 1143, 66 S. Ct. 906, and n. 20 (1946). Moreover, the certification itself does not purport to determine petitioners' proprietary right to the water of the Dosewallips. In fact, the certification expressly states that a "State Water Right Permit (Chapters 90.03.250 RCW and 508-12 WAC) must be obtained prior to commencing construction of the project." App. to Pet. for Cert. 83a. The certification merely determines the nature of the use to which that proprietary right may be put under the Clean Water Act, if and when it is obtained from the State. Our view is reinforced by the legislative history of the 1977 [***734] amendment to the Clean Water Act adding § 101(g). See 3 Legislative History of the Clean Water Act of 1977 (Committee Print compiled for the Committee on Environment and Public Works by the Library of Congress), Ser. No. 95-14, p. 532 (1978) ("The requirements [of the Act] may incidentally affect individual water rights. . . . [**1914] It is not the purpose of this amendment to prohibit those incidental effects. It is the purpose of this amendment to insure that State allocation systems are not subverted, and that effects on individual rights, if any, are prompted by legitimate and necessary water quality considerations").

4 The relevant text of the Federal Power Act provides: "That nothing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the respective States relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein." 41 Stat. 1077, 16 U.S.C. § 821.

IV

Petitioners contend that we should limit the State's authority to impose minimum flow requirements because FERC has comprehensive authority to license hydroelectric projects pursuant to the FPA, 16 U.S.C. §

791a *et seq.* In petitioners' view, the minimum flow requirement imposed here interferes with FERC's authority under the FPA.

[*722] The FPA empowers FERC to issue licenses for projects "necessary or convenient . . . for the development, transmission, and utilization of power across, along, from, or in any of the streams . . . over which Congress has jurisdiction." § 797(e). The FPA also requires FERC to consider a project's effect on fish and wildlife. §§ 797(e), 803(a)(1). In *California v. FERC*, *supra*, we held that the California Water Resources Control Board, acting pursuant to state law, could not impose a minimum stream flow which conflicted with minimum stream flows contained in a FERC license. We concluded that the FPA did not "save" to the States this authority. *Id.*, 495 U.S. at 498.

[***LEdHR1A] No such conflict with any FERC licensing activity is presented here. FERC has not yet acted on petitioners' license application, and it is possible that FERC will eventually deny petitioners' application altogether. Alternatively, it is quite possible, given that FERC is required to give equal consideration to the protection of fish habitat when deciding whether to issue a license, that any FERC license would contain the same conditions as the state § 401 certification. Indeed, at oral argument the Deputy Solicitor General stated that both EPA and FERC were represented in this proceeding, and that the Government has no objection to the stream flow condition contained in the § 401 certification. Tr. of Oral Arg. 43-44.

Finally, the requirement for a state certification applies not only to applications for licenses from FERC, but to all federal licenses and permits for activities which may result in a discharge into the Nation's navigable waters. For example, a permit from the Army Corps of Engineers is required for the installation of any structure in the navigable waters which may interfere with navigation, including piers, docks, and ramps. Rivers and Harbors Appropriation Act of 1899, 30 Stat. 1151, § 10, 33 U.S.C. § 403. Similarly, a permit must be obtained from the Army Corps of Engineers [*723] for the discharge of dredged or fill material, and from the Secretary of the Interior or Agriculture for the construction of reservoirs, canals, and other water storage systems on federal land. See 33 U.S.C. §§ 1344(a), (e); 43 U.S.C. § 1761 (1988 ed. and Supp. IV). [***735] We assume that a § 401 certification would also be required

for some licenses obtained pursuant to these statutes. Because § 401's certification requirement applies to other statutes and regulatory schemes, and because any conflict with FERC's authority under the FPA is hypothetical, we are unwilling to read implied limitations into § 401. If FERC issues a license containing a stream flow condition with which petitioners disagree, they may pursue judicial remedies at that time. Cf. *Escondido Mut. Water Co. v. La Jolla Band of Mission Indians*, 466 U.S. 765, 778, n. 20, 80 L. Ed. 2d 753, 104 S. Ct. 2105 (1984).

In summary, we hold that the State may include minimum stream flow requirements in a certification issued pursuant to § 401 of the Clean Water Act insofar as necessary to enforce a designated use contained in a state water quality standard. The judgment of the Supreme Court of Washington, accordingly, is affirmed.

So ordered.

CONCUR BY: STEVENS

CONCUR

JUSTICE STEVENS, concurring.

While I agree fully with the thorough analysis in the Court's opinion, I add this comment [****1915**] for emphasis. For judges who find it unnecessary to go behind the statutory text to discern the intent of Congress, this is (or should be) an easy case. Not a single sentence, phrase, or word in the Clean Water Act purports to place any constraint on a State's power to regulate the quality of its own waters more stringently than federal law might require. In fact, the Act explicitly recognizes States' ability to impose stricter standards. See, e. g., § 301(b)(1)(C), 33 U.S.C. § 1311(b)(1)(C).

DISSENT BY: THOMAS

DISSENT

[***724**] JUSTICE THOMAS, with whom JUSTICE SCALIA joins, dissenting.

The Court today holds that a State, pursuant to § 401 of the Clean Water Act, may condition the certification necessary to obtain a federal license for a proposed hydroelectric project upon the maintenance of a minimum flow rate in the river to be utilized by the project. In my view, the Court makes three fundamental

errors. First, it adopts an interpretation that fails adequately to harmonize the subsections of § 401. Second, it places no meaningful limitation on a State's authority under § 401 to impose conditions on certification. Third, it gives little or no consideration to the fact that its interpretation of § 401 will significantly disrupt the carefully crafted federal-state balance embodied in the Federal Power Act. Accordingly, I dissent.

I

A

Section 401(a)(1) of the Federal Water Pollution Control Act, otherwise known as the Clean Water Act (CWA or Act), 33 U.S.C. § 1251 *et seq.*, provides that "any applicant for a Federal license or permit to conduct any activity . . ., which may result in any discharge into the navigable waters, shall provide the licensing or permitting agency a certification from the State in which the discharge originates . . . that any such [*****736**] discharge will comply with . . . applicable provisions of [the CWA]." 33 U.S.C. § 1341(a)(1). The terms of § 401(a)(1) make clear that the purpose of the certification process is to ensure that discharges from a project will meet the requirements of the CWA. Indeed, a State's authority under § 401(a)(1) is limited to certifying that "any discharge" that "may result" from "any activity," such as petitioners' proposed hydroelectric project, will "comply" with the enumerated provisions of the CWA; if the discharge will fail to comply, the State may "deny" the certification. *Ibid.* In addition, under § 401(d), a State may place conditions on a [***725**] § 401 certification, including "effluent limitations and other limitations, and monitoring requirements," that may be necessary to ensure compliance with various provisions of the CWA and with "any other appropriate requirement of State law." § 1341(d).

The minimum stream flow condition imposed by respondents in this case has no relation to any possible "discharge" that might "result" from petitioners' proposed project. The term "discharge" is not defined in the CWA, but its plain and ordinary meaning suggests "a flowing or issuing out," or "something that is emitted." Webster's Ninth New Collegiate Dictionary 360 (1991). Cf. 33 U.S.C. § 1362(16) ("The term 'discharge' when used without qualification includes a discharge of a pollutant, and a discharge of pollutants"). A minimum stream flow requirement, by contrast, is a limitation on the amount of

water the project can take in or divert from the river. See *ante*, at 709. That is, a minimum stream flow requirement is a limitation on intake -- the opposite of discharge. Imposition of such a requirement would thus appear to be beyond a State's authority as it is defined by § 401(a)(1).

The Court remarks that this reading of § 401(a)(1) would have "considerable force," *ante*, at 711, were it not for what the Court understands to be the expansive terms of § 401(d). That subsection, as set forth in 33 U.S.C. § 1341(d), provides:

"Any certification provided under this section shall set forth any effluent limitations and other limitations, and monitoring requirements necessary to assure that *any applicant* for a Federal license or permit [**1916] will comply with any applicable effluent limitations and other limitations, under section 1311 or 1312 of this title, standard of performance under section 1316 of this title, or prohibition, effluent standard, or pretreatment standard under section 1317 of this title, and with any other appropriate requirement of State law set forth in such certification, and shall become a condition on any Federal [*726] license or permit subject to the provisions of this section." (Emphasis added.)

According to the Court, the fact that § 401(d) refers to an "applicant," rather than a "discharge," complying with various provisions of the Act "contradicts petitioners' claim that the State may only impose water quality limitations specifically tied to a 'discharge.'" *Ante*, at 711. In the Court's view, § 401(d)'s reference to an applicant's compliance "expands" a State's authority beyond the limits set out in § 401(a)(1), *ibid.*, [***737] thereby permitting the State in its certification process to scrutinize the applicant's proposed "activity as a whole," not just the discharges that may result from the activity, *ante*, at 712. The Court concludes that this broader authority allows a State to impose conditions on a § 401 certification that are unrelated to discharges. *Ante*, at 711-712.

While the Court's interpretation seems plausible at first glance, it ultimately must fail. If, as the Court asserts, § 401(d) permits States to impose conditions

unrelated to discharges in § 401 certifications, Congress' careful focus on discharges in § 401(a)(1) -- the provision that describes the scope and function of the certification process -- was wasted effort. The power to set conditions that are unrelated to discharges is, of course, nothing but a conditional power to deny certification for reasons unrelated to discharges. Permitting States to impose conditions unrelated to discharges, then, effectively eliminates the constraints of § 401(a)(1).

Subsections 401(a)(1) and (d) can easily be reconciled to avoid this problem. To ascertain the nature of the conditions permissible under § 401(d), § 401 must be read as a whole. See *United Sav. Assn. of Tex. v. Timbers of Inwood Forest Associates, Ltd.*, 484 U.S. 365, 371, 98 L. Ed. 2d 740, 108 S. Ct. 626 (1988) (statutory interpretation is a "holistic endeavor"). As noted above, § 401(a)(1) limits a State's authority in the certification process to addressing concerns related to discharges and to ensuring that any discharge resulting from a project will comply with specified provisions of the Act. It is reasonable [*727] to infer that the conditions a State is permitted to impose on certification must relate to the very purpose the certification process is designed to serve. Thus, while § 401(d) permits a State to place conditions on a certification to ensure compliance of the "applicant," those conditions must still be related to discharges. In my view, this interpretation best harmonizes the subsections of § 401. Indeed, any broader interpretation of § 401(d) would permit that subsection to swallow § 401(a)(1).

The text of § 401(d) similarly suggests that the conditions it authorizes must be related to discharges. The Court attaches critical weight to the fact that § 401(d) speaks of the compliance of an "applicant," but that reference, in and of itself, says little about the nature of the conditions that may be imposed under § 401(d). Rather, because § 401(d) conditions can be imposed only to ensure compliance with specified provisions of law -- that is, with "applicable effluent limitations and other limitations, under section 1311 or 1312 of this title, standard[s] of performance under section 1316 of this title, . . . prohibition[s], effluent standard[s], or pretreatment standard[s] under section 1317 of this title, [or] . . . any other appropriate requirement[s] of State law" -- one should logically turn to those provisions for guidance in determining the nature, scope, and purpose of § 401(d) conditions. Each of the four identified CWA provisions describes discharge-related limitations. See §

1311 (making it unlawful to discharge any pollutant except in compliance with enumerated provisions of the Act); § 1312 (establishing effluent limitations on point source discharges); [***738] § 1316 (setting national standards of performance [**1917] for the control of discharges); and § 1317 (setting pretreatment effluent standards and prohibiting the discharge of certain effluents except in compliance with standards).

The final term on the list -- "appropriate requirement[s] of State law" -- appears to be more general in scope. Because [*728] this reference follows a list of more limited provisions that specifically address discharges, however, the principle *eiusdem generis* would suggest that the general reference to "appropriate" requirements of state law is most reasonably construed to extend only to provisions that, like the other provisions in the list, impose discharge-related restrictions. Cf. *Cleveland v. United States*, 329 U.S. 14, 18, 91 L. Ed. 12, 67 S. Ct. 13 (1946) ("Under the *eiusdem generis* rule of construction the general words are confined to the class and may not be used to enlarge it"); *Arcadia v. Ohio Power Co.*, 498 U.S. 73, 84, 112 L. Ed. 2d 374, 111 S. Ct. 415 (1990). In sum, the text and structure of § 401 indicate that a State may impose under § 401(d) only those conditions that are related to discharges.

B

The Court adopts its expansive reading of § 401(d) based at least in part upon deference to the "conclusion" of the Environmental Protection Agency (EPA) that § 401(d) is not limited to requirements relating to discharges. *Ante*, at 712. The agency regulation to which the Court defers is 40 CFR § 121.2(a)(3) (1993), which provides that the certification shall contain "[a] statement that there is a reasonable assurance that the activity will be conducted in a manner which will not violate applicable water quality standards." *Ante*, at 712. According to the Court, "EPA's conclusion that *activities* -- not merely discharges -- must comply with state water quality standards . . . is entitled to deference" under *Chevron U.S. A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984). *Ante*, at 712.

As a preliminary matter, the Court appears to resort to deference under *Chevron* without establishing through an initial examination of the statute that the text of the section is ambiguous. See *Chevron, supra*, 467 U.S. at 842-843. More importantly, the Court invokes *Chevron*

deference to support its interpretation even though the Government does not seek [*729] deference for the EPA's regulation in this case.¹ That the Government itself has not contended that an agency interpretation exists reconciling the scope of the conditioning authority under § 401(d) with the terms of § 401(a)(1) should suggest to the Court that there is no "agency construction" directly addressing the question. *Chevron, supra*, at 842.

1 The Government, appearing as *amicus curiae* "supporting affirmance," instead approaches the question presented by assuming, *arguendo*, that petitioners' construction of § 401 is correct: "Even if a condition imposed under Section 401(d) were valid only if it assured that a 'discharge' will comply with the State's water quality standards, the [minimum flow condition set by respondents] satisfies that test." Brief for United States as *Amicus Curiae* 11.

In fact, the regulation to which the [***739] Court defers is hardly a definitive construction of the scope of § 401(d). On the contrary, the EPA's position on the question whether conditions under § 401(d) must be related to discharges is far from clear. Indeed, the only EPA regulation that specifically addresses the "conditions" that may appear in § 401 certifications speaks exclusively in terms of limiting discharges. According to the EPA, a § 401 certification shall contain "[a] statement of *any conditions* which the certifying agency deems necessary or desirable *with respect to the discharge of the activity*." 40 CFR § 121.2(a)(4) (1993) (emphases added). In my view, § 121.2(a)(4) should, at the very least, give the Court pause before it resorts to *Chevron* deference in this case.

II

The Washington Supreme Court held that the State's water quality standards, promulgated [**1918] pursuant to § 303 of the Act, 33 U.S.C. § 1313, were "appropriate" requirements of state law under § 401(d), and sustained the stream flow condition imposed by respondents as necessary to ensure compliance with a "use" of the river as specified in those standards. As an alternative to their argument that § 401(d) conditions must be discharge related, petitioners assert that [*730] the state court erred when it sustained the stream flow condition under the "use" component of the State's water quality standards without reference to the corresponding "water quality

criteria" contained in those standards. As explained above, petitioners' argument with regard to the scope of a State's authority to impose conditions under § 401(d) is correct. I also find petitioners' alternative argument persuasive. Not only does the Court err in rejecting that § 303 argument, in the process of doing so it essentially removes all limitations on a State's conditioning authority under § 401.

The Court states that, "at a minimum, limitations imposed pursuant to state water quality standards adopted pursuant to § 303 are 'appropriate' requirements of state law" under § 401(d). *Ante*, at 713. ² A water quality standard promulgated pursuant to § 303 must "consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." 33 U.S.C. § 1313(c)(2)(A). The Court asserts that this language "is most naturally read to require that a project be consistent with *both* components, namely, the designated use *and* the water quality criteria." *Ante*, at 715. In the Court's view, then, the "use" of a body of water is independently enforceable through § 401(d) without reference to the corresponding criteria. *Ibid*.

2 In the Court's view, § 303 water quality standards come into play under § 401(d) either as "appropriate" requirements of state law or through § 301 of the Act, which, according to the Court, "incorporates § 303 by reference." *Ante*, at 713 (citations omitted). The Court notes that through § 303, "the statute allows States to impose limitations to ensure compliance with § 301 of the Act." *Ibid*. Yet § 301 makes unlawful only "the [unauthorized] discharge of any pollutant by any person." 33 U.S.C. § 1311(a) (emphasis added); cf. *supra*, 511 U.S. at 727. Thus, the Court's reliance on § 301 as a source of authority to impose conditions unrelated to discharges is misplaced.

[**740] The Court's reading strikes me as contrary to common sense. It is difficult to see how compliance with a "use" of a body of water could be enforced without reference to the [*731] corresponding criteria. In this case, for example, the applicable "use" is contained in the following regulation: "Characteristic uses shall include, but not be limited to, . . . salmonid migration, rearing, spawning, and harvesting." Wash. Admin. Code (WAC) 173-201-045(1)(b)(iii) (1986). The corresponding criteria, by contrast, include measurable factors such as

quantities of fecal coliform organisms and dissolved gases in the water. 173-201-045(1)(c)(i) and (ii). ³ Although the Act does not further address (at least not expressly) the link between "uses" and "criteria," the regulations promulgated under § 303 make clear that a "use" is an aspirational goal to be attained through compliance with corresponding "criteria." Those regulations suggest that "uses" are to be "achieved and protected," and that "water quality criteria" are to be adopted to "protect the designated use[s]." 40 CFR §§ 131.10(a), 131.11(a)(1) (1993).

3 Respondents concede that petitioners' project "will likely not violate any of Washington's water quality criteria." Brief for Respondents 24.

The problematic consequences of decoupling "uses" and "criteria" become clear once the Court's interpretation of § 303 is read in the context of § 401. In the Court's view, a State may condition the § 401 certification "upon *any limitations* necessary to ensure compliance" with the "uses of the water body." *Ante*, at 713-714, 715 (emphasis added). Under the Court's interpretation, then, state environmental agencies may pursue, through § 401, their water goals in any way they choose; the conditions imposed on certifications need not relate to discharges, nor to water quality criteria, nor to any objective or quantifiable standard, so long as they tend to [**1919] make the water more suitable for the uses the State has chosen. In short, once a State is allowed to impose conditions on § 401 certifications to protect "uses" in the abstract, § 401(d) is limitless.

To illustrate, while respondents in this case focused only on the "use" of the Dosewallips River as a fish habitat, this particular river has a number of other "characteristic uses," [*732] including "recreation (primary contact recreation, sport fishing, boating, and aesthetic enjoyment)." WAC 173-201-045(1)(b)(v) (1986). Under the Court's interpretation, respondents could have imposed any number of conditions related to recreation, including conditions that have little relation to water quality. In *Town of Summersville*, 60 F.E.R.C. P61,291, p. 61,990 (1992), for instance, the state agency required the applicant to "construct . . . access roads and paths, low water stepping stone bridges, . . . a boat launching facility . . . , and a residence and storage building." These conditions presumably would be sustained under the approach the Court adopts today. ⁴ In the end, it is difficult to conceive of a condition that

would fall outside a [***741] State's § 401(d) authority under the Court's approach.

4 Indeed, as the § 401 certification stated in this case, the flow levels imposed by respondents are "in excess of those required to maintain water quality in the bypass region," App. to Pet. for Cert. 83a, and therefore conditions not related to water quality must, in the Court's view, be permitted.

III

The Court's interpretation of § 401 significantly disrupts the careful balance between state and federal interests that Congress struck in the Federal Power Act (FPA), 16 U.S.C. § 791 *et seq.* Section 4(e) of the FPA authorizes the Federal Energy Regulatory Commission (FERC) to issue licenses for projects "necessary or convenient . . . for the development, transmission, and utilization of power across, along, from, or in any of the streams . . . over which Congress has jurisdiction." 16 U.S.C. § 797(e). In the licensing process, FERC must balance a number of considerations: "In addition to the power and development purposes for which licenses are issued, [FERC] shall give equal consideration to the purposes of energy conservation, the protection, mitigation of damage to, and enhancement of, fish and wildlife (including related spawning grounds and habitat), the protection of recreational [*733] opportunities, and the preservation of other aspects of environmental quality." *Ibid.* Section 10(a) empowers FERC to impose on a license such conditions, including minimum stream flow requirements, as it deems best suited for power development and other public uses of the waters. See 16 U.S.C. § 803(a); *California v. FERC*, 495 U.S. 490, 494-495, 506, 109 L. Ed. 2d 474, 110 S. Ct. 2024 (1990).

In *California v. FERC*, the Court emphasized FERC's exclusive authority to set the stream flow levels to be maintained by federally licensed hydroelectric projects. California, in order "to protect [a] stream's fish," had imposed flow rates on a federally licensed project that were significantly higher than the flow rates established by FERC. *Id.*, at 493. In concluding that California lacked authority to impose such flow rates, we stated:

"As Congress directed in FPA § 10(a), FERC set the conditions of the [project]

license, including the minimum stream flow, after considering which requirements would best protect wildlife and ensure that the project would be economically feasible, and thus further power development. Allowing California to impose significantly higher minimum stream flow requirements would disturb and conflict with the balance embodied in that considered federal agency determination. FERC has indicated that the California requirements interfere with its comprehensive planning authority, and we agree that allowing California to impose the challenged requirements would be contrary to congressional intent regarding the Commission's licensing authority and would constitute a veto of the project that was approved and licensed by [**1920] FERC." *Id.*, 495 U.S. at 506-507 (citations and internal quotation marks omitted).

California v. FERC reaffirmed our decision in *First Iowa Hydro-Electric Cooperative v. FPC*, 328 U.S. 152, 164, 90 L. Ed. 1143, 66 S. Ct. 906 (1946), in which we warned against "vesting in [state authorities] [*734] a veto power" over federal hydroelectric projects. Such authority, we concluded, could "destroy the effectiveness" of the FPA and "subordinate to the control of the State the 'comprehensive' [***742] planning" with which the administering federal agency (at that time the Federal Power Commission) was charged. *Ibid.*

Today, the Court gives the States precisely the veto power over hydroelectric projects that we determined in *California v. FERC* and *First Iowa* they did not possess. As the language of § 401(d) expressly states, any condition placed in a § 401 certification, including, in the Court's view, a stream flow requirement, "shall become a condition on any Federal license or permit." 33 U.S.C. § 1341(d) (emphasis added). Any condition imposed by a State under § 401(d) thus becomes a "term . . . of the license as a matter of law," *Department of Interior v. FERC*, 293 U.S. App. D.C. 182, 952 F.2d 538, 548 (CADC 1992) (citation and internal quotation marks omitted), regardless of whether FERC favors the limitation. Because of § 401(d)'s mandatory language, federal courts have uniformly held that FERC has no power to alter or review § 401 conditions, and that the

proper forum for review of those conditions is state court. Section 401(d) conditions imposed by States are [*735] therefore binding on FERC. Under the Court's interpretation, then, it appears that the mistake of the State in *California v. FERC* was not that it had trespassed into territory exclusively reserved to FERC; rather, it simply had not hit upon the proper device -- that is, the § 401 certification -- through which to achieve its objectives.

5 See, e. g., *Keating v. FERC*, 288 U.S. App. D.C. 344, 927 F.2d 616, 622 (CADC 1991) (federal review inappropriate because a decision to grant or deny § 401 certification "presumably turns on questions of substantive state environmental law -- an area that Congress expressly intended to reserve to the states and concerning which federal agencies have little competence"); *Department of Interior v. FERC*, 952 F.2d at 548; *United States v. Marathon Development Corp.*, 867 F.2d 96, 102 (CA1 1989); *Proffitt v. Rohm & Haas*, 850 F.2d 1007, 1009 (CA3 1988). FERC has taken a similar position. See *Town of Summersville*, 60 F.E.R.C. P61,291, p. 61,990 (1992) ("Since pursuant to Section 401(d) . . . all of the conditions in the water quality certification must become conditions in the license, review of the appropriateness of the conditions is within the purview of state courts and not the Commission. The only alternatives available to the Commission are either to issue a license with the conditions included or to deny" the application altogether); accord, *Central Maine Power Co.*, 52 F.E.R.C. P61,033, pp. 61,172-61,173 (1990).

Although the Court notes in passing that "the limitations included in the certification become a condition on any federal license," *ante*, at 708, it does not acknowledge or discuss the shift of power from FERC to the States that is accomplished by its decision. Indeed, the Court merely notes that "any conflict with FERC's authority under the FPA" in this case is "hypothetical" at this stage, *ante*, at 723, because "FERC has not yet acted on petitioners' license application," *ante*, at 722. We are assured that "it is quite possible . . . that any FERC license would contain the same conditions as the state § 401 certification." *Ibid*.

The Court's observations simply miss the point. Even

if FERC might have no objection to the stream flow condition established by respondents *in this case*, such a happy coincidence will likely prove to be the exception, rather than the rule. In issuing licenses, FERC must balance the Nation's power needs together with the need for energy conservation, [***743] irrigation, flood control, fish and wildlife protection, and recreation. 16 U.S.C. § 797(e). State environmental agencies, by contrast, need only consider parochial environmental interests. Cf., e. g., Wash. Rev. Code § 90.54.010(2) (1992) (goal of State's water policy is to "insure that waters of the state are protected and fully utilized for the greatest benefit to the people of the state of Washington"). As a result, it is likely that conflicts will arise between a [**1921] FERC-established stream flow level and a state-imposed level.

Moreover, the Court ignores the fact that its decision nullifies the congressionally mandated process for resolving such state-federal disputes when they develop. Section 10(j)(1) of the FPA, 16 U.S.C. § 803(j)(1), which was added as part [*736] of the Electric Consumers Protection Act of 1986 (ECPA), 100 Stat. 1244, provides that every FERC license must include conditions to "protect, mitigate damage to, and enhance" fish and wildlife, including "related spawning grounds and habitat," and that such conditions "shall be based on recommendations" received from various agencies, including state fish and wildlife agencies. If FERC believes that a recommendation from a state agency is inconsistent with the FPA -- that is, inconsistent with what FERC views as the proper balance between the Nation's power needs and environmental concerns -- it must "attempt to resolve any such inconsistency, giving due weight to the recommendations, expertise, and statutory responsibilities" of the state agency. § 803(j)(2). If, after such an attempt, FERC "does not adopt in whole or in part a recommendation of any [state] agency," it must publish its reasons for rejecting that recommendation. *Ibid*. After today's decision, these procedures are a dead letter with regard to stream flow levels, because a State's "recommendation" concerning stream flow "shall" be included in the license when it is imposed as a condition under § 401(d).

More fundamentally, the 1986 amendments to the FPA simply make no sense in the stream flow context if, in fact, the States already possessed the authority to establish minimum stream flow levels under § 401(d) of the CWA, which was enacted years before those

amendments. Through the ECPA, Congress strengthened the role of the States in establishing FERC conditions, but it did not make that authority paramount. Indeed, although Congress could have vested in the States the final authority to set stream flow conditions, it instead left that authority with FERC. See *California v. FERC*, 495 U.S. at 499. As the Ninth Circuit observed in the course of rejecting California's effort to give *California v. FERC* a narrow reading, "there would be no point in Congress requiring [FERC] to consider the state agency recommendations on environmental matters and [*737] make its own decisions about which to accept, if the state agencies had the power to impose the requirements themselves." *Sayles Hydro Associates v. Maughan*, 985 F.2d 451, 456 (1993).

Given the connection between § 401 and federal hydroelectric licensing, it is remarkable that the Court does not at least attempt to fit its interpretation of § 401 into the larger statutory framework governing the licensing process. At the very least, the significant impact the [***744] Court's ruling is likely to have on that process should compel the Court to undertake a closer examination of § 401 to ensure that the result it reaches was mandated by Congress.

IV

Because the Court today fundamentally alters the federal-state balance Congress carefully crafted in the FPA, and because such a result is neither mandated nor supported by the text of § 401, I respectfully dissent.

LEXSEE

CITY OF ARCADIA, et al., Plaintiffs, v. UNITED STATES ENVIRONMENTAL PROTECTION AGENCY, et al., Defendants, - and - NATURAL RESOURCES DEFENSE COUNCIL, et al., Defendants-Intervenors.

No. C 02-5244 SBA

UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF CALIFORNIA

265 F. Supp. 2d 1142; 2003 U.S. Dist. LEXIS 9044

May 16, 2003, Decided

May 16, 2003, Filed

SUBSEQUENT HISTORY: Affirmed by City of Arcadia v. United States EPA, 411 F.3d 1103, 2005 U.S. App. LEXIS 11240 (9th Cir. Cal., 2005)
Related proceeding at City of Arcadia v. State Water Res. Control Bd., 2006 Cal. App. LEXIS 92 (Cal. App. 4th Dist., Jan. 26, 2006)

DISPOSITION: [**1] Defendants' motion to dismiss granted; plaintiffs' motion for partial summary judgment denied, and objections overruled. Action dismissed in its entirety, without leave to amend in part and with prejudice in part. Intervenors' evidentiary objections overruled as moot.

COUNSEL: For Plaintiff: Noam I. Duzman, Richard Montevideo, Robert S. Bower, Rutan & Tucker LLP, Costa Mesa, CA.

For USA, Defendant: Charles M. O'Connor, AUSA & Chief, Environment & Natural Resources, United States Attorney's Office, San Francisco, CA. AND-- S. Randall Humm - Trial Attorney, Pamela Tonglao - Trial Attorney, U.S. Dept. of Justice, Washington, DC.

JUDGES: SAUNDRA BROWN ARMSTRONG, United States District Judge.

OPINION BY: SAUNDRA BROWN ARMSTRONG

OPINION

[*1143] **ORDER GRANTING DEFENDANTS' MOTION TO DISMISS, DENYING AS MOOT PLAINTIFFS' MOTION FOR PARTIAL SUMMARY JUDGMENT, AND DISMISSING ACTION**

[Docket Nos. 18, 28, 31, 43, 47]

Plaintiffs City of Arcadia and other California cities (collectively, "Plaintiffs") bring this action against defendants United States Environmental Protection Agency ("EPA"), the EPA Administrator, and the EPA Region IX Administrator (collectively, "Defendants") for injunctive and declaratory relief. The Natural Resources Defense Council, Santa Monica BayKeeper, and Heal the Bay (collectively, "Intervenors") have intervened as defendants.

Now before the Court are Defendants' [**2] Motion to Dismiss Second Amended Complaint (the "Motion to Dismiss"), in which Intervenors join, and Plaintiffs' Motion for Summary Adjudication of Issues (the "Motion for Partial Summary Judgment"). Having read and considered the papers submitted and being fully informed, the Court GRANTS the Motion to Dismiss, DENIES AS MOOT the Motion for Partial Summary Judgment, and DISMISSES this action.¹

¹ These matters are suitable for disposition without a hearing. *See* Fed. R. Civ. P. 78; Civ. L.R. 7-1(b).

I. BACKGROUND

2

2 Over the years the Court has had the pleasure and privilege of reading some excellent moving papers. Some of these submissions stand out as truly superlative. Defendants' opening and reply briefs for their Motion to Dismiss are shining examples of such superlative submissions. In these briefs Defendants discuss three areas of federal law generally regarded as highly complex--environmental regulation, administrative law, and justiciability--in direct, succinct, well-supported, and powerfully illuminating fashion. Whereas a poor presentation of the statutory and regulatory framework and Defendants' arguments might have required the Court to spend hours to apprehend their arguments, the high quality of Defendants' writing enabled the Court to grasp them in a matter of minutes. Defendants' briefs also thankfully avoid leveling the sorts of thinly veiled (or, at times, not-at-all-veiled) *ad hominem* attacks that unfortunately pervade too much legal writing nowadays. The Court thus commends Defendants' counsel for their outstanding writing and expresses its appreciation for it.

[**3] A. Statutory and Regulatory Background

1. Water Pollution Control Under the Clean Water Act

The Clean Water Act ("CWA"), 33 U.S.C. §§ 1251-1387, utilizes two fundamental approaches to control water pollution: technology-based regulations and water quality standards. Technology-based [*1144] regulations seek to reduce pollution by requiring a discharger to effectuate equipment or process changes, without reference to the effect on the receiving water; water quality standards fix the permissible level of pollution in a specific body of water regardless of the source of pollution.

The National Pollutant Discharge Elimination System ("NPDES") permit program is a key means of implementing both technology-based requirements and water quality standards. 33 U.S.C. §§ 1311(b)(1)(C), 1342(a)(1); 40 C.F.R. § 122.44(a), (d)(1). An NPDES permit establishes specific limits of pollution for an individual discharger. A discharge of pollutants (other than dredged or fill material) from any "point source,"

which is defined as "any discernible, confined and discrete conveyance . . . from which pollutants are or may [**4] be discharged," 33 U.S.C. § 1362(14), into the waters of the United States is prohibited unless that discharge complies with the discharge limits and other requirements of an NPDES permit. *Id.* §§ 1311(a), 1362(12). At present, 45 states, including California, are authorized to administer the NPDES permit program. State Program Status, at http://cfpub.epa.gov/npdes/statestats.cfm?program_id=45&view=general. In the remaining states, EPA issues the permits. 33 U.S.C. § 1342(a).

2. Total Maximum Daily Loads ("TMDLs")

Section 303(d) of the CWA and EPA's implementing regulations require states to identify and prioritize waterbodies where technology-based effluent limitations and other required controls are insufficiently stringent to attain water quality standards. *See* 33 U.S.C. § 1313(d); 40 C.F.R. § 130.7(b). States must develop a "total maximum daily load," or "TMDL," for each pollutant of concern in each waterbody so identified. A TMDL represents the maximum amount of pollutant "loading" that a waterbody can receive from all combined sources without exceeding applicable [**5] state water quality standards. Although the term "total maximum daily load" is not expressly defined in the CWA, EPA's regulations define a TMDL for a pollutant as the sum of: (1) the "wasteload allocations," which is the amount of pollutant that can be discharged to a waterbody from point sources, (2) the "load allocations," which represent the amount of a pollutant in a waterbody attributable to nonpoint sources or natural background, and (3) a margin of safety. 40 C.F.R. §§ 130.2(g)-(i), 130.7(c)(1).

Under CWA Section 303(d)(2), EPA is required to review and approve or disapprove TMDLs established by states for impaired waters within thirty days of submission. 33 U.S.C. § 1313(d)(2). If EPA disapproves a state TMDL submission, EPA must issue its own TMDL for that waterbody within thirty days. *Id.*

3. Implementation of TMDLs

TMDLs established under Section 303(d)(1) of the CWA function primarily as planning devices and are not self-executing. *Pronsolino v. Nastri*, 291 F.3d 1123, 1129 (9th Cir. 2002) ("TMDLs are primarily informational tools that allow the states to proceed from the identification of [**6] waters requiring additional

planning to the required plans.") (citing *Alaska Ctr. for the Env't v. Browner*, 20 F.3d 981, 984-85 (9th Cir. 1994)). A TMDL does not, by itself, prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual NPDES permits or establishing nonpoint source controls. *See, e.g., Sierra Club v. Meiburg*, 296 F.3d 1021, 1025 (11th Cir. 2002) ("Each TMDL serves as the goal for the level of that pollutant in the waterbody to which that TMDL applies. . . . The theory is that individual-discharge permits [*1145] will be adjusted and other measures taken so that the sum of that pollutant in the waterbody is reduced to the level specified by the TMDL."); *Idaho Sportsmen's Coalition v. Browner*, 951 F. Supp. 962, 966 (W.D. Wash. 1996) ("TMDL development in itself does not reduce pollution. . . . TMDLs inform the design and implementation of pollution control measures."); *Pronsolino*, 291 F.3d at 1129 ("TMDLs serve as a link in an implementation chain that includes . . . state or local plans for point and nonpoint [**7] source pollution reduction . . ."); *Idaho Conservation League v. Thomas*, 91 F.3d 1345, 1347 (9th Cir. 1996) (noting that a TMDL sets a goal for reducing pollutants). Thus, a TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and waterbodies.

For point sources, limitations on pollutant loadings may be implemented through the NPDES permit system. 40 C.F.R. § 122.44(d)(1)(vii)(B). EPA regulations require that effluent limitations in NPDES permits be "consistent with the assumptions and requirements of any available wasteload allocation" in a TMDL. *Id.* For nonpoint sources, limitations on loadings are not subject to a federal nonpoint source permitting program, and therefore any nonpoint source reductions can be enforced against those responsible for the pollution only to the extent that a state institutes such reductions as regulatory requirements pursuant to state authority. *Pronsolino v. Marcus*, 91 F. Supp. 2d 1337, 1355-56 (N.D. Cal. 2000), *aff'd sub nom. Pronsolino v. Nastri*, 291 F.3d 1123 (9th Cir. 2002). [**8]

4. California Water Quality Control Statutory and Regulatory Framework

California effectuates the foregoing requirements of the CWA primarily through institutions and procedures set out in certain provisions of the California Water Code

(the "Water Code"), including those of the California Porter-Cologne Water Quality Control Act (the "Porter-Cologne Act"), Cal. Water Code § 13000 *et seq.* These Water Code provisions established the State Water Resources Control Board (the "State Board") within the California Environmental Protection Agency to formulate and adopt state policy for water quality control. Cal. Water Code §§ 174-186, 13100, 13140. The State Board is designated as the state water pollution control agency for all purposes stated in the CWA and is the agency authorized to exercise powers delegated to it under the CWA. 33 U.S.C. § 1313; Cal. Water Code § 13160.

The Porter-Cologne Act established nine California Regional Water Quality Control Boards (individually, a "Regional Board"; collectively, the "Regional Boards"), Cal. Water Code §§ 13200, 13201, which operate under the purview of the State Board, *see id.* § 13225. Each Regional [**9] Board is comprised of nine members, *id.* § 13201, and is required to appoint an executive officer, *id.* § 13220(c), to whom the Regional Board may delegate all but some of its powers and duties, *id.* § 13223. Each Regional Board is required to formulate and adopt water quality control plans for all areas within the region. *Id.* § 13240. The State Board may approve such plan, or it may return it to the Regional Board for further submission and resubmission to the State Board. *Id.* § 13245. It must act on any water quality control plan within 60 days of a Regional Board's submission of such plan to the State Board, or 90 days after resubmission of such plan. *Id.* § 13246. A water quality control plan will not become effective unless and until it is approved by the State Board, followed by approval by the state's Office of Administrative Law ("OAL") in accordance with the appropriate procedures. [*1146] *Id.* § 13245; Cal. Gov't Code §§ 11340.2, 11349.3, 11353(b)(5).

The State Board is required to formulate, adopt, and revise general procedures for the formulation, adoption, and implementation of water quality control plans by the Regional Boards. Cal. Water Code § 13164. [**10] The State Board may adopt water quality control plans for purposes of the CWA that include the regional water quality control plans submitted by the Regional Boards. *See id.* § 13170. Such plans, when adopted by the State Board, supersede any regional water quality control plans for the same waters to the extent of any conflict. *Id.*

B. Factual Summary and Procedural History

1. The Consent Decree

The events underlying the instant action were set in motion by the disposition of *Heal the Bay, Inc., et al. v. Browner, et al.*, No. C 98-4825 SBA ("*Heal the Bay*"), an action previously before this Court. In *Heal the Bay*, an individual and two environmental groups (which groups are now two of the three Intervenor in the instant action) brought a civil action against EPA, the EPA Administrator, and the EPA Region IX Administrator. Their suit primarily concerned EPA's alleged failure to perform its alleged duty under the CWA either to approve or to disapprove TMDLs submitted to EPA by the state of California.

On March 23, 1999, the Court filed an Amended Consent Decree (the "Consent Decree")³ in which "EPA agreed to ensure that a TMDL [would] [**11] be completed for each and every pairing of a [Water Quality Limited Segment, as defined in 40 C.F.R. 130.2(j),] and an associated pollutant in the Los Angeles Region" set forth in an attachment to the Consent Decree by specified deadlines. (Consent Decree PP2a, 2b, 3, 3c.)⁴ Pursuant to the Consent Decree, for each pairing EPA was required either to approve a TMDL submitted by California by a specified deadline or, if it did not approve a TMDL by the date specified, to establish a TMDL within one year of the deadline, unless California submitted and EPA approved a TMDL prior to EPA's establishing the TMDL within the one-year period. (*Id.* P3a.) By March 24, 2002, EPA was required either to have approved a state-submitted TMDL for trash in the Los Angeles River or to have established the TMDL itself. (*Id.* PP2d, 3a; *id.* Att. 2, 3.)⁵

3 No original consent decree was entered. Rather, according to Defendants' representations in their opening brief, the Consent Decree incorporated amendments from an original proposal at the urging of proposed intervenors California Association of Sanitation Agencies and California Alliance of POTWs. (*See* Mot. to Dismiss at 6.)

[**12]

4 The Court takes judicial notice of the existence of the Consent Decree and the contents thereof. *See, e.g., Egan v. Teets*, 251 F.2d 571, 577 n.10 (9th Cir. 1957) (holding that district court was entitled to take judicial notice of prior proceedings involving same petitioner before same district court). The Consent Decree is filed as Docket No. 25 in *Heal the Bay*, No. C 98-4825

SBA.

5 Defendants contend that the relevant deadline was March 22, 2002, (Mot. to Dismiss at 6), and Plaintiffs echo this contention in their Second Amended Complaint, (Second Am. Compl. P25). Review of the terms of the Consent Decree, however, reveal that the deadline was a different date. The Consent Decree defines "effective date" as the date on which the Consent Decree is entered. (*Id.* P2d.) Although the Court signed the Consent Decree on March 22, 1999, (*id.* at 29), it was not entered on the docket until March 24, 1999. Under the terms of Attachments 2 and 3 of the Consent Decree, TMDLs for trash for all Water Quality Limited Segments the Los Angeles River were to be submitted by California within two years of the effective date--March 24, 2001. (*Id.* Atts. 2, 3.) Since EPA was required to ensure that a TMDL was in place within one year of California's deadline to submit a proposed TMDL, (*id.* P3a), the deadline for final approval or establishment of a TMDL was March 24, 2002.

Nevertheless, based on the evidence tendered by EPA, it is clear that EPA believed that the deadline was March 22, 2002. (*See* Decl. of David W. Smith in Supp. of EPA's Mot. to Dismiss, Ex. B at 2.) As is evident from the discussion below, this discrepancy is immaterial to the Court's analysis of the merits of the Motion to Dismiss.

[**13] [*1147] **2. EPA's Issuance of TMDLs and Approval of State-submitted TMDLs**

One of the responsibilities of the Regional Board for the Los Angeles region (the "Los Angeles Regional Board") is to develop TMDLs under the CWA for waterbodies in Los Angeles and Ventura Counties. (Decl. of Dennis Dickerson in Supp. of EPA's Mot. to Dismiss (the "Dickerson Declaration") P2.) With few exceptions, TMDLs are developed as draft TMDLs by Los Angeles Regional Board staff and then submitted to the board to be adopted as amendments to the Los Angeles Regional Board's Water Quality Control Plan, which is known as the Basin Plan. (*Id.*) Basin Plan amendments are then submitted to the State Board, and then subsequently to the OAL; after they have been approved by both of these agencies, they are submitted to EPA. (*Id.*)

On September 19, 2001, the Los Angeles Regional Board adopted TMDLs for trash for the Los Angeles

River watershed. (*Id.* P3.) "Trash" was defined as man-made litter, as defined in California Government Code § 68055.1(g). (*Id.* Ex. A at 2). These TMDLs (the "State Trash TMDLs") were approved by the State Board on February 19, 2002, by OAL on July 16, 2002, and ultimately [**14] by EPA by letter dated August 1, 2002. (*Id.* P3, Ex. C; Second Am. Compl. for Injunctive & Declaratory Relief ("SAC") PP27, 30.) Prior to its approval of the State Trash TMDLs, however, EPA issued its own TMDLs for trash for the Los Angeles River Basin (the "EPA Trash TMDLs") on March 19, 2002. (SAC P26; Decl. of David W. Smith in Supp. of EPA's Mot. to Dismiss (the "Smith Declaration") Ex. B.) The EPA's August 1, 2002, letter approving the State Trash TMDLs announced that they "superseded" the EPA Trash TMDLs. (SAC P31; Smith Decl. P7, Ex. C.)

3. TMDLs Now in Effect and Implementation Provisions

Under the provisions of the TMDLs now in effect--the State Trash TMDLs--the numeric target is zero trash in the Los Angeles River. (Dickerson Decl. Ex. A at 16, 29.) Based on this target, California has determined that the wasteload allocations for trash in the Los Angeles River also must be zero. (*Id.*)

To achieve this goal, California has provided, along with the State Trash TMDLs, implementation provisions that specify a phasing-in of progressive reductions in municipal stormwater wasteload allocations over a ten-year period, following completion of a two-year initial [**15] baseline monitoring period. (*Id.* Ex. A at 21.) While the baseline monitoring program is taking place, cities will be deemed to be in compliance with the wasteload allocations provided that all of the trash that is collected during this period is disposed of in compliance with all applicable regulations. (*Id.* Ex. A at 27.) A baseline monitoring report is due to the Los Angeles Regional Board by February 15, 2004. (*Id.* P6.)⁶

6 Plaintiffs have filed Plaintiffs' Objections to Declarations of David W. Smith and Dennis Dickerson Offered by Defendants in Support of Defendants' Motion to Dismiss Second Amended Complaint ("Plaintiffs' Objections"). Plaintiffs' Objections challenge the admissibility of, *inter alia*, the statements in paragraph 6 of the Dickerson Declaration. The Court considers and resolves the objections to these statements in note 20, *infra*. Although Plaintiffs have objected to all

the statements in paragraph 6, careful review of the arguments advanced in these objections reveals that they are not in fact objecting to the statement in paragraph 6 that "the baseline monitoring report is due to the [Los Angeles] Regional Board by February 15, 2004." (Dickerson Decl. P6; *see* Pls.' Objections at 3-4.) To the extent that Plaintiffs are in fact objecting to this statement, however, the Court OVERRULES their objections to this statement for the reasons set forth in note 20, *infra*.

[**16] [**1148] The State Trash TMDLs and incremental wasteload allocations will be implemented through the Los Angeles stormwater permit, which the Los Angeles Regional Board will need to amend to incorporate specific, enforceable permit requirements. (*Id.* P8.)⁷ The implementation provisions in the TMDLs allow permittees to "employ a variety of strategies to meet the progressive reductions in their Waste Load Allocations" and maintain that they "are free to implement trash reduction in any manner they choose." (*Id.* Ex. A at 29.) The wasteload reduction strategies are broadly classified as either end-of-pipe full capture structural controls, partial capture control systems, and/or institutional controls. (*Id.*) The provisions state that permittees will be deemed to be in compliance with the final wasteload allocation for their associated drainage areas if they utilize "full capture systems" that are adequately sized and maintained and maintenance records are available for inspection by the Los Angeles Regional Board. (*Id.* Ex. A at 30.)

7 Under heading II.2 of Plaintiffs' Objections, Plaintiffs object to the statements in paragraph 8 of the Dickerson Declaration relating to the Los Angeles Regional Board's understanding of how the State Trash TMDLs will be implemented. (Pls.' Objections at 4.) All of the grounds on which Plaintiffs object are meritless. First, Plaintiffs contend that the statements are objectionable as "extra-record evidence." Such evidence, however, may be considered by the Court in connection with a motion to dismiss for lack of subject matter jurisdiction. *See Ass'n of Am. Med. Colleges v. United States*, 217 F.3d 770, 778 (9th Cir. 2000). Since Defendants contend that Plaintiffs' challenges to the merits of EPA's approval of the State Trash TMDLs are unripe, and since the Court considers how these

TMDLs will be implemented at least in part for this purpose, this evidence is properly before the Court. Second, Plaintiffs contend that the statements constitute inadmissible hearsay. These statements, however, do not contain or even implicitly rely on any out-of-court statement by one other than Mr. Dickerson for the truth of the matter stated.

Third, Plaintiffs claim that the statements lack foundation, although they do not explain what they mean by this. To the extent Plaintiffs are asserting that the declarant lacks personal knowledge of the Los Angeles Regional Board's intentions, that assertion is refuted by the fact that Mr. Dickerson has been Executive Officer of the board since 1997. (Dickerson Decl. P1.) Fourth, Plaintiffs insist that "the statements are objectionable and inadmissible as the best evidence of the implementation requirements vis-a-vis the TMDLs, is set forth in the TMDLs themselves, as well as in the terms of other enforceable documents, documenting the actions taken by the [Los Angeles] Regional Board, such as the terms of the Municipal Storm Water Permit referenced in the declaration." (Pls.' Objections at 4.) This objection misunderstands the nature of the "best evidence" rule: that rule applies *only* where the witness attempts to testify as to the *contents of a writing, recording, or photograph*. See Fed. R. Evid. 1002. Such is not the case here. Moreover, this objection reflects a fundamental misunderstanding of the nature of TMDLs. TMDLs are *not* self-executing; they require the appropriate state to issue regulations implementing them. It is also not clear what Plaintiffs mean by their assertion that documents "documenting the actions taken by the Regional Board" constitute "enforceable documents." Finally, Plaintiffs assail the statements at issue as "not competent." (*Id.*) Plaintiffs do not explain what they mean by this objection. The Court thus disregards it. Accordingly, the Court **OVERRULES** the objections under Heading II.2 of Plaintiffs' Objections.

[**17] [*1149] **4. The Instant Action**

Plaintiffs filed their initial complaint on June 28, 2002, in the United States District Court for the Central

District of California. On August 30, 2002, they filed an amended complaint. On October 30, 2002, the case was transferred to this Court, the United States District Court for the Northern District of California. Pursuant to the parties' stipulation and the Court's Order thereon, Plaintiffs filed a Second Amended Complaint for Injunctive and Declaratory Relief (the "SAC" or "Complaint") on December 12, 2002.

The SAC is the operative complaint for purposes of the Motion to Dismiss and the Motion for Partial Summary Judgment. The SAC purports to assert three claims for relief. The First Claim for Relief is ostensibly brought pursuant to a provision of the Administrative Procedure Act (the "APA"), 5 U.S.C. § 706, (SAC at 34), although certain allegations thereunder also invoke the CWA, the Regulatory Flexibility Act (the "RFA"), and the Small Business Regulatory Enforcement Fairness Act of 1996 (the "SBREFA"), (*id.* PP84-85).⁸ The First Claim for Relief alleges several violations of the APA: (1) EPA acted without authority [**18] and acted arbitrarily and capriciously by establishing the EPA Trash TMDLs prior to receiving for review the State Trash TMDLs, (SAC PP78-79); (2) EPA acted without authority and arbitrarily and capriciously by reviewing and approving the State Trash TMDLs because EPA had already established the EPA Trash TMDLs, (*id.* PP80, 83); (3) EPA acted arbitrarily and capriciously and in excess of its jurisdiction with regard to the manner by which it established the EPA Trash TMDLs, (*id.* PP81-82); (4) the collective actions of California and EPA relating to issuance of the EPA Trash TMDLs and subsequent approval of the State Trash TMDLs constitute a "*de facto* TMDL procedure" that is arbitrary, capricious, and contrary to law, (*id.* PP84-86);⁹ and (5) EPA acted arbitrarily and capriciously by approving the State Trash TMDLs because those TMDLs were "patently defective" and established not in accordance with the procedures of the CWA and California law, (*id.* P87).¹⁰ The Second Claim for Relief challenges [*1150] the validity of two alleged agency actions, the EPA Trash TMDLs and the "*de facto* TMDL procedure," under the APA, 5 U.S.C. § 551 *et seq.*; the [**19] RFA, 5 U.S.C. § 601 *et seq.*; and the SBREFA, 5 U.S.C. § 801 *et seq.* (SAC at 40; *id.* PP89-99.) The violations alleged under the Second Claim for Relief, however, appear to relate mostly to procedural requirements under the RFA and the SBREFA. (See *id.* PP91-93, 95-98 (invoking 5 U.S.C. §§ 601(5), 601(6), 603, 604(a), 604(b), 605(b), and 611).)¹¹ The Third Claim for Relief is derivative of the first two

claims. It seeks a declaration under the Declaratory Judgment Act, 28 U.S.C. §§ 2201-2202, as to which party's interpretation of the law is correct and a judicial determination of Plaintiffs' rights and duties. (*Id.* PP100-105.)

8 With respect to the First Claim for Relief, the SAC comes perilously close to violating Federal Rule of Civil Procedure 8(a)'s mandate of providing "a *short and plain* statement of the claim showing that the pleader is entitled to relief..." Fed. R. Civ. P. 8(a) (emphasis added). In particular, Plaintiffs' practice of indicating that the First Claim for Relief is based exclusively on the APA, (SAC at 34), yet at the same time claiming in the allegations thereunder that the actions at issue violate other statutes, (*id.* PP84-85), is confusing. Aside from potentially misleading Defendants as to the nature of the claims against them, it has required the Court to spend needless additional time and effort scrutinizing the allegations of the SAC because the Court cannot trust the accuracy of the headings of the SAC. The practice is especially reprehensible because the Court has already been forced to spend undue time and effort identifying and parsing out the five independent, discrete claims for relief that are set out in stream-of-consciousness fashion in the allegations underlying the "First Claim for Relief"--which heading necessarily suggests a *single* claim. *See infra*.

[**20]

9 This alleged *de facto* TMDL procedure is also claimed to violate the CWA, the RFA, and the SBREFA. (*Id.* PP84-85.)

10 Although not clearly stated, this last claim (claim (5)) within the First Claim for Relief appears to challenge the *merits* of EPA's approval of the State Trash TMDLs, as opposed to, for example, challenging EPA's authority to approve *any* state-submitted TMDLs after it issued the EPA Trash TMDLs, (*see id.* PP80, 83). Presumably, this last claim encompasses challenges to, for example, EPA's approval of the State Trash TMDLs where these TMDLs covered "unlisted" waters. (*See id.* PP42, 49, 62.) Defendants appear to have also construed this claim as challenging the merits of EPA's approval of the State Trash TMDLs, and they move to dismiss this claim as unripe. (*See Mot. to Dismiss*

at 20-24.) Plaintiffs appear to concur in Defendants' construction of this claim. (*See Pls.' Opp. Br.* at 16-20.) Accordingly, the Court construes this last claim as challenging the merits of EPA's approval of the State Trash TMDLs.

11 This is yet another example of Plaintiffs' objectionable drafting of the SAC. In particular, the paragraph alleging improper agency action supposedly giving rise to the Second Claim for Relief, paragraph 96, identifies four bases on which the CWA, the APA, the RFA, and the SBREFA were violated. (*Id.* P96.) Of these four bases, however, only the first (denoted reason "(a)") appears to have anything to do with the APA; the remaining three ("(b)," "(c)," and "(d)") appear to relate solely to provisions of the RFA and SBREFA, at least based on the allegations of the previous paragraphs under the heading "Second Claim for Relief." (*Id.*; *compare id.* (*e.g.*, alleging that EPA failed to perform an initial screening of the EPA Trash TMDLs to determine whether they would have a significant economic impact on a substantial number of small entities) *with id.* PP91-93, 95 (*e.g.*, alleging that RFA requires agencies to screen all proposed rules and identify whether such rules would have such an impact, (*id.* P92))).

The Court is thus left with the distinct impression that either Plaintiffs have been careless in drafting the Second Claim for Relief or they have invoked various statutes and inserted a number of allegations in scattershot fashion in the hope that something will slip by Defendants undetected and "stick." Aside from arguably violating Rule 8(a), this practice is unfair not only to Defendants, but also to the Court, because it makes the Court's resolution of Defendants' arguments considerably more difficult. (Nor is the Court interested in any supporting evidence or clarification from Plaintiffs' counsel regarding the nature of their claims that is not in the four corners of the SAC or incorporated therein by reference. The SAC speaks for itself on that score.) Based on its review of the SAC, the Court construes the allegations underlying the Second Claim for Relief as alleging violation of the APA, the RFA, and the SBREFA only with respect to EPA's alleged failure to provide Plaintiffs with notice and an opportunity for comment with

regard to the *de facto* TMDL procedure, discussed *infra*, and the establishment of the EPA Trash TMDLs; the Court construes them to allege violation of the RFA and the SBREFA, but not the APA, with regard to the remaining allegations under the heading of "Second Claim for Relief." (See SAC P96.)

[**21] On January 13, 2003, Defendants and Intervenor filed answers to the SAC. On that same day, Defendants also filed the instant Motion to Dismiss, which seeks dismissal of the entire action pursuant to Federal Rules of Civil Procedure 12(b)(1) and 12(b)(6). Intervenor filed Intervenor's Notice in Support of Defendants' Motion to Dismiss on February 3, 2003, indicating in brief fashion that they agreed with the arguments in the Motion to Dismiss and therefore supported the motion. On March 10, 2003, Plaintiffs filed their Motion for Partial Summary Judgment.

Most of the plaintiffs in the instant action are currently plaintiffs in a California state court action against the Los Angeles Regional Board and the State Board challenging the legality of the State Trash TMDLs. (*Id.* P33.) Three other lawsuits have similarly been filed challenging either [*1151] California's establishment of the State Trash TMDLs or EPA's approval of the same. (*Id.*)

II. LEGAL STANDARD

A. Rule 12(b)(1)

Federal Rule of Civil Procedure 12(b)(1) authorizes a party to seek dismissal of an action for lack of subject matter jurisdiction. "When subject matter jurisdiction is challenged under [**22] Federal Rule of Procedure 12(b)(1), the plaintiff has the burden of proving jurisdiction in order to survive the motion." *Tosco Corp. v. Communities for a Better Env't*, 236 F.3d 495, 499 (9th Cir. 2001). "A plaintiff suing in a federal court must show in his pleading, affirmatively and distinctly, the existence of whatever is essential to federal jurisdiction, and, if he does not do so, the court, on having the defect called to its attention or on discovering the same, must dismiss the case, unless the defect be corrected by amendment." *Id.* (quoting *Smith v. McCullough*, 270 U.S. 456, 459, 70 L. Ed. 682, 46 S. Ct. 338 (1926)). In adjudicating such a motion, the court is not limited to the pleadings, and may properly consider extrinsic evidence. See *Ass'n of Am. Med. Colleges v. United States*, 217

F.3d 770, 778 (9th Cir. 2000). The court presumes lack of jurisdiction until the plaintiff proves otherwise. See *Stock West, Inc. v. Confederated Tribes*, 873 F.2d 1221, 1225 (9th Cir. 1989).

B. Rule 12(b)(6)

A motion to dismiss pursuant to Federal Rule of Civil Procedure 12(b)(6) tests the legal sufficiency of a claim. [**23] *Navarro v. Block*, 250 F.3d 729, 731 (9th Cir. 2001). A motion to dismiss should not be granted "unless it appears beyond doubt that the plaintiff can prove no set of facts in support of his claim which would entitle him to relief." *Conley v. Gibson*, 355 U.S. 41, 45-46, 2 L. Ed. 2d 80, 78 S. Ct. 99 (1957); accord *Johnson v. Knowles*, 113 F.3d 1114, 1117 (9th Cir. 1997). The complaint is construed in the light most favorable to the plaintiff, and all properly pleaded factual allegations are taken as true. *Jenkins v. McKeithen*, 395 U.S. 411, 421, 23 L. Ed. 2d 404, 89 S. Ct. 1843 (1969); see also *Everest & Jennings, Inc. v. Am. Motorists Ins. Co.*, 23 F.3d 226, 228 (9th Cir. 1994). "Dismissal is proper only where there is no cognizable legal theory or an absence of sufficient facts alleged to support a cognizable legal theory." *Navarro*, 250 F.3d at 731. In adjudicating a motion to dismiss, the court need not accept as true unreasonable inferences or conclusory legal allegations cast in the form of factual allegations. *W. Mining Council v. Watt*, 643 F.2d 618, 624 (9th Cir. 1981). [**24]

When the complaint is dismissed for failure to state a claim, "leave to amend should be granted unless the court determines that the allegation of other facts consistent with the challenged pleading could not possibly cure the deficiency." *Schreiber Distrib. Co. v. Serv-Well Furniture Co.*, 806 F.2d 1393, 1401 (9th Cir. 1986). Leave to amend is properly denied "where the amendment would be futile." *DeSoto v. Yellow Freight Sys., Inc.*, 957 F.2d 655, 658 (9th Cir. 1992).

III. DISCUSSION

Defendants have filed a Motion to Dismiss; Plaintiffs have filed a Motion for Partial Summary Judgment. The Motion for Partial Summary Judgment seeks adjudication of issues pertaining to Plaintiffs' challenge to the procedural legitimacy of the State Trash TMDLs. Because the Court grants the Motion to Dismiss (as discussed below), it does not reach the merits of the Motion for Partial Summary Judgment and therefore

denies it as moot. Accordingly, the following discussion pertains [*1152] only to the Motion to Dismiss, except where noted.

At the outset, the Court notes that it need not analyze all the arguments presented in Defendants' opening brief because Plaintiffs [**25] concede that certain of their claims are moot. In particular, Defendants contend in their opening brief for the Motion to Dismiss that the EPA Trash TMDLs no longer have any force or effect because EPA has announced that the State Trash TMDLs "supercede" the EPA Trash TMDLs; consequently, Defendants maintain, Plaintiffs' claims that EPA lacked authority to establish the EPA Trash TMDLs, (SAC P78-79), and that the procedures by which EPA established them were unlawful, (*id.* PP81-82, 90, 94, 96-97, 99), are moot. (Mot. to Dismiss at 12-15.) In their opposition brief, Plaintiffs express satisfaction with Defendants' assurances that the EPA Trash TMDLs are no longer (and can never be) in effect and therefore "withdraw their claims directly challenging the validity of EPA's TMDLs . . ." (Pls.' Opp. Br. at 4 n.6.) Defendants acknowledge this withdrawal in their reply brief. (Defs.' Reply Br. at 1.) As a result, the Court GRANTS the Motion to Dismiss pursuant to Federal Rule of Civil Procedure 12(b)(1) with regard to claims (1) and (3) (SAC PP78-79 and SAC PP81-82, respectively) within the First Claim for Relief of the SAC identified in Part I.B.4 of this Order, *supra*. The Court [**26] also GRANTS the Motion to Dismiss pursuant to Rule 12(b)(1) with regard to the Second Claim for Relief of the SAC to the extent it challenges the validity of the EPA Trash TMDLs. (*See* SAC PP90, 94, 96-97, 99.) The Court now addresses the parties' arguments in relation to the remaining claims.

A. Challenge to EPA's Authority to Approve the State Trash TMDLs

Plaintiffs claim that EPA lacked authority to approve the State Trash TMDLs because it had already established the EPA Trash TMDLs. (SAC PP80, 83.) Defendants move to dismiss this claim pursuant to Rule 12(b)(6) for failure to state a claim upon which relief can be granted. (Mot. to Dismiss at 19-20.) Defendants contend that EPA in fact has a statutory *obligation* under 33 U.S.C. § 1313 to review any proposed TMDLs submitted by a state and either approve them or disapprove them. (*Id.*) Defendants assert that nothing in the CWA or otherwise divests EPA of jurisdiction to

approve a state-submitted TMDL once EPA has issued its own TMDLs, and in fact, recognizing such a principle would thwart Congressional intent to vest states with the primary responsibility of implementing the CWA's provisions. [**27] (*Id.* at 20.) Plaintiffs counter (in less than straightforward fashion) that by allowing California to submit the State Trash TMDLs to EPA after EPA established the EPA Trash TMDLs, EPA effectively "remanded" a "TMDL submission" to California, and EPA lacked authority to "remand" this submission and subsequently approve California's "resubmission." (*See* Pls.' Opp. Br. at 15-16.)¹²

12 Plaintiffs also argue that EPA lacked authority to approve the State Trash TMDLs because these TMDLs cover "unlisted" waters; according to Plaintiffs, EPA has authority only to approve TMDLs for "listed" waters. (*Id.* at 14-15.) As Defendants correctly point out, this argument goes to the merits of EPA's approval of the State Trash TMDLs, not to the issue of whether EPA had any authority to approve any state-submitted TMDLs after issuing its own TMDLs--the issue raised by this claim. (Defs.' Reply Br. at 10 n.9.) Plaintiffs' argument is relevant only to their own Motion for Partial Summary Judgment, not to the arguments raised in the Motion to Dismiss.

[**28] Plaintiffs' counterargument is meritless. No authority supports the conclusion that EPA lacks authority to approve [*1153] state-submitted TMDLs after EPA has established its own TMDLs, nor does this conclusion logically follow from the proposition that EPA is required to approve or disapprove a state-submitted TMDL within 30 days of submission. Moreover, as Defendants astutely note, recognizing such a principle "would lead to absurd results. Under this scenario, once EPA establishes a TMDL, the State could never update it or modify it based on changed circumstances." (Mot. to Dismiss at 20.) Finally, like Defendants, (*see* Defs.' Reply Br. at 10), the Court is at a loss to understand what Plaintiffs mean by their contention that EPA "remanded" the EPA Trash TMDLs to California for revision and resubmission. Nothing in the allegations of the Complaint remotely suggest any sort of sending back of TMDLs to California for revision or additional development. And even if there were such a "remand," it does not follow that EPA lacked authority to approve the State Trash TMDLs.

For these reasons, the Court GRANTS the Motion to Dismiss with respect to claim (2) within the First Claim for Relief, [**29] (SAC PP80, 83), *see supra* Part I.B.4. Additionally, it is evident that Plaintiffs cannot amend the SAC to allege facts sufficient to rehabilitate this claim because it is meritless as a matter of law. Accordingly, this claim is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE.

B. The "De_Facto TMDL Procedure"

Under claim (4) within their First Claim for Relief, *see supra* Part I.B.4, and the Second Claim for Relief, Plaintiffs challenge the "*de facto* TMDL procedure,"¹³ which they consider to consist of:

the establishment by the [Los Angeles] Regional Board of the TMDL, followed by the preparation and notice of the TMDL by USEPA, followed by the approval of the TMDL by the State Board, followed by the "establishment" by USEPA of the EPA TMDL, followed by the determination by USEPA to review and/or approve the subsequently submitted State TMDL, and to thereafter find the USEPA established TMDL is "superceded"

(SAC P85.) Plaintiffs assert that this procedure violates the APA, the RFA, and the SBREFA. (*Id.* PP84-85, 96-98.) Plaintiffs allege not only that they have previously suffered from the effectuation of the *de facto* [**30] TMDL procedure, but also that they will suffer from the effectuation of the procedure in the future. (*See id.* PP84-86.)

13 Plaintiffs do not expressly use the phrase "*de facto* TMDL procedure" in the SAC. Instead, they refer to this procedure as the "TMDL Procedure" and contend that EPA has effected a "*de facto* adoption" of the "TMDL Procedure." (SAC P85.) For ease of reference, the Court will refer to what Plaintiffs call the "TMDL Procedure" as the "*de facto* TMDL procedure."

Defendants move to dismiss these claims by pointing out that the APA and the RFA, which was amended by the SBREFA, permit challenges *only* to "final agency action." (Mot. to Dismiss at 16-19.)¹⁴ They explain that the APA defines "agency action" to include "the whole or

a part of any agency rule, order, license, sanction, relief, or the equivalent or denial thereof, or failure to act." (*Id.* at 16 (quoting 5 U.S.C. § 551(13).) (They do not indicate whether this definition applies to the RFA and [**31] SBREFA as well.) Defendants assert that what Plaintiffs characterize as a *de* [**1154] *facto* TMDL procedure is not an "agency action," much less a final agency action, but in fact a sequence of events; as such, they maintain, the procedure cannot give rise to a challenge under the APA or under the RFA, as amended by the SBREFA.

14 Defendants also contend that the RFA, as amended by the SBREFA, provides a narrow and exclusive means of judicial review that is not available here due to the nature of Plaintiffs' challenge to the *de facto* TMDL procedure. (*See id.* at 16.)

Plaintiffs respond to Defendants' arguments somewhat curiously. Despite vehemently asserting that Defendants' arguments are incorrect, they do not dispute that a challenge will lie only to final agency action. Instead, they contend that the *de facto* TMDL procedure "led up to and resulted in 'final agency action,'" (Pls.' Opp. Br. at 22), namely the August 1, 2002, approval of the State Trash TMDLs. Plaintiffs also argue at great length that [**32] their challenge to this procedure is not moot because it falls under the "capable of repetition, yet evading review" exception to the mootness doctrine. (*Id.* at 22-25.)

Defendants' arguments are persuasive, and Plaintiffs' responses are both unconvincing and nonresponsive. As Defendants correctly note, (*see* Defs.' Reply Br. at 4-5), Plaintiffs' suggestion that they are challenging EPA's approval of the State Trash TMDLs, as opposed to the so-called "TMDL procedure," is belied by the allegations of the SAC: by their plain language, the allegations of paragraphs 84 through 86 and paragraphs 96 through 98 challenge the "TMDL procedure," (SAC 84-86, 96-98); Plaintiffs' challenge to EPA's approval of the State Trash TMDLs is set out in paragraph 87, (*see id.* P87), the justiciability of which challenge is discussed in Part III.C of this Order, *infra*. Plaintiffs do not demonstrate how the "procedure" is "the whole or a part of any agency rule, order, license, sanction, relief, or the equivalent or denial thereof, or failure to act" or falls within any other definition, statutory or otherwise, of final agency action. 15 Indeed, as Defendants also correctly note, (*see* [**33] Defs.' Reply Br. at 4-5), Plaintiffs' assertion that the

TMDL procedure *consummated* in final agency action, namely EPA's approval of the State Trash TMDLs, is an implicit admission that the "procedure" itself is not final agency action. Nor do Plaintiffs make any effort to distinguish or refute any of the authorities cited by Defendants in support of their arguments. Finally, as Defendants yet again correctly point out, Plaintiffs' mootness argument is nonresponsive because Defendants do not contend that this claim is moot. (*Id.* at 8.)¹⁶

15 Even though the Court has not been able to locate a statutory definition of "agency action" for purposes of the RFA and SBREFA, Plaintiffs have put forward no argument to suggest that it should be given a meaning substantially different than that provided in the APA. The Court sees no reason to conclude that "agency action" should be given a significantly more expansive definition than that provided for purposes of the APA.

16 Plaintiffs do not respond to Defendants' argument that judicial review is unavailable under the RFA, as amended by the SBREFA, for alleged violations of 5 U.S.C. § 603. (Mot. to Dismiss at 18.) The Court agrees with Defendants that the implication of this lack of response is that any opposition to this argument is waived. (*See* Defs.' Reply Br. at 3-4.) The Court disagrees with Defendants, however, that Plaintiffs have failed to respond to Defendants' arguments that the *de facto* TMDL procedure does not constitute "final agency action" under the RFA, as amended by the SBREFA; but the Court finds their response to this argument meritless for the reasons stated above.

[**34] In sum, it is apparent that the alleged *de facto* TMDL procedure, consisting of the various events identified in paragraph 85 of the SAC, is not subject to challenge under the APA, RFA, or SBREFA because it is not final agency action within the meaning of those statutes. *Cf. Lujan v. Nat'l Wildlife Fed'n*, 497 U.S. 871, 890, 111 L. Ed. 2d 695, 110 S. Ct. 3177 (1990) (rejecting challenge to alleged land withdrawal [*1155] review program on grounds that alleged program was not final agency action within meaning of APA). Accordingly, the Court GRANTS Defendants' motion to dismiss pursuant to Federal Rule of Civil Procedure 12(b)(6) with respect to claim (4) within the First Claim for Relief, (SAC PP84-86). The Court also GRANTS Defendants' motion pursuant to Rule 12(b)(6) with regard to the Second

Claim for Relief. Given that the Second Claim for Relief challenges the validity of the EPA Trash TMDLs and the alleged *de facto* TMDL procedure alone, and given that Plaintiffs have withdrawn their challenge to the validity of the EPA Trash TMDLs, the Second Claim for Relief is now dismissed in its entirety.

It is further evident that Plaintiffs cannot amend the SAC to allege [**35] facts sufficient to rehabilitate these claims because they are not actionable as a matter of law. Accordingly, both claim (4) within the First Claim for Relief and the Second Claim for Relief are DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE.

C. Ripeness of Plaintiffs' Challenge to EPA's Approval of State Trash TMDLs

Plaintiffs' remaining claim (aside from the Third Claim for Relief, which is dependent on the First and Second Claims for Relief) challenges the merits of EPA's approval of the State Trash TMDLs. (*See id.* P87.) Defendants move to dismiss this claim as unripe for judicial review. Specifically, Defendants contend that the issues are not yet sufficiently developed to be fit for judicial review under the APA because Plaintiffs' existing NPDES permit imposes no obligations on Plaintiffs in connection with the State Trash TMDLs and because the Los Angeles Regional Board intends to revisit these TMDLs at the end of the monitoring period. (Mot. to Dismiss at 21-23.) Defendants further contend that Plaintiffs will not suffer any immediate hardship if review is withheld because EPA's approval of the State Trash TMDLs imposes no present, affirmative duties on [**36] Plaintiffs and requires no immediate changes in Plaintiffs' conduct. (*Id.* at 23-24.)

Plaintiffs respond by arguing that they have suffered "injury in fact," both economic and non-economic. (Pls.' Opp. Br. at 16-17.) Citing to the text of the State Trash TMDLs, a copy of which is appended to the Declaration of Richard Montevideo in Support of Plaintiffs' Motion for Summary Adjudication of Issues, and in Opposition to Defendants' Motion to Dismiss (the "Montevideo Declaration") as Exhibit 3, Plaintiffs claim that they are impacted by these TMDLs:

By the terms of the TMDL itself, most Plaintiffs are directly impacted by its terms and presently have express monitoring obligations to comply with,

not to mention pending compliance dates requiring annual reductions in trash. Moreover, the TMDL calls out very specific and expensive implementation measures, including possible implementation through full capture vortex systems totaling \$ 109.3 million for all affected entities within the County [of Los Angeles] by the end of Year 1, and a total of \$ 2,053,100,000 for the first 12 years of implementation. Even the Trash TMDL itself concludes that "Trash abatement in the Los Angeles [*37] River system may be expensive."

(Pls.' Opp. Br. at 18 (citing Montevideo Decl., Ex. 3 (State Trash TMDLs)) (internal citations and emphasis omitted).) Similarly, Plaintiffs maintain that "to come into compliance by the Compliance Dates, [they] must begin employing strategies now to meet the progressive reductions in Waste Load Allocations required by the State Trash TMDL[s]." (*Id.* at 19.) [*1156] Plaintiffs further allege that the NPDES permit that applies to all of Plaintiffs provides that the State Trash TMDLs are "effective and enforceable." (*Id.* at 18 (citing Montevideo Decl., Ex. 5, at 10 P14).) Citing paragraph 36 of the SAC, they also contend that they have suffered from the TMDLs' being in effect because they are exposed to "unwarranted enforcement action and third party citizen suits." (*Id.*) Finally, Plaintiffs contend that they have suffered "procedural injuries," to wit, their being "forced to submit comments to two different levels of government (the State of California and the EPA) on two sets of TMDL over a series of many months and several hearings." (*Id.* at 20.)

Defendants dispute all of Plaintiffs' arguments in their reply. Defendants note that [*38] "Plaintiffs point to no present effect of the TMDLs on their day-to-day conduct." (Defs.' Reply Br. at 12.) They point out that, contrary to Plaintiffs' contention, Plaintiffs in fact have no monitoring obligations with which to comply because the Los Angeles County Department of Public Works has assumed that responsibility for all of Plaintiffs. (*Id.*) Defendants clarify that the first compliance date under the TMDLs is not until 2006, and the TMDLs identify several potential compliance options without mandating the use of any particular measure. (*Id.*) They further note that Plaintiffs fail to respond to the record evidence that the Los Angeles Regional Board will revisit the TMDLs

at the conclusion of the monitoring period, that is, prior to the first compliance deadline, and that such reconsideration has been considered a rational basis for delaying judicial review. (*Id.* at 13 (citing *Ohio Forestry Ass'n v. Sierra Club*, 523 U.S. 726, 735, 140 L. Ed. 2d 921, 118 S. Ct. 1665 (1998), and *Municipality of Anchorage v. United States*, 980 F.2d 1320, 1323 (9th Cir. 1992)).) Finally, Defendants assail Plaintiffs' reliance on the aforementioned [*39] statement in Plaintiffs' NPDES permit because this statement does not establish that the State Trash TMDLs are effective or enforceable against *Plaintiffs*. (*Id.*)

The "ripeness doctrine is drawn both from Article III limitations on judicial power and from prudential reasons for refusing to exercise jurisdiction." *Reno v. Catholic Social Services, Inc.*, 509 U.S. 43, 57 n.18, 125 L. Ed. 2d 38, 113 S. Ct. 2485 (1993). Unripe claims are subject to dismissal for lack of subject matter jurisdiction. *See Ass'n of Am. Med. Colleges v. United States*, 217 F.3d 770, 784 n.9 (9th Cir. 2000). In determining whether a case is ripe for review, a court must consider two main issues: "the fitness of the issues for judicial decision" and "the hardship to the parties of withholding court consideration." *Abbott Labs. v. Gardner*, 387 U.S. 136, 149, 18 L. Ed. 2d 681, 87 S. Ct. 1507 (1967). To address these issues in the context of a challenge to the lawfulness of administrative action, the Supreme Court has identified three factors to consider: "(1) whether delayed review would cause hardship to the plaintiffs; (2) whether judicial intervention would inappropriately interfere with further [*40] administrative action; and (3) whether the courts would benefit from further factual development of the issues presented." *Ohio Forestry Ass'n, Inc. v. Sierra Club*, 523 U.S. 726, 733, 140 L. Ed. 2d 921, 118 S. Ct. 1665 (1998).

In light of these three factors, the Court finds this claim unripe for review. First, delayed review would cause, at most, minimal hardship to the parties. Indeed, Plaintiffs have not demonstrated that they will suffer *any* hardship if review is delayed. Despite their preoccupation with various official pronouncements that the State Trash TMDLs are "effective" and "enforceable," Plaintiffs cannot point to a single future event or condition that is fairly certain to occur and will adversely [*1157] impact *Plaintiffs* themselves.¹⁷ That is because the TMDLs do not presently impose any obligations on Plaintiffs and because they are subject to revision before such obligations will be imposed. Nor do Plaintiffs provide

any evidence or explanation whatever of the "unwarranted enforcement action and third party citizen suits" to which they claim to be exposed.

17 The Court notes parenthetically that Plaintiffs' invocation of "injury in fact" in their opposition brief, (Pls.' Opp. Br. at 16-17), is inapposite. Injury-in-fact is a concept that relates to the issue of standing, not ripeness. *See Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560-61, 119 L. Ed. 2d 351, 112 S. Ct. 2130 (1992). Plaintiffs appear to confuse Defendants' arguments as relating to standing, not ripeness. (Pls.' Opp. Br. at 20 ("Federal courts have long recognized procedural injuries, as well as actual injuries, as an alternative basis for standing.")) Nevertheless, the Court construes Plaintiffs' allegations of "injury in fact" as allegations of hardship.

[**41] Equally unsupported is Plaintiffs' contention that they will bear economic costs in complying with the State Trash TMDLs. The sole evidentiary basis of this allegation, set out in paragraph 35 of the SAC and discussed more thoroughly in Plaintiffs' Opposition, is the estimates provided in the text of the TMDLs themselves. (*See* SAC P35; Pls.' Opp. Br. at 18.) But this matter is inadmissible hearsay because it is offered by an out-of-court declarant, *i.e.*, the Los Angeles Regional Board, for the truth of the matter stated, *i.e.*, that the TMDLs will in fact impose these costs.¹⁸ Yet even if this evidence were admissible, it would be insufficient to support Plaintiffs' contention that they will suffer economic injury: the cited portions of the State Trash TMDLs provide estimates of costs to be borne by "permittees"; there is no indication that these costs will be borne by *Plaintiffs* in particular. (*See* Montevideo Decl., Ex. 3, at 37, 40, *cited in* Pls.' Opp. Br. at 18.) Similarly, Plaintiffs provide no evidentiary support for the bald contention in their opposition brief that *Plaintiffs* must begin employing "strategies" now to meet the progressive reductions [**42] in wasteload allocations required by the State Trash TMDLs. (Pls.' Opp. Br. at 19.)

18 The author of the State Trash TMDLs appears to be the Los Angeles Regional Board. (*See* Montevideo Decl., Ex. 3.) Since the Los Angeles Regional Board is an entity created by state law and is subordinate to a state agency, the State Board, the text of the State Trash TMDLs is

arguably ascribable to the State Board and the state of California as well.

But these statements cannot be attributed to EPA by virtue of its approval of the State Trash TMDLs. Plaintiffs have laid no legal or evidentiary foundation tending to show that EPA's mere approval of the *TMDLs themselves* implies that EPA further agreed with or endorsed as accurate California's estimates of the costs of compliance provided with those TMDLs.

Even if Plaintiffs will be forced to comply with obligations imposed by the State Trash TMDLs and will suffer costs therefrom, the first Compliance Point is not until Year 3 of the implementation period, which runs [**43] from October 1, 2005, to September 30, 2006. (*See* Montevideo Decl., Ex. 3, at 28.) Thus, as a practical matter, Plaintiffs have three years to reach the specified Compliance Point. They have "ample opportunity later to bring [their] legal challenge at a time when harm is more imminent and more certain." *Ohio Forestry Ass'n*, 523 U.S. at 734. Accordingly, Plaintiffs cannot be heard to complain that they will suffer hardship if review is withheld at the present time.¹⁹

19 To the extent that Plaintiffs identify past events that are not alleged to recur in the future, such as Plaintiffs' allegedly having to submit comments to two levels of government, for the purpose of demonstrating hardship, those events are irrelevant because Plaintiffs are solely seeking *prospective* relief (aside from attorney's fees and costs of suit).

[*1158] Second, judicial intervention would likely interfere with further administrative action on the part of the state of California. Plaintiffs have not refuted Defendants' [**44] evidence that the Los Angeles Regional Board will be revisiting the State Trash TMDLs at the end of the monitoring period.²⁰ It is thus possible that the compliance [*1159] dates or compliance points will be altered or abolished altogether. The State Board may submit new TMDLs to EPA for review and potential approval well before the compliance dates in the State Trash TMDLs. And even if the State Trash TMDLs remain mostly intact, it is certainly possible that the State Board will approve additional regulations that alleviate much of the burden on Plaintiffs. Again, Plaintiffs must bear in mind that it is the state of California, not the federal government, that is charged with implementing

the State Trash TMDLs.

20 Plaintiffs' Objections challenge the admissibility of, *inter alia*, the portion of Defendants' evidence tending to show that the Los Angeles Regional Board will be revisiting the State Trash TMDLs at the end of the monitoring period, namely relevant statements in paragraphs 6 and 12 of the Dickerson Declaration. (The statements in paragraph 7 of the Dickerson Declaration and Exhibit C thereto also constitute such evidence, (*see* Mot. to Dismiss at 22), although Plaintiffs do not object to those statements.)

Plaintiffs challenge the statements in paragraph 6 of the Dickerson Declaration on five grounds. First, Plaintiffs contend that these statements are irrelevant "to the issue in question." (Pls.' Objections at 3.) The Court is unclear about what Plaintiffs mean by "the issue in question," but at any rate, the Court overrules this objection because these statements are indeed relevant to an important issue relating to ripeness: whether the Los Angeles Regional Board will revisit the State Trash TMDLs at the end of the monitoring period. Second, Plaintiffs assert that the statements are inadmissible hearsay because they seek "to introduce statements from parties other than the declarant, into evidence." (*Id.*) This argument fails because the statements are not offered for the truth of the matter stated by persons or parties other than Mr. Dickerson. That the Los Angeles Regional Board's *discussed* (*i.e.*, verbally articulated) the possibility of reopening the TMDLs in the future does not implicate hearsay concerns, *see United States v. Ballis*, 28 F.3d 1399, 1405 (5th Cir. 1994); and the board's orders to its staff are more akin to written or verbal acts.

Third, Plaintiffs assail the statements as "incompetent" because "the opinions and views of individual Regional Board members is [*sic*] not relevant or admissible evidence of the actions or positions of the entire Board." (Pls.' Objections at 3 (emphasis omitted).) But nowhere are the "opinions and views" of the individual Regional Board members set out in the statements in paragraph 6. Fourth, Plaintiffs claim that these

statements are "not the best evidence of the position of the entire Regional Board, as the views and positions of an entire Board can only be discerned from the meeting minutes and resolutions which confirm the actions of the public body." (*Id.* (emphasis omitted).) But the "views and positions" of the board are not set out therein. Fifth, Plaintiffs argue that the statements should be excluded as "extra-record evidence." This objection is meritless because the statements are relevant to the ripeness of Plaintiffs' challenge to EPA's approval of the State Trash TMDLs, and the Court may appropriately look beyond the pleadings in evaluating a motion to dismiss pursuant to Rule 12(b)(1).

In sum, Plaintiffs appear to have construed the statements in paragraph 6 of the Dickerson Declaration as stating that the Los Angeles Regional Board intends to *revise* the State Trash TMDLs after completion of the monitoring period, and they have evidently made their objections with this understanding in mind. Careful review of these statements reveals, however, that these statements demonstrate only that board staff have been ordered to report on the TMDLs and make recommendations on whether or not to revise the TMDLs based on the result of the monitoring. Thus, the import of the statements in paragraph 6 is that *the board will be in a position to revisit, and potentially reconsider, the TMDLs at the end of the monitoring period*, not that they have actually decided to revise the TMDLs. Accordingly, and for the reasons stated above, the Court **OVERRULES** the objections under heading II.1 in Plaintiffs' Objections.

Although Plaintiffs have objected to the admissibility of the statements in paragraph 12 of the Dickerson Declaration, the Court does not rely on those statements in evaluating issues of ripeness. The Court finds that the statements in paragraphs 6 and 7 of the Dickerson Declaration are sufficient to support a conclusion that the Los Angeles Regional Board will be revisiting--which is not to be confused with an intent to revise--the State Trash TMDLs at the end of the monitoring period. Accordingly, the Court **OVERRULES AS MOOT** the objections under heading II.5 in Plaintiffs' Objections.

Finally, the Court has reviewed the remaining objections in Plaintiffs' Objections. The Court does not rely on any of the matter to which Plaintiffs have objected other than those under headings II.1 and II.2 in evaluating the Motion to Dismiss. Accordingly, the Court **OVERRULES AS MOOT** the remaining objections in Plaintiffs' Objections.

[**45] Finally, the Court would benefit from further factual development of the issues presented. For example, Plaintiffs allege that in approving the State Trash TMDLs, EPA failed "to use 'best science' and [failed] to carefully consider suggestions on how to structure the TMDL program to be more effective and flexible to ensure workable solutions, with such failure resulting in an inequitable share of the burden [of pollution reduction] being placed on municipalities, such as Plaintiffs herein, to attain water quality standards." (SAC P47.) Since TMDLs are not self-executing, but require issuance of state regulations for implementation, delaying review will enable the Court to determine more easily and accurately whether the TMDL program could in fact have been structured more flexibly and whether Plaintiffs are bearing an inequitable share of the burden of pollution reduction.

In light of the Court's evaluation of the foregoing three factors, the Court concludes that Plaintiffs' claim is unripe for judicial review. Accordingly, Plaintiffs' claim (5) within the First Claim for Relief, (*id.* P87), is **DISMISSED** pursuant to Rule 12(b)(1) due to the Court's lack of subject matter jurisdiction. [**46] Since the Court lacks jurisdiction over this claim, it lacks authority to grant Plaintiffs leave to amend the claim; accordingly, the claim is dismissed **WITHOUT LEAVE TO AMEND** in this action. Finally, because the Court necessarily does not reach the merits of the claim, the dismissal is **WITHOUT PREJUDICE**.

D. Third Claim for Relief

Plaintiffs' Third Claim for Relief is wholly predicated on their first two claims for relief. Because these two claims for relief are dismissed, the Third Claim for Relief is **DISMISSED** on the same bases, and to the same extent, as the two claims (and sub-claims thereunder) are dismissed.

E. Motion for Partial Summary Judgment

Plaintiffs' Motion for Partial Summary Judgment seeks summary judgment in Plaintiffs' favor on the issues of (1) whether Defendants had authority and jurisdiction to approve the State Trash TMDLs to the extent that they covered unlisted waters and (2) whether Defendants had authority and jurisdiction to approve the State Trash TMDLs given that they had previously established the EPA Trash TMDLs. For the reasons stated above, the Court grants the Motion to Dismiss. Accordingly, the Motion for Partial Summary Judgment [**47] is **DENIED AS MOOT**. For the same reason, the Court **OVERRULES AS MOOT** Intervenor's Evidentiary Objections to Declaration of Richard Montevideo in Support of Plaintiffs' Motion for Summary Adjudication of Issues, and in Opposition to Defendants' Motion to Dismiss ²¹ and Plaintiffs' Objections to [*1160] Declaration of Anjali I. Jaiswal and Exhibits.

21 Although the Montevideo Declaration relates both to Plaintiffs' opposition to the Motion to Dismiss and to Plaintiffs' Motion for Partial Summary Judgment, Intervenor's objections to the Montevideo Declaration are made in connection with their opposition to the Motion for Partial Summary Judgment. Accordingly, the Court considers their objections solely for that purpose.

IV. CONCLUSION

Plaintiffs have no reason or right to be before this Court, at least at this time. All of their claims are moot, meritless, or unripe. Plaintiffs' challenges to the EPA Trash TMDLs were quite obviously mooted out the minute that EPA approved the State Trash TMDLs. Indeed, given [**48] that Plaintiffs readily withdrew these challenges based solely on Defendants' representations in their moving papers that the EPA Trash TMDLs are void, (Pls.' Opp. Br. at 4 n.6), the Court wonders why Plaintiffs proceeded to file a lawsuit on this basis. Plaintiffs' challenge to EPA's authority to approve the State Trash TMDLs following its establishment of the EPA Trash TMDLs and their challenge to the "*de facto* TMDL procedure" are so patently meritless that the Court fails to understand why Plaintiffs decided to assert these claims in the first place. Finally, Plaintiffs' challenges to the "merits" of the State Trash TMDLs may very well be valid, but in the absence of any indication that they will suffer imminent hardship, these claims are premature.

The Court does not suggest by any means that Plaintiffs have acted in bad faith by continuing to

prosecute this action after EPA approved the State Trash TMDLs. But after receiving Defendants' opening brief for their Motion to Dismiss, Plaintiffs should have recognized that their claims could not be maintained at present, if at all. The arguments in their opposition brief appear to reflect more of a "win at all costs" approach than [**49] considered judgment. And while the Court does not doubt that Plaintiffs would appreciate a judicial declaration as to the validity of the State Trash TMDLs, the Court lacks jurisdiction to grant such relief where Plaintiffs are not in jeopardy of imminent harm and future events could obviate the controversy.

Accordingly,

IT IS HEREBY ORDERED THAT:

1. The Motion to Dismiss Second Amended Complaint [Docket No. 18] is GRANTED, such that:

a. The First Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED, as follows:

i. The claim that EPA acted without authority and acted arbitrarily and capriciously by establishing the EPA Trash TMDLs prior to receiving for review the State Trash TMDLs, (SAC PP78-79), is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE as moot and, thus, for lack of subject matter jurisdiction;

ii. The claim that EPA acted without authority and arbitrarily and capriciously by reviewing and approving the State Trash TMDLs because EPA had already established the EPA Trash TMDLs, (SAC PP80, 83), is DISMISSED

WITHOUT LEAVE TO AMEND and WITH PREJUDICE for failure to state a claim upon which relief [**50] can be granted;

iii. The claim that EPA acted arbitrarily and capriciously and in excess of its jurisdiction with regard to the manner by which it established the EPA Trash TMDLs, (SAC PP81-82), is DISMISSED WITHOUT LEAVE TO AMEND and [*1161] WITH PREJUDICE as moot and, thus, for lack of subject matter jurisdiction;

iv. The claim that the collective actions of California and EPA relating to issuance of the EPA Trash TMDLs and subsequent approval of the State Trash TMDLs constitute a "*de facto* TMDL procedure" that is arbitrary, capricious, and contrary to law, (SAC PP84-86), is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE for failure to state a claim upon which relief can be granted;

v. The claim that EPA acted arbitrarily and capriciously by approving the State Trash TMDLs because those TMDLs were "patently defective" and established not in accordance with the procedures of the CWA and California law, (SAC P87), is DISMISSED WITHOUT

LEAVE TO AMEND in this action and WITHOUT PREJUDICE as unripe and, thus, for lack of subject matter jurisdiction;

b. The Second Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED, as [**51] follows:

i. To the extent the Second Claim for Relief challenges the validity of the EPA Trash TMDLs, the claim is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE as moot and, thus, for lack of subject matter jurisdiction;

ii. To the extent the Second Claim for Relief challenges the validity of the alleged *de facto* TMDL procedure, the claim is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE for failure to state a claim upon which relief can be granted;

c. The Third Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED on the same bases, and to the same extent, as the First and Second Claims for Relief are dismissed, given that the Third Claim for Relief is derivative of the first two claims.

2. Plaintiffs' Motion for Summary Adjudication of Issues [Docket No. 28] is

DENIED AS MOOT.

3. Plaintiffs' Objections to Declarations of David W. Smith and Dennis Dickerson Offered by Defendants in Support of Defendants' Motion to Dismiss Second Amended Complaint [Docket No. 31] are OVERRULED on the merits with respect to the objections under headings II.1 and II.2 therein and OVERRULED AS MOOT with respect [**52] to all remaining objections.

4. Intervenors' Evidentiary Objections to Declaration of Richard Montevideo in Support of Plaintiffs' Motion for Summary Adjudication of Issues, and in Opposition to Defendants' Motion to Dismiss [Docket No. 43] are OVERRULED AS MOOT.

5. Plaintiffs' Objections to Declaration of Anjali I. Jaiswal and Exhibits [Docket No. 47] are OVERRULED AS MOOT.

IT IS FURTHER ORDERED THAT this action is DISMISSED in its entirety. The Clerk shall enter judgment in favor of defendants accordingly. All deadlines and events presently calendared are VACATED. [*1162] The Clerk shall close the file and terminate any pending matters.

IT IS SO ORDERED.

Dated: May 16, 2003

SAUNDRA BROWN ARMSTRONG

United States District Judge

JUDGMENT

In accordance with the Court's Order Granting Defendants' Motion to Dismiss, Denying as Moot Plaintiffs' Motion for Partial Summary Judgment, and Dismissing Action,

IT IS HEREBY ORDERED THAT judgment is entered in favor of defendants and defendants-intervenors, and against plaintiffs, on all of plaintiffs' claims for relief as follows:

1. The First Claim for Relief in the Second Amended Complaint for Injunctive and [**53] Declaratory Relief ("SAC") is DISMISSED, such that:

a. The claim that EPA acted without authority and acted arbitrarily and capriciously by establishing the EPA Trash TMDLs prior to receiving for review the State Trash TMDLs, (SAC PP78-79), is DISMISSED WITH PREJUDICE;

b. The claim that EPA acted without authority and arbitrarily and capriciously by reviewing and approving the State Trash TMDLs because EPA had already established the EPA Trash TMDLs, (SAC PP80, 83), is DISMISSED WITH PREJUDICE;

c. The claim that EPA acted arbitrarily and capriciously and in excess of its jurisdiction with regard to the manner by which it established the EPA Trash TMDLs, (SAC PP81-82), is DISMISSED WITH PREJUDICE;

d. The claim that the collective actions of California and EPA relating to issuance of the EPA Trash TMDLs and subsequent approval of the

State Trash TMDLs constitute a "*de facto* TMDL procedure" that is arbitrary, capricious, and contrary to law, (SAC PP84-86), is DISMISSED WITH PREJUDICE;

e. The claim that EPA acted arbitrarily and capriciously by approving the State Trash TMDLs because those TMDLs were "patently defective" and established not in accordance [**54] with the procedures of the CWA and California law, (SAC P87), is DISMISSED WITHOUT PREJUDICE;

2. The Second Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED WITH PREJUDICE in its entirety; and

3. The Third Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED to the same extent as the First and Second Claims for Relief are dismissed.

IT IS SO ORDERED.

No. 98-71080

UNITED STATES COURT OF APPEALS FOR THE NINTH CIRCUIT

191 F.3d 1159; 1999 U.S. App. LEXIS 22212; 99 Cal. Daily Op. Service 7618; 99 Daily Journal DAR 9661; 30 ELR 20116

**August 11, 1999, Argued and Submitted, San Francisco, California
September 15, 1999, Filed**

SUBSEQUENT HISTORY: [**1] As Amended **OPINION**
December 7, 1999.

PRIOR HISTORY: Petition to Review a Decision of
the Environmental Protection Agency. EPA No. 97-3.

DISPOSITION: PETITION DENIED.

COUNSEL: Jennifer Anderson and David Baron,
Arizona Center for Law in the Public Interest, Phoenix,
Arizona, for the petitioners.

Alan Greenberg, Attorney, U.S. Department of Justice,
Environment & Natural Resources Division, Denver,
Colorado, for the respondent.

Craig Reece, Phoenix City Attorney's Office, Phoenix,
Arizona; Stephen J. Burg, Mesa City Attorney's Office,
Mesa, Arizona; Timothy Harrison, Tucson City
Attorney's Office, Tucson, Arizona; and Harlan C.
Agnew, Deputy County Attorney, Tucson, Arizona, for
the intervenors-respondents.

David Burchmore, Squire, Sanders & Dempsey,
Cleveland, Ohio, for the amici curiae.

JUDGES: Before: John T. Noonan, David R. Thompson,
and Susan P. Graber, Circuit Judges. Opinion by Judge
Graber.

OPINION BY: SUSAN P. GRABER

[*1161] AMENDED OPINION

GRABER, Circuit Judge:

Petitioners challenge the Environmental Protection Agency's (EPA) decision to issue National Pollution Discharge Elimination System (NPDES) permits to five municipalities, for their separate storm sewers, without requiring numeric limitations [**2] to ensure compliance with state water-quality standards. Petitioners sought administrative review of the decision within the EPA, which the Environmental Appeals Board (EAB) denied. This timely petition for review ensued. For the reasons that follow, we deny the petition.

FACTUAL AND PROCEDURAL BACKGROUND

Title 26 U.S.C. § 1342(a)(1) authorizes the EPA to issue NPDES permits, thereby allowing entities to discharge some pollutants. In 1992 and 1993, the cities of Tempe, Tucson, Mesa, and Phoenix, Arizona, and Pima County, Arizona (Intervenors), submitted applications for NPDES permits. The EPA prepared draft permits for public comment; those draft permits did not attempt to ensure compliance with Arizona's water-quality standards.

Petitioner Defenders of Wildlife objected to the permits, arguing that they must contain numeric limitations to ensure strict compliance with state

water-quality standards. The State of Arizona also objected.

Thereafter, the EPA added new requirements:

To ensure that the permittee's activities achieve timely compliance with applicable water quality standards (Arizona Administrative Code, Title 18, Chapter 11, Article 1), the [**3] permittee shall implement the [Storm Water Management Program], monitoring, reporting and other requirements of this permit in accordance with the time frames established in the [Storm Water Management Program] referenced in Part I.A.2, and elsewhere in the permit. This timely implementation of the requirements of this permit shall constitute a schedule of compliance authorized by Arizona Administrative Code, section R18-11-121(C).

The Storm Water Management Program included a number of structural environmental controls, such as storm-water detention basins, retention basins, and infiltration ponds. It also included programs to remove illegal discharges.

With the inclusion of those "best management practices," the EPA determined that the permits ensured compliance with state water-quality standards. The Arizona Department of Environmental Quality agreed:

The Department has reviewed the referenced municipal NPDES storm-water permit pursuant to Section 401 of the Federal Clean Water Act to ensure compliance with State water quality standards. We have determined that, based on the information provided in the permit, and the fact sheet, adherence to provisions and [**4] requirements set forth in the final municipal permit, will protect the water quality of the receiving water.

On February 14, 1997, the EPA issued final NPDES permits to Intervenor. Within 30 days of that decision, Petitioners requested an evidentiary hearing with the regional administrator. *See* 40 C.F.R. § 124.74. Although

Petitioners requested a hearing, they conceded that they raised only a legal issue and that a hearing was, in fact, unnecessary. Specifically, Petitioners raised only the legal question whether the Clean Water Act (CWA) requires numeric limitations to ensure strict compliance with state water-quality standards; they did not raise the factual question whether the management practices that the EPA chose would be effective.

[*1162] On June 16, 1997, the regional administrator summarily denied Petitioners' request. Petitioners then filed a petition for review with the EAB. *See* 40 C.F.R. § 124.91(a). On May 21, 1998, the EAB denied the petition, holding that the permits need not contain numeric limitations to ensure strict compliance with state water-quality standards. Petitioners then moved for reconsideration, *see* 40 C.F.R. § 124.91(i), which the EAB denied.

[**5] JURISDICTION

Title 33 U.S.C. § 1369(b)(1)(F) authorizes "any interested person" to seek review in this court of an EPA decision "issuing or denying any permit under section 1342 of this title." "Any interested person" means any person that satisfies the injury-in-fact requirement for Article III standing. *See Natural Resources Defense Council, Inc. v. EPA*, 966 F.2d 1292, 1297 (9th Cir. 1992) [*NRDC II*]. It is undisputed that Petitioners satisfy that requirement. Petitioners allege that "members of Defenders and the Club use and enjoy ecosystems affected by storm water discharges and sources thereof governed by the above-referenced permits," and no other party disputes those facts. *See Lujan v. Defenders of Wildlife*, 504 U.S. 555, 565-66, 119 L. Ed. 2d 351, 112 S. Ct. 2130 (1992) ("[A] plaintiff claiming injury from environmental damage must use the area affected by the challenged activity."); *see also NRDC II*, 966 F.2d at 1297 ("NRDC claims, inter alia, that [the] EPA has delayed unlawfully promulgation of storm water regulations and that its regulations, as published, inadequately control storm water [**6] contaminants. NRDC's allegations . . . satisfy the broad standing requirement applicable here.").

Intervenors argue, however, that they were not parties when this action was filed and that this court cannot redress Petitioners' injury without them. Their real contention appears to be that they are indispensable parties under Federal Rule of Civil Procedure 19. We need not consider that contention, however, because in

fact Intervenor have been permitted to intervene in this action and to present their position fully. In the circumstances, Intervenor have suffered no injury.

DISCUSSION

A. *Standard of Review*

The Administrative Procedures Act (APA), 5 U.S.C. §§ 701-06, provides our standard of review for the EPA's decision to issue a permit. *See American Mining Congress v. EPA*, 965 F.2d 759, 763 (9th Cir. 1992). Under the APA, we generally review such a decision to determine whether it was "arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law." 5 U.S.C. § 706(2)(A).

On questions of statutory interpretation, we follow the approach from *Chevron U.S.A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984). [**7] *See NRDC II*, 966 F.2d at 1297 (so holding). In *Chevron*, 467 U.S. at 842-44, the Supreme Court devised a two-step process for reviewing an administrative agency's interpretation of a statute that it administers. *See also Bicycle Trails Council of Marin v. Babbitt*, 82 F.3d 1445, 1452 (9th Cir. 1996) ("The Supreme Court has established a two-step process for reviewing an agency's construction of a statute it administers."). Under the first step, we employ "traditional tools of statutory construction" to determine whether Congress has expressed its intent unambiguously on the question before the court. *Chevron*, 467 U.S. at 843 n.9. "If the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress." *Id.* at 842-43 (footnote omitted). If, instead, Congress has left a gap for the administrative agency to fill, we proceed to step two. *See id.* at 843. At step two, we must uphold the administrative regulation unless it is "arbitrary, capricious, or manifestly contrary to the statute." *Id.* at 844.

[**8] [*1163] B. *Background*

The CWA generally prohibits the "discharge of any pollutant," 33 U.S.C. § 1311(a), from a "point source" into the navigable waters of the United States. *See* 33 U.S.C. § 1362(12)(A). An entity can, however, obtain an NPDES permit that allows for the discharge of some pollutants. *See* 33 U.S.C. § 1342(a)(1).

Ordinarily, an NPDES permit imposes effluent limitations on such discharges. *See* 33 U.S.C. § 1342(a)(1) (incorporating effluent limitations found in 33 U.S.C. § 1311). First, a permit-holder "shall . . . achieve . . . effluent limitations . . . which shall require the application of the best practicable control technology [BPT] currently available." 33 U.S.C. § 1311(b)(1)(A). Second, a permit-holder "shall . . . achieve . . . any more stringent limitation, including those necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 1370 of this title)." 33 U.S.C. § 1311 [**9] (b)(1)(C) (emphasis added). Thus, although the BPT requirement takes into account issues of practicability, *see Rybachek v. EPA*, 904 F.2d 1276, 1289 (9th Cir. 1990), the EPA also "is under a specific obligation to require that level of effluent control which is needed to implement existing water quality standards without regard to the limits of practicability," *Oklahoma v. EPA*, 908 F.2d 595, 613 (10th Cir. 1990) (internal quotation marks omitted), *rev'd on other grounds sub nom. Arkansas v. Oklahoma*, 503 U.S. 91, 117 L. Ed. 2d 239, 112 S. Ct. 1046 (1992). *See also Ackels v. EPA*, 7 F.3d 862, 865-66 (9th Cir. 1993) (similar).

The EPA's treatment of storm-water discharges has been the subject of much debate. Initially, the EPA determined that such discharges generally were exempt from the requirements of the CWA (at least when they were uncontaminated by any industrial or commercial activity). *See* 40 C.F.R. § 125.4 (1975).

The Court of Appeals for the District of Columbia, however, invalidated that regulation, holding that "the EPA Administrator does not have authority to exempt categories of point sources from [**10] the permit requirements of § 402 [33 U.S.C. § 1342]." *Natural Resources Defense Council, Inc. v. Costle*, 186 U.S. App. D.C. 147, 568 F.2d 1369, 1377 (D.C. Cir. 1977). "Following this decision, [the] EPA issued proposed and final rules covering storm water discharges in 1980, 1982, 1984, 1985 and 1988. These rules were challenged at the administrative level and in the courts." *American Mining Congress*, 965 F.2d at 763.

Ultimately, in 1987, Congress enacted the Water Quality Act amendments to the CWA. *See NRDC II*, 966 F.2d at 1296 ("Recognizing both the environmental threat posed by storm water runoff and [the] EPA's problems in

implementing regulations, Congress passed the Water Quality Act of 1987 containing amendments to the CWA.") (footnotes omitted). Under the Water Quality Act, from 1987 until 1994,¹ most entities discharging storm water did not need to obtain a permit. See 33 U.S.C. § 1342(p).

1 As enacted, the Water Quality Act extended the exemption to October 1, 1992. Congress later amended the Act to change that date to October 1, 1994. See Pub. L. No. 102-580.

[**11] Although the Water Quality Act generally did not require entities discharging storm water to obtain a permit, it did require such a permit for discharges "with respect to which a permit has been issued under this section before February 4, 1987," 33 U.S.C. § 1342(p)(2)(A); discharges "associated with industrial activity," 33 U.S.C. § 1342(p)(2)(B); discharges from a "municipal separate sewer system serving a population of [100,000] or more," 33 U.S.C. § 1342(p)(2)(C) & (D); and "[a] discharge for which the Administrator . . . determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States," 33 U.S.C. § 1342(p)(2)(E).

[*1164] When a permit is required for the discharge of storm water, the Water Quality Act sets two different standards:

(A) Industrial discharges

Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and section 1311 of this title.

(B) Municipal discharge

Permits for discharges from municipal [**12] storm sewers -

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the

maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator . . . determines appropriate for the control of such pollutants.

33 U.S.C. § 1342(p)(3) (emphasis added).

C. Application of Chevron

The EPA and Petitioners argue that the Water Quality Act is ambiguous regarding whether Congress intended for municipalities to comply strictly with state water-quality standards, under 33 U.S.C. § 1311(b)(1)(C). Accordingly, they argue that we must proceed to step two of *Chevron* and defer to the EPA's interpretation that the statute does require strict compliance. See *Zimmerman v. Oregon Dep't of Justice*, 170 F.3d 1169, 1173 (9th Cir. 1999) ("At step two, we must uphold the administrative regulation unless it is arbitrary, capricious, or [**13] manifestly contrary to the statute.") (citation and internal quotation marks omitted), *petition for cert. filed*, No. 99-243 (Aug. 10, 1999).

Intervenors and *amici*, on the other hand, argue that the Water Quality Act expresses Congress' intent unambiguously and, thus, that we must stop at step one of *Chevron*. See, e.g., *National Credit Union Admin. v. First Nat'l Bank & Trust Co.*, 522 U.S. 479, 118 S. Ct. 927, 938-39, 140 L. Ed. 2d 1 (1998) ("Because we conclude that Congress has made it clear that the *same* common bond of occupation must unite each member of an occupationally defined federal credit union, we hold that the NCUA's contrary interpretation is impermissible under the first step of *Chevron*."). (emphasis in original); *Sierra Club v. EPA*, 118 F.3d 1324, 1327 (9th Cir. 1997) ("Congress has spoken clearly on the subject and the regulation violates the provisions of the statute. Our inquiry ends at the first prong of *Chevron*."). We agree with Intervenors and *amici*: For the reasons discussed below, the Water Quality Act unambiguously demonstrates that Congress did not require municipal storm-sewer discharges to comply [**14] strictly with 33 U.S.C. § 1311(b)(1)(C). That being so, we end our inquiry at the first step of the *Chevron* analysis.

"Questions of congressional intent that can be answered with 'traditional tools of statutory construction' are still firmly within the province of the courts" under *Chevron*. *NRDC II*, 966 F.2d at 1297 (citation omitted).

"Using our 'traditional tools of statutory construction,' *Chevron*, 467 U.S. at 843 n.9, 104 S. Ct. 2778, when interpreting a statute, we look first to the words that Congress used." *Zimmerman*, 170 F.3d at 1173 (alterations, citations, and internal quotation marks omitted). "Rather than focusing just on the word or phrase at issue, we look to the entire statute to determine Congressional intent." *Id.* (alterations, citations, and internal quotation marks omitted).

As is apparent, Congress expressly required industrial storm-water discharges to comply with the requirements of 33 U.S.C. § 1311. *See* 33 U.S.C. § 1342(p)(3)(A) ("Permits for discharges associated with industrial activity shall meet all applicable [**15] provisions of this section and section 1311 of this title.") (emphasis added). By incorporation, then, industrial [*1165] storm-water discharges "shall . . . achieve . . . any more stringent limitation, including those necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any State law or regulation (under authority preserved by section 1370 of this title)." 33 U.S.C. § 1311(b)(1)(C) (emphasis added); *see also* Sally A. Longroy, *The Regulation of Storm Water Runoff and its Impact on Aviation*, 58 J. Air. L. & Com. 555, 565-66 (1993) ("Congress further singled out industrial storm water dischargers, all of which are on the high-priority schedule, and requires them to satisfy all provisions of section 301 of the CWA [33 U.S.C. § 1311]. . . . Section 301 further mandates that NPDES permits include requirements that receiving waters meet water quality based standards.") (emphasis added). In other words, industrial discharges must comply strictly with state water-quality standards.

Congress chose not to include a similar provision for municipal [**16] storm-sewer discharges. Instead, Congress required municipal storm-sewer discharges "to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator . . . determines appropriate for the control of such pollutants." 33 U.S.C. § 1342(p)(3)(B)(iii).

The EPA and Petitioners argue that the difference in wording between the two provisions demonstrates ambiguity. That argument ignores precedent respecting the reading of statutes. Ordinarily, "where Congress

includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion." *Russello v. United States*, 464 U.S. 16, 23, 78 L. Ed. 2d 17, 104 S. Ct. 296 (1983) (citation and internal quotation marks omitted); *see also United States v. Hanousek*, 176 F.3d 1116, 1121 (9th Cir. 1999) (stating the same principle), *petition for cert. filed*, No. 98-323 (Aug. 23, 1999). Applying that familiar [**17] and logical principle, we conclude that Congress' choice to require industrial storm-water discharges to comply with 33 U.S.C. § 1311, but not to include the same requirement for municipal discharges, must be given effect. When we read the two related sections together, we conclude that 33 U.S.C. § 1342(p)(3)(B)(iii) does not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

Application of that principle is significantly strengthened here, because 33 U.S.C. § 1342(p)(3)(B) is not merely silent regarding whether municipal discharges must comply with 33 U.S.C. § 1311. Instead, § 1342(p)(3)(B)(iii) replaces the requirements of § 1311 with the requirement that municipal storm-sewer dischargers "reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator . . . determines appropriate for the control of such pollutants." 33 U.S.C. § 1342(p)(3)(B)(iii). [**18] In the circumstances, the statute unambiguously demonstrates that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

Indeed, the EPA's and Petitioners' interpretation of 33 U.S.C. § 1342(p)(3)(B)(iii) would render that provision superfluous, a result that we prefer to avoid so as to give effect to all provisions that Congress has enacted. *See Government of Guam ex rel. Guam Econ. Dev. Auth. v. United States*, 179 F.3d 630, 634 (9th Cir. 1999) ("This court generally refuses to interpret a statute in a way that renders a provision superfluous."), *as amended*, 1999 U.S. App. LEXIS 18691, 1999 WL 604218 (9th Cir. Aug. 12, 1999). Section 1342(p)(3)(B)(iii) creates a lesser standard than § 1311. Thus, if § 1311 continues to apply to municipal storm-sewer discharges, [*1166] the more stringent requirements of that section always would control.

Contextual clues support the plain meaning of § 1342(p)(3)(B)(iii), which we have described above. The Water Quality Act contains other provisions that undeniably exempt certain discharges from the permit requirement altogether (and therefore from [**19] § 1311). For example, "the Administrator shall not require a permit under this section for discharges composed entirely of return flows from irrigated agriculture." 33 U.S.C. § 1342(l)(1). Similarly, a permit is not required for certain storm-water runoff from oil, gas, and mining operations. *See* 33 U.S.C. § 1342(l)(2). Read in the light of those provisions, Congress' choice to exempt municipal storm-sewer discharges from strict compliance with § 1311 is not so unusual that we should hesitate to give effect to the statutory text, as written.

Finally, our interpretation of § 1342(p)(3)(B)(iii) is supported by this court's decision in *NRDC II*. There, the petitioner had argued that "the EPA has failed to establish substantive controls for municipal storm water discharges as required by the 1987 amendments." *NRDC II*, 966 F.2d at 1308. This court disagreed with the petitioner's interpretation of the amendments:

Prior to 1987, municipal storm water dischargers were subject to the same substantive control requirements as industrial and other types of storm water. In the 1987 amendments, *Congress retained the [**20] existing, stricter controls for industrial storm water dischargers but prescribed new controls for municipal storm water discharge.*

Id. (emphasis added). The court concluded that, under 33 U.S.C. § 1342(p)(3)(B)(iii), "*Congress did not mandate a minimum standards approach.*" *Id.* (emphasis added). The question in *NRDC II* was not whether § 1342(p)(3)(B)(iii) required strict compliance with state water-quality standards, *see* 33 U.S.C. § 1311(b)(1)(C). Nonetheless, the court's holding applies equally in this action and further supports our reading of 33 U.S.C. § 1342(p).

In conclusion, the text of 33 U.S.C. § 1342(p)(3)(B), the structure of the Water Quality Act as a whole, and

this court's precedent all demonstrate that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

D. *Required Compliance with 33 U.S.C. § 1311(b)(1)(C)*

We are left with Intervenor's contention that the EPA may not, under the CWA, require strict compliance with state water-quality [**21] standards, through numerical limits or otherwise. We disagree.

Although Congress did not require municipal storm-sewer discharges to comply strictly with § 1311(b)(1)(C), § 1342(p)(3)(B)(iii) states that "permits for discharges from municipal storm sewers . . . shall require . . . *such other provisions as the Administrator . . . determines appropriate for the control of such pollutants.*" (Emphasis added.) That provision gives the EPA discretion to determine what pollution controls are appropriate. As this court stated in *NRDC II*, "Congress gave the administrator discretion to determine what controls are necessary. . . . NRDC's argument that the EPA rule is inadequate cannot prevail in the face of the clear statutory language." 966 F.2d at 1308.

Under that discretionary provision, the EPA has the authority to determine that ensuring strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards. The EPA has adopted an interim approach, which "uses best management practices (BMPs) in first-round storm water permits . . . to provide [**22] for the attainment of water quality standards." The EPA applied that approach to the permits at issue here. Under 33 U.S.C. § 1342(p)(3)(B)(iii), the EPA's choice to include [*1167] either management practices or numeric limitations in the permits was within its discretion. *See NRDC II*, 966 F.2d at 1308 ("Congress did not mandate a minimum standards approach or specify that [the] EPA develop minimal performance requirements."). In the circumstances, the EPA did not act arbitrarily or capriciously by issuing permits to Intervenor.

PETITION DENIED.

* The Honorable H. Russel Holland, Senior District Judge for the U.S. District Court for the District of Alaska, sitting by designation.

OPINION BY: Milan D. Smith, Jr.

OPINION

[*1196] **SUMMARY****

** This summary constitutes no part of the opinion of the court. It has been prepared by court staff for the convenience of the reader.

Environmental Law

On remand from the United States Supreme Court, the panel reversed the district court's grant of summary judgment and held that pollution exceedances detected at monitoring stations of the County of Los Angeles and the

Los Angeles County Flood [**2] Control District were sufficient to establish the County defendants' liability as a matter of law for violations of the terms of their National Pollutant Discharge Elimination System permit issued pursuant to the Clean Water Act.

In *Los Angeles Cnty. Flood Control Dist. v. Natural Res. Def. Council, Inc.*, 133 S. Ct. 710, 184 L. Ed. 2d 547 (2013), the Supreme Court held that a discharge of pollutants does not occur when polluted water flows from one portion of a river that is navigable water of the United States, through a concrete channel or other engineered improvement in the river, and then into a lower portion of the same river. The Supreme Court declined to address the plaintiffs' argument that the County defendants' monitoring data established their liability for permit violations as a matter of law. On remand, the panel held that this court's previous rejection of the plaintiffs' argument was not a final decision, nor was it law of the case.

The panel held that, under the plain language of the NPDES permit, the data collected at the monitoring stations was intended to determine whether the permittees were in compliance with the permit. Accordingly, if the District's monitoring data showed that the [**3] level of pollutants in federally protected water bodies exceeded those allowed under the permit, then, as a matter of permit construction, the monitoring data conclusively demonstrated that the defendants were not in compliance with the permit conditions and were liable for permit violations. The panel held that extrinsic considerations, including the Clean Water Act's monitoring requirements, also supported its holding. The panel remanded the case to the district court for further proceedings, including a determination of the proper remedy for the County defendants' violations.

OPINION

M. SMITH, Circuit Judge:

Plaintiffs-Appellants Natural Resources Defense Council and Santa Monica Baykeeper (collectively, the Plaintiffs) filed suit against the County of Los Angeles and the Los Angeles County Flood Control District (collectively, the County Defendants) alleging that the County Defendants are discharging polluted stormwater in violation of the terms of their National Pollutant Discharge Elimination System (NPDES) permit, issued pursuant to the Federal Water Pollution Control Act (the

Clean Water Act, Act, or CWA), 86 Stat. 816, codified as amended at 33 U.S.C. §§ 1251, *et seq.* The district [**4] court granted the County Defendants' motion for summary judgment, reasoning that Plaintiffs failed to prove that any *individual* defendant had discharged pollutants in violation of the Clean Water Act, where Plaintiffs' only evidence of violations was monitoring data taken downstream of the County Defendants' (and others') discharge points, as opposed to data sampled at the relevant discharge points themselves. On appeal, we affirmed the district court's judgment in part and reversed in part. *Natural Res. Def. Council, Inc. v. Cnty. of L.A.*, 673 F.3d 880 (9th Cir. 2011). On January 8, 2013, the Supreme Court reversed our judgment and remanded this case to us for further proceedings. *L.A. Cnty. Flood Control Dist. v. Natural Res. Def. Council, Inc.*, 133 S. Ct. 710, 184 L. Ed. 2d 547 (2013). On February 19, 2013, we ordered the parties to file supplemental briefs addressing the implications of the Supreme Court's ruling. Having considered the Supreme Court's ruling, the responses of the parties in their supplemental briefs, and other matters noted [*1197] herein, we now conclude that the pollution exceedances detected at the County Defendants' monitoring stations are sufficient to establish the County Defendants' [**5] liability for NPDES permit violations as a matter of law. Accordingly, we once again reverse the district court's grant of summary judgment in favor of the County Defendants, and remand to the district court for a determination of the appropriate remedy for the County Defendants' violations.

FACTUAL BACKGROUND

I. Stormwater Runoff in Los Angeles County

Stormwater runoff is surface water generated by precipitation events, such as rainstorms, which flows over streets, parking lots, commercial sites, and other developed parcels of land. When stormwater courses over urban environs, it frequently becomes polluted with contaminants, such as "suspended metals, sediments, algae-promoting nutrients (nitrogen and phosphorus), floatable trash, used motor oil, raw sewage, [and] pesticides[.]"¹ *Env'tl. Def. Ctr., Inc. v. EPA*, 344 F.3d 832, 840 (9th Cir. 2003). This polluted stormwater often makes its way into storm drains and sewers, which "generally channel collected runoff into federally protected water bodies," *id.*, such as rivers and oceans. Consequently, stormwater runoff has been recognized as "one of the most significant sources of water pollution in

the nation, at times comparable to, if not [**6] greater than, contamination from industrial and sewage sources." *Id.* (citation omitted).

1 Whereas natural, vegetated soil can absorb rainwater and capture pollutants, paved surfaces and developed land can do neither. Paved facilities with particularly high volumes of motor vehicle traffic--such as parking lots, retail gasoline outlets, and fast food restaurants--are typically responsible for producing higher concentrations of pollutants in storm water runoff.

Los Angeles County (the County) is home to more than 10 million people and covers a sprawling amalgam of populous incorporated cities and significant swaths of unincorporated land. The Los Angeles County Flood Control District (the District) is a public entity governed by the Los Angeles County Board of Supervisors and the Los Angeles County Department of Public Works. The District comprises 84 cities and some unincorporated areas of the County. The County and the District are separate legal entities.

Each city in the District operates a municipal separate storm sewer system (ms4)² that is composed of gutters, catch basins, storm drains, and pipes that collect and convey stormwater. The County also operates its own ms4 that primarily [**7] collects and conveys stormwater runoff in the unincorporated areas of the County. Each of these ms4s connects to the District's substantially larger ms4, an extensive flood-control and storm-sewer infrastructure [*1198] consisting of approximately 500 miles of open channels and 2,800 miles of storm drains. Because a comprehensive map of the County Defendants' storm sewer system does not exist, no one knows the exact size of the LA MS4³ or the locations of all of its storm drain connections and outfalls.⁴ But while the number and location of storm drains and outfalls are too numerous to catalog, it is undisputed that the LA MS4 collects and channels stormwater runoff from across the County. It is similarly undisputed that untreated stormwater is discharged from LA MS4 outfalls into various watercourses, including the Los Angeles and San Gabriel Rivers.⁵ These rivers, in turn, drain into several coastal waters, including, among others, the Santa Monica Bay and the Pacific Ocean.

2 Federal Regulations define an ms4 as:

a conveyance or system of

conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned [**8] or operated by a State, city, town, borough, county, parish, district, association, or other public body . . . having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity . . . ;

(ii) Designed or used for collecting or conveying storm water;

(iii) Which is not a combined sewer; and

(iv) Which is not part of a Publicly Owned Treatment Works

40 C.F.R. § 122.26(b)(8). Unlike a sanitary sewer system, which transports municipal sewage for treatment at a wastewater facility, or a combined sewer system, which transports sewage and stormwater for treatment, an ms4 conveys only untreated stormwater. *See* 40 C.F.R. § 122.26(a)(7), (b)(8).

3 Throughout this Opinion, reference is made to both "ms4" and the "LA MS4." The former is a generic reference to an individual municipal separate storm sewer system without regard to its particular location, while the latter specifically refers to the entire flood control and storm-sewer infrastructure described *supra* that exists in Los Angeles County, and which is made up of the various interconnected [**9] ms4s that are controlled by the County, the District, and the incorporated cities within the District.

4 An "outfall" is defined as a "point source . . . at the point where a municipal separate storm sewer discharges to waters of the United States. . . ." 40 C.F.R. § 122.26(b)(9). It is estimated that the LA

MS4 contains tens of thousands of outfalls where stormwater runoff is discharged into federally protected water bodies.

5 Plaintiffs originally complained about the County Defendants' discharges into four water bodies: the Los Angeles River, the San Gabriel River, the Santa Clara River, and Malibu Creek. *See Natural Res. Def. Council*, 673 F.3d at 883. On remand to this court, however, Plaintiffs only seek review of the district court's summary judgment ruling regarding the County Defendants' discharges into the Los Angeles and San Gabriel Rivers.

II. The County Defendants' NPDES Permit

Section 301(a) of the CWA prohibits the "discharge of any pollutant" from any "point source" into "navigable waters" unless the discharge complies with certain other sections of the CWA.⁶ *See* 33 U.S.C. § 1311(a). One of those sections is section 402, which provides for the issuance of NPDES permits. 33 U.S.C. § 1342. [**10] In nearly all cases, an NPDES permit is required before anyone may lawfully discharge a pollutant from a point source into the navigable waters of the United States. *See Arkansas v. Oklahoma*, 503 U.S. 91, 101-02, 112 S. Ct. 1046, 117 L. Ed. 2d 239 (1992); *Environmental Law Handbook* 323 (Thomas F. P. Sullivan ed., 21st ed. 2011).

6 A point source is defined as "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged." 33 U.S.C. § 1362(14). Throughout this litigation, there has been confusion regarding whether the LA MS4 is a "point source" under the CWA. *See Natural Res. Def. Council*, 673 F.3d at 898 (accepting Plaintiffs' argument that "[u]nder the Clean Water Act, the [LA] MS4 is a 'Point Source.'"). The LA MS4 is *not* a single point source. Rather, the LA MS4 is a collection of point sources, including outfalls, that discharge into the navigable waters of the United States.

Congress has empowered the EPA Administrator to delegate NPDES permitting authority to state agencies. 33 U.S.C. § 1342(b). [**11] Pursuant to this authority,

the EPA has authorized the State of California to develop water quality standards and issue NPDES permits. Pursuant to the Porter-Cologne Water Quality Control Act, California state law designates the State Water Resources Control Board and [*1199] nine regional boards as the principal state agencies charged with enforcing federal and state water pollution laws and issuing NPDES permits. *See* Cal. Water Code §§ 13000 *et seq.* The entity responsible for issuing permits in the Los Angeles area is the California State Water Resources Control Board for the Los Angeles Region (the Regional Board).

On June 18, 1990, the Regional Board first issued an NPDES permit (the Permit) regulating stormwater discharges by the County, the District, and the 84 incorporated municipalities in the District (collectively, the Permittees). The Permit has subsequently been renewed or amended several times, and the version of the Permit at issue in this litigation came into force on December 13, 2001.⁷ The Permit covers all relevant discharges that occur "within the boundaries of the Permittee municipalities . . . over which [the municipalities have] regulatory jurisdiction as well as unincorporated [**12] areas in Los Angeles County within the jurisdiction of the Regional Board."

7 On November 8, 2012, the Regional Board issued a new NPDES permit to the County Defendants and various other permittees.

The Permit runs to 99 pages and contains a myriad of rules, regulations, and conditions regarding the Permittees' operation of the LA MS4. However, only two sets of the Permit's provisions are particularly relevant to this appeal; those contained in Part 2, titled "Receiving Water Limitations," and those contained in the section titled "Monitoring and Reporting Program."

Part 2 places limits on the type and amount of pollutants the Permittees may lawfully discharge from the LA MS4. Specifically, Part 2 prohibits "discharges from the [LA] MS4 that cause or contribute to the violation of the Water Quality Standards or water quality objectives."⁸ The Permit defines "Water Quality Standards and Water Quality Objectives" as "water quality criteria contained in the Basin Plan, the California Ocean Plan, the National Toxics Rule, the California Toxics Rule, and other state or federal approved surface water quality plans."⁹ Succinctly put, the Permit incorporates the pollution standards promulgated [**13]

in other agency documents such as the Basin Plan, and prohibits stormwater discharges that "cause or contribute to the violation" of those incorporated standards. The Permit further provides that the Permittees "shall comply" with the LA MS4 discharge prohibitions outlined in Part 2 "through timely implementation of control measures and other actions to reduce pollutants in the[ir LA MS4] discharges"

8 Part 2 also mandates that "[d]ischarges from the [LA] MS4 of storm water, or non-storm water, for which a Permittee is responsible for [sic], shall not cause or contribute to a condition of nuisance."

9 Under California law, regional boards are required to formulate water quality plans, called "basin plans," which designate the beneficial uses of protected water bodies within the boards' jurisdiction, establish water quality objectives for those water bodies, and establish a program for implementing the basin plan. *See City of Burbank v. State Water Res. Control Bd.*, 35 Cal. 4th 613, 26 Cal. Rptr. 3d 304, 108 P.3d 862, 865 (Cal. 2005) (citing Cal. Water Code § 13050(j)).

The Monitoring and Reporting Program complements Part 2. Under that program, the Permittees are required to monitor the impacts of their LA MS4 discharges [**14] on water quality and to publish the results of all pollution monitoring at least annually. The primary objectives of the monitoring program include "assessing compliance" with the Permit, "measuring and improving the effectiveness" of the Los Angeles Countywide Stormwater Quality Management Program (SQMP),¹⁰ and assessing [*1200] the environmental impact of urban runoff on the receiving waters in the County.

10 The Permit defines the SQMP as "the Los Angeles Countywide Stormwater Quality Management Program, which includes descriptions of programs, collectively developed by the Permittees in accordance with the provisions of the NPDES permit, to comply with applicable federal and state law. . . ."

One of the principal ways the Permittees are required to monitor their LA MS4 discharges is through mass-emissions monitoring. Mass-emissions monitoring measures all constituents present in water, and the readings give a cumulative picture of the pollutant load in

a waterbody. The Permit requires the District, as Principal Permittee, to conduct mass-emissions monitoring at seven enumerated monitoring stations located throughout the County. The District is also responsible for analyzing the resulting [**15] data and submitting a comprehensive report of its findings.¹¹ According to the Permit, the purpose of mass-emissions monitoring is to: (1) estimate the mass emissions from the LA MS4; (2) assess trends in the mass emissions over time; and (3) determine if the LA MS4 is contributing to exceedances of Water Quality Standards by comparing the monitoring results to the applicable pollution standards promulgated in the Basin Plan and similar documents.

11 The District publishes these "Stormwater Monitoring Reports" on the internet at: http://ladpw.org/wmd/NPDES/report_directory.cfm. (last accessed August 1, 2013).

The Permittees sited a mass-emissions monitoring station in both the Los Angeles and San Gabriel Rivers (collectively, the Monitoring Stations). The Los Angeles River monitoring station is located in a channelized portion of the Los Angeles River that runs through the City of Long Beach.¹² The San Gabriel River monitoring station is located in a channelized portion of the San Gabriel River that runs through the City of Pico Rivera. The Monitoring Stations are located downstream of numerous LA MS4 outfalls controlled by the County Defendants and various other non-party Permittees.

12 In [**16] a declaration submitted to the district court, the County Defendants described both Monitoring Stations as being located "in a portion of the District's flood control channel." *See also* "Section Two: Site Descriptions," Los Angeles Cnty. Dept. of Pub. Works, *available at* http://dpw.lacounty.gov/wmd/npdes/9899_report/SiteDesc.pdf (last accessed August 1, 2013). Thus, it appears that the pertinent river segments are part of *both* the LA MS4 itself *and* "the waters of the United States" that the CWA protects. But regardless of whether the mass-emissions monitoring stations are *also* part of the LA MS4, there is no dispute that the mass-emissions monitoring stations are located *within* the Los Angeles and San Gabriel Rivers, downstream of a significant number of the County Defendants' LA MS4 outfalls. We misconstrued some of the data

before us when we previously held otherwise. *See Natural Res. Def. Council*, 673 F.3d at 899 ("As a matter of law and fact, the [LA] MS4 is distinct from the two navigable rivers; the [LA] MS4 is an intra-state man-made construction--not a naturally occurring Watershed River"); *see also* 53 Fed. Reg. 49,416, 49,453 (Dec. 7, 1988) (EPA observes that "[i]n many situations, [*17] waters of the United States that receive discharges from municipal storm sewers can be mistakenly considered to be part of the storm sewer system.").

Between 2002 and 2008, when this case was filed, the District published annual monitoring reports that contain the data that the District collected at the Monitoring Stations. According to those reports, the Monitoring Stations identified 140 separate exceedances of the Permit's water quality standards, including excessive levels of aluminum, copper, cyanide, zinc, and fecal coliform bacteria in both the Los Angeles and San Gabriel Rivers. The County Defendants do not dispute the accuracy of the monitoring data.

PROCEDURAL BACKGROUND

Using the monitoring data self-reported by the District, Plaintiffs cataloged the [*1201] water quality exceedances measured in various receiving waters in the County. Beginning on May 31, 2007, Plaintiffs sent a series of notice letters to the County Defendants informing them that Plaintiffs believed that they were violating the terms of the Permit.¹³ Specifically, Plaintiffs contended that the water quality exceedances documented in the District's monitoring reports demonstrated liability under the CWA. Dissatisfied [*18] with the County Defendants' response to these letters, Plaintiffs brought this citizen-enforcement action on March 3, 2008. After the district court dismissed certain elements of the Plaintiffs' initial complaint because notice of the Permit violations was defective, Plaintiffs sent the County Defendants an adequate notice letter on July 3, 2008.

13 The CWA requires plaintiffs to provide 60 days notice to an alleged violator, the State in which the violation is alleged to be occurring, and the EPA, before filing suit. 33 U.S.C. § 1365(b)(1)(A).

Plaintiffs filed their First Amended Complaint on September 18, 2008. In the complaint, Plaintiffs asserted

six causes of action under the CWA. Four of the Plaintiffs' claims, which the district court designated the "Watershed Claims," were initially before us on appeal. The first three Watershed Claims allege that, beginning in 2002 or 2003, the County Defendants caused or contributed to exceedances of water quality standards in the Santa Clara River (Claim 1), the Los Angeles River (Claim 2), and the San Gabriel River (Claim 3), in violation of 33 U.S.C. §§ 1311(a), 1342(p). The fourth Watershed Claim alleges that, beginning in 2002, County Defendants [*19] caused or contributed to exceedances of the water quality standards and violated the total maximum daily load limits in Malibu Creek. All of the Watershed Claims rest on the same premise: (1) the Permit incorporates water-quality limits for each receiving water body; (2) mass-emissions monitoring stations have recorded pollutant loads in the receiving water bodies that exceed those permitted under the relevant standards; (3) an exceedance constitutes non-compliance with the Permit and, thereby, the Clean Water Act; and (4) County Defendants, as holders of the Permit and joint operators of the LA MS4, are liable for these exceedances under the Act.

Early in the litigation, the district court bifurcated liability and remedy, and all proceedings related to remedy were stayed until liability was determined. On March 2, 2010, the district court denied all parties' cross-motions for summary judgment with regard to liability. *NRDC v. Cnty. of L.A.*, No. CV 08-1467-AHM, 2010 U.S. Dist. LEXIS 25083, 2010 WL 761287 (C.D. Cal. Mar. 2, 2010), *amended on other grounds*, 2011 U.S. Dist. LEXIS 11665, 2011 WL 666875 (C.D. Cal. Jan. 27, 2011). Although the district court accepted Plaintiffs' arguments that the Permit "clearly prohibits 'discharges from the [LA] [*20] MS4 that cause or contribute to the violation of Water Quality Standards or water quality objectives,'" 2010 U.S. Dist. LEXIS 25083, 2010 WL 761287, at *6, and that mass-monitoring stations "are the proper monitoring locations to determine if the [LA] MS4 is contributing to exceedances" of the Water Quality Standards or water quality objectives, *id.*, the district court held that Plaintiffs were improperly attempting to use the District's self-reported monitoring data to establish liability without presenting evidence that any individual defendant was discharging pollutants that "cause[d] or contribute[d] to the violation" of the water quality standards. *Id.* The district court observed that although "the District is responsible for the pollutants in the [LA] MS4" at the time they pass the Monitoring

Stations, "that does not necessarily determine the question of whether the water passing by these points is [*1202] 'discharge' within the meaning of the Permit and the Clean Water Act." 2010 U.S. Dist. LEXIS 25083, [WL] at *7. Unable to determine whether any of the County Defendants' upstream LA MS4 outflows were contributing polluted stormwater to navigable waters, the district court stated that "Plaintiffs would need to present some evidence (monitoring [**21] data or an admission) that some amount of a standards-exceeding pollutant is being discharged through at least one District outlet." 2010 U.S. Dist. LEXIS 25083, [WL] at *8.

Following supplemental briefing, the district court again determined that "Plaintiffs failed to present evidence that the standards-exceeding pollutants passed through the Defendants' [LA] MS4 *outflows* at or near the time the exceedances were observed. Nor did Plaintiffs provide any evidence that the mass emissions stations themselves are located at or near a Defendant's outflow." The district court thus entered summary judgment for the County Defendants on the Watershed Claims.

On June 9, 2010, the district court entered a partial final judgment on the Watershed Claims under Fed. R. Civ. P. 54(b). The court reasoned that an interlocutory appeal was appropriate because the Watershed Claims are "factually and legally severable" from the Plaintiffs' other claims and "[t]he parties and the Court would benefit from appellate resolution of the central legal question underlying the watershed claims: what level of proof is necessary to establish defendants' liability." The Plaintiffs timely appealed.

On appeal, the Plaintiffs pressed the same legal argument [**22] they advanced in the district court: that the data published in the County Defendants' annual monitoring reports--data which shows undisputed pollution exceedances at the mass-emissions monitoring stations--conclusively establishes the County Defendants' liability for Permit violations as a matter of law. Like the district court, we rejected this contention and held that the Plaintiffs must submit at least some additional proof of the County Defendants' *individual* contributions to the measured Permit violations. See *Natural Res. Def. Council*, 673 F.3d at 898 (noting that "the Clean Water Act does not prohibit 'undisputed' exceedances; it prohibits 'discharges' that are *not* in compliance with the Act. . . . While it may be undisputed that exceedances have been detected, responsibility for those exceedances

requires proof that some entity discharged a pollutant.").

Nonetheless, we held the District liable for CWA violations in the Los Angeles and San Gabriel Rivers because we concluded that the mass-emissions monitoring stations for each river are "located in a section of the [LA] MS4 owned and operated by the District" and that "when pollutants were detected, they had not yet exited the [**23] point source into navigable waters." *Id.* at 899. We further clarified that "[t]he [relevant] discharge from a point source occurred when the still-polluted stormwater flowed out of the concrete channels where the Monitoring Stations are located, through an outfall, and into the navigable waterways. We agree with Plaintiffs that the precise location of each outfall is ultimately irrelevant because there is no dispute that [the LA] MS4 eventually adds stormwater to the Los Angeles and San Gabriel Rivers downstream from the Monitoring Stations." *Id.* at 900.

On October 11, 2011, the District filed a petition for writ of certiorari, 673 F.3d 880, 2011 WL 4874090, which was granted in part on June 25, 2012. *L.A. Cnty. Flood Control Dist. v. Natural Res. Def. Council, Inc.*, 133 S. Ct. 23, 183 L. Ed. 2d 673 (2012). The Supreme Court granted review in order to answer a single question: "Under the CWA, does a discharge of pollutants occur when polluted water [*1203] flows from one portion of a river that is navigable water of the United States, through a concrete channel or other engineered improvement in the river, and then into a lower portion of the same river?" *L.A. Cnty. Flood Control Dist.*, 133 S. Ct. at 712-13 (internal quotation [**24] marks omitted). The Court answered in the negative, and re-affirmed its holding in *S. Fla. Water Mgmt. Dist. v. Miccosukee Tribe of Indians*, 541 U.S. 95, 124 S. Ct. 1537, 158 L. Ed. 2d 264 (2004), that "pumping polluted water from one part of a water body into another part of the same body is not a discharge of pollutants under the CWA." *L.A. Cnty. Flood Control Dist.*, 133 S. Ct. at 711. The Court did not address any other basis for the District's potential liability for Permit violations and instead reversed our prior judgment and remanded this case to us for additional proceedings. *Id.* at 713-14.

JURISDICTION AND STANDARD OF REVIEW

We have jurisdiction under 28 U.S.C. § 1291. We review the district court's grant of summary judgment *de novo*. *Assoc. to Protect Hammersley, Eld, & Totten Inlets v. Taylor Res., Inc.*, 299 F.3d 1007, 1009 (9th Cir. 2002).

DISCUSSION

I.

Plaintiffs return from the Supreme Court with the same argument they have consistently advanced throughout this litigation--that the County Defendants' monitoring data establishes their liability for Permit violations as a matter of law. We previously rejected this argument, *see Natural Res. Def. Council*, 673 F.3d at 898, and the Supreme Court explicitly declined [**25] to address it.¹⁴

14 *See L.A. Cnty. Flood Control Dist.*, 133 S. Ct. at 713-14 ("Under the permit's terms, the NRDC and Baykeeper maintain, the exceedances detected at instream monitoring stations are by themselves sufficient to establish the District's liability under the CWA for its upstream discharges. This argument failed below. It is not embraced within, or even touched by, the narrow question on which we granted certiorari. We therefore do not address, and indicate no opinion on, the issue NRDC and Baykeeper seek to substitute for the question we took up for review.").

On remand, the County Defendants argue that we may not reconsider our earlier decision because it has become "final," and because "reconsideration of Appellants' monitoring argument would fly in the face of the finality given to decisions of this Court after denial of rehearing or expiration of the time in which to seek such further review." Alternatively, the County Defendants argue that our earlier disposition should be left undisturbed because it has become the law of the case. The County Defendants are mistaken on both counts.

"No opinion of this circuit becomes final until the mandate issues[.]" *Carver v. Lehman*, 558 F.3d 869, 878 (9th Cir. 2009); [**26] *see also* Fed R. App. P. 41(c), 1998 Adv. Comm. Note ("A court of appeals' judgment or order is not final until issuance of the mandate[.]"). Thus, we have explained that a "court of appeals may modify or revoke its judgment at any time prior to issuance of the mandate, sua sponte or by motion of the parties." *United States v. Foumai*, 910 F.2d 617, 620 (9th Cir. 1990). The mandate in this case has not issued. Consequently, our earlier judgment is not final. *Carver*, 558 F.3d at 878. Nor can it be considered the law of the case. *See id.* at 878 n.16 ("[U]ntil the mandate issues, an

opinion is not fixed as settled Ninth Circuit law, and reliance on the opinion is a gamble." (citation omitted)); *see also Key Enters. of Del., Inc. v. Venice Hosp.*, 9 F.3d 893, 898 (11th Cir. [*1204] 1993) ("[B]ecause the panel's mandate had not issued, the panel's decision was never the 'law of the case.'"). Put simply, we are free to reconsider the merits of Plaintiffs' argument, and we now do so.

II.

Where a permittee discharges pollutants in compliance with the terms of its NPDES permit, the permit acts to "shield" the permittee from liability under the CWA. 33 U.S.C. § 1342(k). The permit shield is a major benefit [**27] to a permittee because it protects the permittee from any obligation to meet more stringent limitations promulgated by the EPA unless and until the permit expires. *See Piney Run Pres. Ass'n v. Cnty. Comm'rs of Carroll Cnty.*, 268 F.3d 255, 266-69 (4th Cir. 2001); *see also The Clean Water Act Handbook* 67 (Mark A. Ryan ed., 3rd ed. 2011). Of course, with every benefit comes a cost: a permittee violates the CWA when it discharges pollutants in excess of the levels specified in the permit, or where the permittee otherwise violates the permit's terms. *See Russian River Watershed Prot. Comm. v. City of Santa Rosa*, 142 F.3d 1136, 1138 (9th Cir. 1998); *see also* 40 C.F.R. § 122.41(a) ("Any permit noncompliance constitutes a violation of the Clean Water Act and is grounds for [an] enforcement action"); *Nw. Envtl. Advocates v. City of Portland*, 56 F.3d 979, 986 (9th Cir. 1995) (noting that "[t]he plain language of [the CWA citizen suit provision] authorizes citizens to enforce all permit conditions"); *Environmental Law Handbook* 327 ("The primary purpose of NPDES permits is to establish enforceable effluent limitations.").

Plaintiffs allege that the County Defendants are violating the terms of the [**28] Permit by discharging pollutants into the Los Angeles and San Gabriel Rivers in excess of the permitted levels. County Defendants do not dispute that they are discharging pollutants from the LA MS4 into these rivers. Nor can the County Defendants dispute that their own monitoring reports demonstrate that pollution levels recorded at the Monitoring Stations are in excess of those allowed under the Permit. Rather, the County Defendants focus on their perception of the evidentiary burden Plaintiffs must satisfy in order to hold any individual defendant liable for these pollution exceedances. Plaintiffs contend that they may rely

exclusively on the District's monitoring reports to establish liability. County Defendants, however, argue that they cannot be held liable for Permit violations based solely on the data published in the District's monitoring reports because: (1) the mass-emissions monitoring required under the Permit was "neither designed nor intended" to measure the compliance of any Permittee; and (2) the monitoring data cannot parse out precisely *whose* discharge(s) contributed to any given exceedance because the Monitoring Stations sample pollution levels downstream from a [**29] legion of discharge points (e.g., LA MS4 outfalls) controlled by various Permittees and other non-party entities, as opposed to at the discharge points themselves.

To resolve the parties' contentions, we must interpret the language of the Permit. Although the NPDES permitting scheme can be complex, a court's task in interpreting and enforcing an NPDES permit is not--NPDES permits are treated like any other contract. *See Nw. Envtl. Advocates*, 56 F.3d at 982 ("We review the district court's interpretation of the 1984 permit as we would the interpretation of a contract or other legal document.").¹⁵ If the language of the permit, considered in light of the structure of the permit as a [*1205] whole, "is plain and capable of legal construction, the language alone must determine the permit's meaning." *Piney Run Pres. Ass'n*, 268 F.3d at 270 (citation omitted). If, however, the permit's language is ambiguous, we may turn to extrinsic evidence to interpret its terms. *Id.* Our sole task at this point of the case is to determine what Plaintiffs are required to show in order to establish *liability* under the terms of *this particular* NPDES permit.¹⁶

¹⁵ *See also Piney Run Pres. Ass'n*, 268 F.3d at 269-70; *Am. Canoe Ass'n, Inc. v. D.C. Water & Sewer Auth.*, 306 F. Supp. 2d 30, 42 (D.D.C. 2004).

¹⁶ The [**30] question before us is not whether the Clean Water Act mandates any particular result. An NPDES permitting authority has wide discretion concerning the terms of a permit. It could, for example, lawfully write an ms4 permit that provides that all permittees will share liability in some ratio for any measured exceedance of applicable pollutant limits. Or, as a further example, a permitting authority could lawfully write a permit providing that only the co-permittee(s) whose specific discharges are

connected to a particular pollutant exceedance may be held liable for the permit violation. *See* 33 U.S.C. § 1342(a)(2) ("The Administrator shall prescribe conditions for [NPDES] permits to assure compliance with the requirements of [33 U.S.C. § 1342(a)(1)], including conditions on data and information collection, reporting, and such other requirements as he deems appropriate.").

A. The Plain Language of the Permit

"[NPDES permit] terms are to be given their ordinary meaning, and when the terms of a [permit] are clear, the intent of the parties must be ascertained from the [permit] itself." *Klamath Water Users Protective Ass'n v. Patterson*, 204 F.3d 1206, 1210 (9th Cir. 1999). Plaintiffs argue [**31] that the text of the County Defendants' Permit is clear, and provides that the District's mass-emissions monitoring data will be used to assess the County Defendants' compliance with the Permit, and particularly Part 2, which prohibits "discharges from the [LA] MS4 that cause or contribute to the violation of Water Quality Standards or water quality objectives." The County Defendants dispute this notion, and first claim that the District's mass-emissions monitoring is intended to serve only a hortatory purpose. As County Defendants state, "the mass emission monitoring program . . . neither measures nor was designed to measure any individual permittee's compliance with the Permit." This argument is clearly belied by the text of the Permit and is rejected.

The Permit establishes a "Monitoring and Reporting Program" with the stated objectives of *both* characterizing stormwater discharges *and* assessing compliance with water-quality standards. The Permit language could not be more explicit in this regard, stating that "[a]ssessing compliance with this [Permit]" is one of the "primary objectives of the Monitoring Program." "The fact that the parties dispute a [permit's] meaning does not establish [**32] that the [permit] is ambiguous; it is only ambiguous if reasonable people could find its terms susceptible to more than one interpretation." *Klamath Water Users Protective Ass'n*, 204 F.3d at 1210. No reasonable person could find even the slightest ambiguity in the phrase "[t]he primary objectives of the Monitoring Program include, but are not limited to: Assessing compliance with this [Permit]." Consequently, we decline to embrace the County Defendants' initial argument that "the mass-emission monitoring stations, as

a matter of fact, do not assess the compliance of any permittee with the Permit"

County Defendants' alternative argument, while more facially appealing, fares no better. Specifically, the County Defendants point to certain Permit language they claim shows that the Regional Board did not intend for the mass--emissions monitoring data to be used to establish liability for Permit violations. For instance, [*1206] the County Defendants note that the Permit provides that "[e]ach permittee is responsible only for a discharge for which it is the operator." County Defendants also cite language in Part 2 that reads: "Discharges from the [LA] MS4 of storm water, or non-storm water, [**33] for which a Permittee is responsible for [sic], shall not cause or contribute to a condition of nuisance." The County Defendants read this language as precluding a finding of liability against them--or any other Permittee--without independent monitoring data establishing that discharges from a particular entity's ms4 outfalls exceeded standards.

"[A] court must give effect to every word or term" in an NPDES permit "and reject none as meaningless or surplusage. . . ." *In re Crystal Props., Ltd., L.P.*, 268 F.3d 743, 748 (9th Cir. 2001) (quotations omitted); see also Restatement (Second) of Contracts § 203(a) (1981) ("[A]n interpretation which gives a reasonable, lawful, and effective meaning to all the terms is preferred to an interpretation which leaves a part unreasonable, unlawful, or of no effect."). "Therefore, we must interpret the [Permit] in a manner that gives full meaning and effect to all of the [Permit's] provisions and avoid a construction of the [Permit] that focuses only on" a few isolated provisions. *In re Crystal Props.*, 268 F.3d at 748.

The County Defendants' interpretation of the Permit ultimately must be rejected because it would create an unreasonable result. Reading [**34] the clause that "[e]ach permittee is responsible only for a discharge for which it is the operator" to preclude use of the mass--emission monitoring data to "assess[] compliance with this [Permit]" would render the monitoring provisions of the Permit largely meaningless. Under the County Defendants' reading of the Permit, individual Permittees could discharge an unlimited amount of pollutants from the LA MS4 but never be held liable for those discharges based on the results of the mass--emissions monitoring, even though that monitoring is explicitly intended to assess whether Permittees are in

compliance with Part 2's discharge limitations. We are unwilling to accept such a strained interpretation. See *Mastrobuono v. Shearson Lehman Hutton, Inc.*, 514 U.S. 52, 63, 115 S. Ct. 1212, 131 L. Ed. 2d 76 (1995) (holding that courts should be guided by the "cardinal principle of contract construction: that a document should be read to give effect to all of its provisions and to render them consistent with each other"). A better reading of the Permit's putatively conflicting provisions, therefore, is the one proposed by Plaintiffs. Limiting a Permittee's responsibility to "discharge[s] for which it is the operator" applies to the [**35] appropriate *remedy* for Permit violations, not to *liability* for those violations. Indeed, Plaintiffs' reading is consistent with the remedial scheme of the Permit itself. If the LA MS4 is found to be contributing to water quality violations, each Permittee must take appropriate remedial measures with respect to its *own* discharges.¹⁷ Thus, a finding of *liability* against the County Defendants would not, as defendants argue, hold any County Defendant responsible for discharges for which they are not "the operator."

17 The relevant Permit provision states: "Each Permittee is required to comply with the requirements of this Order applicable to discharges within its boundaries . . . and not for the implementation of the provisions applicable to the Principal Permittee or other Permittees."

In sum, and contrary to the County Defendants' contentions, the language of the Permit is clear--the data collected at the Monitoring Stations is intended to determine whether the Permittees are in compliance with the Permit. If the District's [*1207] monitoring data shows that the level of pollutants in federally protected water bodies exceeds those allowed under the Permit, then, as a matter of permit construction, [**36] the monitoring data conclusively demonstrate that the County Defendants are not "in compliance" with the Permit conditions. Thus, the County Defendants are liable for Permit violations.

B. Extrinsic Considerations

Although we believe the plain language of the Permit clearly contemplates that the County Defendants' monitoring data will be used to assess Permit compliance (*i.e.*, establish liability for CWA violations), we note that numerous extrinsic considerations also undercut the County Defendants' position.

First and foremost, the Clean Water Act *requires* every NPDES permittee to monitor its discharges into the navigable waters of the United States in a manner sufficient to determine whether it is in compliance with the relevant NPDES permit. 33 U.S.C. § 1342(a)(2); 40 C.F.R. § 122.44(i)(1) ("[E]ach NPDES permit shall include conditions meeting the following . . . monitoring requirements . . . to assure compliance with permit limitations."). That is, an NPDES permit is unlawful if a permittee is not required to effectively monitor its permit compliance. *See* 40 C.F.R. § 122.26(d)(2)(i)(F) ("Permit applications for discharges from large and medium municipal storm sewers . . . shall include [**37] . . . monitoring procedures necessary to determine compliance and noncompliance with permit conditions . . ."). As previously noted, the County Defendants contend that the mass--emissions monitoring program "neither measures nor was designed to measure any individual permittee's compliance with the Permit." But if the County Defendants are correct, the Permit would be unlawful under the CWA. We must interpret the provisions of the Permit like any other contract and reject an interpretation that would render the Permit unenforceable. *See Walsh v. Schlecht*, 429 U.S. 401, 408, 97 S. Ct. 679, 50 L. Ed. 2d 641 (1977) (noting that "contracts should not be interpreted to render them illegal and unenforceable where the wording lends itself to a logically acceptable construction that renders them legal and enforceable"); *see also Nw. Env'tl. Advocates*, 56 F.3d at 984; Restatement (Second) of Contracts § 203.

Second, the County Defendants' position has been explicitly rejected by the Regional Board, the entity that issued the Permit. This is important because one of our obligations in interpreting an NPDES permit is "to determine the intent of the permitting authority. . . ." *Piney Run Pres. Ass'n*, 268 F.3d at 270. Thus, we [**38] give significant weight to any extrinsic evidence that evinces the permitting authority's interpretation of the relevant permit. *See Nw. Env'tl. Advocates*, 56 F.3d at 985 (relying on "significant evidence from [the state permitting agency], the permit author," to determine the proper scope of an NPDES permit).

Here, the record contains an amicus brief filed by the Regional Board in a lawsuit nearly identical to this one.¹⁸ In that suit, these same Plaintiffs sued the City of Malibu, one of the County Defendants' co-permittees, for violating the NPDES Permit at issue in this case. In its brief, the Regional Board stated its position that:

The Permit recognizes that the inter-connected nature of the system means that it may be difficult to determine exactly where [pollutants] originated [**1208] within the [LA] MS4. This does not mean, however, that the Permit assumes only one permittee may be responsible. Instead, it recognizes that in such an integrated storm sewer system, one or more Permittees may have caused or contributed to violations. . . . Having constructed a joint sewer system that, by design, co-mingles the [Permittees'] discharges, they cannot avoid enforcement because one cannot determine [**39] the original source of pollutants in the waste stream.

18 *Santa Monica Baykeeper, et al. v. City of Malibu*, No. CV-08-01465 (AHM) (C.D. Cal. Mar. 3, 2008).

The Regional Board also noted that "the monitoring program that the permittees requested (and were granted) does not readily generate the permittee--by--permittee outfall data that the [County Defendants] would require as a precondition to enforcement." As a result, the Regional Board disagreed with any construction of the Permit that would require individualized proof of a Permittees' discharges in order to establish liability. Simply put, the Regional Board indicated that it "does not agree" that the "burden [of proving Permit violations] rests upon the enforcing entity." Although we do not defer to the Regional Board's interpretation of the Permit, *see Orthopaedic Hosp. v. Belshe*, 103 F.3d 1491, 1495 (9th Cir. 1997), its rejection of the County Defendants' position is clearly instructive.

Finally, the County Defendants' arguments run counter to the purposes of the CWA, and ignore the inherent complexity of ensuring an ms4's compliance with an NPDES permit that covers thousands of different point sources and outfalls. As we have previously [**40] recognized, "[t]he NPDES program fundamentally relies on self-monitoring." *Sierra Club v. Union Oil Co. of Cal.*, 813 F.2d 1480, 1491 (9th Cir. 1987), *vacated and remanded on other grounds*, 485 U.S. 931, 108 S. Ct. 1102, 99 L. Ed. 2d 264 (1988), *and reinstated and*

amended by 853 F.2d 667 (9th Cir. 1988). Congress' purpose in adopting this self-monitoring mechanism was to promote straightforward enforcement of the Act. *See id.* at 1492 (noting that Congress wished to "avoid the necessity of lengthy fact finding, investigations, and negotiations at the time of enforcement. Enforcement of violations of requirements under this Act should be based on relatively narrow fact situations requiring a minimum of discretionary decision making or delay") (quoting S. Rep. No. 92-414, 92nd Cong., 1st Sess. 64, *reprinted in* 1972 U.S. Code Cong. & Ad. News 3668, 3730)).¹⁹ Or, as one treatise writer has described enforcement of the Act:

The CWA is viewed by many as the easiest of the federal environmental statutes to enforce. This is because persons regulated under the act normally must report their own compliance and noncompliance to the regulating agency. For example, holders of NPDES permits must file periodic discharge monitoring reports [**41] (or DMRs), which must contain the results of all monitoring of discharges, and must indicate where those discharges exceed permit limitations. . . . Thus, enforcement actions may be brought based on little, if anything, more than the DMRs and other reports submitted by the permittee itself.

Environmental Law Handbook at 357-58.

¹⁹ *See also* 44 Fed. Reg. 32,854, 32,863 (June 7, 1979) ("Congress intended that prosecution for permit violations be swift and simple.").

Admittedly, regulating pollution from ms4s is substantially more complicated than regulating pollution from a few defined point sources. Like the LA MS4 at issue here, municipal separate storm sewer systems often cover many square miles and comprise numerous, geographically [**1209] scattered, and sometimes uncharted sources of pollution, including streets, catch basins, gutters, man-made channels, and storm drains. Faced with the difficult task of regulating millions of storm-sewer point sources, Congress amended the CWA in 1987 to grant the EPA the express authority to create a separate permitting program for ms4s. 33 U.S.C. § 1342(p)(2), (3). In enacting these amendments, Congress

recognized that for large urban areas like Los Angeles, [**42] ms4 permitting cannot be accomplished on a source-by-source basis. The amendments therefore give the EPA, or a state like California to which the EPA has delegated permitting authority, broad discretion to issue permits "on a system-wide or jurisdiction-wide basis," 40 C.F.R. § 122.26(a)(1)(v), rather than requiring cities and counties to obtain separate permits for millions of individual stormwater discharge points. This increased flexibility is crucial in easing the burden of issuing stormwater permits for both permitting authorities and permittees.²⁰

²⁰ *See* 55 Fed. Reg. 47,990, 48,046 (Nov. 16, 1990) (noting that issuing individual permits to cover all ms4 discharges to the waters of the United States is "unmanageable"); *id.* at 48,049-48,050 ("Given the complex, variable nature of storm water discharges from municipal systems, EPA favors a permit scheme where the . . . [p]ermit writers have the necessary flexibility to develop monitoring requirements that more accurately reflect the true nature of highly variable and complex discharges.").

But while otherwise more flexible than the traditional NPDES permitting system, nothing in the ms4 permitting scheme relieves permittees of the [**43] obligation to monitor their compliance with their NPDES permit in some fashion. *See* 33 U.S.C. § 1342(a)(2) ("The Administrator shall prescribe conditions for [NPDES] permits to assure compliance with the requirements of [the permit], including conditions on data and information collection, reporting, and such other requirements as he deems appropriate."); 40 C.F.R. § 122.44(i)(1) (establishing that every permit "shall include" monitoring "[t]o assure compliance with the permit limitations"). Rather, EPA regulations make clear that while ms4 NPDES permits need not require monitoring of each stormwater source at the precise point of discharge, they may instead establish a monitoring scheme "sufficient to yield data which are *representative of the monitored activity*. . . ." 40 C.F.R. § 122.48(b) (emphasis added). In fact, EPA regulations require permittees, like the County Defendants here, to propose a "monitoring program for *representative data collection* for the term of the permit that describes the location of outfalls or field screening points to be sampled (*or the location of instream stations*)" and explain "why the [chosen] location is *representative*. . . ." 40 C.F.R. §

122.26(d)(2)(iii)(D) [**44] (emphases added). Here, the County Defendants did just that. County Defendants themselves chose the locations of the Monitoring Stations, locations that are downstream from a significant number of their outfalls.²¹ And, as required by law, the County Defendants chose locations that they certified were necessarily "representative" of the monitored activity (*i.e.*, the Permittees' discharges of stormwater runoff into the navigable waters of the United States).²² Now, however, County Defendants claim [*1210] that their compliance with the Permit cannot be measured using the results of the representative monitoring they themselves agreed to, that the Regional Board approved, and that the Permit itself contemplates is to be used to assess compliance with its terms. We take this opportunity to reevaluate and reject County Defendants' arguments.

