CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION, ORDER NO. R4-2012-0175, 13-TC-01 AND 13-TC-02: COMMENTS OF STATE WATER RESOURCES CONTROL BOARD AND LOS ANGELES REGIONAL WATER QUALITY CONTROL BOARD ON TEST CLAIMS

Dear Ms. Halsey:

The State Water Resources Control Board (State Water Board) and the Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) (collectively, Water Boards) jointly file this opposition to Test Claims 13-TC-01 and 13-TC-02 filed by the County of Los Angeles, Los Angeles County Flood Control District, and the cities of Agoura Hills, Bellflower, Beverly Hills, Carson, Cerritos, Commerce, Downey, Huntington Park, Lakewood, Manhattan Beach, Norwalk, Pico Rivera, Rancho Palos Verdes, Redondo Beach, San Marino, Santa Clarita, Santa Fe Springs, Signal Hill, South El Monte, Vernon, Westlake Village, and Whittier (collectively, Claimants). This Test Claim arises from a federal permit issued by the Los Angeles Water Board in 2012 as Order No. R4-2012-0175, *Waste Discharge Requirements for Municipal Separate Storm Sewer System (MS4) Discharges Within the Coastal Watersheds of Los Angeles County, Except Those Discharges Originating from the City of Long Beach MS4* (National Pollutant Discharge Elimination System (NPDES) Permit No. CAS004001) (hereinafter the 2012 Permit). Through the Test Claims filed with the Commission on State Mandates (Commission), Claimants allege that multiple requirements of the 2012 Permit are unfunded state mandates and seek reimbursement of actual and/or estimated costs of implementing or complying with those requirements. For the reasons set forth below, the Commission should deny the Test Claims in their entirety.

I. INTRODUCTION

The Los Angeles Water Board issued the 2012 Permit pursuant to requirements in the federal Clean Water Act (CWA),¹ its implementing regulations, and guidance from the United States

¹ Federal Water Pollution Control Act (FWPCA; 33 U.S.C. §§ 1251 et seq.) The federal Act is referred to herein by its popular name, the Clean Water Act (CWA) and the code sections used are those for the CWA.

(footnote continued on next page)

FELICIA MARCUS, CHAIR | EILEEN SOBECK, EXECUTIVE DIRECTOR

Environmental Protection Agency (U.S. EPA). The CWA prohibits discharges of pollutants from a point source to waters of the United States except in compliance with a National Pollutant Discharge Elimination System (NPDES) permit pursuant to CWA section 402.² In the CWA, Congress mandated that all municipal and industrial stormwater dischargers apply for and comply with NPDES permits regulating their discharges.³ Specific to municipal stormwater dischargers, CWA section 402(p) prohibits the discharge of pollutants from specified municipal separate storm sewer systems (MS4s)⁴ to waters of the United States except as authorized by an NPDES permit and identifies the substantive standards for MS4 permits.⁵ Congress also mandated that these NPDES permits prohibit most non-stormwater discharges through the MS4s to receiving waters.⁶ The non-stormwater discharge prohibition in the CWA is not subject to the maximum extent practicable (MEP) technical standard for MS4 discharges of stormwater. MS4 operators generally obtain a single system-wide NPDES permit for each inter-connected MS4.⁷ The U.S. EPA has authorized the State Water Board, including its nine regional water quality control boards, to issue NPDES permits in lieu of issuance of these permits by U.S. EPA itself.

The Los Angeles Water Board issued Order No. R4-2012-0175 on November 8, 2012, which became effective on December 28, 2012.⁸ The 2012 Permit regulates stormwater (wet weather) and non-stormwater (dry weather) discharges from the MS4s of 86 permittees⁹ within the coastal watersheds of Los Angeles County, excluding those discharges originating from the City of Long Beach MS4,¹⁰ to waters of the United States. The 2012 Permit includes a prohibition on discharges of non-stormwater through the Permittees' MS4s to receiving waters pursuant to the independent federal laws in the Clean Water Act.¹¹ It also requires controls to reduce the

² See generally CWA § 402.

³ *Id.*, § 402(p)

⁴ Pursuant to 40 C.F.R. § 122.26(b)(8), “[a] municipal separate storm sewer system (MS4) means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains): (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States; (ii) Designed or used for collecting or conveying storm water; (iii) Which is not a combined sewer; and (iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.”

⁵ CWA § 402(p); *Natural Resources Defense Council v. U.S. EPA* (9th Cir. 1992) 966 F.2d 1292, 1295-96.

⁶ CWA § 402(p)(3)(B)(ii).

⁷ *Id.*, subd. (p)(3)(B)(i).

⁸ In response to several administrative petitions for review filed by several permittees and non-profit environmental groups, the State Water Board modified Order No. R4-2012-0175 on June 16, 2015 via State Water Board Order WQ 2015-0075. All bates-page references to the 2012 Permit are to the version of the permit as modified by the State Water Board. Note that this is a slightly modified version from the version Claimants attached to their Test Claims. This version of the permit is found in the “2015 AR,” which refers to the administrative record for the State Water Board’s issuance of Order WQ 2015-0075, *In the Matter of Review of Order No. R4-2012-0175*. The 2012 Permit, as modified by the State Water Board begins at p. SB-AR-013294 and ends at p. SB-AR-013862.

⁹ The 86 permittees include the Los Angeles County Flood Control District, County of Los Angeles, and 84 incorporated cities within the County of Los Angeles. A full list of these cities can be found in the 2012 Permit at SB-AR-013294 to 013301.

¹⁰ The City of Long Beach’s MS4 discharges is currently regulated under a separate MS4 permit, Order No. R4-2014-0024.

¹¹ CWA § 402(p)(3)(B)(ii).

discharge of pollutants to the “maximum extent practicable” (MEP). As required by federal statute and regulations, the 2012 Permit contains numerous requirements for the Permittees to take actions, known as Best Management Practices (BMPs), to reduce the discharge of pollutants into surface waters within the Los Angeles Region in order to improve water quality. As required by federal law, the 2012 Permit also includes water quality based effluent limits to implement 33 federally-approved or federally-promulgated total maximum daily loads (TMDLs) required by section 303(d) of the Clean Water Act to ensure that applicable wasteload allocations (WLAs) that are assigned to MS4 discharges in the TMDLs are achieved over time.¹² In addition, as required by federal law, the 2012 Permit includes monitoring and reporting requirements to, among other things, assess permittees’ compliance with permit provisions and to measure and improve the effectiveness of pollutant controls implemented. When it considered the 2012 Permit, the Los Angeles Water Board found that these requirements were necessary and appropriate to meet the requirements of federal law and are based exclusively on federal law.¹³

Claimants bring these Test Claims to determine who must pay for many of the 2012 Permit’s provisions. Article XIII B, section 6, of the California Constitution provides, “[w]henever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service.” In order to obtain reimbursement, the Claimants must show as a threshold matter that the Los Angeles Water Board has imposed a “program” on them and, if so, that it established a “new program” or created a “higher level of service” over the previously required level of service.¹⁴ The California Supreme Court has defined a “program” for purposes of article XIII B, section 6, of the California Constitution, as: (1) programs that carry out the governmental function of providing services to the public, or (2) laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.¹⁵ A “higher level of service” occurs when the new “requirements were intended to provide an enhanced service to the public.”¹⁶ Conversely, the Claimants are not entitled to subvention if the costs are imposed as a result of federal mandates rather than state mandates, if they proposed the permit provisions, or if any additional costs beyond a federal mandate are *de minimis*. Finally, Claimants must establish that they are required to use tax monies to pay for implementation of Permit provisions before receiving reimbursement.¹⁷ If Claimants have the “authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service,” no subvention is required.¹⁸

As explained in detail below, the Claimants are not entitled to subvention of funds for the provisions challenged through their Test Claims. There are several reasons for this. First, the 2012 Permit is not a “program” subject to article XIII B, section 6, of the California Constitution.

¹² 40 C.F.R. § 122.44(d)(1)(vii)(B).

¹³ See, *infra*, Part IV.B.1.i for examples of these findings.

¹⁷ See Gov. Code, § 17556.

¹⁸ *Id.*, subd. (d).

Claimants are unable to show that the requirements of the 2012 Permit carry out a governmental function of providing public services or is unique to local government. Compliance with NPDES laws and regulations, and specifically with stormwater and non-stormwater permitting requirements, is required by private industry as well as non-local governments. NPDES permits governing private entities contain similar provisions requiring that those entities manage stormwater and non-stormwater to prevent or reduce discharges of pollutants. Second, assuming the Permit is a “program,” there is no evidence that many of the requirements at issue impose a new program. To the contrary, the Los Angeles Water Board issued the first MS4 permit to the Claimants and others in 1990, pursuant to the Clean Water Act amendments of 1990.¹⁹ In 1996, and again in 2001, the Los Angeles Water Board renewed the Claimants’ MS4 permit.²⁰ The permit that is the subject of the Test Claims is the fourth such permit, and many (if not all) of the requirements at issue here are not new. Third, again assuming the Permit is a “program,” there is also no evidence suggesting that any of the challenged requirements imposed upon Claimants constitute a higher level of service by enhancing services to the public. As a general matter, the 2012 Permit carries over and builds on the prior permits, and activities conducted thereunder, and implements independent federal requirements, all with a focus on water quality outcomes. Innovations included in the Permit are a part of the iterative process and applied technological advances, both of which are contemplated by federal law.²¹ Fourth, Claimants have not shown (and cannot show) that the challenged provisions constitute State (versus federal) mandates. Indeed, when it considered the 2012 Permit, the Los Angeles Water Board specifically found that its provisions and requirements were necessary to meet the Clean Water Act, and that they were based exclusively on federal law.²² The factual findings supporting this legal conclusion are entitled to deference by the Commission, and should not be disturbed.²³ Fifth, even if there were substantial evidence supporting Claimants’ challenges to the 2012 Permit (and there is not), one or more exceptions under mandates law applies to each challenged provision, precluding a finding that subvention of funds is required.

Further, Claimants rely on the California Supreme Court decision in *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, *as modified on denial of rehearing* (Nov. 16, 2016) (*Department of Finance*) as support for its position. However, Claimants’ challenges here are distinguishable. The Supreme Court’s opinion was limited to a narrow issue: whether the Clean Water Act’s MEP standard required the four provisions concerning trash receptacles and

¹⁹ Los Angeles Water Board Order No. 90-079 (2012 AR, pp. RB-AR22746 - 762). “2012 AR” refers to the administrative record for the Los Angeles Water Board’s issuance of Order No. R4-2012-0175.

²⁰ Los Angeles Water Board Order No. 96-054 (2001 AR, pp. R0008479 - 8580); Los Angeles Water Board Order No. 01-182. As explained in more detail in Section II.C, below, Order No. 01-182 was subsequently amended by the Los Angeles Water Board in 2006, 2007, 2009, 2010, and 2011. Order No. 01-182, as amended, is hereafter referred to as the “2001 Permit” and is the prior permit for analysis of these Test Claims. “2001 AR” refers to the administrative order for the Los Angeles Water Board’s issuance of Order No. 01-182. For ease of reference, a complete copy of the 2001 Permit, as amended and with all attachments, is provided as an attachment to this response.

Reg. 68722, 68754 (Dec. 8, 1999) (2012 AR, p. RB-AR23852) (“EPA envisions application of the MEP standard as an iterative process.”); and Interim Permitting Approach for Water Quality-Based Effluent Limitations in Stormwater Permits (Sept. 1, 1996) (2012 AR, p. RB-AR24857) (“The interim permitting approach uses BMPs in first-round storm water permits, and expanded or better-tailored BMPs in subsequent permits, where necessary, to provide for the attainment of water quality standards.”)

²² See, *infra*, Part IV.B.1.i for examples of these findings.

²³ *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, *as modified on denial of rehearing* (Nov. 16, 2016) (*Department of Finance*).

inspections in the 2001 Los Angeles County MS4 Permit (2001 Permit) to reduce the discharge of pollutants to the MS4.²⁴

By contrast, the 2012 Permit reflects the Los Angeles Water Board's findings and determinations that requirements in the permit, including each of the challenged terms, were necessary to comply with the CWA and its implementing regulations and, thus, the permit was based entirely on federal authority.²⁵ The Supreme Court noted the absence of these findings in the 2001 Permit and further opined that such findings would be entitled to deference.²⁶ In addition, the Supreme Court's primary focus was the construction of the Clean Water Act's MEP standard. But as set forth below, these Test Claims raise the following legal questions or factually distinct circumstances that the Supreme Court did not address:

1. Unlike in the 2001 Permit, the Los Angeles Water Board in the 2012 Permit found the permit requirements at issue in these Test Claims were federal mandates. "Had the Regional Board found when imposing the disputed permit conditions, that those conditions were the only means by which the maximum extent practicable standard could be implemented, deference to the board's expertise in reaching that finding would be appropriate."²⁷ Such findings are "case specific, based among other things on factual circumstances."²⁸
2. Since the narrow issues presented by the appellants in *Department of Finance* was limited to the federal mandates exception, the Los Angeles County MS4 permittees and Los Angeles Water Board did not argue at the California Supreme Court whether each of the four challenged requirements in the 2001 Permit were a new program or higher level of service.²⁹ That issue, as well as others, were remanded back to the trial court for further proceedings. Thus, the Supreme Court did not consider whether the 2001 Permit was a "program" for purposes of article XIII B, section 6, of the California Constitution, including whether the 2001 Permit's discharge requirements were generally applicable and do not impose "unique" obligations on municipal entities.³⁰ In these Test Claims, the Water

²⁴ *Id.*, at p. 757 (citing CWA § 402(p)(3)(B)).

²⁵ See, *infra*, Part IV.B.1.i for examples of these findings.

²⁶ *Department of Finance*, *supra*, 1 Cal.5th at p. 768.

²⁷ *Ibid.*

²⁸ *Id.*, fn. 15.

²⁹ *Id.*, at p. 762 ("The parties do not dispute here that each challenged requirement is a new program or higher level of service. The question here is whether the requirements were mandated by a federal law or regulation."). The Court noted that appellants submitted evidence as part of their test claims showing that none of the challenged requirements were contained in their previous MS4 permits. *Id.*, at pp. 760-761. The Water Boards, however, did not brief that issue to the Supreme Court as that matter was narrowly focused on whether the requirements were federal mandates.

³⁰ The Water Boards note that in several instances Claimants rely upon the Commission's prior findings in Statement of Decisions in *In re Test Claim on: Los Angeles Regional Water Quality Control Board Order No. 01-182, Case Nos. 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21* (July 31, 2009) and *In re Test Claim on San Diego Regional Water Quality Control Board Order No. R9-2007-0001, Case No. 07-TC-09* (March 26, 2010) as support for the arguments in the Test Claims. In considering the challenged 2012 Permit provisions, the Water Boards urge the Commission to recognize factual distinctions between the permits and the fact that challenges to the Commission's findings on mandates law matters in the Statement of Decisions have not yet been resolved by the courts. Specifically, the courts have not yet determined how, if at all, the *Department of Finance* decision affects that matter and numerous other issues were raised but not addressed by *Department of Finance*.

Boards contend that the challenged requirements are not new programs or higher levels of service.

3. There was no evaluation of whether the contested provisions were required by another independent federal mandate such as the mandate to effectively prohibit non-stormwater discharges through permittees' MS4s to receiving waters, to implement waste load allocations from total maximum daily loads, or for permittees to self-monitor their discharges and the impacts, if any, such discharges have on surface waters. These are critical issues in these Test Claims.
4. Unlike here, none of the four requirements evaluated by the Supreme Court were identifiable terms in any EPA-issued MS4 NPDES permits in the record.³¹ Here, the Boards point to similar or identical provisions in EPA-issued MS4 NPDES permits or guidance.
5. The Supreme Court did not evaluate whether the local government had the authority to levy fees or assessments pursuant to Government Code section 17556, subdivision (d).³²

Accordingly, and because the Supreme Court's November 16, 2016 modifications to its opinion underscore that the determination of whether a particular requirement exceeds the federal standards is a case-specific, factual determination, the *Department of Finance* decision is largely, if not wholly, inapplicable to these Test Claims.

Finally, and to the extent that Claimants also invoke the recent California Court of Appeal, Third Appellate District, decision concerning the 2007 San Diego County MS4 Permit in *Department of Finance v. Commission on State Mandates*, 18 Cal.App.5th 661 (the "*San Diego DOF Decision*"), that decision likewise is also inapplicable to these Test Claims. Notably, like *Department of Finance*, the *San Diego DOF Decision* also did not address critical questions here, including but not limited to: (a) whether requirements in a NPDES permit are a "program," including whether the requirements have general applicability; (b) whether the requirements at issue are new or represent a higher level of service than required in previous permits; (c) whether requirements implementing the Clean Water Act's effective prohibition of non-stormwater discharges through the MS4 to receiving waters is federally mandated; (d) whether permit provisions implementing TMDLs required by section 303(d) of the Clean Water Act are federally mandated; (e) whether permit provisions establishing monitoring and reporting requirements are federally mandated; and (f) whether permittees have the ability to impose fees or charges to fund the programs at issue.

In summary, Claimants' Test Claims must be denied in their entirety. The Water Boards' reasoning is set forth below.

II. BACKGROUND

In this section, the Water Boards provide an overview of the legal and regulatory context for the Water Boards' decisions, and the issuance of MS4 permits, under federal law generally, and for the 2012 Permit in particular.

³¹ *Department of Finance*, *supra*, 1 Cal.5th at pp. 761 and 771-72.

³² *Id.*, at p. 761 (acknowledging that the Commission found that the local governments were not entitled to reimbursement because they had authority to levy fees to pay for the required inspections, an issue the Supreme Court did not review).

A. Regulatory Overview of the Clean Water Act MS4 Program

In 1972, Congress extensively amended the federal Clean Water Act to implement a permitting system for all discharges of pollutants from “point sources” to waters of the United States.³³ The permits are issued pursuant to the National Pollutant Discharge Elimination System, and are known as “NPDES permits.” The 1972 amendments allowed U.S. EPA to authorize states to issue these permits.³⁴ California was the first state in the nation to obtain such authorization.³⁵ In order to obtain this authorization, the California Legislature amended the Water Code, finding that the state should implement the federal law in order to avoid direct regulation by the federal government.³⁶ The California legislature mandated that California’s permit program must ensure consistency with federal law.³⁷

The State Water Board and the nine regional water boards are the state agencies charged with implementing the federal NPDES program.³⁸ The State Water Board’s regulations incorporate the U.S. EPA regulations implementing the federal permit program.³⁹ Therefore, both the CWA and U.S. EPA regulations are applicable to the NPDES permit program in California.⁴⁰ In California, permits to allow discharges into state waters are termed “waste discharge requirements.”⁴¹ When issuing permits for discharges to waters of the United States, the term “waste discharge requirements” is equivalent to the term “permit” in the CWA.⁴² Thus, waste discharge requirements that the Water Boards issue for discharges to waters of the United States are NPDES permits under federal law. When the Los Angeles Water Board, a state agency, issues an NPDES permit in lieu of U.S. EPA, it must adopt as stringent a permit as the federal agency would have.⁴³

To ensure that state-authorized programs comply with the U.S. EPA’s mandates and federal law, the U.S. EPA maintains oversight and supervision of these programs. The state must provide the U.S. EPA with proposed permits and notice of any action related to a discharger’s permit

³³ CWA §§ 301 and 402. “The term ‘point source’ means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include agricultural stormwater discharges and return from irrigated agriculture.” (CWA § 502(14).) The Claimants’ MS4 is a point source. (40 C.F.R. § 122.26(b)(4).)

³⁴ CWA § 402(b).

³⁵ Since that time, forty-six other states have received U.S. EPA’s approval to issue NPDES permits. The list of states with the U.S. EPA’s approval to issue NPDES permits can be found at <https://www.epa.gov/npdes/npdes-state-program-information>. Idaho, Massachusetts, New Hampshire, New Mexico, the District of Columbia, and many U.S. territories do not have approved NPDES programs.

³⁶ Wat. Code, § 13370 *et seq.*, adding Chapter 5.5 to the Porter-Cologne Water Quality Control Act.

³⁷ *Id.*, § 13372.

³⁸ *Id.*, § 13370.

³⁹ Cal. Code Regs., tit. 23, § 2235.2.

⁴⁰ The permits *may* also include additional state requirements. (Cal. Code Regs., tit. 23, § 2235.3; *City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613.)

⁴¹ Wat. Code, § 13263.

⁴² *Id.*, § 13374.

⁴³ CWA § 402(b).

application.⁴⁴ The U.S. EPA may object to a permit, finding that it violates the Clean Water Act's requirements.⁴⁵ Should the U.S. EPA determine that a state program does not comply with federal NPDES program guidelines, it may withdraw approval for the state program.⁴⁶

The Clean Water Act prohibits the discharge of pollutants from point sources to waters of the United States, except in compliance with an NPDES permit.⁴⁷ In 1973, U.S. EPA issued regulations that exempted certain types of discharges from NPDES permit requirements that it determined at that time were administratively difficult to regulate, including stormwater runoff. The reason that such regulation was deemed difficult is that stormwater runoff is much more diffuse, discharging at numerous points across the landscape. It runs off urban streets, into gutters and drainage ways, and flows directly into streams, lakes, and the ocean.⁴⁸ This exemption was overruled in *Natural Resources Defense Council v. Costle* (1977),⁴⁹ which held that the exemption was illegal, and ordered U.S. EPA to require NPDES permits for stormwater discharges. In *Costle*, the court suggested innovative methods for permitting, including using general permits for numerous sources and issuing permits that "proscribe industry practices that aggravate the problem of point source pollution."⁵⁰ Where permits prescribe actions that dischargers must implement to prevent or reduce pollutant discharges, these requirements are commonly called "best management practices" (BMPs).⁵¹

Controlling MS4 discharges is important, because stormwater and non-stormwater discharges are one of the most significant sources of water pollution in the nation. At times "comparable to, if not greater than, contamination from industrial and sewage sources."⁵² When stormwater flows over urban environs, it collects heavy metals, sediments, bacteria, nutrients (nitrogen and phosphorus), trash and debris, petroleum products, pesticides, and other toxic pollutants, which are then discharged to creeks, rivers, estuaries, and oceans.⁵³ In addition to stormwater, the MS4 collects non-stormwater runoff from urban activities such as street and vehicle washing, landscape irrigation and lawn watering, potable water system testing, and discharges from groundwater treatment programs. In addition to urban activities, illicit discharges and connections to MS4s are another source of non-stormwater discharges.⁵⁴ These non-stormwater discharges can also contain pollutants that impair the beneficial uses (e.g., recreation, aquatic habitat, etc.)

⁴⁴ *Id.*, subd. (d)(1).

⁴⁵ *Id.*, subd. (d)(2).

⁴⁶ *Id.*, subd. (c)(3).

⁴⁷ CWA § 301(a). In general, "navigable waters" or "waters of the United States," includes all surface waters, such as rivers, lakes, bays and the ocean. (CWA § 502.)

⁴⁸ The chief traditional categories of discharges subject to NPDES permits are industrial process wastewater and sanitary sewer effluent. Both of these discharges are typically processed in a treatment plant before they are discharged to surface waters.

⁴⁹ *Natural Resources Defense Council v. Costle* (D.C. Cir. 1977) 568 F.2d 1369.

⁵⁰ *Id.*, at p. 1380.

⁵¹ 40 C.F.R. § 122.2 ("Best management practices ("BMPs") means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of "waters of the United States." BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.").

⁵² *Environmental Defense Center, Inc. v. EPA* (9th Cir. 2003) 344 F.3d 832, 840.

⁵³ *Id.*, at pp. 840-841.

⁵⁴ *Ibid.*

of the nation's waters. While non-stormwater discharges are most obvious during dry periods and are seen as the water flowing in the gutters, they can and do occur year-round.

Following the *Costle* decision, in 1987, Congress amended the CWA, specifically requiring stormwater permits for industrial and municipal stormwater runoff.⁵⁵ The amendments require NPDES permits for a discharge from a MS4 serving a population of 100,000 or more.⁵⁶

The Clean Water Act contains three provisions specific to permits for MS4s: (1) permits may be issued on a system- or jurisdiction-wide basis; (2) permits must include a requirement to effectively prohibit non-stormwater discharges into storm sewers; and (3) permits must require controls to reduce the discharge of pollutants to the maximum extent practicable (MEP), including management practices, control techniques and system, design and engineering methods, and such other provisions as the [permitting agency] determines appropriate for the control of such pollutants.⁵⁷ The state is required, by federal law, to select the necessary controls.⁵⁸

On November 16, 1990, U.S. EPA published regulations addressing discharges of stormwater and non-stormwater from MS4s.⁵⁹ The regulations establish minimum requirements for MS4 permits and generally focus on the requirement that MS4s implement programs to reduce the amount of pollutants found in stormwater discharges to the MEP. However, the regulations also require the MS4's program to include an element to detect and remove illicit discharges and improper disposal into the storm sewer.⁶⁰ "Illicit discharges" defined in the regulations is the most closely applicable definition of "non-stormwater" contained in federal law, and the terms are often used interchangeably. The State Water Board has concluded that "U.S. EPA added the illicit discharge program requirement with the stated intent of implementing the Clean Water Act's provision requiring permits to 'effectively prohibit non-stormwater discharges.'"⁶¹

B. Overview of Legal Standards for MS4 Permits

The Clean Water Act does not provide a comprehensive set of permit terms that the permitting agency must include in each MS4 permit. Rather, the CWA and U.S. EPA's regulations require a permitting agency to determine what controls are necessary to meet federal requirements in a particular MS4 permit. The applicable legal standards that permitting authorities must meet when issuing MS4 permits are set forth in Clean Water Act section 402(p)(3)(B)(ii) and (iii) and require that MS4 permits:

⁵⁵ CWA § 402(p).

⁵⁶ *Id.*, subd. (p)(2)(C). U.S. EPA defines MS4s that serve a population over 250,000 as "large" MS4s. U.S. EPA issued regulations in 1999 extending permit requirements to small MS4s (those serving a population of less than 100,000).

⁵⁷ *Id.*, subd. (p)(3)(B).

⁵⁸ *Natural Resources Defense Council v. USEPA, supra*, 966 F.2d at p. 1308 ("the language in [CWA § 402(p)(3)(B)(iii)] requires the Administrator or a state to design controls").

⁵⁹ 55 Fed. Reg. 47990 *et seq.* (Nov. 16, 1990) (2012 AR, p. RB-AR23716).

⁶⁰ 40 C.F.R. § 122.26(d)(2)(iv)(B).

⁶¹ State Water Board Order WQ 2009-0008, p. 4 (withdrawn on other grounds); see also State Water Board Order WQ 2015-0075, p. 63 (2012 AR, p. SB-AR-013258) ("the illicit connection and illicit discharge elimination program is a means to implement the non-storm water prohibition and [is] independently implementable and enforceable").

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers, and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.

Federal and state permitting agencies must comply with these legal standards when issuing MS4 permits.⁶²

To obtain coverage under an NPDES permit, federal regulations specify the information that applicants for MS4 permits must include in their applications that the permitting agency will be considering in issuing the permit.⁶³ For the large and medium MS4s, the application requirements are extensive. Applications:

shall include a comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate. The program shall also include a description of staff and equipment available to implement the program. Separate proposed programs may be submitted by each coapplicant. Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. Proposed programs will be considered by the Director when developing permit conditions to reduce pollutants in discharges to the maximum extent practicable.⁶⁴

U.S. EPA's 1990 regulations established minimum control requirements for all MS4 permits, including programs for public and business education and outreach, illicit discharge detection and elimination, construction and post-construction stormwater controls, and public agency activities. Thus, among other elements, the federal regulations require that a proposed management program must address oversight of discharges into the MS4 from the general population, and from industrial and construction activities within its jurisdiction and shall include "[a] description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls."⁶⁵ A proposed management program must also address oversight of discharges into the MS4 from areas of new development and significant redevelopment, public streets, roads and highways, and construction sites as well as from activities including application of pesticides and illicit discharges, among

⁶² CWA § 402(b).

⁶³ 40 C.F.R. § 122.26(a)(4). U.S. EPA regulations have varied requirements depending on the size of the population served by the MS4. A "large" MS4 serves a population of 250,000 or more. (40 C.F.R. § 122.26(b)(4).) Collectively, Claimants and the 10 cities regulated by the Permit exceed the minimum population for a large MS4.

⁶⁴ *Id.*, subd. (d)(2)(iv).