21 "Q: Does the County's ms4 outlet to any tributaries of the Los Angeles River? A: Yes. Q: Does it outlet to tributaries of the Los Angeles River upstream of the mass emissions station? A: Yes. . . . Q: Does [the County's ms4] outlet to the San Gabriel River upstream of the mass emissions station? A: Yes." Pestrella Dep. 697:7-698:6, June 2, 2009.

22 "Q: Who [**45] selected the location of those stations, do you know? A: The County selected those locations for a particular purpose.

And the purpose was [to be] far enough away from tidal influence *so that you would be characterizing the stormwater runoff as opposed to ocean waters*. Q: And the locations were then approved by Regional Board staff; is that correct? A: Correct." Wamikannu Dep. 130:13-130:19, July 1, 2009 (emphasis added).

CONCLUSION

Because the results of County Defendants' pollution monitoring conclusively demonstrate that pollution levels in the Los Angeles and San Gabriel Rivers are in excess of those allowed under the Permit, the County Defendants are *liable* for Permit violations as a matter of law. This case is remanded to the district court for further proceedings consistent with this opinion, including a determination of the appropriate *remedy* for the County Defendants' violations.

REVERSED and REMANDED.

June 4, 1992, Filed

PRIOR HISTORY: [**1] Petition for Review of a Rule Promulgated by the Environmental Protection Agency.

COUNSEL: Robert W. Adler, Natural Resources Defense Council, Washington, D.C., for the petitioner.

Daniel S. Goodman, United States Department of Justice, Washington, D.C., for the respondent.

Dennis J. Whittsley, Collier, Shannon & Scott, Washington, D.C., for intervenors-respondents American Association of Airport Executives, Chemical Specialties Manufacturers Association, Institute of Scrap Recycling Industries, Inc., Leather Industries of America, National Tank Truck Carriers, Inc., Rubber Manufacturers Association, and Specialty Steel Industry of the United States.

William T. O'Neil, Covington & Burling, Washington, D.C., for intervenors-respondents National Food Processors Association and Chemical Manufacturers Association.

Kurt J. Olson, Weinberg, Bergeson & Neuman, Washington, D.C., for intervenor-respondent Battery Council International.

Ellen Siegler, American Petroleum Institute, Washington, D.C., for intervenor-respondent American Petroleum Institute.

Kristy A. Niehaus, Hunton & Williams, Washington, D.C., for intervenor-respondent Electric Utilities.

Russell S. Frye, Chadbourne & Parke, [**2] Washington, D.C., for intervenors-respondents American Paper Institute and National Forest Products Association.

John H. Turner, National Solid Wastes Management Association, Washington, D.C., for intervenor-respondent National Solid Wastes Management Association.

R. Timothy McCrum, Crowell & Moring, Washington, D.C., for intervenors-respondents American Mining Congress, National Coal Association, National Council of Coal Lessors, National Aggregates Association and American Iron and Steel Institute.

Robert J. Saner, II, White, Fine & Verville, Washington, D.C., for intervenor-respondent National Association of Flood and Stormwater Management Agencies.

JUDGES: Before: Harry Pregerson, Warren J. Ferguson, and Diarmuid F. O'Scannlain, Circuit Judges. Opinion by Judge Ferguson; Partial Concurrence, Partial Dissent by Judge O'Scannlain.

OPINION BY: FERGUSON

OPINION

[*1295] OPINION

FERGUSON, Circuit Judge:

The Natural Resources Defense Council ("NRDC") challenges aspects of the Environmental Protection Agency's ("EPA") recent Clean Water Act storm water discharge rule. ¹ NRDC argues that the deadlines

contained in the rule and the scope of its coverage are unlawful under section 402(l), (p) of the Clean Water Act, [**3] 33 U.S.C. § 1342(l), (p). We grant partial relief.

1 National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges, 55 Fed. Reg. 47,990 (1990) (to be codified at 40 C.F.R. § 122.26); National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Application Deadline for Group Applications, 56 Fed. Reg. 12,098 (1991) (to be codified at 40 C.F.R. § 122.26(e)).

I. BACKGROUND

In 1972 Congress enacted significant amendments to the Clean Water Act ("CWA"), ² 33 U.S.C. §§ 1251-1387 (1988), "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." 33 U.S.C. § 1251(a). One major focus of the CWA is the control of "point source" pollution. A "point source" is "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel . . . from which pollutants are or may be discharged." 33 U.S.C. § 1362(14). The CWA also established [**4] the National Pollutant Discharge Elimination System ("NPDES"), requiring permits for any discharge of pollutants from a point source pursuant to section 402 of the CWA, 33 U.S.C. § 1342. The CWA empowers EPA or an authorized state to conduct an NPDES permitting program. 33 U.S.C. § 1342(a)-(b). Under the program, as long as the permit issued contains conditions that implement the requirements of the CWA, the EPA may issue a permit for discharge of any pollutant. 33 U.S.C. § 1342(a)(1).

2 The Act is popularly known as the Clean Water Act or the Federal Water Pollution Control Act. 33 U.S.C. § 1251. For more background on the CWA, see *EPA v. State Water Resources Control Bd.*, 426 U.S. 200, 202-209, 96 S. Ct. 2022, 48 L. Ed. 2d 578 (1976); *Sierra Club v. Union Oil of California*, 813 F.2d 1480, 1483 (9th Cir. 1987), *vacated on other grounds*, 485 U.S. 931, 108 S. Ct. 1102, 99 L. Ed. 2d 264 (1988); and *Natural Resources Defense Council v. Train*, 166 App. D.C. 312, 510 F.2d 692, 695-97 (D.C. Cir. 1975).

This case involves runoff [**5] from diffuse sources that eventually passes through storm sewer systems and is thus subject to the NPDES permit program. *See* National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Application Deadlines, 56 Fed. Reg. 56,548 (1991). One recent study concluded that pollution from such sources, including runoff from urban areas, construction sites, and agricultural land, is now a leading cause of water quality impairment. 55 Fed. Reg. at 47,991.³

3 The Nationwide Urban Runoff Program (NURP) conducted from 1978 through 1983 found that urban runoff from residential, commercial and industrial areas produces a quantity of suspended solids and chemical oxygen demand that is equal to or greater than that from secondary treatment sewage plants. 55 Fed. Reg. at 47,991. A significant number of samples tested exceeded water quality criteria for one or more pollutants. *Id.* at 47,992. Urban runoff is adversely affecting 39% to 59% of the harvest-limited shellfish beds in the waters off the East Coast, West Coast and in the Gulf of Mexico. 56 Fed. Reg. at 56,548.

[**6] *A. Efforts to Regulate Storm Water Discharge.*

Following the enactment of the CWA amendments in 1972, EPA promulgated NPDES permit regulations exempting a number of classes of point sources, including uncontaminated storm water discharge, on the basis of "administrative infeasibility," i.e., the extraordinary administrative burden imposed on EPA should it have to issue permits for possibly millions of point sources of runoff. *Natural Resources Defense Council v. Costle*, 186 App. D.C. 147, 568 F.2d 1369, 1372 & n.5, 1377 (D.C. Cir. 1977). NRDC [*1296] challenged the exemptions. Relying on the language of the statute, its legislative history and precedent, the D.C. Circuit held that the EPA Administrator did not have the authority to create categorical exemptions from regulation. *Id.* at 1379. However, the court acknowledged the agency's discretion to shape permits in ways "not inconsistent with the clear terms of the Act." *Id.* at 1382.

Following this litigation, EPA promulgated regulations covering storm water discharges in 1979, 1980 and 1984. 56 Fed. Reg. 56,548. NRDC challenged various aspects of these rules both at the administrative [**7] level as well as in the courts.

Recognizing both the environmental threat posed by storm water runoff⁴ and EPA's problems in implementing regulations,⁵ Congress passed the Water Quality Act of 1987⁶ containing amendments to the CWA ("the 1987 amendments"), portions of which set up a new scheme for regulation of storm water runoff. Section 402(p), as amended, established deadlines by which certain storm water dischargers must apply for permits, the EPA or states must act on permits and dischargers must implement their permits. *See* Appendix A. The Act also set up a moratorium on permitting requirements for most storm water discharges, which ends on October 1, 1992. There are five exceptions that are required to obtain permits before that date:

4 *See* 132 Cong. Rec. 32,381 (1986).

5 Senator Stafford, speaking in favor of the conference report for the Water Quality Act, noted that "EPA should have developed this program long ago. Unfortunately, it did not. The conference substitute provides a short grace period during which EPA and the States generally may not require permits for municipal separate storm sewers." 132 Cong. Rec. 32,381 (1986). Senator Chafee stated "the Agency has been unable to move forward with a [storm water discharge control] program, because the current law did not give enough guidance to the Agency. This provision provides such guidance, and I expect EPA to move rapidly to implement this control program." 133 Cong. Rec. 1,264 (1987).

[**8]

6 Pub. L. No. 100-4, 101 Stat. 7 (1987) (codified as amended in scattered sections of 33 U.S.C.).

(A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.

(B) A discharge associated with industrial activity.

(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.

(E) A discharge for which the Administrator or the State, . . . determines that the storm water discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to the waters of the

United States.

CWA § 402(p)(2); 33 U.S.C. § 1342(p)(2).

Section 402(p) also outlines an incremental or "phase-in" approach to issuance of storm water discharge permits. The purpose of this approach was to allow EPA and the states to focus their attention on the most serious problems first. 133 Cong. Rec. 991 (1987). Section 402(p) requires EPA to promulgate rules regulating permit application [**9] procedures in a staggered fashion.

Responding to the 1987 amendments requiring the EPA to issue permit application requirements for storm water discharges associated with industrial activities and large municipalities, the EPA issued final rules on November 16, 1990, almost two years after its deadline ("the November 1990 rule"). 55 Fed. Reg. at 47,990c. EPA issued amended rules on March 21, 1991 ("the March 1991 rule"). 56 Fed. Reg. at 12,098. It is to portions of these rules that NRDC objects.

B. Jurisdiction.

We have jurisdiction pursuant to CWA § 509(b)(1), 33 U.S.C. § 1369(b)(1). Section 509(b)(1) describes six types of actions by the EPA administrator that are subject to review in the court of appeals. Although the parties do not specify the section upon which they rely, § 509(b)(1)(F), 33 U.S.C. § 1369(b)(1)(F) allows the court to review [*1297] the issuance or denial of a permit under CWA § 402, 33 U.S.C. § 1342. The court also has the power to review rules that regulate the underlying permit procedures. *NRDC v. EPA*, 211 App. D. C. 179, 656 F.2d 768, 775 (D.C. Cir. 1981); *cf. E.I. duPont de Nemours & Co. v. Train*, 430 U.S. 112, 136, 51 L. Ed. 2d 204, 97 S. Ct. 965 (1976). [**10] NRDC filed timely petitions for review of the final rules at issue here pursuant to CWA § 509(b)(1), 33 U.S.C. 1369(b)(1).

C. Standing.

Any "interested person" may seek review of designated actions of the EPA Administrator. 33 U.S.C. § 1369(b)(1). This court has held that the injury-in-fact rule for standing of *Sierra Club v. Morton*, 405 U.S. 727, 733, 31 L. Ed. 2d 636, 92 S. Ct. 1361 (1972) covers the "interested person" language. *Trustees for Alaska v. EPA*, 749 F.2d 549, 554 (9th Cir. 1984) (adopting the analysis in *Montgomery Environmental Coalition v.*

Costle, 207 App. D.C. 233, 646 F.2d 568, 578 (D.C. Cir. 1980)). A petitioner under *Sierra Club* must suffer adverse affects to her economic interests or "aesthetic and environmental well-being." *Sierra Club*, 405 U.S. at 734. Intervenor are various industry and trade groups subject to regulation under the rules at issue. NRDC claims, inter alia, that EPA has delayed unlawfully promulgation of storm water regulations and that its regulations, as published, inadequately control storm water contaminants. NRDC's allegations and the potential economic impact of the rules on the intervenors satisfy the [**11] broad standing requirement applicable here.

II. DISCUSSION

A. Standard of Review.

5 U.S.C. § 706(2)(A) (1988) authorizes the court to "set aside agency action . . . found to be . . . arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law." Under this standard a court must find a "rational connection between the facts found and the choice made." *Sierra Pacific Indus.*, 866 F.2d 1099, 1105 (9th Cir. 1989) (citing *Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43, 77 L. Ed. 2d 443, 103 S. Ct. 2856 (1983)). The court must decide whether the agency considered the relevant factors and whether there has been a clear error of judgment. *Citizens to Preserve Overton Park, Inc. v. Volpe*, 401 U.S. 402, 416, 28 L. Ed. 2d 136, 91 S. Ct. 814 (1971).

On questions of statutory construction, courts must carry out the unambiguously expressed intent of Congress. If a statute is "silent or ambiguous with respect to the specific issue, the question for the court is whether the agency's answer is based on a permissible construction of the statute." *Chevron U.S.A. Inc. v. Natural Resources Defense Council Inc.*, 467 U.S. 837, 843, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984). [**12] Congress may leave an explicit gap, thus delegating legislative authority to an agency subject to the arbitrary and capricious standard. *Id.* at 843-44. If legislative delegation is implicit, courts must defer to an agency's

statutory interpretation as long as it is reasonable. *Id.* at 844. This is because an agency has technical expertise as well as the authority to reconcile conflicting policies. *See id.* Nevertheless, questions of congressional intent that can be answered with "traditional tools of statutory construction" are still firmly within the province of the courts. *INS v. Cardoza-Fonseca*, 480 U.S. 421, 447-48, 107 S. Ct. 1207, 94 L. Ed. 2d 434 (1987).

B. EPA's Extension of Statutory Deadlines.

1. Background.

NRDC challenges EPA's extension of certain statutory deadlines in the November 1990 and March 1991 rules. The statutory scheme calls for EPA to consider permit applications from the most serious sources of pollutants first: industrial dischargers and large municipal separate storm sewer systems ("large systems").⁷ The statute required EPA to establish regulations [**1298] for permit application requirements for these two groups by February [**13] 4, 1989; to receive applications for permits one year later, February 4, 1990; and to approve or deny the permits by February 4, 1991. Permittees may be given up to three years to comply with their permits. CWA § 402(p)(4)(A), 33 U.S.C. § 1342(p)(4)(A). Medium sized municipal separate storm sewer systems ("medium systems") (those serving a population of 100,000 or more but less than 250,000) are on a similar schedule, except that the deadlines are two years later. CWA § 402(p)(4)(B), 33 U.S.C. § 1342(4)(B). The temporary statutory exemption for all storm water sources expires on October 1, 1992. CWA § 402(p)(1), 33 U.S.C. § 1342(p)(1). EPA states that discharges from municipal separate storm sewer systems serving a population of under 100,000 are to be regulated after that date.

⁷ Large municipal systems are those serving a population of 250,000 or more. § 402(p)(2)(C).

The EPA rules at issue changed the statutory deadlines as follows:

Deadlines pursuant to CWA § 402(p) ⁸		EPA Deadlines ⁹	
Discharge type	Deadline to issue rules	Deadline for application and approval of permits	Application deadlines

Industrial	2/4/89	2/4/90 - applications due	see below
		2/4/91 - approval due	
Large municipal systems	08/04/89	2/4/90 - applications due	Part 1 - 11/18/91
		2/4/91 - approval	Part 2 - 11/16/92
Medium municipal systems	08/04/91	2/4/92 - applications due	Part 1 - 5/18/92
		2/4/93 - approval due	Part 2 - 5/17/93
EPA Application Deadlines for "Industrial Activity" Dischargers			
Individual	Group		
due 11/18/91	Part 1 9/30/91; Part 2 - 10/1/92		

8 Since NRDC filed this action, Congress has passed certain legislation affecting some of the deadlines at issue. Congress ratified the date of September 30, 1991 for part 1 of group applications for industrial dischargers. *See* Dire Emergency Supplemental Appropriations Act of 1991, Pub. L. No. 102-27, § 307, 105 Stat. 130, 152 (1991).

Section 1068 of the Intermodal Surface Transportation Efficiency Act of 1991 ("ISTEA") clarifies the deadlines for storm water discharges associated with industrial activity from facilities owned or operated by a municipality. Pub. L. No. 102-240, § 1068, 105 Stat. 1914, 2007 (1991). ISTEA deadlines are being reviewed in a separate case. Nothing in this opinion should be viewed as requiring EPA to comply with deadlines that have been altered or superseded by the ISTEA.

9 *See* 55 Fed. Reg. at 48,071-72 (to be codified at 40 C.F.R. § 122.26(e)); 56 Fed. Reg. at 12,100 (to be codified at 40 C.F.R. § 122.26(e)(2)(iii)). EPA changed certain of these deadlines after this case was submitted. These changes are the subject of a separate case.

The EPA rules at issue set no date for final approval or denial of applications from municipal or industrial dischargers, nor for compliance by these regulated entities. *See* 55 Fed. Reg. at 48,072.

[**14] As the chart illustrates, EPA made other elaborations on the statutory scheme in addition to extending the deadlines. Medium and large municipal systems and industrial dischargers are now subject to a two-part application process. 55 Fed. Reg. at 48,072. The November 1990 rules allow industrial dischargers to apply for either individual or group permits. *Id.* at 48,066-67. [*1299] The March 1991 rules further extended the deadline for part 1 of the group industrial discharger permits to September 30, 1991. ¹⁰ 56 Fed. Reg. at 12,098. A final rule published on April 2, 1992 extended the deadline for the part 2 group application for industrial dischargers from May 18, 1992 to October 1, 1992. 57 Fed. Reg. at 11,394. The EPA rules at issue contain neither deadlines for final EPA or state approval of permits nor deadlines for compliance with the permit terms.

10 NRDC initially claimed that this extension was unlawful because it was granted without proper notice and comment. However, Congress approved this extended deadline in a supplemental appropriations bill. Dire Emergency Supplemental Appropriations Act of 1991, Pub.L. No. 102-27 § 307, 105 Stat. 130, 152 (1991). This Act moots the procedural and substantive challenge to this extended deadline.

[**15] Seeking to compel the EPA to conform to the statutory scheme, NRDC asks this court:

a) to declare unlawful EPA's failure to issue certain of the storm water permitting regulations by February 4, 1989 and EPA's extension of certain statutory deadlines;

b) to enjoin EPA from granting future extensions of the deadlines;

c) to compel EPA to include deadlines for permit approval or denial and permit compliance consistent with the statute; and

d) to compel EPA to require that medium and small municipal systems meet the same deadlines as large systems.

2. Discussion.

a. Request for Declaratory Relief.

NRDC asks the court to (1) declare unlawful EPA's failure to issue storm water permitting regulations by February 4, 1989; and (2) declare unlawful EPA's extension of deadlines for submission of permit applications by large and medium systems and individual industrial dischargers.

A request for declaratory relief in a challenge to an agency action is ripe for review if the action at issue is final and the questions involved are legal ones. *Public Util. Dist. No. 1 v. Bonneville Power Admin.*, 947 F.2d 386, 390 n. 1 (9th Cir. 1991) (citations omitted), *cert. denied*, [**16] ___U.S.___, 112 S. Ct. 1759, 118 L. Ed. 2d 422, 60 U.S.L.W. 3537 (1992). Here, the agency regulations are final. *See* 55 Fed. Reg. at 47,990, 56 Fed. Reg. at 12,096. The question of whether the EPA is bound by the statutory scheme set by Congress is a legal one. The request for declaratory relief is therefore ripe for consideration by this court.

The granting of declaratory relief "rests in the sound discretion of the [] court exercised in the public interest." 10A Charles A. Wright, Arthur R. Miller & Mary K. Kane, *Federal Practice & Civil Procedure* § 2759, at 645 (1983). The guiding principles are whether a judgment will clarify and settle the legal relations at issue and whether it will afford relief from the uncertainty and controversy giving rise to the proceedings. *McGraw Edison Co. v. Preformed Line Products Co.*, 362 F.2d 339, 342 (9th Cir.) (citing Borchar, *Declaratory Judgments* 299 (2d ed. 1941)), *cert. denied*, 385 U.S. 919, 87 S. Ct. 229, 17 L. Ed. 2d 143 (1966). A court

declaration delineates important rights and responsibilities and can be "a message not only to the parties but also to the public and has significant educational and lasting importance." [**17] *Bilbrey v. Brown*, 738 F.2d 1462, 1471 (9th Cir. 1984). Because of the importance of the interests and the principles at stake, we grant declaratory relief.

EPA does not have the authority to ignore unambiguous deadlines set by Congress. *Delaney v. EPA*, 898 F.2d 687, 691 (9th Cir.), *cert. denied*, 111 S. Ct. 556, 112 L. Ed. 2d 563 (1990). In arguing against injunctive relief, EPA points to cases recognizing factors indicating that equitable relief may be inappropriate. *See, e.g., In re Barr Laboratories, Inc.*, 289 App. D.C. 187, 930 F.2d 72, 74 (D.C. Cir.) (agency's choice of priorities is an important factor in considering whether to grant equitable relief), *cert. denied*, 116 L. Ed. 2d 241, 112 S. Ct. 297, 112 S. Ct. 298 (1991); *Natural Resources Defense Council v. Train*, 166 App. D.C. 312, 510 F.2d 692, 712 (D.C. Cir. 1975) (court may need to give [*1300] agency some leeway due to budgetary commitments or technological problems); *Environmental Defense Fund v. Thomas*, 627 F. Supp. 566, 569-70 (D.D.C. 1986) (EPA's good faith is a factor). None of these factors militates against an award of declaratory relief. They do not grant an executive [**18] agency the authority to bypass explicit congressional deadlines. The deadlines are not aspirational - Congress set them and expected compliance. *See* 132 Cong. Rec. 32,381-82 (remarks of Senator Stafford, commenting on EPA delay and the establishment of statutory deadlines as "outside dates.") This court must uphold adherence to the law, and cannot condone the failure of an executive agency to conform to express statutory requirements. For these reasons, we grant NRDC's request for declaratory relief. EPA's failure to abide by the statutory deadlines is unlawful.

b. Request for Injunction.

NRDC asks the Court to enjoin the EPA from further extensions for permit applications from municipal and industrial dischargers. Injunctions are an extraordinary remedy issued at a court's discretion when there is a compelling need. 11 Charles A. Wright & Arthur R. Miller, *Federal Practice & Procedure* § 2942, at 365, 368-69 (1973). We decline to enjoin the EPA on discretionary grounds.

Injunctive relief could involve extraordinary

supervision by this court. Injunctive relief may be inappropriate where it requires constant supervision. *Id.* at 376. At issue are deadlines for the three major [**19] categories of dischargers, each of which has a two-part application. The permitting process will go on for several years. While recognizing the importance of the interests involved, we nevertheless decline to engage in the active management of such a remedy.

In this situation, we must operate on the assumption that an agency will follow the dictates of Congress and the court. As noted above, the EPA does not have the authority to predicate future rules or deadlines in disagreement with this opinion. *See Allegheny General Hosp. v. NLRB*, 608 F.2d 965, 970 (3rd Cir. 1979). We presume that the EPA will duly perform its statutory duties. *See Upholstered Furniture Action Council v. California Bureau of Home Furnishings*, 442 F. Supp. 565, 568 (E.D. Cal. 1977) (three judge court). Because we decline to take on potentially extensive supervision of the EPA, Congress may need to find other ways to ensure compliance if the agency is recalcitrant.

c. Deadlines for Permit Approval and Compliance.

NRDC requests that the court compel EPA to revise the rules to include deadlines for permit approval or denial and permit compliance consistent with the statute. Section [**20] 402(p)(4)(A) calls for the EPA to issue or deny permits for industrial and large municipalities by February 4, 1991, which is one year after the applications are submitted, and states that "any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of the issuance of such permit." CWA § 402(p)(4)(A), 33 U.S.C. § 1342(p)(4)(A). The statute sets out a similar schedule for medium municipalities, except that the deadlines are two years later. CWA § 402(p)(4)(B), 33 U.S.C. § 1342(p)(4)(B).

The regulations promulgated by the EPA contain neither final approval deadlines nor compliance deadlines for industrial dischargers or medium and large municipalities. 55 Fed. Reg. at 48,072. By failing to regulate final approval and compliance, EPA has omitted a key component of the statutory scheme. To ensure adherence to the statutory time frame, especially in the face of deadlines already missed, the regulated community must be informed of these deadlines. EPA's failure to include these important deadlines is an arbitrary and capricious exercise of its responsibility to issue

regulations pursuant to the statute.

[**21] We see no need for additional delay while supplemental regulations are issued. Given the extraordinary delays already encountered, EPA must avoid further delay. [*1301] The regulations should inform the regulated community of the statute's outside dates for compliance.¹¹ *See* CWA § 402(p)(4)(A)-(B), 33 U.S.C. § 1342(p)(4)(A)-(b).

11 In addition, pursuant to the statute, compliance deadlines applicable to each facility shall be contained in its permit.

d. Timeline for Small and Medium Systems.

The parties disagree on when small systems (those serving a population of less than 100,000) should be regulated. As noted above, the temporary statutory exemption for all storm water sources expires on October 1, 1992. The statute requires EPA to establish a comprehensive program to regulate point sources subject to the moratorium, such as small municipalities, by that date. CWA § 401(p)(1), (6), 33 U.S.C. § 1342(p)(1), (6).

Pointing to a perceived statutory gap, NRDC argues that small systems should be subject to the same permitting [**22] schedule applicable to medium systems, to assure that they are regulated when the permitting moratorium ends on October 1, 1992. However, the plain language of the statute prohibits this. Section 402(p)(1) forbids requiring a permit for entities not listed as exceptions (such as small municipalities) before October 1, 1992. Yet the deadline for part 1 of the application for medium systems is currently May 18, 1992. 55 Fed. Reg. at 48,072.

Even if NRDC is correct that EPA is not proceeding so that regulations will be in place on October 1, 1992, we cannot ignore the plain language of the statute by adopting NRDC's solution. The CWA does not require regulation of such systems prior to expiration of the moratorium. We therefore reject NRDC's proposal that small systems be put on the same schedule as medium ones.

NRDC asks the court to put the medium systems on the same schedule as the large systems, in order to achieve closer compliance with the timeline set out in § 402(p)(4)(B). However, EPA's current schedule for medium systems, although delayed, is still within the

statutory scheme in its relation to the schedule for large systems. That is, Congress placed the medium [**23] systems on a staggered permitting schedule to start two years after the large systems and industrial users. The EPA schedule now has medium municipal system applications due six months after the applications for the large municipal systems. 55 Fed. Reg. at 48,072. For this reason, the current deadline for medium municipalities does not appear to be unreasonable despite the unlawful delay.

C. Exclusion of Certain Sources from Regulation.

1. Definition of "Municipal Separate Storm Sewer System."

Section 402(p) refers to "municipal separate storm sewer systems serving a population" of a specified size. CWA § 402(p)(2)(C), (D), 33 U.S.C. § 1342 §§ 402(p)(2)(C), (D). NRDC contends that EPA's definition of this term violates the plain language of the statute, fails to take into account the statutory definition of the word "municipality" and is arbitrary and capricious because the agency considered improper factors when it defined the term. All of this, according to NRDC, results in an impermissible narrowing of the municipalities covered by the first two rounds of permitting.

The 1987 amendments to the CWA did not contain definitions of "municipal" or "separate storm [**24] sewer system," but the CWA amendments enacted in 1972 defined "municipality" as follows:

except as otherwise specifically provided, when used in this chapter: . . . (4) The term "municipality" means a city, town, borough, county, parish, district, association, or other public body created by or pursuant to State law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved [*1302] management agency under section 1288 of this title [33 U.S.C. § 1288].

33 U.S.C. § 1362.

In the November 1990 regulations, the EPA defined "municipal separate storm sewer" as: "a conveyance or system of conveyances . . . owned or operated by a State, city, town, borough, county, parish, district, association or other public body. . . ." 55 Fed. Reg. at 48,065 (to be codified at 40 C.F.R. § 122.26(b)(8)). This definition

echoes the language of 33 U.S.C. § 1362(4). However, when defining large and medium municipal separate storm sewer *systems serving a population* of a specified size, EPA brought in other factors. 55 Fed. Reg. at 48,064 (to be codified [**25] at 40 C.F.R. § 122.26(b)(4), (7)). EPA defines medium and large separate storm sewer systems using two main categories:

1) separate storm sewer systems located in an incorporated place with the requisite population, and

2) separate storm sewer systems located in unincorporated, urbanized portions of counties containing the requisite population (as listed in Appendices H and I to the rule), excluding those municipal separate sewers located in incorporated places, townships or towns within such counties. ¹² 55 Fed. Reg. at 48,064. NRDC opposes this definition for municipal separate storm sewer systems for the reasons explained below.

12 The rule also permits the Administrator to include certain other systems as part of a medium or large system due to the physical interconnections between the systems, their locations, or certain other factors. *See* 40 C.F.R. § 122.26(b)(4)(iii), (iv) and (b)(7)(iii), (iv).

First, NRDC argues that according to the definitional section cited above and principles of [**26] statutory construction, general definitions apply wherever the defined term appears elsewhere in the law. *See* 33 U.S.C. § 1362 ("except as otherwise specifically provided" the definitions apply throughout the act); *Sierra Club v. Clark*, 755 F.2d 608, 613 (8th Cir. 1985). NRDC argues that the scope of the statutory definition of "municipality" in 33 U.S.C. § 1362(4) and the scope of the phrase "municipal separate storm sewer system serving a population" are the same. NRDC thus proposes that the correct definition is a system of conveyances owned or operated by the full range of entities described at 33 U.S.C. § 1362(4), (cities, towns, etc.) with populations within the ranges designated at § 402(p)(2), i.e., 250,000 or more for large systems and between 100,000 and 250,000 for medium systems.

However, we do not believe that the entire phrase used in the act, "municipal separate storm sewer system serving a population of [a specified size]" can be equated with the term "municipality" in the manner that NRDC proposes. The act contains no definition of either "system" or "serving a population." The word "system" is

particularly ambiguous in the context of storm [**27] sewers.¹³ We therefore agree with EPA that there is no single, plain meaning for the disputed words.

13 Storm sewers located within the boundaries of a city might be part of a state highway system, a flood control district, or a system operated by the state or county. *See* 55 Fed. Reg. at 48,041.

Because the term is ambiguous, we must look first to whether Congress addressed the issue in another way. *See Abourezk v. Reagan*, 251 App. D.C. 355, 785 F.2d 1043, 1053 (D.C. Cir. 1986) ("if the court finds that Congress had a specific intent . . ., the court stops there and enforces that intent regardless of the agency's interpretation") (citing *Chevron U.S.A. Inc. v. Natural Resources Defense Council Inc.*, 467 U.S. 837, 842-43, 81 L. Ed. 2d 694, 104 S. Ct. 2778 & n. 9 (1984)), *aff'd by an equally divided court*, 484 U.S. 1, 108 S. Ct. 252, 98 L. Ed. 2d 1 (1987). The legislative history is not illuminating. Although it explains that a purpose of the permitting scheme was to attack the most serious sources of discharge first,¹⁴ [**28] this general goal is not helpful in discerning the specific meaning of "municipal separate storm sewer system serving a population." Without clear guidance from Congress, we turn to the agency's justifications [**1303] for its choices in the face of NRDC's objections.

14 *See, e.g.*, 133 Cong. Rec. 991 (1987) (statement of Rep. Stangeland).

NRDC claims that EPA's definition is arbitrary and capricious because EPA considered improper factors, including its own work load, the incorporation status of municipalities, and urban density. "An agency rule would be arbitrary and capricious if the agency has relied on factors which Congress has not intended it to consider, entirely failed to consider an important aspect of the problem, offered an explanation for its decision that runs counter to the evidence before the agency, or is so implausible that it could not be ascribed to a difference in view or the product of agency expertise." *Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto Ins.*, 463 U.S. 29, 43, 77 L. Ed. 2d 443, 103 S. Ct. 2856 (1983). [**29]

EPA's final definition took into account many issues and concerns of the regulated community. *See* 55 Fed. Reg. at 48,039. EPA considered eight different options for defining large and medium municipal separate storm sewer systems. 55 Fed. Reg. at 48,038-43. EPA

considered focusing on ownership or operation of a system by an incorporated place, but found that this approach did not take into account systems operated by flood control districts, state transportation systems, or concerns relating to watershed management. It instead fashioned a multi-faceted approach. This choice of approach is not unreasonable.

NRDC challenges EPA's consideration of incorporation as a factor. It claims that limiting regulation to incorporated places of the appropriate size excludes portions of 378 counties that contain over 100,000 people. NRDC essentially contends that because counties are a type of municipality, storm water conveyances in all counties with populations over 100,000 should come within the definition of either medium or large municipal separate storm sewer systems. We have already rejected NRDC's claim that the definition of regulated "systems" must include [**30] conveyances in all "municipalities."

EPA's use of incorporation as a factor is not arbitrary and capricious or inconsistent with the statute. The agency proceeded on the reasonable assumption that cities possess the police powers needed effectively to control land use within their borders. *See* 55 Fed. Reg. at 48,039, 48,043. The first major category within the definition of regulated "systems," municipal separate storm sewers located within incorporated places having the requisite population, is reasonable.

NRDC questions EPA's second major category, which covers storm sewers located in unincorporated urbanized areas of counties with the designated population, but excludes conveyances located in incorporated places with populations under 100,000 within those counties. The exclusion, however, has a legitimate statutory basis. The statute prohibits EPA from requiring permits for systems serving under 100,000 persons prior to October 1, 1992. CWA § 402(p)(1), 33 U.S.C. § 1342(p)(1). EPA reasonably concluded that conveyances within small incorporated places should be considered parts of small systems limited to those incorporated places, rather than parts of larger [**31] systems serving whole counties. EPA's definition attempts to capture population centers of over 100,000 (by including urbanized, unincorporated areas) without violating the congressional stricture against regulation of areas with populations under 100,000 (thus excluding incorporated areas of less than 100,000 within a county).

In arriving at its definition of "municipal separate

storm sewer systems serving" a designated population, EPA investigated numerous options and considered comments from a range of viewpoints. We find "a rational connection between the facts found and the choices made." *Motor Vehicle Mfrs. Ass'n*, 463 U.S. at 43.

NRDC objects to EPA's use of 1980 census data and EPA's definition of urban density. While it appears that NRDC has solid arguments as to why it would be preferable to use 1990 census figures and adopt its method of determining urban density, our role is not to determine whether EPA has chosen the best among all possible [*1304] methods. We can only determine if its choices are rational. EPA chose the 1980 census data because it was the most widely available decennial census data at the time of rule formulation and promulgation. Neither [**32] this choice nor its use of the Census Bureau's definition of urbanized area is arbitrary and capricious.

EPA took agency work load into account in arriving at its definition. 55 Fed. Reg. at 48,039. NRDC objects on the basis that Congress considered the issue of work load when it developed the "phase-in" approach and allowed permit applications on a system- or jurisdiction-wide basis. However, this broad congressional scheme does not prohibit further consideration of EPA's work load as one among many factors in its attempt to fashion a workable program.

In summary, NRDC's argument that the phrase "municipal separate storm sewer system serving a population" has the plain meaning NRDC proposes is not persuasive. Although EPA's definition in the face of the statute's ambiguity is complex, if not convoluted, it is not arbitrary and capricious, and we therefore reject NRDC's request that the definition be declared invalid.

2. EPA Exemption for Light Industry.

NRDC challenges the portion of the EPA rule excluding various types of "light industry" from the definition of "discharge associated with industrial activity."

Under CWA § 402(p)(2)(B), a "discharge associated with [**33] industrial activity" is an exception to the permit moratorium. In the November rule, EPA modified the statutory scheme by drawing distinctions among light and heavy industry and considering actual exposure to

industrial materials. Although the statute does not define "associated with industrial activity," the EPA definition excludes industries it considers more comparable to retail, commercial or service industries. The excluded categories are manufacturers of pharmaceuticals, paints, varnishes, lacquers, enamels, machinery, computers, electrical equipment, transportation equipment, glass products, fabrics, furniture, paper board, food processors, printers, jewelry, toys and tobacco products. 55 Fed. Reg. at 48,008. These types of facilities need apply for permits only if certain work areas or actual materials are exposed to storm water. *Id.* EPA justifies these exemptions on the assumption that most of the activity at these types of manufacturers takes place indoors, and that emissions from stacks, use of unhooded manufacturing equipment, outside material storage or disposal, and generation of large amounts of dust and particles will all be minimal. 55 Fed. Reg. at 48,008c. [**34]

Thus, EPA considers actual exposure to certain materials or stormwater for the light industry categories, but does not consider actual exposure for the other industrial categories. After careful review of the statutory language and the record, we conclude that this distinction is impermissible.

We note that the language "discharges associated with industrial activity" is very broad. The operative word is "associated." It is not necessary that storm water be contaminated or come into direct contact with pollutants; only association with any type of industrial activity is necessary.

There is a brief discussion of the issue in the legislative history: "[a] discharge is associated with industrial activity if it is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. Discharges which do not meet this definition include those discharges associated with parking lots and administrative and employee buildings." 133 Cong. Rec. 985 (1987); *see also* 132 Cong. Rec. 31,968 (1986) (same). EPA argues that the words "directly related" indicate Congress's intent to require permits for only those materials that come in contact with industrial materials. [**35] *See* 55 Fed. Reg. at 48,007. However, the examples given - parking lots and administrative buildings - indicate that the intent was to exclude only those facilities or parts of a facility that are completely non-industrial.

EPA's definition follows the language quoted above:

"Storm water discharge associated with industrial activity means the [*1305] discharge from any conveyance which is used for collecting and conveying stormwater and which is directly related to manufacturing, processing or raw materials storage areas at an industrial plant." 40 C.F.R. § 122.26(b)(14). EPA applies this definition differently depending on type of industry. EPA bases its regulation of industrial activity on Standard Industrial Classification ("SIC") categories. For most of the industrial SIC categories (identified at 40 C.F.R. § 122.26(b)(i-x)), the EPA definition includes all stormwater discharges from plant yards, access roads and rail lines, material handling sites, storage and disposal sites, shipping and receiving areas, and manufacturing buildings. 40 C.F.R. § 122.26(b)(14). However, for the "light industry" categories identified in 40 C.F.R. § 122.26(b)(14)(xi), stormwater must [**36] be actually exposed to raw materials, by-products, waste, etc., before permitting is required.

EPA justifies this difference on the ground that for "light industry," industrial activity will take place indoors, and that generation of large amounts of particles and emissions will be minimal. There is nothing in the record submitted to the Court however, which supports this assumption. *See, e.g.*, 55 Fed. Reg. at 48,008. Without supportable facts, we are unable to rely on our usual assumption that the EPA has rationally exercised the duties delegated to it by Congress. To exempt these industries from the normal permitting process based on an unsubstantiated assumption about the this group of facilities is arbitrary and capricious.

In addition, by designating these light industries as a group that need only apply for permits if actual exposure occurs, EPA impermissibly alters the statutory scheme. The statute did set up a similar approach for oil, gas, and mining industries. However, no other classes of industrial activities are subject to the more lenient "actual exposure" test. To require actual exposure entirely shifts the burden in the permitting scheme. Most industrial [**37] facilities will have to apply for permits and show the EPA or state that they are in compliance. Light industries will be relieved from applying for permits unless actual exposure occurs. The permitting scheme then will work only if these facilities self-report, or the EPA searches out the sources and shows that exposure is occurring. We do not know the likelihood of either self-reporting or EPA inspection and monitoring of light industries, and the regulations appear to contemplate

neither for these industries. For this reason, the proposed regulation is also arbitrary and capricious.

In conclusion, we hold that the rule for light industries is arbitrary and capricious, vacate the rule, and remand for further proceedings.

3. *Exclusion of Construction Sites of Less than Five Acres.*

NRDC challenges the exemption for construction sites of less than five acres. EPA concedes that the construction industry should be subject to storm water permitting because at a high level of intensity, construction is equivalent to other regulated industrial activities. 55 Fed. Reg. at 48,033. Construction sites can pollute with soil sediments, phosphorus, nitrogen, nutrients from [**38] fertilizers, pesticides, petroleum products, construction chemicals and solid wastes. *Id.* EPA states that such substances can be toxic to aquatic organisms, and affect water used for drinking and recreation. *Id.*

Following its characterization of construction sites as suitable for regulation, EPA defined its task as determining "an acreage limit [] appropriate for identifying sites that amount are (sic) to industrial activity." 55 Fed. Reg. at 48,036. EPA originally proposed regulations that exempted operations that disturb less than one acre of land and are not part of a common plan of development or sale. 55 Fed. Reg. at 48,035-36. In response to comments by the regulated community about the administrative burden presented by the regulation, EPA increased the exemption to five acres. 55 Fed. Reg. at 48,036. EPA also noted that larger sites will involve heavier equipment for removing vegetation and bedrock than smaller sites. *Id.* at 48,036. [*1306]

We find that EPA's rationale for increasing the limit from one to five acres inadequate and therefore arbitrary and capricious. EPA cites no information to support its [**39] perception that construction activities on less than five acres are non-industrial in nature.

EPA also claims agency power, inherent in statutory schemes, to make categorical exemptions when the result is *de minimis*. *Alabama Power Co. v. Costle*, 204 App. D.C. 51, 636 F.2d 323, 360 (D.C. Cir. 1979). However, if construction activity is industrial in nature, and EPA concedes that it is, EPA is not free to create exemptions

from permitting requirements for such activity. *See Natural Resources Defense Council, Inc. v. Costle*, 568 F.2d at 1369, 1377 (D.C. Cir. 1977) (once Congress has delineated an area that requires permits, EPA is not free to create exemptions).

Further, we find the *de minimis* principle inapplicable here. The *de minimis* exemption is only available where a regulation would "yield a gain of trivial or no value." *Alabama Power Co., supra*, at 361. Because of the lack of data, we cannot know whether exempting sites of less than five acres will indeed have only a *de minimis* effect.

The *de minimis* concept is based on the principle that the law does not concern itself with trifling matters. *Id.* at 360. [**40] We question its applicability in a situation such as this where the gains from application of the statute are being weighed against administrative burdens to the regulated community. *See id.* at 360-361 (implied authority to make cost-benefit decisions must derive from statute, and not general *de minimis* doctrine).

Further, EPA's claim that the five-acre exemption is *de minimis* is contradicted by the admission that even small construction sites can have a significant impact on local water quality. The EPA acknowledges that "over a short period of time, construction sites can contribute more sediment to streams than was previously deposited over several decades." 55 Fed. Reg. at 48,033. Without data supporting the expanded exemption, we owe no deference to EPA's line-drawing. We thus hold that EPA's choice of a five-acre limit is arbitrary and capricious, invalidate that portion of the rule exempting construction sites of five acres or less from permitting requirements, and remand for further proceedings.

4. Exemption for oil and gas activities.

The 1987 amendments created an exemption from the permit requirement for uncontaminated runoff [**41] from mining, oil and gas facilities. *See* Appendix, CWA § 402(1)(2), 33 U.S.C. §§ 1342(l)(2). Section 402(1)(2) states that a permit is not required for discharges of storm water runoff from mining, oil or gas operations composed entirely of flows from conveyance systems used for collecting precipitation runoff and "which are not contaminated by contact with, or do not come into contact with any overburden, raw material, intermediate products, finished product, byproduct, or waste products". NRDC claims that the November 1990 rule

sets up an impermissible standard for determining contamination at oil and gas facilities. The relevant portion of the rule states that at these facilities, an operator is not required to submit a permit application unless the facility has had a discharge of a reportable quantity¹⁵ since November 1987, or contributes to a violation of a water quality standard. 55 Fed. Reg. 48,067 (to be codified at 40 C.F.R. § 122.26(c)(1)(iii)). A facility which has had a release of oil or a hazardous substance in excess of RQs since [*1307] 1987 must submit a permit application. *Id.*; 55 Fed. Reg. at 48,029-30.

15 "Reportable Quantities" (RQs) are not effluent guidelines setting up permissible limits for pollutants. Rather, they are quantities the discharge of which "may be harmful to the public health or welfare of the United States." CWA § 311(b)(4), 33 U.S.C. § 1321(b)(4). EPA has established RQs for a large number of substances, pursuant to both CWA section 311, 33 U.S.C. § 1321, and the Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA") section 102, 42 U.S.C. § 9602. *See* 40 C.F.R. Parts 110, 117, 302. The operator of any vessel or facility which releases the RQ of any substance must immediately notify the National Response Center. *See, e.g.*, 40 C.F.R. § 110.10.

[**42] NRDC claims that oil and gas operations should be subject to the stricter standards which apply to mining operations.¹⁶ It also objects to EPA's use of RQs as the only test for contamination of runoff from oil and gas storm water dischargers, claiming it is inconsistent with the legislative history. We conclude that the legislative history does not support NRDC's position.

16 Operators of mines must submit permit applications whenever storm water discharges come into contact with overburden, waste products, etc. 40 C.F.R. § 122.26(c)(1)(iv).

The conference report states:

Permits are not required where stormwater runoff is diverted around mining operations or oil and gas operations and does not come in contact with overburden, raw material, product, or process wastes. In addition, where stormwater runoff is not contaminated by contact with such materials, *as determined by the administrator*,

permits are also not required. With respect to oil or grease or hazardous substances, the determination of whether stormwater [**43] is "contaminated by contact with" such materials, *as established by the Administrator*, shall take into consideration whether these materials are present in such stormwater runoff in excess of reportable quantities under section 311 of the Clean Water Act . . . , or in the case of mining operations, above natural background levels.

H.R. Rep. No. 1004, 99th Cong., 2d Sess., at 151 (emphasis added).

Thus, the EPA Administrator has discretion to determine whether or not storm water runoff at an oil, gas or mining operation is contaminated with two types of materials: (1) overburden, raw material, product, or process wastes and (2) oil, grease or hazardous substances. The report sets out factors for the Administrator to consider in determining contamination for the latter group of pollutants.

NRDC first claims that because section 402(1)(2) treats oil, gas and mining together, the EPA rule must do the same. NRDC's second objection is based on its interpretation of the language in the conference report. Because the conference report lists RQs as only one factor to be taken into consideration, NRDC insists EPA cannot make it the only factor to measure contamination for oil and gas [**44] facilities.

Both of these arguments must fail in light of the conference report, which gives the Administrator discretion to determine when contamination has occurred with respect to the substances listed in the statute, i.e., overburden, raw materials, waste products, etc. *See* CWA § 402(1)(2). The conference report states that the Administrator shall take certain factors into account, but the report is clear that the determination of whether storm water is contaminated is within the Administrator's discretion.

NRDC argues that the remarks of certain congressmen during congressional debate show that the mining, oil, and gas exemptions were to apply only if the discharges were entirely free of contaminants. We find these examples less persuasive than the clear language of the conference report. Moreover, in light of the discretion granted the Administrator in the conference report, we cannot say that the rule as promulgated is an arbitrary and capricious exercise of that discretion.

NRDC also contends that Congress intended that EPA consider reportable quantities only in determining if a discharge is contaminated with oil, grease, or hazardous substances. Other pollutants, according [**45] to NRDC, must be found to contaminate the discharge if they exceed background levels.

EPA did not, in fact, limit itself to reportable quantities in determining which oil or gas facilities must apply for a permit. The rule requires a permit for any facility which "contributes to a violation of a water quality standard." 40 C.F.R. § 122.26(c)(1)(iii)(C). This requirement addresses contamination with substances other than oil and hazardous substances. We find no support in the statute or the legislative history for NRDC's claim that, with respect [**1308] to these substances, levels above background must be considered "contamination." The conference report quoted above requires consideration of background levels of any pollutant only with respect to mining operations.

D. Lack of Controls for Municipal Storm Water Discharge.

NRDC contends that EPA has failed to establish substantive controls for municipal storm water discharges as required by the 1987 amendments. Because Congress gave the administrator discretion to determine what controls are necessary, NRDC's argument fails.

Prior to 1987, municipal storm water dischargers were subject to the same substantive control requirements as industrial [**46] and other types of storm water. In the 1987 amendments, Congress retained the existing, stricter controls for industrial storm water dischargers but prescribed new controls for municipal storm water discharge. CWA § 402(p)(3)(A), (B), 33 U.S.C. § 1342(p)(3)(A)-(B). The Act states that permits for discharges from municipal storm sewers:

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-storm water discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, *and such other provisions as the Administrator or the State determines*

appropriate for the control of such pollutants.

Section 402(p)(3)(B), 33 U.S.C. § 1342(p)(3)(B) (emphasis added).

NRDC charges that the EPA regulations accomplish neither of the goals above, i.e., they do not effectively prohibit non-storm water discharges nor do they require the controls described in Par. (iii), above. NRDC argues that Congress granted the moratorium precisely to give EPA the opportunity to develop [*47] new, substantive standards for storm water control of municipal sources and instead EPA wrote vague regulations containing no minimum criteria or performance standards.¹⁷ However, the language in Par. (iii), above, requires the Administrator or a state to design controls. Congress did not mandate a minimum standards approach or specify that EPA develop minimal performance requirements. NRDC also claims that the testing requirements are inadequate because there is only limited sampling at a limited number of sites. However, we must defer to EPA on matters such as this, where EPA has supplied a reasoned explanation of its choices. *See* 55 Fed. Reg. at 48,049.

17 The requirements for permit applications are set forth at 40 C.F.R. § 122.26(d). Individual NPDES permit writers (EPA or state officials) will decide whether application proposals are adequate. Applicants must submit information on source control methods and estimate the annual pollutant load reduction to be achieved from their proposed management programs, but they are not required to achieve any specified level of reduction of any pollutants. *See* 55 Fed. Reg. at 48,070-71.

[**48] NRDC's argument that the EPA rule is inadequate cannot prevail in the face of the clear statutory language and our standard of review. Congress could have written a statute requiring stricter standards, and it did not. We therefore reject NRDC's argument that EPA's storm water control regulations fail to comply with the statute.¹⁸

18 We base our holding on NRDC's challenge to the regulations at issue. Whether a specific permit complies with the requirements of section 402(p)(3)(B) would, of course, be another matter not controlled by this decision.

E. Lack of Notice and Comment on the Approval of Part 1 of Industrial Group Storm Water Applications.

NRDC objects to the lack of opportunity for notice and comment before EPA approval of part 1 of group applications for industrial dischargers. Each member of a proposed group must submit part 1 of the application.¹⁹ If EPA approves part 1, only [*1309] a small subset of the member facilities need submit part 2 of the application. 55 Fed. Reg. at 48,072 (to [*49] be codified at 40 C.F.R. 122.26(e)(2)). NRDC claims that because approval of part 1 waives the requirement of filing part 2 for most members of a group, EPA's decision on part 1 is equivalent to a "rule" requiring notice and comment from the public. The issue thus presented is whether EPA's decision on a part 1 group permit application is a "rule" as defined in 5 U.S.C. § 551(4) (1988)²⁰ requiring public notice and opportunity to comment under 5 U.S.C. § 553 (1988), or is otherwise subject to the notice and comment requirement.

19 Part 1 must include the identity of the group's participants, a description of the participants' industrial activities, a list of significant materials exposed to precipitation and the identity of the subset of the group's members who will submit quantitative data in part 2 of the application. 55 Fed. Reg. at 48,067.

20 A rule means "the whole or part of an agency statement of general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy or describing the organization, procedure, or practice requirements of an agency. . . ." 5 U.S.C. § 551(4).

[**50] NRDC argues that approval or disapproval of a part 1 application requires public comment because it has "general applicability" pursuant to 5 U.S.C. § 551(4) and because it will have a "palpable effect" in that it will relieve the majority of entities in the group from submitting data in part 2 of the application. NRDC cites *NRDC v. EPA*, 683 F.2d 752 (3rd Cir. 1982) and *Council of Southern Mountains, Inc. v. Donovan*, 209 App. D.C. 318, 653 F.2d 573 (D.C. Cir. 1981) in support of its argument. Both cases involved the postponement of regulations. *See NRDC*, 683 F.2d at 753-54, 764 (indefinite postponement of effective date of final amendments to regulations dealing with the discharge of toxic pollutants requires notice and comment because it has a substantial impact on the public and the industry);

Council of Southern Mountains, Inc., 653 F.2d at 575, 580 n. 28 (deferral of implementation of regulations requiring coal operators to supply life-saving equipment ordinarily would require notice and comment because it has a "palpable effect" upon the industry and the public).

We find these cases to be distinguishable. Both involve [**51] the postponement of rules of general applicability to an entire industry, or to a large class of pollutants. In contrast, although the part 1 application process will relieve some entities from the need to furnish further data, the decision is specific to a particular permit application and approval of a preliminary application will not implement, interpret or prescribe any general law or policy pursuant to 5 U.S.C. § 551(4). Rulemaking ordinarily involves "broad judgments, legislative in nature rather than the resolution of a particular dispute of facts." *Washington Utilities & Transportation Com'n v. Federal Communication Commission*, 513 F.2d 1142, 1160 (9th Cir. 1975), *cert. denied*, 423 U.S. 836, 96 S. Ct. 62, 46 L. Ed. 2d 54 (1975). The decision to approve a part 1 permit application, although it may affect a large number of applicants, is nevertheless focused on a specific factual question: whether the application adequately designates a representative smaller group subject to the more extensive data gathering requirements in part 2 of the application *See* 55 Fed. Reg. at 48,028. Because the decision involves a discrete, factual issue, the better view [**52] is that it is neither a rule nor otherwise subject to the notice and comment requirement.

Because approval of a part 1 application is essentially a factual determination, we hold that EPA's group permit application process for industrial dischargers is not invalid by its failure to provide for notice and comment.

III. CONCLUSION

In summary, we grant and deny relief as follows:

1. "*Deadlines*" issue. We grant the request for declaratory relief and deny the request for injunctive relief. We deny the request to place small, medium and large municipalities on the same permitting schedule. We hold that EPA's failure to include deadlines for permit approval or denial and compliance consistent with CWA § 402(p) is arbitrary and capricious.

2. *Exclusion of Sources from Regulation*. We uphold the definition of "municipal [*1310] separate storm

sewers serving a population." We hold that the exemption for construction sites of less than five acres is arbitrary and capricious and remand for further proceedings. Based on the record before us, we vacate that portion of the rule regulating "light industry" and remand for further proceedings.

3. *Other issues*. We uphold the rule as to oil and [**53] gas operations and storm water control. We further hold that EPA approval of part 1 of a group application for an industrial discharger is not a rule requiring notice and comment from the public.

Petition for Review GRANTED IN PART and DENIED IN PART.

APPENDIX A

CWA § 402, 33 USCA § 1342

(1) Limitation on permit requirement

....

(2) Stormwater runoff from oil, gas, and mining operations

The Administrator shall not require a permit under this section, nor shall the Administrator directly or indirectly require any State to require a permit, for discharges of stormwater runoff from mining operations or oil and gas exploration, production, processing, or treatment operations or transmission facilities, composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and which are not contaminated by contact with, or do not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations.

....

(p) Municipal and industrial [**54] stormwater discharges

(1) General rule

Prior to October 1, 1992, the Administrator or the State (in the case of a permit program approved under this section) shall not require a permit under this section

for discharges composed entirely of stormwater.

(2) Exceptions

Paragraph (1) shall not apply with respect to the following stormwater discharges:

(A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.

(B) A discharge associated with industrial activity.

(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.

(E) A discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(3) Permit requirements

(A) Industrial discharges

Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and section 1311 of this title.

[**55] *(B) Municipal discharge*

Permits for discharges from municipal storm sewers

-

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or [*1311] the State determines appropriate for the control of such pollutants.

(4) Permit application requirements

(A) Industrial and large municipal discharges

Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but [**56] in no event later than 3 years after the date of issuance of such permit.

(B) Other municipal discharges

Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(5) Studies

The Administrator, in consultation with the States, shall conduct a study for the purposes of -

(A) identifying those stormwater discharges or classes of stormwater discharges for which permits are not required pursuant to paragraphs (1) and (2) of this subsection;

(B) determining, to the maximum extent practicable, the nature and extent of pollutants in such discharges; and

(C) establishing procedures and methods to control stormwater discharges to the extent necessary [**57] to mitigate impacts on water quality.

Not later than October 1, 1988, the Administrator shall submit to Congress a report on the results of the study described in subparagraphs (A) and (B). Not later than October 1, 1989, the Administrator shall submit to Congress a report on the results of the study described in subparagraph (C).

(6) *Regulations*

Not later than October 1, 1992, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate.

CONCUR BY: O'SCANNLAIN (In Part)

DISSENT BY: O'SCANNLAIN (In Part)

DISSENT

O'SCANNLAIN, Circuit Judge, concurring in part and dissenting in part:

I concur in Parts [*58] I, II.A, II.C.1, II.C.4, II.E, and much of Part II.B of the majority opinion. I dissent from Part II.B.2.c, directing EPA to issue supplemental regulations. I dissent also from Parts II.C.2 and II.C.3, in which the court invalidates EPA's exclusion of storm water discharges from certain light industrial and small construction sites from the definition of "discharges associated with industrial activity." Finally, I concur in the result, but not the reasoning, of Part II.D, holding that EPA has not acted unlawfully by failing to include specific control requirements in the permit application regulations.

[*1312] I

The majority holds that EPA has violated statutory requirements by failing to set dates for approval of, and compliance with, permits as part of its permit application program. *Ante* at 6206. Despite the holding in Part II.B.2.b that injunctive relief is inappropriate (with which I agree), the majority in Part II.B.2.c orders EPA to issue supplemental regulations setting such deadlines immediately.

I am not convinced that the statute requires EPA to

set these deadlines as part of the permit application process. The provision at issue reads, in relevant part:

(4) Permit application [*59] requirements

(A) Industrial and large municipal discharges

Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(B) Other municipal discharges

Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously [*60] as practicable, but in no event later than 3 years after the date of issuance of such permit.

CWA § 402(p)(4); 33 U.S.C. § 1342(p)(4) (1988).

While the statute establishes a time line EPA must follow, it does not, in my view, require that EPA include the deadline for permit approval in the permit application regulations. I agree that, given EPA's past delays and the fact that the statutory dates for issuance or denial of permits are now long past, it is appropriate for this court to declare that the statute requires EPA to issue or deny permits within one year of the application deadline. I do not, however, see that any purpose is served by requiring EPA to issue supplemental regulations setting out these deadlines, and I doubt our authority to do so.

With respect to compliance deadlines, the statute contemplates that such deadlines will be set in individual permits as they are issued. *See* CWA § 402(p)(4)(A), (B)

("Any such permit shall provide for compliance. . ."). Each permit must contain a compliance deadline, which may not exceed three years from the date of issuance. Nothing in the statute requires EPA to establish compliance deadlines now, before any permits have [**61] been issued. Accordingly, in my view, NRDC's challenge to the lack of compliance deadlines in EPA's current regulations is premature. I therefore dissent from Part II.B.2.c of the majority opinion.

II

I dissent also from Parts II.C.2 and II.C.3. In my view, EPA's definition of "discharge associated with industrial activity" is a reasonable construction of an ambiguous statute, entitled to deference. While my colleagues acknowledge that we may not overturn an agency rule that represents a "permissible construction" of a statute, *ante* at 6200 (quoting *Chevron, U.S.A., Inc. v. NRDC*, 467 U.S. 837, 843, 104 S. Ct. 2778, 81 L. Ed. 2d 694 (1984)), they fail to apply that axiom.

A

EPA's rule excludes from the permitting requirement certain light industry facilities at which "areas where material handling equipment or activities, raw materials, intermediate [*1313] products, final products, waste materials, byproducts, or industrial machinery" are not exposed to storm water. *See* 40 C.F.R. § 122.26(b)(14). EPA determined that discharges from such facilities do not fall within the definition of "discharges associated with industrial activity." In my view, this determination was reasonable.

The majority concedes [**62] that the statute does not define "discharge associated with industrial activity." *Ante* at 6213. The operative phrase, as my colleagues note, is "associated with." *See id.* For purposes of evaluating the light industry exemption, I concede that manufacturing falls within the generally accepted meaning of "industrial activity," and that many of the facilities exempted by the EPA rule are manufacturers. Nonetheless, that concession does not compel the conclusion that discharges from such facilities are "associated with industrial activity."

The majority concludes, without explanation, that the phrase "discharges associated with industrial activity" is "very broad." *Ante* at 6214. Neither the plain meaning of the term "associated" nor the legislative history of the

statute support this conclusion. "Associated with" means closely related to or connected with. *See Webster's Ninth New Collegiate Dictionary* 110 (1986). To the extent it casts any light on the subject, the legislative history supports a narrow reading of the phrase "associated with." Four members of the House, in the course of floor debates on the measure both before and after President Reagan's veto, explained [**63] that:

[a] discharge is associated with industrial activity if it is *directly related to manufacturing, processing or raw materials storage areas* at an industrial plant. Discharges which do not meet this definition include those discharges associated with parking lots and administrative and employee buildings.

133 Cong. Rec. 985 (1987) (statement of Rep. Hammerschmidt) (emphasis added).¹ The underscored language suggests that Congress intended to regulate only discharges directly related to certain activities at industrial facilities. EPA's interpretation, that discharges are "directly related" to these activities only if storm water may reasonably be expected to come into contact with them before its discharge, is eminently logical.

¹ This statement was repeated verbatim by Reps. Stangeland and Snyder. 133 Cong. Rec. at 991-92; 132 Cong. Rec. at 31,959, 31,964 (1986). Rep. Rowland offered a slight variation on the theme:

One of the discharge categories is "a discharge associated with an industrial activity." A discharge is not considered to be associated with industrial activity unless it is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Such discharges include [sic] those from parking lots and administrative areas and employee buildings.

132 Cong. Rec. at 31,968. Rep. Rowland apparently misspoke; he probably meant, like the other legislators who addressed the topic, to say "such discharges *do not* include" those from parking lots.

[**64] The majority opinion interprets the exclusion of parking lots as an expression of congressional intent "to exclude only those facilities or parts of a facility that are completely non-industrial." *Ante* at 6215. My colleagues' reliance on the second

sentence of the statement quoted above to establish this intent, however, is misplaced. The sentence relied on cannot assist us in our search for the meaning of "associated with" because it employs that very term. Moreover, it does not pretend to establish an exhaustive list of areas excluded from regulation. Legislators listed discharges from parking lots and administrative and employee buildings as *among those* not directly related to industrial activity; no one suggested that *only* discharges associated with those structures were to be excluded.

EPA's definition is consistent with the plain words of the statute and, to the extent any intent is discernible, the congressional intent. EPA has defined the term "storm water discharge associated with industrial activity" to cover only those discharges reasonably expected to come into contact with industrial activities. A large number of facilities automatically fall within EPA's [**65] definition and are required to [*1314] apply for permits. Because facilities falling within certain specified classifications under the Standard Industrial Classification manual generally conduct their operations entirely indoors, minimizing the likelihood of contact with storm water, EPA has not automatically included them within the regulations. However, these facilities *are* required to apply for permits if "areas where material handling equipment or activities, raw materials, intermediate products, final products, waste materials, byproducts, or industrial machinery at these facilities are exposed to storm water." 40 C.F.R. § 122.26(b)(14). If a storm water discharge is in fact directly related to or associated with the industrial activity carried on at a facility falling within the light industry category, the facility must obtain a permit.²

2 Thus, nothing turns on the assumption, attacked by my colleagues as unsupported by the record, *ante* at 6215, that industrial activities at this category of facilities will take place largely indoors. Where the assumption does not hold true, the permit requirement applies with full force. I also note that NRDC has pointed us to no evidence undermining EPA's assumption.

Unlike my colleagues, I decline to assume that EPA will not carry out its responsibility to identify and to require permits of facilities where industrial activities are in fact exposed to storm water, or that such facilities will ignore their statutory duty to apply for permits. Should that

occur, a lawsuit challenging EPA's failure to enforce its regulations might well be in order. An unsubstantiated suspicion that EPA may not vigorously enforce its regulations, however, does not make those regulations arbitrary or capricious.

[**66] In my view, the statute's treatment of oil and gas facilities supports EPA's reading of the term "associated with industrial activity." Congress specifically exempted from the permit requirement discharges from oil and gas facilities and mining operations which have not come in contact with raw materials, finished products, or waste products. CWA § 402(1)(2). This section indicates a congressional intent to exempt uncontaminated discharges which have not come into contact with "industrial activities" from regulation. For oil, gas, and mining operations, Congress in this section supplied a specific, and quite limited, definition of "industrial activities." For other facilities, that definition was left to the discretion of EPA, which has adopted a much broader definition, encompassing contact with such things as industrial machinery and materials handling equipment. *See* 40 C.F.R. § 122.26(b)(14).

I do not mean to suggest that the majority's construction of the statute is untenable. It may even be preferable to the reading chosen by the agency. Nonetheless, in my view the statute is ambiguous and the legislative history does not demonstrate any clear congressional intent. The question [**67] before this court, therefore, is not whether "the agency construction was the only one it permissibly could have adopted" or even whether it is the "reading the court would have reached if the question initially had arisen in a judicial proceeding." *Chevron, U.S.A. v. NRDC*, 467 U.S. 837, 843, n.9, 104 S. Ct. 2778, 81 L. Ed. 2d 694 (1984). We need only inquire if the agency's construction is a permissible one. *Id.* at 843. EPA's definition falls well within permissible bounds, and should be upheld.

B

Although the issue is closer, I also am not persuaded that EPA's exemption for construction sites under five acres should be struck down. EPA has not conceded that "construction activity is industrial in nature." *Ante* at 6217-18. In the preamble to its final rule, EPA noted that "Construction activity *at a high level of intensity is comparable to other activity that is traditionally viewed as industrial*, such as natural resource extraction."³ 55 Fed. Reg. 48,033 (1990) (emphasis added). EPA

explained that it was "attempting to focus [regulation] only on those construction activities [*1315] that resemble industrial activity." 55 Fed. Reg. at 48,035 [**68] (emphasis added).

3 EPA did admit that "even small construction sites may have a significant negative impact on water quality in localized areas," 55 Fed. Reg. at 48,033. In the absence of any indication of what EPA meant by "small," however, that statement does not undermine EPA's exemption of sites under five acres.

Neither NRDC nor the majority point to anything in the statute or the legislative history that would require the agency to define "industrial activity" as including all construction operations. Accordingly, I believe deference is due EPA's definition, provided it is not arbitrary, capricious, or manifestly contrary to the statute. *Chevron, U.S.A.*, 467 U.S. at 844.

In trying to determine when construction should be treated as industrial activity, EPA considered a number of possible approaches. See 55 Fed. Reg. at 48,035. Exempting construction that would be completed within a certain designated time frame was deemed inappropriate, because the work [**69] could be both intensive and expansive but nonetheless take place over a short period of time. Basing the limit on quantity of soil removed was also rejected as not relating to the amount of land surface disturbed. EPA finally settled on the surface area disturbed by the construction project as a feasible and appropriate mechanism for "identifying sites that are [sic] amount to industrial activity." 55 Fed. Reg. at 48,036.

Having determined that not all construction amounts to industrial activity, and that the appropriate basis for differentiation is land area disturbed, EPA then had to determine where to draw the line. Initially, EPA proposed to exempt all construction operations disturbing less than one acre of land, as well as single family residential projects disturbing less than five acres. 53 Fed. Reg. 49,431 (1988). In the final rule, however, EPA adopted a five-acre minimum for all construction projects. 55 Fed. Reg. 48,066 (1990); 40 C.F.R. § 122.26(b)(14)(x).

Admittedly, the final rule contains little in the way of justification for treating two-acre sites differently than five-acre ones, but that does not necessarily make [**70] it arbitrary and capricious. Line-drawing is often difficult. NRDC was apparently willing to accept EPA's proposed

one-acre/five-acre rule. Although NRDC now challenges the blanket five-acre rule, it offers no evidence that sites excluded from the permitting requirement constitute "industrial activity." In such absence of any evidence in the record undermining EPA's conclusion on an issue squarely within its expertise, I believe the rule must be upheld. 4

4 Because I conclude that the rule falls within the permissible bounds of the statutory definition of "discharges associated with industrial activity," I need not consider the applicability of the *de minimis* exception.

III

Finally, while I concur in the result reached by the majority in Part II.D, rejecting NRDC's claim that EPA has unlawfully failed to require substantive controls on municipal discharges, I disagree with the majority's reasoning. In my view, NRDC's claim is premature, and we should decline to address its merits.

NRDC contends that the 1987 amendments [**71] require EPA to establish substantive controls for municipal storm water discharges. In support of this argument, NRDC relies on CWA § 402(p)(3)(B), 33 U.S.C. § 1342(p)(3)(B), which provides:

Permits for discharges from municipal storm sewers

-
* * *

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable. . . .

This section refers only to *permits*, and says nothing about permit applications. Because EPA has yet to issue any permits, NRDC's claim on this point is premature. In the absence of any indication to the contrary, we must assume that any permit issued will comply with all applicable statutory requirements. The statute does not require that EPA detail the substantive controls to be imposed when establishing permit application requirements. Accordingly, I would reject NRDC's claim without [*1316] reaching the issue of the Administrator's discretion in selecting those controls.

IV

In sum, I join much of my colleagues' opinion. However, I would not require EPA to issue supplemental regulations detailing the time line for [**72] issuance of and compliance with permits, and I would uphold EPA's

definition of "discharge associated with industrial activity." Finally, I would reject NRDC's claim that EPA is required to detail control measures in the permit application regulations on the grounds that the statute requires control measures only in the permits themselves.

PRIOR HISTORY: [***1]

ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE ELEVENTH CIRCUIT.

Florida v. United States HHS, 648 F.3d 1235, 2011 U.S. App. LEXIS 16806 (11th Cir. Fla., 2011)

DISPOSITION: The court of appeals' judgment was reversed insofar as it struck down § 5000A and permitted withdrawal of all Medicaid funding under § 1396c. The judgment was otherwise affirmed. 5-4 Decision; 3 opinions; 1 concurrence in part and dissent in part; 2 dissents.

COUNSEL: **Robert A. Long** argued the cause, as amicus curiae appointed by the court, in No. 11-398.

Donald B. Verrilli, Jr. argued the cause for petitioners in No. 11-398 and respondents in No. 11-400.

Gregory G. Katsas argued the cause for respondents in No. 11-398.

Paul D. Clement argued the cause for petitioners in Nos.

11-393 and 11-400 and respondents Florida, et al. in No. 11-398.

Michael A. Carvin argued the cause for respondents National Federation of Independent Business, et al. in No. 11-398.

Edwin S. Kneedler argued the cause for respondents in Nos. 11-393 and 11-400.

H. Bartow Farr, III argued the cause, as amicus curiae appointed by the court, in Nos. 11-393 and 11-400.

JUDGES: Roberts, C. J., announced the judgment of the Court and delivered the opinion of the Court with respect to Parts I, II, and III-C, in which Ginsburg, Breyer, Sotomayor, and Kagan, JJ., joined; an opinion with respect to Part IV, in which Breyer and Kagan, JJ., joined; and an opinion with respect to Parts III-A, III-B, and III-D. Ginsburg, J., filed an opinion concurring in part, concurring in the judgment in part, and dissenting in part, in which Sotomayor, J., joined, and in which Breyer and Kagan, JJ., joined [***13] as to Parts I, II, III, and IV. Scalia, Kennedy, Thomas, and Alito, JJ., filed a dissenting opinion. Thomas, J., filed a dissenting opinion.

OPINION BY: ROBERTS, GINSBURG

OPINION

[*2577] Chief Justice **Roberts** announced the judgment of the Court and delivered the opinion of the Court with respect to Parts I, II, and III-C, an opinion with respect to Part IV, in which Justice **Breyer** and Justice **Kagan** join, and an opinion with respect to Parts III-A, III-B, and III-D.

Today we resolve constitutional challenges to two provisions of the Patient Protection and Affordable Care Act of 2010: the individual mandate, which requires individuals to purchase a health insurance policy providing a minimum level of coverage; and the Medicaid expansion, which gives funds to the States on the condition that they provide specified health care to all citizens whose income falls below a certain threshold. We do not consider whether the Act embodies sound policies. That judgment is entrusted to the Nation's elected leaders. We ask only whether Congress has the power under the Constitution to enact the challenged provisions.

In our federal system, the National Government possesses only limited powers; the States and the people retain the [***14] remainder. Nearly two centuries ago, Chief Justice Marshall observed that "the question respecting the extent of the powers actually granted" to the Federal Government "is perpetually arising, and will probably continue to arise, as long as our system shall exist." *McCulloch v. [**465] Maryland*, 17 U.S. 316, 4 Wheat. 316, 405, 4 L. Ed. 579 (1819). In this case we must again determine whether the Constitution grants Congress powers it now asserts, but which many States and individuals believe it does not possess. Resolving this controversy requires us to examine both the limits of the Government's power, and our own limited role in policing those boundaries.

The Federal Government "is acknowledged by all to be one of enumerated powers." *Ibid.* That is, rather than granting general authority to perform all the conceivable functions of government, the Constitution lists, or enumerates, the Federal Government's powers. Congress may, for example, "coin Money," "establish Post Offices," and "raise and support Armies." Art. I, § 8, cls. 5, 7, 12. The enumeration of powers is also a limitation of powers, because "[t]he enumeration presupposes something not enumerated." *Gibbons v. Ogden*, 22 U.S. 1, 9 Wheat. 1, 195, 6 L. Ed. 23 (1824). [***15] The Constitution's express conferral of some powers makes clear that it does not grant others. And the Federal

Government "can exercise only the powers granted to it." *McCulloch, supra*, at 405, 4 Wheat. 316, 4 L. Ed. 579 .

Today, the restrictions on government power foremost in many Americans' minds are likely to be affirmative prohibitions, such as contained in the Bill of Rights. These affirmative prohibitions come into play, however, only where the Government possesses authority to act in the first place. If no enumerated power authorizes Congress to pass a certain law, that law may not be enacted, even if it would not violate any of the express prohibitions in the Bill of Rights or elsewhere in the Constitution.

Indeed, the Constitution did not initially include a Bill of Rights at least partly [*2578] because the Framers felt the enumeration of powers sufficed to restrain the Government. As Alexander Hamilton put it, "the Constitution is itself, in every rational sense, and to every useful purpose, A BILL OF RIGHTS." The Federalist No. 84, p. 515 (C. Rossiter ed. 1961). And when the Bill of Rights was ratified, it made express what the enumeration of powers necessarily implied: "The powers [***16] not delegated to the United States by the Constitution . . . are reserved to the States respectively, or to the people." U.S. Const., Amdt. 10. The Federal Government has expanded dramatically over the past two centuries, but it still must show that a constitutional grant of power authorizes each of its actions. See, e.g., *United States v. Comstock*, 560 U.S. 126, 130 S. Ct. 1949, 176 L. Ed. 2d 878 (2010).

The same does not apply to the States, because the Constitution is not the source of their power. The Constitution may restrict state governments--as it does, for example, by forbidding them to deny any person the equal protection of the laws. But where such prohibitions do not apply, state governments do not need constitutional authorization to act. The States thus can and do perform many of the vital functions of modern government--punishing street crime, running public schools, and zoning property for development, to name but a few--even though the Constitution's text does not authorize any government to do so. Our cases refer to this general power of governing, possessed by the States but not by the Federal Government, as the "police power." See, e.g., *United States v. Morrison*, 529 U.S. 598, 618-619, 120 S. Ct. 1740, 146 L. Ed. 2d 658 (2000).

[**466] "State [***17] sovereignty is not just an end in itself: Rather, federalism secures to citizens the

liberties that derive from the diffusion of sovereign power." *New York v. United States*, 505 U.S. 144, 181, 112 S. Ct. 2408, 120 L. Ed. 2d 120 (1992) (internal quotation marks omitted). Because the police power is controlled by 50 different States instead of one national sovereign, the facets of governing that touch on citizens' daily lives are normally administered by smaller governments closer to the governed. The Framers thus ensured that powers which "in the ordinary course of affairs, concern the lives, liberties, and properties of the people" were held by governments more local and more accountable than a distant federal bureaucracy. The Federalist No. 45, at 293 (J. Madison). The independent power of the States also serves as a check on the power of the Federal Government: "By denying any one government complete jurisdiction over all the concerns of public life, federalism protects the liberty of the individual from arbitrary power." *Bond v. United States*, 564 U.S. ___, ___, 131 S. Ct. 2355, 2364, 180 L. Ed. 2d 269, 280 (2011)).

This case concerns two powers that the Constitution does grant [***18] the Federal Government, but which must be read carefully to avoid creating a general federal authority akin to the police power. The Constitution authorizes Congress to "regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes." Art. I, § 8, cl. 3. Our precedents read that to mean that Congress may regulate "the channels of interstate commerce," "persons or things in interstate commerce," and "those activities that substantially affect interstate commerce." *Morrison, supra*, at 609, 120 S. Ct. 1740, 146 L. Ed. 2d 658 (internal quotation marks omitted). The power over activities that substantially affect interstate commerce can be expansive. That power has been held to authorize federal regulation of such seemingly local matters as a farmer's decision to grow wheat for himself and his [*2579] livestock, and a loan shark's extortionate collections from a neighborhood butcher shop. See *Wickard v. Filburn*, 317 U.S. 111, 63 S. Ct. 82, 87 L. Ed. 122 (1942); *Perez v. United States*, 402 U.S. 146, 91 S. Ct. 1357, 28 L. Ed. 2d 686 (1971).

Congress may also "lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defence and [***19] general Welfare of the United States." U.S. Const., Art. I, § 8, cl. 1. Put simply, Congress may tax and spend. This grant gives the Federal Government considerable influence even in areas where it cannot directly regulate. The Federal Government may

enact a tax on an activity that it cannot authorize, forbid, or otherwise control. See, e.g., *License Tax Cases*, 72 U.S. 462, 5 Wall. 462, 471, 18 L. Ed. 497 (1867). And in exercising its spending power, Congress may offer funds to the States, and may condition those offers on compliance with specified conditions. See, e.g., *College Savings Bank v. Florida Prepaid Postsecondary Ed. Expense Bd.*, 527 U.S. 666, 686, 119 S. Ct. 2219, 144 L. Ed. 2d 605 (1999). These offers may well induce the States to adopt policies that the Federal Government itself could not impose. See, e.g., *South Dakota v. Dole*, 483 U.S. 203, 205-206, 107 S. Ct. 2793, 97 L. Ed. 2d 171 (1987) (conditioning federal highway funds on States raising their drinking age to 21).

The reach of the Federal Government's enumerated powers is broader [**467] still because the Constitution authorizes Congress to "make all Laws which shall be necessary and proper for carrying into Execution [***20] the foregoing Powers." Art. I, § 8, cl. 18. We have long read this provision to give Congress great latitude in exercising its powers: "Let the end be legitimate, let it be within the scope of the constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the constitution, are constitutional." *McCulloch*, at 421, 4 L. Ed. 579 .

Our permissive reading of these powers is explained in part by a general reticence to invalidate the acts of the Nation's elected leaders. "Proper respect for a coordinate branch of the government" requires that we strike down an Act of Congress only if "the lack of constitutional authority to pass [the] act in question is clearly demonstrated." *United States v. Harris*, 106 U.S. 629, 635, 1 S. Ct. 601, 27 L. Ed. 290, 4 Ky. L. Rptr. 739 (1883). Members of this Court are vested with the authority to interpret the law; we possess neither the expertise nor the prerogative to make policy judgments. Those decisions are entrusted to our Nation's elected leaders, who can be thrown out of office if the people disagree with them. It is not our job to protect the people from [***21] the consequences of their political choices.

Our deference in matters of policy cannot, however, become abdication in matters of law. "The powers of the legislature are defined and limited; and that those limits may not be mistaken, or forgotten, the constitution is written." *Marbury v. Madison*, 5 U.S. 137, 1 Cranch 137, 176, 2 L. Ed. 60 (1803). Our respect for Congress's

policy judgments thus can never extend so far as to disavow restraints on federal power that the Constitution carefully constructed. "The peculiar circumstances of the moment may render a measure more or less wise, but cannot render it more or less constitutional." Chief Justice John Marshall, *A Friend of the Constitution* No. V, *Alexandria Gazette*, July 5, 1819, in *John Marshall's Defense of McCulloch v. Maryland* 190-191 (G. Gunther ed. 1969). And there can be no question that it is the responsibility of this Court to enforce the limits on federal power [*2580] by striking down acts of Congress that transgress those limits. *Marbury v. Madison*, *supra*, at 175-176, 2 L. Ed. 60.

The questions before us must be considered against the background of these basic principles.

I

In 2010, Congress enacted the Patient Protection and Affordable Care Act, 124 Stat. 119. [***22] The Act aims to increase the number of Americans covered by health insurance and decrease the cost of health care. The Act's 10 titles stretch over 900 pages and contain hundreds of provisions. This case concerns constitutional challenges to two key provisions, commonly referred to as the individual mandate and the Medicaid expansion.

[**LEdHR1] [1] The individual mandate requires most Americans to maintain "minimum essential" health insurance coverage. 26 U.S.C. §5000A. The mandate does not apply to some individuals, such as prisoners and undocumented aliens. §5000A(d). Many individuals will receive the required coverage through their employer, or from a government program such as Medicaid or Medicare. See §5000A(f). But for individuals who are not exempt and do not receive health insurance [**468] through a third party, the means of satisfying the requirement is to purchase insurance from a private company.

[**LEdHR2] [2] Beginning in 2014, those who do not comply with the mandate must make a "[s]hared responsibility payment" to the Federal Government. §5000A(b)(1). That payment, which the Act describes as a "penalty," is calculated as a percentage of household income, subject to a floor based on a specified dollar amount [***23] and a ceiling based on the average annual premium the individual would have to pay for qualifying private health insurance. §5000A(c). In 2016, for example, the penalty will be 2.5 percent of an

individual's household income, but no less than \$695 and no more than the average yearly premium for insurance that covers 60 percent of the cost of 10 specified services (e.g., prescription drugs and hospitalization). *Ibid.*; 42 U.S.C. §18022. [**LEdHR3] [3] The Act provides that the penalty will be paid to the Internal Revenue Service with an individual's taxes, and "shall be assessed and collected in the same manner" as tax penalties, such as the penalty for claiming too large an income tax refund. 26 U.S.C. §5000A(g)(1). The Act, however, bars the IRS from using several of its normal enforcement tools, such as criminal prosecutions and levies. §5000A(g)(2). And some individuals who are subject to the mandate are nonetheless exempt from the penalty--for example, those with income below a certain threshold and members of Indian tribes. §5000A(e).

On the day the President signed the Act into law, Florida and 12 other States filed a complaint in the Federal District Court for the Northern District of Florida. [***24] Those plaintiffs--who are both respondents and petitioners here, depending on the issue--were subsequently joined by 13 more States, several individuals, and the National Federation of Independent Business. The plaintiffs alleged, among other things, that the individual mandate provisions of the Act exceeded Congress's powers under Article I of the Constitution. The District Court agreed, holding that Congress lacked constitutional power to enact the individual mandate. 780 F. Supp. 2d 1256 (ND Fla. 2011). The District Court determined that the individual mandate could not be severed from the remainder of the Act, and therefore struck down the Act in its entirety. *Id.*, at 1305-1306.

The Court of Appeals for the Eleventh Circuit affirmed in part and reversed in [*2581] part. The court affirmed the District Court's holding that the individual mandate exceeds Congress's power. 648 F.3d 1235 (2011). The panel unanimously agreed that the individual mandate did not impose a tax, and thus could not be authorized by Congress's power to "lay and collect Taxes." U.S. Const., Art. I, § 8, cl. 1. A majority also held that the individual mandate was not supported by Congress's power to "regulate Commerce [***25] . . . among the several States." *Id.*, cl. 3. According to the majority, the Commerce Clause does not empower the Federal Government to order individuals to engage in commerce, and the Government's efforts to cast the individual mandate in a different light were unpersuasive.

Judge Marcus dissented, reasoning that the individual mandate regulates economic activity that has a clear effect on interstate commerce.

Having held the individual mandate to be unconstitutional, the majority examined whether that provision [**469] could be severed from the remainder of the Act. The majority determined that, contrary to the District Court's view, it could. The court thus struck down only the individual mandate, leaving the Act's other provisions intact. 648 F.3d, at 1328.

Other Courts of Appeals have also heard challenges to the individual mandate. The Sixth Circuit and the D. C. Circuit upheld the mandate as a valid exercise of Congress's commerce power. See *Thomas More Law Center v. Obama*, 651 F.3d 529 (CA6 2011); *Seven-Sky v. Holder*, 661 F.3d 1, 398 U.S. App. D.C. 134 (CADC 2011). The Fourth Circuit determined that the Anti-Injunction Act prevents courts from considering the merits of that question. [***26] See *Liberty Univ., Inc. v. Geithner*, 671 F.3d 391 (2011). That statute bars suits "for the purpose of restraining the assessment or collection of any tax." 26 U.S.C. §7421(a). A majority of the Fourth Circuit panel reasoned that the individual mandate's penalty is a tax within the meaning of the Anti-Injunction Act, because it is a financial assessment collected by the IRS through the normal means of taxation. The majority therefore determined that the plaintiffs could not challenge the individual mandate until after they paid the penalty.¹

1 The Eleventh Circuit did not consider whether the Anti-Injunction Act bars challenges to the individual mandate. The District Court had determined that it did not, and neither side challenged that holding on appeal. The same was true in the Fourth Circuit, but that court examined the question *sua sponte* because it viewed the Anti-Injunction Act as a limit on its subject matter jurisdiction. See *Liberty Univ.*, 671 F.3d, at 400-401. The Sixth Circuit and the D. C. Circuit considered the question but determined that the Anti-Injunction Act did not apply. See *Thomas More*, 651 F.3d, at 539-540 (CA6); *Seven-Sky*, 661 F.3d, at 5-14 (CADC).

The second [***27] provision of the Affordable Care Act directly challenged here is the Medicaid expansion. Enacted in 1965, [**LEdHR4] [4] Medicaid offers federal funding to States to assist pregnant women,

children, needy families, the blind, the elderly, and the disabled in obtaining medical care. See 42 U.S.C. §1396a(a)(10). In order to receive that funding, States must comply with federal criteria governing matters such as who receives care and what services are provided at what cost. By 1982 every State had chosen to participate in Medicaid. Federal funds received through the Medicaid program have become a substantial part of state budgets, now constituting over 10 percent of most States' total revenue.

The Affordable Care Act expands the scope of the Medicaid program and increases the number of individuals the States must cover. For example, the Act [**2582] requires state programs to provide Medicaid coverage to adults with incomes up to 133 percent of the federal poverty level, whereas many States now cover adults with children only if their income is considerably lower, and do not cover childless adults at all. See §1396a(a)(10)(A)(i)(VIII). The Act increases federal funding to cover the States' costs in expanding [***28] Medicaid coverage, although States will bear a portion of the costs on their own. §1396d(y)(1). If a State does not comply with the Act's new coverage requirements, it may lose not only the federal funding for those requirements, but all of its federal Medicaid funds. See §1396c.

Along with their challenge to the individual mandate, the state plaintiffs in the Eleventh Circuit argued that the Medicaid expansion exceeds Congress's constitutional powers. The [**470] Court of Appeals unanimously held that the Medicaid expansion is a valid exercise of Congress's power under the Spending Clause. U.S. Const., Art. I, § 8, cl. 1. And the court rejected the States' claim that the threatened loss of all federal Medicaid funding violates the Tenth Amendment by coercing them into complying with the Medicaid expansion. 648 F.3d, at 1264, 1268.

We granted certiorari to review the judgment of the Court of Appeals for the Eleventh Circuit with respect to both the individual mandate and the Medicaid expansion. 565 U.S. ___, 132 S. Ct. 603, 181 L. Ed. 2d 420 (2011). Because no party supports the Eleventh Circuit's holding that the individual mandate can be completely severed from the remainder of the Affordable [***29] Care Act, we appointed an *amicus curiae* to defend that aspect of the judgment below. And because there is a reasonable argument that the Anti-Injunction Act deprives us of jurisdiction to hear challenges to the individual mandate,

but no party supports that proposition, we appointed an *amicus curiae* to advance it.²

2 We appointed H. Bartow Farr III to brief and argue in support of the Eleventh Circuit's judgment with respect to severability, and Robert A. Long to brief and argue the proposition that the Anti-Injunction Act bars the current challenges to the individual mandate. 565 U.S. ___, 132 S. Ct. 603, 181 L. Ed. 2d 420 (2011). Both *amici* have ably discharged their assigned responsibilities.

II

Before turning to the merits, we need to be sure we have the authority to do so. The Anti-Injunction Act provides that [**LEdHR5] [5] "no suit for the purpose of restraining the assessment or collection of any tax shall be maintained in any court by any person, whether or not such person is the person against whom such tax was assessed." 26 U.S.C. §7421(a). [**LEdHR6] [6] This statute protects the Government's ability to collect a consistent stream of revenue, by barring litigation to enjoin or otherwise obstruct [***30] the collection of taxes. Because of the Anti-Injunction Act, taxes can ordinarily be challenged only after they are paid, by suing for a refund. See *Enochs v. Williams Packing & Nav. Co.*, 370 U.S. 1, 7-8, 82 S. Ct. 1125, 8 L. Ed. 2d 292 (1962).

The penalty for not complying with the Affordable Care Act's individual mandate first becomes enforceable in 2014. The present challenge to the mandate thus seeks to restrain the penalty's future collection. *Amicus* contends that the Internal Revenue Code treats the penalty as a tax, and that the Anti-Injunction Act therefore bars this suit.

The text of the pertinent statutes suggests otherwise. [**LEdHR7] [7] The Anti-Injunction Act applies to suits "for the purpose of restraining the assessment or collection of any tax." §7421(a) (emphasis added). [**2583] Congress, however, chose to describe the "[s]hared responsibility payment" imposed on those who forgo health insurance not as a "tax," but as a "penalty." §§5000A(b), (g)(2). There is no immediate reason to think that a statute applying to "any tax" would apply to a "penalty."

Congress's decision to label this exaction a "penalty" rather than a "tax" is significant because the Affordable

Care Act describes many other [***31] exactions it creates as "taxes." See *Thomas More*, 651 F.3d, at 551. [**LEdHR8] [8] Where Congress uses certain language in one part of a statute and different language in another, it is [**471] generally presumed that Congress acts intentionally. See *Russello v. United States*, 464 U.S. 16, 23, 104 S. Ct. 296, 78 L. Ed. 2d 17 (1983).

Amicus argues that even though Congress did not label the shared responsibility payment a tax, we should treat it as such under the Anti-Injunction Act because it functions like a tax. [**LEdHR9] [9] It is true that Congress cannot change whether an exaction is a tax or a penalty for *constitutional* purposes simply by describing it as one or the other. Congress may not, for example, expand its power under the Taxing Clause, or escape the Double Jeopardy Clause's constraint on criminal sanctions, by labeling a severe financial punishment a "tax." See *Child Labor Tax Case*, 259 U.S. 20, 36-37, 42 S. Ct. 449, 66 L. Ed. 817 (1922); *Department of Revenue v. Kurth Ranch*, 511 U.S. 767, 779, 114 S. Ct. 1937, 128 L. Ed. 2d 767 (1994).

The Anti-Injunction Act and the Affordable Care Act, however, are creatures of Congress's own creation. How they relate to each other is up to Congress, and the best evidence [***32] of Congress's intent is the statutory text. We have thus applied the Anti-Injunction Act to statutorily described "taxes" even where that label was inaccurate. See *Bailey v. George*, 259 U.S. 16, 42 S. Ct. 419, 66 L. Ed. 816, 1922-2 C.B. 342, T.D. 3347 (1922) (Anti-Injunction Act applies to "Child Labor Tax" struck down as exceeding Congress's taxing power in *Drexel Furniture*).

[**LEdHR10] [10] Congress can, of course, describe something as a penalty but direct that it nonetheless be treated as a tax for purposes of the Anti-Injunction Act. For example, 26 U.S.C. §6671(a) provides that "any reference in this title to 'tax' imposed by this title shall be deemed also to refer to the penalties and liabilities provided by" subchapter 68B of the Internal Revenue Code. Penalties in subchapter 68B are thus treated as taxes under Title 26, which includes the Anti-Injunction Act. The individual mandate, however, is not in subchapter 68B of the Code. Nor does any other provision state that references to taxes in Title 26 shall also be "deemed" to apply to the individual mandate.

Amicus attempts to show that Congress did render the Anti-Injunction Act applicable to the individual

mandate, albeit by a more circuitous [***33] route. [**LEdHR11] [11] Section 5000A(g)(1) specifies that the penalty for not complying with the mandate "shall be assessed and collected in the same manner as an assessable penalty under subchapter B of chapter 68." Assessable penalties in subchapter 68B, in turn, "shall be assessed and collected in the same manner as taxes." §6671(a). According to *amicus*, by directing that the penalty be "assessed and collected in the same manner as taxes," §5000A(g)(1) made the Anti-Injunction Act applicable to this penalty.

The Government disagrees. It argues that §5000A(g)(1) does not direct courts to apply the Anti-Injunction Act, because §5000A(g) is a directive only to the Secretary of the Treasury to use the same "methodology and procedures" to collect the penalty that he uses to collect taxes. [*2584] Brief for United States 32-33 (quoting *Seven-Sky*, 661 F.3d, at 11).

We think the Government has the better reading. As it observes, [**LEdHR12] [12] "Assessment" and "Collection" are chapters of the Internal Revenue Code providing the Secretary authority [**472] to assess and collect taxes, and generally specifying the means by which he shall do so. See §6201 (assessment authority); §6301 (collection authority). Section 5000A(g)(1)'s command [***34] that the penalty be "assessed and collected in the same manner" as taxes is best read as referring to those chapters and giving the Secretary the same authority and guidance with respect to the penalty. That interpretation is consistent with the remainder of §5000A(g), which instructs the Secretary on the tools he may use to collect the penalty. See §5000A(g)(2)(A) (barring criminal prosecutions); §5000A(g)(2)(B) (prohibiting the Secretary from using notices of lien and levies). The Anti-Injunction Act, by contrast, says nothing about the procedures to be used in assessing and collecting taxes.

Amicus argues in the alternative that a different section of the Internal Revenue Code requires courts to treat the penalty as a tax under the Anti-Injunction Act. Section 6201(a) authorizes the Secretary to make "assessments of all taxes (including interest, additional amounts, additions to the tax, and *assessable penalties*)." (Emphasis added.) *Amicus* contends that the penalty must be a tax, because it is an assessable penalty and §6201(a) says that taxes include assessable penalties.

That argument has force only if §6201(a) is read in

isolation. [**LEdHR13] [13] The Code contains many provisions treating taxes [***35] and assessable penalties as distinct terms. See, *e.g.*, §§860(h)(1), 6324A(a), 6601(e)(1)-(2), 6602, 7122(b). There would, for example, be no need for §6671(a) to deem "tax" to refer to certain assessable penalties if the Code already included all such penalties in the term "tax." Indeed, *amicus*'s earlier observation that the Code requires assessable penalties to be assessed and collected "in the same manner as taxes" makes little sense if assessable penalties are themselves taxes. [**LEdHR14] [14] In light of the Code's consistent distinction between the terms "tax" and "assessable penalty," we must accept the Government's interpretation: §6201(a) instructs the Secretary that his authority to assess taxes includes the authority to assess penalties, but it does not equate assessable penalties to taxes for other purposes.

[**LEdHR15] [15] The Affordable Care Act does not require that the penalty for failing to comply with the individual mandate be treated as a tax for purposes of the Anti-Injunction Act. The Anti-Injunction Act therefore does not apply to this suit, and we may proceed to the merits.

III

The Government advances two theories for the proposition that Congress had constitutional authority to enact the individual [***36] mandate. First, the Government argues that Congress had the power to enact the mandate under the Commerce Clause. Under that theory, Congress may order individuals to buy health insurance because the failure to do so affects interstate commerce, and could undercut the Affordable Care Act's other reforms. Second, the Government argues that if the commerce power does not support the mandate, we should nonetheless uphold it as an exercise of Congress's power to tax. According to the Government, even if Congress lacks the power to direct individuals to buy insurance, the only effect of the individual mandate is to raise taxes on those who do not do so, and thus the law may be upheld as a tax.

[*2585] [**473] A

The Government's first argument is that the individual mandate is a valid exercise of Congress's power under the Commerce Clause and the Necessary and Proper Clause. According to the Government, the health care market is characterized by a significant

cost-shifting problem. Everyone will eventually need health care at a time and to an extent they cannot predict, but if they do not have insurance, they often will not be able to pay for it. Because state and federal laws nonetheless require hospitals [***37] to provide a certain degree of care to individuals without regard to their ability to pay, see, e.g., 42 U.S.C. §1395dd; Fla. Stat. Ann. §395.1041, hospitals end up receiving compensation for only a portion of the services they provide. To recoup the losses, hospitals pass on the cost to insurers through higher rates, and insurers, in turn, pass on the cost to policy holders in the form of higher premiums. Congress estimated that the cost of uncompensated care raises family health insurance premiums, on average, by over \$1,000 per year. 42 U.S.C. §18091(2)(F).

In the Affordable Care Act, Congress addressed the problem of those who cannot obtain insurance coverage because of preexisting conditions or other health issues. It did so through the Act's "guaranteed-issue" and "community-rating" provisions. These provisions together prohibit insurance companies from denying coverage to those with such conditions or charging unhealthy individuals higher premiums than healthy individuals. See §§300gg, 300gg-1, 300gg-3, 300gg-4.

The guaranteed-issue and community-rating reforms do not, however, address the issue of healthy individuals who choose not to purchase insurance to cover potential [***38] health care needs. In fact, the reforms sharply exacerbate that problem, by providing an incentive for individuals to delay purchasing health insurance until they become sick, relying on the promise of guaranteed and affordable coverage. The reforms also threaten to impose massive new costs on insurers, who are required to accept unhealthy individuals but prohibited from charging them rates necessary to pay for their coverage. This will lead insurers to significantly increase premiums on everyone. See Brief for America's Health Insurance Plans et al. as *Amici Curiae* in No. 11-393 etc. 8-9.

The individual mandate was Congress's solution to these problems. By requiring that individuals purchase health insurance, the mandate prevents cost-shifting by those who would otherwise go without it. In addition, the mandate forces into the insurance risk pool more healthy individuals, whose premiums on average will be higher than their health care expenses. This allows insurers to subsidize the costs of covering the unhealthy individuals

the reforms require them to accept. The Government claims that Congress has power under the Commerce and Necessary and Proper Clauses to enact this solution.

1

The [***39] Government contends that the individual mandate is within Congress's power because the failure to purchase insurance "has a substantial and deleterious effect on interstate commerce" by creating the cost-shifting problem. Brief for United States 34. The path of our Commerce Clause decisions has not always run [**474] smooth, see *United States v. Lopez*, 514 U.S. 549, 552-559, 115 S. Ct. 1624, 131 L. Ed. 2d 626 (1995), but it is now well established that Congress has broad authority under the Clause. We have recognized, for example, that "[t]he power of Congress over interstate commerce is not confined to the regulation of commerce among the states," but extends to activities that "have a substantial effect on interstate commerce." [*2586] *United States v. Darby*, 312 U.S. 100, 118-119, 61 S. Ct. 451, 85 L. Ed. 609 (1941). Congress's power, moreover, is not limited to regulation of an activity that by itself substantially affects interstate commerce, but also extends to activities that do so only when aggregated with similar activities of others. See *Wickard*, 317 U.S., at 127-128, 63 S. Ct. 82, 87 L. Ed. 122.

Given its expansive scope, it is no surprise that Congress has employed the commerce power [***40] in a wide variety of ways to address the pressing needs of the time. But Congress has never attempted to rely on that power to compel individuals not engaged in commerce to purchase an unwanted product.³ Legislative novelty is not necessarily fatal; there is a first time for everything. But sometimes "the most telling indication of [a] severe constitutional problem . . . is the lack of historical precedent" for Congress's action. *Free Enterprise Fund v. Public Company Accounting Oversight Bd.*, 561 U.S. 477, 130 S. Ct. 3138, 3159, 177 L. Ed. 2d 706, 731 (2010) (internal quotation marks omitted). At the very least, we should "pause to consider the implications of the Government's arguments" when confronted with such new conceptions of federal power. *Lopez*, *supra*, at 564, 115 S. Ct. 1624, 131 L. Ed. 2d 626.

3 The examples of other congressional mandates cited by Justice Ginsburg, *post*, at ___, n. 10, 183 L. Ed. 2d, at 519 (opinion concurring in part, concurring in judgment in part, and dissenting in part), are not to the contrary. Each of those

mandates--to report for jury duty, to register for the draft, to purchase firearms in anticipation of militia service, to exchange gold currency for paper currency, and to [***41] file a tax return--are based on constitutional provisions other than the Commerce Clause. See Art. I, § 8, cl. 9 (to "constitute Tribunals inferior to the supreme Court"); *id.*, cl. 12 (to "raise and support Armies"); *id.*, cl. 16 (to "provide for organizing, arming, and disciplining, the Militia"); *id.*, cl. 5 (to "coin Money"); *id.*, cl. 1 (to "lay and collect Taxes").

The Constitution grants Congress the power to "regulate Commerce." Art. I, § 8, cl. 3 (emphasis added). The power to *regulate* commerce presupposes the existence of commercial activity to be regulated. If the power to "regulate" something included the power to create it, many of the provisions in the Constitution would be superfluous. For example, the Constitution gives Congress the power to "coin Money," in addition to the power to "regulate the Value thereof." *Id.*, cl. 5. And it gives Congress the power to "raise and support Armies" and to "provide and maintain a Navy," in addition to the power to "make Rules for the Government and Regulation of the land and naval Forces." *Id.*, cls. 12-14. If the power to regulate the armed forces or the value of money included the power to bring the subject of the regulation into existence, [***42] the specific grant of such powers would have been unnecessary. The language of the Constitution reflects the natural understanding that the power to regulate assumes there is already something to be regulated. See *Gibbons*, 22 U.S., at 188, 9 Wheat., at 188, 6 L. Ed. 23 ("[T]he enlightened patriots who framed our constitution, and the people who adopted it, must be understood to have employed words in their [**475] natural sense, and to have intended what they have said").⁴

4 Justice Ginsburg suggests that "at the time the Constitution was framed, to 'regulate' meant, among other things, to require action." *Post*, at ___, 183 L. Ed. 2d, at 512 (citing *Seven-Sky v. Holder*, 661 F.3d 1, 16, 398 U.S. App. D.C. 134 (CADC 2011); brackets and some internal quotation marks omitted). But to reach this conclusion, the case cited by Justice Ginsburg relied on a dictionary in which "[t]o order; to command" was the fifth-alternative definition of "to direct," which was itself the second-alternative

definition of "to regulate." See *Seven-Sky*, *supra*, at 16 (citing S. Johnson, *Dictionary of the English Language* (4th ed. 1773) (reprinted 1978)). It is unlikely that the Framers had such an obscure meaning in mind when they used the [***43] word "regulate." Far more commonly, "[t]o regulate" meant "[t]o adjust by rule or method," which presupposes something to adjust. 2 Johnson, *supra*, at 1619; see also *Gibbons*, 22 U.S., at 196, 9 Wheat., at 196, 6 L. Ed. 23 (defining the commerce power as the power "to prescribe the rule by which commerce is to be governed").

[*2587] Our precedent also reflects this understanding. As expansive as our cases construing the scope of the commerce power have been, they all have one thing in common: They uniformly describe the power as reaching "activity." It is nearly impossible to avoid the word when quoting them. See, e.g., *Lopez*, *supra*, at 560, 115 S. Ct. 1624, 131 L. Ed. 2d 626 ("Where economic activity substantially affects interstate commerce, legislation regulating that activity will be sustained"); *Perez*, 402 U.S., at 154, 91 S. Ct. 1357, 28 L. Ed. 2d 686 ("Where the *class of activities* is regulated and that *class* is within the reach of federal power, the courts have no power to excise, as trivial, individual instances of the class" (emphasis in original; internal quotation marks omitted)); *Wickard*, *supra*, at 125, 63 S. Ct. 82, 87 L. Ed. 122 ("[E]ven if appellee's activity be local and though [***44] it may not be regarded as commerce, it may still, whatever its nature, be reached by Congress if it exerts a substantial economic effect on interstate commerce"); *NLRB v. Jones & Laughlin Steel Corp.*, 301 U.S. 1, 37, 57 S. Ct. 615, 81 L. Ed. 893 (1937) ("Although activities may be intrastate in character when separately considered, if they have such a close and substantial relation to interstate commerce that their control is essential or appropriate to protect that commerce from burdens and obstructions, Congress cannot be denied the power to exercise that control"); see also *post*, at ___, ___, ___, 183 L. Ed. 2d, at 507, 513-514, 515, 517 (Ginsburg, J., concurring in part, concurring in judgment in part, and dissenting in part).⁵

5 Justice Ginsburg cites two eminent domain cases from the 1890s to support the proposition that our case law does not "toe the activity versus inactivity line." *Post*, at ___ - ___, 183 L. Ed. 2d, at 512-513 (citing *Monongahela Nav. Co. v.*

United States, 148 U.S. 312, 335-337, 13 S. Ct. 622, 37 L. Ed. 463 (1893), and *Cherokee Nation v. Southern K. R. Co.*, 135 U.S. 641, 657-659, 10 S. Ct. 965, 34 L. Ed. 295 (1890)). The fact that the Fifth Amendment requires the payment of just compensation when the Government exercises its [***45] power of eminent domain does not turn the taking into a commercial transaction between the landowner and the Government, let alone a government-compelled transaction between the landowner and a third party.

The individual mandate, however, does not regulate existing commercial activity. It instead compels individuals to *become* active in commerce by purchasing a product, on the ground that their failure to do so affects interstate commerce. Construing the Commerce Clause to permit Congress to regulate individuals precisely *because* they are doing nothing would open a new and potentially vast domain to congressional authority. Every day individuals do not do an infinite number of things. In some cases they decide not to do something; in [**476] others they simply fail to do it. Allowing Congress to justify federal regulation by pointing to the effect of inaction on commerce would bring countless decisions an individual could *potentially* make within the scope of federal regulation, and--under the Government's theory--empower Congress to make those decisions for him.

Applying the Government's logic to the familiar case of *Wickard v. Filburn* shows how far that logic would carry us from the notion of [***46] a government of limited powers. In *Wickard*, the Court famously upheld a federal penalty imposed on a farmer for growing wheat for consumption on his own farm. 317 U.S., at 114-115, 128-129, 63 S. Ct. 82, 87 L. Ed. 122. That amount of wheat caused the farmer to exceed his quota under a [*2588] program designed to support the price of wheat by limiting supply. The Court rejected the farmer's argument that growing wheat for home consumption was beyond the reach of the commerce power. It did so on the ground that the farmer's decision to grow wheat for his own use allowed him to avoid purchasing wheat in the market. That decision, when considered in the aggregate along with similar decisions of others, would have had a substantial effect on the interstate market for wheat. *Id.*, at 127-129, 63 S. Ct. 82, 87 L. Ed. 122.

Wickard has long been regarded as "perhaps the most

far reaching example of Commerce Clause authority over intrastate activity," *Lopez*, 514 U.S., at 560, 115 S. Ct. 1624, 131 L. Ed. 2d 626, but the Government's theory in this case would go much further. Under *Wickard* it is within Congress's power to regulate the market for wheat by supporting its price. But price can be supported [***47] by increasing demand as well as by decreasing supply. The aggregated decisions of some consumers not to purchase wheat have a substantial effect on the price of wheat, just as decisions not to purchase health insurance have on the price of insurance. Congress can therefore command that those not buying wheat do so, just as it argues here that it may command that those not buying health insurance do so. The farmer in *Wickard* was at least actively engaged in the production of wheat, and the Government could regulate that activity because of its effect on commerce. The Government's theory here would effectively override that limitation, by establishing that individuals may be regulated under the Commerce Clause whenever enough of them are not doing something the Government would have them do.

Indeed, the Government's logic would justify a mandatory purchase to solve almost any problem. See *Seven-Sky*, 661 F.3d, at 14-15 (noting the Government's inability to "identify any mandate to purchase a product or service in interstate commerce that would be unconstitutional" under its theory of the commerce power). To consider a different example in the health care market, many Americans do not [***48] eat a balanced diet. That group makes up a larger percentage of the total population than those without health insurance. See, e.g., Dept. of Agriculture and Dept. of Health and Human Services, *Dietary Guidelines for Americans 1* (2010). The failure of that group to have a healthy diet increases health care costs, to a greater extent than the failure of the uninsured to purchase insurance. See, e.g., Finkelstein, Trogdon, Cohen, & Dietz, *Annual Medical Spending Attributable to Obesity: Payer-and [**477] Service-Specific Estimates*, 28 *Health Affairs* w822 (2009) (detailing the "undeniable link between rising rates of obesity and rising medical spending," and estimating that "the annual medical burden of obesity has risen to almost 10 percent of all medical spending and could amount to \$147 billion per year in 2008"). Those increased costs are borne in part by other Americans who must pay more, just as the uninsured shift costs to the insured. See Center for Applied Ethics, *Voluntary Health Risks: Who Should Pay?*, 6 *Issues in Ethics* 6 (1993) (noting "overwhelming evidence that individuals with

unhealthy habits pay only a fraction of the costs associated with their behaviors; most of the expense [***49] is borne by the rest of society in the form of higher insurance premiums, government expenditures for health care, and disability benefits"). Congress addressed the insurance problem by ordering everyone to buy insurance. Under the Government's theory, Congress could address the diet problem by ordering everyone to buy vegetables. See Dietary Guidelines, *supra*, at 19 ("Improved nutrition, appropriate eating behaviors, and increased [*2589] physical activity have tremendous potential to . . . reduce health care costs").

People, for reasons of their own, often fail to do things that would be good for them or good for society. Those failures--joined with the similar failures of others--can readily have a substantial effect on interstate commerce. Under the Government's logic, that authorizes Congress to use its commerce power to compel citizens to act as the Government would have them act.

That is not the country the Framers of our Constitution envisioned. James Madison explained that the Commerce Clause was "an addition which few oppose and from which no apprehensions are entertained." The Federalist No. 45, at 293. While Congress's authority under the Commerce Clause has of course expanded with [***50] the growth of the national economy, our cases have "always recognized that the power to regulate commerce, though broad indeed, has limits." *Maryland v. Wirtz*, 392 U.S. 183, 196, 88 S. Ct. 2017, 20 L. Ed. 2d 1020 (1968). The Government's theory would erode those limits, permitting Congress to reach beyond the natural extent of its authority, "everywhere extending the sphere of its activity and drawing all power into its impetuous vortex." The Federalist No. 48, at 309 (J. Madison). Congress already enjoys vast power to regulate much of what we do. Accepting the Government's theory would give Congress the same license to regulate what we do not do, fundamentally changing the relation between the citizen and the Federal Government.⁶

6 In an attempt to recast the individual mandate as a regulation of commercial activity, Justice Ginsburg suggests that "[a]n individual who opts not to purchase insurance from a private insurer can be seen as actively selecting another form of insurance: self-insurance." *Post*, at ___, 183 L. Ed. 2d, at 514. But "self-insurance" is, in this

context, nothing more than a description of the failure to purchase insurance. Individuals are no more "activ[e] [***51] in the self-insurance market" when they fail to purchase insurance, *ibid.*, than they are active in the "rest" market when doing nothing.

To an economist, perhaps, there is no difference between activity and inactivity; both have measurable economic effects on commerce. But the distinction between doing something and doing nothing would not have [**478] been lost on the Framers, who were "practical statesmen," not metaphysical philosophers. *Industrial Union Dept., AFL-CIO v. American Petroleum Institute*, 448 U.S. 607, 673, 100 S. Ct. 2844, 65 L. Ed. 2d 1010 (1980) (Rehnquist, J., concurring in judgment). As we have explained, "the framers of the Constitution were not mere visionaries, toying with speculations or theories, but practical men, dealing with the facts of political life as they understood them, putting into form the government they were creating, and prescribing in language clear and intelligible the powers that government was to take." *South Carolina v. United States*, 199 U.S. 437, 449, 26 S. Ct. 110, 50 L. Ed. 261, 41 Ct. Cl. 503, T.D. 961 (1905). The Framers gave Congress the power to *regulate* commerce, not to *compel* it, and for over 200 years both our decisions and Congress's [***52] actions have reflected this understanding. There is no reason to depart from that understanding now.

The Government sees things differently. It argues that because sickness and injury are unpredictable but unavoidable, "the uninsured as a class are active in the market for health care, which they regularly seek and obtain." Brief for United States 50. The individual mandate "merely regulates how individuals finance and pay for that active participation--requiring that they do so through insurance, rather than through attempted self-insurance with the [*2590] back-stop of shifting costs to others." *Ibid.*

The Government repeats the phrase "active in the market for health care" throughout its brief, see *id.*, at 7, 18, 34, 50, but that concept has no constitutional significance. An individual who bought a car two years ago and may buy another in the future is not "active in the car market" in any pertinent sense. The phrase "active in the market" cannot obscure the fact that most of those regulated by the individual mandate are not currently

engaged in any commercial activity involving health care, and that fact is fatal to the Government's effort to "regulate the uninsured as a class." *Id.*, at 42. [***53] Our precedents recognize Congress's power to regulate "class[es] of activities," *Gonzales v. Raich*, 545 U.S. 1, 17, 125 S. Ct. 2195, 162 L. Ed. 2d 1 (2005) (emphasis added), not classes of *individuals*, apart from any activity in which they are engaged, see, e.g., *Perez*, 402 U.S., at 153, 91 S. Ct. 1357, 28 L. Ed. 2d 686 ("Petitioner is clearly a member of the class which engages in 'extortionate credit transactions' . . ." (emphasis deleted)).

The individual mandate's regulation of the uninsured as a class is, in fact, particularly divorced from any link to existing commercial activity. The mandate primarily affects healthy, often young adults who are less likely to need significant health care and have other priorities for spending their money. It is precisely because these individuals, as an actuarial class, incur relatively low health care costs that the mandate helps counter the effect of forcing insurance companies to cover others who impose greater costs than their premiums are allowed to reflect. See 42 U.S.C. §18091(2)(I) (recognizing that the mandate would "broaden the health insurance risk pool to include healthy individuals, which will lower health insurance premiums"). [***54] If the individual mandate is targeted at a class, it is a class whose commercial inactivity rather than activity is its defining feature.

The Government, however, claims that this does not matter. The Government [**479] regards it as sufficient to trigger Congress's authority that almost all those who are uninsured will, at some unknown point in the future, engage in a health care transaction. Asserting that "[t]here is no temporal limitation in the Commerce Clause," the Government argues that because "[e]veryone subject to this regulation is in or will be in the health care market," they can be "regulated in advance." Tr. of Oral Arg. 109 (Mar. 27, 2012).

The proposition that Congress may dictate the conduct of an individual today because of prophesied future activity finds no support in our precedent. We have said that Congress can anticipate the *effects* on commerce of an economic activity. See, e.g., *Consolidated Edison Co. v. NLRB*, 305 U.S. 197, 59 S. Ct. 206, 83 L. Ed. 126 (1938) (regulating the labor practices of utility companies); *Heart of Atlanta Motel, Inc. v. United States*, 379 U.S. 241, 85 S. Ct. 348, 13 L. Ed. 2d 258 (1964) (prohibiting discrimination by hotel operators);

Katzenbach v. McClung, 379 U.S. 294, 85 S. Ct. 377, 13 L. Ed. 2d 290 (1964) [***55] (prohibiting discrimination by restaurant owners). But we have never permitted Congress to anticipate that activity itself in order to regulate individuals not currently engaged in commerce. Each one of our cases, including those cited by Justice Ginsburg, *post*, at ___ - ___, 183 L. Ed. 2d, at 510-511, involved preexisting economic activity. See, e.g., *Wickard*, 317 U.S., at 127-129, 63 S. Ct. 82, 87 L. Ed. 122 (producing wheat); *Raich, supra*, at 25, 125 S. Ct. 2195, 162 L. Ed. 2d 1 (growing marijuana).

Everyone will likely participate in the markets for food, clothing, transportation, shelter, or energy; that does not authorize [*2591] Congress to direct them to purchase particular products in those or other markets today. The Commerce Clause is not a general license to regulate an individual from cradle to grave, simply because he will predictably engage in particular transactions. Any police power to regulate individuals as such, as opposed to their activities, remains vested in the States.

The Government argues that the individual mandate can be sustained as a sort of exception to this rule, because health insurance is a unique product. According to the Government, upholding the individual mandate would not justify mandatory [***56] purchases of items such as cars or broccoli because, as the Government puts it, "[h]ealth insurance is not purchased for its own sake like a car or broccoli; it is a means of financing health-care consumption and covering universal risks." Reply Brief for United States 19. But cars and broccoli are no more purchased for their "own sake" than health insurance. They are purchased to cover the need for transportation and food.

The Government says that health insurance and health care financing are "inherently integrated." Brief for United States 41. But that does not mean the compelled purchase of the first is properly regarded as a regulation of the second. No matter how "inherently integrated" health insurance and health care consumption may be, they are not the same thing: They involve different transactions, entered into at different times, with different providers. And for most of those targeted by the mandate, significant health care needs will be years, or even decades, away. The proximity and degree of connection between the mandate and the subsequent commercial activity is too lacking [**480] to justify an exception of

the sort urged by the Government. The individual mandate forces individuals [***57] into commerce precisely because they elected to refrain from commercial activity. Such a law cannot be sustained under a clause authorizing Congress to "regulate Commerce."

2

The Government next contends that Congress has the power under the Necessary and Proper Clause to enact the individual mandate because the mandate is an "integral part of a comprehensive scheme of economic regulation"--the guaranteed-issue and community-rating insurance reforms. Brief for United States 24. Under this argument, it is not necessary to consider the effect that an individual's inactivity may have on interstate commerce; it is enough that Congress regulate commercial activity in a way that requires regulation of inactivity to be effective.

The power to "make all Laws which shall be necessary and proper for carrying into Execution" the powers enumerated in the Constitution, Art. I, § 8, cl. 18, vests Congress with authority to enact provisions "incidental to the [enumerated] power, and conducive to its beneficial exercise," *McCulloch*, 17 U.S., at 418, 4 Wheat., at 418, 4 L. Ed. 579. Although the Clause gives Congress authority to "legislate on that vast mass of incidental powers which must be involved in [***58] the constitution," it does not license the exercise of any "great substantive and independent power[s]" beyond those specifically enumerated. *Id.*, 17 U.S., at 411, 421, 4 Wheat., at 411, 421, 4 L. Ed. 579. Instead, the Clause is "merely a declaration, for the removal of all uncertainty, that the means of carrying into execution those [powers] otherwise granted are included in the grant." *Kinsella v. United States*, 361 U.S. 234, 247, 80 S. Ct. 297, 4 L. Ed. 2d 268 (1960) (quoting VI Writings of James Madison 383 (G. Hunt ed. 1906)).

As our jurisprudence under the Necessary and Proper Clause has developed, we [*2592] have been very deferential to Congress's determination that a regulation is "necessary." We have thus upheld laws that are "convenient, or useful" or 'conducive' to the authority's 'beneficial exercise.' *Comstock*, 560 U.S., at ___, 130 S. Ct. 1949, 1956, 176 L. Ed. 2d 878, 888 (quoting *McCulloch*, *supra*, at 413, 418, 4 Wheat., at 413, 418, 4 L. Ed. 579). But we have also carried out our responsibility to declare unconstitutional those laws that undermine the structure of government established by the Constitution. Such laws, which are not "consist[ent] with

the letter and [***59] spirit of the constitution," *McCulloch*, *supra*, at 421, 4 Wheat., at 421, 4 L. Ed. 579, are not "proper [means] for carrying into Execution" Congress's enumerated powers. Rather, they are, "in the words of The Federalist, 'merely acts of usurpation' which 'deserve to be treated as such.' *Printz v. United States*, 521 U.S. 898, 924, 117 S. Ct. 2365, 138 L. Ed. 2d 914 (1997) (alterations omitted) (quoting The Federalist No. 33, at 204 (A. Hamilton)); see also *New York*, 505 U.S., at 177, 112 S. Ct. 2408, 120 L. Ed. 2d 120; *Comstock*, *supra*, at ___, 130 S. Ct. 1949, 1967, 176 L. Ed. 2d 878, 902 (Kennedy, J., concurring in judgment) ("It is of fundamental importance to consider whether essential attributes of state sovereignty are compromised by the assertion of federal power under the Necessary and Proper Clause . . .").

Applying these principles, the individual mandate cannot be sustained under the Necessary and Proper Clause as an essential component of [**481] the insurance reforms. Each of our prior cases upholding laws under that Clause involved exercises of authority derivative of, and in service to, a granted power. For example, we have upheld provisions permitting continued confinement [***60] of those *already in federal custody* when they could not be safely released, *Comstock*, *supra*, at ___, 130 S. Ct. 1949, 176 L. Ed. 2d 878, 894; criminalizing bribes involving organizations *receiving federal funds*, *Sabri v. United States*, 541 U.S. 600, 602, 605, 124 S. Ct. 1941, 158 L. Ed. 2d 891 (2004); and tolling state statutes of limitations while cases are *pending in federal court*, *Jinks v. Richland County*, 538 U.S. 456, 459, 462, 123 S. Ct. 1667, 155 L. Ed. 2d 631 (2003). The individual mandate, by contrast, vests Congress with the extraordinary ability to create the necessary predicate to the exercise of an enumerated power.

This is in no way an authority that is "narrow in scope," *Comstock*, *supra*, at ___, 130 S. Ct. 1949, 1964, 176 L. Ed. 2d 878, 898, or "incidental" to the exercise of the commerce power, *McCulloch*, *supra*, at 418, 4 Wheat., at 418, 4 L. Ed. 579. Rather, such a conception of the Necessary and Proper Clause would work a substantial expansion of federal authority. No longer would Congress be limited to regulating under the Commerce Clause those who by some preexisting activity bring themselves within the sphere of federal regulation. Instead, Congress could [***61] reach beyond the natural limit of its authority and draw within

its regulatory scope those who otherwise would be outside of it. Even if the individual mandate is "necessary" to the Act's insurance reforms, such an expansion of federal power is not a "proper" means for making those reforms effective.

The Government relies primarily on our decision in *Gonzales v. Raich*. In *Raich*, we considered "comprehensive legislation to regulate the interstate market" in marijuana. 545 U.S., at 22, 125 S. Ct. 2195, 162 L. Ed. 2d 1. Certain individuals sought an exemption from that regulation on the ground that they engaged in only intrastate possession and consumption. We denied any exemption, on the ground that marijuana is a fungible commodity, so that any marijuana could be readily diverted into the interstate market. Congress's attempt to regulate the interstate market for marijuana would therefore have been substantially undercut if it could not also regulate intrastate possession and consumption. *Id.*, at [*2593] 19, 125 S. Ct. 2195, 162 L. Ed. 2d 1. Accordingly, we recognized that "Congress was acting well within its authority" under the Necessary and Proper Clause even though its "regulation ensnare[d] [***62] some purely intrastate activity." *Id.*, at 22, 125 S. Ct. 2195, 162 L. Ed. 2d 1; see also *Perez*, 402 U.S., at 154, 91 S. Ct. 1357, 28 L. Ed. 2d 686. *Raich* thus did not involve the exercise of any "great substantive and independent power," *McCulloch*, *supra*, at 411, 4 L. Ed. 579, of the sort at issue here. Instead, it concerned only the constitutionality of "individual *applications* of a concededly valid statutory scheme." *Raich*, *supra*, at 23, 125 S. Ct. 2195, 162 L. Ed. 2d 1 (emphasis added).

Just as the individual mandate cannot be sustained as a law regulating the substantial effects of the failure to purchase health insurance, neither can it be upheld as a "necessary and proper" component of the insurance reforms. The commerce power thus does not authorize the mandate. Accord, *post*, at ___ - ___, 183 L. Ed. [**482] 2d, at 537-544 (joint opinion of Scalia, Kennedy, Thomas, and Alito, JJ., dissenting).

B

That is not the end of the matter. Because the Commerce Clause does not support the individual mandate, it is necessary to turn to the Government's second argument: that the mandate may be upheld as within Congress's enumerated power to "lay and collect Taxes." Art. I, § 8, cl. 1.

The Government's tax power argument asks us to [***63] view the statute differently than we did in considering its commerce power theory. In making its Commerce Clause argument, the Government defended the mandate as a regulation requiring individuals to purchase health insurance. The Government does not claim that the taxing power allows Congress to issue such a command. Instead, the Government asks us to read the mandate not as ordering individuals to buy insurance, but rather as imposing a tax on those who do not buy that product.

The text of a statute can sometimes have more than one possible meaning. To take a familiar example, a law that reads "no vehicles in the park" might, or might not, ban bicycles in the park. And it is well established that if a statute has two possible meanings, one of which violates the Constitution, courts should adopt the meaning that does not do so. Justice Story said that 180 years ago: "No court ought, unless the terms of an act rendered it unavoidable, to give a construction to it which should involve a violation, however unintentional, of the constitution." *Parsons v. Bedford*, 28 U.S. 433, 3 Pet. 433, 448-449, 7 L. Ed. 732 (1830). Justice Holmes made the same point a century later: "[T]he rule is settled [***64] that as between two possible interpretations of a statute, by one of which it would be unconstitutional and by the other valid, our plain duty is to adopt that which will save the Act." *Blodgett v. Holden*, 275 U.S. 142, 148, 48 S. Ct. 105, 72 L. Ed. 206, 1928-1 C.B. 324 (1927) (concurring opinion).

The most straightforward reading of the mandate is that it commands individuals to purchase insurance. After all, it states that individuals "shall" maintain health insurance. 26 U.S.C. §5000A(a). Congress thought it could enact such a command under the Commerce Clause, and the Government primarily defended the law on that basis. But, for the reasons explained above, the Commerce Clause does not give Congress that power. Under our precedent, it is therefore necessary to ask whether the Government's alternative reading of the statute--that it only imposes a tax on those without insurance--is a reasonable one.

Under the mandate, if an individual does not maintain health insurance, the only consequence is that he must make an additional payment to the IRS when he [*2594] pays his taxes. See §5000A(b). That, according to the Government, means the mandate can be regarded

as establishing a condition--not [***65] owning health insurance--that triggers a tax--the required payment to the IRS. Under that theory, the mandate is not a legal command to buy insurance. Rather, it makes going without insurance just another thing the Government taxes, like buying gasoline or earning income. And if the mandate is in effect just a tax hike on certain taxpayers who do not have health insurance, it may be within Congress's constitutional power to tax.

[**483] The question is not whether that is the most natural interpretation of the mandate, but only whether it is a "fairly possible" one. *Crowell v. Benson*, 285 U.S. 22, 62, 52 S. Ct. 285, 76 L. Ed. 598 (1932). As we have explained, "every reasonable construction must be resorted to, in order to save a statute from unconstitutionality." *Hooper v. California*, 155 U.S. 648, 657, 15 S. Ct. 207, 39 L. Ed. 297 (1895). The Government asks us to interpret the mandate as imposing a tax, if it would otherwise violate the Constitution. Granting the Act the full measure of deference owed to federal statutes, it can be so read, for the reasons set forth below.

C

[**LEdHR16] [16] The exaction the Affordable Care Act imposes on those without health insurance looks like a tax in many respects. The [***66] "[s]hared responsibility payment," as the statute entitles it, is paid into the Treasury by "taxpayer[s]" when they file their tax returns. 26 U.S.C. §5000A(b). It does not apply to individuals who do not pay federal income taxes because their household income is less than the filing threshold in the Internal Revenue Code. §5000A(e)(2). For taxpayers who do owe the payment, its amount is determined by such familiar factors as taxable income, number of dependents, and joint filing status. §§5000A(b)(3), (c)(2), (c)(4). The requirement to pay is found in the Internal Revenue Code and enforced by the IRS, which--as we previously explained--must assess and collect it "in the same manner as taxes." *Supra*, at ___ - ___, 183 L. Ed. 2d, at 472. This process yields the essential feature of any tax: it produces at least some revenue for the Government. *United States v. Kahriger*, 345 U.S. 22, 28, n. 4, 73 S. Ct. 510, 97 L. Ed. 754, 1953-1 C.B. 456 (1953). Indeed, the payment is expected to raise about \$4 billion per year by 2017. Congressional Budget Office, Payments of Penalties for Being Uninsured Under the Patient Protection and Affordable Care Act (Apr. 30,

2010), in Selected CBO Publications Related to Health [***67] Care Legislation, 2009-2010, p. 71 (rev. 2010).

It is of course true that the Act describes the payment as a "penalty," not a "tax." But while that label is fatal to the application of the Anti-Injunction Act, *supra*, at ___ - ___, 183 L. Ed. 2d, at 470-471, it does not determine whether the payment may be viewed as an exercise of Congress's taxing power. [**LEdHR17] [17] It is up to Congress whether to apply the Anti-Injunction Act to any particular statute, so it makes sense to be guided by Congress's choice of label on that question. That choice does not, however, control whether an exaction is within Congress's constitutional power to tax.

Our precedent reflects this: In 1922, we decided two challenges to the "Child Labor Tax" on the same day. In the first, we held that a suit to enjoin collection of the so-called tax was barred by the Anti-Injunction Act. *George*, 259 U.S., at 20, 42 S. Ct. 419, 66 L. Ed. 816. Congress knew that suits to obstruct taxes had to await payment under the Anti-Injunction Act; Congress called the child labor tax a tax; Congress therefore [*2595] intended the Anti-Injunction Act to apply. In the second case, however, we held that the same exaction, although labeled a tax, was not in fact authorized by Congress's [***68] taxing power. *Drexel Furniture*, 259 U.S., at 38, 42 S. Ct. 449, 66 L. Ed. 817. That constitutional question was not controlled by Congress's choice of label.

We have similarly held that exactions [**484] not labeled taxes nonetheless were authorized by Congress's power to tax. In the *License Tax Cases*, for example, we held that federal licenses to sell liquor and lottery tickets--for which the licensee had to pay a fee--could be sustained as exercises of the taxing power. 5 Wall., at 471, 18 L. Ed. 497. And in *New York v. United States* we upheld as a tax a "surcharge" on out-of-state nuclear waste shipments, a portion of which was paid to the Federal Treasury. 505 U.S., at 171, 112 S. Ct. 2408, 120 L. Ed. 2d 120. [**LEdHR18] [18] We thus ask whether the shared responsibility payment falls within Congress's taxing power, "[d]isregarding the designation of the exaction, and viewing its substance and application." *United States v. Constantine*, 296 U.S. 287, 294, 56 S. Ct. 223, 80 L. Ed. 233 (1935); cf. *Quill Corp. v. North Dakota*, 504 U.S. 298, 310, 112 S. Ct. 1904, 119 L. Ed. 2d 91 (1992) ("[M]agic words or labels" should not "disable an otherwise constitutional levy" (internal quotation marks omitted)); *Nelson v. Sears, Roebuck &*

Co., 312 U.S. 359, 363, 61 S. Ct. 586, 85 L. Ed. 888 (1941) [***69] ("In passing on the constitutionality of a tax law, we are concerned only with its practical operation, not its definition or the precise form of descriptive words which may be applied to it" (internal quotation marks omitted)); *United States v. Sotelo*, 436 U.S. 268, 275, 98 S. Ct. 1795, 56 L. Ed. 2d 275 (1978) ("That the funds due are referred to as a 'penalty' . . . does not alter their essential character as taxes").⁷

7 *Sotelo*, in particular, would seem to refute the joint dissent's contention that we have "never" treated an exaction as a tax if it was denominated a penalty. *Post*, at ___, 183 L. Ed. 2d, at 546. We are not persuaded by the dissent's attempt to distinguish *Sotelo* as a statutory construction case from the bankruptcy context. *Post*, at ___, n. 5, 183 L. Ed. 2d, at 544. The dissent itself treats the question here as one of statutory interpretation, and indeed also relies on a statutory interpretation case from the bankruptcy context. *Post*, at ___, 183 L. Ed. 2d, at 548 (citing *United States v. Reorganized CF&I Fabricators of Utah, Inc.*, 518 U.S. 213, 224, 116 S. Ct. 2106, 135 L. Ed. 2d 506 (1996)).

Our cases confirm this functional approach. For example, in *Drexel Furniture*, we focused on three practical characteristics of the so-called [***70] tax on employing child laborers that convinced us the "tax" was actually a penalty. First, the tax imposed an exceedingly heavy burden--10 percent of a company's net income--on those who employed children, no matter how small their infraction. Second, it imposed that exaction only on those who knowingly employed underage laborers. Such [**LEdHR19] [19] scienter requirements are typical of punitive statutes, because Congress often wishes to punish only those who intentionally break the law. Third, this "tax" was enforced in part by the Department of Labor, an agency responsible for punishing violations of labor laws, not collecting revenue. 259 U.S., at 36-37, 42 S. Ct. 449, 66 L. Ed. 817; see also, *e.g.*, *Kurth Ranch*, 511 U.S., at 780-782, 114 S. Ct. 1937, 128 L. Ed. 2d 767 (considering, *inter alia*, the amount of the exaction, and the fact that it was imposed for violation of a separate criminal law); *Constantine*, *supra*, at 295, 56 S. Ct. 223, 80 L. Ed. 233 (same).

The same analysis here suggests that [**LEdHR20] [20] the shared responsibility payment may for

constitutional purposes be considered a tax, not a penalty: First, for most Americans the amount due will be far less than the [**485] price of insurance, and, by statute, [***71] it [*2596] can never be more.⁸ It may often be a reasonable financial decision to make the payment rather than purchase insurance, unlike the "prohibitory" financial punishment in *Drexel Furniture*. 259 U.S., at 37, 42 S. Ct. 449, 66 L. Ed. 817. Second, the individual mandate contains no scienter requirement. Third, the payment is collected solely by the IRS through the normal means of taxation--except that the Service is *not* allowed to use those means most suggestive of a punitive sanction, such as criminal prosecution. See §5000A(g)(2). The reasons the Court in *Drexel Furniture* held that what was called a "tax" there was a penalty support the conclusion that what is called a "penalty" here may be viewed as a tax.⁹

8 In 2016, for example, individuals making \$35,000 a year are expected to owe the IRS about \$60 for any month in which they do not have health insurance. Someone with an annual income of \$100,000 a year would likely owe about \$200. The price of a qualifying insurance policy is projected to be around \$400 per month. See D. Newman, CRS Report for Congress, Individual Mandate and Related Information Requirements Under PPACA 7, and n. 25 (2011).

9 [**LEdHR21] [21] We do not suggest that any exaction [***72] lacking a scienter requirement and enforced by the IRS is within the taxing power. See *post*, at ___ - ___, 183 L. Ed. 2d, at 548-549 (joint opinion of Scalia, Kennedy, Thomas, and Alito, JJ., dissenting). Congress could not, for example, expand its authority to impose criminal fines by creating strict liability offenses enforced by the IRS rather than the FBI. But the fact the exaction here is paid like a tax, to the agency that collects taxes--rather than, for example, exacted by Department of Labor inspectors after ferreting out willful malfeasance--suggests that this exaction may be viewed as a tax.

None of this is to say that the payment is not intended to affect individual conduct. Although the payment will raise considerable revenue, it is plainly designed to expand health insurance coverage. But taxes that seek to influence conduct are nothing new. Some of our earliest federal taxes sought to deter the purchase of

imported manufactured goods in order to foster the growth of domestic industry. See W. Brownlee, *Federal Taxation in America* 22 (2d ed. 2004); cf. 2 J. Story, *Commentaries on the Constitution of the United States* § 962, p. 434 (1833) ([**LEdHR22] [22] "the taxing power is often, very often, applied for other purposes, [***73] than revenue"). Today, federal and state taxes can compose more than half the retail price of cigarettes, not just to raise more money, but to encourage people to quit smoking. And we have upheld such obviously regulatory measures as taxes on selling marijuana and sawed-off shotguns. See *United States v. Sanchez*, 340 U.S. 42, 44-45, 71 S. Ct. 108, 95 L. Ed. 47, 1950-2 C.B. 139 (1950); *Sonzinsky v. United States*, 300 U.S. 506, 513, 57 S. Ct. 554, 81 L. Ed. 772, 1937-1 C.B. 351 (1937). Indeed, [**LEdHR23] [23] "[e]very tax is in some measure regulatory. To some extent it interposes an economic impediment to the activity taxed as compared with others not taxed." *Sonzinsky*, *supra*, at 513, 57 S. Ct. 554, 81 L. Ed. 772. That §5000A seeks to shape decisions about whether to buy health insurance does not mean that it cannot be a valid exercise of the taxing power.

[**LEdHR24] [24] In distinguishing penalties from taxes, this Court has explained that "if the concept of penalty means anything, it means punishment for an unlawful act or omission." *United States v. Reorganized CF&I Fabricators of Utah, Inc.*, 518 U.S. 213, 224, 116 S. Ct. 2106, 135 L. Ed. 2d 506 (1996); see also *United States v. La Franca*, 282 U.S. 568, 572, 51 S. Ct. 278, 75 L. Ed. 551 (1931) [***74] ("[A] penalty, [**486] as the word is here used, is an exaction imposed by statute as punishment for an unlawful act"). [**LEdHR25] [25] While the individual mandate clearly aims to induce the purchase of health [*2597] insurance, it need not be read to declare that failing to do so is unlawful. Neither the Act nor any other law attaches negative legal consequences to not buying health insurance, beyond requiring a payment to the IRS. The Government agrees with that reading, confirming that if someone chooses to pay rather than obtain health insurance, they have fully complied with the law. Brief for United States 60-61; Tr. of Oral Arg. 49-50 (Mar. 26, 2012).

Indeed, it is estimated that four million people each year will choose to pay the IRS rather than buy insurance. See Congressional Budget Office, *supra*, at [***75] 71. We would expect Congress to be troubled by that prospect if such conduct were unlawful. [**LEdHR26] [26] That Congress apparently regards such extensive

failure to comply with the mandate as tolerable suggests that Congress did not think it was creating four million outlaws. It suggests instead that the shared responsibility payment merely imposes a tax citizens may lawfully choose to pay in lieu of buying health insurance.

The plaintiffs contend that Congress's choice of language--stating that individuals "shall" obtain insurance or pay a "penalty"--requires reading §5000A as punishing unlawful conduct, even if that interpretation would render the law unconstitutional. We have rejected a similar argument before. In *New York v. United States* we examined a statute providing that "[e]ach State shall be responsible for providing . . . for the disposal of . . . low-level radioactive waste." 505 U.S., at 169, 112 S. Ct. 2408, 120 L. Ed. 2d 120 (quoting 42 U.S.C. §2021c(a)(1)(A)). A State that shipped its waste to another State was exposed to surcharges by the receiving State, a portion of which would be paid over to the Federal Government. And a State that did not adhere to the statutory scheme [***76] faced "[p]enalties for failure to comply," including increases in the surcharge. §2021e(e)(2); *New York*, 505 U.S., at 152-153, 112 S. Ct. 2408, 120 L. Ed. 2d 120. *New York* urged us to read the statute as a federal command that the state legislature enact legislation to dispose of its waste, which would have violated the Constitution. To avoid that outcome, we interpreted the statute to impose only "a series of incentives" for the State to take responsibility for its waste. We then sustained the charge paid to the Federal Government as an exercise of the taxing power. *Id.*, at 169-174, 112 S. Ct. 2408, 120 L. Ed. 2d 120. We see no insurmountable obstacle to a similar approach here.¹⁰

10 The joint dissent attempts to distinguish *New York v. United States* on the ground that the seemingly imperative language in that case was in an "introductory provision" that had "no legal consequences." *Post*, at ___, 183 L. Ed. 2d, at 546. We did not rely on that reasoning in *New York*. See 505 U.S., at 169-170, 112 S. Ct. 2408, 120 L. Ed. 2d 120. Nor could we have. While the Court quoted only the broad statement that "[e]ach State shall be responsible" for its waste, that language was implemented through operative provisions [***77] that also use the words on which the dissent relies. See 42 U.S.C. §2021e(e)(1) (entitled "Requirements for non-sited compact regions and non-member States" and directing that those entities "shall

comply with the following requirements"); §2021e(e)(2) (describing "Penalties for failure to comply"). The Court upheld those provisions not as lawful commands, but as "incentives." See 505 U.S., at 152-153, 171-173, 112 S. Ct. 2408, 120 L. Ed. 2d 120.

[**487] The joint dissenters argue that we cannot uphold §5000A as a tax because Congress did not "frame" it as such. *Post*, at ___, 183 L. Ed. 2d, at 545. In effect, they contend that even if the Constitution permits Congress to do exactly what we interpret this statute to do, the law must be struck down because Congress used the wrong labels. An example may help illustrate why labels should not control here. Suppose Congress enacted a statute providing that every taxpayer who owns a house without [*2598] energy efficient windows must pay \$50 to the IRS. The amount due is adjusted based on factors such as taxable income and joint filing status, and is paid along with the taxpayer's income tax return. Those whose income is below the filing threshold need not pay. The required payment [***78] is not called a "tax," a "penalty," or anything else. No one would doubt that this law imposed a tax, and was within Congress's power to tax. That conclusion should not change simply because Congress used the word "penalty" to describe the payment. Interpreting such a law to be a tax would hardly "[i]mpos[e] a tax through judicial legislation." *Post*, at ___, 183 L. Ed. 2d, at 549. Rather, it would give practical effect to the Legislature's enactment.

Our precedent demonstrates that [**LEdHR27] [27] Congress had the power to impose the exaction in §5000A under the taxing power, and that §5000A need not be read to do more than impose a tax. That is sufficient to sustain it. [**LEdHR28] [28] The "question of the constitutionality of action taken by Congress does not depend on recitals of the power which it undertakes to exercise." *Woods v. Cloyd W. Miller Co.*, 333 U.S. 138, 144, 68 S. Ct. 421, 92 L. Ed. 596, 1948 U.S. LEXIS 2530 (1948).

[**LEdHR29] [29] Even if the taxing power enables Congress to impose a tax on not obtaining health insurance, any tax must still comply with other requirements in the Constitution. Plaintiffs argue that the shared responsibility payment does not do so, citing [**LEdHR30] [30] Article I, § 9, clause 4. That clause provides: "No Capitation, or other [***79] direct, Tax shall be laid, unless in Proportion to the Census or

Enumeration herein before directed to be taken." This requirement means that any "direct Tax" must be apportioned so that each State pays in proportion to its population. According to the plaintiffs, if the individual mandate imposes a tax, it is a direct tax, and it is unconstitutional because Congress made no effort to apportion it among the States.

Even when the Direct Tax Clause was written it was unclear what else, other than a capitation (also known as a "head tax" or a "poll tax"), might be a direct tax. See *Springer v. United States*, 102 U.S. 586, 596-598, 26 L. Ed. 253 (1881). Soon after the framing, Congress passed a tax on ownership of carriages, over James Madison's objection that it was an unapportioned direct tax. *Id.*, at 597, 26 L. Ed. 253. This Court upheld the tax, in part reasoning that apportioning such a tax would make little sense, because it would have required taxing carriage owners at dramatically different rates depending on how many carriages were in their home State. See *Hylton v. United States*, 3 Dall. 171, 174, 3 U.S. 171, 1 L. Ed. 556 (1796) (opinion of Chase, J.). The Court was unanimous, [***80] and those Justices who wrote opinions either directly asserted or strongly suggested that only two forms of taxation were direct: capitations and land taxes. See *id.*, at 175, 1 L. Ed. 556; *id.*, at 177, 1 L. Ed. [**488] 556 (opinion of Paterson, J.); *id.*, at 183, 1 L. Ed. 556 (opinion of Iredell, J.).

That narrow view of what a direct tax might be persisted for a century. [**LEdHR31] [31] In 1880, for example, we explained that "*direct taxes*, within the meaning of the Constitution, are only capitation taxes, as expressed in that instrument, and taxes on real estate." *Springer, supra*, at 602, 26 L. Ed. 253. In 1895, we expanded our interpretation to include taxes on personal property and income from personal property, in the course of striking down aspects of the federal income tax. *Pollock v. Farmers' Loan & Trust Co.*, 158 U.S. 601, 618, 15 S. Ct. 912, 39 L. Ed. 1108 (1895). That result was overturned by the Sixteenth Amendment, although we continued to consider taxes on personal property to be direct taxes. See *Eisner v. Macomber*, 252 U.S. 189, 218-219, 40 S. Ct. 189, 64 L. Ed. 521, 1920-3 C.B. 25, T.D. 3010 (1920).

[*2599] [**LEdHR32] [32] A tax on going without health insurance does not fall within any recognized category of direct [***81] tax. It is not a capitation. Capitations are taxes paid by every person, "without

regard to property, profession, or *any other circumstance.*" *Hylton, supra*, at 175, 1 L. Ed. 556 (opinion of Chase, J.) (emphasis altered). The whole point of the shared responsibility payment is that it is triggered by specific circumstances--earning a certain amount of income but not obtaining health insurance. The payment is also plainly not a tax on the ownership of land or personal property. The shared responsibility payment is thus not a direct tax that must be apportioned among the several States.

There may, however, be a more fundamental objection to a tax on those who lack health insurance. Even if only a tax, the payment under §5000A(b) remains a burden that the Federal Government imposes for an omission, not an act. If it is troubling to interpret the Commerce Clause as authorizing Congress to regulate those who abstain from commerce, perhaps it should be similarly troubling to permit Congress to impose a tax for not doing something.

Three considerations allay this concern. First, and most importantly, it is abundantly clear [**LEdHR33] [33] the Constitution does not guarantee that individuals may avoid taxation [***82] through inactivity. A capitation, after all, is a tax that everyone must pay simply for existing, and capitations are expressly contemplated by the Constitution. The Court today holds that our Constitution protects us from federal regulation under the Commerce Clause so long as we abstain from the regulated activity. But from its creation, the Constitution has made no such promise with respect to taxes. See Letter from Benjamin Franklin to M. Le Roy (Nov. 13, 1789) ("Our new Constitution is now established . . . but in this world nothing can be said to be certain, except death and taxes").

Whether the mandate can be upheld under the Commerce Clause is a question about the scope of federal authority. Its answer depends on whether Congress can exercise what all acknowledge to be the novel course of directing individuals to purchase insurance. Congress's use of the Taxing Clause to encourage buying something is, by contrast, not new. Tax incentives already promote, for example, purchasing homes and professional educations. See 26 U.S.C. §§163(h), 25A. Sustaining the mandate as a tax depends only on whether Congress *has* properly exercised its taxing power to encourage purchasing health [***83] insurance, [**489] not whether it *can*. Upholding the individual mandate under

the Taxing Clause thus does not recognize any new federal power. It determines that Congress has used an existing one.

Second, Congress's ability to use its taxing power to influence conduct is not without limits. A few of our cases policed these limits aggressively, invalidating punitive exactions obviously designed to regulate behavior otherwise regarded at the time as beyond federal authority. See, e.g., *United States v. Butler*, 297 U.S. 1, 56 S. Ct. 312, 80 L. Ed. 477, 1936-1 C.B. 421 (1936); *Drexel Furniture*, 259 U.S. 20, 42 S. Ct. 449, 66 L. Ed. 817. More often and more recently we have declined to closely examine the regulatory motive or effect of revenue-raising measures. See *Kahriger*, 345 U.S., at 27-31, 73 S. Ct. 510, 97 L. Ed. 754 (collecting cases). We have nonetheless maintained that " 'there comes a time in the extension of the penalizing features of the so-called tax when it loses its character as such and becomes a mere penalty with the characteristics of regulation and punishment.' *Kurth Ranch*, 511 U.S., at 779, 114 S. Ct. [**2600] 1937, 128 L. Ed. 2d 767 (quoting *Drexel Furniture, supra*, at 38, 42 S. Ct. 449, 66 L. Ed. 817).

We [***84] have already explained that [**LEdHR34] [34] the shared responsibility payment's practical characteristics pass muster as a tax under our narrowest interpretations of the taxing power. *Supra*, at 35-36, 42 S. Ct. 449, 66 L. Ed. 817. Because the tax at hand is within even those strict limits, we need not here decide the precise point at which an exaction becomes so punitive that the taxing power does not authorize it. [**LEdHR35] [35] It remains true, however, that the " 'power to tax is not the power to destroy while this Court sits.' *Oklahoma Tax Comm'n v. Texas Co.*, 336 U.S. 342, 364, 69 S. Ct. 561, 93 L. Ed. 721 (1949) (quoting *Panhandle Oil Co. v. Mississippi ex rel. Knox*, 277 U.S. 218, 223, 48 S. Ct. 451, 72 L. Ed. 857(1928) (Holmes, J., dissenting)).

Third, [**LEdHR36] [36] although the breadth of Congress's power to tax is greater than its power to regulate commerce, the taxing power does not give Congress the same degree of control over individual behavior. Once we recognize that Congress may regulate a particular decision under the Commerce Clause, the Federal Government can bring its full weight to bear. Congress may simply command individuals to do as it directs. An individual who disobeys may be subjected to criminal sanctions. [***85] Those sanctions can include

not only fines and imprisonment, but all the attendant consequences of being branded a criminal: deprivation of otherwise protected civil rights, such as the right to bear arms or vote in elections; loss of employment opportunities; social stigma; and severe disabilities in other controversies, such as custody or immigration disputes.

By contrast, Congress's authority under the taxing power is limited to requiring an individual to pay money into the Federal Treasury, no more. If a tax is properly paid, the Government has no power to compel or punish individuals subject to it. We do not make light of the severe burden that taxation--especially taxation motivated by a regulatory purpose--can impose. But [**LEdHR37] [37] imposition of a tax nonetheless leaves an individual with a lawful choice to do or not do a [**490] certain act, so long as he is willing to pay a tax levied on that choice.¹¹

11 Of course, individuals do not have a lawful choice not to pay a tax due, and may sometimes face prosecution for failing to do so (although not for declining to make the shared responsibility payment, see 26 U.S.C. §5000A(g)(2)). But that does not show that the tax restricts the lawful choice [***86] whether to undertake or forgo the activity on which the tax is predicated. Those subject to the individual mandate may lawfully forgo health insurance and pay higher taxes, or buy health insurance and pay lower taxes. The only thing they may not lawfully do is not buy health insurance and not pay the resulting tax.

[**LEdHR38] [38] The Affordable Care Act's requirement that certain individuals pay a financial penalty for not obtaining health insurance may reasonably be characterized as a tax. Because the Constitution permits such a tax, it is not our role to forbid it, or to pass upon its wisdom or fairness.

D

Justice Ginsburg questions the necessity of rejecting the Government's commerce power argument, given that §5000A can be upheld under the taxing power. *Post*, at ___, 183 L. Ed. 2d, at 521. But the statute reads more naturally as a command to buy insurance than as a tax, and I would uphold it as a command if the Constitution allowed it. It is only because the Commerce Clause does not authorize such a command that it is necessary to

reach the taxing power question. And it is only because we have a duty to construe a statute to save it, if fairly possible, that [*2601] §5000A can be interpreted as a tax. Without deciding the Commerce Clause [***87] question, I would find no basis to adopt such a saving construction.

The Federal Government does not have the power to order people to buy health insurance. Section 5000A would therefore be unconstitutional if read as a command. The Federal Government does have the power to impose a tax on those without health insurance. Section 5000A is therefore constitutional, because it can reasonably be read as a tax.

IV

A

The States also contend that the Medicaid expansion exceeds Congress's authority under the Spending Clause. They claim that Congress is coercing the States to adopt the changes it wants by threatening to withhold all of a State's Medicaid grants, unless the State accepts the new expanded funding and complies with the conditions that come with it. This, they argue, violates the basic principle that the "Federal Government may not compel the States to enact or administer a federal regulatory program." *New York*, 505 U.S., at 188, 112 S. Ct. 2408, 120 L. Ed. 2d 120.

There is no doubt that the Act dramatically increases state obligations under Medicaid. The current Medicaid program requires States to cover only certain discrete categories of needy individuals--pregnant women, children, [***88] needy families, the blind, the elderly, and the disabled. 42 U.S.C. §1396a(a)(10). There is no mandatory coverage for most childless adults, and the States typically do not offer any such coverage. The States also enjoy considerable flexibility with respect to the coverage levels for parents of needy families. §1396a(a)(10)(A)(ii). On average States cover only those unemployed parents who make less than 37 percent of the federal poverty level, and only those employed parents who make less than 63 percent of the poverty [**491] line. Kaiser Comm'n on Medicaid and the Uninsured, *Performing Under Pressure* 11, and fig. 11 (2012).

The Medicaid provisions of the Affordable Care Act, in contrast, require States to expand their Medicaid programs by 2014 to cover *all* individuals under the age

of 65 with incomes below 133 percent of the federal poverty line. §1396a(a)(10)(A)(i)(VIII). The Act also establishes a new "[e]ssential health benefits" package, which States must provide to all new Medicaid recipients--a level sufficient to satisfy a recipient's obligations under the individual mandate. §§1396a(k)(1), 1396u-7(b)(5), 18022(b). The Affordable Care Act provides that the Federal Government will [***89] pay 100 percent of the costs of covering these newly eligible individuals through 2016. §1396d(y)(1). In the following years, the federal payment level gradually decreases, to a minimum of 90 percent. *Ibid.* In light of the expansion in coverage mandated by the Act, the Federal Government estimates that its Medicaid spending will increase by approximately \$100 billion per year, nearly 40 percent above current levels. Statement of Douglas W. Elmendorf, CBO's Analysis of the Major Health Care Legislation Enacted in March 2010, p. 14, Table 2 (Mar. 30, 2011).

The Spending Clause grants Congress the power "to pay the Debts and provide for the . . . general Welfare of the United States." U.S. Const., Art. I, § 8, cl. 1. We have long recognized that Congress may use this power to grant federal funds to the States, and may condition such a grant upon the States' "taking certain actions that Congress could not require them to take." *College Savings Bank*, 527 U.S., at 686, 119 S. Ct. 2219, 144 L. Ed. 2d 605. Such measures "encourage [*2602] a State to regulate in a particular way, [and] influenc[e] a State's policy choices." *New York, supra*, at 166, 112 S. Ct. 2408, 120 L. Ed. 2d 120. The conditions [***90] imposed by Congress ensure that the funds are used by the States to "provide for the . . . general Welfare" in the manner Congress intended.

At the same time, our cases have recognized limits on Congress's power under the Spending Clause to secure state compliance with federal objectives. "We have repeatedly characterized . . . Spending Clause legislation as 'much in the nature of a contract.' *Barnes v. Gorman*, 536 U.S. 181, 186, 122 S. Ct. 2097, 153 L. Ed. 2d 230 (2002) (quoting *Pennhurst State School and Hospital v. Halderman*, 451 U.S. 1, 17, 101 S. Ct. 1531, 67 L. Ed. 2d 694 (1981)). The legitimacy of Congress's exercise of the spending power "thus rests on whether the State voluntarily and knowingly accepts the terms of the 'contract.' *Pennhurst, supra*, at 17, 101 S. Ct. 1531, 67 L. Ed. 2d 694. Respecting this limitation is critical to ensuring that Spending Clause legislation does not

undermine the status of the States as independent sovereigns in our federal system. That system "rests on what might at first seem a counterintuitive insight, that 'freedom is enhanced by the creation of two governments, not one.' *Bond*, 564 U.S., at ___ , 131 S. Ct. 2355, 180 L. Ed. 2d 269 [***91] (quoting *Alden v. Maine*, 527 U.S. 706, 758, 119 S. Ct. 2240, 144 L. Ed. 2d 636 (1999)). For this reason, "the Constitution has never been understood to confer upon Congress the ability to require the States to govern according to Congress' instructions." *New York, supra*, at 162, 112 S. Ct. 2408, 120 L. Ed. 120. Otherwise [***492] the two-government system established by the Framers would give way to a system that vests power in one central government, and individual liberty would suffer.

That insight has led this Court to strike down federal legislation that commandeers a State's legislative or administrative apparatus for federal purposes. See, e.g., *Printz*, 521 U.S., at 933, 117 S. Ct. 2365, 138 L. Ed. 2d 814 (striking down federal legislation compelling state law enforcement officers to perform federally mandated background checks on handgun purchasers); *New York, supra*, at 174-175, 112 S. Ct. 2408, 120 L. Ed. 2d 120 (invalidating provisions of an Act that would compel a State to either take title to nuclear waste or enact particular state waste regulations). It has also led us to scrutinize Spending Clause legislation to ensure that Congress is not using financial inducements [***92] to exert a "power akin to undue influence." *Steward Machine Co. v. Davis*, 301 U.S. 548, 590, 57 S. Ct. 883, 81 L. Ed. 1279, 1937-1 C.B. 444 (1937). Congress may use its spending power to create incentives for States to act in accordance with federal policies. But when "pressure turns into compulsion," *ibid.*, the legislation runs contrary to our system of federalism. "[T]he Constitution simply does not give Congress the authority to require the States to regulate." *New York*, 505 U.S., at 178, 112 S. Ct. 2408, 120 L. Ed. 2d 120. That is true whether Congress directly commands a State to regulate or indirectly coerces a State to adopt a federal regulatory system as its own.

Permitting the Federal Government to force the States to implement a federal program would threaten the political accountability key to our federal system. "[W]here the Federal Government directs the States to regulate, it may be state officials who will bear the brunt of public disapproval, while the federal officials who devised the regulatory program may remain insulated

from the electoral ramifications of their decision." *Id.*, at 169, 112 S. Ct. 2408, 120 L. Ed. 2d 120. Spending Clause programs do not pose this [***93] danger when a State has a legitimate choice whether to accept the federal conditions in exchange for federal [*2603] funds. In such a situation, state officials can fairly be held politically accountable for choosing to accept or refuse the federal offer. But when the State has no choice, the Federal Government can achieve its objectives without accountability, just as in *New York* and *Printz*. Indeed, this danger is heightened when Congress acts under the Spending Clause, because Congress can use that power to implement federal policy it could not impose directly under its enumerated powers.

We addressed such concerns in *Steward Machine*. That case involved a federal tax on employers that was abated if the businesses paid into a state unemployment plan that met certain federally specified conditions. An employer sued, alleging that the tax was impermissibly "driv[ing] the state legislatures under the whip of economic pressure into the enactment of unemployment compensation laws at the bidding of the central government." 301 U.S., at 587, 57 S. Ct. 883, 81 L. Ed. 1279. We acknowledged the danger that the Federal Government might employ its taxing power to exert a "power akin to undue influence" [***94] upon the States. *Id.*, at 590, 57 S. Ct. 883, 81 L. Ed. 1279. But we observed that Congress adopted the challenged tax and abatement program to channel money to the States that would [**493] otherwise have gone into the Federal Treasury for use in providing national unemployment services. Congress was willing to direct businesses to instead pay the money into state programs only on the condition that the money be used for the same purposes. Predicating tax abatement on a State's adoption of a particular type of unemployment legislation was therefore a means to "safeguard [the Federal Government's] own treasury." *Id.*, at 591, 57 S. Ct. 883, 81 L. Ed. 1279. We held that "[i]n such circumstances, if in no others, inducement or persuasion does not go beyond the bounds of power." *Ibid.*

In rejecting the argument that the federal law was a "weapon[] of coercion, destroying or impairing the autonomy of the states," the Court noted that there was no reason to suppose that the State in that case acted other than through "her unfettered will." *Id.*, at 586, 590, 57 S. Ct. 883, 81 L. Ed. 1279. Indeed, the State itself did "not [***95] offer a suggestion that in passing the

unemployment law she was affected by duress." *Id.*, at 589, 57 S. Ct. 883, 81 L. Ed. 1279.

As our decision in *Steward Machine* confirms, Congress may attach appropriate conditions to federal taxing and spending programs to preserve its control over the use of federal funds. In the typical case we look to the States to defend their prerogatives by adopting "the simple expedient of not yielding" to federal blandishments when they do not want to embrace the federal policies as their own. *Massachusetts v. Mellon*, 262 U.S. 447, 482, 43 S. Ct. 597, 67 L. Ed. 1078 (1923). The States are separate and independent sovereigns. Sometimes they have to act like it.

The States, however, argue that the Medicaid expansion is far from the typical case. They object that Congress has "crossed the line distinguishing encouragement from coercion," *New York, supra*, at 175, 112 S. Ct. 2408, 120 L. Ed. 2d 120, in the way it has structured the funding: Instead of simply refusing to grant the new funds to States that will not accept the new conditions, Congress has also threatened to withhold those States' existing Medicaid funds. The States claim that this threat serves no [***96] purpose other than to force unwilling States to sign up for the dramatic expansion in health care coverage effected by the Act.

Given the nature of the threat and the programs at issue here, we must agree. We have upheld Congress's authority to condition the receipt of funds on the [*2604] States' complying with restrictions on the use of those funds, because that is the means by which Congress ensures that the funds are spent according to its view of the "general Welfare." Conditions that do not here govern the use of the funds, however, cannot be justified on that basis. When, for example, such conditions take the form of threats to terminate other significant independent grants, the conditions are properly viewed as a means of pressuring the States to accept policy changes.

In *South Dakota v. Dole*, we considered a challenge to a federal law that threatened to withhold five percent of a State's federal highway funds if the State did not raise its drinking age to 21. The Court found that the condition was "directly related to one of the main purposes for which highway funds are expended--safe interstate travel." 483 U.S., at 208, 107 S. Ct. 2793, 97 L. Ed. 2d 171. At the same time, the condition [***97] was not a restriction on how the highway funds--set [**494] aside for specific highway improvement and maintenance

efforts--were to be used.

We accordingly asked whether "the financial inducement offered by Congress" was "so coercive as to pass the point at which 'pressure turns into compulsion.'" *Id.*, at 211, 107 S. Ct. 2793, 97 L. Ed. 2d 171 (quoting *Steward Machine, supra*, at 590, 57 S. Ct. 883, 81 L. Ed. 1279). By "financial inducement" the Court meant the threat of losing five percent of highway funds; no new money was offered to the States to raise their drinking ages. We found that the inducement was not impermissibly coercive, because Congress was offering only "relatively mild encouragement to the States." *Dole*, 483 U.S., at 211, 107 S. Ct. 2793, 97 L. Ed. 2d 171. We observed that "all South Dakota would lose if she adheres to her chosen course as to a suitable minimum drinking age is 5%" of her highway funds. *Ibid.* In fact, the federal funds at stake constituted less than half of one percent of South Dakota's budget at the time. See Nat. Assn. of State Budget Officers, *The State Expenditure Report* 59 (1987); *South Dakota v. Dole*, 791 F.2d 628, 630 (CA8 1986). In consequence, "we conclude[d] [***98] that [the] encouragement to state action [was] a valid use of the spending power." *Dole*, 483 U.S., at 212, 107 S. Ct. 2793, 97 L. Ed. 2d 171. Whether to accept the drinking age change "remain[ed] the prerogative of the States not merely in theory but in fact." *Id.*, at 211-212, 107 S. Ct. 2793, 97 L. Ed. 2d 171.

In this case, the financial "inducement" Congress has chosen is much more than "relatively mild encouragement"--it is a gun to the head. Section 1396c of the Medicaid Act provides that if a State's Medicaid plan does not comply with the Act's requirements, the Secretary of Health and Human Services may declare that "further payments will not be made to the State." 42 U.S.C. §1396c. A State that opts out of the Affordable Care Act's expansion in health care coverage thus stands to lose not merely "a relatively small percentage" of its existing Medicaid funding, but *all* of it. *Dole, supra*, at 211, 107 S. Ct. 2793, 97 L. Ed. 2d 171. Medicaid spending accounts for over 20 percent of the average State's total budget, with federal funds covering 50 to 83 percent of those costs. See Nat. Assn. of State Budget Officers, *Fiscal Year 2010 State Expenditure Report*, p. 11, Table 5 (2011); [***99] 42 U.S.C. §1396d(b). The Federal Government estimates that it will pay out approximately \$3.3 trillion between 2010 and 2019 in order to cover the costs of *pre*-expansion Medicaid. Brief for United States 10, n. 6. In addition, the States have

developed intricate statutory and administrative regimes over the course of many decades to implement their objectives under existing Medicaid. It is easy to see how the *Dole* Court could conclude that the threatened loss of less than half of one percent of South Dakota's budget left that State with [*2605] a "prerogative" to reject Congress's desired policy, "not merely in theory but in fact." 483 U.S., at 211-212, 107 S. Ct. 2793, 97 L. Ed. 2d 171. The threatened loss of over 10 percent of a State's overall budget, in contrast, is economic dragooning that leaves the States with no real option but to acquiesce in the Medicaid expansion.¹²

12 Justice Ginsburg observes that state Medicaid spending will increase by only 0.8 percent after the expansion. *Post*, at ___, 183 L. Ed. 2d, at 524. That not only ignores increased state administrative expenses, but also assumes that the Federal Government will continue to fund the expansion at the current statutorily specified levels. It [***100] is not unheard of, however, for the Federal Government to increase requirements in such a manner as to impose unfunded mandates on the States. More importantly, the size of the new financial burden imposed on a State is irrelevant in analyzing whether the State has been coerced into accepting that burden. "Your money or your life" is a coercive proposition, whether you have a single dollar in your pocket or \$500.

[**495] Justice Ginsburg claims that *Dole* is distinguishable because here "Congress has not threatened to withhold funds earmarked for any other program." *Post*, at ___, 183 L. Ed. 2d, at 527. But that begs the question: The States contend that the expansion is in reality a new program and that Congress is forcing them to accept it by threatening the funds for the existing Medicaid program. We cannot agree that existing Medicaid and the expansion dictated by the Affordable Care Act are all one program simply because "Congress styled" them as such. *Post*, at ___, 183 L. Ed. 2d, at 528. If the expansion is not properly viewed as a modification of the existing Medicaid program, Congress's decision to so title it is irrelevant.¹³

13 Nor, of course, can the number of pages the amendment occupies, or the extent to which the change preserves [***101] and works within the existing program, be dispositive. Cf. *post*, at ___ - ___, 183 L. Ed. 2d, at 528 (opinion of Ginsburg,

J.). Take, for example, the following hypothetical amendment: "All of a State's citizens are now eligible for Medicaid." That change would take up a single line and would not alter any "operational aspect[] of the program" beyond the eligibility requirements. *Post*, at ___, 183 L. Ed. 2d, at 528. Yet it could hardly be argued that such an amendment was a permissible modification of Medicaid, rather than an attempt to foist an entirely new health care system upon the States.

Here, the Government claims that the Medicaid expansion is properly viewed merely as a modification of the existing program because the States agreed that Congress could change the terms of Medicaid when they signed on in the first place. The Government observes that the Social Security Act, which includes the original Medicaid provisions, contains a clause expressly reserving "[t]he right to alter, amend, or repeal any provision" of that statute. 42 U.S.C. §1304. So it does. But "if Congress intends to impose a condition on the grant of federal moneys, it must do so unambiguously." *Pennhurst*, 451 U.S., at 17, 101 S. Ct. 1531, 67 L. Ed. 2d 694. [***102] A State confronted with statutory language reserving the right to "alter" or "amend" the pertinent provisions of the Social Security Act might reasonably assume that Congress was entitled to make adjustments to the Medicaid program as it developed. Congress has in fact done so, sometimes conditioning only the new funding, other times both old and new. See, e.g., Social Security Amendments of 1972, 86 Stat. 1381-1382, 1465 (extending Medicaid eligibility, but partly conditioning only the new funding); Omnibus Budget Reconciliation Act of 1990, §4601, 104 Stat. 1388-166 (extending eligibility, and conditioning old and new funds).

The Medicaid expansion, however, accomplishes a shift in kind, not merely degree. The original program was designed to cover medical services for four particular categories of the needy: the disabled, [*2606] the blind, the elderly, and needy families with dependent children. See 42 U.S.C. §1396a(a)(10). Previous amendments to Medicaid eligibility merely altered and expanded the boundaries of these categories. Under the Affordable Care Act, Medicaid is transformed into a program to meet the health care needs of the entire nonelderly population with income below 133 [***103] percent of [**496] the poverty level. It is no longer a program to care for the neediest among us, but rather an element of a

comprehensive national plan to provide universal health insurance coverage.¹⁴

14 Justice Ginsburg suggests that the States can have no objection to the Medicaid expansion, because "Congress could have repealed Medicaid [and,] [t]hereafter, . . . could have enacted Medicaid II, a new program combining the pre-2010 coverage with the expanded coverage required by the ACA." *Post*, at ___, 183 L. Ed. 2d, at 529; see also *post*, at ___, 183 L. Ed. 2d, at 521. But it would certainly not be that easy. Practical constraints would plainly inhibit, if not preclude, the Federal Government from repealing the existing program and putting every feature of Medicaid on the table for political reconsideration. Such a massive undertaking would hardly be "ritualistic." *Ibid*. The same is true of Justice Ginsburg's suggestion that Congress could establish Medicaid as an exclusively federal program. *Post*, at ___, 183 L. Ed. 2d, at 525.

Indeed, the manner in which the expansion is structured indicates that while Congress may have styled the expansion a mere alteration of existing Medicaid, it recognized it was enlisting the States in a new health care program. Congress [***104] created a separate funding provision to cover the costs of providing services to any person made newly eligible by the expansion. While Congress pays 50 to 83 percent of the costs of covering individuals currently enrolled in Medicaid, §1396d(b), once the expansion is fully implemented Congress will pay 90 percent of the costs for newly eligible persons, §1396d(y)(1). The conditions on use of the different funds are also distinct. Congress mandated that newly eligible persons receive a level of coverage that is less comprehensive than the traditional Medicaid benefit package. §1396a(k)(1); see Brief for United States 9.

As we have explained, "[t]hough Congress' power to legislate under the spending power is broad, it does not include surprising participating States with postacceptance or 'retroactive' conditions." *Pennhurst*, *supra*, at 25, 101 S. Ct. 1531, 67 L. Ed. 2d 694. A State could hardly anticipate that Congress's reservation of the right to "alter" or "amend" the Medicaid program included the power to transform it so dramatically.

Justice Ginsburg claims that in fact this expansion is no different from the previous changes to Medicaid, such

that "a State would be hard put to complain [***105] that it lacked fair notice." *Post*, at ___, 183 L. Ed. 2d, at 532. But the prior change she discusses--presumably the most dramatic alteration she could find--does not come close to working the transformation the expansion accomplishes. She highlights an amendment requiring States to cover pregnant women and increasing the number of eligible children. *Ibid.* But this modification can hardly be described as a major change in a program that--from its inception--provided health care for "families with dependent children." Previous Medicaid amendments simply do not fall into the same category as the one at stake here.

The Court in *Steward Machine* did not attempt to "fix the outermost line" where persuasion gives way to coercion. 301 U.S., at 591, 57 S. Ct. 883, 81 L. Ed. 1279. The Court found it "[e]nough for present purposes that wherever the line may be, this statute is within it." *Ibid.* We have no need to fix a line either. It is enough for today that wherever that line may be, this statute is surely beyond it. Congress may not simply [*2607] "conscript state [agencies] into the national bureaucratic army," *FERC v. Mississippi*, 456 U.S. 742, 775, 102 S. Ct. 2126, 72 L. Ed. 2d 532 (1982) (O'Connor, J., concurring [**497] in judgment [***106] in part and dissenting in part), and that is what it is attempting to do with the Medicaid expansion.

B

Nothing in our opinion precludes Congress from offering funds under the Affordable Care Act to expand the availability of health care, and requiring that States accepting such funds comply with the conditions on their use. What Congress is not free to do is to penalize States that choose not to participate in that new program by taking away their existing Medicaid funding. Section 1396c gives the Secretary of Health and Human Services the authority to do just that. It allows her to withhold *all* "further [Medicaid] payments . . . to the State" if she determines that the State is out of compliance with any Medicaid requirement, including those contained in the expansion. 42 U.S.C. §1396c. In light of the Court's holding, the Secretary cannot apply §1396c to withdraw existing Medicaid funds for failure to comply with the requirements set out in the expansion.

That fully remedies the constitutional violation we have identified. The chapter of the United States Code that contains §1396c includes a severability clause

confirming that we need go no further. That clause specifies that "[i]f [***107] any provision of this chapter, or the application thereof to any person or circumstance, is held invalid, the remainder of the chapter, and the application of such provision to other persons or circumstances shall not be affected thereby." §1303. Today's holding does not affect the continued application of §1396c to the existing Medicaid program. Nor does it affect the Secretary's ability to withdraw funds provided under the Affordable Care Act if a State that has chosen to participate in the expansion fails to comply with the requirements of that Act.

This is not to say, as the joint dissent suggests, that we are "rewriting the Medicaid Expansion." *Post*, at ___, 183 L. Ed. 2d, at 563. Instead, we determine, first, that §1396c is unconstitutional when applied to withdraw existing Medicaid funds from States that decline to comply with the expansion. We then follow Congress's explicit textual instruction to leave unaffected "the remainder of the chapter, and the application of [the challenged] provision to other persons or circumstances." §1303. When we invalidate an application of a statute because that application is unconstitutional, we are not "rewriting" the [***108] statute; we are merely enforcing the Constitution.

The question remains whether today's holding affects other provisions of the Affordable Care Act. In considering that question, "[w]e seek to determine what Congress would have intended in light of the Court's constitutional holding." *United States v. Booker*, 543 U.S. 220, 246, 125 S. Ct. 738, 160 L. Ed. 2d 621 (2005) (internal quotation marks omitted). Our "touchstone for any decision about remedy is legislative intent, for a court cannot use its remedial powers to circumvent the intent of the legislature." *Ayotte v. Planned Parenthood of Northern New Eng.*, 546 U.S. 320, 330, 126 S. Ct. 961, 163 L. Ed. 2d 812 (2006) (internal quotation marks omitted). The question here is whether Congress would have wanted the rest of the Act to stand, had it known that States would have a genuine choice whether to participate in the new Medicaid expansion. Unless it is "evident" that the answer is [**498] no, we must leave the rest of the Act intact. *Champlin Refining Co. v. Corporation Comm'n of Okla.*, 286 U.S. 210, 234, 52 S. Ct. 559, 76 L. Ed. 1062 (1932).

[*2608] We are confident that Congress would have wanted to preserve the rest of the Act. It is fair to

[***109] say that Congress assumed that every State would participate in the Medicaid expansion, given that States had no real choice but to do so. The States contend that Congress enacted the rest of the Act with such full participation in mind; they point out that Congress made Medicaid a means for satisfying the mandate, 26 U.S.C. §5000A(f)(1)(A)(ii), and enacted no other plan for providing coverage to many low-income individuals. According to the States, this means that the entire Act must fall.

We disagree. The Court today limits the financial pressure the Secretary may apply to induce States to accept the terms of the Medicaid expansion. As a practical matter, that means States may now choose to reject the expansion; that is the whole point. But that does not mean all or even any will. Some States may indeed decline to participate, either because they are unsure they will be able to afford their share of the new funding obligations, or because they are unwilling to commit the administrative resources necessary to support the expansion. Other States, however, may voluntarily sign up, finding the idea of expanding Medicaid coverage attractive, particularly given the level of federal funding [***110] the Act offers at the outset.

We have no way of knowing how many States will accept the terms of the expansion, but we do not believe Congress would have wanted the whole Act to fall, simply because some may choose not to participate. The other reforms Congress enacted, after all, will remain "fully operative as a law," *Champlin, supra*, at 234, 52 S. Ct. 559, 76 L. Ed. 1062, and will still function in a way "consistent with Congress' basic objectives in enacting the statute," *Booker, supra*, at 259, 125 S. Ct. 738, 160 L. Ed. 2d 621. Confident that Congress would not have intended anything different, we conclude that the rest of the Act need not fall in light of our constitutional holding.

* * *

The Affordable Care Act is constitutional in part and unconstitutional in part. The individual mandate cannot be upheld as an exercise of Congress's power under the Commerce Clause. That Clause authorizes Congress to regulate interstate commerce, not to order individuals to engage in it. In this case, however, it is reasonable to construe what Congress has done as increasing taxes on those who have a certain amount of income, but choose to go without health insurance. Such legislation is within [***111] Congress's power to tax.

As for the Medicaid expansion, that portion of the Affordable Care Act violates the Constitution by threatening existing Medicaid funding. Congress has no authority to order the States to regulate according to its instructions. Congress may offer the States grants and require the States to comply with accompanying conditions, but the States must have a genuine choice whether to accept the offer. The States are given no such choice in this case: They must either accept a basic change in the nature of Medicaid, or risk losing all Medicaid funding. The remedy for that constitutional [**499] violation is to preclude the Federal Government from imposing such a sanction. That remedy does not require striking down other portions of the Affordable Care Act.

The Framers created a Federal Government of limited powers, and assigned to this Court the duty of enforcing those limits. The Court does so today. But the Court does not express any opinion on the wisdom of the Affordable Care Act. Under the Constitution, that judgment is reserved to the people.

[*2609] The judgment of the Court of Appeals for the Eleventh Circuit is affirmed in part and reversed in part.

It is so ordered.

CONCUR BY: GINSBURG [***112] (In Part)

DISSENT BY: THOMAS; GINSBURG (In Part)

DISSENT

Justice **Ginsburg**, with whom Justice **Sotomayor** joins, and with whom Justice **Breyer** and Justice **Kagan** join as to Parts I, II, III, and IV, concurring in part, concurring in the judgment in part, and dissenting in part.

I agree with The Chief Justice that the Anti-Injunction Act does not bar the Court's consideration of this case, and that the minimum coverage provision is a proper exercise of Congress' taxing power. I therefore join Parts I, II, and III-C of The Chief Justice's opinion. Unlike The Chief Justice, however, I would hold, alternatively, that the Commerce Clause authorizes Congress to enact the minimum coverage provision. I would also hold that the Spending Clause permits the Medicaid expansion exactly as Congress enacted it.

I

The provision of health care is today a concern of national dimension, just as the provision of old-age and survivors' benefits was in the 1930's. In the Social Security Act, Congress installed a federal system to provide monthly benefits to retired wage earners and, eventually, to their survivors. Beyond question, Congress could have adopted a similar scheme for health care. Congress chose, instead, to preserve a central [***113] role for private insurers and state governments. According to The Chief Justice, the Commerce Clause does not permit that preservation. This rigid reading of the Clause makes scant sense and is stunningly retrogressive.

Since 1937, our precedent has recognized Congress' large authority to set the Nation's course in the economic and social welfare realm. See *United States v. Darby*, 312 U.S. 100, 115, 61 S. Ct. 451, 85 L. Ed. 609 (1941) (overruling *Hammer v. Dagenhart*, 247 U.S. 251, 38 S. Ct. 529, 62 L. Ed. 1101 (1918), and recognizing that "regulations of commerce which do not infringe some constitutional prohibition are within the plenary power conferred on Congress by the Commerce Clause); *NLRB v. Jones & Laughlin Steel Corp.*, 301 U.S. 1, 37, 57 S. Ct. 615, 81 L. Ed. 893 (1937) ("[The commerce] power is plenary and may be exerted to protect interstate commerce no matter what the source of the dangers which threaten it." (internal quotation marks omitted)). The Chief Justice's crabbed reading of the Commerce Clause harks back to the era in which the Court routinely thwarted Congress' efforts to regulate the national economy in the interest of those who labor to sustain it. See, [***114] e.g., *Railroad Retirement Bd. v. Alton R. Co.*, 295 U.S. 330, 362, 368, 55 S. Ct. 758, 79 L. [**500] Ed. 1468 (1935) (invalidating compulsory retirement and pension plan for employees of carriers subject to the Interstate Commerce Act; Court found law related essentially "to the social welfare of the worker, and therefore remote from any regulation of commerce as such"). It is a reading that should not have staying power.

A

In enacting the Patient Protection and Affordable Care Act (ACA), Congress comprehensively reformed the national market for healthcare products and services. By any measure, that market is immense. Collectively, Americans spent \$2.5 trillion on health care in 2009, accounting for 17.6% of our Nation's economy. 42 U.S.C.

§18091(2)(B) (2006 ed., Supp. IV). Within the next decade, it is anticipated, spending on health care will nearly double. *Ibid.*

[*2610] The healthcare market's size is not its only distinctive feature. Unlike the market for almost any other product or service, the market for medical care is one in which all individuals inevitably participate. Virtually every person residing in the United States, sooner or later, will visit a doctor or other health-care professional. [***115] See Dept. of Health and Human Services, National Center for Health Statistics, Summary Health Statistics for U.S. Adults: National Health Interview Survey 2009, Ser. 10, No. 249, p. 124, Table 37 (Dec. 2010) (Over 99.5% of adults above 65 have visited a health-care professional.). Most people will do so repeatedly. See *id.*, at 115, Table 34 (In 2009 alone, 64% of adults made two or more visits to a doctor's office.).

When individuals make those visits, they face another reality of the current market for medical care: its high cost. In 2010, on average, an individual in the United States incurred over \$7,000 in health-care expenses. Dept. of Health and Human Services, Centers for Medicare and Medicaid Services, Historic National Health Expenditure Data, National Health Expenditures: Selected Calendar Years 1960-2010 (Table 1). Over a lifetime, costs mount to hundreds of thousands of dollars. See Alemayahu & Warner, *The Lifetime Distribution of Health Care Costs*, in 39 *Health Service Research* 627, 635 (June 2004). When a person requires nonroutine care, the cost will generally exceed what he or she can afford to pay. A single hospital stay, for instance, typically costs upwards of \$10,000. [***116] See Dept. of Health and Human Services, Office of Health Policy, ASPE Research Brief: *The Value of Health Insurance* 5 (May 2011). Treatments for many serious, though not uncommon, conditions similarly cost a substantial sum. Brief for Economic Scholars as *Amici Curiae* in No. 11-398, p. 10 (citing a study indicating that, in 1998, the cost of treating a heart attack for the first 90 days exceeded \$20,000, while the annual cost of treating certain cancers was more than \$50,000).

Although every U.S. domiciliary will incur significant medical expenses during his or her lifetime, the time when care will be needed is often unpredictable. An accident, a heart attack, or a cancer diagnosis commonly occurs without warning. Inescapably, we are

all at peril of needing medical care without a moment's notice. See, *e.g.*, Campbell, *Down the Insurance Rabbit Hole*, N. Y. Times, Apr. 5, 2012, p. A23 (telling of an uninsured 32-year-old woman who, healthy one day, became a quadriplegic the next due to an auto accident).

[**501] To manage the risks associated with medical care--its high cost, its unpredictability, and its inevitability--most people in the United States obtain health insurance. Many (approximately [***117] 170 million in 2009) are insured by private insurance companies. Others, including those over 65 and certain poor and disabled persons, rely on government-funded insurance programs, notably Medicare and Medicaid. Combined, private health insurers and State and Federal Governments finance almost 85% of the medical care administered to U.S. residents. See Congressional Budget Office, *CBO's 2011 Long-Term Budget Outlook 37* (June 2011).

Not all U.S. residents, however, have health insurance. In 2009, approximately 50 million people were uninsured, either by choice or, more likely, because they could not afford private insurance and did not qualify for government aid. See Dept. of Commerce, Census Bureau, C. DeNavas-Walt, B. Proctor, & J. Smith, *Income, Poverty, and Health Insurance Coverage in the United States: 2009*, p. 23, Table 8 (Sept. 2010). As a group, uninsured individuals [*2611] annually consume more than \$100 billion in health-care services, nearly 5% of the Nation's total. *Hidden Health Tax: Americans Pay a Premium 2* (2009), available at <http://www.familiesusa.org> (all Internet material as visited June 25, 2012, and included in Clerk of Court's case file). Over 60% of those without [***118] insurance visit a doctor's office or emergency room in a given year. See Dept. of Health and Human Services, National Center for Health Statistics, *Health--United States--2010*, p. 282, Table 79 (Feb. 2011).

B

The large number of individuals without health insurance, Congress found, heavily burdens the national health-care market. See 42 U.S.C. §18091(2). As just noted, the cost of emergency care or treatment for a serious illness generally exceeds what an individual can afford to pay on her own. Unlike markets for most products, however, the inability to pay for care does not mean that an uninsured individual will receive no care. Federal and state law, as well as professional obligations

and embedded social norms, require hospitals and physicians to provide care when it is most needed, regardless of the patient's ability to pay. See, *e.g.*, 42 U.S.C. §1395dd; Fla. Stat. §395.1041(3)(f) (2010); Tex. Health & Safety Code Ann. §§311.022(a) and (b) (West 2010); American Medical Association, Council on Ethical and Judicial Affairs, *Code of Medical Ethics, Current Opinions: Opinion 8.11--Neglect of Patient*, p. 70 (1998-1999 ed.).

As a consequence, medical-care providers deliver significant [***119] amounts of care to the uninsured for which the providers receive no payment. In 2008, for example, hospitals, physicians, and other health-care professionals received no compensation for \$43 billion worth of the \$116 billion in care they administered to those without insurance. 42 U.S.C. §18091(2)(F) (2006 ed., Supp. IV).

Health-care providers do not absorb these bad debts. Instead, they raise their prices, passing along the cost of uncompensated care to those who do pay reliably: the government and private insurance companies. In response, private insurers increase their premiums, shifting the cost of the elevated bills from providers onto those who carry insurance. The net result: Those with health insurance subsidize the medical care of those [*502] without it. As economists would describe what happens, the uninsured "free ride" on those who pay for health insurance.

The size of this subsidy is considerable. Congress found that the cost-shifting just described "increases family [insurance] premiums by on average over \$1,000 a year." *Ibid.* Higher premiums, in turn, render health insurance less affordable, forcing more people to go without insurance and leading to further cost-shifting.

And [***120] it is hardly just the currently sick or injured among the uninsured who prompt elevation of the price of health care and health insurance. Insurance companies and health-care providers know that some percentage of healthy, uninsured people will suffer sickness or injury each year and will receive medical care despite their inability to pay. In anticipation of this uncompensated care, health-care companies raise their prices, and insurers their premiums. In other words, because any uninsured person may need medical care at any moment and because health-care companies must account for that risk, every uninsured person impacts the market price of medical care and medical insurance.

The failure of individuals to acquire insurance has other deleterious effects on the health-care market. Because those without insurance generally lack access to [*2612] preventative care, they do not receive treatment for conditions--like hypertension and diabetes--that can be successfully and affordably treated if diagnosed early on. See Institute of Medicine, National Academies, *Insuring America's Health: Principles and Recommendations* 43 (2004). When sickness finally drives the uninsured to seek care, once treatable [***121] conditions have escalated into grave health problems, requiring more costly and extensive intervention. *Id.*, at 43-44. The extra time and resources providers spend serving the uninsured lessens the providers' ability to care for those who do have insurance. See Kliff, *High Uninsured Rates Can Kill You--Even if You Have Coverage*, *Washington Post* (May 7, 2012) (describing a study of California's health-care market which found that, when hospitals divert time and resources to provide uncompensated care, the quality of care the hospitals deliver to those with insurance drops significantly), available at http://www.washingtonpost.com/blogs/ezra-klein/post/high-uninsured-rates-can-kill-you-even-if-you-have-coverage/2012/05/07/gIQALNHN8T_print.html.

C

States cannot resolve the problem of the uninsured on their own. Like Social Security benefits, a universal health-care system, if adopted by an individual State, would be "bait to the needy and dependent elsewhere, encouraging them to migrate and seek a haven of repose." *Helvering v. Davis*, 301 U.S. 619, 644, 57 S. Ct. 904, 81 L. Ed. 1307, 1937-1 C.B. 360 (1937). See also Brief for Commonwealth of Massachusetts as *Amicus Curiae* in No. 11-398, [***122] p. 15 (noting that, in 2009, Massachusetts' emergency rooms served thousands of uninsured, out-of-state residents). An influx of unhealthy individuals into a State with universal health care would result in increased spending on medical services. To cover the increased costs, a State would have to raise taxes, and private health-insurance companies would have to increase premiums. Higher taxes and [**503] increased insurance costs would, in turn, encourage businesses and healthy individuals to leave the State.

States that undertake health-care reforms on their own thus risk "placing themselves in a position of

economic disadvantage as compared with neighbors or competitors." *Davis*, 301 U.S., at 644, 57 S. Ct. 904, 81 L. Ed. 1307. See also Brief for Health Care for All, Inc., et al. as *Amici Curiae* in No. 11-398, p. 4 ("[O]ut-of-state residents continue to seek and receive millions of dollars in uncompensated care in Massachusetts hospitals, limiting the State's efforts to improve its health care system through the elimination of uncompensated care."). Facing that risk, individual States are unlikely to take the initiative in addressing the problem of the uninsured, even though solving that [***123] problem is in all States' best interests. Congress' intervention was needed to overcome this collective-action impasse.

D

Aware that a national solution was required, Congress could have taken over the health-insurance market by establishing a tax-and-spend federal program like Social Security. Such a program, commonly referred to as a single-payer system (where the sole payer is the Federal Government), would have left little, if any, room for private enterprise or the States. Instead of going this route, Congress enacted the ACA, a solution that retains a robust role for private insurers and state governments. To make its chosen approach work, however, Congress had to use some new tools, including a requirement that most individuals obtain private health insurance coverage. See 26 U.S.C. §5000A (2006 ed., Supp. IV) [*2613] (the minimum coverage provision). As explained below, by employing these tools, Congress was able to achieve a practical, altogether reasonable, solution.

A central aim of the ACA is to reduce the number of uninsured U.S. residents. See 42 U.S.C. §18091(2)(C) and (I) (2006 ed., Supp. IV). The minimum coverage provision advances this objective by giving potential recipients [***124] of health care a financial incentive to acquire insurance. Per the minimum coverage provision, an individual must either obtain insurance or pay a toll constructed as a tax penalty. See 26 U.S.C. §5000A.

The minimum coverage provision serves a further purpose vital to Congress' plan to reduce the number of uninsured. Congress knew that encouraging individuals to purchase insurance would not suffice to solve the problem, because most of the uninsured are not uninsured by choice.¹ Of particular concern to Congress were people who, though desperately in need of insurance, often cannot acquire it: persons who suffer from preexisting medical conditions.

1 [***125] According to one study conducted by the National Center for Health Statistics, the high cost of insurance is the most common reason why individuals lack coverage, followed by loss of one's job, an employer's unwillingness to offer insurance or an insurer's unwillingness to cover those with preexisting medical conditions, and loss of Medicaid coverage. See Dept. of Health and Human Services, National Center for Health Statistics, Summary Health Statistics for the U.S. Population: National Health Interview Survey--2009, Ser. 10, No. 248, p. 71, Table 25 (Dec. 2010). "[D]id not want or need coverage" received too few responses to warrant its own category. See *ibid.*, n. 2.

Before the ACA's enactment, private insurance companies took an applicant's medical history into account [**504] when setting insurance rates or deciding whether to insure an individual. Because individuals with preexisting medical conditions cost insurance companies significantly more than those without such conditions, insurers routinely refused to insure these individuals, charged them substantially higher premiums, or offered only limited coverage that did not include the preexisting illness. See Dept. of Health and Human Services, Coverage Denied: How the Current Health Insurance System Leaves Millions Behind 1 (2009) (Over the past three years, 12.6 million nonelderly adults were denied insurance coverage or charged higher premiums due to a preexisting condition.).

To ensure that individuals with medical histories have access to affordable insurance, Congress devised a three-part solution. First, Congress imposed a "guaranteed issue" requirement, which bars insurers from denying coverage to any [***126] person on account of that person's medical condition or history. See 42 U.S.C. §§300gg-1, 300gg-3, 300gg-4(a) (2006 ed., Supp. IV). Second, Congress required insurers to use "community rating" to price their insurance policies. See §300gg. Community rating, in effect, bars insurance companies from charging higher premiums to those with preexisting conditions.

But these two provisions, Congress comprehended, could not work effectively unless individuals were given a powerful incentive to obtain insurance. See Hearings before the House Ways and Means Committee, 111th Cong., 1st Sess., 10, 13 (2009) (statement of Uwe

Reinhardt) ("[I]mposition of *community-rated premiums* and *guaranteed issue* on a market of competing private health insurers will inexorably drive that market into extinction, unless these two features are coupled with . . . a [**2614] *mandate on individual[s] to be insured.*" (emphasis in original)).

In the 1990's, several States--including New York, New Jersey, Washington, Kentucky, Maine, New Hampshire, and Vermont--enacted guaranteed-issue and community-rating laws without requiring universal acquisition of insurance coverage. The results were disastrous. "All seven states suffered [***127] from skyrocketing insurance premium costs, reductions in individuals with coverage, and reductions in insurance products and providers." Brief for American Association of People with Disabilities et al. as *Amici Curiae* in No. 11-398, p. 9 (hereinafter AAPD Brief). See also Brief for Governor of Washington Christine Gregoire as *Amicus Curiae* in No. 11-398, pp. 11-14 (describing the "death spiral" in the insurance market Washington experienced when the State passed a law requiring coverage for preexisting conditions).

Congress comprehended that guaranteed-issue and community-rating laws alone will not work. When insurance companies are required to insure the sick at affordable prices, individuals can wait until they become ill to buy insurance. Pretty soon, those in need of immediate medical care--*i.e.*, those who cost insurers the most--become the insurance companies' main customers. This "adverse selection" problem leaves insurers with two choices: They can either raise premiums dramatically to cover their ever-increasing costs or they can exit the market. In the seven States that tried guaranteed-issue and community-rating requirements without a minimum coverage provision, that is precisely [***128] what insurance companies [**505] did. See, *e.g.*, AAPD Brief 10 ("[In Maine,] [m]any insurance providers doubled their premiums in just three years or less."); *id.*, at 12 ("Like New York, Vermont saw substantial increases in premiums after its . . . insurance reform measures took effect in 1993."); Hall, An Evaluation of New York's Reform Law, 25 J. Health Pol. Pol'y & L. 71, 91-92 (2000) (Guaranteed-issue and community-rating laws resulted in a "dramatic exodus of indemnity insurers from New York's individual [insurance] market."); Brief for Barry Friedman et al. as *Amici Curiae* in No. 11-398, p. 17 ("In Kentucky, all but two insurers (one State-run) abandoned the State.").

Massachusetts, Congress was told, cracked the adverse selection problem. By requiring most residents to obtain insurance, see Mass. Gen. Laws, ch. 111M, §2 (West 2011), the Commonwealth ensured that insurers would not be left with only the sick as customers. As a result, federal lawmakers observed, Massachusetts succeeded where other States had failed. See Brief for Commonwealth of Massachusetts as *Amicus Curiae* in No. 11-398, p. 3 (noting that the Commonwealth's reforms reduced the number of uninsured residents to less [***129] than 2%, the lowest rate in the Nation, and cut the amount of uncompensated care by a third); 42 U.S.C. §18091(2)(D) (2006 ed., Supp. IV) (noting the success of Massachusetts' reforms).² In coupling the minimum coverage provision with guaranteed-issue and community-rating prescriptions, Congress followed Massachusetts' lead.

2 Despite its success, Massachusetts' medical-care providers still administer substantial amounts of uncompensated care, much of that to uninsured patients from out-of-state. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 502-503.

* * *

In sum, Congress passed the minimum coverage provision as a key component of the ACA to address an economic and social problem that has plagued the Nation for decades: the large number of U.S. residents [*2615] who are unable or unwilling to obtain health insurance. Whatever one thinks of the policy decision Congress made, it was Congress' prerogative to make it. Reviewed with appropriate deference, the minimum coverage provision, allied to the guaranteed-issue and community-rating prescriptions, should survive measurement under the Commerce and Necessary and Proper Clauses.

II

A

The Commerce Clause, it is widely acknowledged, "was the Framers' response to the central problem [***130] that gave rise to the Constitution itself." *EEOC v. Wyoming*, 460 U.S. 226, 244, 245, n. 1, 103 S. Ct. 1054, 75 L. Ed. 2d 18 (1983) (Stevens, J., concurring) (citing sources). Under the Articles of Confederation, the Constitution's precursor, the regulation of commerce was left to the States. This scheme proved unworkable,

because the individual States, understandably focused on their own economic interests, often failed to take actions critical to the success of the Nation as a whole. See Vices of the Political System of the United States, in James Madison: Writings 69, 71, P5 (J. Rakove ed. 1999) (As a result of the "want of concert in matters where common [**506] interest requires it," the "national dignity, interest, and revenue [have] suffered.").³

3 Alexander Hamilton described the problem this way: "[Often] it would be beneficial to all the states to encourage, or suppress[,] a particular branch of trade, while it would be detrimental . . . to attempt it without the concurrence of the rest." *The Continentalist* No. V, in 3 Papers of Alexander Hamilton 75, 78 (H. Syrett ed. 1962). Because the concurrence of all States was exceedingly difficult to obtain, Hamilton observed, "the experiment [***131] would probably be left untried." *Ibid.*

What was needed was a "national Government . . . armed with a positive & compleat authority in all cases where uniform measures are necessary." See Letter from James Madison to Edmund Randolph (Apr. 8, 1787), in 9 Papers of James Madison 368, 370 (R. Rutland ed. 1975). See also Letter from George Washington to James Madison (Nov. 30, 1785), in 8 *id.*, at 428, 429 ("We are either a United people, or we are not. If the former, let us, in all matters of general concern act as a nation, which ha[s] national objects to promote, and a national character to support."). The Framers' solution was the Commerce Clause, which, as they perceived it, granted Congress the authority to enact economic legislation "in all Cases for the general Interests of the Union, and also in those Cases to which the States are separately incompetent." 2 Records of the Federal Convention of 1787, pp. 131-132, P8 (M. Farrand rev. 1966). See also *North American Co. v. SEC*, 327 U.S. 686, 705, 66 S. Ct. 785, 90 L. Ed. 945 (1946) ("[The commerce power] is an affirmative power commensurate with the national needs.").

The Framers understood that the "general Interests of the Union" would [***132] change over time, in ways they could not anticipate. Accordingly, they recognized that the Constitution was of necessity a "great outlin[e]," not a detailed blueprint, see *McCulloch v. Maryland*, 17 U.S. 316, 4 Wheat. 316, 407, 4 L. Ed. 579 (1819), and that its provisions included broad concepts, to be "explained by the context or by the facts of the case,"

Letter from James Madison to N. P. Trist (Dec. 1831), in 9 Writings of James Madison 471, 475 (G. Hunt ed. 1910). "Nothing . . . can be more fallacious," Alexander Hamilton emphasized, "than to infer the extent of any power, proper to be lodged in the national government, from . . . its immediate necessities. [*2616] There ought to be a CAPACITY to provide for future contingencies[,] as they may happen; and as these are illimitable in their nature, it is impossible safely to limit that capacity." The Federalist No. 34, pp. 205, 206 (John Harvard Library ed. 2009). See also *McCulloch*, 4 Wheat., at 415, 4 L. Ed. 579 (The Necessary and Proper Clause is lodged "in a constitution[,] intended to endure for ages to come, and consequently, to be adapted to the various *crises* of human affairs.").

B

Consistent with the Framers' intent, we have repeatedly [***133] emphasized that Congress' authority under the Commerce Clause is dependent upon "practical" considerations, including "actual experience." *Jones & Laughlin Steel Corp.*, 301 U.S., at 41-42, 57 S. Ct. 615, 81 L. Ed. 893; see *Wickard v. Filburn*, 317 U.S. 111, 122, 63 S. Ct. 82, 87 L. Ed. 122 (1942); *United States v. Lopez*, 514 U.S. 549, 573, 115 S. Ct. 1624, 131 L. Ed. 2d 626 (1995) (Kennedy, J., concurring) (emphasizing "the Court's definitive commitment to the practical conception of the commerce power"). See also *North American [**507] Co.*, 327 U.S., at 705, 66 S. Ct. 785, 90 L. Ed. 945 ("Commerce itself is an intensely practical matter. To deal with it effectively, Congress must be able to act in terms of economic and financial realities." (citation omitted)). We afford Congress the leeway "to undertake to solve national problems directly and realistically." *American Power & Light Co. v. SEC*, 329 U.S. 90, 103, 67 S. Ct. 133, 91 L. Ed. 103 (1946).

Until today, this Court's pragmatic approach to judging whether Congress validly exercised its commerce power was guided by two familiar principles. First, Congress has the power to regulate economic activities "that substantially affect interstate [***134] commerce." *Gonzales v. Raich*, 545 U.S. 1, 17, 125 S. Ct. 2195, 162 L. Ed. 2d 1 (2005). This capacious power extends even to local activities that, viewed in the aggregate, have a substantial impact on interstate commerce. See *ibid.* See also *Wickard*, 317 U.S., at 125, 63 S. Ct. 82, 87 L. Ed. 122 ("[E]ven if appellee's activity be local and though it may not be regarded as commerce, it may still, *whatever*

its nature, be reached by Congress if it exerts a substantial economic effect on interstate commerce." (emphasis added)); *Jones & Laughlin Steel Corp.*, 301 U.S., at 37, 57 S. Ct. 615, 81 L. Ed. 893.

Second, we owe a large measure of respect to Congress when it frames and enacts economic and social legislation. See *Raich*, 545 U.S., at 17, 125 S. Ct. 2195, 162 L. Ed. 2d 1. See also *Pension Benefit Guaranty Corporation v. R. A. Gray & Co.*, 467 U.S. 717, 729, 104 S. Ct. 2709, 81 L. Ed. 2d 601 (1984) ("[S]trong deference [is] accorded legislation in the field of national economic policy."); *Hodel v. Indiana*, 452 U.S. 314, 326, 101 S. Ct. 2376, 69 L. Ed. 2d 40 (1981) ("This [C]ourt will certainly not substitute its judgment for that of Congress unless the relation of the subject to [***135] interstate commerce and its effect upon it are clearly non-existent." (internal quotation marks omitted)). When appraising such legislation, we ask only (1) whether Congress had a "rational basis" for concluding that the regulated activity substantially affects interstate commerce, and (2) whether there is a "reasonable connection between the regulatory means selected and the asserted ends." *Id.*, at 323-324, 101 S. Ct. 2376, 69 L. Ed. 2d 40. See also *Raich*, 545 U.S., at 22, 125 S. Ct. 2195, 162 L. Ed. 2d 1; *Lopez*, 514 U.S., at 557, 115 S. Ct. 1624, 131 L. Ed. 2d 626; *Hodel v. Virginia Surface Mining & Reclamation Assn., Inc.*, 452 U.S. 264, 277, 101 S. Ct. 2352, 69 L. Ed. 2d 1 (1981); *Katzenbach v. McClung*, 379 U.S. 294, 303, 85 S. Ct. 377, 13 L. Ed. 2d 290 (1964); *Heart of Atlanta Motel, Inc. v. United States*, 379 U.S. 241, 258, 85 S. Ct. 348, 13 L. Ed. 2d 258 [*2617] (1964); *United States v. Carolene Products Co.*, 304 U.S. 144, 152-153, 58 S. Ct. 778, 82 L. Ed. 1234 (1938). In answering these questions, we presume the statute under review is constitutional and may strike it down only on a "plain showing" that Congress acted irrationally. *United States v. Morrison*, 529 U.S. 598, 607, 120 S. Ct. 1740, 146 L. Ed. 2d 658 (2000).

C

Straightforward [***136] application of these principles would require the Court to hold that the minimum coverage provision is proper Commerce Clause legislation. Beyond dispute, Congress had a rational basis for concluding that the uninsured, as a class, substantially affect interstate commerce. Those without insurance consume billions [**508] of dollars of health-care products and services each year. See *supra*, at ___, 183 L.

Ed. 2d, at 501. Those goods are produced, sold, and delivered largely by national and regional companies who routinely transact business across state lines. The uninsured also cross state lines to receive care. Some have medical emergencies while away from home. Others, when sick, go to a neighboring State that provides better care for those who have not prepaid for care. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 502-503.

Not only do those without insurance consume a large amount of health care each year; critically, as earlier explained, their inability to pay for a significant portion of that consumption drives up market prices, foists costs on other consumers, and reduces market efficiency and stability. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 501-502. Given these far-reaching effects on interstate commerce, the decision to forgo insurance is hardly inconsequential or equivalent [***137] to "doing nothing," *ante*, at ___, 183 L. Ed. 2d, at 475; it is, instead, an economic decision Congress has the authority to address under the Commerce Clause. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 506-507. See also *Wickard*, 317 U.S., at 128, 63 S. Ct. 82, 87 L. Ed. 122 ("It is well established by decisions of this Court that the power to regulate commerce includes the power to regulate the prices at which commodities in that commerce are dealt in and *practices affecting such prices*." (emphasis added)).

The minimum coverage provision, furthermore, bears a "reasonable connection" to Congress' goal of protecting the health-care market from the disruption caused by individuals who fail to obtain insurance. By requiring those who do not carry insurance to pay a toll, the minimum coverage provision gives individuals a strong incentive to insure. This incentive, Congress had good reason to believe, would reduce the number of uninsured and, correspondingly, mitigate the adverse impact the uninsured have on the national health-care market.

Congress also acted reasonably in requiring uninsured individuals, whether sick or healthy, either to obtain insurance or to pay the specified penalty. As earlier observed, because every person is at risk [***138] of needing care at any moment, all those who lack insurance, regardless of their current health status, adversely affect the price of health care and health insurance. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 501-502. Moreover, an insurance-purchase requirement

limited to those in need of immediate care simply could not work. Insurance companies would either charge these individuals prohibitively expensive premiums, or, if community-rating regulations were in place, close up shop. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 503-505. See also Brief for State of Maryland and 10 Other States et al. as *Amici Curiae* in No. 11-398, p. 28 (hereinafter Maryland Brief) ("No insurance regime can survive if people can opt out when the risk insured against is only a risk, but opt in when the risk materializes.").

[*2618] "[W]here we find that the legislators . . . have a rational basis for finding a chosen regulatory scheme necessary to the protection of commerce, our investigation is at an end." *Katzenbach*, 379 U.S., at 303-304, 85 S. Ct. 377, 13 L. Ed. 2d 290. Congress' enactment of the minimum coverage provision, which addresses a specific [**509] interstate problem in a practical, experience-informed manner, easily meets this criterion.

D

Rather than evaluating the constitutionality of the minimum coverage [***139] provision in the manner established by our precedents, The Chief Justice relies on a newly minted constitutional doctrine. The commerce power does not, The Chief Justice announces, permit Congress to "compe[l] individuals to become active in commerce by purchasing a product." *Ante*, at ___, 183 L. Ed. 2d, at 475 (emphasis deleted).

1

a

The Chief Justice's novel constraint on Congress' commerce power gains no force from our precedent and for that reason alone warrants disapprobation. See *infra*, at ___ - ___, 183 L. Ed. 2d, at 512-514. But even assuming, for the moment, that Congress lacks authority under the Commerce Clause to "compel individuals not engaged in commerce to purchase an unwanted product," *ante*, at ___, 183 L. Ed. 2d, at 474, such a limitation would be inapplicable here. Everyone will, at some point, consume health-care products and services. See *supra*, at ___, 183 L. Ed. 2d, at 500. Thus, if The Chief Justice is correct that an insurance-purchase requirement can be applied only to those who "actively" consume health care, the minimum coverage provision fits the bill.

The Chief Justice does not dispute that all U.S. residents participate in the market for health services over the course of their lives. See *ante*, at ___, 183 L. Ed. 2d, at 473 ("Everyone will eventually need health care at a time and [***140] to an extent they cannot predict."). But, The Chief Justice insists, the uninsured cannot be considered active in the market for health care, because "[t]he proximity and degree of connection between the [uninsured today] and [their] subsequent commercial activity is too lacking." *Ante*, at ___, 183 L. Ed. 2d, at 479.

This argument has multiple flaws. First, more than 60% of those without insurance visit a hospital or doctor's office each year. See *supra*, at ___, 183 L. Ed. 2d, at 501. Nearly 90% will within five years.⁴ An uninsured's consumption of health care is thus quite proximate: It is virtually certain to occur in the next five years and more likely than not to occur this year.

4 See Dept. of Health and Human Services, National Center for Health Statistics, Summary Health Statistics for U.S. Adults: National Health Interview Survey 2009, Ser. 10, No. 249, p. 124, Table 37 (Dec. 2010).

Equally evident, Congress has no way of separating those uninsured individuals who will need emergency medical care today (surely their consumption of medical care is sufficiently imminent) from those who will not need medical services for years to come. No one knows when an emergency will occur, yet emergencies involving the uninsured arise daily. To capture individuals who unexpectedly will obtain medical care in the very near future, then, Congress needed to include individuals who will not go to a doctor anytime soon. Congress, our decisions instruct, [***141] has authority to cast its net that wide. See *Perez v. United States*, 402 U.S. 146, 154, 91 S. Ct. 1357, 28 L. Ed. 2d 686 (1971) ("[W]hen it is necessary in order to [**510] prevent an evil to make the law embrace more than the precise [*2619] thing to be prevented it may do so." (internal quotation marks omitted)).⁵

5 Echoing The Chief Justice, the joint dissenters urge that the minimum coverage provision impermissibly regulates young people who "have no intention of purchasing [medical care]" and are too far "removed from the [health-care] market." See *post*, at ___, ___, 183 L. Ed. 2d, at 539, 541. This criticism ignores the reality that a healthy

young person may be a day away from needing health care. See *supra*, at ___, 183 L. Ed. 2d, at 500. A victim of an accident or unforeseen illness will consume extensive medical care immediately, though scarcely expecting to do so.

Second, it is Congress' role, not the Court's, to delineate the boundaries of the market the Legislature seeks to regulate. The Chief Justice defines the health-care market as [***142] including only those transactions that will occur either in the next instant or within some (unspecified) proximity to the next instant. But Congress could reasonably have viewed the market from a long-term perspective, encompassing all transactions virtually certain to occur over the next decade, see *supra*, at ___, 183 L. Ed. 2d, at 509, not just those occurring here and now.

Third, contrary to The Chief Justice's contention, our precedent does indeed support "[t]he proposition that Congress may dictate the conduct of an individual today because of prophesied future activity." *Ante*, at ___, 183 L. Ed. 2d, at 479. In *Wickard*, the Court upheld a penalty the Federal Government imposed on a farmer who grew more wheat than he was permitted to grow under the Agricultural Adjustment Act of 1938 (AAA). 317 U.S., at 114-115, 63 S. Ct. 82, 87 L. Ed. 122. He could not be penalized, the farmer argued, as he was growing the wheat for home consumption, not for sale on the open market. *Id.*, 317 U.S. at 119, 63 S. Ct. 82, 87 L. Ed. 122. The Court rejected this argument. *Id.*, 317 U.S. at 127-129, 63 S. Ct. 82, 87 L. Ed. 122. Wheat intended for home consumption, the Court noted, "overhangs the market, and if induced by rising prices, tends to flow [***143] into the market and check price increases [intended by the AAA]." *Id.*, 317 U.S. at 128, 63 S. Ct. 82, 87 L. Ed. 122.

Similar reasoning supported the Court's judgment in *Raich*, which upheld Congress' authority to regulate marijuana grown for personal use. 545 U.S., at 19, 125 S. Ct. 2195, 16 L. Ed. 2d 1. Home-grown marijuana substantially affects the interstate market for marijuana, we observed, for "the high demand in the interstate market will [likely] draw such marijuana into that market." *Ibid.*

Our decisions thus acknowledge Congress' authority, under the Commerce Clause, to direct the conduct of an individual today (the farmer in *Wickard*, stopped from growing excess wheat; the plaintiff in *Raich*, ordered to

cease cultivating marijuana) because of a prophesied future transaction (the eventual sale of that wheat or marijuana in the interstate market). Congress' actions are even more rational in this case, where the future activity (the consumption of medical care) is certain to occur, the sole uncertainty being the time the activity will take place.

Maintaining that the uninsured are not active in the health-care market, The Chief Justice draws an analogy to the car market. An individual [***144] "is not 'active in the car market,' " The Chief Justice observes, simply because he or she may someday buy a car. *Ante*, at ____, 183 L. Ed. 2d, at 478. The analogy is inapt. The inevitable yet unpredictable need for medical care and the [**511] guarantee that emergency care will be provided when required are conditions nonexistent in other markets. That is so of the market for cars, and of the market for broccoli as well. Although an individual *might* buy a car or a crown of broccoli one day, there is no certainty she [*2620] will ever do so. And if she eventually wants a car or has a craving for broccoli, she will be obliged to pay at the counter before receiving the vehicle or nourishment. She will get no free ride or food, at the expense of another consumer forced to pay an inflated price. See *Thomas More Law Center v. Obama*, 651 F.3d 529, 565 (CA6 2011) (Sutton, J., concurring in part) ("Regulating how citizens pay for what they already receive (health care), never quite know when they will need, and in the case of severe illnesses or emergencies generally will not be able to afford, has few (if any) parallels in modern life."). Upholding the minimum coverage provision on the ground that all are participants or will be [***145] participants in the health-care market would therefore carry no implication that Congress may justify under the Commerce Clause a mandate to buy other products and services.

Nor is it accurate to say that the minimum coverage provision "compel[s] individuals . . . to purchase an unwanted product," *ante*, at ____, 183 L. Ed. 2d, at 474, or "suite of products," *post*, at ____, n. 2, 183 L. Ed. 2d, at 541 (joint opinion of Scalia, Kennedy, Thomas, and Alito, JJ.). If unwanted today, medical service secured by insurance may be desperately needed tomorrow. Virtually everyone, I reiterate, consumes health care at some point in his or her life. See *supra*, at ____, 183 L. Ed. 2d, at 500. Health insurance is a means of paying for this care, nothing more. In requiring individuals to obtain insurance, Congress is therefore not mandating the

purchase of a discrete, unwanted product. Rather, Congress is merely defining the terms on which individuals pay for an interstate good they consume: Persons subject to the mandate must now pay for medical care in advance (instead of at the point of service) and through insurance (instead of out of pocket). Establishing payment terms for goods in or affecting interstate commerce is quintessential economic regulation well within Congress' [***146] domain. See, e.g., *United States v. Wrightwood Dairy Co.*, 315 U.S. 110, 118, 62 S. Ct. 523, 86 L. Ed. 726 (1942). Cf. *post*, at ____, 183 L. Ed. 2d, at 542 (joint opinion of Scalia, Kennedy, Thomas, and Alito, JJ.) (recognizing that "the Federal Government can prescribe [a commodity's] quality . . . and even [its price]").

The Chief Justice also calls the minimum coverage provision an illegitimate effort to make young, healthy individuals subsidize insurance premiums paid by the less hale and hardy. See *ante*, at ____, __ - ____, 183 L. Ed. 2d, at 473, 478-479. This complaint, too, is spurious. Under the current health-care system, healthy persons who lack insurance receive a benefit for which they do not pay: They are assured that, if they need it, emergency medical care will be available, although they cannot afford it. See *supra*, at __ - ____, 183 L. Ed. 2d, at 501-502. Those who have insurance bear the cost of this guarantee. See *ibid*. By requiring the healthy uninsured to obtain insurance or pay a penalty structured as a tax, the minimum coverage provision ends the free ride these individuals currently enjoy.

In the fullness of time, moreover, [**512] today's young and healthy will become society's old and infirm. Viewed over a lifespan, the costs and benefits even out: The young who [***147] pay more than their fair share currently will pay less than their fair share when they become senior citizens. And even if, as undoubtedly will be the case, some individuals, over their lifespans, will pay more for health insurance than they receive in health services, they have little to complain about, for that is how insurance works. Every insured person receives protection against a catastrophic loss, even though only a subset of the covered class will ultimately need that protection.

[*2621] b

In any event, The Chief Justice's limitation of the commerce power to the regulation of those actively engaged in commerce finds no home in the text of the

Constitution or our decisions. Article I, § 8, of the Constitution grants Congress the power "[t]o regulate Commerce . . . among the several States." Nothing in this language implies that Congress' commerce power is limited to regulating those actively engaged in commercial transactions. Indeed, as the D. C. Circuit observed, "[a]t the time the Constitution was [framed], to 'regulate' meant," among other things, "to require action." See *Seven-Sky v. Holder*, 661 F.3d 1, 16, 398 U.S. App. D.C. 134 (2011).

Arguing to the contrary, The Chief Justice notes [***148] that "the Constitution gives Congress the power to 'coin Money,' in addition to the power to 'regulate the Value thereof,'" and similarly "gives Congress the power to 'raise and support Armies' and to 'provide and maintain a Navy,' in addition to the power to 'make Rules for the Government and Regulation of the land and naval Forces.'" *Ante*, at ___ - ___, 183 L. Ed. 2d, at 474 (citing Art. I, § 8, cls. 5, 12-14). In separating the power to regulate from the power to bring the subject of the regulation into existence, The Chief Justice asserts, "[t]he language of the Constitution reflects the natural understanding that the power to regulate assumes there is already something to be regulated." *Ante*, at ___, 183 L. Ed. 2d, at 474.

This argument is difficult to fathom. Requiring individuals to obtain insurance unquestionably regulates the interstate health-insurance and health-care markets, both of them in existence well before the enactment of the ACA. See *Wickard*, 317 U.S., at 128, 63 S. Ct. 82, 87 L. Ed. 122 ("The stimulation of commerce is a use of the regulatory function quite as definitely as prohibitions or restrictions thereon."). Thus, the "something to be regulated" was surely there when Congress created the minimum coverage provision. [***149]⁶

6 The Chief Justice's reliance on the quoted passages of the Constitution, see *ante*, at ___ - ___, 183 L. Ed. 2d, at 474-475, is also dubious on other grounds. The power to "regulate the Value" of the national currency presumably includes the power to increase the currency's worth--*i.e.*, to create value where none previously existed. And if the power to "[r]egulat[e] . . . the land and naval Forces" presupposes "there is already [in existence] something to be regulated," *i.e.*, an Army and a Navy, does Congress lack authority to create an Air Force?

Nor does our case law toe the activity versus inactivity line. In *Wickard*, for example, we upheld the penalty imposed on a farmer who grew too much wheat, even though the regulation had the effect of compelling farmers to purchase wheat in the open market. *Id.*, at 127-129, 63 S. Ct. 82, 87 L. Ed. 122. "[F]orcing some farmers [**513] into the market to buy what they could provide for themselves" was, the Court held, a valid means of regulating commerce. *Id.*, at 128-129, 63 S. Ct. 82, 87 L. Ed. 122. In another context, this Court similarly upheld Congress' authority under the commerce power to compel an "inactive" land-holder to submit to an unwanted sale. See *Monongahela Nav. Co. v. United States*, 148 U.S. 312, 335-337, 13 S. Ct. 622, 37 L. Ed. 463 (1893) [***150] ("[U]pon the [great] power to regulate commerce[,] Congress has the authority to mandate the sale of real property to the Government, where the sale is essential to the improvement of a navigable waterway (emphasis added)); *Cherokee Nation v. Southern Kansas R. Co.*, 135 U.S. 641, 657-659, 10 S. Ct. 965, 34 L. Ed. 295 (1890) (similar reliance on the commerce power regarding mandated sale of private property for railroad construction).

[*2622] In concluding that the Commerce Clause does not permit Congress to regulate commercial "inactivity," and therefore does not allow Congress to adopt the practical solution it devised for the health-care problem, The Chief Justice views the Clause as a "technical legal conception," precisely what our case law tells us not to do. *Wickard*, 317 U.S., at 122, 63 S. Ct. 82, 87 L. Ed. 122 (internal quotation marks omitted). See also *supra*, at ___ - ___, 183 L. Ed. 2d, at 506-507. This Court's former endeavors to impose categorical limits on the commerce power have not fared well. In several pre-New Deal cases, the Court attempted to cabin Congress' Commerce Clause authority by distinguishing "commerce" from activity once conceived to be noncommercial, notably, "production," "mining," and "manufacturing." [***151] See, *e.g.*, *United States v. E. C. Knight Co.*, 156 U.S. 1, 12, 15 S. Ct. 249, 39 L. Ed. 325 (1895) ("Commerce succeeds to manufacture, and is not a part of it."); *Carter v. Carter Coal Co.*, 298 U.S. 238, 304, 56 S. Ct. 855, 80 L. Ed. 1160 (1936) ("Mining brings the subject matter of commerce into existence. Commerce disposes of it."). The Court also sought to distinguish activities having a "direct" effect on interstate commerce, and for that reason, subject to federal regulation, from those having only an "indirect" effect, and therefore not amenable to federal control. See, *e.g.*,

A. L. A. Schechter Poultry Corp. v. United States, 295 U.S. 495, 548, 55 S. Ct. 837, 79 L. Ed. 1570 (1935) ("[T]he distinction between direct and indirect effects of intrastate transactions upon interstate commerce must be recognized as a fundamental one.").

These line-drawing exercises were untenable, and the Court long ago abandoned them. "[Q]uestions of the power of Congress [under the Commerce Clause]," we held in *Wickard*, "are not to be decided by reference to any formula which would give controlling force to nomenclature such as 'production' and 'indirect' and foreclose consideration of the actual [***152] effects of the activity in question upon interstate commerce." 317 U.S., at 120, 63 S. Ct. 82, 87 L. Ed. 122. See also *Morrison*, 529 U.S., at 641-644, 120 S. Ct. 1740, 146 L. Ed. 658 (Souter, J., dissenting) (recounting the Court's "nearly disastrous experiment" with formalistic limits on Congress' commerce power). Failing to learn from this history, The Chief Justice plows ahead with his formalistic distinction between those who are "active in commerce," *ante*, at ___, 183 L. Ed. 2d, at 475, and those who are not.

[**514] It is not hard to show the difficulty courts (and Congress) would encounter in distinguishing statutes that regulate "activity" from those that regulate "inactivity." As Judge Easterbrook noted, "it is possible to restate most actions as corresponding inactions with the same effect." *Archie v. Racine*, 847 F.2d 1211, 1213 (CA7 1988) (en banc). Take this case as an example. An individual who opts not to purchase insurance from a private insurer can be seen as actively selecting another form of insurance: self-insurance. See *Thomas More Law Center*, 651 F.3d, at 561 (Sutton, J., concurring in part) ("No one is inactive when deciding how to pay for health care, as self-insurance and private insurance [***153] are two forms of action for addressing the same risk."). The minimum coverage provision could therefore be described as regulating activists in the self-insurance market.⁷ *Wickard* is another example. Did the statute there at issue [*2623] target activity (the growing of too much wheat) or inactivity (the farmer's failure to purchase wheat in the marketplace)? If anything, the Court's analysis suggested the latter. See 317 U.S., at 127-129, 63 S. Ct. 82, 87 L. Ed. 122.

7 The Chief Justice's characterization of individuals who choose not to purchase private insurance as "doing nothing," *ante*, at ___, 183 L.

Ed. 2d, at 475, is similarly questionable. A person who self-insures opts against prepayment for a product the person will in time consume. When aggregated, exercise of that option has a substantial impact on the health-care market. See *supra*, at ___ - ___, ___ - ___, 183 L. Ed. 2d, at 501-502, 507-508.

At bottom, The Chief Justice's and the joint dissenters' "view that an individual cannot be subject to Commerce Clause regulation absent voluntary, affirmative acts that enter him or her into, or affect, the interstate market expresses a concern for individual liberty that [is] more redolent of Due Process Clause arguments." *Seven-Sky*, 661 F.3d, at 19. See also [***154] *Troxel v. Granville*, 530 U.S. 57, 65, 120 S. Ct. 2054, 147 L. Ed. 2d 49 (2000) (plurality opinion) ("The [Due Process] Clause also includes a substantive component that provides heightened protection against government interference with certain fundamental rights and liberty interests." (internal quotation marks omitted)). Plaintiffs have abandoned any argument pinned to substantive due process, however, see 648 F.3d 1235, 1291, n. 93 (CA11 2011), and now concede that the provisions here at issue do not offend the Due Process Clause.⁸

8 Some adherents to the joint dissent have questioned the existence of substantive due process rights. See *McDonald v. City of Chicago*, 561 U.S. ___, ___, 130 S. Ct. 3020, 3062, 177 L. Ed. 2d 894, 941 (2010) (Thomas, J., concurring) (The notion that the Due Process Clause "could define the substance of th[e] righ[t to liberty] strains credulity."); *Albright v. Oliver*, 510 U.S. 266, 275, 114 S. Ct. 807, 127 L. Ed. 2d 114 (1994) (Scalia, J., concurring) ("I reject the proposition that the Due Process Clause guarantees certain (unspecified) liberties[.]"). Given these Justices' reluctance to interpret the Due Process Clause as guaranteeing liberty [***155] interests, their willingness to plant such protections in the Commerce Clause is striking.

2

Underlying The Chief Justice's view that the Commerce Clause must be confined to the regulation of active participants in a commercial market is a fear that the commerce power would otherwise know no limits. See, e.g., *ante*, at ___, 183 L. Ed. 2d, at 477 (Allowing

Congress to compel an individual not engaged in commerce to purchase a product would "permi[t] Congress to reach beyond the natural extent of its authority, everywhere extending the sphere of its activity, [**515] and drawing all power into its impetuous vortex." (internal quotation marks omitted)). The joint dissenters express a similar apprehension. See *post*, at ___, 183 L. Ed. 2d, at 539 (If the minimum coverage provision is upheld under the commerce power then "the Commerce Clause becomes a font of unlimited power, . . . the hideous monster whose devouring jaws . . . spare neither sex nor age, nor high nor low, nor sacred nor profane." (internal quotation marks omitted)). This concern is unfounded.

First, The Chief Justice could certainly uphold the individual mandate without giving Congress *carte blanche* to enact any and all purchase mandates. As several times noted, the unique attributes [***156] of the health-care market render everyone active in that market and give rise to a significant free-riding problem that does not occur in other markets. See *supra*, at ___ - ___, ___ - ___, ___, 183 L. Ed. 2d, at 507-508, 507-509, 510.

Nor would the commerce power be unbridled, absent The Chief Justice's "activity" limitation. Congress would remain unable to regulate noneconomic conduct that has only an attenuated effect on interstate commerce and is traditionally left to state law. See *Lopez*, 514 U.S., at 567, 115 S. Ct. 1624, 131 L. Ed. 2d 626; *Morrison*, 529 U.S., at 617-619, 120 S. Ct. 1740, 146 L. Ed. 2d 658. In *Lopez*, for example, the Court held that the Federal Government lacked power, under the Commerce Clause, to criminalize the possession of a gun in a local school zone. Possessing [*2624] a gun near a school, the Court reasoned, "is in no sense an economic activity that might, through repetition elsewhere, substantially affect any sort of interstate commerce." 514 U.S., at 567, 115 S. Ct. 1624, 131 L. Ed. 2d 626; *ibid.* (noting that the Court would have "to pile inference upon inference" to conclude that gun possession has a substantial effect on commerce). Relying on similar logic, the Court concluded in *Morrison* that Congress [***157] could not regulate gender-motivated violence, which the Court deemed to have too "attenuated [an] effect upon interstate commerce." 529 U.S., at 615, 120 S. Ct. 1740, 146 L. Ed. 658.

An individual's decision to self-insure, I have explained, is an economic act with the requisite

connection to interstate commerce. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 507-508. Other choices individuals make are unlikely to fit the same or similar description. As an example of the type of regulation he fears, The Chief Justice cites a Government mandate to purchase green vegetables. *Ante*, at ___ - ___, 183 L. Ed. 2d, at 476-477. One could call this concern "the broccoli horrible." Congress, The Chief Justice posits, might adopt such a mandate, reasoning that an individual's failure to eat a healthy diet, like the failure to purchase health insurance, imposes costs on others. See *ibid.*

Consider the chain of inferences the Court would have to accept to conclude that a vegetable-purchase mandate was likely to have a substantial effect on the health-care costs borne by lithe Americans. The Court would have to believe that individuals forced to buy vegetables would then eat them (instead of throwing or giving them away), would prepare the vegetables in a healthy [***158] way (steamed or raw, not deep-fried), would cut back on unhealthy foods, and would not allow other factors (such as lack of exercise or little sleep) to trump the [**516] improved diet.⁹ Such "pil[ing of] inference upon inference" is just what the Court refused to do in *Lopez* and *Morrison*.

9 The failure to purchase vegetables in The Chief Justice's hypothetical, then, is *not* what leads to higher health-care costs for others; rather, it is the failure of individuals to maintain a healthy diet, and the resulting obesity, that creates the cost-shifting problem. See *ante*, at ___ - ___, 183 L. Ed. 2d, at 476-477. Requiring individuals to purchase vegetables is thus several steps removed from solving the problem. The failure to obtain health insurance, by contrast, is the *immediate cause* of the cost-shifting Congress sought to address through the ACA. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 501-502. Requiring individuals to obtain insurance attacks the source of the problem directly, in a single step.

Other provisions of the Constitution also check congressional overreaching. A mandate to purchase a particular product would be unconstitutional if, for example, the edict impermissibly abridged the freedom of speech, interfered with the free exercise of religion, [***159] or infringed on a liberty interest protected by the Due Process Clause.

Supplementing these legal restraints is a formidable

check on congressional power: the democratic process. See *Raich*, 545 U.S., at 33, 125 S. Ct. 2195, 162 L. Ed. 2d 1; *Wickard*, 317 U.S., at 120, 63 S. Ct. 82, 87 L. Ed. 122 (repeating Chief Justice Marshall's "warning that effective restraints on [the commerce power's] exercise must proceed from political rather than judicial processes" (citing *Gibbons v. Ogden*, 9 Wheat. 1, 197, 6 L. Ed. 23 (1824))). As the controversy surrounding the passage of the Affordable Care Act attests, purchase mandates are likely to engender political resistance. This prospect is borne out by the behavior of state legislators. Despite their possession of unquestioned authority to impose mandates, state governments have rarely done so. See Hall, *Commerce Clause Challenges to Health [*2625] Care Reform*, 159 U. Pa. L. Rev. 1825, 1838 (2011).

When contemplated in its extreme, almost any power looks dangerous. The commerce power, hypothetically, would enable Congress to prohibit the purchase and home production of all meat, fish, and dairy goods, effectively compelling Americans to eat only vegetables. [***160] Cf. *Raich*, 545 U.S., at 9, 125 S. Ct. 2195, 162 L. Ed. 2d 1; *Wickard*, 317 U.S., at 127-129, 63 S. Ct. 82, 87 L. Ed. 122. Yet no one would offer the "hypothetical and unreal possibilit[y]," *Pullman Co. v. Knott*, 235 U.S. 23, 26, 35 S. Ct. 2, 59 L. Ed. 105 (1914), of a vegetarian state as a credible reason to deny Congress the authority ever to ban the possession and sale of goods. The Chief Justice accepts just such specious logic when he cites the broccoli horrible as a reason to deny Congress the power to pass the individual mandate. Cf. R. Bork, *The Tempting of America* 169 (1990) ("Judges and lawyers live on the slippery slope of analogies; they are not supposed to ski it to the bottom."). But see, e.g., *post*, at ___, 183 L. Ed. 2d, at 536 (joint opinion of Scalia, Kennedy, Thomas, and Alito, JJ.) (asserting, outlandishly, that if the minimum coverage provision is sustained, then Congress could make "breathing in and out the basis for federal prescription").

3

To bolster his argument that the minimum coverage provision is not valid Commerce Clause legislation, The Chief Justice emphasizes the provision's novelty. See *ante*, at ___, 183 L. Ed. 2d, at 474 (asserting that [**517] "sometimes the most telling indication of [a] severe constitutional [***161] problem . . . is the lack of historical precedent for Congress's action" (internal

quotation marks omitted)). While an insurance-purchase mandate may be novel, The Chief Justice's argument certainly is not. "[I]n almost every instance of the exercise of the [commerce] power differences are asserted from previous exercises of it and made a ground of attack." *Hoke v. United States*, 227 U.S. 308, 320, 33 S. Ct. 281, 57 L. Ed. 523 (1913). See, e.g., Brief for Petitioner in *Perez v. United States*, O. T. 1970, No. 600, p. 5 ("unprecedented exercise of power"); Supplemental Brief for Appellees in *Katzenbach v. McClung*, O. T. 1964, No. 543, p. 40 ("novel assertion of federal power"); Brief for Appellee in *Wickard v. Filburn*, O. T. 1941, No. 59, p. 6 ("complete departure"). For decades, the Court has declined to override legislation because of its novelty, and for good reason. As our national economy grows and changes, we have recognized, Congress must adapt to the changing "economic and financial realities." See *supra*, at ___ - ___, 183 L. Ed. 2d, at 506-507. Hindering Congress' ability to do so is shortsighted; if history is any guide, today's constriction of the Commerce Clause will not endure. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 513.

III

A

For [***162] the reasons explained above, the minimum coverage provision is valid Commerce Clause legislation. See *supra*, Part II. When viewed as a component of the entire ACA, the provision's constitutionality becomes even plainer.

The Necessary and Proper Clause "empowers Congress to enact laws in effectuation of its [commerce] powe[r] that are not within its authority to enact in isolation." *Raich*, 545 U.S., at 39, 125 S. Ct. 2195, 162 L. Ed. 2d 1 (Scalia, J., concurring in judgment). Hence, "[a] complex regulatory program . . . can survive a Commerce Clause challenge without a showing that every single facet of the program is independently and directly related to a valid congressional goal." *Indiana*, 452 U.S., at 329, n. 17, [*2626] 101 S. Ct. 2376, 69 L. Ed. 2d 40. "It is enough that the challenged provisions are an integral part of the regulatory program and that the regulatory scheme when considered as a whole satisfies this test." *Ibid.* (collecting cases). See also *Raich*, 545 U.S., at 24-25, 125 S. Ct. 2195, 162 L. Ed. 2d 1 (A challenged statutory provision fits within Congress' commerce authority if it is an "essential par[t] of a larger regulation of economic activity," such that, in the absence [***163] of the provision, "the regulatory scheme could be undercut."

(quoting *Lopez*, 514 U.S., at 561, 115 S. Ct. 1624, 131 L. Ed. 2d 626)); *Raich*, 545 U.S., at 37, 125 S. Ct. 2195, 162 L. Ed. 2d 1 (Scalia, J., concurring in judgment) ("Congress may regulate even noneconomic local activity if that regulation is a necessary part of a more general regulation of interstate commerce. The relevant question is simply whether the means chosen are 'reasonably adapted' to the attainment of a legitimate end under the commerce power." (citation omitted)).

Recall that one of Congress' goals in enacting the Affordable Care Act was to eliminate the insurance industry's practice of charging higher prices or denying coverage to individuals with preexisting medical conditions. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 503-504. The commerce power allows [**518] Congress to ban this practice, a point no one disputes. See *United States v. SouthEastern Underwriters Assn.*, 322 U.S. 533, 545, 552-553, 64 S. Ct. 1162, 88 L. Ed. 1440 (1944) (Congress may regulate "the methods by which interstate insurance companies do business.").

Congress knew, however, that simply barring insurance companies from relying on an applicant's medical history would not work [***164] in practice. Without the individual mandate, Congress learned, guaranteed-issue and community-rating requirements would trigger an adverse-selection death-spiral in the health-insurance market: Insurance premiums would skyrocket, the number of uninsured would increase, and insurance companies would exit the market. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 504. When complemented by an insurance mandate, on the other hand, guaranteed issue and community rating would work as intended, increasing access to insurance and reducing uncompensated care. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 504-505. The minimum coverage provision is thus an "essential par[t] of a larger regulation of economic activity"; without the provision, "the regulatory scheme [w]ould be undercut." *Raich*, 545 U.S., at 24-25, 125 S. Ct. 2195, 162 L. Ed. 2d 1 (internal quotation marks omitted). Put differently, the minimum coverage provision, together with the guaranteed-issue and community-rating requirements, is " 'reasonably adapted' to the attainment of a legitimate end under the commerce power": the elimination of pricing and sales practices that take an applicant's medical history into account. See *id.*, 545 U.S. at 37, 125 S. Ct. 2195, 162 L. Ed. 2d 1 (Scalia, J., [***165] concurring in judgment).

B

Asserting that the Necessary and Proper Clause does not authorize the minimum coverage provision, The Chief Justice focuses on the word "proper." A mandate to purchase health insurance is not "proper" legislation, The Chief Justice urges, because the command "undermine[s] the structure of government established by the Constitution." *Ante*, at ___, 183 L. Ed. 2d, at 480. If long on rhetoric, The Chief Justice's argument is short on substance.

The Chief Justice cites only two cases in which this Court concluded that a federal statute impermissibly transgressed the Constitution's boundary between state and federal authority: *Printz v. United States*, 521 U.S. 898, 117 S. Ct. 2365, 138 L. Ed. 2d 914 (1997), and *New York v. United States*, 505 U.S. 144, 112 S. Ct. 2408, 120 L. Ed. 2d 120 (1992). See *ante*, at ___, 183 L. Ed. 2d, at 480. The statutes at issue in both cases, however, compelled *state officials* to act on the Federal Government's behalf. 521 U.S., at 925-933, 117 S. Ct. 2365, 138 L. Ed. 2d 914 (holding unconstitutional a statute obligating state law enforcement officers to implement a federal gun-control law); *New York*, 505 U.S., at 176-177, 112 S. Ct. 2408, 120 L. Ed. 2d 120 (striking down a statute [***166] requiring state legislators to pass regulations pursuant to Congress' instructions). "[Federal] laws conscripting state officers," the Court reasoned, "violate state sovereignty and are thus not in accord with the Constitution." *Printz*, 521 U.S., at 925, 935, 117 S. Ct. 2365, 138 L. Ed. 2d 914; *New York*, 505 U.S., at 176, 112 S. Ct. 2408, 120 L. Ed. 2d 120.

The minimum coverage provision, in contrast, acts "directly upon individuals, [**519] without employing the States as intermediaries." *New York*, 505 U.S., at 164, 112 S. Ct. 2408, 120 L. Ed. 2d 120. The provision is thus entirely consistent with the Constitution's design. See *Printz*, 521 U.S., at 920, 117 S. Ct. 2365, 138 L. Ed. 914 ("[T]he Framers explicitly chose a Constitution that confers upon Congress the power to regulate individuals, not States." (internal quotation marks omitted)).

Lacking case law support for his holding, The Chief Justice nevertheless declares the minimum coverage provision not "proper" because it is less "narrow in scope" than other laws this Court has upheld under the Necessary and Proper Clause. *Ante*, at ___, 183 L. Ed. 2d, at 481 (citing *United States v. Comstock*, 560 U.S. 126,

130 S. Ct. 1949, 176 L. Ed. 2d 878 (2010); *Sabri v. United States*, 541 U.S. 600, 124 S. Ct. 1941, 158 L. Ed. 2d 891 (2004); [***167] *Jinks v. Richland County*, 538 U.S. 456, 123 S. Ct. 1667, 155 L. Ed. 2d 631 (2003)). The Chief Justice's reliance on cases in which this Court has affirmed Congress' "broad authority to enact federal legislation" under the Necessary and Proper Clause, *Comstock*, 560 U.S., at ___, 130 S. Ct. 1949, 1956, 176 L. Ed. 2d 878, 888, is underwhelming.

Nor does The Chief Justice pause to explain *why* the power to direct either the purchase of health insurance or, alternatively, the payment of a penalty collectible as a tax is more far-reaching than other implied powers this Court has found meet under the Necessary and Proper Clause. These powers include the power to enact criminal laws, see, e.g., *United States v. Fox*, 95 U.S. 670, 672, 24 L. Ed. 538 (1878); the power to imprison, including civil imprisonment, see, e.g., *Comstock*, 560 U.S., at ___, 130 S. Ct. 1949, 176 L. Ed. 2d 878; and the power to create a national bank, see *McCulloch*, 4 Wheat., at 425, 4 L. Ed. 579. See also *Jinks*, 538 U.S., at 463, 123 S. Ct. 1667, 155 L. Ed. 2d 631 (affirming Congress' power to alter the way a state law is applied in state court, where the alteration "promotes fair and efficient operation [***168] of the federal courts").¹⁰

10 Indeed, Congress regularly and uncontroversially requires individuals who are "doing nothing," see *ante*, at ___, 183 L. Ed. 2d, at 475, to take action. Examples include federal requirements to report for jury duty, 28 U.S.C. §1866(g) (2006 ed., Supp. IV); to register for selective service, 50 U.S.C. App. §453; to purchase firearms and gear in anticipation of service in the Militia, 1 Stat. 271 (Uniform Militia Act of 1792); to turn gold currency over to the Federal Government in exchange for paper currency, see *Nortz v. United States*, 294 U.S. 317, 328, 55 S. Ct. 428, 79 L. Ed. 907, 80 Ct. Cl. 859 (1935); and to file a tax return, 26 U.S.C. §6012 (2006 ed., Supp. IV).

In failing to explain why the individual mandate threatens our constitutional order, The Chief Justice deserves future courts. How is a judge to decide, when ruling on the constitutionality of a federal statute, whether Congress employed an "independent power," *ante*, at ___, 183 L. Ed. 2d, at 480, or merely a "derivative" one, *ante*, at ___, 183 L. Ed. 2d, at 481.

Whether the power used is "substantive," *ante*, at ___, 183 L. Ed. 2d, at 481, or just "incidental," [*2628] *ante*, at ___, 183 L. Ed. 2d, at 481? The instruction The Chief Justice, in effect, provides lower courts: You will know it when you see it.

It [***169] is more than exaggeration to suggest that the minimum coverage provision improperly intrudes on "essential attributes of state sovereignty." *Ibid.* (internal quotation marks omitted). First, the Affordable Care Act does not operate "in [an] are[a] such [**520] as criminal law enforcement or education where States historically have been sovereign." *Lopez*, 514 U.S., at 564, 115 S. Ct. 1624, 131 L. Ed. 2d 626. As evidenced by Medicare, Medicaid, the Employee Retirement Income Security Act of 1974 (ERISA), and the Health Insurance Portability and Accountability Act of 1996 (HIPAA), the Federal Government plays a lead role in the health-care sector, both as a direct payer and as a regulator.

Second, and perhaps most important, the minimum coverage provision, along with other provisions of the ACA, addresses the very sort of interstate problem that made the commerce power essential in our federal system. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 505-506. The crisis created by the large number of U.S. residents who lack health insurance is one of national dimension that States are "separately incompetent" to handle. See *supra*, at ___ - ___, ___, 183 L. Ed. 2d, at 502-503, 506. See also Maryland Brief 15-26 (describing "the impediments to effective state policymaking [***170] that flow from the interconnectedness of each state's healthcare economy" and emphasizing that "state-level reforms cannot fully address the problems associated with uncompensated care"). Far from trampling on States' sovereignty, the ACA attempts a federal solution for the very reason that the States, acting separately, cannot meet the need. Notably, the ACA serves the general welfare of the people of the United States while retaining a prominent role for the States. See *id.*, at 31-36 (explaining and illustrating how the ACA affords States wide latitude in implementing key elements of the Act's reforms).¹¹

11 In a separate argument, the joint dissenters contend that the minimum coverage provision is not necessary and proper because it was not the "only . . . way" Congress could have made the guaranteed-issue and community-rating reforms work. *Post*, at ___ - ___, 183 L. Ed. 2d, at 540.

Congress could also have avoided an insurance-market death spiral, the dissenters maintain, by imposing a surcharge on those who did not previously purchase insurance when those individuals eventually enter the health-insurance system. *Post*, at ___, 183 L. Ed. 2d, at 540. Or Congress could "den[y] a full income tax credit" to those who do not purchase [***171] insurance. *Ibid.* Neither a surcharge on those who purchase insurance nor the denial of a tax credit to those who do not would solve the problem created by guaranteed-issue and community-rating requirements. Neither would prompt the purchase of insurance before sickness or injury occurred. But even assuming there were "practicable" alternatives to the minimum coverage provision, "we long ago rejected the view that the Necessary and Proper Clause demands that an Act of Congress be 'absolutely necessary' to the exercise of an enumerated power." *Jinks v. Richland County*, 538 U.S. 456, 462, 123 S. Ct. 1667, 155 L. Ed. 2d 631 (2003) (quoting *McCulloch v. Maryland*, 17 U.S. 316, 4 Wheat. 316, 414-415, 4 L. Ed. 579 (1819)). Rather, the statutory provision at issue need only be "conducive" and "[reasonably] adapted" to the goal Congress seeks to achieve. *Jinks*, 538 U.S., at 462, 123 S. Ct. 1667, 155 L. Ed. 2d 631 (internal quotation marks omitted). The minimum coverage provision meets this requirement. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 517-518.

IV

In the early 20th century, this Court regularly struck down economic regulation enacted by the peoples' representatives in both the States and the Federal Government. See, [***172] *e.g.*, *Carter Coal Co.*, 298 U.S., at 303-304, 309-310, 56 S. Ct. 855, 80 L. Ed. 1160; *Dagenhart*, 247 U.S., at 276-277, 38 S. Ct. 529, 62 L. Ed. 1101; [*2629] *Lochner v. New York*, 198 U.S. 45, 64, 25 S. Ct. 539, 49 L. Ed. 937 (1905). The Chief Justice's Commerce Clause opinion, and even more so the joint dissenters' reasoning, see *post*, at ___ - ___, 183 L. Ed. 2d, at 537-544, [**521] bear a disquieting resemblance to those long-overruled decisions.

Ultimately, the Court upholds the individual mandate as a proper exercise of Congress' power to tax and spend "for the . . . general Welfare of the United States." Art. I,

§ 8, cl. 1; *ante*, at ___ - ___, 183 L. Ed. 2d, at 489-490. I concur in that determination, which makes The Chief Justice's Commerce Clause essay all the more puzzling. Why should The Chief Justice strive so mightily to hem in Congress' capacity to meet the new problems arising constantly in our everdeveloping modern economy? I find no satisfying response to that question in his opinion.¹²

12 The Chief Justice states that he must evaluate the constitutionality of the minimum coverage provision under the Commerce Clause because the provision "reads more naturally as a command to buy insurance than as a tax." *Ante*, at ___, 183 L. Ed. 2d, at 490. The Chief Justice ultimately [***173] concludes, however, that interpreting the provision as a tax is a "fairly possible" construction. *Ante*, at ___, 183 L. Ed. 2d, at 483 (internal quotation marks omitted). That being so, I see no reason to undertake a Commerce Clause analysis that is not outcome determinative.

V

Through Medicaid, Congress has offered the States an opportunity to furnish health care to the poor with the aid of federal financing. To receive federal Medicaid funds, States must provide health benefits to specified categories of needy persons, including pregnant women, children, parents, and adults with disabilities. Guaranteed eligibility varies by category: for some it is tied to the federal poverty level (incomes up to 100% or 133%); for others it depends on criteria such as eligibility for designated state or federal assistance programs. The ACA enlarges the population of needy people States must cover to include adults under age 65 with incomes up to 133% of the federal poverty level. The spending power conferred by the Constitution, the Court has never doubted, permits Congress to define the contours of programs financed with federal funds. See, *e.g.*, *Pennhurst State School and Hospital v. Halderman*, 451 U.S. 1, 17, 101 S. Ct. 1531, 67 L. Ed. 2d 694 (1981). [***174] And to expand coverage, Congress could have recalled the existing legislation, and replaced it with a new law making Medicaid as embracive of the poor as Congress chose.

The question posed by the 2010 Medicaid expansion, then, is essentially this: To cover a notably larger population, must Congress take the repeal/reenact route, or may it achieve the same result by amending existing

law? The answer should be that Congress may expand by amendment the classes of needy persons entitled to Medicaid benefits. A ritualistic requirement that Congress repeal and reenact spending legislation in order to enlarge the population served by a federally funded program would advance no constitutional principle and would scarcely serve the interests of federalism. To the contrary, such a requirement would rigidify Congress' efforts to empower States by partnering with them in the implementation of federal programs.

Medicaid is a prototypical example of federal-state cooperation in serving the Nation's general welfare. Rather than authorizing a federal agency to administer a uniform national health-care system for the poor, Congress offered States the opportunity to tailor Medicaid grants to their particular [***175] needs, so long as they remain within bounds set by federal law. In shaping [*2630] Medicaid, Congress did not endeavor [**522] to fix permanently the terms participating states must meet; instead, Congress reserved the "right to alter, amend, or repeal" any provision of the Medicaid Act. 42 U.S.C. §1304. States, for their part, agreed to amend their own Medicaid plans consistent with changes from time to time made in the federal law. See 42 CFR §430.12(c)(1)(i) (2011) . And from 1965 to the present, States have regularly conformed to Congress' alterations of the Medicaid Act.

The Chief Justice acknowledges that Congress may "condition the receipt of [federal] funds on the States' complying with restrictions on the use of those funds," *ante*, at ___, 183 L. Ed. 2d, at 493, but nevertheless concludes that the 2010 expansion is unduly coercive. His conclusion rests on three premises, each of them essential to his theory. First, the Medicaid expansion is, in The Chief Justice's view, a new grant program, not an addition to the Medicaid program existing before the ACA's enactment. Congress, The Chief Justice maintains, has threatened States with the loss of funds from an old program in an effort to get them to adopt a new one. Second, [***176] the expansion was unforeseeable by the States when they first signed on to Medicaid. Third, the threatened loss of funding is so large that the States have no real choice but to participate in the Medicaid expansion. The Chief Justice therefore--*for the first time ever*--finds an exercise of Congress' spending power unconstitutionally coercive.

Medicaid, as amended by the ACA, however, is not

two spending programs; it is a single program with a constant aim--to enable poor persons to receive basic health care when they need it. Given past expansions, plus express statutory warning that Congress may change the requirements participating States must meet, there can be no tenable claim that the ACA fails for lack of notice. Moreover, States have no entitlement to receive any Medicaid funds; they enjoy only the opportunity to accept funds on Congress' terms. Future Congresses are not bound by their predecessors' dispositions; they have authority to spend federal revenue as they see fit. The Federal Government, therefore, is not, as The Chief Justice charges, threatening States with the loss of "existing" funds from one spending program in order to induce them to opt into another program. Congress [***177] is simply requiring States to do what States have long been required to do to receive Medicaid funding: comply with the conditions Congress prescribes for participation.

A majority of the Court, however, buys the argument that prospective withholding of funds formerly available exceeds Congress' spending power. Given that holding, I entirely agree with The Chief Justice as to the appropriate remedy. It is to bar the withholding found impermissible--not, as the joint dissenters would have it, to scrap the expansion altogether, see *post*, at ___ - ___, 183 L. Ed. 2d, at 561-563. The dissenters' view that the ACA must fall in its entirety is a radical departure from the Court's normal course. When a constitutional infirmity mars a statute, the Court ordinarily removes the infirmity. It undertakes a salvage operation; it does not demolish the legislation. See, *e.g.*, *Brockett v. Spokane Arcades, Inc.*, 472 U.S. 491, 504, 105 S. Ct. 2794, 86 L. Ed. 2d 394 (1985) (Court's normal course is to declare a statute invalid "to the extent that it reaches too far, but otherwise [to leave the statute] intact"). That course is [**523] plainly in order where, as in this case, Congress has expressly instructed courts to leave untouched every [***178] provision not found invalid. See 42 U.S.C. §1303. Because The Chief Justice finds the withholding--[*2631] not the granting--of federal funds incompatible with the Spending Clause, Congress' extension of Medicaid remains available to any State that affirms its willingness to participate.

A

Expansion has been characteristic of the Medicaid program. Akin to the ACA in 2010, the Medicaid Act as

passed in 1965 augmented existing federal grant programs jointly administered with the States.¹³ States were not required to participate in Medicaid. But if they did, the Federal Government paid at least half the costs. To qualify for these grants, States had to offer a minimum level of health coverage to beneficiaries of four federally funded, state-administered welfare programs: Aid to Families with Dependent Children; Old Age Assistance; Aid to the Blind; and Aid to the Permanently and Totally Disabled. See Social Security Amendments of 1965, §121(a), 79 Stat. 343; *Schweiker v. Gray Panthers*, 453 U.S. 34, 37, 101 S. Ct. 2633, 69 L. Ed. 2d 460 (1981). At their option, States could enroll additional "medically needy" individuals; these costs, too, were partially borne by the Federal Government at the [***179] same, at least 50%, rate. *Ibid.*

13 Medicaid was "plainly an extension of the existing Kerr-Mills" grant program. Huberfeld, *Federalizing Medicaid*, 14 U. Pa. J. Const. L. 431, 444-445 (2011). Indeed, the "section of the Senate report dealing with Title XIX"--the title establishing Medicaid--"was entitled, 'Improvement and Extension of Kerr-Mills Medical Assistance Program.' " Stevens & Stevens, *Welfare Medicine in America* 51 (1974) (quoting S. Rep. No. 404, 89th Cong., 1st Sess., pt. 1, p. 9 (1965)). Setting the pattern for Medicaid, Kerr-Mills reimbursed States for a portion of the cost of health care provided to welfare recipients if States met conditions specified in the federal law, *e.g.*, participating States were obliged to offer minimum coverage for hospitalization and physician services. See Huberfeld, *supra*, at 443-444.

Since 1965, Congress has amended the Medicaid program on more than 50 occasions, sometimes quite sizably. Most relevant here, between 1988 and 1990, Congress required participating States to include among their beneficiaries pregnant women with family incomes up to 133% of the federal poverty level, children up to age 6 at the same income levels, and children ages [***180] 6 to 18 with family incomes up to 100% of the poverty level. See 42 U.S.C. §§1396a(a)(10)(A)(i), 1396a(l); Medicare Catastrophic Coverage Act of 1988, §302, 102 Stat. 750; Omnibus Budget Reconciliation Act of 1989, §6401, 103 Stat. 2258; Omnibus Budget Reconciliation Act of 1990, §4601, 104 Stat. 1388-166. These amendments added millions to the

Medicaid-eligible population. Dubay & Kenney, *Lessons from the Medicaid Expansions for Children and Pregnant Women* 5 (Apr. 1997).

Between 1966 and 1990, annual federal Medicaid spending grew from \$631.6 million to \$42.6 billion; state spending rose to \$31 billion over the same period. See Dept. of Health and Human Services, *National Health Expenditures by Type of Service and Source of Funds: Calendar Years 1960 to 2010* (table).¹⁴ And between 1990 and 2010, federal spending increased to \$269.5 billion. *Ibid.* Enlargement of [**524] the population and services covered by Medicaid, in short, has been the trend.

14 Available online at <http://www.cms.gov/Research-Statistics-D ata-and-Systems/Statistics-Trends-and-Reports/NationalHealthExpendData/NationalHealthAccountsHistorical.html>.

Compared to past alterations, the ACA is notable for the extent to which [***181] the Federal Government will pick up the tab. Medicaid's 2010 expansion is financed [*2632] largely by federal outlays. In 2014, federal funds will cover 100% of the costs for newly eligible beneficiaries; that rate will gradually decrease before settling at 90% in 2020. 42 U.S.C. §1396d(y) (2006 ed., Supp. IV). By comparison, federal contributions toward the care of beneficiaries eligible pre-ACA range from 50% to 83%, and averaged 57% between 2005 and 2008. §1396d(b) (2006 ed., Supp. IV); Dept. of Health and Human Services, Centers for Medicare and Medicaid Services, C. Truffer et al., 2010 Actuarial Report on the Financial Outlook for Medicaid, p. 20.

Nor will the expansion exorbitantly increase state Medicaid spending. The Congressional Budget Office (CBO) projects that States will spend 0.8% more than they would have, absent the ACA. See CBO, *Spending & Enrollment Detail for CBO's March 2009 Baseline*. But see *ante*, at ___ - ___, 183 L. Ed. 2d, at 490-491 ("[T]he Act dramatically increases state obligations under Medicaid."); *post*, at ___, 183 L. Ed. 2d, at 561 (joint opinion of Scalia, Kennedy, Thomas, and Alito, JJ.) ("[A]cceptance of the [ACA expansion] will impose very substantial costs on participating States."). Whatever the increase [***182] in state obligations after the ACA, it will pale in comparison to the increase in federal funding.¹⁵

15 Even the study on which the plaintiffs rely, see Brief for Petitioners 10, concludes that "[w]hile most states will experience some increase in spending, this is quite small relative to the federal matching payments and low relative to the costs of uncompensated care that [the states] would bear if the[re] were no health reform." See Kaiser Commission on Medicaid & the Uninsured, *Medicaid Coverage & Spending in Health Reform* 16 (May 2010). Thus there can be no objection to the ACA's expansion of Medicaid as an "unfunded mandate." Quite the contrary, the program is impressively well funded.

Finally, any fair appraisal of Medicaid would require acknowledgment of the considerable autonomy States enjoy under the Act. Far from "conscript[ing] state agencies into the national bureaucratic army," *ante*, at ___, 183 L. Ed. 2d, at 496 (citing *FERC v. Mississippi*, 456 U.S. 742, 775, 102 S. Ct. 2126, 72 L. Ed. 2d 532 (1982) (O'Connor, J., concurring in judgment in part and dissenting in part) (brackets in original and internal quotation marks omitted)), Medicaid "is designed to advance cooperative federalism." *Wis. Dep't of Health & Family Servs. v. Blumer*, 534 U.S. 473, 495 (2002), 122 S. Ct. 962, 151 L. Ed. 2d 935 [***183] (citing *Harris v. McRae*, 448 U.S. 297, 308, 100 S. Ct. 2671, 65 L. Ed. 2d 784 (1980)). Subject to its basic requirements, the Medicaid Act empowers States to "select dramatically different levels of funding and coverage, alter and experiment with different financing and delivery modes, and opt to cover (or not to cover) a range of particular procedures and therapies. States have leveraged this policy discretion to generate a myriad of dramatically different Medicaid programs over the past several decades." Ruger, *Of Icebergs and Glaciers*, 75 *Law & Contemp. Probs.* 215, 233 (2012) (footnote omitted). The ACA does not jettison this approach. States, as first-line administrators, will continue to guide the distribution of substantial resources among their needy populations.

[**525] The alternative to conditional federal spending, it bears emphasis, is not state autonomy but state marginalization.¹⁶ In 1965, Congress elected to nationalize health coverage for seniors through Medicare. [*2633] It could similarly have established Medicaid as an exclusively federal program. Instead, Congress gave the States the opportunity to partner in the program's administration and development. Absent from the nationalized [***184] model, of course, is the state-level

policy discretion and experimentation that is Medicaid's hallmark; undoubtedly the interests of federalism are better served when States retain a meaningful role in the implementation of a program of such importance. See Caminker, *State Sovereignty and Subordinacy*, 95 *Colum. L. Rev.* 1001, 1002-1003 (1995) (cooperative federalism can preserve "a significant role for state discretion in achieving specified federal goals, where the alternative is complete federal preemption of any state regulatory role"); Rose-Ackerman, *Cooperative Federalism and Co-optation*, 92 *Yale L. J.* 1344, 1346 (1983) ("If the federal government begins to take full responsibility for social welfare spending and preempts the states, the result is likely to be weaker . . . state governments.").¹⁷

16 In 1972, for example, Congress ended the federal cash-assistance program for the aged, blind, and disabled. That program previously had been operated jointly by the Federal and State Governments, as is the case with Medicaid today. Congress replaced the cooperative federal program with the nationalized Supplemental Security Income (SSI) program. See *Schweiker v. Gray Panthers*, 453 U.S. 34, 38, 101 S. Ct. 2633, 69 L. Ed. 2d 460 (1981). [***185]

17 The Chief Justice and the joint dissenters perceive in cooperative federalism a "threa[t]" to "political accountability." *Ante*, at ___, 183 L. Ed. 2d, at 492; see *post*, at ___ - ___, 183 L. Ed. 2d, at 554-555. By that, they mean voter confusion: Citizens upset by unpopular government action, they posit, may ascribe to state officials blame more appropriately laid at Congress' door. But no such confusion is apparent in this case: Medicaid's status as a federally funded, state-administered program is hardly hidden from view.

Although Congress "has no obligation to use its Spending Clause power to disburse funds to the States," *College Sav. Bank v. Florida Prepaid Postsecondary Ed. Expense Bd.*, 527 U.S. 666, 686 (1999), 119 S. Ct. 2219, 144 L. Ed. 2d 605, it has provided Medicaid grants notable for their generosity and flexibility. "[S]uch funds," we once observed, "are gifts," *id.*, 527 U.S. at 686-687, 119 S. Ct. 2219, 144 L. Ed. 2d 605, and so they have remained through decades of expansion in their size and scope.

B

The Spending Clause authorizes Congress "to pay the Debts and provide for the . . . general Welfare of the United States." Art. I, § 8, cl. 1. To ensure that federal funds granted to the States are spent "to 'provide for the [***186] . . . general Welfare' in the manner Congress intended," *ante*, at ___, 183 L. Ed. 2d, at 491, Congress must of course have authority to impose limitations on the States' use of the federal dollars. This Court, time and again, has respected Congress' prescription of spending conditions, and has required States to abide by them. See, e.g., *Pennhurst*, 451 U.S., at 17, 101 S. Ct. 1531, 67 L. Ed. 2d 694 ("[O]ur cases have long recognized that Congress may fix the terms on which it shall disburse federal money to the States."). In particular, we have recognized Congress' prerogative to condition a State's receipt of Medicaid funding on compliance with the terms Congress set for participation in the program. See, e.g., *Harris*, 448 U.S., at 301, 100 S. Ct. 2671, 65 L. Ed. 2d [**526] 784 ("[O]nce a State elects to participate [in Medicaid], it must comply with the requirements of [the Medicaid Act]."); *Arkansas Dept. of Health and Human Servs. v. Ahlborn*, 547 U.S. 268, 275, 126 S. Ct. 1752, 164 L. Ed. 2d 459 (2006); *Frew v. Hawkins*, 540 U.S. 431, 433, 124 S. Ct. 899, 157 L. Ed. 2d 855 (2004); *Atkins v. Rivera*, 477 U.S. 154, 156-157, 106 S. Ct. 2456, 91 L. Ed. 2d 131 (1986).

Congress' authority to condition the use of federal [***187] funds is not confined to spending programs as first launched. The legislature may, and often does, amend the law, imposing new conditions grant recipients henceforth must meet in order to continue receiving funds. See *infra*, at ___, 183 L. Ed. 2d, at 530 (describing *Bennett v. Kentucky Dep't of Education*, [*2634] 470 U.S. 656, 659-660, 105 S. Ct. 1544, 84 L. Ed. 2d 590 (1985) (enforcing restriction added five years after adoption of educational program)).

Yes, there are federalism-based limits on the use of Congress' conditional spending power. In the leading decision in this area, *South Dakota v. Dole*, 483 U.S. 203, 107 S. Ct. 2793, 97 L. Ed. 2d 171 (1987), the Court identified four criteria. The conditions placed on federal grants to States must (a) promote the "general welfare," (b) "unambiguously" inform States what is demanded of them, (c) be germane "to the federal interest in particular national projects or programs," and (d) not "induce the States to engage in activities that would themselves be unconstitutional." *Id.*, at 207-208, 210, 107 S. Ct. 2793, 97 L. Ed. 2d 171 (internal quotation marks omitted).¹⁸

18 Although the plaintiffs, in the proceedings below, did not contest the ACA's satisfaction of these [***188] criteria, see 648 F.3d 1235, 1263 (CA11 2011), The Chief Justice appears to rely heavily on the second criterion. Compare *ante*, at ___, ___, 183 L. Ed. 2d, at 494, 496, with *infra*, at ___ - ___, 183 L. Ed. 2d, at 529-531.

The Court in *Dole* mentioned, but did not adopt, a further limitation, one hypothetically raised a half-century earlier: In "some circumstances," Congress might be prohibited from offering a "financial inducement . . . so coercive as to pass the point at which 'pressure turns into compulsion.'" *Id.*, 483 U.S. at 211, 107 S. Ct. 2793, 97 L. Ed. 2d 171 (quoting *Steward Machine Co. v. Davis*, 301 U.S. 548, 590, 57 S. Ct. 883, 81 L. Ed. 1279, 1937-1 C.B. 444 (1937)). Prior to today's decision, however, the Court has never ruled that the terms of any grant crossed the indistinct line between temptation and coercion.

Dole involved the National Minimum Drinking Age Act, 23 U.S.C. §158, enacted in 1984. That Act directed the Secretary of Transportation to withhold 5% of the federal highway funds otherwise payable to a State if the State permitted purchase of alcoholic beverages by persons less than 21 years old. Drinking age was not within the authority of Congress to regulate, South Dakota argued, because the Twenty-First Amendment [***189] gave the States exclusive power to control the manufacture, transportation, and consumption of alcoholic beverages. The small percentage of highway-construction funds South Dakota stood to lose by adhering to 19 as the age of eligibility to purchase 3.2% beer, however, was not enough to qualify as coercion, the Court concluded.

[**527] This case does not present the concerns that led the Court in *Dole* even to consider the prospect of coercion. In *Dole*, the condition--set 21 as the minimum drinking age--did not tell the States how to use funds Congress provided for highway construction. Further, in view of the Twenty-First Amendment, it was an open question whether Congress could directly impose a national minimum drinking age.

The ACA, in contrast, relates solely to the federally funded Medicaid program; if States choose not to comply, Congress has not threatened to withhold funds earmarked for any other program. Nor does the ACA use Medicaid funding to induce States to take action

Congress itself could not undertake. The Federal Government undoubtedly could operate its own health-care program for poor persons, just as it operates Medicare for seniors' health care. See *supra*, at ___, 183 L. Ed. 2d, at 525.

That is what [***190] makes this such a simple case, and the Court's decision so unsettling. Congress, aiming to assist the needy, has appropriated federal money to subsidize state health-insurance programs that meet federal standards. The principal standard the ACA sets is that the state program cover adults earning no more [*2635] than 133% of the federal poverty line. Enforcing that prescription ensures that federal funds will be spent on health care for the poor in furtherance of Congress' present perception of the general welfare.

C

The Chief Justice asserts that the Medicaid expansion creates a "new health care program." *Ante*, at ___, 183 L. Ed. 2d, at 496. Moreover, States could "hardly anticipate" that Congress would "transform [the program] so dramatically." *Ante*, at ___, 183 L. Ed. 2d, at 496. Therefore, The Chief Justice maintains, Congress' threat to withhold "old" Medicaid funds based on a State's refusal to participate in the "new" program is a "threa[t] to terminate [an]other . . . independent gran[t]." *Ante*, at ___, ___ - ___, 183 L. Ed. 2d, at 493, 495. And because the threat to withhold a large amount of funds from one program "leaves the States with no real option but to acquiesce [in a newly created program]," The Chief Justice concludes, the Medicaid expansion is unconstitutionally [***191] coercive. *Ante*, at ___, 183 L. Ed. 2d, at 494.

1

The starting premise on which The Chief Justice's coercion analysis rests is that the ACA did not really "extend" Medicaid; instead, Congress created an entirely new program to co-exist with the old. The Chief Justice calls the ACA new, but in truth, it simply reaches more of America's poor than Congress originally covered.

Medicaid was created to enable States to provide medical assistance to "needy persons." See S. Rep. No. 404, 89th Cong., 1st Sess., pt. 1, p. 9 (1965). See also §121(a), 79 Stat. 343 (The purpose of Medicaid is to enable States "to furnish . . . medical assistance on behalf of [certain persons] whose income and resources are

insufficient to meet the costs of necessary medical services."). By bringing health care within the reach of a larger population of Americans unable to afford it, the Medicaid expansion is an extension of that basic aim.

The Medicaid Act contains hundreds of provisions governing operation [**528] of the program, setting conditions ranging from "Limitation on payments to States for expenditures attributable to taxes," 42 U.S.C. §1396a(t) (2006 ed.), to "Medical assistance to aliens not lawfully admitted for permanent residence," [***192] §1396b(v) (2006 ed. and Supp. IV). The Medicaid expansion leaves unchanged the vast majority of these provisions; it adds beneficiaries to the existing program and specifies the rate at which States will be reimbursed for services provided to the added beneficiaries. See ACA §§2001(a)(1), (3), 124 Stat. 271-272. The ACA does not describe operational aspects of the program for these newly eligible persons; for that information, one must read the existing Medicaid Act. See 42 U.S.C. §§1396-1396v(b) (2006 ed. and Supp. IV).

Congress styled and clearly viewed the Medicaid expansion as an amendment to the Medicaid Act, not as a "new" health-care program. To the four categories of beneficiaries for whom coverage became mandatory in 1965, and the three mandatory classes added in the late 1980's, see *supra*, at ___ - ___, 183 L. Ed. 2d, at 523-524, the ACA adds an eighth: individuals under 65 with incomes not exceeding 133% of the federal poverty level. The expansion is effectuated by § 2001 of the ACA, aptly titled: "Medicaid Coverage for the Lowest Income Populations." 124 Stat. 271. That section amends Title 42, Chapter 7, Subchapter XIX: Grants to States for Medical Assistance Programs. Commonly known as the Medicaid [***193] Act, Subchapter XIX filled some 278 pages in 2006. Section 2001 of the ACA [*2636] would add approximately three pages.¹⁹

19 Compare Subchapter XIX, 42 U.S.C. §§1396-1396v(b) (2006 ed. and Supp. IV) with §§1396a(a) (10)(A)(i)(VIII) (2006 ed. and Supp. IV); 1396a(a)(10)(A)(ii)(XX), 1396a(a)(75), 1396a(k), 1396a(gg) to (hh), 1396d(y), 1396r-1(e), 1396u-7(b)(5) to (6).

Congress has broad authority to construct or adjust spending programs to meet its contemporary understanding of "the general Welfare." *Helvering v. Davis*, 301 U.S. 619, 640-641, 57 S. Ct. 904, 81 L. Ed. 1307, 1937-1 C.B. 360 (1937). Courts owe a large

measure of respect to Congress' characterization of the grant programs it establishes. See *Steward Machine*, 301 U.S., at 594, 57 S. Ct. 883, 81 L. Ed. 1279. Even if courts were inclined to second-guess Congress' conception of the character of its legislation, how would reviewing judges divine whether an Act of Congress, purporting to amend a law, is in reality not an amendment, but a new creation? At what point does an extension become so large that it "transforms" the basic law?

Endeavoring to show that Congress created a new program, The Chief Justice cites three aspects of the [***194] expansion. First, he asserts that, in covering those earning no more than 133% of the federal poverty line, the Medicaid expansion, unlike pre-ACA Medicaid, does not "care for the neediest among us." *Ante*, at ___, 183 L. Ed. 2d, at 496. What makes that so? Single adults earning no more than \$14,856 per year--133% of the current federal poverty level--surely rank among the Nation's poor. Second, according to The Chief Justice, "Congress mandated that newly eligible persons receive a level of coverage that is less comprehensive than the traditional Medicaid benefit package." *Ibid*. That less comprehensive benefit package, however, is not an [***529] innovation introduced by the ACA; since 2006, States have been free to use it for many of their Medicaid beneficiaries.²⁰ The level of benefits offered therefore does not set apart post-ACA Medicaid recipients from all those entitled to benefits pre-ACA.

20 The Deficit Reduction Act of 2005 authorized States to provide "benchmark coverage" or "benchmark equivalent coverage" to certain Medicaid populations. See § 6044, 120 Stat. 88, 42 U.S.C. §1396u-7 (2006 ed. and Supp. IV). States may offer the same level of coverage to persons newly eligible under the ACA. See §1396a(k).

Third, [***195] The Chief Justice correctly notes that the reimbursement rate for participating States is different regarding individuals who became Medicaid-eligible through the ACA. *Ibid*. But the rate differs only in its generosity to participating States. Under pre-ACA Medicaid, the Federal Government pays up to 83% of the costs of coverage for current enrollees, §1396d(b) (2006 ed. and Supp. IV); under the ACA, the federal contribution starts at 100% and will eventually settle at 90%, §1396d(y). Even if one agreed that a change of as little as 7 percentage points carries

constitutional significance, is it not passing strange to suggest that the purported incursion on state sovereignty might have been averted, or at least mitigated, had Congress offered States *less* money to carry out the same obligations?

Consider also that Congress could have repealed Medicaid. See *supra*, at ___ - ___, 183 L. Ed. 2d, at 521-522 (citing 42 U.S.C. §1304); Brief for Petitioners in No. 11-400, p. 41. Thereafter, Congress could have enacted Medicaid II, a new program combining the pre-2010 coverage with the expanded coverage required by the ACA. By what right does a court stop Congress from building up without first tearing down?

2

The Chief Justice [***196] finds the Medicaid expansion vulnerable because it took [*2637] participating States by surprise. *Ante*, at ___, 183 L. Ed. 2d, at 496. "A State could hardly anticipate that Congress[s]" would endeavor to "transform [the Medicaid program] so dramatically," he states. *Ante*, at ___ - ___, 183 L. Ed. 2d, at 496. For the notion that States must be able to foresee, when they sign up, alterations Congress might make later on, The Chief Justice cites only one case: *Pennhurst State School and Hospital v. Halderman*, 451 U.S. 1, 101 S. Ct. 1531, 67 L. Ed. 2d 694.

In *Pennhurst*, residents of a state-run, federally funded institution for the mentally disabled complained of abusive treatment and inhumane conditions in alleged violation of the Developmentally Disabled Assistance and Bill of Rights Act. 451 U.S., at 5-6, 101 S. Ct. 1531, 67 L. Ed. 2d 694. We held that the State was not answerable in damages for violating conditions it did not "voluntarily and knowingly accep[t]." *Id.*, 451 U.S. at 17, 27, 101 S. Ct. 1531, 67 L. Ed. 2d 694. Inspecting the statutory language and legislative history, we found that the Act did not "unambiguously" impose the requirement on which the plaintiffs relied: that they receive appropriate treatment in the least restrictive [***197] environment. *Id.*, 451 U.S. at 17-18, 101 S. Ct. 1531, 67 L. Ed. 2d 694. Satisfied that Congress had not clearly conditioned the States' receipt of federal funds on the States' provision of such treatment, we declined to read such a requirement into the Act. Congress' spending power, we concluded, "does [**530] not include surprising participating States with postacceptance or 'retroactive' conditions." *Id.*, 451 U.S. at 24-25, 101 S. Ct. 1531, 67 L. Ed. 2d 694.

Pennhurst thus instructs that "if Congress intends to impose a condition on the grant of federal moneys, it must do so unambiguously." *Ante*, at ___, 183 L. Ed. 2d, at 495 (quoting *Pennhurst*, 451 U.S., at 17, 101 S. Ct. 1531, 67 L. Ed. 2d 694). That requirement is met in this case. Section 2001 does not take effect until 2014. The ACA makes perfectly clear what will be required of States that accept Medicaid funding after that date: They must extend eligibility to adults with incomes no more than 133% of the federal poverty line. See 42 U.S.C. §1396a(a)(10)(A) (i)(VIII) (2006 ed. and Supp. IV).

The Chief Justice appears to find in *Pennhurst* a requirement that, when spending legislation is first passed, or when States first enlist in the federal program, Congress [***198] must provide clear notice of conditions it might later impose. If I understand his point correctly, it was incumbent on Congress, in 1965, to warn the States clearly of the size and shape potential changes to Medicaid might take. And absent such notice, sizable changes could not be made mandatory. Our decisions do not support such a requirement.²¹

21 The Chief Justice observes that "Spending Clause legislation [i]s much in the nature of a contract." *Ante*, at ___, 183 L. Ed. 2d, at 491 (internal quotation marks omitted). See also *post*, at ___, 183 L. Ed. 2d, at 554 (joint opinion of Scalia, Kennedy, Thomas, and Alito, JJ.) (same). But the Court previously has recognized that "[u]nlike normal contractual undertakings, federal grant programs originate in and remain governed by statutory provisions expressing the judgment of Congress concerning desirable public policy." *Bennett v. Kentucky Dep't of Education*, 470 U.S. 656, 669, 105 S. Ct. 1544, 84 L. Ed. 2d 590 (1985).

In *Bennett v. New Jersey*, 470 U.S. 632, 105 S. Ct. 1555, 84 L. Ed. 2d 572 (1985), the Secretary of Education sought to recoup Title I funds²² based on the State's noncompliance, from 1970 to 1972, with a 1978 amendment to Title I. Relying on *Pennhurst*, [*2638] we rejected the [***199] Secretary's attempt to recover funds based on the States' alleged violation of a rule that did not exist when the State accepted and spent the funds. See 470 U.S., at 640, 105 S. Ct. 1555, 84 L. Ed. 2d 572 ("New Jersey[,] when it applied for and received Title I funds for the years 1970-1972[,] had no basis to believe that the propriety of the expenditures would be judged by

any standards other than the ones in effect *at the time*." (citing *Pennhurst*, 451 U.S., at 17, 24-25, 101 S. Ct. 1531, 67 L. Ed. 2d 694; emphasis added)).

22 Title I of the Elementary and Secondary Education Act of 1965 provided federal grants to finance supplemental educational programs in school districts with high concentrations of children from low-income families. See *Bennett v. New Jersey*, 470 U.S. 632, 634-635, 105 S. Ct. 1555, 84 L. Ed. 2d 572 (1985) (citing Pub. L. No. 89-10, 79 Stat. 27).

When amendment of an existing grant program has no such retroactive effect, however, we have upheld Congress' instruction. In *Bennett v. Kentucky Dep't of Education*, 470 U.S. 656, 105 S. Ct. 1544, 84 L. Ed. 2d 590 (1985), the Secretary sued to recapture Title I funds based on the Commonwealth's 1974 violation of a spending [***200] condition Congress added to Title I in 1970. Rejecting Kentucky's argument pinned to *Pennhurst*, we held that the Commonwealth suffered no surprise after accepting the federal funds. Kentucky was therefore obliged to return the money. 470 U.S., at 665-666, 673-674, 105 S. Ct. 1544, 84 L. Ed. 2d 590. The conditions imposed [**531] were to be assessed as of 1974, in light of "the legal requirements in place when the grants were made," *id.*, 470 U.S., at 670, 105 S. Ct. 1544, 84 L. Ed. 2d 590, not as of 1965, when Title I was originally enacted.

As these decisions show, *Pennhurst's* rule demands that conditions on federal funds be unambiguously clear at the time a State receives and uses the money--not at the time, perhaps years earlier, when Congress passed the law establishing the program. See also *Dole*, 483 U.S., at 208, 107 S. Ct. 2793, 97 L. Ed. 2d 171 (finding *Pennhurst* satisfied based on the clarity of the Federal Aid Highway Act as amended in 1984, without looking back to 1956, the year of the Act's adoption).

In any event, from the start, the Medicaid Act put States on notice that the program could be changed: "The right to alter, amend, or repeal any provision of [Medicaid]," the statute [***201] has read since 1965, "is hereby reserved to the Congress." 42 U.S.C. §1304. The "effect of these few simple words" has long been settled. See *National Railroad Passenger Corporation v. Atchison, T. & S. F. R. Co.*, 470 U.S. 451, 467-468, n. 22, 105 S. Ct. 1441, 84 L. Ed. 2d 432 (1985) (citing *Sinking Fund Cases*, 99 U.S. 700, 720, 25 L. Ed. 496, 25 L. Ed.

504, 14 Ct. Cl. 594 (1879)). By reserving the right to "alter, amend, [or] repeal" a spending program, Congress "has given special notice of its intention to retain . . . full and complete power to make such alterations and amendments . . . as come within the just scope of legislative power." *Id.*, at 720, 25 L. Ed. 504, 14 Ct. Cl. 594.

Our decision in *Bowen v. Public Agencies Opposed to Social Security Entrapment*, 477 U.S. 41, 51-52, 106 S. Ct. 2390, 91 L. Ed. 2d 35 (1986), is guiding here. As enacted in 1935, the Social Security Act did not cover state employees. *Id.*, at 44, 106 S. Ct. 2390, 91 L. Ed. 2d 35. In response to pressure from States that wanted coverage for their employees, Congress, in 1950, amended the Act to allow States to opt into the program. *Id.*, at 45, 106 S. Ct. 2390, 91 L. Ed. 2d 35. The statutory provision [***202] giving States this option expressly permitted them to withdraw from the program. *Ibid.*

Beginning in the late 1970's, States increasingly exercised the option to withdraw. *Id.*, at 46, 106 S. Ct. 2390, 91 L. Ed. 2d 35. Concerned that withdrawals were threatening the integrity of Social Security, Congress repealed the termination provision. Congress thereby changed Social Security from a program voluntary for the States to one from which they could not escape. *Id.*, at 48, 106 S. Ct. 2390, 91 L. Ed. 2d 35. California objected, arguing that the change impermissibly deprived it of a right to withdraw [*2639] from Social Security. *Id.*, at 49-50, 106 S. Ct. 2390, 91 L. Ed. 2d 35. We unanimously rejected California's argument. *Id.*, at 51-53, 106 S. Ct. 2390, 91 L. Ed. 2d 35. By including in the Act "a clause expressly reserving to it '[t]he right to alter, amend, or repeal any provision' of the Act," we held, Congress put States on notice that the Act "created no contractual rights." *Id.*, at 51-52, 106 S. Ct. 2390, 91 L. Ed. 2d 35. The States therefore had no law-based ground on which to complain about the amendment, despite the significant character of the change.

The Chief Justice nevertheless would [***203] rewrite §1304 to countenance only the "right to alter somewhat," or "amend, *but not too much.*" Congress, however, did not so qualify §1304. [**532] Indeed, Congress retained discretion to "repeal" Medicaid, wiping it out entirely. Cf. *Delta Air Lines, Inc. v. August*, 450 U.S. 346, 368, 101 S. Ct. 1146, 67 L. Ed. 2d 287 (1981) (Rehnquist, J., dissenting) (invoking "the common-sense maxim that the greater includes the

lesser"). As *Bowen* indicates, no State could reasonably have read §1304 as reserving to Congress authority to make adjustments only if modestly sized.

In fact, no State proceeded on that understanding. In compliance with Medicaid regulations, each State expressly undertook to abide by future Medicaid changes. See 42 CFR §430.12(c)(1) (2011) ("The [state Medicaid] plan must provide that it will be amended whenever necessary to reflect . . . [c]hanges in Federal law, regulations, policy interpretations, or court decisions."). Whenever a State notifies the Federal Government of a change in its own Medicaid program, the State certifies both that it knows the federally set terms of participation may change, and that it will abide by those changes as a condition of continued participation. [***204] See, e.g., Florida Agency for Health Care Admin., State Plan Under Title XIX of the Social Security Act Medical Assistance Program § 7.1, p. 86 (Oct. 6, 1992).

The Chief Justice insists that the most recent expansion, in contrast to its predecessors, "accomplishes a shift in kind, not merely degree." *Ante*, at ___, 183 L. Ed. 2d, at 495. But why was Medicaid altered only in degree, not in kind, when Congress required States to cover millions of children and pregnant women? See *supra*, at ___ - ___, 183 L. Ed. 2d, at 523-524. Congress did not "merely alte[r] and expan[d] the boundaries of" the Aid to Families with Dependent Children program. But see *ante*, at ___ - ___, 183 L. Ed. 2d, at 495-497. Rather, Congress required participating States to provide coverage tied to the federal poverty level (as it later did in the ACA), rather than to the AFDC program. See Brief for National Health Law Program et al. as *Amici Curiae* 16-18. In short, given §1304, this Court's construction of §1304's language in *Bowen*, and the enlargement of Medicaid in the years since 1965,²³ a State would be hard put to complain that it lacked fair notice when, in 2010, Congress altered Medicaid to embrace a larger portion of the Nation's poor.

23 Note, in this regard, the extension of Social Security, [***205] which began in 1935 as an old-age pension program, then expanded to include survivor benefits in 1939 and disability benefits in 1956. See Social Security Act, ch. 531, 49 Stat. 622-625; Social Security Act Amendments of 1939, 53 Stat. 1364-1365; Social Security Amendments of 1956, ch. 836, § 103, 70 Stat. 815-816.

3

The Chief Justice ultimately asks whether "the financial inducement offered by Congress . . . pass[ed] the point at which pressure turns into compulsion." *Ante*, at ___, 183 L. Ed. 2d, at 494 (internal quotation marks omitted). The financial inducement Congress employed here, he concludes, crosses [*2640] that threshold: The threatened withholding of "existing Medicaid funds" is "a gun to the head" that forces States to acquiesce. *Ante*, at ___ - ___, 183 L. Ed. 2d, at 494 (citing 42 U.S.C. §1396c).²⁴

24 The joint dissenters, for their part, would make this the entire inquiry. "[I]f States really have no choice other than to accept the package," they assert, "the offer is coercive." *Post*, at ___, 183 L. Ed. 2d, at 555. The Chief Justice recognizes Congress' authority to construct a single federal program and "condition the receipt of funds on the States' complying with restrictions on the use of those funds." *Ante*, at ___, 183 L. Ed. 2d, at 493. For the joint dissenters, however, [***206] all that matters, it appears, is whether States can resist the temptation of a given federal grant. *Post*, at ___, 183 L. Ed. 2d, at 555. On this logic, any federal spending program, sufficiently large and well-funded, would be unconstitutional. The joint dissenters point to smaller programs States might have the will to refuse. See *post*, at ___ - ___, 183 L. Ed. 2d, at 558 (elementary and secondary education). But how is a court to judge whether "only 6.6% of all state expenditures," *post*, at ___, 183 L. Ed. 2d, at 558, is an amount States could or would do without? Speculations of this genre are characteristic of the joint dissent. See, e.g., *post*, at ___, 183 L. Ed. 2d, at 555 ("it may be state officials who will bear the brunt of public disapproval" for joint federal-state endeavors); *ibid.*, ("federal officials . . . may remain insulated from the electoral ramifications of their decision"); *post*, at ___, 183 L. Ed. 2d, at 555 ("a heavy federal tax . . . levied to support a federal program that offers large grants to the States . . . may, as a practical matter, [leave States] unable to refuse to participate"); *ibid.* (withdrawal from a federal program "would likely force the State to impose a huge tax increase"); *post*, at ___, 183 L. Ed. 2d, at 556 (state share of ACA expansion costs "may increase in the

future") (all emphasis [***207] added; some internal quotation marks omitted). The joint dissenters are long on conjecture and short on real-world examples.

[**533] The Chief Justice sees no need to "fix the outermost line," *Steward Machine*, 301 U.S., at 591, 57 S. Ct. 883, 81 L. Ed. 1279, "where persuasion gives way to coercion," *ante*, at ___, 183 L. Ed. 2d, at 496. Neither do the joint dissenters. See *post*, at ___, ___, 183 L. Ed. 2d, at 556, 557.²⁵ Notably, the decision on which they rely, *Steward Machine*, found the statute at issue inside the line, "wherever the line may be." 301 U.S., at 591, 57 S. Ct. 883, 81 L. Ed. 1279.

25 The joint dissenters also rely heavily on Congress' perceived intent to coerce the States. *Post*, at ___ - ___, 183 L. Ed. 2d, at 559-561; see, e.g., *post*, at ___, 183 L. Ed. 2d, at 559 ("In crafting the ACA, Congress clearly expressed its informed view that no State could possibly refuse the offer that the ACA extends."). We should not lightly ascribe to Congress an intent to violate the Constitution (at least as my colleagues read it). This is particularly true when the ACA could just as well be comprehended as demonstrating Congress' mere expectation, in light of the uniformity of past participation and the generosity of the federal contribution, that States would not withdraw. Cf. *South Dakota v. Dole*, 483 U.S. 203, 211, 107 S. Ct. 2793, 97 L. Ed. 2d 171 [***208] (1987) ("We cannot conclude . . . that a conditional grant of federal money . . . is unconstitutional simply by reason of its success in achieving the congressional objective.").

When future Spending Clause challenges arrive, as they likely will in the wake of today's decision, how will litigants and judges assess whether "a State has a legitimate choice whether to accept the federal conditions in exchange for federal funds"? *Ante*, at ___, 183 L. Ed. 2d, at 492. Are courts to measure the number of dollars the Federal Government might withhold for noncompliance? The portion of the State's budget at stake? And which State's--or States'--budget is determinative: the lead plaintiff, all challenging States (26 in this case, many with quite different fiscal situations), or some national median? Does it matter that Florida, unlike most States, imposes no state income tax, and therefore might be able to replace foregone federal

funds with new state revenue?²⁶ Or that the [*2641] coercion state officials in fact fear is punishment at [**534] the ballot box for turning down a politically popular federal grant?

26 Federal taxation of a State's citizens, according to the joint dissenters, may diminish a State's ability to raise new revenue. [***209] This, in turn, could limit a State's capacity to replace a federal program with an "equivalent" state-funded analog. *Post*, at ___, 183 L. Ed. 2d, at 558. But it cannot be true that "the amount of the federal taxes extracted from the taxpayers of a State to pay for the program in question is relevant in determining whether there is impermissible coercion." *Post*, at ___, 183 L. Ed. 2d, at 556. When the United States Government taxes United States citizens, it taxes them "in their individual capacities" as "the people of America"--not as residents of a particular State. See *U.S. Term Limits, Inc. v. Thornton*, 514 U.S. 779, 839, 115 S. Ct. 1842, 131 L. Ed. 2d 881 (1995) (Kennedy, J., concurring). That is because the "Framers split the atom of sovereignty[,] . . . establishing two orders of government"--"one state and one federal"--"each with its own direct relationship" to the people. *Id.*, at 838, 115 S. Ct. 1842, 131 L. Ed. 2d 881. A State therefore has no claim on the money its residents pay in federal taxes, and federal "spending programs need not help people in all states in the same measure." See Brief for David Satcher et al. as Amici Curiae 19. In 2004, for example, New Jersey received 55 cents in federal spending for every dollar [***210] its residents paid to the Federal Government in taxes, while Mississippi received \$1.77 per tax dollar paid. C. Dubay, Tax Foundation, Federal Tax Burdens and Expenditures by State: Which States Gain Most from Federal Fiscal Operations? 2 (Mar. 2006). Thus no constitutional problem was created when Arizona declined for 16 years to participate in Medicaid, even though its residents' tax dollars financed Medicaid programs in every other State.

The coercion inquiry, therefore, appears to involve political judgments that defy judicial calculation. See *Baker v. Carr*, 369 U.S. 186, 217, 82 S. Ct. 691, 7 L. Ed. 2d 663 (1962). Even commentators sympathetic to robust enforcement of *Dole's* limitations, see *supra*, at ___, 183

L. Ed. 2d, at 526, have concluded that conceptions of "impermissible coercion" premised on States' perceived inability to decline federal funds "are just too amorphous to be judicially administrable." Baker & Berman, Getting off the *Dole*, 78 Ind. L. J. 459, 521, 522, n. 307 (2003) (citing, e.g., Scalia, The Rule of Law as a Law of Rules, 56 U. Chi. L. Rev. 1175 (1989)).

At bottom, my colleagues' position is that the States' reliance on federal funds limits Congress' authority to alter its spending [***211] programs. This gets things backwards: Congress, not the States, is tasked with spending federal money in service of the general welfare. And each successive Congress is empowered to appropriate funds as it sees fit. When the 110th Congress reached a conclusion about Medicaid funds that differed from its predecessors' view, it abridged no State's right to "existing," or "pre-existing," funds. But see *ante*, at ___ - ___, 183 L. Ed. 2d, at 494; *post*, at ___ - ___, 183 L. Ed. 2d, at 562-563 (joint opinion of Scalia, Kennedy, Thomas, and Alito, JJ.). For, in fact, there are no such funds. There is only money States *anticipate* receiving from future Congresses.

D

Congress has delegated to the Secretary of Health and Human Services the authority to withhold, in whole or in part, federal Medicaid funds from States that fail to comply with the Medicaid Act as originally composed and as subsequently amended. 42 U.S.C. §1396c.²⁷ The Chief Justice, however, holds that the Constitution precludes the Secretary from withholding "existing" Medicaid funds based on [*2642] States' refusal to comply with the expanded Medicaid program. *Ante*, at ___, 183 L. Ed. 2d, at 497. For the foregoing reasons, I disagree that any such withholding would violate the Spending Clause. Accordingly, I would [***212] affirm the decision of [**535] the Court of Appeals for the Eleventh Circuit in this regard.

27 As The Chief Justice observes, the Secretary is authorized to withhold all of a State's Medicaid funding. See *ante*, at ___, 183 L. Ed. 2d, at 494. But total withdrawal is what the Secretary *may*, not must, do. She has discretion to withhold only a portion of the Medicaid funds otherwise due a noncompliant State. See §1396c; cf. 45 CFR §80.10(f) (2011) (Secretary may enforce Title VI's nondiscrimination requirement through "refusal to grant or continue Federal financial

assistance, *in whole or in part.*" (emphasis added)). The Secretary, it is worth noting, may herself experience political pressures, which would make her all the more reluctant to cut off funds Congress has appropriated for a State's needy citizens.

But in view of The Chief Justice's disposition, I agree with him that the Medicaid Act's severability clause determines the appropriate remedy. That clause provides that "[i]f any provision of [the Medicaid Act], or the application thereof to any person or circumstance, is held invalid, the remainder of the chapter, and the application of such provision to other persons or circumstances shall not be affected thereby." 42 U.S.C. §1303.

The Court does not strike down any provision of the ACA. It prohibits only the "application" of the Secretary's authority to withhold Medicaid funds from States that decline to conform their Medicaid plans to the ACA's requirements. Thus the ACA's authorization of funds to finance the expansion remains intact, and the Secretary's authority to withhold funds for reasons other than noncompliance with the expansion remains unaffected.

[***213] Even absent §1303's command, we would have no warrant to invalidate the Medicaid expansion, *contra post*, at ___ - ___, 183 L. Ed. 2d, at 561-563 (joint opinion of Scalia, Kennedy, Thomas, and Alito, JJ.), not to mention the entire ACA, *post*, at ___ - ___, 183 L. Ed. 2d, at 563-572 (same). For when a court confronts an unconstitutional statute, its endeavor must be to conserve, not destroy, the legislature's dominant objective. See, e.g., *Ayotte v. Planned Parenthood of Northern New Eng.*, 546 U.S. 320, 328-330, 126 S. Ct. 961, 163 L. Ed. 2d 812 (2006). In this case, that objective was to increase access to health care for the poor by increasing the States' access to federal funds. The Chief Justice is undoubtedly right to conclude that Congress may offer States funds "to expand the availability of health [***214] care, and requir[e] that States accepting such funds comply with the conditions on their use." *Ante*, at ___, 183 L. Ed. 2d, at 497. I therefore concur in the judgment with respect to Part IV-B of The Chief Justice's opinion.

* * *

For the reasons stated, I agree with The Chief Justice that, as to the validity of the minimum coverage provision, the judgment of the Court of Appeals for the Eleventh Circuit should be reversed. In my view, the

provision encounters no constitutional obstruction. Further, I would uphold the Eleventh Circuit's decision that the Medicaid expansion is within Congress' spending power.

Justice **Scalia**, Justice **Kennedy**, Justice **Thomas**, and Justice **Alito**, dissenting.

Congress has set out to remedy the problem that the best health care is beyond the reach of many Americans who cannot afford it. It can assuredly do that, by exercising the powers accorded to it under the Constitution. The question in this case, however, is whether the complex structures and provisions of the Patient Protection and Affordable Care Act (Affordable Care Act or ACA) go beyond those powers. We conclude that they do.

This case is in one respect difficult: it presents [***215] two questions of first impression. The first of those is whether failure to engage in economic activity (the purchase of health insurance) is subject to regulation under the Commerce Clause. Failure to act does result in an effect on commerce, and hence might be said to come under [**536] this Court's "affecting commerce" criterion of Commerce Clause jurisprudence. But in none of its decisions has this Court extended the Clause that far. [*2643] The second question is whether the congressional power to tax and spend, U.S. Const., Art. I, § 8, cl. 1, permits the conditioning of a State's continued receipt of all funds under a massive state-administered federal welfare program upon its acceptance of an expansion to that program. Several of our opinions have suggested that the power to tax and spend cannot be used to coerce state administration of a federal program, but we have never found a law enacted under the spending power to be coercive. Those questions are difficult.

The case is easy and straightforward, however, in another respect. What is absolutely clear, affirmed by the text of the 1789 Constitution, by the Tenth Amendment ratified in 1791, and by innumerable cases of ours in the 220 years [***216] since, is that there are structural limits upon federal power--upon what it can prescribe with respect to private conduct, and upon what it can impose upon the sovereign States. Whatever may be the conceptual limits upon the Commerce Clause and upon the power to tax and spend, they cannot be such as will enable the Federal Government to regulate all private conduct and to compel the States to function as

administrators of federal programs.

That clear principle carries the day here. The striking case of *Wickard v. Filburn*, 317 U.S. 111, 63 S. Ct. 82, 87 L. Ed. 122 (1942), which held that the economic activity of growing wheat, even for one's own consumption, affected commerce sufficiently that it could be regulated, always has been regarded as the *ne plus ultra* of expansive Commerce Clause jurisprudence. To go beyond that, and to say the *failure* to grow wheat (which is *not* an economic activity, or any activity at all) nonetheless affects commerce and therefore can be federally regulated, is to make mere breathing in and out the basis for federal prescription and to extend federal power to virtually all human activity.

As for the constitutional power to tax and spend for the general welfare: [***217] The Court has long since expanded that beyond (what Madison thought it meant) taxing and spending for those aspects of the general welfare that were within the Federal Government's enumerated powers, see *United States v. Butler*, 297 U.S. 1, 65-66, 56 S. Ct. 312, 80 L. Ed. 477, 1936-1 C.B. 421 (1936). Thus, we now have sizable federal Departments devoted to subjects not mentioned among Congress' enumerated powers, and only marginally related to commerce: the Department of Education, the Department of Health and Human Services, the Department of Housing and Urban Development. The principal practical obstacle that prevents Congress from using the tax-and-spend power to assume all the general-welfare responsibilities traditionally exercised by the States is the sheer impossibility of managing a Federal Government large enough to administer such a system. That obstacle can be overcome by granting funds to the States, allowing them to administer the program. That is fair and constitutional enough when the States freely agree to have their powers employed and their employees enlisted in the federal scheme. But it is a blatant violation of the constitutional structure when the States have [***218] no choice.

The Act before us here exceeds federal power both in mandating the purchase of health insurance and in [**537] denying nonconsenting States all Medicaid funding. These parts of the Act are central to its design and operation, and all the Act's other provisions would not have been enacted without them. In our view it must follow that the entire statute is inoperative.

[*2644] I

The Individual Mandate

Article I, § 8, of the Constitution gives Congress the power to "regulate Commerce . . . among the several States." The Individual Mandate in the Act commands that every "applicable individual shall for each month beginning after 2013 ensure that the individual, and any dependent of the individual who is an applicable individual, is covered under minimum essential coverage." 26 U.S.C. §5000A(a) (2006 ed., Supp. IV). If this provision "regulates" anything, it is the *failure* to maintain minimum essential coverage. One might argue that it regulates that failure by requiring it to be accompanied by payment of a penalty. But that failure--that abstention from commerce--is not "Commerce." To be sure, *purchasing* insurance is "Commerce"; but one does not regulate commerce that does not exist by compelling [***219] its existence.

In *Gibbons v. Ogden*, 22 U.S. 1, 9 Wheat. 1, 196, 6 L. Ed. 23 (1824), Chief Justice Marshall wrote that the power to regulate commerce is the power "to prescribe the rule by which commerce is to be governed." That understanding is consistent with the original meaning of "regulate" at the time of the Constitution's ratification, when "to regulate" meant "[t]o adjust by rule, method or established mode," 2 N. Webster, *An American Dictionary of the English Language* (1828); "[t]o adjust by rule or method," 2 S. Johnson, *A Dictionary of the English Language* (7th ed. 1785); "[t]o adjust, to direct according to rule," 2 J. Ash, *New and Complete Dictionary of the English Language* (1775); "to put in order, set to rights, govern or keep in order," T. Dyche & W. Pardon, *A New General English Dictionary* (16th ed. 1777).¹ It can mean to direct the manner of something but not to direct that something come into being. There is no instance in which this Court or Congress (or anyone else, to our knowledge) has used "regulate" in that peculiar fashion. If the word bore that meaning, Congress' authority "[t]o make Rules for the Government and Regulation of the land and naval Forces," U.S. Const., Art. I, § 8, cl. 14, [***220] would have made superfluous the later provision for authority "[t]o raise and support Armies," *id.*, § 8, cl. 12, and "[t]o provide and maintain a Navy," *id.*, § 8, cl. 13.

1 The most authoritative legal dictionaries of the founding era lack any definition for "regulate" or "regulation," suggesting that the term bears its ordinary meaning (rather than some specialized

legal meaning) in the constitutional text. See R. Burn, *A New Law Dictionary* 281 (1792); G. Jacob, *A New Law Dictionary* (10th ed. 1782); 2 T. Cunningham, *A New and Complete Law Dictionary* (2d ed. 1771).

We do not doubt that the buying and selling of health insurance contracts is commerce generally subject to federal regulation. But when Congress provides that (nearly) all citizens must buy an insurance contract, it goes beyond "adjust[ing] by rule or method," Johnson, *supra*, or "direct[ing] according to rule," Ash, *supra*, it directs the creation of commerce.

In response, the Government offers two theories as to why the Individual [**538] Mandate is nevertheless constitutional. Neither theory suffices to sustain its validity.

A

First, the Government submits that §5000A is "integral to the Affordable Care Act's insurance reforms" and "necessary [***221] to make effective the Act's core reforms." Brief for Petitioners in No. 11-398 (Minimum Coverage Provision) 24 (hereinafter Petitioners' Minimum Coverage Brief). Congress included a "finding" to similar effect in the Act itself. See 42 U.S.C. §18091(2)(H).

[*2645] As discussed in more detail in Part V, *infra*, the Act contains numerous health insurance reforms, but most notable for present purposes are the "guaranteed issue" and "community rating" provisions, §§300gg-4. The former provides that, with a few exceptions, "each health insurance issuer that offers health insurance coverage in the individual or group market in a State must accept every employer and individual in the State that applies for such coverage." §300gg-1(a). That is, an insurer may not deny coverage on the basis of, among other things, any pre-existing medical condition that the applicant may have, and the resulting insurance must cover that condition. See §300gg-3.

Under ordinary circumstances, of course, insurers would respond by charging high premiums to individuals with pre-existing conditions. The Act seeks to prevent this through the community-rating provision. Simply put, the community-rating provision requires [***222] insurers to calculate an individual's insurance premium

based on only four factors: (i) whether the individual's plan covers just the individual or his family also, (ii) the "rating area" in which the individual lives, (iii) the individual's age, and (iv) whether the individual uses tobacco. §300gg(a)(1)(A). Aside from the rough proxies of age and tobacco use (and possibly rating area), the Act does not allow an insurer to factor the individual's health characteristics into the price of his insurance premium. This creates a new incentive for young and healthy individuals without pre-existing conditions. The insurance premiums for those in this group will not reflect their own low actuarial risks but will subsidize insurance for others in the pool. Many of them may decide that purchasing health insurance is not an economically sound decision--especially since the guaranteed-issue provision will enable them to purchase it at the same cost in later years and even if they have developed a pre-existing condition. But without the contribution of above-risk premiums from the young and healthy, the community-rating provision will not enable insurers to take on high-risk individuals without [***223] a massive increase in premiums.

The Government presents the Individual Mandate as a unique feature of a complicated regulatory scheme governing many parties with countervailing incentives that must be carefully balanced. Congress has imposed an extensive set of regulations on the health insurance industry, and compliance with those regulations will likely cost the industry a great deal. If the industry does not respond by increasing premiums, it is not likely to survive. And if the industry does increase premiums, then there is a serious risk that its products--insurance plans--will become economically [**539] undesirable for many and prohibitively expensive for the rest.

This is not a dilemma unique to regulation of the health-insurance industry. Government regulation typically imposes costs on the regulated industry--especially regulation that prohibits economic behavior in which most market participants are already engaging, such as "piecing out" the market by selling the product to different classes of people at different prices (in the present context, providing much lower insurance rates to young and healthy buyers). And many industries so regulated face the reality that, without an artificial [***224] increase in demand, they cannot continue on. When Congress is regulating these industries directly, it enjoys the broad power to enact " 'all appropriate legislation' " to " 'protec[t]' " and " 'advanc[e]' "

commerce, *NLRB v. Jones & Laughlin Steel Corp.*, 301 U.S. 1, 36-37, 57 S. Ct. 615, 81 L. Ed. 893 (1937) (quoting *The Daniel Ball*, 77 U.S. 557, 10 Wall. 557, 564, 19 L. Ed. 999 (1871)) . Thus, Congress might protect the [*2646] imperiled industry by prohibiting low-cost competition, or by according it preferential tax treatment, or even by granting it a direct subsidy.

Here, however, Congress has impressed into service third parties, healthy individuals who could be but are not customers of the relevant industry, to offset the undesirable consequences of the regulation. Congress' desire to force these individuals to purchase insurance is motivated by the fact that they are further removed from the market than unhealthy individuals with pre-existing conditions, because they are less likely to need extensive care in the near future. If Congress can reach out and command even those furthest removed from an interstate market to participate in the market, then the Commerce Clause becomes a font of unlimited [***225] power, or in Hamilton's words, "the hideous monster whose devouring jaws . . . spare neither sex nor age, nor high nor low, nor sacred nor profane." *The Federalist* No. 33, p. 202 (C. Rossiter ed. 1961).

At the outer edge of the commerce power, this Court has insisted on careful scrutiny of regulations that do not act directly on an interstate market or its participants. In *New York v. United States*, 505 U.S. 144, 112 S. Ct. 2408, 120 L. Ed. 2d 120 (1992), we held that Congress could not, in an effort to regulate the disposal of radioactive waste produced in several different industries, order the States to take title to that waste. *Id.*, at 174-177, 112 S. Ct. 2408, 120 L. Ed. 2d 120. In *Printz v. United States*, 521 U.S. 898, 117 S. Ct. 2365, 138 L. Ed. 2d 914 (1997), we held that Congress could not, in an effort to regulate the distribution of firearms in the interstate market, compel state law-enforcement officials to perform background checks. *Id.*, at 933-935, 117 S. Ct. 2365, 138 L. Ed. 2d 914. In *United States v. Lopez*, 514 U.S. 549, 115 S. Ct. 1624, 131 L. Ed. 2d 626 (1995), we held that Congress could not, as a means of fostering an educated interstate labor market through the [***226] protection of schools, ban the possession of a firearm within a school zone. *Id.*, at 559-563, 115 S. Ct. 1624, 131 L. Ed. 2d 626. And in *United States v. Morrison*, 529 U.S. 598, 120 S. Ct. 1740, 146 L. Ed. 2d 658 (2000), we held that Congress could not, in an effort to ensure the full participation of women in the interstate economy, subject private individuals and companies to suit for

gender-motivated violent torts. *Id.*, at 609-619, 120 S. Ct. 1740, 146 L. Ed. 2d 658. The lesson of these [***540] cases is that the Commerce Clause, even when supplemented by the Necessary and Proper Clause, is not *carte blanche* for doing whatever will help achieve the ends Congress seeks by the regulation of commerce. And the last two of these cases show that the scope of the Necessary and Proper Clause is exceeded not only when the congressional action directly violates the sovereignty of the States but also when it violates the background principle of enumerated (and hence limited) federal power.

The case upon which the Government principally relies to sustain the Individual Mandate under the Necessary and Proper Clause is *Gonzales v. Raich*, 545 U.S. 1, 125 S. Ct. 2195, 162 L. Ed. 2d 1 (2005). That case [***227] held that Congress could, in an effort to restrain the interstate market in marijuana, ban the local cultivation and possession of that drug. *Id.*, at 15-22, 125 S. Ct. 2195, 162 L. Ed. 2d 1. *Raich* is no precedent for what Congress has done here. That case's prohibition of growing (cf. *Wickard*, 317 U.S. 111, 63 S. Ct. 82, 87 L. Ed. 122), and of possession (cf. innumerable federal statutes) did not represent the expansion of the federal power to direct into a broad new field. The mandating of economic activity does, and since it is a field so limitless that it converts the Commerce Clause into a general authority to direct the economy, that mandating is not "consist[ent] with the letter and spirit of the [*2647] constitution." *McCulloch v. Maryland*, 17 U.S. 316, 4 Wheat. 316, 421, 4 L. Ed. 579 (1819).

Moreover, *Raich* is far different from the Individual Mandate in another respect. The Court's opinion in *Raich* pointed out that the growing and possession prohibitions were the only practicable way of enabling the prohibition of interstate traffic in marijuana to be effectively enforced. 545 U.S., at 22, 125 S. Ct. 2195, 162 L. Ed. 2d 1. See also *Shreveport Rate Cases*, 234 U.S. 342, 34 S. Ct. 833, 58 L. Ed. 1341 (1914) [***228] (Necessary and Proper Clause allows regulations of intrastate transactions if necessary to the regulation of an interstate market). Intrastate marijuana could no more be distinguished from interstate marijuana than, for example, endangered-species trophies obtained before the species was federally protected can be distinguished from trophies obtained afterwards--which made it necessary and proper to prohibit the sale of all such trophies, see *Andrus v. Allard*, 444 U.S. 51, 100 S. Ct. 318, 62 L. Ed.

2d 210 (1979).

With the present statute, by contrast, there are many ways other than this unprecedented Individual Mandate by which the regulatory scheme's goals of reducing insurance premiums and ensuring the profitability of insurers could be achieved. For instance, those who did not purchase insurance could be subjected to a surcharge when they do enter the health insurance system. Or they could be denied a full income tax credit given to those who do purchase the insurance.

The Government was invited, at oral argument, to suggest what federal controls over private conduct (other than those explicitly prohibited by the Bill of Rights or other constitutional controls) could *not* be justified [***229] as necessary and proper for the carrying out of a general regulatory scheme. See Tr. of Oral Arg. 27-30, 43-45 (Mar. 27, 2012). It was unable to name any. As we said at the outset, whereas the precise scope of the Commerce Clause and the Necessary and Proper Clause is uncertain, the proposition that the Federal Government [**541] cannot do everything is a fundamental precept. See *Lopez*, 514 U.S., at 564, 115 S. Ct. 1624, 131 L. Ed. 2d 626 ("[I]f we were to accept the Government's arguments, we are hard pressed to posit any activity by an individual that Congress is without power to regulate"). Section 5000A is defeated by that proposition.

B

The Government's second theory in support of the Individual Mandate is that §5000A is valid because it is actually a "regulat[ion of] activities having a substantial relation to interstate commerce, . . . *i.e.*, . . . activities that substantially affect interstate commerce." *Id.*, at 558-559, 115 S. Ct. 1624, 131 L. Ed. 2d 626. See also *Shreveport Rate Cases*, *supra*. This argument takes a few different forms, but the basic idea is that §5000A regulates "the way in which individuals finance their participation in the health-care market." Petitioners' Minimum [***230] Coverage Brief 33 (emphasis added). That is, the provision directs the manner in which individuals purchase health care services and related goods (directing that they be purchased through insurance) and is therefore a straightforward exercise of the commerce power.

The primary problem with this argument is that §5000A does not apply only to persons who purchase all, or most, or even any, of the health care services or goods that the mandated insurance covers. Indeed, the main

objection many have to the Mandate is that they have no intention of purchasing most or even any of such goods or services and thus no need to buy insurance for those purchases. The Government responds that the health-care market involves "essentially universal participation," [*2648] *id.*, at 35. The principal difficulty with this response is that it is, in the only relevant sense, not true. It is true enough that everyone consumes "health care," if the term is taken to include the purchase of a bottle of aspirin. But the health care "market" that is the object of the Individual Mandate not only includes but principally consists of goods and services that the young people primarily affected by the Mandate *do* [***231] *not purchase*. They are quite simply not participants in that market, and cannot be made so (and thereby subjected to regulation) by the simple device of defining participants to include all those who will, later in their lifetime, probably purchase the goods or services covered by the mandated insurance.² Such a definition of market participants is unprecedented, and were it to be a premise for the exercise of national power, it would have no principled limits.

2 Justice Ginsburg is therefore right to note that Congress is "not mandating the purchase of a discrete, unwanted product." *Ante*, at ____, 183 L. Ed. 2d, at 511 (opinion concurring in part, concurring in judgment in part, and dissenting in part). Instead, it is mandating the purchase of an unwanted suite of products--*e.g.*, physician office visits, emergency room visits, hospital room and board, physical therapy, durable medical equipment, mental health care, and substance abuse detoxification. See Selected Medical Benefits: A Report from the Dept. of Labor to the Dept. of Health & Human Services (April 15, 2011) (reporting that over two-thirds of private industry health plans cover these goods and services), <http://www.bls.gov/ncs/ebs/sp/selmedbensreport.pdf> [***232] (all Internet materials as visited June 26, 2012, and available in Clerk of Court's case file).

In a variation on this attempted exercise of federal power, the Government points out that Congress in this Act has purported to regulate "economic and financial decision[s] to [**542] forego [*sic*] health insurance coverage and [to] attempt to self-insure," 42 U.S.C. §18091(2)(A), since those decisions have "a substantial

and deleterious effect on interstate commerce," Petitioners' Minimum Coverage Brief 34. But as the discussion above makes clear, the decision to forgo participation in an interstate market is not itself commercial activity (or indeed any activity at all) within Congress' power to regulate. It is true that, at the end of the day, it is inevitable that each American will affect commerce and become a part of it, even if not by choice. But if every person comes within the Commerce Clause power of Congress to regulate by the simple reason that he will one day engage in commerce, the idea of a limited Government power is at an end.

Wickard v. Filburn has been regarded as the most expansive assertion of the commerce power in our history. A close second is *Perez v. United States*, 402 U.S. 146, 91 S. Ct. 1357, 28 L. Ed. 2d 686 (1971), [***233] which upheld a statute criminalizing the eminently local activity of loan-sharking. Both of those cases, however, involved commercial *activity*. To go beyond that, and to say that the failure to grow wheat or the refusal to make loans affects commerce, so that growing and lending can be federally compelled, is to extend federal power to virtually everything. All of us consume food, and when we do so the Federal Government can prescribe what its quality must be and even how much we must pay. But the mere fact that we all consume food and are thus, sooner or later, participants in the "market" for food, does not empower the Government to say when and what we will buy. That is essentially what this Act seeks to do with respect to the purchase of health care. It exceeds federal power.

C

A few respectful responses to Justice Ginsburg's dissent on the issue of the Mandate are in order. That dissent duly [*2649] recites the test of Commerce Clause power that our opinions have applied, but disregards the premise the test contains. It is true enough that Congress needs only a " 'rational basis' for concluding that the *regulated activity* substantially affects interstate commerce," *ante*, at ___, 183 L. Ed. 2d, at 507 (emphasis [***234] added). But it must be *activity* affecting commerce that is regulated, and not merely the failure to engage in commerce. And one is not now purchasing the health care covered by the insurance mandate simply because one is likely to be purchasing it in the future. Our test's premise of regulated activity is not invented out of whole cloth, but rests upon the Constitution's requirement

that it be commerce which is regulated. If all inactivity affecting commerce is commerce, commerce is everything. Ultimately the dissent is driven to saying that there is really no difference between action and inaction, *ante*, at ___, 183 L. Ed. 2d, at 514, a proposition that has never recommended itself, neither to the law nor to common sense. To say, for example, that the inaction here consists of activity in "the self-insurance market," *ibid.*, seems to us wordplay. By parity of reasoning the failure to buy a car can be called participation in the non-private-car-transportation market. Commerce becomes everything.

The dissent claims that we "fai[l] to explain why the individual mandate threatens our constitutional order." *Ante*, at ___, 183 L. Ed. 2d, at 519. [**543] But we have done so. It threatens that order because it gives such an expansive meaning to the [***235] Commerce Clause that *all* private conduct (including failure to act) becomes subject to federal control, effectively destroying the Constitution's division of governmental powers. Thus the dissent, on the theories proposed for the validity of the Mandate, would alter the accepted constitutional relation between the individual and the National Government. The dissent protests that the Necessary and Proper Clause has been held to include "the power to enact criminal laws, . . . the power to imprison, . . . and the power to create a national bank," *ante*, at ___ - ___, 183 L. Ed. 2d, at 519. Is not the power to compel purchase of health insurance much lesser? No, not if (unlike those other dispositions) its application rests upon a theory that everything is within federal control simply because it exists.

The dissent's exposition of the wonderful things the Federal Government has achieved through exercise of its assigned powers, such as "the provision of old-age and survivors' benefits" in the Social Security Act, *ante*, at ___, 183 L. Ed. 2d, at 499, is quite beside the point. The issue here is whether the federal government can impose the Individual Mandate through the Commerce Clause. And the relevant history is not that Congress has achieved [***236] wide and wonderful results through the proper exercise of its assigned powers in the past, but that it has never before used the Commerce Clause to compel entry into commerce.³ The dissent [*2650] treats the Constitution as though it is an enumeration of those problems that the Federal Government can address--among which, it finds, is "the Nation's course in the economic and social welfare realm," *ibid.*, and more

specifically "the problem of the uninsured," *ante*, at ___, 183 L. Ed. 2d, at 503. The Constitution is not that. It enumerates not federally soluble *problems*, but federally available *powers*. The Federal Government can address whatever problems it wants but can bring to their solution only those powers that the Constitution confers, among which is the power to regulate commerce. None of our cases say anything else. Article I contains no whatever-it-takes-to-solve-a-national-pr oblem power.

3 In its effort to show the contrary, Justice Ginsburg's dissent comes up with nothing more than two condemnation cases, which it says demonstrate "Congress' authority under the commerce power to compel an 'inactive' landholder to submit to an unwanted sale." *Ante*, at ___, 183 L. Ed. 2d, at 513. Wrong on both scores. As its name suggests, the condemnation [***237] power does not "compel" anyone to do anything. It acts *in rem*, against the property that is condemned, and is effective with or without a transfer of title from the former owner. More important, the power to condemn for public use is a separate sovereign power, explicitly acknowledged in the Fifth Amendment, which provides that "private property [shall not] be taken for public use, without just compensation." Thus, the power to condemn tends to refute rather than support the power to compel purchase of unwanted goods at a prescribed price: The latter is rather like the power to condemn cash for public use. If it existed, why would it not (like the condemnation power) be accompanied by a requirement of fair compensation for the portion of the exacted price that exceeds the goods' fair market value (here, the difference between what the free market would charge for a health-insurance policy on a young, healthy person with no pre-existing conditions, and the government-exacted community-rated premium)?

The dissent dismisses the conclusion that the power to compel entry into the health-insurance market would include the power to compel entry into the new-car or broccoli markets. The latter [***238] purchasers, it says, "will be obliged to pay at the [**544] counter before receiving the vehicle or nourishment," whereas those refusing to purchase health-insurance will ultimately get treated anyway, at others' expense. *Ante*, at ___, 183 L. Ed. 2d, at 511. "[T]he unique attributes of the health-care

market . . . give rise to a significant free-riding problem that does not occur in other markets." *Ante*, at ___, 183 L. Ed. 2d, at 515. And "a vegetable-purchase mandate" (or a car-purchase mandate) is not "likely to have a substantial effect on the health-care costs" borne by other Americans. *Ante*, at ___, 183 L. Ed. 2d, at 515. Those differences make a very good argument by the dissent's own lights, since they show that the failure to purchase health insurance, unlike the failure to purchase cars or broccoli, creates a national, social-welfare problem that is (in the dissent's view) included among the unenumerated "problems" that the Constitution authorizes the Federal Government to solve. But those differences do not show that the failure to enter the health-insurance market, unlike the failure to buy cars and broccoli, is an *activity* that Congress can "regulate." (Of course one day the failure of some of the public to purchase American cars may endanger the [***239] existence of domestic automobile manufacturers; or the failure of some to eat broccoli may be found to deprive them of a newly discovered cancer-fighting chemical which only that food contains, producing health-care costs that are a burden on the rest of us--in which case, under the theory of Justice Ginsburg's dissent, moving against those inactivities will also come within the Federal Government's unenumerated problem-solving powers.)

II

The Taxing Power

As far as §5000A is concerned, we would stop there. Congress has attempted to regulate beyond the scope of its Commerce Clause authority,⁴ and §5000A is therefore invalid. The Government contends, however, as expressed in the caption to Part II of its brief, that "THE MINIMUM COVERAGE PROVISION IS INDEPENDENTLY AUTHORIZED BY CONGRESS'S TAXING POWER." Petitioners' Minimum Coverage Brief 52. The phrase "independently authorized" suggests the existence of a creature never hitherto seen in the United States Reports: [*2651] A penalty for constitutional purposes that is *also* a tax for constitutional purposes. In all our cases the two are mutually exclusive. The provision challenged under the Constitution is either a penalty or else a tax. Of course [***240] in many cases what was a regulatory mandate enforced by a penalty *could have been* imposed as a tax upon permissible action; or what was imposed as a tax upon permissible action *could have been* a regulatory mandate enforced by

a penalty. But we know of no case, and the Government cites none, in which the imposition was, for constitutional purposes, both.⁵ The two are mutually exclusive. Thus, what the [**545] Government's caption should have read was "ALTERNATIVELY, THE MINIMUM COVERAGE PROVISION IS NOT A MANDATE-WITH-PENALTY BUT A TAX." It is important to bear this in mind in evaluating the tax argument of the Government and of those who support it: The issue is not whether Congress had the *power* to frame the minimum-coverage provision as a tax, but whether it *did* so.

4 No one seriously contends that any of Congress' other enumerated powers gives it the authority to enact §5000A *as a regulation*.

5 Of course it can be both for statutory purposes, since Congress can define "tax" and "penalty" in its enactments any way it wishes. That is why *United States v. Sotelo*, 436 U.S. 268, 98 S. Ct. 1795, 56 L. Ed. 2d 275 (1978), does not disprove our statement. That case held that a "penalty" for willful [***241] failure to pay one's taxes was included among the "taxes" made non-dischargeable under the Bankruptcy Code. 436 U.S., at 273-275, 98 S. Ct. 1795, 56 L. Ed. 2d 275. Whether the "penalty" was a "tax" within the meaning of the Bankruptcy Code had absolutely no bearing on whether it escaped the constitutional limitations on penalties.

In answering that question we must, if "fairly possible," *Crowell v. Benson*, 285 U.S. 22, 62, 52 S. Ct. 285, 76 L. Ed. 598 (1932), construe the provision to be a tax rather than a mandate-with-penalty, since that would render it constitutional rather than unconstitutional (*ut res magis valeat quam pereat*). But we cannot rewrite the statute to be what it is not. "[A]lthough this Court will often strain to construe legislation so as to save it against constitutional attack, it must not and will not carry this to the point of perverting the purpose of a statute . . ." or judicially rewriting it.' *Commodity Futures Trading Comm'n v. Schor*, 478 U.S. 833, 841, 106 S. Ct. 3245, 92 L. Ed. 2d 675 (1986) (quoting *Aptheker v. Secretary of State*, 378 U.S. 500, 515, 84 S. Ct. 1659, 12 L. Ed. 2d 992 (1964), in turn quoting *Scales v. United States*, 367 U.S. 203, 211, 81 S. Ct. 1469, 6 L. Ed. 2d 782 (1961)). [***242] In this case, there is simply no way, "without doing violence to the fair meaning of the words used," *Grenada County Supervisors v. Brogden*, 112 U.S. 261,

269, 5 S. Ct. 125, 28 L. Ed. 704 (1884), to escape what Congress enacted: a mandate that individuals maintain minimum essential coverage, enforced by a penalty.

Our cases establish a clear line between a tax and a penalty: "[A] tax is an enforced contribution to provide for the support of government; a penalty . . . is an exaction imposed by statute as punishment for an unlawful act.' *United States v. Reorganized CF&I Fabricators of Utah, Inc.*, 518 U.S. 213, 224, 116 S. Ct. 2106, 135 L. Ed. 2d 506 (1996) (quoting *United States v. La Franca*, 282 U.S. 568, 572, 51 S. Ct. 278, 75 L. Ed. 551 (1931)). In a few cases, this Court has held that a "tax" imposed upon private conduct was so onerous as to be in effect a penalty. But we have never held--*never*--that a penalty imposed for violation of the law was so trivial as to be in effect a tax. We have never held that *any* exaction imposed for violation of the law is an exercise of Congress' taxing power--even when the statute *calls* it a tax, much less when (as here) the statute repeatedly [***243] calls it a penalty. When an act "adopt[s] the criteria of wrongdoing" and then imposes a monetary penalty as the "principal consequence on those who transgress [*2652] its standard," it creates a regulatory penalty, not a tax. *Child Labor Tax Case*, 259 U.S. 20, 38, 42 S. Ct. 449, 66 L. Ed. 817, 1922-2 C.B. 337, T.D. 3346 (1922).