⁶⁵ *Id.*, subd. (d)(2)(iv)(A).

other program elements.⁶⁶ Permit applications must also describe programs for education and outreach to the general public, and to certain categories of municipal workers.⁶⁷ Federal regulations also require MS4 applicants to characterize their discharges and to submit a proposed monitoring program for “representative data collection,” which includes outfall and receiving water monitoring.⁶⁸

U.S. EPA has made clear that permit terms must be “clear, specific, and measurable.”⁶⁹

The Federal MEP Standard

The maximum extent practicable or “MEP” standard is akin to a technology-based standard and was first established in the Clean Water Act in 1987. The fundamental requirement that municipalities reduce pollutants in MS4s to the MEP remains a cornerstone of the mandate imposed on municipalities by the federal Clean Water Act and implementing NPDES regulations. Meeting the MEP standard is generally a result of emphasizing robust pollution prevention through various programs and structural measures, with treatment methods serving as additional lines of defense. These pollution prevention methods require municipalities take actions that will lessen the incidence of pollutants entering the storm drains by regulating the behavior and practices of the municipalities, their residents, and their businesses.⁷⁰

The MEP approach is an ever evolving, flexible and advancing concept, which considers technical and economic feasibility. As knowledge and technology regarding controlling stormwater runoff continues to evolve, so too must the actions that are taken to comply with the standard. In addition to regulations, U.S. EPA has issued guidance documents that discuss the type of BMPs that should be included in MS4 permits in order to reduce the discharge of pollutants in stormwater to the MEP.⁷¹ Successive permits issued to MS4 dischargers thus require greater levels of specificity over time in defining what constitutes MEP. This is consistent with Congress’ intent that state management programs evolve based on changing conditions from program development and implementation and corresponding improvements in water quality.⁷² This is also consistent with

⁶⁶ *Id.*, subd. (d)(2)(iv)(A)(2)-(3), (D)(1)-(4), (A)(6), (B)(1)-(6).

⁶⁷ *Id.*, subds. (iv)(A)(6), (B)(6), (D)(4); see also, 40 C.F.R. § 122.34(b)(1), establishing public education and outreach as a minimum control measure for small MS4s. The initial requirements for small MS4s were considered to be less stringent than those for Phase I MS4s, such as Permittees. (64 Fed. Reg. 68722 (Dec. 8, 1999) (2012 AR, p. BR-AR23819)).

⁶⁸ 40 C.F.R. §§ 122.26(d)(2)(i)(F) & (d)(2)(iii), 122.42(c).

⁶⁹ See generally 81 Fed. Reg. 89320 (Dec. 9, 2016).

⁷⁰ There may also be engineered solutions, and there are some in Los Angeles County, but it is important to keep in mind that there is no single engineered storm sewer treatment plant as there is for other types of discharges such as sanitary sewage.

⁷¹ See, e.g., U.S. EPA, *MS4 Permit Improvement Guide* (2010) (2012 AR, p. RB-AR53451). Prior to issuance of the MS4 Permit Improvement Guide, U.S. EPA provided BMP “menus” for the required elements of a MS4 permittee’s stormwater management program as required by 40 C.F.R. § 122.26(d)(2)(iv).

⁷² Federal regulations and companion U.S. EPA guidance convey the expectation that the level of specificity in a permit reconsidered and reissued every five years will increase over time whereby each successive permit becomes more refined, detailed, and expanded as needed, based on experience under the previous permit. (See, Letter from U.S. EPA, Alexis Strauss, to State Water Board, April 10, 2008, concerning Los Angeles County Copermittee Test Claims Nos. 03-TC-04, 03-TC-19, 03-TC-20, and 03-TC-21 (2012 AR, p. RB-AR34517), citing 55 Fed. Reg. 47990, 48052 (“EPA anticipates that storm water management programs will evolve and mature over time.”); 64 Fed. Reg. 68722, 68754; Dec. 8, 1999) (“EPA envisions application of the MEP standard as an iterative process.”); and Interim Permitting Approach for Water Quality-Based Effluent Limitations in Stormwater Permits (Sept. 1, 1996) (“The interim permitting

(footnote continued on next page)

the U.S. EPA's guidance that successive permits for the same MS4 must become more refined and detailed. The MEP standard, which the Los Angeles Water Board found permit provisions necessary to meet in this case, is discussed in more detail below as relevant to challenged permit provisions.

The Federal Prohibition on Non-Stormwater Discharges

Wholly independent from the MEP standard is the Clean Water Act requirement that MS4 permittees effectively prohibit non-stormwater discharges to their MS4s.⁷³ Under Clean Water Act section 402(p)(3)(B)(ii), permitting agencies must ensure that permits for MS4 discharges include requirements necessary to “effectively prohibit non-stormwater discharges into the storm sewers.” U.S. EPA has defined “storm water” to mean “stormwater runoff, snow melt runoff and surface runoff and drainage.”⁷⁴ While “non-stormwater” is not defined in the CWA or federal regulations, the federal regulations define “illicit discharge” as “any discharge to a municipal separate storm sewer that is not composed entirely of storm water and that is not covered by an NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer and discharges resulting from firefighting activities).”⁷⁵ This definition is the most closely applicable definition of “non-stormwater” contained in federal law. Non-stormwater discharges are generally considered dry weather discharges. In general, the requirement to “effectively prohibit” non-stormwater discharges requires MS4 owners and operators to prohibit flows to the MS4s by implementing a program to detect and remove illicit discharges, or by requiring a discharger to obtain a separate NPDES permit for the non-stormwater discharge into the storm sewer.⁷⁶

The Federal Requirement That Permits Include Other Provisions the Permitting Agency Determines Appropriate for the Control of Pollutants

In addition to requiring controls to reduce the discharge of pollutants to the MEP, CWA section 402(p)(3)(B)(iii) requires that MS4 permits “shall . . . include[e] . . . such other provisions as the Administrator or the State determines appropriate for the control of pollutants.” U.S. EPA interprets this provision to mandate “...controls to reduce the discharge of pollutants to the maximum extent practicable, *and where necessary water quality-based controls*”⁷⁷ The permitting agency, be it the Los Angeles Water Board or U.S. EPA, must therefore include provisions that go beyond MEP when it is appropriate to do so and to exercise its discretion in determining permit requirements. Thus, the state does not exceed federal law in using its discretion to impose permit provisions that are necessary to control pollutants. If the Board failed

approach uses BMPs in first-round storm water permits, and expanded or better-tailored BMPs in subsequent permits, where necessary, to provide for the attainment of water quality standards.”.)

⁷³ State Water Board Order WQ 2015-0075, pp. 62-63 (2015 AR, pp. SB-AR-013257 - 258), confirming that non-stormwater discharges through the MS4s under the Clean Water Act are not subject to the MEP standard applicable to stormwater discharges.

⁷⁴ 40 C.F.R. § 122.26(b)(13).

⁷⁵ *Id.*, subd. (b)(2).

⁷⁶ *Id.*, subd. (d)(2)(iv)(B). See also 55 Fed. Reg. 47990, 47995 (Nov. 16, 1990) (2012 AR, p. RB-AR23722) (“Ultimately, such non-storm water discharges through a municipal separate storm sewer must either be removed from the system or become subject to an NPDES permit.”).

⁷⁷ 55 Fed. Reg. 47990, 47994 (Nov. 16, 1990) (2012 AR, p. RB-AR23721); see also *Building Industry Ass’n of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 882-887.)

to determine appropriate provisions to control pollutants, it would violate the Clean Water Act's specific mandate to do so.

The Federal TMDL Requirements

The CWA requires states to establish a total maximum daily load (TMDL) for each pollutant in surface waters in which federal water quality standards are not being attained.⁷⁸ A TMDL, which must be approved by U.S. EPA, establishes the maximum amount of a specific pollutant that can be discharged or "loaded" into a waterbody on a daily basis and still achieve federal water quality standards.⁷⁹ The TMDL assigns a wasteload allocation (WLA), which is a portion of the TMDL's total pollutant load, to point source dischargers (including MS4 dischargers) to limit pollutant discharges to the impaired receiving water.⁸⁰ Once a TMDL has been established, federal law specifically requires the permitting authority such as the Los Angeles Water Board to incorporate in NPDES permits of all types, including MS4 permits or other non-municipal NPDES permits, water quality-based effluent limitations that are "consistent with the assumptions and requirements of any available wasteload allocations for the discharge."⁸¹ This is another independent ground upon which certain provisions of the 2012 Permit are based.

Federal Monitoring and Reporting Requirements

The Clean Water Act and its implementing regulations require monitoring and reporting as a major component of *all* NPDES permits, not just MS4 permits. As a condition of receiving a NPDES permit, a permittee agrees to monitor its discharges to ensure compliance with the permit's terms.⁸² Section 308(a) of the Clean Water Act⁸³ and sections 122.41 (h), (j)-(l), 122.44(i), and 122.48 of Title 40 of the Code of Federal Regulations establish substantive monitoring and reporting requirements for all NPDES permits. Federal regulations applicable to large and medium MS4s also specify additional monitoring and reporting requirements.⁸⁴ The regulations specific to monitoring requirements for MS4 discharges are prescriptive and require the permitting agency to include requirements for both stormwater and non-stormwater effluent sampling at representative outfalls, representative receiving water monitoring, sampling of specific pollutants,

⁷⁸ CWA, § 303(d)(1). See also *Friends of the Earth, Inc. v. U.S. EPA* (D.C. Cir. 2006) 446 F.3d 140 (holding that the Clean Water Act unambiguously requires states to establish TMDLs for waters failing to achieve water quality standards).

⁷⁹ CWA § 303(d); 40 C.F.R. §§ 130.2(f), (i) and 130.7(c)(1).

⁸⁰ 40 C.F.R. § 130.2(h) (defining wasteload allocation as: "The portion of a receiving water's loading capacity that is allocated to one of its existing or future point sources of pollution. WLAs constitute a type of water quality-based effluent limitation.")

⁸¹ *Id.*, § 122.44(d)(1)(vii)(B).

⁸² CWA § 402(a)(1) ("the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 1311(a) of this title, upon condition that such discharge will meet either (A) all applicable requirements under sections 1311, 1312, 1316, 1317, 1318, and 1343 of this title, or (B) prior to the taking of necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this chapter.")

⁸³ CWA § 308(a) mandates, in part, that "the Administrator shall require the owner or operator of any point source to (i) establish and maintain such records, (ii) make such reports, (iii) install, use, and maintain such monitoring equipment or methods (including where appropriate, biological monitoring methods), (iv) sample such effluents (in accordance with such methods, at such locations, at such intervals, and in such manner as the Administrator shall prescribe), and (v) provide such other information as he may reasonably require..."

⁸⁴ See, e.g., 40 C.F.R. §§ 122.26, subds. (d)(2)(i)(F) & (d)(2)(iii)(D), 122.42(c).

monitoring at specified intervals (e.g., at least three storm events per year), use of analytical methods specified in 40 C.F.R. Part 136, use of field collection methods (e.g., grab vs. composite samples), among other requirements.⁸⁵

As the Ninth Circuit Court of Appeal recently stated in a case concerning the 2001 Los Angeles County MS4 Permit: “First and foremost, the Clean Water Act *requires* every NPDES permittee to monitor its discharges into the navigable waters of the United States in a manner sufficient to determine whether it is in compliance with the relevant NPDES permit.... That is, an NPDES permit is unlawful if a permittee is not required to effectively monitor its permit compliance.”⁸⁶ The Court also stated:

But while otherwise more flexible than the traditional NPDES permitting system, nothing in the ms4 permitting scheme relieves permittees of the obligation to monitor their compliance with their NPDES permit in some fashion... Rather, EPA regulations make clear that while ms4 NPDES permits need not require monitoring of each stormwater source at the precise point of discharge, they may instead establish a monitoring scheme “sufficient to yield data which are *representative of the monitored activity*...”⁸⁷

The federal authority described herein mandates that the Los Angeles Water Board impose a monitoring and reporting program on MS4 permittees, as with all NPDES permittees. As such, these are further independent grounds upon which certain provisions of the 2012 Permit are based.⁸⁸

C. Overview of Los Angeles County MS4 Permit Development

The 2012 Permit is a single permit that covers the collective discharges from the MS4s throughout the Los Angeles County metropolitan area, with the exception of discharges originating from the City of Long Beach.⁸⁹ This area includes 84 cities, Los Angeles County unincorporated areas, and the Los Angeles County Flood Control District. Los Angeles County is one of the most populous counties in the country. This dense population and associated infrastructure, including impervious surfaces, applies tremendous pressure on water, both in terms of quality and quantity, within the Los Angeles Region. The area covered by the Los Angeles County MS4 Permit encompasses more than 3,600 square miles with a vast interconnected drainage network totaling

⁸⁵ *Id.*, § 122.26(d)(2).

⁸⁶ *Natural Resources Defense Council v. County of Los Angeles* (9th Cir. 2013) 725 F.3d 1194, 1207, cert. den. *Los Angeles County Flood Control Dist. v. Natural Resources Defense Council* (2014) 134 S.Ct. 2135 (citations omitted; emphasis in original) (citing CWA § 402(a)(2) and 40 C.F.R. §§ 122.44(i)(1) and 122.26(d)(2)(i)(F) (emphasis in original).)

⁸⁷ *Id.*, at p. 1209 (citations omitted; emphasis in original) (citing CWA § 402(a)(2) and 40 C.F.R. §§ 122.41(i)(1) and 122.48(b).)

⁸⁸ See also *In re Los Angeles County Municipal Storm Water Permit Litigation* (Sup. Ct. Los Angeles County, March 24, 2005, Case No. BS 080548), Statement of Decision from Phase II Trial on Petitions for Writ of Mandate, pp. 19-20 (2012 AR, pp. RB-AR23197 - 23198).

⁸⁹ The City of Long Beach’s MS4 discharges is currently regulated under a separate MS4 permit, Order No. R4-2014-0024.

over 4,300 miles in length of storm drains and open channels, commingling discharges from multiple jurisdictions along the way, and includes approximately ten million inhabitants.⁹⁰

The Claimants' challenges largely center around the argument that the 2012 Permit imposes on them either "new programs" or "higher levels of service" compared to those required in the past. But prior to 2012, the Permittees were bound by provisions that were very similar or equivalent to those in the 2012 Permit. As a general matter, the 2012 Permit carries over and builds on the prior permits and implements independent federal requirements, all with a focus on water quality outcomes. Accordingly, it is necessary to include an overview of the general history and development of the 2012 Permit and prior relevant permit provisions.

1. First Term MS4 Permit – The 1990 Permit

On June 18, 1990, pursuant to the CWA amendments of 1987, the Los Angeles Water Board issued the first Los Angeles County MS4 permit to the County of Los Angeles and the incorporated cities therein (the "1990 Permit").⁹¹ The 1990 Permit was issued on a system-wide basis due to the highly interconnected storm drain system serving a population well in excess of 100,000 inhabitants. While Los Angeles County was designated as Principal Permittee, each city was designated as Permittee, Co-Permittee, or Co-Participant.⁹²

The 1990 Permit was issued before the promulgation of U.S. EPA's final federal NPDES stormwater regulations in November 1990. By issuing this first term permit before the federal regulations took effect, the Los Angeles Water Board was able to provide the permittees with flexibility in addressing and managing stormwater discharges. The 1990 Permit generally required the permittees to develop and implement stormwater pollution controls including amending ordinances, optimizing existing pollutant controls such as street sweeping, construction site controls, and others to minimize pollutants in stormwater. The Los Angeles Water Board approved 13 baseline BMPs to facilitate the implementation of countywide minimum requirements, encourage countywide consistency, and provide a minimum measure of progress. While the 1990 Permit contained the essentials of U.S. EPA's 1990 regulations and required the permittees to develop and implement runoff management programs, they provided little specificity about what was required to be included in or actually achieved by those programs.

2. Second Term MS4 Permit – The 1996 Permit

On July 15, 1996, the Los Angeles Water Board renewed the MS4 permit for a second term (the "1996 Permit").⁹³ The County of Los Angeles remained designated as the Principal Permittee.⁹⁴ The flexibility and lack of specificity from the 1990 Permit was generally continued through the 1996 Permit. In furtherance of U.S. EPA's 1990 regulations, the 1996 Permit required model programs be developed and implemented by the permittees for the six minimum control measures - Public Information and Participation, Industrial/Commercial Activities, Development Construction, Illicit Connections and Illicit Discharges, Public Agency Activities, and Development Planning. The 1996 Permit required the permittees to submit a Standard Urban Stormwater

⁹⁰ 2012 Permit, p. 20 and Attachment F (Fact Sheet), p. F-6 (2015 AR, pp. SB-AR-013313 and 013578).

⁹¹ Los Angeles Water Board Order No. 90-079 (2012 AR, pp. RB-AR-22746 - 762).

⁹² *Id.*, at p. 2 (2012 AR, p. RB-AR22747).

⁹³ Los Angeles Water Board Order No. 96-054 (2001 AR, pp. R0008479 - 8580).

⁹⁴ *Id.*, at p. 7 (2001 AR, p. R0008485).

Mitigation Plans (SUSMPs), which are plans to designate BMPs that must be used in specific categories of development projects. The model programs were intended to be dynamic and expected to change with time as more information on stormwater impacts became available.

For the first time, the 1996 Permit established receiving water limitations for MS4 discharges and stated that “[i]t is the purpose of this Order that the discharge of storm water, or non-storm water, from a [MS4] for which a Permittee is responsible not cause nuisance, continuing or recurring impairment of beneficial uses, or exceedances of water quality objectives in the receiving waters.”⁹⁵ It further provided that “[t]imely and complete implementation by a Permittee of the storm water management programs prescribed in this Order shall satisfy the requirements of this section and constitute compliance with receiving water limitations.”⁹⁶ Where exceedances of a water quality objective had occurred, permittees were required to submit revised watershed-specific stormwater management programs as part of their next permit application that “will increase the likelihood of preventing future exceedances of water quality objectives.”⁹⁷

The combination of the lack of specificity generally in the 1990 and 1996 Permits, a general lack of meaningful action by the permittees, and a general lack of corresponding reaction (i.e., enforcement) by the Los Angeles Water Board during the first ten years of the MS4 permitting program, resulted in few substantive steps towards achieving improvements in the quality of receiving waters or stormwater discharges from the MS4s.

3. Third Term MS4 Permit – The 2001 Permit and Amendments Thereto

i. Order No. 01-182

On December 13, 2001, the Los Angeles Water Board issued Order No. 01-182, renewing the Los Angeles County MS4 permit for a third term. Order No. 01-182 continued the model programs begun under the 1996 Permit, but included more detailed requirements that outlined the minimum level of implementation required for the permittees’ to meet the MEP standard for stormwater. Order No. 01-182 also included provisions, known as “Receiving Water Limitations,” to ensure that MS4 discharges did not cause or contribute to violations of water quality standards in surface waters. The permit also refined the requirements to control discharges of pollutants from new development and redevelopment. These two latter requirements were based on two precedential decisions by the State Water Board.

In State Water Board Order WQ 99-05, the State Water Board established precedential receiving water limitations language to be included in all MS4 permits statewide, making it clear that MS4 permits in California must include provisions requiring MS4 discharges to be controlled to attain water quality standards in receiving waters.⁹⁸ Order WQ 99-05 specifically requires language in MS4 permits to comply with water quality standards based discharge prohibitions and receiving water limitations through timely implementation of BMPs, control measures, and other actions to reduce pollutants in discharges.⁹⁹ Order WQ 99-05 reflects U.S. EPA’s requirement that California

⁹⁵ *Id.*, at p 12 (2001 AR, p. R0008490).

⁹⁶ *Ibid.*

⁹⁷ *Ibid.*

⁹⁸ State Water Board Order WQ 99-05 (2015 AR, pp. SB-AR-014867 - 70).

⁹⁹ *Id.*, at pp. 2-3 (2015 AR, pp. SB-AR-014868 to 69).

include receiving water limitations in MS4 Permits.¹⁰⁰ Notably, unlike the receiving water limitations language in the 1996 Permit, a permittee's timely implementation of BMPs, control measures, and other actions do not deem a permittee in compliance with the receiving water limitations or "shield" them from enforcement for causing or contributing to exceedance of water quality standards.

In State Water Board Order WQ 2000-11, the State Water Board resolved a challenge from a number of permittees and industry groups on the Los Angeles Water Board's approval of SUSMPs, which included requirements for new development and significant redevelopment projects in Los Angeles County to control the discharge of pollutants in post-construction stormwater.¹⁰¹ The State Water Board found that numeric design standards used to develop BMPs to meet receiving water quality standards, and which require that runoff generated by 85 percent of storm events from specific development categories be infiltrated or treated, reflect the federal MEP standard. The State Water Board also found that the SUSMP provisions constitute MEP for addressing stormwater pollutant discharges resulting from new development and significant redevelopment.

Order No. 01-182 also required the permittees to conduct receiving water monitoring, which measures the quality of the receiving water itself, at seven mass emission stations. There was a monitoring station for each of the seven main watersheds. That monitoring was undertaken by the Los Angeles County Flood Control District on behalf of all MS4 permittees. These receiving water monitoring requirements were used to determine if MS4 discharges are causing or contributing to exceedances of applicable water quality standards during both dry and wet weather.

Numerous permittees and industry groups challenged several aspects of Order No. 01-182 and the process by which it was issued. The Superior Court upheld the permit, and the Court of Appeal affirmed the judgment in its entirety.¹⁰² Notably, the courts upheld the receiving water limitations (including compliance with numeric water quality standards), non-stormwater, monitoring, and inspection requirements, among others.

ii. Amendments to Order No. 01-182

In March 1999, the U.S. EPA entered into a consent decree with Heal the Bay, Santa Monica Baykeeper, and Terry Tamminen requiring the establishment of certain TMDLs for the Los Angeles Region pursuant to Clean Water Act section 303(d) within 13 years.¹⁰³ The U.S. EPA was required to establish the TMDLs if the Los Angeles Water Board did not. Prompted by this consent decree, starting in 1999, the Los Angeles Water Board and U.S. EPA embarked on a 14-year effort to develop over 50 TMDLs to restore water quality in the Los Angeles Region. When the Los Angeles Water Board adopted Order No. 01-182, there were no TMDLs in effect with wasteload allocations assigned to MS4 dischargers.

¹⁰⁰ *Id.*, at pp. 1-2 (2015 AR, pp. SB-AR-014867 - 68).

¹⁰¹ State Water Board Order WQ 2000-11.

¹⁰² See generally *In re Los Angeles County Municipal Storm Water Permit Litigation* (L.A. Super. Ct., No. BS080548, Mar. 23, 2005) (2012 AR, pp. RB-AR23154 to 23222); *County of Los Angeles et al. v. California State Water Resources Control Board et al.* (Cal. Ct. of Appeal, 2nd App. Dist., Case No. B184034) (2012 AR, pp. RB-AR23223 to 23276).

¹⁰³ Consent Decree: *Heal the Bay, Inc.; Santa Monica Baykeeper, Inc.; and Terry Tamminen v. Browner*, Case No. C 98-4825 SBA, Mar. 22, 1999.

While Order No. 01-182 expired in 2006, the permit was administratively extended pursuant to federal regulations.¹⁰⁴ The Los Angeles Water Board reopened and amended Order No. 01-182 twice to incorporate provisions to implement two TMDLs.¹⁰⁵ On August 8, 2007 and December 10, 2009, the Los Angeles Water Board reopened and amended Order No. 01-182 to incorporate provisions implementing the Marina del Rey Harbor Mothers' Beach and Back Basins Bacteria TMDL and the Los Angeles River Watershed Trash TMDL, respectively.¹⁰⁶ When the Los Angeles Water Board incorporated provisions implementing the Los Angeles River Watershed Trash TMDL in 2009, the Board included the TMDL wasteload allocations as numeric effluent limitations, but provided a "deemed in compliance" pathway through implementation of certain trash control measures.

Unless otherwise noted, Order No. 01-182, as amended, is referred to throughout this response as the "2001 Permit."¹⁰⁷

4. Fourth Term MS4 Permit – The 2012 Permit

In 2006, the Permittees submitted reports of waste discharge (ROWDs), which served as reapplications for a fourth-term permit.¹⁰⁸ In 2010, the Los Angeles County Flood Control District withdrew from its 2006 reapplication and submitted a new application, requesting its own permit and that it no longer serve as Principal Permittee.¹⁰⁹ The Permittees' reapplication packages contained proposed Storm Water Management Programs and Monitoring Programs for the Board to consider for incorporation into the 2012 Permit as permit conditions and to demonstrate compliance with federal law. The Los Angeles Water Board evaluated each of the ROWDs and found that they did not satisfy federal MS4 reapplication regulations,¹¹⁰ nor did they reflect the current status of program elements for MS4 permits developed over the past decade or the new information specific to this MS4.

More than two decades after the first MS4 permit was issued, water quality impacts from MS4 discharges remained. Although Los Angeles County municipalities made significant strides in implementing programs to reduce stormwater pollution, exceedances of water quality standards

¹⁰⁴ 40 C.F.R. § 122.6. For a variety of reasons, the Los Angeles Water Board did not renew the 2001 Permit until 2012.

¹⁰⁵ In 2006, the Los Angeles Water Board reopened and amended the permit to incorporate provisions implementing the Santa Monica Bay summer dry weather bacteria TMDL. However, as a result of a legal challenge by the County of Los Angeles and the Los Angeles County Flood Control District, and due to procedural deficiencies only, the Los Angeles Water Board was required to void and set aside those provisions, which the Board did in 2010 and 2011. (See generally, *County of Los Angeles et al. v. State Water Resources Control Board et al.* (L.A. Super. Ct., No. BS122724) (2012 AR, pp. RB-AR23664 to 236980)).

¹⁰⁶ Order No. R4-2007-0042 (2007 AR, pp. 8-1 to 8-80); Order No. R4-2009-0130 (2009 AR, pp. 13-1 to 13-92). "2007 AR" refers to the administrative record for the Los Angeles Water Board's issuance of Order No. R4-2007-0042, which amended Order No. 01-182 to incorporate the Marina del Rey Bacteria TMDL. "2009 AR" refers to the administrative record for the Los Angeles Water Board's issuance of Order No. R4-2009-0130, which amended Order No. 01-182 to incorporate the Los Angeles River Trash TMDL.

¹⁰⁷ As noted earlier, for ease of reference, a complete copy of the 2001 Permit, as amended and with all attachments, is provided as an attachment to this response.

¹⁰⁸ See generally 2012 AR, pp. RB-AR1 to 238.

¹¹⁰ U.S. EPA Interpretive Policy Memorandum on Reapplication Requirements for Municipal Separate Storm Sewer Systems; Final Rule, 61 Fed Reg. 41698 (Aug. 9, 1996) (2012 AR, p. RB-AR24852).

for stormwater pollutants such as bacteria and heavy metals continued. Years of experience showed that water quality impairments require more focused measures to restore water quality and beneficial uses. Since issuance of Los Angeles Water Board Order No. 01-182 in 2001, BMPs for stormwater greatly improved and many TMDLs had been established by either the Los Angeles Water Board or U.S. EPA to guide their implementation.

It is against this backdrop that, on November 8, 2012, the Los Angeles Water Board issued Order No. R4-2012-0175 (the “2012 Permit”).¹¹¹ The 2012 Permit became effective on December 28, 2012.¹¹² The 2012 Permit was based on the 2001 Permit, the Permittees’ ROWDs, and the 2010 Ventura County MS4 Permit, with revisions and additions necessary to meet minimum federal requirements. The 2012 Permit continued to include requirements in six program areas to prevent or reduce the discharge of pollutants from the Permittees’ MS4s to surface waters. One of the most significant additions to the fourth iteration of the Los Angeles County MS4 Permit was the incorporation of water-quality based effluent limits to implement wasteload allocations established in 33 watershed-based TMDLs, for such pollutants as metals, bacteria, and trash, as required by the federal regulations. The number of TMDLs in the Los Angeles Region, and the number of impaired water bodies addressed by these TMDLs, far exceeds that of other regions in California. These TMDLs address the highest priority water quality issues in the region.

The Los Angeles Water Board recognized that the key to successful implementation of these TMDL requirements was to link the traditional programmatic requirements of the permit to the new TMDL water quality based requirements such that permittees’ stormwater management programs would be driven by specific required water quality outcomes. The Board created this linkage by crafting the integrative framework of the watershed management programs (WMPs)/enhanced watershed management programs (EWMPs). The 2012 Permit provides Permittees the option to develop either a WMP or an EWMP to implement permit requirements on a watershed scale through customized strategies, control measures, and BMPs. Development of a WMP or EWMP is voluntary and allows a Permittee to address the highest watershed priorities, including complying with the requirements of Part V.A (Receiving Water Limitations), Part VI.E and Attachments L through R (Total Maximum Daily Load Provisions), by customizing the control measures in Parts III.A (Prohibitions – Non-Storm Water Discharges) and VI.D (Minimum Control Measures), except the Planning and Land Development Program. These watershed-based program alternatives are designed to facilitate collaboration, support prioritization of actions, incentivize cost-effective regional solutions, and ensure improved water quality over time. Permittees who opted to develop a WMP or EWMP were provided with a two-to three-year planning period for program development and approval, and have timeframes of up to 25 years to fully implement their programs. It is important to note that every claimant to these Test Claims is voluntarily participating in an approved WMP or EWMP.¹¹³

The 2012 Permit also builds on the monitoring provisions of the 2001 Permit to more effectively monitor compliance with permit provisions. Notably, as required by federal regulations and at the

¹¹¹ See generally 2012 Permit (2015 AR, pp. SB-AR-013294 - 862).

¹¹² *Id.*, at p. 9 (2015 AR, p. SB-AR-013302).

¹¹³ In total, seventy-seven cities along with Los Angeles County and the Los Angeles County Flood Control District have organized into watershed management groups and developed WMPs or EWMPs, and three cities have developed individual WMPs, customized to the unique characteristics and water quality priorities in different areas of Los Angeles County.

request of several permittees, the 2012 Permit now also requires representative outfall monitoring.

Several permittees and three non-profit environmental organizations filed 37 petitions seeking review of the 2012 Permit by State Water Board. On June 16, 2015, the State Water Board issued Order WQ 2015-0075, generally upholding the 2012 Permit, but with some revisions to the findings and provisions in response to issues raised in the petitions.¹¹⁴ The State Water Board directed the Los Angeles Water Board to prepare a complete version of the permit with the State Water Board's amendments.¹¹⁵ The Los Angeles Water Board distributed the 2012 Permit, as modified by the State Water Board, on June 26, 2015.¹¹⁶

Soon thereafter, the Natural Resources Defense Council and Los Angeles Waterkeeper, the City of Duarte, and the City of Gardena each filed a petition for writ of mandate in superior court challenging the 2012 Permit. The case filed by NRDC and Los Angeles Waterkeeper is currently at the Court of Appeal. Both of the cases filed by the cities of Duarte and Gardena are still at the superior court.

While the 2012 Permit does contain more detailed requirements, most of the actual substantive permit requirements themselves, however, are continued from previous permits. These facts are important, not least of all because to determine whether the challenged permit provision is a new program or higher level of service, it is compared to the legal requirements in effect immediately before its adoption, in this case, the 2001 Permit. A more detailed description of the challenged provisions of the 2012 Permit, together with any historical permitting requirements that required the same or similar performance from Claimants prior to the issuance of the Fourth Term MS4 Permit in 2012, is set forth in the Argument sections (Sections IV and V), together with the specific arguments that are relevant to each part of the challenged 2012 Permit.

III. OVERVIEW OF MANDATES LAW

California mandates law has its origins in the late 1970's, when Proposition 13 and Proposition 4 added articles XIII A and XIII B to the California Constitution, limiting state and local governments' taxing and spending powers.¹¹⁷ Article XIII B, Section 6, of the California Constitution provides, "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service." Courts have found that the purpose of this section "is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose."¹¹⁸

Numerous judicial decisions have defined limitations on the requirements for subvention of funds.

¹¹⁴ See generally State Water Board Order WQ 2015-0075 (2015 AR, pp. SB-AR-013196 - 275).

¹¹⁵ *Id.*, at p. 80 (2015 AR, p. SB-AR-013275).

¹¹⁶ 2015 AR, pp. SB-AR-013276 to 280.

¹¹⁷ *Department of Finance v. Commission on State Mandates (Kern High School District)* (2003) 30 Cal.4th 727, 735.

¹¹⁸ *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 81.

In construing what constitutes a “new program or higher level of service,” courts have found that reimbursement to local agencies is required only for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities. Laws of general application are not entitled to subvention.¹¹⁹ The fact that a requirement may single out local governments is not dispositive; where local agencies are required to perform the same functions as private industry, no subvention is required.¹²⁰

There are also several limitations and exceptions to the subvention requirements that provide grounds for the Commission to determine that the Test Claims are not subject to subvention. Implementing statutes clarify that no subvention of funds is required if: (1) the mandate imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation;¹²¹ (2) the local agency proposed the mandate;¹²² or (3) the local agency has the authority to levy service charges, fees, or assessments sufficient to pay.¹²³ Subvention is only required if expenditure of tax monies is required, and not if the costs can be reallocated or paid for with fees.¹²⁴

IV. ARGUMENT: THE CHALLENGED PERMIT PROVISIONS DO NOT IMPOSE NEW PROGRAMS OR REQUIRE HIGHER LEVELS OF SERVICE AND APPLICABLE MANDATES EXCEPTIONS PRECLUDE SUBVENTION—GENERAL RESPONSES

Claimants contend that the 2012 Permit imposes numerous new programs or requires higher levels of service than previously required and that the provisions are uniquely imposed on local government. They also assert that all of the activities for which they seek reimbursement exceed federal law and they are unable to assess a fee to recover the costs of the mandated activities. Claimants are wrong.

As a threshold matter, all of the challenged permit provisions fail to constitute either a new program or a higher level of service within the context of mandates law.¹²⁵ Compliance with NPDES permits, and specifically permits regulating stormwater discharges, is required of private industry as well as state and federal government agencies. Local government is not singled out.

¹¹⁹ *County of Los Angeles*, *supra*, 43 Cal.3d 46.

¹²⁰ *City of Richmond v. Commission on State Mandates* (1998) 64 Cal.App.4th 1190.

¹²¹ Govt. Code, § 17556, subd. (c).

¹²² *Id.*, subd. (a).

¹²³ *Id.*, subd. (d).

¹²⁴ *County of Los Angeles v. Commission on State Mandates* (2003) 110 Cal.App.4th 1176; *Redevelopment Agency v. Commission on State Mandates* (1997) 55 Cal.App.4th 976.

¹²⁵ No appellate court has addressed what constitutes a new program or a higher level of service in the context of MS4 permits. At the California Supreme Court in *Department of Finance* (re: Los Angeles Water Board Order No. 01-182), the Los Angeles Water Board and the Los Angeles County MS4 Permittees did not brief that each of the four challenged requirements were a new program or high level of service as that matter was on the narrow issue construing whether the challenged requirements were federal mandates. The matter was remanded so the trial court may consider other issues the parties raised in their pleadings. The issue was also raised in the State Water Board, San Diego Regional Water Quality Control Board, and Department of Finance’s Petition for Writ of Mandate regarding the Commission’s Statement of Decision in *In re Test Claim on San Diego Regional Water Quality Control Board Order No. R9-2007-0001, Case No. 07-TC-09* (March 26, 2010). The Court of Appeal, however, did not address that issue. That matter was also remanded to the trial court for further proceedings.

Even if the Commission finds that some of the challenged provisions do impose a new program or higher level of service, the challenged provisions are nonreimbursable because of applicable mandates exceptions. For example:

- All of the programs are federal mandates. The Los Angeles Water Board found that all of the challenged provisions were adopted entirely under federal law and are necessary for the Claimants to meet the standards and requirements of the Clean Water Act and its implementing regulations. Therefore, none of the costs are for activities exceeding federal requirements.
- Claimants, as well as other Permittees, are not *required* to use taxes to pay for the costs for the programs. They can be paid for by levying fees especially enacted for stormwater programs.¹²⁶ The local agencies have not established that tax monies are required.¹²⁷ But even if the Commission determines that a portion of the MS4 operators' activities exceed federal law requirements and would otherwise qualify for subvention, the costs are *de minimis* and therefore not reimbursable.
- Claimants, as well as the other Permittees, proposed concepts on which many of the challenged permit requirements are based in their permit application, or ROWDs or in the permitting process for their requested permit.

Because many of the Water Boards' responses concerning applicable mandates law apply to all of the challenged provisions, the Los Angeles Water Board has endeavored to avoid repetition by responding generally to Claimants' assertions below. These general responses alone support denial of each of Claimants' challenges. Where appropriate, the Water Boards provide additional support for the conclusion that exceptions apply to specific challenged provisions, in Section V, below.

A. The Contested Provisions Do Not Impose New Programs or Higher Levels of Service

In order to obtain reimbursement, the Claimants must show as a threshold matter that the Los Angeles Water Board has imposed a "program" on them and, if so, that it established a "new

¹²⁶ Claimants generally state that they are restricted in their ability to assess fees or assessments sufficient to pay for the Permit's mandates. Claimants refer to limitations on assessing fees and surcharges under California law. The referenced law concerns only the percent of voters who must approve the assessment. The Cities of Palo Alto, San Clemente, San Jose, Alameda and Santa Cruz have stormwater fee funded programs. Claimants' contention also ignores the clear authority granted to them to actually raise such fees in Proposition 218 and their enabling acts. Thus, Claimants have not shown they are *required* to rely on using tax money to fund challenged activities.

¹²⁷ As mentioned in the Introduction, no appellate court has addressed what constitutes fee authority in the context of MS4 permits, particularly with consideration of Proposition 218. The Commission has also not considered the later approved Proposition 26. In their petition for writ of mandate in *State of California, Department of Finance, et al., v. Commission on State Mandates*, Sacramento County Superior Court, Case No. 34-2010-80000604, the San Diego Water Board, San Diego Regional Water Quality Control Board, and Department of Finance challenged the Commission's conclusion in the underlying Statement of Decision in *In re Test Claim on San Diego Regional Water Quality Control Board Order No. R9-2007-0001, Case No. 07-TC-09* (March 26, 2010) that the requirement for voter approval as a prerequisite to raising fees precluded finding that a local agency has fee authority to pay for some permit-related activities. Likewise, claimants there in a cross-petition for writ in the same matter challenged the sufficiency of the evidence supporting the Commission's underlying determination that local agencies have authority to fund hydromodification and low impact development programs through their land development programs. The Court of Appeal, however, did not address these issues. The matter was remanded so the trial court may consider other issues the parties raised in their pleadings.

program” or created a “higher level of service” over the previously required level of service.¹²⁸ Claimants have not satisfied, and cannot satisfy, this threshold. Thus, article XIII B, section 6, of the California Constitution is inapplicable.

1. The 2012 Permit Does Not Impose a “Program”

The 2012 Permit is not a “program” subject to article XIII B, section 6, of the California Constitution. The California Supreme Court has defined a “program” for purposes of article XIII B, section 6, of the California Constitution, as: (1) programs that carry out the governmental function of providing services to the public, or (2) laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.¹²⁹ Claimants are unable to show that the 2012 Permit satisfies either test.

First, the 2012 Permit does not impose a program that carries out a governmental function of providing services to the public. The Clean Water Act forbids everyone - individuals, businesses, state governments, tribal governments, local governments, etc. - from discharging pollutants from point sources to waters of the United States without an NPDES permit.¹³⁰ That includes municipal and industrial stormwater dischargers.¹³¹ All government entities that operate MS4s, including state and federal facilities, are required to obtain an NPDES permit; local governments are not singled out. Whether pollutants originate from a local government or a private industrial point source, the Water Boards must assure their NPDES permits protect water quality consistent with state and federal law. Thus, Claimants were not issued a NPDES permit because they are government entities. Claimants were issued a NPDES permit because they are point source dischargers of pollutants under the Clean Water Act.

In its Statement of Decision on the test claims concerning the trash receptacle and inspection requirements of the 2001 Permit, the Commission found the challenged permit activities as constituting a program since the permit activities were limited to local government activities and the 2001 Permit only named local government entities as permittees.¹³² The Commission also determined that the “permit provides a service to the public by preventing or abating pollution in waterways and beaches in Los Angeles County,” specifically noting that an objective of the permit “is to protect the beneficial uses of receiving waters in Los Angeles County.”¹³³

The approach previously taken by the Commission fails to appropriately focus on whether the permit mandates functions peculiar to government and obscures the Clean Water Act’s focus on, and regulation, of pollutant discharges – something that is not unique to local governments. Governments, let alone *local* governments, are not uniquely responsible for reducing or abating pollution to waters of the United States. MS4 permits, as with all NPDES permits, are intended to support the objective of the federal Clean Water Act “to restore and maintain the chemical,

¹³² *In re Test Claim on: Los Angeles Regional Water Quality Control Board Order No. 01-182, Case Nos. 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21* (July 31, 2009), p. 48.

¹³³ *Ibid.*

physical, and biological integrity of the Nation's waters."¹³⁴ Within the Los Angeles Region, the Water Boards have issued hundreds, if not thousands, of NPDES permits to both public and private entities. All of those NPDES permits share the same objective – to protect the beneficial uses of receiving waters in the Los Angeles Region. While regulating water quality is a general service to the public, actions by persons, including local governments, that discharge pollutants and waste to prevent or abate discharges of pollutants from point sources to waters of the United States is not a governmental function of providing services to the public.

Second, the 2012 Permit does not impose unique requirements on local governments and the CWA's NPDES permitting requirements apply generally to all residents and entities in the state. Courts have found that reimbursement to local agencies is required only for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities.¹³⁵ Laws of general applicability are not entitled to subvention because they do not "force" programs on localities.¹³⁶ The fact that a requirement may single out local governments is not dispositive; where local agencies are required to perform the same functions as private industry, no subvention is required.¹³⁷

The relevant "state policy" implemented by the 2012 Permit is the Clean Water Act and Chapter 5.5 of the Porter-Cologne Water Quality Control Act requiring that NPDES permits be consistent with the Clean Water Act. That policy applies generally to all residents and entities in the state and does not apply uniquely to local governments. The Clean Water Act prohibits both public and private entities from discharging pollutants from point sources to waters of the United States without an NPDES permit. Both municipal and non-municipal stormwater discharges must be controlled; MS4s owned or operated by local governments are not singled out.¹³⁸ The NPDES permitting requirements implemented by the 2012 Permit thus effectuates laws of general application that prohibit both public and private entities from discharging to waters of the United States except as specified in a NPDES permit. The 2012 Permit is the means by which the Water Boards ensure that public entities abide by the same requirements against polluted discharges to waters of the United States that the law imposes on private entities. The 2012 Permit, as is required by federal law, merely places the Claimants and the other Permittees on the same, or in some cases a lesser, footing as most other private entities and non-local governments.

Numerous provisions of the 2012 Permit are requirements of general applicability. Like the 2012 Permit, NPDES permits governing private entities contain similar provisions requiring that those entities manage stormwater and non-stormwater to prevent or reduce discharges of pollutants, including the requirement to implement specific control measures or BMPs. Likewise, NPDES

¹³⁷ *Ibid.*

¹³⁸ See e.g., 40 C.F.R. § 122.26(a)(vi)(6). See also e.g., State Water Board, Order No. 2014-0057-DWQ, NPDES General Permit for Storm Water Discharges Associated with Industrial Activities; State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation; State Water Board, Order No. 2009-0009-DWQ (as amended by 2010-0014-DWQ and 2012-0006-DWQ), NPDES General Permit for Storm Water Discharges Associated With Construction And Land Disturbance Activities.

permits issued to private entities implement wasteload allocations established in federally required TMDLs, which are assigned to identified sources of pollutants, whether MS4 operators, private industry, or government agencies. And all NPDES permittees are required to self-monitor their discharges.

While Claimants' obligations under the 2012 Permit are similar to the obligations of non-municipal dischargers who are issued NPDES permits for stormwater and non-stormwater discharges, in many respects Claimants are subject to less stringent requirements. MS4 discharges are not managed as stringently as industrial and construction stormwater discharges.¹³⁹ The requirements for industrial entities are more stringent than for local government dischargers because industrial entities are required to strictly (i.e., immediately) comply with water quality standards. The 2012 Permit does not require strict compliance with water quality standards. The 2012 Permit, therefore, regulates the discharge of pollutants in MS4 discharges more leniently than the discharge of pollutants from private non-governmental sources.

In the proceedings on the test claims concerning the trash receptacle and inspection requirements of the 2001 Permit, the Water Boards made similar arguments to those made here. In its Statement of Decision, the Commission rejected the Water Boards arguments. Having apparently found the first test satisfied, the Commission did not consider whether the second test had also been satisfied. Rather, the Commission relied on an erroneous assumption that it had to consider the 2001 Permit in isolation, concluding that the "permit activities are limited to local governmental entities" and that "the issue is not whether NPDES permits generally constitute a 'program' within the meaning of article XIII B, section 6. The only issue before the Commission is whether the permit in this test claim...constitutes a program because this permit is the only one over which the Commission has jurisdiction."¹⁴⁰ But the Water Boards contend whether NPDES permits generally constitute a "program" within the meaning of article XIII B, section 6 is precisely a threshold issue the Commission needs to determine.

In *City of Sacramento*, the Court held that a law extending mandatory unemployment insurance coverage to local governments did not constitute a new program or higher level of service.¹⁴¹ The Court reasoned that the law "merely makes the local agencies indistinguishable ... from private employers."¹⁴² It rejected the local government's argument that because the program was new to local governments, it triggered reimbursement under article XIII B, section 6.¹⁴³ Accepting that argument, the Court explained, would create an anomalous situation in which the State could be required to pay local governments if it deferred their compliance with the law, but could avoid the

¹³⁹ Compare CWA § 402(p)(3)(B) to § 402(p)(3)(A), which requires that industrial stormwater dischargers strictly comply with water quality standards pursuant to CWA § 301(b)(1)(C). The provisions of the 2012 Permit regulate the discharge of pollutants in municipal stormwater under the CWA's MEP standard, not the BAT/BCT standard that applies to other types of discharges. See also *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159, 1164-1165 (distinguishing "strict compliance" required of industrial storm water dischargers to MEP standard applicable to municipal stormwater dischargers).

¹⁴⁰ *In re Test Claim on: Los Angeles Regional Water Quality Control Board Order No. 01-182, Case Nos. 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21* (July 31, 2009), p. 49.

¹⁴¹ *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 57.

¹⁴² *Id.*, at p. 67.

¹⁴³ *Id.*, at p. 68 (explaining that the law "may have imposed a requirement 'new' to local agencies, but that requirement was not 'unique'").

reimbursement requirements if it imposed the same obligations on the public and private sectors at the same time.¹⁴⁴

Similarly, in *City of Richmond*, a state law exempted public safety employers from Labor Code provisions governing death benefits payable to a deceased employee's survivors.¹⁴⁵ After the State repealed the exemption, a city sought reimbursement for payment of death benefits.¹⁴⁶ The Court of Appeal recognized that just because a law "affects only local governments does not compel the conclusion that that [the law] imposes a unique requirement on local government."¹⁴⁷ The new law made "the workers' compensation death benefit requirements as applicable to local governments as they are to private employers," and therefore did not impose a new program or higher level of service.¹⁴⁸

These cases show the error in the Commission's prior reasoning. Both the Supreme Court in *City of Sacramento* and the Court of Appeal in *City of Richmond* considered that the laws at issue put local government on an equal footing with private entities, rather than place a burden exclusively on local government. In its prior decision on the 2001 Permit, the Commission declined to recognize that permitting rules apply equally to public and private dischargers, and instead focused narrowly on specific provisions in the 2001 Permit. Under *City of Richmond*, the Commission should recognize that because the permitting requirement does not rest exclusively on local governments, whatever its expression in specific permit provisions, and whether or not those specific provisions are imposed on private emitters, it cannot be a reimbursable mandate so long as local governments are held to the same, or lesser, standard than private entities.¹⁴⁹ Under the Commission's prior reasoning, even if the Los Angeles Water Board had issued identical NPDES permits to local governments and industrial dischargers - that is, permits that required the public and private permittees to do exactly the same thing - the permit issued to the local government would trigger a subvention of funds. That would be an impermissible "state subsidy of the public sector" to offset "expenses imposed *in common* on the private and public sectors by ... a general law."¹⁵⁰ Therefore, the mere fact that one particular NPDES permit, out of hundreds of NPDES permits issued by the Water Boards, only names local governments is not the correct standard as to whether the 2012 Permit constitutes a "program" under article XIII B, section 6 of the California Constitution.

Treating individual permit terms that implement BMPs or other control measures as state mandates, when other dischargers, including other stormwater dischargers, are subject to more stringent standards, is the sort of anomalous result the Supreme Court cautioned against in *City of Sacramento*. If updating a law to require local governments to adhere to the same standard as private parties does not create a mandate, as the courts in *City of Sacramento* and *City of Richmond* held, then imposing a lesser standard in lieu of a more stringent standard cannot create a mandate. Among other things, it would encourage the state and regional water boards to issue

permits imposing the same standards on MS4 operators as on other stormwater dischargers, potentially at greater cost to local governments.¹⁵¹

Further, on remand from the California Supreme Court, the Los Angeles County Superior Court recently agreed with the Water Boards that the receptacle and inspections requirements in the 2001 Permit are not state mandated program subject to subvention as the costs incurred by the local governments are “an incidental impact of laws [and policies] that apply generally to all state residents and entities” rather than the result of a state mandate shifting the costs of a state initiated program to the local governments.¹⁵² Notably, the Court also found the following:

Moreover, just because the requirements are “unique” to the local governments and cause them to incur costs does not mean the local entities are necessarily entitled to reimbursement from the state. Whereas a private industrial discharger has considerable power to control its operations and employees to prevent contaminated discharges, municipalities cannot prevent contaminated discharges without inducing or policing the public to refrain from harmful conduct. It is therefore inevitable that the Operators’ NPDES permit includes measures “unique” to local governments such as the receptacle and inspection requirements at issue here. Indeed, because the anti-pollution laws, the permit and the policies behind them implement a ban on unlawful discharges that applies to both public and private entities, the state must, as a practical matter, impose “unique” requirements on local governments to ensure that their required compliance is “indistinguishable ... from private employers.”¹⁵³

Thus, while the provisions in the 2012 Permit apply only to the local agencies named in the permit, the substantive actions required by the permit’s provisions are by no means unique to this class of permittee. That other NPDES permits impose similar requirements on non-local government agencies demonstrates that the provisions in the Permit are not unique to local government. The Water Boards urge the Commission to reconsider its prior approach in this respect and to view the 2012 Permit within this larger context.

2. The 2012 Permit Does Not Impose a New Program

Assuming the Commission finds that the 2012 Permit is a “program,” there is no evidence that many of the requirements at issue impose a “new” program. A program is “new” if the local government had not previously been required to institute it.¹⁵⁴ Here, even if each of the challenged provisions could be considered a “program,” none meets the definition of “new.”

Claimants have been permitted under the NPDES program for their MS4 discharges since 1990. The 2012 Permit is the fourth NPDES permit issued for the Los Angeles County MS4, and many, (if not all) of the requirements at issue in the Test Claims are not new. The overarching

¹⁵¹ See *Defenders of Wildlife*, *supra*, 191 F.3d at pp. 1163, 1166-1167 (noting state can impose effluent limitations on MS4 permittees); *Building Industry*, *supra*, 124 Cal.App.4th at pp. 886-887 (discussing *Defenders of Wildlife*).

¹⁵² *State of California Department of Finance v. Commission on State Mandates*, Los Angeles County Superior Court Case No. BS130730, Order Granting Petition for Writ of Mandate (Post-Remand) and Denying Cross-Petitions as Moot, Feb. 9, 2018, p. 14 (citing *County of Los Angeles*, *supra*, 43 Cal.3d at p. 57.)

¹⁵³ *Id.*, at p. 13 (citing *County of Los Angeles*, *supra*, 43 Cal.3d at p. 56).

¹⁵⁴ *Ibid.*

requirement to impose controls to reduce or prevent pollutants in MS4 discharges is dictated by the Clean Water Act and is not new to this permit cycle. The inclusion of new and advanced measures as the MS4 programs evolve and mature over time is anticipated under the Clean Water Act and these new and advanced measures do not constitute a new program.¹⁵⁵ Prior permits, like the 2012 Permit, included management program requirements, monitoring programs, annual reporting requirements, land development requirements, enforcement obligations, discharge prohibitions, and the requirement to comply with receiving water limitations.¹⁵⁶

3. The 2012 Permit Does Not Impose Higher Levels of Service

Assuming the Commission finds that the 2012 Permit is a “program,” there is no evidence that many of the requirements at issue constitute a “higher level of service.” The term “higher level of service” “must be read in conjunction with the predecessor phrase ‘new program’ to give it meaning. Thus read, it is apparent that the subvention requirement for increased or higher level[s] of service is directed to state mandated increases in the services provided by local agencies in existing ‘programs.’”¹⁵⁷ A “higher level of service” occurs when the new “requirements were intended to provide an enhanced service to the public.”¹⁵⁸

As an initial matter, any new requirements in the 2012 Permit are not intended “to provide an enhanced service to the public.”¹⁵⁹ The service to the public of affording better water quality, which is required by both public and private entities, has remained the same. This service is not enhanced in the 2012 Permit. Just because Claimants or other Permittees have not met the requirements of prior permits (e.g., achieving compliance with water quality standards), it does not mean that more detailed requirements in *this* permit to ensure the water quality protection required by prior permits and the CWA is achieved as soon as possible somehow provides an “enhanced” service to the public. Claimants, as with all other Permittees, are still required to effectively prohibit their non-stormwater discharges, comply with water quality standards, implement the six minimum control measures, monitor their discharges, etc., in order to achieve the CWA standards that were established decades ago.

The changes to the requirements of prior permits (e.g., increased detail or specificity) do not amount to a higher level of service, both because equivalent changes are applicable to non-local government permittees, discussed in Section V below, and because they are merely refinements of existing requirements, most of which are a result of the iterative process expressly contemplated by federal law.¹⁶⁰ A higher level of service is not simply any increase in costs. “If

Reg. 68722, 68754; Dec. 8, 1999 (“EPA envisions application of the MEP standard as an iterative process.”); and Interim Permitting Approach for Water Quality-Based Effluent Limitations in Stormwater Permits (Sept. 1, 1996)
(footnote continued on next page)

the Legislature had intended to continue to equate 'increased level of service' with 'additional costs,' then the provision would be circular: 'costs mandate by the state' are defined as 'increased costs' due to an increased level of service, which, in turn would be defined as 'additional costs.'"¹⁶¹ Costs for purposes of article XIII B, section 6, of the California Constitution do "not equal every increase in a locality's budget resulting from compliance with a new state directive."¹⁶²

Nor does every increase in specificity about where to direct costs amount to a higher level of service.¹⁶³ That the level of specificity in a permit reconsidered and reissued every five years may have changed over time is consistent with U.S. EPA's guidance that MS4 permitting follow an iterative process whereby each successive permit becomes more refined, detailed, and expanded as needed, based on experience under the previous permit.¹⁶⁴

Rather, the costs incurred must involve programs previously funded exclusively by the state.¹⁶⁵ The "state must be attempting to divest itself of its responsibility to provide fiscal support for a program, or forcing a new program on a locality for which it is ill equipped to allocate funding."¹⁶⁶ In certain instances set forth in Section V, below, Claimants contend that the state has shifted costs to local government and that they have been saddled with entirely new obligations to control pollution in MS4 discharges. As explained below, these claims are simply not true. In other cases, though, Claimants do not contend that the state has shifted any costs to them, or saddled them with entirely new obligations to control pollution in MS4 discharges. Without any burden shifting from the state to municipalities, mere direction from the Los Angeles Water Board that the municipalities reallocate some of their resources in a particular way does not amount to a higher level of service.¹⁶⁷ "Loss of flexibility does not, in and of itself, require the [local agencies] to expend funds that previously had been expended by the State."¹⁶⁸

("The interim permitting approach uses BMPs in first-round storm water permits, and expanded or better-tailored BMPs in subsequent permits, where necessary, to provide for the attainment of water quality standards.")

Commission on State Mandates* (2000) 84 Cal.App.4th 1264, 1288 (state law requiring reallocation of school funds from one local government entity to another, where local government generally had always had a substantial role in funding schools, did not impose a higher level of service).

¹⁶⁶ See *County of Los Angeles v. Commission on State Mandates*, *supra*, 110 Cal.App.4th at p. 1194; accord *Dept. of Finance v. Commission on State Mandates*, *supra*, 1 Cal.5th at p. 771 (agreeing that state had shifted responsibility for some industrial inspections to local government agency).

¹⁶⁷ See *County of Los Angeles v. Commission on State Mandates*, *supra*, 110 Cal.App.4th at p. 1194.

¹⁶⁸ *Ibid.*; accord *Department of Finance (Kern High School District)*, *supra*, 30 Cal.4th at p. 748 (requirement that school districts allocate some of their grant funds in a particular way did not transform those costs into a reimbursable state mandate).

In this case, any costs arising from the 2012 Permit's requirements do not result in a "program," or a "new" program. Nor do they result from a "higher level of service," because the state has not shifted its own responsibilities to local agencies and the Claimants are not "ill-equipped" to allocate funding to control MS4 discharges. And, as explained below, Claimants have been subject to the same federal standards (the requirement to effectively prohibit non-stormwater discharges to the MS4 and implement controls to reduce the discharge of pollutants in stormwater to the MEP, and other controls determined appropriate by the permitting agency, as well as monitoring and reporting requirements) for decades. Whether Claimants must implement different approaches in an effort to achieve the required federal standards does not mean the state has imposed a new program or required performance of a higher level of service.