So the question is, quite simply, whether the exaction here is imposed for violation of the law. It unquestionably is. The minimum-coverage provision is found in 26 U.S.C. §5000A, entitled "*Requirement to maintain minimum essential coverage*." (Emphasis added.) It commands that every "applicable individual *shall* . . . ensure that the individual . . . is covered under minimum essential coverage." *Ibid.* (emphasis added). And the immediately following provision [**546] states that, "[i]f . . . an applicable individual . . . fails to meet the *requirement* of subsection (a) . . . there is hereby imposed . . . a *penalty*." §5000A(b) (emphasis added). And several of Congress' legislative "findings" with regard to §5000A confirm that it sets forth a legal requirement and constitutes the assertion of regulatory power, not mere taxing power. See 42 U.S.C. §18091(2)(A) ("The requirement [***244] regulates activity . . ."); §18091(2)(C) ("The requirement . . . will add millions of new consumers to the health insurance market . . ."); §18091(2)(D) ("The requirement achieves near-universal coverage"); §18091(2)(H) ("The requirement is an essential part of this larger regulation of economic

activity, and the absence of the requirement would undercut Federal regulation of the health insurance market"); §18091(3) ("[T]he Supreme Court of the United States ruled that insurance is interstate commerce subject to Federal regulation").

The Government and those who support its view on the tax point rely on *New York v. United States*, 505 U.S. 144, 112 S. Ct. 2408, 120 L. Ed. 2d 120, to justify reading "shall" to mean "may." The "shall" in that case was contained in an introductory provision--a recital that provided for no legal consequences--which said that "[e]ach State shall be responsible for providing . . . for the disposal of . . . low-level radioactive waste." 42 U.S.C. §2021c(a)(1)(A). The Court did not hold that "shall" could be construed to mean "may," but rather that this preliminary provision could not impose upon the operative provisions of the Act a mandate that they did not [***245] contain: "We . . . decline petitioners' invitation to construe §2021c(a)(1)(A), alone and in isolation, as a command to the States independent of the remainder of the Act." *New York*, 505 U.S., at 170, 112 S. Ct. 2408, 120 L. Ed. 2d 120. Our opinion then proceeded to "consider each [of the three operative provisions] in turn." *Ibid.* Here the mandate--the "shall"--is contained not in an inoperative preliminary recital, but in the dispositive operative provision itself. *New York* provides no support for reading it to be permissive.

Quite separately, the fact that Congress (in its own words) "imposed . . . a penalty," 26 U.S.C. §5000A(b)(1), for failure to buy insurance is alone sufficient to render that failure unlawful. It is one of the canons of interpretation that a statute that penalizes an act makes it unlawful: "[W]here the statute inflicts a penalty for doing an act, although the act itself is not expressly prohibited, yet to do the act is unlawful, because it cannot be supposed that the Legislature intended that a penalty should be inflicted for a lawful act." *Powhatan Steamboat Co. v. Appomattox R. Co.*, 65 U.S. 247, 24 How. 247, 252, 16 L. Ed. 682 (1861). Or in the words of Chancellor [***246] Kent: "If a statute inflicts a penalty for doing an act, the penalty implies a prohibition, and the thing is unlawful, though there be no prohibitory words in the statute." 1 J. Kent, *Commentaries on American Law* 436 (1826).

[*2653] We never have classified as a tax an exaction imposed for violation of the law, and so too, we never have classified as a tax an exaction described in the

legislation itself as a penalty. To be sure, we have sometimes treated as a tax a statutory exaction (imposed for something other than a violation of law) which bore an agnostic label that does not entail the significant constitutional consequences of a penalty--such as "license" (*License Tax* [**547] *Cases*, 72 U.S. 462, 5 Wall. 462, 18 L. Ed. 497 (1867)) or "surcharge" (*New York v. United States*, *supra.*). But we have never--never--treated as a tax an exaction which faces up to the critical difference between a tax and a penalty, and explicitly denominates the exaction a "penalty." Eighteen times in §5000A itself and elsewhere throughout the Act, Congress called the exaction in §5000A(b) a "penalty."

That §5000A imposes not a simple tax but a mandate to which a penalty is attached is demonstrated by the fact that some are [***247] exempt from the tax who are not exempt from the mandate--a distinction that would make no sense if the mandate were not a mandate. Section 5000A(d) exempts three classes of people from the definition of "applicable individual" subject to the minimum coverage requirement: Those with religious objections or who participate in a "health care sharing ministry," §5000A(d)(2); those who are "not lawfully present" in the United States, §5000A(d)(3); and those who are incarcerated, §5000A(d)(4). Section 5000A(e) then creates a separate set of exemptions, excusing from liability for the penalty certain individuals who are subject to the minimum coverage requirement: Those who cannot afford coverage, §5000A(e)(1); who earn too little income to require filing a tax return, §5000A(e)(2); who are members of an Indian tribe, §5000A(e)(3); who experience only short gaps in coverage, §5000A(e)(4); and who, in the judgment of the Secretary of Health and Human Services, "have suffered a hardship with respect to the capability to obtain coverage," §5000A(e)(5). If §5000A were a tax, these two classes of exemption would make no sense; there being no requirement, *all* the exemptions would attach to the penalty [***248] (renamed tax) alone.

In the face of all these indications of a regulatory requirement accompanied by a penalty, the Solicitor General assures us that "neither the Treasury Department nor the Department of Health and Human Services interprets Section 5000A as imposing a legal obligation," *Petitioners' Minimum Coverage Brief* 61, and that "[i]f [those subject to the Act] pay the tax penalty, they're in compliance with the law," *Tr. of Oral Arg.* 50 (Mar. 26, 2012). These self-serving litigating positions are entitled

to no weight. What counts is what the statute says, and that is entirely clear. It is worth noting, moreover, that these assurances contradict the Government's position in related litigation. Shortly before the Affordable Care Act was passed, the Commonwealth of Virginia enacted Va. Code Ann. §38.2-3430.1:1 (Lexis Supp. 2011), which states, "No resident of [the] Commonwealth . . . shall be required to obtain or maintain a policy of individual insurance coverage except as required by a court or the Department of Social Services" In opposing Virginia's assertion of standing to challenge §5000A based on this statute, the Government said that "if the minimum coverage provision [***249] is unconstitutional, the [Virginia] statute is unnecessary, and if the minimum coverage provision is upheld, the state statute is void under the Supremacy Clause." Brief for Appellant in No. 11-1057 etc. (CA4), p. 29. But it would be void under the Supremacy Clause only if it was contradicted by a federal "require[ment] [*2654] to obtain or maintain a policy of individual insurance coverage."

[**548] Against the mountain of evidence that the minimum coverage requirement is what the statute calls it--a requirement--and that the penalty for its violation is what the statute calls it--a penalty--the Government brings forward the flimsiest of indications to the contrary. It notes that "[t]he minimum coverage provision amends the Internal Revenue Code to provide that a non-exempted individual . . . will owe a monetary penalty, in addition to the income tax itself," and that "[t]he [Internal Revenue Service (IRS)] will assess and collect the penalty in the same manner as assessable penalties under the Internal Revenue Code." Petitioners' Minimum Coverage Brief 53. The manner of collection could perhaps suggest a tax if IRS penalty-collection were unheard-of or rare. It is not. See, e.g., 26 U.S.C. §527(j) (2006 ed.) [***250] (IRS-collectible penalty for failure to make campaign finance disclosures); §5761(c) (IRS-collectible penalty for domestic sales of tobacco products labeled for export); §9707 (IRS-collectible penalty for failure to make required health-insurance premium payments on behalf of mining employees). In *Reorganized CF&I Fabricators of Utah, Inc.*, 518 U.S. 213, 116 S. Ct. 2106, 135 L. Ed. 2d 506, we held that an exaction not only *enforced* by the Commissioner of Internal Revenue but even *called* a "tax" was in fact a penalty. "[I]f the concept of penalty means anything," we said, "it means punishment for an unlawful act or omission." *Id.*, at 224, 116 S. Ct. 2106, 135 L. Ed. 2d

506. See also *Lipke v. Lederer*, 259 U.S. 557, 42 S. Ct. 549, 66 L. Ed. 1061, T.D. 3354 (1922) (same). Moreover, while the penalty is assessed and collected by the IRS, §5000A is administered both by that agency and by the Department of Health and Human Services (and also the Secretary of Veteran Affairs), see §5000A(e)(1)(D), (e)(5), (f)(1)(A)(v), (f)(1)(E) (2006 ed., Supp. IV), which is responsible for defining its substantive scope--a feature that would be quite extraordinary for taxes.

The Government points out that [***251] "[t]he amount of the penalty will be calculated as a percentage of household income for federal income tax purposes, subject to a floor and [a] ca[p]," and that individuals who earn so little money that they "are not required to file income tax returns for the taxable year are not subject to the penalty" (though they are, as we discussed earlier, subject to the mandate). Petitioners' Minimum Coverage Brief 12, 53. But varying a penalty according to ability to pay is an utterly familiar practice. See, e.g., 33 U.S.C. §1319(d) (2006 ed., Supp. IV) ("In determining the amount of a civil penalty the court shall consider . . . the economic impact of the penalty on the violator"); see also 6 U.S.C. §488e(c); 7 U.S.C. §§7734(b)(2), 8313(b)(2); 12 U.S.C. §§1701q-1(d)(3), 1723i(c)(3), 1735f-14(c)(3), 1735f-15(d)(3), 4585(c)(2); 15 U.S.C. §§45(m)(1)(C), 77h-1(g)(3), 78u-2(d), 80a-9(d)(4), 80b-3(i)(4), 1681s(a)(2)(B), 1717a(b)(3), 1825(b)(1), 2615(a) (2)(B), 5408(b)(2); 33 U.S.C. §2716a(a).

The last of the feeble arguments in favor of petitioners that we will address is the contention that what this statute repeatedly calls a penalty is in fact a tax because it contains no scienter [***252] requirement. The *presence* of such a requirement suggests a penalty--though one can imagine a tax imposed only on willful action; but the *absence* of such a requirement does not suggest a tax. Penalties for absolute-liability offenses are commonplace. [**549] And where a statute is silent as to scienter, we traditionally presume a *mens rea* requirement if the statute imposes a "severe penalty." *Staples v. United States*, 511 U.S. 600, 618, 114 S. Ct. 1793, 128 L. Ed. 2d 608 [*2655] (1994). Since we have an entire jurisprudence addressing when it is that a scienter requirement should be inferred from a penalty, it is quite illogical to suggest that a penalty is not a penalty for want of an express scienter requirement.

And the nail in the coffin is that the mandate and penalty are located in Title I of the Act, its operative core,

rather than where a tax would be found--in Title IX, containing the Act's "Revenue Provisions." In sum, "the terms of [the] act rende[r] it unavoidable," *Parsons v. Bedford*, 28 U.S. 433, 3 Pet. 433, 448, 7 L. Ed. 732 (1830), that Congress imposed a regulatory penalty, not a tax.

For all these reasons, to say that the Individual Mandate merely imposes a tax is not to interpret the [***253] statute but to rewrite it. Judicial tax-writing is particularly troubling. Taxes have never been popular, see, e.g., Stamp Act of 1765, and in part for that reason, the Constitution requires tax increases to originate in the House of Representatives. See Art. I, § 7, cl. 1. That is to say, they must originate in the legislative body most accountable to the people, where legislators must weigh the need for the tax against the terrible price they might pay at their next election, which is never more than two years off. The Federalist No. 58 "defend[ed] the decision to give the origination power to the House on the ground that the Chamber that is more accountable to the people should have the primary role in raising revenue." *United States v. Munoz-Flores*, 495 U.S. 385, 395, 110 S. Ct. 1964, 109 L. Ed. 2d 384 (1990). We have no doubt that Congress knew precisely what it was doing when it rejected an earlier version of this legislation that imposed a tax instead of a requirement-with-penalty. See Affordable Health Care for America Act, H. R. 3962, 111th Cong., 1st Sess., § 501 (2009); America's Healthy Future Act of 2009, S. 1796, 111th Cong., 1st Sess., § 1301. Imposing a tax through judicial [***254] legislation inverts the constitutional scheme, and places the power to tax in the branch of government least accountable to the citizenry.

Finally, we must observe that rewriting §5000A as a tax in order to sustain its constitutionality would force us to confront a difficult constitutional question: whether this is a direct tax that must be apportioned among the States according to their population. Art. I, § 9, cl. 4. Perhaps it is not (we have no need to address the point); but the meaning of the Direct Tax Clause is famously unclear, and its application here is a question of first impression that deserves more thoughtful consideration than the lick-and-a-promise accorded by the Government and its supporters. The Government's opening brief did not even address the question--perhaps because, until today, no federal court has accepted the implausible argument that §5000A is an exercise of the tax power. And once respondents raised the issue, the Government

devoted a mere 21 lines of its reply brief to the issue. Petitioners' Minimum Coverage Reply Brief 25. At oral argument, the most prolonged statement about the issue was just over 50 words. Tr. of Oral Arg. 79 (Mar. 27, 2012). One would [***255] expect this Court to demand more than fly-by-night briefing [**550] and argument before deciding a difficult constitutional question of first impression.

III

The Anti-Injunction Act

There is another point related to the Individual Mandate that we must discuss--a point that logically should have been discussed first: Whether jurisdiction over the challenges to the minimum-coverage provision is precluded by the Anti-Injunction Act, which provides that "no suit for the purpose of restraining the assessment or collection of any tax shall be [*2656] maintained in any court by any person," 26 U.S.C. §7421(a) (2006 ed.).

We have left the question to this point because it seemed to us that the dispositive question whether the minimum-coverage provision is a tax is more appropriately addressed in the significant constitutional context of whether it is an exercise of Congress' taxing power. Having found that it is not, we have no difficulty in deciding that these suits do not have "the purpose of restraining the assessment or collection of any tax."⁶

6 The *amicus* appointed to defend the proposition that the Anti-Injunction Act deprives us of jurisdiction stresses that the penalty for failing to comply with the [***256] mandate "shall be assessed and collected in the same manner as an assessable penalty under subchapter B of chapter 68," 26 U.S.C. §5000A(g)(1) (2006 ed., Supp. IV), and that such penalties "shall be assessed and collected in the same manner as taxes," §6671(a) (2006 ed.). But that point seems to us to confirm the *inapplicability* of the Anti-Injunction Act. That the penalty is to be "assessed and collected *in the same manner as taxes*" refutes the proposition that it *is* a tax for all statutory purposes, including with respect to the Anti-Injunction Act. Moreover, elsewhere in the Internal Revenue Code, Congress has provided *both* that a particular payment shall be "assessed and collected" in the same manner as a tax *and* that no suit shall be maintained to restrain the

assessment or collection of the payment. See, e.g., §§7421(b)(1), §6901(a); §6305(a), (b). The latter directive would be superfluous if the former invoked the Anti-Injunction Act. Amicus also suggests that the penalty should be treated as a tax because it is an assessable penalty, and the Code's assessment provision authorizes the Secretary of the Treasury to assess "all taxes (including interest, additional amounts, additions [***257] to the tax, and assessable penalties) imposed by this title." §6201(a) (2006 ed., Supp. IV). But the fact that such items are included as "taxes" for purposes of assessment does not establish that they are included as "taxes" for purposes of other sections of the Code, such as the Anti-Injunction Act, that do not contain similar "including" language.

The Government and those who support its position on this point make the remarkable argument that §5000A is not a tax for purposes of the Anti-Injunction Act, see Brief for Petitioners in No. 11-398 (Anti-Injunction Act), but is a tax for constitutional purposes, see Petitioners' Minimum Coverage Brief 52-62. The rhetorical device that tries to cloak this argument in superficial plausibility is the same device employed in arguing that for constitutional purposes the minimum-coverage provision is a tax: confusing the question of what Congress *did* with the question of what Congress *could have done*. What qualifies as a tax for purposes of the Anti-Injunction Act, unlike what qualifies as a tax for purposes of the Constitution, is entirely within the control of Congress. Compare *Bailey v. George*, 259 U.S. 16, 20, 42 S. Ct. 419, 66 L. Ed. 816, 1922-2 C.B. 342, T.D. 3347 (1922) [***258] (Anti-Injunction Act barred suit to restrain collections under the Child Labor Tax Law), with *Child Labor Tax Case*, 259 U.S., at 36-41, 42 S. Ct. 449, 66 L. Ed. 817 (holding the same law unconstitutional as exceeding Congress' taxing power). Congress could have defined "tax" for purposes of that statute in such fashion as to exclude some exactions that in fact are "taxes." It [**551] might have prescribed, for example, that a particular exercise of the taxing power "shall not be regarded as a tax for purposes of the Anti-Injunction Act." But there is no such prescription here. What the Government would have us believe in these cases is that the very same textual indications that show this is *not* a tax under the Anti-Injunction Act show that it *is* a tax under the Constitution. That carries verbal wizardry too far, deep into the forbidden land of the sophists.

IV

The Medicaid Expansion

We now consider respondents' second challenge to the constitutionality of the [*2657] ACA, namely, that the Act's dramatic expansion of the Medicaid program exceeds Congress' power to attach conditions to federal grants to the States.

The ACA does not legally compel the States to participate in the expanded Medicaid program, [***259] but the Act authorizes a severe sanction for any State that refuses to go along: termination of all the State's Medicaid funding. For the average State, the annual federal Medicaid subsidy is equal to more than one-fifth of the State's expenditures.⁷ A State forced out of the program would not only lose this huge sum but would almost certainly find it necessary to increase its own health-care expenditures substantially, requiring either a drastic reduction in funding for other programs or a large increase in state taxes. And these new taxes would come on top of the federal taxes already paid by the State's citizens to fund the Medicaid program in other States.

⁷ "State expenditures" is used here to mean annual expenditures from the States' own funding sources, and it excludes federal grants unless otherwise noted.

The States challenging the constitutionality of the ACA's Medicaid Expansion contend that, for these practical reasons, the Act really does not give them any choice at all. As proof of this, they point to the goal and the structure of the ACA. The goal of the Act is to provide near-universal medical coverage, 42 U.S.C. §18091(2)(D), and without 100% State participation in the Medicaid program, attainment of this goal would be thwarted. Even if States could elect to remain in the old Medicaid program, while declining to participate [***260] in the Expansion, there would be a gaping hole in coverage. And if a substantial number of States were entirely expelled from the program, the number of persons without coverage would be even higher.

In light of the ACA's goal of near-universal coverage, petitioners argue, if Congress had thought that anything less than 100% state participation was a realistic possibility, Congress would have provided a backup scheme. But no such scheme is to be found anywhere in the more than 900 pages of the Act. This shows, they

maintain, that Congress was certain that the ACA's Medicaid offer was one that no State could refuse.

In response to this argument, the Government contends that any congressional assumption about uniform state participation was based on the simple fact that the offer of federal funds associated with the expanded coverage is such a generous gift that no State would want to turn it down.

To evaluate these arguments, we consider the extent of the Federal Government's power to spend money and to attach conditions to money granted [***261] to the States.

[**552] A

No one has ever doubted that the Constitution authorizes the Federal Government to spend money, but for many years the scope of this power was unsettled. The Constitution grants Congress the power to collect taxes "to . . . provide for the . . . general Welfare of the United States," Art. I, § 8, cl. 1, and from "the foundation of the Nation sharp differences of opinion have persisted as to the true interpretation of the phrase" "the general welfare." *Butler*, 297 U.S., at 65, 56 S. Ct. 312, 80 L. Ed. 477. Madison, it has been said, thought that the phrase "amounted to no more than a reference to the other powers enumerated in the subsequent clauses of the same section," while Hamilton "maintained the clause confers a power separate and distinct from those later enumerated [and] [*2658] is not restricted in meaning by the grant of them." *Ibid*.

The Court resolved this dispute in *Butler*. Writing for the Court, Justice Roberts opined that the Madisonian view would make Article I's grant of the spending power a "mere tautology." *Ibid*. To avoid that, he adopted Hamilton's approach and found that "the power of Congress to authorize expenditure of public moneys for public purposes is [***262] not limited by the direct grants of legislative power found in the Constitution." *Id.*, at 66, 56 S. Ct. 312, 80 L. Ed. 477. Instead, he wrote, the spending power's "confines are set in the clause which confers it, and not in those of section 8 which bestow and define the legislative powers of the Congress." *Ibid.*; see also *Steward Machine Co. v. Davis*, 301 U.S.548, 586-587, 57 S. Ct. 883, 81 L. Ed. 1279, 1937-1 C.B. 444 (1937); *Helvering v. Davis*, 301 U.S. 619, 640, 57 S. Ct. 904, 81 L. Ed. 1307, 1937-1 C.B. 360 (1937).

The power to make any expenditure that furthers "the general welfare" is obviously very broad, and shortly after *Butler* was decided the Court gave Congress wide leeway to decide whether an expenditure qualifies. See *Helvering*, 301 U.S., at 640-641, 57 S. Ct. 904, 81 L. Ed. 1307. "The discretion belongs to Congress," the Court wrote, "unless the choice is clearly wrong, a display of arbitrary power, not an exercise of judgment." *Id.*, at 640, 57 S. Ct. 904, 81 L. Ed. 1307. Since that time, the Court has never held that a federal expenditure was not for "the general welfare."

B

One way in which Congress may spend to promote the general welfare is by making grants to the States. Monetary grants, so-called [***263] grants-in-aid, became more frequent during the 1930's, G. Stephens & N. Wikstrom, *American Intergovernmental Relations--A Fragmented Federal Polity* 83 (2007), and by 1950 they had reached \$20 billion⁸ or 11.6% of state and local government expenditures from their own sources.⁹ By 1970 this number had grown to \$123.7 billion¹⁰ or 29.1% of state and local government expenditures from their own [**553] sources.¹¹ As of 2010, federal outlays to state and local governments came to over \$608 billion or 37.5% of state and local government expenditures.¹²

8 This number is expressed in billions of Fiscal Year 2005 dollars.

9 See Office of Management and Budget, Historical Tables, Budget of the U.S. Government, Fiscal Year 2013, Table 12.1--Summary Comparison of Total Outlays for Grants to State and Local Governments: 1940-2017 (hereinafter Table 12.1), <http://www.whitehouse.gov/omb/budget/HistoricalTables>; *id.*, Table 15.2--Total Government Expenditures: 1948-2011 (hereinafter Table 15.2).

10 This number is expressed in billions of Fiscal Year 2005 dollars.

11 See Table 12.1; Dept. of Commerce, Bureau of Census, Statistical Abstract of the United States: 2001, p. 262 (Table 419, Federal Grants-in-Aid Summary: [***264] 1970 to 2001).

12 See Statistical Abstract of the United States: 2012, p. 268 (Table 431, Federal Grants-in-Aid to State and Local Governments: 1990 to 2011).

When Congress makes grants to the States, it

customarily attaches conditions, and this Court has long held that the Constitution generally permits Congress to do this. See *Pennhurst State School and Hospital v. Halderman*, 451 U.S. 1, 17, 101 S. Ct. 1531, 67 L. Ed. 2d 694 (1981); *South Dakota v. Dole*, 483 U.S. 203, 206, 107 S. Ct. 2793, 97 L. Ed. 2d 171 (1987); *Fullilove v. Klutznick*, 448 U.S. 448, 474, 100 S. Ct. 2758, 65 L. Ed. 2d 902 (1980) (opinion of Burger, C. J.); *Steward Machine, supra*, at 593, 57 S. Ct. 883, 81 L. Ed. 1279.

[*2659] C

This practice of attaching conditions to federal funds greatly increases federal power. "[O]bjectives not thought to be within Article I's enumerated legislative fields, may nevertheless be attained through the use of the spending power and the conditional grant of federal funds." *Dole, supra*, at 207, 107 S. Ct. 2793, 97 L. Ed. 2d 171 (internal quotation marks and citation omitted); see also *College Savings Bank v. Florida Prepaid Postsecondary Ed. Expense Bd.*, 527 U.S. 666, 686, 119 S. Ct. 2219, 144 L. Ed. 2d 605 (1999) [***265] (by attaching conditions to federal funds, Congress may induce the States to "tak[e] certain actions that Congress could not require them to take").

This formidable power, if not checked in any way, would present a grave threat to the system of federalism created by our Constitution. If Congress' "Spending Clause power to pursue objectives outside of Article I's enumerated legislative fields," *Davis v. Monroe County Bd. of Ed.*, 526 U.S. 629, 654, 119 S. Ct. 1661, 143 L. Ed. 2d 839 (1999) (Kennedy, J., dissenting) (internal quotation marks omitted), is "limited only by Congress' notion of the general welfare, the reality, given the vast financial resources of the Federal Government, is that the Spending Clause gives 'power to the Congress to tear down the barriers, to invade the states' jurisdiction, and to become a parliament of the whole people, subject to no restrictions save such as are self-imposed,' *Dole, supra*, at 217, 107 S. Ct. 2793, 97 L. Ed. 2d 171 (O'Connor, J., dissenting) (quoting *Butler*, 297 U.S., at 78, 56 S. Ct. 312, 80 L. Ed. 477). "[T]he Spending Clause power, if wielded without concern for the federal balance, has the potential to obliterate distinctions between [***266] national and local spheres of interest and power by permitting the Federal Government to set policy in the most sensitive areas of traditional state concern, areas which otherwise would lie outside its reach." *Davis, supra*, at 654-655, 119 S. Ct. 1661, 143 L. Ed. 2d 839

(Kennedy, J., dissenting).

Recognizing this potential for abuse, our cases have long held that the power to attach conditions to grants to the States has limits. See, e.g., *Dole, supra*, at 207-208, 107 S. Ct. 2793, 97 L. Ed. 2d 171; *id.*, at 207, 107 S. Ct. 2793, 97 L. Ed. 2d 171 (spending power is "subject to several general restrictions articulated in our cases"). For one thing, any such conditions [**554] must be unambiguous so that a State at least knows what it is getting into. See *Pennhurst, supra*, at 17, 101 S. Ct. 1531, 67 L. Ed. 2d 694. Conditions must also be related "to the federal interest in particular national projects or programs," *Massachusetts v. United States*, 435 U.S. 444, 461, 98 S. Ct. 1153, 55 L. Ed. 2d 403 (1978), and the conditional grant of federal funds may not "induce the States to engage in activities that would themselves be unconstitutional," *Dole, supra*, at 210, 107 S. Ct. 2793, 97 L. Ed. 2d 171; [***267] see *Lawrence County v. Lead-Deadwood School Dist. No. 40-1*, 469 U.S. 256, 269-270, 105 S. Ct. 695, 83 L. Ed. 2d 635 (1985). Finally, while Congress may seek to induce States to accept conditional grants, Congress may not cross the "point at which pressure turns into compulsion, and ceases to be inducement." *Steward Machine*, 301 U.S., at 590, 57 S. Ct. 883, 81 L. Ed. 1279. Accord, *College Savings Bank, supra*, at 687, 119 S. Ct. 2219, 144 L. Ed. 2d 605; *Metropolitan Washington Airports Authority v. Citizens for Abatement of Aircraft Noise, Inc.*, 501 U.S. 252, 285, 111 S. Ct. 2298, 115 L. Ed. 2d 236 (1991) (White, J., dissenting); *Dole, supra*, at 211, 107 S. Ct. 2793, 97 L. Ed. 2d 171.

When federal legislation gives the States a real choice whether to accept or decline a federal aid package, the federal-state relationship is in the nature of a contractual relationship. See *Barnes v. Gorman*, 536 U.S. 181, 186, 122 S. Ct. 2097, 153 L. Ed. 2d [*2660] 230 (2002); *Pennhurst*, 451 U.S., at 17, 101 S. Ct. 1531, 67 L. Ed. 2d 694. And just as a contract is voidable if coerced, "[t]he legitimacy of Congress' power to legislate under the spending power . . . rests on whether the State voluntarily and [***268] knowingly accepts the terms of the 'contract.'" *Ibid.* (emphasis added). If a federal spending program coerces participation the States have not "exercise[d] their choice"--let alone made an "informed choice." *Id.*, at 17, 25, 101 S. Ct. 1531, 67 L. Ed. 2d 694.

Coercing States to accept conditions risks the

destruction of the "unique role of the States in our system." *Davis, supra*, at 685, 119 S. Ct. 1661, 143 L. Ed. 2d 839 (Kennedy, J., dissenting). "[T]he Constitution has never been understood to confer upon Congress the ability to require the States to govern according to Congress' instructions." *New York*, 505 U.S., at 162, 112 S. Ct. 2408, 120 L. Ed. 2d 120. Congress may not "simply commandeer the legislative processes of the States by directly compelling them to enact and enforce a federal regulatory program." *Id.*, at 161, 112 S. Ct. 2408, 120 L. Ed. 2d 120 (internal quotation marks and brackets omitted). Congress effectively engages in this impermissible compulsion when state participation in a federal spending program is coerced, so that the States' choice whether to enact or administer a federal regulatory program is rendered illusory.

Where all Congress has done is to "encourag[e] [***269] state regulation rather than compe[l] it, state governments remain responsive to the local electorate's preferences; state officials remain accountable to the people. [But] where the Federal Government compels States to regulate, the accountability of both state and federal officials is diminished." *New York, supra*, at 168, 112 S. Ct. 2408, 120 L. Ed. 2d 120.

Amici who support the Government argue that forcing state employees to implement a federal program is more [**555] respectful of federalism than using federal workers to implement that program. See, e.g., Brief for Service Employees International Union et al. as *Amici Curiae* in No. 11-398, pp. 25-26. They note that Congress, instead of expanding Medicaid, could have established an entirely federal program to provide coverage for the same group of people. By choosing to structure Medicaid as a cooperative federal-state program, they contend, Congress allows for more state control. *Ibid.*

This argument reflects a view of federalism that our cases have rejected--and with good reason. When Congress compels the States to do its bidding, it blurs the lines of political accountability. If the Federal Government makes a controversial decision while [***270] acting on its own, "it is the Federal Government that makes the decision in full view of the public, and it will be federal officials that suffer the consequences if the decision turns out to be detrimental or unpopular." *New York*, 505 U.S., at 168, 112 S. Ct. 2408, 120 L. Ed. 2d 120. But when the Federal Government compels the

States to take unpopular actions, "it may be state officials who will bear the brunt of public disapproval, while the federal officials who devised the regulatory program may remain insulated from the electoral ramifications of their decision." *Id.*, at 169, 112 S. Ct. 2408, 120 L. Ed. 2d 120; see *Printz, supra*, at 930, 117 S. Ct. 2365, 138 L. Ed. 2d 914. For this reason, federal officeholders may view this "departur[e] from the federal structure to be in their personal interests . . . as a means of shifting responsibility for the eventual decision." *New York*, 505 U.S., at 182-183, 112 S. Ct. 2408, 120 L. Ed. 2d 120. And even state officials may favor such a "departure from the constitutional plan," since uncertainty concerning responsibility may also permit them to escape accountability. *Id.*, at 182, 112 S. Ct. 2408, 120 L. Ed. 2d 120. If a program is popular, [***271] state officials may claim credit; if it is unpopular, [*2661] they may protest that they were merely responding to a federal directive.

Once it is recognized that spending-power legislation cannot coerce state participation, two questions remain: (1) What is the meaning of coercion in this context? (2) Is the ACA's expanded Medicaid coverage coercive? We now turn to those questions.

D

1

The answer to the first of these questions--the meaning of coercion in the present context--is straightforward. As we have explained, the legitimacy of attaching conditions to federal grants to the States depends on the voluntariness of the States' choice to accept or decline the offered package. Therefore, if States really have no choice other than to accept the package, the offer is coercive, and the conditions cannot be sustained under the spending power. And as our decision in *South Dakota v. Dole* makes clear, theoretical voluntariness is not enough.

In *South Dakota v. Dole*, we considered whether the spending power permitted Congress to condition 5% of the State's federal highway funds on the State's adoption of a minimum drinking age of 21 years. South Dakota argued that the program was impermissibly coercive, [***272] but we disagreed, reasoning that "Congress ha[d] directed only that a State desiring to establish a minimum drinking age lower than 21 lose a relatively [**556] small percentage of certain federal highway funds." 483 U.S., at 211, 107 S. Ct. 2793, 97 L. Ed. 2d

171. Because "all South Dakota would lose if she adhere[d] to her chosen course as to a suitable minimum drinking age [was] 5% of the funds otherwise obtainable under specified highway grant programs," we found that "Congress ha[d] offered relatively mild encouragement to the States to enact higher minimum drinking ages than they would otherwise choose." *Ibid.* Thus, the decision whether to comply with the federal condition "remain[ed] the prerogative of the States *not merely in theory but in fact*," and so the program at issue did not exceed Congress' power. *Id.*, at 211-212, 107 S. Ct. 2793, 97 L. Ed. 2d 171 (emphasis added).

The question whether a law enacted under the spending power is coercive in fact will sometimes be difficult, but where Congress has plainly "crossed the line distinguishing encouragement from coercion," *New York, supra*, at 175, 112 S. Ct. 2408, 120 L. Ed. 2d 120, a federal program that coopts the States' political [***273] processes must be declared unconstitutional. "[T]he federal balance is too essential a part of our constitutional structure and plays too vital a role in securing freedom for us to admit inability to intervene." *Lopez*, 514 U.S., at 578, 115 S. Ct. 1624, 131 L. Ed. 2d 626 (Kennedy, J., concurring).

2

The Federal Government's argument in this case at best pays lip service to the anticoercion principle. The Federal Government suggests that it is sufficient if States are "free, *as a matter of law*, to turn down" federal funds. Brief for Respondents in No. 11-400, p. 17 (emphasis added); see also *id.*, at 25. According to the Federal Government, neither the amount of the offered federal funds nor the amount of the federal taxes extracted from the taxpayers of a State to pay for the program in question is relevant in determining whether there is impermissible coercion. *Id.*, at 41-46.

This argument ignores reality. When a heavy federal tax is levied to support a federal program that offers large grants to the States, States may, as a practical matter, be unable to refuse to participate in the federal program and to substitute a state alternative. Even if a State believes that the federal program [***274] is ineffective and [*2662] inefficient, withdrawal would likely force the State to impose a huge tax increase on its residents, and this new state tax would come on top of the federal taxes already paid by residents to support subsidies to participating States.¹³

13 Justice Ginsburg argues that "[a] State . . . has no claim on the money its residents pay in federal taxes." *Ante*, at ___, n. 26, 183 L. Ed. 2d, at 534. This is true as a formal matter. "When the United States Government taxes United States citizens, it taxes them 'in their individual capacities' as 'the people of America'--not as residents of a particular State." *Ante*, at ___, n. 26, 183 L. Ed. 2d, at 533 (quoting *U.S. Term Limits, Inc. v. Thornton*, 514 U.S. 779, 839, 115 S. Ct. 1842, 131 L. Ed. 2d 881 (1995) (Kennedy, J., concurring)). But unless Justice Ginsburg thinks that there is no limit to the amount of money that can be squeezed out of taxpayers, heavy federal taxation diminishes the practical ability of States to collect their own taxes.

Acceptance of the Federal Government's interpretation of the anticoercion rule would permit Congress to dictate policy in areas traditionally governed primarily at the state or local level. Suppose, for example, that Congress enacted [***275] legislation offering each State a grant equal to the State's [**557] entire annual expenditures for primary and secondary education. Suppose also that this funding came with conditions governing such things as school curriculum, the hiring and tenure of teachers, the drawing of school districts, the length and hours of the school day, the school calendar, a dress code for students, and rules for student discipline. *As a matter of law*, a State could turn down that offer, but if it did so, its residents would not only be required to pay the federal taxes needed to support this expensive new program, but they would also be forced to pay an equivalent amount in state taxes. And if the State gave in to the federal law, the State and its subdivisions would surrender their traditional authority in the field of education. Asked at oral argument whether such a law would be allowed under the spending power, the Solicitor General responded that it would. Tr. of Oral Arg. 44-45 (Mar. 28, 2012).

E

Whether federal spending legislation crosses the line from enticement to coercion is often difficult to determine, and courts should not conclude that legislation is unconstitutional on this ground unless the coercive [***276] nature of an offer is unmistakably clear. In this case, however, there can be no doubt. In structuring the ACA, Congress unambiguously signaled its belief that

every State would have no real choice but to go along with the Medicaid Expansion. If the anticoercion rule does not apply in this case, then there is no such rule.

1

The dimensions of the Medicaid program lend strong support to the petitioner States' argument that refusing to accede to the conditions set out in the ACA is not a realistic option. Before the ACA's enactment, Medicaid funded medical care for pregnant women, families with dependents, children, the blind, the elderly, and the disabled. See 42 U.S.C. §1396a(a)(10) (2006 ed., Supp. IV). The ACA greatly expands the program's reach, making new funds available to States that agree to extend coverage to all individuals who are under age 65 and have incomes below 133% of the federal poverty line. See §1396a(a)(10)(A)(i)(VIII). Any State that refuses to expand its Medicaid programs in this way is threatened with a severe sanction: the loss of all its federal Medicaid funds. See §1396c (2006 ed.).

Medicaid has long been the largest federal program of grants to the States. [***277] See Brief for Respondents in No. 11-400, at 37. In 2010, the Federal Government directed [*2663] more than \$552 billion in federal funds to the States. See Nat. Assn. of State Budget Officers, 2010 State Expenditure Report: Examining Fiscal 2009-2011 State Spending, p. 7 (2011) (NASBO Report). Of this, more than \$233 billion went to pre-expansion Medicaid. See *id.*, at 47.¹⁴ *This amount equals nearly 22% of all state expenditures combined.* See *id.*, at 7.

14 The Federal Government has a higher number for federal spending on Medicaid. According to the Office of Management and Budget, federal grants to the States for Medicaid amounted to nearly \$273 billion in Fiscal Year 2010. See Office of Management and Budget, Historical Tables, Budget of the U.S. Government, Fiscal Year 2013, Table 12.3--Total Outlays for Grants to State and Local Governments by Function, Agency, and Program: 1940-2013, <http://www.whitehouse.gov/omb/budget/HistoricalTables>. In that Fiscal Year, total federal outlays for grants to state and local governments amounted to over \$608 billion, see Table 12.1, and state and local government expenditures from their own sources amounted to \$1.6 trillion, see Table 15.2. Using these numbers, [***278]

44.8% of all federal outlays to both state and local governments was allocated to Medicaid, amounting to 16.8% of all state and local expenditures from their own sources.

[**558] The States devote a larger percentage of their budgets to Medicaid than to any other item. *Id.*, at 5. Federal funds account for anywhere from 50% to 83% of each State's total Medicaid expenditures, see §1396d(b) (2006 ed., Supp. IV); most States receive more than \$1 billion in federal Medicaid funding; and a quarter receive more than \$5 billion, NASBO Report 47. These federal dollars total nearly two thirds--64.6%--of all Medicaid expenditures nationwide.¹⁵ *Id.*, at 46.

15 The Federal Government reports a higher percentage. According to Medicaid.gov, in Fiscal Year 2010, the Federal Government made Medicaid payments in the amount of nearly \$260 billion, representing 67.79% of total Medicaid payments of \$383 billion. See www.medicaid.gov/Medicaid-CHIP-Program-Information/By-State/By-State.html.

The Court of Appeals concluded that the States failed to establish coercion in this case in part because the "states have the power to tax and raise revenue, and therefore can create and fund programs of their own if they do not [***279] like Congress's terms." 648 F.3d 1235, 1268 (CA11 2011); see Brief for Sen. Harry Reid et al. as *Amici Curiae* in No. 11-400, p. 21 ("States may always choose to decrease expenditures on other programs or to raise revenues"). But the sheer size of this federal spending program in relation to state expenditures means that a State would be very hard pressed to compensate for the loss of federal funds by cutting other spending or raising additional revenue. Arizona, for example, commits 12% of its state expenditures to Medicaid, and relies on the Federal Government to provide the rest: \$5.6 billion, equaling roughly one-third of Arizona's annual state expenditures of \$17 billion. See NASBO Report 7, 47. Therefore, if Arizona lost federal Medicaid funding, the State would have to commit an additional 33% of all its state expenditures to fund an equivalent state program along the lines of pre-expansion Medicaid. This means that the State would have to allocate 45% of its annual expenditures for that one purpose. See *ibid.*

The States are far less reliant on federal funding for any other program. After Medicaid, the next biggest

federal funding item is aid to support elementary and secondary [***280] education, which amounts to 12.8% of total federal outlays to the States, see *id.*, at 7, 16, and equals only 6.6% of all state expenditures combined. See *ibid.* In Arizona, for example, although federal Medicaid expenditures are equal to 33% of all state expenditures, federal education funds amount to only 9.8% of all state [*2664] expenditures. See *ibid.* And even in States with less than average federal Medicaid funding, that funding is at least twice the size of federal education funding as a percentage of state expenditures. *Id.*, at 7, 16, 47.

A State forced out of the Medicaid program would face burdens in addition to the loss of federal Medicaid funding. For example, a nonparticipating State might be found to be ineligible for other major federal funding sources, such as Temporary Assistance for Needy Families (TANF), which is premised on the expectation that States will participate in Medicaid. See 42 U.S.C. §602(a)(3) (2006 ed.) (requiring that certain beneficiaries of TANF funds be "eligible for medical assistance under the State[']s Medicaid] plan"). And withdrawal or expulsion [**559] from the Medicaid program would not relieve a State's hospitals of their obligation under federal law to [***281] provide care for patients who are unable to pay for medical services. The Emergency Medical Treatment and Active Labor Act, §1395dd, requires hospitals that receive any federal funding to provide stabilization care for indigent patients but does not offer federal funding to assist facilities in carrying out its mandate. Many of these patients are now covered by Medicaid. If providers could not look to the Medicaid program to pay for this care, they would find it exceedingly difficult to comply with federal law unless they were given substantial state support. See, e.g., Brief for Economists as *Amici Curiae* in No 11-400, p. 11.

For these reasons, the offer that the ACA makes to the States--go along with a dramatic expansion of Medicaid or potentially lose all federal Medicaid funding--is quite unlike anything that we have seen in a prior spending-power case. In *South Dakota v. Dole*, the total amount that the States would have lost if every single State had refused to comply with the 21-year-old drinking age was approximately \$614 million--or about 0.19% of all state expenditures combined. See Nat. Assn. of State Budget Officers, 1989 (Fiscal Years 1987-1989 Data) State Expenditure Report [***282] 10, (1989), <http://www.nasbo.org/publications-data/state-expenditure-report/archives>. South Dakota stood to

lose, at most, funding that amounted to less than 1% of its annual state expenditures. See *ibid.* Under the ACA, by contrast, the Federal Government has threatened to withhold 42.3% of all federal outlays to the states, or approximately \$233 billion. See NASBO Report 7, 10, 47. South Dakota stands to lose federal funding equaling 28.9% of its annual state expenditures. See *id.*, at 7, 47. Withholding \$614.7 million, equaling only 0.19% of all state expenditures combined, is aptly characterized as "relatively mild encouragement," but threatening to withhold \$233 billion, equaling 21.86% of all state expenditures combined, is a different matter.

2

What the statistics suggest is confirmed by the goal and structure of the ACA. In crafting the ACA, Congress clearly expressed its informed view that no State could possibly refuse the offer that the ACA extends.

The stated goal of the ACA is near-universal health care coverage. To achieve this goal, the ACA mandates that every person obtain a minimum level of coverage. It attempts to reach this goal in several different ways. The guaranteed [***283] issue and community-rating provisions are designed to make qualifying insurance available and affordable for persons with medical conditions that may require expensive care. Other ACA provisions seek to make such policies more affordable for people of modest means. Finally, for low-income individuals who are simply not able [*2665] to obtain insurance, Congress expanded Medicaid, transforming it from a program covering only members of a limited list of vulnerable groups into a program that provides at least the requisite minimum level of coverage for the poor. See 42 U.S.C. §§1396a(a) (10)(A)(i)(VIII) (2006 ed., Supp. IV), 1396u-7(a), (b)(5), 18022(a). This design was intended to provide at least a specified minimum level of coverage for all Americans, but the achievement of that goal obviously depends on participation by every single State. If any State--not to [**560] mention all of the 26 States that brought this suit--chose to decline the federal offer, there would be a gaping hole in the ACA's coverage.

It is true that some persons who are eligible for Medicaid coverage under the ACA may be able to secure private insurance, either through their employers or by obtaining subsidized insurance through [***284] an exchange. See 26 U.S.C. §36B(a) (2006 ed., Supp. IV); Brief for Respondents in No. 11-400, at 12. But the new

federal subsidies are not available to those whose income is below the federal poverty level, and the ACA provides no means, other than Medicaid, for these individuals to obtain coverage and comply with the Mandate. The Government counters that these people will not have to pay the penalty, see, *e.g.*, Tr. of Oral Arg. 68 (Mar. 28, 2012); Brief for Respondents in No. 11-400, at 49-50, but that argument misses the point: Without Medicaid, these individuals will not have coverage and the ACA's goal of near-universal coverage will be severely frustrated.

If Congress had thought that States might actually refuse to go along with the expansion of Medicaid, Congress would surely have devised a backup scheme so that the most vulnerable groups in our society, those previously eligible for Medicaid, would not be left out in the cold. But nowhere in the over 900-page Act is such a scheme to be found. By contrast, because Congress thought that some States might decline federal funding for the operation of a "health benefit exchange," Congress provided a backup scheme; if a State declines [***285] to participate in the operation of an exchange, the Federal Government will step in and operate an exchange in that State. See 42 U.S.C. §18041(c)(1). Likewise, knowing that States would not necessarily provide affordable health insurance for aliens lawfully present in the United States--because Medicaid does not require States to provide such coverage--Congress extended the availability of the new federal insurance subsidies to all aliens. See 26 U.S.C. §36B(c) (1)(B)(ii) (excepting from the income limit individuals who are "not eligible for the medicaid program . . . by reason of [their] alien status"). Congress did not make these subsidies available for citizens with incomes below the poverty level because Congress obviously assumed that they would be covered by Medicaid. If Congress had contemplated that some of these citizens would be left without Medicaid coverage as a result of a State's withdrawal or expulsion from the program, Congress surely would have made them eligible for the tax subsidies provided for low-income aliens.

These features of the ACA convey an unmistakable message: Congress never dreamed that any State would refuse to go along with the expansion of Medicaid. [***286] Congress well understood that refusal was not a practical option.

The Federal Government does not dispute the inference that Congress anticipated 100% state

participation, but it argues that this assumption was based on the fact that ACA's offer was an "exceedingly generous" gift. Brief for Respondents in No. 11-400, at 50. As the Federal Government sees things, Congress is like the [*2666] generous benefactor who offers \$1 million with few strings attached to 50 randomly selected individuals. Just as this benefactor might assume that all of these 50 individuals would snap up his offer, so Congress assumed that every State would gratefully accept [**561] the federal funds (and conditions) to go with the expansion of Medicaid.

This characterization of the ACA's offer raises obvious questions. If that offer is "exceedingly generous," as the Federal Government maintains, why have more than half the States brought this lawsuit, contending that the offer is coercive? And why did Congress find it necessary to threaten that any State refusing to accept this "exceedingly generous" gift would risk losing all Medicaid funds? Congress could have made just the *new* funding provided under the ACA contingent on acceptance [***287] of the terms of the Medicaid Expansion. Congress took such an approach in some earlier amendments to Medicaid, separating new coverage requirements and funding from the rest of the program so that only new funding was conditioned on new eligibility extensions. See, *e.g.*, Social Security Amendments of 1972, 86 Stat. 1465.

Congress' decision to do otherwise here reflects its understanding that the ACA offer is not an "exceedingly generous" gift that no State in its right mind would decline. Instead, acceptance of the offer will impose very substantial costs on participating States. It is true that the Federal Government will bear most of the initial costs associated with the Medicaid Expansion, first paying 100% of the costs of covering newly eligible individuals between 2014 and 2016. 42 U.S.C. §1396d(y). But that is just part of the picture. Participating States will be forced to shoulder substantial costs as well, because after 2019 the Federal Government will cover only 90% of the costs associated with the Expansion, see *ibid.*, with state spending projected to increase by at least \$20 billion by 2020 as a consequence. Statement of Douglas W. Elmendorf, CBO's Analysis of the Major [***288] Health Care Legislation Enacted in March 2010, p. 24 (Mar. 30, 2011); see also R. Bovbjerg, B. Ormond, & V. Chen, Kaiser Commission on Medicaid and the Uninsured, State Budgets under Federal Health Reform: The Extent and Causes of Variations in Estimated

Impacts 4, n. 27 (Feb. 2011) (estimating new state spending at \$43.2 billion through 2019). After 2019, state spending is expected to increase at a faster rate; the CBO estimates new state spending at \$60 billion through 2021. Statement of Douglas W. Elmendorf, *supra*, at 24. And these costs may increase in the future because of the very real possibility that the Federal Government will change funding terms and reduce the percentage of funds it will cover. This would leave the States to bear an increasingly large percentage of the bill. See Tr. of Oral Arg. 74-76 (Mar. 28, 2012). Finally, after 2015, the States will have to pick up the tab for 50% of all administrative costs associated with implementing the new program, see §§1396b(a)(2)-(5), (7) (2006 ed., Supp. IV), costs that could approach \$12 billion between fiscal years 2014 and 2020, see Dept. of Health and Human Services, Center for Medicaid and Medicare Services, 2010 Actuarial [***289] Report on the Financial Outlook for Medicaid 30.

In sum, it is perfectly clear from the goal and structure of the ACA that the offer of the Medicaid Expansion was one that Congress understood no State could refuse. The Medicaid Expansion therefore exceeds Congress' spending power and cannot be implemented.

F

Seven Members of the Court agree that the Medicaid Expansion, as enacted [**562] by [*2667] Congress, is unconstitutional. See Part IV-A to IV-E, *supra*; Part IV-A, *ante*, at ___ - ___, 183 L. Ed. 2d, at 490-497 (opinion of Roberts, C. J., joined by Breyer and Kagan, JJ.). Because the Medicaid Expansion is unconstitutional, the question of remedy arises. The most natural remedy would be to invalidate the Medicaid Expansion. However, the Government proposes--in two cursory sentences at the very end of its brief--preserving the Expansion. Under its proposal, States would receive the additional Medicaid funds if they expand eligibility, but States would keep their pre-existing Medicaid funds if they do not expand eligibility. We cannot accept the Government's suggestion.

The reality that States were given no real choice but to expand Medicaid was not an accident. Congress assumed States would have no choice, and the ACA depends on States' [***290] having no choice, because its Mandate requires low-income individuals to obtain insurance many of them can afford only through the Medicaid Expansion. Furthermore, a State's withdrawal

might subject everyone in the State to much higher insurance premiums. That is because the Medicaid Expansion will no longer offset the cost to the insurance industry imposed by the ACA's insurance regulations and taxes, a point that is explained in more detail in the severability section below. To make the Medicaid Expansion optional despite the ACA's structure and design " 'would be to make a new law, not to enforce an old one. This is no part of our duty.' *Trade-Mark Cases*, 100 U.S. 82, 99, 25 L. Ed. 550, 1879 Dec. Comm'r Pat. 619 (1879).

Worse, the Government's proposed remedy introduces a new dynamic: States must choose between expanding Medicaid or paying huge tax sums to the federal fisc for the sole benefit of expanding Medicaid in other States. If this divisive dynamic between and among States can be introduced at all, it should be by conscious congressional choice, not by Court-invented interpretation. We do not doubt that States are capable of making decisions when put in a tight spot. We [***291] do doubt the authority of this Court to put them there.

The Government cites a severability clause codified with Medicaid in Chapter 7 of the United States Code stating that if "any provision of this chapter, or the application thereof to any person or circumstance, is held invalid, the remainder of the chapter, and the application of such provision to other persons or circumstances shall not be affected thereby." 42 U.S.C. §1303 (2006 ed.). But that clause tells us only that other provisions in Chapter 7 should not be invalidated if §1396c, the authorization for the cut-off of all Medicaid funds, is unconstitutional. It does not tell us that §1396c can be judicially revised, to say what it does not say. Such a judicial power would not be called the doctrine of severability but perhaps the doctrine of amendatory invalidation--similar to the amendatory veto that permits the Governors of some States to reduce the amounts appropriated in legislation. The proof that such a power does not exist is the fact that it would not preserve other congressional dispositions, but would leave it up to the Court what the "validated" legislation will contain. The Court today opts for permitting the [***292] cut-off of only incremental Medicaid funding, but it might just as well have permitted, say, the cut-off of funds that represent no more than *x* percent of the State's budget. The [**563] Court severs nothing, but simply revises §1396c to read as the Court would desire.

We should not accept the Government's invitation to attempt to solve a constitutional problem by rewriting the Medicaid Expansion so as to allow States that reject it to retain their pre-existing Medicaid funds. Worse, the Government's remedy, [*2668] now adopted by the Court, takes the ACA and this Nation in a new direction and charts a course for federalism that the Court, not the Congress, has chosen; but under the Constitution, that power and authority do not rest with this Court.

V

Severability

The Affordable Care Act seeks to achieve "near-universal" health insurance coverage. §18091(2)(D) (2006 ed., Supp. IV). The two pillars of the Act are the Individual Mandate and the expansion of coverage under Medicaid. In our view, both these central provisions of the Act--the Individual Mandate and Medicaid Expansion--are invalid. It follows, as some of the parties urge, that all other provisions of the Act must fall as well. The following section [***293] explains the severability principles that require this conclusion. This analysis also shows how closely interrelated the Act is, and this is all the more reason why it is judicial usurpation to impose an entirely new mechanism for withdrawal of Medicaid funding, see Part IV-F, *supra*, which is one of many examples of how rewriting the Act alters its dynamics.

A

When an unconstitutional provision is but a part of a more comprehensive statute, the question arises as to the validity of the remaining provisions. The Court's authority to declare a statute partially unconstitutional has been well established since *Marbury v. Madison*, 5 U.S. 137, 1 Cranch 137, 2 L. Ed. 60 (1803), when the Court severed an unconstitutional provision from the Judiciary Act of 1789. And while the Court has sometimes applied "at least a modest presumption in favor of . . . severability," C. Nelson, *Statutory Interpretation* 144 (2010), it has not always done so, see, e.g., *Minnesota v. Mille Lacs Band of Chippewa Indians*, 526 U.S. 172, 190-195, 119 S. Ct. 1187, 143 L. Ed. 2d 270 (1999).

An automatic or too cursory severance of statutory provisions risks "rewrit[ing] a statute and giv[ing] it an effect altogether [***294] different from that sought by the measure viewed as a whole." *Railroad Retirement Bd.*

v. Alton R. Co., 295 U.S. 330, 362, 55 S. Ct. 758, 79 L. Ed. 1468 (1935). The Judiciary, if it orders uncritical severance, then assumes the legislative function; for it imposes on the Nation, by the Court's decree, its own new statutory regime, consisting of policies, risks, and duties that Congress did not enact. That can be a more extreme exercise of the judicial power than striking the whole statute and allowing Congress to address the conditions that pertained when the statute was considered at the outset.

The Court has applied a two-part guide as the framework for severability analysis. The test has been deemed "well established." *Alaska Airlines, Inc. v. Brock*, 480 U.S. 678, 684, 107 S. Ct. 1476, 94 L. Ed. 2d 661 (1987). First, if the Court holds a statutory provision unconstitutional, it then determines whether the now truncated statute will operate in the [**564] manner Congress intended. If not, the remaining provisions must be invalidated. See *id.*, at 685, 107 S. Ct. 1476, 94 L. Ed. 2d 661. In *Alaska Airlines*, the Court clarified that this first inquiry requires more than asking whether "the [***295] balance of the legislation is incapable of functioning independently." *Id.*, at 684, 107 S. Ct. 1476, 94 L. Ed. 2d 661. Even if the remaining provisions will operate in some coherent way, that alone does not save the statute. The question is whether the provisions will work as Congress intended. The "relevant inquiry in evaluating severability is whether the statute will function in a *manner* consistent with the intent of Congress." *Id.*, at 685, 107 S. Ct. 1476, 94 L. Ed. 2d 661 (emphasis [*2669] in original). See also *Free Enter. Fund v. Pub. Co. Accounting Oversight Bd.*, 561 U.S. 477, 130 S. Ct. 3138, 177 L. Ed. 2d 706 (2010) (the Act "remains fully operative as a law with these tenure restrictions excised") (internal quotation marks omitted); *United States v. Booker*, 543 U.S. 220, 227, 125 S. Ct. 738, 160 L. Ed. 2d 621 (2005) ("[T]wo provisions . . . must be invalidated in order to allow the statute to operate in a manner consistent with congressional intent"); *Mille Lacs, supra*, at 194, 119 S. Ct. 1187, 143 L. Ed. 2d 270 ("[E]mbodiment as it did one coherent policy, [the entire order] is inseverable").

Second, even if the remaining provisions can operate [***296] as Congress designed them to operate, the Court must determine if Congress would have enacted them standing alone and without the unconstitutional portion. If Congress would not, those provisions, too, must be invalidated. See *Alaska Airlines, supra*, at 685,

107 S. Ct. 1476, 94 L. Ed. 2d 661 ("[T]he unconstitutional provision must be severed unless the statute created in its absence is legislation that Congress would not have enacted"); see also *Free Enterprise Fund*, *supra*, at ___, 130 S. Ct. 3138, 177 L. Ed. 2d 706 ("[N]othing in the statute's text or historical context makes it 'evident' that Congress, faced with the limitations imposed by the Constitution, would have preferred no Board at all to a Board whose members are removable at will"); *Ayotte v. Planned Parenthood of Northern New Eng.*, 546 U.S. 320, 330, 126 S. Ct. 961, 163 L. Ed. 2d 812 (2006) ("Would the legislature have preferred what is left of its statute to no statute at all"); *Denver Area Ed. Telecommunications Consortium, Inc. v. FCC*, 518 U.S. 727, 767, 116 S. Ct. 2374, 135 L. Ed. 2d 888 (1996) (plurality opinion) ("Would Congress still have passed § 10(a) had it known that the remaining provisions [***297] were invalid" (internal quotation marks and brackets omitted)).

The two inquiries--whether the remaining provisions will operate as Congress designed them, and whether Congress would have enacted the remaining provisions standing alone--often are interrelated. In the ordinary course, if the remaining provisions cannot operate according to the congressional design (the first inquiry), it almost necessarily follows that Congress would not have enacted them (the second inquiry). This close interaction may explain why the Court has not always been precise in distinguishing between the two. There are, however, occasions in which the severability standard's first inquiry (statutory functionality) is not a proxy for the second inquiry (whether the Legislature intended the remaining provisions to stand alone).

[**565] B

The Act was passed to enable affordable, "near-universal" health insurance coverage. 42 U.S.C. §18091(2)(D). The resulting, complex statute consists of mandates and other requirements; comprehensive regulation and penalties; some undoubted taxes; and increases in some governmental expenditures, decreases in others. Under the severability test set out above, it must be determined if those [***298] provisions function in a coherent way and as Congress would have intended, even when the major provisions establishing the Individual Mandate and Medicaid Expansion are themselves invalid.

Congress did not intend to establish the goal of

near-universal coverage without regard to fiscal consequences. See, *e.g.*, ACA § 1563, 124 Stat. 270 ("[T]his Act will reduce the Federal deficit between 2010 and 2019"). And it did not intend to impose the inevitable costs on any one industry or group of individuals. The whole design of the Act is to balance the costs and benefits affecting each set of regulated [*2670] parties. Thus, individuals are required to obtain health insurance. See 26 U.S.C. §5000A(a). Insurance companies are required to sell them insurance regardless of patients' pre-existing conditions and to comply with a host of other regulations. And the companies must pay new taxes. See §4980I (high-cost insurance plans); 42 U.S.C. §§300gg(a)(1), 300gg-4(b) (community rating); §§300gg-1, 300gg-3, 300gg-4(a) (guaranteed issue); §300gg-11 (elimination of coverage limits); §300gg-14(a) (dependent children up to age 26); ACA §§9010, 10905, 124 Stat. 865, 1017 (excise tax); Health Care and Education [***299] Reconciliation Act of 2010 (HCERA) §1401, 124 Stat. 1059 (excise tax). States are expected to expand Medicaid eligibility and to create regulated marketplaces called exchanges where individuals can purchase insurance. See 42 U.S.C. §§1396a(a)(10)(A)(i)(VIII) (2006 ed., Supp. IV) (Medicaid Expansion), 18031 (exchanges). Some persons who cannot afford insurance are provided it through the Medicaid Expansion, and others are aided in their purchase of insurance through federal subsidies available on health-insurance exchanges. See 26 U.S.C. §36B (2006 ed., Supp. IV), 42 U.S.C. §18071 (2006 ed., Supp. IV) (federal subsidies). The Federal Government's increased spending is offset by new taxes and cuts in other federal expenditures, including reductions in Medicare and in federal payments to hospitals. See, *e.g.*, §1395ww(r) (Medicare cuts); ACA Title IX, Subtitle A, 124 Stat. 847 ("Revenue Offset Provisions"). Employers with at least 50 employees must either provide employees with adequate health benefits or pay a financial exaction if an employee who qualifies for federal subsidies purchases insurance through an exchange. See 26 U.S.C. §4980H (2006 ed., Supp. IV).

In short, the Act [***300] attempts to achieve near-universal health insurance coverage by spreading its costs to individuals, insurers, governments, hospitals, and employers--while, at the same time, offsetting significant portions of those costs with new benefits to each group. For example, the Federal Government bears the burden of paying billions for the new entitlements mandated by the Medicaid Expansion and federal subsidies for insurance

purchases on the exchanges; but it benefits from reductions in the reimbursements it pays to [*566] hospitals. Hospitals lose those reimbursements; but they benefit from the decrease in uncompensated care, for under the insurance regulations it is easier for individuals with pre-existing conditions to purchase coverage that increases payments to hospitals. Insurance companies bear new costs imposed by a collection of insurance regulations and taxes, including "guaranteed issue" and "community rating" requirements to give coverage regardless of the insured's pre-existing conditions; but the insurers benefit from the new, healthy purchasers who are forced by the Individual Mandate to buy the insurers' product and from the new low-income Medicaid recipients who will enroll in [***301] insurance companies' Medicaid-funded managed care programs. In summary, the Individual Mandate and Medicaid Expansion offset insurance regulations and taxes, which offset reduced reimbursements to hospitals, which offset increases in federal spending. So, the Act's major provisions are interdependent.

The Act then refers to these interdependencies as "shared responsibility." See ACA Subtitle F, Title I, 124 Stat. 242 ("Shared Responsibility"); ACA §1501, *ibid.* (same); ACA §1513, *id.*, at 253 (same); ACA §4980H, *ibid.* (same). In at least six places, the Act describes the Individual Mandate as working "together with the other provisions of this Act." 42 U.S.C. §18091(2)(C) (2006 ed., Supp. IV) [*2671] (working "together" to "add millions of new consumers to the health insurance market"); §18091(2)(E) (working "together" to "significantly reduce" the economic cost of the poorer health and shorter lifespan of the uninsured); §18091(2)(F) (working "together" to "lower health insurance premiums"); §18091(2)(G) (working "together" to "improve financial security for families"); §18091(2)(I) (working "together" to minimize "adverse selection and broaden the health insurance risk pool to include healthy [***302] individuals"); §18091(2)(J) (working "together" to "significantly reduce administrative costs and lower health insurance premiums"). The Act calls the Individual Mandate "an essential part" of federal regulation of health insurance and warns that "the absence of the requirement would undercut Federal regulation of the health insurance market." §18091(2)(H).

C

One preliminary point should be noted before applying severability principles to the Act. To be sure, an argument can be made that those portions of the Act that none of the parties has standing to challenge cannot be held nonseverable. The response to this argument is that our cases do not support it. See, *e.g.*, *Williams v. Standard Oil Co. of La.*, 278 U.S. 235, 242-244, 49 S. Ct. 115, 73 L. Ed. 287 (1929) (holding nonseverable statutory provisions that did not burden the parties). It would be particularly destructive of sound government to apply such a rule with regard to a multifaceted piece of legislation like the ACA. It would take years, perhaps decades, for each of its provisions to be adjudicated separately--and for some of them (those simply expending federal funds) no one may have separate standing. The Federal Government, [***303] the States, and private parties ought to know at once whether the entire legislation fails.

The opinion now explains in Part V-C-1, *infra*, why the Act's major provisions are not severable from the Mandate and Medicaid Expansion. It [*567] proceeds from the insurance regulations and taxes (C-1-a), to the reductions in reimbursements to hospitals and other Medicare reductions (C-1-b), the exchanges and their federal subsidies (C-1-c), and the employer responsibility assessment (C-1-d). Part V-C-2, *infra*, explains why the Act's minor provisions also are not severable.

1

The Act's Major Provisions

Major provisions of the Affordable Care Act--*i.e.*, the insurance regulations and taxes, the reductions in federal reimbursements to hospitals and other Medicare spending reductions, the exchanges and their federal subsidies, and the employer responsibility assessment--cannot remain once the Individual Mandate and Medicaid Expansion are invalid. That result follows from the undoubted inability of the other major provisions to operate as Congress intended without the Individual Mandate and Medicaid Expansion. Absent the invalid portions, the other major provisions could impose enormous risks of unexpected burdens [***304] on patients, the health-care community, and the federal budget. That consequence would be in absolute conflict with the ACA's design of "shared responsibility," and would pose a threat to the Nation that Congress did not intend.

a

Insurance Regulations and Taxes

Without the Individual Mandate and Medicaid Expansion, the Affordable Care Act's insurance regulations and insurance taxes impose risks on insurance companies and their customers that this Court cannot measure. Those risks would undermine Congress' scheme of "shared responsibility." [*2672] See 26 U.S.C. §4980I (2006 ed., Supp. IV) (high-cost insurance plans); 42 U.S.C. §§300gg(a)(1) (2006 ed., Supp. IV), 300gg-4(b) (community rating); §§300gg-1, 300gg-3, 300gg-4(a) (guaranteed issue); §300gg-11 (elimination of coverage limits); §300gg-14(a) (dependent children up to age 26); ACA §§9010, 10905, 124 Stat. 865, 1017 (excise tax); HCERA §1401, 124 Stat. 1059 (excise tax).

The Court has been informed by distinguished economists that the Act's Individual Mandate and Medicaid Expansion would each increase revenues to the insurance industry by about \$350 billion over 10 years; that this combined figure of \$700 billion is necessary to offset [***305] the approximately \$700 billion in new costs to the insurance industry imposed by the Act's insurance regulations and taxes; and that the new \$700-billion burden would otherwise dwarf the industry's current profit margin. See Brief for Economists as *Amici Curiae* in No. 11-393 etc. (Severability), pp. 9-16, 10a.

If that analysis is correct, the regulations and taxes will mean higher costs for insurance companies. Higher costs may mean higher premiums for consumers, despite the Act's goal of "lower[ing] health insurance premiums." 42 U.S.C. §18091(2)(F) (2006 ed., Supp. IV). Higher costs also could threaten the survival of health-insurance companies, despite the Act's goal of "effective health insurance markets." §18091(2)(J).

The actual cost of the regulations and taxes may be more or less than predicted. What is known, however, is that severing other provisions from the Individual Mandate and Medicaid [**568] Expansion necessarily would impose significant risks and real uncertainties on insurance companies, their customers, all other major actors in the system, and the government treasury. And what also is known is this: Unnecessary risks and avoidable uncertainties are hostile to economic [***306] progress and fiscal stability and thus to the safety and welfare of the Nation and the Nation's freedom. If those risks and uncertainties are to be imposed, it must not be

by the Judiciary.

b

Reductions in Reimbursements to Hospitals and Other Reductions in Medicare Expenditures

The Affordable Care Act reduces payments by the Federal Government to hospitals by more than \$200 billion over 10 years. See 42 U.S.C. §1395ww(b)(3)(B)(xi)-(xii) (2006 ed., Supp. IV); §1395ww(q); §1395ww(r); §1396r-4(f)(7).

The concept is straightforward: Near-universal coverage will reduce uncompensated care, which will increase hospitals' revenues, which will offset the government's reductions in Medicare and Medicaid reimbursements to hospitals. Responsibility will be shared, as burdens and benefits balance each other. This is typical of the whole dynamic of the Act.

Invalidating the key mechanisms for expanding insurance coverage, such as community rating and the Medicaid Expansion, without invalidating the reductions in Medicare and Medicaid, distorts the ACA's design of "shared responsibility." Some hospitals may be forced to raise the cost of care in order to offset the reductions in reimbursements, which [***307] could raise the cost of insurance premiums, in contravention of the Act's goal of "lower[ing] health insurance premiums." 42 U.S.C. §18091(2)(F) (2006 ed., Supp. IV). See also §18091(2)(I) (goal of "lower[ing] health insurance premiums"); §18091(2)(J) (same). Other hospitals, particularly safety-net hospitals that serve a large number of uninsured patients, may be forced to shut down. Cf. National Assn. of Public [*2673] Hospitals, 2009 Annual Survey: Safety Net Hospitals and Health Systems Fulfill Mission in Uncertain Times 5-6 (Feb. 2011). Like the effect of preserving the insurance regulations and taxes, the precise degree of risk to hospitals is unknowable. It is not the proper role of the Court, by severing part of a statute and allowing the rest to stand, to impose unknowable risks that Congress could neither measure nor predict. And Congress could not have intended that result in any event.

There is a second, independent reason why the reductions in reimbursements to hospitals and the ACA's other Medicare cuts must be invalidated. The ACA's \$455 billion in Medicare and Medicaid savings offset the \$434-billion cost of the Medicaid Expansion. See CBO

Estimate, Table 2 (Mar. 20, 2010) [***308] . The reductions allowed Congress to find that the ACA "will reduce the Federal deficit between 2010 and 2019" and "will continue to reduce budget deficits after 2019." ACA §§1563(a)(1), (2), 124 Stat. 270.

That finding was critical to the ACA. The Act's "shared responsibility" concept extends to the federal budget. Congress chose to offset new federal expenditures with budget cuts and tax increases. That is why the United States has explained in the course of this litigation that "[w]hen Congress passed the ACA, it was careful to ensure that any increased [**569] spending, including on Medicaid, was offset by other revenue-raising and cost-saving provisions." Memorandum in Support of Government's Motion for Summary Judgment in No. 3-10-cv-91, p. 41.

If the Medicare and Medicaid reductions would no longer be needed to offset the costs of the Medicaid Expansion, the reductions would no longer operate in the manner Congress intended. They would lose their justification and foundation. In addition, to preserve them would be "to eliminate a significant *quid pro quo* of the legislative compromise" and create a statute Congress did not enact. *Legal Services Corporation v. Velazquez*, 531 U.S. 533, 561, 121 S. Ct. 1043, 149 L. Ed. 2d 63 (2001) [***309] (Scalia, J., dissenting). It is no secret that cutting Medicare is unpopular; and it is most improbable Congress would have done so without at least the assurance that it would render the ACA deficit-neutral. See ACA §§1563(a)(1), (2), 124 Stat. 270.

c

Health Insurance Exchanges and Their Federal Subsidies

The ACA requires each State to establish a health-insurance "exchange." Each exchange is a one-stop marketplace for individuals and small businesses to compare community-rated health insurance and purchase the policy of their choice. The exchanges cannot operate in the manner Congress intended if the Individual Mandate, Medicaid Expansion, and insurance regulations cannot remain in force.

The Act's design is to allocate billions of federal dollars to subsidize individuals' purchases on the exchanges. Individuals with incomes between 100 and 400 percent of the poverty level receive tax credits to

offset the cost of insurance to the individual purchaser. 26 U.S.C. §36B (2006 ed., Supp. IV); 42 U.S.C. §18071 (2006 ed., Supp. IV). By 2019, 20 million of the 24 million people who will obtain insurance through an exchange are expected to receive an average federal subsidy of \$6,460 per [***310] person. See CBO, *Analysis of the Major Health Care Legislation Enacted in March 2010*, pp. 18-19 (Mar. 30, 2011). Without the community-rating insurance regulation, however, the average federal subsidy could be much higher; for community rating greatly lowers the enormous [*2674] premiums unhealthy individuals would otherwise pay. Federal subsidies would make up much of the difference.

The result would be an unintended boon to insurance companies, an unintended harm to the federal fisc, and a corresponding breakdown of the "shared responsibility" between the industry and the federal budget that Congress intended. Thus, the federal subsidies must be invalidated.

In the absence of federal subsidies to purchasers, insurance companies will have little incentive to sell insurance on the exchanges. Under the ACA's scheme, few, if any, individuals would want to buy individual insurance policies outside of an exchange, because federal subsidies would be unavailable outside of an exchange. Difficulty in attracting individuals outside of the exchange would in turn motivate insurers to enter exchanges, despite the exchanges' onerous regulations. See 42 U.S.C. §18031. That system of incentives collapses [***311] if the federal subsidies are invalidated. Without the federal subsidies, individuals would lose the main incentive to purchase insurance inside the exchanges, [**570] and some insurers may be unwilling to offer insurance inside of exchanges. With fewer buyers and even fewer sellers, the exchanges would not operate as Congress intended and may not operate at all.

There is a second reason why, if community rating is invalidated by the Mandate and Medicaid Expansion's invalidity, exchanges cannot be implemented in a manner consistent with the Act's design. A key purpose of an exchange is to provide a marketplace of insurance options where prices are standardized regardless of the buyer's pre-existing conditions. See *ibid.* An individual who shops for insurance through an exchange will evaluate different insurance products. The products will offer different benefits and prices. Congress designed the exchanges so the shopper can compare benefits and

prices. But the comparison cannot be made in the way Congress designed if the prices depend on the shopper's pre-existing health conditions. The prices would vary from person to person. So without community rating--which prohibits insurers from basing [***312] the price of insurance on pre-existing conditions--the exchanges cannot operate in the manner Congress intended.

d

Employer-Responsibility Assessment

The employer responsibility assessment provides an incentive for employers with at least 50 employees to provide their employees with health insurance options that meet minimum criteria. See 26 U.S.C. §4980H (2006 ed., Supp. IV). Unlike the Individual Mandate, the employer-responsibility assessment does not require employers to provide an insurance option. Instead, it requires them to make a payment to the Federal Government if they do not offer insurance to employees and if insurance is bought on an exchange by an employee who qualifies for the exchange's federal subsidies. See *ibid*.

For two reasons, the employer-responsibility assessment must be invalidated. First, the ACA makes a direct link between the employer-responsibility assessment and the exchanges. The financial assessment against employers occurs only under certain conditions. One of them is the purchase of insurance by an employee on an exchange. With no exchanges, there are no purchases on the exchanges; and with no purchases on the exchanges, there is nothing to trigger the [***313] employer-responsibility assessment.

Second, after the invalidation of burdens on individuals (the Individual Mandate), insurers (the insurance regulations and taxes), States (the Medicaid Expansion), the Federal Government (the federal subsidies [*2675] for exchanges and for the Medicaid Expansion), and hospitals (the reductions in reimbursements), the preservation of the employer-responsibility assessment would upset the ACA's design of "shared responsibility." It would leave employers as the only parties bearing any significant responsibility. That was not the congressional intent.

2

The Act's Minor Provisions

The next question is whether the invalidation of the ACA's major provisions requires the Court to invalidate the ACA's other provisions. It does.

The ACA is over 900 pages long. Its regulations include requirements [**571] ranging from a break time and secluded place at work for nursing mothers, see 29 U.S.C. §207(r)(1) (2006 ed., Supp. IV), to displays of nutritional content at chain restaurants, see 21 U.S.C. §343(q)(5)(H). The Act raises billions of dollars in taxes and fees, including exactions imposed on high-income taxpayers, see ACA §§9015, 10906; HCERA §1402, medical devices, see 26 U.S.C. §4191 (2006 ed., Supp. IV), [***314] and tanning booths, see §5000B. It spends government money on, among other things, the study of how to spend less government money. 42 U.S.C. §1315a. And it includes a number of provisions that provide benefits to the State of a particular legislator. For example, §10323, 124 Stat. 954, extends Medicare coverage to individuals exposed to asbestos from a mine in Libby, Montana. Another provision, §2006, *id.*, at 284, increases Medicaid payments only in Louisiana.

Such provisions validate the Senate Majority Leader's statement, " I don't know if there is a senator that doesn't have something in this bill that was important to them. . . . [And] if they don't have something in it important to them, then it doesn't speak well of them. That's what this legislation is all about: It's the art of compromise." Pear, In Health Bill for Everyone, Provisions for a Few, N. Y. Times, Jan. 4, 2010, p. A10 (quoting Sen. Reid). Often, a minor provision will be the price paid for support of a major provision. So, if the major provision were unconstitutional, Congress would not have passed the minor one.

Without the ACA's major provisions, many of these minor provisions will not operate in the manner [***315] Congress intended. For example, the tax increases are "Revenue Offset Provisions" designed to help offset the cost to the Federal Government of programs like the Medicaid Expansion and the exchanges' federal subsidies. See Title IX, Subtitle A-Revenue Offset Provisions, 124 Stat. 847. With the Medicaid Expansion and the exchanges invalidated, the tax increases no longer operate to offset costs, and they no longer serve the purpose in the Act's scheme of "shared responsibility" that Congress intended.

Some provisions, such as requiring chain restaurants to display nutritional content, appear likely to operate as Congress intended, but they fail the second test for severability. There is no reason to believe that Congress would have enacted them independently. The Court has not previously had occasion to consider severability in the context of an omnibus enactment like the ACA, which includes not only many provisions that are ancillary to its central provisions but also many that are entirely unrelated--hitched on because it was a quick way to get them passed despite opposition, or because their proponents could exact their enactment as the *quid pro quo* for their needed support. When we [***316] are confronted with such a so-called "Christmas tree," a law to which many nongermane ornaments have been attached, we think the proper rule must be [*2676] that when the tree no longer exists the ornaments are superfluous. We have no reliable basis for knowing which pieces of the Act would have passed on their own. It is certain that many of them would not have, and it is not a proper function of this Court to guess which. To sever the statute in that manner " 'would be to make a new law, not to enforce an old one. This is not part of our duty.' *Trade-Mark Cases*, 100 U.S., at 99, 25 L. Ed. 550.

[**572] This Court must not impose risks unintended by Congress or produce legislation Congress may have lacked the support to enact. For those reasons, the unconstitutionality of both the Individual Mandate and the Medicaid Expansion requires the invalidation of the Affordable Care Act's other provisions.

* * *

The Court today decides to save a statute Congress did not write. It rules that what the statute declares to be a requirement with a penalty is instead an option subject to a tax. And it changes the intentionally coercive sanction of a total cut-off of Medicaid funds to a supposedly noncoercive cut-off [***317] of only the incremental funds that the Act makes available.

The Court regards its strained statutory interpretation as judicial modesty. It is not. It amounts instead to a vast judicial overreaching. It creates a debilitated, inoperable version of health-care regulation that Congress did not enact and the public does not expect. It makes enactment of sensible health-care regulation more difficult, since Congress cannot start afresh but must take as its point of departure a jumble of now senseless provisions, provisions that certain interests favored under the Court's

new design will struggle to retain. And it leaves the public and the States to expend vast sums of money on requirements that may or may not survive the necessary congressional revision.

The Court's disposition, invented and atextual as it is, does not even have the merit of avoiding constitutional difficulties. It creates them. The holding that the Individual Mandate is a tax raises a difficult constitutional question (what is a direct tax?) that the Court resolves with inadequate deliberation. And the judgment on the Medicaid Expansion issue ushers in new federalism concerns and places an unaccustomed strain upon the Union. [***318] Those States that decline the Medicaid Expansion must subsidize, by the federal tax dollars taken from their citizens, vast grants to the States that accept the Medicaid Expansion. If that destabilizing political dynamic, so antagonistic to a harmonious Union, is to be introduced at all, it should be by Congress, not by the Judiciary.

The values that should have determined our course today are caution, minimalism, and the understanding that the Federal Government is one of limited powers. But the Court's ruling undermines those values at every turn. In the name of restraint, it overreaches. In the name of constitutional avoidance, it creates new constitutional questions. In the name of cooperative federalism, it undermines state sovereignty.

The Constitution, though it dates from the founding of the Republic, has powerful meaning and vital relevance to our own times. The constitutional protections that this case involves are protections of structure. Structural protections--notably, the restraints imposed by federalism and separation of powers--are less romantic and have less obvious a connection to personal freedom than the provisions of the Bill of Rights or the Civil War Amendments. [***319] Hence they tend to be undervalued or even forgotten by our citizens. It should be the responsibility of the Court to teach otherwise, to remind our people that the Framers considered structural protections [*2677] of freedom the most important ones, for which reason they alone were embodied [**573] in the original Constitution and not left to later amendment. The fragmentation of power produced by the structure of our Government is central to liberty, and when we destroy it, we place liberty at peril. Today's decision should have vindicated, should have taught, this truth; instead, our judgment today has disregarded it.

For the reasons here stated, we would find the Act invalid in its entirety. We respectfully dissent.

Justice **Thomas**, dissenting.

I dissent for the reasons stated in our joint opinion, but I write separately to say a word about the Commerce Clause. The joint dissent and The Chief Justice correctly apply our precedents to conclude that the Individual Mandate is beyond the power granted to Congress under the Commerce Clause and the Necessary and Proper Clause. Under those precedents, Congress may regulate "economic activity [that] substantially affects interstate commerce." *United States v. Lopez*, 514 U.S. 549, 560, 115 S. Ct. 1624, 131 L. Ed. 2d 626 (1995). [***320] I adhere to my view that "the very notion of a 'substantial effects' test under the Commerce Clause is inconsistent with the original understanding of Congress' powers and with this Court's early Commerce Clause cases." *United States v. Morrison*, 529 U.S. 598, 627, 120 S. Ct. 1740, 146 L. Ed. 2d 658 (2000) (Thomas, J., concurring); see also *Lopez, supra*, at 584-602, 115 S. Ct. 1624, 131 L. Ed. 2d 626 (Thomas, J., concurring); *Gonzales v. Raich*, 545 U.S. 1, 67-69, 125 S. Ct. 2195, 162 L. Ed. 2d 1 (2005) (Thomas, J., dissenting). As I have explained, the Court's continued use of that test "has encouraged the Federal Government to persist in its view that the Commerce Clause has virtually no limits." *Morrison, supra*, 529 U.S. at 627, 120 S. Ct. 1740, 146 L. Ed. 2d 658. The Government's unprecedented claim in this suit that it may regulate not only economic activity but also *inactivity* that substantially affects interstate commerce is a case in point.

JUDGES: Kennard, J., with George, C. J., Baxter, Werdegar, Chin, and Moreno, JJ., concurring. Concurring opinion by Brown, J.

OPINION BY: KENNARD [**864]

OPINION

KENNARD, J.--Federal law establishes national water quality standards but allows the states to enforce their own water quality laws so long as they comply with federal standards. Operating within this federal-state framework, California's nine Regional Water Quality Control Boards establish water quality policy. They also issue permits for the discharge of treated wastewater; these permits specify the maximum allowable concentration of chemical pollutants in the discharged wastewater.

The question here is this: When a regional board issues a permit to a wastewater treatment facility, must the board take into account the facility's costs of complying with the board's restrictions on pollutants in the wastewater to be discharged? The trial court ruled that California law required a regional board to weigh the economic burden on the facility against the expected

environmental benefits of reducing pollutants in the wastewater discharge. The Court of Appeal disagreed. On petitions by the municipal operators of three wastewater treatment facilities, we granted review.

We reach the following conclusions: Because both California law and federal law require regional boards to comply with federal clean water standards, and because the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than the applicable federal standards require. When, however, a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit *more stringent* than federal law requires, California law allows the board to take into account economic [**865] factors, including the wastewater discharger's cost of compliance. We remand this case for further proceedings to determine whether the pollutant limitations in the permits challenged here meet or exceed federal standards.

[*619] I. Statutory Background

The quality of our nation's waters is governed by a "complex statutory and regulatory scheme ... that implicates both federal and state administrative responsibilities." (*PUD No. 1 of Jefferson County v. Washington Department of Ecology* (1994) 511 U.S. 700, 704 [128 L. Ed. 2d 716, 114 S. Ct. 1900].) We first discuss California law, then federal law.

A. California Law

In California, the controlling law is the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), which was enacted in 1969. (Wat. Code, § 13000 et seq., added by Stats. 1969, ch. 482, § 18, p. 1051.)¹ Its goal is "to attain the highest water [***307] quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible." (§ 13000.) The task of accomplishing this belongs to the State Water Resources Control Board (State Board) and the nine Regional Water Quality Control Boards; together the State Board and the regional boards comprise "the principal state agencies with primary responsibility for the coordination and control of water quality." (§ 13001.) As relevant here, one of those regional boards oversees

the Los Angeles region (the Los Angeles Regional Board).²

1 Further undesignated statutory references are to the Water Code.

2 The Los Angeles water region "comprises all basins draining into the Pacific Ocean between the southeasterly boundary, located in the westerly part of Ventura County, of the watershed of Rincon Creek and a line which coincides with the southeasterly boundary of Los Angeles County from the ocean to San Antonio Peak and follows thence the divide between San Gabriel River and Lytle Creek drainages to the divide between Sheep Creek and San Gabriel River drainages." (§ 13200, subd. (d).)

(1) Whereas the State Board establishes statewide policy for water quality control (§ 13140), the regional boards "formulate and adopt water quality control plans for all areas within [a] region" (§ 13240). The regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. (§ 13050, subd. (j).) Basin plans must be consistent with "state policy for water quality control." (§ 13240.)

B. Federal Law

In 1972, Congress enacted amendments (Pub.L. No. 92-500 (Oct. 18, 1972) 86 Stat. 816) to the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), which, as amended in 1977, is commonly known as the Clean [*620] Water Act. The Clean Water Act is a "comprehensive water quality statute designed to 'restore and maintain the chemical, physical, and biological integrity of the Nation's waters.'" (*PUD No. 1 of Jefferson County v. Washington Dept. of Ecology, supra*, 511 U.S. at p. 704, quoting 33 U.S.C. § 1251(a).) The act's national goal was to eliminate by the year 1985 "the discharge of pollutants into the navigable waters" of the United States. (33 U.S.C. § 1251(a)(1).) To accomplish this goal, the act established "effluent limitations," which are restrictions on the "quantities, rates, and concentrations of chemical, physical, biological, and other constituents"; these effluent limitations allow the discharge of pollutants only when the water has been satisfactorily treated to conform with federal water quality standards. (33 U.S.C. §§ 1311, 1362(11).)

(2) Under the federal Clean Water Act, each state is free to enforce its own water quality laws so long as its effluent limitations are not "less stringent" than those set out in the Clean Water Act. (33 U.S.C. § 1370.) This led the California Legislature in 1972 to amend the state's Porter-Cologne Act "to ensure consistency with the requirements for state programs implementing the Federal Water Pollution Control Act." (§ 13372.)

[**866] (3) Roughly a dozen years ago, the United States Supreme Court, in *Arkansas v. Oklahoma* (1992) 503 U.S. 91 [117 L. Ed. 2d 239, 112 S. Ct. 1046], described the distinct roles of the state and federal agencies in enforcing water quality: "The Clean Water Act anticipates a partnership between the States and the Federal Government, animated by a shared objective: 'to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.' 33 U.S.C. § 1251(a). Toward [***308] this end, [the Clean Water Act] provides for two sets of water quality measures. 'Effluent limitations' are promulgated by the [Environmental Protection Agency (EPA)] and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources.[³] See §§ 1311, 1314. '[W]ater quality standards' are, in general, promulgated by the States and establish the desired condition of a waterway. See § 1313. These standards supplement effluent limitations 'so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.' *EPA v. California ex rel. State Water Resources Control Bd.*, 426 U.S. 200, 205, n. 12 [48 L. Ed. 2d 578, 96 S. Ct. 2022, 2025, n. 12] (1976).

3 A "point source" is "any discernible, confined and discrete conveyance" and includes "any pipe, ditch, channel ... from which pollutants ... may be discharged." (33 U.S.C. § 1362 (14).)

[*621] (4) "The EPA provides States with substantial guidance in the drafting of water quality standards. See generally 40 CFR pt. 131 (1991) (setting forth model water quality standards). Moreover, [the Clean Water Act] requires, *inter alia*, that state authorities periodically review water quality standards and secure the EPA's approval of any revisions in the standards. If the EPA recommends changes to the standards and the State fails to comply with that recommendation, the Act authorizes the EPA to

promulgate water quality standards for the State. 33 U.S.C. § 1313(c)." (*Arkansas v. Oklahoma*, *supra*, 503 U.S. at p. 101.)

(5) Part of the federal Clean Water Act is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma*, *supra*, 503 U.S. at p. 101.) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)

With this federal and state statutory framework in mind, we now turn to the facts of this case.

II. Factual Background

This case involves three publicly owned treatment plants that discharge wastewater under NPDES permits issued by the Los Angeles Regional Board.

The City of Los Angeles owns and operates the Donald C. Tillman Water Reclamation Plant (Tillman Plant), which serves the San Fernando Valley. The City of Los Angeles also owns and operates the Los Angeles-Glendale Water Reclamation Plant (Los Angeles-Glendale Plant), which processes wastewater from areas within the City of Los Angeles and the independent cities of Glendale and Burbank. Both the Tillman Plant and the Los Angeles-Glendale Plant discharge wastewater directly into the Los Angeles River, now a concrete-lined flood control channel that runs through the City of Los Angeles, ending at the Pacific Ocean. The State Board and the Los Angeles Regional Board consider the Los Angeles River to be a navigable water of the United States for purposes of the federal Clean Water Act.

The third plant, the Burbank Water Reclamation Plant (Burbank Plant), is owned and operated by the City of Burbank [***309], serving residents and businesses within that city. The Burbank Plant discharges wastewater into the Burbank Western Wash, which drains into the Los Angeles River.

[*622] All three plants, which together process

hundreds of millions of gallons of sewage [**867] each day, are tertiary treatment facilities; that is, the treated wastewater they release is processed sufficiently to be safe not only for use in watering food crops, parks, and playgrounds, but also for human body contact during recreational water activities such as swimming.

In 1998, the Los Angeles Regional Board issued renewed NPDES permits to the three wastewater treatment facilities under a basin plan it had adopted four years earlier for the Los Angeles River and its estuary. That 1994 basin plan contained general narrative criteria pertaining to the existing and potential future beneficial uses and water quality objectives for the river and estuary.⁴ The narrative criteria included municipal and domestic water supply, swimming and other recreational water uses, and fresh water habitat. The plan further provided: "All waters shall be maintained free of toxic substances in concentrations that are toxic to, or that produce detrimental physiological responses in human, plant, animal, or aquatic life." The 1998 permits sought to reduce these narrative criteria to specific numeric requirements setting daily maximum limitations for more than 30 pollutants present in the treated wastewater, measured in milligrams or micrograms per liter of effluent.⁵

4 This opinion uses the terms "narrative criteria" or descriptions, and "numeric criteria" or effluent limitations. Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, "no toxic pollutants in toxic amounts" would be a narrative description. This contrasts with numeric criteria, which detail specific pollutant concentrations, such as parts per million of a particular substance.

5 For example, the permits for the Tillman and Los Angeles-Glendale Plants limited the amount of fluoride in the discharged wastewater to 2 milligrams per liter and the amount of mercury to 2.1 micrograms per liter.

The Cities of Los Angeles and Burbank (Cities) filed appeals with the State Board, contending that achievement of the numeric requirements would be too costly when considered in light of the potential benefit to water quality, and that the pollutant restrictions in the NPDES permits were unnecessary to meet the narrative criteria described in the basin plan. The State Board summarily denied the Cities' appeals.

Thereafter, the Cities filed petitions for writs of administrative mandate in the superior court. They alleged, among other things, that the Los Angeles Regional Board failed to comply with sections 13241 and 13263, part of California's Porter-Cologne Act, because it did not consider the economic burden on the Cities in having to reduce substantially the pollutant content of their discharged wastewater. They also alleged that compliance with the pollutant restrictions set out in the NPDES permits issued by the regional [*623] board would greatly increase their costs of treating the wastewater to be discharged into the Los Angeles River. According to the City of Los Angeles, its compliance costs would exceed \$ 50 million annually, representing more than 40 percent of its entire budget for operating its four wastewater treatment plants and its sewer system; the City of Burbank estimated its added costs at over \$ 9 million annually, a nearly 100 percent increase above its \$ 9.7 million annual budget for wastewater treatment.

[***310] The State Board and the Los Angeles Regional Board responded that sections 13241 and 13263 do not require consideration of costs of compliance when a regional board issues a NPDES permit that restricts the pollutant content of discharged wastewater.

The trial court stayed the contested pollutant restrictions for each of the three wastewater treatment plants. It then ruled that sections 13241 and 13263 of California's Porter-Cologne Act required a regional board to consider costs of compliance not only when it adopts a basin or water quality plan but also when, as here, it issues an NPDES permit setting the allowable pollutant content of a treatment plant's discharged wastewater. The court found no evidence that the Los Angeles Regional Board had considered economic factors at either stage. Accordingly, the trial court granted the Cities' petitions for writs of mandate, and it ordered the Los Angeles Regional Board to vacate the contested restrictions on pollutants in the wastewater discharge permits issued to the three municipal plants here and to conduct hearings [**868] to consider the Cities' costs of compliance before the board's issuance of new permits. The Los Angeles Regional Board and the State Board filed appeals in both the Los Angeles and Burbank cases.⁶

⁶ Unchallenged on appeal and thus not affected by our decision are the trial court's rulings that (1) the Los Angeles Regional Board failed to show how it derived from the narrative criteria in the

governing basin plan the specific numeric pollutant limitations included in the permits; (2) the administrative record failed to support the specific effluent limitations; (3) the permits improperly imposed daily maximum limits rather than weekly or monthly averages; and (4) the permits improperly specified the manner of compliance.

The Court of Appeal, after consolidating the cases, reversed the trial court. It concluded that sections 13241 and 13263 require a regional board to take into account "economic considerations" when it adopts water quality standards in a basin plan but not when, as here, the regional board sets specific pollutant restrictions in wastewater discharge permits intended to satisfy those standards. We granted the Cities' petition for review.

[*624] III. Discussion

A. Relevant State Statutes

The California statute governing the issuance of *wastewater permits* by a regional board is section 13263, which was enacted in 1969 as part of the Porter-Cologne Act. (See *ante*, at p. 619.) Section 13263 provides in relevant part: "*The regional board, after any necessary hearing, shall prescribe requirements as to the nature of any proposed discharge [of wastewater]. The requirements shall implement any relevant water quality control plans that have been adopted, and shall take into consideration the beneficial uses to be protected, the water quality objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and the provisions of Section 13241.*" (§ 13263, subd. (a), italics added.)

Section 13241 states: "Each regional board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance; however, it is recognized that it may be possible for the quality of water to be changed to some degree without unreasonably affecting beneficial uses. Factors to be considered by a regional board in establishing water quality objectives shall include, but not necessarily be limited to, all of the following:

[***311] "(a) Past, present, and probable future beneficial uses of water.

"(b) Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.

"(c) Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.

"(d) *Economic considerations.*

"(e) The need for developing housing within the region.

"(f) The need to develop and use recycled water."
(Italics added.)

The Cities here argue that section 13263's express reference to section 13241 requires the Los Angeles Regional Board to consider section 13241's listed factors, notably "[e]conomic considerations," before issuing NPDES permits requiring specific pollutant reductions in discharged effluent or treated wastewater.

[*625] Thus, at issue is language in section 13263 stating that when a regional board "prescribe[s] requirements as to the nature of any proposed discharge" of treated wastewater it must "take into consideration" certain factors including "the provisions of Section 13241." According to the Cities, this statutory language requires that a regional board make an independent evaluation of the section 13241 factors, including "economic considerations," before restricting the pollutant content in an NPDES permit. This was the view expressed in the trial court's ruling. The Court of Appeal rejected that view. It held that a regional board need consider the section 13241 factors only when it adopts a basin or water quality plan, but not when, as in this case, it issues a wastewater discharge [*869] permit that sets specific numeric limitations on the various chemical pollutants in the wastewater to be discharged. As explained below, the Court of Appeal was partly correct.

B. Statutory Construction

(6) When construing any statute, our task is to determine the Legislature's intent when it enacted the statute "so that we may adopt the construction that best effectuates the purpose of the law." (*Hassan v. Mercy American River Hospital* (2003) 31 Cal.4th 709, 715 [3 Cal. Rptr. 3d 623, 74 P.3d 726]; see *Esberg v. Union Oil Co.* (2002) 28 Cal.4th 262, 268 [121 Cal. Rptr. 2d 203,

47 P.3d 1069].) In doing this, we look to the statutory language, which ordinarily is "the most reliable indicator of legislative intent." (*Hassan, supra*, at p. 715.)

(7) As mentioned earlier, our Legislature's 1969 enactment of the Porter-Cologne Act, which sought to ensure the high quality of water in this state, predated the 1972 enactment by Congress of the precursor to the federal Clean Water Act. Included in California's original Porter-Cologne Act were sections 13263 and 13241. Section 13263 directs regional boards, when issuing wastewater discharge permits, to take into account various factors, including those set out in section 13241. Listed among the section 13241 factors is "[e]conomic considerations." (§ 13241, subd. (d).) The plain language of sections 13263 and 13241 indicates the Legislature's intent in 1969, when these statutes were enacted, that a regional board consider the cost of compliance when setting effluent limitations in a wastewater discharge permit.

Our construction of sections 13263 and 13241 does not end with their plain statutory language, however. We must also analyze them in the context of the statutory scheme of which they are a part. (*State Farm Mutual Automobile Ins. Co. v. Garamendi* (2004) 32 Cal.4th 1029, 1043 [12 ***312] Cal. Rptr. 3d 343, 88 P.3d 71].) Like sections 13263 and 13241, section 13377 is part of the Porter-Cologne Act. But unlike the former two statutes, section 13377 was [*626] not enacted until 1972, shortly after Congress, through adoption of the Federal Water Pollution Control Act Amendments, established a comprehensive water quality policy for the nation.

(8) Section 13377 specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, section 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water Act. That act prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants such as those before us here must comply with the act's clean water standards, regardless of cost (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3)). (9) Because section 13263 cannot authorize what federal law forbids, it

cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards.⁷ Such a construction of section 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's [**870] declaration in section 13377 that all discharged wastewater must satisfy federal standards.⁸ This was also the conclusion of the Court of Appeal. Moreover, under the federal Constitution's supremacy clause (art. VI), a state law that conflicts with federal law is " 'without effect.' " (*Cipollone v. Liggett Group, Inc.* (1992) 505 U.S. 504, 516 [120 L. Ed. 2d 407, 112 S. Ct. 2608]; see *Dowhal v. SmithKline Beecham Consumer Healthcare* (2004) 32 Cal.4th 910, 923 [12 Cal. Rptr. 3d 262, 88 P.3d 1].) To comport with the principles of federal supremacy, California law cannot authorize this [*627] state's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law.

7 The concurring opinion misconstrues both state and federal clean water law when it describes the issue here as "whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions *that meet the clean water standards in more cost-effective and economically efficient ways.*" (Conc. opn. of Brown, J., *post*, at p. 629, some italics added.) This case has nothing to do with meeting federal standards in more cost effective and economically efficient ways. State law, as we have said, allows a regional board to consider a permit holder's compliance cost to *relax* pollutant concentrations, as measured by numeric standards, for pollutants in a wastewater discharge permit. (§§ 13241 & 13263.) Federal law, by contrast, as stated above in the text, "prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants such as those before us here must comply with the [federal] act's *clean water standards, regardless of cost* (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3))." (Italics added.)

8 As amended in 1978, section 13377 provides for the issuance of waste discharge permits that

comply with federal clean water law "together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." We do not here decide how this provision would affect the cost-consideration requirements of sections 13241 and 13263 when more stringent effluent standards or limitations in a permit are justified for some reason independent of compliance with federal law.

[***313] Thus, in this case, whether the Los Angeles Regional Board should have complied with sections 13263 and 13241 of California's Porter-Cologne Act by taking into account "economic considerations," such as the costs the permit holder will incur to comply with the numeric pollutant restrictions set out in the permits, depends on whether those restrictions meet or exceed the requirements of the federal Clean Water Act. We therefore remand this matter for the trial court to resolve that issue.

C. Other Contentions

The Cities argue that requiring a regional board at the wastewater discharge permit stage to consider the permit holder's cost of complying with the board's restrictions on pollutant content in the water is consistent with federal law. In support, the Cities point to certain provisions of the federal Clean Water Act. They cite section 1251(a)(2) of title 33 United States Code, which sets, as a national goal "*wherever attainable*," an interim goal for water quality that protects fish and wildlife, and section 1313(c)(2)(A) of the same title, which requires consideration, among other things, of waters' "*use and value for navigation*" when revising or adopting a "water quality standard." (Italics added.) These two federal statutes, however, pertain not to permits for wastewater discharge, at issue here, but to establishing water quality standards, not at issue here. Nothing in the federal Clean Water Act suggests that a state is free to disregard or to weaken the federal requirements for clean water when an NPDES permit holder alleges that compliance with those requirements will be too costly.

(10) At oral argument, counsel for amicus curiae National Resources Defense Council, which argued on behalf of California's State Board and regional water boards, asserted that the federal Clean Water Act incorporates state water policy into federal law, and that

therefore a regional board's consideration of economic factors to justify greater pollutant concentration in discharged wastewater would conflict with the federal act even if the specified pollutant restrictions were not less stringent than those required under federal law. We are not persuaded. The federal Clean Water Act reserves to the states significant aspects of water quality policy (33 U.S.C. § 1251(b)), and it specifically grants the states authority to "enforce any effluent limitation" that is not "*less stringent*" than the federal standard (33 U.S.C. § 1370, italics added). It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit [*628] a state--when imposing effluent limitations that are *more stringent* than required by federal law--from taking into account the economic effects of doing so.

Also at oral argument, counsel for the Cities asserted that if the three municipal wastewater treatment facilities ceased releasing their treated wastewater into the concrete channel that makes up the Los Angeles River, it would (other than during the rainy season) contain no water at all, and thus would not be a "navigable water" of the [*871] United States subject to the Clean Water Act. (See *Solid Waste Agency v. United States Army Corps of Engineers* (2001) 531 U.S. 159, 172 [148 L. Ed. 2d 576, 121 S. Ct. 675] ["The term 'navigable' has at least the import of showing us what Congress had in mind as its authority for enacting the CWA: its traditional jurisdiction over waters that were or had been navigable in fact or which could reasonably be so made."].) It is unclear when the Cities first raised this issue. The Court of Appeal did not discuss it in its opinion, and the Cities did not seek rehearing on this ground. (See Cal. Rules of Court, rule [***314] 28(c)(2).) Concluding that the issue is outside our grant of review, we do not address it.

Conclusion

Through the federal Clean Water Act, Congress has regulated the release of pollutants into our national waterways. The states are free to manage their own water quality programs so long as they do not compromise the federal clean water standards. When enacted in 1972, the goal of the Federal Water Pollution Control Act Amendments was to *eliminate* by the year 1985 the discharge of pollutants into the nation's navigable waters. In furtherance of that goal, the Los Angeles Regional Board indicated in its 1994 basin plan on water quality the intent, insofar as possible, to remove from the water

in the Los Angeles River toxic substances in amounts harmful to humans, plants, and aquatic life. What is not clear from the record before us is whether, in limiting the chemical pollutant content of wastewater to be discharged by the Tillman, Los Angeles-Glendale, and Burbank wastewater treatment facilities, the Los Angeles Regional Board acted only to implement requirements of the federal Clean Water Act or instead imposed pollutant limitations that exceeded the federal requirements. This is an issue of fact to be resolved by the trial court.

Disposition

We affirm the judgment of the Court of Appeal reinstating the wastewater discharge permits to the extent that the specified numeric limitations on chemical pollutants are necessary to satisfy federal Clean Water Act requirements for treated wastewater. The Court of Appeal is directed to remand this [*629] matter to the trial court to decide whether any numeric limitations, as described in the permits, are "more stringent" than required under federal law and thus should have been subject to "economic considerations" by the Los Angeles Regional Board before inclusion in the permits.

George, C. J., Baxter, J., Werdegar, J., Chin, J., and Moreno, J., concurred.

CONCUR BY: BROWN

CONCUR

BROWN, J., Concurring.--I write separately to express my frustration with the apparent inability of the government officials involved here to answer a simple question: How do the federal clean water standards (which, as near as I can determine, are the state standards) prevent the state from considering economic factors? The majority concludes that because "the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than the applicable federal standards require." (Maj. opn., ante, at p. 618.) That seems a pretty self-evident proposition, but not a useful one. The real question, in my view, is whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions that *meet* the clean water standards in more cost-effective and economically

efficient ways. I can see no reason why a federal law--which purports to be an example of cooperative federalism--would decree such a result. I do not think the majority's reasoning is at fault here. Rather, the agencies involved seemed to have worked hard to make this simple question impenetrably obscure.

A brief review of the statutory framework at issue is necessary to understand my concerns. [***315]

[**872] I. Federal Law

"In 1972, Congress enacted the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), commonly known as the Clean Water Act (CWA) [Citation.] ... [¶] Generally, the CWA 'prohibits the discharge of any pollutant except in compliance with one of several statutory exceptions. [Citation.]' ... The most important of those exceptions is pollution discharge under a valid NPDES [National Pollution Discharge Elimination System] permit, which can be issued either by the Environmental Protection Agency (EPA), or by an EPA-approved state permit program such as California's. [Citations.] NPDES permits are valid for five years. [Citation.] [¶] Under the CWA's NPDES permit system, the states are required to develop *water quality standards*. [Citations.] A water quality standard 'establish[es] the desired condition of a waterway.' [Citation.] A water quality standard for any [*630] given waterway, or 'water body,' has two components: (1) the designated beneficial uses of the water body and (2) the *water quality criteria* sufficient to protect those uses. [Citations.] [¶] Water quality criteria can be either *narrative* or *numeric*. [Citation.]" (*Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092-1093 [1 Cal. Rptr. 3d 76].)

With respect to satisfying water quality standards, "a polluter must comply with *effluent limitations*. The CWA defines an effluent limitation as 'any restriction established by a State or the [EPA] Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.' [Citation.] 'Effluent limitations are a means of *achieving* water quality standards.' [Citation.] [¶] NPDES permits establish effluent limitations for the polluter. [Citations.] CWA's NPDES permit system provides for a two-step process for the

establishing of effluent limitations. First, the polluter must comply with *technology-based effluent limitations*, which are limitations based on the best available or practical technology for the reduction of water pollution. [Citations.] [¶] Second, the polluter must also comply with more stringent *water quality-based effluent limitations* (WQBEL's) where applicable. In the CWA, Congress 'supplemented the "technology-based" effluent limitations with "water quality-based" limitations "so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels." ' [Citation.] [¶] The CWA makes WQBEL's applicable to a given polluter whenever WQBEL's are 'necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations' [Citations.] Generally, NPDES permits must conform to state water quality laws insofar as the state laws impose more stringent pollution controls than the CWA. [Citations.] Simply put, WQBEL's implement water quality standards." (*Communities for a Better Environment v. State Water Resources Control Bd.*, *supra*, 109 Cal.App.4th at pp. 1093-1094, fns. omitted.)

This case involves water quality-based effluent limitations. As set forth above, "[u]nder the CWA, states have the primary role in promulgating water quality standards." (*Piney Run Preservation Ass'n v. Commrs. of Carroll Co.* (4th Cir. 2001) 268 F.3d 255, 265, fn. 9.) "Under the CWA, the water quality standards referred to in section 301 [see 33 U.S.C. § 1311] are primarily the states' handiwork." [***316] (*American Paper Institute, Inc. v. U.S. Env'tl. Protection Agency* (D.C. Cir. 1993) 302 U.S. App. D.C. 80 [996 F.2d 346, 349] (*American Paper*).) In fact, upon the 1972 passage of the CWA, "[s]tate water quality standards in effect at the time ... were deemed to be the initial water quality benchmarks for CWA purposes The states were to revisit and, if [*631] necessary, revise those initial standards at least once every three years." (*American Paper*, at p. 349.) Therefore, "once a water quality standard has been promulgated, section 301 of the CWA requires all NPDES permits for point sources to incorporate discharge limitations necessary to satisfy that standard." (*American Paper*, at p. 350.) Accordingly, it appears that in most instances, [**873] state water quality standards are identical to the federal requirements for NPDES permits.

II. State Law

In California, pursuant to the Porter-Cologne Water Quality Control Act (Wat. Code, § 13000 et seq.; Stats. 1969, ch. 482, § 18, p. 1051; hereafter Porter-Cologne Act), the regional water quality control boards establish water quality standards--and therefore federal requirements for NPDES permits--through the adoption of water quality control plans (basin plans). The basin plans establish water quality objectives using enumerated factors--including economic factors--set forth in Water Code section 13241.

In addition, as one court observed: "The Porter-Cologne Act ... established nine regional boards to prepare water quality plans (known as basin plans) and issue permits governing the discharge of waste. (Wat. Code, §§ 13100, 13140, 13200, 13201, 13240, 13241, 13243.) The Porter-Cologne Act identified these permits as 'waste discharge requirements,' and provided that the waste discharge requirements must mandate compliance with the applicable regional water quality control plan. (Wat. Code, §§ 13263, subd. (a), 13377, 13374.) [¶] Shortly after Congress enacted the Clean Water Act in 1972, the California Legislature added Chapter 5.5 to the Porter-Cologne Act, for the purpose of adopting the necessary federal requirements to ensure it would obtain EPA approval to issue NPDES permits. (Wat. Code, § 13370, subd. (c).) As part of these amendments, the Legislature provided that the state and regional water boards 'shall, as required or authorized by the [Clean Water Act], issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions [of the Clean Water Act], together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance.' (Wat. Code, § 13377.) Water Code section 13374 provides that '[t]he term "waste discharge requirements" as referred to in this division is the equivalent of the term "permits" as used in the [Clean Water Act].' [¶] California subsequently obtained the required approval to issue NPDES permits. [Citation.] Thus, the waste discharge requirements issued by the regional water boards ordinarily also serve as NPDES permits under federal law. (Wat. Code, § 13374.)" (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 875 [22 Cal. Rptr. 3d 128].)

[*632] Applying this federal-state statutory scheme, it appears that throughout this entire process, the Cities of Burbank and Los Angeles (Cities) were unable to have economic factors considered because the Los Angeles Regional Water Quality Control Board (Board)--the body responsible to enforce the statutory framework--failed to comply with its statutory mandate.

[***317] For example, as the trial court found, the Board did not consider costs of compliance when it initially established its basin plan, and hence the water quality standards. The Board thus failed to abide by the statutory requirement set forth in Water Code section 13241 in establishing its basin plan. Moreover, the Cities claim that the initial narrative standards were so vague as to make a serious economic analysis impracticable. Because the Board does not allow the Cities to raise their economic factors in the permit approval stage, they are effectively precluded from doing so. As a result, the Board appears to be playing a game of "gotcha" by allowing the Cities to raise economic considerations when it is not practical, but precluding them when they have the ability to do so.

Moreover, the Board acknowledges that it has neglected other statutory provisions that might have provided an additional opportunity to air these concerns. As set forth above, pursuant to the CWA, "[t]he states were to revisit and, if necessary, revise those initial standards at least once every three years--a process commonly known as triennial review. [Citation.] Triennial reviews consist of public hearings in which current water quality standards are examined to assure that they 'protect the public health or welfare, enhance the quality of water and serve the purposes' of the Act. [Citation.] Additionally, the CWA directs [**874] states to consider a variety of competing policy concerns during these reviews, including a waterway's 'use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes.'" (*American Paper, supra*, 996 F.2d at p. 349.)

According to the Cities, "[t]he last time that the narrative water quality objective for toxicity contained in the Basin Plan was reviewed and modified was 1994." The Board does not deny this claim. Accordingly, the Board has failed its duty to allow public discussion--including economic considerations--at the required intervals when making its determination of

proper water quality standards.

What is unclear is why this process should be viewed as a contest. State and local agencies are presumably on the same side. The costs will be paid by taxpayers and the Board should have as much interest as any other agency in fiscally responsible environmental solutions.

[*633] Our decision today arguably allows the Board to continue to shirk its statutory duties. The majority holds that when read together, Water Code sections 13241, 13263, and 13377 do not allow the Board to consider economic factors when issuing NPDES permits to satisfy federal CWA requirements. (Maj. opn., *ante*, at pp. 625-627.) The majority then bifurcates the issue when it orders the Court of Appeal "to remand this matter to the trial court to decide whether any numeric limitations, as described in the permits, are 'more stringent' than required under federal law and thus should have been subject to 'economic considerations' by the Los Angeles Regional Board before inclusion in the permits." (*Id.* at pp. 628-629.)

The majority overlooks the feedback loop established by the CWA, under which federal standards are linked to state-established water quality standards, including narrative water quality criteria. (See 33 U.S.C. § 1311 (b)(1)(C); 40 C.F.R. § 122.44(d)(1) (2004).) Under the CWA, NPDES permit requirements include the state narrative criteria, which are incorporated into the Board's basin plan under the description "no toxins in toxic amounts." As far as I can determine, NPDES permits [***318] designed to achieve this narrative criteria (as well as designated beneficial uses) will usually implement the state's basin plan, while satisfying federal requirements as well.

If federal water quality standards are typically identical to state standards, it will be a rare instance that a state exceeds its own requirements and economic factors are taken into consideration. ¹ In light of the Board's initial failure to consider costs of compliance and its repeated failure to conduct required triennial reviews, the result here is an unseemly bureaucratic bait-and-switch that we should not endorse. The likely outcome of the

majority's decision is that the Cities will be economically burdened to meet standards imposed on them in a highly questionable manner. ² In these times of tight fiscal budgets, it is difficult to imagine imposing additional financial burdens on municipalities without at least allowing them to present alternative views.

1 (But see *In the Matter of the Petition of City and County of San Francisco, San Francisco Baykeeper et al.* (Order No. WQ 95-4, Sept. 21, 1995) 1995 WL 576920.)

2 Indeed, given the fact that "water quality standards" in this case are composed of broadly worded components (i.e., a narrative criteria and "designated beneficial uses of the water body"), the Board possessed a high degree of discretion in setting NPDES permit requirements. Based on the Board's past performance, a proper exercise of this discretion is uncertain.

Based on the facts of this case, our opinion today appears to largely retain the status quo for the Board. If the Board can actually demonstrate that only the precise limitations at issue here, implemented in only one way, will achieve the desired water standards, perhaps its obduracy is justified. That case has yet to be made.

[*634] Accordingly, I cannot conclude that the majority's decision is wrong. The analysis [**875] may provide a reasonable accommodation of conflicting provisions. However, since the Board's actions "make me wanna holler and throw up both my hands," ³ I write separately to set forth my concerns and concur in the judgment--*dubitante*. ⁴

COUNSEL: Rutan & Tucker, Richard Montevideo and Terence J. Gallagher for Plaintiffs and Appellants.

Downey Brand, Melissa A. Thorme; Lewis, Brisbois, Bisgaard, & Smith and B. Richard Marsh for County Sanitation Districts of Los Angeles County as Amicus Curiae on behalf of Plaintiffs and Appellants.

Demetriou, Del Guercio, Springer & Francis, Stephen A. Del Guercio, Michael A. Francis and Brian D. Langa for California Contract Cities Association as Amicus Curiae on behalf of Plaintiffs and Appellants.

Richards, Watson & Gershon and John J. Harris for The League of California Cities as Amicus Curiae on behalf of Plaintiffs and Appellants.

Bill Lockyer, Attorney General, Tom Greene, Chief Assistant Attorney General, Mary E. Hackenbracht, Assistant Attorney General, Marilyn H. Levin and Gregory J. Newmark, Deputy Attorneys General, for Defendants and Appellants.

Law Office of Michael R. Lozeau, Michael R. Lozeau; and Dana P. Palmer for Santa Monica Baykeeper, Inc., Heal the Bay, Inc., [***2] and Natural Resources Defense Council, Inc., as Amici Curiae on behalf of Defendants and Appellants.

JUDGES: McConnell, P. J., with McIntyre and Irion, JJ., concurring.

OPINION BY: McConnell

OPINION

[**378] **McCONNELL, P. J.**--This case concerns the serious environmental problem of litter discharged from municipal storm drains into the Los Angeles River, and efforts of the California Regional Water Quality Control Board, Los Angeles Region (Regional Board) and the State Water Resources Control Board (State Board) ¹ to ameliorate the problem through the adoption and approval of a planning document setting a target of zero trash discharge within a multi-year implementation period.

1 We refer to these entities together as the Water Boards.

The Water Boards appeal a judgment partially granting a petition for writ of mandate brought by the City of Arcadia and 21 other cities (Cities),² who [*1402] agree trash pollution must be remedied but oppose the target of zero trash as unattainable and inordinately expensive. The Water Boards challenge [***3] the court's findings that an assimilative capacity study is a required element of its action; a cost-benefit analysis and consideration of economic factors are required under state law and are not met; the zero trash target is inapplicable to the Los Angeles River Estuary (Estuary) because it does not appear on the state's list of impaired waters; and, the Water Boards failed to comply with the California Environmental Quality Act (CEQA) by not preparing an environmental impact report (EIR) or its functional equivalent.

2 In addition to Arcadia the Cities include Baldwin Park, Bellflower, Cerritos, Commerce, Diamond Bar, Downey, Irwindale, Lawndale, Monrovia, Montebello, Monterey Park, Pico Rivera, Rosemead, San Gabriel, Santa Fe Springs, Sierra Madre, Signal Hill, South Pasadena, Vernon, West Covina and Whittier.

The Water Boards also contend the court erred by granting the Cities declaratory relief on their claim the trash total maximum daily load (TMDL) does not apply to "nonwaters," meaning areas that do [***4] not drain into navigable waters such as the Los Angeles River or tributaries, as the parties agreed during this proceeding that the trash TMDL applies only to navigable waters.

The Cities also appeal, contending the trial court erred by not invalidating the trash TMDL on the additional grounds the Water Boards failed to provide for deemed compliance with the target of zero trash through certain methods; failed to implement load allocations for nonpoint sources of trash pollution; failed to adhere to the data collection and analysis required by federal and state law; relied on nonexistent, illegal and irrational uses to be made of the Los Angeles River; and, violated the Administrative Procedures Act (APA).

We conclude the Cities' appeal lacks merit. As to the Water Boards' appeal, we conclude the court properly invalidated the planning document on the ground of noncompliance with CEQA, and we affirm the judgment

insofar as it is based on that ground. We reverse the judgment to the extent it is based on other grounds. Further, we hold the court erred by granting declaratory relief on the nonwaters issue as there was no controversy when the court ruled.

[**379] BACKGROUND INFORMATION

I

[***5] *Statutory and Regulatory Scheme*

The "quality of our nation's waters is governed by a 'complex statutory and regulatory scheme ... that implicates both federal and state administrative responsibilities.' " (*City of Burbank v. State Water Resources Control Bd.* [*1403] (2005) 35 Cal.4th 613, 619 [26 Cal. Rptr. 3d 304, 108 P.3d 862] (*City of Burbank*)). An overview of applicable law is required to place the facts here in context.

A

Federal Law

In 1972 Congress enacted amendments to the Federal Water Pollution Control Act (Pub.L. No. 92-500 (Oct. 18, 1972) 86 Stat. 816; 33 U.S.C. § 1251 et seq.), which, as amended in 1977, is commonly known as the Clean Water Act. (*City of Burbank, supra*, 35 Cal.4th at pp. 619-620.) Its stated goal is "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters" by eliminating the discharge of pollutants into navigable waters. (33 U.S.C. § 1251(a).)

(1) The Clean Water Act places "primary reliance for developing water quality standards on the states." (*Scott v. Hammond* (7th Cir. 1984) 741 F.2d 992, 994.) It requires each state to develop such standards [***6] and review them at least once every three years for required modifications. (33 U.S.C. § 1313(a), (c)(1).) The standards must include designated uses such as recreation, navigation or the propagation of fish, shellfish and wildlife; water quality criteria sufficient to protect the designated uses; and an antidegradation policy. (40 C.F.R. §§ 131.6, 131.10-131.12 (2003).) The water quality criteria "can be expressed in narrative form or in a numeric form, e.g., specific pollutant concentrations." (*Florida Public Interest Research Group v. E.P.A.* (11th Cir. 2004) 386 F.3d 1070, 1073.) "Narrative criteria are broad statements of desirable water quality goals in a

water quality plan. For example, 'no toxic pollutants in toxic amounts' would be a narrative description." (*City of Burbank, supra*, 35 Cal.4th at p. 622, fn. 4.)

The Clean Water Act focuses on two possible sources of pollution: point sources and nonpoint sources. "Point source" means "any discernable, confined and discrete conveyance" such as a pipe, ditch, channel, tunnel, or [***7] conduit. (33 U.S.C. § 1362(14).) The Clean Water Act does not define nonpoint source pollution, but it has been described as " 'nothing more [than] a [water] pollution problem not involving a discharge from a point source.' " (*Defenders of Wildlife v. U.S. Environ. Protec.* (10th Cir. 2005) 415 F.3d 1121, 1124.)³

3 According to the Environmental Protection Act (EPA), nonpoint source pollution is caused by rainfall or snowmelt moving over and through the ground, and includes excess fertilizers, herbicides, and insecticides from agricultural lands and residential areas; oil, grease and toxic chemicals from urban runoff and energy production; sediment from improperly managed construction sites, crop and forest land, and eroding stream banks; salt from irrigation practices and acid drainage from abandoned mines; and bacteria and nutrients from livestock, pet wastes and faulty septic systems.
(<http://www.epa.gov/owow/nps/qa.html>) [as of Jan. 26, 2006].)

[*1404] (2) "Congress dealt with the problem of point source [***8] pollution using the National Pollution Discharge Elimination System [NPDES] permit process. Under this approach, compliance rests on technology- [***380] based controls that limit the discharge of pollution from any point source into certain waters unless that discharge complies with the [Clean Water] Act's specific requirements." (*San Francisco BayKeeper v. Whitman* (2002) 297 F.3d 877, 880; see 33 U.S.C. § 1311(b)(1)(A).) "Nonpoint sources, because of their very nature, are not regulated under the NPDES [program]. Instead, Congress addressed nonpoint sources of pollution in a separate portion of the [Clean Water] Act which encourages states to develop areawide waste treatment management plans." (*Pronsolino v. Marcus* (N.D.Cal. 2000) 91 F. Supp. 2d 1337, 1348, citing 33 U.S.C. § 1288; see also 33 U.S.C. § 1329.)

"When the NPDES system fails to adequately clean

up certain rivers, streams or smaller water segments, the [Clean Water] Act requires use of a water-quality based approach. States are required to identify such waters ... [and] rank [them] in order of priority, and [***9] based on that ranking, calculate levels of permissible pollution called 'total maximum daily loads' or 'TMDLs.' " (*San Francisco BayKeeper v. Whitman, supra*, 297 F.3d at p. 880; see 33 U.S.C. § 1313(d)(1)(A); 40 C.F.R. § 130.7(b) (2003).) "This list of substandard waters is known as the '303(d) list' (section 303 of the Clean Water Act having been codified as [title 33 United States Code] section 1313)." (*City of Arcadia v. U.S. Environmental* (9th Cir. 2005) 411 F.3d 1103, 1105 (*City of Arcadia II*).)

"A TMDL defines the specified maximum amount of a pollutant which can be discharged or 'loaded' into the waters at issue from all combined sources." (*Dioxin/Organochlorine Center v. Clarke* (9th Cir. 1995) 57 F.3d 1517, 1520.) "A TMDL must be 'established at a level necessary to implement the applicable water quality standards' [Citation.] A TMDL assigns a *waste load allocation* ... to each point source, which is that portion of the TMDL's total pollutant load, which is allocated to a point source for which an NPDES permit is required. [Citation.] Once a TMDL is developed, effluent limitations [***10] in NPDES permits must be consistent with the [waste load allocations] in the TMDL." (*Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1095-1096 [1 Cal. Rptr. 3d 76]; see *Dioxin/Organochlorine Center v. Clarke*, at p. 1520.)⁴ A TMDL requires a [*1405] "margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality." (33 U.S.C. § 1313(d)(1)(C).)

4 The Clean Water Act "does not define total maximum daily load. EPA's regulations break it into a 'waste[]load allocation' for point sources and a 'load allocation' for nonpoint sources." (*Pronsolino v. Marcus, supra*, 91 F. Supp. 2d at p. 1344, fn. 8; see 40 C.F.R. § 130.2(g)-(i) (2005).)

The EPA may allow states to adopt and administer NPDES permit programs (*Pronsolino v. Marcus, supra*, 91 F. Supp. 2d at p. 1347, fn. 10), and it has authorized California to administer [***11] such a program. (54 Fed.Reg. 40664 (Oct. 3, 1989).)

B

State Law

(3) California implements the Clean Water Act through the Porter-Cologne Act (Wat. Code, § 13000 et seq.), which was promulgated in 1969. Under the Porter-Cologne Act, nine regional boards regulate the quality of waters within their regions under the purview of the State Board. (Wat. Code, §§ 13000, 13100, 13200, 13241, 13242.)

[**381] Regional boards must formulate and adopt water quality control plans, commonly called basin plans, which designate the beneficial uses to be protected, water quality objectives and a program to meet the objectives. (Wat. Code, §§ 13050, subd. (j), 13240.) " 'Water quality objectives' means the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area." (*Id.*, § 13050, subd. (h).)

The EPA must approve or disapprove a state's TMDL within 30 days of its submission. [***12] (33 U.S.C. § 1313(d)(2).) If the EPA disapproves a state's submission, it must establish its own TMDL within 30 days of the disapproval. (*Ibid.*)

II

Trash TMDL

The Los Angeles River is a 51-mile flood control channel, largely concrete-lined, which runs through the City of Los Angeles and surrounding municipalities in Los Angeles County and terminates at the Pacific Ocean. In 1990 the Regional Board issued an NPDES storm water permit to the Los Angeles County Department of Public Works as the principal permittee and 84 cities as copermittees, to address various chemical pollutants discharged into the region's water bodies (Municipal NPDES Permit).

[*1406] In 1994 the Regional Board adopted a revised water quality control plan, or basin plan (1994 Basin Plan), which includes narrative water quality objectives. It provides that "[w]aters shall not contain floating materials, including solids, liquids, foams, and scum, in concentrations that cause nuisance or adversely affect beneficial uses," and "[w]aters shall not contain suspended or settleable material in concentrations that cause nuisance or adversely affect beneficial uses."

(Italics [***13] omitted.) Beneficial uses of the Los Angeles River and surrounds include wildlife and marine habitat, including habitat for endangered species, and recreational activities such as fishing, walking, hiking, jogging, bicycling, horseback riding, bird watching and photography.

In 1996 and 1998 the Regional Board identified certain reaches of the Los Angeles River on the state's "303(d) list" as being impaired by trash, primarily through storm water runoff in thousands of municipal storm drains. ⁵ On September 19, 2001, the Regional Board adopted a resolution to amend its 1994 Basin Plan to incorporate a TMDL for trash in the Los Angeles River (Trash TMDL). Despite many objections from affected municipalities, the Trash TMDL sets a numeric target of zero trash as "even a single piece of trash can be detrimental, and no level of trash is acceptable in waters of the state." ⁶ "The numeric target is staff's interpretation of the narrative water quality objective [in [**382] the 1994 Basin Plan], including an implicit margin of safety."

5 The Regional Board defines "trash" as "man-made litter" within the meaning of Government Code section 68055.1, subdivision (g), which provides: " 'Litter' means all improperly discarded waste material, including, but not limited to, convenience food, beverage, and other produce packages or containers constructed of steel, aluminum, glass, paper, plastic, and other natural and synthetic materials, thrown or deposited on the lands and waters of the state, but not including the properly discarded waste of the primary processing of agriculture, mining, logging, sawmilling, or manufacturing."

[***14]

6 The Regional Board adopted a Trash TMDL in January 2001, which also had a target of zero trash. It reconsidered the matter on September 19, 2001, "to provide clarifying language and greater flexibility in implementing the [Trash] TMDL."

The reduction of trash is to be phased over a 14-year period, including an optional two-year baseline monitoring period. In lieu of baseline monitoring, cities may accept a default baseline allocation of "640 gallons of uncompressed trash per square mile per year," a value based on data the City of Calabasas provided. The Trash TMDL provides for a "review of the current target [of zero trash] ... once a reduction of 50% has been achieved

and sustained," "based on the findings of future studies regarding the threshold levels needed for protecting beneficial uses."

Under the Trash TMDL, cities may use a variety of compliance methods, including "[e]nd-of-pipe full capture structural controls," "partial capture [*1407] control systems" and "[i]nstitutional controls." Cities using a full-capture system meeting certain criteria will be deemed in compliance with [***15] the zero target if the systems are properly maintained and maintenance records are available for the Regional Board's inspection.

On December 21, 2001, the Regional Board issued an order under Water Code section 13267 to the County of Los Angeles and copermittees under the Municipal NPDES Permit to submit baseline monitoring plans by February 1, 2002, and to monitor trash in the Los Angeles River between January 2002 and December 2003, with a final report due February 2004. ⁷ The Regional Board intends to use resulting data to "refine" the default baseline waste load allocations in the Trash TMDL.

⁷ In *City of Arcadia v. U.S. Environ. Protection Agency* (N.D.Cal. 2003) 265 F. Supp. 2d 1142, 1156 (*City of Arcadia I*), the court noted the Los Angeles County Department of Public Works has assumed responsibility for the baseline monitoring burden for all municipalities to which the Trash TMDL applies. The Trash TMDL states that "[e]ach of the permittees and copermittees are responsible for monitoring land uses within their jurisdiction," but "monitoring responsibilities may be delegated to a third-party monitoring entity such as the [Department of Public Works]."

[***16] In February and July 2002, the State Board and the Office of Administrative Law, respectively, approved the Trash TMDL. In August 2002 the EPA approved it and announced it supersedes an interim TMDL for trash the EPA adopted in March 2002 as a result of a consent decree in litigation between environmental groups and the EPA. (*City of Arcadia I, supra*, 265 F. Supp. 2d 1142, 1147.) ⁸

⁸ In *City of Arcadia I, supra*, 265 F. Supp. 2d at page 1153, the City of Arcadia and other cities unsuccessfully challenged the EPA's approval of the Trash TMDL on the ground it was unauthorized to do so after adopting its own TMDL. In *City of Arcadia II, supra*, 411 F.3d at

pages 1106-1107, the court affirmed the lower court's dismissal of the case.

III

Procedural History

The Cities are within the Regional Board's jurisdiction and are permittees under the 2001 Municipal NPDES Permit. In July 2002 the Cities filed a petition for writ of mandate and complaint for declaratory [***17] and injunctive relief against the Water Boards. They filed the action in the Los Angeles County Superior Court, but the parties stipulated to its transfer to the San Diego County Superior Court.

The second amended petition alleges numerous grounds on which the Trash TMDL violates the Clean Water Act or the Porter-Cologne Act, and the court adjudicated some issues in favor of each party. It found the [*1408] Water Boards improperly (1) failed to conduct an analysis of the Los Angeles River's assimilative capacity; (2) failed to conduct a cost-benefit analysis or [**383] consider economic factors under Water Code sections 13267 and 13241; (3) purported to apply the Trash TMDL to the Estuary even though it is not listed on the state's 1998 303(d) list as impaired; and (4) failed to prepare a required EIR or its functional equivalent under CEQA. The court issued a writ of mandate commanding the Water Boards to set aside the amendment to the 1994 Basin Plan and the Trash TMDL to the extent it was based on the above findings and to not take any further steps to implement it. The court denied the Water Boards' motion to vacate the judgment or grant [***18] a new trial, and judgment was entered on December 24, 2003.

The Cities later moved for an order that the prohibitory terms of the writ of mandate and judgment not be stayed on appeal. (Code Civ. Proc., § 1110b.) The court granted the motion, and further ordered that "to preserve the status quo and prevent injustice to [the Cities], the ... implementation schedule and compliance dates, and all milestones contained in the [Trash TMDL] shall be tolled effective December 24, 2003, through and until a final determination has been rendered on the pending appeal." The Water Boards appealed that order, and in accordance with the parties' stipulation we consolidated it with the other appeals.

DISCUSSION

WATER BOARDS' APPEAL

I

Standard of Review

(4) The Water Boards contend a deferential standard of review applies to our review of their action under Code of Civil Procedure section 1085, and the Cities claim an independent standard applies under Code of Civil Procedure section 1094.5. Code of Civil Procedure section 1094.5, the administrative mandamus [***19] statute, applies when "the writ is issued for the purpose of inquiring into the validity of any final administrative order or decision made as the result of a proceeding in which by law a hearing is required to be given, evidence is required to be taken, and discretion in the determination of facts is vested in the inferior tribunal." (Code Civ. Proc., § 1094.5, subd. (a).) "Acts of an administrative agency that are quasi-legislative in nature, e.g., establishment of regulations to carry out a statutory policy or direction, are not reviewable by administrative mandamus." (8 Witkin, Cal. Procedure (4th ed. 1997) Extraordinary Writs, § 268, pp. 1067-1068.) Rather, review of a quasi-legislative action is limited to traditional mandamus. (*Id.* at p. 1068.)

[*1409] (5) The trial court correctly found this proceeding is for traditional mandamus because the Regional Board's adoption and the State Water Board's approval of the Trash TMDL was quasi-legislative. Under Code of Civil Procedure section 1085, " ' 'review is limited to an inquiry into whether the action was arbitrary, capricious or entirely lacking [***20] in evidentiary support, ... ' ' ... [and] [t]he petitioner has the burden of proof to show that the decision is unreasonable or invalid as a matter of law. [Citation.] We review the record de novo except where the trial court made foundational factual findings, which are binding on appeal if supported by substantial evidence." (*Citizens for Improved Sorrento Access, Inc. v. City of San Diego* (2004) 118 Cal.App.4th 808, 814 [13 Cal. Rptr. 3d 259], citations omitted.)

The Cities' reliance on Water Code section 13330 is misplaced. It provides that "[a]ny party aggrieved by a final decision or order of a regional board for which the state board denies review may obtain review of the decision or order of the regional [**384] board in the superior court" (*id.*, § 13330, subd. (b), italics added), and "[e]xcept as otherwise provided herein, Section 1094.5 of

the Code of Civil Procedure shall govern proceedings for which petitions are filed pursuant to this section" (*id.*, § 13330, subd. (d)). Given the language italicized *ante*, Water Code section 13330 necessarily applies to an administrative appeal of a quasi-judicial action [***21] under Code of Civil Procedure section 1094.5. Here, an appeal to the State Board was unnecessary because the Trash TMDL was ineffective without its approval. (Wat. Code, § 13245.) Indeed, the State Board notified the Cities in March 2001 that it "lacks statutory authority to accept petitions for review of water quality control plan (basin plan) amendments adopted" by regional boards.

As to CEQA issues, the parties agree an abuse of discretion standard applies. (*Federation of Hillside & Canyon Assns. v. City of Los Angeles* (2004) 126 Cal.App.4th 1180, 1199 [24 Cal. Rptr. 3d 543].) Abuse of discretion "is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence." (Pub. Resources Code, § 21168.5.) "Our task on appeal is 'the same as the trial court's.' [Citation.] Thus, we conduct our review independent of the trial court's findings." (*Quail Botanical Gardens Foundation, Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602, fn. 3 [35 Cal. Rptr. 2d 470].)

II

Assimilative Capacity Study

The trial court [***22] invalidated the Trash TMDL based in part on the Cities' argument an "assimilative capacity study" is a required element of a TMDL and none was performed here. In its statement of decision, the court [*1410] explained "[i]t is unreasonable to conclude that the beneficial uses of the [Los Angeles] River could not be maintained with some 'target' other than zero. Of course, it is possible the River would not support a greater target, however, without a study it is yet undetermined."

The Water Boards contend the trial court erred by substituting its own judgment for that of the Water Boards on the issue of whether the adoption of the Trash TMDL should have been preceded by a scientific study of the assimilative capacity of the Los Angeles River. They assert the matter was best suited for their determination rather than the court's and the evidence adequately supports their decision. We agree with the Water Boards.

During the notice and comment period, the Regional Board received numerous complaints that a zero Trash TMDL is infeasible, or at least unwarranted without a scientific assimilative capacity study, or load capacity study, showing a zero limit is the only means of protecting beneficial [***23] uses. For instance, the City of Los Angeles worried that "[i]f there's one gum wrapper in the [Los Angeles] River, you can get sued."

The Regional Board responded to one complaint as follows: "For more typical pollutants, the loading parameters are flow and pollutant concentration. For this pollutant [trash], flow does not serve to dilute the pollutant, but merely serves as a transport mechanism. Therefore, the typical loading calculation does not apply to trash." The Regional Board took the position that since littering is unlawful, a target of zero trash in the Los Angeles River is the only defensible position. It also explained that its staff "found no study to document that there is an acceptable level of trash that will cause no harm to aquatic life," and absent such a study it was compelled to adopt a zero target.

[**385] At a Regional Board hearing, Dr. Mark Gold, executive director of Heal the Bay, testified he was unaware of any assimilative capacity study having been performed anywhere on trash. He explained, "Basically it's a physical object. It's trash. It's not something that breaks down and becomes part of the environment in many, many cases. And so honestly, it probably [***24] won't reach any sort of threshold of being a scientific study of any value."

At a State Board hearing Dave Smith, an EPA team leader working with the Regional Board on the trash issue, testified "it would be difficult to design [an assimilative capacity] study and come up with firm answers." He also explained that both the Regional Board and the State Board "have conducted pretty diligent efforts to find research studies, reports, that look at the affects of trash on the aquatic environment," and neither they nor the EPA could find any literature to support a target of more than zero trash.

[*1411] Alex Helperin, of the Natural Resources Defense Council, testified at a Regional Board hearing that "[e]ven small quantities [of trash] can maim and kill wildlife, [which] becomes entangled in it or ingest[s] it. [Trash] [c]an obstruct and repel boaters and contract recreators and compromise the aesthetic quality that's essential to the recognized aspect of non-contact

recreation beneficial use for the Los Angeles River."

The administrative record includes numerous photographs of copious amounts of trash deposited in the Los Angeles River watershed through storm water drains. Dennis [***25] Dickerson, the executive officer of the Regional Board, testified he took photographs of trash in the Long Beach area shortly after storms, and among them are photographs of "water birds foraging among the trash." One photograph is of a bird with a cigarette butt in its mouth and another is of a fish trapped in a plastic six-ring can holder.

In arguing an assimilative capacity study is required *before* adopting a TMDL, the Cities rely principally on an EPA document issued January 7, 2000, entitled "Guidance for Developing TMDLs in California" (2000 EPA Guidance). It states: "The TMDL document must describe the relationship between numeric target(s) and identified pollutant sources, and estimate total assimilative capacity (loading capacity) of the water[body for the pollutant of concern [¶] The loading capacity is the critical quantitative link between the applicable water quality standards (as interpreted through numeric targets) and the TMDL. Thus, a maximum allowable pollutant load must be estimated to address the site-specific nature of the impairment. ... [¶] The loading capacity section must discuss the methods and data used to estimate loading capacity. [***26] A range of methods can be used" (Boldface omitted.)

The 2000 EPA Guidance, however, contains the following disclaimer: "[I]t does not impose legally-binding requirements on the EPA, the State of California, or the regulated community, and may not apply to a particular situation based upon the circumstances. EPA and State decision makers retain the discretion to adopt approaches on a case-by-case basis that differ from this guidance where appropriate and consistent with the requirements of section 303(d) [of the Clean Water Act] and EPA's regulations."

(6) Smith, of the EPA, testified at a Regional Board hearing that he wrote the 2000 EPA Guidance and the Trash TMDL "fully complies with the Clean Water Act, its regulations and [the 2000 EPA Guidance]." Smith explained the "TMDL process specifically contemplates making decisions under uncertainty," and "[i]t does so by providing that a margin of safety has to be [**386] incorporated in every TMDL to account for the uncertainty in the analysis." Smith said states are required

"to move forward to make TMDL decisions [*1412] based on available information and data, not to wait again and again for better information to come forward." [***27] Generally, " 'considerable weight should be accorded to an executive department's construction of a statutory scheme it is entrusted to administer.' " (*United States v. Mead Corp.* (2001) 533 U.S. 218, 227-228 [150 L. Ed. 2d 292, 121 S. Ct. 2164].)

In *Natural Resources Defense Council v. Muszynski* (2d Cir. 2001) 268 F.3d 91 (*Muszynski*), the plaintiff asked the court to invalidate a TMDL that the EPA had approved to control phosphorus pollution in drinking water, on the ground a margin of safety of only 10 percent was insufficient to account for uncertainty regarding the effects of phosphorus on water quality. The plaintiff argued "that no scientific or mathematical basis prescribed this percentage as opposed to any other." (*Id.* at p. 102.) The EPA countered that "because 'there is no "standard" or guideline for choosing a specific margin of safety, best professional judgment and the available information are used in setting [it].' " (*Ibid.*) The *Muszynski* court agreed with the EPA, explaining: "While the [margin of safety] may ... be set with an uncomfortable degree of discretion, requiring that EPA [or authorized regional board] show a rigorous [***28] scientific methodology *dictates one course of action as opposed to another and would effectively prevent the agency from acting in situations where action is required in the face of a clear public health or environmental danger but the magnitude of that danger cannot be effectively quantified.* '[A]s long as Congress delegates power to an agency to regulate on the borders of the unknown, courts cannot interfere with reasonable interpretations of equivocal evidence.' [Citation.] ... [S]imply to reject EPA's efforts to implement the [Clean Water Act] because it must respond to real water quality problems without the guidance of a rigorously precise methodology would essentially nullify the exercise of agency discretion in the form of 'best professional judgment.' " (*Muszynski, supra*, 268 F.3d at pp. 102-103, italics added.)

Further, in *Muszynski, supra*, 268 F.3d 91, 103, the court noted "that approval of the Phase I [margin of safety] was based, in part, on the limited information available. The EPA approval contemplates revision of the [margin of safety] as more information becomes available: 'As additional reservoir data and loading [***29] data become available, Phase I model

assumptions are being reexamined under Phase II.' "

We conclude federal law does not require the Regional Board to conduct an assimilative capacity study before adopting the Trash TMDL. Moreover, the evidence amply shows that because of the nature of trash, including Styrofoam containers and other materials that are undiluted by water, in contrast to chemical pollutants, and the dangers to wildlife of even small amounts of trash, an assimilative capacity study would be difficult to conduct and of little value at the outset. For instance, given the ill effects of trash in a [*1413] water body it is unlikely such a study would determine the Los Angeles River may be loaded with a certain percentage of trash without affecting beneficial uses, particularly since a TMDL must include a margin of safety that "takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality." (33 U.S.C. § 1313(d)(1)(C).) In any event, the Trash TMDL requires the Regional Board to reconsider the zero trash target after a 50 percent reduction of trash is achieved, and no party suggests a trash reduction of [***30] at least 50 percent is unwarranted or unattainable. Because of [**387] this escape hatch, compliance with a zero trash target may never actually be mandated. The Water Boards' decision not to conduct or require an assimilative capacity study is within their expertise, not the court's, and we defer to them on the issue.

III

Cost-Benefit Analysis and Economic Considerations

The Water Boards next contend the court erred by finding the Trash TMDL is invalid because they violated state law by not conducting a cost-benefit analysis (Wat. Code, § 13267) or considering economic factors (*id.* at § 13241) before adopting and approving it.

A

Water Code Section 13267

A regional board is authorized to investigate the quality of waters in its region (Wat. Code, § 13267, subd. (a)), and when it requires a polluter to furnish "technical or monitoring program reports," the "burden, including costs, of these reports shall bear a reasonable relationship to the need for the report[s] and the benefits to be obtained from the reports." (Wat. Code, § 13267, subd.

(b)(1.) The court [***31] found the Regional Board adopted the Trash TMDL under the authority of Water Code section 13267, as the document mentions the statute several times and "expressly requires monitoring plans and submission of data to establish baselines for trash discharges."

The Water Boards persuasively contend Water Code section 13267 is inapplicable, and references to that statute in the Trash TMDL are to contemplated future orders. For instance, the Trash TMDL states "[b]aseline monitoring will be required via [Water Code] Section 13267," and the submission of baseline monitoring plans will be due 30 days after receipt of the Executive Officer's request as authorized by [Water Code] Section 13267." [*1414] It also states that "future storm water permits will be modified to incorporate the Waste Load Allocations and to address monitoring and implementation of this [Trash] TMDL."

Further, the Trash TMDL states "the permittee [under the Municipal NPDES permit] will submit a monitoring plan with the proposed monitoring sites and at least two alternative monitoring locations for each site. The plan must [***32] include maps of the drainage and storm drain data for each proposed and alternate monitoring location. The monitoring plan(s) will be submitted to the Regional Board within 30 days after receipt of the Executive Officer's letter requesting such a plan. Such a request is authorized pursuant to [Water Code] [s]ection 13267. ... The Regional Board's Executive Officer will have full authority to review the monitoring plan(s), to modify the plan, to select among the alternate monitoring sites, and to approve or disapprove the plan(s)."

Additionally, the Water Boards submit that the December 21, 2001 order the Regional Board issued under Water Code section 13267 to the County of Los Angeles and copermittees under the Municipal NPDES permit regarding baseline monitoring and reporting would have been "useless and unnecessary" had the Trash TMDL itself required monitoring and reporting, and since there was no appeal of the December 21 order to the State Board within 30 days (Wat. Code, § 13320, subd. (a)) the cost-benefit analysis issue is not subject to appellate review. We note that the December 21 order, but not the Trash TMDL, warns [***33] that under Water Code section 13268 the "failure to conduct the required monitoring and/or to provide the required information in

a timely manner [**388] may result in civil liability imposed by the Regional Board in an amount not to exceed ... \$ 1000."

(7) "Our primary aim in construing any law is to determine the legislative intent. [Citation.] In doing so we look first to the words of the statute, giving them their usual and ordinary meaning." (*Committee of Seven Thousand v. Superior Court* (1988) 45 Cal.3d 491, 501 [247 Cal. Rptr. 362, 754 P.2d 708].) We agree that by its plain terms Water Code section 13267 is inapplicable at the TMDL stage, and thus the court erred by invalidating the Trash TMDL on this ground. The monitoring and reports are required by the December 21, 2001 order, not the Trash TMDL, and the reduction of trash will be implemented by other NPDES permits. "TMDLs are primarily informational tools that allow the states to proceed from the identification of waters requiring additional planning to the required plans." (*Pronsolino v. Nastri* (9th Cir. 2002) 291 F.3d 1123, 1129.) (8) "A TMDL does not, by itself, [***34] prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual NPDES permits or establishing nonpoint source [*1415] controls." (*City of Arcadia I, supra*, 265 F. Supp. 2d at p. 1144.) A "TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and water[bodies]." (*Id.* at p. 1145.)

B

Water Code Section 13241

Water Code section 13241 provides that "[e]ach regional board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance." In establishing water quality objectives a regional board is required to consider several factors, including "[e]conomic considerations." (Wat. Code, § 13241, subd. (d).)

The Water Boards contend Water Code section 13241 is inapplicable because the Trash TMDL does not establish water quality objectives, but [***35] merely implements, under Water Code section 13242, the existing narrative water quality objectives in the 1994 Basin Plan. It provides that waters shall not contain floating materials, including solids, or suspended or

settleable materials in concentrations that adversely affect beneficial uses. The Cities counter that the Trash TMDL effectively establishes new water quality objectives, because when the 1994 Basin Plan was adopted a TMDL for trash was not contemplated and thus economic considerations of such a TMDL were not considered. Further, the Trash TMDL imposes for the first time a numeric limit for trash and significantly increases the costs of compliance.

We need not, however, decide whether the Trash TMDL adopts new or revised water quality objectives within the meaning of Water Code section 13241, because even if the statute is applicable, the Water Boards sufficiently complied with it.⁹ Water Code section 13241, subdivision (d) does not define "economic considerations" or specify a particular manner of compliance, and thus, as the Water Boards assert, the matter is within a regional [***389] board's discretion. [***36] It appears there is no reported opinion analyzing the "economic considerations" phrase of this statute. In *City of Burbank, supra*, 35 Cal.4th at page 625, the court, without discussion, concluded that in adopting Water Code section 13241 the Legislature intended "that a regional board consider the *cost of compliance* [with numeric pollutant restrictions] when setting effluent limitations in a wastewater discharge permit." (Italics added.)

9 For the same reason, we are not required to reach the Water Boards' assertion that to any extent the California Supreme Court's recent opinion in *City of Burbank, supra*, 35 Cal.4th 613, applies to a TMDL, it precludes them from considering economic factors in establishing the Trash TMDL.

[*1416] The Trash TMDL discusses the costs of gathering and disposing of trash at the mouth of the Los Angeles River watershed during the rainy seasons between 1995 and 1999. It also states: "Cleaning up the river, its tributaries and [***37] the beaches is a costly endeavor. The Los Angeles County Department of Public Works contracts out the cleaning of over 75,000 catchments (catch basins) for a total cost of slightly over \$ 1 million per year, billed to 42 municipalities. ... [¶] Over 4,000 tons of trash are collected from Los Angeles County beaches annually, at a cost of \$ 3.6 million to Santa Monica Bay communities in fiscal years 1988-1989 alone. In 1994 the annual cost to clean the 31 miles of

beaches (19 beaches) along Los Angeles County was \$ 4,157,388."

The Trash TMDL also discusses the costs of various types of compliance measures, and explains the "cost of implementing this TMDL will range widely, depending on the method that the Permittees select to meet the Waste Load Allocations. Arguably, enforcement of existing litter ordinances could be used to achieve the final Waste Load Allocations at minimal or no additional cost. The most costly approach in the short-term is the installation of full-capture structural treatment devices on all discharges into the river. However, in the long term this approach would result in lower labor costs and may be less expensive than some other approaches."

The Trash TMDL [***38] defines catch basin inserts as "the least expensive structural treatment device in the short term," at a cost of approximately \$ 800 each. It cautions, however, that because catch basin inserts "are not a full capture method, they must be monitored frequently and must be used in conjunction with frequent street sweeping." The Trash TMDL estimates that if the approximately 150,000 catch basins throughout the watershed were retrofitted with inserts, capital costs would be \$ 120 million over 10 years, maintenance and operation costs would be \$ 330 million over 10 years, and maintenance and operation costs after full implementation would be \$ 60 million per year.

Further, the Trash TMDL discusses the full capture vortex separation system (VSS), which "diverts the incoming flow of storm[water] and pollutants into a pollutant separation and containment chamber. Solids within the separation chamber are kept in continuous motion, and are prevented from blocking the screen so that water can pass through the screen and flow downstream. This is a permanent device that can be retrofitted for oil separation as well. Studies have shown that VSS [units] remove virtually all of the trash contained [***39] in treated water. The cost of installing a VSS is assumed to be high, so limited funds will place a cap on the number of units which can be installed during any single fiscal year."

[*1417] The Trash TMDL estimates the retrofitting of the entire Los Angeles River watershed with low capacity VSS units would be \$ 945 million in capital costs and \$ 813 million in operation and maintenance costs over 10 years, and \$ 148 million in annual operation and maintenance costs after full implementation. The

installation of large capacity VSS units would run [**390] approximately \$ 332 million in capital costs and \$ 41 million in operation and maintenance costs over 10 years, and \$ 7.4 million per year in operation and maintenance costs after full implementation. The yearly cost of servicing one VSS unit is estimated to be \$ 2,000. The Trash TMDL explains that "outfitting a large drainage with a number of large VSS [units] may be less costly than using a larger number of small VSS [units]. Maintenance costs decrease dramatically as the size of the system increases." The Trash TMDL also contains a cost comparison of catch basin inserts and low capacity and large capacity VSS units.

Additionally, the Trash [***40] TMDL estimates the costs for end-of-pipe nets at between \$ 10,000 and \$ 80,000, depending on the length of the pipe network. It explains that " '[r]elease nets' are a relatively economical way to monitor trash loads from municipal drainage systems. However, in general they can only be used to monitor or intercept trash at the end of a pipe and are considered to be partial capture systems, as nets are usually sized at a 1/2&inches; to 1&inches; mesh."

The Cities assert that "a 'consideration' of economics should have included a discussion of the economic *impacts* associated with the vortex separation systems. Alternatively, the Water Boards could have analyzed other methods of compliance, such as a series of [best management practices], including increased street sweeping, catch basin inserts, release nets, or some other combination of [best management practices] that should have been evaluated for purposes of allowing the municipalities to be in deemed compliance with the zero [Trash] TMDL." (Italics added.) As stated, though, the Trash TMDL does include the estimated costs of several types of compliance methods and a cost comparison of capital costs and costs of operation and maintenance. [***41] The Cities cite no authority for the proposition that a consideration of economic factors under Water Code section 13241 must include an analysis of every conceivable compliance method or combinations thereof or the fiscal impacts on permittees.

Given the lack of any definition for "economic considerations" as used in Water Code section 13241, and our deference to the Water Boards' expertise, we conclude the Trash TMDL's discussion of compliance costs is adequate [*1418] and does not fulfill the arbitrary or capricious standard. Accordingly, the Trash

TMDL is not invalid on this ground.¹⁰

10 The Cities also assert that under federal law an economic analysis is a prerequisite to the adoption of a TMDL. They rely on 40 Code of Federal Regulations, part 130.6(c)(4), but it pertains to nonpoint sources of pollution that need not be addressed in a TMDL, as discussed further *post*. The portion of the regulation covering TMDL's does not mention economics (*id.*, § 130.6(c)(1)). Parts 130.6(5) and (6) of 40 Code of Federal Regulations discuss economics, but in the context of the area wide planning process under section 208(b)(2) of the Clean Water Act (33 U.S.C. § 1288(b)(2)), which is inapplicable here. According to the Water Boards, the Southern California Association of Governments is the designated area-wide planning agency.

[***42] IV

Los Angeles River Estuary

Additionally, the Water Boards challenge the court's finding they abused their discretion by attempting to include the Estuary in the Trash TMDL, as the Estuary is not on the state's 1998 303(d) list of impaired waters. The Water Boards contend a water body's formal listing on the state's 303(d) list is not a prerequisite to formulating a TMDL for it. Rather, an agency may simultaneously submit to the EPA the *identification* of a [**391] water body as impaired and a corresponding TMDL.

The Clean Water Act provides: "Each state shall identify those waters within its boundaries for which the effluent limitations ... are not stringent enough to implement any water quality standards applicable to such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters." (33 U.S.C. § 1313(d)(1)(A).) Further, it provides that "[e]ach state shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, the total maximum daily load" (*Id.* at § 1313(d)(1)(C).) [***43] These provisions do not prohibit a regional board from identifying a water body and establishing a TMDL for it at essentially the same time, or indicate that formal designation on a state's 303(d) list is a prerequisite to a TMDL.

Further, 33 United States Code section 1313(d)(2)

provides: "Each State shall submit to the [EPA] Administrator from time to time, ... for his [or her] approval the waters identified *and* the loads established under paragraphs (1)(A) [and] ... (1)(C) ... of this subsection. The [EPA] Administrator shall either approve or disapprove such identification *and* load not later than thirty days after the date of submission." (Italics added.) This clarifies that a regional board may simultaneously identify an impaired water body and establish a TMDL for it.

[*1419] In *San Francisco BayKeeper v. Whitman*, *supra*, 297 F.3d 877, 884-885, the court held an agency has no *duty* to submit a TMDL at the same time it identifies an impaired water body, noting the development of a TMDL "to correct the pollution is obviously a more intensive and time-consuming project than simply identifying the polluted waters, as the [***44] EPA has indicated." (*Id.* at p. 885.) The Water Boards assert the case does not deprive an agency from exercising its *discretion* to simultaneously submit to the EPA the identification of an impaired water body and a TMDL for it. Given the plain language of 33 United States Code section 1313(d)(2), we agree. Moreover, "[s]tates remain at the front line in combating pollution" (*City of Arcadia II, supra*, 411 F.3d at p. 1106), and "[s]o long as the [s]tate does not attempt to adopt more *lenient* pollution control measures than those already in place under the [Clean Water] Act, [it] does not prohibit state action." (*Id.* at p. 1107.)

Alternatively, the Cities complain the Regional Board did not sufficiently identify the Estuary as being impaired and included in the Trash TMDL until after its adoption and approval by the State Board and Office of Administrative Law and the completion of all public hearings. On July 29, 2002, the Regional Board sent the EPA a memorandum "to provide clarification on specific aspects" of the Trash TMDL. It stated that a "TMDL was established for the reaches of the Los [***45] Angeles River, tributaries and lakes listed on the [state's] 1998 303(d) list," and "[i]n addition, a TMDL was established for the Los Angeles River [E]stuary in the City of Long Beach. As described on page 12, paragraph 2 of the [staff] report, staff found that the impairment in the [E]stuary due to trash is 'even more acute in Long Beach where debris flushed down by the upper reaches collects.' [¶] The impairment in the [E]stuary was well documented during TMDL development," and it "would have been included in the 1998 303(d) list if the attached

photographic evidence had been available at the time of the listing."

The Trash TMDL lists the reaches of the Los Angeles River "that are impaired by trash, and listed on the [state's] 303(d) [**392] list." The list does not include the Estuary. The Water Boards assert that even so, it was always obvious the Estuary is impaired and included in the Trash TMDL. The Trash TMDL states it is "for the Los Angeles River Watershed," and "watershed" is defined as "a region or area bounded peripherally by a divide and draining ultimately to a particular watercourse or body of water." (Merriam-Webster's Collegiate Dict. (10th ed. 1996) p. [***46] 1336.) "Estuary" is defined as "a water passage where the tide meets a river current," especially "an arm of the sea at the lower end of a river." (*Id.* at p. 397.)

The Trash TMDL describes the watershed as beginning at the "western end of the San Fernando Valley to the Queensway Bay and Pacific Ocean at Long Beach," and it also states the watershed continues from "Willow Street all [*1420] the way through the [E]stuary." An amici curiae brief by Santa Monica BayKeeper, Inc., Heal the Bay, Inc., and Natural Resources Defense Council, Inc. (collectively BayKeeper), asserts Queensway Bay is the site of the Estuary, and no party has challenged the assertion. Further, the Trash TMDL lists and discusses the beneficial uses of the Estuary, including habitat for many species of birds, some endangered, and fish. It also states beneficial uses "are impaired by large accumulations of suspended and settled debris throughout the river system," and in particular "estuarine habitat" is impaired. Further, the administrative record contains several pictures of trash deposited in the Estuary during high flows, depicting "the variety of ways through which trash ... becomes an integral part of wildlife, [***47] affecting all plant and animal communities in the process."

The Trash TMDL's identification of the Estuary as impaired could have been clearer, but we conclude it was sufficient to put all affected parties on notice, and does not meet the arbitrary-and-capricious standard. Further, although the identification of impaired water bodies requires a priority ranking (33 U.S.C. § 1313(d)(2)), and the Trash TMDL does not prioritize the Estuary's need for a TMDL, we agree with amici curiae BayKeeper that any error in the Water Boards' procedure was not prejudicial because the Trash TMDL shows amelioration

of the trash problem in the entire Los Angeles River watershed is highly important, and it is unlikely the Water Boards would single out the Estuary for lower priority or that inclusion of the Estuary would disturb their existing priorities.

V

CEQA

(9) The Water Boards challenge the sufficiency of the evidence to support the trial court's finding that the amendment adding the Trash TMDL to the 1994 Basin Plan does not comport with CEQA. The court found the Regional Board's environmental checklist was deficient and there is sufficient evidence of a fair argument that [***48] the project may have a significant effect on the environment, thus necessitating an EIR or its functional equivalent. We conclude the court was correct.

A

General Legal Principles

(10) "CEQA compels government first to identify the environmental effects of projects, and then to mitigate those adverse effects through the [*1421] imposition of feasible mitigation measures or through the selection of feasible alternatives." (*Sierra Club v. State Bd. of Forestry* (1994) 7 Cal.4th 1215, 1233 [32 Cal. Rptr. 2d 19, 876 P.2d 505].) CEQA mandates that public agencies refrain from approving projects with significant environmental effects if [**393] there are feasible alternatives or mitigation measures that can substantially lessen or avoid those effects. (*Mountain Lion Foundation v. Fish & Game Com.* (1997) 16 Cal.4th 105, 134 [65 Cal. Rptr. 2d 580, 939 P.2d 1280].)

CEQA is implemented through initial studies, negative declarations and EIR's. (*Sierra Club v. State Bd. of Forestry, supra*, 7 Cal.4th at p. 1229.) "CEQA requires a governmental agency [to] prepare an [EIR] whenever it considers approval of a proposed project that 'may have a significant effect on the environment.' " (*Quail Botanical Gardens Foundation, Inc. v. City of Encinitas, supra*, 29 Cal.App.4th at p. 1601.) [***49] "If there is no substantial evidence a project 'may have a significant effect on the environment' or the initial study identifies potential significant effects, but provides for mitigation revisions which make such effects insignificant, a public agency must adopt a negative declaration to such effect

and, as a result, no EIR is required. [Citations.] However, the Supreme Court has recognized that CEQA requires the preparation of an EIR 'whenever it can be fairly argued on the basis of substantial evidence that the project may have significant environmental impact.' [Citations.] Thus, if substantial evidence in the record supports a 'fair argument' significant impacts or effects may occur, an EIR is required and a negative declaration cannot be certified." (*Id.* at pp. 1601-1602.)

" 'Significant effect on the environment? means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the [***50] environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant." (Cal. Code Regs., tit. 14, § 15382.)

B

Certified Regulatory Program

(11) "State regulatory programs that meet certain environmental standards and are certified by the Secretary of the California Resources Agency are exempt from CEQA's requirements for preparation of EIRs, negative declarations, and initial studies. [Citations.] Environmental review documents prepared by certified programs may be used instead of environmental documents that CEQA would otherwise require. [Citations.] Certified regulatory [*1422] programs remain subject, however, to other CEQA requirements." (2 Kostka & Zischke, Practice Under the Cal. Environmental Quality Act (Cont.Ed.Bar 2005) § 21.2, p. 1076; see Pub. Resources Code, § 21080.5.) Documents prepared by certified programs are considered the "functional equivalent" of documents CEQA would otherwise require. (*Mountain Lion Foundation v. Fish & Game Com., supra*, 16 Cal.4th at p. 113; 2 Kostka & Zischke, Practice Under the Cal. Environmental [***51] Quality Act, *supra*, § 21.10, p. 1086 ["the documentation required of a certified program essentially duplicates" that required for an EIR or negative declaration].)

An "agency seeking certification must adopt regulations requiring that final action on the proposed activity include written responses to significant

environmental points raised during the decisionmaking process. [Citation.] The agency must also implement guidelines for evaluating the proposed activity consistently with the [**394] environmental protection purposes of the regulatory program. [Citation.] The document generated pursuant to the agency's regulatory program must include alternatives to the proposed project and mitigation measures to minimize significant adverse environmental effects [citation], and be made available for review by other public agencies and the public [citation]." (*Mountain Lion Foundation v. Fish & Game Com.*, *supra*, 16 Cal.4th at p. 127.)

(12) The guidelines for implementation of CEQA (Cal. Code Regs., tit. 14, § 15000 et seq.) do not directly apply to a certified regulatory program's environmental document. (2 Kostka & Zischke, [***52] Practice Under the Cal. Environmental Quality Act, *supra*, § 21.10, p. 1086.) However, "[w]hen conducting its environmental review and preparing its documentation, a certified regulatory program is subject to the broad policy goals and substantive standards of CEQA." (*Ibid.*)

In a certified program, an environmental document used as a substitute for an EIR must include "[a]lternatives to the activity and mitigation measures to avoid or reduce any significant or potentially significant effects that the project might have on the environment," and a document used as a substitute negative declaration must include a "statement that the agency's review of the project showed that the project would not have any significant or potentially significant effects on the environment and therefore no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. This statement shall be supported by a checklist or other documentation to show the possible effects that the agency examined in reaching this conclusion." (Cal. Code Regs., tit. 14, § 15252, subd. (a)(2)(A), (B).)

The basin planning process of the State Board and regional boards is [***53] a certified regulatory program (Cal. Code Regs., tit. 14, § 15251, subd. (g)), and [*1423] the regulations implementing the program appear in the California Code of Regulations, title 23, sections 3775 to 3782. A regional board's submission of a plan for State Board approval must be accompanied by a brief description of the proposed activity, a completed environmental checklist prescribed by the State Board, and a written report addressing reasonable alternatives to

the proposed activity and mitigation measures to minimize any significant adverse environmental impacts. (*Id.*, § 3777, subd. (a).)

C

Environmental Documentation

The Regional Board's environmental documentation in lieu of documents CEQA ordinarily requires consists of a checklist and the Trash TMDL. The checklist asked a series of questions regarding whether implementation of the Trash TMDL would cause environmental impacts, to which the Regional Board responded "yes," "maybe" or "no." "Yes" or "maybe" answers required an explanation. The checklist described beneficial impacts pertaining to plant and animal life, water quality [***54] and recreation. The checklist denied the project would have any environmental impact on land, including soil displacement, air, noise, natural resources or traffic, and thus it included no discussion of those factors. The checklist concluded "the proposed Basin Plan amendment [adding the Trash TMDL] could not have a significant effect on the environment."

The Regional Board obviously intended its documentation to be the functional equivalent of a negative declaration. Nonetheless, on appeal the Water Boards claim for the first time that the Regional [**395] Board's environmental review process is tiered, and its documentation meets the requirements of a first tier EIR under Public Resources Code section 21159. They assert the court's criticism of the checklist is baseless "because it ignores the concept of tiered environmental review and specific provisions for pollution control performance standards."

" 'Tiering' refers 'to the coverage of general matters in broader EIRs (such as on general plans or policy statements) with subsequent narrower EIRs or ultimately *site-specific* EIRs incorporating by reference the general discussions and concentrating solely [***55] on the issues specific to the EIR subsequently prepared. Tiering is appropriate when the sequence of EIRs is: [¶] ... [f]rom a general plan, policy, or program EIR to a ... site-specific EIR.' " (*Natural Resources Defense Council, Inc. v. City of Los Angeles* (2002) 103 Cal.App.4th 268, 285 [126 Cal. Rptr. 2d 615].) "[C]ourts have allowed first tier EIR's to defer detailed analysis to subsequent project EIR's." (*Friends of [*1424] Mammoth v. Town of Mammoth Lakes Redevelopment Agency* (2000) 82

Cal.App.4th 511, 532 [98 Cal. Rptr. 2d 334].)

(13) Public Resources Code section 21159, which allows expedited environmental review for mandated projects, provides that an agency "shall perform, at the time of the adoption of a rule or regulation requiring the installation of pollution control equipment, or a performance standard or treatment requirement, an environmental analysis of the reasonably foreseeable methods of compliance. ... The environmental analysis shall, at [a] minimum, include, all of the following: [¶] (1) An analysis of the reasonably foreseeable environmental impacts of the methods of compliance. [¶] (2) An analysis of reasonably foreseeable mitigation measures. [***56] [¶] (3) An analysis of reasonably foreseeable alternative means of compliance with the rule or regulation." (Pub. Resources Code, § 21159, subd. (a).) The Water Boards submit they complied with the statute, and the "tier two environmental review is the responsibility of the local agencies who will determine how they intend to comply with the performance standards" of the Trash TMDL.

Issues not presented to the trial court are ordinarily waived on appeal. (*Royster v. Montanez* (1982) 134 Cal. App. 3d 362, 367 [184 Cal. Rptr. 560].) In any event, we conclude the checklist and Trash TMDL are insufficient as either the functional equivalent of a negative declaration¹¹ or a tiered EIR. Moreover, an EIR is required since the Trash TMDL itself presents substantial evidence of a fair argument that significant environmental impacts may occur. "Because a negative declaration ends environmental review, the fair argument test provides a low threshold for requiring an EIR." (*Ocean View Estates Homeowners Assn., Inc. v. Montecito Water Dist.* (2004) 116 Cal.App.4th 396, 399 [10 Cal. Rptr. 3d 451].)

¹¹ A negative declaration may not be based on a "bare bones" approach in a checklist. (*Snarled Traffic Obstructs Progress v. City and County of San Francisco* (1999) 74 Cal.App.4th 793, 797, fn. 2 [88 Cal. Rptr. 2d 455], and cases cited therein.) A "certified program's statement of no significant impact must be supported by documentation showing the potential environmental impacts that the agency examined in reaching its conclusions," and "[t]his documentation would be similar to an initial study." (2 Kostka & Zischke, Practice Under the

Cal. Environmental Quality Act, *supra*, § 21.11, pp. 1088-1089, italics added.) Because we conclude an EIR is required, we need not expand on how the checklist and Trash TMDL fail to satisfy negative declaration requirements or their functional equivalent.

[***57] [**396] The Trash TMDL discusses various compliance methods or combinations thereof that permittees may employ, including the installation of catch basin inserts and VSS units. The Trash TMDL estimates that if the catch basin method is used exclusively, approximately 150,000 catch basins throughout the watershed would require retrofitting at a cost of approximately \$ 120 million. It explains, however, that the "ideal way to capture trash deposited into a storm[]drain system would be to install a VSS unit. This device diverts [*1425] the incoming flow of storm[]water and pollutants into a pollution separation and containment chamber." Only VSS units or similar full-capture devices will be deemed fully compliant with the zero trash target. The Trash TMDL estimates the cost of installing low capacity VSS units would be \$ 945 million and the cost of installing large capacity VSS units would be \$ 332 million.

The checklist and the Trash TMDL, however, ignore the temporary impacts of the construction of these pollution controls, which logically may result in soils disruptions and displacements, an increase in noise levels and changes in traffic circulation. Further, the Trash TMDL explains that since [***58] catch basin inserts "are not a full capture method, they must be monitored frequently and must be used in conjunction with frequent street sweeping." The checklist and the Trash TMDL also ignore the effects of increased street sweeping on air quality, and possible impacts caused by maintenance of catch basin inserts, VSS units and other compliance methods.

Indeed, the County of Los Angeles wrote to the Regional Board that "cleanout of structural controls, such as [catch basin inserts] and VSSs, naturally will increase existing noise levels due to vehicle and vacuuming noises." The City of Los Angeles advised that the Trash TMDL would result in increased maintenance vehicle traffic and "substantial air emissions or deterioration of ambient air quality," increased noise, increased use of natural resources and adverse impacts on existing transportation systems.

The Water Boards contend those comments are merely "unsubstantiated opinion and speculation by biased project opponents." Substantial evidence is not "[a]rgument, speculation, unsubstantiated opinion or narrative [or] evidence which is clearly inaccurate or erroneous." (Pub. Resources Code, § 21082.2, subd. (c).) [***59] However, letters and testimony from government officials with personal knowledge of the anticipated effects of a project on their communities "certainly supports a fair argument that the project may have a significant environmental impact." (*City of Livermore v. Local Agency Formation Com.* (1986) 184 Cal. App. 3d 531, 542 [230 Cal. Rptr. 867].) Again, however, the Trash TMDL itself satisfies the fair argument criterion.

Even if the Water Boards had relied on Public Resources Code section 21159 at the trial court, the environmental documents do not meet its minimum requirements. Neither the checklist nor the Trash TMDL includes an analysis of the reasonably foreseeable impacts of construction and maintenance of pollution control devices or mitigation measures, and in fact the Water Boards develop no argument as to how they ostensibly complied with the statute. While we agree a tiered environmental analysis is appropriate here, the Regional Board did not prepare a first-level EIR or its functional equivalent. We reject the Water Boards' argument the Regional Board did all it [*1426] could because there "is no way to examine project level [***60] impacts that are entirely dependent upon the speculative possibilities of how subsequent [**397] decision[.]makers may choose to comply" with the Trash TMDL. Tier two project-specific EIR's would be more detailed under Public Resources Code section 21159.2, but the Trash TMDL sets forth various compliance methods, the general impacts of which are reasonably foreseeable but not discussed.

As a matter of policy, in CEQA cases a public agency must explain the reasons for its actions to afford the public and other agencies a meaningful opportunity to participate in the environmental review process, and to hold it accountable for its actions. (*Federation of Hillside & Canyon Assns. v. City of Los Angeles, supra*, 126 Cal.App.4th 1180, 1198.) The Water Boards' CEQA documentation is inadequate, and remand is necessary for the preparation of an EIR or tiered EIR, or functional equivalent, as substantial evidence raises a fair argument the Trash TMDL may have significant impacts on the

environment. The court correctly invalidated the Trash TMDL on CEQA grounds. ¹²

12 The Water Boards also contend the trial court erred by staying the implementation schedule for the Trash TMDL pending this appeal. The matter is moot given our holding on the CEQA issue.

[***61] VI

Declaratory Relief

In its statement of decision, the trial court explained the Cities "contend [the Water Boards] improperly attempted to control the watershed including the 'entire 584 square miles' of incorporated and unincorporated areas of the County [of Los Angeles], and nowhere in the [Trash] TMDL or the [1994] Basin Plan Amendment did [they] assert that the numeric Waste Load Allocations ... are to apply to the entire 584 square miles of watershed." The court, however, explained the Water Boards "concede the [Trash] TMDL only applies to navigable waters by asserting [they] didn't intend to control non-navigable waters," and it found "the parties are in agreement that the trash load allocations apply to the portion of the subject watershed as defined on pages 3575 and 3584 of the Administrative Record [pages of the Trash TMDL] and the Waste Load Allocations do not apply to non-waters."

The statement of decision nonetheless states the court granted the Cities' "relief as requested" as to "regulation of non-waters." In their third cause of action, the Cities sought a judicial declaration that the amendment to the 1994 Basin Plan and the Trash [***62] TMDL are invalid because they violate federal and state law. The judgment declared unenforceable a July 29, 2002, letter from [*1427] the Regional Board to the EPA that stated the "Waste Load Allocations apply to the entire urbanized portion of the watershed The urbanized portion of the watershed was calculated to encompass 584 square miles of the total watershed."

(14) "The fundamental basis of declaratory relief is the existence of an *actual, present controversy*." (5 Witkin, Cal. Procedure, *supra*, Pleadings, § 817, p. 273.) Because the parties agreed during this proceeding there was no *present* controversy, the judgment should not have included declaratory relief on the nonwaters issue.

CITIES' APPEAL

I

Concepts of "Maximum Extent Practicable" and "Best Management Practices"

(15) The Cities contend a zero target for trash in the Los Angeles River is unattainable, [**398] and thus the Trash TMDL violates the law by not deeming compliance through the federal "maximum extent practicable" and "best management practices" standards, which are less stringent than the numeric target of zero. The Cities rely on 33 United States Code section 1342(p)(3)(B)(iii), [***63] under which an NPDES permit for a municipal discharge into a storm drain "shall require controls to reduce the discharge of pollutants to the *maximum extent practicable*, including management practices, control techniques and system, design and engineering methods, and such other provisions as the [EPA] Administrator or the State determines appropriate for the control of such pollutants." (Italics added.)¹³ "Best management practices" are generally pollution control measures set forth in NPDES permits. (*BIA*, *supra*, 124 Cal.App.4th at p. 877.)

13 The Clean Water Act and applicable regulations do not define the maximum extent practicable standard. (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 889 [22 Cal. Rptr. 3d 128] (*BIA*)). In *BIA*, the NPDES permit at issue defined the standard as "a highly flexible concept that depends on balancing numerous factors." (*Ibid.*)

The Cities assert that "as the [r]ecord [***64] reflects, compliance with the 'zero' [Trash] TMDL ... is impossible," and the Water Boards "themselves recognize that 'zero' is an impossible standard to meet." Contrary to the Cities' suggestion, the Water Boards made no implied finding or concession of impossibility. Rather, the record shows that members of the Water Boards questioned whether a zero trash target is actually attainable. A zero limit on [*1428] trash within the meaning of the Trash TMDL is attainable because there are methods of deemed compliance with the limit. The record does not show the limit is unattainable, and the burden was on the Cities as opponents of the Trash TMDL to establish impossibility. Further, the impossibility issue is not germane at this juncture, as the matter is at the planning stage with an

interim goal of a 50 percent reduction in trash, a goal everyone agrees is necessary and achievable.

In any event, the trial court found 33 United States Code section 1342(p)(3)(B)(iii) inapplicable to the adoption of a TMDL. The court also found state and federal laws authorize regional boards to "use water quality, and not be limited to practicability as the guiding principle for [***65] developing limits [in a TMDL] on pollution." Further, the court noted the Cities presented no authority for their proposition the Regional Board is required to adopt a storm water TMDL that is achievable.

(16) We agree with the court's assessment. The statute applicable to establishing a TMDL, 33 United States Code section 1313(d)(1)(C), does not suggest that practicality is a consideration. To the contrary, a regional board is required to establish a TMDL "at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety." (33 U.S.C. § 1313(d)(1)(C).) The NPDES permit provision, 33 United States Code 1342(p)(3)(B), is inapplicable because, again, we are only considering the propriety of the Trash TMDL, a precursor to NPDES permits implementing it. Under the Trash TMDL, the numeric target will be reconsidered after several years when a reduction in trash of 50 percent is achieved, and thus it is presently unknown whether compliance with a trash limit of zero will ever actually be mandated.

(17) To bolster their position the Cities rely on 33 United States Code section 1329(a)(1)(C)). [***66] [**399] It provides, however, that in a state's assessment report for a *nonpoint* source management program, the state must "describe[] the process, including intergovernmental coordination and public participation, for identifying best management practices and measures to control each category and subcategory of nonpoint sources and, where appropriate, particular nonpoint sources identified under subparagraph (B) and to reduce, to the maximum extent practicable, the level of pollution resulting from such category, subcategory, or source." (*Ibid.*) In *BIA*, *supra*, 124 Cal.App.4th at page 887, we rejected the argument the statute shows Congress intended to apply a maximum extent practicable standard to point source discharges as well as nonpoint discharges. The Cities say they disagree with *BIA*, but they develop no argument revealing any flaw in the opinion. "[P]arties are required [*1429] to include argument and citation to authority in their briefs, and the absence of these

necessary elements allows this court to treat appellant's ... issue as waived." (*Interinsurance Exchange v. Collins* (1994) 30 Cal.App.4th 1445, 1448 [37 Cal. Rptr. 2d 126].)

The Cities' reliance [***67] on *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159, for the proposition that municipalities, unlike private companies, may not be required to strictly comply with numeric discharge limits is likewise misplaced. *Defenders of Wildlife v. Browner* involves a challenge to an NPDES permit, not the adoption of a TMDL. Further, the court there rejected the argument that "the EPA [or authorized regional or state board] may not, under the [Clean Water Act], require strict compliance with state water-quality standards, through numerical limits or otherwise." (*Id.* at p. 1166.) The court explained: "Although Congress did not require municipal storm-sewer discharges to comply strictly with [numerical effluent limitations], [section] 1342(p)(3)(B)(iii) [of United States Code, title 33] states that '[p]ermits for discharges from municipal storm sewers ... shall require ... such other provisions as the [EPA] Administrator ... determines appropriate for the control of such pollutants.'" (Emphasis added.) That provision gives the EPA discretion to determine what pollution controls are appropriate. ... [¶] Under that [***68] discretionary provision, the EPA has the authority to determine that ensuring strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards. ... Under 33 [United States Code section] 1342(p)(3)(B)(iii), the EPA's choice to include either management practices or numeric limitations in the permits was within its discretion." (*Id.* at pp. 1166-1167.)

In *BIA*, this court similarly held that 33 United States Code section 1342(p)(3)(B)(iii) does not divest a regional board's discretion to impose an NPDES permit condition requiring compliance with state water quality standards more stringent than the maximum-extent-practicable standard. (*BIA, supra*, 124 Cal.App.4th at pp. 871, 882-885; see also Wat. Code, § 13377 [waste discharge requirements shall meet federal standards and may also include "more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance"].) [***69] Thus, even if the analysis in *Defenders of Wildlife v. Browner* or *BIA* arguably has any

application to a TMDL, the opinions do not help the Cities.

(18) Additionally, the Cities' reliance on a November 2002 EPA memorandum on establishing TMDL's and issuing NPDES [**400] permits is misplaced, as it postdates the Regional Board's adoption of the Trash TMDL and its approval by the State Board and the EPA. Further, the memorandum states it [*1430] is not binding, and "indeed, there may be other approaches that would be appropriate in particular situations. When EPA makes a TMDL or permitting decision, it will make each decision on a case-by-case basis and will be guided by applicable requirements of the [Clean Water Act] and implementing regulations, taking into account comments and information presented at that time by interested persons regarding the appropriateness of applying these recommendations to the particular situation."

II

Nonpoint Sources of Pollution

The Cities contend the court should have invalidated the Trash TMDL on additional grounds, including the Water Boards' failure to identify load allocations and implementation measures for nonpoint sources of trash discharge. [***70] The Cities assert the Water Boards are required to adopt implementation measures "for the homeless and aerial sources of trash, [and] also for the other nonpoint sources of trash consisting of State and federal facilities, and other facilities not yet subject to NPDES Permits." The Cities submit that the Clean Water Act does not allow the Water Boards "to effectively impose the burden of the load allocation from all nonpoint sources solely on municipalities."

The Cities further claim the Water Boards acted arbitrarily and capriciously by imposing a trash target of zero on municipalities, but imposing a " 'de minimus' requirement on non-point source discharges." The Cities cite the July 29, 2002, letter from the Regional Board to the EPA, clarifying that it identified nonpoint sources of trash pollution "as wind blown trash and direct deposit of trash into the water," but "as the non-point sources were determined to be de-minimus, we did not believe it necessary to outline a reduction schedule for non-point sources." Contrary to the Cities' position, the Regional Board did not adopt a "de minimus" load allocation for nonpoint sources. Rather, as the trial court found, the Regional [***71] Board found the trash pollution from

nonpoint sources is de minimus compared to trash pollution from point sources. The TMDL states the "major source of trash in the [Los Angeles River] results from litter, which is intentionally or accidentally discarded in the watershed drainage areas."

In arguing the Trash TMDL is required to include a specific load allocation for nonpoint sources of pollution, the Cities rely on the 2000 EPA Guidance, which provides: "Load allocations for nonpoint sources *may* be expressed as specific allocations for specific discharges or as 'gross allotments' to nonpoint source discharger categories. Separate nonpoint source allocations *should* be established for background loadings. Allocations may be based on a variety [*1431] of technical, economic, and political factors. The methodology used to set allocations *should* be discussed in detail." (Italics added.)

The 2000 EPA Guidance, however, states it does not impose legally binding requirements. Further, the load allocation for nonpoint sources is implicitly zero for trash. Federal regulations define a TMDL as the sum of waste load allocations for point sources, load allocations for nonpoint sources [***72] and natural backgrounds. (40 C.F.R. § 130.2(i) (2003).) Since "[a] TMDL defines the specified maximum amount of a pollutant which can be discharged into a body of water from all sources combined" (*American Wildlands v. Browner* (10th Cir. 2001) 260 F.3d 1192, 1194), [**401] and the Trash TMDL specifies a zero numeric target for trash in Los Angeles River, load allocations are necessarily zero as well as waste load allocations.

Additionally, the Cities cite no authority for the proposition the Water Boards are required to identify an implementation program for nonpoint pollution sources. Again, "[w]here a point is merely asserted by counsel without any argument of or authority for its proposition, it is deemed to be without foundation and requires no discussion." (*People v. Ham* (1970) 7 Cal. App. 3d 768, 783 [86 Cal. Rptr. 906], disapproved on another ground in *People v. Compton* (1971) 6 Cal.3d 55, 60, fn. 3 [98 Cal. Rptr. 217, 490 P.2d 537]; see *People v. Sierra* (1995) 37 Cal.App.4th 1690, 1693, fn. 2 [44 Cal. Rptr. 2d 575].)

(19) In any event, although the Clean Water Act focuses on both point and nonpoint sources of pollution, it is settled that [***73] the measure "does not require states to take regulator[y] action to limit the amount of non-point water pollution introduced into its waterways.

While the [Clean Water Act] requires states to designate water standards and identify bodies of water that fail to meet these standards, ' "nothing in the [Clean Water Act] demands that a state adopt a regulatory system for nonpoint sources." ' " (*Defenders of Wildlife v. U.S. Environ. Protec.*, *supra*, 415 F.3d at pp. 1124-1125, citing *American Wildlands v. Browner*, *supra*, 260 F.3d 1192, 1197 ["In the [Clean Water] Act, Congress has chosen not to give the EPA the authority to regulate nonpoint source pollution"]; *Appalachian Power Co. v. Train* (4th Cir. 1976) 545 F.2d 1351, 1373 ["Congress consciously distinguished between point source and nonpoint source discharges, giving EPA authority under the [Clean Water] Act to regulate only the former"]; *City of Arcadia I*, *supra*, 265 F. Supp. 2d at p. 1145 ["For nonpoint sources, limitations on loadings are not subject to a federal nonpoint source permitting program, and therefore any nonpoint source reductions can be enforced ... only to [***74] the extent that a state institutes such reductions as regulatory requirements pursuant to state [*1432] authority"].) "Nonpoint sources, because of their very nature, are not regulated under the NPDES [program]. Instead, Congress addressed nonpoint sources of pollution in a separate portion of the [Clean Water] Act which encourages states to develop areawide waste treatment management plans." (*Pronsolino v. Marcus*, *supra*, 91 F. Supp. 2d at p. 1348, citing 33 U.S.C. § 1288; see also 33 U.S.C. § 1329.)

We conclude the court correctly ruled on this issue.

III

Uses To Be Made of Watershed

The Cities next contend the Trash TMDL is invalid because the Water Boards "improperly relied on nonexistent, illegal and irrational 'uses to be made' of the [Los Angeles] River." (Boldface and some capitalization omitted.) The Cities complain that the Trash TMDL states a purported beneficial use of one of numerous reaches of the river on the state's 303(d) list is "recreation and bathing, in particular by homeless people who seek shelter there," and the State Board chairman questioned the legality of such uses. The Cities also assert there is no [***75] evidence to support the Trash TMDL's finding that swimming is an actual use of the river in any location.

The Cities rely on section 303(d)(1)(A) of the Clean Water Act (33 U.S.C. § 1313(d)(1)(A)), which provides

that in identifying impaired waters for its 303(d) list, states "shall establish a priority ranking for such waters, taking into account the severity of the pollution and the *uses to be made* of such waters." (Italics added.) [**402] The Cities assert "an 'illegal' use cannot be a 'use to be made' for the water body."

Additionally, the Cities cite Water Code section 13241, which requires regional boards to establish water quality objectives in water quality control plans by considering a variety of factors, including "[p]ast, present, and probable future beneficial uses of water." (Wat. Code, § 13241, subd. (a).) They assert the "Water Boards acted contrary to law by basing the [Trash] TMDL on any uses of the [Los Angeles] River other than the actual 'uses to be made' of the River." (Boldface omitted.)

The Cities, however, make no showing of prejudice. Swimming and bathing by the homeless are only [***76] two among numerous other beneficial uses that the Cities do not challenge, and there is no suggestion the numeric target of zero trash in the Los Angeles River would have been less stringent without consideration of the factors the Cities raise.

[*1433] IV

Scientific Methodology

Further, the Cities contend the Trash TMDL is invalid on the additional ground that before adopting and approving it the Water Boards failed to comply with the requisite data collection and analysis. The Cities rely on a federal regulation providing that "[s]tates must establish appropriate monitoring methods and procedures (including biological monitoring) necessary to compile and analyze data on the quality of waters of the United States and, to the extent practicable, ground-waters." (40 C.F.R. § 130.4(a) (2003).) "The State's water monitoring program shall include collection and analysis of physical, chemical and biological data and quality assurance and control programs to assure scientifically valid data" in developing, among other things, TMDL's. (*Id.*, § 130.4(b).)

The trial court rejected the Cities' position, finding they failed to establish the Water Boards' [***77] scientific data is inadequate or scientifically invalid. The court explained the Water Boards "have not failed to conduct ongoing studies, as they say, how else would

[they] know the River is impaired by trash[?] And the Record reveals studies relied upon by the Boards."

This argument is a variation on the assimilative capacity study issue, and we similarly reject it. As the Water Boards point out, "trash is different than other pollutants. ... The complex modeling and analytical effort that may be necessary for typical pollutants that may be present in extremely low concentrations have no relevance to calculating a trash TMDL." Further, the Trash TMDL does discuss sources of trash in the Los Angeles River. It states the "City of Los Angeles conducted an Enhanced Catch Basin Cleaning Project in compliance with a consent decree between the [EPA], the State of California, and the City of Los Angeles. The project goals were to determine debris loading rates, characterize the debris, and find an optimal cleaning schedule through enhancing basin cleaning. The project evaluated trash loading at two drainage basins[.]" It goes on to discuss the amounts and types of trash collected [***78] in the drainage basins between March 1992 and December 1994. The Cities cite no authority for the notion the Water Boards may not rely on data collected by another entity.

The Trash TMDL also states "[s]everal studies conclude that urban runoff is the dominant source of trash. The large amounts of trash conveyed by the urban storm water to the Los Angeles River is evidenced by the amount of ... trash that accumulates at the base of storm drains."

[*1434] [**403] Alternatively, the Cities contend a TMDL is not suitable for trash calculation. They rely on 33 United States Code section 1313(d)(1)(C), which provides: "Each State shall establish for [impaired] waters ... the total maximum daily load, for those pollutants which the [EPA] Administrator identifies ... as *suitable for such calculation*. Such load shall be established at a level *necessary* to implement the applicable water quality standards with seasonal variations and a margin of safety." (Italics added.)

The Cities also cite a 1978 EPA regulation that states a TMDL is "suitable for ... calculation" only under "proper technical conditions." (43 Fed.Reg. 60662, 60665 (Dec. 28, 1978) [***79] (italics omitted).) "Proper technical conditions" require "the availability of the analytical methods, modeling techniques and data base necessary to develop a technically defensible TMDL." (*Id.* at p. 60662.) The Cities assert the proper technical

conditions do not exist, referring to the Trash TMDL's comment that "[e]xtensive research has not been done on trash generation or the precise relationship between rainfall and its deposition in waterways."

The Cities ignore the EPA's determination that a TMDL *may* be calculated for trash as a pollutant. It approved the Regional Board's Trash TMDL, and had previously approved a trash TMDL for the East Fork of the San Gabriel River. (See Cal. Code Regs., tit. 23, § 3933.) Thus, the Cities' view that the 1978 EPA regulation prohibits a TMDL for trash is unfounded. TMDL's for trash are relatively new, and there is no evidence that in 1978 the EPA contemplated their establishment.

We find irrelevant the Cities' discussion of the EPA's proposed July 2000 TMDL "rule," as their federal register citation is not a regulation and merely concerns the 2003 withdrawal of a rule that never took effect. [***80] (68 Fed.Reg. 13608, 13609 (Mar. 19, 2003) ["The July 2000 rule was controversial from the outset"].) In August 2001 the EPA delayed implementation of the July 2000 rule for further consideration, noting that some local government officials argued "some pollutants are not suitable for TMDL calculation." (66 Fed.Reg. 41817, 41819 (Aug. 9, 2001).) Nothing is said, however, about whether a trash TMDL is unsuitable for calculation, and again, the EPA has approved such TMDL's. The withdrawal of the proposed July 2000 rule left the existing rule regarding the establishment of a TMDL in place. (33 U.S.C. § 1313(d)(1)(C).)

V

APA Requirements

Lastly, the Cities contend the trial court erred by finding the Water Boards did not violate the APA. They assert the July 29, 2002, "clarification [*1435] memorandum" from the Regional Board to the EPA makes substantive changes to the Trash TMDL regulation-the inclusion of the Estuary in the Trash TMDL and designating an allocation of zero for nonpoint pollution sources-violates the notice and hearing provisions of the APA. The Cities also contend the Trash TMDL and the clarification memorandum [***81] "establish[] a regulation in violation of the APA's elements of 'clarity,' 'consistency,' and 'necessity,' as defined in [Government] Code section 11349."

(20) The APA (Gov. Code, §§ 11340 et seq., 11370) "establishes the procedures by which state agencies may adopt regulations. The agency must give the public notice of its proposed regulatory action [citations]; issue a complete text of the proposed regulation with a statement of the reasons for it [citation]; give interested parties an opportunity to comment on [**404] the proposed regulation [citation]; respond in writing to public comments [citations]; and forward a file of all materials on which the agency relied in the regulatory process to the Office of Administrative Law [citation], which reviews the regulation for consistency with the law, clarity, and necessity [citations]." (*Tidewater Marine Western, Inc. v. Bradshaw* (1996) 14 Cal.4th 557, 568 [59 Cal. Rptr. 2d 186, 927 P.2d 296].) "One purpose of the APA is to ensure that those persons or entities whom a regulation will affect have a voice in its creation [citation], as well as notice of the law's requirements so [***82] that they can conform their conduct accordingly [citation]." (*Id.* at pp. 568-569.)

The APA does not apply to "the adoption or revision of state policy for water quality control" unless the agency adopts a "policy, plan, or guideline, or any revision thereof." (Gov. Code, § 11353, subs. (a), (b)(1).) The Water Boards contend that while the Trash TMDL and amendment adding it to the 1994 Basin Plan are policies or plans covered by the APA, the clarification memorandum is not because it does not revise the terms of the Trash TMDL.

We are not required to reach the issue, because assuming the APA is applicable the Cities' position lacks merit. As to the Estuary, we have determined the Trash TMDL sufficiently notified affected parties of its inclusion in the document as an impaired water body. Further, we have determined the load allocation for nonpoint sources of trash pollution is also necessarily zero, and the Trash TMDL is not required to include implementation measures for nonpoint sources. Accordingly, the clarification memorandum is not germane.¹⁴

14 We deny the Water Boards' June 16, 2005, request for judicial notice.

[***83]

[*1436] DISPOSITION

The judgment is affirmed insofar as it is based on the

Trash TMDL's violation of CEQA, and on a rejection of each of the issues the Cities raised in their appeal. The judgment is reversed insofar as it is based on the Trash TMDL's lack of an assimilative capacity study, inclusion of the Estuary as an impaired water body, and a cost-benefit analysis under Water Code section 13267 or the consideration of economic factors under Water Code section 13241, and also insofar as it grants declaratory relief regarding the purported inclusion of nonnavigable waters in the Trash TMDL.

The court's postjudgment order staying the Trash TMDL's implementation schedule is affirmed. The parties are to bear their own costs on appeal.

McIntyre, J., and Irion, J., concurred.

A petition for a rehearing was denied January 17, 2006, and the petition of plaintiffs and appellants for review by the Supreme Court was denied April 19, 2006, S141673.

Woodruff, Spradlin & Smart, Thomas L. Woodruff, Tami S. Crosby, Roberta A. Kraus and M. Lois Bobak for Plaintiff, Cross-defendant and Appellant Orange County Sanitation District.

Rockard J. Delgadillo, City Attorney, Christopher M. Westhoff, Assistant City Attorney, and Keith W. Pritsker, Deputy City Attorney, for Plaintiff, Cross-defendant and Appellant City of Los Angeles.

[*1557] Somach, Simmons & Dunn and Roberta L. Larson for Plaintiff and Appellant California Association of Sanitation Agencies.

Griswold, LaSalle, Cobb, Dowd & Gin, Robert M. Dowd and Raymond L. Carlson for Plaintiff and Appellant Southern California Alliance of Publicly Owned

Treatment Works.

Jones & Beardsley, Mark A. Jones; Borton, Petrini & Conron and Roger A. Parkinson for Plaintiff and Appellant Responsible Biosolids Management, Inc.

Bernard C. Barmann, Sr., County Counsel, James H. Thebeau, Deputy County Counsel; Hogan Guiney Dick and Michael M. Hogan [***2] for Defendant, Cross-complainant and Appellant and for Defendant and Appellant.

Law Offices of Young Wooldridge, Ernest A. Conant, Scott K. Kuney and Steven M. Torigiani for Intervener and Respondent Arvin-Edison Water Storage District.

McMurtrey, Hartsock & Worth, James A. Worth; and Linda Alvarado for Interveners and Respondents Cawelo Water District and West Kern Water District.

JUDGES: Dawson, J., with Dibiaso, Acting P. J., and Vartabedian, J., concurring.

OPINION BY: DAWSON [**35]

OPINION

DAWSON, J.--This appeal concerns the validity of an ordinance that restricts the application of sewage sludge on land located within the jurisdiction of Kern County. ¹ Sanitation agencies from Southern California ²

appeal adverse rulings from the trial court. The sanitation agencies contend (1) County was required to prepare an environmental impact report (EIR) under the California Environmental Quality Act (CEQA) ³ prior to adopting the ordinance, (2) the ordinance violated the commerce clause as well as other constitutional and statutory provisions, and (3) a biosolids impact fee of \$ 3.37 per ton violated the prohibition in Vehicle Code section 9400.8 against [*1558] local fees for [***3] the privilege of using roads. County contests all of these allegations. It contends that the ordinance benefited the Kern County environment and that any potential adverse environmental impacts were too remote and speculative to justify preparing an EIR.

1 The ordinance was enacted by the Kern County Board of Supervisors, on behalf of the County of Kern (collectively, defendants or County). For purposes of this opinion, "County" refers to the governmental entity and "Kern County" refers to the geographical area.

2 Plaintiffs, cross-defendants and appellants are County Sanitation District No. 2 of Los Angeles County (CSDLAC), Orange County Sanitation District (OCSD), and the City of Los Angeles (Bureau of Sanitation; CLABS); plaintiffs and appellants are California Association of Sanitation Agencies (CASA), Responsible Biosolids Management, Inc. (RBM), and the Southern California Alliance of Publicly Owned Treatment Works (SCAP).

3 Public Resources Code section 21000 et seq. All further statutory references are to the Public Resources Code unless otherwise indicated.

[***4] We hold County was required to prepare an EIR under CEQA. This is because CEQA requires the preparation of an EIR whenever substantial evidence supports a fair argument that an ordinance will cause potentially significant adverse environmental impacts. CEQA thus sets a low threshold for the required preparation of an EIR. Here, the evidence in the administrative record establishes a reasonable possibility that the ordinance will have both positive and adverse impacts on the environment in Kern County and other areas of California, principally because alternative methods of disposal must be implemented. The positive effects of a project do not absolve the public agency from the responsibility of preparing an EIR to analyze the potentially significant negative environmental effects of

the project, because those negative effects might be reduced through the adoption of feasible alternatives or mitigation measures analyzed in the EIR. Therefore, County was required to prepare an EIR.

We hold also that plaintiffs have failed to show that the ordinance discriminates against interstate commerce. We reject plaintiffs' constitutional and statutory attacks on the validity of the ordinance, [***5] except that we hold the biosolids impact fee [**36] was invalid to the extent it was a local fee for road use.

We will remand with directions to the trial court to issue a writ of mandate directing County to prepare an EIR for the ordinance, and for further proceedings to determine the extent to which the biosolids impact fee was a fee for road use. Otherwise, the rulings of the trial court in favor of County on plaintiffs' complaint will be affirmed.

County cross-appeals from the trial court's denial of its CEQA cross-claims against the sanitation agencies. We address County's contention that CEQA required those agencies to conduct an environmental examination in connection with certain biosolids disposal contracts they entered into or extended near the time the ordinance in question was enacted. We hold that the agencies' contract activities were within the scope of their program EIR's covering their wastewater treatment projects and, therefore, were "[s]ubsequent activities in the program" that should have been subjected to an examination in accordance with title 14, section 15168 of the California Code of Regulations ⁴ to determine if further CEQA review was necessary. We [*1559] further hold [***6] that, as to expired contracts, this question is moot. Therefore, judgment on County's cross-claims will be reversed and the matter remanded to the trial court with directions to (1) conduct further proceedings to make a complete determination of which contracts have expired, (2) enter an order dismissing as moot County's causes of action that are based on contracts that have expired, and (3) issue writs of mandate under the remaining causes of action directing the appropriate sanitation agency to conduct an examination to determine if additional environmental documents must be prepared in connection with the contracts and extensions.

4 In all further citations, title 14, section 15000 et seq. of the California Code of Regulations will be referred to as the Guidelines.

HISTORICAL BACKGROUND

Sewage sludge is a product of wastewater treatment. The safe and efficient disposal of sludge is a modern and worldwide concern--a by-product of population growth and modernization.⁵ Recent decades have witnessed [***7] increasing governmental involvement in the effort to safely and efficiently treat sewage and dispose of sewage sludge. In the United States, efforts at regulation have involved the executive, legislative and judicial branches of government at the federal, state and local levels. This historical background briefly describes the process that reduces sewage to sewage sludge and then discusses the disposal and use of that sludge.

5 European Commission Joint Research Centre, Institute for Environment and Sustainability, Soil and Waste Unit, Organic Contaminants in Sewage Sludge for Agricultural Use (Oct. 18, 2001) <http://europa.eu.int/comm/environment/waste/sludge/organics_in_sludge.pdf> (as of Apr. 1, 2005).

(1) "Sewage sludge" is defined by federal regulations as the "solid, semi-solid, or liquid residue generated during the treatment of domestic sewage in a treatment works." (40 C.F.R. § 503.9(w) (2005).) More generally, sewage sludge refers to the mud-like deposit originating from sewage [***8] and created by the treatment processes used to decontaminate wastewater before it is released into local waterways.⁶ [***37] Sewage sludge typically consists of water and 2 to 28 percent solids.⁷ (68 Fed.Reg. 61084, 61086 (Oct. 24, 2003).) To illustrate, the Joint Water Pollution Control Plant located in Carson, California (Carson Plant) produces sewage sludge by detaining wastewater solids in an anaerobic digester for approximately 18 days. After digestion, the remaining solids are dewatered in a centrifuge that produces a residue that is approximately 25 percent solids. The Carson Plant refers to these residues as [*1560] "biosolids"--a term that is not defined by federal regulation, and the meaning of which varies with the context in which it is used. (Goldfarb, *Sewage Sludge*, *supra*, 26 B.C. Env'tl. Aff. L.Rev. at p. 688.) Some use the term to mean sewage sludge that has been stabilized and disinfected for beneficial use. (*Id.*, fn. 6.) To others, the term helps emphasize the material is a recyclable resource with potential beneficial properties. (Goldfarb, *Sewage Sludge*, at p. 688.)

6 Goldfarb et al., *Unsafe Sewage Sludge or*

Beneficial Biosolids?: Liability, Planning, and Management Issues Regarding the Land Application of Sewage Treatment Residuals (1999) 26 B.C. Env'tl. Aff. L.Rev. 687, 688 (Goldfarb, *Sewage Sludge*).

[***9]

7 Because the percentage of solids in sewage sludge varies, there is no constant for converting the wet weight of sewage sludge to its dry weight. Dry weight is defined by federal regulation to mean the mass reached after drying to essentially 100 percent solids content. (40 C.F.R. § 503.9(h) (2005).)

Scope of Sewage Sludge Production

National Production

The United States Environmental Protection Agency (EPA) recently estimated the annual production of sewage sludge from the 16,000 wastewater treatment plants in the United States at both 7 million tons and 8 million dry metric tons.⁸ (Compare 68 Fed.Reg. 68813, 68817 (Dec. 10, 2003) with 68 Fed.Reg. 61086 (Oct. 24, 2003).) In 2003, the EPA estimated that approximately 60 percent of sewage sludge was treated and applied to farmland, 17 percent was buried in landfills, 20 percent was incinerated, and 3 percent was used as landfill or mine reclamation cover. (68 Fed.Reg. 68817 (Dec. 10, 2003).) The land application of sewage sludge occurred [***10] on approximately 0.1 percent of the agricultural land in the United States. (68 Fed.Reg. 61086 (Oct. 24, 2003).) Other application sites include forests, strip-mines, reclamation sites, and public spaces like parks, golf courses, and highway median strips. (*Ibid.*)

8 The EPA has estimated the United States production of human sanitary waste, a precursor of sewage sludge, at approximately 150 million wet tons per year. (68 Fed.Reg. 7176, 7180 (Feb. 12, 2003).) This figure can be restated as about 0.518 wet tons per person per year (*ibid.*) or 2.8 pounds per person per day. By comparison, in 1997, the United States annual production of animal waste from cattle, hogs, chickens and turkeys (which includes more than manure) was estimated at 1,365,661,300 tons, or roughly 5 tons for every person in the United States.

California

CASA estimated that in 1998 California produced approximately 672,330 dry tons of biosolids and approximately 67.8 percent was applied [***11] to land, 10.6 percent was composted, 9.1 percent was buried in landfills, 5.6 percent was incinerated, and 6.9 percent was put in onsite and offsite storage.⁹

9 State Water Resources Control Board (State Water Board), Draft EIR, General Waste Discharge Requirements for Biosolids Land Application (June 28, 1999) figure 2-2 (State Water Board's 1999 Draft EIR), which was in the administrative record and is available at <<http://www.swrcb.ca.gov/programs/biosolids/deir/chapters/ch2.pdf>> (as of Apr. 1, 2005).

[*1561] The EPA estimated that in 2003 California produced 777,480 dry tons of treated sewage sludge.¹⁰ Approximately 50 [**38] percent of this sewage sludge was applied to land, 30 percent was put in landfills, 10 percent was transported out of state, 3 percent was incinerated, and the balance was put in long-term storage or treatment or put to other uses.¹¹

10 State Water Board, Final Statewide Program EIR, General Waste Discharge Requirements for Biosolids Land Application (June 2004) page 3-3 (State Water Board's 2004 Final PEIR for Biosolids), which is available at <http://www.swrcb.ca.gov/hearings/docs/finalbio_chap3.pdf> (as of Apr. 1, 2005).

[***12]

11 State Water Board's 2004 Final PEIR for Biosolids, page 3-4.

Conflict between urban and rural interests has caused controversy over the land application of sewage sludge in California. In 1998, approximately 73 percent of land-applied biosolids in California was applied within the geographical jurisdiction of the Regional Water Quality Control Board, Central Valley Region (Central Valley Water Board), a region that generated only 16.7 percent of California's total production. In contrast, the Los Angeles and San Francisco Regions generated 37.9 percent and 14.4 percent, respectively, and received less than 0.1 percent and 1.8 percent, respectively, of the total land-applied biosolids.¹² The proportion of biosolids applied to land in the Central Valley Region has decreased as a result of restrictive ordinances adopted by counties.¹³

12 State Water Board's 1999 Draft EIR, table 2-2 and figure 2-2.

13 In 1998, the Counties of Kings, Kern, Fresno, and Riverside did not have ordinances that prohibited the land application of Class B biosolids. (See State Water Board's 2004 Final PEIR for Biosolids, p. 3-8.) By early 2004, these counties had adopted ordinances that prohibited the land application of Class B biosolids and were among the 17 of the 58 counties in California that had some type of ordinance related directly to the land application of biosolids. (*Ibid.*)

[***13] *Kern County*

In 1998, approximately one-third of the biosolids applied to land in California was applied in Kern County.¹⁴ In 1999, County estimated that one million wet tons of sewage sludge were applied to approximately 23,594 acres of irrigated agricultural land in Kern County.¹⁵ The acreage, which was distributed among 14 noncontiguous sites, represented approximately 3 percent of the harvested cropland in Kern County.

14 State Water Board's 1999 Draft EIR, table 2-1 (Kern County received 148,000 dry tons).

15 The administrative record contains a document dated September 1, 1999, that estimated the volume of Class B biosolids brought into Kern County at 823,350 wet tons per year. The four largest sources were the City of Los Angeles (273,700), Los Angeles County (214,000), Orange County (130,300) and "Fresno" (85,000).

[*1562] *Statutory and Regulatory Framework*

Federal

Congress enacted the Federal Water Pollution Control Act Amendments of 1972 (Pub.L. No. 92-500 (Oct. 18, 1972) 86 Stat. 896) [***14] to restore and maintain the quality of the nation's waters (33 U.S.C.A. § 1251(a)) by addressing various sources of pollution, including municipal sewage. In addition to providing extensive federal grants to finance the construction of local sewage treatment facilities, the 1972 amendments increased the role of the federal government by extending water quality standards to intrastate waters, setting technology-based effluent limitations, and implementing the water quality standards through a discharge permit system.¹⁶ The Clean Water Act reflected the judgment of

Congress [**39] that the problem of water pollution caused by the discharge of municipal sewage outweighed problems associated with treating the sewage and disposing of the sewage sludge.¹⁷ The federal legislation stimulated the building of sewage treatment facilities which, in turn, significantly increased the national production of sewage sludge. (See *Leather Industries of America, Inc. v. E.P.A.* (D.C. Cir. 1994) 309 U.S. App. D.C. 136 [40 F.3d 392, 394].)

16 The federal legislation became commonly known as the Clean Water Act (33 U.S.C.A. § 1251 et seq.) as a result of amendments adopted in 1977. (Pub.L. No. 95-217, § 2 (Dec. 27, 1977) 91 Stat. 1566.)

[***15]

17 "According to Milton Russell and Michael Gruber, 'Risk Assessment in Environmental Policy-Making,' 236 *Science* 286, 289 (April 17, 1989), 'the removal of pollutants from waste water produces sludge that must be either disposed of on land, incinerated, or dumped at sea. None of these procedures are without risk to human health or the environment.'" (Breyer, *Breaking the Vicious Circle: Toward Effective Risk Regulation* (1993) p. 97, fn. 111.)

(2) The Clean Water Act addressed the problem of sewage sludge disposal in four ways. First, the use or disposal of sewage sludge was subjected to a permitting program (33 U.S.C.A. § 1345(a)-(c)).¹⁸ Second, the EPA was directed to develop comprehensive regulations establishing standards for sewage sludge use and disposal (33 U.S.C.A. § 1345(d)).¹⁹ Third, states were allowed to establish more stringent standards (33 U.S.C.A. § 1345(e)).²⁰ Fourth, grants were authorized for the conduct of scientific [*1563] studies, demonstration projects, and public information and education programs [***16] concerning the safe and beneficial management of sewage sludge (33 U.S.C.A. § 1345(g)).

18 The National Pollutant Discharge Elimination System (NPDES) permitting program set forth in the Clean Water Act regulates point sources of pollution that reach the waters of the United States. (33 U.S.C.A. § 1342.) Congress delegated the authority to issue permits to discharge pollutants under the NPDES to states with approved water quality programs.

19 The Water Quality Act of 1987 (Pub.L. No.

100-4 (Feb. 4, 1987) 101 Stat. 7) amended the Clean Water Act to require the EPA to identify and set numeric limits for toxic pollutants in sewage sludge and establish management practices for the use and disposal of sewage sludge containing those pollutants. (33 U.S.C.A. § 1345(d)(2).)

20 Similarly, legislation adopted by the European Union sets minimum standards for the use of sewage sludge in agriculture and also allows member states to impose more stringent measures. (See Council Directive 86/278/EEC of 12 June 1986, Protection of the Environment, and in Particular of the Soil, When Sewage Sludge Is Used in Agriculture, 1986 Official J. Eur. Coms. (L181), pp. 0006-0012 <http://europa.eu.int/smartapi/cgi/sga_d oc?smartapi!celexapi!prod!CELEXnumdoc&lg =EN&nu mdoc=31986L0278&model=guichett> [as of Apr. 1, 2005].) The Web site maintained by the European Union that summarizes the legislation is <<http://europa.eu.int/scadplus/leg/en/lv b/128088.htm>> (as of Apr. 1, 2005).

[***17] (3) Eventually, in 1993,²¹ the EPA complied with the directive regarding regulations by promulgating Standards for the Use or Disposal of Sewage Sludge (40 C.F.R. § 503 (2005)) (Part 503), which specify that sewage-sludge may be (1) applied to land, (2) placed in a surface disposal site, such as a sewage-sludge-only landfill, (3) burned in a sewage sludge incinerator, or (4) disposed of in a municipal solid waste landfill that complies with the minimum criteria set forth in 40 Code of Federal Regulations part 258. (Part 503, subparts B [land application], C [surface disposal] & E [incineration]; 40 C.F.R. § 503.4 (2005) [***40] [disposal in municipal solid waste landfill].)²²

21 The history of the EPA's regulation of sewage sludge prior to the final adoption of Part 503 in 1993 is described in Goldfarb, *Sewage Sludge, supra*, 26 B.C. Env'tl. Aff. L.Rev. at pages 697-704. The EPA has described the recent legal history of its regulation of sewage sludge in the Federal Register. (See 68 Fed.Reg. 75533 (Dec. 31, 2003).)

22 A fifth option, ocean dumping of sewage sludge, was eliminated as a legal disposal option effective December 31, 1991, by the federal

Ocean Dumping Ban Act of 1988. (33 U.S.C.A. §§ 1401-1445.) (See *City of New York v. United States EPA* (S.D.N.Y. 1981) 543 F. Supp. 1084 [prior to statutory ban, City of New York and EPA litigated deleterious impacts of ocean dumping versus other methods of disposal].)

[***18] The land application provisions of subpart B of Part 503 establish concentration ceilings as well as annual and cumulative loading rates for arsenic, cadmium, copper, lead, mercury, nickel, selenium and zinc (40 C.F.R. § 503.13 (2005)); establish management practices for the protection of water quality and public health (40 C.F.R. § 503.14 (2005)); set the standards for the reduction of pathogens²³ and vector attraction²⁴ (40 C.F.R. § 503.15 (2005)); and include requirements for monitoring (40 C.F.R. § 503.16 (2005)), recordkeeping (40 C.F.R. § 503.17 (2005)), and reporting (40 C.F.R. § 503.18 (2005)).

23 Pathogenic organisms cause disease and "include, but are not limited to, certain bacteria, protozoa, viruses, and viable" eggs of parasitic worms (40 C.F.R. § 503.31(f) (2005)), such as tapeworms, whipworms, roundworms, and hookworms.

24 Vectors are rodents, flies, mosquitoes, or other organisms capable of transporting infectious agents; vector attraction refers to the characteristic of sewage sludge that attracts these carriers. (See 40 C.F.R. § 503.31(k) (2005).)

[***19] [*1564] (4) Pathogen reduction standards contained in Part 503 are used to differentiate between Class A sewage sludge and Class B sewage sludge. (See 40 C.F.R. § 503.32 (2005).) While Class A sewage sludge is sufficiently treated to essentially eliminate pathogens, Class B sewage sludge is treated only to substantially reduce them. As a result, the requirements for land application of Class B sewage sludge are more stringent than the requirements imposed on Class A sewage sludge.

At the time of their adoption, the EPA stated it was confident the regulations in Part 503 adequately protected the environment and public health from all reasonably anticipated adverse effects. (58 Fed.Reg. 9248, 9249 (Feb. 19, 1993).) Nevertheless, Part 503 has been described as "quite controversial."²⁵ Citizens and environmental organizations have questioned the adequacy of the chemical and pathogen standards

contained in Part 503.²⁶ As a result of [***41] these concerns and the requirement in the Clean Water Act that the sewage sludge regulations be reviewed every two years, the EPA commissioned the National Research Council (NRC) of the National Academy of Sciences to independently [***20] review the scientific basis of the regulations governing the land application of sewage sludge.²⁷

25 Goldfarb, *Sewage Sludge, supra*, 26 B.C. Env'tl. Aff. L.Rev. at page 708; see Comment, *Sewage Sludge and Land Application Practices: Do the Section 503 Standards Guarantee Safe Fertilizer Usage?* (2000) 9 Dick. J. Env'tl. L. & P. 147, 169 (asserting EPA failed to account for variability of contaminants in sludge and how combinations of contaminants may affect public health and environment, and failed to foresee problems caused by lackadaisical monitoring and labeling requirements and by the lack of remedies for failure to comply with requirements). Another aspect of the controversy is illustrated by the dispute created when the Agricultural Marketing Service of the United States Department of Agriculture considered allowing the use of sewage sludge in "organic" production. The proposal was based on the view of the federal government that "there is no current scientific evidence that use of sewage sludge in the production of foods presents unacceptable risks to the environment or human health." (65 Fed.Reg. 13514 (Mar. 13, 2000).) Overwhelming public opposition led to the rejection and replacement of the proposal with a regulation that "prohibit[ed] sewage sludge] use in the production" of all organic foods. (*Ibid.* ["275,603 commenters ... almost universally opposed the use of [sewage sludge] in organic production systems"]; see 7 C.F.R. §§ 205.105(g) & 205.301(f)(2) (2005).)

[***21]

26 See EPA, Office of Water, Use and Disposal of Biosolids (Sewage Sludge) (Dec. 2003) <http://www.epa.gov/ost/biosolids/dec03f_actsheet.html> (as of Apr. 1, 2005).

27 See EPA, Office of Water, Use and Disposal of Biosolids (Sewage Sludge), *supra*; 33 U.S.C.A. § 1345(d)(2)(C) (two-year review of regulations).

In July 2002, the NRC published its report--Biosolids Applied to Land: Advancing Standards

and Practices--and made the following overarching findings: "There is no documented scientific evidence that the Part 503 rule has failed to protect public health. However, additional scientific work is needed to reduce persistent uncertainty about the potential for adverse human health effects from exposure to biosolids. There have been anecdotal [*1565] allegations of disease,[²⁸] and many scientific advances have occurred since the Part 503 rule was promulgated. To assure the public and to protect public health, there is a critical need to update the scientific basis of the rule to (1) ensure that the chemical and pathogen standards are supported by current scientific [***22] data and risk-assessment methods, (2) demonstrate effective enforcement of the Part 503 rule, and (3) validate the effectiveness of biosolids-management practices." (NRC, *Biosolids Applied to Land: Advancing Standards and Practices* (July 2002) p. 3 <<http://www.epa.gov/waterscience/biosolids/nas/complete.pdf>> [as of Apr. 1, 2005].)

28 The anecdotal allegations of which the EPA is aware (but unconvinced) include (1) over 350 claims of adverse effects collected by the Cornell Waste Management Institute, (2) the deaths of Shayne Conner, Tony Behun, and Daniel Pennock, and (3) the deaths of 300 dairy cattle on a farm near Augusta, Georgia that resulted in a \$ 550,000 jury verdict in a state court action. (G. Tracy Mehan, III, EPA, letter to Joseph Mendelson, III, Center for Food Safety, and Thomas Alan Linzey, Community Environmental Legal Defense Fund, Inc., Dec. 22, 2003, pp. 3, 5-7 [denying petition to stop land application of sewage sludge] <<http://www.centerforfoodsafety.org/pubs/SewageSludgePetitionResponse12-22-03.pdf> f> [as of Apr. 1, 2005].) The claims related to the dairy cattle also are described in the administrative record and in *Boyce v. Augusta-Richmond County* (S.D.Ga. 2000) 111 F. Supp. 2d 1363. The medical examiner's autopsy report for Shayne Conner is in the administrative record and it concludes the cause of his death is unknown.

[***23] In response to the NRC report, the EPA developed a final action plan that established objectives and identified research and regulatory projects designed to strengthen its sewage sludge use and disposal program.

(68 Fed.Reg. 75531, 75533 (Dec. 31, 2003); see EPA, Office of Water, Use and Disposal of Biosolids (Sewage Sludge), *supra*.) As an example of one project, the EPA intends to conduct an incident-tracking workshop to obtain input on developing a program focused on individuals who have received medical attention and suspect that they may have been affected by sewage sludge application practices, and to thereby isolate the causes of any health problems. (68 Fed.Reg. 75535 (Dec. 31, 2003).) As of the date of this opinion, the implementation of the final action plan is an ongoing process, and some of the activities have not been commenced. (See EPA, Office of Water, Use and Disposal of Biosolids (Sewage Sludge), *supra*.)

California

(5) In response to Congress's delegation of authority to the states to issue NPDES permits (see fn. 18, *ante*), the California [**42] Legislature amended the Porter-Cologne Water Quality Control Act (Wat. Code, § 13000 [***24] et seq.) to require the State Water Board and its regional counterparts to issue discharge permits that ensure compliance with the Clean Water Act. (See Wat. Code, § 13370 et seq.) As a result, on May 14, 1973, California became the first [*1566] state to be approved by the EPA to administer the NPDES permit program. (See 54 Fed.Reg. 40664 (Oct. 3, 1989); *WaterKeepers Northern California v. State Water Resources Control Bd.* (2002) 102 Cal.App.4th 1448, 1452 [126 Cal. Rptr. 2d 389].)

In August 1993, as part of administering the NPDES permit program, the Central Valley Water Board adopted a general order setting the waste discharge requirements (WDR) for the use of sewage sludge as a soil amendment and approved an initial study and negative declaration in connection with that general order. Under the general order, a person wanting to apply biosolids to agricultural land could file with the Central Valley Water Board a notice of intent to comply with the general order, a filing fee, and a preapplication report and, upon receiving an approval letter from the Central Valley Water Board, could begin to apply biosolids subject to the terms and conditions in the [***25] general order. Projects using sewage sludge that did not fit the conditions contained in the general order were required to apply for individual WDR's.

On May 26, 1995, the Central Valley Water Board modified its earlier general order by adopting Order No.

95-140 titled "Waste Discharge Requirements General Order For Reuse of Biosolids and Septage on Agricultural, Forest, and Reclamation Sites." The order set minimum standards for the use of biosolids, including Class B sewage sludge, as a soil amendment.

(6) Also in 1995, the California Legislature specifically addressed the land application of sewage sludge by adopting Water Code section 13274 (Stats. 1995, ch. 613, § 1, p. 4590), which required the State Water Board or the regional boards to prescribe general WDR's for the discharge of treated sewage sludge used as a soil amendment. (Wat. Code, § 13274, subs. (a) & (b).) Water Code section 13274 also states that it does not restrict the authority of local government agencies to regulate the application of sewage sludge to land within their jurisdiction. (*Id.*, subd. (i).)

(7) Other California legislation affecting the [***26] disposal and use of sewage sludge is the California Integrated Waste Management Act of 1989 (Pub. Resources Code, § 40000 et seq., also known as Assem. Bill No. 939 (1989-1990 Reg. Sess.); see Stats. 1989, ch. 1095, § 22, p. 3812), which requires the use of recycling and source reduction to reduce the amount of solid waste going into landfills. (§ 41780.) More specifically, counties were required to adopt integrated waste management plans that described how 25 percent of the solid waste²⁹ stream would be recycled, reduced or composted [*1567] by 1995 and how 50 percent would be achieved by 2000. (See § 41780; *Kern County Farm Bureau v. County of Kern* (1993) 19 Cal.App.4th 1416, 1419, fn. 2 [23 Cal. Rptr. 2d 910].) This legislation caused sewage sludge to be diverted from disposal in landfills in favor of recycling it as a fertilizer applied to agricultural land.³⁰ For example, in 1995 the [***43] City of Oxnard purchased 1,280 acres in Kern County for \$ 1,174,000 as part of a program to apply its sewage sludge to agricultural land and thus reduce its use of landfills.

29 The California Integrated Waste Management Act of 1989 defines "solid waste" to include "dewatered, treated, or chemically fixed sewage sludge [that] is not hazardous waste, manure, vegetable or animal solid" (§ 40191, subd. (a).)

[***27]

30 According to one set of estimates, the portion of California's annual sewage sludge production

disposed of in landfills was 60.2 percent in 1988, 43.3 percent in 1991, 9.1 percent in 1998, and 30 percent in 2003. (State Water Board's 1999 Draft EIR, table 2-2 & fig. 2-2; State Water Board's 2004 Final PEIR for Biosolids, p. 3-4.)

By 2000, several of the nine regional boards had issued WDR's for the use of biosolids as a soil amendment. To provide a single regulatory framework for the land application of treated sewage sludge in California, in August 2000, the State Water Board issued Water Quality Order No. 2000-10-DWQ, entitled "General Waste Discharge Requirements for the Discharge of Biosolids to Land for Use as a Soil Amendment in Agricultural, Silvicultural, Horticultural, and Land Reclamation Activities" (General Order 2000-10).³¹ General Order 2000-10 also was intended to comply with the directive in Water Code section 13274 and streamline the permitting process. The State Water Board's final program EIR relating to General Order 2000-10 was approved on June 30, 2000, and [***28] it is part of the appellate record as a result of the superior court granting a request for judicial notice. General Order 2000-10 allowed Class B biosolids to be applied to agricultural land subject to numerous conditions, including site, crop, and harvesting restrictions.

31 General Order 2000-10 is available on the State Water Board's Web site. (See <<http://www.swrcb.ca.gov/resdec/wqorders/2000/wqo2000-10.doc>> [as of Apr. 1, 2005].)

The State Water Board's approval of General Order 2000-10 and certification of the final program EIR was vacated as a result of a CEQA lawsuit brought by County. (*County of Kern v. State Water Resources Control Board* (Jan. 13, 2003, C039485) [nonpub. opn.].)³² The Third Appellate District held the EIR was defective because it did not evaluate, as alternatives to General Order 2000-10, either a requirement that sewage sludge be treated to Class A standards before application as a soil amendment or a prohibition on the use of treated sewage sludge where fruits and vegetables [***29] are grown.

32 County referred to the Third Appellate District's unpublished decision in its reply brief and cited a statement made by the State Water Board in an appellate brief it filed in that case. Our reference to this unpublished opinion as part of a factual narrative of the historical

development of California's regulation of sewage sludge is not a citation or reliance upon that opinion as legal authority for purposes of California Rules of Court, rule 976.

[*1568] To comply with that decision, the State Water Board's 2004 Final PEIR for Biosolids considered, but rejected, the two alternatives specified by the Third Appellate District. Based on that final EIR, the State Water Board adopted Water Quality Order No. 2004-0012 on July 22, 2004 (General Order 2004-0012). 33 General Order 2004-0012 allows Class B biosolids to be applied to agricultural land subject to numerous conditions, including site and crop restrictions.

33 General Order 2004-0012 is available at <<http://www.swrcb.ca.gov/resdec/wqorders/2004/wqo/wqo2004-0012.pdf>> (as of Apr. 1, 2005).

[***30] *Kern County*

County first attempted to regulate the application of sewage sludge to agricultural land within its jurisdiction in August 1998, when it adopted Ordinance No. G-6528, an interim urgency ordinance which became operative on September 1, 1998, and was repealed effective December 31, 1999. Ordinance No. G-6528 allowed the application of Class A and Class B sewage sludge in Kern County by any person who [**44] obtained a permit from the County Environmental Health Services Department, paid a \$ 7,250 application fee, and observed specified management practices, site restrictions and other requirements.

On October 19, 1999, the Kern County Board of Supervisors adopted Ordinance No. G-6638 (Ordinance G-6638) to substitute a new chapter 8.05 into the Kern County Ordinance Code. Ordinance G-6638 provided for two regulatory stages. The first stage, which lasted three years, allowed the application of Class B sewage sludge on sites that had already been approved, but precluded the approval of any new sites. The second stage was scheduled to become effective on January 1, 2003, and allowed only exceptional quality (EQ) sewage sludge³⁴ to be applied to land in Kern County.

34 EQ sewage sludge must meet one of the Class A pathogen reduction alternatives set forth in 40 Code of Federal Regulations part 503.32(a) (2005); the more stringent pollutant concentration

standards set forth in 40 Code of Federal Regulations part 503.13(b)(3) (2005); and a level of vector attraction reduction required by 40 Code of Federal Regulations part 503.33 (2005).

[***31] Ordinance G-6638 is the subject of this appeal and its pertinent provisions are set forth, *post*, in Facts and Proceedings.

In late 2002, County adopted Ordinance No. 6931, which amended chapter 8.05 of the county code to impose a permitting requirement on the application of EQ biosolids to land within the unincorporated area of Kern County, and found that the project was exempt from CEQA pursuant to section 15308 of the Guidelines, which concerns actions by regulatory agencies to protect the environment. This appeal does not directly involve the 2002 amendment.

[*1569] *Overview of California Cases Involving Land Application of Sewage Sludge*

The application of sewage sludge to land has been the topic of litigation before this and other appellate courts located in California.

This court considered the application of CEQA to Kings County's sewage sludge ordinance in *Magan v. County of Kings* (2002) 105 Cal.App.4th 468 [129 Cal. Rptr. 2d 344]. In that case, the Kings County Board of Supervisors determined that its ordinance regulating the application of sewage sludge to land in Kings County was categorically exempt from review under CEQA, and this court upheld that determination. (105 Cal.App.4th at pp. 476-477.) [***32]

As described earlier, in January 2003, the Third Appellate District considered County's challenge to the adequacy of the EIR the State Water Board prepared in connection with its adoption of General Order 2000-10. (*County of Kern v. State Water Resources Control Board, supra*, C039485 [nonpub. opn.].) That litigation led to the certification of the State Water Board's 2004 Final PEIR for Biosolids and the adoption of General Order 2004-0012.

In *U.S. v. Cooper* (9th Cir. 1999) 173 F.3d 1192, the defendant sludge hauler directly applied sludge to a local farm instead of taking the sludge to a composting site first as required by a NPDES permit issued to the City of San Diego by the regional water quality board. The

sludge hauler was convicted under the Clean Water Act of knowingly violating conditions imposed by the permit on the disposal of sewage sludge. The Ninth Circuit Court of Appeals upheld the conviction and ruled, among other things, that Part 503--which encouraged the direct land application of sewage sludge, but did not require state and local governments to allow it--did not preempt the conditions in the permit that [*45] the sludge hauler violated. (*U.S. v. Cooper, supra*, at pp. 1200-1201.) [***33]

In addition to the foregoing appellate cases, the briefing in this appeal mentions other cases before state and federal trial courts concerning County's efforts to regulate the land application of sewage sludge. County contends that Shaen Magan brought two state court actions challenging Ordinance G-6638 and that the judgments entered in County's favor in those actions are now final. In addition, County represents that another state court action brought against it has been stayed by the Tulare County Superior Court pending the resolution of this appeal, and that CASA and others have sued it in a federal action attacking an amended version of the ordinance.

[*1570] **FACTS AND PROCEEDINGS**

In connection with its consideration and adoption of an ordinance regulating the land application of biosolids within its jurisdiction, County undertook a process that involved the public and produced an administrative record of over 25,000 pages.

In 1997, County established a Biosolids Ordinance Advisory Committee to assist in the preparation of a draft ordinance. The committee included representatives from farming organizations, sludge generators and applicators, environmental groups, County [***34] staff and other interested parties. In all, the committee held five public meetings between November 20, 1997, and April 29, 1999. Expert presentations on the scientific issues involving biosolids were received at two public hearings held by County.

In January 1998, County pursued early consultation with public agencies and interested parties to obtain comments on the potential environmental effect of its proposed form of biosolids ordinance. After revisions to the proposed ordinance, County again sought early consultation in May 1999 in connection with determining whether compliance with CEQA would require

preparation of an EIR for the proposed ordinance. After the second consultation period was complete, an initial study was prepared.

On August 10, 1999, an environmental checklist form was completed which found the project--that is, enactment of the ordinance--would not have a significant effect on the environment, and which recommended the preparation of a negative declaration.

County's Planning Department prepared a proposed negative declaration for the biosolids ordinance and published the corresponding notice of availability for public review on August 13, 1999. On October 19, 1999, after [***35] the period for public review of the negative declaration expired, County enacted Ordinance G-6638 and adopted the negative declaration. Section 3 of Ordinance G-6638 amended chapter 8.05 of the Kern County Ordinance Code (Kern Code) effective January 1, 2000, to provide in part:

"8.05.010 PURPOSE AND INTENT

"There are numerous unanswered questions about the safety, environmental effect, and propriety of land applying Biosolids or sewage sludge, even when applied in accordance with federal and state regulations. Biosolids may contain heavy metals, pathogenic organisms, chemical pollutants, and synthetic organic compounds, which may pose a risk to public health and the environment if improperly handled. There is a lack of adequate scientific [*1571] understanding concerning the risk land applying of Biosolids may pose to land, air and water and to human and animal health. ... Consequently, in order to promote the general health, safety and welfare of Kern County and its inhabitants, it is [**46] the intent of this chapter that the land application of Biosolids shall be prohibited in the unincorporated area of Kern County.

"The County recognizes there are existing permitted sites involved in the land [***36] application of Biosolids. Consistent with the protection of private property rights under the United States and California constitutions, this ordinance contains a three year amortization period to permit the orderly discontinuation of the land application of Biosolids by January 1, 2003.

"The County also recognizes that Exceptional Quality Biosolids, as defined in this chapter, are considered by the U.S. Environmental Protection Agency to be a product ... that can be applied as freely as any

other fertilizer or soil amendment to any type of land. Therefore, the provisions of this chapter do not apply to Exceptional Quality Biosolids unless specifically stated herein. Further, the provisions of this chapter do not apply to Compost, as defined herein, manufactured from Biosolids at composting facilities that are otherwise regulated by the County through Solid Waste and Conditional Use Permits.

"8.05.020 DEFINITIONS

"A. **Agency** means an authorized representative of the Environmental Health Services Department of the County. ... [¶] ... [¶]

"E. **Biosolids** are treated solid, semi-solid or liquid residues generated during the treatment of sewage in a wastewater [***37] treatment facility that meet [certain federal requirements for pathogen reduction, vector attraction reduction and pollutant concentrations]. ... Biosolids as used in this chapter excludes Biosolids products that are in a bag or container packaged for routine retail sales through regular retail outlets which are primarily used for landscaping.

"F. **Biosolids Impact Fee** means the fee per ton of Biosolids charged to Biosolids applicators for mitigating the impacts to the Kern County infrastructure shown to be caused by the transport of Biosolids. Permittees which can establish the lack of impact on County infrastructure shall be exempt from payment of the fee. [¶] ... [¶]

[*1572] "H. **Class A Biosolids** are Biosolids that meet the pathogen reduction requirements in 40 CFR 503.32(a) ³⁵ and contain constituents in concentrations not exceeding the concentrations listed in 40 CFR 503.13, Table 1 or Table 3.

35 This reference was probably intended to be limited to subsection (a), which states the pathogen reduction requirements for sewage sludge to be classified Class A.

[***38] "I. **Class B Biosolids** are Biosolids that meet the pathogen reduction requirements in 40 CFR 503.32(b).

"J. **Compost** means the product resulting from the controlled biological decomposition of organic materials which may include Biosolids. Facilities where compost is produced are required to obtain Solid Waste Facilities

and Conditional Use Permits as a condition of operation. Compost products are required to meet or exceed product quality criteria as established by the California Integrated Waste Management Board. [¶] ... [¶]

"M. **Exceptional Quality Biosolids** are Class A Biosolids that meet the pollutant concentrations in 40 CFR 503.13, Table 3 and have achieved a level of vector attraction reduction required by 40 CFR 503.33. Additionally, Class A Biosolids must meet both the fecal coliform and Salmonella sp. bacteria limits contained in alternatives 1 through 6 of 40 CFR 503.32(a) to be Exceptional [**47] Quality. For the purposes of this chapter, Exceptional Quality Biosolids are in bulk form and shall not include Compost which meets or exceeds Exceptional Quality [***39] criteria. [¶] ... [¶]

"P. **Land Application** means the placement of Biosolids on agricultural land at a predetermined agronomic rate to support vegetative growth. For purposes of this chapter, placement includes the spraying or spreading of Biosolids onto the land surface, the injection of Biosolids below the surface, or the incorporation of Biosolids into the soil. [¶] ... [¶]

"R. **Permit** means a Land Application Permit issued by the Agency jointly to an Applier and all POTWs or other generators who supply Biosolids to the Applier. Such permit authorizes the Land Application of Biosolids in the County. Permits are not transferable to other parties without the prior approval of the Agency as provided in Section 8.05.040.R. [¶] ... [¶]

"T. **POTW** means publicly or privately owned treatment works that process wastewater and generate Biosolids. ... [¶] ... [¶]

[*1573] "8.05.030 GENERAL REQUIREMENTS

"A. Prior to commencing any Land Application activities under this chapter, the Applier shall obtain a Permit and pay all applicable fees. Only Sites with an Existing Permit shall be eligible for issuance of a Permit under this chapter. [¶] ... [¶]

"H. Biosolids [***40] Impact Fee.

"1. There is levied by the County of Kern a fee of \$ 3.37 per ton for each ton of Biosolids land applied within the county. The amount of the fee shall be calculated

based on the monthly activity report as required by section 8.05.070(I) and is to be remitted to the Agency along with the filing of the monthly activity report. Permittees are subject to enforcement action, including revocation of the Permit, for non-payment. Where the Permittee can demonstrate the land application of Biosolids does not have an impact on County infrastructure or roads, the Agency may waive this fee.

"2. Permittees, either directly or through the wastewater treatment plant generating the Biosolids to be applied on the Permittee's property, which separately contract with the County or are determined to provide a reciprocal benefit, as determined by the Board of Supervisors, shall be exempt from this fee.

"3. Funds generated by this impact fee and other permit fees may be available to fund the following uses: Expenses associated with the inspection of properties within the County which have permits for the land application of Biosolids; development and operation of a GIS tracking system for all [***41] Biosolids land applied within the County so that there is an accurate data base containing this information; technical studies and pilot projects which provide additional data on Biosolids land application; correction of any infrastructure deficiencies directly associated with the hauling of Biosolids; and, the cost of public outreach and education programs to ensure that the standards expressed within this ordinance and contained in the federal guidance for the beneficial use of Biosolids are adhered to. The budget for the expenditure of the Biosolids Mitigation Fund on mitigating the impact of Biosolids land application within the County as set forth above, shall be prepared by the Director of the Resource Management Agency for approval by the Board of Supervisors annually. [¶] ... [¶]

"8.05.040 PERMIT APPLICATION

[**48] " A. It shall be unlawful for any person to apply Biosolids to land within the unincorporated area of the County without obtaining a Permit from the Agency and being in compliance with the terms and conditions as stated herein.

[*1574] "B. The application for a Permit shall be filed with the Agency on an application form furnished by the Agency, accompanied by an [***42] eight thousand dollar (\$ 8,000) fee. ... [¶] ... [¶]

"G. The Agency may deny an application for one (1)

or more of the following reasons:

"1. Prior significant non-compliance with local, state or federal regulations or permits related to the land application of biosolids.

"2. Inadequate, incomplete, or inaccurate application information.

"3. The land application proposal would not be in conformance with the applicable requirements of this chapter. [¶] ... [¶]

"M. Fees to review and process Permit applications, appeal an action of the Agency, as specified herein, inspect Sites, engage in enforcement activities and compensate for infrastructure impacts shall be established by the Board of Supervisors. [¶] ... [¶]

"8.05.050 MANAGEMENT PRACTICES

"A. Transportation, Storage and Land Application of Biosolids shall not degrade the groundwater or surface water.

"B. Discharge of Biosolids to surface waters or surface water drainage courses is prohibited and all Biosolids shall be confined to within the boundaries of the Site.

"C. All irrigation tailwater on Sites utilized for Biosolids application shall be maintained on the permitted Site and shall not be allowed [***43] to flow on to adjacent properties, either by means of surface or subsurface flows. [¶] ... [¶]

"8.05.080 INSPECTION AND ENFORCEMENT

"A. The Agency shall inspect all Sites at least one (1) time per week during the period when Biosolids are being applied and may inspect more frequently or at any time.

"B. The Agency may charge for services not specifically described that are rendered by personnel that are necessary for the enforcement of the provisions of this ordinance. The charge will be calculated on the per-hour fee of [*1575] seventy-five (\$ 75.00) dollars as established in Section 8.04.100. Any laboratory analysis will be charged at the Agency's actual costs as charged by a Certified Laboratory retained by Agency for any testing.

"C. Any person violating any of the provisions of this chapter shall be deemed guilty of a misdemeanor.

"D. In addition, any violation of this chapter may be deemed by the Agency to be a public nuisance, and may be abated, or enjoined by the Agency, irrespective of any other remedy herein provided.

"8.05.090 EFFECTIVE DATE

"The provisions of this chapter shall expire on December 31, 2002, unless otherwise extended by the board of [***44] supervisors."

Section 4 of Ordinance G-6638 replaced the expired version of chapter 8.05 with a new chapter 8.05 scheduled to become effective on January 1, 2003. Provision 8.05.010 was revised slightly but still stated that the chapter did not apply to EQ biosolids or compost. The definitions of EQ biosolids and compost were not changed. The substantive requirements of that new chapter 8.05 stated:

[**49] " **8.05.040 BIOSOLIDS PROHIBITED**

"A. It shall be unlawful for any person to land apply Biosolids to property within the unincorporated area of the County. Any Site for which a Permit was issued prior to ... January 1, 2003 shall discontinue land application of Biosolids upon the effective date of this chapter.[³⁶]

36 All subsequent references to Kern Code provision 8.05.040(A), Ordinance G-6638, are to this version, which was contained in section 4 of Ordinance G-6638 and was scheduled to become effective on January 1, 2003. The substantive requirements of provision 8.05.040(A) were reenacted by the adoption of Ordinance No. G-6931, which repealed Ordinance G-6638. All subsequent references to the "heightened treatment standards" are to those substantive requirements; this term was chosen because the effect of those requirements was that sewage sludge could not be applied to land in the unincorporated areas of Kern County unless the sludge was treated to the higher standards used to define EQ biosolids.

"B. The discharge of Biosolids to surface waters or surface water drainage courses, including wetlands and water ways, is prohibited."

[***45] Section 5 of Ordinance G-6638 declared that the provisions of Ordinance G-6638 were severable and that the invalidity of any clause or provision would not affect the validity of the other provisions of the ordinance.

[*1576] On November 8, 1999, CSDLAC, OCSD, CLABS, SCAP, CASA, and RBM filed a petition for writ of mandate and complaint for injunction and declaratory relief. The first cause of action in the petition alleged County violated CEQA by approving the negative declaration and making findings that Ordinance G-6638 would not have significant impact on the environment. The second cause of action asserted the adoption of Ordinance G-6638 was an invalid exercise of police power and a violation of the commerce clause. The third cause of action alleged the imposition of the biosolids impact fee violated provisions of the California Constitution concerning taxes, as well as the equal protection and due process clauses of the United States and California Constitutions, by unfairly discriminating against vehicles carrying biosolids.³⁷

37 The theory of discrimination alleged was that vehicles loaded with Class B biosolids should not be singled out, and that all vehicles using the same roads and carrying a load of similar weight caused damage to the roads and thus should be charged the same fee.

[***46] On March 1, 2000, County filed its cross-action against CSDLAC, OCSD and CLABS challenging changes made in their sewage sludge disposal programs. After amendment on June 19, 2000, County's cross-action contained (1) four causes of action alleging CLABS violated CEQA by entering certain contracts and amendments relating to the disposal of biosolids generated at its facilities without performing any environmental review; (2) one cause of action alleging CSDLAC violated CEQA by failing to undertake any environmental review when it and Yakima Company amended and extended their contract for the transportation of sewage sludge from CSDLAC's facilities to Kern County for application on farm land; and (3) five causes of action alleging OCSD violated CEQA by entering biosolids management agreements or options for the purchase of real estate used in connection with the disposal or use of biosolids generated at its facilities without performing any environmental review.

The superior court granted plaintiffs' request that

their CEQA cause of action be bifurcated, took all of the CEQA claims under submission on August 30, 2000, and by written ruling entered on November 22, [*50] 2000, denied the CEQA [***47] claims of all parties.

Approximately a year and a half later, the superior court heard and denied plaintiffs' motions for summary judgment, and granted County's motion for a protective order regarding depositions and written discovery requested by CSDLAC, OCSO and Shaen Magan relating to the remaining non-CEQA causes of action that challenged the validity of County's legislative act of adopting Ordinance G-6638.

[*1577] On June 3, 2002, the parties agreed to present their cases by trial briefs. After considering the briefs filed by the parties, the superior court entered an order on November 25, 2002, denying the non-CEQA claims alleged in plaintiffs' second and third causes of action. The superior court filed a statement of decision on January 7, 2003, which ruled that (1) Ordinance G-6638 was not an invalid exercise of police power or a violation of the commerce clause and (2) the biosolids impact fee passed constitutional scrutiny because it had a rational basis and was not an illegal general or special tax. On March 10, 2003, judgment was entered in favor of County on all causes of action asserted by plaintiffs and in favor of the cross-defendants on all causes of action asserted by [***48] County in its cross-action.

CSDLAC, OCSO, CLABS, CASA, RBM and SCAP timely filed an appeal. County timely filed a notice of appeal from the judgment that denied its cross-action.

DISCUSSION

Plaintiffs contend County erroneously found that Ordinance G-6638 would not have a significant effect on California's environment and, therefore, County violated CEQA when it approved the negative declaration and adopted Ordinance G-6638. The superior court ruled the approval of the negative declaration was appropriate because there was no "substantial evidence of a fair argument that adoption of this ordinance, which continues to allow application of biosolids but requires [plaintiffs] to upgrade them to protect the environment, would have an adverse impact on the environment."

We hold that the preparation of an EIR was mandatory under the low threshold imposed by the fair argument standard because the administrative record

contained sufficient, credible evidence that the heightened treatment standards for the application of sewage sludge to land in the unincorporated areas of Kern County might have a significant adverse effect on California's environment. Furthermore, the possibility [***49] that the net overall impact of the ordinance was beneficial did not override the requirement in CEQA for the preparation of an EIR addressing the significant adverse environmental impacts the ordinance may have caused. (Guidelines, § 15063, subd. (b).)

I. CEQA Standard of Review

A. General Principles

(8) It is well established in CEQA proceedings that (1) the public agency is the finder of fact, (2) the superior court's findings are not binding on the appellate court, and (3) the scope and standard of review applied by [*1578] the appellate court to the agency's decision is the same as that applied by the superior court. (See §§ 21168, 21168.5; *Fat v. County of Sacramento* (2002) 97 Cal.App.4th 1270, 1277 [19 Cal. Rptr. 2d 402] [county's approval of a negative declaration and conditional use permit reinstated and trial court reversed].)

(9) When a CEQA petition challenges action of a public agency that is legislative or quasi-legislative in character, the standard of review contained in section 21168.5 [**51] and the procedures for traditional mandamus set forth in Code of Civil Procedure section 1085 are applied. (See *Western States Petroleum Assn. v. Superior Court* (1995) 9 Cal.4th 559, 566-567 [8 Cal. Rptr. 2d 139, 888 P.2d 1268].) [***50] Section 21168.5 provides: "In any action or proceeding, other than an action or proceeding under Section 21168, to attack, review, set aside, void or annul a determination, finding, or decision of a public agency on the grounds of noncompliance with this division, the inquiry shall extend only to whether there was a prejudicial abuse of discretion. Abuse of discretion is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence."

(10) Amendment or adoption of an ordinance is a legislative act subject to review under section 21168.5. (*Friends of Sierra Madre v. City of Sierra Madre* (2001) 25 Cal.4th 165, 172, fn. 2 [105 Cal. Rptr. 2d 214, 19 P.3d 567] [§ 21168.5 applied to CEQA challenge to city ordinance that removed certain properties from register of

historic landmarks]; *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.3d 68 [118 Cal. Rptr. 34, 529 P.2d 66] [city's adoption of ordinances without CEQA compliance was governed by § 21168.5]; *Fall River Wild Trout Foundation v. County of Shasta* (1999) 70 Cal.App.4th 482, 488 [82 Cal. Rptr. 2d 705] [county's amendment of a zoning ordinance reviewed [***51] under § 21168.5.) Accordingly, the Kern County Board of Supervisors' adoption of Ordinance G-6638 is reviewable under section 21168.5 for a prejudicial abuse of discretion.

B. Fair Argument Test

(11) CEQA requires a governmental agency to "prepare, or cause to be prepared by contract, and certify the completion of, an environmental impact report on any project which they propose to carry out or approve that may have a significant effect on the environment." (§ 21100, subd. (a); see Guidelines, § 15064, subd. (a)(1).) Conversely, a negative declaration--rather than an EIR--is appropriate when the administrative record before the [*1579] governmental agency does not contain substantial evidence that the project may have a significant effect on the environment. (§ 21080, subd. (c).)

(12) When a court reviews an agency's decision to certify a negative declaration, the court must determine whether substantial evidence supports a "fair argument" that the project may have a significant effect on the environment. (See §§ 21080, subs. (c) & (d), 21151; *Laurel Heights Improvement Assn. v. Regents of University of California* (1993) 6 Cal.4th 1112, 1123 [26 Cal. Rptr. 2d 231, 864 P.2d 502]; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150-151 [39 Cal. Rptr. 2d 54] [Ct. App., 5th Dist. voided negative declaration and mandated preparation of EIR].) The determination by an appellate court under the fair argument test involves a question of law decided independent of any ruling by the superior court. (*Stanislaus Audubon Society, Inc.*, at p. 151.) Consequently, "we independently 'review the record and determine whether there is substantial evidence in support of a fair argument [the proposed project] may have a significant environmental impact, while giving [the lead agency] the benefit of a doubt on any legitimate, disputed issues of credibility.'" (*Ibid.*, quoting *Quail Botanical Gardens Foundation, Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1603 [35 Cal. Rptr. 2d 470]; see § 21151.)

(13) California courts, including the Fifth Appellate District, routinely describe [**52] the fair argument test as a low threshold requirement for the initial preparation of an EIR that reflects a preference for resolving doubts in favor of environmental review. (See *Stanislaus Audubon Society, Inc. v. County of Stanislaus, supra*, 33 Cal.App.4th at p. 151; [***53] *Sierra Club v. County of Sonoma* (1992) 6 Cal.App.4th 1307, 1316-1317 [8 Cal. Rptr. 2d 473] [Ct. App., 1st Dist., Div. 1]; see also *No Oil, Inc. v. City of Los Angeles, supra*, 13 Cal.3d at p. 84.)

In contrast to this description of the fair argument test, County asserts that "[a]ny reasonable doubts whether substantial evidence exists must be resolved in favor of the agency's decision." This assertion is rejected because (1) it misstates the low threshold of the fair argument test and (2) the case relied upon by County did not actually involve the fair argument test or the approval of a negative declaration. (See *Marin Mun. Water Dist. v. KG Land California Corp.* (1991) 235 Cal. App. 3d 1652, 1660 [1 Cal. Rptr. 2d 767] [court explicitly stated it was applying the substantial evidence standard to the agency's approval of the EIR].) Where the question is the sufficiency of the evidence to support a fair argument, "deference to the agency's determination is not appropriate" (*Sierra Club v. County of Sonoma, supra*, 6 Cal.App.4th at pp. 1317-1318.) [*1580]

(14) A logical deduction from the formulation of the fair argument test is that, if substantial evidence [***54] establishes a reasonable possibility of a significant environmental impact, then the existence of contrary evidence in the administrative record is not adequate to support a decision to dispense with an EIR. (Guidelines, § 15064, subd. (f)(1); *League for Protection of Oakland's etc. Historic Resources v. City of Oakland* (1997) 52 Cal.App.4th 896, 904-905 [60 Cal. Rptr. 2d 821].) The environmental review necessary to complete an EIR prepares the agency to weigh the conflicting substantial evidence on each side of an issue and make its findings of fact.

(15) The fair argument test also requires the preparation of an EIR where "there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial" (Guidelines, § 15063, subd. (b)(1); see *San Joaquin Raptor/Wildlife*

Rescue Center v. County of Stanislaus (1996) 42 Cal.App.4th 608, 614-615 [49 Cal.Rptr.2d 494].) In other words, for projects that may cause both beneficial and adverse significant impacts on the environment, preparation of an EIR is required because the consideration of feasible [***55] alternatives and mitigation measures might result in changes to the project that decrease its adverse impacts on California's environment. Consequently, the argument that an EIR was unnecessary because the net overall effect of Ordinance G-6638 was beneficial to the environment must fail, regardless of potential environmental benefits, if substantial evidence shows a reasonable possibility of one or more significant adverse environmental impacts.

C. Definitions Relevant to the Fair Argument Test

The fair argument test contains several terms that are defined further by CEQA, the Guidelines, or case law.

(16) First, the term "substantial evidence" is defined by the Guidelines to mean "enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached." (Guidelines, § 15384, subd. (a); see *No Oil, Inc. v. City of Los Angeles, supra*, 13 Cal.3d at p. 75.) CEQA specifically provides that "substantial evidence includes fact, a reasonable assumption predicated upon fact, or expert opinion supported by fact" (§ 21080, subd. (e)(1)) and excludes [***56] "argument, speculation, unsubstantiated opinion or narrative, evidence that is clearly inaccurate or erroneous, or evidence of social or economic impacts that do not contribute to, or are not caused by, physical impacts on the environment." (*Id.*, subd. (e)(2); see Guidelines, § 15384, subd. (a).) Thus, the existence of a public controversy is not a substitute for substantial evidence. (Guidelines, § 15064, subd. (f)(4).)

[*1581] (17) Second, a project "may" have a significant effect on the environment if there is a "reasonable possibility" that it will result in a significant impact. (*No Oil, Inc. v. City of Los Angeles, supra*, 13 Cal.3d at p. 83, fn. 16.)

Third, "environment" is defined by CEQA as "the physical conditions [that] exist within the area [that] will be affected by a proposed project, including land, air, water, minerals, flora, fauna, noise, objects of historic or aesthetic significance." (§ 21060.5.) Section 15360 of the

Guidelines explains this definition by providing: "The area involved shall be the area in which significant effects would occur either directly or indirectly as a result of the project. The 'environment' includes both [***57] natural and man-made conditions."

Fourth, the phrase "significant effect on the environment" is defined as "a substantial, or potentially substantial, adverse change in the environment." (§ 21068; see Guidelines, § 15382.) "In determining whether an effect will be adverse or beneficial, the lead agency shall consider the views held by members of the public in all areas affected as expressed in the whole record before the lead agency." (Guidelines, § 15064, subd. (c).)

Fifth, the "significance" of an environmental effect requires the evaluation of "direct physical changes in the environment [that] may be caused by the project and reasonably foreseeable indirect physical changes in the environment [that] may be caused by the project." (Guidelines, § 15064, subd. (d); see § 21065.)³⁸ In this context, "direct" means "caused by and immediately related to the project." (Guidelines, § 15064, subd. (d)(1).) "Indirect" means "not immediately related to the project, but ... caused indirectly by the project" such as a physical change caused by a direct physical change. (*Id.*, subd. (d)(2).) The test for the strength of the nexus between the project and an indirect physical [***58] change is whether "that change is a reasonably foreseeable impact [that] may be caused by the project." (*Id.*, subd. (d)(3).) The "reasonably foreseeable" test excludes physical changes that are speculative or not likely to occur. (*Ibid.*)

38 The Guidelines caution that an ironclad definition of "significant effect" is not possible because the significance of an activity may vary with the setting. (Guidelines, § 15064, subd. (b).)

Sixth, "effects" and "impacts" are synonymous and include (1) "[d]irect or primary effects [that] are caused by the project and occur at the same time and place" and (2) "[i]ndirect or secondary effects [that] are caused by the project and are later in time or farther removed in distance, but are still reasonably foreseeable." (Guidelines, § 15358, subd. (a).) A common example of an indirect effect is the pollution that results from the growth-inducing effect of a project. (See Guidelines, §§ 15064, subd. (d)(2), 15382.) [*1582]

[**54] II. *An EIR is Required Under the Low [***59] Threshold of the Fair Argument Test*

Plaintiffs contend the implementation of Ordinance G-6638 created a reasonable possibility of significant environmental impacts both inside and outside Kern County. Plaintiffs contend these significant impacts included (1) increased vehicle traffic, (2) increased air pollution in the form of vehicle emissions, dust and volatilization of pesticides, (3) degraded water quality from the use of alternative fertilizers, (4) increased burdens on landfills, (5) increased energy and fuel consumption, (6) increased soil erosion, (7) increased use of irrigation water, (8) increased exposure of humans to pathogens, (9) loss of habitat for small animals, and (10) loss of productivity of marginal farmland.

County contends the fair argument test was not met because (1) the relevant environment was approximately 23,594 acres of farmland³⁹ in Kern County where Class B biosolids were applied and (2) it was not reasonably possible that significant adverse environmental impacts would occur on that farmland. To support its first contention, County asserts that any broader sweep of the ordinance would depend on alternative methods of biosolids disposal chosen [***60] by plaintiffs, and that the environmental impacts resulting from those methods were thus too uncertain and speculative for County to evaluate. To support its second contention, County asserts EQ biosolids would serve as an adequate substitute for the Class B biosolids that could no longer be applied by farmers.

39 This farmland represents about 3 percent of the total harvested cropland in Kern County.

CEQA defines the relevant geographical environment as the area where physical conditions will be affected by the proposed project. (§ 21060.5.) Consequently, the project area does not define the relevant environment for purposes of CEQA when a project's environmental effects will be felt outside the project area. (See *Napa Citizens for Honest Government v. Napa County Bd. of Supervisors* (2001) 91 Cal.App.4th 342, 369 [110 Cal. Rptr. 2d 579].) Moreover, "the purpose of CEQA would be undermined if the appropriate governmental agencies went forward without an awareness of the effects a project will have on areas outside [***61] of the boundaries of the project area." (*Ibid.*)

We agree with County that some of the physical changes to the environment resulting from the adoption of Ordinance G-6638 would depend on the reactions of plaintiffs and others to its requirements. Consequently, we will not limit our review to a particular geographical area, but begin by examining (1) the reasonably foreseeable reactions of those affected by the heightened treatment standards, (2) how such reactions might cause physical changes to [*1583] the environment, and (3) the environmental significance of those physical changes. The two main groups directly affected by Ordinance G-6638 were sewage sludge generators and the farmers who used Class B biosolids as a fertilizer. We will analyze each group separately.

A. Reactions of Sewage Sludge Generators and Related Impacts

Under the heightened treatment standards of Ordinance G-6638, sludge generators such as CSDLAC, CLABS and OCSD that applied Class B biosolids to agricultural land in Kern County were required to either reduce their production of biosolids or dispose of their biosolids in some other way.

[**55] 1. *Continued production and disposal of sewage sludge [***62] was foreseeable*

It was reasonably foreseeable that the City of Los Angeles, and the Counties of Los Angeles and Orange would continue to produce sewage sludge and would need to dispose of it. County does not dispute this point. The administrative record includes documents stating that the generation of biosolids will continue to increase along with the state's population. Therefore, at the time County certified the negative declaration, it was reasonably foreseeable that the heightened treatment standards would compel CSDLAC, CLABS, OCSD and other agencies to find a substitute for applying Class B biosolids on land within the jurisdiction of Kern County.

2. *Alternative methods of disposal were reasonably foreseeable*

a. Foreseeability of disposal alternatives

The following alternatives were foreseeable, because of the applicable rules of law governing the use and disposal of sewage sludge and because of information contained in the administrative record: (1) further treatment to convert Class B biosolids to EQ biosolids

followed by land application, (2) land application of Class B biosolids somewhere other than Kern County, (3) incineration, or (4) disposal [***63] in a landfill.

The applicable rules of law set forth in state statute and federal regulations address land application, ⁴⁰ landfilling, and incineration of sewage sludge. (See Wat. Code, § 13274, subs. (d), (f) & (g); 40 C.F.R. § 503, subparts B [land application], C [surface disposal, i.e., landfill] & E [incineration].) ⁴¹ [*1584] Also, land application of sewage sludge that has been treated to heightened standards is suggested by Ordinance G-6638 itself.

⁴⁰ Land application may involve sewage sludge that has received various levels of treatment. For example, composting may be an intermediate step that prepares the sewage sludge to be applied to land as EQ biosolids.

⁴¹ See generally Goldfarb, *Sewage Sludge*, *supra*, 26 B.C. Env'tl. Aff. L.Rev. at pages 690-697 (discussing the three main ways to dispose of sewage sludge: landfilling, incineration and land application).

The administrative record contains a vast amount of information about the alternative methods for [***64] disposing of Class B biosolids. Part of that information was presented in comments from persons familiar with the disposal of sewage sludge. For instance, a September 13, 1999, declaration of James F. Stahl, an assistant chief engineer and assistant general manager of CSDLAC, identified the four alternatives and provided historical data showing the disposal options California had used in the past: "[I]n 1998 approximately 1,849 dry tons per day of sludge were generated in California. Of that amount, approximately 67.8% was land applied, while about 7% was in storage, 5.6% was incinerated, 9% was disposed of in landfills, and 10.6% [was] used in compost. In California, the most common use of land-applied biosolids is for agricultural crop production. ... [A]bout one-third of all land-applied biosolids in the State of California in 1998 were applied in Kern County." ⁴²

⁴² Mr. Stahl relied on a survey conducted by CASA that was described in the State Water Board's 1999 Draft EIR, figure 2-2.

[***65] A letter from the Chief of the Office of Clean Water Act Compliance of Region IX of the EPA indicated the alternatives were (1) treatment to Class A

standards, (2) hauling further distances for land application, [**56] and (3) adding the organic, nitrogen-rich material to landfills. These methods and incineration were identified in the September 13, 1999, comments jointly submitted by CASA and SCAP and a June 14, 1999, letter signed by attorneys for OCSO, CSDLAC and CLABS. In addition, a letter from the Chair of the Central Valley Water Board mentions landfilling and incineration as alternative methods of disposal.

As a result of the foregoing comments and existing law, the foreseeable alternative methods of disposal of Class B biosolids included (1) land application outside Kern County, (2) further treatment to EQ biosolids standards followed by land application, (3) landfilling and (4) incineration.

b. Reasonableness limitation on foreseeable alternatives

(18) Next, we consider which of the foreseeable alternatives were *reasonably* foreseeable under the circumstances of this case. Under the fair argument test, the inquiry into what is reasonably foreseeable depends on whether [***66] the administrative record contains enough evidence to show a reasonable possibility that a particular alternative would be used in the future.

[*1585] OCSO, CSDLAC and CLABS were among the entities affected by Ordinance G-6638 that submitted comments to County predicting how they would respond to the ordinance.

An assistant general manager of OCSO, Blake P. Anderson, stated in a September 9, 1999, declaration that OCSO intended to respond to the ordinance by (1) converting Class B biosolids to EQ biosolids and (2) hauling the portion of the Class B biosolids not converted to more distant locations for land application. At that time, OCSO was "in the process [of] developing a request for proposals in order to obtain bids for the conversion of OCSO's Class B biosolids to exceptional quality biosolids." Earlier, in comments attached to its June 14, 1999, letter, OCSO discussed the limitations on landfills in Southern California and indicated that the landfills most likely to be used to dispose of Class B biosolids were located in Arizona and Utah.

The declaration of Mr. Stahl, CSDLAC's assistant general manager, stated adoption of the ordinance would cause CSDLAC to apply its biosolids to [***67] land

further away and, if the sites with permits for land application of Class B biosolids did not have sufficient capacity, to treat the biosolids to meet Class A or EQ standards. Mr. Stahl also addressed the potential alternatives of incineration and local landfilling by stating that (1) incineration was not feasible in Southern California because of its adverse impact on air quality and (2) local landfilling lacked viability because of various constraints placed on those landfills, which included the recycling requirements of the California Integrated Waste Management Act of 1989. Also, Gregory M. Adams, the head of the air quality engineering section of CSDLAC, opined that the incineration of sewage sludge in Southern California was not feasible because of its adverse impact on air quality.

A September 10, 1999, letter from CLABS stated that "[t]o date, our analysis indicates that the alternative with the highest likelihood of immediate success is the conversion of Class B biosolids to what are known as exceptional quality biosolids under the federal regulations." The letter described the testing undertaken for the conversion of Class B biosolids at its Terminal Island wastewater [***68] treatment plant and its Hyperion treatment plant and stated that it was reasonably foreseeable that within three years CLABS would be converting 100,000 wet tons per year of Class B biosolids to EQ biosolids. The letter also mentioned that the City of Los Angeles [**57] had examined potential alternative sites for land application of Class B biosolids as well as the use of a landfill in Arizona as a backup method for disposal.

[*1586] The foregoing predictions by entities that would have to change their practices when the heightened treatment standards went into effect are not rendered speculative by virtue of being predictions of future methods of compliance. Predicting the physical changes a project will bring about is an inescapable part of CEQA analysis. (*Planning & Conservation League v. Department of Water Resources* (2000) 83 Cal.App.4th 892, 919 [100 Cal. Rptr. 2d 173] [CEQA compels reasonable forecasting]; ⁴³ see *Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 398-399 [253 Cal. Rptr. 426, 764 P.2d 278].)

43 In addressing forecasting, i.e., predicting or estimating what will occur in the future, the Guidelines state that "[d]rafting an EIR or

preparing a negative declaration necessarily involves some degree of forecasting. While foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can." (Guidelines, § 15144.)

[***69] (19) County contends that, when it adopted Ordinance G-6638, it could only speculate as to which alternative biosolids generators would adopt when the heightened treatment standards went into effect on January 1, 2003. Determining whether alternative methods of compliance with a new ordinance are reasonably foreseeable or speculative depends on the facts in the record rather than a bright-line rule of law. A bright-line rule--stating that the existence of alternative means of compliance with a new rule or regulation would cause each alternative to be so uncertain that it was not reasonably foreseeable--would contradict the requirements for environmental analysis imposed by section 21159, subdivision (a). That subdivision provides that when specified agencies adopt a rule or regulation concerning pollution control, performance standards, or treatment requirements, the agency must perform "an environmental analysis of the reasonably foreseeable methods of compliance." ⁴⁴ Thus, CEQA recognizes that the existence of alternative methods of compliance does not, in itself, make the alternatives not reasonably foreseeable. Nothing in logic dictates a different conclusion when the new edict is [***70] a county ordinance, even though the express terms of section 21159 do not cover ordinances. Consequently, regardless of whether the situation concerns a new rule, regulation or ordinance, whether one or more methods of future compliance are reasonably foreseeable depends upon the quality and quantity of evidence in the administrative record.

44 The section in the Guidelines corresponding to section 21159, subdivision (a) provides that adoption of a rule or regulation concerning pollution control, performance standards, or treatment requirements by specified state agencies requires an "environmental analysis of the reasonably foreseeable methods by which compliance ... will be achieved." (Guidelines, § 15187, subd. (a).)

The evidence in this case includes predictions of OCSD, CSDLAC and CLABS that are supported by a

reasoned analysis of the options available to them, an investigation into the practicalities of those options, and the plans or [*1587] intentions they had formed at that stage of their investigation. Accordingly, [***71] the predictions and the information upon which the predictions were based constitute substantial evidence supporting a fair argument that the reasonably foreseeable alternatives for disposing of sewage sludge that otherwise would have been applied to Kern County farmland as Class B biosolids were (1) hauling the Class B biosolids to other locations [**58] where land application was allowed, (2) treating the Class B biosolids to meet more stringent standards, and (3) depositing the Class B biosolids in landfills. In other words, based on the record cited on appeal (see Cal. Rules of Court, rule 14(a)(1)(C)), the only alternative method of disposal that was not *reasonably* foreseeable was incineration.

3. *Significance of environmental impacts of disposal alternatives*

(20) The next inquiry under the fair argument test is whether the likelihood of implementation of the reasonably foreseeable disposal alternatives created a reasonable possibility of a significant effect on the environment. A project will have a significant effect on the environment if it will cause "a substantial, or potentially substantial, adverse change in" (§ 21068) "the physical conditions [that] [***72] exist within the area [that] will be affected by [the] project, including land, air, water, minerals, flora, fauna, noise, objects of historic or aesthetic significance." (§§ 21060.5 [defining "environment"], 21068 [defining "significant effect on the environment"]; see Guidelines, §§ 15360, 15382.)

One illustration of the foreseeability of secondary environmental impacts occurred in *City of Redlands v. County of San Bernardino* (2002) 96 Cal.App.4th 398 [117 Cal. Rptr. 2d 582] where a county approved amendments that modified its general plan relating to land use regulation of unincorporated territory within a city's sphere of influence. The general plan amendment caused the slope development standards to become more lenient in certain areas and created the possibility for development of land previously considered too steep for development. (*Id.* at pp. 412-413.) The Fourth Appellate District held that an expected secondary effect of the adoption of a general plan amendment was an increase in grading that would destroy the natural contours of

hillsides and possibly eliminate the natural habitat for plants and animals. (*Id.* at p. 413.) Despite the county's [***73] argument that the evidence lacked the necessary specificity and the absence of a particular development project, the court concluded the administrative record contained [*1588] "substantial evidence of a fair argument that the amendments [to the general plan] may have a significant effect on the environment." (*Id.* at p. 414.) Thus, the trial court's decision to require the preparation of an EIR was upheld. (*Ibid.*)

a. *Hauling*

Mr. Anderson stated that OCS D anticipated hauling at least five truckloads of Class B biosolids per day to Kings County and two truckloads per day to Yuma, Arizona, which would involve a total of 2,000 vehicle miles per day and 1,200 vehicle miles per day, respectively.

Mr. Stahl stated Ordinance G-6638 would cause CSDLAC to apply Class B biosolids to land "at a currently-permitted location in Kings County for which [CSDLAC has] an existing contract" and at more remote permitted locations because the permitted capacity in Kings County could only accept about two-thirds of the biosolids generated by CSDLAC, OCS D and CLABS. Mr. Stahl also stated the additional hauling distance to the location in Kings County was approximately 45 miles [***74] one way. Based on this additional mileage and the amount of wet tons of sewage sludge CSDLAC produced, Mr. Adams stated that the additional hauling of CSDLAC alone would result in nitrogen oxide (NOx) emissions of 63 pounds per day. Daily operations-related emissions that exceed 55 pounds per day of NOx are considered significant under the thresholds [**59] established by the San Joaquin Valley Unified Air Pollution Control District (SJVUAPCD). ⁴⁵ (See Guidelines, § 15064.7 [public agencies encouraged to develop and publish thresholds of significance]; *Communities for a Better Environment v. California Resources Agency* (2002) 103 Cal.App.4th 98, 110-111 [126 Cal. Rptr. 2d 441] [adopting quantitative standard as threshold of significance "promotes consistency, efficiency, and predictability in deciding whether to prepare an EIR".]) Accordingly, Mr. Adams concluded that the additional hauling of sewage sludge produced by CSDLAC would have a significant effect on the environment.

45 The SJVUAPCD and the South Coast Air

Quality Management District (SCAQMD) have both established thresholds of significance for direct and indirect project emissions, such as NO_x, reactive organic gases (ROG), carbon monoxide (CO), sulfur oxide (SO_x) and fine particulate matter (PM-10).

[***75] The information in the administrative record supported a reasonable inference that the totality of additional hauling of Class B biosolids beyond sites in Kern County to locations in Kings County and further north would create additional NO_x emissions that would have a significant adverse impact on the air quality within the jurisdiction of the SJVUAPCD. This determination is based on the levels of significance established by the SJVUAPCD. (See [*1589] Guidelines, § 15064.7.) Accordingly, under the fair argument test, an EIR should have been prepared to consider the impact of Ordinance G-6638 on air quality.

b. *Treatment to EQ standards*

Mr. Stahl's declaration also stated CSDLAC had not built facilities sufficient to process its biosolids to meet Class A or EQ standards, but the design parameters for a pasteurization facility to accomplish that processing had been calculated by CSDLAC and would require approximately 700 MMBTUH⁴⁶ for heating in a natural gas boiler and 3,200 Hp⁴⁷ for pumping and handling.

46 Million British thermal units per hour. A British thermal unit is a unit of energy defined as the quantity of heat required to raise the temperature of one pound of water one degree Fahrenheit.

[***76]

47 Horsepower, which is a unit of power that can be defined as 550 foot pounds per second or 745.7 watts.

The declaration of Mr. Adams states that for the 700 MMBTUH design parameter calculated by CSDLAC for a pasteurization facility, a natural gas fired boiler of that capacity "would emit approximately 111 lbs of NO_x and 581 lbs of CO per day at their BACT [best available control technology] levels (i.e., 5 ppm NO_x and 50 ppm CO)." This estimate of the per day emission of NO_x is more than twice the threshold of significance set by the SCAQMD, and the estimate of CO emission also exceeds the threshold of significance of 550 pounds per day. Mr. Adams also stated that the processing activity necessary

for another sanitation agency to convert 100,000 tons of Class B biosolids to EQ biosolids per year would also exceed the thresholds of significance for NO_x and CO.

In addition, the declaration of Robert A. Gillette, a civil engineer and principal of Carollo Engineers, described the energy consumption associated with the additional treatment processes used to convert Class B biosolids to Class A biosolids. In his declaration, Mr. Gillette expressed the opinion that the most viable processes for converting Class B biosolids to Class A at a treatment plant were in-vessel composting, heat drying, and lime stabilization. Based on these processes and other data, Mr. Gillette estimated: [*60] "If only one third of the Class B biosolids presently used in Kern County are converted to Class A, the electricity usage for these alternatives is equivalent on an annual average basis to the amount used by between 1,500 and 5,000 homes in Southern California, according to data from Southern California Edison. The natural gas usage is equivalent on an annual average basis to the amount used by between 3,000 and 6,000 homes in Southern California according to data from the Southern California Gas Company."

[*1590] Mr. Gillette also stated his opinion that if 200,000 wet tons per year of Class B biosolids were converted to more stringent standards instead of applied to land in Kern County, "the environmental impact from the additional use of energy would be very significant."

While we recognize that OCSD, CSDLAC and CLABS each had choices in deciding what combination of further treatment and [***78] hauling to distant sites to implement, we conclude that a fair argument can be made that the aggregate impact of the alternatives adopted by these entities and the publicly and privately owned treatment works (POTW) serving Kern County communities⁴⁸ may cause a substantial, or potentially substantial, adverse change in the air quality within the jurisdiction of the SCAQMD and the SJVUAPCD. Furthermore, a fair argument can be made that the increased energy use caused by further treatment processes would cause a significant effect on the environment.

48 A Central Valley Water Board letter of September 17, 1999, stated the negative declaration "should also address the impacts of the proposed ban on POTWs serving Kern County communities."

c. *Landfill capacity*

The historical data in the administrative record shows that the biggest changes in the disposal and use of biosolids in California between 1988 and 1998 were the reduction in the use of landfills (60.2 percent to 9.1 percent) and the increase in [***79] the use of land application (12.7 percent to 67.8 percent). From this data, it is reasonable to infer that land application has acted as a substitute for disposal in landfills and, as land application becomes more difficult, the use of landfills will be a partial substitute for land application. For instance, page 2-2 of the State Water Board's 1999 Draft EIR links the "huge increase in land application" reflected in the 1998 data with the reduction in the use of landfills.

The California Integrated Waste Management Act of 1989 includes the legislative findings that the "amount of solid waste generated in the state coupled with diminishing landfill space and potential adverse environmental impacts from landfilling constitutes an urgent need for state and local agencies to enact and implement an aggressive new integrated waste management program" (§ 40000, subd. (d)), and that the reuse of solid waste would preserve landfill capacity and protect the state's environment (*id.*, subd. (e)).

Based in part on (1) the volume of Class B biosolids applied to land in Kern County before the heightened treatment standards became effective, (2) the use of landfills as a substitute for land [***80] application of biosolids, and (3) the legislative findings regarding diminishing landfill capacity and the adverse [*1591] environmental impact associated with landfilling, we conclude that a fair argument exists that the potential increased use of California's limited landfill space to dispose of an organic, nitrogen-rich material may have a significant adverse effect on the environment. Accordingly, [**61] that potential environmental impact should be assessed in an EIR.

d. *Summary*

(21) The reasonably foreseeable reactions of sewage sludge generators to Ordinance G-6638, and the reasonably foreseeable environmental impacts of those reactions, include: (1) increased fuel consumption and vehicle emissions resulting from hauling Class B biosolids greater distances; (2) the consumption of energy for the heating, pumping and handling involved in

treating Class B biosolids to meet more stringent standards, and the emissions generated by the additional treatment; and (3) loss of landfill capacity.⁴⁹

49 In determining the foreseeability of a significant environmental impact, predicting what combination of alternatives will be used is less important when environmental impacts are associated with each alternative in the limited array of choices available.

[***81] B. *Farmer Reaction and Related Impacts*

Plaintiffs argue that the reaction of Kern County farmers to the heightened treatment standards for sewage sludge applied to land after December 31, 2002, would result in significant impacts, "including the loss of productivity of marginal farmland (EPA, Garvey, Magan), increased air pollution from volatilization of increased pesticide usage, increased dust, and additional truck traffic (EPA, Regional Board, Garvey, Wilson, Tow, Anderson, Stahl, Adams, Hyde, Nixon, Westhoff) ... increased energy and fuel consumption (Wilson, Gillette, Anderson, Stahl, Nixon), increased erosion and dust (Garvey, Tow), increased water use (Garvey, Dixon, Tow), increased risks to human health (Nixon, Gerba), and loss of habitat for small animals (Garvey)." (Fn. omitted.)

County argues that the evidence referred to by plaintiffs is too general and does not show that "the Ordinance will result in significant environmental impacts on the land to which it applies." County asserts the lack of site-specific evidence occurred because "no physical changes would occur in the unincorporated area during the first three years because the Ordinance allowed the continued [***82] use of Class B biosolids; and no significant impacts [*1592] would occur after January 1, 2003 because the Ordinance allows the continued land application of EQ biosolids."

1. *Reasonably foreseeable farmer reactions*

Plaintiffs predicted that farmers who could not apply Class B biosolids after December 31, 2002, would react by (1) taking land out of agricultural production, (2) applying animal manure as a substitute for the biosolids, or (3) using chemical fertilizers. County asserts plaintiffs have indulged in assumptions unsupported by facts and have "ignore[d] evidence showing it is far more likely sludge generators will convert their Class B biosolids to

EQ, ensuring an adequate substitute for Class B biosolids for anyone who wishes to use them." County supports its prediction by referring to various contracts and related documents of the sanitation agencies that contemplate the use of composting as a disposal option.⁵⁰

50 Reliance upon these documents could be an after-the-fact justification because the documents were not part of the administrative record before the Kern County Board of Supervisors when it decided to adopt Ordinance G-6638 and to certify the negative declaration.

[***83] In effect, County has argued its forecast of how farmers would react when they could no longer apply Class B biosolids was the only forecast supported by substantial [**62] evidence. (See Guidelines, § 15144 [forecasting].) This position is rejected for three reasons.

First, the documents cited by County in its appellate brief were not considered by County in adopting Ordinance G-6638 as they were not a part of the administrative record. (See § 21003, subd. (b) [document cannot be "meaningful and useful to decisionmakers" if it was not available to them].)

Second, County has cited and this court has located no evidence in the administrative record that supports the factual assertion that EQ biosolids are "an adequate substitute for Class B biosolids." Indeed, the evidence in the administrative record, including a letter from the EPA, indicates that most treatment processes for Class B biosolids reduce the nitrogen levels considerably and therefore reduce its value as fertilizer. County contends this evidence is unreliable because another document that was not in the administrative record shows that one of the primary land application sites used by OCSD in Kern County did not need [***84] additional nitrogen for crop growth and would not be available for land application of Class B biosolids for a year or more. This attack on the evidence is faulty because (1) it is based on a document that is not in the administrative record; (2) it pertains to only one of the many land application sites in Kern County and provides no basis for inferring that all the other sites have the same characteristic; and (3) the [*1593] period the site was unavailable was not shown to extend to the time the heightened treatment standards went into effect.⁵¹

51 In other words, County failed to show that by January 1, 2003, nitrogen levels at the site would

have remained so high that EQ biosolids could have been used as fertilizer without any need for an additional source of nitrogen.

Third, even if one were to assume EQ biosolids and Class B biosolids were equivalents as fertilizer, the administrative record does not contain evidence which supports County's assumption that EQ biosolids would be available in sufficient quantities [***85] to completely replace Class B biosolids at all land application sites in Kern County. Some of the Class B biosolids that would have been applied in Kern County would be hauled to more distant locations or placed in landfills, which supports the inference that the EQ biosolids generated by the conversion of Class B biosolids would not be sufficient to completely replace the use of Class B biosolids.

Consequently, we reject County's position that the only reasonable forecast of the farmers' reaction to the implementation of the heightened treatment standards was that they all would use EQ biosolids as a substitute for Class B biosolids. Instead, substantial evidence in the administrative record shows that it was reasonable to forecast that the farmer reactions also would include taking marginal land out of production and substituting other types of fertilizer to replace the Class B biosolids. (See *League for Protection of Oakland's etc. Historic Resources v. City of Oakland*, supra, 52 Cal.App.4th at pp. 904-905 [substantial evidence of one impact is not negated if the record also contains substantial evidence showing a different impact will result].)

The forecast [***86] that farmers would take land out of production was reasonable because one farmer told the Kern County Board of Supervisors that the availability of Class B biosolids made it feasible for him to bring 1,200 acres of marginal alkali soil into production, and another stated that the availability of biosolids as a free fertilizer allowed him to break even on a [**63] 160-acre parcel. Shaen Magan wrote a letter indicating that if he was unable to continue farming with the use of biosolids, then approximately 4,000 acres of his farmland located in Kern County would revert to open-range land. From these statements, it is reasonable to infer that without the free application of Class B biosolids, the marginal land would be taken out of production.

The forecast that some land would remain in production and substitutes would be used was reasonable

because Pat McCarthy stated that he was currently applying Class B biosolids in his family's farming operations and, similar to gypsum, sulfur, animal waste and dairy waste, it was just one tool available to farmers. This statement supports an inference that he would [*1594] continue to farm by using one or more other types of fertilizer available to replace the [***87] Class B biosolids.

2. Potential environmental impacts of farmer reactions

a. Dust and air quality

Plaintiffs claim substantial evidence shows that "[a]t marginal sites that are currently used for Class B biosolids application, there will be a significant increase in soil loss of approximately 28,800 tons per year as PM-10 (Dust)" and cite to a letter prepared by Harry A. Tow, a principal engineer with Quad Knopf, Inc. In his letter, Tow states that sites left fallow and unfarmed will experience a significant increase in soil loss through wind erosion. The figure of 28,800 tons per year calculated by Tow equates to approximately 157,808 pounds per day, which is over 1,000 times the 150 pounds per day threshold of significance established for PM-10 by the SJVUAPCD for any project.

Tow also stated that more dust and odor is likely to be created where animal manure is used as a substitute for Class B biosolids because the transport and application of dry manure is not regulated and it could be applied in wind conditions where the application of biosolids would not be allowed.

[*1595] Plaintiffs also cite a September 10, 1999, letter written on behalf of OCS D by Diane D. [***88] Garvey, who has a degree in civil and environmental engineering and a 20-year career in biosolids management. Garvey's company is Garvey Resources, Inc., and it is located in Lansdale, Pennsylvania. In Garvey's opinion, farmers who use chemical fertilizers as a substitute for biosolids will suffer increased soil loss from wind erosion because biosolids reduce soil erosion by increasing the amount of organic matter in the soil, which improves the soil's structure and cohesion. To support her opinion, Garvey quotes from an article titled "Agricultural Tillage Systems: Water Erosion and Sedimentation" published by the Soil and Water Conservation Society.

b. Increased use of animal manure

Plaintiffs contend a fair argument exists that increased use of animal manure by farmers affected by Ordinance G-6638 would lead to more surface water pollution, more groundwater pollution and the spread of pathogens such as cryptosporidium, giardia, salmonella and E. coli. This argument is supported by a report by the United States Geological Survey and a report prepared for United States Senator Tom Harkin, both of which are in the administrative record, and show that animal manure has had [***89] an adverse impact on the environment at locations across the country and in California.

Plaintiffs also cite the September 10, 1999, letter written by Garvey which asserted that increased use of animal manure [**64] would increase (1) nitrate contamination of groundwater and (2) the spread of disease because animal manure is not treated to reduce pathogens like Class B biosolids. Garvey asserts biosolids cause less nitrate contamination because biosolids are closely monitored and more consistent in quality; in contrast, the quality of animal manure can vary greatly in solids and nitrogen content based on the age of the manure, storage method, the feed given to the animals and their weight. The inconsistent quality of manure means that some areas of a field will receive more nitrogen than can be used by the crops and the excess nitrates will contaminate the groundwater.

With respect to the pathogens in animal manure, plaintiffs cite a September 13, 1999, letter from Charles P. Gerba, Ph.D., from the Department of Soil, Water and Environmental Science at the University of Arizona, which described some of the pathogens found in animal manure, asserted outbreaks of some of these pathogens were [***90] associated with the use of animal manure as a fertilizer, and observed that animal manure that is land applied is not regulated for pathogen removal, unlike Class B biosolids.⁵² The lack of regulatory oversight to the land application of animal manure also is mentioned in the comments submitted to County by the EPA.

52 Under Part 503, sewage sludge must be treated to significantly reduce pathogens to obtain Class B status. (See 40 C.F.R. § 503.32(b) (2005) [Class B pathogen requirements and site restrictions].)

c. Increased use of concentrated chemical fertilizers

Plaintiffs assert substantial evidence shows that

increased use of concentrated chemical fertilizers by affected farmers would lead to a number of adverse environmental impacts including (1) soil erosion, ⁵³ (2) surface water pollution, (3) groundwater pollution, (4) increased use of irrigation water, (5) decreased crop production and (6) increased use of pesticides.

53 The soil loss from wind erosion is discussed in part II.B.2.a., *ante*.

[***91] We agree that it is reasonable to forecast that this farmland will have a lower organic content than it would have had if Class B biosolids had continued to be applied. There is ample evidence in the administrative record showing that the application of biosolids increases the organic content of soil. For example, the September 9, 1999, letter submitted to County by Robert C. Dixon, a certified professional agronomist, indicates that biosolids are an organic soil amendment with a high level of organic matter.

[*1596] Both Garvey and Dixon asserted that the substitution of chemical fertilizers for biosolids could result in adverse impacts to the environment by (1) decreasing the ability of the soil to retain water and thus increasing the amount of water used to irrigate crops, and (2) increasing the amount of nutrients likely to leach below the root zone before they can be utilized by the crops and thereby increasing the amount of nutrients that leach into and pollute the groundwater.

Dixon also asserted that the increase in organic matter from biosolids increases the ability of the soil to hold onto pesticides, fertilizers and the soil itself. Thus, the water runoff from fields using biosolids [***92] would pollute surface water less because the runoff would transport fewer nutrients, pesticides and sediment.

Garvey asserted that the decrease in organic matter would decrease beneficial microbial populations in the soil and would increase farmer dependence on pesticides.

[**65] 3. *Significance of potential impacts from farmer reactions*

On our own initiative, we could provide bases on which to attack the significance of the above noted potential impacts to the environment arising from the reasonably foreseeable reactions of affected farmers. ⁵⁴ County, however, has not provided any detailed analysis of the potential impacts plaintiffs have identified, other

than to argue (1) the potential impacts will not arise because farmers will use EQ biosolids as a replacement for Class B biosolids and (2) plaintiffs' claims are based on (a) unsupported assumptions and opinions and (b) biased and unreliable information. (See § 21080, subd. (e); Guidelines, § 15384, subd. (a); *Leonoff v. Monterey County Bd. of Supervisors* (1990) 222 Cal. App. 3d 1337, 1349 [272 Cal. Rptr. 372] [agency entitled to disbelieve biased witness].)

54 For example, Tow's analysis of the impact of dust on air quality suffers from a rather glaring deficiency--his failure to compare the potential dispersal of PM-10 after January 1, 2003, to the dispersal of PM-10 from the same land while it was farmed and biosolids were applied to it. The question, of course, is *change* to the environment which might arise from the ordinance. (See § 21068; Remy et al., *Guide to the Cal. Environmental Quality Act (CEQA)* (10th ed. 1999) p. 162 (Remy, *Guide to CEQA*).)

[***93] Neither of County's arguments is compelling. First, substantial evidence in the record establishes a reasonable possibility that farmers would react to the heightened treatment standards in various ways (see part II.B.1., *ante*) and thus would not limit their reaction to using EQ biosolids as a complete substitute for Class B biosolids. Moreover, County's argument appears to be an after-the-fact rationalization for a decision already made because the [*1597] administrative record contains no evidence that County seriously investigated whether EQ biosolids would be a complete substitute for the Class B biosolids that had been used. ⁵⁵ The after-the-fact nature of the position is illustrated by County's inability to cite any supporting evidence in the administrative record. (See fn. 50, *ante*.)

55 For instance, in completing the initial study County did not investigate the basic question of quantity--whether the volume of EQ biosolids available for application to farmland in Kern County would be sufficient to replace the volume of Class B biosolids that had been used.

[***94] (22) Second, County's generalized assertion that the evidence relied upon by plaintiffs was biased and unreliable fails because County (1) did not make any express credibility findings in connection with its approval of the negative declaration and (2) has not shown that there were "legitimate, disputed issues of

credibility.' [Citation.]" (*Stanislaus Audubon Society, Inc. v. County of Stanislaus*, *supra*, 33 Cal.App.4th at p. 151.) Were we to accept County's broad-brush assertion of the incredibility of plaintiffs' evidence, the fair argument test would be effectively eviscerated because much of the evidence submitted in administrative proceedings concerning CEQA projects comes from people and entities who are interested in the outcome of the lead agency's decision. Instead, we hold that before an agency may rely on its purported rejection of evidence as incredible, it must first identify that evidence with sufficient particularity⁵⁶ to allow the reviewing court to determine whether there were legitimate, disputed issues of credibility. (E.g., *Leonoff v. Monterey County Bd. of Supervisors*, *supra*, 222 Cal. [**66] App. 3d at pp. 1351-1353 [court [***95] upheld county's rejection of project opponents' evidence of purportedly significant traffic impacts].)

56 Under the facts of this case, we need not decide whether that identification must take place in explicit findings by the agency, elsewhere in the administrative record, or in the briefing submitted by the lead agency to the court.

We refrain from supplying arguments County has not made, or from requesting further briefing, because to do so would not reflect County's actual analysis but would simply create more after-the-fact justifications. Moreover, it would not change the need to remand this matter with directions to County to prepare an EIR. (See part II.A., *ante*.)

(23) We also agree with plaintiffs that, under CEQA, the lead agency bears a burden to investigate potential environmental impacts. "If the local agency has failed to study an area of possible environmental impact, a fair argument may be based on the limited facts in the record. Deficiencies in the record may actually enlarge the scope of [***96] fair argument by lending a logical plausibility to a wider range of inferences." (*Sundstrom v. County of Mendocino* (1988) 202 Cal. App. 3d 296, 311 [248 Cal. Rptr. 352].) [*1598]

In this case, Tow's calculation regarding the creation of 28,800 tons per year of PM-10 is not a reasonable prediction. Nevertheless, County failed to study the impact of dust on air quality and, as a result, there exists a plausible inference that the heightened treatment standard could cause, in the aggregate, the addition of 150 pounds per day of PM-10 to the air within the jurisdiction of the

SJVUAPCD based on (1) Tow's analysis of wind erosion from fallow land, (2) Tow's analysis of the additional dust that will result from the use of animal manure, (3) Garvey's claim that increased use of chemical fertilizers will affect soil structure and lead to more wind erosion, and (4) the PM-10 from the additional truck emissions created by further hauling distances. Accordingly, the heightened treatment standards may have a significant adverse impact on the amount of PM-10 in the air and an EIR should address this potential impact.

In addition, we conclude the impacts from the increased use of animal [***97] manure and the increased use of chemical fertilizers may have a significant adverse impact on the environment and should be addressed in an EIR.

C. *Magan v. County of Kings Is Distinguishable*

In *Magan v. County of Kings*, *supra*, 105 Cal.App.4th 468, the Kings County Board of Supervisors found that an ordinance regulating the application of sewage sludge to land in Kings County was categorically exempt from review under CEQA as an action taken by a regulatory agency for the protection of the environment. (See Guidelines, § 15308 [class 8 categorical exemption concerning protection of the environment]; see also § 21084.) In upholding the superior court's denial of a writ of mandate, this court determined that (1) the county met its burden of showing substantial evidence supported the board of supervisors' decision that the ordinance fell within the categorical exemption (*Magan*, at p. 476) and (2) that the petitioner failed to meet his burden of producing substantial evidence showing a reasonable possibility of adverse environmental impact sufficient to remove the ordinance from the categorically exempt class (*ibid.*). In particular, this [***98] court observed that the petitioner "has failed to support his claims with *any* evidence in the record. The claims are based entirely on speculation." (*Id.* at p. 477.)

The present case is distinguished easily from *Magan v. County of Kings* based on [**67] the contents of the administrative record.⁵⁷ In this case, the administrative record contains a large quantity of specific information about alternative methods of disposing of the Class B biosolids that otherwise [*1599] would have been applied to Kern County farmland and the environmental significance of the impact of those alternatives on energy consumption, air quality within the jurisdiction of the SJVUAPCD, and landfill capacity. Thus, plaintiffs in this

case have done exactly what the petitioner in *Magan v. County of Kings* failed to do--produced substantial evidence to support their argument that the ordinance would indirectly cause "a substantial, or potentially substantial, adverse change in" "the physical conditions [that] exist" inside and outside the county. (§§ 21060.5, 21068; Guidelines, §§ 15360, 15382; *Heninger v. Board of Supervisors* (1986) 186 Cal. App. 3d 601, 609-611 [231 Cal. Rptr. 11] [***99] ["considerable body of evidence" supported a fair argument that an ordinance amendment authorizing installation of alternative private sewage disposal systems might have a significant effect on the environment; thus, a negative declaration was inappropriate and the preparation of an EIR was required].)

57 This court has emphasized the importance of connecting one's arguments to the contents of the administrative record in a CEQA proceeding. (*Protect Our Water v. County of Merced* (2003) 110 Cal.App.4th 362 [1 Cal. Rptr. 3d 726]; see Cal. Rules of Court, rule 14(a)(1)(C).)

D. Deferral of Environmental Analysis

County asserts deferring the preparation of an EIR was appropriate because the uncertainty over how the sanitation agencies would react to Ordinance G-6638 rendered environmental analysis of those reactions premature.

1. Deferral and the fair argument test

(24) A threshold issue is how the concept of deferral of environmental analysis interacts with the fair argument [***100] test. When a public agency is preparing an EIR and decides to defer environmental review of an action that may be taken in the future, courts analyze the decision to defer environmental review under a specific test. (See *National Parks & Conservation Assn. v. County of Riverside* (1996) 42 Cal.App.4th 1505, 1516-1520 [50 Cal. Rptr. 2d 339] [deferral of environmental analysis in the context of EIR preparation and the test for deferral].) That test provides that the "discussion of a [future potential action] is not required in an EIR for the project ... if: (1) obtaining more detailed useful information is not meaningfully possible at the time when the EIR for the project is prepared, and (2) it is not necessary to have such additional information at an earlier stage in determining whether or not to proceed with the project." (*Id.* at p. 1518.)⁵⁸

58 A dispute over the application of the test for deferral often is closely related to a dispute concerning the proper scope of the project and whether a line can be drawn between the project covered by the EIR and the future action for which environmental analysis is deferred. (See *National Parks & Conservation Assn. v. County of Riverside*, *supra*, 42 Cal.App.4th at pp. 1514-1515; see also *No Oil, Inc. v. City of Los Angeles* (1987) 196 Cal. App. 3d 223, 236-237 [242 Cal. Rptr. 37] [discussion of pipelines in an EIR for exploration phase of multistage oil project need not address specific pipeline routes because quantity and quality of oil discovery was uncertain and another EIR would be prepared in connection with the city's approval of a specific pipeline route].)

[***101] [*1600] (25) In the context of a negative declaration, however, the courts have not [**68] used this test to determine whether the approval of the negative declaration complies with CEQA. (See *Pala Band of Mission Indians v. County of San Diego* (1998) 68 Cal.App.4th 556, 580 [80 Cal. Rptr. 2d 294] (*Pala Band*) [applying fair argument test, court held preparation of EIR would be premature; upheld negative declaration]; *Sundstrom v. County of Mendocino*, *supra*, 202 Cal. App. 3d at pp. 306-307 [deferring environmental assessment related to mitigation measures violated CEQA; negative declaration held invalid].) Further, we believe that use of an inquiry separate from the fair argument test would be inappropriate if it were used to raise or lower the threshold imposed by that test. Because the concept of deferral of environmental review does not change the threshold imposed by the fair argument test, there is no need for a separate inquiry. In other words, the idea of deferral is subsumed in the fair argument test, which considers whether a potential environmental impact is speculative or reasonably foreseeable; undertaking a separate inquiry would be redundant.

2. Timing and [***102] Guidelines section 15004

County contends preparation of an EIR would have been premature because "meaningful information for environmental assessment" (Guidelines, § 15004, subd. (b)) was not available at the time Ordinance G-6638 was adopted.

Section 15004 of the Guidelines addresses the time for preparation of an EIR or negative declaration, and

subdivision (b) states: "Choosing the precise time for CEQA compliance involves a balancing of competing factors. EIRs and negative declarations should be prepared as early as feasible in the planning process to enable environmental considerations to influence project program and design and yet late enough to provide meaningful information for environmental assessment." The "Discussion" that follows section 15004 of the Guidelines states: "This section codifies the requirement that EIRs and Negative Declarations be prepared before an agency makes a decision on the project and early enough to help influence the project's plans or design. For EIRs and Negative Declarations to be effective in serving the purposes of CEQA, the preparation of these documents must be coordinated with the planning, review, and approval processes [***103] as described in subsection (c). Early preparation is necessary for the legal validity of the process and for the usefulness of the documents. Early preparation enables agencies to make revisions in projects to reduce or avoid adverse environmental effects before [*1601] the agency has become so committed to a particular approach that it can make changes only with difficulty." ⁵⁹

59 The Discussion is available on the Internet at <http://ceres.ca.gov/topic/env_law/ceqa/guidelines/art1.html> (as of Apr. 1, 2005). (See generally *San Franciscans for Reasonable Growth v. City and County of San Francisco* (1987) 189 Cal. App. 3d 498, 503, fn. 1 [234 Cal. Rptr. 527] [judicial notice taken of the "Discussion" that followed a section of the Guidelines].)

County's timing argument is ill-suited to the facts of this case because it (1) confuses deferring environmental analysis of Ordinance G-6638 with avoiding it and (2) treats the reactions of the sanitation agencies as though they were part of the same [***104] CEQA project. ⁶⁰

60 The project description contained in County's proposed negative declaration states the project is "the adoption of a Kern County ordinance regulating the land application of Class A and B biosolids" The project description does not include any biosolids management activities that might be undertaken by sanitation agencies in response to the ordinance.

[**69] An agency's deferral of environmental assessment was appropriate in *Pala Band, supra*, 68

Cal.App.4th 556, and *Kaufman & Broad-South Bay, Inc. v. Morgan Hill Unified School Dist.* (1992) 9 Cal.App.4th 464 [11 Cal. Rptr. 2d 792] (*Kaufman & Broad*) because the agency had the opportunity to assess all of the physical impacts of its multistage activity in an EIR prepared by the agency at a later stage of the project. Thus, those cases do not use timing considerations to justify an agency's completely avoiding the preparation of an EIR for its project.

In *Pala Band, supra*, 68 Cal.App.4th 556, the County of [***105] San Diego adopted a countywide integrated waste management plan, which was a statutory prerequisite to the development of new landfills in the county. The court held the preparation of an EIR would be premature where all 10 proposed landfill sites identified in the siting element of the plan were only "tentatively reserved" and the county had made no commitment to develop any of the sites. (*Id.* at pp. 574-575, 580.) Thus, it was not "reasonably foreseeable at the current planning stage that any of the sites will actually be developed" (*id.* at p. 575), and the county could wait and subsequently prepare an EIR to help it decide which sites to actually develop.

Similarly, in *Kaufman & Broad, supra*, 9 Cal.App.4th 464, a school district formed a consolidated facilities district (CFD) but did not prepare an EIR. The formation of the CFD was merely an initial step and many alternative courses of action remained open to the school district. (*Id.* at p. 476.) For instance, formation of the CFD did not commit the school district to build a new facility, buy or lease portable classrooms, or rehabilitate existing facilities. [***106] (*Id.* at pp. 474-475.) The formation of the CFD caused no physical changes to the environment and it was not an essential step culminating in [*1602] activity that might cause physical changes to the environment. (*Id.* at p. 474.) In other words, physical changes would not occur until the district actually committed to building a new facility or some other course of action. Therefore, the school district itself had the opportunity to prepare an EIR when it committed to a stage of the project that would cause a physical change to the environment. ⁶¹ (Cf. Guidelines, § 15165 [issues raised by multiple and phased projects where significant environmental impacts arise earlier in the process].)

61 The analogy between the adoption of a land use ordinance and the multistage activities involved in *Pala Band* and *Kaufman & Broad* is

weak. The stronger analogy is between the adoption of Ordinance G-6638 and the adoption of (1) an amendment to a general plan, (2) revised sphere of influence guidelines, or (3) development plans for an area surrounding an airport. (See *City of Redlands v. County of San Bernardino*, *supra*, 96 Cal.App.4th at pp. 412-413 [adoption of negative declaration set aside and county required to prepare an EIR in connection with general plan amendment]; *City of Livermore v. Local Agency Formation Com.* (1986) 184 Cal. App. 3d 531 [230 Cal. Rptr. 867] [LAFCO's negative declaration vacated and preparation of EIR required for changes in sphere of influence guidelines regarding urban development]; *Napa Citizens for Honest Government v. Napa County Bd. of Supervisors*, *supra*, 91 Cal.App.4th at p. 369 [final subsequent EIR certified in connection with approval of updated specific plan for development of area surrounding county airport properly considered "project's effect on growth and housing ... felt outside of the project area"].)

[***107] [**70] The present case is distinguishable from *Pala Band* and *Kaufman & Broad* because the adoption of Ordinance G-6638 was a definitive action by County that *completed* its project and, accordingly, County had no opportunity to assess the indirect physical impacts of Ordinance G-6638 before those impacts occurred. Therefore, we reject County's attempts to use cases upholding a public agency's deferral of EIR preparation as support for its avoidance of EIR preparation.

Furthermore, in this case the CEQA "project" was Ordinance G-6638 itself. (See fn. 58, *ante*.) The final form of that project was proposed at the time Ordinance G-6638 was proposed, and County's commitment to the project became final when it adopted that ordinance. By avoiding the preparation of an EIR, County committed to a particular approach and completed its project without the benefit of the environmental analysis and information an EIR would have contained.

3. Each agency has separate CEQA responsibilities

Another aspect of County's deferral argument is that (1) the sanitation agencies are responsible for performing an environmental review of the potential environmental impacts resulting [***108] from the changes those agencies make in their biosolids management programs,

and (2) plaintiffs are trying to [*1603] avoid this responsibility by foisting it on County. We reject County's argument because it misses the mark on how CEQA operates. If only the sanitation agencies were required to prepare, supplement, or amend their EIR's, there would be no environmental review of (1) feasible alternatives to the heightened treatment standards adopted in Ordinance G-6638, (2) its cumulative impacts, and (3) mitigation measures available to County but not the sanitation agencies. Under this approach, the environmental review contemplated by CEQA would contain a gap, and California's environment would be deprived of the benefits that might result from County's consideration of feasible alternatives, cumulative impacts, and mitigation measures.⁶²

62 Plaintiffs point to the State Water Board's 1999 Draft EIR contained in the administrative record and argue that if the adoption of General Order 2000-10 at the state level created potential impacts that could be foreseen and required analysis, then the potential impacts from the adoption of Ordinance G-6638 (which represented a greater change from the status quo) also must be foreseeable. In plaintiffs' view, consistent application of CEQA's concept of foreseeability at the state and county level requires rejection of County's position that the potential physical impacts of Ordinance G-6638 were so attenuated as to be unforeseeable.

[***109] (26) Furthermore, the fact that County must prepare an EIR does not absolve the sanitation agencies of their responsibilities to comply with CEQA. (See part VII., *post*.)⁶³ As noted by the Third Appellate District in *Citizens for Quality Growth v. City of Mt. Shasta* (1988) 198 Cal. App. 3d 433 [243 Cal. Rptr. 727], "Each public agency is required to comply with CEQA and meet its responsibilities, including evaluating mitigation measures and project alternatives. (See Guidelines, § 15020.)" (*Id.* at p. 442, fn. 8.) When agencies--even agencies with antagonistic positions--comply with their responsibilities for environmental review under CEQA, their action should be taken after consideration of the other's position and, [**71] as a result, their action may achieve a measure of coordination that would not have existed without that review. (See § 21000, subs. (d) & (f).)

63 Justice Stephen Breyer has described the

problem of regulatory inconsistency which can arise when agencies ignore their regulatory program's environmental effect on other programs. (See Breyer, *Breaking the Vicious Circle: Toward Effective Risk Regulation*, *supra*, pp. 21-22.)

[***110] E. *Relief Appropriate Under Section 21168.9*

Section 21168.9 sets forth the requirements for the court order entered after a failure to comply with CEQA has been found. (See *San Bernardino Valley Audubon Society v. Metropolitan Water Dist.* (2001) 89 Cal.App.4th 1097, 1102-1103 [109 Cal. Rptr. 2d 108].) An order granting relief for CEQA violations "shall include only those mandates ... necessary to achieve compliance with [CEQA] and only those specific project activities in noncompliance with [CEQA]." (§ 21168.9, subd. (b).) In this case, the specific project activity that did not comply with CEQA was the approval of the negative declaration and the adoption of the heightened treatment standards.

[*1604] (27) Accordingly, the order could mandate that County void all or part of its decision to approve the negative declaration and adopt the heightened treatment standards. (§ 21168.9, subd. (a).) The order also could mandate that County take specific action necessary to bring its decision into compliance with CEQA. (§ 21168.9, subd. (a)(3).)

We requested supplemental briefing concerning how section 21168.9 should be applied in this case and what directions should be given to the superior [***111] court on remand. (Gov. Code, § 68081.) We asked whether the heightened treatment standard should be voided or allowed to remain in effect pending the completion of an EIR, and whether the adoption of Ordinance No. G-6931, which repealed Ordinance G-6638 but reenacted the heightened treatment standards, should affect the relief ordered.

The parties concurred that the heightened treatment standards should remain operative pending County's (1) completion of an EIR in good faith and without unnecessary delay and (2) approval of whatever replacement version of the biosolids ordinance is generated as a result of completing the EIR. ⁶⁴ This position presumes (1) the severability of the heightened treatment standards from the other provisions in Ordinance G-6638 as well as from the additional

provisions added by Ordinance No. G-6931, such as the licensing permit required for the land application of EQ biosolids, and (2) that the equities favor it. Because we conclude both of these presumptions are appropriate, we will accept the position adopted by the parties.

64 At the time County begins the EIR process, it will not know the exact terms of the ordinance that it might approve at the end of that process because the terms it initially proposes, i.e., the "project," may be revised after considering feasible alternatives and mitigation measures.

[***112] (28) First, we conclude that the heightened treatment standards are grammatically, functionally, and volitionally severable from the remainder of chapter 8.05 as adopted by Ordinance G-6638 or as currently in effect under Ordinance No. G-6931. (See *Calfarm Ins. Co. v. Deukmejian* (1989) 48 Cal.3d 805, 821-822 [258 Cal. Rptr. 161, 771 P.2d 1247].) ⁶⁵ Therefore, the CEQA violations relating to the adoption of the heightened treatment standards do not infect the other provisions of the ordinances. (See § 21168.9, subd. (b).)

65 This conclusion regarding severability does not mean, however, that the heightened treatment standards are the entire "project" for purposes of determining the scope of the EIR.

Second, County and CSDLAC both state they are unaware of any published [**72] case in which (1) a negative declaration that related to the adoption of an ordinance, regulation or general order was ruled invalid under CEQA, and (2) the appellate court did not invalidate the ordinance, regulation or general [*1605] order itself. (Cf. [***113] *Friends of Sierra Madre v. City of Sierra Madre*, *supra*, 25 Cal.4th at p. 196 [appropriate relief for noncompliance with CEQA was invalidation of ordinance; ordinance not allowed to remain in effect pending compliance with CEQA]; *No Oil, Inc. v. City of Los Angeles*, *supra*, 13 Cal.3d at p. 88 [superior court directed to set aside three ordinances].) Nevertheless, a remedy less severe than immediately voiding the heightened treatment standards may be ordered if supported by equitable principles. (See *Laurel Heights Improvement Assn. v. Regents of University of California*, *supra*, 47 Cal.3d at pp. 423-425; *San Bernardino Valley Audubon Society v. Metropolitan Water Dist.*, *supra*, 89 Cal.App.4th at p. 1104.) Because the heightened treatment standards currently contained in

Ordinance No. G-6931 have been in effect for over two years, we will follow the more steady course of allowing the status quo to continue pending the completion of an EIR. The alternative of reverting to a situation where the application of Class B biosolids is not subject to any local regulation and then, after an EIR is completed, [***114] possibly returning to a situation where Class B biosolids either cannot be land applied or are highly regulated by County would be disruptive to County, the sanitation agencies, and the members of the biosolids industry that are subject to the ordinances.

In light of (1) the position of the parties, (2) the authority given to the courts in section 21168.9 to fashion the terms of the writ of mandate, and (3) the equitable considerations relevant to this proceeding, we hold that the heightened treatment standards may continue in effect provided that County prepares, in good faith without unnecessary delay, an EIR that complies with CEQA. If County decides to forgo regulating the application of biosolids to land, or does not prepare an EIR in good faith⁶⁶ and without unnecessary delay, then the superior court shall enter an order that immediately invalidates the heightened treatment standards. Questions concerning County's good faith or lack of diligence, if raised, shall be decided by the superior court in the first instance.

⁶⁶ One issue that may arise in connection with the good faith of County's attempt to prepare an EIR is whether its definition of the scope of the EIR appropriately considers the "project" to include the "whole of an action" actually implemented by County in regulating the land application of sewage sludge. (Guidelines, § 15378, subd. (a); see *Association for a Cleaner Environment v. Yosemite Community College Dist.* (2004) 116 Cal.App.4th 629, 637-640 [10 Cal. Rptr. 3d 560].)

[***115] III. *Ordinance G-6638 Is Consistent with Water Code Section 13274*

In the proceedings before the superior court, County argued that Ordinance G-6638 was a local determination concerning sewage sludge that was authorized by Part 503 and by Water Code section 13274. Plaintiffs agree that Water Code section 13274 allows a county to impose stricter regulations than [*1606] those contained in the federal regulations on the land application of Class B biosolids. Plaintiffs contend, however, that County has imposed an outright ban and thus has gone further than

Water Code section 13274 allows when it is read in conjunction with Part 503. (See *Blanton v. Amelia County* (2001) 261 Va. 55 [540 S.E.2d 869] [**73] [county ordinance banning use of biosolids on farmland held invalid because of conflict with Virginia statute and regulations]; *O'Brien v. Appomattox County* (W.D.Va. 2003) 293 F. Supp. 2d 660 [same]; *Franklin County v. Fieldale Farms Corp.* (1998) 270 Ga. 272 [507 S.E.2d 460] [Georgia water quality statute regulating land application of [***116] sludge implicitly preempted county ordinance regulating land application of sewage sludge, except in area of monitoring].)

Plaintiffs' contention presents an issue of statutory construction concerning the meaning of subdivision (i) of section 13274 of the Water Code, which provides: "Nothing in this section restricts the authority of a local government agency to regulate the application of sewage sludge and other biological solids to land within the jurisdiction of that agency, ..." (Italics added.)

(29) Under plaintiffs' statutory construction, the word "regulate" does not include the authority to prohibit an activity. Accepting this narrow view of the word "regulate" for purposes of argument,⁶⁷ it does not follow that County lacks the authority to prohibit the application of Class B biosolids to land within its jurisdiction. This is because the statute refers to "sewage sludge" and not specifically to Class B biosolids.⁶⁸ Ordinance G-6638 did not prohibit "the application of sewage sludge ... to land within the jurisdiction of [County]" (Wat. Code, § 13274, subd. (i)) within the usual, ordinary meaning of that [***117] language because it would have allowed the application of sewage sludge that has been treated to specified, stringent standards. By allowing the land application of EQ biosolids, Ordinance G-6638 would have regulated how much treatment sewage sludge must receive before it was applied within the unincorporated area of Kern County. Accordingly, the heightened treatment standards do not conflict with Water Code section 13274 when the term "sewage sludge" is given its usual, ordinary meaning--that is, read literally.⁶⁹

⁶⁷ But see *Young v. Department of Fish & Game* (1981) 124 Cal. App. 3d 257, 279 [177 Cal. Rptr. 247] ("power to regulate includes the power to prohibit"); *Watkins v. Naifeh* (Tenn. 1982) 635 S.W.2d 104, 107 ("extremely broad powers to regulate the sale ... of alcoholic beverages ... extends even to the power to ban such sales"); see

also *Personal Watercraft Coalition v. Marin County Bd. of Supervisors* (2002) 100 Cal.App.4th 129, 150 [122 Cal. Rptr. 2d 425].

68 Class B biosolids are one category of "sewage sludge," which Part 503 defines as the "solid, semi-solid, or liquid residue generated during the treatment of domestic sewage in a treatment works." (40 C.F.R. § 503.9(w) (2005).)

[***118]

69 We need not reach the question of statutory construction concerning whether the authority to "regulate" includes or excludes the authority to ban an entire activity. Thus, although we requested supplemental briefing on whether it would be appropriate for this court to take judicial notice of State Water Board's General Order 2004-0012, which states the Water Code does not preempt the authority of local agencies to prohibit the use of biosolids, we need not consider the weight to give the regulatory agency's construction of the statute. (See generally *Yamaha Corp. of America v. State Bd. of Equalization* (1999) 19 Cal.4th 1, 6-8 [78 Cal. Rptr. 2d 1, 960 P.2d 1031].)

[*1607] Furthermore, plaintiffs have not demonstrated a legislative purpose that justifies narrowly construing the term "sewage sludge" to mean only Class B biosolids rather than using the broader, literal construction of the term set forth in 40 Code of Federal Regulations part 503.9(w) (2005). (See *Lungren v. Deukmejian* (1988) 45 Cal.3d 727, 735 [248 Cal. Rptr. 115, 755 P.2d 299] [literal construction should prevail unless contrary to legislative purpose].) [***119] Thus, the heightened treatment standards do not conflict with [**74] Water Code section 13274 when that section is read in conjunction with Part 503. (See 40 C.F.R. § 503.5(b) (2005) [state and local government authorized to impose more stringent requirements].)

IV. Commerce Clause Analysis

Plaintiffs contend that the heightened treatment standards in Kern Code provision 8.05.040(A), 70 Ordinance G-6638, violate the commerce clause of the United States Constitution (U.S. Const., art. I, § 8, cl. 3) in that those standards (1) impermissibly discriminate against out-of-county biosolids by allowing municipalities located in Kern County to apply their own Class B biosolids on land in the incorporated areas of

Kern County, and (2) were adopted for the protectionist purpose of banning out-of-county biosolids in order to prevent damage to the reputation of agricultural products grown in Kern County.

70 See footnote 36, *ante*.

As factual support for the first of these [***120] contentions, plaintiffs point out that the City of Bakersfield maintains an extensive Class B biosolids application program within its incorporated area. At an April 27, 1999, hearing before the Kern County Board of Supervisors, Lauren Fondahl, the biosolids coordinator for the EPA regional office in San Francisco, observed that the proposed ordinance would not prevent Bakersfield and other cities in Kern County from applying Class B biosolids on city lands, and stated that "Bakersfield has been applying for many years now on lands across from East Planz Road[,] Wasco, Taft, Delano and North of Kern in Kern Community Service District have also been applying on city lands for years."

71

71 According to the Web site maintained by the City of Bakersfield Public Works Department, approximately 3,541 dry tons per year of Class B biosolids produced from two treatment plants are applied to 5,000 acres of farmland owned by the city. (<<http://www.bakersfieldcity.us/cityservices/pubwrks/wastewater>> [as of Apr. 1, 2005].) Assuming an even distribution, each square foot of farmland would receive approximately five ounces of Class B biosolids per year.

[***121] [*1608] In contrast to the Bakersfield example, however, the administrative record also shows that not all municipalities located in Kern County were able to apply their Class B biosolids on land within an incorporated area of Kern County. A September 13, 1999, letter from the City of Shafter indicated that the city had applied biosolids from its treatment plant to neighboring agricultural land that was in the unincorporated area of Kern County and stated that the proposed ordinance would "force local, smaller communities, which rely on cost-saving alternatives to promote growth and development, to explore other methods of biosolid use or treatment that require technology and resources that we may not be able to acquire."

A. Scope of the Dormant Commerce Clause

(30) The commerce clause of the federal Constitution delegates to Congress the power "[t]o regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes." (U.S. Const., art. I, § 8, cl. 3.) This explicit grant of power has been interpreted as an implied limitation on the power of states and local government to adopt statutes, regulations and ordinances that burden or interfere with interstate [***122] commerce. (*West Lynn Creamery, Inc. v. Healy* (1994) 512 U.S. 186, 192 [129 L. Ed. 2d 157, 114 S. Ct. 2205].) Known as the "dormant" or "negative" commerce clause (*Barclays Bank [**75] PLC v. Franchise Tax Bd. of Cal.* (1994) 512 U.S. 298, 311, fn. 9 [129 L. Ed. 2d 244, 114 S. Ct. 2268]), this limitation has been characterized as "predicated upon the implications of the commerce clause itself, [citations], or upon the presumed intention of Congress, where Congress has not spoken, [citations]." (*Southern Pacific Co. v. Arizona* (1945) 325 U.S. 761, 768 [89 L. Ed. 1915, 65 S. Ct. 1515].) Consequently, where Congress has spoken and specifically authorized the state or local government action, the dormant commerce clause does not apply. (*White v. Mass. Council of Constr. Employers* (1983) 460 U.S. 204, 213 [75 L. Ed. 2d 1, 103 S. Ct. 1042] (*White*).)

The threshold question is whether Ordinance G-6638 is subject to analysis under the dormant commerce clause.⁷² This question will be answered in the [*1609] affirmative if (1) an article of commerce is involved and (2) Congress did not specifically authorize the adoption of such an ordinance.

72 The parties did not address this threshold question in their initial briefs, but followed the approach used by others in analyzing the validity of local sewage sludge regulation. For example, the parties in a case involving a ban on biosolids application by a county in Virginia appear to have assumed the dormant commerce clause applied and argued whether the sewage sludge ordinance violated a particular test. (*Welch v. Bd. of Sup'rs of Rappahannock County, Va.* (W.D.Va. 1995) 888 F. Supp. 753, 758 (*Welch*); see *Synagro-WWT, Inc. v. Rush Tp., Penn.* (M.D.Pa. 2002) 204 F. Supp. 2d 827, 842-843 [allegations sufficient to state a claim under two-tiered analysis applied to violations of dormant commerce clause]; Goldfarb, *Sewage Sludge*, *supra*, 26 B.C. Env'tl. Aff. L.Rev. at pp. 718-727 [discussion of dormant commerce clause does not

address whether enactment of Clean Water Act restricts or eliminates application of dormant commerce clause to local sewage sludge regulations]; Harrison & Eaton, *The Role of Municipalities in Regulating the Land Application of Sewage Sludges and Septage* (2001) 41 Nat. Resources J. 77, 112-115 [overview of commerce clause does not address threshold question].) Accordingly, this court requested supplement briefing on this threshold question. (See Gov. Code, § 68081.)

[***123] B. Article of Commerce

(31) The United States Supreme Court has held that the processing and disposal of solid waste in landfills is an article of commerce. (*C & A Carbone, Inc. v. Clarkstown* (1994) 511 U.S. 383, 391 [128 L. Ed. 2d 399, 114 S. Ct. 1677]; see *Philadelphia v. New Jersey* (1978) 437 U.S. 617, 628 [57 L. Ed. 2d 475, 98 S. Ct. 2531]; Nowak & Rotunda, *Constitutional Law* (5th ed. 1995) § 8.8, pp. 299-300 [out-of-state buyers purchased space in landfill, waste was not purchased]; but see Cox, *Burying Misconceptions About Trash and Commerce: Why It Is Time to Dump Philadelphia v. New Jersey* (1991) 20 Cap. U. L.Rev. 813, 829 [trash is not a commodity but a regulated stream to which the commerce clause should not apply].) Sewage sludge differs from solid waste in that economic benefits are realized by farmers using treated sewage sludge as a fertilizer. This difference creates a stronger case for concluding that an article of commerce is involved in transactions concerning the use of sewage sludge on agricultural land. Accordingly, based on the strength of the analogy to solid waste and the commercial value resulting from the application of treated [***124] sewage sludge to land, we conclude that the land application of sewage sludge is an article of commerce for purposes of the commerce clause.

C. Congress Authorized Local Sewage Sludge Ordinances

Congress has not been silent on the issue of local regulation of the land application of sewage sludge. Specifically, the Clean Water Act authorizes some degree of local control over the use and disposal of [**76] sewage sludge so long as federal regulatory standards are met: "The determination of the manner of disposal or use of sludge is a local determination, except that it shall be unlawful for any person to dispose of sludge from a publicly owned treatment works or any other treatment

works treating domestic sewage for any use for which regulations have been established pursuant to subsection (d) of this section, except in accordance with such regulations." (33 U.S.C.A. § 1345(e).)

The regulations of the EPA reiterate this aspect of local control: "Nothing in this part precludes a State or political subdivision thereof ... from imposing requirements for the use or disposal of sewage sludge more [*1610] stringent than the requirements in this part [***125] or from imposing additional requirements for the use or disposal of sewage sludge." (40 C.F.R. § 503.5(b) (2005).)

(32) The foregoing statutory and regulatory language must be examined to determine if Congress affirmatively permitted the adoption of a local ordinance like Ordinance G-6638. (*White, supra*, 460 U.S. at p. 213 [applicable federal statute and regulations examined to determine if they authorized City of Boston's requirement that construction contracts it entered must be with firms that hire half or more of their workers from Boston].) "Where state or local government action is specifically authorized by Congress, it is not subject to the Commerce Clause even if it interferes with interstate commerce. *Southern Pacific Co. v. Arizona*, 325 U.S. 761, 769 [89 L. Ed. 1915, 65 S. Ct. 1515] (1945)." (*Ibid.*) As the United States Supreme Court has noted, however, "for a state regulation to be removed from the reach of the dormant Commerce Clause, congressional intent must be unmistakably clear." (*South-Central Timber Dev. v. Wunnicke* (1984) 467 U.S. 82, 91 [81 L. Ed. 2d 71, 104 S. Ct. 2237].)

(33) It is unmistakably clear that Congress [***126] intended "the manner of disposal or use of sludge [to be] a local determination" so long as minimum federal standards were met. (33 U.S.C.A. § 1345(e).) (34) It is equally clear that the restriction in Ordinance G-6638--that only sewage sludge meeting the heightened treatment standards can be applied to land in Kern County--reflects a local determination of the manner of disposal or use of sewage sludge.⁷³ Thus, the heightened treatment standards are the type of local regulation expressly authorized by the Clean Water Act. (Cf. *Welch, supra*, 888 F. Supp. at p. 760 [ordinance banning the land application of sewage sludge permissible under Clean Water Act].) Because Congress authorized a local ban on the land application of sewage sludge (*Welch, supra*, at pp. 757-758), one can strongly infer that Congress also

authorized local governments to impose a lesser burden on commerce such as the heightened treatment standards in Kern Code provision 8.05.040(A), Ordinance G-6638. (See *Posadas de Puerto Rico Assoc. v. Tourism Co.* (1986) 478 U.S. 328, 345-346 [92 L. Ed. 2d 266, 106 S. Ct. 2968] [the greater power to ban an activity necessarily [***127] includes the lesser power to impose conditions on the activity].)

73 Plaintiffs argue the statutory phrase "local determination" refers only to the decisions made by a wastewater treatment agency and excludes ordinances adopted by land use agencies such as County. We reject this statutory construction because, among other things, it cannot be reconciled with the EPA's regulation concerning local imposition of requirements for the use or disposal of sewage sludge. (See 40 C.F.R. § 503.5(b) (2005).)

In light of the foregoing, plaintiffs' assertion that Ordinance G-6638 is a step [**77] towards the balkanization of the sewage sludge industry misses the [*1611] mark; the natural consequence of Congress's authorization of local control is variety and inconsistency in the way localities choose to address the subject. What plaintiffs characterize as balkanization is more appropriately characterized as Congress's choosing to exploit one of the strengths of our federal system--its flexibility--by allowing states [***128] and localities to (1) experiment with different approaches (see *New State Ice Co. v. Liebmann* (1932) 285 U.S. 262, 311 [76 L. Ed. 747, 52 S. Ct. 371] (dis. opn. of Brandeis, J.) [describing states as laboratories that can experiment with different laws]), subject to the minimum national standard contained in Part 503, and (2) adapt their regulations to local conditions, such as geography, climate, soil types and population density.