B. Mandates Exceptions Preclude Finding Subvention is Required

Assuming *arguendo* that the Commission concludes that the challenged provisions of the 2012 Permit require new programs or impose higher levels of service, the following mandates exceptions apply to the contested provisions such that subvention is not required.

1. The 2012 Permit Provisions are Required by Federal Law

i. The Los Angeles Water Board Determined that the 2012 Permit Provisions are Required to Comply with CWA Requirements - And Such Findings are Entitled to Deference Under *Department of Finance*

One of the exceptions to the subvention requirements is if the mandate imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation.¹⁶⁹ Federal law specifically requires that permits be issued to entities that operate MS4s and that permits effectively prohibit non-stormwater discharges to the MS4, include controls to reduce the discharge of pollutants in stormwater to the maximum extent practicable, include other provisions the permitting agency determines appropriate for the control of such pollutants, include water quality based effluent limits implementing TMDL wasteload allocations, and include monitoring and reporting requirements. If the Water Boards had not been authorized to issue the NPDES permit in lieu of U.S. EPA, the MS4 discharges would be prohibited unless U.S. EPA itself issued a similar permit directly to the entities. Therefore, in issuing the permit provisions necessary to comply with federal law, the Los Angeles Water Board exercised its duty under federal law. As the Ninth Circuit Court of Appeals held in *Natural Resources Defense Council v. U.S. EPA*, "Congress did not mandate a minimum standards approach."¹⁷⁰ Rather, Congress mandated that the permitting entity, here the Los Angeles Water Board, determine appropriate provisions designed to control pollutants.¹⁷¹

The Court of Appeal in *City of Rancho Cucamonga v. Regional Water Quality Control Bd., Santa Ana Region*, succinctly addressed the federal mandate on the regional water boards to prescribe requirements that meet the CWA standard:¹⁷²

¹⁶⁹ Gov. Code, § 17556, subd. (c).

¹⁷⁰ *Natural Resources Defense Council v. U.S. EPA*, *supra*, 966 F.2d at p. 1308.

¹⁷¹ *Ibid.*

¹⁷² *City of Rancho Cucamonga v. Regional Water Quality Control Bd., Santa Ana Region* (2002) 135 Cal.App.4th 1377.

In creating a permit system for dischargers from municipal storm sewers, Congress intended to implement actual programs. (*Natural Resources Defense Council, Inc. v. Costle* (D.C.Cir.1977) 568 F.2d 1369, 1375.) The Clean Water Act authorizes the imposition of permit conditions, including: “management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.” (33 U.S.C. § 1342, subd. (p)(3)(B)(iii).) The Act authorizes states to issue permits with conditions necessary to carry out its provisions. (33 U.S.C. § 1342, subd. (a)(1).) The permitting agency has discretion to decide what practices, techniques, methods and other provisions are appropriate and necessary to control the discharge of pollutants. (*NRDC v. EPA* (9th Cir.1992) 966 F.2d 1292, 1308.) That is what the Regional Board has created in the 2002 permit.¹⁷³

As in *Rancho Cucamonga*, the 2012 Permit includes requirements to implement BMPs to meet the MEP standard for stormwater discharges. Similarly, the Los Angeles Water Board exercised its duty under federal law and adopted the Permit provisions requiring compliance with the non-stormwater discharge prohibition, TMDL wasteload allocations, and monitoring and reporting requirements, all of which are independent federal law mandates.

The fact that the Los Angeles Water Board exercised its discretion, as required by federal law, to impose requirements that it determined were necessary to implement federal law and meet the CWA standards in the 2012 Permit supports the conclusion that the permit provisions are federal, not state mandates. Under the factual circumstances here, *Department of Finance* does not require a different result.

An essential underpinning of *Department of Finance* is the Supreme Court's determination that the 2001 Permit had as its roots both federal and State law. In that permit, the Los Angeles Water Board had made no finding that the permit requirements were necessary to implement the MEP standard.¹⁷⁴ Instead, the Los Angeles Water Board found only that the permit was consistent with or within the federal standard. In *Department of Finance*, the Supreme Court held that, “Had the Regional Board found when imposing the disputed permit conditions, that those conditions were the only means by which the maximum extent practicable standard could be implemented, deference to the board's expertise in reaching that finding would be appropriate.”¹⁷⁵

In contrast, in issuing the 2012 Permit, the Los Angeles Water Board made specific findings throughout the Permit that its provisions are based on federal law and are necessary to meet CWA standards under the factual circumstances presented.¹⁷⁶ Examples of this include, but are not limited to:

- “This Order is issued pursuant to CWA section 402 and implementing regulations adopted by the USEPA and chapter 5.5, division 7 of the California Water Code (commencing with

¹⁷³ *Id.*, at 1389.

¹⁷⁴ *Department of Finance v. Commission on State Mandates*, *supra*, 1 Cal.5th at p. 768.

¹⁷⁵ *Ibid.*

¹⁷⁶ The findings that the permit terms are necessary to satisfy the federal CWA standards under the factual circumstances presented means the Los Angeles Water Board did not impose more stringent terms under the Porter-Cologne Water Quality Control Act, which it is authorized to do. (See *Burbank*, *supra*, 35 Cal.4th at p. 626-629.)

section 13370). This Order serves as an NPDES permit for point source discharges from the Permittees' MS4s to surface waters."¹⁷⁷

- "This Order implements the federal Phase I NPDES Storm Water Program requirements. These requirements include three fundamental elements: (i) a requirement to effectively prohibit non-storm water discharges through the MS4, (ii) requirements to implement controls to reduce the discharge of pollutants to the maximum extent practicable, and (iii) other provisions the Regional Water Board has determined appropriate for the control of such pollutants."¹⁷⁸
- "[T]he Regional Water Board finds that the requirements in this permit are not more stringent than the minimum federal requirements."¹⁷⁹
- "This Order includes programmatic requirements in six areas pursuant to 40 CFR section 122.26(d)(2)(iv) as well as numeric design standards for storm water runoff from new development and redevelopment consistent with the federal MEP standard (see State Water Board Order WQ 2000-11, the "LA SUSMP Order"). This Order also includes protocols for periodically evaluating and modifying or adding control measures, consistent with the concept that MEP is an evolving and flexible standard."¹⁸⁰
- "The Regional Water Board finds that the requirements in this Order are not more stringent than the minimum federal requirements. ... The requirements in this Order may be more specific or detailed than those enumerated in federal regulations under 40 CFR § 122.26 or in USEPA guidance. However, the requirements have been designed to be consistent with and within the federal statutory mandates described in Clean Water Act section 402(p)(3)(B)(ii) and (iii) and the related federal regulations and guidance. Consistent with federal law, all of the conditions in this Order could have been included in a permit adopted by USEPA in the absence of the in lieu authority of California to issue NPDES permits."¹⁸¹
- "The Regional Water Board finds that the requirements in this Order are reasonably necessary to protect beneficial uses identified in the Basin Plan..."¹⁸²
- "The requirements of the Order, taken as a whole rather than individually, are necessary to reduce the discharge of pollutants to the maximum extent practicable and to protect water quality. The Regional Water Board finds that the requirements of the Order are practicable, do not exceed federal law, and thus do not constitute an unfunded mandate."¹⁸³

The Los Angeles Water Board also found:

¹⁷⁷ 2012 Permit, Finding H, p. 20 (2015 AR, p. SB-AR-013313).

¹⁷⁸ *Id.*, Finding I.

¹⁷⁹ *Id.*, Finding S, p. 26 (2015 AR, p. SB-AR-013319).

¹⁸⁰ *Id.*, Attachment F (Fact Sheet), Part IV.B, p. F-34 (2015 AR, p. SB-AR-013606).

¹⁸¹ *Id.*, Part VIII, p. F-141 (2015 AR, p. SB-AR-013713).

¹⁸² *Ibid.*

¹⁸³ *Id.*, Part IX, p. F-159 (2015 AR, p. SB-AR-013731).

This Order implements federally mandated requirements under the Clean Water Act...The authority exercised under this Order is not reserved state authority under the Clean Water Act's savings clause (cf. *Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 627-628 [relying on 33 U.S.C. § 1370, which allows a state to develop requirements which are not "less stringent" than federal requirements]), but instead is part of a federal mandate to develop pollutant reduction requirements for municipal separate storm sewer systems. To this extent, it is entirely federal authority that forms the legal basis to establish the permit provisions. (See, *City of Rancho Cucamonga v. Regional Water Quality Control Bd.-Santa Ana Region* (2006) 135 Cal.App.4th 1377, 1389; *Building Industry Ass'n of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 882-883.)¹⁸⁴

Collectively, these findings set forth the Los Angeles Water Board's regulatory basis for issuing the Permit and make it clear that the Board intended to and did rely solely on federal law in issuing the Permit.¹⁸⁵ As the Supreme Court held, "deference to the board's expertise in reaching that finding would be appropriate."

The Water Boards understand the Supreme Court to mean that, to be entitled to deference, the regional water boards must make an express finding that the particular set of permit conditions finally embodied in a given permit is required to meet that federal standard, and must support that finding with evidence. The opinion is consistent with the Water Boards' reading of the Clean Water Act: where a regional water board has devised a set of conditions necessary to ensure local governments' compliance with federal law (that is, a set of conditions that is federally mandated), the regional water board does not have a choice to impose some other, less rigorous, set of conditions.

For the "maximum extent practicable" standard applicable to MS4 stormwater discharges, determining whether this standard has been exceeded necessarily rests on whether the Permit includes requirements which are impracticable. Practicability is a matter squarely within the Los Angeles Water Board's jurisdiction and technical expertise. The Los Angeles Water Board determined that the requirements in the Permit are practicable.¹⁸⁶ In the Test Claims, Claimants continue to present no evidence that any of the challenged provisions applicable to stormwater are impracticable. Accordingly, absent any evidence that any of the challenged provisions are impracticable, the Commission cannot find these provisions as exceeding MEP and therefore entitled to subvention. The Commission must defer to the board's findings.¹⁸⁷

Department of Finance addressed the narrow question of whether the federal MEP standard and certain implementing regulations¹⁸⁸ mandated both the trash can and inspection requirements

¹⁸⁴ *Id.*, Part IX, p. F-158 (2015 AR, p. SB-AR-013730) (emphasis added).

¹⁸⁵ The finding that the permit terms are necessary to satisfy the federal MEP standard under the factual circumstances presented means the Los Angeles Water Board did not impose more stringent terms under the Porter-Cologne Water Quality Control Act, which it is authorized to do. (See *Burbank*, *supra*, 35 Cal.4th at pp. 626-629.)

¹⁸⁶ 2012 Permit, Attachment F (Fact Sheet), p. F-159 (2015 AR, pp. SB-AR-013731).

¹⁸⁷ *Department of Finance*, *supra*, 1 Cal.5th at pp. 768-769.

¹⁸⁸ The Supreme Court considered Title 40 of the Code of Federal Regulations, parts 122.26(d)(2)(iv)(A)(3), (B)(1), (C)(1), and (D)(3) in reaching its decision. (*Department of Finance v. Commission on State Mandates*, *supra*, 1 Cal.5th at p. 749.)

contained in the 2001 Permit. In reaching its decision, the Supreme Court's analysis necessarily turned on whether, and to what extent, the MEP standard and the specific implementing regulations compelled the Los Angeles Water Board to impose the challenged permit conditions.¹⁸⁹ Non-stormwater discharge provisions, TMDL provisions, and monitoring and reporting requirements required by independent federal mandates were not analyzed by the Supreme Court in the *Department of Finance* decision. Consequently, the Supreme Court decision has limited application when the federal standard compelling a challenged permit provision is wholly separate from the MEP standard and those specific implementing regulations.

Likewise, the recent California Court of Appeal, Third Appellate District, decision concerning the 2007 San Diego County MS4 Permit¹⁹⁰ was also narrowly focused on the federal mandate exception related to the MEP standard only. Notably, like *Department of Finance*, the *San Diego DOF Decision* also did not address critical questions here, including but not limited to: (a) whether requirements implementing the Clean Water Act's effective prohibition of non-stormwater discharges through the MS4 to receiving waters is federally mandated; (b) whether permit provisions implementing TMDLs required by section 303(d) of the Clean Water Act are federally mandated; and (c) whether permit provisions establishing monitoring and reporting requirements is federally mandated. Importantly, however, the California Court of Appeal did not, and could not, disturb the California Supreme Court's determinations concerning the deference owed to the permitting agency.

The 2012 Permit, like its predecessors, implements wholly separate CWA requirement that MS4 operators effectively prohibit non-stormwater discharges through their storm sewers to waters of the United States, monitor their discharges, and implement TMDLs. These are separate, independent federal requirements that neither the Supreme Court in the *Department of Finance* decision nor the California Court of Appeal, Third Appellate District, in the *San Diego DOF Decision* analyzed.

ii. U.S. EPA Has Required Similar Provisions in Permits it Has Issued

The Supreme Court in *Department of Finance* observed that U.S. EPA-issued permits did not contain requirements to place trash receptacles at transit stops (a requirement of the 2001 Permit), and found that the absence of such conditions in EPA-issued permits "undermines the argument that the requirement was federally mandated."¹⁹¹ The Court's modifications to its original opinion underscore that determining what constitutes MEP is a case-specific, factual determination and the absence of similar conditions in U.S. EPA-issued permits is not fatal to the argument that a particular requirement is necessary to meet the federal standard.¹⁹² U.S. EPA

¹⁸⁹ *Id.*, at p. 767 ("The federal CWA broadly directed the board to issue permits...designed to reduce the pollutant discharges to the maximum extent practicable").

¹⁹⁰ *Department of Finance v. Commission on State Mandates* (2017) 18 Cal.App.5th 661.

¹⁹¹ *Department of Finance, supra*, 1 Cal.5th at p. 772.

¹⁹² The Court stated:

The opinion in this matter filed on August 29, 2016, and appearing in the California Official Reports at 1 Cal.5th 749, is modified as follows: On page 768 of the published opinion, a footnote is inserted at the end of the sentence that reads: "The board's legal authority to administer the CWA and its technical experience in water quality control would call on sister agencies as well as courts to defer to that finding." The new footnote, which is numbered as footnote 15, reads: "Of course, this finding would be case specific, based among other things on local factual circumstances." On page 771 of the published opinion, current footnote 15 is renumbered as footnote 16. On page 772 of the

(footnote continued on next page)

has, however, issued permits requiring either equivalent or substantially similar provisions to the contested provisions of this Permit.¹⁹³ If the State had not issued the Permit, the U.S. EPA would have done so. If the State had issued a permit that failed to meet federal standards, U.S. EPA could have objected to the permit, which effectively vetoes the permit and triggers U.S. EPA's obligation to issue the permit itself.¹⁹⁴ The inclusion of equivalent or substantially similar provisions by U.S. EPA in other permits demonstrates that the Los Angeles Water Board effectively administered federal requirements concerning permit requirements.

To the extent the provisions are more detailed or provide more specificity than past iterations of the Los Angeles County MS4 Permit, this is consistent with U.S. EPA's guidance that successive permits for the same MS4 must become more refined and detailed:

The EPA also expects stormwater permits to follow an iterative process whereby each successive permit becomes more refined, detailed, and expanded as needed, based on experience under the previous permit. See, 55 Fed. Reg. 47990, 48052 ("EPA anticipates that storm water management programs will evolve and mature over time."); 64 Fed. Reg. 67722, 68754 (Dec. 8, 1999 ("EPA envisions application of the MEP as an iterative process.") Interim Permitting Approach for Water Quality-Based Effluent Limitations in Stormwater Permits (Sept. 1, 1996) ("The interim permitting approach uses BMPs in first-round stormwater permits, and expanded or better-tailored BMPs in subsequent permits, where necessary, to provide for the attainment of water quality standards.")¹⁹⁵

The permit provisions are, as the Los Angeles Water Board concluded, federal mandates.

Even if the Commission concludes that some aspect of a challenged provision imposes requirements that exceed a federal mandate, any increased costs to implement those activities are *de minimis* and therefore not entitled to subvention.¹⁹⁶

2. Claimants Have Authority to Raise Fees for the Contested Provisions

Claimants must establish that they are required to use tax monies to pay for implementation of the contested provisions.¹⁹⁷ Subvention is not required if the costs can be reallocated or funded

published opinion, the word "fatally" is deleted from the sentence that reads: "The fact the EPA itself had issued permits in other cities, but did not include the trash receptacle condition, fatally undermines the argument that the requirement was federally mandate."

¹⁹³ See, State Water Board Order WQ 2015-0075, p. 14, citing to Modified NPDES Permit No. DC0000221 for the MS4 for the District of Columbia issued by U.S. EPA (2015 AR, SB-AR-013209). See also, U.S. EPA, Permit for District of Columbia Municipal Separate Storm Sewer System, Modified Permit No. DC0000221 (Oct. 7, 2011, mod. Nov. 9, 2012), p. 5 (2015 AR, SB-AR-014156) ("[The permittee must] [e]ffectively prohibit pollutants in stormwater discharges or other unauthorized discharges into the MS4 as necessary to comply with existing District of Columbia Water Quality Standards (DCWQS).")

through service charges, fees, assessments, or other means.¹⁹⁸ Claimants have not demonstrated that they are precluded from establishing or raising fees or lack another revenue source to pay for implementation of the contested provisions.¹⁹⁹

In the Commission's Statement of Decision concerning certain provisions of the 2001 Permit that were considered in *Department of Finance*, the Commission found that all but one of the challenged provisions issued by the Los Angeles Water Board did not qualify as unfunded state mandates as they did "not impose costs mandated by the state within the meaning of article XIII B, section 6, of the California Constitution because the claimants have fee authority (under Cal. Const. article XI, § 7) within the meaning of Government Code section 17556, subdivision (d), sufficient to pay for the activities in those parts of the permit."²⁰⁰ Although the Supreme Court acknowledged the Commission's finding, it did not address the fee issue but remanded for further proceedings. *Department of Finance* is thus inapplicable on this issue.

Claimants are not *required* to use taxes to pay for the costs of the programs, and can levy fees. Like the Department of Finance, the Water Boards believe that Claimants possess fee authority within the meaning of Government Code section 17566, subdivision (d), such that no reimbursement by the state is required. Such authority is undiminished by Propositions 218 or 26. Notably, Proposition 26 specifically excludes assessments and property-related fees imposed in accordance with Proposition 218 from the definition of taxes.²⁰¹

As an initial matter, Claimants have the ability to increase sewer fees or charges without voter approval to cover increased costs of implementing the 2012 Permit. Article XIII D, section 6, subdivision (c) of the California Constitution provides an exception to the voter approval requirements of Proposition 218 "for fees or charges for sewer, water, and refuse collection services." The Legislature has recently enacted two important pieces of legislation confirming that Claimants have fee authority without the need for voter approval.

First, through Assembly Bill 2043 (2014), effective January 1, 2015, the Legislature amended the definition of "water" for purposes of articles XIII C and XIII D to mean "water from any source."²⁰² In doing so, the Legislature stated that its act "is declaratory of existing law."²⁰³

¹⁹⁸ See Gov. Code, § 17556, subd. (d) (costs not mandated by the state when the local agency has "authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service"); *County of Los Angeles v. Commission on State Mandates*, *supra*, 110 Cal.App.4th at p. 1189 ("in order for a state mandate to be found, the local governmental entity must be required to expend the proceeds of its tax revenues"); *Redevelopment Agency v. Commission on State Mandates*, *supra*, 55 Cal.App.4th at p. 987 ("No state duty of subvention is triggered where the local agency is not required to expend its proceeds of taxes").

¹⁹⁹ Claimants must also demonstrate that the fees are more than *de minimis*. (*San Diego Unified School Dist.*, *supra*, 33 Cal.4th at p. 889 ["incidental procedural requirements, producing at most *de minimis* added cost, should be viewed as part and parcel of the underlying federal mandate, and hence nonreimbursable under Government Code, section 17556, subdivision (c)].) *Department of Finance* did not consider when a particular cost is *de minimis*. Except to the extent the Supreme Court affirmed prior holdings that *de minimis* costs do not create reimbursable mandates, *Department of Finance* does not apply to the Commission's determination on that issue.

²⁰⁰ *In re Test Claim on: Los Angeles Regional Water Quality Control Board Order No. 01-182, Case Nos. 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21* (July 31, 2009), p. 2.

²⁰¹ Cal. Const., art. XIII C, § 1, subd. (e)(7).

²⁰² Gov. Code, § 53750, subd. (n), amended by Assembly Bill 2043 (Stats. 2014, ch. 78, § 2).

²⁰³ Stats. 2014, ch. 78, § 1(c).

Second, through Senate Bill 231 (2017), effective January 1, 2018, the Legislature “reaffirm[ed] and reiterate[d]” that the definition of “sewer” for purposes of article XIII D includes:

systems, all real estate, fixtures, and personal property owned, controlled, operated, or managed in connection with or to facilitate sewage collection, treatment, or disposition for sanitary *or drainage* purposes, including lateral and connecting sewers, interceptors, trunk and outfall lines, sanitary sewage treatment or disposal plants or works, drains, conduits, outlets for *surface or storm waters*, and any and all other works, property, or structures necessary or convenient for the collection or disposal of sewage, industrial waste, *or surface or storm waters*.²⁰⁴

These legislative actions confirm that the Claimants have authority to raise fees, without voter approval, for costs related to their storm sewer systems. To the extent Claimants rely on *Howard Jarvis Taxpayers Ass’n v. City of Salinas* (2002) 98 Cal.App.4th 1351 as precluding the ability of a municipality to raise fees related to stormwater, that decision is no longer controlling. The Legislature has subsequently clarified the extent of sewers covered by the exception to voter approval requirements contained in Proposition 218.²⁰⁵ The Legislature thus clarified that Claimants have, and have always had, the ability to raise fees related to stormwater. The California Constitution requires the Commission to abide by these later-enacted statutory requirements unless and until a Court of Appeal finds them unconstitutional.²⁰⁶

Applying the vote-exception for fees confirmed by Assembly Bill 2043 and Senate Bill 231, a majority of property owners can protest and defeat a stormwater fee, but not with the result of creating a state mandate.

The Los Angeles County Flood Control District (LACFCD) also has specific fee authority. In 2010, through Assembly Bill 2554, the Legislature amended the Los Angeles County Flood Control Act to specifically authorize the LACFCD to impose a fee or charge, in compliance with article XIII D of the California Constitution, to pay the costs and expenses of carrying out projects and providing services to improve water quality and reduce stormwater and urban runoff pollution in the district.²⁰⁷ Formed in 1915, the LACFCD is a special act district that provides flood control and water quality services to 85 cities and most of the unincorporated area in Los Angeles County. The LACFCD is governed by the Los Angeles County Board of Supervisors. Any revenues from any fee or charge would be allocated as follows – 10% to the District for implementation and administration of water quality programs, 40% to Los Angeles County and to the cities within the

²⁰⁴ Gov. Code, § 53750, subd. (f), and § 53751, subd. (i), added by Senate Bill 231, Stats. 2017, ch. 536, § 2 (emphasis added). The Legislature noted the numerous authorities predating Proposition 218 that use this same definition, including: (1) Section 230.5 of the Public Utilities Code, added by Chapter 1109 of the Statutes of 1970; (2) Section 23010.3, added by Chapter 1193 of the Statutes of 1963; (3) The Street Improvement Act of 1913; (4) *L.A. County Flood Control Dist. v. Southern Cal. Edison Co.* (1958) 51 Cal.2d 331 (“no distinction has been made between sanitary sewers and storm drains or sewers”); (5) Many other cases where the term “sewer” has been used interchangeably to refer to both sanitary and storm sewers including, but not limited to, *County of Riverside v. Whitlock* (1972) 22 Cal.App.3d 863, *Ramseier v. Oakley Sanitary Dist.* (1961) 197 Cal.App.2d 722, and *Torson v. Fleming* (1928) 91 Cal.App. 168; and (6) Dictionary definitions of sewer, which courts have found to be an objective source for determining common or ordinary meaning, including Webster’s (1976), American Heritage (1969), and Oxford English Dictionary (1971).

²⁰⁵ Gov. Code, § 53751, subd. (f).

²⁰⁶ Cal. Const., art. III, § 3.5; *Lockyer v. City and County of San Francisco* (2004) 33 Cal.4th 1055, 1094.

²⁰⁷ Assembly Bill 2554, Stats. 2010, ch. 602.

district for water quality improvement programs, and 50% to nine watershed authority groups to implement collaborative water quality improvement projects. In issuing the 2012 Permit, the Los Angeles Water Board noted that this additional fee authority had been established and that such funding could be used “to initiate, plan, design, construct, implement, operate, maintain, and sustain projects and services to improve surface water quality and reduce storm water and non-storm water pollution in the LACFCD, which may directly support Permittees’ implementation of the requirements in this Order.”²⁰⁸

In addition, in 2017, through Assembly Bill 1180, the Legislature further authorized the LACFCD to levy a tax or impose a fee or charge, in compliance with applicable provisions of article XIII C or XIII D of the California Constitution, to pay the costs and expenses of carrying out projects and programs to increase stormwater capture and reduce stormwater and urban runoff pollution in the district.²⁰⁹ This additional authorization specified that projects funded by the revenues from the tax, fee, or charge may include projects providing multiple benefits that increase water supply, improve water quality, and, where appropriate, provide community enhancements. Like Assembly Bill 2554, revenues derived from any tax, fee, or charge imposed would be subject to specific allocations.

Health and Safety Code section 5471 and Public Resources Code section 40059, subdivision (a)(1), provide additional authority to charge fees for the costs associated with the contested provisions. Health and Safety Code section 5471, subdivision (a), gives Claimants fee authority for “services and facilities furnished...in connection with its water, sanitation, *storm drainage*, or sewerage system.”²¹⁰ Similarly, Public Resources Code section 40059, subdivision (a)(1), also confers fee authority on counties, cities, districts, or other local governmental agencies for “[a]spects of solid waste handling which are of local concern, including, but not limited to, frequency of collection, means of collection and transportation, level of services, charges and fees, and nature, location, and extent of providing solid waste handling services.”²¹¹

Claimants argue that certain Permit provisions are intended to improve overall water quality and benefit all persons within the jurisdiction and, therefore, it is impossible to develop a fee structure based on the benefits received or burdens imposed by prospective payors. But the Fact Sheet to the 2012 Permit amply demonstrates that numerous activities contribute to the pollutant loading from MS4s. Claimants have the ability to levy charges, fees, or assessments on these activities, independent of real property ownership.²¹² For example, inspection fees have been held not to be subject to Proposition 218.²¹³ The California Supreme Court has also validated the adoption of regulatory fees, providing they are not levied for unrelated revenue purposes.²¹⁴ It is

²⁰⁸ 2012 Permit, Attachment F (Fact Sheet), pp. F-17, F-160 (2015 AR, pp. SB-AR-013589, 013732).

²⁰⁹ Assembly Bill 1180, Stats, 2017, ch. 617.

²¹⁰ Health & Safety Code, § 5471, subd. (a) (emphasis added).

²¹¹ Pub. Resources Code, § 40059, subd. (a)(1).

²¹² For a general overview of funding mechanisms that have been employed by municipalities, see Black and Veatch, 2005 Stormwater Utility Survey, p. 2 (72% cited stormwater user fees as major [at least 90% of total income] revenue sources and the majority of utilities reported funding was adequate to meet all or most needs).

²¹³ See, e.g., *Apartment Ass’n of Los Angeles County, Inc. v. City of Los Angeles* (2001) 24 Cal.4th 830, 842, 844-45 (upholding inspection fees associated with renting property). A fee for residential inspections to ensure compliance with MS4 Permit directives (e.g., compliance with laws related to conducting business) would be similar.