D. Discrimination Against Interstate Commerce

Plaintiffs contend, however, that although Congress has authorized some local determinations concerning the land application of sewage sludge, it has not expressly authorized ordinances that discriminate against interstate commerce. (Cf. *White, supra*, 460 U.S. at p. 213 [federal program authorized local favoritism in hiring construction workers as a means for economic revitalization and providing opportunities for the poor, minorities, and unemployed].) We will address this contention by considering whether the Clean Water Act

authorized discriminatory local ordinances and, if not, whether Ordinance G-6638 discriminates against interstate commerce.

1. *The Clean Water [***129] Act does not authorize discrimination*

(35) The Clean Water Act does not explicitly authorize local governmental units to discriminate against sewage sludge that arrives in a state through interstate commerce. (See 33 U.S.C.A. § 1345(e).) Nor is there anything in the statutory language that gives rise to a reasonable inference that Congress intended such a result. Also, County has cited no legislative history revealing such a Congressional intent. Thus, County has failed to establish that Congress demonstrated an unmistakably clear intent to allow discriminatory state regulation of the land application of sewage sludge. (See *South-Central Timber Dev. v. Wunnicke*, *supra*, 467 U.S. at p. 91.) Consequently, any discriminatory aspect of a local ordinance regulating the land application of sewage sludge is still subject to scrutiny under the limitation imposed on discrimination by the dormant commerce clause.

2. *Ordinance G-6638 is not facially discriminatory*

(36) Unless Congress has provided otherwise, an ordinance that discriminates against interstate commerce, as opposed to one that regulates evenhandedly, is virtually always invalid [***130] under the dormant commerce clause. (*Oregon [*1612] Waste Systems v. Dept. of Env. Quality* (1994) 511 U.S. 93, 99 [128 L. Ed. 2d 13, 114 S. Ct. 1345] [landfill disposal fees imposed by Oregon statute were higher for waste generated in other states than for waste generated in Oregon and, thus, were facially discriminatory and invalid].) In this context, discrimination means "differential treatment of in-state and out-of-state economic interests that benefits the former and burdens the latter." (*Ibid.*)

Ordinance G-6638 does not on its face discriminate against interstate commerce, because its provisions apply to the land application of all sewage sludge regardless of its geographical origin. (See Goldfarb, *Sewage Sludge*, *supra*, 26 B.C. Env'tl. Aff. [**78] L.Rev. at p. 722 ["local ordinance upheld in *Welch* banned all land application of sewage sludge, not just sewage sludge generated out-of-state"].) Consequently, Ordinance G-6638 is distinguishable from a Michigan statute that violated the dormant commerce clause by creating

separate categories for in-county and out-of-county solid waste. (*Fort Gratiot Sanitary Landfill, Inc. v. Michigan Dept. of Natural Resources* (1992) 504 U.S. 353 [119 L. Ed. 2d 139, 112 S. Ct. 2019]; [***131] see *Philadelphia v. New Jersey*, *supra*, 437 U.S. at p. 624 [New Jersey's prohibition on the importation of solid waste unconstitutional].)

3. *Ordinance G-6638 is not discriminatory in effect*

In addition to facial discrimination, an ordinance may be discriminatory "in practical effect." (*Hughes v. Oklahoma* (1979) 441 U.S. 322, 336 [60 L. Ed. 2d 250, 99 S. Ct. 1727].) Plaintiffs' claim of discrimination in practical effect is based on an incorrect comparison of the impacts of different regulations, rather than different impacts caused by the challenged ordinance. Plaintiffs compare (a) the effect of the ordinance within the geographical area that comprises the jurisdiction of County to (b) the effect of other regulations, or the lack of regulations, applicable to the incorporated areas of Kern County. The incorporated areas of Kern County are necessarily outside the jurisdiction and authority of County; County's authority extends only to the unincorporated areas within its borders. (See Cal. Const., art. XI, § 7 ["A county or city may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict [***132] with general laws"]; *City of Dublin v. County of Alameda* (1993) 14 Cal.App.4th 264, 274-275 [17 Cal. Rptr. 2d 845] [only unincorporated area of a county is "within its limits"].) Therefore, the correct comparison is between the impact of the ordinance on sewage sludge generated outside the jurisdictional authority of County and the impact on sewage sludge generated within that area. (See *Associated Industries of Missouri v. Lohman* (1994) 511 U.S. 641, 650 [128 L. Ed. 2d 639, 114 S. Ct. 1815] ["discrimination is appropriately assessed with reference to the specific subdivision in which applicable laws reveal differential treatment"].) In this case, the ordinance's burden on the sewage sludge [*1613] industry is the same without regard to the place of origin of the sewage sludge. Sewage sludge, regardless of whether it originates in Kern County, other counties in California, or out of state must be treated to the same standards before it is allowed to be applied to land in the unincorporated areas of Kern County.

Plaintiffs stated at oral argument that discrimination in practical effect occurred because no in-county

producer of sewage sludge needed access to land within the unincorporated area [***133] of Kern County to dispose of its sewage sludge. This argument is rejected because it is factually inaccurate. The administrative record contains a letter from the City of Shafter indicating that it had applied biosolids from its treatment plant to neighboring agricultural land that was in the unincorporated area of Kern County.

Consequently, plaintiffs have failed to meet their burden of showing that the ordinance, in practical effect, treats out-of-state economic interests ⁷⁴ differently than [**79] in-state economic interests. (See *Pacific Merchant Shipping Assn. v. Voss* (1995) 12 Cal.4th 503, 517 [48 Cal. Rptr. 2d 582, 907 P.2d 430] [party raising commerce clause challenge has burden of showing discrimination].) In other words, plaintiffs have failed to show that Ordinance G-6638 causes an out-of-county producer of sewage sludge to be at a disadvantage to an in-county producer of sewage sludge in the competition among those producers to acquire the right to place their sewage sludge on agricultural land located in the unincorporated areas of Kern County. ⁷⁵

74 If Ordinance G-6638 were shown to discriminate against out-of-county interests, that discrimination, by definition, would include discrimination against out-of-state interests. (See *Fort Gratiot Sanitary Landfill, Inc. v. Michigan Dept. of Natural Resources*, *supra*, 504 U.S. 353.) Thus, even though the record does not show any sewage sludge originating outside California was ever shipped to Kern County, we will treat plaintiffs' arguments as implicating interstate commerce.

[***134]

75 This lack of discrimination also means the heightened treatment standards do not violate the equal protection clause.

Plaintiffs condemn Ordinance G-6638 as illegitimate economic protectionism prohibited by the commerce clause. But the possibility that the reputation of agricultural produce from Kern County benefited from the enactment of Ordinance G-6638 is not enough to violate the commerce clause. First, Ordinance G-6638 still falls within the scope of what Congress authorized. Second, the possibility that consumers might view Kern County produce more favorably does not render the ordinance discriminatory against interstate commerce

from the perspective of (1) in-county farmers who are selling sewage sludge disposal services and applying biosolids to their land in the unincorporated areas of Kern County or (2) the producers of sewage sludge, regardless of their location, that are buying sewage sludge disposal services. RBM focuses on the farmers who applied Class B biosolids and argues [*1614] Ordinance G-6638 had the practical effect of discriminating against them for the benefit of farmers who [***135] claimed the reputation of their products was harmed by allowing the land application of Class B biosolids in Kern County. This theory of discrimination and protectionism fails because all in-county farmers are subject to the same practical effect of Ordinance G-6638--they can no longer apply Class B biosolids to their land. Furthermore, this result was not achieved at the expense of out-of-state competition. (See *Hunt v. Washington Apple Advertising Comm'n* (1977) 432 U.S. 333 [53 L. Ed. 2d 383, 97 S. Ct. 2434] [out-of-state competition improperly discriminated against by North Carolina statute that prohibited sale of closed apple containers displaying another state's grading classification]; see also *Oregon Waste Systems v. Dept. of Env. Quality*, *supra*, 511 U.S. at pp. 106-107.)

E. Burden on Interstate Commerce

As we have stated, though the Clean Water Act does not authorize discrimination against interstate commerce, it does explicitly authorize local governmental entities to regulate the land application of sewage sludge. Because Congress has specifically and unmistakably authorized nondiscriminatory local ordinances like Ordinance G-6638, our analysis [***136] of the dormant commerce clause need not consider "whether the ordinance imposes a burden on interstate commerce that is 'clearly excessive in relation to the putative local benefits,' *Pike v. Bruce Church, Inc.*, 397 U.S. 137, 142 [25 L. Ed. 2d 174, 90 S. Ct. 844] (1970)." (*C & A Carbone, Inc. v. Clarkstown*, *supra*, 511 U.S. at p. 390.) Application of the *Pike* test is inappropriate in this case because the enactment of the Clean Water Act reflects a determination by Congress that local regulation is appropriate, which necessarily implies that localities have a legitimate purpose in regulating the use and disposal of [**80] sewage sludge within their jurisdictional boundaries and that the local benefits from such a regulation outweigh any nondiscriminatory burdens on interstate commerce that might result.

V. California Constitutional Limitations on Exercise of

Police Power

Plaintiffs contend that the Kern County Board of Supervisors failed to consider the effect of the ordinance on surrounding areas beyond the borders of Kern County, and that this failure renders the ordinance a defective exercise of the police powers granted to County by the [***137] California Constitution. (See Cal. Const., art. XI, § 7 ["A county or city may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general laws"].)

(37) The California Supreme Court has identified the standard for determining whether the adoption of a land use restriction is a valid exercise of the [*1615] police power granted under the California Constitution. An ordinance is valid "if it is fairly debatable that the [land use] restriction in fact bears a reasonable relation to the general welfare." (*Associated Home Builders etc., Inc. v. City of Livermore* (1976) 18 Cal.3d 582, 601 [135 Cal. Rptr. 41, 557 P.2d 473].) The "general welfare" that must be considered may extend beyond the geographical limits of the local governmental entity adopting the ordinance. "[I]f a restriction significantly affects residents of surrounding communities, the constitutionality of the restriction must be measured by its impact not only upon the welfare of the enacting community, but upon the welfare of the surrounding region." (*Ibid.*)

In ruling against the plaintiffs on this claim, the superior court stated "that OCS D has not [***138] presented any evidence of the impact on the entire region as is required pursuant to *Associated Home Builders ...* ." The superior court observed that the administrative record did not contain a study of the ordinance's regional impact and found OCS D was collaterally estopped from raising the issue again because it had already been presented in the CEQA portion of the lawsuit.

We previously held that the imposition of heightened treatment standards in Kern Code provision 8.05.040(A), Ordinance G-6638, was not valid under CEQA. An EIR should have been prepared because plaintiffs presented substantial evidence to support a fair argument that the heightened treatment standards might have a significant effect on the environment, including effects occurring outside Kern County. (See part II.A., *ante.*) Assuming for purposes of argument that County exceeded the limitations imposed by the California Constitution on the exercise of police power when it adopted Ordinance G-6638, the preparation of the EIR required by this

decision would have the effect of addressing the alleged failure to consider the general welfare outside Kern County. Therefore, we need not rule separately on this constitutional [***139] challenge to the heightened treatment standards.

VI. *The Biosolids Impact Fee Violates Vehicle Code Section 9400.8*

Vehicle Code section 9400.8 provides in pertinent part: "Notwithstanding any other provision of law, ... no local agency may impose a tax, permit fee, or other charge for the privilege of using its streets or highways, other than a permit fee for extra legal loads, after December 31, 1990, unless the local agency had imposed the fee prior to June 1, 1989." ⁷⁶

76 This statutory provision became operative because voters approved Senate Constitutional Amendment No. 1 of the 1989-1990 Regular Session (Prop. 111) at the June 5, 1990, primary election. (See *San Francisco Taxpayers Assn. v. Board of Supervisors* (1992) 2 Cal.4th 571, 583, fn. 13 [7 Cal. Rptr. 2d 245, 828 P.2d 147].)

[*1616] [**81] In moving for summary adjudication of issues, OCS D asserted that the biosolids impact fee was invalid because it was barred by Vehicle Code section 9400.8. [***140] The superior court denied summary adjudication and ruled "[t]his issue was not raised by OCS D's pleadings and the pleadings control. Pleadings must give notice of the claim. [Citation.]" OCS D raised the issue again at trial and requested leave to amend its complaint. The superior court denied this request and stated that "[a]mendment at this time would be unduly prejudicial to ... County."

Plaintiffs contend that the complaint raised the preemption issue, although it did not specifically reference Vehicle Code section 9400.8, and that the superior court's refusal to consider the issue at the motion for summary adjudication or at trial was a prejudicial abuse of discretion. County argues that plaintiffs' claim is procedurally defective because they did not exhaust their administrative remedies and failed to file a timely motion to amend their complaint. County also asserts that the biosolids impact fee imposed by the ordinance is a bona fide impact fee and not a fee for the privilege of using the streets and highways in Kern County. ⁷⁷

77 The provisions of Ordinance G-6638

relevant to the biosolids impact fee are contained in Kern Code provisions 8.05.020(F) and 8.05.030(H), which expired on December 31, 2002. (See FACTS AND PROCEEDINGS, *ante*.)

[***141] **(38)** We independently review issues of statutory construction and the application of that construction to a set of undisputed facts as questions of law. (*Twedt v. Franklin* (2003) 109 Cal.App.4th 413, 417 [134 Cal. Rptr. 2d 740].)

A. Exhaustion Doctrine

County asserts that plaintiffs did not raise Vehicle Code section 9400.8 during the administrative proceedings and, as a result, "are barred by the exhaustion doctrine from seeking judicial review of this claim. (*Coalition for Student Action v. City of Fullerton* (1984) 153 Cal. App. 3d 1194, 1197-1198 [200 Cal. Rptr. 855].)"

Coalition for Student Action v. City of Fullerton did not involve a claim that a local ordinance was preempted by a state statute. (See *Coalition for Student Action v. City of Fullerton*, *supra*, 153 Cal. App. 3d 1194.) In that case, the plaintiffs failed to assert CEQA violations at the administrative level and then sought to set aside approval of construction plans based on alleged violations of CEQA. The superior court denied their petition for a writ of mandate based on the failure to exhaust administrative remedies, and the Court of Appeal affirmed. [***142] (*Id.* at p. 1198.) [*1617]

Alleged violations of CEQA are distinguishable from alleged violations of Vehicle Code section 9400.8 because (1) CEQA expressly requires the exhaustion of administrative remedies (§ 21177; see Remy, Guide to CEQA, *supra*, pp. 578-588 [exhaustion of administrative remedies] and (2) compliance with CEQA is first determined by a public agency rather than the courts. In contrast, a claim that an ordinance violates Vehicle Code section 9400.8 is not given to the exclusive jurisdiction of a county's board of supervisors. (See *Farmers Ins. Exchange v. Superior Court* (1992) 2 Cal.4th 377, 390-391 [6 Cal. Rptr. 2d 487, 826 P.2d 730] [exhaustion doctrine applies where an agency alone has jurisdiction over a case].) In asserting its [**82] theory of exhaustion, County has not shown that there was an available administrative procedure for asserting the ordinance violated the prohibition contained in Vehicle Code section 9400.8. (See *People v. Beaumont Inv., Ltd.*

(2003) 111 Cal.App.4th 102, 125 [3 Cal. Rptr. 3d 429] [exhaustion doctrine does not apply in the absence of an available administrative remedy].) [***143] The coincidental existence of a CEQA administrative procedure did not confer exclusive jurisdiction over the preemption challenge on the Kern County Board of Supervisors, or require the preemption challenge to be raised in the CEQA proceeding, before a court could obtain jurisdiction over such a challenge.

(39) Accordingly, we hold that the doctrine of exhaustion of administrative remedies does not apply to the claim that the biosolids impact fee imposed by the ordinance is preempted by Vehicle Code section 9400.8.

B. Mitigation Fee Act Does Not Apply to the Biosolids Impact Fee

County asserts that the biosolids impact fee was adopted by County pursuant to the Mitigation Fee Act, Government Code section 66000 et seq. and therefore the prohibition in Vehicle Code section 9400.8 does not apply.

(40) We do not address the issues of statutory construction raised in connection with the Mitigation Fee Act in detail because the prohibition on certain fees contained in Vehicle Code section 9400.8 is not overridden by the Mitigation Fee Act. Vehicle Code section 9400.8 [***144] expressly states that its prohibition applies "[n]otwithstanding any other provision of law." The Mitigation Fee Act was in effect at the time Vehicle Code section 9400.8 became operative and thus was among the other provisions of law covered by the quoted phrase. In short, despite the existence of the Mitigation Fee Act, a local agency may not impose a charge for the privilege of using its streets and highways.

C. Prejudice and Leave to Amend to Reference Specific Code Section

(41) The superior court found that allowing plaintiffs to amend their pleadings to assert a violation of Vehicle Code section 9400.8 would prejudice County. This finding is not supported by any evidence. Indeed, County [*1618] did not even assert it experienced prejudice in its trial brief, reply trial brief, or appellate brief. "A pleading may be amended at the time of trial unless the adverse party can establish prejudice. [Citation.] Where a party is allowed to prove facts to establish one cause of action, an amendment which would allow the same facts to

establish another cause of action is favored, and a trial court abuses its discretion by prohibiting [***145] such an amendment when it would not prejudice another party. [Citations.] A variance between pleading and proof does not justify the denial of an amendment to conform pleading to proof unless the unamended pleading 'misled the adverse party to his prejudice in maintaining his action or defense upon the merits.' [Citations.]" (*Brady v. Elixir Industries* (1987) 196 Cal. App. 3d 1299, 1303 [242 Cal. Rptr. 324], overruled on another ground in *Turner v. Anheuser-Busch, Inc.* (1994) 7 Cal.4th 1238, 1248-1251 [32 Cal. Rptr. 2d 223, 876 P.2d 1022].)

(42) As a general rule, where the evidence to support the cause of action in the amendment is already before the court, the opposing party will not experience prejudice if the amendment is allowed. (See Wegner et al., Cal. Practice Guide: Civil Trials and Evidence (The Rutter Group 2004) ¶ 12:394, p. 12-79 (rev. # 1, 2004).) In this case, the general rule applies because the evidence relied upon by [**83] plaintiffs was contained in the administrative record and was discussed before the superior court in connection with the constitutional challenges raised against the biosolids impact fee. In addition, County has not shown that the lack of a specific reference [***146] to Vehicle Code section 9400.8 in the complaint misled it in the presentation of its defense, either in terms of the evidence it would have produced or in a manner not related to evidence. Thus, County has not shown that this situation falls within an exception to the general rule. Accordingly, we conclude that plaintiffs should have been allowed to assert that the biosolids impact fee was prohibited by Vehicle Code section 9400.8.

D. Vehicle Code Section 9400.8 Preempts the Biosolids Impact Fee

The general principles governing state law preemption of a local ordinance were set forth by the California Supreme Court in *Sherwin-Williams Co. v. City of Los Angeles* (1993) 4 Cal.4th 893 [16 Cal. Rptr. 2d 215, 844 P.2d 534] as follows:

(43) "If otherwise valid local legislation conflicts with state law, it is preempted by such law and is void.' [Citations.] [¶] 'A conflict exists if the local legislation 'duplicates, contradicts, or enters an area fully occupied by general law, either expressly or by legislative implication.' " ' [Citations.] [¶] Local legislation is 'duplicative' of general law when it is coextensive

[***147] therewith. [Citation.]

[*1619] "Similarly, local legislation is 'contradictory' to general law when it is inimical thereto. [Citation.]

"Finally, local legislation enters an area that is 'fully occupied' by general law when the Legislature has expressly manifested its intent to 'fully occupy' the area [citation], or when it has impliedly done so in light of one of the following indicia of intent: '(1) the subject matter has been so fully and completely covered by general law as to clearly indicate that it has become exclusively a matter of state concern; (2) the subject matter has been partially covered by general law couched in such terms as to indicate clearly that a paramount state concern will not tolerate further or additional local action; or (3) the subject matter has been partially covered by general law, and the subject is of such a nature that the adverse effect of a local ordinance on the transient citizens of the state outweighs the possible benefit to the' locality. [Citations.]" (*Sherwin-Williams Co. v. City of Los Angeles, supra*, 4 Cal.4th at pp. 897-898.)

(44) By adopting Vehicle Code section 9400.8, the Legislature expressly [***148] prohibited a county from "impos[ing] a tax, permit fee, or other charge for the privilege of using its streets or highways, other than a permit fee for extra legal loads" (*Ibid.*) This language raises two questions of statutory construction. First, was the biosolids impact fee a "tax, permit fee, or other charge"? Second, do fees "for the privilege of using its streets or highways" ⁷⁸ include fees designed to cover damage resulting from the use of a county's roads?

78 "Highway" and "street" are both defined as "a way or place of whatever nature, publicly maintained and open to the use of the public for purposes of vehicular travel." (Veh. Code, §§ 360, 590.)

County does not argue that the biosolids impact fee was not a "permit fee or other charge" for purposes of Vehicle Code section 9400.8. The parties' dispute focuses on the second issue. County specifically [**84] argues the fee was not for road use, but was a bona fide impact fee: "The [***149] fee is imposed only on permittees to recover the costs for repairing damage or upgrading county roads due to the incremental increase in truck traffic transporting biosolids to be land applied in Kern County."

In describing the underlying basis for the fee, County states in its appellate brief that it "commissioned an engineering firm to determine the condition of local roads used for biosolids transport, the volume of traffic attributable to trucks hauling biosolids on ... those roads, and the estimated cost of maintaining the roads in their current condition. [Citation.] The study specifically identified the roads affected, the length of the road segments, the required thickness of paving overlay needed to maintain them, and the price [*1620] of the required materials. [Citation.] Based on this information, ... County determined the amount of the fee needed to pay the estimated cost of the required maintenance. [Citation.]"

County explicitly argues that a fee for the privilege of using its roads is distinguishable from a fee "for mitigating the impacts to the ... County infrastructure shown to be caused by the transport of Biosolids." (Ordinance G-6638, Kern Code provision 8.05.020(F) [definition [***150] of biosolids impact fee].) Whether such a distinction should be recognized is a matter of statutory construction.

(45) A reviewing court's fundamental task in determining the meaning of a statute "is to ascertain the intent of the lawmakers so as to effectuate the purpose of the statute. [Citation.]" (*Day v. City of Fontana* (2001) 25 Cal.4th 268, 272 [105 Cal. Rptr. 2d 457, 19 P.3d 1196].) The analysis starts with an examination of the actual words of the statute, giving them their usual, ordinary meaning. (*Garcia v. McCutchen* (1997) 16 Cal.4th 469, 476 [66 Cal. Rptr. 2d 319, 940 P.2d 906].) A court may refer to the definitions contained in a dictionary to obtain the usual and ordinary meaning of a word. (*Martinez v. Enterprise Rent-A-Car Co.* (2004) 119 Cal.App.4th 46, 54, fn. 3 [13 Cal. Rptr. 3d 857].)

Webster's Third New International Dictionary (1986), page 2524, states the verb "use" "is general and indicates any putting to service of a thing, usu. for an intended or fit purpose" This definition is quite broad because it covers "any putting to service" (italics added). If the Legislature employed the literal meaning of this definition, then the "privilege of using" a road would cover the privilege of putting that road [***151] to service. Because trucks hauling loads within the legal weight limit are putting to service the roads over which they travel and they have the privilege of traveling over those roads as a result of being properly licensed and

registered, it follows that a literal reading of the phrase the "the privilege of using [a county's] streets or highways" includes driving a truck on a road even if it causes incremental damage to the road. In other words, a road maintenance or impact fee is simply one type of fee for the privilege of using a road.

Before adopting the literal meaning of the word "using," we must check the resulting statutory construction to determine if it comports with, or frustrates, the purpose of the statutory scheme. (See *Torres v. Automobile Club of So. California* (1997) 15 Cal.4th 771, 777 [63 Cal. Rptr. 2d 859, 937 P.2d 290] [statutory language must be construed in context by referring to the nature and purpose of the statutory scheme as a whole]; *Select Base Materials, Inc. v. Board of Equalization* (1959) 51 Cal.2d 640, 645 [335 P.2d 672] [legislative purpose will not be sacrificed to a literal construction].) [*1621]

[**85] First, neither Vehicle Code section 9400.8 [***152] nor the remainder of article 3 of chapter 6 of division 3 of the Vehicle Code--which addresses weight fees assessed at vehicle registration--contains an express exception for local fees or charges that attempt to recover damage to streets or highways caused by vehicle use.

Second, such an exception cannot be implied. Vehicle Code section 9400.8 expressly creates an exception for "extra legal loads" and authorizes local agencies to collect a permit fee for those types of loads. Because the exception for extra legal loads shows the Legislature was capable of expressing its intent to except certain uses, it creates the inference that the Legislature did not intend any exceptions that were not expressly stated. (See Code Civ. Proc., § 1858 [judge may not insert what Legislature has omitted]; see *Sierra Club v. State Bd. of Forestry* (1994) 7 Cal.4th 1215, 1230 [32 Cal. Rptr. 2d 19, 876 P.2d 505] [express statutory exemptions generally preclude implied exemptions].)

Third, Vehicle Code section 9400.8 is part of article 3 of chapter 6 of division 3 of the Vehicle Code. Division 3 concerns the registration of vehicles and [***153] certificates of title. Chapter 6 addresses registration and weight fees. Article 3, which includes Vehicle Code sections 9400 through 9410, concerns weight fees. For example, subdivision (b) of Vehicle Code section 9400 sets forth registration fees based on unladen weight for commercial motor vehicles with not more than two axles, and subdivision (c) does the same for commercial motor

vehicles with three or more axles and certain trailers and dollies. ⁷⁹ Thus, it appears that Vehicle Code section 9400.8 is part of a statutory scheme that regulates fees based on vehicle weight. ⁸⁰ This statutory scheme as set forth in article 3 of chapter 6 of division 3 of the Vehicle Code, and the Legislature's statement in the legislation that added section 9400.8 to the Vehicle Code that "[n]othing in this act shall be construed to allow local governments to impose fees not otherwise authorized by statute" (Stats. 1989, ch. 1337, § 4, p. 5498), support the conclusion that the Legislature intended to fully occupy the field of fees related to the weight of vehicles carrying legal [***154] loads.

⁷⁹ Vehicle Code section 9400.1 became effective on September 29, 2000, and sets forth a range of fees based on gross vehicle weight for commercial motor vehicles with declared gross vehicle weight of 10,001 pounds or more. (Stats. 2000, ch. 861, § 50.)

⁸⁰ The commercial weight fees collected under this statutory scheme are deposited with the State Treasurer, who, on order of the Controller, shall deposit the money in the State Highway Account in the State Transportation Fund. (Veh. Code, § 42205, subd. (a).) Funds from the commercial weight fee not used to cover the administration costs related to the fee may be appropriated by the Legislature to various uses including the maintenance and construction of public streets and highways. (Veh. Code, § 42205, subd. (b); see Cal. Const., art. XIX, §§ 1, 2.)

[*1622] In opposition to the foregoing reasoning, County has cited no case law, legislative history, published legal opinion of the [***155] Attorney General, treatise, article or other authority that adopts or endorses the distinction between fees for the privilege of using roads and fees that recover damages caused by a specific type of road use. Nor has County offered an explanation as to how such a distinction would further the purpose of the statutory scheme. In other words, County has not shown the Legislature intended to allow local agencies to charge fees for road use that causes incremental damage to the roads.

(46) Accordingly, Vehicle Code section 9400.8 must be construed to prohibit a local agency from imposing fees or charges on legal [***86] loads that are hauled on its roads, even though hauling such loads may cause

damage beyond minor wear and tear to the roads.

The final step of our analysis is to determine if the biosolids impact fee was in fact the type of fee prohibited by Vehicle Code section 9400.8. This is necessary because, on its face, the biosolids impact fee was not assessed on miles driven on roads. Instead, the biosolids impact fee was assessed primarily on tons of Class B biosolids applied to land in the unincorporated areas of Kern County. Although this [***156] basis of assessment is attenuated from actual road use, that attenuation is insufficient to save the entire biosolids impact fee. The undisputed facts in the administrative record establish that the per-ton amount of the biosolids impact fee was derived from (1) the miles of Kern County roads used in the hauling of biosolids, ⁸¹ (2) the quality of those roads, ⁸² (3) an estimate of the total weight of Class B biosolids that would be hauled before the January 1, 2003, deadline, (4) the load and volume of nonbiosolid traffic experienced by the road segments, and (5) the amount of load and volume of traffic added to each road segment by the transport of biosolids. The funds generated by the biosolids impact fee were to be used to maintain and repair roads and correct any other "infrastructure deficiencies directly associated with the hauling of Biosolids" (Ordinance G-6638, Kern Code provision 8.05.030(H)(3)), but also were available for other purposes not related to roads and other infrastructure.

⁸¹ An inventory of those roads established their total length at 153.5 miles.

⁸² The roads were classified into three categories. According to the biosolids staff report dated October 5, 1999, issued by the County Resource Management Agency, category 3 roads were designed for heavy truck traffic and, as a result, "[t]he increased truck traffic due to the biosolids transport [would] not have any noticeable effect on the structural integrity of these roads."

[***157] (47) The way County calculated the biosolids impact fee and the way funds generated could be applied leads inescapably to the conclusion that the fee was, at least in part, a fee imposed on road use. This conclusion is reinforced by the exception in Kern Code provision 8.05.03(H)(1), Ordinance G-6638, [*1623] that allows a waiver of the fee "[w]here the Permittee can demonstrate the land application of Biosolids does not

have an impact on County infrastructure or roads." Because the primary purpose of the biosolids impact fee was to collect funds based on the use of streets or highways located in Kern County, it violated Vehicle Code section 9400.8.

E. Remedy

Although the primary purpose of the biosolids impact fee was to pay for road repair and maintenance, that was not its exclusive purpose. Kern Code provision 8.05.030(H)(3), Ordinance G-6638, was in effect from January 1, 2000, through December 31, 2002, and stated that the money generated by the biosolids impact fee and other permit fees would be available to fund a number of different uses, some of which were not related to the impact of hauling biosolids over County roads.

Because of these multiple purposes, we asked [***158] OCSD and County to submit supplemental letter briefs on the issue of what relief is appropriate when an ordinance imposes a fee for more than one purpose and one of the purposes conflicts with a statute and other purposes do not. We asked OCSD and County whether the superior court should be directed to (1) uphold the entire biosolids impact fee, (2) invalidate the entire fee, or (3) determine what portion of the fee, if any, was or will [**87] be used for purposes not contrary to Vehicle Code section 9400.8 and allow that portion to stand.

The first alternative--upholding the entire fee based on the existence of some potentially valid uses of the funds generated by that fee--is not appropriate because such a remedy would allow public agencies to adopt fees with illegal purposes and save those fees from invalidation by appending one valid purpose for which the fees could be used. Thus, when a fee has both valid and invalid purposes, the entire fee cannot be upheld as valid.

Conversely, it would be unduly harsh to completely invalidate a fee when part of the funds would be used for proper purposes and the formula by which the fee is calculated--in this case, tons of [***159] biosolids applied to the unincorporated areas of Kern County--does not itself run afoul of a statutory prohibition.⁸³

83 A stronger argument for invalidating the entire fee might exist if the formula by which the fee is applied to the public were itself contrary to

a statute.

(48) Accordingly, we hold the appropriate relief when a fee is imposed for both valid and invalid purposes is to uphold the fee to the extent that the funds generated are applied to valid purposes and those purposes are otherwise severable from the invalid ones. (See *Williams Communications v. City* [*1624] of *Riverside* (2003) 114 Cal.App.4th 642, 656-660 [8 Cal. Rptr. 3d 96] [unlawful portion of school facilities fee imposed on developer ordered refunded under Gov. Code, § 66020, subd. (e)].)⁸⁴

84 Government Code section 66020 is not applicable to the biosolids impact fee, but it provides a useful analogy for determining the appropriate relief in this case.

[***160] In this case, Ordinance G-6638 expressly stated that (1) the invalidity of any of its provisions would not affect the validity of its other provisions and (2) its provisions were severable. (See *City and County of San Francisco v. Flying Dutchman Park, Inc.* (2004) 122 Cal.App.4th 74, 79 [18 Cal. Rptr. 3d 532] [illegal allocation did not require invalidation of entire parking tax ordinance or reduction of parking tax arrearages because offending clause was severable under ordinance's savings clause].) Furthermore, the rate used to determine the biosolids impact fee as well as the funds generated by the fee are inherently divisible, at least down to the penny. We conclude that the appropriate relief is to invalidate the biosolids impact fee to the extent it was or will be used for purposes that violated Vehicle Code section 9400.8.

OCSD contends this court should direct the superior court to invalidate the entire biosolids impact fee and order a refund of that fee with interest. Recognizing that Kern Code provision 8.05.030(H)(3), Ordinance G-6638, created the possibility of valid purposes mixed with invalid purposes, OCSD asserts: "To the extent that ... 8.05.030(H)(3) [***161] could be read as authorizing the use of biosolids impact fees for property inspections or the GIS tracking system, then the annual permit fee would have to be reduced and the overpayment would have to be refunded--the County cannot recover the same cost twice."

OCSD's assertion is based on the factual premise that the annual permit fees collected were sufficient to pay for all of the valid uses and, therefore, the funds generated by

the biosolids impact fee were not needed, and will not be budgeted, for valid uses. We are unable to confirm this factual premise based on the current appellate record.

Relief in the form of apportionment or allocation between valid and invalid purposes cannot be granted without further [**88] findings of fact. Therefore, this matter will be remanded to the superior court for further proceedings to consider how the funds generated by the biosolids impact fee were spent or will be spent and how to separate the valid applications of funds, if any, from the invalid applications.⁸⁵

85 Deciding these broad questions may involve the consideration of a wide variety of specific factual and legal issues. For example, if the terms of section 3 of Ordinance G-6638, Kern Code provision 8.05.040(M) are construed to allow the biosolids impact fee to be used to pay costs and expenses incurred in "enforcement activities," then funds from the biosolids impact fee might appropriately be allocated to cover various amounts expended in connection with *Kern County Environmental Health Services v. Arciero Ranches* (Aug. 9, 2001, F035181) (nonpub. opn.). These issues and others are best addressed in the first instance by the superior court.

[**162] [*1625] Because of the relief that will be granted on remand, we need not address the claims that the biosolids impact fee violated the equal protection clause of the United States Constitution and constituted an illegal general or special tax. (See fn. 37, *ante*; see also *Waters-Pierce Oil Co. v. City of Hot Springs* (1908) 85 Ark. 509 [109 S.W. 293] [taxing vehicles differently based on contents--petroleum products, ice or other--instead of capacity and size unconstitutional].) On one hand, if all or a portion of the biosolids impact fee is invalidated under Vehicle Code section 9400.8, then addressing other grounds of invalidity would be redundant. On the other hand, if all or a portion of the biosolids impact fee was or will be allocated to expenditures specifically related to County's biosolids regulatory program, then a rational basis exists for imposing a per ton fee on Class B biosolids and not imposing a per ton fee on other materials carried by truck. The existence of a rational basis for distinguishing between biosolids and other materials means the distinction does not violate equal protection. (See *Genesis Environmental Services v. San Joaquin Valley Unified*

Air Pollution Control Dist. (2003) 113 Cal.App.4th 597, 605 [6 Cal. Rptr. 3d 574] [***163] [equal protection claims are based on the lack of a rational basis for treating similarly situated persons differently].) Similarly, funds allocated to valid uses do not constitute illegal general or special taxes. (See *City of Dublin v. County of Alameda, supra*, 14 Cal.App.4th 264 [county landfill \$ 6 per ton surcharge valid as a reasonably necessary charge for cost of the program].)

VII. County's Cross-action

County's cross-action alleged that a number of contracts and contract extensions entered by CSDLAC, CLABS, and OCS D relating to the transport and disposal of biosolids were projects for purposes of CEQA, and that some level of CEQA review should have been performed before they were entered. Environmental assessment was required, according to County, because the new contracts and extensions were either separate projects or modifications of prior projects that may have triggered the need for a subsequent EIR, supplemental EIR or subsequent negative declaration.

The superior court ruled against County on all of the causes of action in its cross-action and concluded that (1) some of the actions by the sanitation agencies were covered by program [**164] EIR's that did not require additional CEQA documentation, (2) the Central Valley Water Board rather than the sanitation agency was the lead agency for some of the projects, and (3) CEQA review of an option to purchase real estate was premature under the [*1626] provisions of Guidelines section 15004 [**89] . County appeals from the rulings related to nine contracts.⁸⁶

86 The first, second, fourth, seventh, tenth, eleventh, twelfth, thirteenth and fourteenth causes of action of County's cross-action each address one of the nine contracts.

A. Mootness of Expired Contracts and Extensions

(49) The termination dates for some of the contracts and extensions have passed since the ruling by the superior court. Consequently, we directed the parties to submit supplemental letter briefs on the question whether County's CEQA challenges to those contracts or extensions are moot. The standard this court applies in determining the mootness of a CEQA appeal is whether any effective relief can be granted the appellant. (

Association for a Cleaner Environment v. Yosemite Community College Dist., *supra*, 116 Cal.App.4th 629 [***165] [question whether initial study should have been prepared was not moot]; *Woodward Park Homeowners Assn. v. Garreks, Inc.* (2000) 77 Cal.App.4th 880, 888-889 [92 Cal. Rptr. 2d 268] [completing and opening car wash project for operations while appeal was pending did not render preparation of EIR moot because modification or removal of project remained possible.]

1. Extension of CSDLAC-Yakima Agreement

On November 9, 1994, CSDLAC and Yakima Company (Yakima) entered into an agreement for the removal, transportation and reuse of biosolids (Yakima Agreement) pursuant to which biosolids produced at the Carson Plant would be transported to Kern County and applied to a specific site owned and cultivated by the Buttonwillow Land and Cattle Company. The Yakima Agreement required Yakima to (1) obtain all the necessary licenses, permits and other approvals needed to perform the agreement, (2) keep complete records, (3) conduct testing of soil, groundwater and plant tissue, (4) provide CSDLAC access to the site and records for inspection purposes, (5) provide CSDLAC with copies of all regulatory reports, and (6) maintain insurance. Yakima agreed to remove up to 1,000 wet tons of [***166] biosolids per week from CSDLAC's treatment plant and was paid \$ 25 per wet ton.

The Yakima Agreement began on November 9, 1994, remained effective for a period of three years, and provided for two 3-year renewal periods upon agreement of Yakima and CSDLAC's chief engineer. Yakima was granted the right to terminate the Yakima Agreement by giving 24 hours' notice if it could no longer legally perform the required services.

In October 1997, CSDLAC and Yakima agreed to the first extension of the Yakima Agreement. Almost two years later, in a letter dated September 16, [*1627] 1999, CSDLAC stated: "The first three-year extension was granted and will expire on November 8, 2000. Due to the current uncertain situation involving proposed ordinances in the County of Kern, which may place restrictions on the land application of biosolids, [CSDLAC's] preference is to extend the contract through the second allowable three-year period. It is our understanding that Yakima is interested and will participate in this arrangement at the original biosolids

management fee of \$ 25.00 per wet ton."

Yakima agreed to the second extension by countersigning the letter and, as a result, the termination [***167] date of the extended contract became November 8, 2003.

[**90] a. Previous CEQA review and documentation

CSDLAC's final program EIR for the "Joint Outfall System 2010 Master Facilities Plan, June 1995" (1995 final Program EIR), discussed the Yakima Agreement: "Since circulation of the draft EIR, some changes in the reuse sites have occurred. ... Ag Tech has opened an additional land application site near Delano, California, that now receives some of the Districts' biosolids. The Districts also have initiated new land application contracts with the Yakima Company near Buttonwillow, California; McCarthy Family Farms near Corcoran, California; and one short-term contract with Bio Gro Systems near Blythe, California." The 1995 final Program EIR also stated that in January 1995, approximately 1,699 wet tons per week were delivered to McCarthy Family Farms and 580 wet tons per week were delivered to Yakima Company.

CSDLAC's draft Program EIR recognized that NOx emissions generated by trucks transporting biosolids from the Carson Plant to disposal or use sites would be considered a significant impact under the thresholds adopted by the South Coast Air Basin and the Southeast [***168] Desert Air Basin. To mitigate this impact, CSDLAC stated it would perform maintenance on its trucks at least as frequently as recommended by the manufacturer.

The 1995 final Program EIR also references the mitigated negative declarations from the Central Valley Water Board obtained by McCarthy Family Farms and Yakima Company in connection with the permits that authorize them to land apply biosolids. More specifically, the Central Valley Water Board adopted resolution No. 95-011 approving the initial study and adopting a mitigated negative declaration for the issuance of a WDR relating to Yakima Company's application of biosolids to 1,372 acres of farmland in Kern County.

Based on the 1995 final Program EIR and the mitigated negative declaration of the Central Valley Water Board, CSDLAC contends that both the [*1628] hauling and the land application aspects of the extension

of the Yakima Agreement were covered by CEQA documents and that further CEQA review was unnecessary. In contrast, County argues that CSDLAC violated CEQA by (1) approving the extension of the Yakima Agreement without performing the review required by Guidelines section 15168 and (2) failing to prepare a subsequent or supplemental [***169] EIR that analyzed the extension.

b. *Mootness*

In responding to our inquiry, both parties have agreed that the November 8, 2003, termination date rendered County's CEQA challenge to the extension of the Yakima Agreement moot. (See *Giles v. Horn* (2002) 100 Cal.App.4th 206 [123 Cal. Rptr. 2d 735] [challenges to county contracts moot because contracts had been fully performed and had expired].) County, however, asserts that we should exercise our discretion to address the controversy because of its importance and the likelihood similar controversies will recur. We also conclude the challenge to the Yakima Agreement is moot. Furthermore, we decline County's invitation to render an advisory opinion because the future disputes between County and CSDLAC regarding CSDLAC's disposal activities are likely to be factually distinct. Thus, any ruling made now would do little to prevent future disputes from arising.

2. *CLABS Contract No. C-87685*

In January 1994, CLABS entered contract No. C-87685 (Contract C-87685) with [**91] Gardner-Arciero for the loading, transporting and beneficial use of biosolids produced by CLABS. Gardner-Arciero applied the biosolids to farms near Cantil, [***170] California. On February 11, 2000, the Los Angeles City Council approved amendment No. 3 to Contract C-87685, which included an extension of the contract through February 14, 2003. The second cause of action in County's cross-action alleged CLABS violated CEQA by failing to perform any environmental review before approving the amendment of Contract C-87685. The superior court rejected the second cause of action and ruled (1) the Central Valley Water Board, not CLABS, was the lead agency for the project, (2) the contract had been reviewed under a program EIR prepared by CLABS, and (3) the amendment did not expand the project in a way that required additional review under CEQA.

The date for the expiration of the amendment to Contract C-87685 has passed, but County asserts its CEQA claim regarding the amendment of Contract C-87685 is not moot unless that contract cannot be renewed or extended.

As with the CSDLAC-Yakima Agreement, we conclude that County's CEQA challenges to CLABS's February 11, 2000, approval of amendment [*1629] No. 3 to Contract C-87685 is moot because the contract is no longer in effect. (See *Giles v. Horn*, *supra*, 100 Cal.App.4th 206.) Moreover, the mere [***171] prospect that Contract C-87685 or a similar contract might become operative because of future actions taken by CSDLAC and Gardner-Arciero does not create an actual, present controversy.

3. *CLABS Contract No. C-94375*

In October 1996, CLABS entered contract No. C-94375 (Contract C-94375) with RBM and Valley Communities, Inc. (collectively, RBM-Valley) for the loading, transporting and beneficial use of biosolids produced at the Terminal Island and Hyperion treatment plants. RBM-Valley agreed to load CLABS's biosolids onto its trucks, transport the biosolids to RBM-Valley's sites, unload the biosolids at designated sites, and beneficially use the biosolids in accordance with applicable laws and regulations. The term of Contract C-94375 was to run for three years from the date of the first load.

On October 26, 1999, the Los Angeles City Council approved an amendment of Contract C-94375 to provide CLABS the option of renewing it for two additional three-year terms, the first of which would be from October 31, 1999, through October 30, 2002. The first cause of action in County's cross-action alleged the extension of Contract C-94375 was a project for purposes of CEQA, and CLABS violated CEQA [***172] by failing to perform any environmental review before approving the extension. The superior court rejected this claim, ruling the extension already had been reviewed under a program EIR adopted by CLABS and further review was not required.

In its supplemental letter brief, CLABS represented that Contract C-94375 was amended again in 2000 and that the contract, as then amended, remains in effect. RBM⁸⁷ and CLABS assert that performing CEQA review at this point, such as preparing an EIR or the

checklist referenced in Guidelines section 15168, subdivision (c)(4), would be pointless because the particular amendment to Contract C-94375 challenged in the cross-action is no [*92] longer in effect. In contrast, County contends that its CEQA claim regarding Contract C-94375 is not moot because the contract has remained in effect as a result of the subsequent amendment in 2000.

87 RBM also submitted a supplemental letter brief and requested that we consider it. That request is granted.

We conclude that County's cause of [***173] action based on Contract C-94375 is not moot. First, a court order addressing Contract C-94375 may still be able to provide effective relief. For example, if an environmental assessment actually is performed by CLABS, such assessment could lead to mitigation [*1630] measures, either as part of a supplemental EIR or a subsequent mitigated negative declaration, that affect the performance of Contract C-94375. (See *Association for a Cleaner Environment v. Yosemite Community College Dist.*, *supra*, 116 Cal.App.4th at p. 641 [CEQA claim not moot because performing initial study could lead to adoption of mitigation measures].) Second, Contract C-94375 itself is still in effect and the case law regarding the mootness of contract-based claims involves the expiration of the entire contract, not just the expiration of a single amendment. (See *Giles v. Horn*, *supra*, 100 Cal.App.4th at pp. 228-229.)

4. OCSD's contract with Yakima

OCSD and Yakima entered into a contract titled "Agreement for the Management of Biosolids and Construction and Operation of Storage/Composting Facility," effective January 10, 2000 (OCSD-Yakima Agreement). Under section 1 of [***174] the OCSD-Yakima Agreement, Yakima charged \$ 25 per wet ton "to accept delivery of up to 100 wet tons per day of Class B Biosolids" from OCSD's plants and apply the biosolids to land at specified sites in Kern County. Yakima represented that it had valid permits from the Central Valley Water Board and Kern County Environmental Health Services Department that authorized it to land apply biosolids at the sites.

The OCSD-Yakima Agreement also contained a number of provisions regarding the construction and operation of a storage and composting facility. In July 2000, however, OCSD and Yakima amended the

OCSD-Yakima Agreement to remove any reference to the construction or operation of a storage and composting facility. The trial court ruled County's CEQA challenge to the storage and composting facility was moot. We concur in that ruling.

The remaining part of the OCSD-Yakima Agreement, which concerns the land application of Class B biosolids to sites located in Kern County, was not formally terminated and technically remains in effect. Section 21.1 of the OCSD-Yakima Agreement stated that the term of the agreement would end in January 2012, unless terminated earlier. Section 23.1 of the OCSD-Yakima [***175] Agreement stated Yakima could terminate the agreement on 24 hours' notice if it could no longer legally perform the required services. OCSD contends the adoption of the heightened treatment standards had the effect of terminating the agreement by making the land application of Class B biosolids illegal. [*1631] County asserts the CEQA claim in its thirteenth cause of action is not moot because OCSD and Yakima could resume activities under the OCSD-Yakima Agreement if the heightened treatment standards were invalidated or modified. ⁸⁸ [***93] Even assuming the claim presently is moot, we will exercise our inherent discretion and consider County's CEQA claim regarding the OCSD-Yakima Agreement because of the potential it will be reinstated if the heightened treatment standards are modified. (See *In re William M.* (1970) 3 Cal.3d 16, 23 [89 Cal.Rptr. 33, 473 P.2d 737] [court has discretion to consider issue likely to recur].)

88 For example, in conducting its environmental review, County might consider alternatives to the current heightened treatment standards that would allow the application of Class B biosolids to land only used to grow fiber crops, such as cotton, or land not used for food crops and grazing. If an alternative is adopted that allows some lands to receive Class B biosolids, then deliveries might resume under the OCSD-Yakima Agreement.

[***176] 5. OCSD's contract with Magan

OCSD and Shaen Magan entered a contract titled "Agreement for the Management of Biosolids," effective January 10, 2000 (OCSD-Magan Biosolids Agreement). Under the agreement, OCSD agreed to pay Magan a base fee of \$ 22.40 per wet ton for biosolids that Magan accepted, transported, and used on land located in Kings

and Kern Counties. The agreement was not expressly limited to Class B biosolids. The OCS-D-Magan Biosolids Agreement was scheduled to terminate January 2003 and provided for early termination in the event that Magan could no longer legally perform the services required.

In its supplemental letter brief, OCS-D has represented that OCS-D and Magan agreed to extend the OCS-D-Magan Biosolids Agreement through December 31, 2004, and it was likely that OCS-D would exercise an option to extend the agreement an additional year. Because the agreement may have been extended through 2005, we will address the merits of County's challenge to OCS-D's failure to perform any environmental assessment concerning the OCS-D-Magan Biosolids Agreement and leave it to the superior court to determine the question of mootness on remand.

6. OCS-D's option [***177] contracts

On January 10, 2000, OCS-D entered three contracts involving the option to purchase real estate. One option contract was entered with Shaen Magan involving 1,360 acres and another option contract was entered with Shaen Magan, Inc., involving 2,666 acres. Also, OCS-D entered an option and right of first refusal with Yakima, which had a 12-year total term and involved 320 acres.

[*1632] The appellate record does not show whether OCS-D's option agreements with Shaen Magan and Shaen Magan, Inc., which were to expire after three years, have been exercised, extended or allowed to expire. Similarly, the appellate record does not show the current status of OCS-D's option and right of first refusal with Yakima. The option was to expire after three years and the right of first refusal was to remain in effect for nine years thereafter, but OCS-D and Yakima may have rescinded it like the portion of the OCS-D-Yakima Agreement. We will consider the merits of County's CEQA claims concerning these contracts and, on remand, the superior court can determine whether those claims are moot.

B. Program EIR and Subsequent Environmental Assessment

Both CLABS and OCS-D have adopted program EIR's [***178] that cover the management of biosolids generated at the treatment plants they operate.

1. EIR's of CLABS

In connection with CLABS's wastewater treatment operations, the City of Los Angeles prepared a CEQA document titled "Offsite Sludge Transportation and Disposal Program Final EIR" dated March 1989 (CLABS 1989 FEIR). Section 3 of the CLABS 1989 FEIR is titled "Setting, Impacts, and Mitigation Measures" and excerpts are part of the appellate record.

The CLABS 1989 FEIR states that (1) the hauling and disposal of sewage sludge [**94] from the treatment plants is not one specific action, but consists of potential combinations of actions involving different disposal technologies and transportation modes; (2) a detailed discussion of current or proposed projects is not provided because site-specific issues will be dealt with on a case-by-case basis; (3) future or ongoing specific projects may require additional CEQA documentation; and (4) such additional CEQA documentation would tier off the CLABS 1989 FEIR.

More recently, the City of Los Angeles also prepared a CEQA document titled "Biosolids Management Program Final [EIR]" dated July 1996 (CLABS 1996 FEIR). The first page [***179] of its executive summary is part of the appellate record. The CLABS 1996 FEIR was designed to "serve as the basis for examining subsequent implementation actions to determine if additional environmental documentation is required." The CLABS 1996 FEIR stated that (1) under the concept of tiering, the site-specific environmental documents would incorporate by reference the analysis of environmental effects contained in the CLABS 1996 FEIR and (2) if additional effects are created or further mitigation measures are required, supplemental environmental documents would be required.

[*1633] 2. OCS-D's program EIR

OCS-D adopted a 1999 Strategic Plan that covered all aspects of its operations and assessed its wastewater systems needs and options to the year 2020. Volume 8 of OCS-D's 1999 Strategic Plan addressed biosolids management. OCS-D acted as the lead agency for purposes of preparing and considering the environmental documents that CEQA required for the adoption of the 1999 Strategic Plan. As a result, OCS-D caused a draft program EIR, dated June 1999, to be prepared covering the 1999 Strategic Plan (OCS-D 1999 DEIR). Chapter 8.0 of the OCS-D 1999 DEIR was titled "Residual Solids/Biosolids [***180] Management Setting, Impacts, and Mitigations." In October 1999, after receipt of

comments, the "Orange County Sanitation District 1999 Strategic Plan Final Program [EIR]" was prepared. Both the draft and final EIR are part of the administrative record.

OCSO used a program EIR to allow for more streamlined and focused environmental reviews in the future, including the use of tiering. In addition, the OCSO 1999 DEIR states that "[s]hould the design or project description as identified in this document change substantially for any of the near-term projects, subsequent project-level impact evaluation will be necessary."

3. Lead agencies under the program EIR's

(50) CEQA defines "lead agency" as "the public agency [that] has the principal responsibility for carrying out or approving a project [that] may have a significant effect upon the environment." (§ 21067.) If more than one public agency is involved in a project but only one public agency carries out the project, then "that agency shall be the lead agency even if the project would be located within the jurisdiction of another public agency." (Guidelines, § 15051, subd. (a); see § 21165.)

CLABS and OCSO are the [***181] agencies that actually carry out the construction and operation of wastewater treatment facilities. Thus, under the ordinary meaning of the language contained in the statutory definition of "lead agency," both CLABS and OCSO are lead agencies. This conclusion is not controversial in that CLABS and OCSO have recognized in their program EIR's that they are each the lead agency for purposes of their wastewater treatment operations.

[**95] Because the operation of a wastewater treatment facility includes managing the biosolids that the facility produces, CLABS and OCSO are also each the lead agency for their activities concerning the management of biosolids. Again, this conclusion is based on (1) a straightforward application of the statutory definition of "lead agency" and the criteria contained in the Guidelines (see [*1634] § 21067; Guidelines, §§ 15050, 15051), and (2) the program EIR's of CLABS and OCSO, both of which cover the activity of biosolids management. Thus, the program EIR's effectively acknowledge that biosolids management is the responsibility of CLABS and OCSO, even though they carry out that responsibility by contracting with other entities to handle the physical aspects of hauling and disposing [***182] of the biosolids generated. (See §

21065, subd. (b) [definition of "project" includes activity undertaken in whole or in part through a contract with a public agency].)

4. Assessment of later actions related to the program

Having determined that CLABS and OCSO are lead agencies with program EIR's that address biosolids management, the question becomes what procedural steps those lead agencies should have performed to comply with CEQA when entering contracts or extensions concerning the use or disposal of biosolids generated at their facilities.

The program EIR's of CLABS and OCSO expressly state that activity undertaken after the adoption of the program EIR's might result in the use of a tiered EIR to achieve future CEQA compliance. Therefore, one possible answer to the question is that the lead agencies must follow the steps of performing a preliminary review, completing an initial study, and preparing a tiered EIR. (See § 21094.)

(51) Alternatively, section 21166 sets forth the conditions where a subsequent or supplemental EIR is required to cover a new activity that is regarded as a change in a project already covered by an existing EIR. In particular, a subsequent [***183] or supplemental EIR is required where "[s]ubstantial changes are proposed in the project [that] will require major revisions of the [EIR]." (§ 21166, subd. (a); see Guidelines, §§ 15162 [subsequent EIR], 15163 [supplement to EIR] & 15164 [addendum to EIR].)

To identify the initial procedural steps that CLABS and OCSO should have taken, we turn to the provisions in the Guidelines that explicitly address how subsequent activity that is related to the program covered by a program EIR must be handled to comply with the documentation requirements of CEQA. Section 15168 of the Guidelines provides:

"(c) Use With Later Activities. Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared.

"(1) If a later activity would have effects that were not examined in the program EIR, a new initial study would need to be prepared leading to either an EIR or a negative declaration.

[*1635] "(2) If the agency finds that pursuant to Section 15162 [regarding subsequent EIR's], no new effects could occur or no new mitigation measures would be required, the agency can approve the activity as [***184] being within the scope of the project covered by the program EIR, and no new environmental document would be required.

"(3) An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into subsequent actions in the program.

[**96] "(4) Where the subsequent activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR."

The Discussion that follows section 15168 of the Guidelines states: "Use of the program EIR also enables the Lead Agency to characterize the overall program as the project being approved at that time. Following this approach when individual activities within the program are proposed, the agency would be required to examine the individual activities to determine whether their effects were fully analyzed in the program EIR. If the activities would have no effects beyond those analyzed in the program EIR, the agency could assert that the activities are merely part of the program which had been approved earlier, and no further CEQA [***185] compliance would be required. This approach offers many possibilities for agencies to reduce their costs of CEQA compliance and still achieve high levels of environmental protection." ⁸⁹

89 The Discussion is available at <http://ceres.ca.gov/topic/env_law/ceqa/guidelines/art11.html> (as of Apr. 1, 2005).

Based on the requirements of subdivision (c) of section 15168 of the Guidelines, County argues that if CLABS's and OCSD's sludge disposal contracts are viewed as "subsequent activities" in their wastewater collection, treatment and disposal program, then CLABS and OCSD are required to conduct an examination to determine if additional environmental documents must be prepared and, with respect to site-specific activities, prepare a written checklist or similar device to determine whether the environmental effects of the contracts were covered by the program EIR.

There is little doubt that the contracts and extensions entered by CLABS and OCSD concern the management of biosolids and that CLABS and OCSD [***186] have characterized the management of biosolids as part of the overall program covered by their program EIR's. Therefore, the contracts and extensions are "[s]ubsequent activities in the program" for purposes of Guidelines section 15168, subdivision (c). Consequently, CLABS and OCSD [*1636] were required to conduct the examination and make the determinations required by that subdivision. ⁹⁰

90 We do not address what impact, if any, the provisions of section 15004 of the Guidelines might have on the steps taken to comply with CEQA after the examination and determinations required by subdivision (c) of section 15168 of the Guidelines have been made.

The required examination and determinations were not made. Neither CLABS nor OCSD has cited to any evidence in the administrative record showing it completed these requirements. With respect to some of OCSD's contracts, the administrative record affirmatively shows such an examination was overlooked. One staff report sent to the board of directors of the OCSD on November 17, 1999, concerning [***187] the OCSD's consideration of the OCSD-Yakima Agreement and the OCSD-Magan Biosolids Agreement, contained no entries under the heading "CEQA FINDINGS." Similarly, another staff report that recommended authorizing the staff to negotiate with Magan for the purchase of a site for the long-term management of OCSD's biosolids contained only the notation "N/A" under the heading "CEQA FINDINGS."

[**97] As a result of their failure to conduct an examination and document the determinations required to be made after the examination, CLABS and OCSD violated section 15168, subdivision (c) of the Guidelines. Accordingly, they have "not proceeded in a manner required by law" and have abused their discretion for purposes of section 21168.5. ⁹¹

91 We will not go so far as to rule what determinations should have been made, but remand to allow CLABS and OCSD to make those determinations in the first instance.

C. Remand and Remedy

To remedy the foregoing violations of CEQA and appropriately dispose of the moot causes of action [***188] in County's cross-action, the judgment on the cross-action will be reversed and the superior court directed to dismiss the moot causes of action (see *Giles v. Horn, supra*, 100 Cal.App.4th at p. 229 [when an appeal is moot, the preferable procedure is to reverse the judgment and direct the trial court to dismiss the action for having become moot prior to its final determination on appeal]), and issue a writ of mandate under the remaining causes of action.

We have determined that dismissals of the second cause of action concerning Contract C-87685 between CLABS and Gardner-Arciero, and the seventh cause of action concerning the CSDLAC-Yakima Agreement are appropriate because of mootness. Additional causes of action in the cross-action may be moot at the time the superior court issues a writ of mandate. For instance, if Yakima and OCS D formally terminate the OCS D-Yakima Agreement, then the thirteenth cause of action would be moot and should be dismissed rather [*1637] than included in the writ. Similarly, if any option agreement has expired unexercised or has been formally terminated, then the related cause of action would be moot. Consequently, immediately prior to issuing [***189] a writ of mandate, the superior court should determine which causes of action are moot and exclude them from the writ or writs issued.

If all of the remaining causes of action are justiciable, the superior court should issue a writ of mandate under the first and fourth causes of action of the cross-action ⁹² directing CLABS to undertake the examination required by section 15168, subdivision (c) of the Guidelines as well as the other steps necessary to comply with that provision and any other provisions of CEQA or the Guidelines that become applicable as a result of the determinations made under section 15168, subdivision (c) of the Guidelines. A similar writ of mandate should be issued under the remaining causes of action that concern OCS D ⁹³ and are justiciable. The superior court also shall require a return be filed to notify it of (1) the determinations made under Guidelines section 15168, subdivision (c), and (2) the other actions taken by the [**98] sanitation agency in response to the writ of mandate. (See § 21168.9, subd. (b) [trial court shall retain jurisdiction by way of a return]; Cal. Civil Writ Practice (Cont.Ed.Bar 3d ed. 2004) § 11.1 & appen. A-15, pp. 473-474, 581-582.) [***190]

92 The first cause of action concerns Contract C-94375 and the fourth cause of action concerns the "Contract to Purchase Real Property" that the City of Los Angeles entered with Valley Communities, Inc., and Buena Vista Lake Properties regarding 4,688 acres of land located in Kern County at a purchase price of approximately \$ 9.6 million. The contract to purchase real property was not discussed in part VII.A., *ante*, because it was performed and did not expire. Accordingly, the CEQA cause of action relating to that contract is not moot.

93 These causes of action are the tenth (OCS D-Magan Biosolids Agreement), eleventh (option agreement to purchase real estate from Magan), twelfth (option agreement to purchase real estate from Shaen Magan, Inc.), thirteenth (OCS D-Yakima Agreement) and fourteenth (option agreement to purchase real estate from Yakima) contained in County's cross-action.

The question of whether any acts taken in performance of the contracts should be enjoined should, if raised by the parties [***191] on remand, be determined by the superior court in accordance with section 21168.9 and any other applicable provisions of law.

VIII. Evidentiary Objections

In connection with the non-CEQA causes of action, plaintiffs contend the superior court erred in failing to permit them to conduct discovery or submit extra-record evidence at the time of trial. Because plaintiffs' cause of action concerning the biosolids impact fee will be remanded for further proceedings, the assertions of reversible error based on the evidentiary rulings related to that cause of action need not be addressed.

[*1638] To the extent that the evidentiary issues relate to plaintiffs' allegations that counsel for County advised the Kern County Board of Supervisors that it only had to consider the proposed ordinance's impacts within Kern County and had no duty to consider the impacts to the surrounding communities, those evidentiary issues are no longer relevant because of the broader environmental review that will be conducted in connection with the preparation of an EIR. For the same reason that we did not address the issues concerning the claim based on California's constitutional limits on exercises of the police [***192] power (see part V., *ante*

), we need not address the related evidentiary issues.

Insofar as the evidentiary issues might relate to the other alleged constitutional violations, such as the claims based on the commerce clause and equal protection, or the affirmative defenses of laches, unclean hands and estoppel, we conclude the evidentiary rulings of the superior court did not affect the outcome on those claims and defenses, and thus were not reversible error.

DISPOSITION

Appeal

The judgment entered on plaintiffs' petition and complaint is reversed and the matter is remanded to the superior court. The orders underlying the judgment are reversed in part and affirmed in part as set forth *post*.

As to plaintiffs' first cause of action, the superior court is directed to vacate its November 22, 2000, order denying that cause of action under CEQA. The superior court is further directed to issue a writ of mandate ordering County to void its negative declaration relating to Ordinance G-6638 and to prepare an EIR that covers the adoption of an ordinance regulating the land application of treated sewage sludge within its jurisdiction. The heightened treatment standards [***193] once reflected in Kern County Ordinance Code provision 8.05.040(A), Ordinance G-6638, and now set forth in Ordinance No. G-6931, may remain operative, provided that County prepares, in good faith without unnecessary delay, an EIR that complies with CEQA.

As to plaintiffs' second cause of action, the November 25, 2002, order denying relief is affirmed.

As to plaintiffs' third cause of action regarding the validity of the biosolids impact fee, the superior court is

directed to vacate its November 25, 2002, order denying relief under that cause of action. On remand, the superior court is directed to uphold the biosolids impact fee to the extent that the funds generated are, or will [**99] be, applied to valid purposes and those purposes are [*1639] otherwise severable from the invalid ones. The superior court also is directed to hold such further proceedings as it deems appropriate for the purpose of determining how the funds generated by the biosolids impact fee were spent, or will be spent, and how to separate the valid applications of funds, if any, from the invalid applications.

Cross-action

The judgment on County's cross-action is reversed and the matter remanded to the superior court with directions to (1) [***194] enter an order dismissing the second and seventh causes of action as moot; (2) determine which of the remaining causes of action in the cross-action (first, fourth, tenth, eleventh, twelfth, thirteenth and fourteenth causes of action) have become moot and dismiss those causes of action; (3) issue a writ of mandate under the causes of action that are not moot directing CLABS or OCSD to undertake (a) the examination and make the determinations necessary to comply with section 15168, subdivision (c) of the Guidelines and (b) the steps necessary to comply with any other provisions of CEQA or the Guidelines that become applicable as a result of the determinations made under Guidelines section 15168; and (4) require the party subject to the writ of mandate to file a return.

The parties shall bear their own costs on the appeals.

Dibiaso, Acting P. J., and Vartabedian, J., concurred.

A petition for a rehearing was denied April 25, 2005.

SUBSEQUENT HISTORY: Rehearing denied by Divers' Environmental Conservation Organization v. State Water Resource Control Board, 2006 Cal. App. LEXIS 2102 (Cal. App. 4th Dist., Dec. 27, 2006)

PRIOR HISTORY: [***1] Superior Court of San Diego County, No. GIC819689, Ronald S. Prager, Judge.

COUNSEL: Briggs Law Corporation, Cory J. Briggs; Environmental Advocates and Suzanne E. Bevasch for Plaintiff and Appellant.

Lawyers for Clean Water, Inc., Daniel Cooper and Layne Friedrich for California Coastkeeper Alliance as Amicus Curiae on behalf of Plaintiff and Appellant.

Bill Lockyer, Attorney General, Mary Hackenbracht and Carol A. Squire, Deputy Attorneys General, for Defendants and Respondents.

No appearance for Real Parties in Interest and Respondents.

JUDGES: Benke, Acting P. J., with Nares and Haller, JJ., concurring.

OPINION BY: Benke [*250]

OPINION
[**499]

BENKE, Acting P. J.--This is an appeal from an order denying a petition for a writ of mandate. The petition challenged a discharge permit respondent California Regional Water Quality Control Board, San Diego Region (the Regional Board), issued to real parties in interest United States Department of the Navy et al. (Navy). We affirm. Although the Regional Board could have issued a permit that imposed numeric limits on chemicals in the Navy's stormwater discharges into San Diego Bay, under provisions of the Federal Water Pollution Control [***2] Act (33 U.S.C. § 1251 et seq.), commonly known as the Clean Water Act (CWA), and applicable regulations, the Regional Board was authorized to instead require that the Navy limit its stormwater chemical discharges by employing so-called "best management practices" (BMP's). Given these circumstances, we reject appellant Divers' Environmental Conservation Organization's (Divers') contention that the permit was defective for its failure to analyze or impose numeric limits on chemicals in the Navy's stormwater discharges.

SUMMARY

In November 2002 the Regional Board issued a National Pollutant Discharge Elimination System (NPDES) permit to the Navy governing discharges from the Naval Base San Diego Complex¹ (the base complex) to San Diego Bay. The permit includes regulations governing stormwater discharges from the base complex to the bay. In particular, the permit requires that the Navy develop and adopt a "Storm Water Pollution Prevention

Plan" (the prevention plan), which employs BMP's² designed to reduce or eliminate pollutants received into the bay from industrial activities at the base complex. The permit requires that the prevention plan identify [***3] and evaluate sources of pollution [**500] that might affect stormwater discharges from the base complex and then implement site-specific BMP's to reduce or prevent pollutants in the base complex's stormwater discharges. Under the permit the Navy is required [*251] to consider implementing nonstructural BMP's, such as good housekeeping, preventative maintenance, spill response procedures, material handling and storage procedures, employee training programs, recycling procedures, and erosion controls. Where nonstructural BMP's are not effective, the permit requires that the Navy consider structural BMP's, such as structures which cover chemicals and other pollutants, retention ponds, berms and other devices which channel runoff away from pollutant sources and treatment facilities, such as vegetative swales, which reduce pollutants in stormwater discharges.

1 The base complex includes four installations: Naval Station, San Diego; Mission Gorge Recreational Facility; Broadway Complex; and the Naval Medical Center, San Diego.

2 The permit defines BMP's as "schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the United States. The BMPs also include treatment measures, operating procedures, and practices to control facility site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage. The BMPs may include any type of pollution prevention and pollution control measure necessary to achieve compliance with this Order."

[***4] In addition to the prevention plan and based on the Regional Board's study of water quality, the permit contains a numeric limit on the amount of toxicity in the Navy's total effluent. This limitation requires that test organisms be able to survive in the effluent. The permit also prohibits the discharge of the first quarter-inch of runoff from "high-risk" areas.

The Regional Board's study of water quality noted that levels of copper and zinc in stormwater runoff were matters of concern. In addition to the BMP's and

limitation on toxicity in the total effluent discharges, the permit set forth "benchmarks" for copper and zinc. The permit requires the Navy to measure the concentration of copper and zinc in its stormwater discharges and if they exceed the benchmark levels, the Navy must commence an iterative process of reviewing and upgrading its BMP's.

The permit requires that the Navy annually review all BMP's to determine "whether the BMP's are properly designed, implemented, and are effective in reducing and preventing pollutants in storm water discharges." In the event the Regional Board finds the prevention plan does meet the requirements of the permit, the permit requires [***5] the plan be revised to implement additional BMP's.

Before the permit was finally adopted by the Regional Board, Divers' challenged it administratively. Divers' argued that applicable federal regulations required that instead of regulating the Navy's industrial stormwater discharges by way of a BMP's-based prevention plan, the Regional Board was required to set numeric "water quality based effluent limitations" (WQBEL's) on the Navy's stormwater discharges and that before setting those [**501] numeric WQBEL's the Navy was required to conduct an analysis of particular pollutants for which there was a reasonable potential the stormwater [*252] discharges would cause or contribute to a violation of any state water quality standard. The Regional Board rejected Divers's argument and adopted the permit without numeric WQBEL's and without performing any analysis of particular pollutants in the Navy's stormwater discharges. Divers' filed an administrative petition with respondent State Water Resources Control Board (State Board). The administrative petition was dismissed on the grounds it failed to raise substantial issues appropriate for review by the State Board.

Divers' filed a petition [***6] for a writ of administrative mandate (Code Civ. Proc., § 1094.5) against the State Board and the Regional Board. The trial court dismissed the State Board as a defendant. As against the Regional Board, Divers' alleged the board abused its discretion in failing to conduct an analysis of the reasonable potential impact of particular stormwater pollutants on state water quality standards and in failing to impose numeric WQBEL's on the Navy's stormwater discharges. The trial court denied Divers's petition.

Divers' filed a timely notice of appeal.

DISCUSSION

I

Standard of Review

"[O]ur standard of review must extend appropriate deference to the administrative agencies in this case, and their technical expertise. [Citations.] And while interpretation of a statute or regulation is ultimately a question of law, we must also defer to an administrative agency's interpretation of a statute or regulation involving its area of expertise, unless the interpretation flies in the face of the clear language and purpose of the interpreted provision." (*Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1103-1104 [1 Cal. Rptr. 3d 76] [***7] (*Communities*)).

II

The Clean Water Act

(1) "In 1972, Congress enacted the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), commonly known as the Clean Water Act (CWA). [Citation.] The goal of the CWA is 'to restore and maintain the chemical, [*253] physical, and biological integrity of the Nation's waters.' (33 U.S.C. § 1251(a); see *Arkansas v. Oklahoma* (1992) 503 U.S. 91, 101 [117 L. Ed. 2d 239, 112 S. Ct. 1046, 1054] (*Arkansas*)). [¶] Generally, the CWA 'prohibits the discharge of any pollutant except in compliance with one of several statutory exceptions. [Citation.] [Citation.] The most important of those exceptions is pollution discharge under a valid NPDES permit, which can be issued either by the Environmental Protection Agency (EPA), or by an EPA-approved state permit program such as California's. [Citations.] NPDES permits are valid for five years. [Citation.]" (*Communities, supra*, 109 Cal.App.4th at p. 1092.)

Initially, the CWA regulated permittees by requiring them to adopt technology-based effluent limitations. (33 U.S.C. § 1311(b)(1)(A).) [***8] These are limitations based on the best available or practical technology for the reduction of water pollution.

After July 1, 1977, permittees were required to not only adopt technology-based effluent limitations but

more WQBEL's. "In the CWA, Congress 'supplemented the "technology-based" effluent limitations with "water quality-based" limitations "so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels." ' [Citation.]" (*Communities, supra*, 109 Cal.App.4th at p. 1093.)

(2) In general terms the CWA and governing regulations require that in addition to determining an applicant's obligations by focusing on what technology can be used on the applicant's discharges, the permitting agency must also focus on the quality of the body of water into which the applicant is discharging pollutants. Thus under 40 Code of Federal Regulations part 122.44(d)(1)(i) (2005), WQBEL's must be imposed on applicants "whenever the permitting agency determines that pollutants 'are or may be discharged [***9] at a level which will cause, or *have the reasonable potential to cause, or contribute* to an excursion above any State water quality standard' " (*Communities, supra*, 109 Cal.App.4th at p. 1094.) Under 40 Code of Federal Regulations part 122.44(d)(1)(ii) [**502] in making the determination about whether WQBEL's are required "the permitting authority shall use procedures which account for existing controls on point and nonpoint sources of pollution, the variability of the pollutant or pollutant parameter in the effluent, the sensitivity of the species to toxicity testing (when evaluating whole effluent toxicity), and where appropriate, the dilution of the effluent in the receiving water." [*254]

(3) When, after employing the procedures and analysis required by 40 Code of Federal Regulations part 122.44(d)(1)(ii), a permitting agency determines that an applicant's discharge "has the reasonable potential to cause ... an in-stream excursion above ... a State water quality standard for an individual pollutant" the permit must contain effluent limits for that pollutant. (40 C.F.R. § 122.44(d)(1)(iii) (2005).)

[***10] As we explain more fully below, this appeal rests in large measure on Divers's contention that 40 Code of Federal Regulations part 122.44(d)(1) mandated a numeric analysis of individual pollutants in the Navy's stormwater and numeric WQBEL's for pollutants which would cause the bay to exceed applicable water quality standards. As we explain, we do not adopt this interpretation of the regulations. Briefly, as we read the

regulations, the analysis which is mandatory in all cases is the more general analysis required by part 122.44(d)(1)(ii); only if that analysis results in a finding that discharges are likely to exceed state numeric criteria for a particular pollutant are limits for that pollutant required. However, as we believe is the case here, an analysis of stormwater discharges may satisfy the requirements of part 122.44(d)(1)(ii) without any numeric analysis of individual pollutants and hence without giving rise to any obligation to impose specific pollutant limitations under part 122.44(d)(1)(iii).

III

Stormwater Discharges

Before 1987 the CWA did not expressly regulate stormwater discharges.³ In 1987 Congress added [***11] subdivision (p) to section 402 of the CWA [*255] (33 U.S.C. § 1342(p)),⁴ [**503] which expressly requires NPDES permits [**504] for stormwater discharges either associated with industrial activity or from municipal storm sewer systems. Section 402(p)(4)(A) of the CWA gave the administrator of the EPA until 1989 to promulgate regulations governing stormwater discharges from industrial polluters and large municipalities; [*256] applicants for stormwater permits were given until 1990 to make applications and the EPA or state was given until 1991 to issue or deny the permit.

³ Shortly after the CWA was enacted in 1972 "the EPA promulgated regulations exempting most municipal storm sewers from the NPDES permit requirements. [Citations.] When environmental groups challenged this exemption in federal court, the Ninth Circuit held a storm sewer is a point source and the EPA did not have the authority to exempt categories of point sources from the Clean Water Act's NPDES permit requirements. [Citation.] The *Costle* court [(*Natural Resources Defense Council, Inc. v. Costle* (D.C. Cir. 1977) 568 F.2d 1369)] rejected the EPA's argument that effluent-based storm sewer regulation was administratively infeasible because of the variable nature of storm water pollution and the number of affected storm sewers throughout the country. [Citation.] Although the court acknowledged the practical problems relating to storm sewer regulation, the court found the EPA had the flexibility under the Clean Water Act to design regulations that would overcome

these problems. [Citation.]

"During the next 15 years, the EPA made numerous attempts to reconcile the statutory requirement of point source regulation with the practical problem of regulating possibly millions of diverse point source discharges of storm water. [Citations.]

"Eventually, in 1987, Congress amended the Clean Water Act to add provisions that specifically concerned NPDES permit requirements for storm sewer discharges. [Citations.]" (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 873-874 [22 Cal. Rptr. 3d 128].)

[***12]

4 Section 402(p) of the CWA states:

"(p) Municipal and industrial storm water discharges

"(1) General rule

"Prior to October 1, 1994, the Administrator or the State (in the case of a permit program approved under section 1342 of this title) shall not require a permit under this section for discharges composed entirely of storm water.

"(2) Exceptions

"Paragraph (1) shall not apply with respect to the following storm water discharges:

"(A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.

"(B) A discharge associated with industrial activity.

"(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

"(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.

"(E) A discharge for which the Administrator or the State, as the case may be, determines that the storm water discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

"(3) Permit requirements

"(A) Industrial discharges

"Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and section 1311 of this title.

"(B) Municipal discharge

"Permits for discharges from municipal storm sewers--

"(i) may be issued on a system- or jurisdiction-wide basis;

"(ii) shall include a requirement to effectively prohibit non-storm water discharges into the storm sewers; and

"(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.

"(4) Permit application requirements

"(A) Industrial and large municipal discharges

"Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for storm water discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as

practicable, but in no event later than 3 years after the date of issuance of such permit.

"(B) Other municipal discharges

"Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for storm water discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

"(5) Studies

"The Administrator, in consultation with the States, shall conduct a study for the purposes of--

"(A) identifying those stormwater discharges or classes of stormwater discharges for which permits are not required pursuant to paragraphs (1) and (2) of this subsection;

"(B) determining, to the maximum extent practicable, the nature and extent of pollutants in such discharges; and

"(C) establishing procedures and methods to control storm water discharges to the extent necessary to mitigate impacts on water quality.

"Not later than October 1, 1988, the Administrator shall submit to Congress a report on the results of the study described in subparagraphs (A) and (B). Not later than October 1, 1989, the Administrator shall submit to Congress a report on the results of the study described in subparagraph (C).

"(6) Regulations

"Not later than October 1, 1993, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate storm water discharges,

other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State storm water management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate."

[***13] In regulating stormwater permits the EPA has repeatedly expressed a preference for doing so by way of BMP's, rather than by way of imposing either technology-based or water quality-based numerical limitations. "Unlike discharges of process wastewater where numeric effluent limitations (technology-based and/or water-quality-based) are typically used to control the discharge of pollutants from industrial facilit[y]s, the primary permit condition used to address discharges of pollutants in a facilities stormwater is a pollution prevention plan. The development and implementation of a site-specific stormwater pollution prevention plan is considered to be the most important requirement of the EPA and State issued stormwater general permits. Site-specific stormwater pollution prevention plans allow permittees to develop and implement 'best management practices', whether structural or non-structural, that are best suited for controlling stormwater discharges from their industrial facility." (U.S. EPA NPDES Permit Writers' Manual (Dec. 1996) pp. 149-150; see also U.S. E.P.A. Interim Permitting Strategy Approach for Water Quality-Based Effluent Limitations in Storm Water Permits, 61 Fed. Reg. 43761 [***14] (Aug. 26, 1996); and U.S. E.P.A. Questions and Answers, 61 Fed. Reg. 57425 (Nov. 6, 1996).) In addition to the rationale it has expressed, the EPA also adopted 40 Code of Federal Regulations part 122.44(k) (2005) [*257] so that the regulation reads, in part, as follows: "[E]ach NPDES permit shall include conditions meeting the following requirements when applicable. [¶] ... [¶]

"(k) Best management practices (BMPs) to control or abate the discharge of pollutants when:

"(1) Authorized under section 304(e) of the CWA for the control of toxic pollutants and hazardous substances from ancillary industrial activities;

"(2) Authorized under section 402(p) of the CWA for

the control of stormwater discharges;

"(3) Numeric effluent limitations are infeasible; or

"(4) The practices are reasonably necessary to achieve effluent limitations and standards or to carry out the purposes and intent of the CWA."

As we explain more fully below, essentially 40 Code of Federal Regulations part 122.44(k)(2) (2005) allows permitting agencies to treat BMP's as the type of WQBEL's appropriate for control of stormwater discharges.

IV

[***15] *Reasonable Potential Analysis*

In its first argument on appeal Divers' contends that because the Regional Board did not identify and analyze the numeric level of particular pollutants in the Navy's stormwater discharges, it did not perform the reasonable potential analysis required by 40 Code of Federal Regulations part 122.44(d)(1) (2005).

(4) Contrary to Divers's argument, 40 Code of Federal Regulations part 122.44(d)(1) (2005) does not require that in all cases a permitting authority analyze the particular pollutants in an applicant's stormwater discharges. As we have seen, [**505] the procedures a permitting agency must engage in in performing the required reasonable potential analysis are set forth in 40 Code of Federal Regulations part 122.44(d)(1)(ii). By its terms that portion of the regulation does not require any analysis of particular pollutants. Rather, it only requires that the permitting authority use procedures that account for existing controls, the variability of the pollutants in effluent, the sensitivity of [*258] species to toxicity, and the dilution of effluent in receiving waters. (40 C.F.R. § 122.44(d)(1)(ii).) [***16] While, as Divers' points out, a numeric analysis of particular pollutants would in most instances be the most effective means of meeting the requirements of 40 Code of Federal Regulations part 122.44(d)(1)(ii), that is not the only means of meeting the requirements of the regulation. As the trial court noted, the Regional Board performed a water quality analysis and made extensive findings with respect to the toxicity of copper and zinc in the Navy's discharge and established benchmarks for concentrations of those chemicals in the Navy's discharges. The fact the studies the Regional Board performed did not produce numeric

analysis of all the potential pollutants in the Navy's stormwater discharges did not prevent the Regional Board from nonetheless concluding, on the basis of the studies it did perform, that the stormwater discharges had a reasonable potential to cause or contribute to pollution in the bay above state water quality standards. As the Regional Board points out and the EPA has repeatedly noted, stormwater consists of a variable stew of pollutants, including toxic pollutants, from a variety of sources which impact a receiving body on a [***17] basis which is only as predictable as the weather. Given these circumstances the Regional Board could reasonably conclude that any attempt to provide a numeric analysis of pollutants in stormwater discharges was not the most effective means of determining whether WQBEL's were nonetheless needed for the Navy's stormwater discharges.

(5) Inherent in the flexibility we find in 40 Code of Federal Regulations part 122.44(d)(1)(ii) (2005) is our conclusion the BMP'S authorized by 40 Code of Federal Regulations section 122.44(k)(2) are in fact WQBEL's, which a permitting authority may employ when it has found that stormwater discharges may cause a receiving body to exceed state water quality standards. In reaching this conclusion we are persuaded by the reasoning the court adopted in *Communities*, where the opponent of a permit argued that numeric WQBEL's were required by 40 Code of Federal Regulations part 122.44(d)(1). "Case law is limited. A few cases seem to assume that a WQBEL is always a number, but the cases do not squarely address and decide the issue. [Citations.] But *Natural Resources Defense Council, Inc. v. Costle* (D.C. Cir. 1977) 186 U.S. App. D.C. 147 [568 F.2d 1369] [***18] (*Costle*), suggests that Congress did not intend numeric effluent limitations to be the only limitation on pollution discharges under the CWA, but intended a flexible approach including alternative effluent control strategies. [Citation.]

"We find instructive a prior decision of the State Board, of which we have taken judicial notice: *In the Matter of the Petition of Citizens for a Better Environment, Save San Francisco Bay Association, and Santa Clara Valley* [*259] *Audubon Society* (Order No. WQ 91-03, May 16, 1991) 1991 WL 135460 (Cal.St.Wat.Res.Bd.). In that order, the State Board stated: "The petitioners contend that the Clean Water Act, and regulations and court decisions interpreting the Act, require the inclusion of numeric effluent limitations in NPDES permits We have reviewed these authorities,

and also opinions we have received [**506] from EPA, and conclude that numeric effluent limitations are not legally required. Further, we have determined that the program of prohibitions, source control measures and "best management practices" set forth in the permit constitutes effluent limitations as required by law.' [Citation.]

"The State Board noted the EPA's [***19] regulatory definition of 'effluent limitation' was broad, and noted that the *Costle* decision supported the conclusion that numeric limitations were not required--especially since CWA ' "gives EPA considerable flexibility in framing the permit to achieve a desired reduction in pollutant discharges. ..." ' [Citation.]

"Specifically referring to section 122.44(d)(1), the State Board noted the regulation did not contain 'the term "numeric" effluent limitation. ... Concededly, in most cases, the easiest and most effective chemical-specific limitation would be numeric. However, there is no legal requirement that effluent limitations be numeric.' [Citation.]" (*Communities, supra*, 109 Cal.App.4th at pp. 1104-1105.)

(6) Where, as in the case of stormwater discharges, BMP's will be the WQBEL's employed, the study performed under 40 Code of Federal Regulations part 122.44(d)(1)(ii) (2005) must at a minimum look to the likely impact of stormwater as a whole on the receiving body; however, as we have seen, the BMP's that may be imposed if there is a determination that state water quality standards will be exceeded are usually systemic procedures [***20] tailored to decrease the overall risk toxic pollutants from the discharger will reach stormwater runoff. Because there is no direct correlation between the type and volume of toxic pollutants in stormwater and the BMP's that will be employed to reduce those volumes, a permitting authority can reasonably conclude that in the case of stormwater discharges such a detailed numeric analysis is not a cost-effective means of performing a "reasonable potential" analysis. In sum, contrary to Divers' contention, the Regional Board was not required to perform a numeric analysis of each pollutant in the Navy's stormwater discharges. [*260]

V

Feasibility Study

Divers' does not accept our conclusion the Regional Board was authorized to employ BMP's in lieu of numeric WQBEL's. Instead, Divers' argues that in the case of industrial permits, such as the one the Navy obtained, BMP's are permissible only upon a finding by the permitting authority that numeric WQBEL's are not feasible. We do not read 40 Code of Federal Regulations part 122.44(k)(2) (2005) so narrowly.

As we have noted, 40 Code of Federal Regulations part 122.44(k)(2) (2005) [***21] gives permitting authorities the power to impose BMP's when they are "[a]uthorized under section 402(p) of the CWA for the control of storm water discharges." Divers' contends that section 402(p) of the CWA (33 U.S.C. § 1342(p)) does not authorize BMP's to control *industrial* stormwater discharges and that the only authority for use of BMP's in an industrial setting is provided by 40 Code of Federal Regulations part 122.44(k)(3), which permits BMP's when numeric effluent limitations are not feasible.

Divers' fundamentally misinterprets section 402(p) of the CWA. Before enactment of section 402(p) there was considerable controversy over whether and in what manner stormwater discharges were subject to permitting under the CWA. (See *Building Industry Assn. of San Diego County v. State* [**507] *Water Resources Control Bd.*, *supra*, 124 Cal.App.4th at pp. 873-874.) Enactment of section 402(p) made it clear that such discharges were subject to the permitting requirements of the CWA and gave the EPA broad discretion in developing and enforcing rules governing stormwater discharges. In this context BMP's are expressly mentioned in [***22] the statute as one of the limitations a permitting authority may impose in municipal stormwater permits. (See 33 U.S.C. § 1342(p)(3)(B)(iii).) However, neither the absence of an express reference to BMP's in industrial settings nor the illustrative reference with respect to municipal stormwater permits, is very persuasive in determining whether, as the Regional Board and the EPA have found, in enacting section 402(p) Congress intended to authorize a wide array of controls over all stormwater discharges, including use of BMP's. In this regard we note the final paragraph of section 402(p) contains a further reference to BMP's and gives the EPA the power to use management practices as a means, among others, of controlling stormwater discharges from sources other than industrial activities and municipalities. This reference to management practices, along with the reference to the use of BMP's in municipal settings, show

that in enacting section 402(p) of the CWA, Congress clearly recognized the role of BMP's as a means of controlling pollutants in stormwater discharges. [*261]

In sum, there is nothing on the face of the statute that suggests that in making express [***23] reference to BMP's in particular instances Congress intended to limit use of BMP's in controlling stormwater discharges in general.⁵ Indeed, we can discern no rationale which would permit BMP's in the case of municipalities and other nonindustrial stormwater discharges but bar them in the case of industrial discharges. Thus the EPA, along with the Regional Board, could reasonably conclude that in enacting section 402(p) of the CWA, Congress intended to permit the EPA and permitting authorities wide discretion in regulating stormwater runoff, including the use of BMP's where the agencies believed they were appropriate.

⁵ As we noted in *Building Industry Assn. of San Diego County v. State Water Resources Control Bd.*, *supra*, 124 Cal.App.4th at page 874, under section 402(p)(3)(B)(iii) of the CWA municipalities are only required to reduce "pollutants to the maximum extent practicable," whereas stormwater from industrial discharges must be governed by WQBEL's. Nothing in our opinion in *Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* addressed the specific question raised here: whether a permitting authority may use BMP's as a means of limiting industrial stormwater waste.

[***24] Because the Regional Board and EPA's interpretation of section 402(p) of the CWA is not at odds with either the language or overall purposes of the statute, we must accept it. (See *Communities*, *supra*, 109 Cal.App.4th at p. 1104.) Accordingly, read in light of that interpretation of the statute, 40 Code of Federal Regulations part 122.44(k)(2) (2005) fully authorized the Regional Board to use BMP's as the principal means of limiting the Navy's stormwater discharges.

VI

Benchmarks

As we have noted, under the permit the Navy is required to determine whether levels of zinc and copper in its stormwater discharges reach designated benchmarks, and if they do the Navy is then required to

review and amend its BMP's. The benchmarks for these chemicals is higher than applicable water quality [**508] standards for San Diego Bay as set forth in the EPA's California toxic rule (CTR). (See 65 Fed. Reg. 31682-31719 (May 18, 2000).) Contrary to Divers's argument, the discrepancy between the benchmarks and CTR standards does not invalidate the permit.

The CTR was adopted by the EPA because California failed to adopt final water quality standards [***25] as required by the CWA. (See 33 U.S.C. § 1313(c); 40 C.F.R. §§ 131.6, 131.12 (2005).) The standards set forth in the CTR are expressed as numeric criteria for specific toxic pollutants and apply to California's inland waters and enclosed bays and estuaries. Following the holding in *Communities*, it is now clear that in implementing numeric [*262] water quality standards, such as those set forth in the CTR, permitting agencies are not required to do so solely by way of corresponding numeric WQBEL's. (*Communities*, *supra*, 109 Cal.App.4th at pp. 1095, 1104-1105.) In *Communities* the court stated: "[A] water quality standard can be numeric; the question before us is whether a WQBEL, which implements a ... numeric water quality standard, must itself be numeric." (*Id.* at p. 1095.) The court then went on to answer this question in the negative. (*Id.* at pp. 1104-1105.)

We also note that in adopting the CTR, the EPA took note of the use of BMP's as a means of controlling municipal runoff and stated that the EPA "believes that compliance with water quality standards [***26] through the use of Best Management Practices (BMPs) is appropriate." (65 Fed. Reg. 31703 (May 18, 2000).) This reference to BMP's, in the context of adopting the CTR, supports the Regional Board's contention that the CTR does not require it to impose the CTR's numeric water quality standards as numeric limits on toxic substances in the Navy's stormwater discharges.

In sum the Regional Board was empowered to enforce the CTR by way of the BMP's and benchmarks set forth in the permit. Although the CTR governs the entire bay, including the point of any discharge, in employing benchmarks for further action by the Navy, the permit does not in any manner authorize the Navy to violate the CTR. In this context the benchmarks only

serve as a means of ensuring that the Navy will monitor toxicity of its stormwater discharges and take appropriate action in the event it discovers toxicity at designated levels. As the Regional Board points out, it is fully capable of taking enforcement action against the Navy in the event a violation of the CTR occurs.

VII

Delegation of Discretion

Finally, we note that Divers' contends that in allowing the Navy to develop a prevention [***27] plan, including BMP's, the permit delegated too much discretion to the Navy. Our review of the record does not support this contention. The requirements of the prevention plan the Navy must develop are set forth in an 18-page attachment to the permit. The attachment sets forth in some detail what the plan must include in terms of identifying sources of pollution, monitoring, recordkeeping and reporting. In particular, we note the permit provides that "[u]pon notification by the Regional Board and/or local agency that the [prevention plan] does not meet one or more of the minimum requirements of this Section," the Navy must revise the plan and implement [*263] additional BMP's that are effective in reducing and eliminating pollutants in its discharges. Thus the permit both carefully limits the [**509] Navy's discretion in developing a prevention plan and provides for meaningful regulatory review of the prevention plan. (See *Environmental Defense Center, Inc. v. U.S. E.P.A.* (9th Cir. 2003) 344 F.3d 832, 856.)

Judgment affirmed. ⁶

⁶ Amicus curiae California Coastkeeper Alliance asked that we take judicial notice of data it prepared and filed with the State Board in other proceedings and after the Regional Board issued the Navy's permit. We deny the request for judicial notice. Appellant's objection to respondents' lodgment of exhibits is overruled.

Nares, J., [***28] and Haller, J., concurred.

A petition for a rehearing was denied December 27, 2006.

OPINION BY: Elia

OPINION

[*1352] [**229] **ELIA, J.**

In this "reverse validation" action, plaintiff taxpayers challenged a storm drainage fee imposed by the City of Salinas. Plaintiffs contended that the fee was a "property-related" fee requiring voter approval, pursuant to California Constitution, article XIII D, section 6, subdivision (c), which was added by the passage of

Proposition 218. The trial court ruled that the fee did not violate this provision because (1) it was not a property-related fee [*1353] and (2) it met the exemption [***2] for fees for sewer and water services. We disagree with the trial court's conclusion and therefore reverse the order.

BACKGROUND

In an effort to comply with the 1987 amendments to the federal Clean Water Act (33 U.S.C. § 1251 et seq.; 40 C.F.R. § 122.26(a) et seq. (2001)), the Salinas City Council took measures to reduce or eliminate pollutants contained in storm water, which was channeled in a drainage system separate from the sanitary and industrial waste systems. On June 1, 1999, the city council enacted two ordinances to fund and maintain the compliance program. These measures, ordinance Nos. 2350 and 2351, added former chapters 29 and 29A, respectively, to the Salinas City Code. Former section 29A-3 allowed the city council to adopt a resolution imposing a "Storm Water Management Utility fee" to finance the improvement of storm and surface water management facilities. The fee would be imposed on "users of the storm water drainage system."

On July 20, 1999, the city council adopted resolution No. 17019, which established rates for the storm and surface water management system. The resolution specifically states: "There is hereby imposed on each [***3] and every developed parcel of land within the City, and the owners and occupiers thereof, jointly and severally, a storm drainage fee." The fee was to be paid annually to the City "by the owner or occupier of each and every developed parcel in the City who shall be

presumed to be the primary utility rate payer" The amount of the fee was to be calculated according to the degree to which the property contributed runoff to the City's drainage facilities. That contribution, in turn, would be measured by the amount of "impervious area" ¹ on that parcel.

1 "Impervious Area," according to resolution No. 17019, is "any part of any developed parcel of land that has been modified by the action of persons to reduce the land's natural ability to absorb and hold rainfall. This includes any hard surface area which either prevents or retards the entry of water into the soil mantle as it entered under natural conditions pre-existent to development, and/or a hard surface area which causes water to run off the surface in greater quantities or at an increased rate of flow from the flow present under natural conditions pre-existent to development."

[***4] [**230] Undeveloped parcels--those that had not been altered from their natural state--were not subject to the storm drainage fee. In addition, developed parcels that maintained their own storm water management facilities or only partially contributed storm or surface water to the City's storm drainage facilities were required to pay in proportion to the amount they did contribute runoff or used the City's treatment services.

[*1354] On September 15, 1999, plaintiffs filed a complaint under Code of Civil Procedure section 863 to determine the validity of the fee. ² Plaintiffs alleged that this was a property-related fee that violated article XIII D, section 6, subdivision (c), of the California Constitution because it had not been approved by a majority vote of the affected property owners or a two-thirds vote of the residents in the affected area. The trial court, however, found this provision to be inapplicable on two grounds: (1) the fee was not "property related" and (2) it was exempt from the voter-approval requirement because it was "related to" sewer and water services.

2 Plaintiffs are the Howard Jarvis Taxpayers Association, the Monterey Peninsula Taxpayers Association, and two resident property owners.

[***5] *DISCUSSION*

Article XIII D was added to the California

Constitution in the November 1996 election with the passage of Proposition 218, the Right to Vote on Taxes Act. Section 6 of article XIII D ³ requires notice of a proposed property-related fee or charge and a public hearing. If a majority of the affected owners submit written protests, the fee may not be imposed. (§ 6, subd. (a)(2).) The provision at issue is section 6, subdivision (c) (hereafter section 6(c)), which states, in relevant part: "Except for fees or charges for sewer, water, and refuse collection services, no property-related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area."

3 All further unspecified section references are to article XIII D of the California Constitution.

Section 2 [***6] defines a "fee" under this article as a levy imposed "upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property-related service." (§ 2, subd. (e).) A "property-related service" is "a public service having a direct relationship to property ownership." (§ 2, subd. (h).) (1a) The City maintains that the storm drainage fee is not a property-related fee, but a "user fee" which the property owner can avoid simply by maintaining a storm water management facility on the property. Because it is possible to own property without being subject to the fee, the City argues this is not a fee imposed "as an incident of property ownership" or "for a property-related service" within the meaning of section 2.

We cannot agree with the City's position. Resolution No. 17019 plainly established a property-related fee for a property-related service, the management of storm water runoff from the "impervious" areas of each parcel in the [*1355] City. The resolution [**231] expressly stated that "each owner and occupier of a developed lot or parcel of real property within the City, is served by the City's storm drainage facilities" and burdens the [***7] system to a greater extent than if the property were undeveloped. Those owners and occupiers of developed property "should therefore pay for the improvement, operation and maintenance of such facilities." Accordingly, the resolution makes the fee applicable to "*each and every developed parcel* of land within the City." (Italics added.) This is not a charge directly based on or measured by use, comparable to the metered use of

water or the operation of a business, as the City suggests. (See *Apartment Assn. of Los Angeles County, Inc. v. City of Los Angeles* (2001) 24 Cal. 4th 830, 838 [102 Cal. Rptr. 2d 719, 14 P.3d 930] [art. XIII D inapplicable to inspection fee imposed on private landlords; *Howard Jarvis Taxpayers Assn. v. City of Los Angeles* (2000) 85 Cal. App. 4th 79 [101 Cal. Rptr. 2d 905] [water usage rates are not within the scope of art. XIII D].)

The "Proportional Reduction" clause on which the City relies does not alter the nature of the fee as property related. ⁴ A property owner's operation of a private storm drain system reduces the amount owed to the City to the extent that runoff into the City's system is reduced. The fee [***8] nonetheless is a fee for a public service having a direct relationship to the ownership of developed property. The City's characterization of the proportional reduction as a simple "opt-out" arrangement is misleading, as it suggests the property owner can avoid the fee altogether by declining the service. Furthermore, the reduction is not proportional to the amount of services requested or used by the occupant, but on the physical properties of the parcel. Thus, a parcel with a large "impervious area" (driveway, patio, roof) would be charged more than one consisting of mostly rain-absorbing soil. Single-family residences are assumed to contain, on average, a certain amount of impervious area and are charged \$ 18.66 based on that assumption.

4 According to the public works director, proportional reductions were not anticipated to apply to a large number of people.

Proposition 218 specifically stated that "[t]he provisions of this act shall be liberally construed to effectuate its purposes of limiting local [***9] government revenue and enhancing taxpayer consent." (Prop. 218, § 5; reprinted at Historical Notes, 2A West's Ann. Cal.Const. (2002 supp.) foll. art. XIII C, p. 38 [hereafter Historical Notes].) (2) We are obligated to construe constitutional amendments in accordance with the natural and ordinary meaning of the language used by the framers--in this case, the voters of California--in a manner that effectuates their purpose in adopting the law. (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal. 3d 208, 244-245 [149 Cal. Rptr. 239, 583 P.2d 1281]; *Arden Carmichael, Inc. v. County of Sacramento* (2000) 93 Cal. App. 4th 507, 514-515 [113 Cal. Rptr. 2d 248]; *Board of Supervisors v. Lonergan* (1980) 27 Cal. 3d 855, 863 [167 [*1356] Cal.

Rptr. 820, 616 P.2d 802].) (1b) To interpret the storm drainage fee as a use-based charge would contravene one of the stated objectives of Proposition 218 by "frustrat[ing] the purposes of voter approval for tax increases." (Prop. 218, § 2.) We must conclude, therefore, that the storm drainage fee "burden[s] landowners *as landowners*," and is therefore subject [***10] to the voter-approval requirements of article XIII D unless an exception applies. (*Apartment Assn. of Los Angeles County, Inc. v. City of Los Angeles, supra*, 24 Cal. 4th at p. 842.)

[**232] *EXCEPTION FOR "SEWER" OR "WATER" SERVICE*

As an alternative ground for its decision, the trial court found that the storm drainage fee was "clearly a fee related to 'sewer' and 'water' services." The exception in section 6(c) applies to fees "for sewer, water, and refuse collection services." Thus, the question we must next address is whether the storm drainage fee was a charge *for sewer service or water service*.

The parties diverge in their views as to whether the reach of California Constitution, article XIII D, section 6(c) extends to a storm drainage system as well as a sanitary or industrial waste sewer system. The City urges that we rely on the "commonly accepted" meaning of "sewer," noting the broad dictionary definition of this word. ⁵ The City also points to Public Utilities Code section 230.5 and the Salinas City Code, which describe storm drains as a type of sewer. ⁶

5 Webster's Third New International Dictionary, for example, defines "sewer" as "1: a ditch or surface drain 2: an artificial usu. subterranean conduit to carry off water and waste matter (as surface water from rainfall, household waste from sinks or baths, or waste water from industrial works)." (Webster's 3d New Internat. Dict. (1993) p. 2081.) The American Heritage Dictionary also denotes the function of "carrying off sewage or rainwater." (American Heritage College Dict. (3d ed. 1997) p. 1248.) On the other hand, the Random House Dictionary of the English Language (2d ed. 1987) page 1754, does not mention storm or rainwater in defining "sewer" as "an artificial conduit, usually underground, for carrying off waste water and refuse, as in a town or city."

[***11]

6 Public Utilities Code section 230.5 defines "Sewer system" to encompass all property connected with "sewage collection, treatment, or disposition for sanitary or drainage purposes, including . . . all drains, conduits, and outlets for surface or storm waters, and any and all other works, property or structures necessary or convenient for the collection or disposal of sewage, industrial waste, or surface or storm waters." Salinas City Code section 36-2, subdivision (31) defines "storm drain" as "a sewer which carries storm and surface waters and drainage, but which excludes sewage and industrial wastes other than runoff water."

Plaintiffs "do not disagree that storm water is carried off in storm sewers," but they argue that we must look beyond mere definitions of "sewer" to examine the legal meaning in context. Plaintiffs note that the storm water management system here is distinct from the sanitary sewer system and the industrial waste management system. Plaintiffs' position echoes that of the [*1357] Attorney General, who observed that several California [***12] statutes differentiate between management of storm drainage and sewerage systems. ⁷ (81 Ops.Cal.Atty.Gen. 104, 106 (1998).) Relying extensively on the Attorney General's opinion, plaintiffs urge application of a different rule of construction than the plain-meaning rule; they invoke the maxim that "if a statute on a particular subject omits a particular provision, inclusion of that provision in another related statute indicates an intent [that] the provision is not applicable to the statute from which it was omitted." (*In re Marquis D.* (1995) 38 Cal. App. 4th 1813, 1827 [46 Cal. Rptr. 2d 198].) Thus, while section 5, which addresses assessment procedures, refers to exceptions specifically [**233] for "*sewers, water, flood control, [and] drainage systems*" (italics added), the exceptions listed in section 6(c) pertain only to "sewer, water, and refuse collection services." Consequently, in plaintiffs' view, the voters must have intended to exclude drainage systems from the list of exceptions to the voter-approval requirement.

⁷ For example, Government Code section 63010 specifies "storm sewers" in delimiting the scope of " '[d]rainage,' " while separately identifying the facilities and equipment used for " '[s]ewage collection and treatment.' " (Gov. Code, § 63010, subd. (q)(3), (10).) Government Code section

53750, part of the Proposition 218 Omnibus Implementation Act, explains that for purposes of articles XIII C and article XIII D " '[d]rainage system' " means "any system of public improvements that is intended to provide for erosion control, landslide abatement, or for other types of water drainage." Health and Safety Code section 5471 sets forth government power to collect fees for "services and facilities . . . in connection with its water, sanitation, storm drainage, or sewerage system."

[***13] The statutory construction principles invoked by both parties do not assist us. The maxim proffered by plaintiffs, "although useful at times, is no more than a rule of reasonable inference" and cannot control over the lawmakers' intent. (*California Fed. Savings & Loan Assn. v. City of Los Angeles* (1995) 11 Cal. 4th 342, 350 [45 Cal. Rptr. 2d 279, 902 P.2d 297]; *Murillo v. Fleetwood Enterprises, Inc.* (1998) 17 Cal. 4th 985, 991 [73 Cal. Rptr. 2d 682, 953 P.2d 858].) On the other hand, invoking the plain-meaning rule only begs the question of whether the term "sewer services" was intended to encompass the more specific sewerage with which most voters would be expected to be familiar, or all types of systems that use sewers, including storm drainage and industrial waste. The popular, nontechnical sense of sewer service, particularly when placed next to "water" and "refuse collection" services, suggests the service familiar to most households and businesses, the sanitary sewerage system.

We conclude that the term "sewer services" is ambiguous in the context of both section 6(c) and Proposition 218 as a whole. We must keep in mind, however, the voters' [***14] intent that the constitutional provision be construed liberally to curb the rise in "excessive" taxes, assessments, and fees exacted [*1358] by local governments without taxpayer consent. (Prop. 218, §§ 2, 5; reprinted at Historical Notes, *supra*, p. 38.) Accordingly, we are compelled to resort to the principle that exceptions to a general rule of an enactment must be strictly construed, thereby giving "sewer services" its narrower, more common meaning applicable to sanitary sewerage. ⁸ (Cf. *Estate of Banerjee* (1978) 21 Cal. 3d 527, 540 [147 Cal. Rptr. 157, 580 P.2d 657]; *City of Lafayette v. East Bay Mun. Utility Dist.* (1993) 16 Cal. App. 4th 1005 [20 Cal. Rptr. 2d 658].)

⁸ Sanitary sewerage carries "putrescible waste"

from residences and businesses and discharges it into the sanitary sewer line for treatment by the Monterey Regional Water Pollution Control Agency. (Salinas City Code, § 36-2, subd. (26).)

The City itself treats storm drainage differently [***15] from its other sewer systems. The stated purpose of ordinance No. 2350 was to comply with federal law by reducing the amount of pollutants discharged into the storm water, and by preventing the discharge of "non-storm water" into the storm drainage system, which channels storm water into state waterways. According to John Fair, the public works director, the City's storm drainage fee was to be used not just to provide drainage service to property owners, but to monitor and control pollutants that might enter the storm water before it is discharged into natural bodies of water.⁹ The Salinas City Code contains requirements [**234] addressed specifically to the management of storm water runoff.¹⁰ (See, e.g., Salinas City Code, §§ 31-802.2, 29-15.)

9 Resolution No. 17019 defined "Storm Drainage Facilities" as "the storm and surface water sewer drainage systems comprised [*sic*] of storm water control facilities and any other natural features [that] store, control, treat and/or convey surface and storm water. The Storm Drainage Facilities shall include all natural and man-made elements used to convey storm water from the first point of impact with the surface of the earth to a suitable receiving body of water or location internal or external to the boundaries of the City. . . ." The "storm drainage system" was defined to include pipes, culverts, streets and gutters, "storm water sewers," ditches, streams, and ponds. (See also Salinas City Code, former § 29-3, subd. (l) [defining "storm drainage system"].)

[***16]

10 Storm water under ordinance No. 2350 includes "stormwater runoff, snowmelt runoff, and surface runoff and drainage." (Salinas City Code, former § 29-3, subd. (dd).)

For similar reasons we cannot subscribe to the City's suggestion that the storm drainage fee is "for . . . water services." Government Code section 53750, enacted to explain some of the terms used in articles XIII C and XIII D, defines "[w]ater" as "any system of public improvements intended to provide for the production, storage, supply, treatment, or distribution of water." (Gov. Code, § 53750, subd. (m).) The average voter would envision "water service" as the supply of water for personal, household, and commercial use, not a system or program that monitors storm water for pollutants, carries it away, and discharges it into the nearby creeks, river, and ocean.

We conclude that article XIII D required the City to subject the proposed storm drainage fee to a vote by the property owners or the voting residents of [*1359] the affected area. The trial court therefore [***17] erred in ruling that ordinance Nos. 2350 and 2351 and Resolution No. 17019 were valid exercises of authority by the city council.

DISPOSITION

The judgment is reversed. Costs on appeal are awarded to plaintiffs.

Premo, Acting P. J., and Mihara, J., concurred.

A petition for a rehearing was denied July 2, 2002, and respondents' petition for review by the Supreme Court was denied August 28, 2002.

OPINION

[**452] **GAUT, J.--**

1. Introduction

This case involves environmental regulation of municipal storm sewers that carry excess water runoff to the Santa Ana River as it passes through San Bernardino County on its way to the Pacific Ocean. Federal and state laws impose regulatory controls on storm sewer discharges. Municipalities are required to obtain and comply with a federal regulatory permit limiting the quantity and quality of water runoff that can be discharged from these storm sewer systems.

In this instance, the Regional Water Quality Control Board for the Santa Ana Region (the Regional Board) conducted public hearings and then issued a comprehensive 66-page [***2] municipal storm sewer permit governing 18 local [*1380] public entities. Two permittees, the City of Rancho Cucamonga and the City of Upland, among others, filed an administrative appeal with the State Water Resources Control Board (the State Board.) The State Board summarily dismissed the appeal. The Cities of Rancho Cucamonga and Upland¹ then filed a petition for writ of mandate and complaint against the State Board and the Regional Board.

1 Upland is not a party to this appeal.

The trial court sustained without leave to amend the demurrer of the State Board to the entire action. It sustained the demurrer as to four causes of action and granted the motion to strike of the Regional Board. After a hearing, the trial court denied the petition for writ of mandate.

Both procedurally and substantively, the City of Rancho Cucamonga challenges the conditions imposed by the NPDES² permit and waste discharge requirements (the 2002 permit). It contends the procedure by which the 2002 permit was adopted was not legal, that [***3] the 2002 permit's conditions are not appropriate for the area, and that the permit's requirements are too expensive. Because we conclude the permit was properly adopted and its conditions and requirements are appropriate, we reject these contentions.

2 The National Pollutant Discharge Elimination System.

2. The National Pollutant Discharge Elimination System

California cases have repeatedly explained the complicated web of federal and state laws and regulations concerning water pollution, especially storm sewer discharge into the public waterways. (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619-621 [26 Cal. Rptr. 3d 304, 108 P.3d 862] (*Burbank*); *Building Industry Assn. of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 872-875 [22 Cal. Rptr. 3d 128] (*Building Industry*); *Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092-1094 [1 Cal. Rptr. 3d 76] (*Communities*); *WaterKeepers Northern California v. State Water Resources Control Bd.* (2002) 102 Cal.App.4th 1448, 1451-1453 [**453] [126 Cal. Rptr. 2d 389]).

[***4] For purposes of this case, the important point is described by the California Supreme Court in *Burbank*: "Part of the Federal Clean Water Act [33 U.S.C. § 1251 et seq.] is the National Pollutant Discharge Elimination System (NPDES), '[t]he primary means' for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma* [(1992) 503 U.S. [*1381] 91, 101 [117 L. Ed. 2d 239, 112 S. Ct. 1046]). The NPDES sets out the conditions under which the federal [Environmental Protection Agency] or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)" (*Burbank, supra*, 35 Cal.4th at p. 621.)

California's Porter-Cologne Act (Wat. Code, § 13000 et seq.) establishes a statewide program for water quality control. Nine regional boards, overseen by the State Board, administer the program in their respective regions. (Wat. Code, §§ 13140, [***5] 13200 et seq., 13240, and 13301.) Water Code sections 13374 and 13377 authorize the Regional Board to issue federal NPDES permits for five-year periods. (33 U.S.C. § 1342, subd.(b)(1)(B).)

As discussed more fully in part 6 *post*, the state-issued NPDES permits are subject to the informal hearing procedures set forth for administrative adjudications. (Gov. Code, § 11445.10 et seq.; Cal. Code Regs., tit. 23, § 647 et seq.) The issuance of permits is specifically excluded from the procedures for administrative regulations and rulemaking. (Gov. Code, §§ 11340 et seq., 11352.)

3. Factual and Procedural Background

The Regional Board issued the first NPDES permit for San Bernardino County in 1990. The principal permittee was the San Bernardino Flood Control District (the District). The 1990 permit required the permittees to develop and implement pollution control measures, using "best management practices" and monitoring programs, to eliminate illegal discharges [***6] and connections, and to obtain any necessary legal authority to do so. The management programs could be existing or new.

In 1993, the District developed the NPDES drain area management program (DAMP).

The second NPDES permit was issued in 1996 and was based on the report of waste discharge (ROWD) prepared by the principal permittee and copermitees, including Rancho Cucamonga. The 1996 permit proposed extending the existing program, which included inspections of industrial and commercial sources; policies for development and redevelopment; better public education; and implementation of a monitoring program. It offered a commitment to reduce pollutants to the "maximum extent practicable."

In 2000, the permittees submitted another ROWD to renew their NPDES permit. The 2000 ROWD proposed continuing to implement and develop water quality management and monitoring programs.

[*1382] Based on the 2000 ROWD, the Regional Board staff created five successive drafts of the 2002

permit, incorporating written comments by Rancho Cucamonga and others and comments made during two public workshops. Some of the comments addressed the economic considerations of anticipated prohibitive compliance costs.

[***7] The notice of the public hearing to consider adoption of the 2002 permit hearing [**454] announced: "relevant Regional Board files are incorporated into the record;" the governing procedures were those for an informal hearing procedure as set forth in "Title 23, California Code of Regulations, Section 647 et seq.;" and "Hearings before the Regional Water Board are not conducted pursuant to Government Code section 11500 et seq.," the alternative formal hearing procedure for administrative adjudication. The notice was mailed to all permittees. The accompanying "fact sheet," which was publicly circulated, offered further information about the conduct and nature of the hearing and the legal and factual grounds for the Regional Board's recommendation to adopt the 2002 permit.

The informal public hearing was conducted on April 26, 2002. Neither Rancho Cucamonga nor any of the permittees objected to the form or substance of the hearing. Ultimately, after a staff presentation and testimony, including a statement from Rancho Cucamonga's counsel, the Regional Board adopted the 2002 permit. After the State Board dismissed their administrative appeal, [***8] Rancho Cucamonga and Upland filed the instant action.

The operative pleading is the second amended petition for writ of mandate and complaint. The petition alleges that the State Board and the Regional Board acted illegally and in excess of their jurisdiction in developing, adopting and implementing the 2002 permit. Based on 26 pages of general allegations, the petition asserts eight causes of action, alleging the State Board and the Regional Board violated sections 13241, 13263, and 13360 of the Water Code (the Porter-Cologne Act); the California Environmental Quality Act (Pub. Resources Code, § 21000 et seq.); the California Administrative Procedure Act (Gov. Code, §§ 11340-11529); the California Constitution; and the federal Clean Water Act; and seeking declaratory and injunctive relief.

The State Board successfully opposed the action on demurrer. The Regional Board eliminated four causes of action, the fourth, fifth, seventh, and eighth by demurrer and motion to strike. On the remaining four causes of

action, the trial court found in favor of the Regional Board.

[*1383] 4. State Board's Demurrer

Rancho Cucamonga maintains the [***9] trial court should not have sustained the demurrer of the State Board without leave to amend because the State Board is the ultimate authority on state-issued NPDES permits, and, therefore, was properly joined as a party: "Because the State Board has for all intents and purposes adopted the rules and policies of general application upon which the Permit is based, it is clearly a proper party to this action."

The difficulty with Rancho Cucamonga's theory of liability against the State Board is, to quote Gertrude Stein about the City of Oakland, "There is no there there." (Stein, *Everybody's Autobiography* (1937).) In other words, Rancho Cucamonga's allegations against the State Board lack any substance. Instead, Rancho Cucamonga launches an unspecific attack on the State Board without identifying any particular problems. The petition makes the unexceptional allegation that the State Board formulates general water control policy which it implements and enforces through regional boards. It also alleges the State Board has not complied with the Administrative Procedure Act but it does not identify any objectionable policies or how there is no compliance. Instead the petition complains [***10] about a State Board letter directing that all NPDES permits follow consistent principles regarding standard urban storm water mitigation plans. [**455] Additionally, the petition maintains the 2002 permit included new reporting requirements and increased costs of compliance.

But the foregoing allegations did not articulate any improper State Board conduct. The 2002 permit, issued by the Regional Board and not by the State Board, is not subject to formal rulemaking procedures. (Gov. Code, § 11352, subd. (b).) The State Board's letter, explaining a precedential decision concerning mitigation plans, is not an example of formal rulemaking. (Gov. Code, § 11425.60, subd. (b).) By dismissing Rancho Cucamonga's administrative appeal concerning the 2002 permit, the State Board declined to become involved and the Regional Board's decision to issue the permit became final and subject to judicial review. (*People ex rel Cal. Regional Wat. Quality Control Bd. v. Barry* (1987) 194 Cal.App.3d 158, 177 [239 Cal. Rptr. 349].) But the State Board was not made a proper party by reason of its

dismissal of the administrative appeal.

[***11] Furthermore, even if Rancho Cucamonga had identified any cognizable claim against the State Board, it would have been barred by the 30-day statute of limitations for challenging an improperly adopted State Board regulation or order. (Wat. Code, § 13330; Gov. Code, § 11350.)

[*1384] We hold the trial court properly sustained without leave to amend the State Board's demurrer to the second amended petition for writ of mandate and complaint.

5. Standard of Review for Petition for Writ of Mandate

In deciding a petition for writ of mandate, the trial court exercises its independent judgment. (Code Civ. Proc., § 1094.5, subd. (c); Wat. Code, § 13330, subd. (d); *Building Industry, supra*, 124 Cal.App.4th at p. 879.) But, "[i]n exercising its independent judgment, a trial court must afford a strong presumption of correctness concerning the administrative findings [¶] ... [¶] ... Because the trial court ultimately must exercise its own independent judgment, that court is free to substitute its own findings after first giving due respect to the agency's findings." (*Fukuda v. City of Angels* (1999) 20 Cal.4th 805, 817-818 [85 Cal. Rptr. 2d 696, 977 P.2d 693] (*Fukuda*).)

[***12] On appeal, the reviewing court determines whether substantial evidence supports the trial court's factual determinations. (*Fukuda, supra*, 20 Cal.4th at p. 824; *Building Industry, supra*, 124 Cal.App.4th at p. 879.) The trial court's legal determinations receive a de novo review with consideration being given to the agency's interpretations of its own statutes and regulations. (*Building Industry, supra*, at p. 879; *Nasha v. City of Los Angeles* (2004) 125 Cal.App.4th 470, 482 [22 Cal. Rptr. 3d 772].)

6. Rancho Cucamonga's Objections to the Administrative Record and Lack of Notice

The notice of the administrative hearing for adoption of the 2002 permit included the statement that the Regional Board's files would be incorporated as part of the record. Before trial on the writ petition, Rancho Cucamonga attempted to raise an omnibus objection to the entire administrative record and a specific objection to four documents, three studies about marine pollution

and one economic study. The trial court ruled the objections had been waived by not making them before or at the time of the hearing. Applying the presumption of administrative [***13] regularity, we affirm the trial court's evidentiary ruling. (*Mason v. Office of Admin. [**456] Hearings* (2001) 89 Cal.App.4th 1119, 1131 [108 Cal. Rptr. 2d 102].)

The reasons given by Rancho Cucamonga as to why the trial court should have sustained its objections to all or part of the administrative record are that it did not waive its objections to the record because Rancho Cucamonga did not know the hearing was adjudicative; the Regional Board did not provide [*1385] notice of an informal hearing (Gov. Code, § 11445.30); and Rancho Cucamonga never had an opportunity to object to the administrative record.

(1) As noted previously, Government Code section 11352, subdivision (b), makes the issuance of an NPDES permit exempt from the rulemaking procedures of the Administrative Procedure Act. Permit issuance is a quasi-judicial, not a quasi-legislative, rulemaking proceeding: "The exercise of discretion to grant or deny a license, permit or other type of application is a quasi-judicial function." (*Sommerfield v. Helmick* (1997) 57 Cal.App.4th 315, 320 [67 Cal. Rptr. 2d 51]; see *City of Santee v. Superior Court* (1991) 228 Cal.App.3d 713, 718 [279 Cal. Rptr. 22].)

[***14] Instead, the Regional Board correctly followed the administrative adjudication procedures (Gov. Code, § 11445.10 et seq.) and the companion regulations at California Code of Regulations, title 23, sections 647-648.8 for informal adjudicative public hearings. These procedures were announced in the notice of hearing which also stated that Government Code section 11500 et seq., governing formal administrative adjudication hearings, would not apply, thus satisfying Government Code section 11445.30 requiring notice of an informal hearing procedure. At the time of the hearing, Rancho Cucamonga did not object to the informal procedure. Rancho Cucamonga's effort to argue that federal notice requirements (40 C.F.R. § 124.8, subd. (b)(6)(ii) (2005)) should also have been followed fails because this involved a state-issued NPDES permit adopted according to California procedures.

Because Rancho Cucamonga was given notice that the hearing on the permit would proceed as an informal administrative adjudication, it cannot successfully argue

it was relieved of the obligation to object to the administrative record [***15] at the time of the hearing. An informal administrative adjudication contemplates liberality in the introduction of evidence. (23 Cal. Code Regs., tit. 23, §§ 648, subd. (d), 648.5.1.) If Rancho Cucamonga wished to object to the informal hearing procedures, including the liberal introduction of evidence, it should have raised its objections as provided by statute and regulation before or at the time of the hearing (Gov. Code, §§ 11445.30, 11445.40, 11445.50; 23 Cal. Code Regs., tit. 23, § 648.7), not a year later in the subsequent civil proceeding.

7. Economic Considerations for Issuance of NPDES Permit

Rancho Cucamonga's next assignment of error is that the Regional Board failed to consider the economic impact of the requirements of the 2002 permit by not conducting a cost-benefit analysis. Rancho Cucamonga relies on the California Supreme Court's *Burbank* opinion, in which the court held: "When ... a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit *more stringent* than federal [***16] law [*1386] requires, California law allows the board to take into account economic factors, including the wastewater discharger's cost of compliance." (*Burbank, supra*, 35 Cal.4th at p. 618.) Rancho Cucamonga contends that the 2002 permit exceeds federal requirements and that, therefore, this case should be remanded for a consideration of [**457] economic factors. (See *ibid.*; Wat. Code, § 13241, subd. (d).)

The two problems with this argument are the trial court found there was no evidence that the 2002 permit exceeded federal requirements and Rancho Cucamonga does not explain now how it does so. There was also evidence that the 2002 permit was based on a fiscal analysis and a cost-benefit analysis. In the absence of the foundational predicate and in view of evidence that cost was considered, Rancho Cucamonga's contention on this point fails.

(2) We also reject Rancho Cucamonga's related procedural argument that the Regional Board's motion to strike was impermissible as piecemeal adjudication. (*Regan Roofing v. Superior Court* (1994) 24 Cal.App.4th 425, 432-436; *Lilienthal & Fowler v. Superior Court* (1993) 12 Cal.App.4th 1848, 1851-1855 [16 Cal. Rptr. 2d 458].) [***17] It is well recognized a court may strike all

or part of a pleading as it did in this instance. (Code Civ. Proc., §§ 431.10, 436; *PH II, Inc. v. Superior Court* (1995) 33 Cal.App.4th 1680, 1682-1683 [40 Cal. Rptr. 2d 169].)

8. Substantial Evidence

Rancho Cucamonga also challenges the trial court's independent factual determination that sufficient evidence supports the findings of the Regional Board. Rancho Cucamonga's main contention is that the 2002 permit was not distinctively crafted for San Bernardino County but, instead, copied a similar permit for other counties without identifying any particular water quality impairment in San Bernardino County caused by the permittees. In other words, no evidence in the record supports issuance of the 2002 permit and the trial court did not identify any such evidence in its statement of decision.

(3) One problem with Rancho Cucamonga's foregoing argument is that the Clean Water Act requires an NPDES permit to be issued for *any* storm sewer discharge, whether there is any actual impairment in a particular region. (33 U.S.C. § 1342; *Communities, supra*, 109 Cal.App.4th at pp. 1092-1093.) [***18] Therefore, Rancho Cucamonga's contention that the permit fails to identify impaired water bodies in the region is beside the point.

In its statement of decision, the trial court discussed the inadequacy of the arguments and evidence cited by Rancho Cucamonga and concluded: "The San Bernardino Permit is based in part on the Basin Plan for this region. It is [*1387] also based on the permittees' own reports and monitoring within this region It incorporates the permittees' management program, which is unique to these cities and county." The trial court included a citation to the 1993 DAMP report's "Geographic Description of the Drainage Area," which discusses the specific conditions present in San Bernardino County.

On appeal, Rancho Cucamonga faults the trial court for not presenting a more detailed description of the evidence supporting the issuance of the permit. We do not think the trial court, or this court, must bear that burden.

(4) First, "[a]n agency may ... rely upon the opinion of its staff in reaching decisions, and the opinion of staff has been recognized as constituting substantial evidence.

(*Coastal Southwest Dev. Corp. v. California Coastal Zone Conservation Com.* (1976) 55 Cal.App.3d 525, 535-536 [127 Cal. Rptr. 775].)" [***19] (*Browning-Ferris Industries v. City Council* (1986) 181 Cal.App.3d 852, 866 [226 Cal. Rptr. 575].) Here the Regional Board adopted the recommendation of its staff in issuing the permit. And, as the record shows, the staff's recommendation was based on the previous 1990 and 1996 permits, the 1993 DAMP [**458] report and the 2000 ROWD, the permittees' application for renewal of the 1996 permit, as well as more general water quality factors. The evidence contradicts Rancho Cucamonga's assertion, that "the Regional Board simply copied verbatim the NPDES Permit for North Orange County, a coastal region with markedly different water quality conditions and problems."

As part of the trial court's consideration of the petition for writ of mandate, Rancho Cucamonga and the Regional Board directed the court to review specific items of evidence contained in the administrative record. In its opposing brief, the Regional Board offered a detailed account of the evidence supporting the issuance of the permit. The trial court indicated it had reviewed the parties' submissions before ruling. It discussed the evidence at the hearing on the petition and referred to it in its statement of decision. [***20] (*Lala v. Maiorana* (1959) 166 Cal.App.2d 724, 731 [333 P.2d 862].) Rancho Cucamonga had the burden of showing the Board abused its discretion or its findings were not supported by the facts. (*Building Industry, supra*, 124 Cal.App.4th at pp. 887-888.) To the extent it attempted to do so at the trial court level, it was not successful.

This court has independently reviewed the record with particular attention to the evidence as emphasized by the parties. We do not, however, find it incumbent upon us or the trial court to review the many thousands of pages submitted on appeal and identify the particular evidence that constitutes substantial evidence. Instead, we deem the trial court's findings sufficient and not affording any grounds for reversal. (*Building Industry, supra*, 124 Cal.App.4th at p. 888; see *Weisz Trucking Co., Inc. v. Emil R. Wohl* [*1388] *Construction* (1970) 13 Cal.App.3d 256, 264 [91 Cal. Rptr. 489], citing *Perry v. Jacobsen* (1960) 184 Cal.App.2d 43, 50 [7 Cal. Rptr. 177].)

9. Safe Harbor Provision

As it did repeatedly below, Rancho Cucamonga

maintains the 2002 permit violates section 402(k) of the Clean [***21] Water Act (33 U.S.C. § 1342(k)), because the permit does not include "safe harbor" language, providing that, if a permittee is in full compliance with the terms and conditions of its permit, it cannot be found in violation of the Clean Water Act. (*U.S. Public Interest v. Atlantic Salmon* (1st Cir. 2003) 339 F.3d 23, 26; *EPA v. State Water Resources Control Board* (1976) 426 U.S. 200, 205 [48 L.Ed.2d 578, 96 S.Ct. 2022].) The trial court found there was no statutory right to a "safe harbor" provision to be included as the term of the permit. We agree.

This seems like much ado about nothing because 33 United States Code section 1342 (k), already affords Rancho Cucamonga the protection it seeks: "Compliance with a permit issued pursuant to this section shall be deemed compliance, for purposes of sections 1319 and 1365 of this title, with sections 1311, 1312, 1316, 1317, and 1343 of this title, except any standard imposed under section 1317 of this title for a toxic pollutant injurious to human health." Rancho Cucamonga does not cite any persuasive authority as to why this statutory protection had to [***22] be duplicated as a provision in the 2002 permit.

Furthermore, the 2002 permit complied with the State Board's water quality order No. 99-05, a precedential decision requiring NPDES permits to omit "safe harbor" language used in earlier permits. A permit without "safe harbor" language was upheld in *Building Industry, supra*, 124 [**459] Cal.App.4th at page 877. The trial court did not err.

10. Maximum Extent Practicable

Rancho Cucamonga protests that the 2002 permit's discharge limitations/prohibitions exceed the federal requirement that storm water dischargers should "reduce the discharge of pollutants to the maximum extent practicable." (33 U.S.C. § 1342(p)(3)(B)(iii).) The trial court, however, found there was no evidence presented that the 2002 permit exceeded federal requirements. Because there is no evidence, the issue presented is hypothetical and, therefore, premature. (*Building Industry, supra*, 124 Cal.App.4th at p. 890.)

Additionally, as Rancho Cucamonga recognizes, *Building Industry* rejected the contention that a "regulatory permit violates federal law because it allows the Water Boards to impose municipal [***23] storm

sewer control measures more [*1389] stringent than a federal standard known as 'maximum extent practicable.' [Citation.] [Fn. omitted.] ... [W]e ... conclude the Water Boards had the authority to include a permit provision requiring compliance with state water quality standards." (*Building Industry, supra*, 124 Cal.App.4th at p. 871.) The *Burbank* case, allowing for consideration of economic factors when federal standards are exceeded, does not alter the analysis in this case where there was no showing that federal standards were exceeded and where there was evidence that economic factors were considered. Furthermore, like the permit in *Building Industries*, the 2002 permit contemplates controlling discharge of pollutants to the maximum extent practicable through a "cooperative iterative process where the Regional Water Board and Municipality work together to identify violations of water quality standards." (*Building Industry, supra*, at p. 890.) The 2002 permit does not exceed the maximum extent practicable standard.

11. The Requirements of the 2002 Permit

Rancho Cucamonga lastly complains the requirements of the 2002 permit are "overly prescriptive," [***24] illegally dictating the manner of compliance and improperly delegating to the permittees the inspection duties of the State Board and the Regional Board. Rancho Cucamonga's arguments contradict the meaning and spirit of the Clean Water Act.

(5) In creating a permit system for dischargers from municipal storm sewers, Congress intended to implement actual programs. (*National Resources Defense Council, Inc. v. Costle* (D.C. Cir. 1977) 186 U.S. App.D.C. 147 [568 F.2d 1369, 1375].) The Clean Water Act authorizes the imposition of permit conditions, including: "management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." (33 U.S.C. § 1342(p)(3)(B)(iii).) The act authorizes states to issue permits with conditions necessary to carry out its provisions. (33 U.S.C. § 1342(a)(1).) The permitting agency has discretion to decide what practices, techniques, methods and other provisions are appropriate and necessary to control the discharge of pollutants. (*National Resources Defense Council v. U.S. EPA* (1992) 966 F.2d 1292, 1308.) [***25] That is what the Regional Board has created in the 2002 permit.

Rancho Cucamonga's reliance on Water Code section 13360 is misplaced because that code section involves enforcement and implementation of state water quality law, (Wat. Code, § 13300 et seq.) not compliance with the Clean Water Act (Wat. Code, § 13370 et seq.) The federal law [**460] preempts the state law. (*Burbank, supra*, 35 Cal.4th at p. 618.) The Regional Board must comply with federal law requiring detailed conditions for NPDES permits.

[*1390] Furthermore, the 2002 permit does afford the permittees discretion in the manner of compliance. It is the permittees who design programs for compliance, implementing best management practices selected by the permittees in the DAMP report and approved by the Regional Board. Throughout the permit, the permittees are granted considerable autonomy and responsibility in maintaining and enforcing the appropriate legal authority; inspecting and maintaining their storm drain systems according to criteria they develop; establishing the priorities for their own inspection requirements; and establishing programs [***26] for new development. The development and implementation of programs to control the discharge of pollutants is left largely to the permittees.

More particularly, we agree with the Regional Board that the permit properly allocated some inspection duties to the permittees. As part of their ROWD application for a permit, the permittees proposed to "Conduct Inspection, Surveillance, and Monitoring. Carry out all inspections, surveillance, and monitoring procedures necessary to determine compliance and noncompliance with permit conditions including the prohibition on illicit discharges to the municipal storm drain system." The ROWD also discussed continuing existing inspection programs.

(6) Water Code section 13383 provides that as part of compliance with the Clean Water Act, the Regional Board may establish inspection requirements for any pollutant discharger. Federal law, either expressly or by implication, requires NPDES permittees to perform inspections for illicit discharge prevention and detection; landfills and other waste facilities; industrial facilities; construction sites; certifications of no discharge; nonstormwater discharges; permit compliance; and local [***27] ordinance compliance. (40 C.F.R. 122.26(d), (g) (2005); 33 U.S.C. § 1342(p)(3)(B)(ii).) Permittees must report annually on their inspection activities. (40 C.F.R. § 122.42(c)(6) (2005).)

Rancho Cucamonga claims it is being required to conduct inspections for facilities covered by other state-issued general permits. Rancho Cucamonga and the other permittees are responsible for inspecting construction and industrial sites and commercial facilities within their jurisdiction for compliance with and enforcement of local municipal ordinances and permits. But the Regional Board continues to be responsible under the 2002 NPDES permit for inspections under the general permits. The Regional Board may conduct its own inspections but permittees must still enforce their own laws at these sites. (40 C.F.R. § 122.26(d)(2) (2005).)

[*1391] 12. Disposition

Rancho Cucamonga is the only of the original 18 permittees still objecting to the 2002 NPDES permit. It has not successfully demonstrated that substantial evidence does not support the trial court's factual determinations or the [***28] trial court erred in its interpretation and application of state and federal law.

We affirm the judgment and order the prevailing parties to recover their costs on appeal.

Hollenhorst, Acting P. J., and Richli, J., concurred.

On February 27, 2006, the opinion was modified to read as printed above.

THE LEXIS PAGINATION OF THIS DOCUMENT IS SUBJECT TO CHANGE PENDING RELEASE OF THE FINAL PUBLISHED VERSION. THIS OPINION IS UNCORRECTED AND SUBJECT TO REVISION BEFORE PUBLICATION IN THE OFFICIAL REPORTS.

PRIOR HISTORY: Matter of Natural Resources Defense Council, Inc. v. New York State Dept. of Env'tl. Conservation, 120 A.D.3d 1235, 994 N.Y.S.2d 125, 2014 N.Y. App. Div. LEXIS 6035, 2014 NY Slip Op 6090 (N.Y. App. Div. 2d Dep't, 2014)

DISPOSITION: Order, insofar as appealed from, affirmed, with costs.

COUNSEL: Lawrence M. Levine, for appellants.

Barbara Underwood, for respondent.

Nadia B. Ahmad et al.; Citizens Campaign for the Environment; East of Hudson Coalition; City of New York et al., amici curiae.

JUDGES: READ, J. RIVERA, J.(dissenting in part). Opinion by Judge Read. Judges Pigott, Abdus-Salaam and Stein concur. Judge Rivera dissents in part in an opinion in which Chief Judge Lippman and Judge Fahey concur.

OPINION BY: READ

OPINION

[**273] [*378] [**783] READ, J.:

Runoff from rain and snow melt courses over roofs, roads, driveways and other surfaces, picking up pollutants along the way. It then passes through municipal storm sewer systems into rivers and lakes, adding the pollutants accumulated during its journey to those bodies of water. These municipal storm sewer [*379] systems thus differ from other entities that discharge effluents into our State's surface waters (for example, industrial or commercial facilities and sewage treatment plants) in three major ways: precipitation is naturally occurring, intermittent and variable and cannot be stopped; although municipalities operate sewer systems, stormwater contamination results from the often unforeseen or unpredictable choices of individual residents and businesses (for example, to let litter pile up or to use certain lawn fertilizers), as well as decisions made long ago about the design of roads, parking lots and buildings; and because stormwater runoff flows into surface waters through tens of thousands of individual outfalls, each locality's contribution to the pollution of a particular river or lake is difficult to ascertain or allocate through numeric limitations.

Federal and state law prohibit discharges of stormwater from New York's municipal separate storm sewer systems in urbanized areas (referred to as MS4s) without authorization under a State Pollutant Discharge Elimination System (SPDES) permit. As an alternative to an individual SPDES permit, municipal separate storm sewer systems that serve a population under 100,000 (or small MS4s) may seek to discharge stormwater under a

SPDES general permit. The 2010 General Permit -- the subject of this lawsuit -- requires these municipal systems to develop, document and implement a Stormwater Management Program (SWMP) in compliance with detailed specifications developed by the New York State Department of Environmental Conservation (DEC or the Department) to limit the introduction of pollutants into stormwater to the maximum extent practicable. To obtain initial coverage (i.e., authorization to discharge) under the terms of the 2010 General Permit, small MS4s must first submit a complete and accurate notice of intention (NOI) to DEC.

After the 2010 General Permit took effect on May 1st of that year,¹ the Natural [***274] [**784] Resources Defense Council, Inc. (NRDC) and seven other environmental advocacy groups (collectively, [*380] NRDC) brought this hybrid CPLR article 78 proceeding/declaratory judgment action against DEC to challenge certain aspects of the 2010 General Permit. NRDC claims generally that by allowing small MS4s to gain coverage under the 2010 General Permit based upon an NOI reviewed only for completeness and not subject to an opportunity for a public hearing, DEC has created an "impermissible self-regulatory system" that fails to force local governments to reduce the discharge of pollutants to the maximum extent practicable -- the statutory standard -- and violates federal and state law². Equating NOIs with applications for individual SPDES permits, Supreme Court granted partial relief to NRDC (35 Misc 3d 652, 940 N.Y.S.2d 437 [Sup Ct Westchester County 2012]). The Appellate Division, as relevant here, rejected NRDC's federal and state law challenges to the 2010 General Permit (120 AD3d 1235, 994 N.Y.S.2d 125 [2d Dept 2014]). We granted NRDC leave to appeal (23 NY3d 901, 987 N.Y.S.2d 1, 10 N.E.3d 189 [2014]), and now affirm.

1 DEC issued the first General Permit in 2003 for a five-year period, and in 2008 issued a revised two-year General Permit, which expired on April 30, 2010. The five-year 2010 General Permit expired on April 30, 2015. A substantively identical new two-year General Permit took effect on May 1, 2015 and expires on April 30, 2017. Almost all the 500 plus small MS4s authorized to discharge stormwater under the challenged 2010 General Permit were initially covered by the 2008 (or, before that, the 2003) General Permit. The 2010 General Permit authorized them to discharge

stormwater on an interim basis for up to 180 days after May 1, 2010. These small MS4s gained coverage under the 2010 General Permit by submission of their Annual Reports (discussed later in more detail) due in June 2010; they were not required to and did not submit NOIs.

2 As previously observed (*see* n 1, *supra*), virtually all the small MS4s in the State achieved coverage under the 2010 General Permit by virtue of NOIs that they submitted to DEC for initial coverage under the 2003 or 2008 General Permits, and their 2009 Annual Reports. As a result, the practical effect of a ruling in favor of NRDC is not self-evident, and threatens to create considerable confusion; i.e., would these small MS4s be required to resubmit an NOI, or would they be grandfathered? (*see* 6 NYCRR 750-1.21 [d] [3]).

I.

Background

The NPDES and SPDES Programs

The Federal Water Pollution Control Act Amendments of 1972 (Pub L No 92-500, 86 Stat 816-904 [codified as amended at 33 USC §§ 1251-1388 [2014]], popularly known as the Clean Water Act, ushered in the modern era of water pollution control whereby discharges of pollutants from "point sources" (i.e., "any discernible and confined discrete conveyance" [33 USC § 1362 (14)]) into the waters of the United States are prohibited except as authorized by a National Pollutant Discharge Elimination System (NPDES) permit issued by the Administrator of the United States Environmental Protection Agency (EPA or the Agency). "Generally speaking," the statute envisaged [*381] site-specific individual NPDES permits that "place[d] limits on the type and quantity of pollutants that can be released into the Nation's waters" (*South Florida Water Mgmt. Dist. v Miccosukee Tribe of Indians*, 541 U.S. 95, 102, 124 S. Ct. 1537, 158 L. Ed. 2d 264 [2004]).

Although the federal government plays the dominant role in water pollution control under the Clean Water Act, states may continue their own water pollution control regulations as long as they are at least as stringent as federal law demands (33 USC § 1370). And importantly, states are allowed to administer the NPDES permit program for discharges into navigable waters within their

borders, subject to the Administrator's approval (33 USC § 1342 [b]). To attain this approval, a [***275] [**785] state must demonstrate that its permit program meets the requirements of the Clean Water Act and that the state possesses adequate legal authority to implement it (*id.*). In 1973, the Legislature amended the Environmental Conservation Law to create SPDES, New York's version of NPDES (*see* L 1973, ch 801 [adding a new title 8 to article 17 of the Environmental Conservation Law and amending other provisions of article 17 to bring them into conformity with new title 8]). EPA approved New York's SPDES program, which is administered by DEC, in 1975.

EPA's Stormwater Exemption

In its 1973 regulations implementing the NPDES program, EPA excluded discharges from a number of classes of point sources from the permit requirement, including separate storm sewers containing only storm runoff uncontaminated by any industrial or commercial activity (*see* 38 Fed Reg 18000 [July 5, 1973] [40 CFR former 124.11 (f)]). EPA justified the exclusion as necessary to conserve its regulatory resources for more significant polluters. The United States Circuit Court for the District of Columbia ruled that the Clean Water Act did not give EPA this option, but interpreted the statute to grant the Agency considerable leeway in setting permit terms (*see Natural Res. Def. Council v Costle*, 568 F2d 1369, 1377, 186 U.S. App. D.C. 147 [DC Cir 1977]). Noting its "sensitiv[ity] to EPA's concerns of an intolerable permit load," the D.C. Circuit suggested that area or general permits would be a permissible and "well-established" device for coping with the avalanche of NPDES permit applications anticipated in the wake of its decision (*id.* at 1380-1381; *see also Natural Res. Def. Council v Train*, 396 F Supp 1393, 1402 [DDC 1975] [EPA has "substantial discretion to use administrative devices, such [*382] as area permits," to make its burden of permit issuance "manageable"]).

The Water Quality Act

In the Water Quality Act of 1987 (Pub L No 100-4, 101 Stat 7 [codified as amended in scattered sections of 33 USC]) (the Water Quality Act), Congress endorsed permits for municipal stormwater discharges "issued on a system- or jurisdiction-wide basis" (33 USC § 1342 [p] [3] [B] [i]). These permits were mandated to "include a requirement to effectively prohibit non-stormwater discharges into the storm sewers," and "controls to reduce the discharge of pollutants *to the maximum extent*

practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants" (*id.* at § 1342 [p] [3] [B] [ii], [iii] [emphasis added]).

The Water Quality Act did not define "maximum extent practicable," but section 1342 (p)'s text and legislative history indicate that Congress had in mind something other than conventional end-of-pipe control techniques and numeric effluent limits (*see* 132 Cong Rec 32, 381 [1986] [remarks of Sen. Stafford, then Chairman of the Senate Environment and Public Works Committee] ["These permits will not necessarily be like industrial discharge permits. Often, an end-of-pipe technology is not appropriate for this type of discharge"]; *see also Defenders of Wildlife v Browner*, 191 F3d 1159, 1164-1165 [recognizing that Congress "chose *not* to include" provisions (like effluent limitations under 33 USC § 1311) for municipal storm-sewer discharges], *amended on denial of rehr*, 197 F3d 1035 [9th Cir 1999] [emphasis added]).

The Water Quality Act established a timetable for EPA to issue NPDES permitting [***276] [**786] regulations and for EPA and states to issue permits for certain categories of stormwater discharges, principally discharges associated with industrial activity and discharges from large municipal separate stormwater sewer systems (those systems serving a population of 100,000 or more) (*see* 33 USC § 1342 [p] [2], [4]). But for the many small municipal systems (those serving a population under 100,000), the Water Quality Act embraced a different approach.

The statute directed the Administrator, in consultation with the states, to conduct studies and report the results to Congress before developing a program to regulate stormwater discharges [*383] from these systems (*see* 33 USC § 1342 [p] [5]). The study was meant to identify sources or classes of stormwater discharges for which NPDES permits were not required by the Clean Water Act; determine, to the maximum extent practicable, the extent and nature of their pollution; and develop procedures and methods to mitigate the effect of these discharges on water quality (*id.*). Congress then directed EPA to "issue regulations (based on the results of the studies . . .) which designate stormwater discharges . . . to be regulated to protect water

quality and [to] establish a comprehensive program to regulate such designated sources" (*id.* § 1342 [p] [6]). This program was to be designed, "at a minimum," to "(A) establish priorities, (B) establish requirements of State stormwater management programs, and (C) establish expeditious deadlines. The program [might] include *performance standards, guidelines, guidance, and management practices and treatment requirements*, as appropriate" (*id.* [emphasis added]).

New York's 1988 Legislation

By chapter 360 of the Laws of 1988, the Legislature amended the Environmental Conservation Law to authorize DEC to issue general SPDES permits, as allowed by the Water Quality Act. To this end, new section 17-0808 specified at subdivision three that "[p]ermits for discharges from municipal storm sewers:

"a. May be issued on a system or jurisdiction-wide basis, pursuant to paragraph (a) of subdivision seven of section 70-0117 of this chapter;

"b. Shall include a requirement which regulates non-storm-water discharges into the storm sewers; and

"c. Shall require controls to reduce the discharge of pollutants *to the maximum extent practicable, including management practices, control techniques and system design and engineering methods, and such other provisions as the commissioner determines appropriate for the control of such pollutants*" (Environmental Conservation Law § 17-0808 [3] [emphasis added]; compare 33 USC 1342 [p] [3] [B] [iii], the cognate federal provision).

Additionally, the Legislature amended existing section 70-0117 of the Environmental Conservation Law to include a new subdivision 7 to provide as follows:

[*384] "(a) Under the [SPDES] program . . . , the department may issue a general permit, upon application or on its own initiative, to cover a category of point sources of one or more discharges within a stated geographical area which (i) involve the same or substantially similar types of operations, (ii) discharge the same types of pollutants, (iii) require the same effluent limitations or operating conditions, (iv) require the same or similar monitoring, and (v) which will result in minimal cumulative impacts.

"(b) General permits can only be issued for the following categories of discharges, if, by virtue of their nature and location, the department determines such discharges are more appropriately controlled [***277] [**787] under a general permit than under individual permits:

"(i) separate storm sewers or stormwater conveyance systems; . . .

"(c) Any general permit under this subdivision shall set forth the conditions which shall apply to any discharge authorized by such general permit.

"(d) The department may require any person authorized by a general permit to apply for and obtain an individual permit and the department shall adopt rules and regulations specifying circumstances under which an individual permit may be required.

"(e) General permits shall be governed by the procedures set forth in this article [70] for the issuance of major permits" (former Environmental Conservation Law § 70-0117 [7], renumbered Environmental Conservation Law § 70-0117 [6] [L 1994, ch 170, § 202]).

The bill that became chapter 360 was drafted by and introduced at the request of DEC, which sought general permitting authority in order to avoid "issuance of thousands of individual SPDES permits covering discharges of heat, stormwater and non-industrial waste as well as . . . discharges of a minor nature[, which] *do not require the individual attention the statute currently demands*" (Bill Jacket, L 1988, ch 360 at 9 [emphasis added]). Similarly, DEC explained that general permitting would [*385] "reduce the amount of paperwork and resources dedicated to permitted discharges which *do not warrant technical case review*. Past regulation of such discharges has created *substantial administrative burdens without corresponding increases in environmental protection*. Staff time spent on processing these types of permits detracts from time that could be spent on major and toxic discharges" (*id.* [emphases added]).

The bill's Senate and Assembly sponsors repeated these rationales (*id.* at 18, 23, 29).

EPA's Final Rule

EPA promulgated its final rule regulating stormwater

discharges from small municipalities' separate stormwater sewer systems on December 8, 1999, effective February 7, 2000 (64 Fed Reg 68722 [Dec 8, 1999] codified at 40 CFR pts 9, 122, 123 and 124)). These so-called Phase II regulations expanded the existing NPDES Phase I stormwater program³. The record to support the regulation of small MS4s included the studies and reports to Congress mandated by the Water Quality Act, as well as EPA's evaluation of comments and considerable additional research and studies. Based on this record, EPA determined that surface water contamination from wet-weather discharges from these systems was best controlled by means of measures designed to reduce the quantity of pollutants introduced into stormwater and the volume of stormwater flow rather than end-of-pipe numeric limits (*id.* at 68753). Accordingly, the regulations required small MS4s to develop and implement a SWMP that identified best management practices to attain "minimum control measures" in six key areas: public education and outreach; public involvement; illicit discharge detection and elimination; [***278] [**788] construction site runoff control; stormwater management in new development and redevelopment; and pollution prevention and good housekeeping of municipal operations (*id.* at 68736; 68754-68762).

3 As the first step in carrying out the requirements of the Water Quality Act, the Phase I program covered NPDES permitting of stormwater discharges from MS4s serving a population of 100,00 or more and stormwater discharges associated with industrial activity, including construction activities involving five or more acres (33 USC § 1342 [p] [2], [4]; *see also* 55 Fed Reg 47990 [Nov 16, 1990]). In addition to small MS4s, the Phase II regulations also addressed construction sites that disturb one to five acres and additional sources that might be designated on a case-by-case basis (64 Fed Reg at 68722).

[*386] EPA determined that if small MS4s carried out best management practices in accordance with their SWMPs, they would comply with the statutory standard to reduce pollutants to the maximum extent practicable (*id.* at 68754; *see also id.* at 68843 [40 CFR 122.34 (a)]); and "[a]bsent evidence to the contrary, . . . presume[d] that a small MS4 program that implements the six minimum measures . . . does not require more stringent limitations to meet water quality standards" (64 Fed Reg

at 68753). EPA recommended that small MS4s include the public in developing, implementing and reviewing the SWMP (*id.* at 68844 [40 CFR 122.34 (b) (2) (ii)]);⁴ and required that all records, including a description of the SWMP, must be made available to the public for review and copying at reasonable times during regular business hours (64 Fed Reg at 68846 [40 CFR 122.34 (g) (2)]).⁵

4 The 2010 General Permit requires small MS4s to provide the public with the opportunity to participate in the development, implementation, review and revision of the SWMP. In this context, "development" means the "period after initial authorization under [the 2010 General Permit] when [the small MS4] creates, designs or develops activities, BMPs, tasks or other measures to include in [its] SWMP"; and "implementation" means the "period after development of [the] SWMP, where the [small MS4] puts into effect the practices, tasks and other activities in [its] SWMP."

5 The 2010 General Permit directs small MS4s to ensure that copies of SWMPs and Annual Reports are available for public inspection.

EPA interpreted the Water Quality Act as authorizing it to develop a stormwater program for small municipalities either as part of the NPDES permit program or as a stand-alone non-NPDES program, such as a self-implementing rule. EPA settled on the use of NPDES permits instead of a rule for several reasons, including a desire to maintain consistency with its Phase I program for stormwater control; to capitalize upon the existing government infrastructure for administration of the NPDES program and the regulated community's understanding of how the NPDES program works; and to provide flexibility in order to facilitate watershed planning and sensitivity to local conditions (*id.* at 68739). EPA did note, however, that "[k]ey provisions" of the rule "promot[ed] a streamlined approach to permit issuance by, for example, using general [*387] permits" (*id.* at 68740; *see also id.* at 68762 [although the permit to authorize a small MS4's discharges might take the form of either an individual NPDES permit issued to one or more facilities as co-permittees or a general NPDES permit that applied to a group of small MS4s, EPA "expect[ed]" that most discharges would be authorized or "covered" under general permits for reasons of administrative efficiency and reduced paperwork burdens]). In fact, EPA recommended using general

permits, rather than individual permits, for all stormwater sources newly regulated under its rule (*id.* at 68737).

A small MS4 that seeks coverage under a general NPDES permit for its stormwater discharges is required to submit an NOI to the permitting authority. The [***279] [**789] NOI must specify the best management practices to be implemented for each of the six required minimum control measures along with measurable goals for the development and implementation of each best management practice (*id.* at 68762-68764). Although "[s]everal commenters suggested that EPA require permitting authorities to approve or disapprove the submitted BMPs and measurable goals[,] EPA disagree[d] that formal approval or disapproval by the permitting authority [was] needed" (*id.* at 68764).⁶

6 EPA allows a small MS4 that submits a complete and timely NOI to discharge upon receipt of the NOI by the state permitting authority, after a waiting period specified in the general permit, on a date specified in the general permit or upon receiving notice of inclusion from the state permitting authority (*see* 40 CFR 122.28 [b] [2] [iv]). By contrast, the 2010 General Permit requires DEC to publish a notice in the Environmental Notice Bulletin when an NOI is received from a small MS4. These notices provide a web link to the actual NOI, and inform the public of the physical location of the NOI and SWMP, which are available for public inspection. The NOI is subject to a 28-day public comment period prior to DEC's authorization of the small MS4's discharges.

EPA afforded small MS4s up to five years to fully develop and implement their SWMPs,⁷ with annual reports required to document progress (*id.* at 68770, 68846 [40 CFR 122.34 (g) (3)]). The Agency stated that "[t]he permitting authority will use the reports in evaluating compliance with permit conditions and, where necessary, will modify the permit conditions to address changed conditions" (64 Fed Reg at 68770).

7 DEC reduced the time period from five to three years for the New York program.

[*388] *The 2010 General Permit*

The 2010 General Permit is a 97-page document,

with appendices, which requires small MS4s to develop, document and implement a SWMP that includes 44 mandatory best management practices grouped into the six program components, or minimum control measures. Many of the mandatory best management practices afford small MS4s little or no choice about what they must do to comply with the 2010 General Permit; others afford more freedom in implementation. As an example of the latter, under the minimum control measure addressing public outreach, small MS4s must develop and implement an ongoing public education and outreach program, but enjoy flexibility to decide how best to accomplish this in light of local conditions or considerations (e.g., a media campaign, presentations to community groups, outreach to commercial entities, a webpage, printed materials, posters and/or 13 other suggested ways or management practices to raise the public's awareness and engage its participation in reducing pollution of stormwater runoff).

At the other end of the spectrum, the 2010 General Permit imposes highly prescriptive requirements for small MS4s to develop, implement and enforce a program to detect and eliminate non-stormwater (i.e., illicit) discharges. The small MS4s must develop and maintain maps showing the location of all outfalls, verify each of them in the field and conduct an outfall inventory in accordance with detailed guidance published on EPA's website. Further, each small MS4's program must include procedures to identify areas that are of greatest concern and describe those areas, available equipment, staff and funding; identify and locate illicit discharges; eliminate illicit discharges; and document the steps the small MS4 has taken to implement its program.

The NOI and Annual Reports Provided for by the 2010 General Permit

The NOI is currently a 19-page document that sets out the six minimum control [***280] [**790] measures, listing the mandatory and optional best management practices for each. The small MS4 must commit to each mandated and any optional best management [*389] practice initially identified in the SWMP;⁸ describe initially identified measurable goals for each of the required or chosen best management practices, with start and end dates, including work to be done by partners. And finally, either a principal executive or ranking elected official must sign the NOI, certifying that the information submitted is, to the best of the signer's knowledge and belief, true, accurate and

complete, and acknowledging awareness of the significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations. As noted previously (*see* n 6, *supra*), the NOI is made available to the public for comment for a 28-day period. Small MS4s that submit an NOI are authorized to discharge stormwater upon written notification from DEC that a complete NOI has been received. DEC, however, may also choose to require the small MS4 to submit an application for an individual SPDES permit or an alternative SPDES general permit. DEC annually audits up to 10% of all municipal storm sewers, makes site inspections, reviews citizen complaints and, where necessary, takes enforcement action.

8 Small MS4s in specified watershed improvement strategy areas must identify the additional best management practices that they will implement in order to reach specified pollutant load reductions.

The vast majority of New York's 500 plus small MS4s achieved initial authorization to discharge stormwater prior to the effective date of the 2010 General Permit; they were able to maintain coverage under the 2010 General Permit by submitting their 2009 Annual Reports (*see* n 1 and 2, *supra*). The 2010 General Permit directs small MS4s to make Annual Reports and SWMPs available for public review; provides for notice of receipt of 2009 Annual Reports to be published in the Environmental Notice Bulletin;⁹ and requires small MS4s to present draft Annual Reports to the public and to include its responses to any public comments (including, as appropriate, any modifications of the SWMP) when they submit these reports to DEC. The Annual Report summarizes the activities performed by the small MS4 during the reporting period and those planned for the next year, and includes, among other things, an assessment of compliance with permit conditions; the appropriateness of the identified best management practices; and [*390] progress toward meeting the measurable goals for each minimum control measure and achieving the statutory goal of reducing the discharge of pollutants to the maximum extent practicable. DEC's review of Annual Reports allows the Department to keep tabs on small MS4s and to require any necessary refinement of best management practices. DEC refers to these contemplated successive rounds of reviewing and, as necessary, finetuning and refocusing best management practices as

the "iterative process" that is the hallmark of the flexible "maximum extent practicable" standard, which Congress deliberately chose as best suited for regulating small municipalities' stormwater discharges.

9 The 2010 General Permit states that "[f]or public participation purposes, the [2009] Annual Report will be considered equivalent to an NOI."

II.

Discussion

The Clean Water Act

There is no doubt that the 2010 General Permit complies with EPA's 1999 [***281] [**791] regulations, which allow permitting authorities to authorize small MS4s to discharge stormwater under a general NPDES permit upon receipt of an NOI --- i.e., without *any* regulatory review, public notice and comment or opportunity for a public hearing. There is likewise no doubt that the 2010 General Permit affords more generous regulatory review and public participation than EPA's 1999 regulations require. But NRDC contends, and the dissent agrees, that the federal courts have held that the regulatory review and public participation features of EPA's 1999 regulations, on which the 2010 General Permit is necessarily modeled, constitute an "impermissible self-regulatory system" in contravention of the Clean Water Act, and that New York courts are bound to follow suit with respect to the New York program. Stated slightly differently, NRDC and the dissent assert that federal court decisions make clear that the Clean Water Act does not allow DEC to authorize a small MS4's stormwater discharges under the 2010 General Permit without first engaging in an undefined more detailed review of the NOI (and, apparently, the SWMP) and providing the public an opportunity to request a hearing.

After EPA promulgated its 1999 regulations, various environmental, municipal and industry groups brought petitions for review, which were consolidated in the United States Court of Appeals for the Ninth Circuit (*see Environmental Defense Ctr., [*391] Inc. v EPA, 344 F3d 832 [9th Cir 2003] [EDC]*). The environmental petitioners argued that, by allowing permitting authorities to authorize small MS4s to discharge stormwater on the basis of "unreviewed NOIs," the regulations created an "impermissible self-regulatory system," and additionally

"fail[ed] to provide for public participation as required by the Clean Water Act, because the public receive[d] neither notice nor opportunity for hearing regarding an NOI" (*id.* at 854, 856). A divided panel agreed.

Applying *Chevron* analysis,¹⁰ the *EDC* majority first determined that the Clean Water Act unambiguously expressed Congress's intent that "EPA issue no permits to discharge from municipal storm sewers unless those permits require[d] controls to reduce the discharge of pollutants to the maximum extent practicable" (*id.* at 854 [internal citations omitted]), and that EPA's 1999 regulations did not fulfill this plain command. This was the case, the majority reasoned, because absent a permitting agency's "meaningful review" of the minimum control measures selected by a small MS4,¹¹ the municipal operator might "misunderstand[] or misrepresent[] its own stormwater situation and propos[e] a set of minimum measures for itself that would reduce discharges by far less than the maximum extent practicable" (*id.* at [***282] [**792] 854-856). The *EDC* majority also concluded that NOIs (unlike NRDC and the dissent, the court did not mention SWMPs) are "functionally equivalent" to NPDES permit applications, and therefore are subject to the same public availability and public hearing requirements (*id.* at 857).

10 The United States Supreme Court held in the seminal case of *Chevron U.S.A., Inc. v Natural Resources Defense Council, Inc.* (467 U.S. 837, 104 S. Ct. 2778, 81 L. Ed. 2d 694 [1984]) that federal courts will accept a federal agency's reasonable interpretation of the ambiguous statutory language of statutes that the agency administers.

11 As pointed out earlier, EPA's 1999 regulations did not require *any* review of NOIs. DEC takes the position that its review of NOIs for completeness is "meaningful review"; specifically, DEC does not authorize a small MS4's stormwater discharges until after examining the NOI to make sure that the system operator has committed to carrying out a SWMP that comprehends, at a minimum, 44 *mandatory* best management practices (clearly identified in the NOI as "required"), and has established measurable goals by which to assess how successfully these best management practices, as implemented, control stormwater discharges to the maximum extent practicable.

The dissenting judge considered the "central issues" in the case to be whether the Clean Water Act allowed EPA to use a general permit system to administer the NPDES program and [*392] whether NOIs should properly be regarded as "permits." Citing *Chevron*, he noted that "resolution of these issues require[d] a complicated weighing of policies (e.g., administrative streamlining vs. robust inquiry) that is precisely what agencies are designed to do and courts are without the resources or experience to do" (*id.* at 881 [Tallman, J., dissenting]).

In the dissenting judge's view, although the majority correctly recognized that EPA was allowed to use a general permit system, it "ignore[d] the effects of the general permit. By filing an NOI, a discharger obligates itself to comply with the limitations and controls imposed by the general permit under which it intends to operate. EPA mandates that all permits (including general permits) condition their issuance on satisfaction of pollution limitations imposed by the Clean Water Act[; t]herefore, the *general permit* imposes the obligations with which the discharger must comply (including applicable Clean Water Act standards), and EPA's decision not to review every NOI is not a failure to insure compliance with the [statute]" (*id.* at 882).

As for the majority's objection that EPA's general permit system did not allow for sufficient public participation, the dissenting judge chided his colleagues for "fail[ing] to give deference to EPA and impos[ing] the majority's own wishes instead" (*id.*). He added that where "an agency promulgates rules after a deliberative process, it is incumbent upon [the federal courts] to respect the agency's decisions or else risk trivializing the function of that agency"; and that "[i]n this case, EPA made a permissible decision to create a general permit program supported by NOIs" (*id.*).¹²

12 The dissent comments that the Supreme Court "has chosen not to take up *EDC*," citing *Texas Cities Coalition on Stormwater v EPA* (541 U.S. 1085, 124 S. Ct. 2811, 159 L. Ed. 2d 246 [2004])(dissenting op at 34-35). The Texas Cities Coalition sought Supreme Court review of its challenge to EPA's 1999 regulations, primarily on Tenth Amendment grounds.

In *Texas Indep. Producers & Royalty Owners Assn. v EPA* (410 F3d 964 [7th Cir 2005] [*Tex. Indep. Producers*]), the United States Court of Appeals for the

Seventh Circuit agreed with the dissenting judge in *EDC* that NOIs are not subject to the Clean Water Act's public participation requirements for NPDES permit applications. As mentioned earlier (*see* n 3, [*393] *supra*), EPA's Phase I stormwater regulations addressed construction activities involving five or more acres, and its Phase II stormwater regulations addressed construction sites that disturb one to five acres (as well as small MS4s). EPA eventually promulgated a general permit for stormwater discharges from both large and small construction sites in those jurisdictions where it had not authorized the state or an Indian tribe to administer the NPDES program. This general permit required operators to submit an NOI to acquire coverage; a responsible corporate officer to certify the basis for eligibility for coverage; creation, maintenance and implementation of a site-specific Storm Water [***283] [**793] Pollution Prevention Plan (SWPPP), also to be certified by a corporate official; and implementation of best management practices necessary to comply with water quality standards, assure weekly site inspections and document those inspections, including detailing weather conditions.

In its petition for review, NRDC attacked the general permit's failure to make NOIs and SWPPPs available to the public and afford the opportunity for a public hearing, citing 33 USC §§ 1342 (j) and 1342 (a) (1)¹³. EPA responded that these provisions did not apply to NOIs and SWPPPs because NOIs and SWPPPs were not permits or permit applications. The Seventh Circuit concluded that because the Clean Water Act spoke only of permits and permit applications, not NOIs or SWPPPs, the statute was silent or ambiguous for purposes of *Chevron* analysis. Accordingly, the court was called upon to decide whether EPA had reasonably construed the relevant provisions of the Clean Water Act.

13 Section 1342 (j) of the Clean Water Act provides that "[a] copy of each permit application and each permit issued under this section shall be available to the public. Such permit application or permit, or portion thereof, shall further be available on request for the purpose of reproduction"; section 1342 (a) (1) authorizes the EPA "after opportunity for public hearing, [to] issue a permit for the discharge of any pollutant, or combination of pollutants" (*see* Environmental Conservation Law § 17-0805 [1] for the cognate provisions in state law).

In support of its interpretation, EPA "stressed" that general NPDES permitting did not "make use of a permit application"; rather, general permits were proposed through a notice in the Federal Register to solicit public comment, and "[i]t [was] at that time that the public [had] the opportunity to request a public hearing" (*id.* at 978). Once EPA issued the general permit as a final rule, a discharger intending to operate under the general permit's authority was required to comply with [*394] that permit's already established terms; therefore, "there [was] no need for additional public comment or a notice period," and potentially requiring a public hearing for individual NOIs and SWPPPs risked "eviscerat[ing] the administrative efficiency inherent in the general permitting concept, in effect making the general permit scheme no different from the process for obtaining individual permits[, which] would be inconsistent with Congress' intent to allow for the use of general permits" (*id.* [internal citations omitted]).

Calling these rationales "eminently reasonable," the Seventh Circuit concluded that "EPA's interpretation of the terms 'permit application' and 'permit' as not including NOIs and SWPPPs is a permissible construction" (*id.*). In so holding, the court acknowledged that it disagreed with the *EDC* majority and agreed with the dissenting judge in that case, thus creating a split between the circuits (*id.* at 978, n 13).¹⁴

14 The parties disagree about the relevance of a third federal case, *Waterkeeper Alliance, Inc. v EPA* (399 F3d 486 [2d Cir 2005] [*Waterkeeper Alliance*]), which the United States Court of Appeals for the Second Circuit handed down after *EDC* and before *Tex. Indep. Producers*. This decision invalidated portions of EPA's 2003 regulations governing NPDES permitting for concentrated animal feeding operations (CAFOs), which are variously-sized but large-scale enterprises that raise animals like cows and pigs in confined quarters. *Waterkeeper Alliance*, however interpreted, does not eliminate the circuit split.

In sum, then, the federal circuit courts are split on the question of whether EPA has permissibly interpreted the Clean Water Act to mean that an NOI is not a "permit application."¹⁵ And we obviously [***284] [**794] may not engage in *Chevron* analysis to review EPA's interpretation, which underlies the corresponding,

although not identical, parts of the 2010 General Permit to [*395] which NRDC objects. The federal courts and EPA will have to sort this out¹⁶. In that regard, NRDC has recently filed a petition for a writ of mandamus in the Ninth Circuit in the *EDC* case, asking that court to order EPA to amend its 1999 regulations within six months to provide individualized review of NOIs with notice and opportunity for public hearings. This is all the more reason, DEC argues, to reject "NRDC's attempt to litigate an underlying dispute with EPA by ordering relief against DEC for *complying* with EPA's regulations." We agree. Unless and until EPA revises its 1999 regulations, DEC's SPDES general permitting program for small MS4s must comply with them (as it concededly does), and DEC need not go beyond the specifications of those regulations unless New York law requires it to do so.

15 We recognize that at least one statement in EPA's 1999 regulations does not appear facially consistent with its position in the *EDC* and *Tex. Indep. Producers* lawsuits. The *EDC* majority remarked that "[t]he text of [EPA's] Rule itself acknowledges that a Phase II NOI is a permit application that is, *at least in some regards*, functionally equivalent to a detailed application for an individualized permit" (*EDC*, 344 F3d at 853 [emphasis added]). In support of this proposition, the *EDC* majority (and the dissent; *see* dissenting op at 42, n 10) cite 40 CFR 122.34 (d) (1), which starts out by stating "[i]n your permit application (either a notice of intent for coverage under a general permit or an individual permit application)." Section 122.34 is written in a "readable regulation" format as an answer to the question "As an operator of a regulated small MS4, what will my NPDES storm water permit require?" It is the task of the federal courts, not this Court, to figure out whether section 122.34 (d) (1) or anything else in EPA's 1999 regulations is inconsistent with the Agency's litigation posture in *EDC* and *Tex. Indep. Producers* and, if so, the significance of the inconsistency.

16 The dissent protests that our "hands-off" approach would leave this court with no authority to consider the legality of state agency conduct, [which is] most certainly not the law, as made plain by [our] administrative law jurisprudence" (dissenting op at 42). The dissent then cites four cases, only one of which -- *Seittelman v Sabol* (91 NY2d 618, 697 N.E.2d 154, 674 N.Y.S.2d 253

[1998]) -- involves federal law, and in *Seittelman*, the issue was whether we owed deference to a State agency's interpretation of a federal statute. Here, NRDC is asking us to decide that a federal agency -- EPA -- has improperly interpreted the statute it is tasked with administering. This is quite different from *Seittelman*. DEC operates the SPDES program as EPA's NPDES delegee, and is bound to follow EPA's interpretation of the Clean Water Act, here expressed, as challenged, in EPA's 1999 regulations. Federal law vests exclusive jurisdiction to review those regulations in the federal circuit courts (*see* 33 USC § 1369; *see also Amer. Frozen Food Inst. v Train*, 539 F2d 107, 124, 176 U.S. App. D.C. 105 [DC Cir 1976]). Under the dissent's view and notwithstanding section 1369 of title 33, the highest court in every state that administers the NPDES permit program would be empowered to second-guess EPA's governing regulations, creating an obvious impediment to implementation of a coherent nationwide NPDES permitting scheme.

The Environmental Conservation Law

A SPDES general permit covers multiple entities with similar characteristics and minimal impacts (*see* Environmental Conservation Law § 70-0117 [6] [a]). SPDES general permitting allows DEC to avoid detailed review where it is not warranted and thereby frees up finite regulatory resources for the individual SPDES permitting of entities with greater impact on the environment. These were the reasons that DEC gave the Legislature when it sought SPDES general permitting authority in 1988, after Congress endorsed NPDES general permitting in the Water Quality Act, and the explanations that the legislation's sponsors gave when [*396] the Environmental Conservation Law was amended to empower DEC to issue SPDES general permits.

[***285] [**795] The Legislature has exhibited a continuing willingness to simplify and streamline the SPDES permitting process to reduce or eliminate administrative complexities that burden DEC and the regulated community alike in ways that do not benefit the environment. For example, in 1994 the Legislature amended the Environmental Conservation Law to expand general permitting and require DEC to develop a priority

ranking system for individual SPDES permits in order to carry out an "Environmental Benefit Permit Strategy" (EBPS) (*see* L 1994, ch 701). Broadly described, the EBPS prioritizes SPDES permits for full technical review and, when necessary, modification, in order to insure that those point source discharges presenting the greatest risk to the environment receive the most expedient and detailed regulatory attention (*see generally* TOGS 1.2.2 [Administrative Procedures and the Environmental Benefit Permit Strategy for Individual SPDES Permits," issued June 2003; revised Jan. 2012]; *see also* Environmental Conservation Law § 17-0805 [1] [b] [making a SPDES permit's priority ranking subject to an opportunity for a public hearing]).

NRDC and the dissent blur the distinction between SPDES general and individual permits by seeking to require DEC to undertake an undefined more comprehensive review of NOIs (and, apparently, to review SWMPs), and to provide an opportunity for a public hearing on NOIs/SWMPs. Thus, NRDC would like DEC to treat an NOI as though it were, or at least more like, an application for an individual SPDES permit *to be issued* rather than what it really is -- a request for coverage under a general SPDES permit that has *already been issued* pursuant to the full panoply of article 70 procedures (*see* Environmental Conservation Law § 70-0117 [6] [e]; 6 NYCRR part 621)¹⁷. But the Environmental Conservation Law does not obligate DEC to conduct SPDES [*397] general permitting for small MS4s in accordance with NRDC's and the dissent's policy preferences. SPDES general and individual permits represent *alternative* ways for small MS4s to obtain authorization for their stormwater discharges. To the extent the courts force DEC to apply the same or similar procedures for both alternatives, the resource-conserving benefits sought by the Legislature when it enacted the 1988 legislation are compromised, if not altogether lost.

17 In fact, the public enjoyed opportunities to participate in the development of the 2010 General Permit which exceed article 70's requirements. In the Fact Sheet issued with the 2010 General Permit, DEC explained that, in response to "significant public interest" in the 2008 General Permit, it limited that Permit's term to two years and embarked on an 18-month post-issuance review process. All commenters on the 2008 General Permit were invited to

participate, and DEC conducted nine monthly topic meetings to address Green Infrastructure, Intermunicipal Cooperation, Stormwater Retrofits, Public Participation, Numeric Effluent Limits, MS4 Funding, Steep Slopes, Riparian Buffers, Total Maximum Daily Loads and Impaired Waters. Following these meetings, working drafts of a revised general permit and revised chapters of DEC's Stormwater Management Design Manual were reviewed with the participants. Meetings were held to discuss proposed changes to the Design Manual and the general permit; participants were invited to submit comments on the working drafts. DEC incorporated beneficial provisions identified during this 18-month review in the 2010 General Permit.

Here, DEC has determined that examining NOIs for completeness constitutes a sufficient level of technical regulatory review to qualify a small MS4 for initial coverage under the 2010 General Permit; and that the 2010 General Permit's public [***286] [**796] participation requirements for NOIs (i.e., notices in the Environmental Notice Bulletin to let the public know when a small MS4's NOI has been submitted to DEC and where the NOI and SWMP are physically located and may be inspected; making the NOI, which DEC posts on its website, subject to a pre-authorization 28-day public comment period) are sufficient. These are reasonable judgments that DEC possesses the discretion and expertise to make in furtherance of its responsibilities under the Environmental Conservation Law to regulate stormwater discharges from small MS4s (*see Matter of Howard v Wyman*, 28 NY2d 434, 438, 271 N.E.2d 528, 322 N.Y.S.2d 683 [1971] ["It is well settled that the construction given statutes and regulations by the agency responsible for their administration, if not irrational or unreasonable, should be upheld"]; *Matter of Davis v Mills*, 98 NY2d 120, 125, 778 N.E.2d 540, 748 N.Y.S.2d 890 [2002] ["(T)his Court treads gently in second-guessing the experience and expertise of state agencies charged with administering statutes and regulations"]).

We have reviewed NRDC's other challenges to the lawfulness of the 2010 General Permit and consider them likewise to be without merit. Accordingly, the order of the Appellate Division, insofar as appealed from, should be affirmed, with costs.

Matter of Natural Resources Defense Council, Inc.,
et al. v New York State Department of Environmental
Conservation

DISSENT BY: RIVERA (In Part)

DISSENT

RIVERA, J.(dissenting in part):

Petitioners are nine organizations or corporations, including lead petitioner, the not-for-profit Natural Resources Defense Council, Inc., whose several members use and enjoy New York State water bodies. Petitioners challenge New York's statewide general permit which allows [*398] storm water pollutant discharges from small Municipal Storm Sewer Systems. I concur with the majority to the extent it affirms dismissal of petitioners' claims as related to the "no net increase" provision and monitoring. However, because I conclude that the State's general permit as currently implemented fails to comply in several respects with federal and state statutory and regulatory mandates, I dissent.

I.

A. *Water Pollution Control and the Clean Water Act*

Long-standing concerns over contamination of New York's and the nation's waters have led to over a century of governmental controls and prohibitions on water pollution. As far back as 1903, New York State prohibited sewage and waste discharge into public waters (*see* L. 1903, ch. 468). There was also early federal concern with contamination of New York's water, as reflected by Congressional passage of laws in 1886 and 1888 prohibiting discharges of certain pollutants and refuse into New York Harbor (*see* L. 1886, ch. 929, § 3).

The Rivers and Harbors Appropriation Act of 1899 was the first statute to consolidate these and other prior federal prevention efforts, in order to establish nationwide water pollution controls. The Act prohibited discharge of "any refuse matter of any kind or description whatsoever," into any navigable water of the United States without approval or a permit from the United States Army Corps of Engineers (*see* William L. Andreen, *The Evolution of Water Pollution Control in the United States-State, Local, and Federal Efforts, 1789-1972: Part II*, 22 Stan Env'tl LJ 215, 220 [2003]; Section of Natural Resources, Energy, and Environmental

Law, American Bar Association, *The Clean Water Act Handbook*, at 1 [3d Edition] [hereinafter "Clean Water Act Handbook"].

Water pollution, however, remained unabated and continued to present serious [***287] [**797] public health issues (*see* Andreen at 222; 9 N.Y.Prac., Environmental Law and Regulation in New York § 6:2 [2d ed.]). Congress eventually passed the Federal Water Pollution Control Act in 1948 (FWPCA) to address stream pollution which, as a result of World War II, had intensified due to "increased industrial activity and dramatically lower expenditures on wastewater treatment" (Andreen at 235). Under the FWPCA, the states bore primary responsibility for water pollution within their jurisdictions, and federal enforcement was limited (*see* Andreen at 238; *see also* 80 Cong. Ch. 758, June 30, 1948, 62 Stat. 1155). [*399] Over time, Congress amended the FWPCA to provide financial assistance to municipalities in the form of grants to construct sewage treatment plants and to shore up federal enforcement (*see* Andreen at 240; 62 Stat. 1158).

As national concern increased over environmental degradation and the adverse impacts of water pollution on society and the economy, Congress established the Federal Water Pollution Control Administration (*see* Water Quality Act of 1965, Pub. L. No. 89-234, 79 Stat. 903), and the Environmental Protection Agency (EPA) (*see* 42 USC § 4321 [Reorganization Plan No. 3 of 1970 establishing the EPA]). It also enacted the Water Quality Act of 1965 and the Water Quality Improvement Act of 1970. This administrative and regulatory framework was intended to ensure the adoption and enforcement of appropriate water quality standards and pollution controls.

After these efforts failed to protect the nation's waters from dangerous levels of contamination, or to halt the continued decline of water quality, Congress passed a comprehensive revision and recodification of the FWPCA in 1972 (*see* Pub. L. No. 92-500, October 18, 1972 86 Stat. 816 [codified as amended at 33 USC §§ 1251-1376 (2000)]). These amendments form the basis for what is best known as the Clean Water Act.

B. *The Clean Water Act and the National Pollutant Discharge Elimination System*

The Clean Water Act (CWA) heralded the modern era of federal water pollution control, with the stated

objective to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters" and the goal of eliminating water pollution (*see* 33 USC § 1251 [a]). It provided for more robust federal enforcement of pollution controls and the development and implementation of waste treatment programs (*see* Andreen at 239-24). It also declared unlawful "the discharge of any pollutant by any person," to "navigable waters" from a "point source" (*see* 33 USC § 1311 [a]) unless authorized by federal permit, in accordance with the newly established national pollutant discharge elimination system (NPDES) (*see* 33 USC § 1342 [a]).¹

1 The CWA defines point sources as "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged" (33 USC § 1362 [14]; *see also* 40 CFR 122.2).

This federal permit scheme, central to the CWA and administered by the EPA, subjects permit holders to pollutant discharge [*400] limitations as well as mandatory monitoring and reporting requirements (*see* 33 USC § 1311 [b] [1] [A]; 33 USC § 1342 [b] [1] [A] [requiring SPDES permits to comply with § 1311]; *see also* Andreen at 261; Jeffrey M. Gaba, *Generally Illegal: Npdes General Permits Under* [***288] [**798] *the Clean Water Act*, 31 Harv Envtl L Rev 409, 410 [2007]). While the NPDES permit "authoriz[es] some water pollution, [it] place[s] important restrictions on the quality and character of that licit pollution" (*Waterkeeper Alliance, Inc. v U.S. E.P.A.*, 399 F3d 486, 491 [2d Cir 2005]).

The CWA imposes effluent limitations, which are "restriction[s]... on [the] quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters" (*id.*, citing *South Florida Water Mgt. Dist. v Miccosukee Tribe of Indians*, 541 U.S. 95, 100, 124 S. Ct. 1537, 158 L. Ed. 2d 264 [2004]). The CWA defines effluent limitations as "any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of

compliance" (33 USC § 1362 [11]). Certain effluent limitations are technology based, meaning they are "established in accordance with various technological standards that the [CWA] statutorily provides and that . . . vary depending upon the type of pollutant involved, the type of discharge involved, and whether the point source in question is new or already existing" (*Waterkeeper*, 399 F3d at 491). The CWA also provides for more stringent water quality-based effluent limitations when necessary to ensure state water quality standards (*see* 33 USC § 1311 [b] [C]). The technology-based and water quality-based limitations are generally represented as numerical limits on specific pollutant discharges (*see Waterkeeper*, 399 F3d at 491).

A permit is issued "upon condition that such [pollutant] discharge will meet . . . all applicable requirements including the effluent limitations statutorily required" by the CWA (*id.* at 498 [brackets omitted]). Thus, under the CWA's NPDES permit structure, "a discharger's performance is now measured against strict technology-based effluent limitations specified levels of treatment to which it must conform, rather than against limitations [*401] derived from water quality standards to which it and other polluters must collectively conform" (*Environmental Protection Agency v California ex rel. State Water Resources Control Bd.*, 426 U.S. 200, 204-05, 96 S. Ct. 2022, 48 L. Ed. 2d 578 [1976] [hereinafter "EPA"]). As described by the United States Supreme Court

"[a]n NPDES permit serves to transform generally applicable effluent limitations and other standards including those based on water quality into the obligations (including a timetable for compliance) of the individual discharger, and the Amendments provide for direct administrative and judicial enforcement of permits . . . In short, the permit defines, and facilitates compliance with, and enforcement of a preponderance of a discharger's obligations under the [Clean Water Act] Amendments"

(*id.* at 205 [internal citations omitted]).

The CWA itself "imposes only limited procedural obligations on the issuance of NPDES permits" (Gaba at 417). The process for obtaining a permit is specifically set forth in EPA regulations (*see* 40 CFR 122.21, *et seq.*). As a general matter, an applicant must file an EPA permit application form (*see* 40 CFR 122.21 [a] [2]). The application must be submitted at least 180 days before the

applicant intends to commence discharging (*see* 40 CFR 122.21 [c] [1]), and no permit will issue if an application is deemed incomplete by the EPA (*see* 40 CFR 122.21 [e] [1]).

The CWA anticipates and requires certain opportunities for public participation. [***289] [**799] As prominently set forth in the CWA Declaration of Goals and Policy, "[p]ublic participation in the development, revision, and enforcement of any regulation, standard, effluent limitation, plan, or program established by the [EPA] or any State . . . shall be provided for, encouraged, and assisted by the [EPA] and the States" (33 USC § 1251 [e]). The EPA may issue a NPDES permit only "after opportunity for public hearing" (33 USC § 1342 [a] [1]), and "a copy of each permit application and permit issued . . . shall be available to the public" (33 USC § 1342 [j]). In addition, the EPA regulations provide for public participation in the issuance of NPDES permits, including requiring notice and opportunity for comment on the denial of permit applications or the issuance of draft permits (*see* 40 CFR 124.10 [a] [i], [ii]), and the opportunity for a public hearing at the request of interested parties (*see* 40 CFR 124.11). The Administrator of the EPA shall hold a hearing where the Administrator "finds, on the basis of [*402] requests, a significant degree of public interest in a draft permit(s)" (40 CFR 124.12 [a] [1]), or "at [the Administrator's] discretion, whenever, for instance, such a hearing might clarify one or more issues involved in the permit decision" (40 CFR 124.12 [a] [2]).

Maximization of public involvement as a federally recognized goal is illustrated not only by the CWA's public participation requirement, but also by its statutory provisions authorizing private civil suits (*see* 33 USC § 1365). Under the CWA, a person may commence a civil suit against individual polluters as well as federal and state government entities for failure to act in accordance with the law (*see* 33 USC §§ 1365 (a) (1),(a) (2)). Private actors have actively litigated the proper enforcement of the CWA and compliance with NPDES permits (*see e.g. Los Angeles County Flood Control Dist. v Natural Resources Defense Council, Inc.*, 133 S Ct 710, 184 L. Ed. 2d 547 [2013] [environmental organizations brought action against California municipal entities, alleging that they were discharging urban stormwater runoff into navigable waters in violation of the CWA]; *Decker v Northwest Env'tl. Defense Ctr.*, 133 S Ct 1326, 185 L. Ed. 2d 447 [2013] [environmental organization brought

action against Oregon officials and timber companies, alleging that they violated the CWA by discharging stormwater from ditches alongside logging roads in state forest without NPDES permits]).

C. State Pollutant Discharge Elimination System

The CWA also allows for a federally-authorized, EPA-approved state to issue permits "for discharges into navigable waters within" the state's jurisdiction (33 USC § 1342 [b]). Currently, a majority of states are EPA-approved to operate their own state pollutant discharge elimination system (SPDES). The laws of such state must "provide adequate authority to carry out the [permit] program" (33 USC § 1342 [b]), and the permits issued pursuant to this EPA authorization, must "apply, and insure compliance with, any applicable [CWA effluent limitations and standards]" (33 USC § 1342 [b] [1] [A]).

In 1975, the EPA authorized New York to issue permits under the state's SPDES, established pursuant to Article 17 of New York's Environmental Conservation Law. Thus, discharges or pollutants from point sources into the waters of the state are prohibited, unless authorized under New York's SPDES permit program (*see* ECL 17-0803; *see also* 33 USC § 1311 [a]). In accordance [*403] with the ECL, any discharges allowed by these permits shall

"conform to and meet all applicable requirements of the [CWA] ... and rules, [***290] [**800] regulations, guidelines, criteria, standards and limitations adopted pursuant thereto relating to effluent limitations, water quality related effluent limitations, new source performance standards, toxic and pretreatment effluent limitations, ocean discharge criteria, and monitoring, and to participate in the [NPDES] created by the [CWA]"

(ECL § 17-0801). In addition to applicable federal requirements, such permits are also subject to regulations issued by DEC (*see* 6 NYCRR 750, *et seq.*).

In New York, in order to obtain a permit, an interested party must file an application (*see* ECL § 17-0803; 6 NYCRR 750-1.4 [a]). The applicant must secure the permit prior to actual discharge of any prohibited pollutant (ECL § 17-0803 ["it shall be unlawful to discharge . . . without a SPDES permit"]; 6 NYCRR 750-1.4 [a] ["no person shall discharge . . . without a SPDES permit"]). As required by law, DEC

reviews and, where appropriate, approves the permit and issues a draft permit setting forth the effluent limitations and other conditions applicable to the discharger (ECL § 17-0809 [1]; 6 NYRR 750-1.10 [a]).

Public participation under New York's SPDES permit program is advanced through public notice requirements and an opportunity for public hearing on the permit application (*see* ECL § 17-0805 [b]; *see also* 6 NYCRR 750-1.12 [a] [requiring notice]). The DEC must provide notice of every draft SPDES permit, describing its terms and conditions, and must allow for a minimum 30-day public comment period (ECL § 17-0805 [b]). During the comment period, "[t]he department may, in its discretion, provide an opportunity for the applicant or any interested agency, person or group of persons to request or petition for a public hearing" (*id.*).

D. General Permits

As an alternative to the NPDES permit established by the CWA, the EPA passed regulations allowing the issuance of general permits "to cover one or more categories or subcategories of discharges . . . within a geographical area" (40 CFR § 122.28 [a] [1]). [*404] A general permit "is a single NPDES permit that covers a number of individual discharges that would otherwise require individual NPDES permits" (*Ohio Val. Envtl. Coalition v Horinko*, 279 F Supp 2d 732, 758 [SDW Va 2003], citing 40 CFR 122.28; *see also Environmental Defense Ctr., Inc. v U.S. E.P.A.*, 344 F3d 832, 853 [9th Cir 2003] ["A general permit is a tool by which EPA regulates a large number of similar dischargers"] [Hereinafter *EDC*]). Unlike the single-applicant NPDES permit process, under the general permit scheme, the permitting authority may issue a general permit "containing a common set of effluent limitations and other permit conditions that will apply to a potentially large number of point sources" (Gaba at 419). As such, it provides for certain efficiencies and reduces the administrative burdens associated with an individual permit process (*see Natural Resources Defense Council, Inc. v Costle*, 568 F2d 1369, 1381, 186 U.S. App. D.C. 147 [DC Cir 1977] ["Area-wide regulation is one well-established means of coping with administrative exigency"]).

With the exception of the CWA's authorization for general permits allowing discharges of "dredged or fill material" (*see* 33 USC § 1344 [e] [1]), the CWA contains no special provisions for a category of "general permits,"

thus leaving the procedures and substantive contours of a general permit scheme to the EPA (*see* 40 CFR 122.28 [b])². [***291] [**801] Those EPA regulations allow states to issue general permits through their SPDES programs, in accordance with federal regulatory provisions (*see* 40 CFR 123.1 [c] ["The (EPA) Administrator will approve State programs which conform to the applicable requirements of this part"]). All general permits, whether issued by the EPA or by an authorized state, must comply with the CWA and federal regulations (*see* 40 CFR § 123.25 [a]).

2 Hence, explaining 1991 legislation wherein Congress mandated that the EPA "issue final regulations with respect to general permits for stormwater discharges associated with industrial activity on or before February 1, 1992" (Pub. L. No. 102-240, December 18, 1991, 105 Stat 1914). In response, EPA implemented a general permit system for stormwater discharges from industrial activities (*see* National Pollutant Discharge Elimination System General Permits and Reporting Requirements for Storm Water Discharges Associated With Industrial Activity, 56 FR 40948-01).

Since under a general permit program the permit is not issued for individual dischargers, but rather sets forth requirements that all applicants must satisfy in order to lawfully discharge pollutants, public participation under this scheme is provided through a notice and comment period directed at [*405] soliciting public comments on the contents of the general permit (*see* 40 CFR 124.10 [requiring notice]; 40 CFR 124.11 [allowing comment and requests for a hearing]). Once the general permit is finalized and approved, applicants for whom the general permit is designed may submit a Notice of Intent (NOI) to comply with the permit and thus acquire coverage thereunder (*see* 40 CFR 122.28 [b] [2] [i]).

New York State implements a general permit program (*see* 6 NYCRR 750-1.21 [a]). As defined in the ECL, a general permit "cover[s] a category of point sources of one or more discharges within a stated geographical area which (i) involve the same or substantially similar types of operations, (ii) discharge the same types of pollutants, (iii) requires the same effluent limitations or operating conditions, (iv) require the same or similar monitoring, and (v) which will result in minimal adverse cumulative impacts" (ECL 70-0117

[6][a]; *see also* 6 NYCRR 750-1.21).

II.

A. Stormwater Pollutant Discharges

Congress amended the CWA in 1987 to provide for regulation of municipal and industrial stormwater discharges under the NPDES program (*see* 33 USC § 1342 [p]). Stormwater, from rain and snow, is a highly significant source of water pollution, because it flows across all types of surfaces and washes various contaminants into municipal storm sewer systems which then drain into local water bodies. According to the EPA,

"[s]torm water runoff continues to harm the nation's waters. Runoff from lands modified by human activities can harm surface water resources in several ways[,] including by changing natural hydrologic patterns and by elevating pollutant concentrations and loadings. Storm water runoff may contain or mobilize high levels of contaminants, such as sediment, suspended solids, nutrients, heavy metals, pathogens, toxins, oxygen-demanding substances, and floatables"

(40 CFR 122.30 [c]). Regulation of stormwater discharges are particularly challenging because of the ever present rain and snow that lead to stormwater runoff, and the fact that third-parties may be the [*406] source of illicit discharges to storm sewer systems (*see* 64 Fed Reg 68, 789 ["EPA acknowledges the [***292] [**802] need to devise a regulatory program that is both flexible enough to accommodate the episodic nature, variability and volume of wet weather discharges and prescriptive enough to ensure protection of the water resource"])).

As provided under the CWA, the NPDES permit for municipal storm sewer discharges "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions the [EPA] Administrator or the State determines appropriate for the control of such pollutants" (*see* 33 USC § 1342 [p] [3] [B] [iii]). The CWA does not define the maximum extent practicable standard. However, it appears to provide broad authority to agencies to control stormwater pollution.

In 1990 and 1999, the EPA adopted rules regulating Municipal Separate Storm Sewer Systems ("MS4s"),

which are systems designed to carry stormwater (*see* 40 CFR 122.26 [b] [8]). The problems associated with regulating small MS4s are complex because of these municipalities' limited resources, the sheer numbers and diversity of the localities impacted by the general permit system, and the opportunity for an MS4 drainage system to cross geographic boundary lines, thus implicating multiple government entities.

The federal regulations authorize state agencies to issue general permits for such discharges (*see* 40 CFR 122.26 [a] [5], 122.28 [a] [2] [i]). According to the EPA regulations, the state general permit must require that the MS4 "develop, implement and enforce a storm water management program designed to reduce the discharge of pollutants from [the] MS4 to the maximum extent practicable (MEP), to protect water quality, and to satisfy the appropriate water quality requirements of the [CWA]" (*see* 40 CFR 122.34 [a]). Further, the MS4's stormwater management program (SWMP) "must include the minimum control measures" set forth in the EPA regulations (*id.*). The EPA has also concluded that with respect to MS4s

"narrative effluent limitations requiring implementation of best management practices (BMPs) are generally the most appropriate form of effluent limitations when designed to satisfy technology requirements (including reductions of pollutants to [*407] the maximum extent practicable) and to protect water quality. Implementation of best management practices consistent with the provisions of the storm water management program required pursuant to this section and the provisions of the permit required pursuant to § 122.33 constitutes compliance with the standard of reducing pollutants to the 'maximum extent practicable'"

(40 CFR 122.34 [a]).

B. New York State's MS4 SPDES Stormwater Discharges General Permit

In 2003, DEC issued a General Permit For Stormwater Discharges for MS4s ("General Permit"), which applies to small municipalities as defined in the federal regulations (*see* 40 CFR 122.26 [16]). The General Permit was renewed for two years in 2008, and renewed again for five years in 2010³. This single General Permit currently covers 559 municipal separate storm sewer systems, statewide.

3 In anticipation of the General Permit's expiration on April 30, 2010, DEC sent a public notice of an interim draft renewal, effective for two years.

The General Permit authorizes stormwater discharges by small MS4 operators covered by the permit. Coverage is effective once the MS4 submits, and the State [***293] [**803] accepts as complete, an NOI (*see* NYS DEC SPDES General Permit, Permit No. GP-0-10-002, at 2, [hereinafter "General Permit"] ["Authorization under this SPDES General Permit is effective upon written notification from the [DEC] of the receipt of a complete NOI"]). The New York NOI is a form document filled out by an MS4. It contains the MS4's affirmances that it will comply with the general permit requirements, and that it has developed an initial SWMP to be implemented in accordance with the terms of the General Permit.

Under the General Permit scheme, an MS4

"must develop (for newly authorized MS4s, implement), and enforce a SWMP designed to reduce the discharge of pollutants from small MS4s to the [*408] maximum extent practicable ("MEP") in order to protect water quality and to satisfy the appropriate water quality requirements of the ECL and the CWA. The objective of the permit is for the MS4s to assure achievement of the applicable water quality standards"

(General Permit, "Part IV. Stormwater Management Program (SWMP)," Subsection A, "SWMP Background," at 14). The General Permit requires the SWMP contain the six mandatory minimum control measures set forth in the General Permit, and which mirror those contained in the EPA regulations. These control measures are titled: (1) public education and outreach on stormwater; (2) public participation in the development, implementation and review of the MS4's SWMP; (3) development of a program for detecting and eliminating "illicit discharges"; (4) development of a program to control construction site stormwater runoff; (5) post-construction stormwater management; and (6) pollution prevention for municipal operations (General Permit, "Part VIII. Minimum Control Measures - Traditional Non-land Use and Non-traditional MS4s," at 49-67; *see also* CFR §§ 122.34 [b] [1]-[6]).

Also, DEC has identified for each minimum control, certain mandatory "best management practices," to be

utilized by the MS4 "to prevent or reduce the pollution of waters of the state" (General Permit, "Part X. Acronyms and Definitions," at 88). The MS4's SWMP must specifically set forth "measurable goals" for each management practice (*see id.* at 95). An MS4 documents the developed, planned, and implemented SWMP elements in a SWMP Plan (Plan),⁴ which "describe[s] how pollutants in stormwater runoff will be controlled" (*id.* at 96).

4 The Plan may be created individually or with a group of covered municipalities, and is a separate document, not to be submitted with the NOI (*see* General Permit, "Part X. Acronyms and Definitions," at 96).

In addition to the minimum controls and management practices identified by the DEC, an MS4 "must comply with all applicable technology-based effluent standards or limitations promulgated by EPA pursuant to" the CWA (General Permit, "Part VI. Standard Permits and Conditions," Subsection E. "Technology Standards," at 22). Further, "[i]f an effluent standard or limitation more stringent than any effluent limitation in the SPDES general permit or controlling a pollutant not limited in the permit is promulgated or approved after the permit is [***294] [**804] issued, the SWMP [*409] plan shall be promptly modified to include that effluent standard or limitation" (*id.*)

The ECL further requires that SPDES permits "insure compliance with water quality standards adopted pursuant to state law" (ECL § 17-0811 [5]). The EPA regulations also prohibit issuance of SPDES permits that do not "ensure compliance with applicable water quality requirements of all affected States" (*see* 40 CFR §§ 122.4 [d], 123.25 [a] [1], 122.44 [1], 123.25 [a] [15]).

The CWA requires a state to establish, as effluent limitations, water quality standards for the state's water bodies by designating uses for every waterway and the amount of permissible pollutants that may be present without impairing those designated uses (*see* 33 USC § 1313 [c] [2] [A]). Where current technology-based pollution controls are ineffective to attain or retain water quality standards for a water body, then that body is considered "impaired" (*see* 33 USC § 1311 [d]). The CWA requires that the states priority rank these impaired waters, "taking into account the severity of the pollution and the uses to be made of such waters" (*see* 33 USC § 1311 [d] [1] [A]), and calculate for each the total

maximum daily load (TMDL) for the relevant pollutants that the water body may receive from all sources while still maintaining its water quality standards for any particular pollutant (*id.*). The states must set reductions for sources responsible for discharging pollutants in order for the dischargers to meet the TMDL (*see* 33 USC § 1311 [d] [1] [C]). As petitioners and the state recognize, it can take years to determine a TMDL.

For those impaired waters in New York that do not have a TMDL, the state's General Permit has established interim measures to address stormwater discharges pending designation of the applicable TMDL. In particular, effective the date the MS4 attains permit coverage, the MS4 must ensure "no net increase" in its discharge for certain pollutants, referred to as "pollutants of concern" and which are identified in the General Permit (*see* General Permit, "Part III. Special Conditions," Subsection B., "Impaired Waters," at 11, 101-108). The General Permit includes pollutant load reductions for various water bodies in the state (General Permit, "Part IX. Watershed Improvement Strategy Requirements," Subsection C., "Pathogen Impaired Watershed MS4s," at 78). Further, the MS4 must take all necessary actions to ensure future discharges do not cause or contribute to any existing violation of water quality standards. In other words, the General [*410] Permit requires the MS4 maintain the pollutant level at status quo. With respect to those water bodies for which New York has established a TMDL, the General Permit requires that the MS4 comply with the discharge reduction as "defined by the TMDL program" (General Permit, "Part III. Special Conditions," Subsection B "Impaired Waters," Subpart 2, "Watershed Improvement Strategies," at 12).

The MS4's affirmative agreement to comply with the General Permit requirements is represented in the NOI form, which consists mainly of a simplified checklist of the minimum control measures and management practices. In other words, the MS4 selects from a "menu" of required and optional management practices, and thus indicates which items the MS4 will employ to meet a given minimum control measure⁵. In order to select from [***295] [**805] the list, the MS4 need only fill in the circle corresponding to each management practice. The NOI form also provides for a narrative description of "measurable goals," with start and end dates "that will be used for each best management practice for each of the minimum control measures" (NOI at 12-13).

5 For example, with respect to the minimum control measure "Illicit Discharge Detection and Elimination," the NOI form requires the MS4 include in its SWMP the following management practices:

"Develop, implement and enforce a program to detect and eliminate illicit discharges to the MS4"

"Outfall and storm sewershed boundary mapping"

"field verify outfalls"

"outfall reconnaissance inventory"

"prohibit illicit discharges"

"Public, employees, business informed of hazards of illicit discharge"

"Adopt and enforce local law to prohibit illicit discharges"

"Adopt available mechanisms for to prohibit illicit discharges"(see NYS DEC Phase II SPDES General Permit for Storm Water Discharge from MS4s Notice of Intent, at 8 [hereinafter "NOI"]).

In addition to the required practices, the NOI lists, by short phrases, several optional management practices for the applicant to consider adopting:

"System mapping"

"address exempt non-stormwater discharges as necessary"

"Dye testing"

"shoreline surveys"

"system surveys"

(*id.* at 8).

[*411] III.

Petitioners filed this hybrid CPLR article 78 proceeding and declaratory judgment action challenging portions of the General Permit as inconsistent with

federal and state law. Petitioners requested the court remand the General Permit to DEC, with instructions that DEC modify the permit to conform with all applicable legal requirements.

Our scope of review requires that we determine whether DEC's issuance of the General Permit "was made in violation of lawful procedure, was affected by an error of law or was arbitrary and capricious or an abuse of discretion" to the extent that the permit's requirements violate state and federal law (CPLR 7803 [3]). Contrary to the majority, I conclude that DEC is in violation of applicable mandatory statutory and regulatory requirements on two grounds. First, DEC improperly grants coverage under the General Permit to an MS4, without a pre-coverage substantive review of the MS4's intended storm water discharge control measures. Second, the state's General Permit scheme fails to provide members of the public with an opportunity to request a hearing on the contents of a MS4's NOI and SWMP.

A. New York's Small MS4 General Permit

Petitioners allege that the General Permit relies on an impermissible self-regulatory system, one that is dependent on the MS4 implementing pollution controls unverified by DEC for compliance with federal and state requirements. Specifically, petitioners claim that under federal law, the General Permit must contain effluent limitations that reduce pollutant discharges to the "maximum extent practicable," and also ensure compliance with water quality standards. Petitioners explain that New York's General Permit scheme fails to ensure the adoption of legally sufficient pollution controls because DEC authorizes an MS4 to develop and implement a stormwater discharge management program, without DEC first making an administrative determination that the specific measures chosen by the MS4 will satisfy statutory pollutant reduction standards.

DEC responds that by requiring an MS4 to adopt the six minimum control measures [***296] [**806] and certain best management practices, DEC has set the benchmark for compliance with the CWA's "maximum extent practicable" standard. According to [*412] DEC, so long as the MS4 agrees to the minimum control measures and management practices, the MS4 has chosen a course of action that meets legal requirements.

The majority concludes that the General Permit is in compliance with the CWA and ECL, and that the

petitioners merely seek for this Court to hold the SPDES General Permit to the same standards applicable to a SPDES individual permit, in contravention of the state legislature's intent (*see* majority op at 27-29). Essentially, the majority adopts DEC's position that the stormwater general permit scheme is lawful because it complies with EPA stormwater regulations and ECL requirements, and reflects the legislative preference for a streamlined regulatory process which reduces or eliminates administrative burdens (*see id.* at 27).

I agree with the majority that the General Permit is designed to reduce the administrative burdens associated with the SPDES individual permit program, and that our analysis of petitioners' claims must consider that these are different permitting schemes. Where I disagree with the majority is with its conclusion that the state's stormwater General Permit complies with the CWA and ECL when it does no more than allow those who seek to discharge pollutants to determine for themselves the pollution controls that satisfy the federal standard, and as a consequence insulate themselves from liability should they fall short of the federal mandate to reduce discharges to the "maximum extent practicable."

DEC's own description of the General Permit and its regulatory efforts establishes that DEC has created an impermissible scheme that allows pollution without first ensuring that the MS4's pollution controls comply with the CWA and ECL. While the General Permit sets forth certain control measures and management practices that every MS4 must incorporate as part of its pollutant discharge control program, the MS4 is wholly responsible for the task of identifying, developing and implementing the activities and measurable goals necessary to achieve the reduction of stormwater discharges to the "maximum extent practicable." This is not itself unlawful because DEC could reasonably conclude there are administrative and substantive benefits associated with allowing the state's several hundred municipalities to develop pollution control programs designed to address local circumstances. However, by leaving to an MS4 the development and adoption of its pollutant discharge controls, and granting General Permit coverage [*413] without DEC having reviewed the MS4's program to ensure compliance with the CWA and ECL, the state has abdicated its essential regulatory role, in violation of the CWA and ECL.⁶

6 DEC contends it reviews every NOI before

accepting it. However, DEC can point to only three instances in which it has rejected an NOI under the 2010 General Permit. In all three, the offending MS4 failed to identify certain best management practices that it is implementing or intends to implement. Stated differently, DEC has only rejected NOIs where the MS4 left portions of the NOI's menu blank. Despite DEC's contention to the contrary, this "review" hardly amounts to anything more than a "rubber stamp."

The mechanics of the General Permit scheme are undisputed. The General Permit replaces the individual permit system with a single permit applicable to a class of dischargers. New York's General Permit [***297] [**807] contains the six minimum control measures identified by the EPA as appropriate to reducing pollutant discharges to the maximum extent practicable. DEC contends that it has determined that these measures can be achieved by application of certain best management practices and has included those in the General Permit, grouped according to their corresponding control measure. Thus, the measures, as expanded by the specified management practices, are the foundation of the DEC's approach to ensuring an MS4's reduction of stormwater pollutant discharges within the mandates of the CWA.

In directing an MS4 to employ these control measures and management practices in order to achieve compliance with the "maximum extent practicable" standard, the General Permit does little to explain the standard, other than to state that if an MS4 utilizes all the applicable management practices it will satisfy the federal standard. However, the text of the controls and management practices lacks the type of quantitative explication of objective standards which an MS4 can apply to assess whether its stormwater system's protocols actually reduce pollutant discharges to a legally sufficient level.

For example, the minimum control measure titled "Illicit Discharge Detection and Elimination," which refers to mixed stormwater discharges such as sanitary sewage, garage drain effluent, and waste motor oil, requires as a management practice that an MS4 "develop, implement and enforce a program to detect and eliminate illicit discharges to the MS4" (*see* General Permit, "Part VII. Minimum Control Measures - Traditional Land Use Control," Subsection A "Traditional Land-Use Control

MS4 Minimum Control Measures," Subpart [*414] 3 "Illicit Discharge Detection and Elimination [IDDE] - SWMP Development/Implementation, at 34-35). This, of course, says nothing more than that the MS4 must establish a program to comply with the law. This is but one example of the vague management practices that provide little by way of instruction on how an MS4 develops and implements specific controls to achieve sufficient reduction of discharge levels.

Each and every one of those six control measures requires that the MS4 "develop (for newly authorized MS4s), record, periodically assess, and modify as needed, measurable goals," and also that the MS4 "select and implement appropriate ... [activities or best management practices] and measurable goals to ensure the reduction of all [pollutants of concern] in stormwater discharges to the [maximum extent practicable]" (General Permit, "Part VII. Minimum Control Measures - Traditional Land Use Control" at 29, 33, 35, 39, 46). As the General Permit requires, the SWMP "describe[s] the best management practice/measurable goal, "identif[ies] time lines/schedules and milestones for development and implementation"; includes "quantifiable goals to assess progress over time"; and describes "how the covered entity will address pollutants of concern" (General Permit, "Part X, Acronyms and Definitions," at 95). These are hardly the type of "highly specific" controls DEC claims them to be.

While the General Permit references other guidance, the guidance is non-binding. Moreover, it is still the case that the MS4 could choose to ignore the guidance, believing it has complied with the maximum extent practicable standard only to learn later that it has violated the CWA. This is not a merely speculative assessment of the General Permit structure because as the permit itself states

"[i]f a covered entity chooses only a few of the least expensive methods, it is [***298] [**808] likely that MEP has not been met. On the other hand, if a covered entity employs all applicable BMPs except those where it can be shown that they are not technically feasible in the locality, or whose cost would exceed any benefit to be derived, it would have met the standard. MEP required covered entities to choose effective BMPs, and to reject applicable BMPs only where other effective BMPs will serve the same purpose, [*415] the BMPs would not be technically feasible, or the cost would be prohibitive"

(General Permit, "Part X. Acronyms and Definitions," at 91). As this suggests, something less than adoption of all of the management practices may comply with the maximum extent practicable standard, but when that would be the case and under what circumstances is uncertain and subject to the particularities of the MS4.

More significant than the opportunity for an MS4 to select additional management practices -- or even substitute mandatory best management practices with management practices the MS4 determines on its own are better suited or economically feasible, and yet still designed to ensure achieve reduction to the maximum extent practicable -- is the fact that, even if the mandatory management practices were clearer and specific, the General Permit does not, alone, set the limitations that each MS4 will implement. Instead, DEC delegated that task to the MS4. The General Permit requires that in order to utilize the measures and management practices, the MS4 must determine the details and logistics of the management practices it has selected. Thus, the General Permit scheme depends on each MS4's determination and eventual adoption of the most efficacious practices that the MS4 will apply to achieve the statutory goal of pollutant discharge reductions to the maximum extent practicable.

To that end, the General Permit specifically requires that the MS4 develop and implement a SWMP "designed to reduce the discharge of pollutants from the small MS4 to the maximum extent practicable [], to order to protect water quality, and to satisfy the appropriate water quality requirements of the ECL and [CWA]" (*see* General Permit, "Part IV. Stormwater Management Program (SWMP) Requirements," Subsection A. "SWMP Background," at 14). Although the General Permit requires the SWMP contain the six measures and the mandatory management practices, the SWMP does more than merely recite them. Rather, the SWMP expounds upon them, and thus reflects the MS4's determination of the appropriate limits necessary to achieve CWA compliance.

That determination is set forth in the "measurable goals" the MS4 develops for each of the management practices. These goals are intended to "help the covered entities assess the [*416] status and progress of their program" (General Permit, "Part X, Acronyms and Definitions," at 95). They "should reflect the needs and characteristics of the covered entity and the areas served

by its small MS4. Furthermore, the goals should be chosen using an integrated approach that fully addresses the requirements and intent of the [minimum control measures]" (*id.* at 91).

This is not a static process, because as the General Permit indicates, "[t]he assumption is that the program schedules would be created over a 5 year period and goals would be integrated into that time frame" (*id.*). Particularly troubling is the fact that DEC does not review the SWMP or the Plan. In fact, it appears DEC has gone to great lengths to avoid formal consideration of both by prohibiting inclusion of the SWMP with the MS4's NOI, and by allowing up to 3 years after the effective [***299] [**809] date of permit coverage for the MS4 to develop and implement the Plan.

If, as DEC argues, all that is required to result in discharge reductions sufficient to comply with the CWA is the employment of the minimum control measures and the mandatory management practices, there would be no need for municipal development and articulation of "activities," "measurable goals" and "other techniques." In reality, the MS4 is left to details where none have been provided, and to craft a SWMP and Plan to guide the implementation of its storm water discharge reduction efforts. Notably, DEC anticipates that those efforts will change over time, and thus allows the Plan to be developed and implemented up to three years after the MS4 gains coverage under the General Permit.

The majority concludes that "[t]here is no doubt that the 2010 General Permit complies with EPA's 1999 regulations" (majority op at 18). However, those very same federal regulations for small municipal separate storm sewer systems were deemed to violate the CWA in *EDC* because they failed to provide for meaningful administrative review (*see* 344 F3d 832, 856 [9th Cir 2003]). In that case, the Ninth Circuit Court of Appeals considered a challenge to the EPA's Storm Water Phase II Rule, under which small MS4s were authorized by an NPDES general permit to immediately commence the discharge of storm water after submitting an NOI. Unlike the "traditional general permitting model," the court explained, "the Phase II Rule requires that each NOI contain information on an [*417] individualized pollution control program that addresses each of the six general criteria specified in the Minimum Measures" (*id.* at 853). Under the Rule, the EPA was not required to conduct a review of each NOI prior to discharge

authorization, as it is required to conduct before granting an application for an individual permit (*id.* at 854-856). The Ninth Circuit held that the permitting scheme violated 33 USC § 1342 (p) (3) (B) (iii) because "nothing prevents the operator of a small MS4 from misunderstanding or misrepresenting its own stormwater situation and proposing a set of minimum measures for itself that would reduce the discharges by far less than the maximum extent practicable" (*EDC*, 344 F3d at 855). Moreover, "in order to receive the protection of a general permit, the operator of a small MS4 needs to do nothing more than decide for itself what reduction in discharges would be the maximum practical reduction. No one will review that operator's decision to make sure that it was reasonable, or even good faith" (*id.*). As a consequence, the "EPA would allow permits to issue that would do less than *require* controls to reduce the discharge of pollutants to the maximum extent practicable" (*id.* [emphasis in original]). Accordingly, the court remanded that aspect of the Rule.

The Second Circuit applied similar reasoning to reject EPA's NPDES permitting scheme, albeit in a case involving different water pollutants, namely emissions from concentrated animal feeding operations (CAFOs) proscribed by the EPA's CAFO Rule. In *Waterkeeper*, the Circuit Court concluded that the CAFO Rule did not require NPDES permitting authorities to review the management plans to ensure that the plans were developed and implemented so as to reduce discharges as required by the federal regulations (*Waterkeeper*, 399 F3d at 500).

New York's General Permit similarly fails for the reasons articulated by the Circuit Courts in *EDC* and *Waterkeeper*. Although the Appellate Division concluded that the General Permit "includes[s] a variety [***300] [**810] of enforcement measures that are sufficient to comply with the maximum extent practicable standard" (*Natural Resources Defense Council, Inc.*, 120 AD3d at 1243), that is besides the point because the issue is not the propriety of the measures or the management practices, [*418] because those alone do not establish the details of any particular MS4's stormwater discharge program. Indeed, petitioners do not challenge DEC's choice of minimum controls or management practices. Rather, they challenge DEC's failure to assess for legal adequacy the pollutant discharge proscriptions actually developed by the municipalities, and intended to be applied by the MS4s.

The fact that DEC provides a menu of management practices cannot save the General Permit scheme because "nothing requires that the combination of items that the operator of a small MS4 selects from this 'menu' will have the combined effect of reducing discharges to the maximum extent practicable" (*EDC*, 344 F3d 832, n 32). Moreover, it is not the amount of choices that matters here--as the DEC suggests by arguing that it imposes forty four mandatory management practices--because more practices are meaningless if there is no assessment as to whether the MS4 understands how those practices work and how to apply them to ensure pollutant discharge reduction to the level required by the CWA. This is certainly the case here where the CWA's maximum extent practicable standard is intentionally undefined, and where DEC's management practices are vague and generalized, often redundant of the minimum controls.

The majority appears to marginalize the decision in *EDC*, characterizing it as part of a Federal Circuit Court split (see majority op at 25)⁷. However, in *EDC*, the Ninth Circuit vacated the EPA regulations to the extent they did "allow permits to issue that would do less than *require* controls to reduce the discharge of pollutants to the maximum extent practicable" (*EDC*, 344 F3d at 855-56, citing 64 Fed. Reg. at 68753). Rather than a division among the Circuit Courts, the Ninth Circuit decision is the only Circuit decision on the validity of the regulations' content. While the United States Supreme Court is the final word on the proper interpretation of the CWA and the EPA regulations, that Court has chosen not to take up the case (*see Texas Cities Coalition on Stormwater v E.P.A.*, 541 U.S. 1085, 124 S. Ct. 2811, 159 L. Ed. 2d 246 [2004] [denying petition for writ of certiorari]). Moreover, the Ninth Circuit decision has affected the EPA's application of the regulations. Indeed, the EPA issued post-EDC guidance to Water [*419] Management Division Directors stating that "[t]he permitting authority will need to conduct an appropriate review of Phase II MS4s' NOIs to ensure consistency with the permit."⁸

⁷ The majority treats *Waterkeeper* similarly, relegating it to a footnote because that decision, "however interpreted, does not eliminate the circuit split" (*see* majority op at 25 n 14).

⁸ This guidance pre-dates the Seventh Circuit's decision in *Texas Ind. Producers and Royalty Owners Assn. v E.P.A.* (410 F3d 964 [7th Cir

2005]) which held, contrary to the Ninth Circuit, that NOIs are not subject to the CWA public participation requirements. However, the EPA guidance has not been rescinded and there is nothing to suggest the obsolescence of the guidance with respect to agencies ensuring consistency with the permit and compliance with the CWA.

Even assuming we could simply ignore that the EPA regulations have been vacated [***301] [**811] in relevant part, notwithstanding the majority's conclusion that the state's General Permit "concededly" complies with the EPA regulations, the fact is that the EPA regulations require implementation of best management practices consistent with the SWMP (*see* 40 CFR 122.34 [a] ["Implementation of best management practices consistent with the provisions of the storm water management program required pursuant to this section and the provisions of the permit required pursuant to § 122.33 constitutes compliance with the standard of reducing pollutants to the 'maximum extent practicable'"]). Therefore, so long as DEC allows General Permit coverage to an MS4 without ensuring the intended consistency between management practices and the individualized protocols set forth in the SWMP, the state is in violation of the CWA (*see* 33 USC § 1342 [p] [3] [B] [iii] [providing that MS4 permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants"]]).

It is undeniable that DEC has made efforts to adopt a general permit scheme that complies with the CWA and ECL, and which provides an administratively feasible approach to the difficult task of reducing stormwater pollutant discharges. Nevertheless, DEC's current approach is legally impermissible. Of course, it is for the state, and not the judiciary, to establish the state's review and assessment protocols (*see Akpan v Koch*, 75 NY2d 561, 570, 554 N.E.2d 53, 555 N.Y.S.2d 16 [1990] ["courts may not substitute their judgment for that of the agency for it is not their role to weigh the desirability of any action or to choose among alternatives"]). It very well [*420] may be that the state determines, as have other jurisdictions,⁹ that review of the SWMP and the Plan is but one way by which the state may

comprehensively and expeditiously comply with its regulatory mandate. How best to address this issue should be left to New York.

9 Texas and Mississippi, for example, require the submission of a full SWMP contemporaneously with the filing of an NOI for substantive review (*see* Texas Commission on Environmental Quality, General Permit to Discharge Under the Texas Pollutant Discharge Elimination System, § II.E.1 [2013] available at https://www.tceq.texas.gov/assets/public/permitting/stormwater/tx_r040000_issued_permit.pdf [accessed April 13, 2015]; Mississippi Department Environmental Quality, Separate Storm Sewer System (MS4) General Permit, Condition S-1. [2009] available at [http://www.deq.state.ms.us/mdeq.nsf/pdf/epd_MS4PhaseIIStormWaterGeneralPermit/\\$File/22General.pdf?OpenElement](http://www.deq.state.ms.us/mdeq.nsf/pdf/epd_MS4PhaseIIStormWaterGeneralPermit/$File/22General.pdf?OpenElement) [accessed April 14, 2015]).

B. Public Participation Requirements

Petitioners argue that DEC violates statutory public participation requirements by failing to provide an opportunity for public comment and to request a public hearing on a MS4's NOI and SWMP, prior to DEC's authorization of coverage under the General Permit. DEC currently provides a full public notice and comment period and an opportunity to request a public hearing on the General Permit, and DEC also affords an additional 28 day pre-coverage public comment period with respect to each NOI (*see* General Permit, "Part II. Obtaining Permit Coverage," at 8). The majority concludes this meets all applicable legal requirements. I disagree and would find that the CWA and ECL require more pre-coverage public participation. Specifically, because the NOI and SWMP must contain the MS4s' pollution controls, and the SWMP must be [***302] [**812] developed in advance of the NOI, which is then submitted to obtain coverage under the General Permit, DEC must provide an opportunity to request a public hearing for any particular NOI and SWMP.

Congress explicitly sought to encourage public participation in the development and implementation of the nation's water pollution control measures, and required that the EPA and the states provide for, encourage, and assist with "public participation in the development, revision and enforcement of any regulation,

standard, effluent limitation, plan or program established by the [EPA] or any State" (33 USC § 1251 [e]). The intended transparency of the process is reflected in the CWA [*421] requirement that permit applications, and the NPDES and SPDES permits themselves be made public (*see* 33 USC § 1342 [j]). With respect to the demand for administrative hearings, the CWA provides that the EPA may issue a permit "*after* an opportunity for public hearing" (*see* 33 USC § 1342 [a] [1] [emphasis added]).

The ECL also mandates public participation with respect to SPDES coverage. State law requires "[p]ublic notice of a complete application for a SPDES permit" (ECL § 17-0805 [1] [a]), which shall include "a statement that written comments or requests for a public hearing on the permit application ... may be filed by a time and at a place specified" (ECL 17-0805 [a] [ix]). The public comment shall last "not less than thirty days following the date of the public notice . . . during which time interested persons may submit their written views with respect to the application and the priority ranking of the permit" (ECL § 17-0805 [1] [b]).

Petitioners argue that the public should have the opportunity to request a hearing on the contents of the NOI and SWMP because both contain the MS4's pollution controls. Petitioners are correct that an MS4 must identify and list in the NOI its chosen management practices, and it must include in the SWMP the controls to reduce the discharge pollutants in accordance with the maximum extent practicable standard. Thus, the NOI and SWMP not only affirm that the MS4 will comply with the General Permit's terms, but they also explain how the MS4s will meet legal requirements, based on the localities' unique circumstances. Indeed, to ensure for itself that an MS4 understands its duties and obligations, the DEC must refer to the NOI and SWMP.

Here, DEC issued a General Permit for the specific purpose of allowing storm water pollutant discharges by a covered MS4, where an MS4 has agreed to meet conditions set forth in the CWA, ECL, federal and state regulations, and the General Permit. A cursory review of the General Permit makes clear that it is not specific to any particular MS4, but rather it is generic, intended to set forth the minimum requirements identified by DEC, which must be complied with by every MS4 seeking coverage under the General Permit. However, as DEC has vigorously contended, General Permit coverage is not

automatic, but requires that the MS4 submit an NOI which DEC must then accept as complete.

[*422] According to the General Permit, the NOI affirms that a SWMP has been developed. As the parties concede, the NOI and SWMP contain what DEC considers to be the mandatory limitations and measurable goals an MS4 proposes to implement in order to ensure stormwater pollutant discharge reduction to the maximum extent practicable, as required by the CWA. Clearly, then, submission of a completed NOI, based as it is on an initial SWMP, is the MS4's entree to the General Permit system, and is a necessary step to securing authorization to lawfully discharge pollutants in accordance with the [***303] [**813] CWA and ECL. If the NOI, and the prerequisite SWMP, do not constitute a permit application, then what other avenue does an MS4 have to secure permit coverage and authorization to lawfully discharge pollutants? The NOI and SWMP constitute an application in everything but name.

The DEC argues that the CWA and ECL public hearing requirements apply only to individual permit applications, and that public participation requirements are satisfied because the public has the opportunity to submit comments and request a public hearing regarding the General Permit itself. The EPA similarly argued in *Texas Ind. Producers and Royalty Owners Assn. v E.P.A.* (410 F3d 964 [7th Cir 2005]). In that case, the Seventh Circuit Court of Appeals agreed with the EPA that the CWA did not require the agency to provide a comment period or an opportunity to request a public hearing on NOIs and Storm Water Pollution Prevention Plans (SWPPP) submitted under the EPA's "Final National Pollutant Discharge Elimination System General Permit for Storm Water Discharges From Construction Activities." The Court concluded that the CWA was ambiguous as to whether NOIs and SWPPPs are "permits" or "permit applications", and in accordance with *Chevron, U.S.A., Inc. v Natural Resources Defense Council, Inc.* (467 U.S. 837, 104 S. Ct. 2778, 81 L. Ed. 2d 694 [1984]), judicially deferred to the EPA's interpretation of those statutory terms (*see Texas Ind. Producers*, 410 F3d at 978). The Court accepted as reasonable EPA's argument that individual public hearings for NOIs and SWPPPs would eviscerate the administrative efficiency of the general permit scheme (*id.*).

In contrast, in *EDC*, the Ninth Circuit had previously

rejected the EPA's argument that the CWA public hearing opportunity requirement did not apply to NOIs because they are not "permits". Instead, the Ninth Circuit held that the "NOI establishes what the discharger will do to reduce discharges to [*423] the 'maximum extent practicable'" and therefore is "functionally equivalent to a detailed application for an individualized permit" (344 F3d at 853).

The majority contends that the federal courts will have to resolve this "circuit split," and concludes that DEC's general permit scheme is permissible because it complies with the EPA's regulations and New York's law does not require more. I disagree because the majority's conclusion is unsupportable on the record before us.

Notably, the EPA's position in both cases is counter to the EPA's own description in its stormwater regulations that a permit application is inclusive of "a notice of intent for coverage under a general permit" (40 CFR 122.34). This inconsistently alone undermines the state's argument that the NOI is something other than a permit or permit application.¹⁰

10 The majority holds that while 40 CFR 122.34 "does not appear facially consistent" with the EPA's position in *EDC* and *Texas Ind. Producers*, that section of the EPA's regulations is part of a "question and answer" format intended to clarify requirements applicable to regulated small MS4s (*see* majority op at 25 n 15). Therefore, according to the majority, it is for the federal courts to determine whether the regulations are inconsistent with the EPA's position in those federal cases. However, whether the EPA has taken a position at odds with what DEC now asserts is the correct and intended interpretation of the federal regulations is, of course, relevant to this Court's analysis of DEC's defense to petitioners' claims. Turning to the regulations, it is clear from the text of 40 CFR 122.34 (d) (1) that a small MS4's NOI is a general permit application. Notwithstanding the majority's word play, there is no avoiding that the federal regulations are inconsistent with the EPA's position in *EDC* and *Texas Ind. Producers*.

[***304] [**814] Additionally, the majority's "hands-off" approach would leave this court with no authority to consider the legality of state agency conduct. That is most certainly not the law, as made plain by this Court's administrative law jurisprudence (*see Seittelman*

v Sabol, 91 NY2d 618, 625, 697 N.E.2d 154, 674 N.Y.S.2d 253 [1998] [invalidating state regulation that was "inconsistent with the controlling Federal statute it was intended to implement"]; *see also Kurcsics v Merchants Mut. Ins. Co.*, 49 NY2d 451, 459, 403 N.E.2d 159, 426 N.Y.S.2d 454 [1980][the Court affords an agency *no* deference if its interpretive regulations "run[] counter to the clear wording of a statutory provision"]; *Raritan Dev. Corp. v. Silva*, 91 NY2d 98, 689 N.E.2d 1373, 667 N.Y.S.2d 327 [1997] [holding that "when an [agency] interpretation is contrary to the plain meaning of the statutory language," the Court may overrule and "decline to enforce an agency's conflicting application thereof"]; *Matter of New York Statewide Coalition of Hispanic Chambers of Commerce v New York City Dept. of [*424] Health & Mental Hygiene*, 23 NY3d 681, 992 N.Y.S.2d 480, 16 N.E.3d 538 [2014] [striking down the New York City Board of Health's restriction on soda portions as exceeding its regulatory authority given by the legislature)]¹¹. Moreover, absent binding precedent from the United States Supreme Court, there is no legal impediment to this Court interpreting federal law (*see Flanagan v Prudential-Bache Sec., Inc.*, 67 NY2d 500, 506, 495 N.E.2d 345, 504 N.Y.S.2d 82 [1986] ["When there is neither decision of the Supreme Court nor uniformity in the decisions of the lower Federal courts . . . a State court required to interpret [a] Federal statute has the same responsibility as the lower Federal courts and is not precluded from exercising its own judgment . . ."]).

11 The majority argues that DEC, as the permitting agency, must follow the EPA's interpretation of the CWA, but contends that I suggest every state's high court may second-guess the EPA (*see* majority op at 27 n 16). However, my point is not that we can decide counter to the EPA, but rather that the Ninth Circuit already has, and we cannot ignore that fact or the Ninth Circuit's analysis, even if DEC and the majority would have it otherwise.

There is also no support for the majority's concern that our review poses a potential "impediment to implementation of a coherent nationwide NPDES permitting scheme" (*id.*). The EPA provides that while SPDES permits must comply with federal regulations and the CWA, "[n]othing in the [regulations] precludes a State from . . . [a]dopting or enforcing requirements which are more stringent or more extensive than

those required [by the EPA]" (40 CFR 123.1 [h] [i] [1]). Nor is there a legal impediment to "[o]perating a program with greater scope of coverage than that required [by the federal regulations]" (40 CFR § 123.1 [h] [i] [2]). Indeed, the EPA expressly requires MS4s to "comply with any more stringent effluent limitations in [their State-issued] permit" (40 CFR 122.34 [e] [1]). It would appear, then, that differences among the Circuit Courts are the more likely obstacles to national uniformity.

We should reject DEC's argument because under the general permit scheme the NOI and SWMP replace an individual permit application. To adopt approvingly DEC's position, and EPA's argument in *Texas Ind. Producers*, fails to sufficiently interrogate the general permit regulatory scheme, or fully appreciate the role of the general public in the general permitting process. Moreover, the court's conclusion that requiring public hearings for each individual NOI and SWPPP would be inconsistent with Congressional intent is not supported by the language of the CWA. The stated purpose of that statute is to restore and maintain the integrity of the [***305] [**815] nation's waters, eliminate the discharge of pollutants into navigable waters, and ensure public participation in the development and implementation of any "plan or program" administered under the CWA by the states. While there may be administrative efficiencies [*425] supporting the use of a general permit scheme, they do not outweigh the explicit objectives and goals of the CWA to protect the country's waters. In any event, because the EPA regulations allow for individual permits even where a general permit is in place, the efficiency argument propounded by the DEC and EPA is underwhelming (*see* 40 CFR 122.28 [b] [3] [i]).

What is actually counter to the intent of the CWA is to provide an opportunity to request a public hearing in cases involving individual permits, while denying the

same under a statewide general permit scheme involving pollutant discharges from hundreds of MS4s. The latter potentially implicates the integrity of local water bodies more significantly than the actions of any single polluter, and therefore requires the type of public scrutiny and engagement envisioned by the CWA (*see* 33 USC § 1342 [a] [1] [the EPA may issue a NPDES permit only "after opportunity for public hearing"]).

Therefore, DEC's determination that neither the CWA nor the ECL requires an opportunity for a public hearing on the NOIs and SWMPs, prior to DEC granting permit coverage, ignores the obvious purpose and role of these documents, and undermines the CWA's public participation requirement. As such, DEC's interpretation is not entitled to deference, and is, for the reasons I have stated, arbitrary and capricious. Therefore, the NOI and SWMP should be subject to statutory public participation requirements that include the opportunity to request a public hearing.

III.

Accordingly, the 2010 General Permit does not provide for adequate review of NOIs or meaningful public participation in accordance with the CWA. Thus, I would modify the Appellate Division order to remit the Permit to DEC for compliance. I agree with the majority that petitioners' remaining contentions are without merit (*see* majority op at 30).

* * * * *

Order, insofar as appealed from, affirmed, with costs. Opinion by Judge Read. Judges Pigott, Abdus-Salaam and Stein concur. Judge Rivera dissents in part in an opinion in which Chief Judge Lippman and Judge Fahey concur.

[**981] [*156] Opinion by Nazarian, J.

TABLE OF CONTENTS

COUNSEL: Argued by: Nancy W. Young (Douglas F.

I. BACKGROUND
A. Statutory Background.
1. The Clean Water Act and federal permit requirements.
2. The role of the States and Maryland's permit requirements.
B. The Permit.
C. The Proceedings.
II. DISCUSSION
A. Standard of Review.
B. The Permit Is Subject To §§ 1342, Not §§ 1311.
C. The Permit Does Not Comply With State Law Regarding The Permitting Process.
1. The Permit does not give meaningful opportunity for notice and comment, and eludes judicial review.

a. The Environment Article requires that the public have an opportunity for notice and comment.
b. Specific shortcomings of the Permit
i. The public can't comment about decisions that have yet to be made.
ii. The Permit is not specific enough.
iii. The Permit overrelies on incorporation by reference.
iv. The Permit contains no meaningful deadlines or ways to measure compliance.
2. The agency decision to issue the Permit was unsupported by substantial evidence with respect to TMDLs and the twenty percent requirement.
a. The twenty percent requirement.
b. The TMDL requirement.

[*157]

This case arises out of protracted litigation over the terms of the stormwater management [***2] permit (the "Permit") that the Maryland Department of the Environment ("the Department") issued to Montgomery County (the "County") in 2010. The County and Department appeal the decision of the Circuit Court for Montgomery County remanding the Permit to the Department "for further proceedings to allow the agency to comply with Maryland law, the Clean Water Act, and federal regulations consistent with" the court's interpretation of the governing law and regulations. We agree that the Permit must be revised, and so we affirm the circuit court's decision to remand. Importantly, though, we hold that the Department and the County had the law right: the Permit falls short not for failing to hold the County to State water quality standards, as the challengers urge,¹ but because it did not [**982] afford an appropriate opportunity for public notice and comment and because it lacks crucial details that would explain the County's stormwater management obligations.

1 The challengers include Anacostia Riverkeeper and other self-described "local and regional environmental groups dedicated to restoring and protecting waters that flow through Montgomery County," who challenged the Permit based on a number of [***3] concerns including those we will describe below.

I. BACKGROUND

Stormwater is what the word suggests: water from rain- or other storm events that, as it (over)flows into

streams and [*158] rivers, picks up and carries large quantities of pollutants that evade Mother Nature's filtration process. The pollutants can include anything from road detritus--trash, road salts, grease, and other materials from cars--to pesticides, to natural materials, such as fecal bacteria from animal waste.

The County collects stormwater through a municipal separate storm sewer system (the County's is big enough to qualify as an "MS4," a term we will define later) that covers a nearly-500-square-mile area. After it falls from the sky, stormwater flows, in higher volumes and at higher speeds, through natural outfalls or through the County's sewer pipes and wastewater treatment facilities, then into the Middle Potomac and Patuxent River basins. Everyone agrees that this is bad for the rivers: in its comments during the Permit application process, the Department recognized that interested parties saw stormwater as "the ' . . . biggest form of pollution affecting the Anacostia River. . . ' carrying trash and accumulated pollutants [***4] and causing flooding in low-lying areas of various watersheds throughout the County. . . . It becomes fairly easy for all organizations, individuals, and government agencies to agree that urban stormwater is a problem that must be addressed." And just as everything else in life flows downhill, the pollution (and corresponding degradation of water quality) flows downstream into the waters of the District of Columbia and Prince George's County, and eventually into the Chesapeake Bay.

The Clean Water Act (the "Act"), along with its Maryland counterpart and overlapping layers of regulations,² regulates and seeks to limit water pollution from stormwater runoff into municipal sewer systems

that discharge into rivers. This case involves a successful challenge to the terms of the stormwater permit the Department issued to the County in 2010. We begin by discussing the statutory requirements, then walk [*159] through the process the County went through with the Department to obtain the Permit, then summarize the proceedings that culminated in this appeal.

2 Despite our best efforts to avoid jargon and acronyms, the Act, its state law counterpart, and the various regulations rely on them in abundance. Fortunately, [***5] the law, the parties, and the record all seem to use terms consistently, and we will follow suit.

A. Statutory Background.

1. The Clean Water Act and federal permit requirements.

The Act was passed in 1972 to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters," 33 U.S.C. § 1251(a). The Act presumptively prohibits the discharge of pollutants, *id.* § 1251(a)(1), and renders any discharge unlawful, *id.* § 1311(a), unless the discharging party obtains a permit under the "National Pollutant Discharge Elimination System" ("NPDES"). *Id.* § 1342(a)(1).

As initially drafted, § 1311 limited the amount of pollutants that could enter the water from a particular source. The Act [***983] imposes "effluent limitations" on discharges from any "point source" (a term we will get to momentarily) by requiring the source to use "the best practicable control technology ["BPT"] currently available." 33 U.S.C. § 1311(b)(1)(A)(i). When first enacted, the Act required effluent limitations to be in place by July 1, 1977. *Id.* § 1311(b)(1)(A). Section 1311 also required compliance with any "more stringent limitation, including those necessary to meet water quality standards . . . established pursuant to any State law or regulations." *Id.* § 1311(b)(1)(C) (emphasis added); *see also Defenders of Wildlife v. Browner*, 191 F.3d 1159, 1163 (9th Cir. 1999) (noting too that "although the [***6] BPT requirement takes into account issues of practicability," the EPA nonetheless requires the level of controls necessary to "implement existing water quality standards" (quoting *Rybachek v. EPA*, 904 F.2d 1276, 1289 (9th Cir. 1990))).

At its inception, the Act directed its efforts primarily

at the most obvious "point source" pollution. The term "point source" was defined within the Act in a technical way that aimed to capture a broad universe of potential pollution sources:

[*160] The term "point source" means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged.

33 U.S.C.A. § 1362(14); *see also* 40 C.F.R. § 122.2. The parties don't dispute that a sewage system like the County's qualifies as a network of point sources, but that point has not been altogether obvious since the Act came about. The Act did not purport initially to regulate stormwater discharge, and in fact exempted stormwater separate from industrial or commercial activity. *See Natural Resources Defense Council, Inc. v. Costle*, 568 F.2d 1369, 1372 n.5, 186 U.S. App. D.C. 147 (D.C. Cir. 1977) (citing 40 C.F.R. § 125.4 (1975)); *see also* Jeffrey G. Miller, *The Supreme Court's Water Pollution Jurisprudence: Is the [***7] Court All Wet?*, 24 Va. Env'tl. L.J. 125, 131-32 (2005); *The Clean Water Act Handbook* at 167 (Mark A. Ryan ed. 2011) ("Stormwater runoff in the early days of the NPDES program was treated as a diffuse source of *nonpoint source pollution*. This may have seemed logical because most runoff cannot efficiently be controlled using the strict end-of-pipe effluent limitations that are effective in regulating traditional industrial and municipal discharges." (emphasis added)). But in 1987, Congress amended the Act to bring stormwater discharge specifically within its reach, and since then storm sewer discharge has been treated as a point source and covered by the NPDES permit requirements. *Natural Res. Def. Council v. EPA*, 966 F.2d 1292, 1296 & n.5 (9th Cir. 1992).³ *See* 33 U.S.C. § 1342(p)(3)(B); [*161] *see also Browner*, 191 F.3d 1159. The amendments applied discharge limitations to MS4 systems that serve a population of [***984] 100,000 or more,⁴ 33 U.S.C. § 1342(p)(2)(C), (D):

Permits for discharges from municipal storm sewers . . . (iii) *shall require controls to reduce the discharge of pollutants to the maximum extent*

practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.

33 U.S.C. §1342(p)(3)(B) (emphasis added).

3 The amendments came about in part because of a 1977 court decision that [***8] held that the EPA lacked the authority to exempt *any* particular category of point source (such as MS4s) from the Act's reach. *See Natural Res. Def. Council v. Costle*, 568 F.2d 1369, 1379, 186 U.S. App. D.C. 147 (D.C. Cir. 1977) ("[T]he existence of uniform national effluent limitations is not a necessary precondition for incorporating into the NPDES program pollution from . . . storm water runoff point sources. The technological or administrative infeasibility of such limitations may result in adjustments in the permit programs, . . . but it does not authorize the Administrator to exclude the relevant point source from the NPDES program.").

4 The County's system here falls within that description.

The Act also raises standards for permits where the "effluent limitations [imposed by § 1311] are not stringent enough to implement any water quality standard applicable to such waters." *Id.* § 1313(d). A state must establish a total maximum daily load ("TMDL") for those pollutants that keep it from meeting water quality standards; the TMDL "is the sum of pollutants a body of water can absorb from all point and non-point sources, plus a margin of safety, and still meet water quality standards for its designated uses." *Assateague Coastkeeper v. Maryland Dep't of the Env.*, 200 Md. App. 665, 675 n.8, 28 A.3d 178 (2011). So, for example, the EPA has issued a TMDL for the Chesapeake Bay that applies expressly [***9] to this Permit, in addition to other local TMDLs. As the Chesapeake Bay Foundation explains it,⁵ "Maryland's ability to comply with the Bay TMDL pollution reduction requirements relies heavily on reducing pollutants from urban stormwater," and "*the ability to track and confirm progress*" on that reduction "through public participation, monitoring, and [*162] setting and using interim benchmarks *is of the utmost importance*" (emphasis added).

5 The Foundation sought permission to file an *amicus curiae* brief and we granted its request on August 15, 2014.

The "maximum extent practicable" language in § 1342 leaves altogether unclear, though, who *deems* a measure maximally practicable. And although that concept differs from the prior standard, and relieves municipal systems of the burden to meet specific water quality standards (a burden that still applies to private sources), it leaves open whether MS4s also must comply with the "effluent limitations" (and concomitant BPT standard) in § 1311. Add to this mix the state environmental regulations we discuss next, and the picture (like the water) becomes murkier.

2. The role of the States and Maryland's permit requirements.

The Act recognizes the "responsibilities and [***10] rights" of the various states to respond to System requirements, *id.* § 1251(b), and the EPA has delegated to Maryland the right to issue permits, *see Assateague Coastkeeper*, 200 Md. App. at 677-78 n.10, a task that it in turn has delegated to the Department. The Environment Article to the Maryland Code declares pollution to be "a menace to public health and welfare," and declares the State's policies regarding water pollution and water quality:

(1) To improve, conserve, and manage the quality of the waters of this State;

(2) To protect, maintain, and improve the quality of water for public supplies, propagation of wildlife, fish, and aquatic life, and domestic, agricultural, industrial, recreational, and other legitimate beneficial uses;

(3) To provide that no waste is discharged into any waters of this State without first receiving necessary treatment [***985] or other corrective action to protect the legitimate beneficial uses of the waters of this State;

(4) Through innovative and alternative methods of waste and wastewater treatment, to provide and promote prevention, [*163] abatement,

and control of new or existing water pollution; and

(5) To promote and encourage the use of reclaimed water in order to conserve water supplies, facilitate the indirect recharge of groundwater, and develop an alternative to discharging wastewater [***11] effluent to surface waters, thus pursuing the goal of the Clean Water Act to end the discharge of pollutants and meet the nutrient reduction goals of the Chesapeake Bay Agreement.

Md. Code (1996, 2007 Repl. Vol.), § 9-302(b) of the Environment Article ("Envir."). Like the Act, Maryland law prohibits discharges generally (providing that "a person may not discharge any pollutant into the waters of this State," *id.* § 9-322), but allows for a discharge permit to issue from the Department, *id.* § 9-323, and specifies both what a permit must contain and how it must be obtained:

(a) Subject to the provisions of this section, the Department may issue a discharge permit if the Department finds that the discharge meets:

(1) All applicable State and federal water quality standards and effluent limitations; and

(2) All other requirements of this subtitle.

* * *

(d) The Department shall give public notice of each application for a discharge permit as required by Title 1, Subtitle 6 of this article, and *by making available to the public appropriate documents, permit applications, supporting material, plans, and other relevant information.*

Id. § 9-324 (emphasis added).

The statute also allows the Department to "adopt rules and regulations that set, for the waters [***12] of this State, water quality standards and effluent standards":

(a) These standards shall be designed to protect:

(1) The public health, safety, and welfare;

(2) Present and future use of the waters of this State for public water supply;

[*164] (3) The propagation of aquatic life and wildlife;

(4) Recreational use of the waters of this State; and

(5) Agricultural, industrial, and other legitimate uses of the waters of this State.

(b) *The rules and regulations adopted under this section shall include at least the following:*

(1) *Water quality standards* that specify the maximum permissible short term and long term concentrations of pollutants in the water, the minimum permissible concentrations of dissolved oxygen and other desirable matter in the water, and the temperature range for the water.

(2) *Effluent standards* that specify the maximum loading or concentrations and the physical, thermal, chemical, biological, and radioactive properties of wastes that may be discharged into the waters of this State.

* * *

(c) *Effluent standards set under this section shall be at least as stringent as [**986] those specified by the National Pollutant Discharge Elimination System.*

Id. § 9-314 (emphasis added).

This background establishes the simple [***13] premise that federal and state laws and regulations limit a county or other governmental entity from letting stormwater runoff go unchecked into our waters, and give that entity the flexibility to devise maximally practicable measures to deal with the problem. Turning that seemingly straightforward anti-pollution premise into real-life permits, however, is a challenging task.

B. The Permit.

In 1996, the Department issued the County its first municipal separate storm sewerage system ("MS4") permit, for a five-year term. The permit reissued in 2001 and at least once after.⁶ In 2009, after the renewal application process for the [*165] most recent permit was underway, the Department recognized the need for strict monitoring of stormwater discharge. In its response to comments to the proposed permit, the Department stated that the new Permit would require the County to intensify its efforts, that it would

force [the County] to make major strides toward controlling urban runoff better than ever before. New conditions such as . . . requiring an additional twenty percent of the County's impervious area to be restored are major additions. Additionally, a firm commitment for TMDL implementation according [***14] to the plan that the County is required to develop within one year of permit issuance is the strongest evidence yet of what MDE believes will move these programs forward toward the ultimate goal of meeting water quality standards.

⁶ The Department states in its brief that the Permit was reissued in 2006 as well. Anacostia disagrees, although it claims (without citing any authority) that the renewal took place in 2010, "more than three years *after* it was scheduled to expire." (Emphasis added.) This dispute doesn't matter to our analysis.

This response came after public comment on a "tentative determination to issue permit" that the Department had issued in September 2008. The appellees filed timely comments on December 1, 2008, and

complained (among other arguments) that the draft permit did not include enforceable language or deadlines, did not link in a meaningful way to water quality standards or TMDLs, did not allow for meaningful public participation or review of the County Stormwater Management Program, and lacked adequate monitoring and reporting requirements. After receiving additional comments from other interested parties, the Department issued a notice of final determination [***15] to issue the Permit (the "Notice") on March 4, 2009 without substantial changes, and it issued the Permit itself on February 16, 2010, for a five-year period that expired on February 15, 2015.⁷

⁷ We asked at oral argument whether this appeal would be moot if this litigation weren't resolved by the Permit's then-impending (and now past) expiration date. The Department responded, and we are comfortable, that the disputes remain live after February 15 for two reasons. *First*, as we discuss in detail below, the Permit requires that "the County must *submit* an implementation plan for complying with the requirement for [twenty] percent restoration within the 5-year term of the [P]ermit" (emphasis added), but does not seem expressly to require that the plan be *executed* fully by then, so it is still subject to revision after it nominally expires. *Second*, the Department advised us that the application for the succeeding permit had not yet begun at the time of argument, that the process (including notice and comment periods) for a new permit could not be completed before this one expired, and that the terms of the existing Permit would remain in place until superseded.

[**987] [*166] The final Permit specifically required [***16] the County to "implement or install best management practices on twenty percent of the impervious surfaces within the County in an effort to restore the pollution reduction functions performed by undeveloped land," which in turn required the County to submit "a long-term schedule for the completion of detailed assessments of each watershed in the County." (This requirement comes into play below, we will refer to it from here as the "twenty percent requirement"). The Permit calls for pollution controls that include implementation of "management programs . . . designed to control stormwater discharges to the maximum extent practicable." And the stormwater management program

requires that the County, at a minimum, "[c]onduct preventative maintenance" by inspecting "all stormwater management facilities at least on a triennial basis"; "[i]mplement the stormwater management design policies, principles, methods, and practices found in the 2000 *Maryland Stormwater Design Manual*" (the "Manual"); and "[m]aintain programmatic and implementation information according to the requirements established as part of [the Department's] triennial stormwater program review."

C. The Proceedings.

This case began not with the current appeal, [***17] but an earlier one. After the Department filed the Notice, Anacostia requested a contested case hearing on March 18, 2009. (At the time, *Envir.* § 1-605(a) allowed for a contested case proceeding.) An administrative law judge ("ALJ") concluded that Anacostia lacked standing to challenge the Permit because it [*167] had no special interest to protect beyond that of the general public. Anacostia sought judicial review in July 2009 in the Circuit Court for Baltimore County, which later transferred the case to the Circuit Court for Montgomery County. That court upheld the ALJ's decision, but we reversed, holding that Anacostia did in fact have standing, and we remanded for consideration of the underlying substantive issues. *Anacostia Riverkeeper v. Md. Dep't of the Envir.*, Sept. Term 2011, No. 2107 (filed January 7, 2013) ("*Anacostia I*"), slip op. at 22.

Round Two took a slightly different path because in 2009, the General Assembly changed the procedures for challenging a permit. Section 1-601 of the Environment Article now allows direct judicial review of agency permitting decisions. (It also broadens the class of people who can bring such a challenge, and formed part of our basis for reversing the ALJ's decision in *Anacostia I*. See *Anacostia I*, slip op. at 20.) So once we remanded *Anacostia* [***18] *I*, the circuit court took the case directly and held a hearing on the merits on November 20, 2013 (the "Hearing"). Anacostia argued there that the Permit failed to require compliance with Maryland's water quality standards or applicable TMDLs, and that by allowing for the specific development of so many implementation plans outside the four corners of the Permit, the Department allowed the Permit to escape meaningful public participation or judicial review.

The Department responded that the Permit contained all that it needed in requiring the County "to install best

management practices" to restore twenty percent of impervious surfaces and meet certain wasteload allocations. It also argued that the policies and provisions of the Manual and the Maryland Stormwater Management Act of 2007 were properly referenced in the Permit.

The trial judge expressed frustration with the Department's position at the Hearing, both as to the vagueness of the [**988] term "best management practices" and the Permit's references to so many outside sources. The court ultimately held, both in a ruling from the bench and in a written order two weeks later, [*168] that the Permit had to comply with sections 1311 and 1342 of the Act, along with [***19] state law requirements under *Envir.* § 9-324, and that the Permit fell short of these standards (we omit the paragraph numbering):

After reviewing the permit and the administrative record, the Court is unable to understand why [the Department] adopted the terms in the permit, or how those terms meet the requirements of the law. The permit does not state with clarity what the permittees will do, how they are to do it, what standards apply, or how one will measure compliance or noncompliance. The permit lacks ascertainable metrics for meeting water quality standards that can either be met or not met.

The Court finds that it is not sufficient for the permit to require that permittees engage in best management practices and file annual reports on their activities. Manuals and policies that exist outside of the permit change frequently, and do not inform the public or the Court of what the permit specifically requires. While it is allowable for the permit to require best management practices, specific requirements for meeting water quality standards must be stated in the permit.

The Court finds that the permit's requirement to restore 20% of impervious surface is simply too general to show how the permittees [***20] will meet water

quality standards. It does not explain what the permittee is to do or how its performance is to be measured.

Federal regulations require that the permit include a monitoring program for representative data collection for the term of the permit, including a program to monitor and control pollutants in storm water discharges from sites that are contributing a substantial pollutant loading. 40 C.F.R. § 122.26(d). The permit requires monitoring in one tributary, and requires the permittees to submit an annual report to MDE regarding all activities under the permit. [*169] The Court finds that these requirements are not sufficient to meet the applicable requirements for monitoring.

This timely appeal followed.

II. DISCUSSION

This appeal presents one overarching question with numerous sub-questions that make it more complex: is the Permit legal? To answer the broader question, we analyze the Permit's near-twenty-year history against the statutory and regulatory lattice. And perhaps counterintuitively, we find that the Department's expertise (which on review of agency decisions so often gives us reason to defer to an agency) and intimacy with the process and available technology may well be the Permit's [***21] undoing. There may be rational reasons for requiring the County to prepare plans after approval and incorporate outside materials into the Permit by reference. But those reasons are difficult to discern for anyone who did not live deeply in the weeds of negotiating and preparing it, and because many of the Permit's terms are structured as obligations to develop plans, they are insulated from effective review.

We hold *first* that Congress, by adding § 1342 the 1987 amendments to the Act, intended to treat MS4s differently and regulate them separately from, or in conjunction with, the existing requirements of § 1311. *Second*, we analyze what exactly the § 1342 "maximum extent practicable" and "best management practices" language [**989] requires of a state attempting to enforce environmental laws, and how state environmental regulations pick up on that language. That hardly ends the

story, though: although we agree with the Department that Congress relieved it of the more stringent requirement of § 1311, we conclude *third* that this Permit effectively cuts off public commentary on important components by glossing important requirements and deadlines and incorporating outside sources in a manner that leaves the Permit's [***22] operative terms too difficult to find and know.

[*170] A. Standard of Review.

Our review of an agency decision is highly deferential. We look through the decision of the circuit court and use the same standard of review that the circuit court did. *Kim v. Maryland State Bd. of Physicians*, 423 Md. 523, 32 A.3d 30 (2011) (citing *People's Counsel for Baltimore County v. Surina*, 400 Md. 662, 681, 929 A.2d 899 (2007)). In a case like this, we review the agency decision at two levels: *first*, to determine whether the record contains substantial evidence to support the agency decision and *second*, to determine whether the decision is legally correct. *Najafi v. Motor Vehicle Admin.*, 418 Md. 164, 173, 12 A.3d 1255 (2011) (citation omitted).

For reasons we will explain in Part II.B, we start with the second step--whether the Department was legally correct in its decision to issue the Permit. We are "under no constraints in reversing an administrative decision which is premised solely on an erroneous conclusion of law." *People's Counsel for Baltimore Cnty. v. Maryland Marine Mfg. Co.*, 316 Md. 491, 497, 560 A.2d 32 (1989); *see also HNS Dev., LLC v. People's Counsel for Baltimore Cnty.*, 425 Md. 436, 449, 42 A.3d 12 (2012). A reviewing court should respect "the expertise of an agency in its own field," *Board of Phys. Quality Assur. v. Banks*, 354 Md. 59, 69, 729 A.2d 376 (1999) (citations omitted), and the Department correctly points out that an agency's authority "may include a broad power to promulgate legislative-type rules or regulations" to assist in implementing applicable statutes. *Christ v. Dep't of Natural Res.*, 335 Md. 427, 445, 644 A.2d 34 (1994). Agencies "are created in order to perform activities which the Legislature deems desirable and necessary [***23] to further the public health, safety, welfare, and morals," and "[t]he powers vested in the courts, by statute or inherence, to review administrative decisions does not carry with it the right to substitute its fact-finding process for that of an agency." *Northwest Land Corp. v. Maryland Dep't of Env.*, 104

Md. App. 471, 488, 656 A.2d 804 (1995) (quoting *Sec'y of Health & Mental Hygiene v. Crowder*, 43 Md. App. 276, 281, 405 A.2d 279 (1979)).

[*171] As to the substantial evidence component of our review, *Najafi* directs a generous level of deference:

In applying the substantial evidence test, a reviewing court decides "whether a reasoning mind reasonably could have reached the factual conclusion the agency reached." A reviewing court should defer to the agency's fact-finding and drawing of inferences if they are supported by the record. A reviewing court "must review the agency's decision in the light most favorable to it; . . . the agency's decision is prima facie correct and presumed valid, and . . . it is the agency's province to resolve conflicting evidence" and to draw inferences from that evidence.

Id. at 173 (quoting *Maryland Aviation Admin v. Noland*, 386 Md. 556, 571-72, 873 A.2d 1145 (2005)). And where an agency is acting within its discretion, [*990] we will overturn its decision only where we find that its action is arbitrary and capricious. *Md. Board of Phys. v. Elliott*, 170 Md. App. 369, 406, 907 A.2d 321 (2006); *see also* Md. Code (1984, 2009 Repl. Vol.), § 10-222(h)(3)(vi) of the State Government Article ("S.G."). But we owe no deference to an agency whose conclusions have gone [***24] unsupported "by competent and substantial evidence, or where the agency draws impermissible or unreasonable inferences and conclusions from undisputed evidence." *Stansbury v. Jones*, 372 Md. 172, 184, 812 A.2d 312 (2002); *see also Mayor and Aldermen of City of Annapolis v. Annapolis Waterfront Co.*, 284 Md. 383, 395, 396 A.2d 1080 (1979) ("When reviewing an administrative decision for arbitrariness or capriciousness, a court must first determine whether the question before the agency was fairly debatable," and if not it is not arbitrary and capricious.). For an issue to be "fairly debatable," "the administrative agency overseeing the . . . decision must have "substantial evidence" on the record supporting its decision." *Mills v. Godlove*, 200 Md. App. 213, 224, 26 A.3d 1034 (2011) (quoting *White v. North*, 356 Md. 31, 44, 736 A.2d 1072 (1999)).

B. The Permit Is Subject To § 1342, Not § 1311.

At the threshold, the parties dispute which of the various federal and state laws drive the requirements the [*172] Permit must fulfill. The Department argues that the Act does not require an MS4 to comply with the water quality standards articulated in § 1311 because the 1987 amendments replaced those standards "with the maximum-extent-practicable standard, and replaced numerical effluent limitations with 'management practices,' 'control techniques,' 'systems, design and engineering methods,' and other provisions that the State 'determines appropriate.'" Anacostia argues that the Permit continues [***25] to be subject to the technology-based limitations of § 1311 *in addition to* "any more stringent limitation necessary to assure compliance with water quality standards for the receiving waters." We disagree, and hold that the Permit is *not* subject to the technology-based discharge limitations ("TBDLs") of § 1311(a), but rather to § 1342(p)(3)(B), which in turn requires the County to adhere to the TMDL limits imposed by state law via § 1313(d)(1)(C).

When first passed in 1972, the Act regulated big municipal stormwater systems. With the benefit of hindsight, it appears that that approach was not practical for MS4s. We agree with the Department that the 1987 amendments, and § 1342 in particular, imposed different and *alternative* standards on MS4s, standards that state broader principles rather than prescriptive requirements.

But although § 1342(p)(3)(B) imposed new requirements for MS4s that differed from the technology-based requirements of § 1311, the amendments did not state whether MS4 permits *also* had to comply with water quality standards under § 1311(b)(1)(C). In 1991, the EPA's General Counsel interpreted the "MEP" standard to modify the technology-based requirements of § 1311, but he did not believe that the MEP language displaced the general water quality standards imposed [***26] by § 1311. *See* Memorandum from E. Donald Elliott, Ass't Admin'or & General Counsel, EPA, to Nancy Marvel, Regional Counsel, January 9, 1991, "Compliance with Water Quality Standards in NPDES Permits Issued to Municipal Separate Storm Sewer Systems," 1991 W.L. 326640 (the "Elliott Memorandum") at *2.⁸ Then, in 1996, the EPA [**991] issued a [*173] Notice outlining an "Interim Permitting Approach for Water Quality-Based Effluent Limitations in Storm Water Permits," 61 Fed. Reg. 43761-01 (Aug. 26, 1996), in which it likewise approved use of BMPs while leaving room for improvement:

The interim permitting approach uses best management practices (BMPs) in first-round storm water permits, and expanded or better-tailored BMPs in subsequent permits, where necessary, to provide for the attainment of water quality standards. In cases where adequate information exists to develop more specific conditions or limitations to meet water quality standards, these conditions or limitations are to be incorporated into storm water permits, as necessary and appropriate. *This interim permitting approach is not intended to affect those storm water permits that already include appropriately derived numeric water quality-based effluent limitations.*

Id. (emphasis added). [***27]

8 It doesn't matter for our purposes whether the broader question raised by and answered in the Elliott Memorandum--whether the term "water quality standards" (which can be, but is not always, used as a term of art to describe specific standards) still applies with equal force to MS4s. Anacostia argued that the distinction between state and federal water quality standards is not material here, and we are inclined to agree. The Department is not arguing that the Permit need not attempt to *meet* TMDL requirements as part of broader water quality standards, but that the Permit adequately spells out how the County must do so, and by when.

Several years later, the United States Court of Appeals for the Ninth Circuit held in *Browner* that Congress intended § 1342(p)(3)(B) to treat MS4s *differently*--no longer to require strict compliance with state water-quality standards (as industrial discharges had to comply with under § 1311), but instead to impose the maximum-extent-practicable standard. 191 F.3d at 1165. After reviewing the legislative history that culminated in the 1987 amendments, the Ninth Circuit held that § 1342(p)(3) specifically treats industrial discharges differently from municipal discharges, and held the former to the more stringent [***28] § 1311 requirements. 191 F.3d at 1165 ("[I]ndustrial discharges must comply strictly with state water quality standards.").

Municipal discharges, on the other hand, [*174] lacked any such requirement, and Congress instead imposed the MEP requirement in § 1342(p)(3)(B)(iii).

As such, the Ninth Circuit held, Congress intended in § 1342 to *not* require municipal stormwater discharges to comply with § 1311. 191 F.3d at 1165 ("Where Congress includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion." (quoting *Russello v. United States*, 464 U.S. 16, 23, 104 S. Ct. 296, 78 L. Ed. 2d 17 (1983) (citation and internal quotation marks omitted))). The Court also noted that interpreting § 1342 to include the requirements of § 1311 would render § 1342 superfluous: because the latter is less strict, reading it to include § 1311's requirements would really just fold it into § 1311, "a result that we prefer to avoid so as to give effect to all provisions that Congress has enacted." 191 F.3d at 1165; *see also Koste v. Town of Oxford*, 431 Md. 14, 25-26, 63 A.3d 582 (2013) ("The primary goal of statutory construction is 'to discern the legislative purpose, the ends to be accomplished, or the evils to be remedied by a particular provision[.]' In so doing, we look first to the 'normal, plain meaning of the language of the [***29] statute,' read as a whole so that 'no word, clause, sentence or phrase is rendered surplusage, superfluous, meaningless or nugatory[.]' (citations omitted) [***92] (emphasis added)). Other courts have followed suit. *See, e.g., Divers' Env'tal Cons. Org. v. State Water Resources Control Bd.*, 145 Cal. App. 4th 246, 51 Cal. Rptr. 3d 497, 504 (2006) ("In regulating storm water permits the EPA has repeatedly expressed a preference for doing so by way of BMPs, rather than by way of imposing either technology-based or water quality-based numeric limitations"⁹); *NRDC v. New York State Dep't of Env'tal Cons.*, 120 A.D.3d 1235, 994 N.Y.S.2d 125 (2d App. Div. 2014) (assessing MEP standard as the appropriate one for municipal discharges); [*175] *Tualatin Riverkeepers v. Oregon Dep't of Env'tal Quality*, 235 Ore. App. 132, 230 P.3d 559, 564 n.10 (Ore. App. 2010) (citing *Defenders of Wildlife* with approval and noting the lesser MEP standard in § 1342 that applies to municipal stormwater discharges); *but see Building Indus. Ass'n of San Diego Cnty. v. State Water Resources Control Bd.*, 124 Cal. App. 4th 866, 22 Cal Rptr. 3d 128, 141 (reading § 1342 not specifically to replace or not replace § 1311 as it related to municipal discharge, but seeing the significance of Congress adding the MEP language "to

strengthen the [Act] by making its mandate correspond to the practical realities of municipal storm sewer regulation").

9 *Divers* also pointed to the relevant federal regulations as giving wiggle room to the states to apply BMPs when other approaches aren't feasible. *See id.* at 506-07 (quoting 40 C.F.R. § 122.44(k)).

It falls to the Department, then, to translate these concepts into real-life permits. Over a decade ago, the [***30] EPA issued a memorandum (included here in the Department's record extract) designed to harmonize the BMP concept and the "maximum extent practicable" language. *See* November 22, 2002, Memorandum from Robert H. Wayland, III, Director, Office of Wetlands, Oceans and Watersheds, EPA, to Water Division Directors, Regions 1-10. This memorandum counseled in favor of "an iterative approach to control pollutants in storm water discharges," and recognized that "storm water discharges are due to storm events that are highly variable in frequency and duration and are not easily characterized," therefore making it difficult to establish hard, numeric limits. In turn, it viewed BMPs as "an appropriate form of effluent limits" to control pollutants, *see* 40 CFR § 122.44(k)(2), (3). But the EPA did not leave it at that--it stated its express expectation that agencies granting permits will ensure that BMPs are appropriately tailored:

EPA expects that the NPDES permitting authority will review the information provided by the TMDL, *see* 40 C.F.R. § 122.44(d)(1)(vii)(B), and determine whether the effluent limit is appropriately expressed using a BMP approach (including an iterative BMP approach) or a numeric limit. Where BMPs are used, EPA recommends that the [***31] permit provide a mechanism to require use of expanded or better-tailored BMPs when monitoring demonstrates they [*176] are necessary to implement the WLA and protect water quality.

This guidance frames the issue here. Although our analysis relieves the Department and the County of their obligations to comply with § 1311, the Permit cannot

satisfy the alternative standard simply by parroting broad principles of best practices, especially given that State law applies as well.

C. The Permit Does Not Comply With State Law Regarding The Permitting Process.

Even under the standards imposed by § 1342, the Permit fails at two separate levels. *First*, it does not comply with the statutory procedural requirements [**993] of notice and public comment. To be clear, the Permit might have complied from a *technical* point of view (by, for example, posting the required notice at the required time), but it failed to comply from a *practical* point of view because it omits or obscures important elements, leaving anyone not an expert unable to decipher it. The Permit contains aspirational goals rather than particularized objectives, and it refers to and relies on too much information that falls wholly outside of its terms (which makes [***32] it impossible to figure out what the Permit requires without hunting for the underlying information in a way that requires far more expertise than one could reasonably expect). We also find it impossible to discern from the Permit when the County would have to complete critical tasks. *Second*, the Permit fails as a *substantive* matter because it does not contain ascertainable metrics that define how the County must comply, or whether at some point it has complied, with what all agree are two of the Permit's most important terms: regulation of TMDLs and the twenty percent requirement. We recognize the tension between the desire for specificity (both in tactics and in metrics) and the reality of achieving that granularity across a system as large as the County's, and so we acknowledge that these competing objectives must be balanced. That said, they need to be balanced in a way that allows meaningful public comment and [*177] participation and meaningful review of the Permit's compliance with the law.

1. The Permit does not give meaningful opportunity for notice and comment, and eludes judicial review.

a. The Environment Article requires that the public have an opportunity for notice and comment.

Section 9-324 of the Environment Article requires explicitly [***33] that "[t]he Department shall give public notice of each application for a discharge permit as required by Title 1, Subtitle 6." Subtitle 6, in turn, requires that the public have a full opportunity to

participate in the permitting process. Envir. § 1-601(a)(3). The notice of an application for a permit, for example, must include certain basic information:

(i) The name and address of the applicant;

(ii) A description of the location and the nature of the activity for which the permit has been sought;

(iii) A reference to the applicable statutes or regulations governing the application process;

(iv) The time and place of any scheduled informational meeting or public hearing, or a description of where this information can be found;

(v) A description of where further information about the permit application can be found; and

(vi) Any other information that the Department determines is necessary.

Id. § 1-602(b)(2) (emphasis added). The statute no longer provides for a contested case hearing, *id.* § 1-601(b), but does authorize judicial review on behalf of a party that, as Anacostia has, "[p]articipated in a public participation process through the submission of written or oral comments." *Id.* § 1-601(c)(2)(ii). And although the subtitle limits judicial review to the administrative [***34] record and objections raised before the Department, it permits review when:

(i) The objections were not reasonably ascertainable during the comment period; or

[*178] (ii) Grounds for the objections arose after the comment period.

Id. § 1-601(d)(1).

Transparency is essential to effectuating the goals of the Act. "Public participation [**994] in the development, revision, and enforcement of any regulation, standard, effluent limitation, plan, or program established by the [EPA] or any State . . . shall be provided for, encouraged, and assisted by the [EPA] and

the States." 33 U.S.C. § 1251(e). The Supreme Court has acknowledged that NPDES permits "defin[e], and facilitat[e] compliance with, and enforcement of, a preponderance of a discharger's obligations under the [Act]." *EPA v. State Water Res. Control Bd.*, 426 U.S. 200, 205, 96 S. Ct. 2022, 48 L. Ed. 2d 578 (1976). A permit should translate big-picture environmental goals into specific obligations and measurable objectives for each applicant, and provide a way to hold permit-holders accountable--at least theoretically. This permit does not.

b. Specific shortcomings of the Permit.

i. The public can't comment about decisions that have yet to be made.

To be sure, the process leading up to the Permit ostensibly allowed for several "public participation" opportunities. But the Permit deferred the process [***35] of defining important substantive provisions (TMDL implementation plans, SWMP plans, etc.) until well *after* approval. This creates an obvious flaw: the public can't comment on a program that doesn't yet exist, and by the time the program *did* exist, the time for comment on it had passed.¹⁰

10 This also means that we can't tell from the Permit's terms whether it should be reviewed under § 1-601(d)(1)(ii), which allows for judicial review, even if objections weren't raised during a comment period, where the "[g]rounds for the objections arose after the comment period." *Id.* This Permit could well qualify because so many of its substantive terms weren't defined until after the comment period had passed.

[*179] Under the terms of the Permit, the Department effectively can approve new requirements and management projects without public comment because the County was not required to develop impervious surface restoration plans and TMDL implementation plans until after the Permit was approved. The Permit itself does not include the substantive contents of each program, nor does it require that the programs even be made available to the public for review after the fact. Part E of the Permit, for example, states broad requirements [***36] that the County must satisfy in developing, implementing, and maintaining its programs. But that approach is inconsistent with the emphasis on public participation in the Act, which requires permits to include effluent limitations so that

citizens can enforce their terms, requirements, and restrictions. 33 U.S.C. § 1365(a).

In order to be measurable, a permit must articulate what the County must do, how much of each task the County must do, where the County needs to perform those tasks, and by when the County must complete them.¹¹ For each Permit requirement, the "what" is usually the BMP or activity required, the "how much" is the performance standard the County is expected to meet, the "when" is the specific time (or frequency) the BMP or activity should be complete, and the "where" is the location where the activity must be performed. Unless discernible requirements are contained in the permit itself, the public will have no way to know its terms or to [**995] assist the Department in the enforcement of the Permit, nor will the County know exactly what the Permit requires of it. And although there may be value in deferring the definition of certain terms until later, that deferral cannot deprive the public of [***37] notice and an opportunity to comment--that opportunity must somehow be replicated as those plans are developed and approved, at whatever point in time.

11 For the EPA's guidance in this regard, *see* Laura Gentile and John Tinger, U.S. E.P.A. Region IX, Stormwater Phase I MS4 Permitting: Writing More Effective, Measurable Permits, 135 (February 2003), http://water.epa.gov/polwaste/nps/stormwater/upload/2003_03_26_NPS_natlstormwater_03_13Gentile.pdf (last viewed February 19, 2015).

[*180] **ii. The Permit is not specific enough.**

The Permit eludes notice and comment because there is not enough *in* it for the public fairly to comment *on* it. The Act requires that a state permit specify the "type, intervals, and frequency sufficient to yield data which are representative of the monitored activity." 40 C.F.R. § 122.48(b), 122.44(i)(1). Under § 1342, a permit such as this is also subject to EPA regulations governing permit applications, 33 U.S.C. § 1342(p)(4)(A), which require a "proposed monitoring program for representative data collection for the term of the permit," 40 C.F.R. § 122.26(d)(2)(iii)(D), and which describe the necessary data. This Permit, however, requires monitoring only in the Lower Paint Branch watershed, one of many affected by the County's system.¹² And although, as the Department argues in its brief, the Permit "requires the

County [***38] to *assess* all of its watersheds" (emphasis added), the Permit itself requires the County only to "provide a long-term schedule for the completion of detailed assessments of each watershed in Montgomery County." That "long-term schedule" is not due until a year into the Permit's five-year lifespan, though, and the Permit says nothing about whether that schedule must require assessments before the Permit expires. And, again, the process defined in the Permit leaves no opportunity for public comment or judicial review of the schedule once the County proposes it.

12 We do not mean to suggest that a single watershed cannot qualify as a representative sample, but the Department hasn't made or supported that argument here, either in general or for the Lower Paint Branch watershed in particular.

The Department argues that *prior* iterations of the Permit required broader monitoring, and it may be that the Permit could satisfy its monitoring obligations by building on and incorporating monitoring work done previously. But if that is what the Department intended, the terms of the Permit need to reflect that so that the Permit's overall compliance with the Act's monitoring obligations can be understood [***39] and tested.

[*181] The Permit is similarly quiet about the County's reporting requirements. In the absence of specifics, the Department points to the BMPs in the Manual, which "are *designed* to be flexible so that regulatory agencies may adapt them to the highly variable nature of stormwater discharges." (Emphasis in original.) That may be so, but the Department must demonstrate in the Permit *which* of these BMPs it is choosing--otherwise, we are left with a Permit that is simply a now-fifteen-year-old (and very long) Manual.¹³ We understand the need for flexibility, but someone seeking to understand the Permit's terms, [**996] or a reviewing body seeking to review it, is left at a total loss to understand how the County will proceed, either at the inception of the Permit period or during the five years (or more) it remains in effect.

13 Counsel for the Department pointed out in response to the court's questioning at the Hearing that stormwater management facilities have to "install BMPs" as specifically required by the Permit, and she referred to the provision in the "Management Programs" section under the Permit

that requires the County at a minimum to "implement the stormwater management design policies, [***40] principles, methods, and practices found in the [Manual] and the provisions of Maryland's Stormwater Management Act of 2007." As counsel put it, these would be the "only BMPs allowed or acceptable."

iii. The Permit overrelies on incorporation by reference.

The Permit's generality is compounded by the way it incorporates outside sources by reference. There is nothing wrong *per se* with that approach, but the result here is that someone outside the negotiations can't tell where to look to understand the Permit or how to challenge its terms. This is particularly true with regard to the Manual, a 589-page list of "best management practices." Chapter 1 of the Manual states that "[o]ver the last 14 years, tens of thousands of [BMPs] have been constructed in an attempt to meet program mandates." After the County selects appropriate BMPs, the Manual is meant to help in the process of actually implementing the practices, by

provid[ing] design guidance on the most effective planning techniques, and nonstructural and structural BMPs for development [*182] sites, and to improve the quality of BMPs that are constructed in the [s]tate, specifically with regard to performance, longevity, safety, ease of maintenance, community acceptance [***41] and environmental benefit.

Chapter 3 of the Manual identifies five groups of structural water quality Stormwater BMPs: (1) ponds, (2) wetlands, (3) infiltration practices, (4) filtering systems, and (5) open channels. The chapter goes on to discuss "sets of BMP performance criteria" for each BMP listed above. Of course, if the County opts to implement a new BMP, it must submit monitoring data to demonstrate that it meets these performance criteria. The Manual might provide some understanding, for example, of why the County would choose "ponds" for a given location, and why that strategy may or may not be successful in reducing pollution to the maximum extent practicable. But in the context of this Permit, there is no way of knowing which BMPs the County will select.¹⁴ And that

leaves no way to know what the County will be required to do until after the County does it, and no way to apply even an appropriately deferential level of review to the Department's substantive directions to the County.

14 Like the chapter preceding it, Chapter 4, "Guide to BMP Selection and Location in Maryland" may well be useful to those charged with designing the various management plans. The Chapter outlines the [***42] "process for selecting the best BMP or group of BMPs for a development site and provides guidance on facts to consider when deciding where to locate them." Again, had the Permit identified the BMPs to be used in each program, the Manual would explain the details in a useful way; without that information, it is academically interesting but not helpful to understanding this Permit.

We see compelling similarities to the permit in *Waterkeeper Alliance, Inc. v. EPA*, 399 F.3d 486 (2d Cir. 2005), in which the United States Court of Appeals for the Second Circuit held that NPDES permits for concentrated animal feeding operations ("CAFOs") lacked "any meaningful review of the nutrient management plans" developed by the applicants, and also "fail[ed] to require that the terms of the nutrient management plans be included in the NPDES permits." *Id.* at 498. The court held that regulation of the CAFO nutrient plans [*183] (which strike us as analogous to the MS4 regulatory program here) had to be incorporated into a facility's NPDES permit because a permit that omitted specific waste application rates did "nothing to ensure that each Large CAFO has, in fact, developed a nutrient management plan [**997] that satisfies [applicable federal regulations]." *Id.* at 499 (emphasis in original).

There is [***43] no doubt that under the CAFO Rule, the only restrictions actually imposed on land application discharges are those restrictions imposed by the various terms of the nutrient management plan, including the waste application rates developed by the Large CAFOs pursuant to their nutrient management plans. Indeed, the requirement to develop a nutrient management plan constitutes a restriction on land application discharges only to the extent that the nutrient

management plan actually *imposes* restrictions on land application discharges.

Id. at 502 (emphasis added).

Like the nutritional plans discussed in *Waterkeeper Alliance*, the Management Plans the Permit requires the County to develop represent the only restrictions on stormwater pollutants flowing into and from this MS4. For that reason, it is not enough for the Permit simply to require the County to develop plans consistent with the Manual and leave it at that. The Permit must at least allow the County and the public to understand how the County plans to restrict stormwater discharges and, subject to the appropriately deferential standard, to challenge the Department's ultimate directions.

iv. The Permit contains no meaningful deadlines or ways [*44] to measure compliance.**

The Permit purports to require, within a year of its effective date, implementation plans that include "the actions and deadlines by which those actions must be taken to meet the required pollutant load reduction benchmarks and [wasteload allocations] within the specified time frame." Determining the means to the ends, including TMDLs and SWMPs, has been left to the County, which gets one year out of the five-year lifespan of the Permit simply to *devise* implementation plans. [*184] In layman's terms, the Permit seems to say that the County has a deadline of a year to set its deadlines. But as a practical matter, that open-ended, goal-oriented statement articulates no specific method within the Permit (like setting out those benchmarks, for example) for achieving those goals or measuring progress. Put another way, the County seemingly could be in compliance if, within a year of the Permit's issuance, it laid out a plan with deadlines of twenty years from now. The Permit imposes no timeframe for executing the plans, and there are not clear requirements for what the aspirational plans must include.

Without measurable commitments, anything could be deemed "in compliance" [***45] with the Permit. And without deadlines for compliance and implementation, the County could plan while postponing implementation, an outcome that effectively would circumvent the NDPEs permitting program. This is not to say that the Permit must list and measure minute details or water quality standards, only that it must contain some discernible and meaningful milestones of planning,

implementation, or achievement that can be understood and measured and, to our earlier point, that the public can review and comment upon.

The description of "Management Programs" in the Permit is also insufficient to allow meaningful evaluation of any monitoring. These programs appear to be an important aspect of the Permit, but are not incorporated as enforceable conditions. The Permit connects no specific or measurable BMPs to the various management programs. It requires no justification for why a given BMP or strategy was selected, and how that program or strategy will reduce discharges to the maximum extent [**998] practicable. The Permit contains no information about how the County must select, implement, maintain, and monitor BMPs, and most importantly, it contains no deadlines by which the County must actually [***46] implement the programs it designs.

This lack of meaningful deadlines was illustrated well at oral argument, when we asked counsel for Montgomery County [*185] whether the County had actually approved a plan that the Department then approved. Counsel first responded that yes, a plan "would have been" submitted. When pressed, counsel responded with continued hedging: "I will say that they would have approved it." The fact that counsel for the *County* couldn't even tell us the status of the Permit's progress highlights the toothlessness of the Permit's terms and the difficulty for anyone to know (or ask) whether the County is complying with them.

2. The agency decision to issue the Permit was unsupported by substantial evidence with respect to TMDLs and the twenty percent requirement.

Once the County reworks the Permit in a way that allows for meaningful notice and comment, it still must address the absence of objective metrics for what the parties agree are two of its most important elements: the twenty percent requirement and setting TMDLs.¹⁵

15 This failing can be viewed in one of three ways: (1) the Department's decision to issue the Permit was legally incorrect because the Permit fails to require [***47] compliance with 33 U.S.C. § 1342(p)(3)(B) and Envir. § 9-324; (2) the Department's decision to issue the Permit was unsupported by substantial evidence that it complied with these statutory requirements; and (3) the Department's decision to issue the Permit

was arbitrary and capricious because it was made without any factual support based on the record before it. Whichever the analytical path (and any is legally correct), the fact remains that neither the TMDL requirement nor the twenty percent requirement are laid out with sufficient clarity in the Permit.

a. The twenty percent requirement.

The Department argues that the Permit appropriately "requires the County to install controls on twenty percent of impervious surfaces and to regularly review and refine its [BMPs] to achieve steady and measured reductions in pollutants." But we see nothing in the Permit that explains how we or anyone can define the universe of impervious surfaces. Only one of the three sources the Department cites sends us to the Permit itself; the pages cited to govern "Watershed Restoration" (Part III.G), "Assessment of Controls" (Part [*186] III.H), "Program Funding," (Part III.I), and "TMDLs" (Part III.J). None of these gives any guidance as to exactly what [***48] constitutes "impervious surfaces." The Department claims that the twenty percent requirement is "specific, measurable, and enforceable," and it purports to lay out how the twenty percent is calculated, based on using the acreage designations from the *prior* permit's designation of ten percent of impervious surfaces in the County (in turn citing not even to the outdated permit, but to the "Annual Report for 2006 NPDES Municipal Separate Storm Sewer System Permit" that is included in the record extract):

The permit requires the County to implement controls on 20 percent of its previously uncontrolled impervious areas. Because the prior permit required the County to install best management practices on 10 percent of its impervious areas, the County already has in place a mechanism for calculating the total acreage of land that does not have stormwater controls. That acreage comes to 21,458 acres - which excludes the 10 percent [**999] already controlled under the prior permit - and 20 percent of that amount comes to 4,292.

It cannot be that the universe of impervious surfaces

has remained constant since 2006; by 2009, when this permitting process began, this information was already three years old. [***49] So the Department's calculation is grounded in outdated calculations and, therefore, unsupported by substantial evidence.¹⁶

16 This failing also goes to the problems with public notice and comment. Although the Department has advanced this numerical calculation, we see no evidence that it was made apparent to anyone in the course of the permitting process. That means that, even if the Department could demonstrate to us now that the calculation is supported by substantial evidence, the public never had a meaningful opportunity to comment on that calculation at the appropriate time.

Anacostia is also correct that the Permit does not actually impose restoration of twenty per cent of *all* impervious surfaces within the County, but only mandates restoration of twenty percent of "impervious surface area *that is not restored to the MEP [maximum extent practicable].*" As with so many other parts of the Permit, this definition requires [*187] another subjective calculation--where someone will need to determine what has not been restored to the maximum extent practicable--that is completely unreviewable.

The Department also contends broadly that the standards it applies for BMPs must be flexible "so that regulatory [***50] agencies may adapt them to the highly variable nature of stormwater discharges." We don't disagree with this proposition, and we are keenly aware that the Department has the expertise (far beyond the ken of this or any court) to determine these standards. But even those flexible standards have to be expressed in a way that gives meaning to the Permit, and that allows non-expert reviewing bodies to do their jobs.

The Department claims that the Permit articulates sufficiently specific BMPs for impervious surfaces by incorporating the Manual and other documents, and it argues that the BMPs in the Manual "have measurable outcome[s];" it points in particular to "general performance standards for stormwater management in Maryland" that appear in two pages of the Manual. The Manual is one of the three "scientific texts developed by the Department" that it claims encapsulates twenty-seven years of research. The others are a "BMP Assessment" (a March 21, 2009 report whose full title is "Developing Nitrogen, Phosphorus and Sediment Reduction

Efficiencies for Tributary Strategies, BMP Assessment: Final Report, 3/31/2009"), and a manual entitled "Accounting for Stormwater Wasteload Allocations and Impervious [***51] Acres Treated" (with the ambiguous date of "June (*Draft*) 2011" (emphasis added), which we will short-form as the "2011 Manual"). The Department says that it standardized best management practices in the Manual, and has technical guidelines "in place" based on the BMP Assessment and the 2011 Manual. But the Department's arguments are indecipherable. The "general performance standards" to which it cites don't appear, to us at least, to articulate useful or enforceable numbers, and a broad citation to three manuals (dated four, six, and fifteen years ago) leave the contours of the twenty percent requirement unclear.

[*188] **b. The TMDL requirement.**

Anacostia argues that the Permit lacks the necessary clarity for attaining TMDL requirements, and that its provisions are not supported by facts or explanations. We agree. Part III.J requires the County [**1000] to design a TMDL implementation plan that "includes estimates of pollutant loading reductions (benchmarks) to be achieved by specific deadlines and describe those actions necessary to meet the storm drain system's share of WLAs and EPA approved TMDLs." But the County is left to design these implementation programs *after* the final Permit is approved, and [***52] the TMDL plans do not become an enforceable condition of the Permit. Putting aside the notice problem, there are no enforceable minimum requirements for these plans, and they generally require no particular outcome from the measures that the County identifies in its TMDL implementation plans. The only hard-and-fast requirement is that the County submit a *proposed plan* to the Department for review within one year (and as we explained above, that proposed plan need contain no deadlines of its own).

The Permit incorporates, by reference, pollutant-loading limits (called Waste Load Allocations, or "WLAs") in approved TMDLs. It does not require the County to demonstrate that its TMDL implementation plans will meet the required pollution reductions or defend them against challenge, and it doesn't specify any interim or final deadlines for meeting those reductions. The County is left to set its own deadlines, without any outside limits. In the event that "WLAs are not being met according to the benchmarks and deadlines contained in

the County's TMDL implementation plans, an iterative approach shall be used where additional or alternative Stormwater controls are proposed and implemented in [***53] order to achieve WLAs." It is hard to know what this means (and it is the language that was the source of palpable frustration on the part of the trial judge), but we know that there are no specific guidelines for implementing these "adaptive management activities," and no elaboration on what they might entail.

[*189] Perhaps inadvertently, the Department identified the problem best at oral argument: when the Court criticized the TMDL plan because it can't be challenged by the public, counsel answered that TMDLs are "on the MDE website," and that "there's a separate TMDL process." But that advice leads to a thicket: a search of the term "TMDL" on the MDE website yielded 771 results, the first of which purports to explain "TMDL Implementation in Maryland" from a 2006 issue of an "e-MDE" publication. *See* <http://mde.maryland.gov/programs/ResearchCenter/ReportsandPublications/Pages/ResearchCenter/publications/general/emde/vol1no9/tmdl.aspx> (last viewed February 19, 2015). And although there may be a "TMDL process," that process leaves anyone seeking to know what TMDLs are at issue in this Permit completely in the dark.

* * *

It may be that the actions and standards that the Department and County have in mind under this Permit satisfies the requirements that the Act imposes on both, and we agree with the Department about what the [***54] law generally requires. But there is no way for the public or for us to know from the Permit itself whether they do or not, and we agree with the circuit court that the Permit must be revised accordingly. We recognize the Department's expertise in this area, and we know that it is not our role to dictate precisely how the Department must balance the complex realities of managing pollution in a large stormwater system against the important public policies of transparency, public participation, and meaningful judicial review. It seems, though, that the more details are framed as future obligations to plan or propose plans, the harder it will be for the public to participate [**1001] and for courts to review the Permit, even deferentially.

**JUDGMENT OF THE CIRCUIT COURT FOR
MONTGOMERY COUNTY AFFIRMED AND**

CASE REMANDED TO THE MARYLAND DEPARTMENT OF THE ENVIRONMENT FOR PROCEEDINGS NOT INCONSISTENT WITH THIS OPINION. COSTS TO BE PAID BY APPELLANTS.

May 11, 2009, Argued and Submitted

April 28, 2010, Filed

SUBSEQUENT HISTORY: Review denied by Riverkeepers v. Or. Dep't of Env'tl. Quality, 2010 Ore. LEXIS 803 (Or., Oct. 21, 2010)

PRIOR HISTORY: [***1]

Multnomah County Circuit Court 060100752. Christopher J. Marshall, Judge.

DISPOSITION: Affirmed.

COUNSEL: Christopher Winter argued the cause for appellants. With him on the joint briefs were Crag Law Center and Brent Foster.

Erin C. Lagesen, Assistant Attorney General, argued the cause for respondents. With her on the brief were Hardy Myers, Attorney General, and Mary H. Williams, Solicitor General.

Jay T. Waldron argued the cause for intervenor-respondents. With him on the joint brief were Laura Maffei, Andrew J. Lee and Schwabe, Williamson

& Wyatt, P.C.; G. Kevin Kiely, James Kincaid, Carla Scott, and Cable Huston Benedict Haagensen & Lloyd LLP; David Doughman and Beery Elsner & Hammond LLP; and David Ris and Gresham City Attorney's Office.

James J. Nicita filed the brief *amicus curiae* for Northwest Environmental Defense Center, Northwest Environmental Advocates, Native Fish Society, Friends of the Clackamas River, and Barbara Kemper.

JUDGES: Before Wollheim, Presiding Judge, and Brewer, Chief Judge, and Sercombe, Judge. *

* Brewer, C. J., *vice* Edmonds, P. J.

OPINION BY: SERCOMBE

OPINION

[**560] [*135] SERCOMBE, J.

Petitioners sought judicial review of several municipal storm water permits issued by respondent ¹

pursuant to ORS 468B.050 and the federal [***2] Clean Water Act, *see* 33 USC § 1342. ² They appeal following the trial court's grant of summary judgment in favor of respondent, contending that, in issuing the permits, respondent acted inconsistently with the requirements of ORS 468B.025(1)(b) and OAR 340-045-0015(5)(c), [**561] as well as ORS 468B.050 and OAR 340-042-0080. We affirm.

1 For ease of reference, we refer to Oregon Department of Environmental Quality (DEQ) and Oregon Environmental Quality Commission (EQC), collectively, as "respondent."

2 The Federal Water Pollution Control Act, 33 USC §§ 1251 - 1376, is generally referred to as the Clean Water Act. National Pollutant Discharge Elimination System permits are issued pursuant to the Clean Water Act. They are specifically provided for in 33 USC section 1342.

The storm water permits at issue are all National Pollutant Discharge Elimination System (NPDES) permits, issued by respondent as part of the state's implementation of the Clean Water Act. *See* ORS 468B.035 (EQC "may perform or cause to be performed any acts necessary to be performed by the state to implement" the provisions of the Clean Water Act). Although municipal storm water was not initially regulated pursuant to the NPDES program, [***3] ³ eventually, the Clean Water Act was amended to explicitly require regulation of certain storm water discharges. *See American Min. Congress v. U.S.E.P.A.*, 965 F2d 759, 763 (9th Cir 1992) (discussing amendments to Clean Water Act requiring that regulation). After those amendments but prior to 1994, most discharges composed entirely of storm water did not require an NPDES permit. 33 USC § 1342(p)(1). However, discharges from municipal separate storm sewer systems ⁴ serving populations of more than 100,000 people were subject to a permit [*136] requirement. 33 USC § 1342(p)(2)(C) - (D). The permit requirement now applies to an even larger range of municipal storm water dischargers: OAR 340-045-015(2) provides that, "[w]ithout first obtaining an NPDES permit, a person may not discharge into navigable waters * * * storm water subject to permit requirements in 40 CFR § 122.26 or § 122.33, including storm water from large, medium, and regulated small municipal separate storm sewer systems[.]"

3 For example, 40 CFR section 125.4(f) (1975) provided that, generally, no NPDES permit was required for "uncontrolled discharges composed entirely of storm runoff when these discharges are uncontaminated by [***4] any industrial or commercial activity[.]"

4 A municipal separate storm sewer is

"a conveyance or system of conveyances including roads with drainage systems, municipal streets, catch basins, curbs, gutter[s], ditches, manmade channels, or storm drains that is owned or operated by a state, city, county, district, association, or other public body; is designed or used for collecting or conveying storm water; and is not a combined sewer or part of a Publicly Owned Treatment Works as defined in 40 CFR § 122.2."

OAR 340-045-0010(10); *see also* OAR 340-045-0010(11) ("Municipal Separate Storm Sewer System or MS4' means all municipal separate storm sewers that are defined as 'large,' 'medium,' or 'small' municipal separate storm sewers systems in 40 CFR § 122.26(b).").

The NPDES permits at issue in this case were issued by respondent and authorize the municipal permittees, who are intervenors in this judicial review proceeding, to

"implement a storm water management program to reduce the contribution of pollutants in storm water to the maximum extent practicable (MEP), to address where applicable TMDL [total maximum daily load] wasteload allocations, and to discharge storm water to waters of the [***5] State, in conformance with all the requirements and conditions set forth in the attached schedules * * *." ⁵

5 The permit issued to Clean Water Services contains slightly different language.

The permits mandate that the permittees "implement

all applicable provisions in the Storm Water Management Plan (SWMP) as the associated Monitoring Program" and incorporate the SWMP by reference.

"The SWMP and associated Monitoring Program include best management practices (BMPs), monitoring triggers, narrative conditions, adaptive management and other elements designed to reduce the introduction of pollutions into the waters of the State from [municipal separate storm sewer systems] to the maximum extent practicable (MEP). The SWMP also includes evaluation and reporting requirements designed to measure the effectiveness of BMPs and other programs."

[*137] Pursuant to those permits, the municipal permittees discharge storm water into a number of rivers and streams, including the Columbia, Willamette, and Tualatin Rivers.

Although the permits are extensive, it is undisputed that that they do not contain conditions stating that the storm water discharges must comply with state water quality standards. In addition, [***6] the permits do not specify wasteload allocations⁶ in the form of [**562] numeric effluent limits; they instead incorporate benchmarks. They also require compliance with the SWMP, which, in turn, incorporates best management practices. It is the permits' lack of numeric limits and conditions requiring compliance with state water quality standards that gave rise to this case.

⁶ "Wasteload Allocation" refers to the portion of receiving water's loading capacity that is allocated to a particular source of pollution. *See* OAR 340-042-0040(4)(g) (a wasteload allocation "determines the portions of the receiving water's loading capacity that are allocated to existing point sources of pollution, including all point source discharges regulated under the Federal Water Pollution Control Act Section 402 (33 USC Section 1342)" (emphasis omitted)); OAR 340-041-0002(67) (defining wasteload allocation).

On summary judgment, the trial court concluded that "the agency did not erroneously interpret a provision of

law in issuing the final orders before the Court, that the agency's exercise of discretion was not inconsistent with an agency rule, and the agency's discretion was not outside the range of discretion delegated [***7] to the agency by law[.]" Accordingly, it entered a general judgment affirming the permits and dismissing the judicial review proceeding with prejudice. Petitioners seek review of that dismissal.

ORS 183.484(5) provides the criteria for judicial review of orders in other than contested cases:⁷

"(a) The court may affirm, reverse or remand the order. If the court finds that the agency has erroneously interpreted a provision of law and that a correct interpretation compels a particular action, it shall:

"(A) Set aside or modify the order; or

"(B) Remand the case to the agency for further action under a correct interpretation of the provision of law.

[*138] "(b) The court shall remand the order to the agency if it finds the agency's exercise of discretion to be:

"(A) Outside the range of discretion delegated to the agency by law;

"(B) Inconsistent with an agency rule, an officially stated agency position, or a prior agency practice, if the inconsistency is not explained by the agency; or

"(C) Otherwise in violation of a constitutional or statutory provision.

"(c) The court shall set aside or remand the order if it finds that the order is not supported by substantial evidence in the record. Substantial [***8] evidence exists to support a finding of fact when the record, viewed as a whole, would permit a reasonable person to make that finding."

⁷ The storm water permits at issue are orders in other than a contested case. *See Wilbur Residents*

v. *DEQ*, 176 Ore. App. 353, 354, 30 P3d 1228, *rev den*, 333 Ore. 73, 36 P.3d 974 (2001).

We review the trial court's judgment to determine whether it correctly assessed respondent's actions under the standards set forth in ORS 183.484(5). *See G.A.S.P. v. Environmental Quality Commission*, 198 Ore. App. 182, 187, 108 P.3d 95, *rev den*, 339 Ore. 230, 119 P.3d 790 (2005) (we review to determine compliance with the standards set forth in ORS 183.484(5)). The issues presented in this case are purely legal in nature. Thus, we review to determine whether, in issuing the permits, respondent "erroneously interpreted a provision of law" and whether respondent exercised its discretion "outside the range of discretion delegated" by law, or acted "inconsistent[ly] with an agency rule" or "otherwise in violation of * * * a statutory provision." ORS 183.484(5). Specifically, we examine the requirements of the statutory and regulatory provisions that petitioners contend respondent violated in issuing [***9] the permits.

In their first assignment of error, petitioners assert that, because the permits "do not ensure that the [allowed] discharges will comply with and protect Water Quality Standards," respondent's issuance of those permits violated the requirements of ORS 468B.025(1)(b) and OAR 340-045-0015(5)(c).⁸ [**563] In essence, petitioners contend that, in light of [*139] ORS 468B.025, respondent was required to impose stricter permit requirements on municipal storm water discharges than are required pursuant to the federal scheme. We look first at the statute, which we construe by examining its text, context, and any legislative history submitted by the parties, giving the legislative history the weight, if any, that we conclude it merits. *State v. Gaines*, 346 Ore. 160, 171-72, 206 P3d 1042 (2009).

⁸ Petitioners do not contend that the municipal storm water permits violate the requirements of federal law. In *Defenders of Wildlife v. Browner*, 191 F3d 1159, 1163 (9th Cir 1999), the court explained the background of the regulation of municipal storm water and explained the requirements of federal law with respect to such storm water and state water quality standards. The court held that permits providing [***10] for discharges of municipal storm water need not require strict compliance with state water quality standards under the federal law. Although the

Environmental Protection Agency (EPA) has discretion to require such compliance as it determines appropriate, the federal statutory scheme requires only that municipal storm water dischargers "reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and systems, design and engineering methods, and other such provisions as the Administrator * * * determines appropriate for the control of such pollutants." *Id.* at 1165 (quoting 33 USC § 1342(p)(3)(B)(iii) (omission in original)).

ORS 468B.025 provides:

"(1) Except as provided in ORS 468B.050 or 468B.053, no person shall:

"(a) Cause pollution of any waters of the state or place or cause to be placed any wastes in a location where such wastes are likely to escape or be carried into the waters of the state by any means.

"(b) Discharge any wastes into the waters of the state if the discharge reduces the quality of such waters below the water quality standards established by rule for such waters by the Environmental Quality Commission.

"(2) [***11] No person shall violate the conditions of any waste discharge permit issued under ORS 468B.050.

"(3) Violation of subsection (1) or (2) of this section is a public nuisance."

ORS 468B.050, in turn, authorizes DEQ to issue permits and sets out circumstances in which a permit is required. *See also EQC v. City of Coos Bay*, 171 Ore. App. 106, 110, 14 P3d 649 (2000) ("ORS 468B.050(1)(a) specifies when it is necessary to obtain a permit[.]").

On its face, ORS 468B.025 does not set forth standards for the issuance of permits or describe what conditions a permit must contain. Instead, it lists several activities that [*140] "no person shall" engage in. Those are (1) violating the conditions of a permit issued pursuant to ORS 468B.050; (2) except as provided in ORS 468B.050 or ORS 468B.053, causing pollution of

the waters of the state, or causing waste to be placed in a location where it is likely to enter the waters of the state; and (3) except as provided in ORS 468B.050 or ORS 468B.053, discharging waste into the waters of the state if the discharge reduces the quality of those waters below state water quality standards. None of those provisions directly governs DEQ's issuance of permits.

Furthermore, [***12] pursuant to the plain text of the statute at issue, in context, the prohibition on discharges that reduce the receiving water below state water quality standards is not absolute. On the contrary, as noted, ORS 468B.025(1)(b) specifically refers to the permit section of the statute, providing that, "[e]xcept as provided in ORS 468B.050 or 468B.053," persons may not discharge waste into the water if those discharges reduce the water quality below applicable state water quality standards. (Emphasis added.) Under ORS 468B.050, DEQ is authorized to issue a permit allowing the discharge of wastes into the waters of the state. Alternatively, under ORS 468B.053, EQC may exempt *de minimis* discharges (and other specified discharges not relevant here) from the permits "required under ORS 468B.025 or 468B.050[.]"⁹ Read together, the statutes prohibit any person from discharging wastes into the waters of the state if those discharges would reduce the quality of that water below the state's water quality standards *unless* the person has a permit from DEQ specifically authorizing the discharge at issue. Neither statute requires that permits [**564] issued must contain provisions mandating compliance with [***13] water quality standards.¹⁰ Instead of placing that type of limitation on respondent's ability to determine and impose [*141] appropriate permit conditions, the statutes generally give respondent discretion in those areas. Indeed, the only express requirement included in ORS 468B.050 as to the issuance of permits thereunder is that such permits "shall specify applicable effluent limitations."

⁹ Specifically, pursuant to ORS 468B.053(2), EQC may exempt "from permit requirements subsurface injection of fluids that are authorized under the underground injection control program of" DEQ. Also, ORS 468B.050 references ORS 468B.215, pursuant to which, "[e]xcept for an animal feeding operation subject to regulation under 33 USC 1342, a fee shall not be assessed to nor permit required under ORS 468B.050(1)(d) of confined animal feeding operations of four

months or less duration or that do not have waste water control facilities."

¹⁰ Federal law generally requires that discharges pursuant to NPDES permits must strictly comply with state water quality standards. 33 USC § 1311(b)(1)(C); *see Defenders of Wildlife*, 191 F3d at 1163. However, under 33 USC section 1342(p)(3)(B), dischargers of municipal storm [***14] water are not subject to that requirement. *See Defenders of Wildlife*, 191 F3d at 1165-66. Instead, federal law requires that NPDES permits relating to municipal storm water discharges require reduction of "the discharge of pollutants to the maximum extent practicable." 33 USC § 1342(p)(3)(B)(iii); *see Defenders of Wildlife*, 191 F3d at 1165 ("§ 1342(p)(3)(B)(iii) creates a lesser standard than § 1311").

Petitioners, citing ORS 468B.030, suggest that an effluent limitation, by definition, must mandate compliance with state water quality standards. That is not the case. ORS 468B.030 provides, in relevant part:

"In relation to waters of the state, the [EQC] by rule may establish effluent limitations, as defined in [the Clean Water Act], and other minimum requirements for disposal of wastes, minimum requirements for operation and maintenance of disposal systems, and all other matters pertaining to standards of quality for the waters of the state."

The Clean Water Act, in turn, defines "effluent limitation" as "any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from [***15] point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance." 33 USC § 1362(11) (emphasis added).¹¹ Thus, although a permit must include restrictions on discharges of pollutants into the water, the applicable statute does not specify what form they must take. "Best management practices," such as those incorporated in the permits at issue in this case, are a type of effluent limitation. *See* 40 CFR § 122.44(k)(2) - (3) (best management practices are to be used in NPDES permits where authorized pursuant to 33 USC § 1342(p) for the control of storm water discharges or where numeric effluent limits are infeasible); *see also*

Interim Permitting Approach for Water Quality-Based Effluent Limitations in Storm Water [*142] *Permits*, 61 Fed Reg 43,761-01 (Aug 26, 1996) (EPA considers the use of best management practices appropriate in permitting of municipal storm water based on typical lack of information on which to base numeric water quality-based effluent limitations). In short, petitioners incorrectly equate effluent limitations with state water quality standards. A statutory requirement that storm water permits include effluent limitations [***16] is not the same as a requirement that the permits mandate compliance with state water quality standards.

11 Effluent limitations can be water-quality based, *see, e.g.*, OAR 340-041-0002(67) (a WLA is a water-quality-based effluent limitation) or technology based, *see, e.g.*, 40 CFR § 125.3 (discussing technology-based effluent limitations).

Petitioners urge that the context of the statute supports their assertion that ORS 468B.025(1)(b) should be read to require the inclusion of specific terms mandating compliance with state water quality standards in any permit issued by respondent.¹² We disagree. In fact, our review of the statutory context confirms our determination that, rather than imposing that specific limitation on respondent's authority to issue the type of permits at issue, the legislature delegated broad discretion to the agency. ORS 468B.015 sets forth the policies of the state to [**565] (1) conserve the waters of the state, (2) protect and improve water quality, (3) provide for treatment or other corrective action before waste is discharged into the water, (4) prevent and control pollution, and (5) cooperate with other agencies, states, and the federal government.¹³ In order to [***17] carry out that policy, the legislature granted broad authority to respondent:

"(2) In order to carry out the public policy set forth in ORS 468B.015, [DEQ] shall take such action as is necessary for the prevention of new pollution and the abatement of existing pollution by:

[*143] "(a) Fostering and encouraging the cooperation of the people, industry, cities and counties, in order to prevent, control and reduce pollution of waters of the state; and

"(b) Requiring the use of *all available and reasonable methods necessary* to achieve the purposes of ORS 468B.015 and to conform to the standards of water quality and purity established under ORS 468B.048."

ORS 468B.020 (emphasis added); *see also Springfield Education Assn. v. Springfield School Dist.*, 290 Ore. 217, 228, 621 P.2d 547 (1980) (Terms such as "unreasonable" or "public convenience and necessity" are delegative in nature and give an agency "authority, responsibility and discretion for refining and executing generally expressed legislative policy."); ORS 468B.048 (authorizing the agency to "establish standards of quality and purity for waters of this state"); ORS 468.065(1) (providing that all permits shall be "in a form prescribed by" the agency and shall [***18] "specify its duration, and the conditions for compliance with the rules and standards, if any, adopted by the [EQC] pursuant to * * * ORS chapters 468 * * * and 468B"). Those statutes, taken together, make clear that, instead of including many specific requirements regarding the issuance of permits, the legislature intended to delegate the responsibility for appropriately implementing its policies to the agency. That context, in turn, supports our conclusion that the plain text of ORS 468B.025(1)(b) does not require respondent to include in its storm water permits specific conditions mandating compliance with state water quality standards.¹⁴ In light of the foregoing, we conclude that respondent's issuance of the permits in this case did not violate ORS 468B.025(1)(b).¹⁵

12 Petitioners also point to our decision in *EQC v. City of Coos Bay*, 171 Ore. App. 106, 14 P3d 649 (2000), in support of their first assignment of error. However, that case does not inform our decision here. There, we considered whether ORS 468B.025 and ORS 468B.050 authorized EQC to impose penalties on a permittee that violated the terms of its permit and concluded that only ORS 468B.025 prohibited violations of [***19] permit conditions. We did not address the question whether ORS 468B.025 required particular conditions mandating compliance with water quality standards to be included in NPDES permits issued by DEQ.

13 ORS 468B.015 was amended in 2009. Or Laws 2009, ch 248, § 1. That amendment does not significantly modify the statute's language and, in

any event, is not relevant to this case.

14 We note that we have considered the legislative history submitted by petitioners but did not find it helpful in resolving the issue presented.

15 We further note, parenthetically, that petitioners' argument, if extended to ORS 468B.025(1)(a), would lead to an absurd result. That section of the statute prohibits any person from, among other things, causing "pollution of any waters of the state" except as provided by ORS 468B.050 or ORS 468B.053. As noted, ORS 468B.050, in turn, provides for the issuance of permits. Under petitioners' reasoning, however, the issuance of permits that would allow for pollution of waters of the state would be impermissible. As a result, NPDES permits, which allow for pollution by their terms, could never be issued.

Petitioners next assert that the permits are inconsistent with the requirements [***20] of OAR 340-045-0015(5)(c). [*144] According to petitioners, that rule creates "a distinct and specific regulatory requirement that permits for municipal stormwater discharges comply with Water Quality Standards." We are not persuaded.

"Administrative rules are interpreted under the same analytical framework we apply when construing statutes." *Birmingham v. Department of Forestry*, 209 Ore. App. 736, 743-44, 149 P.3d 600 (2006), *rev den*, 342 Ore. 644, 158 P.3d 507 (2007). We defer to an agency's interpretation of its own rule if that interpretation is plausible and not inconsistent with the text of the rule, its context, or some other source of law. *Don't Waste Or. Comm. v. Energy Facility Siting Council*, 320 Ore. 132, 142, 881 P.2d 119 (1994).

Pursuant to OAR 340-045-0015(5):

"Each person required by sections (1) and (2) of this rule to obtain a permit must:

"(a) Promptly apply to the Department for the permit;

[**566] "(b) Fulfill all terms and conditions of the permit issued;

"(c) Comply with applicable federal

and state requirements, effluent standards, and limitations including but not limited to those contained in or promulgated pursuant to Sections 204, 301, 302, 304, 306, 307, 402, and 403 of the [Clean Water Act] and [***21] applicable federal and state water quality standards[.]"

The permittees in this case are required to obtain permits pursuant to OAR 340-045-0015(2), which provides:

"Without first obtaining an NPDES permit, a person may not discharge into navigable waters pollutants from a point source or storm water subject to permit requirements in 40 CFR § 122.26 or § 122.33, including storm water from large, medium, and regulated small municipal separate storm sewer systems and storm water associated with industrial or construction activity."

Like ORS 468B.025, the text of OAR 340-045-0015(5), does not, by its terms, regulate the issuance of permits by the agency. Instead, it requires persons who must obtain permits pursuant to sections (1) and (2) of the rule to do certain things. Namely, those persons must apply for the [*145] required permit promptly, fulfill the terms and conditions of the permit, and comply with applicable federal and state requirements and standards. On its face, the rule says nothing about what must be included in a permit, nor does it impose particular conditions on the issuance of permits. In contrast, other rules do impose requirements on respondent with respect to the issuance [***22] of permits. *See, e.g.*, OAR 340-045-0027 (public notice and participation requirements for permitting actions); OAR 340-045-0033 (requirements for general permits). Indeed, OAR 340-045-0035, which governs the issuance of the type of permit at issue in this case, imposes specific requirements on respondent.

Furthermore, OAR 340-045-0015(5) does not itself make state water quality standards applicable to storm water dischargers. Instead, it simply requires compliance with "applicable" federal and state water quality standards. The text of the provision, thus, only requires that permittees comply with legal standards that some other source makes applicable to them. As we have observed, pursuant to federal and state statutes, permits for the discharge of municipal storm water, unlike other NPDES permits, need not incorporate provisions

requiring compliance with state water quality standards. In the context of storm water, permittees must implement best management practices to reduce the discharge of pollutants in storm water to the maximum extent practicable. OAR 340-045-0015(5) does not impose a stricter requirement. Instead, it simply requires that, to the extent that state water quality [***23] standards otherwise apply, a permittee must comply with them. Because those standards are not otherwise strictly applicable to storm water, the rule does not, itself, make them applicable. In sum, we are not persuaded by petitioners' assertion that, because they do not contain specific conditions requiring compliance with in-stream state water quality standards, the permits violate the requirements of OAR 340-045-0015(5).

In their second assignment of error, petitioners argue that respondent acted inconsistently with ORS 468B.050 and OAR 340-042-0080 when it issued the permits "because the [p]ermits do not incorporate wasteload allocations as enforceable effluent limitations." Petitioners' argument suggests that wasteload allocations should be set forth [*146] as numeric limits within the permits and that the benchmarks incorporated into the permits are impermissible.

In their argument regarding the statute, petitioners suggest that the permits are inconsistent with the requirements of ORS 468B.050 and point to that statute's general requirement that permits "shall specify applicable effluent limitations." As discussed above, that statute does not mandate that such effluent limitations take [***24] a particular form. A best management practices requirement is a type of effluent limitation. In this case, the permits included such a limitation (set forth in detail in the incorporated storm water management plans). We reject petitioners' assertion that the permits violate ORS 468B.050.

[**567] We turn to petitioners' assertion that the permits violate OAR 340-042-0080. That rule is part of a set of rules adopted by respondent relating to "total maximum daily loads (TMDLs)." A TMDL is

"a written quantitative plan and analysis for attaining and maintaining water quality standards and includes the elements described in OAR 340-042-0040. These elements include a calculation of the maximum amount of a pollutant that a

waterbody can receive and still meet state water quality standards, allocations of portions of that amount to the pollutant sources or sectors, and a Water Quality Management Plan to achieve water quality standards."

OAR 340-042-0030(15). TMDLs are established for pollutants in waters of the state that are identified, pursuant to 33 USC section 1313(d), as being water quality impaired. OAR 340-042-0040(1); *see* 33 USC § 1313(d). Among other things TMDLs must include loading capacities [***25] (the amount of a pollutant that a waterbody can receive and still meet water quality standards), wasteload allocations (the portions of the receiving water's loading capacity allocated to particular point sources), and a water quality management plan (a framework of management strategies to attain and maintain water quality standards, including proposed strategies to meet wasteload allocations in the TMDL). OAR 340-042-0040(4).

As part of the implementation of TMDLs, "[f]or sources subject to permit requirements in ORS 468B.050, [*147] wasteload allocations and other management strategies will be incorporated into permit requirements." OAR 340-042-0080(4). In relation to TMDLs, the term "wasteload allocation" is defined, by rule, to mean "the portion of [the] receiving water's loading capacity that is allocated to one of its existing or future point sources of pollution. [Wasteload allocations] constitute a type of water quality-based effluent limitation." OAR 340-041-0002(67). However, the rule does not specifically provide the manner in which those wasteload allocations must be implemented. Petitioners' argument raises the question whether wasteload allocations have been incorporated into [***26] the permits in a meaningful way. We conclude that they have.

The applicable TMDLs in this case set forth specific wasteload allocations for municipal storm water. The permits at issue, in turn, indicate the bodies of water for which TMDLs and wasteload allocations have been established and reference the specific TMDL for those bodies of water. The permits provide in the "adaptive management" section that, "[w]here TMDL wasteload allocations have been established for pollutant parameters associated with the permittee's [municipal separate storm sewer system] discharges, the permittee must use the estimated pollutant load reductions (benchmarks)

established in the [storm water management plan] to guide the adaptive management process." Furthermore, they include a section that specifically addresses the TMDL wasteload allocations. The section is intended to "ensure pollutant discharges for those parameters listed in the TMDL are reduced to the [maximum extent practicable]. Adequate progress toward achieving assigned wasteload allocations * * * will be demonstrated through the implementation of best management practices that are targeted at TMDL-related pollutants." Pursuant to that section, [***27] permittees must evaluate progress toward reducing pollutant loads "through the use of performance measures and pollutant load reduction benchmarks developed and listed in the [storm water management plan]." ¹⁶ The storm water management [*148] plan describes a program, including best management practices, designed to achieve reductions in TMDL pollutants. Failure to meet an approved benchmark is not, itself, a violation of permit conditions. However, such a failure gives rise to an obligation on the part of the permittee to follow the adaptive management [**568] process to improve the storm water management plan. Failure to engage in that process would be a violation of the permits.

16 A benchmark is defined in the permit as

"a total pollutant load reduction estimate for each parameter or surrogate, where applicable, for which a [wasteload allocation] is established at the time of permit issuance. A benchmark is used to measure the overall effectiveness of the storm water management plan in making progress toward the wasteload allocation * * * and is intended to be a tool for guiding the adaptive management activities."

In our view, the provisions of the permits are sufficient to meet the requirement [***28] of OAR

340-042-0080(4) that wasteload allocations be incorporated into permit requirements. The agency has interpreted what it means to "incorporate" wasteload allocations through its implementation of that rule in the issuance of permits, and that interpretation is a reasonable one. Although the permits do not themselves include numeric wasteload allocations like those set forth in the TMDLs, the TMDL wasteload allocations are clearly referenced in the permits, and the permits require implementation of best management practices, set forth in the storm water management plans, to make progress toward meeting those wasteload allocations. Again, best management practices are a type of effluent limitation that is used in municipal storm water permits. *See* 40 CFR § 122.44(k)(2) - (3). Furthermore, the permits incorporate benchmarks, through incorporation of the storm water management plan, which are specific pollutant load reduction goals for the permittees. Those measures are "permit requirements" that properly incorporate the TMDL wasteload allocations.

As well, contrary to petitioners' assertion, the permits incorporate wasteload allocations in a way that is enforceable. Although the [***29] failure to reduce pollutants to the extent set forth in a particular benchmark is not itself a violation of the permit, it gives rise to specific obligations on the part of the permittee. Furthermore, the requirement that permittees implement best management practices that are set out in their approved storm water management plan is an enforceable requirement. Looking at the permits in light of [*149] the requirements of the regulatory scheme, we conclude that their provisions are sufficient to meet the requirement of OAR 340-042-0080 that "wasteload allocations * * * be incorporated into permit requirements."

In light of the foregoing discussion, we conclude that the permits do not violate ORS 468B.025, ORS 468B.050, OAR 340-045-0015, or OAR 340-042-0080. Accordingly, the trial court did not err in granting summary judgment in favor of respondent.

JUDGES: Haller, J., with Benke, Acting P. J., and Aaron, J., concurring.

OPINION BY: HALLER [*871]

OPINION

[**130] **HALLER, J.**--This case concerns the environmental regulation of municipal storm sewers that

carry excess water runoff to lakes, lagoons, rivers, bays, and the ocean. The waters flowing through these sewer systems have accumulated numerous harmful pollutants that are then discharged into the water body without receiving any treatment. To protect against the resulting water quality impairment, federal and state laws impose regulatory controls on storm sewer discharges. In particular, municipalities and other public entities are required to obtain, and comply with, a regulatory permit limiting the quantity and quality of water runoff that can be discharged from these storm sewer systems.

In this case, the California Regional Water Control Board, San Diego Region, (Regional Water Board) conducted numerous public hearings and then issued a comprehensive municipal storm sewer permit governing 19 local public entities. Although these entities did not bring an administrative challenge to the permit, one business organization, the Building Industry [***3] Association of San Diego County (Building Industry), filed an administrative appeal with the State Water Resources Control Board (State Water Board). After making some modifications to the permit, the State Water Board denied the appeal. Building Industry then petitioned for a writ of mandate in the superior court, asserting numerous claims, including that the permit violates state and federal law because the permit provisions are too stringent and impossible to satisfy. Three environmental groups intervened as defendants in the action. After a hearing, the trial court found Building Industry failed to prove its claims and entered judgment in favor of the administrative agencies (the Water Boards) and the intervenor environmental groups.

(1) On appeal, Building Industry's main contention is that the regulatory permit violates federal law because it allows the Water Boards to impose municipal storm sewer control measures more stringent than a federal standard known as "maximum extent practicable." (33 U.S.C. § 1342(p)(3)(B)(iii).)² [**131] In the published portion of this opinion, we reject this contention, and conclude the Water Boards had the authority to include [***4] a permit provision requiring compliance with state water quality standards. In the unpublished portion of the opinion, we find Building Industry's additional contentions to be without merit. We affirm the judgment.

² Further statutory references are to title 33 of the United States Code, unless otherwise specified.

[*872] RELEVANT BACKGROUND INFORMATION

I. Summary of Relevant Clean Water Act Provisions

Before setting forth the factual background of this particular case, it is helpful to summarize the federal and state statutory schemes for regulating municipal storm sewer discharges.³

³ The systems that carry untreated urban water runoff to receiving water bodies are known as "[m]unicipal separate storm sewer" systems (40 C.F.R. § 122.26(b)(8)), and are often referred to as "MS4s" (40 C.F.R. § 122.30). For readability, we will identify these systems as municipal storm sewers. To avoid confusion in this case, we will generally use descriptive names, rather than initials or acronyms, when referring to parties and concepts.

[***5] A. Federal Statutory Scheme

When the United States Congress first enacted the Federal Water Pollution Control Act in 1948, the Congress relied primarily on state and local enforcement efforts to remedy water pollution problems. (*Middlesex Cty. Sewerage Auth. v. Sea Clammers* (1981) 453 U.S. 1, 11 [69 L. Ed. 2d 435, 101 S. Ct. 2615]; *Tahoe-Sierra Preservation Council v. State Water Resources Control Bd.* (1989) 210 Cal. App. 3d 1421, 1433 [259 Cal. Rptr. 132].) However, by the early 1970's, it became apparent that this reliance on local enforcement was ineffective and had resulted in the "accelerating environmental degradation of rivers, lakes, and streams" (*Natural Resources Defense Council, Inc. v. Costle* (D.C. Cir. 1977) 568 F.2d 1369, 1371 (*Costle*); see *EPA v. State Water Resources Control Board* (1976) 426 U.S. 200, 203 [48 L. Ed. 2d 578, 96 S. Ct. 2022].) In response, in 1972 Congress substantially amended this law by mandating compliance with various minimum technological effluent standards established by the federal government and creating a comprehensive regulatory scheme to implement these laws. (See *EPA v. State Water Resources Control Board, supra*, 426 U.S. at pp. 204-205.) [***6] The objective of this law, now commonly known as the Clean Water Act, was to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." (§ 1251(a).)

(2) The Clean Water Act employs the basic strategy of prohibiting pollutant emissions from "point sources"⁴

unless the party discharging the pollutants obtains a permit, known as an NPDES⁵ permit. (See *EPA v. State Water Resources Control Board*, *supra*, 426 U.S. at p. 205.) It is "unlawful [*873] for any person to discharge a pollutant without obtaining a permit and complying with its terms." (*Ibid.*; see § 1311(a); *Costle*, *supra*, 568 [**132] F.2d at p. 1375.) An NPDES permit is issued by the United States Environmental Protection Agency (EPA) or by a state that has a federally approved water quality program. (§ 1342(a), (b); *EPA v. State Water Resources Control Board*, *supra*, 426 U.S. at p. 209.) Before an NPDES is issued, the federal or state regulatory agency must follow an extensive administrative hearing procedure. (See 40 C.F.R. §§ 124.3, 124.6, 124.8, 124.10; see generally Wardzinski et al., *National Pollutant Discharge Elimination System [***7] Permit Application and Issuance Procedures*, in *The Clean Water Act Handbook* (Evans edit., 1994) pp. 72-74 (Clean Water Act Handbook).) NPDES permits are valid for five years. (§ 1342(b)(1)(B).)

4 The Clean Water Act defines a "point source" to be "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged." (§ 1362(14).)

5 NPDES stands for National Pollution Discharge Elimination System.

(3) Under the Clean Water Act, the proper scope of the controls in an NPDES permit depends on the applicable state water quality standards for the affected water bodies. (See *Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092 [1 Cal. Rptr. 3d 76].) Each state is required to develop water quality standards that establish " 'the desired [***8] condition of a waterway.' " (*Ibid.*) A water quality standard for any given water segment has two components: (1) the designated beneficial uses of the water body; and (2) the water quality criteria sufficient to protect those uses. (*Ibid.*) As enacted in 1972, the Clean Water Act mandated that an NPDES permit require compliance with state water quality standards and that this goal be met by setting forth a specific "effluent limitation," which is a restriction on the amount of pollutants that may be discharged at the point source. (§§ 1311, 1362(11).)