²¹⁴ See *Sinclair Paint Co. v. State Bd. Of Equalization* (1997) 15 Cal.4th 866, 876-77. See also *Cal. Farm Bur. Federation v. State Water Resources Control Bd.* (2011) 51 Cal.4th 421, 437-438; *California Association of Professional* (footnote continued on next page)

reasonable to collect fees from developers for the costs associated with implementing certain permit provisions. Similarly, the costs of trash controls can be allocated to businesses responsible for generating high trash areas. Asking these entities to bear the costs directly related to their activities “is comparable in character to similar police power measures imposing fees to defray the actual or anticipated adverse effects of various business operations.”²¹⁵

The question before the Commission is whether Claimants have the authority to impose fees or assessments, not whether the actions to impose a fee or assessment will be successful. Claimants also have authority to impose property-related fees or assessments under their police power to pay for the costs of complying with the 2012 Permit, whether or not it is politically feasible to impose such fees via voter approval as may be required by Proposition 218. Permittees’ police power is “broad enough to include mandatory remedial measures to mitigate the *past, present or future* adverse impact of the fee payer’s operations” in situations, like those present here, where there is a causal connection or nexus between the adverse effects and the fee payer’s activities.²¹⁶ Local governments can choose not to submit a fee to the voters or voters can reject a proposed fee. Claimants provide no evidence whatsoever that it attempted to raise fees, but was prevented from doing so. The authority of a local agency to defray the cost of a program without raising taxes indicates that a program does not entail a cost subject to subvention. A municipality’s failure even to attempt the Proposition 218 process does not turn permit costs into state reimbursable mandates.²¹⁷ “Claimant can choose not to require” or even not to pursue “these fees, but not at the State’s expense.”²¹⁸

Moreover, Claimants’ arguments fundamentally ignore the fact that municipalities can and do impose fees on their residents and businesses to fund aspects of their MS4 programs. For example, the cities of Culver City, Alameda, Palo Alto, San Clemente, San Jose, and Santa Cruz have all either adopted new fees for implementation of their programs, raised existing stormwater fees, or adopted fee assessments.²¹⁹ Whether circumstances make it impractical to assess fees is not relevant to the inquiry (nor is the contention even factually correct).²²⁰

Scientists v. Department of Fish and Game (2000) 79 Cal.App.4th 935, 945 (distinguishing regulatory fees from taxes); *Schmeer v. County of Los Angeles* (2013) 213 Cal.App.4th 1310, 1326 (finding plastic bag charge retained by businesses not to be a tax).

²¹⁵ *Sinclair Paint Co., supra*, 15 Cal.4th at p. 877.

²¹⁶ *Id.*, at p. 877-878. Examples of non-tax fees within the police power of municipalities to impose include: single-use carryout bag ordinances charging fee for use of plastic or paper bags; fines for violations of prohibitions on use of foam/polystyrene food containers; hazardous waste disposal fees for businesses; and vehicle registration fees used to fund combined road safety/green infrastructure projects.

²¹⁷ *Connell v. Sup. Ct.* (1997) 59 Cal.App.4th 382, 398 (where statute on its face authorized water districts to levy fees sufficient to pay the costs associated with a regulatory change, there was no right to reimbursement); *Clovis Unified School Dist. v. Chiang* (2010) 188 Cal.App.4th 794, 812 (“to the extent a local agency... ‘has the authority’ to charge for the mandated program or increased level of service, that charge cannot be recovered as a state mandated cost”).

²¹⁸ *Clovis Unified Sch. Dist., supra*, 188 Cal.App.4th at p. 812.

²¹⁹ See documentation of City of Alameda Storm Water Fee Ordinance, City of Palo Alto Storm Drainage Fee Ordinance, and storm water fees authorized in Cities of Culver City, San Clemente, San Jose and Santa Cruz, included as attachments to this response.

²²⁰ *Connell, supra*, 59 Cal.App.4th at p. 398 (where statute on its face authorized water districts to levy fees sufficient to pay the costs associated with a regulatory change, there was no right to reimbursement); *Clovis Unified School Dist., supra*, 188 Cal.App.4th at p. 812 (“to the extent a local agency... ‘has the authority’ to charge for the mandated program or increased level of service, that charge cannot be recovered as a state mandated cost”). Moreover, Claimants have not demonstrated that properly designed engineering report or study could not comply with Proposition 218’s requirements to impose upon a person or property the particular fee at issue, which does not exceed the proportional

(footnote continued on next page)

Finally, if the Commission were to conclude the 2012 Permit imposes reimbursable mandated costs, Claimants acknowledged receiving potentially offsetting revenue, including “portions of a small grant for implementation of tree box low impact development Best Management Practices.”²²¹ This grant, and others received by Claimants since filing the Test Claims, should reduce mandated costs and be identified by Claimants and the Commission.

3. Participation in a Watershed Management Program (WMP) or Enhanced Watershed Management Program (EWMP)

i. Costs Incurred Pursuant to Part VI.C (Watershed Management Programs) are not Subject to the Subvention of Funds

Permittees can elect to implement the requirements of the 2012 Permit by participating in an optional alternative compliance pathway whereby it develops a WMP or EWMP.²²² Participation in a WMP or EWMP allows Permittees, individually or collectively, the flexibility to implement requirements of the permit on a watershed scale by proposing customized strategies, control measures, and BMPs for Part III.A.4 (Prohibitions – Non-Storm Water Discharges: Permittee Requirements) and VI.D (Minimum Control Measures) except the Planning and Land Development Program.²²³ The Fact Sheet to the 2012 Permit states that “[t]his watershed management paradigm is consistent with federal regulations that support the development of permit conditions, as well as the implementation of storm water management programs, at a watershed scale (40 CFR §§ 122.26(a)(3)(ii), 122.26(a)(3)(v), and 122.26(d)(2)(iv)).”²²⁴ One of the reasons for including the WMP or EWMP approach in the permit is that “[a] watershed based structure for permit implementation is consistent with TMDLs developed by the Los Angeles Water Board and USEPA, which are established at a watershed or subwatershed scale...Many of the Permittees regulated by this Order have already begun collaborating on a watershed scale to develop monitoring and implementation plans required by TMDLs.”²²⁵ Furthermore, the Fact Sheet states that “a watershed based structure comports with the recent amendment to the Los Angeles County Flood Control Act (Assembly Bill 2554 in 2010), which allows the LACFCD to assess a parcel tax for storm water and clean water programs. Funding is subject to voter approval in accordance with Proposition 218.”²²⁶

However, participation in a WMP or EWMP is not a mandate for any Permittee. It is voluntary. The 2012 Permit could not be more clear on this fact – “Participation in a Watershed Management Program is voluntary....”²²⁷ Therefore, costs incurred by Claimants or other Permittees that elect to develop and implement a WMP or EWMP, including costs for meetings, staff time, work by

cost of the service attributable to the parcel in question. (Cal. Const. art. XIII D, § 6, subd. (b)(3).) The nature of the fee at issue is what must be examined.

consultants, and submittals to the Los Angeles Water Board are not subject to a subvention of funds.

Claimants provide examples of costs incurred including “staff time analyzing and deciding whether to implement Watershed Management Programs or Enhanced Watershed Management Programs...staff time expended resulted in Letters of Intent to the LARWQCB in June 2013.”²²⁸ A Letter of Intent (LOI) is alternatively termed Notice of Intent (NOI) in the permit. Part VI.C.4.b of the 2012 Permit specifies the information required in a notification to the Los Angeles Water Board for Permittees electing to develop a WMP or EWMP.²²⁹ However, this notification provision does not require Permittees to identify Minimum Control Measures (MCMs) to propose for customization nor provide any new information on how they will comply with TMDLs and discharge prohibitions. Therefore, any additional information provided in the LOIs/NOIs that were beyond the requirements of Part VI.C.4.b of the 2012 Permit were at the Permittees’ discretion. Costs requested for subvention of funds should be evaluated accordingly.

Claimants also request a subvention of funds for costs incurred in 2012-2013 and 2013-2014 fiscal year.²³⁰ Note that Part VI.C.4.d.i-iii of the 2012 Permit requires Permittees electing to develop a WMP or EWMP to continue implementing their existing stormwater management program under the 2001 Permit prior to the approval of their WMP or EWMP including: (i) the six Minimum Control Measures (MCMs) per 40 CFR section 122.26(d)(2)(iv); (ii) watershed control measures to eliminate non-stormwater discharges through the MS4 that are a source of pollutants to receiving waters per CWA § 402(p)(3)(B)(ii); and (iii) watershed control measures from existing TMDL implementation plans to ensure compliance with receiving water limitations and water quality-based effluent limitations.²³¹ Note that all of the Claimants to these Test Claims opted for participation in a WMP or EWMP and therefore, were required to implement their existing stormwater management program as aforementioned.²³² Claimants’ existing stormwater management program are not “new programs” or a “higher level of service.” Therefore, any costs incurred that are within the scope of Part VI.C.4.d of the 2012 Permit pertaining to the Claimants’ existing stormwater management program required in the 2001 are not subject to subvention.

Furthermore, the California Watershed Improvement Act of 2009 authorizes MS4 permittees statewide to develop and implement voluntary watershed improvement plans.²³³ State Water Board Order WQ 2015-0075, which upheld the 2012 Permit with some modifications, clarifies that “[t]he California Watershed Improvement Act of 2009 grants authority to local government permittees regulated by an MS4 permit to develop and implement watershed improvement plans, but does not limit the authority of a regional water board to impose terms related to watershed management in an MS4 permit. Further, the terms of the WMPs/EWMPs are largely consistent

²²⁸ Test Claim 13-TC-01 p. 3 and 13-TC-02, p. 4.

²³² See Watershed Management Program (WMP) and Enhanced Watershed Management Program (EWMP) Approval Letters for WMP Groups Los Angeles River Upper Reach 2, Lower San Gabriel River, Los Cerritos Channel, Lower Los Angeles River, Santa Monica Bay Jurisdiction 7, Alamitos Bay / Los Cerritos Channel and EWMP Groups Upper Santa Clara River, Upper Los Angeles River, Rio Hondo / San Gabriel River, Malibu Creek, Upper San Gabriel River, Marina del Rey, Ballona Creek, Dominguez Channel, Santa Monica Bay Jurisdictions 2 & 3, North Santa Monica Bay, Palos Verdes Peninsula, and Beach Cities.

²³³ Wat. Code, §§ 16100 to 16104.

with the watershed improvement plans authorized by the Act, so a permittee can comply with the Los Angeles MS4 Order while also using the authority provided by the California Watershed Improvement Act of 2009 if it so chooses.”²³⁴ Additionally, Permittees have the authority to impose fees “on activities that generate or contribute to runoff, stormwater, or surface runoff pollution, to pay the costs of the preparation of a watershed improvement plan, and the implementation of a watershed improvement plan” if certain requirements per the California Watershed Improvement Act of 2009 are met.²³⁵ Therefore, costs to develop and/or implement a WMP or EWMP, which falls under the category of a watershed improvement plan are not subject to subvention.

For all these reasons discussed above, the Commission should find that Part VI.C (Watershed Management Programs) of the 2012 Permit is not subject to subvention.

ii. Costs Incurred Pursuant to Parts III.A.4, VI.D.4 through VI.D.6, and VI.D.8 through VI.10 are not Subject to the Subvention of Funds for Claimants Participating in a WMP or EWMP

As noted above, by participating in a WMP or EWMP, Permittees may customize strategies, control measures, and BMPs for Part III.A.4 (Prohibitions – Non-Storm Water Discharges: Permittee Requirements) and VI.D (Minimum Control Measures) except the Planning and Land Development Program.²³⁶ Claimants attempt to minimize the discretion provided by Part VI.C “Watershed Management Programs” (WMP provisions) of the 2012 Permit with the objective of upholding their argument that the specificity of Parts III.A.4, VI.D.4 through VI.D.6, and VI.D.8 through VI.10 constitute a state mandate. They attempt to argue that, by specifying the means of compliance, the requirements of the aforementioned parts are the result of a “true choice” by the Los Angeles Water Board, i.e., that the Board did not have to impose these specific requirements.

Claimants allege that the while the 2012 Permit's WMP/EWMP provisions (Part VI.C.1.a-b²³⁷) allow Permittees to customize the requirements in Part VI.D. (known as “minimum control measures” or “MCMs”) through development of a WMP or EWMP, the WMP/EWMP “must be consistent with those MCM control measures set forth in Permit Part VI.D” and... “[t]he discretion of permittees participating in a WMP or EWMP is thus constrained by the requirements of the MCMs.”²³⁸

However, the very purpose of the WMP provisions is “to allow Permittees the flexibility to develop Watershed Management Programs to implement the requirements of this Order on a watershed scale through customized strategies, control measures, and BMPs.”²³⁹ Part VI.C.1.b states that this allowance for customization includes the contested provisions of Part VI.D.²⁴⁰ The WMP provisions only require Permittees to develop and implement programs required by federal regulations. Part VI.C.5.b.iv.(1)(a) states, “Permittees shall assess the minimum control measures

²³⁷ *Id.*, Part VI.C.1.a-b, pp. 47-48 (2015 AR, pp. SB-AR-013340-341).

²³⁸ Test Claim 13-TC-01, p. 9 and 13-TC-02, p. 10.

²³⁹ 2012 Permit, Part VI.C.1.a, p. 47 (2015 AR, pp. SB-AR-013340 - 341).

²⁴⁰ *Id.*, Part VI.C.1.b, p. 48 (2015 AR, p. SB-AR-013341).

(MCMs) as defined in Part VI.D.4 to Part VI.D.10 of this Order to identify opportunities for focusing resources on the high priority issues in each watershed...”²⁴¹ Part VI.C.5.b.iv.(1)(b) immediately follows with, “[a]t a minimum, the Watershed Management Program shall include management programs consistent with 40 CFR section 122.26(d)(2)(iv)(A)-(D).”²⁴² Part VI.C.5.b.iv.(1)(d) further states, “[s]uch customized actions, once approved as part of the Watershed Management Program, shall replace in part or in whole the requirements in Parts VI.D.4, VI.D.5, VI.D.6 and VI.D.8 to VI.D.10 for participating Permittees” (emphasis added).²⁴³

This is reiterated in Part VI.D.1.a, which states “[e]ach Permittee ... may in lieu of the requirements in Parts VI.D.4 through VI.D.10 implement customized actions within each of these general categories of control measures as set forth in an approved Watershed Management Program per Part VI.C. Implementation shall be consistent with the requirements of 40 CFR § 122.26(d)(2)(iv)” (emphasis added).²⁴⁴ The Fact Sheet states that the WMP or EWMP approach “will provide permittees with the flexibility to prioritize and customize control measures to address the water quality issues specific to the watershed management area (WMA), consistent with federal regulations (40 CFR § 122.26(d)(2)(iv)).”²⁴⁵ The Claimants’ allegation that the Permit’s requirement to provide justification for eliminating a control measure in a WMP or EWMP renders the provision a state mandate is without merit. U.S. EPA, in a comment letter on the Los Angeles Water Board’s tentative permit, asked the Board to revise the WMP provisions to include language requiring Permittees to provide justification if proposing to eliminate a control measure in Parts VI.D.4, VI.D.5, VI.D.6, VI.D.8, VI.D.9 or VI.D.10, indicating that U.S. EPA considered these requirements necessary based on federal regulations in the absence of justification for why the requirement was not applicable to the Permittee.²⁴⁶

Thus, where the Claimants participating in a WMP or EWMP have not proposed alternative program elements and activities to achieve the intent of Part VI.D (excluding VI.D.7), then they have elected to implement these requirements to meet the federal requirements of 40 CFR § 122.26(d)(2)(iv). As previously noted, all Claimants are participating in an approved WMP or EWMP. Therefore, their contentions that Parts VI.D.4, VI.D.5, VI.D.6, VI.D.8 and VI.D.9 of the 2012 Permit are state mandates are incorrect.

Similarly, Claimants’ contentions that requirements in Part III.A.4 are state mandates are also incorrect for the same reasons. As noted above, Part VI.C.1.a-b allows Permittees to customize strategies, control measures, and BMPs to implement the requirements of the 2012 Permit, including Part III.A.4.²⁴⁷ Part VI.C.5.b.iv.(2) provides Permittees with broad discretion through WMPs or EWMPs to select the strategies, control measures, and/or BMPs they will implement to consistent with Part III.A, which is the section of the 2012 Permit that addresses the federal requirement to effectively eliminate non-stormwater discharges of pollutants.²⁴⁸

²⁴¹ *Id.*, Part VI.C.5.b.iv.(1)(a), p. 63 (2015 AR, p. SB-AR-013356).

²⁴² *Id.*, Part VI.C.5.b.iv.(1)(b), p. 63 (2015 AR, p. SB-AR-013356).

²⁴³ *Id.*, Part VI.C.5.b.iv.(1)(d), p. 63 (2015 AR, p. SB-AR-013356).

²⁴⁴ *Id.*, Part VI.D.1.a, p. 70 (2015 AR, p. SB-AR-013363).

²⁴⁵ *Id.*, Attachment F (Fact Sheet), Part VI.B, p. F-43 (2015 AR, p. SB-AR-013615).

²⁴⁶ U.S. EPA. *Re: Draft MS4 Permit for LA County (NPDES Permit No. CAS004001)*. July 23, 2012. p. 6 (2012 AR, p. RB-AR17764).

²⁴⁷ 2012 Permit, Part VI.C.1.a-b, pp. 47-48 (2015 AR, pp. SB-013340-341).

²⁴⁸ CWA § 402(p)(3)(B)(ii); 40 C.F.R. § 122.26(d)(2)(iv)(B).

For all these reasons discussed above, the Commission should find that costs incurred pursuant to Parts III.A.4, VI.D.4 through VI.D.6, and VI.D.8 through VI.10 are not subject to subvention for Claimants participating in a WMP or EWMP.

V. ARGUMENT: SPECIFIC RESPONSES TO CHALLENGED PROVISIONS

While the general discussion above in Section IV explains why it is appropriate for the Commission to reject the Test Claims in their entirety, the following elaboration on specific challenges provides additional justification in support of rejection of the Test Claims.

In their Test Claims, Claimants make many general references to parts of the 2012 Permit, but then only discuss certain sub-parts and provisions contained therein. Please note that the Water Board are only responding to the specific provisions of the sub-parts referenced in the Test Claims.

Due to the similarity of contentions raised in Test Claims 13-TC-01 and 13-TC-02, both Test Claims are addressed in the specific responses below. For ease of reference, the specific responses below generally follow the organizational format of Test Claim 13-TC-01.

A. TMDL Requirements

Part VI.E.1.c requires that Claimants comply with applicable water quality-based effluent limitations (WQBELs) and/or receiving water limitations (RWLs) necessary to implement 33 federally-approved or federally-established TMDLs, which are set forth in Attachments K through R.²⁴⁹ Attachment K identifies the Permittees subject to each TMDL.²⁵⁰ Attachments L through Q set forth the specific WQBELs and/or RWLs and the compliance deadlines for each TMDL applicable to Claimants.²⁵¹ Part VI.B and Attachment E, Parts II.E.1-3, V, VI.A.1.b(iii-iv), VI.B.2, VI.C.1.a, VI.D.1.a, VIII.B.1.b(ii), IX.A.5, IX.C.1.a, IX.E.1.a-b, IX.G.1.b, and IX.G.2 set forth monitoring provisions. These provisions are addressed in two subgroups, below.

Claimants assert that, with the exception of the dry weather requirements of the Marina del Rey bacteria TMDL, all TMDL requirements in the 2012 Permit, including monitoring requirements with respect thereto, are state mandated new programs or higher levels of service. They also argue that federal law did not compel the Los Angeles Water Board to include these provisions in the 2012 Permit, but instead included them as a matter of discretion.²⁵² As set forth below, Claimants are wrong and their arguments ignore federal law.

1. Compliance with TMDL-based Water Quality-Based Effluent Limitations and Receiving Water Limitations (Part VI.E.1.c and Attachments K-Q)

The TMDL-based limitations are necessary to implement federal law, do not constitute a new program or higher level of service, and are not unique to local government.

²⁵⁰ *Id.*, Part VI.E.1.b (2015 AR, p. SB-AR-013333); *Id.*, Attachment K (2015 AR, pp. SB-AR-013763 - 780)

²⁵¹ *Id.*, Attachments L through Q (2015 AR, pp. SB-AR-013781 – 860).

²⁵² Test Claim 13-TC-01, p. 12 and 13-TC-02, p. 13.

The Provisions Are Necessary to Implement Federal Law

As discussed above, section 303(d) of the CWA requires that the Water Boards identify impaired water bodies that do not meet water quality standards after applying required technology-based effluent limitations. Specifically, the states must identify those waters for which technology-based effluent limitations are not stringent enough to implement any water quality standard applicable to such waters and establish a priority ranking for such waters.²⁵³ For those waters identified as not meeting water quality standards, each state must establish the TMDL at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety.²⁵⁴ Each state is required to develop a list that identifies and establishes a priority ranking for those waters requiring TMDLs.²⁵⁵ The list is known as the CWA Section 303(d) List of Water Quality Limited Segments or more commonly, the 303(d) List. For the specific purpose of developing information, states are also required to estimate TMDLs for all other waters that are not identified on the 303(d) List.²⁵⁶

TMDLs are developed by either the regional water boards or by U.S. EPA in response to section 303(d) listings of impaired water bodies. A TMDL established by a regional water board must be approved by U.S. EPA before it becomes effective.²⁵⁷ A TMDL is defined as the sum of the individual wasteload allocations²⁵⁸ for point sources of pollution, the load allocations for nonpoint sources of pollution, and the contribution of background to the pollution, and represents the maximum amount of a pollutant that a water body may receive and still achieve water quality standards.²⁵⁹ TMDLs developed by regional water boards include implementation plans, which is essentially a road map for how the regional water board anticipates that the allocations will be met and by when. Many TMDLs issued by the Los Angeles Water Board applicable to MS4 discharges include implementation schedules spanning decades. TMDLs established by regional water boards are typically incorporated into the regional water boards' water quality control plan.²⁶⁰ Notably, TMDLs established by U.S. EPA do not include implementation plans or schedules. Most TMDLs are not self-executing, but instead rely upon subsequently issued permits to impose requirements on dischargers that implement the TMDL's wasteload allocations.²⁶¹

Once a TMDL is approved or established by U.S. EPA, any NPDES permit, not just MS4 permits, must include water quality-based effluent limitations "consistent with the assumptions and

²⁵³ CWA § 303(d)(1)(A).

²⁵⁴ *Id.*, § 303(d)(1)(C).

²⁵⁵ 40 C.F.R. § 130.7(b)(1).

²⁵⁶ CWA § 303(d)(3).

²⁵⁷ *Id.*, § 303(d)(2).

²⁵⁸ "Wasteload allocation" is defined as "[t]he portion of a receiving water's loading capacity that is allocated to one if its existing or future point sources of pollution. WLAs constitute a type of water quality-based effluent limitation." (40 C.F.R. § 130.2(h)).

²⁵⁹ *Id.*, § 130.2(i).

²⁶⁰ *Id.*, §§ 130.6(c)(1) and 130.7. The State is required to incorporate, or reference, the TMDLs in the State Water Quality Management Plan. The Los Angeles Water Board's Water Quality Control Plan for the Los Angeles Region ("Basin Plan") serves as the State Water Quality Management Plan for the Los Angeles Region.

²⁶¹ *See, e.g.,* Wat. Code, §§ 13350 and 13385 (boards have no authority to take enforcement for violations of water quality control plans, other than prohibitions).

requirements of any available wasteload allocations.”²⁶² Therefore, the federal NPDES regulations provide an alternative and independent federal authority for the TMDL-derived effluent limitations.

Based on this independent federal requirement, the Los Angeles Water Board determined it was necessary to include provisions consistent with the assumptions and requirements of applicable WLAs from 33 federally-approved or federally-established TMDLs.²⁶³ The Board made specific findings in relation to incorporation of these TMDL requirements in the 2012 Permit, including but not limited to:

- “The Regional Water Board and USEPA have each established TMDLs to address many of these water quality impairments. Pursuant to CWA section 402(p)(B)(3)(iii) and 40 CFR section 122.44(d)(1)(vii)(B), this Order includes requirements that are consistent with and implement WLAs that are assigned to discharges from the Los Angeles County MS4 from 33 State adopted and USEPA established TMDLs. This Order requires Permittees to comply with the TMDL Provisions in Part VI.E and Attachments L through R, which are consistent with the assumptions and requirements of the TMDL WLAs assigned to discharges from the Los Angeles County MS4.”²⁶⁴
- “Part VI.E of this Order includes provisions that are designed to assure that Permittees achieve WLAs and meet other requirements of TMDLs covering receiving waters impacted by the Permittees’ MS4 discharges.”²⁶⁵
- “In this Order, WQBELs are included where the Regional Water Board has determined that discharges from the MS4 have the reasonable potential to cause or contribute to an excursion above water quality standards. Reasonable potential can be demonstrated in several ways, one of which is through the TMDL development process. Where a point source is assigned a WLA in a TMDL, the analysis conducted in the development of the TMDL provides the basis for the Regional Water Board’s determination that the discharge has the reasonable potential to cause or contribute to an exceedance of water quality standards in the receiving water. This approach is affirmed in USEPA’s Permit Writer’s Manual, which states, “[w]here there is a pollutant with a WLA from a TMDL, a permit writer

²⁶² 40 C.F.R. § 122.44(d)(1)(vii)(B). This provision states that, “When developing water quality-based effluent limits under this paragraph the permitting authority shall ensure that... (B) Effluent limits developed to protect a narrative water quality criterion, a numeric water quality criterion, *or both*, are consistent with the assumptions and requirements of any available wasteload allocation for the discharge prepared by the State and approved by EPA pursuant to 40 CFR 130.7.” (emphasis added). 40 C.F.R. Part 30, which includes section 130.7, establishes policies and program requirements for water quality planning, management and implementation under several sections of the CWA, including Section 303, and 40 C.F.R. § 130.7 addresses the process for identifying and establishing WLAs and TMDLs for impaired waterbodies.

²⁶³ The Los Angeles Water Board also provided detailed descriptions of the specific water body impairments and the TMDLs associated with those impairments. See generally 2012 Permit, Attachment F (Fact Sheet), Part VI.D, pp. F-89 to F-102 (2015 AR, pp. SB-AR-013661 – 674).

²⁶⁴ 2012 Permit, Part II.K.1, p. 22 (2015 AR, p. SB-AR-013315).

²⁶⁵ *Id.*, Part IV.E.1.a, p. 144 (2015 AR, p. SB-AR-013437).

must develop WQBELs.” Therefore, WQBELs are included in this Order for all pollutants for which a WLA is assigned to MS4 discharges.”²⁶⁶

- “[T]he provisions of this Order to implement total maximum daily loads (TMDLs) are federal mandates. The Clean Water Act requires TMDLs to be developed for water bodies that do not meet federal water quality standards. (33 U.S.C. § 1313(d).) Once the USEPA or a state establishes or adopts a TMDL, federal law requires that permits must contain effluent limitations consistent with the assumptions and requirements of any applicable waste load allocation in a TMDL. (40 CFR § 122.44(d)(1)(vii)(B).)”²⁶⁷

These findings are entitled to deference under *Department of Finance*.²⁶⁸

Claimants nevertheless assert that “federal stormwater regulations do not require municipal stormwater permits to contain TMDL provisions” in the 2012 Permit and that including them was done at the Los Angeles Water board’s discretion. As support for their assertion, they further argue that because “MS4 permits are not required to contain provisions to comply with water quality standards, TMDL wasteload allocations intended to achieve such standards are not ‘applicable’ as that term is used in 40 C.F.R. § 122.44(d)(1)(vii)(B).”²⁶⁹ Claimants misinterpret this federal regulation. The regulation cited by Claimants requires that all NPDES permits (which include MS4 Permits) include conditions consistent with the assumptions and requirements of TMDL wasteload applications “*when applicable*.” The proper reading of the phrase “when applicable” in this context is that inclusion of such conditions is limited to those permits with identified sources of discharges that may contribute to an impairment in the affected receiving waters. As noted above, the Los Angeles Water Board has specifically “determined that discharges from the MS4 have the reasonable potential to cause or contribute to an excursion above water quality standards” through the development of the TMDLs.²⁷⁰ In any case, as a practical matter, if impairments exist in receiving waters to which an MS4 discharges, the MS4 is responsible for complying with water quality standards whether or not there is a TMDL. This view is also consistent with U.S. EPA’s interpretation of its regulations in its 2014 TMDL Memorandum in which U.S. EPA clearly contemplates that NPDES permits, inclusive of stormwater permits – municipal, industrial and construction – shall “contain effluent limits and conditions consistent with the assumptions and requirements of the WLAs in the TMDL. See 40 CFR § 122.44(d)(1)(vii)(B).”²⁷¹ Nowhere does U.S. EPA state or even imply that this is contingent on some type of finding of applicability. Thus, even U.S. EPA, who drafted the regulation, does not agree with Claimants and U.S. EPA’s interpretation of its own regulation is entitled to deference.

²⁷⁰ *Id.*, Attachment F (Fact Sheet), Part IV.C, p. F-35 (2015 AR, p. SB-AR-013607) (citing 40 C.F.R. § 122.44, subds. (d)(1)(i)-(iii) and (d)(1)(vii)(B)).

²⁷¹ U.S. EPA Memorandum, Revisions to the November 22, 2002 Memorandum “Establishing Total Maximum Daily Load (TMDL) Wasteload Allocations (WLAs) for Storm Water Sources and NPDES Permit Requirements Based on Those WLAs (Nov. 26, 2014), p. 6 (2015 AR, p. SB-AR-014645).