Shortly after the 1972 legislation, the EPA promulgated regulations exempting most municipal storm sewers from the NPDES permit requirements. (*Costle*, *supra*, 568 F.2d at p. 1372; see *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159, 1163 (*Defenders of Wildlife*).) When environmental groups challenged this exemption in federal court, the Ninth Circuit held a storm sewer is a point source and the EPA did not have the authority to exempt categories of point sources from the Clean Water Act's NPDES permit requirements. (*Costle*, *supra*, 568 F.2d at pp. 1374-1383.) [***9] The *Costle* court rejected the EPA's argument that effluent-based storm sewer regulation was administratively infeasible because of the variable nature of storm water pollution and the number of affected storm sewers throughout the country. (*Id.* at pp. 1377-1382.) Although the court acknowledged the practical problems relating to storm sewer regulation, the court found the EPA had the flexibility under the Clean Water Act to design regulations that would overcome these problems. (*Id.* at pp. 1379-1383.)

[*874] During the next 15 years, the EPA made numerous attempts to reconcile the statutory requirement of point source regulation with the practical problem of regulating possibly millions of diverse point source discharges of storm water. (*Defenders of Wildlife*, *supra*, 191 F.3d at p. 1163; see Gallagher, *Clean Water Act in Environmental Law Handbook* (Sullivan edit., 2003) p. 300 (Environmental Law Handbook); Eisen, *Toward a Sustainable Urbanism: Lessons from Federal Regulation of Urban Stormwater Runoff* (1995) 48 Wash. U. J. Urb. & Contemp. L. 1, 40-41 (*Regulation of Urban Stormwater Runoff*).)

(4) Eventually, in 1987, Congress amended the [***10] Clean Water Act to add provisions that specifically concerned NPDES permit requirements for storm sewer discharges. (§ 1342(p); see *Defenders of Wildlife*, *supra*, [**133] 191 F.3d at p. 1163; *Natural Resources Defense Council v. U.S. E.P.A.* (1992) 966 F.2d 1292, 1296.) In these amendments, enacted as part of the Water Quality Act of 1987, Congress distinguished between industrial and municipal storm water discharges. With respect to *industrial* storm water discharges, Congress provided that NPDES permits "shall meet all applicable provisions of this section and section 1311 [requiring the EPA to establish effluent limitations under specific timetables]" (§ 1342(p)(3)(A).) With respect to *municipal* storm water discharges, Congress clarified

that the EPA had the authority to fashion NPDES permit requirements to meet water quality standards without specific numerical effluent limits and instead to impose "controls to reduce the discharge of pollutants to the maximum extent practicable" (§ 1342(p)(3)(B)(iii); see *Defenders of Wildlife, supra*, 191 F.3d at p. 1163.) Because the statutory language pertaining to municipal [***11] storm sewers is at the center of this appeal, we quote the relevant portion of the statute in full:

"(B) ... Permits for discharges from municipal storm sewers--

"(i) may be issued on a system- or jurisdiction-wide basis;

"(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

"(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." (§ 1342(p)(3)(B).) To ensure this scheme would be administratively workable, Congress placed a moratorium on many new types of required stormwater permits until 1994 (§ 1342(p)(1)), and created a phased approach to necessary municipal [*875] stormwater permitting depending on the size of the municipality (§ 1342(p)(2)(D)). (See *Environmental Defense Center, Inc. v. U.S. E.P.A.* (9th Cir. 2003) 344 F.3d 832, 841-842.)

B. State Statutory Scheme

Three years before the 1972 Clean Water Act, the California Legislature enacted [***12] its own water quality protection legislation, the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), seeking to "attain the highest water quality which is reasonable" (Wat. Code, § 13000.) The Porter-Cologne Act created the State Water Board to formulate statewide water quality policy and established nine regional boards to prepare water quality plans (known as basin plans) and issue permits governing the discharge of waste. (Wat. Code, §§ 13100, 13140, 13200, 13201, 13240, 13241, 13243.) The Porter-Cologne Act identified these permits as "waste discharge requirements," and provided that the

waste discharge requirements must mandate compliance with the applicable regional water quality control plan. (Wat. Code, §§ 13263, subd. (a), 13377, 13374.)

Shortly after Congress enacted the Clean Water Act in 1972, the California Legislature added chapter 5.5 to the Porter-Cologne Act, for the purpose of adopting the necessary federal requirements to ensure it would obtain EPA approval to issue NPDES permits. (Wat. Code, § 13370, subd. (c).) As part of these amendments, the Legislature provided that the state and regional water boards "shall, as required or authorized [***13] by the [Clean Water Act], issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions [***134] [of the Clean Water Act], together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." (Wat. Code, § 13377.) Water Code section 13374 provides that "[t]he term 'waste discharge requirements' as referred to in this division is the equivalent of the term 'permits' as used in the [Clean Water Act]."

(5) California subsequently obtained the required approval to issue NPDES permits. (*WaterKeepers Northern California v. State Water Resources Control Bd.* (2002) 102 Cal.App.4th 1448, 1453 [126 Cal. Rptr. 2d 389].) Thus, the waste discharge requirements issued by the regional water boards ordinarily also serve as NPDES permits under federal law. (Wat. Code, § 13374.)

II. The NPDES Permit at Issue in this Case

Under its delegated authority and after numerous public hearings, in February 2001 the Regional Water Board issued a 52-page NPDES permit [*876] and Waste Discharge Requirements (the Permit) governing municipal storm sewers owned [***14] by San Diego County, the San Diego Unified Port District, and 18 San Diego-area cities (collectively, Municipalities).⁶ The first 10 pages of the Permit contain the Regional Water Board's detailed factual findings. These findings describe the manner in which San Diego-area water runoff absorbs numerous harmful pollutants and then is conveyed by municipal storm sewers into local waters without any treatment. The findings state that these storm sewer discharges are a leading cause of water quality impairment in the San Diego region, endangering aquatic life and human health. The findings further state that to achieve applicable state water quality objectives, it is necessary not only to require municipalities to comply

with existing pollution-control technologies, but also to require compliance with applicable "receiving water limits" (state water quality standards) and to employ an "iterative process" of "development, implementation, monitoring, and assessment" to improve existing technologies.

6 Under the Clean Water Act, entities responsible for NPDES permit conditions pertaining to their own discharges are referred to as "copermittees." (40 C.F.R. § 122.26(b)(1).) For clarity and readability, we shall refer to these entities as Municipalities.

[***15] Based on these factual findings, the Regional Water Board included in the Permit several overall prohibitions applicable to municipal storm sewer discharges. Of critical importance to this appeal, these prohibitions concern two categories of restrictions. First, the Municipalities are prohibited from discharging those pollutants "which have not been reduced to the *maximum extent practicable*" ⁷ (Italics added). Second, the Municipalities [**135] are prohibited from discharging pollutants "which cause or contribute to exceedances of receiving water quality objectives ... " and/or that "cause or contribute to the violation of water quality standards" This second category of restrictions (referred to in this opinion as the Water Quality Standards provisions) essentially provide that a municipality may not discharge pollutants if those pollutants would cause the receiving water body to exceed the applicable water quality standard. It is these latter restrictions that are challenged by Building Industry in this appeal.

7 The Permit does not precisely define this phrase, and instead, in its definition section, contains a lengthy discussion of the variable nature of the maximum extent practicable concept, referred to as MEP. A portion of this discussion is as follows: "[T]he definition of MEP is dynamic and will be defined by the following process over time: municipalities propose their definition of MEP by way of their [local storm sewer plan]. Their total collective and individual activities conducted pursuant to the [plan] becomes their proposal for MEP as it applies both to their overall effort, as well as to specific activities (e.g., MEP for street sweeping, or MEP for municipal separate storm sewer maintenance). In the absence of a proposal acceptable to the

[Regional Water Board], the [Regional Water Board] defines MEP." The definition also identifies several factors that are "useful" in determining whether an entity has achieved the maximum extent practicable standard, including "Effectiveness," "Regulatory Compliance," "Public Acceptance," "Cost," and "Technical Feasibility."

[***16] [*877] Part C of the Permit (as amended) qualifies the Water Quality Standards provisions by detailing a procedure for enforcing violations of those standards through a step-by-step process of "timely implementation of control measures ...," known as an "iterative" process. Under this procedure, when a municipality "caus[es] or contribute[s] to an exceedance of an applicable water quality standard," the municipality must prepare a report documenting the violation and describing a process for improvement and prevention of further violations. The municipality and the regional water board must then work together at improving methods and monitoring progress to achieve compliance. But the final provision of Part C states that "Nothing in this section shall prevent the [Regional Water Board] from enforcing any provision of this Order while the [municipality] prepares and implements the above report."

In addition to these broad prohibitions and enforcement provisions, the Permit requires the Municipalities to implement, or to require businesses and residents to implement, various pollution control measures referred to as "best management practices," which reflect techniques for preventing, [***17] slowing, retaining or absorbing pollutants produced by stormwater runoff. These best management practices include structural controls that minimize contact between pollutants and flows, and nonstructural controls such as educational and public outreach programs. The Permit also requires the Municipalities to regulate discharges associated with new development and redevelopment and to ensure a completed project will not result in significantly increased discharges of pollution from storm water runoff.

III. *Administrative and Trial Court Challenges*

After the Regional Water Board issued the Permit, the Building Industry, an organization representing the interests of numerous construction-related businesses, filed an administrative challenge with the State Water

Board. Although none of the Municipalities joined in the administrative appeal, Building Industry claimed its own independent standing based on its assertion that the Permit would impose indirect obligations on the regional building community. (See Wat. Code, § 13320 [permitting any "aggrieved person" to challenge regional water board action].) Among its numerous contentions, Building Industry argued that the Water [***18] Quality Standards provisions in the Permit require strict compliance with state water quality standards beyond what is "practicable" and therefore violate federal law.

In November 2001, the State Water Board issued a written decision rejecting Building Industry's appeal after making certain modifications to the Permit. (Cal. Wat. Resources Control Bd. Order WQ2001-15 (Nov. 15, 2001).) Of particular relevance here, the State Water [*878] Board modified the Permit to make clear that the iterative enforcement process applied to the Water Quality Standards provisions in the Permit. But the State Water Board did not delete the Permit's [**136] provision stating that the Regional Water Board retains the authority to enforce the Water Quality Standards provisions even if a Municipality is engaged in this iterative process.

Building Industry then brought a superior court action against the Water Boards, challenging the Regional Board's issuance of the Permit and the State Water Board's denial of Building Industry's administrative challenge.⁸ Building Industry asserted numerous legal claims, including that the Water Boards: (1) violated the Clean Water Act by imposing a standard greater [***19] than the "maximum extent practicable" standard; (2) violated state law by failing to consider various statutory factors before issuing the Permit; (3) violated the California Environmental Quality Act (CEQA) by failing to prepare an environmental impact report (EIR); and (4) made findings that were factually unsupported.

⁸ Several other parties were also named as petitioners: Building Industry Legal Defense Foundation, California Business Properties Association, Construction Industry Coalition for Water Quality, San Diego County Fire Districts Association, and the City of San Marcos. However, because these entities were not parties in the administrative challenge, the superior court properly found they were precluded by the

administrative exhaustion doctrine from challenging the administrative agencies' compliance with the federal and state water quality laws. Although these entities were named as appellants in the notice of appeal, they are barred by the exhaustion doctrine from asserting appellate contentions concerning compliance with federal and state water quality laws. However, as to any other claims (such as CEQA), these entities are proper appellants. For ease of reference and where appropriate, we refer to the appellants collectively as Building Industry.

Three environmental organizations, San Diego BayKeeper, Natural Resources Defense Council, and California CoastKeeper (collectively, Environmental Organizations), [***20] requested permission to file a complaint in intervention, seeking to uphold the Permit and asserting a direct and substantial independent interest in the subject of the action. Over Building Industry's objections, the trial court permitted these organizations to file the complaint and enter the action as parties-interveners.

After reviewing the lengthy administrative record and the parties' briefs, and conducting an oral hearing, the superior court ruled in favor of the Water Boards and Environmental Organizations (collectively, respondents). Applying the independent judgment test, the court found Building Industry failed to meet its burden to establish the State Water Board abused its discretion in approving the Permit or that the administrative findings are contrary to the weight of the evidence. In particular, the court found Building Industry failed to establish the Permit requirements were "impracticable under federal law or unreasonable under state law," and noted that there was evidence showing the Regional Water Board considered many practical aspects of the regulatory [*879] controls before issuing the Permit. Rejecting Building Industry's legal arguments, the court also stated that [***21] under federal law the Water Boards had the discretion "to require strict compliance with water quality standards" or "to require less than strict compliance with water quality standards." The court also sustained several of respondents' evidentiary objections, including to documents relating to the legislative history of the Clean Water Act.

Building Industry appeals, challenging the superior court's determination that the Permit did not violate the

federal Clean Water Act. In its appeal, Building Industry does not reassert its claim that the Permit violates state law, except for its contentions pertaining to CEQA.

DISCUSSION

I. Standard of Review

(6) A party aggrieved by a final decision of the State Water Board may obtain review of the decision by filing a timely [*137] petition for writ of mandate in the superior court. (Wat. Code, § 13330, subd. (a).) Code of Civil Procedure section 1094.5 governs the proceedings, and the superior court must exercise its independent judgment in examining the evidence and resolving factual disputes. (Wat. Code, § 13330, subd. [***22] (d).) "In exercising its independent judgment, a trial court must afford a strong presumption of correctness concerning the administrative findings, and the party challenging the administrative decision bears the burden of convincing the court that the administrative findings are contrary to the weight of the evidence." (*Fukuda v. City of Angels* (1999) 20 Cal.4th 805, 817 [85 Cal. Rptr. 2d 696, 977 P.2d 693].)

(7) In reviewing the trial court's factual determinations on the administrative record, a Court of Appeal applies a substantial evidence standard. (*Fukuda v. City of Angels*, *supra*, 20 Cal.4th at p. 824.) However, in reviewing the trial court's legal determinations, an appellate court conducts a de novo review. (See *Alliance for a Better Downtown Millbrae v. Wade* (2003) 108 Cal.App.4th 123, 129 [133 Cal. Rptr. 2d 249].) Thus, we are not bound by the legal determinations made by the state or regional agencies or by the trial court. (See *Yamaha Corp. of America v. State Bd. of Equalization* (1998) 19 Cal.4th 1, 7-8 [78 Cal. Rptr. 2d 1, 960 P.2d 1031].) But we must give appropriate consideration to an administrative agency's expertise underlying its interpretation of an applicable statute.⁹ (*Ibid.*)

9 We note that in determining the meaning of the Clean Water Act and its amendments, federal courts generally defer to the EPA's statutory construction if the disputed portion of the statute is ambiguous. (See *Chevron U.S.A. v. Natural Res. Def. Council, Inc.* (1984) 467 U.S. 837, 842-844 [81 L. Ed. 2d 694, 104 S. Ct. 2778] (*Chevron*).) However, the parties do not argue this same principle applies to a *state agency's* interpretation of the Clean Water Act.

Nonetheless, under governing state law principles, we do consider and give due deference to the Water Boards' statutory interpretations in this case. (See *Yamaha Corp. of America v. State Bd. of Equalization*, *supra*, 19 Cal.4th at pp. 7-8.)

[***23]

[*880] II. Water Boards' Authority to Enforce Water Quality Standards in NPDES Permit

Building Industry's main appellate contention is very narrow. Building Industry argues that two provisions in the Permit (the Water Quality Standards provisions) violate federal law because they prohibit the Municipalities from discharging runoff from storm sewers if the discharge would cause a water body to exceed the applicable water quality standard established under state law.¹⁰ Building Industry contends that under federal law the "maximum extent practicable" standard is the "exclusive" measure that may be applied to municipal storm sewer discharges and a regulatory agency may not require a Municipality to comply with a state water quality standard if the required controls exceed a "maximum extent practicable" standard.

10 These challenged Permit provisions state "Discharges from [storm sewers] which cause or contribute to exceedances of receiving water quality objectives for surface water or groundwater are prohibited" (Permit, § A.2), and "Discharges from [storm sewers] that cause or contribute to the violation of water quality standards ... are prohibited" (Permit, § C.1).

[***24] In the following discussion, we first reject respondents' contentions that Building Industry waived these arguments by failing to raise a substantial evidence challenge to the court's factual findings and/or [*138] to reassert its state law challenges on appeal. We then focus on the portion of the Clean Water Act (§ 1342(p)(3)(B)(iii)) that Building Industry contends is violated by the challenged Permit provisions. On our de novo review of this legal issue, we conclude the Permit's Water Quality Standards provisions are proper under federal law, and Building Industry's legal challenges are unsupported by the applicable statutory language, legislative purpose, and legislative history.

A. Building Industry Did Not Waive the Legal Argument

Respondents (the Water Boards and Environmental Organizations) initially argue that Building Industry waived its right to challenge the Permit's consistency with the maximum extent practicable standard because Building Industry did not challenge the trial court's *factual* findings that Building Industry failed to prove any of the Permit requirements were "impracticable" or "unreasonable."

In taking this position, respondents misconstrue the [***25] nature of Building Industry's appellate contention challenging the Water Quality Standards provisions. Building Industry's contention concerns the scope of the authority given to the Regional Water Board under the Permit terms. Specifically, [*881] Building Industry argues that the Regional Water Board does not have the authority to require the Municipalities to adhere to the applicable water quality standards because federal law provides that the "maximum extent practicable" standard is the exclusive standard that may be applied to storm sewer regulation. This argument--concerning the proper scope of a regulatory agency's authority--presents a purely legal issue, and is not dependent on the court's factual findings regarding the practicality of the specific regulatory controls identified in the Permit.

Respondents alternatively contend that Building Industry waived its right to challenge the propriety of the Water Quality Standards provisions under federal law because the trial court found the provisions were valid under state law and Building Industry failed to reassert its state law challenges on appeal. Under the particular circumstances of this case, we conclude Building Industry did [***26] not waive its rights to challenge the Permit under federal law.

(8) Although it is well settled that the Clean Water Act authorizes states to impose water quality controls that are more stringent than are required under federal law (§ 1370; see *PUD No. 1 of Jefferson Cty. v. Washington Dept. of Ecology* (1994) 511 U.S. 700, 705 [128 L. Ed. 2d 716, 114 S. Ct. 1900]; *Northwest Environmental Advocates v. Portland* (9th Cir. 1995) 56 F.3d 979, 989), and California law specifically allows the imposition of controls more stringent than federal law (Wat. Code, § 13377), the Water Boards made a tactical decision in the superior court to assert the Permit's validity based solely on federal law, and repeatedly made clear they were not seeking to justify the Permit requirements based on the Boards' independent authority to act under state law. On

appeal, the Water Boards continue to rely primarily on federal law to uphold the Permit requirements, and their assertions that we may decide the matter based solely on state law are in the nature of asides rather than direct arguments. On this record, it would be improper to rely solely on state law to uphold the challenged Permit provisions. [***27]

B. *The Water Quality Standards Requirement Does Not Violate Federal Law*

We now turn to Building Industry's main substantive contention on appeal-- [*139] that the Permit's Water Quality Standards provisions (fn. 10, *ante*) violate federal law. Building Industry's contention rests on its interpretation of the 1987 Water Quality Act amendments containing NPDES requirements for municipal storm sewers. The portion of the relevant statute reads: "(B) ... Permits for discharges from municipal storm sewers ... [¶] ... [¶] (iii) shall require controls to reduce the discharge of pollutants to the *maximum extent practicable, including* management practices, control techniques and [*882] system, design and engineering methods, and such other provisions as the [EPA] Administrator or the State determines appropriate for the control of such pollutants." (§ 1342(p)(3)(B)(iii), italics added.)

1. *Statutory Language*

Focusing on the first 14 words of subdivision (iii), Building Industry contends the statute means that the maximum extent practicable standard sets the upper limit on the type of control that can be used in an NPDES permit, and that each of the phrases following the [***28] word "*including*" identify examples of "maximum extent practicable" controls. (§ 1342(p)(3)(B)(iii), italics added.) Building Industry thus reads the final "and such other provisions" clause as providing the EPA with the authority only to include *other* types of "maximum extent practicable" controls in an NPDES storm sewer permit.

Respondents counter that the term "including" refers only to the three identified types of pollution control procedures--(1) "management practices"; (2) "control techniques"; and (3) "system, design and engineering methods"--and that the last phrase, "*and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants,*" provides the EPA (or the approved state regulatory agency) the specific authority to go beyond the maximum extent

practicable standard to impose effluent limitations or water-quality based standards in an NPDES permit. In support, respondents argue that because the word "system" in section 1342(p)(3)(B)(iii) is singular, it necessarily follows from parallel-construction grammar principles that the word "system" is part of the phrase "system, design and engineering methods" rather [***29] than the phrase "control techniques and system." Under this view and given the absence of a comma after the word "techniques," respondents argue that the "and such other provisions" clause cannot be fairly read as restricted by the "maximum extent practicable" phrase, and instead the "and such other provisions" clause is a separate and distinct clause that acts as a second direct object to the verb "require" in the sentence. (§ 1342(p)(3)(B)(iii).)

Building Industry responds that respondents' proposed statutory interpretation is "not logical" because if the "and such other provisions" phrase is the direct object of the verb "require," the sentence would not make sense. Building Industry states that "permits" do not generally "require" provisions; they "include" or "contain" them.

(9) As a matter of grammar and word choice, respondents have the stronger position. The second part of Building Industry's proposed interpretation--"control techniques and system, design and engineering methods"--without a comma after the word "techniques" does not logically serve as a [*883] parallel construct with the "and such other provisions" clause. Moreover, we disagree that the "and such other provisions" [***30] clause cannot be a direct object to the word "require." (§ 1342(p)(3)(B)(iii).) Although it is not the clearest way of articulating the concept, the language of section 1342(p)(3)(B)(iii) does communicate the [**140] basic principle that the EPA (and/or a state approved to issue the NPDES permit) retains the discretion to impose "appropriate" water pollution controls in addition to those that come within the definition of " 'maximum extent practicable.' " (*Defenders of Wildlife, supra*, 191 F.3d at pp. 1165-1167.) We find unpersuasive Building Industry's reliance on several statutory interpretation concepts, *ejusdem generis*, *noscitur a sociis*, and *expressio unius est exclusion alterius*, to support its narrower statutory construction.

2. Purpose and History of Section 1342(p)(3)(B)(iii)

(10) Further, "[w]hile punctuation and grammar should be considered in interpreting a statute, neither is

controlling unless the result is in harmony with the clearly expressed intent of the Legislature." (*In re John S.* (2001) 88 Cal.App.4th 1140, 1144, fn. 1 [106 Cal. Rptr. 2d 476]; see *Estate of Coffee* (1941) 19 Cal.2d 248, 251 [120 P.2d 661].) If the statutory language is susceptible [***31] to more than one reasonable interpretation, a court must also "look to a variety of extrinsic aids, including the ostensible objects to be achieved, the evils to be remedied, the legislative history, public policy, contemporaneous administrative construction, and the statutory scheme of which the statute is a part." (*Nolan v. City of Anaheim* (2004) 33 Cal.4th 335, 340 [14 Cal. Rptr. 3d 857, 92 P.3d 350].)

(11) The legislative purpose underlying the Water Quality Act of 1987, and section 1342(p) in particular, supports that Congress intended to provide the EPA (or the regulatory agency of an approved state) the discretion to require compliance with water quality standards in a municipal storm sewer NPDES permit, particularly where, as here, that compliance will be achieved primarily through an iterative process.

Before section 1342(p) was enacted, the courts had long recognized that the EPA had the authority to require a party to comply with a state water quality standard even if that standard had not been translated into an effluent limitation. (See *EPA v. State Water Resources Control Board, supra*, 426 U.S. at p. 205, fn. 12; *PUD No. 1 of Jefferson Cty. v. Washington Dept. of Ecology, supra*, 511 U.S. at p. 715; [***32] *Northwest Environmental Advocates v. Portland* (9th Cir. 1995) 56 F.3d 979, 987; *Natural Resources Defense Council v. U.S.E.P.A.* (9th Cir. 1990) 915 F.2d 1314, 1316.) Specifically, section 1311(b)(1)(C) gave the regulatory agency the authority to impose "any more stringent limitation, including those necessary to meet water quality standards," and section 1342(a)(2) provided that "[t]he [EPA] Administrator shall [**884] prescribe conditions for [NPDES] permits to assure compliance" with requirements identified in section 1342(a)(1), which encompass state water quality standards. The United States Supreme Court explained that when Congress enacted the 1972 Clean Water Act, it retained "[w]ater quality standards ... as a supplementary basis for effluent limitations, ... so that numerous point sources despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels. ..." (*EPA v. State Water Resources Control Board, supra*, 426 U.S. at p. 205, fn. 12; see also *Arkansas v. Oklahoma* (1992)

503 U.S. 91, 101 [117 L. Ed. 2d 239, 112 S. Ct. 1046].)

There [***33] is nothing in section 1342(p)(3)(B)(iii)'s statutory language or legislative history showing that Congress intended to eliminate this discretion when it amended the Clean Water Act in 1987. [**141] To the contrary, Congress added the NPDES storm sewer requirements to strengthen the Clean Water Act by making its mandate correspond to the practical realities of municipal storm sewer regulation. As numerous commentators have pointed out, although Congress was reacting to the physical differences between municipal storm water runoff and other pollutant discharges that made the 1972 legislation's blanket effluent limitations approach impractical and administratively burdensome, the primary point of the legislation was to address these administrative problems while giving the administrative bodies the tools to meet the fundamental goals of the Clean Water Act in the context of stormwater pollution. (See *Regulation of Urban Stormwater Runoff*, *supra*, 48 Wash. U. J. Urb. & Contemp. L. at pp. 44-46; Environmental Law Handbook, *supra*, at p. 300; Clean Water Act Handbook, *supra*, at pp. 62-63.) In the 1987 congressional debates, the Senators and Representatives emphasized the need to prevent the widespread and escalating problems [***34] resulting from untreated storm water toxic discharges that were threatening aquatic life and creating conditions dangerous to human health. (See Remarks of Sen. Durenberger, 133 Cong. Rec. 1279 (Jan. 14, 1987); Remarks of Sen. Chaffee, 133 Cong. Rec. S738 (daily ed. Jan 14, 1987); Remarks of Rep. Hammerschmidt, 133 Cong. Rec. 986 (Jan. 8, 1987); Remarks of Rep. Roe, 133 Cong. Rec. 1006, 1007 (Jan. 8, 1987); Remarks of Sen. Stafford, 132 Cong. Rec. 32381, 32400 (Oct. 16, 1986).) This legislative history supports that in identifying a maximum extent practicable standard Congress did not intend to substantively bar the EPA/state agency from imposing a more stringent water quality standard if the agency, based on its expertise and technical factual information and after the required administrative hearing procedure, found this standard to be a necessary and workable enforcement mechanism to achieving the goals of the Clean Water Act.

To support a contrary view, Building Industry relies on comments by Minnesota Senator David Durenberger during the lengthy congressional [*885] debates on the 1987 Water Quality Act amendments.¹¹ (132 Cong. Rec. 32400 (Oct. 16, 1986); 133 Cong. Rec. S752 (daily

[***35] ed. Jan. 14, 1987.) In the cited portions of the Congressional Record, Senator Durenberger states that NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable. Such controls include management practices, control techniques and systems, design and engineering methods, and such other provisions, as the Administrator determines appropriate for the control of pollutants in the stormwater discharge." (*Ibid.*) When viewing these statements in context, it is apparent that the Senator was merely paraphrasing the words of the proposed statute and was not intending to address the issue of whether the maximum extent practicable standard was a regulatory ceiling or whether he believed the proposed amendments limited the EPA's existing discretion.¹²

11 We agree with Building Industry that the trial court's refusal to consider this legislative history on the basis that it was not presented to the administrative agencies was improper. However, this error was not prejudicial because we apply a de novo review standard in interpreting the relevant statutes.

[***36]

12 In the cited remarks, Senator Durenberger in fact expressed his dissatisfaction with the EPA's prior attempts to regulate municipal storm sewers. He pointed out, for example, that "[r]unoff from municipal separate storm sewers and industrial sites contain significant values of both toxic and conventional pollutants," and that despite the Clean Water Act's "clear directive," the EPA "has failed to require most stormwater point sources to apply for permits which would control the pollutants in their discharge." (133 Cong. Rec. 1274, 1279-1280 (daily ed. Jan. 14, 1987).)

[**142] Building Industry's reliance on comments made by Georgia Representative James Rowland, who participated in drafting the 1987 Water Quality Act amendments, is similarly unhelpful. During a floor debate on the proposed amendments, Representative Rowland noted that cities have "millions of" stormwater discharge points and emphasized the devastating financial burden on cities if they were required to obtain a permit for each of these points. (133 Cong. Rec. 522 (daily ed. Feb. 3, 1987).) Representative Rowland then explained [***37] that the amendments would address this problem by "allow[ing] communities to obtain far less costly single jurisdictionwide permits." (*Ibid.*) Viewed in context,

these comments were directed at the need for statutory provisions permitting the EPA to issue jurisdiction-wide permits thereby preventing unnecessary administrative costs to the cities, and do not reflect a desire to protect cities from the cost of complying with strict water quality standards when deemed necessary by the regulatory agency.

3. Interpretations by the EPA and Other Courts

(12) Our conclusion that Congress intended section 1342(p)(3)(B)(iii) to provide the regulatory agency with authority to impose standards stricter than a "maximum extent practicable" standard is consistent with interpretations by [*886] the EPA and the Ninth Circuit. In its final rule promulgated in the Federal Register, the EPA construed section 1342(p)(3)(B)(iii) as providing the administrative agency with the authority to impose water-quality standard controls in an NPDES permit if appropriate under the circumstances. Specifically, the EPA stated this statutory provision requires "controls to reduce the discharge of pollutants to the [***38] maximum extent practicable, and where necessary water quality-based controls" (55 Fed.Reg. 47990, 47994 (Nov. 16, 1990), italics added.) We are required to give substantial deference to this administrative interpretation, which occurred after an extensive notice and comment period. (See *ibid.*; *Chevron, supra*, 467 U.S. at pp. 842-844.)

The only other court that has interpreted the "such other provisions" language of section 1342(p)(3)(B)(iii) has reached a similar conclusion. (*Defenders of Wildlife, supra*, 191 F.3d at pp. 1166-1167.) In *Defenders of Wildlife*, environmental organizations brought an action against the EPA, challenging provisions in an NPDES permit requiring several Arizona localities to adhere to various best management practice controls without requiring numeric effluent limitations. (*Id.* at p. 1161.) The environmental organizations argued that section 1342(p) did not allow the EPA to issue NPDES permits without requiring strict compliance with effluent limitations. (*Defenders of Wildlife, supra*, at p. 1161.) Rejecting this argument, the Ninth Circuit found section 1342(p)(3)(B)(iii)'s statutory language "unambiguously [***39] demonstrates that Congress did not require [**143] municipal storm-sewer discharges to comply strictly" with effluent limitations. (*Defenders of Wildlife, supra*, at p. 1164.)

But in a separate part of the opinion, the *Defenders*

of Wildlife court additionally rejected the reverse argument made by the affected municipalities (who were the interveners in the action) that "the EPA may not, under the [Clean Water Act], require strict compliance with state water-quality standards, through numerical limits or otherwise." (*Defenders of Wildlife, supra*, 191 F.3d at p. 1166.) The court stated: "Although Congress did not require municipal storm-sewer discharges to comply strictly with [numerical effluent limitations], § 1342(p)(3)(B)(iii) states that '[p]ermits for discharges from municipal storm sewers ... shall require ... such other provisions as the Administrator ... determines appropriate for the control of such pollutants.' (Emphasis added.) That provision gives the EPA discretion to determine what pollution controls are appropriate. ... [¶] Under that discretionary provision, the EPA has the authority to determine that ensuring [***40] strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards Under 33 U.S.C. § 1342(p)(3)(B)(iii), the EPA's choice to include either management practices or numeric limitations in the permits was within its discretion. [Citations.]" (*Defenders of Wildlife, supra*, 191 F.3d at pp. 1166-1167, second italics added.) Although dicta, this [*887] conclusion reached by a federal court interpreting federal law is persuasive and is consistent with our independent analysis of the statutory language.¹³

13 Building Industry's reliance on two other Ninth Circuit decisions to support a contrary statutory interpretation is misplaced. (See *Natural Res. Def. Council, Inc. v. U.S.E.P.A., supra*, 966 F.2d at p. 1308; *Environmental Defense Center, Inc. v. U.S. E.P.A.* (9th Cir. 2003) 344 F.3d 832.) Neither of these decisions addressed the issue of the scope of a regulatory agency's authority to exceed the maximum extent practicable standard in issuing NPDES permits for municipal storm sewers.

[***41] To support its interpretation of section 1342(p)(3)(B)(iii), Building Industry additionally relies on the statutory provisions addressing nonpoint source runoff (a diffuse runoff not channeled through a particular source), which were also part of the 1987 amendments to the Clean Water Act. (§ 1329.) In particular, Building Industry cites to section 1329(a)(1)(C), which states, "The Governor of each State

shall ... prepare and submit to the [EPA] Administrator for approval, a report which ... [¶] ... [¶] describes the process ... for identifying best management practices and measures to control each [identified] category ... of nonpoint sources and ... to reduce, to the *maximum extent practicable*, the level of pollution resulting from such category" (Italics added.) Building Industry argues that because this "nonpoint source" statutory language expressly identifies only the maximum extent practicable standard, we must necessarily conclude that Congress meant to similarly limit the storm sewer point source pollution regulations to the maximum extent practicable standard.

The logic underlying this analogy is flawed because the critical language in the [***42] two statutory provisions is different. In the nonpoint source statute, Congress chose to include only the maximum extent practicable standard (§ 1329(a)(1)(C)); whereas in the municipal storm sewer provisions, Congress elected to include the "and such other provisions" clause (§ 1342(p)(3)(B)(iii)). This difference leads to the reasonable inference that Congress had a different intent when it enacted the two statutory provisions. Moreover, because of a fundamental difference between point and nonpoint source pollution, Congress has historically treated the two types of pollution differently and has subjected each type to entirely different requirements. (See *Pronsolino v. Nastri* (9th Cir. 2002) 291 F.3d 1123, 1126-1127.) Given this different treatment, it would be improper to presume Congress intended to apply the same standard in both statutes. Building Industry's citation to comments during the 1987 congressional debates regarding nonpoint source regulation does [**144] not support Building Industry's contentions.

[*888] 4. *Contention that it is "Impossible" for Municipalities to Meet Water Quality Standards*

We also reject Building Industry's arguments woven throughout [***43] its appellate briefs, and emphasized during oral arguments, that the Water Quality Standards provisions violate federal law because compliance with those standards is "impossible." The argument is not factually or legally supported.

(13) First, there is no showing on the record before us that the applicable water quality standards are unattainable. The trial court specifically concluded that Building Industry failed to make a factual showing to support this contention, and Building Industry does not

present a proper appellate challenge to this finding sufficient to warrant our reexamining the evidence. All judgments and orders are presumed correct, and persons challenging them must affirmatively show reversible error. (14) (*Walling v. Kimball* (1941) 17 Cal.2d 364, 373 [110 P.2d 58].) A party challenging the sufficiency of evidence to support a judgment must summarize (and cite to) *all* of the material evidence, not just the evidence favorable to his or her appellate positions. (*In re Marriage of Fink* (1979) 25 Cal.3d 877, 887-888 [160 Cal. Rptr. 516, 603 P.2d 881]; *People v. Dougherty* (1982) 138 Cal. App. 3d 278, 282 [188 Cal. Rptr. 123].) Building Industry has made [***44] no attempt to comply with this well-established appellate rule in its briefs.

In a supplemental brief, Building Industry attempted to overcome this deficiency by asserting that "[t]he record clearly establishes that [the Water Quality Standards provisions] are unattainable during the period the permit is in effect." This statement, however, is not supported by the proffered citation or by the evidence viewed in the light most favorable to the respondents. Further, the fact that many of the Municipalities' storm sewer discharges currently violate water quality standards does not mean that the Municipalities cannot comply with the standards during the five-year term of the Permit. Additionally, Building Industry's assertions at oral argument that the trial court never reached the impossibility issue and/or that respondents' counsel conceded the issue below are belied by the record, including the trial court's rejection of Building Industry's specific challenge to the proposed statement of decision on this very point. ¹⁴

14 Because we are not presented with a proper appellate challenge, we do not address the trial court's factual determinations in this case concerning whether it is possible or practical for a Municipality to achieve any specific Permit requirement.

[***45] (15) We reject Building Industry's related argument that it was respondents' burden to affirmatively show it is feasible to satisfy each of the applicable Water Quality Standards provisions. The party challenging the scope of an administrative permit, such as an NPDES, has the burden of [*889] showing the agency abused its discretion or its findings were unsupported by the facts. (See *Fukuda v. City of Angels, supra*, 20 Cal.4th at p.

817; *Huntington Park Redevelopment Agency v. Duncan* (1983) 142 Cal. App. 3d 17, 25 [190 Cal. Rptr. 744].) Thus, it was not respondents' burden to affirmatively demonstrate it was possible for the Municipalities to meet the Permit's requirements.

Building Industry alternatively contends it was not required to challenge the facts underlying the trial court's determination that the Permit requirements were feasible [**145] because the court's determination was wrong as a matter of law. Specifically, Building Industry asserts that a Permit requirement that is more stringent than a "maximum extent practicable" standard is, by definition, "not practicable" and therefore "technologically impossible" to achieve under any circumstances. Building [***46] Industry relies on a dictionary definition of "practicable," which provides that the word means "something that can be done; feasible," citing the 1996 version of "Webster's Encyclopedic Unabridged Dictionary."

(16) This argument is unpersuasive. The federal maximum extent practicable standard is not defined in the Clean Water Act or applicable regulations, and thus the Regional Water Board properly included a detailed description of the term in the Permit's definitions section. (See *ante*, fn. 7.) As broadly defined in the Permit, the maximum extent practicable standard is a highly flexible concept that depends on balancing numerous factors, including the particular control's technical feasibility, cost, public acceptance, regulatory compliance, and effectiveness. This definition conveys that the Permit's maximum extent practicable standard is a term of art, and is not a phrase that can be interpreted solely by reference to its everyday or dictionary meaning. Further, the Permit's definitional section states that the maximum extent practicable standard "considers economics and is generally, but not necessarily, *less* stringent than BAT." (Italics added.) BAT is an acronym [***47] for "best available technology economically achievable," which is a technology-based standard for industrial storm water dischargers that focuses on reducing pollutants by treatment or by a combination of treatment and best management practices. (See *Texas Oil & Gas Ass'n v. U.S. E.P.A.* (5th Cir. 1998) 161 F.3d 923, 928.) If the maximum extent practicable standard is generally "less stringent" than another Clean Water Act standard that relies on available technologies, it would be unreasonable to conclude that anything more stringent than the maximum extent practicable standard is necessarily

impossible. In other contexts, courts have similarly recognized that the word "practicable" does not necessarily mean the most that can possibly be done. (See *Nat. Wildlife Federation v. Norton* (E.D.Cal. 2004) 306 F. Supp. 2d 920, 928, fn. 12 ["[w]hile the meaning of the term 'practicable' in the [Endangered Species Act] is not entirely clear, the term does not simply equate to 'possible'"]; *Primavera Familienstiftung v. Askin* (S.D.N.Y. 1998) 178 F.R.D. [*890] 405, 409 [noting that "impracticability does not mean impossibility, but rather difficulty [***48] or inconvenience"].)

We additionally question whether many of Building Industry's "impossibility" arguments are premature on the record before us. As we have explained, the record does not support that any required control is, or will be, impossible to implement. Further, the Permit allows the Regional Water Board to enforce water quality standards during the iterative process, but does not impose any obligation that the board do so. Thus, we cannot determine with any degree of certainty whether this obligation would ever be imposed, particularly if it later turns out that it is not possible for a Municipality to achieve that standard.

Finally, we comment on Building Industry's repeated warnings that if we affirm the judgment, all affected Municipalities will be in immediate violation of the Permit because they are not now complying with applicable water quality standards, subjecting them to immediate and substantial civil penalties, and leading to a potential "shut down" of public operations. These doomsday arguments are unsupported. The Permit makes clear that Municipalities [**146] are required to adhere to numerous specific controls (none of which are challenged in this case) and [***49] to comply with water quality standards through "timely implementation of control measures" by engaging in a cooperative iterative process where the Regional Water Board and Municipality work together to identify violations of water quality standards in a written report and then incorporate approved modified best management practices. Although the Permit allows the regulatory agencies to enforce the water quality standards during this process, the Water Boards have made clear in this litigation that they envision the ongoing iterative process as the centerpiece to achieving water quality standards. Moreover, the regulations provide an affected party reasonable time to comply with new permit requirements under certain circumstances. (See 40 C.F.R. § 122.47.) There is nothing

in this record to show the Municipalities will be subject to immediate penalties for violation of water quality standards.

We likewise find speculative Building Industry's predictions that immediately after we affirm the judgment, citizens groups will race to the courthouse to file lawsuits against the Municipalities and seek penalties for violation of the Water Quality Standards provisions. 15 As noted, the applicable [***50] laws provide time for an affected entity to comply with new standards. Moreover, although we do not reach the enforcement issue in this case, we note the [*891] Permit makes clear that the iterative process is to be used for violations of water quality standards, and gives the Regional Water Board the discretionary authority to enforce water quality standards during that process. Thus, it is not at all clear that a citizen would have standing to compel a municipality to comply with a water quality standard despite an ongoing iterative process. (See § 1365(a)(1)(2).) [***51]

15 The Clean Water Act allows a citizen to sue a discharger to enforce limits contained in

NPDES permits, but requires the citizen to notify the alleged violator, the state, and the EPA of its intention to sue at least 60 days before filing suit, and limits the enforcement to nondiscretionary agency acts. (See § 1365(a)(1)(2).)

III.-VII.* [NOT CERTIFIED FOR PUBLICATION]

* See footnote, *ante*, page 866.

DISPOSITION

Judgment affirmed. Appellants to pay respondents' costs on appeal.

Benke, Acting P. J., and Aaron, J., concurred.

A petition for a rehearing was denied January 4, 2005, and the opinion was modified to read as printed above. Appellants' petition for review by the Supreme Court was denied March 30, 2005. Baxter, J., and Brown, J., were of the opinion that the petition should be granted. [***52]

STATE OF CALIFORNIA
STATE WATER RESOURCES CONTROL BOARD
ORDER WQ 2015-0075

In the Matter of Review of

Order No. R4-2012-0175, NPDES Permit No. CAS004001

**WASTE DISCHARGE REQUIREMENTS FOR MUNICIPAL SEPARATE STORM SEWER
SYSTEM (MS4) DISCHARGES WITHIN THE COASTAL WATERSHEDS OF
LOS ANGELES COUNTY, EXCEPT THOSE DISCHARGES ORIGINATING FROM THE
CITY OF LONG BEACH MS4**

Issued by the
California Regional Water Quality Control Board,
Los Angeles Region

SWRCB/OCC FILES A-2236 (a)-(kk)

BY THE BOARD:

In this order, the State Water Resources Control Board (State Water Board) reviews [Order No. R4-2012-0175](#) (NPDES Permit No. CAS004001) adopted by the Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) on November 8, 2012. Order No. R4-2012-0175 regulates discharges of storm water and non-storm water from the municipal separate storm sewer systems (MS4s) located within the coastal watersheds of Los Angeles County, with the exception of the City of Long Beach MS4, and is hereinafter referred to as the “Los Angeles MS4 Order” or the “Order.” We received 37 petitions challenging various provisions of the Los Angeles MS4 Order. For the reasons discussed herein, we generally uphold the Los Angeles MS4 Order, but with a number of revisions to the findings and provisions in response to issues raised in the petitions and as a result of our own review of the Order.

I. BACKGROUND

The Los Angeles MS4 Order regulates discharges from the MS4s operated by the Los Angeles County Flood Control District, Los Angeles County, and 84 municipal permittees (Permittees) in a drainage area that encompasses more than 3,000 square miles and multiple watersheds. The Order was issued by the Los Angeles Water Board in

accordance with section 402(p)(3)(B) of the Clean Water Act¹ and sections 13263 and 13377 of the Porter-Cologne Water Quality Control Act (Porter-Cologne Act),² as a National Pollutant Discharge Elimination System (NPDES) permit to control storm water and non-storm water discharges that enter the area's water bodies from the storm sewer systems owned or operated by the multiple governmental entities named in the Order. The Los Angeles MS4 Order superseded Los Angeles Water Board [Order No. 01-182](#) (2001 Los Angeles MS4 Order), and is the fourth iteration of the NPDES permit for MS4 discharges in the relevant area.

The Los Angeles MS4 Order incorporates most of the pre-existing requirements of the 2001 Los Angeles MS4 Order, including the water quality-based requirement to not cause or contribute to exceedances of water quality standards in the receiving water. The Los Angeles MS4 Order also requires Permittees to comply with new water quality-based requirements to implement 33 watershed-based total maximum daily loads (TMDLs) for the region. The Order links both of these water quality-based requirements to the programmatic elements of the Order by allowing Permittees to comply with the water quality-based requirements, in part, by developing and implementing a watershed management program (WMP) or enhanced watershed management program (EWMP), as more specifically defined in the Order.

Following adoption of the Los Angeles MS4 Order, we received 37 timely petitions challenging various provisions of the Order and, in particular, the provisions implementing TMDLs and integrating water quality-based requirements and watershed-based program implementation. Several petitioners asked that their petitions be held in abeyance;³ however, due to the number of active petitions also seeking review, we declined to hold those petitions in abeyance at that time.⁴ Five petitioners additionally requested that we partially stay the Los Angeles MS4 Order. Following review, the Executive Director of the State Water Board denied the stay requests for failure to comply with the prerequisites for a stay as specified in California Code of Regulations, title 23, section 2053.

¹ 33 U.S.C. § 1342(p)(3)(B).

² Wat. Code, §§ 13263, 13377.

³ See Cal. Code Regs., tit. 23, § 2050.5, subd. (d).

⁴ By letter dated January 30, 2013, we provided an opportunity for petitioners to submit an explanation for why a petition should be held in abeyance notwithstanding the existence of the active petitions. In response, two petitioners, City of Signal Hill and the City of Claremont, argued that their petitions raised unique issues not common to the remaining petitions and therefore appropriate for abeyance. We thereafter denied their requests on July 29, 2013, finding that the unique issues could nevertheless be resolved concurrently with the issues in the other petitions. On October 9, 2013, the City of Claremont withdrew two of the claims in its petition.

We deemed the petitions complete by letter dated July 8, 2013, and, as permitted under our regulations,⁵ consolidated the petitions for review.

An issue front and center in the petitions is the appropriateness of the approach of the Los Angeles MS4 Order in addressing what we generally refer to as “receiving water limitations.” Receiving water limitations in MS4 permits are requirements that specify that storm water and non-storm water discharges must not cause or contribute to exceedances of water quality standards in the waters of the United States that receive those discharges. In precedential State Water Board [Order WQ 99-05](#) (*Environmental Health Coalition*), we directed that all MS4 permits contain specific language that explains how the receiving water limitations will be implemented. (For clarity, we refer to MS4 permit language that relates to implementation of the permit’s receiving water limitations as “receiving water limitations provisions.”) We held a workshop on November 20, 2012, concerning receiving water limitations in MS4 permits. The purpose of the workshop was to receive public comment on an issue paper discussing several alternatives to the receiving water limitations provisions currently included in MS4 permits as directed by Order WQ 99-05 (Receiving Water Limitations Issue Paper).⁶

Because the Los Angeles MS4 Order contains new provisions that authorize the Permittees to develop and implement WMP/EWMPs in lieu of requiring compliance with the receiving water limitations provisions, we view our review of the Order as an appropriate avenue for resolving some of the issues raised in our November 20, 2012 workshop. Through notice to all interested persons, we bifurcated the responses to the petitions and solicited two separate sets of responses: (1) Responses to address issues related to whether the WMP/EWMP alternatives contained in the Los Angeles MS4 Order are an appropriate approach to revising the receiving water limitations provisions in MS4 permits (August 15, 2013 Receiving Water Limitations Submissions); and (2) Responses to address all other issues raised in the petitions (October 15, 2013 Responses).⁷ We held a workshop on October 8, 2013, to hear public comment on the first set of responses.

⁵ Cal. Code Regs., tit. 23, § 2054.

⁶ Information on that workshop is available at http://www.waterboards.ca.gov/water_issues/programs/stormwater/rwl.shtml (as of Nov 18, 2014).

⁷ We requested the bifurcated responses initially by letter dated July 15, 2013. Subsequent letters on July 29, 2013, and September 18, 2013, clarified the nature of the submissions and extended the submission deadline for the second response.

State Water Board regulations generally require final disposition on petitions within 270 days of the date a petition is deemed complete.⁸ However, in this case, we required additional time to review the large number of issues raised in the petitions. When the State Water Board anticipates addressing a petition on the merits after the review period passes, it may indicate that it will review the matter on its own motion.⁹ On April 1, 2014, we adopted [Order WQ 2014-0056](#) taking up review of the issues in the petitions on our own motion.¹⁰

We now resolve the issues in the petitions with this order.

II. ISSUES AND FINDINGS

The 37 petitions raise over sixty contentions claiming deficiencies in the Los Angeles MS4 Order. This Order addresses the most significant contentions. To the extent petitioners raised issues that are not discussed in this Order, such issues are dismissed as not raising substantial issues appropriate for State Water Board review.¹¹

Before proceeding to the merits of the petitions, we will resolve several procedural issues.

Requests to Take Official Notice or Supplement the Record with Additional Evidence

We received a number of requests to take official notice of documents not in the administrative record of the adoption of the Los Angeles MS4 Order by the Los Angeles Water Board (hereinafter Administrative Record)¹² and a number of requests to admit supplemental evidence not considered by the Los Angeles Water Board.¹³ We reviewed the requests with

⁸ Cal. Code Regs., tit. 23, § 2050.5, subd. (b).

⁹ See Wat. Code, § 13320, subd. (a); Cal. Code Regs., tit. 23, § 2050.5, subd. (c).

¹⁰ To avoid premature litigation on the petition issues as a result of our review extending past the 270 day-regulatory review period, at our suggestion most of the petitioners asked that their petitions be placed in abeyance until adoption by the State Water Board of a final order. We granted those requests. Simultaneously with adopting this order, we are removing the petitions from abeyance and acting upon them.

¹¹ *People v. Barry* (1987) 194 Cal.App.3d 158, 175-177; *Johnson v. State Water Resources Control Bd.* (2004) 123 Cal.App.4th 1107, 1114; Cal. Code Regs., tit. 23, § 2052, subd. (a)(1).

¹² The Administrative Record was prepared by the Los Angeles Water Board and is available at <http://www.waterboards.ca.gov/losangeles/water_issues/programs/stormwater/municipal/AdminRecordOrderNoR4_2012_0175/index.shtml> (as of Nov. 18, 2014).

¹³ Several requests for official notice or to admit supplemental evidence were received concurrently with submission of the petitions, with the August 15, 2013 Receiving Water Limitations Submissions, and with the October 15, 2013 Responses. Additional requests for official notice were submitted concurrently with comments on first and revised public drafts of this order and were opposed by several parties. (Request for Official Notice, Natural Resources Defense Council, Los Angeles Waterkeeper, and Heal the Bay, Jan. 21, 2015; Request for Official Notice, Natural Resources Defense Council, Los Angeles Waterkeeper and Heal the Bay, June 2, 2015.) Although we have reviewed these additional requests for official notice, we have not granted the requests for the various reasons articulated in this section, in Section II.B.8, and in footnote 74.

consideration of whether they were appropriate for notice or admission based on the legal standards governing our proceedings¹⁴ and whether the documents would materially aid in our review of the issues in the proceedings. We grant the requests with regard to documents 1-7 below, and additionally take official notice on our own motion of documents 8, 9, and 10.¹⁵

1. [Order No. 2013-0001-DWQ](#), NPDES Permit for Storm Water Discharges from Small MS4s, adopted by State Water Board, February 5, 2013;¹⁶
2. Modified NPDES Permit No. DC0000022 for the MS4 for the District of Columbia issued by the United States Environmental Protection Agency (USEPA), November 9, 2012, and a responsiveness summary issued in support of its original adoption of the permit, October 7, 2011;¹⁷

Among other requests, we are not granting the requests to take official notice of or supplement the Administrative Record with the notices of intent, workplans, draft programs, and other documents filed by Permittees toward development of WMPs/EWMPs and associated monitoring programs following adoption of the Los Angeles MS4 Order or comments submitted on those documents, or the conditional approvals of several of the programs. With regard to factual evidence regarding actions taken by Permittees to comply with the Los Angeles MS4 Order after it was adopted, we believe it appropriate to close the record with the adoption of the Los Angeles MS4 Order. However, we are keenly aware that the success of the Los Angeles MS4 Order in addressing water quality issues depends primarily on the careful and effective development and implementation of programs consistent with the requirements of the Order; we speak to that issue later in our discussion.

City of El Monte's Amended Petition

Petitioner City of El Monte (El Monte) timely filed a petition on December 10, 2012, challenging a number of provisions of the Los Angeles MS4 Order. Thereafter, on February 19, 2013, El Monte filed an amended petition, based on information it asserted was not available prior to the deadline for submission of the petition.

Water Code section 13320, subdivision (a) provides that a petition for review of a regional water quality control board (regional water board) action must be filed within 30 days of the regional water board's action.²⁷ The State Water Board interprets that requirement strictly and petitions filed more than 30 days from regional water board action are rejected as untimely. El Monte asserted that the two additional arguments raised in the amended petition were based on information that was not available prior to the deadline for submitting the petition and were therefore appropriate for State Water Board consideration.

Even if we were required by statute or regulation to accept amended petitions based on new information, here, El Monte's new arguments are not supported by information previously unavailable. First, El Monte argues that the Supreme Court's decision in *Los Angeles County Flood Control District v. Natural Resources Defense Council* (2013) 133 S.Ct. 710 invalidated certain provisions of the Los Angeles MS4 Order that require compliance with water quality standards and total maximum daily load requirements through receiving water monitoring. Contrary to El Monte's assertion, the decision by the Supreme Court did not invalidate any requirements of the Los Angeles MS4 Order and did not result in any changes to

²⁷ See also Cal. Code Regs., tit. 23, § 2050.

the Order. The Supreme Court decision, to the extent it applies to the legal issues before us in this matter, constitutes precedential case law and must be considered in our review of the Los Angeles MS4 Order, but it does not constitute new information that supports an amended petition.²⁸

Second, El Monte argues that the Los Angeles Water Board failed to consider various provisions of the California Watershed Improvement Act of 2009²⁹ when it adopted the Los Angeles MS4 Order. To the extent El Monte believed that the California Watershed Improvement Act was relevant to adoption of the Los Angeles MS4 Order, El Monte had the opportunity to raise that issue in comments before the Los Angeles Water Board and in its timely petition to the State Water Board. Having failed to raise the issue before the Los Angeles Water Board and in its timely petition, El Monte cannot raise the issue in an amended petition.³⁰

We reject El Monte's amended petition as untimely.

Environmental Petitioners' Motion to Strike

Petitioners Natural Resources Defense Council, Los Angeles Waterkeeper, and Heal the Bay (Environmental Petitioners), submitted a motion on November 11, 2013, requesting that the State Water Board strike sections of the October 15, 2013 Responses by six petitioners (Motion to Strike). The relevant sections respond to a collateral estoppel argument made by the Environmental Petitioners in their August 15, 2013 Receiving Water Limitations Submission to the State Water Board. Several parties asserted in their petitions that requiring compliance with water quality standards in MS4 permits violates federal law or conflicts with prior State Water Board precedent. The Environmental Petitioners responded in their August 15, 2013 Receiving Water Limitations Submission that these arguments were barred by collateral estoppel because the claims were settled in prior court cases challenging the 2001 Los Angeles MS4 Order. Six of the October 15, 2013 Responses, namely those by the Cities of

²⁸ We note that the State Water Board has the option of allowing additional briefing when there are material legal developments concerning issues raised in a petition, but we did not find such briefing would aid review of the petitions in this case.

²⁹ Wat. Code, § 16100 et seq.

³⁰ In addition to being untimely, El Monte's argument lacks merit. The California Watershed Improvement Act of 2009 grants authority to local government permittees regulated by an MS4 permit to develop and implement watershed improvement plans, but does not limit the authority of a regional water board to impose terms related to watershed management in an MS4 permit. Further, the terms of the WMPs/EWMPs are largely consistent with the watershed improvement plans authorized by the Act, so a permittee can comply with the Los Angeles MS4 Order while also using the authority provided by the California Watershed Improvement Act of 2009 if it so chooses.

Arcadia, Claremont, Covina, Duarte and Huntington Park, San Marino et al.,³¹ and Sierra Madre, incorporated a response to the collateral estoppel argument.

We stated in a July 15, 2013 letter that “[i]nterested persons may not use the [October 15]³² deadline for responses on the remaining petition issues as an opportunity to respond to comments filed on the receiving water limitations approach.” We clarified further in a July 29, 2013 letter: “[W]hen submitting subsequent responses to the petitions in accordance with the [October 15] deadline, petitioners and interested persons should not raise new issues related to the specific questions regarding the watershed management program/enhanced watershed management program or respond to any August 15, 2013, submissions; however petitioners and interested persons will not be precluded from responding to specific issues raised in the original petitions on grounds that the issues are related to the receiving water limitations language.”

We find that the collateral estoppel responses by the six petitioners are disallowed by the direction we provided in our July 15 and July 29, 2013 letters. However, as will be apparent in our discussion in section II.A, we do not rely on the Environmental Petitioners’ collateral estoppel argument in resolving the petitions. Our determination that portions of the October 15, 2013 Responses are disallowed is, therefore, immaterial to the resolution of the issues.³³

Having resolved the procedural issues, we turn to the merits of the Petitions.

A. Implementation of the Iterative Process as Compliance with Receiving Water Limitations

The Los Angeles MS4 Order includes receiving water limitations provisions that are consistent with our direction in Order WQ 99-05 in Part V.A of the Los Angeles MS4 Order. Part V.A. provides, in part, as follows:

1. Discharges from the MS4 that cause or contribute to the violation of receiving water limitations are prohibited.

³¹ The cities of San Marino, Rancho Palos Verdes, South El Monte, Norwalk, Artesia, Torrance, Beverly Hills, Hidden Hills, Westlake Village, La Mirada, Vernon, Monrovia, Agoura Hills, Commerce, Downey, Inglewood, Culver City, and Redondo Beach submitted a joint October 15, 2013 Response.

³² The July 15, 2013 letter set a deadline of September 20, 2013, which was subsequently extended to October 15, 2013.

³³ In a November 21, 2013 letter, we indicated that we would consider the Motion to Strike concurrently with drafting of this Order, but that we would not accept any additional submissions in this matter, including any responses to the Motion to Strike. City of San Marino objected to the letter and submitted an opposition to the Motion to Strike. Several petitioners submitted joinders in City of San Marino’s motion. For the same reasons articulated above, we are not accepting these submissions; they would not affect our resolution of the issues.

2. Discharges from the MS4 of storm water, or non-storm water, for which a Permittee is responsible [footnote omitted], shall not cause or contribute to a condition of nuisance.
3. The Permittees shall comply with Parts V.A.1 and V.A.2 through timely implementation of control measures and other actions to reduce pollutants in the discharges in accordance with the storm water management program and its components and other requirements of this Order including any modifications. . . .³⁴

The petitioners that are permittees (hereinafter referred to as “Permittee Petitioners”)³⁵ argue that the above language either means, or should be read and/or clarified to mean, that good faith engagement in the requirements of Part V.A.3, traditionally referred to as the “iterative process,” constitutes compliance with Parts V.A.1. and V.A.2. The position put forth by Permittee Petitioners is one we took up when we initiated a process to re-examine the receiving water limitations and iterative process in MS4 permits statewide with our Receiving Water Limitations Issue Paper and the November 20, 2012 workshop. We summarize the law and policy regarding Permittee Petitioners’ position again here and ultimately disagree with Permittee Petitioners that implementation of the iterative process does or should constitute compliance with receiving water limitations.

The Clean Water Act generally requires NPDES permits to include technology-based effluent limitations and any more stringent limitations necessary to meet water quality standards.³⁶ In the context of NPDES permits for MS4s, however, the Clean Water Act does not explicitly reference the requirement to meet water quality standards. MS4 discharges must meet a technology-based standard of prohibiting non-storm water discharges and reducing pollutants in the discharge to the Maximum Extent Practicable (MEP) in all cases, but requiring strict compliance with water quality standards (e.g., by imposing numeric effluent limitations) is at the discretion of the permitting agency.³⁷ Specifically the Clean Water Act states as follows:

Permits for discharges from municipal storm sewers –

. . .

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

³⁴ Los Angeles MS4 Order, Part V.A, pp. 38-39.

³⁵ For ease of reference, where an argument is made by multiple Permittee Petitioners, even if not by all, we attribute that argument to Permittee Petitioners generally, and do not list which of the 37 Permittee Petitioners in fact make the argument. Where only one or two Permittee Petitioners make a particular argument, we have identified the specific Permittee Petitioner(s).

³⁶ 33 U.S.C. §§ 1311, 1342(a).

³⁷ 33 U.S.C. § 1342(p)(3)(B); *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159.

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as . . . the State determines appropriate for the control of such pollutants.³⁸

Thus, a permitting agency imposes requirements related to attainment of water quality standards where it determines that those provisions are “appropriate for the control of [relevant] pollutants” pursuant to the Clean Water Act municipal storm water provisions.

Under the Porter-Cologne Act, waste discharge requirements must implement applicable water quality control plans, which include the beneficial uses to be protected for a given water body and the water quality objectives reasonably required for that protection.³⁹ In this respect, the Porter-Cologne Act treats MS4 dischargers and other dischargers even-handedly and anticipates that all waste discharge requirements will implement the water quality control plans. However, when implementing requirements under the Porter-Cologne Act that are not compelled by federal law, the State Water Board and regional water boards (collectively, “water boards”) have some flexibility to consider other factors, such as economics, when establishing the appropriate requirements.⁴⁰ Accordingly, since the State Water Board has discretion under federal law to determine whether to require strict compliance with the water quality standards of the water quality control plans for MS4 discharges, the State Water Board may also utilize the flexibility under the Porter-Cologne Act to decline to require strict compliance with water quality standards for MS4 discharges.

We have previously exercised the discretion we have under federal law in favor of requiring compliance with water quality standards, but have required less than strict compliance. We have directed, in precedential orders, that MS4 permits require discharges to be controlled so as not to cause or contribute to exceedances of water quality standards in receiving waters,⁴¹ but have prescribed an iterative process whereby an exceedance of a water quality standard triggers a process of BMP improvements. That iterative process involves reporting of the violation, submission of a report describing proposed improvements to BMPs

³⁸ 33 U.S.C. § 1342(p)(3)(B).

³⁹ Wat. Code, § 13263. The term “water quality standards” encompasses the beneficial uses of the water body and the water quality objectives (or “water quality criteria” under federal terminology) that must be met in the waters of the United States to protect beneficial uses. Water quality standards also include the federal and state antidegradation policy.

⁴⁰ Wat. Code, §§ 13241, 13263; *City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613.

⁴¹ State Water Board Orders WQ 98-01 (*Environmental Health Coalition*), WQ 99-05 (*Environmental Health Coalition*), WQ 2001-15 (*Building Industry Association of San Diego*).

expected to better meet water quality standards, and implementation of these new BMPs.⁴² The current language of the existing receiving waters limitations provisions was actually developed by USEPA when it vetoed two regional water board MS4 permits that utilized a prior version of the State Water Board's receiving water limitations provisions.⁴³ In State Water Board Order WQ 99-05, we directed that all regional boards use USEPA's receiving water limitations provisions.

There has been significant confusion within the regulated MS4 community regarding the relationship between the receiving water limitations and the iterative process, in part because the water boards have commonly directed dischargers to achieve compliance with water quality standards by improving control measures through the iterative process. But the iterative process, as established in our precedential orders and as generally written into MS4 permits adopted by the water boards, does not provide a "safe harbor" to MS4 dischargers. When a discharger is shown to be causing or contributing to an exceedance of water quality standards, that discharger is in violation of the permit's receiving water limitations and potentially subject to enforcement by the water boards or through a citizen suit, regardless of whether or not the discharger is actively engaged in the iterative process.⁴⁴

The position that the receiving water limitations are independent from the provisions that establish the iterative process has been judicially upheld on several occasions. The receiving water limitations provisions of the 2001 Los Angeles MS4 Order specifically have been litigated twice, and in both cases, the courts upheld the provisions and the Los Angeles Water Board's interpretation of the provisions. In a decision resolving a challenge to the 2001 Los Angeles MS4 Order, the Los Angeles County Superior Court stated: "[T]he Regional [Water] Board acted within its authority when it included [water quality standards compliance] in

⁴² State Water Board Order WQ 99-05, pp. 2-3; see also State Water Board Order WQ 2001-15, pp. 7-9. Additionally, consistent with federal law, we found it appropriate to require implementation of BMPs in lieu of numeric water quality-based effluent limitations to meet water quality standards. See State Water Board Orders WQ 91-03 (*Citizens for a Better Environment*), WQ 91-04 (*Natural Resources Defense Council*), WQ 98-01, WQ 2001-15. This issue is discussed in greater detail in Section II.C. of this order.

⁴³ See State Water Board Orders WQ 99-05, WQ 2001-15.

⁴⁴ Several Permittee Petitioners have argued that the State Water Board's opinion in State Water Board Order WQ 2001-15 must be read to endorse a safe harbor in the iterative process. We disagree. Regardless, the State Water Board's position that the iterative process of the subject permit did not create a "safe harbor" from compliance with receiving water limitations was clearly established in subsequent litigation on that order. (See *Building Industry Ass'n of San Diego County v. State Water Resources Control Bd.* (Super. Ct. 2003, No. GIC780263), *affd.* *Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866.)

the Permit without a ‘safe harbor,’ whether or not compliance therewith requires efforts that exceed the ‘MEP’ standard.”⁴⁵ The lack of a safe harbor in the iterative process of the 2001 Los Angeles MS4 Order was again acknowledged in 2011 and 2013, this time by the Ninth Circuit Court of Appeal. In these instances, the Ninth Circuit was considering a citizen suit brought by the Natural Resources Defense Council against the County of Los Angeles and the Los Angeles County Flood Control District for alleged violations of the receiving water limitations of that order. The Ninth Circuit held that, as the receiving water limitations of the 2001 Los Angeles MS4 Order (and accordingly as the precedential language in State Water Board Order WQ 99-05) was drafted, engagement in the iterative process does not excuse liability for violations of water quality standards.⁴⁶ The California Court of Appeal has come to the same conclusion in interpreting similar receiving water limitations provisions in MS4 Orders issued by the San Diego Regional Water Quality Control Board in 2001 and the Santa Ana Regional Water Quality Control Board in 2002.⁴⁷

While we reiterate that the judicial rulings have been consistent with the water boards’ intention and position regarding the relationship between the receiving water limitations and the iterative process, we acknowledge that some in the regulated community perceived the 2011 Ninth Circuit opinion in particular as a re-interpretation of that relationship. Our Receiving Water Limitations Issue Paper and subsequent workshop reflected our desire to re-examine the issue in response to concerns expressed by the regulated community in the aftermath of that ruling.

As stated above, both the Clean Water Act and the Porter-Cologne Act afford some discretion to not require strict compliance with water quality standards for MS4 discharges. In each of the discussed court cases above, the court’s decision is based on the specific permit language; thus the cases do not address our authority with regard to requiring compliance with water quality standards in an MS4 permit as a threshold matter, and they do not require us to continue to exercise our discretion as we decided in State Water Board Order

⁴⁵ *In re Los Angeles County Municipal Storm Water Permit Litigation* (L.A. Super. Ct., No. BS 080548, Mar. 24, 2005) Statement of Decision from Phase I Trial on Petitions for Writ of Mandate, pp. 4-5, 7. The decision was affirmed on appeal (*County of Los Angeles v. State Water Resources Control Board* (2006) 143 Cal.App.4th 985); however, this particular issue was not discussed in the court of appeal’s decision.

⁴⁶ *Natural Resources Defense Council v. County of Los Angeles* (9th Cir. 2011) 673 F.3d. 880, rev’d on other grounds sub nom. *Los Angeles County Flood Control Dist. v. Natural Resources Defense Council* (2013) 133 S.Ct. 710, mod. by *Natural Resources Defense Council v. County of Los Angeles* (9th Cir. 2013) 725 F.3d 1194, cert. den. *Los Angeles County Flood Control Dist. v. Natural Resources Defense Council* (2014) 134 S.Ct. 2135.

⁴⁷ *Building Industry Assn. of San Diego County, supra*, 124 Cal.App.4th 866; *City of Rancho Cucamonga v. Regional Water Quality Control Bd.* (2006) 135 Cal.App.4th 1377.

WQ 99-05. Although it would be inconsistent with USEPA's general practice of requiring compliance with water quality standards over time through an iterative process,⁴⁸ we may even have the flexibility to reverse⁴⁹ our own precedent regarding receiving water limitations and receiving water limitations provisions and make a policy determination that, going forward, we will either no longer require compliance with water quality standards in MS4 permits, or will deem good faith engagement in the iterative process to constitute such compliance.⁵⁰

However, with this Order, we now decline to do either. As the storm water management programs of municipalities have matured, an increasing body of monitoring data indicates that many water quality standards are in fact not being met by many MS4s. The iterative process has been underutilized and ineffective to date in bringing MS4 discharges into compliance with water quality standards. Compliance with water quality standards is and should remain the ultimate goal of any MS4 permit. We reiterate and confirm our determination that provisions requiring compliance with receiving water limitations are "appropriate for the control of . . . pollutants" addressed in MS4 permits and that therefore, consistent with our authority under the Clean Water Act, we will continue to require compliance with receiving water limitations.⁵¹

⁴⁸ See, e.g. Modified NPDES Permit No. DC0000022 for the MS4 for the District of Columbia, *supra*, fn. 17.

⁴⁹ Of course any change of direction would be subject to ordinary principles of administrative law. (See Code Civ. Proc., § 1094.5, subd. (b).)

⁵⁰ As such, it is not necessary to address the collateral estoppel arguments raised by the Environmental Petitioners and opposed by Permittee Petitioners. We agree that it is settled law that we have the discretion to require compliance with water quality standards in an MS4 permit under federal and state law. We also agree that it is settled law that the receiving water limitations provisions currently spelled out in our MS4 permits do not carve out a safe harbor in the iterative process. But the question for us is whether we should continue to exercise our discretion to utilize the same approach to receiving water limitations established under our prior precedent, or proceed in a new direction.

⁵¹ Several Permittee Petitioners argued in comments submitted on the first draft of this order that, because we find that we have some discretion under Clean Water Act section 402(p)(3) to not require compliance with receiving water limitations, the Los Angeles Water Board's action in requiring such compliance -- and our action in affirming it -- is pursuant to state authority. (See, e.g., Cities of Arcadia, Claremont, and Covina, Comment Letter, Jan. 21, 2015.) The Permittee Petitioners argue that the action is therefore subject to evaluation in light of the factors set out in Water Code section 13263 and 13241 pursuant to *City of Burbank*, *supra*, 35 Cal.4th 613. Under *City of Burbank*, a regional water board must consider the factors specified in section 13241 when issuing waste discharge requirements under section 13263, subdivision (a), but only to the extent those waste discharge requirements exceed the requirements of the federal Clean Water Act. (35 Cal.4th at 627.) Nowhere in our discussion in this section do we mean to disavow either that the Los Angeles Water Board acted under federal authority to impose "such other provisions as . . .determine[d] appropriate for the control of . . . pollutants" in adopting the receiving water limitations provisions of the Los Angeles MS4 Order in the first instance or that we are acting under federal authority in upholding those provisions. (33 U.S.C. § 1342(p)(3)(B)(iii).) The receiving water limitations provisions do not exceed the requirements of federal law. We nevertheless also point out that the Los Angeles Water Board engaged in an analysis of the factors under section 13241 when adopting the Order. (See Los Angeles MS4 Order, Att. F, Fact Sheet, pp. F-139 to F-155.)

As we explained in 2001, “[u]rban runoff is causing and contributing to impacts on receiving waters throughout the state and impairing their beneficial uses.”⁵² More than a decade later, this is still true. By definition, many of our urban waterways will never attain water quality standards and fully realize their beneficial uses if municipal runoff is allowed to continue to cause or contribute to exceedances of water quality standards. Further, the efforts of other dischargers who are required to not cause or contribute to exceedances of water quality standards would be largely in vain if we did not regulate MS4 dischargers with a somewhat even hand.

Such an approach is additionally consistent with the Porter-Cologne Act’s emphasis on water quality control plans as the cornerstone of water quality planning and regulation and the act’s expectation that all waste discharge requirements will implement the water quality control plans. We believe that direct enforcement of water quality standards is necessary to protect water quality, at a minimum as a back-stop where dischargers fail to meet requirements of the Order designed to achieve progress toward meeting the standards. We will not reverse our precedential determination in State Water Board Order WQ 99-05 that established the receiving water limitations provisions for MS4 permits statewide and reiterate that we will continue to read those provisions consistent with how the courts have: engagement in the iterative process does not excuse exceedances of water quality standards. We accordingly also decline to direct any revisions to the receiving water limitations provisions of the Los Angeles MS4 Order, which are consistent with our precedential language.⁵³

Yet, we are sympathetic to the assertions made by MS4 dischargers that the receiving water limitations provisions mandated by our Order WQ 99-05 may result in many years of permit noncompliance, because it may take years of technical efforts to achieve compliance with the receiving water limitations, especially for wet weather discharges.

⁵² State Water Board Order WQ 2001-15, p. 7.

⁵³ We disagree with Permittee Petitioners’ argument that the receiving water limitations in Part V.A of the Los Angeles MS4 Order are confusing, unclear, or overbroad, because they prohibit causing or contributing to a violation of a receiving water limitation rather than a violation of water quality standards. The Los Angeles Water Board defines “receiving water” as “[a] ‘water of the United States’ in to which waste and/or pollutants are or may be discharged.” (Los Angeles MS4 Order, Att. A., p. A-16.) The Los Angeles Water Board further defines “receiving water limitations” as “[a]ny applicable numeric or narrative water quality objective or criterion, or limitation to implement the applicable water quality objective or criterion, for the receiving water as contained in Chapter 3 or 7 of the Water Quality Control Plan for the Los Angeles Region (Basin Plan), water quality control plans or policies adopted by the State Water Board, or federal regulations, including but not limited to, 40 CFR §131.38.” (*Ibid.*) Receiving water limitations are therefore the water quality standards, including water quality objectives and criteria, that apply to the receiving water as expressed in the water quality control plan for the region, statewide water quality control plans that specify objectives for water bodies in the region, State Water Board policies for water quality control, and federal regulations.

Accordingly, we believe that the MS4 permits should incorporate a well-defined, transparent, and finite alternative path to permit compliance that allows MS4 dischargers that are willing to pursue significant undertakings beyond the iterative process to be deemed in compliance with the receiving water limitations.

With the WMP/EWMP provisions of the Los Angeles MS4 Order, the Los Angeles Water Board is striving to allow one such alternative compliance path. As such, the fundamental issue for review before us in this matter is whether the Los Angeles MS4 Order's WMP/EWMP provisions constitute a legal and technically sound compliance alternative for achieving receiving water limitations. We discuss and resolve this issue in the next section.

B. WMP/EWMP as Alternative Compliance Options for Complying with Receiving Water Limitations

The WMP/EWMP provisions allow Permittees to choose an integrated and collaborative watershed-based approach to meeting the requirements of the Los Angeles MS4 Order, including the receiving water limitations. Permittees develop a plan, either collaboratively or individually, that addresses water quality priorities within a watershed. Permittees first prioritize water quality issues within each watershed. Permittees may use the WMP/EWMP to address water body-pollutant combinations for which a TMDL has been developed, giving highest priority to those with interim and final compliance deadlines within the permit term. Permittees may also address water body-pollutant combinations for which no TMDL has been developed, but where the water body is impaired or shows exceedances of the standards for the relevant pollutant from an MS4 source. Once prioritization is completed, Permittees assess the sources of the pollutants and select watershed strategies that are designed to eliminate non-storm water discharges to the MS4 that are a source of pollutants, that meet all applicable TMDL-derived interim and final water quality-based effluent limitations (WQBELs) and/or limitations to be met in the receiving water (referred to herein as "other TMDL-specific limitations")⁵⁴ pursuant to corresponding compliance schedules, and that ensure that discharges from the MS4 do not cause or contribute to exceedances of receiving water limitations. Except as described below for storm water retention projects, Permittees conduct a "reasonable assurance analysis" for each water body-pollutant combination incorporated into the

⁵⁴ Some of the TMDL limitations of the Los Angeles MS4 Order are expressed not as WQBELs but as standards to be met in the receiving water. The Los Angeles MS4 Order refers to these limitations as "receiving water limitations;" however, in order to avoid confusion with the general receiving water limitations in Part V.A., we will use the term "other TMDL-specific limitations." Accordingly, while the Los Angeles MS4 Order uses the term "receiving water limitations" to refer to both the receiving water limitations in part V.A and some of the TMDL-based requirements in Attachments L-R, when we use the term we refer only to the receiving water limitations in part V.A.

WMP/EWMP to demonstrate the ability of the program to meet those objectives. Permittees additionally implement an integrated monitoring and assessment program to determine progress, adapting strategies and measures as necessary.⁵⁵

In addition to all the requirements above, for those Permittees that choose to develop and implement an EWMP, the EWMP provisions also require that Permittees collaborate on multi-benefit regional projects and, wherever feasible, retain all non-storm runoff, as well as all storm water runoff from the 85th percentile 24-hour storm event (hereinafter “storm water retention approach”) for the drainage areas tributary to the projects.⁵⁶

The primary controversy concerning the WMP/EWMP provisions of the Los Angeles MS4 Order is the manner in which they interact with the receiving water limitations and the WQBELs and other TMDL-specific limitations. Under certain conditions detailed in the Order, Permittees may be deemed in compliance with the receiving water limitations and the WQBELs and other TMDL-specific limitations by fully implementing the WMP/EWMP, rather than by demonstrating that the receiving water limitations and the WQBELs and other TMDL-specific limitations have actually been achieved. Specifically:

1. Permittees that develop and implement a WMP/EWMP and fully comply with all requirements and dates of achievement for the WMP/ EWMP as established in the Los Angeles MS4 Order, are deemed to be in compliance with the receiving water limitations in Part V.A for the water body-pollutant combinations addressed by the WMP/EWMP.⁵⁷

2. Permittees fully in compliance with the requirements and dates of achievement of the WMP/EWMP are deemed in compliance with the *interim* WQBELs and other TMDL-specific limitations in Attachments L-R for the water body-pollutant combinations addressed by the WMP/EWMP.⁵⁸

3. Permittees implementing an EWMP and utilizing the storm water retention approach in a drainage area tributary to the applicable water body are deemed in compliance with the *final* WQBELs and other TMDL-specific limitations in Attachments L-R for the water body-pollutant combinations addressed by the storm water retention approach.⁵⁹

⁵⁵ Los Angeles MS4 Order, Part VI.C., pp. 49-67.

⁵⁶ *Id.*, Part VI.C.1.g., pp. 48-49.

⁵⁷ *Id.*, Part VI.C.2.b., p. 52.

⁵⁸ *Id.*, Parts VI.C.3.a., p. 53, VI.E.2.d.i.4., pp. 143-44. The Los Angeles MS4 Order establishes separate requirements for Trash TMDLs and the WMP/EWMP are not a means of achieving compliance with the Trash TMDL provisions. (See Part VI.E.5, pp. 147-154.) References to TMDLs in this section exclude the Trash TMDLs.

⁵⁹ *Id.*, Part VI.E.2.e.i.(4), p. 145. As with Part VI.E.2.d.i.4, this Part does not apply to Trash TMDLs.

4. Because the Order additionally provides that full compliance with the general TMDL requirements in Part VI.E and the WQBELs and other TMDL-specific limitations in Attachments L through R constitutes compliance with the receiving water limitations in V.A for the specific pollutants addressed by the relevant TMDL,⁶⁰ provisions 2 and 3 above also constitute compliance with the receiving water limitations for the particular water body-pollutant combinations.

5. Finally, Permittees that have declared their intention to develop a WMP/EWMP may be deemed in compliance with receiving water limitations and with interim WQBELs with compliance deadlines occurring prior to approval of the WMP/EWMP if they meet certain conditions during the development phase.⁶¹

Both Environmental Petitioners and Permittee Petitioners put forth a number of arguments to the effect that the WMP/EWMP provisions of the Los Angeles MS4 Order are contrary to federal and state law or reflect poor policy. We discuss each argument below.

1. Anti-backsliding

The Environmental Petitioners argue that the inclusion of the WMP/EWMP in the Los Angeles MS4 Order violates the anti-backsliding provisions of the Clean Water Act and of the federal regulations.⁶² The Clean Water Act generally prohibits the relaxation of an effluent limitation established in an NPDES permit when that permit is renewed; the federal regulations include similar provisions. The Environmental Petitioners argue that the WMP/EWMP of the Los Angeles MS4 Order, by allowing a discharger to be deemed in compliance with receiving water limitations, even where a discharger may in fact be causing or contributing to an exceedance of a water quality standard, represent a relaxation of the receiving water limitations provisions contained in the 2001 Los Angeles MS4 Order.⁶³

We do not agree with the Environmental Petitioners that the WMP/EWMP provisions of the Los Angeles MS4 Order violate the anti-backsliding provisions of either the Clean Water Act or the federal regulations. Anti-backsliding provisions are an important aspect

⁶⁰ *Id.*, Part VI.E.2.c.ii., p. 143. Although this provision reflects a departure from provisions in previous MS4 permits, the provision has not generated controversy and has not been contested in the petitions. The State Water Board supports this provision in MS4 permits, as discussed at section II.B.5.b. of this order.

⁶¹ *Id.*, Parts VI.C. 2.d., pp. 52-53, VI.E.2.d.i.(4)(d), p. 144.

⁶² 33 U.S.C. § 1342(o); 40 C.F.R. §122.44(f).

⁶³ The receiving water limitations of the 2001 Los Angeles MS4 Order (like the receiving water limitations in Section V.A. of the Los Angeles MS4 Order) were modeled on the precedential language in State Water Board Order WQ 99-05.

of the Clean Water Act that generally promote continued progress toward clean water, but the provisions do not apply in all circumstances and are subject to certain exceptions. The 2001 Los Angeles MS4 Order required compliance with receiving water limitations, directed Permittees to achieve those limitations through the iterative process, but retained the Los Angeles Water Board's discretion to enforce compliance with the receiving water limitations at any time. The Los Angeles MS4 Order requires compliance with receiving water limitations, but allows implementation of control measures through the WMPs/EWMPs to constitute such compliance, and reserves direct enforcement of the receiving water limitations to situations where a permittee fails to comply with the WMP/EWMP provisions. The approaches under the prior and current orders are designed to achieve the same results – compliance with receiving water limitations – but through distinct paths that are not easily comparable for purposes of the specific, technical anti-backsliding requirements laid out in federal law.⁶⁴ We nevertheless discuss the provisions below.

The Clean Water Act contains both statutory anti-backsliding provisions in section 402(o) and regulatory anti-backsliding provisions in 40 C.F.R. section 122.44(f). The Clean Water Act's statutory prohibition against backsliding applies under a narrow set of criteria specified in Clean Water Act section 402(o). First, section 402(o) prohibits relaxing effluent limitations originally established based on best professional judgment, when there is a newly revised effluent limitation guideline.⁶⁵ The WMP/EWMP is not derived from an effluent limitation guideline, so this first prohibition is inapplicable. Second, section 402(o) prohibits relaxing effluent limitations imposed pursuant to Clean Water Act sections 301(b)(1)(C) or 303(d) or (e).⁶⁶ The receiving water limitations provisions in the 2001 Los Angeles MS4 Order were not

⁶⁴ Responding to an argument that NPDES Permit No. DC00000221 for MS4 discharges to the District of Columbia violated anti-backsliding requirements by removing certain numeric limitations in the prior permit, USEPA stated: "The Commenter implies that a Permit that replaces a numeric effluent limit with a non-numeric one is somehow automatically less stringent on that parameter. However, the narrative requirement only violates the anti-backsliding prohibition if the two provisions are comparable. . . . In this case, the two provisions are not comparable: EPA has determined that compliance with the performance standards in the Final Permit will result in more water quality protections for the DC MS4's receiving streams than did the previous aggregate numeric limit." (Responsiveness Summary, p. 84, *supra*, fn.17, citing *Communities for a Better Environment v. State Water Resources Control Bd.* (2005) 132 Cal. App. 4th 1313.)

⁶⁵ 33 U.S.C. § 1342(o)(1) ("In the case of effluent limitations established on the basis of subsection (a)(1)(B) of this section, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under section 1314 (b) of this title subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit.").

⁶⁶ *Ibid.* ("In the case of effluent limitations established on the basis of section 1311 (b)(1)(C) or section 1313 (d) or (e) of this title, a permit may not be renewed, reissued, or modified to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit except in compliance with section 1313 (d)(4) of this title.").

established based on either section 301(b)(1)(C) or section 303(d) or (e), so this prohibition on backsliding is inapplicable.⁶⁷ The receiving water limitations provisions in MS4 permits are imposed under section 402(p)(3)(B) of the Clean Water Act rather than under section 301(b)(1)(C),⁶⁸ and are accordingly not subject to the anti-backsliding requirements of section 402(o).

With respect to the regulatory anti-backsliding provisions in 40 Code of Federal Regulations section 122.44(l), the non-applicability is less clear cut. USEPA promulgated 40 Code of Federal Regulations section 122.44(l)(1) and its predecessor anti-backsliding regulations prior to the Water Quality Act of 1987, which established the municipal permitting requirements of section 402(p)(3)(B). There is ample regulatory history to demonstrate USEPA's intent in establishing the anti-backsliding policy and regulations with respect to evolving technology standards for traditional point sources.⁶⁹ We have found no definitive guidance, however, since that time from USEPA or the courts applying the general provisions of section 122.44(l) in the context of municipal storm water permits.⁷⁰ Further, we have previously noted that anti-backsliding principles may be difficult to assess in the context of non-

⁶⁷ The Environmental Petitioners do not argue that the Los Angeles MS4 Order is contrary to Clean Water Act section 303(d)(4) (33 U.S.C. § 1313(d)(4)), which also sets out anti-backsliding requirements. Section 303(d)(4) sets out the conditions under which effluent limitations based on TMDL wasteload allocations may be relaxed. Specifically, effluent limitations for a discharge impacting an impaired water body where standards have not yet been attained may only be relaxed if either the cumulative effect of the revisions still assures the attainment of the water quality standards or the designated use that is not being attained is removed. (33 U.S.C. § 1313(d)(4)(A).) Where a water body has attained standards, effluent limitations may only be relaxed consistent with the federal antidegradation policy. (33 U.S.C. § 1313(d)(4)(B).)

⁶⁸ *Defenders of Wildlife, supra*, 191 F.3d at pp. 1165-1166.

⁶⁹ See, e.g., 44 Fed.Reg. 32854, 32864 (Jun. 7, 1979) (describing codification of predecessor regulation codified at 40 C.F.R. 122.15(i).) In the context of municipal storm water, the MEP standard is the technology standard; the record here supports that MEP, as reflected in the permit conditions, has evolved since the issuance of the 2001 Los Angeles MS4 Order to become more stringent. (See, e.g., Los Angeles MS4 Order, Part VI.D.9.h.vii., p.132, compared to 2001 Los Angeles MS4 Order, Part 4.F.5.c., pp.48-49 [trash controls]; Los Angeles MS4 Order, Part VI.D.7.c., pp. 97-109, as compared to 2001 Los Angeles MS4 Order, Part 4.D.3., pp.36-37 [new development/redevelopment project performance criteria]; Los Angeles MS4 Order, Part VI.D.8.d., pp.113-114, as compared to 2001 Los Angeles MS4 Order, Part 4.E., pp.42-45 [requirements for construction sites less than one acre].)

⁷⁰ As requested by the Environmental Petitioners, we took official notice of a Letter to the Water Management Administration, Maryland Department of the Environment, issued by USEPA Region III on August 8, 2012. (See fn. 19). We acknowledge that the letter states at page 3 that a provision in the Prince George County, Maryland, Phase I MS4 draft permit allowing for more time to complete tasks that were required under the previous permit constituted backsliding. The letter refers in passing to section 122.44(l)(1), but the letter has no regulatory effect and, further, is devoid of any analysis. The Environmental Petitioners have also pointed us to discussion of the regulatory anti-backsliding provisions in the NPDES Permit Writers' Manual. (NPDES Permit Writers' Manual, p. 7-4.) The relevant section of the NPDES Permit Writers' Manual does not explicitly distinguish between municipal storm water permits and traditional NPDES Permits in its discussion of the applicability of regulatory anti-backsliding provisions; however, nor does it specifically direct application of the anti-backsliding regulatory provisions to municipal storm water permits. We do not find this discussion to be to be determinative on the issue.

quantitative, non-numeric requirements such as BMPs and plans.⁷¹ It is unnecessary, however, to resolve the ultimate applicability of the regulatory anti-backsliding provisions, because, assuming for the sake of argument they do apply, the WMP/EWMP provisions would qualify for an exception to backsliding as discussed below.

Even if the receiving water limitations in MS4 permits could be considered subject to the anti-backsliding requirements of the Clean Water Act or the federal regulations, backsliding would be permissible based on the new information available to the Los Angeles Water Board when it developed and adopted the Los Angeles MS4 Order. The Clean Water Act and federal regulations contain exceptions to the anti-backsliding requirements where new information is available to the permitting authority that was not available at the time of the issuance of the prior permit and that would have justified the imposition of less stringent effluent limitations at that time.⁷² The Los Angeles Water Board makes a compelling argument in its October 15, 2013 Response that the development of 33 watershed-based TMDLs adopted since 2001, the inclusion and implementation of three of those TMDLs in the 2001 Los Angeles MS4 Order, and the TMDL-specific and general monitoring and analysis during implementation, have made new information available to the Los Angeles Water Board that fundamentally shaped the WMP/EWMP alternative of the Los Angeles MS4 Order. The Los Angeles Water Board states that the new information resulted in a new understanding that “time to plan, design, fund, operate and maintain [best management practices (BMPs)] is necessary to attain water quality improvements, and these BMPs are best implemented on a watershed scale.”⁷³ The Los Angeles Water Board further points out that, in terms of water supply, there has been a paradigm shift in the last decade from viewing storm water as a liability to viewing it as a regional asset, and that the Los Angeles MS4 Order was drafted to incorporate this new paradigm into its structure.

The WMP/EWMP approach represents a comprehensive attempt to implement the Board’s new understanding regarding how to make progress toward achieving water quality

⁷¹ See Order WQ 96-13 (*Save San Francisco Bay Association*) at pp. 8-10. Although the relevant portion of that decision primarily concerned Clean Water Act section 402(o), its analysis is equally instructive with respect to 40 C.F.R. section 122.44(l). (In passing, we note that the order appears to assume that the permit’s water quality-based requirements for the MS4 permit were derived pursuant to section 301(b)(1)(C); however, that assumption is in error based on the *Defenders of Wildlife* decision and subsequent State Water Board precedent.)

⁷² See 33 U.S.C. § 1342(o)(2)(B)(i); 40 C.F.R. § 122.44(l)(1) (anti-backsliding does not apply if the circumstances on which the previous permit was based have materially and substantially changed and would constitute cause for permit modification under 40 C.F.R. section 122.62); 40 C.F.R. § 122.62(a)(2) (stating that new information not available at the time the previous permit was issued is cause for modification); see also 40 C.F.R. §122.44(l)(2)(i)(B)(1).

⁷³ Los Angeles Water Board October 15, 2013 Response, p. 51.

standards as well as supporting the development of new water supplies.⁷⁴ The anti-backsliding requirements of the Clean Water Act and the federal regulations thus did not foreclose the incorporation of the WMP/EWMP alternatives into the Los Angeles MS4 Order even though the alternatives allow additional time to achieve receiving water limitations as compared to the immediate compliance required under the 2001 Los Angeles MS4 Order.

We shall amend Finding II.N. and Part III.D.4, page F-20, of Attachment F, Fact Sheet, as follows:

Finding II.N:

N. Anti-Backsliding Requirements. Section 402(o)(2) of the CWA and federal regulations at 40 CFR section 122.44(l) prohibit backsliding in NPDES permits. These anti-backsliding provisions require effluent limitations in a reissued permit to be as stringent as those in the previous permit, with some exceptions where limitations may be relaxed. All effluent limitations in this Order are at least as stringent as the effluent limitations in the previous permit. **The Fact Sheet of this Order contains further discussion regarding anti-backsliding.**

Attachment F, Fact Sheet, Part III.D.4:

4. Anti-Backsliding Requirements. Sections 402(o)(2) and 303(d)(4) of the CWA and federal regulations at 40 CFR section 122.44(l) prohibit backsliding in NPDES permits. These anti-backsliding provisions require effluent limitations in a reissued permit to be as stringent as those in the previous permit, with some exceptions where limitations may be relaxed. ~~All effluent limitations in this Order are at least as stringent as the effluent limitations in the previous permit.~~ **While this Order allows implementation of Watershed Management Plans/EWMPs to constitute compliance with receiving water limitations under certain circumstances, the availability of that alternative and the corresponding availability of additional time to come into compliance with receiving water limitations, does not violate the anti-backsliding provisions. The receiving**

⁷⁴ The Environmental Petitioners argue that information relied on to develop the WMP/EWMP approach was available to the Los Angeles Water Board at the time of the issuance of the 2001 Los Angeles MS4 Order, since regional and watershed based strategies and technologies in storm water planning, as well as the potential benefits of storm water for water supply, were considered prior to the last permit cycle. Similarly, the Environmental Petitioners argue that some of the data gathered through TMDL development was through the process of assessing impairments and through preparing drafts of the TMDL and was therefore available to the Los Angeles Water Board in 2001. (Environmental Petitioners, Written Comments, Jan. 21, 2015, pp. 15-17, 23-25.) The Environmental Petitioners have asked us to take official notice of several documents that support these assertions. It is not necessary for us to do so because we do not disagree with the Environmental Petitioners that some of the information that the Los Angeles Water Board has cited in support of an exception to the anti-backsliding requirements was available at the time of the adoption of the 2001 Los Angeles MS4 Order. We nevertheless concur with the Los Angeles Water Board that the more than a decade of implementation of storm water requirements, as well as the development and implementation of TMDL requirements, since 2001, has, as a whole, fundamentally reshaped our understanding of the physical and time scale on which such measures must be implemented to bring MS4s into compliance with receiving water limitations. Further, we find that all regional water boards are informed by the information gained in the Los Angeles region, so that any regional water board that adopts an alternative compliance path in a subsequent Phase I permit would not be in violation of anti-backsliding requirements, regardless of the particular storm water permitting history of that region.

water limitations provisions of this Order are imposed under section 402(p)(3)(B) of the Clean Water Act rather than based on best professional judgment, or based on section 301(b)(1)(C) or sections 303(d) or (e), and are accordingly not subject to the anti-backsliding requirements of section 402(o). Although the non-applicability is less clear with respect to the regulatory anti-backsliding provisions in 40 Code of Federal Regulations section 122.44(l), the regulatory history suggests that USEPA's intent was to establish the anti-backsliding regulations with respect to evolving technology standards for traditional point sources. (See, e.g., 44 Fed.Reg. 32854, 32864 (Jun. 7, 1979)). It is unnecessary, however, to resolve the ultimate applicability of the regulatory anti-backsliding provisions, because the WMP/EWMP provisions qualify for an exception to backsliding as based on new information. The Watershed Management Plan/EWMP provisions of this Order were informed by new information available to the Board from experience and knowledge gained through the process of developing 33 watershed-based TMDLs and implementing several of the TMDLs since the adoption of the previous permit. In particular, the Board recognized the significance of allowing time to plan, design, fund, operate and maintain watershed-based BMPs necessary to attain water quality improvements and additionally recognized the potential for municipal storm water to benefit water supply. Thus, even if the receiving water limitations are subject to anti-backsliding requirements, they were revised based on new information that would support an exception to the anti-backsliding provisions. (33 U.S.C. § 1342(o)(2)(B)(i); 40 C.F.R. § 122.44(l)(1); 40 C.F.R. §122.44(l)(2)(i)(B)(1)).

2. Antidegradation

The Environmental Petitioners argue that the WMP/EWMP provisions of the Los Angeles MS4 Order violate the federal and state antidegradation policies.⁷⁵ The federal and state antidegradation policies generally require that the existing quality of water bodies be maintained, unless degradation is justified through specific findings. At a minimum, any degradation may not lower the quality of the water below the water quality standards.⁷⁶

The federal and state antidegradation policies are not identical; however, where the federal antidegradation policy is applicable, the State Water Board has interpreted State Water Board Resolution No. 68-16, the state antidegradation policy, to incorporate the federal antidegradation policy.⁷⁷ In the context of the Los Angeles MS4 Order, a federal NPDES permit, compliance with the federal antidegradation policy would require consideration of the following: First, the Los Angeles MS4 Order must ensure that “existing instream uses and the level of

⁷⁵ 40 C.F.R. § 131.12; State Water Board Resolution No. 68-16, Statement of Policy with Respect to Maintaining High Quality Waters in California (State Water Board Resolution No. 68-16).

⁷⁶ *Ibid.*

⁷⁷ State Water Board Order WQ 86-17 (*Fay*), pp. 16-19.

water quality necessary to protect the existing uses” is maintained and protected.⁷⁸ Second, if the baseline quality of a water body for a given constituent “exceeds levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water, that quality shall be maintained and protected” through the requirements of the Los Angeles MS4 Order unless the Los Angeles Water Board makes findings that (1) any lowering of the water quality is “necessary to accommodate important economic or social development in the area in which the waters are located;” (2) “water quality adequate to protect existing uses fully“ is assured; and (3) “the highest statutory and regulatory requirements for all new and existing point sources and all cost-effective and reasonable best management practices for nonpoint source control” are achieved.⁷⁹

The Los Angeles MS4 Order must also comply with any requirements of State Water Board Resolution No. 68-16 beyond those imposed through incorporation of the federal antidegradation policy.⁸⁰ In particular, the Los Angeles Water Board must find that not only present, but also anticipated future uses of water are protected, and must ensure “best practicable treatment or control” of the discharges.⁸¹ The baseline quality considered in making the appropriate findings is the best quality of the water since 1968, the year of the adoption of Resolution No. 68-16, or a lower level if that lower level was allowed through a permitting action that was consistent with the federal and state antidegradation policies.⁸²

⁷⁸ 40 C.F.R. § 131.12(a)(1). This provision has been interpreted to mean that, “[i]f baseline water quality is equal to or less than the quality as defined by the water quality objective, water quality shall be maintained or improved to a level that achieves the objectives.” (State Water Board, Administrative Procedures Update, Antidegradation Policy Implementation for NPDES Permitting, 90-004 (APU 90-004), p. 4.) This provision is completely consistent with, and implemented by, the receiving water limitations provisions discussed above.

⁷⁹ 40 C.F.R. § 131.12(a)(2); see also State Water Board Resolution No. 68-16, Resolve 2. The federal regulations additionally require strict maintenance of water quality for “outstanding national resources.” (40 C.F.R. § 131.12(a)(3).) There are no designated outstanding national resource waters covered by the Los Angeles MS4 Order.

⁸⁰ See State Water Board Order WQ 86-17 (*Fay*), p. 23, fn. 11.

⁸¹ State Water Board Resolution No. 68-16, Resolve 2. Best practicable treatment or control is not defined in Resolution No. 68-16; however, the State Water Board has evaluated what level of treatment or control is technically achievable using “best efforts.” (See State Water Board Orders WQ 81-5 (*City of Lompoc*), WQ 82-5 (*Chino Basin Municipal Water District*), WQ 90-6 (*Environmental Resources Protection Council*).) A Questions and Answers document on Resolution No. 68-16 by the State Water Board states as follows: “To evaluate the best practicable treatment or control method, the discharger should compare the proposed method to existing proven technology; evaluate performance data, e.g. through treatability studies; compare alternative methods of treatment or control; and/or consider the method currently used by the discharger or similarly situated dischargers . . . The costs of the treatment or control should also be considered . . .” (Questions and Answers, Resolution No. 68-16, State Water Board (Feb. 16, 1995), pp. 5-6.)

⁸² APU 90-004, p.4. The baseline for application of the federal antidegradation policy is 1975. For state antidegradation requirements, see also *Asociacion de Gente Unida por el Agua v. Central Valley Water Board* (2012) 210 Cal.App.4th 1255,1270. The baseline for the application of the state antidegradation policy is generally the highest water quality achieved since 1968. However, where a water quality objective for a particular constituent was adopted after 1968, the baseline for that constituent is the highest water quality achieved since the adoption of the (*Continued*)

The Los Angeles MS4 Order contains a conclusory antidegradation finding, but the Fact Sheet contains additional discussion.⁸³ The Fact Sheet discussion essentially conveys that, where there are high quality waters in the region, the antidegradation requirements are met because the Order requires best practicable treatment or control in the form of MEP and water quality standards compliance and, further, where the water quality is already impaired, the Order requires implementation of TMDL requirements to achieve water quality standards over time. The Fact Sheet also finds that the Los Angeles MS4 Order does not authorize an increase in waste discharges. The Los Angeles Water Board argues that it was not required to make more detailed findings because, using its best professional judgment and available data, it concluded that the Los Angeles MS4 Order would prevent any degradation. For this proposition, the Los Angeles Water Board cites to State Water Board guidance from 1990 (APU 90-004).⁸⁴ The guidance may be construed to exempt the Los Angeles Water Board from conducting an extensive pollutant by pollutant analysis for each water body in the region, but it does not exempt the Board from clearly stating its basis for finding that its action is consistent with the antidegradation policies.

The Los Angeles Water Board has provided a more extensive analysis of why the Los Angeles MS4 Order complies with the antidegradation policies in its October 15, 2013 Response. The Los Angeles Water Board argues that most of the water bodies impacted by the Los Angeles MS4 Order are already impaired for multiple constituents and that, even if some of these water bodies may have been higher quality in 1968, a scenario largely contradicted by the available data,⁸⁵ the appropriate baseline for the quality of such waters is the level of control achieved under the prior permit. The Los Angeles Water Board further argues that the Los Angeles MS4 Order has provisions that are equally or more stringent than those of the

(continued from previous page)

objective. Resolution 68-16 requires a comparison of the existing quality to “the quality established in policies as of the date on which such policies become effective.” (Resolution 68-16, Resolve 1.)

⁸³ Los Angeles MS4 Order, Finding II.M; Fact Sheet, Att. F, pp. F19-F20.

⁸⁴ APU 90-004, p. 2.

⁸⁵ We reviewed the Administrative Record, including the 1998 Clean Water Act section 303(d) List (May 12, 1999) (Administrative Record, section 10.VI.E., RB-AR35684-35733), the 2010 Clean Water Act section 303(d) List (Oct. 11, 2011) (Administrative Record, section 10.VI.E., RB-AR35734-35785), Santa Monica Bay Restoration Project, An Assessment of Inputs of Fecal Indication Organisms and Human Enteric Viruses from Two Santa Monica Bay Storm Drains (1990) (Administrative Record, section 10.VI.E, RB-AR43363-43413), Toxic Substances Monitoring Program, 10 Year Summary Report 1978-1987 (Administrative Record, Order No. 01-182, R0044602-0045053) and comments submitted by interested persons to the Los Angeles Water Board (Administrative Record RB-AR1006-1038, RB-AR1100-1128, RB-AR1768-2119, RB-AR2653-2847, RB-AR5642-17888). We found no specific evidence presented to the Los Angeles Water Board of high quality waters in the region with regard to pollutants typically associated with storm water discharges; however, we also recognize that in the absence of specific evidence of high quality waters, a blanket statement that there are no high quality water body-pollutant combinations may be overbroad.

2001 Los Angeles MS4 Order and therefore will not allow water quality to degrade below the level of control achieved under the prior permit.

We agree with the Los Angeles Water Board that the Los Angeles MS4 Order maintains and improves the level of control achieved under the 2001 Los Angeles MS4 Order. We expect that the Los Angeles MS4 Order's TMDL requirements and receiving water limitations, which may be implemented through the WMP/EWMP provisions, will be the means for achieving water quality standards for the majority of degraded water bodies in the region. To assert, as the Environmental Petitioners do, that compliance with the receiving water limitations provisions of the 2001 Los Angeles Order is more stringent than establishing specific implementation requirements with clear deadlines for TMDL and receiving water limitations compliance is misguided. We are concerned with the totality of the provisions in the two permits and find that, viewed from that broader perspective, the Los Angeles MS4 Order is at least as stringent in addressing degradation as its predecessor.⁸⁶ The Los Angeles MS4 Order improves on past practices that have been inadequate to protect water quality, and includes a monitoring and assessment program that will identify any changes in water quality.⁸⁷ In general, under the Los Angeles MS4 Order, we expect to see a trajectory away from any past degradation, even if there may be some continued short-term degradation.

We are not persuaded, however, that the level of control achieved under the 2001 Los Angeles MS4 Order necessarily represents the baseline for purposes of an antidegradation analysis. The 2001 Los Angeles MS4 Order had only minimal findings regarding antidegradation and it is not apparent that any degradation that may have continued under the conditions of the 2001 Los Angeles MS4 Order was anticipated by the Los Angeles Water Board and supported with appropriate analysis regarding economic and social benefits⁸⁸ and best practicable treatment or control. We therefore find that the appropriate baseline remains 1968 or the highest quality of receiving waters attained since 1968. We acknowledge

⁸⁶ In making this finding we also recognize that the Permittees may be deemed in compliance with receiving water limitations prior to approval of the WMP/EWMP. (Los Angeles MS4 Order Parts VI.C.2.d., pp. 52-53, VI.E.2.d.i.(4)(d), p. 144.) As discussed further under section II.B.6., we find that the Los Angeles Water Board reasonably exercised its discretion in allowing for compliance during the program development phase and further that the program development phase does not detract from the overall effectiveness of the permit provisions.

⁸⁷ See *Asociacion de Gente Unida*, *supra*, 210 Cal.App.4th at p. 1278.

⁸⁸ We note that the administrative record provides evidence that some discharge of storm water is to the maximum benefit of the people of the state because such discharge is necessary for flood control and public safety and helps accommodate development. (See, e.g., Administrative Record, section 10.VI.C, RB-AR30101; RB-AR32557-32558.)

that the evidence in the record indicates that it is unlikely that many water bodies were high quality even as far back as 1968, but we cannot make a blanket statement to that effect.⁸⁹

Despite this conclusion, we will not remand the antidegradation issue to the Los Angeles Water Board for further consideration, but will make the findings ourselves based on the record before us. Our findings are necessarily made at a generalized level. Even if the directive of APU 90-004 to carry out a complete antidegradation analysis for each water body-pollutant combination is applicable here, there is simply insufficient data available (to us or the Los Angeles Water Board) to make such findings. The APU 90-004 contemplates the appropriate antidegradation analysis for a discrete discharge or facility. It has limited value when considering antidegradation in the context of storm water discharges from diffuse sources, conveyed through multiple outfalls, with multiple pollutants impacting multiple water bodies within a municipality, or in this case, region, especially given that reliable data on the baseline water quality from 1968 is not available.⁹⁰

The Environmental Petitioners propose that antidegradation be addressed in subsequent actions of the Los Angeles Water Board by requiring that the reasonable assurance analysis (discussed in greater detail in section II.B.4.c. of this Order) supporting a WMP/EWMP also demonstrate that the proposed control measures will maintain high quality of waters with regard to pollutants for which they are not impaired. We reject this approach for two reasons. First, the Los Angeles Water Board was required under the federal and state antidegradation policies to evaluate whether permit conditions would lead to degradation of high quality waters at the time of permit issuance. Second, requiring Permittees to incorporate an evaluation of all water body-pollutant combinations, including those where there are no impairments or exceedances, would require them to expand the reasonable assurance analysis beyond its useful function and manageable scope.

We shall amend Finding II.M and Part D.3 at pages F-19 to F-20 of Attachment F, the Fact Sheet, as follows:

⁸⁹ See fn. 85.

⁹⁰ We note that USEPA did not conduct a detailed antidegradation analysis in issuing NPDES Permit No. DC00000221 for MS4 discharges to the District of Columbia, presumably for similar reasons. The court in *Asociacion de Gente Unida* relied on APU 90-004 in part in rejecting an antidegradation analysis conducted by the Central Valley Regional Water Quality Control Board for discharges of pollutants to groundwater from dairy facilities region-wide, but the court's objection was to the regional water board's reliance on an illusory prohibition of discharge to groundwater in finding that no antidegradation analysis was required, not to the sufficiency of any generalized antidegradation analysis the Board might have conducted in lieu of its reliance on the prohibition. (210 Cal.App.4th at pp. 1271-1273.)

Finding II. M.

M. Antidegradation Policy

40 CFR section 131.12 requires that state water quality standards include an antidegradation policy consistent with the federal antidegradation policy. The State Water Board established California's antidegradation policy in State Water Board Resolution No. 68-16 ("Statement of Policy with Respect to Maintaining the Quality of the Waters of the State"). Resolution No. 68-16 incorporates the federal antidegradation policy where the federal policy applies under federal law. Resolution No. 68-16 requires that existing water quality be maintained unless degradation is justified based on specific findings. The Regional Water Board's Basin Plan implements, and incorporates by reference, both the state and federal antidegradation policies. The permitted discharge is consistent with the antidegradation provision of section 131.12 and State Water Board Resolution No. 68-16 **as set out in the Fact Sheet.**

Attachment F, Fact Sheet Part III.D.3.

3. Antidegradation Policy. 40 CFR section 131.12⁴ requires that the state water quality standards include an antidegradation policy consistent with the federal antidegradation policy. The State Water Board established California's antidegradation policy in [State Water Board Resolution No. 68-16](#) ("Statement of Policy with Respect to Maintaining the Quality of the Waters of the State"). Resolution No. 68-16 incorporates the federal antidegradation policy where the federal policy applies under federal law. The Regional Water Board's Basin Plan implements, and incorporates by reference, both the State and federal antidegradation policies. Resolution No. 68-16 and 40 CFR section 131.12 require the Regional Water Board to maintain high quality waters of the State **unless degradation is justified based on specific findings. First, the Board must ensure that "existing instream uses and the level of water quality necessary to protect the existing uses" are maintained and protected. Second, if the baseline quality of a water body for a given constituent exceeds levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water, that quality shall be maintained and protected through the requirements of the Order unless the Board makes findings that (1) any lowering of the water quality is necessary to accommodate important economic or social development in the area in which the waters are located; (2) water quality adequate to protect existing uses fully is assured; and (3) the highest statutory and regulatory requirements for all new and existing point sources and all cost-effective and reasonable best management practices for nonpoint source control are achieved. The Board must also comply with any requirements of State Water Board Resolution No. 68-16 beyond those imposed through incorporation of the federal antidegradation policy. In particular, the Board must find that not only present, but also anticipated future uses of water are protected, and must ensure best practicable treatment or control of the discharges. The baseline quality considered in making the appropriate findings is the best quality of the water since 1968, the year of the adoption of Resolution No. 68-16, or a lower level if that lower level was allowed through a permitting action that was consistent with the federal and state antidegradation policies.** until it is demonstrated that any change in quality will

~~be consistent with maximum benefit to the people of the State, will not unreasonably affect beneficial uses, and will not result in water quality less than that described in the Regional Water Board's policies. Resolution 68-16 requires that discharges of waste be regulated to meet best practicable treatment or control to assure that pollution or nuisance will not occur and the highest water quality consistent with the maximum benefit to the people of the State be maintained.~~

The discharges permitted in this Order are consistent with the antidegradation provisions of 40 CFR section 131.12 and Resolution 68-16 **as set out in the Findings below:-**

1. Many of the water bodies within the area covered by this Order are of high quality. The Order requires the Permittees to meet best practicable treatment or control to meet water quality standards. As required by 40 CFR section 122.44(a), the Permittees must comply with the "maximum extent practicable" technology-based standard set forth in CWA section 402(p). Many of the waters within the area covered by this Order are impaired and for multiple pollutants discharged through MS4s and are not high quality waters with regard to these pollutants. In most cases, there is insufficient data to determine whether these water bodies were impaired as early as 1968, but the limited available data shows impairment dating back for more than two decades. Many such water bodies are listed on the State's CWA Section 303(d) List and either the Regional Water Board or USEPA has established TMDLs to address the impairments. This Order ensures that existing instream (beneficial) water uses and the level of water quality necessary to protect the existing uses is maintained and protected. This Order requires the Permittees to comply with permit provisions to implement the WLAs set forth in the TMDLs in order to restore the beneficial uses of the impaired water bodies consistent with the assumptions and requirements of the TMDLs. This Order further requires compliance with receiving water limitations to meet water quality standards in the receiving water either by demonstrating compliance pursuant to Part V.A and the Permittee's monitoring and reporting program pursuant to Part VI.B or by implementing Watershed Management Programs/EWMPs with a compliance schedule. This Order includes requirements to develop and implement storm water management programs, achieve water quality-based effluent limitations, and effectively prohibit non-storm water discharges through the MS4.

2. To the extent that some of the water bodies within the jurisdiction are high quality waters with regard to some constituents, this Order finds as follows:

a. Allowing limited degradation of high quality water bodies through MS4 discharges is necessary to accommodate important economic or social development in the area and is consistent with the maximum benefit to the people of the state. The discharge of storm water in certain circumstances is to the maximum benefit to the people of the state because it can assist with maintaining instream flows that support beneficial uses, may spur the development of multiple-benefit projects, and may be necessary for flood control, and public safety as well as to accommodate development in the

area. The alternative – capturing all storm water from all storm events – would be an enormous opportunity cost that would preclude MS4 permittees from spending substantial funds on other important social needs. The Order ensures that any limited degradation does not affect existing and anticipated future uses of the water and does not result in water quality less than established standards. The Order requires compliance with receiving water limitations that act as a floor to any limited degradation.

b. The Order requires the highest statutory and regulatory requirements and requires that the Permittees meet best practicable treatment or control. The Order prohibits all non-storm water discharges, with a few enumerated exceptions, through the MS4 to the receiving waters. As required by 40 CFR section 122.44(a), the Permittees must comply with the “maximum extent practicable” technology-based standard set forth in CWA section 402(p), and implement extensive minimum control measures in a storm water management program. Recognizing that best practicable treatment or control may evolve over time, the Order includes new and more specific requirements as compared to Order No. 01-182. The Order incorporates options to implement Watershed Management Programs or EWMPs that must specify concrete and detailed structural and non-structural storm water controls that must be implemented in accordance with an approved time schedule. The Order contains provisions to encourage, wherever feasible, retention of the storm water from the 85th percentile 24-hour storm event.

~~The issuance of this Order does not authorize an increase in the amount of discharge of waste. The Order includes new requirements to implement WLAs assigned to Los Angeles County MS4 discharges that have been established in 33 TMDLs, most of which were not included in the previous Order.~~

3. Compliance Schedules and the Appropriateness of Enforcement Orders

The Environmental Petitioners concede that immediate compliance with receiving water limitations is not achievable in many instances and that some additional time to reach compliance is warranted. They have proposed an alternative to the WMP/EWMP that would incorporate many of the provisions of those programs but require implementation through the mechanism of a time schedule order or other enforcement order rather than as permit conditions. The Los Angeles MS4 Order already provides that Permittees who are out of compliance with final WQBELs and other TMDL-specific limitations may request a time schedule order.⁹¹ Under the alternative proposed by the Environmental Petitioners, all Permittees that are currently out of compliance with receiving water limitations not addressed by a TMDL as well as with interim TMDL requirements with passed compliance deadlines, would be issued a time schedule order or other enforcement order not to exceed the five year term of

⁹¹ Los Angeles MS4 Order, Part VI.E.4., pp.146-147.

the permit. The Permittees would then implement a WMP/EWMP type plan to achieve compliance with the appropriate limitations within the confines of the enforcement order.

In the prior two sections, we found that the WMP/EWMP provisions are not contrary to the anti-backsliding or antidegradation requirements of federal and state law. We therefore disagree with the Environmental Petitioners that the relevant provisions must be stricken from the Order and incorporated instead into an enforcement order for those reasons. We also find that, given that strict compliance with water quality standards is discretionary in MS4 permits, the Los Angeles Water Board was not restricted to limiting the schedule for compliance with receiving water limitations to the term of the Los Angeles MS4 Order.

Further, from a policy perspective, we find that the MS4 Permittees that are developing and implementing a WMP/EWMP should be allowed additional time to come into compliance with receiving water limitations and interim and final TMDLs through provisions built directly into their permit, rather than through enforcement orders. Building a time schedule into the permit itself, as the Los Angeles MS4 Order does, is appropriate because it allows a more efficient regulatory structure compared to having to issue multiple enforcement orders. More importantly, it is appropriate to regulate Permittees in a manner that allows them to strive for compliance with the permit terms, provided no provision of law otherwise precludes including the schedule in the NPDES permit. For example, for traditional point source discharges subject to strict compliance with water quality standards pursuant to section 301(b)(1)(C), the terms of a compliance schedule are dictated by our compliance schedule policy (State Water Board Resolution 2008-0025) and any additional time for compliance could only be under the auspices of an enforcement order outside the permit.⁹²

The WMP/EWMP provisions constitute an effort to set ambitious, yet achievable, targets for Permittees; receiving water limitations, on the other hand, while the ultimate goal of MS4 permitting, may not in all cases be achievable within the five-year permit cycle. Generally, permits are best structured so that enforcement actions are employed when a discharger shows some shortcoming in achieving a realistic, even if ambitious, permit condition and not under circumstances where even the most diligent and good faith effort will fail to achieve the required condition. We add that it is our intention to encourage a watershed-based approach to addressing storm water issues going forward and that it would be contrary to that intention to

⁹² We also note that the State Water Board's Policy for the Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California (2005) (State Implementation Policy) and the CTR itself (40 C.F.R. § 131.38(e)) restrict the scope of compliance schedules for effluent limitations addressing the discharge of toxic pollutants; however the policy does not apply to storm water discharges. (State Implementation Policy, p.3, fn.1.)

structure the watershed-based requirements as an enforcement order. We will not require Permittees that propose and timely implement a WMP/EWMP to request time schedule orders or other enforcement orders as a precondition of being in compliance with the receiving water limitations or interim TMDL requirements of the Los Angeles MS4 Order.

While declining to structure the WMP/EWMP provisions generally as an enforcement order, we acknowledge that time schedule orders are appropriate under some circumstances. We have already noted that the Los Angeles MS4 Order allows a Permittee to request a time schedule order where a final compliance deadline for a state-adopted TMDL has passed and the Permittee believes that additional time to comply with the requirement is necessary.⁹³ We expect that a Permittee will request a time schedule order also if the Permittee fails to meet a final compliance deadline for a TMDL after the adoption date of the Los Angeles MS4 Order. We will also provide that a Permittee may request a time schedule order if the Permittee fails to meet a final compliance deadline for a receiving water limitation set in the Permittee's WMP/EWMP.

We shall add a new Part VI.C.6.b and revise Part VI.E.4.b as follows:

Part VI.C.6

b. Where a Permittee believes that additional time to comply with a final receiving water limitation compliance deadline set within a WMP/EWMP is necessary, and the Permittee fails to timely request or is not granted an extension by the Executive Officer, a Permittee may, no less than 90 days prior to the final compliance deadline, request a time schedule order pursuant to California Water Code section 13300 for the Regional Water Board's consideration.

Part VI.E.4

b. Where a Permittee believes that additional time to comply with the final water quality-based effluent limitations and/or receiving water limitations is necessary, a Permittee may within 45 days of Order adoption, **or no less than 90 days prior to the final compliance deadline if after adoption of the Order,** request a time schedule order pursuant to California Water Code section 13300 for the Regional Water Board's consideration.

4. Rigor and Accountability in the WMPs/EWMPs

We now turn to a consideration, from a technical as well as policy lens, as to whether the WMPs/EWMPs are structured in a manner that will maximize the likelihood of

⁹³ *Ibid.*

reaching the ultimate goal of the compliance alternative – achieving receiving water limitations.⁹⁴ We can support an alternative approach to compliance with receiving water limitations only to the extent that that approach requires clear and concrete milestones and deadlines toward achievement of receiving water limitations and a rigorous and transparent process to ensure that those milestones and deadlines are in fact met. Conversely, we cannot accept a process that leads to a continuous loop of iterative WMP/EWMP implementation without ultimate achievement of receiving water limitations.

We find below that the WMP/EWMP provisions generally ensure the appropriate rigor, transparency, and accountability, and that, with the few revisions we direct, are designed to lead to achievement of receiving water limitations.⁹⁵

a. Milestones and Compliance Deadlines

We first consider whether the WMP/EWMP provisions require clear, concrete, and finite milestones and deadlines.

For water body-pollutant combinations addressed by TMDLs, the Los Angeles MS4 Order requires the Permittees to incorporate the compliance schedules found in Attachments L through R of the Order, which reflect previously adopted TMDL-based requirements, into the WMP/EWMP, and, as necessary, to develop interim milestones and dates for their achievement.⁹⁶ A Permittee that does not thereafter comply with the approved compliance schedule must instead demonstrate compliance with the WQBELs and other TMDL-specific limitations of the Order.⁹⁷ For water body-pollutant combinations not addressed by a TMDL, but where the relevant pollutant is one for which the water body is identified as impaired on the Clean Water Act section 303(d) List and the pollutant is in the same class as a TMDL pollutant, the Order requires that the WMP/EWMP incorporate a schedule consistent with the TMDL schedule for the same class pollutant.⁹⁸ A Permittee that does not thereafter comply with

⁹⁴ From a legal standpoint, our analysis serves to verify that the Los Angeles MS4 Order's alternative compliance approach through WMPs/EWMPs is supported by the findings and by evidence in the record. (*Topanga Assn. for a Scenic Community v. County of Los Angeles* (1974) 11 Cal.3d 506.)

⁹⁵ We do not agree with Permittee Petitioners that the WMP/EWMP provisions are precluded by the program requirements of 40 Code of Federal Regulations section 122.26. Nor do we agree that the requirements are vague or lack definition. The WMP/EWMP provisions of the Order are guidelines for development of a subsequent program with more specificity to be approved by the Los Angeles Water Board or its Executive Officer.

⁹⁶ Los Angeles MS4 Order, Part VI.C.5.c., pp.64-65.

⁹⁷ *Id.*, Part VI.E.2.d.i(4)(c), p.144.

⁹⁸ *Id.*, Part VI.C.2.a.i., pp. 49-50.

the approved compliance schedule must instead demonstrate immediate compliance with the receiving water limitations in Part V.A.⁹⁹ We will not disturb these provisions.

With regard to exceedances of receiving water limitations not addressed by a TMDL, and where the pollutant is not in the same class as a pollutant addressed by a TMDL, the Order requires that the WMP/EWMP include milestones based on measurable criteria or indicators and a schedule for achieving the milestones. The WMP/EWMP must also incorporate a final date for achievement of receiving water limitations, but that date is circumscribed simply as “as soon as possible.”¹⁰⁰ Parts VI.C.2.a.ii.(4) and VI.C.2.a.iii.(2)(c) help clarify the meaning of “as soon as possible:”

Permittees shall identify enforceable requirements and milestones and dates for their achievement to control MS4 discharges such that they do not cause or contribute to exceedances of receiving water limitations within a timeframe(s) that is as short as possible, taking into account the technological, operation, and economic factors that affect the design, development, and implementation of the control measures that are necessary. The time between dates shall not exceed one year. Milestones shall relate to a specific water quality endpoint (e.g., x% of the MS4 drainage area is meeting the receiving water limitations) and dates shall relate either to taking a specific action or meeting a milestone.¹⁰¹

We will make a revision to the compliance schedule provisions to make it clear that the term “as soon as possible” is to be interpreted consistent with the more specific direction cited above. However, because the WMP/EWMP, and therefore the proposed compliance schedule, is subject to public review and comment and approval by the Los Angeles Water Board or its

⁹⁹ *Id.*, Part VI.C.2.c., p.52.

¹⁰⁰ *Id.*, Part VI.C.5.c.iii.(3), p. 65. If the pollutant is not in the same class as those addressed in a TMDL, but the water body is still identified as impaired for that pollutant, the WMP/EWMP must either have a final compliance deadline within the 5 year permit term or Permittees are expected to initiate development of a stakeholder-proposed TMDL and incorporate a compliance schedule consistent with the TMDL. (*Id.*, Part VI.C.2.a. ii., pp. 50-51) (If the exceedances are in a drainage area implementing the storm water retention approach, there is no requirement to initiate the TMDL development process.) The requirement to address receiving water limitations is ongoing. As exceedances are found through monitoring for water body-pollutant combinations not identified on the 303(d) List, Permittees must either meet receiving water limitations or include the water body-pollutant combination in the WMP/EWMP and set enforceable requirements and milestones and dates for their achievement within a time frame that is as short as possible. (*Id.*, Part VI.C.2.a.iii, pp. 51-52.) Permittees are deemed in compliance with receiving water limitations only for water body-pollutant combinations addressed in the WMP/EWMPs. Thus, as pointed out by several interested parties, for lower priority water body-pollutant combinations not incorporated into a WMP/EWMP for which exceedances are detected, Permittees may be in violation of the receiving water limitations. A Permittee always has the ability to reprioritize a water body-pollutant combination from low priority to high priority and amend its WMP/EWMP to incorporate measures to address that water body-pollutant combination.

¹⁰¹ *Id.*, Parts VI.C.2.a.ii.4, p. 50, VI.C.2.a.iii.(2)(c), p. 51 (identical language).

Executive Officer,¹⁰² we do not find it necessary to constrain the determination of milestones and dates for the achievement of receiving water limitations any further.

We shall amend Part VI.C.5.c.iii.(3)(b) as follows:

- (b) A final date for achieving the receiving water limitations as soon as possible, **consistent with Parts VI.C.2.a.ii.(4) & VI.C.2.a.iii.(2)(c).**

b. Constraints on Extension of Deadlines

The fact that the Los Angeles MS4 Order requires the establishment of concrete and rigorous deadlines within the WMP/EWMP for the achievement of receiving water limitations is critical to ensuring progress on such achievement; however, the Order also contemplates that the deadlines, with the exception of those compliance deadlines established in a TMDL, may be extended.¹⁰³ The WMP/EWMP is subject to an adaptive management process. Based on the results of that process the Permittees may propose modifications, including modifications to compliance deadlines and interim milestones, in the Annual Report.¹⁰⁴

The potential for multiple extensions is nevertheless ameliorated by the fact that extensions of compliance deadlines and interim milestones require Los Angeles Water Board Executive Officer approval,¹⁰⁵ and are accordingly, subject to a 30-day public comment period.¹⁰⁶ The public comment period will allow all other interested persons to weigh in on the appropriateness of any requested extensions. If thereafter dissatisfied with the determination made by the Executive Officer, interested persons may additionally seek review of the Executive Officer's decision by the Los Angeles Water Board.¹⁰⁷ Of course, in cases where no extension

¹⁰² *Id.*, Part VI.C.4.c., p.56, Table 9, p. 54, Part VI.A.5.b., p. 42, Att. F, Fact Sheet, p. F-42. Under Part VI.A.5.b, “[a]ll documents submitted to the Regional Water Board Executive Officer for approval shall be made available to the public for a 30-day period to allow for public comment.”

¹⁰³ *Id.*, Parts VI.C.7, p.66, VI.C.8, pp.66-67.

¹⁰⁴ *Id.*, Part, VI.C.8, p.67. Under another provision of the Order, Permittees may at any time request an extension of deadlines for achievement of interim milestones established to address exceedances of receiving water limitations not otherwise addressed by a TMDL. (*Id.*, Part VI.C.6.a., p.65.) (We note that the cited provision refers to “milestones established pursuant to Part VI.C.4.c.ii.(3),” but the intent appears to have been to reference Part VI.C.5.c.iii.(3).) But as we read the Los Angeles MS4 Order, extensions of not just interim deadlines for achievement of milestones but also final compliance deadlines to achieve receiving water limitations are already allowed under the adaptive management provisions of Part VI.C.8.a.ii.: “Based on the results of the adaptive management process, Permittees shall report any modifications, including where appropriate *new compliance deadlines* and interim milestones, with the exception of those compliance deadlines established in a TMDL, necessary to improve the effectiveness of the Watershed Management Program or EWMP, in the Annual Report” (Emphasis added.)

¹⁰⁵ *Id.*, Parts VI.C.8, p.67, VI.C.6.a., p.65. We recognize that as currently written the adaptive management provisions in effect deem any modifications to the WMPs/EWMPs approved if the Executive Officer “expresses no objections” within 60 days. (*Id.*, Part VI.C.8.a.iii., p. 67.) With our revisions, any deadline extensions must be affirmatively approved by the Executive Officer.

¹⁰⁶ *Id.*, Part VI.A.5.b, p. 42.

¹⁰⁷ *Id.*, Part VI.A.6, p.42.

is available, as with final deadlines established in TMDLs,¹⁰⁸ or where no extension is requested or granted, failure to meet a deadline means that the Permittee will have to comply from that time forward with the receiving water limitations or WQBELs and other TMDL-specific limitations or request a time schedule order. Therefore, Permittees cannot rely on the certainty of a deadline extension, and Permittees have a strong incentive to implement control measures that will in fact get them to compliance by the established deadline. Given that the Permittees and the Los Angeles Water Board are working with limited data¹⁰⁸ regarding storm water impacts and control measure performance, especially where TMDLs have not been developed, we are hesitant to remove all flexibility for deadline extensions, and find that the Order strikes an appropriate balance.

Permittee Petitioners seek even greater flexibility under the WMP/EWMP provisions for adjusting approved control measures and time lines. They advocate for amendments that would allow a Permittee to propose alternative controls or time lines upon a demonstration that required controls for timely achievement of a limitation are either technically infeasible or otherwise constitute a substantial hardship to the Permittee. We have found above that, in the case of final deadlines set in the WMP/EWMP for achievement of receiving water limitations not otherwise addressed in a TMDL, the Los Angeles MS4 Order already provides for an opportunity to propose new deadlines through the adaptive management process. We will make a clarifying revision below to confirm that Permittees may ask for extensions in meeting receiving water limitations not addressed by a TMDL. Technical infeasibility or substantial hardship may be grounds for such a request. The Los Angeles Water Board Executive Officer, in turn, may, after allowing for public review and comment, choose to (1) extend the deadline, (2) decline the extension but approve any time schedule order requested by the Permittee, or (3) decline the extension and not approve a time schedule order, with the result that the Permittee will be out of compliance with the provision of the WMP/EWMP and therefore the receiving water limitations of Part V.A. As stated previously, interested persons may thereafter ask the Los Angeles Water Board to review the Executive Officer's determination.¹⁰⁹

With regard to final deadlines for WQBELs and other TMDL-specific limitations, we will not amend the WMP/EWMP provisions to add flexibility for extensions. We find that the only option appropriately available to a Permittee unable to meet final deadlines that are set out in a TMDL and incorporated into the Los Angeles MS4 Order and the WMP/EWMPs, is to

¹⁰⁸ *Id.*, Part VI.C.8.a.ii., p.67.

¹⁰⁹ *Id.*, Part VI.A.6, p.42.

request a time schedule order, consistent with Part VI.E.2.e. of the Order, as that Part was amended in section II.B.3. above.¹¹⁰

We shall amend Part VI.C.6.a as follows:

- a. Permittees may request an extension of deadlines for achievement of interim milestones **and final compliance deadlines** established pursuant to Part VI.C.45.c.iii.(3) ~~only~~, **with the exception of those final compliance deadlines established in a TMDL**. Permittees shall provide requests in writing at least 90 days prior to the deadline and shall include in the request the justification for the extension. Extensions ~~shall be subject to approval by~~ **must be affirmatively approved by** the Regional Water Board Executive Officer, **notwithstanding Part VI.C.8.a.iii.**

c. Rigor and Accountability in the Process

We see three additional components of the WMPs/EWMPs as essential to ensuring that the proposed WMPs/EWMPs are in fact designed to achieve receiving water limitations within the appropriate time frame.

First, as documents to be approved by either the Los Angeles Water Board or its Executive Officer, the WMPs/EWMPs are subject to a public review and comment period.¹¹¹ Such review includes consideration of proposed control measures, deadlines for achievement of final limitations, and the reasonable assurance analysis that supports the WMP/EWMP. We expect this public process to vet the proposed WMPs/EWMPs and facilitate revisions to strengthen the programs as needed, thereby providing some assurance that approved WMPs/EWMPs will achieve the water quality targets set out.

Second, the requirement for a reasonable assurance analysis in particular is designed to ensure that Permittees are choosing appropriate controls and milestones for the WMP/EWMP.¹¹² Competent use of the reasonable assurance analysis should facilitate achievement of final compliance within the specified deadlines.¹¹³

¹¹⁰ Final TMDL deadlines are established and incorporated into the Basin Plans during the TMDL development process. That process invites stakeholder participation and the proposed schedule is subject to public review and comment and approval by the relevant regional water board, the State Water Board, and USEPA. The deadlines are established with consideration of the time needed for compliance for all dischargers contributing to an impairment, including industrial and construction storm water dischargers and traditional NPDES dischargers. Although we recognize that it may not always be feasible for municipal storm water dischargers to meet final TMDL deadlines, short of amending the Basin Plan to modify the deadlines (see *California Association of Sanitation Agencies v. State Water Resources Control Board* (2012) 208 Cal.App.4th 1438), we find it appropriate for the dischargers to request time schedule orders rather than be granted an extension within the provisions of the Los Angeles MS4 Order.

¹¹¹ See Los Angeles MS4 Order, Parts VI.C.4.d., p. 57, VI.C.6, p. 65, Table 9, p.54; see also *id.*, Part VI.A.5., p. 42.

¹¹² *Id.*, Part VI.C.5.b.iv.(5), pp. 63-64.

¹¹³ We note that the Los Angeles Water Board has released guidance on the development of a reasonable assurance analysis. The guidance was released after adoption of the Los Angeles MS4 Order and accordingly is not (*Continued*)

Third, the adaptive management provisions of the Order ensure that the Permittees will evaluate monitoring data and other new information every two years and consider progress up to that point on achieving WQBELs and other TMDL-specific limitations. Permittees are required as part of the adaptive management process to propose modifications to improve the effectiveness of the WMP/EWMP and implement those modifications.¹¹⁴

While we are supportive of all of these measures, we find that they should be strengthened. As a preliminary matter, we will require the Permittees to submit specific information, concurrently with the two-year adaptive management process, that will assist the Los Angeles Water Board in determining how effective the WMP/EWMP path is in spurring the completion of on-the-ground structural control measures that lead to measurable water quality improvement. As we discuss further in Section II.B.8 of this Order, we will direct the Los Angeles Water Board to report to the State Water Board periodically on the effectiveness of the WMP/EWMP approach and expect the additional information submitted by the Permittees to inform that report.

More significantly, we will add a provision that requires Permittees to comprehensively update the reasonable assurance analysis and the WMP/EWMP, following an opportunity to implement the adaptive management process. Given the limitations inherent in models, as well as the potential incentive to choose the lowest effort and cost level predicted by the model to achieve receiving water limitations,¹¹⁵ we are concerned that reliance on one initial reasonable assurance analysis is insufficient to ensure that in the long term WMPs/EWMPs will

(continued from previous page)

part of the Administrative Record. We nevertheless take this opportunity to state that we expect any revisions and updates to the guidance to be subject to a public process as part of reissuance of the Los Angeles MS4 Order.

¹¹⁴ Los Angeles MS4 Order, Part VI.C.8., pp. 66-67. We add that the adaptive management process will also allow Permittees to revise their WMPs/EWMPs to take advantage of funding opportunities as they arise in the future, including funding opportunities through Assembly Bill 2403 (approved by Governor, June 28, 2014 (2013-2014 Reg. Sess.)) and Proposition 1 (approved by ballot Nov. 4, 2014). We are cognizant of criticism that the adaptive management process is just another version of the ineffective iterative process of the receiving water limitations. These arguments are misplaced. Unlike the iterative process of the receiving water limitations, the adaptive management process is only one component of a series of actions required under the WMP/EWMP and acts as a periodic check to ensure that all the other requirements are achieving the stated goals of the WMP/EWMP within clearly stated deadlines. As our discussion above makes clear, we would not endorse an alternative compliance path with the sole requirement to adaptively manage implemented control measures. Further, the adaptive management process in the Los Angeles MS4 Order differs from the iterative process in that Permittees must carry out the adaptive management process every two years, limiting any discretionary determination as to when the program must be evaluated. (Los Angeles MS4 Order, Part VI.C.8.a.)

¹¹⁵ The numerical analysis methods and models approved for use by Permittees for estimating hydrologic conditions and contaminant fate and transport in the watersheds should, in principle, be able to propagate any and all known uncertainty to the outputs and results. It is in the public interest that the Los Angeles Water Board communicate this uncertainty to all stakeholders, as the results in most cases will affect the beneficial uses of California waters. Moreover, it is highly desirable that, to the extent possible, the Los Angeles Water Board define a minimum level of uncertainty (or level of confidence) acceptable for a reasonable assurance analysis to be approved.

achieve relevant water quality goals. . Currently, as stated above, the Permittees are required to implement the adaptive management process every two years from the date of program approval. Under the provision we add, the Permittees will be required to comprehensively update the reasonable assurance analysis (including potentially considering whether the model itself and its assumptions require updating) and the WMP/EWMP after several years of adaptive management, based on previous years' monitoring data and other performance measures. The Permittee will submit a full revised package to the Los Angeles Water Board Executive Officer for approval, following public review.

Given that the WMPs/EWMPs in many cases address water quality targets that are to be achieved a decade or more in the future, a periodic, complete re-consideration and recalibration of the assumptions and predictions that support the proposed control measures and implementation schedule in light of new data, above and beyond the two-year adaptive management requirements of the Los Angeles MS4 Order, is essential, notwithstanding the additional time and effort that Permittees must expend on the update. We also recognize that such review is a staff intensive process for the Los Angeles Water Board, but addressing storm water impacts is a priority for that Board. Although we expect that the update will be necessary in most cases, the new requirements provide that the Executive Officer of the Los Angeles Water Board may waive the requirement for an update if the Permittee demonstrates through water quality monitoring that the WMP/EWMP is meeting appropriate targets. Our direction to require a comprehensive update of the reasonable assurance analyses and the WMPs/EWMPs after several cycles of adaptive management should in no way be construed as limiting the Los Angeles Water Board Executive Officer's discretion to request such updates earlier in the implementation process or the obligation of the Permittees to initiate such updates earlier in the implementation process based on the ongoing adaptive management process.

The second added provision will not be relevant for the permit term of the order before us; however, we anticipate that the next iteration of an MS4 Order for the Los Angeles area will closely track the Los Angeles MS4 Order to allow for continued implementation of the WMP/EWMPs.

We shall amend Part VI.C.8 by adding new subsections a.iv. and b. as follows:

a.

iv. Permittees shall report the following information to the Regional Water Board concurrently with the reporting for the adaptive management process:

(1) On-the-ground structural control measures completed;

(2) Non-structural control measures completed;

- (3) Monitoring data that evaluates the effectiveness of implemented control measures in improving water quality;**
- (4) Comparison of the effectiveness of the control measures to the results projected by the RAA;**
- (5) Comparison of control measures completed to date with control measures projected to be completed to date pursuant to the Watershed Management Program or EWMP;**
- (6) Control measures proposed to be completed in the next two years pursuant to the Watershed Management Program or EWMP and the schedule for completion of those control measures;**
- (7) Status of funding and implementation for control measures proposed to be completed in the next two years.**

b. Watershed Management Program Resubmittal Process

- i. In addition to adapting the Watershed Management Program or EWMP every two years as described in Part VI.C.8.a., Permittees must submit an updated Watershed Management Program or EWMP with an updated Reasonable Assurance Analysis by June 30, 2021, or sooner as directed by the Regional Water Board Executive Officer or as deemed necessary by Permittees through the Adaptive Management Process, for review and approval by the Regional Water Board Executive Officer. The updated Reasonable Assurance Analysis must incorporate both water quality data and control measure performance data, and any other information informing the two-year adaptive management process, gathered through December 31, 2020. As appropriate, the Permittees must consider any new numeric analyses or other methods developed for the reasonable assurance analysis. The updated Watershed Management Program or EWMP must comply with all provisions in Part VI.C. The Regional Water Board Executive Officer will allow a 60-day public review and comment period with an option to request a hearing. The Regional Water Board Executive Officer must approve or disapprove the updated Watershed Management Program or EWMP by June 30, 2022. The Executive Officer may waive the requirement of this provision, following a 60-day public review and comment period, if a Permittee demonstrates through water quality monitoring data that the approved Watershed Management Program or EWMP is meeting appropriate water quality targets in accordance with established deadlines.**

5. Determination of Compliance with Final Requirements

a. Compliance with Final TMDL Requirements¹¹⁶

Part VI.E.2.e.i.4. of the Los Angeles MS4 Order provides that Permittees will be deemed in compliance with the final WQBELs and other TMDL-specific limitations if “[i]n drainage areas where Permittees are implementing an EWMP, (i) all non-storm water and (ii) all storm water runoff up to and including the volume equivalent to the 85th percentile, 24 hour event is retained for the drainage area tributary to the applicable receiving water.”¹¹⁷ Part VI.E.2.e.i.4 is one of four options available to the Permittee in Part VI.E.2.e. to be deemed in compliance with WQBELs and other TMDL-specific limitations. The other three options allow a Permittee to establish compliance with a final WQBEL or other TMDL-specific limitation by showing that (1) there are no violations of the final WQBEL; (2) there are no exceedances of the receiving water limitation for the specific pollutant in the receiving water at or downstream of the Permittee’s outfall, or (3) there is no direct or indirect discharge from the Permittee’s MS4 to the receiving water during any relevant time period.¹¹⁸ These three options ensure that either the receiving water limitations or WQBELs and other TMDL-specific limitations are in fact being complied with. In contrast, the storm water retention approach assumes compliance with *final* WQBELs and other TMDL-specific limitations, and accordingly, compliance with the receiving water limitations in Part V for the relevant water body-pollutant combinations,¹¹⁹ even if the final WQBELs and other TMDL-specific limitations are not actually being achieved. The Environmental Petitioners argue that the Los Angeles Water Board has failed to establish through findings and record evidence that the storm water retention approach will in fact achieve compliance with the WQBELs and other TMDL-specific limitations and that the Los Angeles

¹¹⁶ The Los Angeles MS4 Order additionally deems compliance with *interim* WQBELs and other TMDL-specific limitations if the “Permittee has submitted and is fully implementing an approved” WMP/EWMP. (Los Angeles MS4 Order, Part VI.E.2.d.i.(4), p. 143; see also *id.*, Part VI.C.3.a., p. 53.) Because Permittees are required to incorporate into the WMP/EWMP compliance schedules “compliance deadlines occurring within the permit term for all applicable interim . . . water quality-based effluent limitations and/or receiving water limitations in Part VI.E and Attachments L through R,” we expect that in most cases full implementation of the WMP/EWMP necessarily results in compliance with interim WQBELs and other TMDL-specific limitations. However, to the extent this is not the result reached, we find that requiring implementation of the WMP/EWMP with control measures designed to achieve interim WQBELs and other TMDL-specific limitations, in lieu of showing actual compliance with any *interim* numeric requirements, is consistent with the assumptions and requirements of the wasteload allocations of the relevant TMDLs. (40 C.F.R. § 122.44(d)(1)(vii)(B).)

¹¹⁷ Los Angeles MS4 Order, Part VI.E.2.e.i.(4), p. 145.

¹¹⁸ *Id.*, Part VI.E.2.e.i.(1)-(3), pp. 144-45.

¹¹⁹ We note again that Part VI.E.2.c.i. states that Part VI.E establishes the manner of achieving compliance with the receiving water limitations in Part V.A where the receiving water limitations are associated with water body-pollutant combinations addressed in a TMDL.

MS4 Order's reliance on the storm water retention approach for final compliance determination is therefore contrary to the law.

We are supportive of the EWMP's use of the storm water retention approach as a technical requirement. Retention of storm water is likely to be an effective path to water quality improvement. Furthermore, in addition to preventing pollutants from reaching the receiving water except as a result of high precipitation events (which also generally result in significant dilution in the receiving water), the storm water retention approach has additional benefits including recharge of groundwater, increased water supply, reduced hydromodification effects, and creation of more green space to support recreation and habitat.¹²⁰

We have some concerns, however, with the lack of verification in the Los Angeles MS4 Order that final WQBELs and other TMDL-specific limitations or receiving water limitations will in fact be met as a result of implementation of the storm water retention approach. We acknowledge that, in most cases, the final TMDLs have deadlines outside of the permit term for the Los Angeles MS4 Order and that, therefore, with regard to those, our concerns are more theoretical at this point than immediate. Nevertheless, we agree with the Environmental Petitioners that the evidence in the Administrative Record is not sufficient to establish that the storm water retention approach will in all cases result in achievement of final WQBELs and other TMDL-specific limitations and, more importantly, are concerned that the Order itself does not incorporate clear requirements that would provide for such verification in the process of implementation.

With regard to evidence in the Administrative Record, it is clear that the storm water retention approach is a promising approach for achieving compliance with receiving water limitations, with multiple additional environmental benefits. But the research regarding the storm water retention approach is still in early stages and we cannot say with certainty at this point that implementation will lead to compliance with receiving water limitations in all cases.¹²¹

With that conclusion in mind, we look to the Los Angeles MS4 Order itself to determine if there are sufficient additional provisions to assure that, in the long run, the storm water retention approach will achieve the ultimate goal of compliance with receiving water limitations. We first note that the Order does not require a reasonable assurance analysis when

¹²⁰ See e.g. Administrative Record, section 10.VI.C, RB-AR29263-29311, RB-AR32318-32350.

¹²¹ We reviewed the citations to the Administrative Record provided in the Los Angeles Water Board October 15, 2013 Response and in the October 15, 2013 Responses of many of the Petitioners. We find that the cited studies show the storm water retention to be a promising approach to meeting water quality standards, but do not establish, at a sufficiently high level of confidence, that the storm water retention approach will definitively achieve compliance with the receiving water limitations.

a Permittee opts for the storm water retention approach. Permittees are required to conduct a reasonable assurance analysis for each water body-pollutant combination addressed by a WMP, with the objective of demonstrating the ability of the controls to ensure that MS4 discharges achieve applicable WQBELs and do not cause or contribute to exceedances of receiving water limitations.¹²² The relevant provisions reference EWMPs, but elsewhere the Order states that the reasonable assurance analysis is only required for areas covered by the EWMP where retention of the 85th percentile, 24-hour storm event is not feasible.¹²³ The Fact Sheet also implies that the requirement for a reasonable assurance analysis is confined to situations where the storm water retention approach is not feasible.¹²⁴ In sum, then, Permittees that choose to develop and implement an EWMP are required to conduct a reasonable assurance analysis for each waterbody-pollutant combination addressed by the EWMP, except in the drainage areas that are tributary to the storm water retention projects.

The fact that the storm water retention approach does not require a reasonable assurance analysis prior to implementation to demonstrate the ability of the approach to achieve compliance with the limitations is mitigated in part by required monitoring and adaptive management to verify compliance following implementation. Although the provision could be clearer, we read the language “[i]n drainage areas where Permittees are implementing an EWMP” in Part VI.E.2.e.i.(4) to require Permittees to be in compliance with all aspects of the EWMP, including the monitoring and adaptive management provisions of Parts VI.C.7 and 8, to be deemed in compliance with final limitations through the storm water retention approach. As we read the Order, a Permittee’s showing that it has retained all non-storm water and all storm water up to and including the volume equivalent to the 85th percentile, 24-hour event, establishes compliance, but only if the Permittee continues to conduct monitoring and adapt the EWMP in response to the monitoring. The Los Angeles Water Board appears to read the Order the way we do, as it states in its October 15, 2013 Response that “the Permit requires monitoring and adaptive management, which will continue to inform the Los Angeles Water Board regarding the efficacy of this storm water retention approach in conjunction with implementation of the other storm water management program elements and any needed

¹²² Los Angeles MS4 Order, Part VI.C.5.b.iv.(5), pp. 63-64.

¹²³ *Id.*, Part VI.C.1.g., p. 48.

¹²⁴ *Id.*, Att. F, Fact Sheet, p. F-39.

modifications to the approach.”¹²⁵ The Los Angeles Water Board further states in comments submitted on a draft of this order, as follows:

The Los Angeles MS4 Order does not exclude EWMPs or areas within an EWMP where the stormwater retention standard is achieved from the integrated watershed monitoring, assessment and adaptive management processes. Neither does the Los Angeles MS4 Order specify or contemplate an end to the monitoring, assessment and adaptive management processes in the case of a Watershed Management Program (WMP) or EWMP. These required elements, including receiving water and outfall monitoring, evaluation of these monitoring data, and modification of the EWMP to improve its effectiveness, will be continually conducted throughout the Watershed Management Area addressed by the EWMP. . . . The Los Angeles Water Board understood that these regional multi-benefit projects would take time to implement and that Permittees needed to be afforded this time in the Los Angeles MS4 Order. The Los Angeles Water Board will continually evaluate progress during the implementation period. If, as full implementation nears, some Receiving Water Limitations are still not achieved, the Los Angeles Water Board and State Water Board have a variety of tools that can be used at a regional or statewide level including reconsideration of TMDLs, Basin Planning actions, policy development and permitting, among others.¹²⁶

We will make a revision to Part VI.E.2.e.i. to make it clear that the Permittee must be in compliance with all other requirements of the EWMP in addition to implementation of the storm water retention approach in order to be deemed in compliance with the final WQBELs and other TMDL-specific limitations.

With no definitive evidence in the record establishing that the storm water retention approach will achieve final requirements, no reasonable assurance analysis required at the outset, and reliance only on subsequent monitoring and adaptive management to improve results if final limitations are not in fact achieved, the storm water retention approach does not provide a level of assurance of success that would lead us to conclude that its implementation, with nothing else, is sufficient to constitute compliance with final WQBELs and other TMDL-specific limitations. We understand that there are nevertheless very good reasons to encourage its use. Certainly for all non-storm water and for all storm water generated in storms up to the 85th percentile storm, the storm water retention approach achieves compliance because there is no discharge. And there are significant benefits beyond water quality, including most importantly benefits to water supply. We also believe that public projects requiring investment of this magnitude are unlikely to be carried out without a commitment from the water boards that Permittees will be considered in compliance even if the resulting improvement in water quality

¹²⁵ Los Angeles Water Board, October 15, 2013 Response, p. 62.

¹²⁶ Los Angeles Water Board, Comment Letter, January 21, 2015, pp. 2-3.

does not rise all the way to complete achievement of the final WQBELs and other TMDL-specific limitations.

We are not willing to go as far as saying that compliance with the storm water retention approach alone constitutes compliance with final WQBELs and other TMDL-specific limitations for all time, regardless of the actual results.¹²⁷ Nonetheless, we anticipate that implementation of such projects will bring the drainage area most and, in many cases, all of the way to achievement of water quality standards. Where there is still a gap in required water quality improvement, we expect the Executive Officer of the Los Angeles Water Board to require appropriate actions, consistent with the provisions of the Los Angeles MS4 Order and the Los Angeles Water Board's stated interpretation of those provisions,¹²⁸ to close that gap with additional control measures in order for the Permittee to be considered in compliance with the WQBEL or other TMDL-specific limitation. There are various mechanisms to provide assurances that additional control measures will be implemented to achieve the WQBEL or other TMDL-specific limitation, and in some instances, it may be appropriate for the Los Angeles Water Board to issue a time schedule order governing the implementation of further control measures. Further, as acknowledged by the Los Angeles Water Board in its comments, in some circumstances, reconsideration of the underlying TMDLs and the final deadlines within those TMDLs may instead be warranted.¹²⁹ We additionally recognize that municipal storm water management is an area of continued development and, with continued research and data evaluation, water quality standards may evolve and become more nuanced or sophisticated over time.

While we decline to interpret the storm water retention approach to, in and of itself, constitute compliance with final WQBELs and other TMDL-specific limitations, we emphasize here that any additional control measures to reach compliance that may be required by the Los Angeles Water Board must not require changes to installed storm water retention projects. Any revisions should be prospective in nature and should not disturb projects that Permittees have already installed in good faith to comply with the provisions of their EWMP.

¹²⁷ Further, Permittees still have substantial incentive to develop and implement an EWMP. If a permittee pursues an EWMP, it will be deemed in compliance with the receiving water limitations during the EWMP development phase, and it may also recognize significant non-water quality benefits.

¹²⁸ Los Angeles Water Board, Comment Letter, January 21, 2015, pp. 2-3. As explained in footnote 110, at this time we see limited options available to the Los Angeles Water Board in addressing compliance with final deadlines for WQBELs and other TMDL-specific limitations.

¹²⁹ We also acknowledge the need for and commit to supporting state-wide solutions for source reduction as appropriate, similar to the brake pad legislation adopted to address copper discharges. (Senate Bill 346 (approved by the Governor September 27, 2010).)

Ultimately, we must set out to verify through appropriate monitoring that final WQBELs and other TMDL-specific limitations can be achieved through the storm water retention approach, or be willing to revise that approach. However, new or additional measures required at that point should be additive to the storm water retention approach measures already installed.

In sum, despite the uncertainty inherent in allowing the storm water retention approach, we concur in its use in the Los Angeles MS4 Order, with the clarification that ultimate compliance is subject to continued planning, monitoring and adaptive management. We shall amend Part VI.E.2.e.i. as follows:

- i. A Permittee shall be deemed in compliance with an applicable final water quality-based effluent limitation and final receiving water limitation for the pollutant(s) associated with a specific TMDL if any of the following is demonstrated:

...

- (4) In drainage areas where Permittees are implementing an EWMP, (i) all non-storm water and (ii) all storm water runoff up to and including the volume equivalent to the 85th percentile, 24 hour event is retained for the drainage area tributary to the applicable receiving water, **and the Permittee is implementing all requirements of the EWMP, including, but not limited to, Parts VI.C.7 and VI.C.8 of this Order.** This provision (4) shall not apply to final trash WQBELs.

b. Compliance with Final Receiving Water Limitations

The Los Angeles MS4 Order states that for receiving water limitations associated with water-body pollutant combinations addressed in a TMDL, compliance with the TMDL requirements of the Order in Part VI.E and Attachments L through R constitutes compliance with the receiving water limitations in Part V.A.¹³⁰ In other words, if there is an exceedance for a pollutant in a water body that has a TMDL addressing that pollutant, as long as the Permittee is complying with the requirements for the TMDL, the Permittee is deemed in compliance with the receiving water limitation. No petitioner has contested this provision and we find that it constitutes an appropriate approach to compliance with receiving water limitations for water body-pollutant combinations that are addressed by a TMDL.

For exceedances of receiving water limitations for a water body-pollutant combination not addressed by a TMDL, as previously discussed, the Permittee must either incorporate control measures to address the exceedances into the Permittee's WMP/EWMP or comply directly with the receiving water limitations provisions of Part V.A of the Order. For

¹³⁰ Los Angeles MS4 Order, Part VI.E.2.c.ii., p. 143.

Permittees that choose the WMP/EWMP approach, the WMP/EWMP must incorporate “a final date for achieving the receiving water limitation.”¹³¹ To the extent the Permittee does not achieve the limitation by that final date and does not request and receive an extension, the Permittee has “fail[ed] to meet [a] requirement or date for its achievement in an approved Watershed Management Program or EWMP”¹³² and is immediately subject to the receiving water limitations provisions of the Order, with the same result that it is out of compliance. In other words, implementation of non-structural and structural control measures in accordance with the timelines established in the WMP/EWMP constitutes compliance with the receiving water limitations up until the final deadline for achievement of the relevant receiving water limitation; however, at the deadline for final compliance, there must be verification of achievement based on the receiving water limitation itself. While we find that the Order provisions lead to this result as written, for the sake of greater clarity, we will specifically state that final compliance with receiving water limitations must be determined through verification that the receiving water limitation is actually being achieved.

We shall amend Part VI.C.2.c. as follows:

- c. If a Permittee fails to meet any requirement or date for its achievement in an approved Watershed Management Program or EWMP, the Permittee shall be subject to the provisions of Part V.A. for the waterbody-pollutant combination(s) that were to be addressed by the requirement. **For water body-pollutant combinations that are not addressed by a TMDL, final compliance with receiving water limitations is determined by verification through monitoring that the receiving water limitation provisions in Part V.A.1 and 2 have been achieved.**

c. Compliance with the Non-Storm Water Discharge Prohibition

The Environmental Petitioners suggest that the Los Angeles MS4 Order is unclear as to whether compliance with the WMP/EWMP may also constitute compliance with the non-storm water discharge prohibition of the Order. We disagree that the Los Angeles MS4 Order is unclear on this issue. The Permittees’ obligation to comply with the receiving water limitations and WQBELs and other TMDL-specific limitations in Parts V.A and VI.E is independent of the Permittees’ obligation to comply with the effective prohibition of non-storm water discharges in Part III.A. The several provisions stating that Permittees will be deemed to be in compliance with the receiving water limitations of the Los Angeles MS4 Order for implementing the WMP/EWMP specifically reference Parts V.A and VI.E of the Order and not

¹³¹ *Id.*, Part VI.C.5.c.iii.(3)(b), p. 65.

¹³² *Id.*, Part VI.C.2.c., p. 52.

III.A.¹³³ This notwithstanding, Parts VI.C.1.d and VI.C.5.b.iv.(2) require that a Permittee's WMP/EWMP include program elements and control measures to effectively prohibit non-storm water discharges consistent with Part III.A and Part VI.D.4.d or VI.D.10. Therefore, a Permittee's implementation of program elements and control measures consistent with Part III.A and Part VI.D.4.d or VI.D.10, through its approved WMP/EWMP, may provide a mechanism for compliance with Part III.A. Although we accordingly see no need to direct revisions to the Order, we provide this clarification here to respond to the Environmental Petitioners' concern and address any confusion that may exist.

6. "Safe Harbor" During the Planning Phase for the WMP/EWMP

Under the Los Angeles MS4 Order, a Permittee that has declared its intention to develop a WMP/EWMP is deemed in compliance with the receiving water limitations and with interim WQBELs with due dates prior to approval of the WMP/EWMP for the water body-pollutant combinations the WMP/EWMP addresses, provided it meets certain conditions, even though the Permittee is developing, not implementing the WMP/EWMP. Specifically, the Permittee is deemed in compliance if the Permittee (1) provides timely notice of its intent to develop a WMP/EWMP; (2) meets all interim and final deadlines for development of a WMP/EWMP; (3) targets implementation of watershed control measures in the existing program

¹³³ Los Angeles MS4 Order, Parts VI.C.2.b., p. 52, VI.C.3.a., p. 53, VI.E.2.c.ii., p. 143, VI.C. 2.d., pp. 52-53, VI.E.2.d.i.(4)(d), p. 144. To the extent that a non-storm water discharge authorized by Part III.A may be causing or contributing to an exceedance of receiving water limitations in V.A, compliance with the WMP/EWMP provisions would constitute compliance with the receiving water limitations and any relevant interim WQBELs and other TMDL-specific limitations, as long as the WMP/EWMP addresses the water body-pollutant combination for that water body. However, the discharger would have to additionally comply with requirements in Part III.A. and Part VI.D.4.d or VI.D.10 through its approved WMP/EWMP for conditionally exempt non-storm water discharges that are found to cause or contribute to an exceedance in the receiving water. (See *id.*, Part III.A.4.c.-e., pp. 31-32.) We disagree that every discharge from a Permittee's MS4 to the receiving water of non-storm water that is not specifically authorized under Part III.A will necessarily be subject to enforcement under the Los Angeles MS4 Order. Section 402(p)(3)(B)(ii) of the Clean Water Act imposes a requirement to "effectively prohibit" non-storm water discharges. Part III.A of the Los Angeles MS4 Order effectuates that requirement with a requirement for the Permittee to prohibit non-storm water discharges: "Each Permittee shall, for the portion of the MS4 for which it is an owner or operator, prohibit non-storm water discharges through the MS4 to receiving waters, except where such discharges are . . . [listing exceptions]." (Los Angeles MS4 Order, Part III.A.1, p. 27.) The Los Angeles MS4 Order incorporates a specific and detailed programmatic requirement – the Illicit Connections and Illicit Discharges Elimination Program – for the Permittees to achieve their obligation to effectively prohibit non-storm water discharges. (Los Angeles MS4 Order, Parts VI.D.4.d., pp. 81-86, VI.D.10, pp. 137-141.) We recognize that even the most comprehensive efforts to address unauthorized non-storm water discharges may not eliminate all such discharges. Where a Permittee is fully implementing its Illicit Connections and Illicit Discharges Elimination Program, either pursuant to Parts VI.D.4.d. or VI.D.10, or by incorporation of customized actions into a WMP/EWMP as approved by the Los Angeles Water Board (see Los Angeles MS4 Order Part VI.D.1.a., p. 67), we would expect any enforcement action under Part III.A to be supported by a fact-specific analysis of the nature and source of the unauthorized non-storm water discharge and the efforts of the Permittee to prohibit the discharge.

to address known contributions of pollutants; and (4) receives approval of the WMP/EWMP within the specified time periods.¹³⁴