Notwithstanding the above, it is important to note that the State Water Board has required that all MS4 permits in California require compliance with water quality standards. As discussed above, in Order WQ 99-05, the State Water Board directed that specific receiving water limitations language be included in all MS4 permits requiring compliance with water quality standards.²⁷² The language was initially developed by U.S. EPA after it objected to receiving water limitations in two regional water board permits that effectively provided a safe harbor from enforcement during iterative process implementation. The State Water Board's precedential order was issued in 1999 and the 2001 Permit reflected that required receiving water limitations language. Thus, since MS4 permits in California *are* required to contain provisions to comply with water quality standards, TMDL wasteload allocations intended to achieve such standards are clearly "applicable" under 40 C.F.R. § 122.44(d)(1)(vii)(B).

Based on the above, it is clear that the Los Angeles Water Board had no "true choice" in implementing the TMDL requirements in the 2012 Permit as it was *required* by 40 C.F.R. section 122.44(d)(1)(vii)(B).²⁷³ The Board was required to include the TMDL-related provisions that would result in attainment of the wasteload allocations within the timeframes established in the TMDLs.

Even if the Los Angeles Water Board was required to include TMDL requirements in the 2012 Permit, Claimants next assert that neither the CWA nor its implementing regulations compelled the Board to reflect TMDL requirements as *numeric* WQBELs.²⁷⁴ Claimants appear to argue that inclusion of numeric WQBELs exceeds federal law. The Water Boards disagree that inclusion of numeric WQBELs exceeds federal law where the Los Angeles Water Board determined that they are necessary to assure compliance with the federal water quality standards in the receiving waters.²⁷⁵

For context, it is important to note that numeric effluent limitations were only included in the 2012 for state-adopted TMDLs and not TMDLs established by U.S. EPA. The 2012 Permit requires Permittees subject to the wasteload allocations in U.S. EPA-established TMDLs to propose and implement BMPs that will be effective in achieving compliance with the wasteload allocations.²⁷⁶ In addition, for state-adopted TMDLs where numeric effluent limitations were included in the 2012 Permit, Permittees may demonstrate compliance with those limitations by implementing an approved WMP or EWMP.²⁷⁷

Having been required by federal regulations to include TMDL-based WQBELs in the 2012 Permit, federal law authorizes the Los Angeles Water Board, as the permitting authority, to exercise its discretion in expressing the WQBELs either in numeric form (i.e., numeric effluent limitations) or

²⁷² State Water Board Order WQ 99-05 (2015 AR, pp. SB-AR-014867 - 70).

²⁷³ See *Department of Finance*, *supra*, 1 Cal.5th at p. 765.

²⁷⁴ Test Claim 13-TC-01, pp. 13-14 and 13-TC-02, pp. 14-15.

²⁷⁵ In addition, the numeric effluent limitations for dry weather discharges also are consistent with the independent federal prohibition on non-storm water discharges discussed above. Also, the TMDL compliance schedules afford more time to comply than Claimants would otherwise have.

²⁷⁶ 2012 Permit, Part VI.E.3, pp. 148-149 (2015 AR, pp. SB-AR-013441 – 442).

²⁷⁷ *Id.*, Parts VI.E.2.d.i.(4) and VI.E.2.e, pp. 146-148 (2015 AR, pp. 013439 - 441).

in narrative form (i.e., BMPs).²⁷⁸ But the permitting authority *must* choose one of these options. Neither the Clean Water Act nor its implementing regulations specify how WQBELs must be expressed in MS4 permits. Both numeric and narrative limitations are allowed and neither one is more stringent than the other.²⁷⁹ BMPs are allowed for the control of stormwater discharges, when numeric effluent limitations are infeasible, or when the practices are reasonable necessary to achieve effluent limitations and standards to carry out the purposes and intent of the CWA.²⁸⁰ They are simply two sides of the same coin.

Claimants refer to a U.S. EPA guidance memorandum issued on November 22, 2002 as purported support for their assertion that it was infeasible or inappropriate to include numeric limitations in the 2012 Permit. But Claimants utterly ignore that U.S. EPA has updated this guidance. On November 12, 2010, U.S. EPA revised its 2002 memorandum concerning inclusion of effluent limitations in MS4 permits to implement TMDL wasteload allocations. Noting that the expectations expressed in its 2002 memorandum “have changed as the stormwater permit program has matured,” U.S. EPA stated “[w]here the NPDES authority determines that MS4 discharges have the reasonable potential to cause or contribute to a water quality standard excursion, EPA recommends that, where feasible, the NPDES permitting authority exercise its discretion to include numeric effluent limitations as necessary to meet water quality standards.”²⁸¹ This was the version of the guidance memorandum that was in effect when the Los Angeles Water Board issued the 2012 Permit and when Claimants filed these Test Claims.

On November 16, 2014, U.S. EPA again revised aspects of its 2002 guidance memorandum and replaced the 2010 memorandum. U.S. EPA stated that “[w]here the NPDES authority determines that MS4 discharges have the reasonable potential to cause or contribute to a water quality standard excursion, EPA recommends that the NPDES permitting authority exercise its discretion to include clear specific, and measurable permit requirements, and, where feasible, numeric effluent limitations[] as necessary to meet water quality standards.”²⁸² U.S. EPA recognizes permitting authorities have discretion in how to express the requirements to meet the federal standards, but the determination “should be based on an analysis of the specific facts and

²⁷⁸ CWA § 402(p)(3)(B)(iii) (MS4 permits “shall require controls to reduce the discharge of pollutants to the maximum extent practicable ... and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.”); see also *Defenders of Wildlife, supra*, 191 F.3d at 1166.

²⁷⁹ U.S. EPA. Memorandum, *Revisions to the November 22, 2002 Memorandum “Establishing Total Maximum Daily Load (TMDL) Wasteload Allocations (WLAs) for Storm Water Sources and NPDES Permit Requirements Based on Those WLAs,”* (Nov. 26, 2014), p. 6. (2015 AR, p. SB-AR-014645) (noting that WQBELs “could take the form of a numeric limit, or of a measurable, objective BMP-based limit that is projected to achieve the WLA”).

²⁸⁰ 40 C.F.R. § 122.44(k)

²⁸¹ U.S. EPA. *Revisions to the November 22, 2002 Memorandum “Establishing Total Maximum Daily Load (TMDL) Waste Load Allocations (WLAs) for Storm Water Sources and NPDES Permit Requirements Based on Those WLAs”* (Nov. 12, 2010), pp. 2-3 (2012 AR, p. RB-AR23963 – 964).

²⁸² U.S. EPA. Memorandum, *Revisions to the November 22, 2002 Memorandum “Establishing Total Maximum Daily Load (TMDL) Wasteload Allocations (WLAs) for Storm Water Sources and NPDES Permit Requirements Based on Those WLAs,”* (Nov. 26, 2014), p. 4. (2015 AR, p. SB-AR-014643). U.S. EPA clarified that numeric effluent limitations in the context of stormwater discharges “refer[s] to limitations with a quantifiable or measurable parameter related to a pollutant (or pollutants). Numeric WQBELs may include other types of numeric limits on pollutant discharges by specifying parameters such as on-site stormwater retention volume or percentage or amount of effective impervious cover, as well as the more traditional pollutant concentration limits and pollutant loads in the discharge.” However, numeric limitations should be crafted to ensure that water quality standards will be achieved.

circumstances surrounding the permit, and/or the underlying WLA, including the nature of the stormwater discharge, available data, modeling results, and other relevant information.”²⁸³

Here, the Los Angeles Water Board determined that inclusion of numeric effluent limitations in the 2012 Permit was feasible, appropriate, and necessary to achieve compliance with the TMDLs as required by federal law. The Board made extensive findings on this matter in the 2012 Permit Fact Sheet, including but not limited to:²⁸⁴

- “[S]ole reliance in MS4 permits on BMP-based requirements is not sufficient to ensure attainment of water quality standards....This conclusion is amply supported by Regional Water Board and USEPA established TMDLs for impaired waters in the Los Angeles Region, indicating that MS4 discharges are a continuing source of pollutants to the impaired receiving waters notwithstanding the implementation of storm water management programs that have been driven by the MEP standard by Permittees for the last two decades.”²⁸⁵
- “The Regional Water Board interprets this to mean that the final WQBEL must be expressed in similar terms as the underlying WLA; for example, where a TMDL includes WLAs for MS4 discharges that provide numeric pollutant load objectives, the WLA should be translated into numeric WQBELs in the permit, and at a level to achieve the same expected water quality outcome....Numeric WQBELs will help clarify MS4 permit requirements and improve accountability in this permit term.”²⁸⁶
- “[T]here is insufficient data and information available at this time on the prospective implementation of BMPs throughout Los Angeles County to provide the Regional Water Board reasonable assurance that the BMPs would be sufficient to achieve the WQBELs.”²⁸⁷
- “Regarding the feasibility of numeric effluent limitations, the Regional Water Board concludes that numeric WQBELs are feasible. While a lack of data may have hampered the development of numeric effluent limitations for MS4 discharges in earlier permit cycles, in the last decade, 33 TMDLs have been developed for water bodies in Los Angeles County in which WLAs are assigned to MS4 discharges. In each case, part of the development process entailed analyzing pollutant sources and allocating loads using empirical relationships or modeling approaches. As a result, it is possible to use these numeric WLAs to derive numeric WQBELs for MS4 discharges. USEPA has also acknowledged that its expectations regarding the application of numeric WQBELs to municipal storm water discharges have changed as the storm water permit program has continued to mature over the last decade.”²⁸⁸

²⁸³ *Id.*, at p. 6.

²⁸⁴ See generally 2012 Permit, Attachment F (Fact Sheet), pp. F-34 to F-37 (2015 AR, pp. SB-AR-013606 - 609).

²⁸⁵ *Id.*, at p. F-35 (2015 AR, p. SB-AR-013607).

²⁸⁶ *Id.*, at pp. F-35 to F-36 (2015 AR, p. SB-AR-013607 – 608).

²⁸⁷ *Id.*, at p. F-36 (2015 AR, p. SB-AR-013608).

²⁸⁸ *Ibid.*

- “Further, given the variability in implementation of storm water management programs across Permittees, numeric WQBELs create an objective, equitable and accountable means of controlling MS4 discharges, while providing the flexibility for Permittees to comply with the WQBELs in any lawful manner.”²⁸⁹

These findings are entitled to deference under *Department of Finance*.²⁹⁰ In addition, U.S. EPA supported the Los Angeles Water Board’s approach.²⁹¹

Lastly, it must be noted that the Los Angeles Water Board’s inclusion of numeric effluent limitations in the 2012 Permit required less discretion than including specific BMPs. Because the TMDL wasteload allocations themselves are numeric, implementing the wasteload allocations through BMPs necessarily requires discretion in terms of translating the numeric wasteload allocations into appropriate BMP-based provisions. The more direct approach, involving far more less discretion, was to include the wasteload allocations as numeric WQBELs. “The Board’s approach allows the Permittees the flexibility to comply with the numeric effluent limitations using any lawful means, and establishes appropriate and enforceable compliance metrics depending on the method of compliance and level of assurance provided by the Permittee that the selected method will achieve the numeric effluent limitations derived from the TMDL WLAs.”²⁹² Thus, when the permitting agency must choose to include the TMDL wasteload allocations either in numeric or narrative form, choosing numeric effluent limits identical to the wasteload allocations themselves arguably requires the least amount of discretion exercised by the permitting agency.

In summary, the Los Angeles Water Board determined that the TMDL limitations in this Permit are necessary to implement federal law.²⁹³ Thus any “mandate” to comply with TMDLs is federal, and not imposed by the State. As discussed above, the Board’s findings are entitled to deference under *Department of Finance*.

The Provisions are Not New Programs or Higher Levels of Service

With the exception of the dry weather requirements of the Marina del Rey Bacteria TMDL, Claimants appear to argue that that the TMDL provisions are new programs or higher levels of service because the specific TMDL provisions were not included in the 2001 Permit. This argument must be rejected. The Water Boards disagree that the 2012 Permit imposes new programs or higher levels of service.

First, Claimants have been subject to TMDL programs in prior permits. As adopted in 2001, Los Angeles Water Board Order No. 01-182 required that Permittees amend their Storm Water Quality Management Program (SQMP), at the direction of the Board’s Executive Officer, to comply with TMDL wasteload allocations developed and approved for impaired water bodies.²⁹⁴ Order No. 01-182 also specified performance measures for storm drain operation and maintenance for

²⁹⁴ 2001 Permit, Part 3.C., p. 26.

watersheds subject to a trash TMDL.²⁹⁵ The Los Angeles Water Board noted that this “represents a significant difference from the existing [1996] permit, which does not contain a provision for implementation of TMDLs” and that “TMDLs are one of the Regional Board’s highest priorities.”²⁹⁶ In addition, as previously discussed at Section II.C.3.ii, above, the Los Angeles Water Board included specific TMDL provisions in the 2001 Permit for Marina del Rey Bacteria TMDL in 2007 and the Los Angeles River Watershed Trash TMDL in 2009. Thus, compliance with TMDL programs are not new.

Second, the purpose of the TMDLs, and the accompanying implementing provisions in the 2012 Permit, is to address identified impairments for waters not meeting water quality standards. The 2012 Permit separately requires that discharges to receiving waters not cause or contribute to exceedances of water quality standards.²⁹⁷ These objectives are to be achieved through compliance with the TMDL provisions incorporated into the Permit. While certain specific TMDL-related provisions may be new to the 2012 Permit, the objectives themselves are not new. Indeed, the same objectives – that discharges not cause or contribute to exceedances of water quality standards – was in the 2001 Permit and the Permittees were subject to that requirement for nearly 11 years before the 2012 Permit was issued.²⁹⁸ Once a TMDL is approved by U.S. EPA, water quality-based effluent limitations must be consistent with wasteload allocations for the particular discharge per federal law.²⁹⁹ In fact, the compliance schedules established in the TMDLs and incorporated in the 2012 Permit allow Claimants time to achieve necessary pollutant reductions to the receiving waters.³⁰⁰

Because Claimants are separately required to achieve compliance with water quality standards through Part V.A.1 of the 2012 Permit, but have been provided a timeframe in which to comply through incorporation of limitations and associated compliance schedules, the TMDL-based limitations included to implement the TMDLs do not constitute new programs or require higher levels of service be provided beyond what Claimants are already obligated by law to achieve, and were required to achieve in the prior permit.

Provisions Implementing the Los Angeles River Watershed Trash TMDL (LAR Trash TMDL) Are Not New Programs or Higher Levels of Service

As noted in Section II.C.3.ii, above, the Los Angeles Water Board amended Order No. 01-182 on December 10, 2009 to incorporate provisions implementing the LAR Trash TMDL. At that time, the Board incorporated the wasteload allocations from the LAR Trash TMDL into the 2001 Permit as numeric water quality-based effluent limitations.³⁰¹ The 2001 Permit stated: “Each Permittee identified in Appendix 7-1 shall comply with the interim and final effluent limitations set forth in

²⁹⁵ *Id.*, Part 4.F.5.b), p. 56.

²⁹⁶ *Id.*, Fact Sheet, Part IV.E., p. 14 (2001 AR, p. R0008047).

²⁹⁷ 2012 Permit, Part V.1 (2015 AR, p. SB-AR-013331).

²⁹⁸ 2001 Permit, Part 2.1, p 24.

²⁹⁹ 40 C.F.R. § 122.44(d)(1)(vii)(B).

³⁰⁰ See 2012 Permit, Attachment F (Fact Sheet), Part VI.D.2, pp. F-106 to F-110 (2015 AR, pp. SB-AR-013678 – 682) listing the respective compliance schedules.

³⁰¹ See generally 2001 Permit, Part 7, pp. 79-84, Appendix 7-1, and Appendix 7-2. See also, 2001 Permit, Findings Related to the Incorporation of the Los Angeles River Trash TMDL, pp. 15-20; see also 2012 Permit, Fact Sheet, pp. F-13, F-23 (2015 AR, pp. SB-AR-013585, SB-AR-013595).

Appendix 7-1 hereto.”³⁰² Appendix 7-1 expressed the numeric effluent limitations for trash as progressively decreasing allowable amounts of trash discharged from each applicable permittee’s jurisdictional area within the watershed. Each applicable permittee was required to make annual reductions of its discharges of trash over a 7-year period (2010-2016), until the final effluent limitation of zero trash discharged from the MS4 was achieved. “Permittees shall achieve their final effluent limitation of zero trash discharge for the 2015-2016 storm year and every year thereafter.”³⁰³ The Board allowed Permittees the option to be deemed in compliance with the numeric effluent limitations through the installation of certain BMPs.³⁰⁴

In the 2012 Permit, the Los Angeles Water Board carried over the applicable effluent limitations and compliance deadlines, as well the compliance approaches, established in the 2001 Permit.³⁰⁵ Section A of Attachment O includes the interim and final numeric water quality-based effluent limitations and compliance deadlines implementing the LAR Trash TMDL. Applicable permittees are required to “comply with the final water quality-based effluent limitation of zero trash discharged to the Los Angeles River no later than September 30, 2016 and every year thereafter.”³⁰⁶

While Claimants acknowledge that the Los Angeles Water Board incorporated interim and final effluent limitations implementing the LAR TMDL into the 2001 Permit in December 2009, Claimants assert that the “2012 Permit has different requirements [with respect to the LAR Trash TMDL]; permittees must now reduce trash to zero percent of the baseline allocation.”³⁰⁷ As purported support for this erroneous conclusion, Claimants argue that the 2001 Permit required “a reduction of trash to 30 percent of the baseline load calculated as a rolling 3-year average,” referring to the 2007 LAR Trash TMDL.³⁰⁸ Claimants are wrong. It was the 2001 Permit as amended in 2009, not the 2012 Permit, that first required Claimants to reduce trash to zero percent of the baseline allocation.

Claimants’ reference to a “rolling 3-year average” in the 2007 TMDL is not applicable to the 2001 or 2012 Permits as the average was already taken into account when the Los Angeles Water Board calculated the interim and effluent limitations in 2009. In other words, the interim and final effluent limitations in Appendix 7-1 of the 2001 Permit already reflect a calculation of a “rolling 3-year average.” The 2007 TMDL required that the wasteload allocation of 0% trash be achieved by September 30, 2014, with a compliance point of “3.3% of the baseline load calculated as a rolling 3-year annual average.”³⁰⁹ Using a 3-year rolling average, a final effluent limitation of zero trash discharged by September 30, 2016 was included in the 2001 Permit.

³⁰² 2001 Permit, Part 7, p. 79 and Appendix 7-1.

³⁰³ *Id.*, Part 7, Appendix 7-1, footnote 3.

³⁰⁸ *Ibid.*

³⁰⁹ Los Angeles Water Board Resolution No. 2007-012, Attachment A, Table 7.2.3 (2009 AR, p. 1-17).

It is also imperative to note that the 2001 Permit did not only require a reduction of trash to 30%. It clearly required a reduction to 0%. Claimants appear to make this illogical leap as the compliance schedule for the LAR Trash TMDL in the 2001 Permit required a 30% reduction be achieved by 2012 and the Los Angeles Water Board reissued the permit in 2012, before the final compliance deadline in 2016. As noted above, the 2001 Permit clearly established both interim and final effluent limitations from 2010 to 2016, with a final compliance deadline of September 30, 2016 and every year thereafter. The fact that the Los Angeles Water Board reissued the permit in 2012 and continued to include the previously established schedule does not in any way make inclusion of the previously established schedule a new program or higher level of service. The requirement for Claimants to comply with the interim and final effluent limitations related to the LAR Trash TMDL was first required in 2009, period. Claimants' untimely challenge to requirements that were first established in 2009 fails as a matter of law.³¹⁰

As these provisions were first required in 2009 as part of the 2001 Permit, the Los Angeles Water Board's inclusion of these provisions in the 2012 Permit did not constitute a new program or higher level of service.

The Provisions are Not Unique to Local Government

The requirement to implement TMDL wasteload allocations in NPDES permits does not apply uniquely to local government. The TMDLs themselves assign wasteload allocations for specific pollutants to all point sources identified as causing or contributing to the impairment of the waterbody, such as stormwater, publicly owned treatment works, and other wastewater dischargers.³¹¹ As noted above, federal law requires that *all* NPDES permits, whether they are issued to private or public entities, include water quality-based effluent limitations that are consistent with the assumptions and requirements of all available TMDL wasteload allocations.³¹² For example, construction stormwater dischargers, as well as the State of California Department of Transportation (Caltrans), must also comply with TMDL-based WQBELs.³¹³

The above clearly demonstrates that Claimants are not being treated any differently than non-local government entities.

³¹⁰ Notably, no Permittee timely filed any test claim with the Commission on these specific requirements. The first time Claimants challenged these requirements is when they originally filed these Test Claims in June 2014, nearly five years after the requirements were incorporated into the 2001 Permit.

³¹¹ See, for example, Los Angeles Water Board, Order No. R4-2018-0020, NPDES Permit for Sentinel Peak Resources California, LLC Inglewood Oil Field, pp. 13-14, F-38.

³¹² 40 C.F.R. § 122.44(d)(1)(vii)(B). Water Code section 13263 also requires that waste discharge requirements "implement any relevant water quality control plans," which include established TMDLs. While the Los Angeles Water Board relied primarily on federal authority to include the TMDL-based requirements in the permit, it is important to note that state law also requires that *all* waste discharge requirements implement TMDLs, regardless of the particular source.

³¹³ State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation, pp. 10-12 ("This Order implements U.S. EPA-approved or U.S. EPA-established TMDLs applicable to the Department") and Attachment IV (listing the applicable TMDLs Caltrans is subject to); State Water Board, Order No. 2009-0009-DWQ (as amended by 2010-0014-DWQ and 2012-0006-DWQ), NPDES General Permit for Storm Water Discharges Associated With Construction And Land Disturbance Activities, p. 31 ("Dischargers located within the watershed of a CWA § 303(d) impaired water body, for which a TMDL has been approved by the U.S. EPA, shall comply with the approved TMDL if it identifies "construction activity" or land disturbance as a source of the pollution.") and Appendix 4 (identifying Non-Sediment TMDLs and Sediment TMDLs).

2. Monitoring Requirements Related to Implementation of TMDLs (Part VI.B and Attachment E, Parts II.E.1-3, V, VI.A.1.b(iii-iv), VI.B.2, VI.C.1.a, VI.D.1.a, VIII.B.1.b(ii), IX.A.5, IX.C.1.a, IX.E.1.a-b, IX.G.1.b, and IX.G.2)

Relying on their contention that the TMDL requirements in the 2012 Permit are state mandates, Claimants simply allege that “because federal law did not compel the LARWQCB to include the TMDLs, the monitoring program to implement those TMDLs was also not required.”³¹⁴ Claimants provide no other rationale other than an incorrect assertion that the 2001 Permit did not include TMDL monitoring.³¹⁵ Claimants list the following provisions of the 2012 Permit as part of the monitoring program to implement TMDLs: Part VI.B and Attachment E, Parts II.E.1-3, V, VI.A.1.b(iii-iv), VI.B.2, VI.C.1.a, VI.D.1.a, VIII.B.1.b(ii), IX.A.5, IX.C.1.a, IX.E.1.a-b, IX.G.1.b, and IX.G.2.

Part VI.B of the 2012 Permit requires Permittees to comply with a Monitoring and Reporting Program (MRP), which is set forth in Attachment E.³¹⁶

Attachment E, Parts II.E.1-3 set forth the required monitoring program elements for the 2012 Permit, including receiving water monitoring (Part II.E.1), stormwater outfall based monitoring (Part II.E.2), and non-stormwater outfall based monitoring (Part II.E.3).³¹⁷ Permittees are required to implement these elements to determine compliance and noncompliance with the 2012 Permit provisions regardless of whether there is a TMDL in place or not.³¹⁸

Attachment E, Parts V, VI.A.1.b(iii-iv), and VI.B.2 identify previously approved TMDL Monitoring Plans and the information pertaining to TMDL-related monitoring that must be included in an Integrated Monitoring Program (IMP) plan and Coordinated Integrated Monitoring Program (CIMP) plan.³¹⁹ Participation in an IMP or CIMP plan is voluntary and allows permittees flexibility to increase cost-efficiency and effectiveness.³²⁰

Attachment E, Parts VI.C.1.a and VI.D.1.a set forth the number of monitoring events per year for wet weather and dry weather, respectively.³²¹

Attachment E, Part VIII.B.1.b(ii) provides alternative definitions of “wet weather conditions” for purposes of scheduling stormwater outfall based monitoring.³²²

³¹⁴ Test Claim 13-TC-01, p. 14 and 13-TC-02, p. 15.

³¹⁵ Test Claim 13-TC-01, p. 12 and 13-TC-02, p. 13

³¹⁶ 2012 Permit, Part VI.B, p. 46 (2015 AR, p. SB-AR-013339).

³¹⁷ 2012 Permit, Attachment E, Part II.E, p. E-4 (2015 AR, p. SB-AR-013513).

³¹⁸ See, for example, 40 C.F.R. § 122.26, subds. (d)(2)(i)(F), (d)(2)(iii).

³¹⁹ 2012 Permit, Attachment E, Parts V, VI.A.1.b(iii-iv), and VI.B.2, pp. E-8 to E-14 (2015 AR, pp. SB-AR-013517 - 523).

³²⁰ *Id.*, Parts II.C. and II.D, p. E-3 (2015 AR, p. SB-AR-013512).

³²¹ *Id.*, Parts VI.C.1.a and VI.D.1.a, pp. E-15 to E-16 (2015 AR, pp. SB-AR-013524 - 525).

³²² *Id.*, Part VIII.B.1.b(ii), p. E-22 (2015 AR, pp. SB-AR-013531).

Attachment E, Parts IX.A.5, IX.C.1.a, and IX.E.1.a-b identify TMDL related considerations to be taken into account when Permittees implement their “Non-Storm Water Outfall Based Screening and Monitoring” program.³²³

Attachment E, Part IX.G.1.b provides a list of the parameters to be monitored in significant non-stormwater discharges, among the list of parameters are pollutants identified in the TMDL provisions as well as other pollutants identified on the CWA section 303(d) list for the receiving water, pollutants identified as causing toxicity in the receiving water, and other parameters in Table E-2 that exceed the lowest applicable water quality objective in the downstream receiving water.³²⁴

Attachment E, Part IX.G.2 states that for MS4 outfalls subject to a dry weather TMDL, the monitoring frequency shall be per the approved TMDL Monitoring Plan, or as specified in an IMP or CIMP.³²⁵

Notably, while the abovementioned parts of Attachment E each make some reference to TMDL-related monitoring or monitoring considerations, the 2012 Permit’s MRP and the particular challenged provisions are not required for the sole purpose of TMDL monitoring. Claimants ignore this fact. This is important because Part VI.B allows Permittees implementing a WMP or EWMP to propose a customized monitoring program per Attachment E, Part IV to meet the five primary objectives set forth in Part II.A, only one of which is to assess compliance with receiving water limitations and WQBELs in the TMDL Provisions.³²⁶

Therefore, Claimants, who are all currently implementing an approved WMP or EWMP, had the ability to propose an alternative monitoring program. Part IV of Attachment E states, in relevant part:

“The Integrated Monitoring Program may leverage monitoring resources *by selecting monitoring locations, parameters, or monitoring techniques that will satisfy multiple monitoring requirements.*” (Part IV.A.3)

“Where appropriate, the Integrated Monitoring Program [or CIMP] may develop and utilize alternative approaches to meet the Primary Objectives (Part II.A)...” (Parts IV.A.4 and IV.B.6)

“The requirements of *an approved TMDL Monitoring Plan may be modified by an IMP [or CIMP]* that is subsequently approved by the Executive Officer...” (Parts IV.A.5 and IV.B.3)³²⁷

³²³ *Id.*, Parts IX.A.5, IX.C.1.a, and IX.E.1.a-b, pp. E-23 to E-26 (2015 AR, pp. SB-AR-013532 - 535).

³²⁷ *Id.*, Part IV, pp. E-6 to E-8 (2015 AR, pp. SB-AR-013515 - 517) (emphasis added).

The Provisions are Not a New Program or Higher Level of Service

Claimants allege that TMDL monitoring requirements in the 2012 Permit are new programs or higher levels of service; however, the 2001 Permit also included a MRP. The 2001 Permit MRP included many of the same primary objectives as the 2012 Permit,³²⁸ and included different types of monitoring to meet the objectives. For example, the 2001 Permit MRP included Mass Emissions Monitoring, Tributary Monitoring, and a BMP Effectiveness Study.³²⁹ Mass Emissions Monitoring was required to estimate the mass emissions from the MS4, assess trends in the mass emissions over time, and determine if the MS4 is contributing to exceedances of water quality standards (receiving water limitations). The Tributary Monitoring was required “to identify sub-watersheds where stormwater discharges are causing or contributing to exceedances of Water Quality Standards, and to prioritize drainage and sub-drainage areas that need management actions.” The BMP Effectiveness Study was required in order to “monitor the reduction of pollutants of concern in storm water (including, but not limited to: trash, suspended sediment, pathogen indicators, nutrients, heavy metals, and oil and grease) from five or more different types of BMPs that have been properly installed within the year preceding monitoring.” The requirement for outfall monitoring in the 2012 Permit MRP is a refinement of the Tributary Monitoring and BMP Effectiveness Study required in the 2001 Permit MRP.

The 2001 Permit MRP also included the same general frequency of monitoring as the 2012 Permit MRP in Part VI, at three wet weather events and two dry weather events per year.³³⁰ Moreover, the 2001 Permit MRP included TMDL-related monitoring, including shoreline monitoring for bacteria and monitoring for trash in the Los Angeles River and Ballona Creek watershed management areas.³³¹ Just as required in the 2012 Permit MRP in Parts V, VI.A.1.b.iii-iv, VI.B.2.a-c, and IX.G.2, the 2001 Permit MRP was updated in 2005 to reflect the TMDL Monitoring Plan for the Santa Monica Bay Beaches Bacteria TMDLs, including both dry weather and wet weather monitoring.³³²

The 2001 Permit also included a requirement to conduct field screening of the storm drain system, including investigation to determine the source of, and eliminate, any illicit connections and illicit discharges.³³³ Parts II.E.3 and IX.A.5, IX.C.1.a, IX.E.1.a-b, IX.G.1.b of the 2012 Permit’s MRP also pertain to field screening for non-stormwater discharges and simply refine the 2001 Permit requirement for field screening by prioritizing outfalls for screening, source identification, and monitoring based on TMDL considerations.³³⁴

³²⁸ 2001 Permit, MRP, Part II, p. T-6.

³²⁹ *Id.*, Parts II.A, II.C, and II.J, pp. T-6 to T-7, T-9 to T-10, and T-20.

³³⁰ *Id.*, Part II.A., p. T-6.

³³¹ 2001 Permit, Finding C.5, p. 6; Part 6.A.4, p. 72; MRP, pp. T-1, T-11 to T-12, T-13 to T-14; see Wat. Code § 13267 “Request for Trash Monitoring,” issued by the Los Angeles Water Board on December 21, 2001, which is referenced in the 2001 MRP (p. T-14) and provides information on the need for the trash monitoring relative to the adoption of TMDLs for trash in the Los Angeles River and Ballona Creek (2001 AR, pp. R0007973 - 976).

³³² Los Angeles Water Board, “Final Approval of Changes to the Santa Monica Bay Shoreline Monitoring Requirements Contained in the Monitoring and Reporting Program under the Los Angeles County Municipal Storm Water Discharge Permit (NPDES No. CAS004001) to Conform to the Extent Possible with the Santa Monica Bay Beaches Bacterial TMDLs” (Jun. 14, 2005).

³³³ 2001 Permit, Part 4.G, pp. 59-61.

³³⁴ Non-stormwater discharges are considered “illicit discharges” in federal regulations, and the terms are often used interchangeably. In fact, “illicit discharge” is defined by U.S. EPA in its 1990 rulemaking as “any discharge through a municipal separate storm sewer that is not composed entirely of storm water and that is not covered by an NPDES
(footnote continued on next page)

Therefore, while the 2012 Permit MRP addresses more TMDLs, the MRP is not a new program or higher level of service because the 2001 Permit had a MRP and that MRP included TMDL monitoring.

The Provisions are Necessary to Implement Federal Law

TMDL-related monitoring is necessary to implement federal law. The Clean Water Act and its implementing regulations require monitoring and reporting as a major component of *all* NPDES permits, not just MS4 permits. As a condition of receiving a NPDES permit, a permittee agrees to monitor its discharges to ensure compliance with the permit's terms.³³⁵ Section 308(a) of the Clean Water Act³³⁶ and sections 122.41 (h), (j)-(l), 122.44(i), and 122.48 of Title 40 of the Code of Federal Regulations establish substantive monitoring and reporting requirements for all NPDES permits. Federal regulations applicable to large and medium MS4s also specify additional monitoring and reporting requirements.³³⁷ The regulations specific to monitoring requirements for MS4 discharges are prescriptive and require the permitting agency to include requirements for both stormwater and non-stormwater effluent sampling at representative outfalls, representative receiving water monitoring, sampling of specific pollutants, monitoring at specified intervals (e.g., at least three storm events per year), use of analytical methods specified in 40 C.F.R. Part 136, use of field collection methods (e.g., grab vs. composite samples), among other requirements.³³⁸

As the Ninth Circuit Court of Appeal recently stated in a case concerning the 2001 Permit: "First and foremost, the Clean Water Act *requires* every NPDES permittee to monitor its discharges into the navigable waters of the United States in a manner sufficient to determine whether it is in compliance with the relevant NPDES permit.... That is, an NPDES permit is unlawful if a permittee is not required to effectively monitor its permit compliance."³³⁹ The Court also stated:

But while otherwise more flexible than the traditional NPDES permitting system, nothing in the ms4 permitting scheme relieves permittees of the obligation to monitor their compliance with their NPDES permit in some fashion... Rather, EPA regulations make clear that while ms4 NPDES permits need not require monitoring

permit [other than the permit for the discharge from the MS4]." (55 Fed. Reg. 47990, 47995 (Nov. 16, 1990) (2012 AR, p. RB-AR23722)).

³³⁵ CWA § 402(a)(1) ("the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 1311(a) of this title, upon condition that such discharge will meet either (A) all applicable requirements under sections 1311, 1312, 1316, 1317, 1318, and 1343 of this title, or (B) prior to the taking of necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this chapter.")

³³⁶ CWA § 308(a) mandates, in part, that "the Administrator shall require the owner or operator of any point source to (i) establish and maintain such records, (ii) make such reports, (iii) install, use, and maintain such monitoring equipment or methods (including where appropriate, biological monitoring methods), (iv) sample such effluents (in accordance with such methods, at such locations, at such intervals, and in such manner as the Administrator shall prescribe), and (v) provide such other information as he may reasonably require..."

³³⁷ See, e.g., 40 C.F.R. §§ 122.26, subs. (d)(2)(i)(F) & (d)(2)(iii)(D), 122.42(c).

³³⁸ 40 C.F.R. § 122.26(d)(2).

³³⁹ *Natural Resources Defense Council v. County of Los Angeles* (9th Cir. 2013) 725 F.3d 1194, 1207, cert. den. *Los Angeles County Flood Control Dist. v. Natural Resources Defense Council* (2014) 134 S.Ct. 2135 (citations omitted; emphasis in original) (citing CWA § 402(a)(2) and 40 C.F.R. §§ 122.44(i)(1) and 122.26(d)(2)(i)(F) (emphasis in original).)

(footnote continued on next page)

of each stormwater source at the precise point of discharge, they may instead establish a monitoring scheme “sufficient to yield data which are *representative of the monitored activity...*”³⁴⁰

The federal authority described herein mandates that the Los Angeles Water Board impose a monitoring and reporting program on MS4 permittees that is sufficient to determine compliance with permit terms, as with all NPDES permittees.

In part, federal regulation requires MS4 Permittees, specifically, to “[c]arry out all inspection, surveillance and monitoring procedures necessary to determine compliance and noncompliance with permit conditions including the prohibition on illicit discharges to the municipal separate storm sewer,” including a “monitoring program for representative data collection for the term of the permit that describes the location of outfalls or field screening points to be sampled (or the location of instream stations) ...”³⁴¹ The 2012 Permit MRP requirements, including the receiving water monitoring during wet and dry weather (Parts II.E.1 and VI) and stormwater and non-stormwater based outfall monitoring (Parts II.E.2, II.E.3, VIII, and IX), are necessary to meet these federal requirements. Further, because the Los Angeles Region is characterized by two distinct periods, wet weather and dry weather, the frequency of monitoring required by the 2012 Permit MRP in Part VI, generally three wet weather events and two dry weather events per year, is necessary to meet federal requirements for representative data collection. Part VIII.B.1.b(ii) provides various definitions to guide data collection during wet weather conditions to ensure it is representative.

Additionally, federal regulations require that a program to detect and remove illicit discharges includes “on-going field screening activities during the life of the permit” and “procedures to be followed to investigate portions of the separate storm sewer system that ... based on the results of the field screen, or other appropriate information, indicate a reasonable potential of containing illicit discharges ... (such procedures may include: sampling procedures ...)...”³⁴² Therefore, the 2012 Permit MRP and, in particular, Parts II.E.3 and IX, are necessary to meet this federal requirement.

The Los Angeles Water Board relied on this federal authority in establishing the 2012 Permit MRP.³⁴³ The Board also provided detailed rationale for the MRP requirements in the 2012 Permit Fact Sheet.³⁴⁴ For example, the Board found that the “purposes of receiving water monitoring are to measure the effects of storm water and non-storm water discharges from the MS4 to the receiving water, to identify water quality exceedances, to evaluate compliance with TMDL WLAs and receiving water limitations, and to evaluate whether water quality is improving, staying the

³⁴⁰ *Id.*, at p. 1209 (citations omitted; emphasis in original) (citing CWA § 402(a)(2) and 40 C.F.R. §§ 122.41(i)(1) and 122.48(b).)

³⁴¹ 40 C.F.R. § 122.26, subds. (d)(2)(i)(F) and (d)(2)(iii)(D).

³⁴² *Id.*, subd. (d)(2)(iv)(B)(2)-(3).

³⁴³ 2012 Permit, Finding P, p. 25 (2015 AR, p. SB-AR-013318), Attachment F (Fact Sheet), Part VII, p. F-116 (2015 AR, p. SB-AR-013688), Attachment E (MRP), Part I, p. E-3 (2015 AR, p. SB-AR-013512).

³⁴⁴ See generally 2012 Permit, Attachment F (Fact Sheet), Part VII, pp. F-116 to F-140 (2015 AR, pp. SB-AR-013688 – 712).

same or declining.”³⁴⁵ The Board also found that “[o]utfall based monitoring is also conducted to assess compliance with WQBELs.”³⁴⁶

Further, MS4 permits issued by U.S. EPA support the conclusion that TMDL-related monitoring is a federal requirement for MS4 permits. For example, the District of Columbia MS4 Permit states under Section 5, Monitoring and Assessment of Controls, that the monitoring must meet several objectives, including “any additional necessary monitoring for purposes of source identification and wasteload allocation tracking. This strategy must align with the Consolidated TMDL Implementation Plan....monitoring must be adequate to determine if relevant WLAs are being attained within specified timeframes in order to make modifications to relevant management programs, as necessary.”³⁴⁷

Therefore, the TMDL-related monitoring requirements in the 2012 Permit are federally required.

This Provisions are Not Unique to Local Government

Requirements for TMDL monitoring are also not unique to local government. For example:

- The MS4 permit issued to Caltrans requires that Caltrans conduct effluent and receiving water monitoring and implement a “Comprehensive TMDL Monitoring Plan;”³⁴⁸
- The Industrial General Stormwater Permit requires industrial facilities to collect samples of their discharge and analyze them for various parameters, including “[a]dditional applicable industrial parameters related to receiving waters with 303(d) listed impairments or approved TMDLs...;”³⁴⁹
- The NPDES permit for stormwater discharges from Sentinel Peak Resources (Inglewood Oil Field) includes effluent limitations based on TMDLs and corresponding effluent and receiving water monitoring requirements;³⁵⁰ and

The above demonstrates that Claimants are not being treated differently than non-local government entities in terms of TMDL monitoring requirements.

For all these reasons, and for the additional reasons discussed in Section IV above, the Commission should find that the TMDL-related monitoring in Part VI.B and Attachment E, Parts II.E.1-3, V, VI.A.1.b(iii-iv), VI.B.2, VI.C.1.a, VI.D.1.a, VIII.B.1.b(ii), IX.A.5, IX.C.1.a, IX.E.1.a-b, IX.G.1.b, and IX.G.2 of the 2012 Permit are not state mandates subject to subvention.

B. Prohibitions – Non-Storm Water Discharges

Part III.A of the 2012 Permit requires each Permittee to prohibit non-stormwater discharges through the MS4 to receiving waters, implement BMPs for conditionally exempt non-stormwater discharges, or ensure implementation of BMPs by developing and implementing procedures for dischargers that are not a Permittee to address non-stormwater discharges, evaluate non-stormwater monitoring data, and if a conditionally exempt non-stormwater discharge is found to be a source of pollutants that causes or contributes to an exceedance of applicable receiving water limitations and/or water quality-based effluent limitations, take certain steps to address this.³⁵¹ The challenged provisions of Part III.A. are addressed below.

As an initial matter, Claimants' reliance on *Department of Finance* in relation to non-stormwater discharge prohibition requirements is not applicable here. As explained above, the Supreme Court's focus in *Department of Finance* was the construction of the Clean Water Act's MEP technical standard for MS4 discharges of stormwater. The non-stormwater discharge prohibition in the CWA is not subject to the MEP standard, but rather the wholly independent CWA requirement that MS4 permittees effectively prohibit non-stormwater discharges to their MS4s.³⁵²

1. Prohibition of Non-Stormwater Discharges (Part III.A.1)

Part III.A.1 of the 2012 Permit requires Permittees to prohibit non-stormwater discharges through the MS4 to receiving waters with certain exceptions.³⁵³ Claimants allege that this provision is somehow different than the requirement in the 2001 Permit "to effectively prohibit non-storm water discharges into the MS4 and watercourses." Claimants are wrong.

The Provision is Not a New Program or Higher Level of Service

As a threshold matter, Part III.A.1 of the 2012 Permit was carried over from prior permits and therefore can in no way be considered a new program or higher level of service. The 1996 Permit stated: "Each Permittee shall, within its jurisdiction, effectively prohibit non-storm water discharges into the [MS4] and watercourses..."³⁵⁴ The 2001 Permit stated that "The Permittees shall effectively prohibit non-storm water discharges into the MS4 and watercourses..."³⁵⁵ The 2012 Permit states "Each Permittee shall, for the portion of the MS4 for which it is an owner or operator, prohibit non-storm water discharges through the MS4 to receiving waters..."³⁵⁶ The 2012 Permit language is wholly consistent with the 2001 Permit language. The slight variation in terminology between the 2001 Permit and the 2012 Permit does not alter the substantive requirement but simply serves to provide greater clarity. As explained below, the minor terminology differences are consistent with U.S. EPA's 1990 Phase I MS4 regulations. In the end, there is no meaningful difference between the phrasing of "into the MS4 and watercourses" from

³⁵¹ 2012 Permit, Part III.A., pp. 27-37 (2015 AR, pp. 013320 - 330).

³⁵² CWA § 402(p)(3)(B)(ii); State Water Board Order WQ 2015-0075, pp. 62-63 (2015 AR, pp. SB-AR-013257-258), confirming that non-stormwater discharges through the MS4s under the Clean Water Act are not subject to the MEP standard applicable to stormwater discharges.

³⁵³ 2012 Permit, Part III.A.1, pp. 27 - 28 (2015 AR, p. SB-AR-013320 - 321).

³⁵⁴ 1996 Permit, Part 1.I, p. 11 (2001 AR, p, R0008489).

³⁵⁵ 2001 Permit, Part I.A., p. 23.

³⁵⁶ 2012 Permit, Part III.A.1, p. 27 (2015 AR, p. SB-AR-013320).

the 2001 Permit and “through the MS4 to receiving waters” in the 2012 Permit. Both requirements prohibit non-stormwater discharges from reaching receiving waters, which is wholly consistent with Congress’ ultimate intent in the Clean Water Act and U.S. EPA’s regulations that such non-stormwater discharges not reach receiving waters.³⁵⁷

Since the slight variation in terminology between the 2001 Permit and the 2012 Permit did not alter the substance of the requirement, Permittees should have already been implementing programs to prevent non-stormwater from reaching receiving waters since at least 1996. For Claimants to argue that this provision in the 2012 Permit is somehow a new or a higher level of service is, frankly, disingenuous.

The Provision is Necessary to Implement Federal Law

Claimants allege that the requirement in Part III.A.1 to prohibit non-stormwater discharges *through the MS4 to receiving waters* is contrary to the CWA, which requires that MS4 permits shall effectively prohibit non-stormwater discharges *into the storm sewers*.³⁵⁸ It is not.

The Water Boards acknowledge that CWA section 402, subdivision (p)(3)(B)(ii), requires that MS4 permits include a requirement to effectively prohibit non-stormwater discharges “into the storm sewers.” However, the 2012 Permit’s prohibition of non-stormwater discharges “through the MS4 to receiving waters” is wholly consistent with this mandate and U.S. EPA’s regulations. It can be logically concluded that if non-stormwater discharges are detected leaving the MS4, they must have entered the MS4.

U.S. EPA regulations and its 1990 preamble to the Phase I MS4 regulations use the terms “into,” “to,” “through,” and “from” the MS4 interchangeably when describing the federal requirement to effectively prohibit non-stormwater discharges. As noted previously, federal regulations define illicit discharges as “any discharge *to* a municipal separate storm sewer that is not composed entirely of storm water except discharges pursuant to a NPDES permit...”.³⁵⁹ U.S. EPA in its 1990 preamble states that “[t]hese [MS4] permits are to...effectively prohibit non-storm water discharges *to* the municipal separate storm sewer system,” and that “[t]oday’s rule defines the term ‘illicit discharge’ to describe any discharge *through* a municipal separate storm sewer that is not composed entirely of storm water and that is not covered by an NPDES permit. Such illicit discharges are not authorized under the CWA. Section 402(p)(3)(B) of the CWA requires that permits for discharges *from* municipal separate storm sewers require the municipality to ‘effectively prohibit’ non-storm water discharges *from* the municipal separate storm sewer... Ultimately, such non-storm water discharges *through a municipal separate storm sewer* must either be removed from the system or become subject to an NPDES permit.”³⁶⁰ Further on, U.S. EPA states that “[t]he CWA prohibits the point source discharge of non-storm water not subject to an NPDES permit *through* municipal separate storm sewers to waters of the United States.”³⁶¹ In addressing comments related to various types of non-stormwater discharges, U.S. EPA again

³⁵⁷ 55 Fed. Reg. 47990, 47997 (Nov. 16, 1990) (2012 AR, p. RB-AR23724) (“The entire thrust of today’s regulation is to control pollutants that enter receiving water from storm water conveyances.”).

³⁵⁸ CWA § 402(p)(3)(B)(ii).

³⁵⁹ 40 C.F.R. § 122.26(b)(2).

³⁶⁰ 55 Fed. Reg. 47990, 47995 (Nov. 16, 1990) (2012 AR, p. RB-AR23722).

³⁶¹ *Id.*, at p. 47996 (2012 AR, p. RB-AR23723).

uses “through” to describe the nature of the non-stormwater discharge prohibition, stating with regard to street wash waters that “such discharges...must be addressed by municipal management programs as part of the prohibition on non-storm water discharges *through* municipal separate storm sewer systems.”³⁶² Congress’ intent and U.S. EPA’s phraseology in its own regulations therefore support the Water Board’s interpretation that there is no meaningful difference with these terms, and that permittees must have adequate legal authority to control discharges into and from a portion of an MS4 for which it is an owner or operator.

The Los Angeles Water Board specifically states that the “provisions in this Order to effectively prohibit non-storm water discharges are also mandated by the Clean Water Act. (33 U.S.C. § 1342(p)(3)(B)(ii).)”³⁶³ This finding is entitled to deference.

When commenting on a draft version of the 2012 Permit, U.S. EPA supported the non-stormwater discharge prohibition. In addressing the allegation that Claimants again make here, U.S. EPA stated:

We understand that concerns have been raised specifically on Section III.A.1 of the draft permit which requires that the permittee prohibit certain non-stormwater discharges “through” the MS4 while Section 402(p)(3)(B)(ii) of the Clean Water Act requires that the permittee prohibit discharges “into” the MS4. We support the Board’s proposed language on this issue. We would note that the preamble to EPA’s 1990 stormwater regulations (55 FR 47995) itself uses the word “through” in describing the discharges which are to be prohibited. We believe this is in recognition of the fact that a discharge “into” the MS4 is tantamount to a discharge “through” the MS4 to receiving waters since the principal purpose of an MS4 is conveyance of water.³⁶⁴

This is also not the first time that many of the Claimants have made this argument. This exact argument was raised by many of the Claimants when they challenged several provisions of the 2001 Permit. And they lost. The Los Angeles County Superior Court upheld the language in the 2001 Permit and rejected the “into” versus “from” argument that Claimants make here again. The court stated:

[A]lthough this Court recognizes that it may not always be possible to prevent something from going into the system, it probably is the cheapest method. If something does not go in, then there is no concern about it coming out the other end. If the contaminant does not enter the system, there is no need to process it at the end of the system.³⁶⁵

³⁶² *Id.*, at p. 47990, 47996 (2012 AR, p. RB-AR23723).

³⁶³ 2012 Permit, Attachment F (Fact Sheet), Part IX, p. F-159 (2015 AR, p. SB-AR-013731).

³⁶⁴ U.S. EPA Comments on Draft MS4 Permit for Los Angeles County (July 23, 2012), p. 6 (2012 AR, pp. RB-AR17764).

³⁶⁵ In *re Los Angeles County Municipal Storm Water Permit Litigation* (Sup. Ct. Los Angeles County, March 24, 2005, Case No. BS 080548), Statement of Decision from Phase I Trial on Petitions for Writ of Mandate, p. 16 (2012 AR, p. RB-AR23172).

The court further stated that the permit's "regulation of what goes 'into' the storm drain does not take away from the Petitioners' rights and needs to control the process" and set regional controls.³⁶⁶

Most Claimants also filed petitions for review with the State Water Board on the 2012 Permit similarly contesting the usage of the phrase "through the MS4."³⁶⁷ In Order WQ 2015-0075, the State Water Board agreed with the Los Angeles Water Board and found "the variation in language to be a distinction without a difference." It concluded "[w]hether the Los Angeles MS4 Order prohibits non-storm water discharges *into the MS4* or *through the MS4 to receiving waters*, the intent and effect of the prohibition is to prevent non-exempt non-storm water discharges from reaching the receiving waters. The legal standard governing non-storm water – effective prohibition – is not altered because the Los Angeles MS4 Order imposes the prohibition at the point of entry into the receiving water rather than the point of entry into the MS4 itself. Instructively, USEPA has used the terms "into," "from," and "through" interchangeably when describing the prohibition."³⁶⁸

Therefore, the language in Part III.A.1 implements federal law.

The Provision Is Not Unique to Local Government

The non-stormwater discharge prohibition is not unique to local government. The non-stormwater discharge prohibition is a key provision in other permits issued to non-local governmental entities in order to effectively reduce and/or prevent pollutants from reaching waterbodies. For example, Caltrans, as well as industrial and construction stormwater dischargers, are also prohibited from discharging non-stormwater to the MS4 and/or waterbodies. Examples of relevant permit provisions are as follows:

- NPDES Statewide Storm Water Permit Waste Discharge Requirements (WDRs) for State of California Department of Transportation, Order 2012-0011-DWQ (as amended) (issued by State Water Board)³⁶⁹:
 - "Discharge of material other than storm water, or discharge that is not composed entirely of storm water, to waters of the United States or another permitted MS4 is prohibited, except as conditionally exempted under Section B.2 of this Order or authorized by a separate National Pollutant Discharge Elimination System (NPDES) permit."³⁷⁰

³⁶⁶ *Id.*, at p. 17 (2012 AR, p. RB-AR23173).

³⁶⁷ Claimants that filed petitions for review by the State Water Board on the 2012 Permit include the cities of Agoura Hills, Beverly Hills, Carson, Commerce, Downey, Huntington Park, Manhattan Beach, Norwalk, Pico Rivera, Rancho Palos Verdes, Redondo Beach, San Marino, Signal Hill, South El Monte, Vernon, and Westlake Village. (2015 AR, pp. SB-AR-001007 to SB-AR-001106; SB-AR-001186 to SB-AR-001210; SB-AR-001426 to SB-AR-002058; SB-AR-002767 to SB-AR-002798; SB-AR-002831 to SB-AR-002852; SB-AR-002920 to SB-AR-002978; SB-AR-003492 to SB-AR-004923; SB-AR-005610 to SB-AR-005770; SB-AR-006343 to SB-AR-006392; SB-AR-006924 to SB-AR-007109).

and from dewatering activities associated with construction. Examples include: properly washing vehicles in contained areas, cleaning streets, and minimizing irrigation runoff.³⁷⁸

The above clearly demonstrates that Claimants are not being treated any differently than non-local government entities.

2. Conditional Exemptions from Non-Storm Water Discharge Prohibition (Part III.A.2) and Permittee Requirements (Parts III.A.4.a and III.A.4.b)

Part III.A.2 of the 2012 Permit conditionally exempts certain categories of non-stormwater discharges from the non-stormwater discharge prohibition, including discharges from non-emergency fire-fighting activities,³⁷⁹ drinking water supplier distribution systems where not otherwise regulated by an individual or general NPDES permit,³⁸⁰ and other categories of non-stormwater discharges that are not a source of pollutants, if the discharges meet required conditions specified in the Permit or as otherwise approved by the Los Angeles Water Board Executive Officer.³⁸¹

Part III.A.4.a requires Permittees to develop and implement procedures to ensure that a discharger, if not a Permittee, notifies the Permittee of the planned discharge in advance, obtains the appropriate permits, conducts monitoring of the discharge if required by the Permittee, implements appropriate BMPs, and maintains records of discharges to the MS4.³⁸²

Part III.4.b requires Permittees to develop and implement procedures that minimize the discharge of landscape irrigation water into the MS4 by promoting conservation programs.³⁸³ This provision requires Permittees to coordinate with the local water purveyor(s), where applicable, to promote landscape water use efficiency requirements for existing landscaping, use of drought tolerant, native vegetation, and the use of less toxic options for pest control and landscape management. It also requires Permittees to develop and implement a coordinated outreach and education program to minimize the discharge of irrigation water and pollutants associated with irrigation water consistent with the Public Information and Participation Program in the permit.

Citing *Department of Finance*, which is not applicable here as discussed above, Claimants allege that the specificity in these provisions “usurp[] the [Claimants’] ability to design their own

³⁷⁸ *Id.*, Fact Sheet, Section II.J.1.d, p. 30.

³⁷⁹ This includes fire-fighting training activities, which simulate emergency responses, and routine maintenance and testing activities necessary for the protection of life and property, including building fire suppression system maintenance and testing (e.g. sprinkler line flushing) and fire hydrant testing and maintenance. Discharges from vehicle washing are not considered essential and as such are not conditionally exempt from the non-storm water discharge prohibition. 2012 Permit, Part III.A.2.i, pg. 28, fn. 7 (2015 AR, p. SB-AR-013321).

³⁸⁰ Drinking water supplier distribution system releases refers to sources of flows from drinking water storage, supply and distribution systems (including flows from system failures), pressure releases, system maintenance, distribution line testing, and flushing and dewatering of pipes, reservoirs, and vaults, and minor non-invasive well maintenance activities not involving chemical addition(s) where not otherwise regulated by NPDES Permit No. CAG674001, NPDES Permit No. CAG994005, or another separate NPDES permit. 2012 Permit, Part III.A.2.ii, pg. 29, fn. 8 (2015 AR, p. SB-AR-013322).

³⁸¹ 2012 Permit, Part III.A.2, pp. 28-30 (2015 AR, pp. SB-AR-013321 - 323).

³⁸² *Id.*, Part III.A.4.a, pp. 30-31 (2015 AR, pp. SB-AR-013323 - 324).

³⁸³ *Id.*, Part III.A.4.b, p. 31 (2015 AR, p. SB-AR-013324).

program.”³⁸⁴ However, this is simply not true. As discussed in Section IV.B.3.ii, above, Part III.A.4 of the 2012 Permit, including all their subparts, are provisions that Permittees can customize in an approved WMP or EWMP.³⁸⁵ Part VI.C.1.b states that this allowance for customization includes the contested provisions of Part III.A.4. As such, the WMP/EWMP provisions provide significant flexibility to Permittees to select alternative means to comply with the federal requirement to effectively prohibit non-stormwater discharges. All Claimants elected to develop, and are now implementing, an approved WMP or EWMP. Therefore, regardless of the specificity, the choice to implement the specific requirements of Part III.A.4.a-b, rather than alternative activities consistent with federal regulations was the Claimants’ and is, therefore, not a state mandate.

Furthermore, even if Claimants did not elect to implement permit requirements through a WMP or EWMP, Part III.A.2 allows Permittees to propose for approval by the Los Angeles Water Board Executive Officer alternative conditions from those specified in Parts III.A.2 and III.A.4, including Table 8, for the conditionally exempt discharges. Part III.A.2 states “[t]he following categories of non-storm water discharges are conditionally exempt from the non-storm water discharge prohibition, provided they meet all required conditions specified below, *or as otherwise approved by the Regional Water Board Executive Officer ...*”.³⁸⁶

Lastly, Claimants state that both Parts III.A.2 and VI.D.9.f relate to conditional exemptions from the non-stormwater discharge prohibition and require the Claimants to assure appropriate BMPs are employed for discharges from essential non-emergency firefighting activities.³⁸⁷ However, Part III.A.2 is not related to Part VI.D.9.f. Part VI.D.9.f does not apply to “essential non-emergency fire fighting activities.” Footnote 7 of the 2012 Permit clearly defines “essential *non-emergency* fire-fighting activities” and states that “[d]ischarges from vehicle washing are not considered essential and as such are not conditionally exempt from the non-storm water discharge prohibition.”³⁸⁸ Part VI.D.9.f only applies to vehicle and equipment washing, which is a prohibited non-stormwater discharge unless in compliance with certain BMPs.³⁸⁹ The BMPs that Permittees are required to implement under Part VI.D.9.f are different than the BMPs under Part III.A.1.

As such, the Water Boards do not understand Claimants’ reference here. Since there are no specific allegations concerning Part VI.D.9.f aside from an incorrect reference to inapplicable conditional exemptions, the Water Boards do not consider the Claimants as having challenged Part VI.D.9.f as a separate state mandate and the time for Claimants to assert any new allegations has passed. Therefore, the Water Boards are not providing a response to that specific provision. If the Commission determines otherwise, the Los Angeles Water Board requests an opportunity to submit supplemental comments on that provision.

The Provisions are Not New Programs or Higher Levels of Service

³⁸⁴ Test Claims 13-TC-01, p. 16 and 13-TC-02, p. 18.

³⁸⁵ *Id.*, Part VI.C.1.b, p. 48 (2015 AR, p. SB-AR-013341) and Part VI.C.5.b.iv.(1), p. 63 (2015 AR, p. SB-AR-013356).

³⁸⁶ *Id.*, Part III.A.2, pp. 28-30 (2015 AR, p. SB-AR-013321 - 323).

³⁸⁷ Test Claim 13-TC-01, pp. 14-15 and 13-TC-02, p. 16.

³⁸⁸ 2012 Permit, Part III.A.2.a.i, footnote 7, p. 28 (2015 AR, p. SB-AR-013321).

³⁸⁹ *Id.*, Part VI.D.9.f, p. 132 (2015 AR, p. SB-AR-013425).

The provision in Part III.A.2.a.i is not a new program or higher level of service. Under the 2001 Permit, “essential *non-emergency* firefighting activities” was not a category of discharge conditionally exempt from the non-stormwater discharge prohibition.³⁹⁰ This means that, under the 2001 Permit, those discharges fell under the non-stormwater discharge prohibition and Permittees were not authorized to discharge non-stormwater associated with non-emergency firefighting activities at all through the MS4 to receiving waters. To comply with the prohibition, Permittees would have had to employ BMPs to ensure that this category of discharge did not reach receiving waters. Part III.A.2.a.i of the 2012 Permit changed that by allowing the discharge of non-stormwater from non-emergency firefighting activities, but subject to certain conditions, recognizing this category as an essential conditionally exempt non-stormwater discharge.³⁹¹ As such, this provision, which allows for a conditional discharge that was otherwise previously prohibited, certainly can not be considered a new program or higher level of service; if anything, it is a lesser standard since Permittees would have to employ fewer BMPs.

The provision in Part III.A.2.a.ii is also not a new program or higher level of service. Under the 2001 Permit, “potable drinking water supply and distribution system releases” was identified as a conditionally exempt non-stormwater discharge. The 2001 Permit stated that the category of discharge was conditioned on the releases being “consistent with American Water Works Association guidelines for dichlorination and suspended solids reduction practices.”³⁹² The 2012 Permit carried over this conditional exemption, but refined the applicable conditions.³⁹³ Permittees’ BMPs are still required to be implemented based on the American Water Works Association guidelines or an equivalent industry standard BMP manual. The remaining conditions simply require the Claimants to work with drinking water suppliers that discharge 10,000 gallons or more to a Permittee’s MS4 such that the Permittees receive advanced notice of the discharge and that the drinking water supplier monitor the discharge and keep records.

Regarding the other conditionally exempt non-stormwater discharges in Part III.A.2.b of the Permit, dewatering of lakes, landscape irrigation, dechlorinated/dibrominated swimming pool/spa discharges, dewatering of decorative fountains, non-commercial car washing by residents or by non-profit organizations, and sidewalk rinsing were all conditionally exempted in the 2001 Permit.³⁹⁴ The 2012 Permit carried over these categories, but with clarification and centralization of the conditions that need to be met in order for the discharge to be exempted from the non-stormwater discharge prohibition and thus allowed through the MS4.³⁹⁵ The Los Angeles Water Board made extensive findings pertaining to the purpose of the conditions and BMPs required in the 2012 Permit Fact Sheet.³⁹⁶

Although the 2001 Permit did not specify how to address the conditionally exempt non-stormwater discharges, Part 1.A.2 of the 2001 Permit authorized the Los Angeles Water Board Executive

³⁹⁰ Only “flows from emergency fire fighting activit[ies]” were conditionally exempted. (2001 Permit, Part 1.A.2.b), p. 23). Non-stormwater discharges from emergency fire fighting activities are still authorized in the 2012 Permit. See 2012 Permit, Part III.A.1.c, p. 267 (2012 Permit, p. SB-AR-013320).

³⁹⁵ 2012 Permit, Part III.A.2.b. and Table 8, pp. 29-30, 34-37 (2015 AR, p. SB-AR-013322 – 323, 327 – 330).

³⁹⁶ See 2012 Permit, Attachment F (Fact Sheet), p. F-26 to F-32 (2015 AR, p. SB-AR-013598 – 604).

Officer to impose conditions or withdraw the exemption if non-stormwater discharges were determined to be a source of pollutants. Specifically, Part 1.A.2 of the 2001 Permit states that “[t]he Regional Board Executive Officer may add or remove categories of non-storm water discharges above. Furthermore, in the event that any of the above categories of non-storm water discharges are determined to be a source of pollutants by the Regional Board Executive Officer, the discharge will no longer be exempt from this prohibition unless the Permittee implements conditions approved by the Regional Board Executive Officer to ensure that the discharge is not a source of pollutants. Notwithstanding the above, the Regional Board Executive Officer may impose additional prohibitions of non-storm water discharges in consideration of antidegradation policies and TMDLs.”³⁹⁷ Consistent with this provision of the 2001 Permit, the Los Angeles Water Board clarified the conditions for the continued exemption from the non-stormwater discharge prohibition for these categories of non-stormwater discharges in the 2012 Permit.

Regarding the BMPs for street/sidewalk wash water, the Los Angeles Water Board noted in its Fact Sheet that the requirements for street/sidewalk wash water contained in Resolution 98-08 were explicitly incorporated into the 2012 Permit.³⁹⁸ As part of the 1996 Permit, the City of Los Angeles conducted a study on pollutants entering storm drains from street and sidewalk washing operations and recommended BMPs in a report titled “*A Study of Pollutants Entering Storm Drains from Street and Sidewalk Washing Operations in Los Angeles, California.*”³⁹⁹ The BMPs included in Table 8 of the 2012 Permit for street/sidewalk wash water are the same as those in Resolution No. 98-08.⁴⁰⁰

The other conditions in the 2012 Permit for these categories of non-stormwater discharges were based on what the Permittees were already doing under the 2001 Permit. The Los Angeles Water Board found that the conditions are common practice and have been incorporated into other area MS4 permits.⁴⁰¹ During the implementation of the 2001 Permit, Permittees implemented measures such as ordinances to meet permit requirements and reported on these in their reports of waste discharge/permit reapplications. For example, Los Angeles County reported in its report of waste discharge submitted on behalf of all Los Angeles County MS4 Permittees that Permittees adopted ordinances:

to prohibit the discharge of runoff to the MS4 from: wash water from the cleaning of gas stations, auto repair garages, or other types of automotive services facilities; mobile auto washing, steam cleaning, mobile carpet cleaning, and other such mobile commercial and industrial operations; areas where repair of machinery and equipment, that are visibly leaking oil, fluid or antifreeze, is undertaken; storage areas of materials containing grease, oil, or other hazardous substances, and uncovered receptacles containing hazardous materials; chlorinated/brominated swimming pool water and filter backwash; the washing of toxic materials from paved or unpaved areas; washing impervious surfaces in industrial/commercial

⁴⁰⁰ 2012 Permit, p. 34-37 (2015 AR, SB-AR-013327 - 330) and Resolution No. 98-08, Attachment 2 (2012 AR, p. RB-AR24503).

⁴⁰¹ See 2012 Permit, Attachment F (Fact Sheet), p. F-32 (2015 AR, p. SB-AR-013604).

areas; and concrete or cement laden wash water from concrete trucks, pumps, tools, and equipment.⁴⁰²

Therefore, some of the aforementioned non-stormwater discharges were already prohibited through ordinances prior to the issuance of the 2012 Permit. Additionally, on their website, the City of Los Angeles identifies BMPs for discharges from swimming pools, spas, and fountains to ensure that these discharges are not a source of pollutants.⁴⁰³

Also, on September 29, 2011, U.S. EPA conducted a joint audit with the Los Angeles Water Board of the City of El Segundo's Illicit Connection and Illicit Discharge Elimination (IC/IDE) program, where they found that the City "had in place a permit process for discharges of permitted non-storm water discharges that specifically prohibits, including dechlorinated and debrominated swimming pool water and decorative fountain water, from being discharged into the storm drain system. All non-storm water discharges are to be directed to the sanitary sewer. In addition, the City has a prohibition against the draining of swimming pools and decorative fountains to the public right-of-way."⁴⁰⁴ Likewise, on September 30, 2011, U.S. EPA conducted a joint audit with the Board of Culver City's IC/IDE program where they found that "[t]he City does not authorize the discharge of pool water to the storm sewer system. Essentially, there are no authorized discharges to the storm drain system with residential car washing being a 'grey area' of oversight."⁴⁰⁵ U.S. EPA's findings from the audits show that permittees already had in place prohibitions on certain non-stormwater discharges.

Note that Part III.A.6 of the 2012 Permit is consistent with Part 1.A.2 of the 2001 Permit where the Los Angeles Water Board Executive Officer can modify a category of authorized non-stormwater discharges if the Executive Officer determines that the non-stormwater discharge category is a source of pollutants.⁴⁰⁶ Therefore, regardless of the Claimant's allegations that federal regulations allow only the Permittee to make a determination if certain non-stormwater discharges are a source of pollutants,⁴⁰⁷ the Executive Officer had the authority to do so in the 2001 Permit, and continues to have the same authority in the 2012 Permit, to impose conditions on non-stormwater discharges if determined to be a source of pollutants. As noted above, this is also consistent with federal regulations as explained in U.S. EPA's preamble to its 1990 regulations, which states that the permitting authority may include permit conditions to control the types of non-stormwater discharges that may otherwise be allowed to enter the MS4 where appropriate.⁴⁰⁸

The Provisions are Necessary to Implement Federal Law

U.S. EPA's preamble to its 1990 Phase I MS4 regulations explain that the "effective prohibition" means that non-stormwater discharges to MS4s require separate NPDES permits, and that such permits must meet applicable requirements of CWA sections 402 and 301.⁴⁰⁹ In response to public comments suggesting that certain types of non-stormwater discharges should not be prohibited in such a manner because they did not pose significant environmental problems, U.S. EPA stated that "[it] disagrees that the above described flows will not pose, in every case, significant environmental problems." U.S. EPA goes on to state that "[it] is clarifying that section 402(p)(3)(B) of the CWA (which requires permits for municipal separate storm sewers to 'effectively' prohibit non-storm water discharges) does not require permits for municipalities to prohibit certain discharges or flows of non-storm water to waters of the United States through municipal separate storm sewers in all cases."⁴¹⁰ U.S. EPA clarified that the permitting authority (i.e., Los Angeles Water Board) "may include permit conditions that either require municipalities to prohibit or otherwise control any of these types of discharges where appropriate."⁴¹¹

Additionally, federal regulations require that MS4 permittees have a program "to detect and remove (or require the discharger to the municipal separate storm sewer to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer."⁴¹² As discussed above, while federal regulations have no definition for "non-storm water discharges," illicit discharges most closely represent the statutory term and are defined as "any discharge to a municipal separate storm sewer that is not composed entirely of storm water except discharges pursuant to a NPDES permit . . . and discharges resulting from firefighting activities."⁴¹³ The program must include among other elements a program to implement and enforce an ordinance, orders or similar means to prevent illicit discharges to the MS4. The program is to address all types of illicit discharges, however the federal regulations specifically identify the following categories of non-storm water discharges to be addressed where such discharges are identified by the municipality as sources of pollutants to waters of the United States: water line flushing, landscape irrigation, diverted stream flows, rising ground waters, uncontaminated ground water infiltration (as defined at 40 CFR 35.2005(20)) to separate storm sewers, uncontaminated pumped ground water, discharges from potable water sources, foundation drains, air conditioning condensation, irrigation water, springs, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, flows from riparian habitats and wetlands, dechlorinated swimming pool discharges, and street wash water."⁴¹⁴ Accordingly, federal regulations require that non-stormwater discharges be controlled if they are a significant source of pollutants and the permitting authority is expected to include permit conditions to prohibit or control specified categories of non-stormwater discharges if they are determined to be a source of pollutants to waters of the United States.

⁴¹³ *Id.*, § 122.26(b)(2). The preamble to the regulations states: "Today's rule defines the term 'illicit discharge' to describe any discharge through a municipal separate storm sewer system that is not composed entirely of storm water and that is not covered by an NPDES permit." (55 Fed. Reg. 47990, 47995 (Nov. 16, 1990) (2012 AR, p. RB-AR23722).)

⁴¹⁴ 40 C.F.R. § 122.26(d)(2)(iv)(B)(1).

As required by federal law, the 2012 Permit specifies requirements to effectively prohibit non-stormwater discharges, but includes allowances for some categories of non-stormwater discharges that would otherwise be prohibited if certain conditions are met such that the non-stormwater discharge is not a significant source of pollutants to waters of the United States. These particular discharges are termed “conditionally exempt non-stormwater discharges.”

Part III.A.2 of the 2012 Permit allows specified categories of non-stormwater discharges under the condition that appropriate BMPs are implemented to ensure that they are not a source of pollutants.⁴¹⁵ Part III.A.4.a-b of the 2012 Permit requires Permittees to develop and implement procedures to ensure that dischargers that are not Permittees address non-stormwater discharges and “effectively” prohibit non-stormwater discharges as required by the CWA.⁴¹⁶ The requirement to “develop and implement procedures” to address non-stormwater discharges directly stems from the requirement in federal regulations that MS4 permittees have a program to implement and enforce an ordinance, orders or similar means to prevent illicit discharges to the MS4.⁴¹⁷

The need for conditions on exempt non-stormwater discharges is supported by an evaluation of Los Angeles County mass emission stations dry weather data from 2005 to 2011 conducted by PG Environmental on behalf of the Los Angeles Water Board, which found that non-stormwater discharges are a source of pollutants and recommended the use of dry weather controls for non-stormwater prohibitions/exemptions.⁴¹⁸ Additionally, during the 2001 Permit term, the Awwa Research Foundation and U.S. EPA sponsored a study on non-treatment discharges from drinking water utilities where they found that these drinking water supplier distribution system discharges could be a source of pollutants and recommended certain BMPs for drinking water supplier distribution systems based on their findings.⁴¹⁹ The report states, “[t]he levels of these constituents can pose concerns with surface [water quality standards] compliance ... [i]f these concerns are mitigated, either by BMPs or simple chemical treatment prior to discharge, the environmental impacts to receiving stream quality, TMDL mass loadings, and aquatic life can be minimized.”⁴²⁰ The Los Angeles Water Board noted the pollutants of concern from drinking water supplier distribution system releases, including trash and debris, including organic matter, total suspended solids (TSS), residual chlorine, and pH.⁴²¹ As required by federal regulations and the 2001 Permit, the Board incorporated BMPs for non-stormwater discharges identified by Permittees and Permittee member associations in consideration of the numerous TMDLs established to address water quality impairments during dry weather and the incorporation of water quality-based effluent limitations for non-stormwater discharges consistent with these TMDLs.⁴²²

⁴²¹ 2012 Permit, Part III.A.2.a.ii, p. 29, fn. 8 (2015 AR, p. SB-AR-013322).

⁴²² 2001 Permit, Part 1.A.2.

The City of Torrance contacted the Los Angeles Water Board prior to the issuance of the 2012 Permit and provided a photograph of a non-stormwater discharge of opaque burgundy-colored water from flushing of a fire sprinkler system. The City of Torrance recognized this non-stormwater discharge as a source of pollutants and recognized the need to allow this discharge only with appropriate actions to abate the pollutants.⁴²³

In addition, U.S. EPA's MS4 Permit Improvement Guide includes the following example of MS4 permit language addressing the Permittee's authority to require compliance by Dischargers: "Authority to Require Compliance – Require compliance with conditions in the permittee's ordinances, permits, contracts, or orders (i.e., hold dischargers accountable for their contributions of pollutants and flows)."⁴²⁴

Part III.A.4.a-b of the 2012 Permit is therefore consistent with federal regulations by requiring Permittees to develop and implement procedures to ensure that a discharger, if not a Permittee, controls non-stormwater discharges such that they are not a significant source of pollutants to waters of the United States.

The alternative to Part III.A.2 and Part III.A.4.a-b of the 2012 Permit, which is more stringent than permit requirements and is a conservative interpretation of CWA 402(p)(3)(B)(ii), is to require Permittees to effectively prohibit all non-stormwater discharges. However, with this alternative, Permittees may incur more costs to implement a prohibition of all non-stormwater discharges than to implement or ensure implementation of specified BMPs to address non-stormwater discharges that are conditionally exempt from the discharge prohibition.

Prior to the issuance of the 2012 Permit, the Los Angeles Water Board explored this alternative at a permit reissuance workshop where the Board proposed to remove specific exempt categories of non-stormwater discharges such as landscape irrigation.⁴²⁵ After the Board workshop, Larry Walker Associates, in a memorandum to the City of Los Angeles, stated that "[i]mplementing a strict prohibition on landscape irrigation would require a considerable amount of public agency funding to enforce the prohibition...For a city the size of Los Angeles, the resources and staff hours to inspect and eliminate such discharges would be fiscally irresponsible."⁴²⁶ In lieu of a prohibition, that memorandum proposed conditional exemptions for non-stormwater discharges to be included in the 2012 Permit as required in the Ventura County MS4 Permit (Order No. R4-2010-0108) including coordinating with the local water purveyor(s) to promote landscape water use efficiency and using an outreach and education program that focuses on water conservation and landscape water use efficiency per the Public Information and Participation program.⁴²⁷ Consistent with these findings, the Board included landscape irrigation as a conditionally exempt

non-stormwater discharge in the 2012 Permit and included conditions in line with those suggested by the City of Los Angeles.

Other Mandates Exceptions Apply

Notably, many of the conditions and BMPs for exempt non-stormwater discharges that are included in the 2012 Permit were identified or proposed by Los Angeles County MS4 Permittees.

For example, Claimants and other permittees identified the BMPs that should be implemented for non-stormwater discharges from essential non-emergency firefighting activities and drinking water supplier distribution systems. Various Permittees, including the City of Beverly Hills, along with the cities of El Segundo and Torrance, developed the recommended BMP manual by CAL FIRE in Part III.A.2.a.i of the 2012 Permit.⁴²⁸ Note that Part III.A.2.a.i of the 2012 Permit specifies use of BMPs from CAL FIRE's BMP Manual, but provides Permittees the option to implement appropriate BMPs per an "equivalent BMP manual for fire training activities and post-emergency fire fighting activities."⁴²⁹ Therefore, this requirement gives Permittees flexibility to design their own program by choosing their BMP manual to address non-stormwater discharges from essential non-emergency fire-fighting activities.

Additionally, various agencies including the City of Pomona and the City of Downey developed the American Water Works Association's (California-Nevada Section) suggested BMP manual addressing discharges from drinking water supplier distribution systems identified in Part III.A.2.a.ii of the 2012 Permit.⁴³⁰ Note that Part III.A.2.ii of the 2012 Permit specifies the use of this BMP manual, but gives Permittees the option to implement appropriate BMPs per an "equivalent industry standard BMP manual."⁴³¹ Therefore, this requirement gives Permittees flexibility to design their own program by choosing their BMP manual to address non-stormwater discharges from drinking water supplier distribution systems not otherwise regulated by an NPDES permit. For example, the Los Angeles Water Board considered and included in the Administrative Record the City of Los Angeles' Pollution Prevention Plan for water system discharges⁴³² as well as the Golden State Water Company's Water Pollution Control Program for potable water distribution system releases for unincorporated areas of Los Angeles County.⁴³³

⁴²⁸ CAL FIRE. *Office of the State Fire Marshal's Water-Based Fire Protection Systems Discharge Best Management Practices Manual*. September 2011. (2012 AR, pp. RB-AR24289 - 337); 2012 Permit, Part III.A.2.a.i, p. 28 (2015 AR, p. SB-AR-013321).

⁴³³ Golden State Water Company. *Water Pollution Control Program – Potable Water Distribution System Releases for Unincorporated Areas of Los Angeles County*. June 2007. Notably, Golden State Water Company states that the manual was developed to comply with the requirements of the 2001 Permit. (2012 AR, pp. RB-AR24416 - 478, see in particular RB-AR24419 - 420). Los Angeles County is a Claimant in Test Claim No. 13-TC-02.

The City of Los Angeles also identified proposed conditions for landscape irrigation during the 2012 Permit development and the Los Angeles Water Board used the City's proposed conditions in large part such as working with local water purveyors to reduce landscape irrigation runoff.⁴³⁴

3. Permittee Requirements (Parts III.A.4.c and III.A.4.d)

Part III.A.4.c of the 2012 Permit requires Permittees to evaluate non-stormwater monitoring data resulting from the implementation of the Monitoring and Reporting Program (Attachment E of the 2012 Permit) and available non-stormwater monitoring data to determine if any of the exempt non-stormwater discharges are a source of pollutants or are causing or contributing to an exceedance of receiving water limitations and/or water quality-based effluent limitations.⁴³⁵ If monitoring data shows that any authorized non-stormwater discharges are a source of pollutants that causes or contributes to an exceedance of receiving water limitations and/or water quality-based effluent limitations, Part III.A.4.d of the 2012 Permit requires Permittees to address this discharge.⁴³⁶

Claimants allege that Part III.A.4.c of the 2012 Permit was previously an obligation of the Los Angeles Water Board per the 2001 Permit and that federal regulations do not require Permittees to "affirmatively evaluate" non-stormwater discharges to determine if they are a source of pollutants that may be causing or contributing to an exceedance of a receiving water limitation.⁴³⁷ However, the challenged requirements to evaluate authorized non-stormwater discharges derive directly from the 2001 Permit and federal regulations.

Again, as discussed in Section IV.B.3.ii, above, Part III.A.4 of the 2012 Permit, including all their subparts, are provisions that Permittees can customize in an approved WMP or EWMP.⁴³⁸ All Claimants elected to develop, and are now implementing, an approved WMP or EWMP. Therefore, regardless of the specificity, the choice to implement the specific requirements of Part III.A.4, rather than alternative activities consistent with federal regulations was the Claimants' and is, therefore, not a state mandate.

The Provisions are Not New Programs or Higher Levels of Service

Consistent with federal regulations, the 2001 Permit required non-stormwater discharges to be prohibited unless the discharge fell within one of the federally-enumerated categories and was not considered a significant source of pollutants.⁴³⁹ While the 2001 Permit did not call it an "evaluation," this requirement was at a minimum implicit throughout the permit. Under Part 3.G.2.d) of the 2001 Permit, Permittees were required to possess the legal authority to "[c]arry out all inspection, surveillance and monitoring procedures necessary to determine compliance and non-compliance with permit conditions, including the prohibition of illicit discharges to the

⁴³⁴ Larry Walker Associates. Proposed Conditions to Allow for the Continued Exemption of Landscape Irrigation Discharges, January 30, 2012 (2012 AR, p. RB-AR24504 – 505).

⁴³⁶ *Id.*, Part III.A.4.d, p. 32 (2015 AR, p. SB-AR-013325).

⁴³⁷ Test Claims 13-TC-01, pp. 16-17 and 13-TC-02, pp. 17-18.

⁴³⁸ 2012 Permit, Part VI.C.1.b, p. 48 (2015 AR, p. SB-AR-013341) and Part VI.C.5.b.iv.(1), p. 63 (2015 AR, p. SB-AR-013356).

⁴³⁹ 2001 Permit, Part 1.A. p. 23-24.

MS4.”⁴⁴⁰ Furthermore, Part 2, subpart 3.a and Part 6.A.3 of the 2001 Permit required that Permittees determine whether stormwater or non-stormwater discharges were causing or contributing to an exceedance of water quality standards and report such circumstances to the Los Angeles Water Board and “...report all instances of non-compliance not otherwise reported at the time monitoring reports are submitted.”⁴⁴¹ Part 3.D.6 (Designation and Responsibilities of the Principal Permittee) of the 2001 Permit required LACFCD, the Principal Permittee, to “[i]mplement the Countywide Monitoring Program required under this Order and *evaluate*, assess and synthesize the *results of the monitoring program*.”⁴⁴² Further, Part 3.G.2.a) of the 2001 Permit required that Permittees possess adequate legal authority to “[r]equire persons within their jurisdiction to comply with conditions in Permittees' ordinances, permits, contracts, model programs, or orders (i.e. hold dischargers to its MS4 accountable for their contributions of pollutants and flows).”⁴⁴³ Thus, some level of analysis and field screening would be involved for Permittees to make these determinations. The challenged provisions merely make explicit what was already required in the prior permit.

The requirements of Parts III.A.4.c-d of the 2012 Permit are substantively the same as those in the 2001 Permit by requiring Permittees to monitor and evaluate non-stormwater discharges to ensure that they are not a source of pollutants and address them if they are. As such, the provisions do not constitute a new program or higher level of service.

The Provisions are Necessary to Implement Federal Law

A central part of the federal regulatory scheme for MS4s is the requirement that MS4 permittees develop and implement a program to prevent illicit discharges.⁴⁴⁴ As discussed above, while federal regulations have no definition for “non-stormwater discharges,” illicit discharges most closely represent the statutory term and are defined as “any discharge to a municipal separate storm sewer that is not composed entirely of storm water except discharges pursuant to a NPDES permit . . . and discharges resulting from firefighting activities.”⁴⁴⁵ Federal regulations specify what an illicit discharge prevention program must contain.⁴⁴⁶ Fundamentally, the illicit discharge prevention program must include provisions to “detect and remove (or require the discharger to the municipal separate storm sewer to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer.”⁴⁴⁷ Furthermore, federal regulations require the illicit discharge prevention program to include “procedures to conduct field screening activities during the life of the permit” and “procedures to be followed to investigate portions of the separate storm

⁴⁴⁷ *Id.*, subd. (d)(2)(iv)(B)(1).

sewer system that ... indicate a reasonable potential of containing illicit discharges or other sources of non-storm water.”⁴⁴⁸

MS4 permittees must possess legal authority to “[c]arry out all inspection, surveillance and monitoring procedures necessary to determine compliance and noncompliance with permit conditions including the prohibition on illicit discharges to the municipal separate storm sewer.”⁴⁴⁹ Federal regulations also require that all NPDES permittees furnish to the permitting authority any information it may request to determine compliance with the permit, and report all instances of noncompliance.⁴⁵⁰ Regarding the requirement of Part III.A.4.d, federal regulations require MS4 permittees to possess the legal authority to prohibit through ordinance, order or similar means, illicit discharges to the MS4 and control through ordinance, order or similar means the discharge to a MS4 of materials other than stormwater.⁴⁵¹

Certain categories of non-stormwater discharges are allowable as long as these discharges are not “identified by the municipality as sources of pollutants to waters of the United States.”⁴⁵² Therefore, federal regulations require Permittees to affirmatively evaluate available monitoring data for non-stormwater discharges for “compliance and noncompliance with permit conditions,” and if determined to be a source of pollutants, address the discharge through “a program, including inspections, to implement and enforce an ordinance, orders or similar means to prevent illicit discharges to the municipal separate storm sewer system.”⁴⁵³

Thus, the federal regulations clearly require the Permittees to affirmatively screen, or evaluate, the levels of pollutants in non-stormwater discharges. Part III.A.4.c-d implements this federal directive by requiring the Permittees to affirmatively evaluate whether any of the authorized discharges are a significant source of pollutants and, if one is, to prevent the discharge or otherwise mitigate the impacts.

For all these reasons, and for the additional reasons discussed in Section IV above, the Commission should find that Parts III.A.1, III.A.2, and III.A.4.a-d of the 2012 Permit are not state mandates subject to subvention.

C. Public Information and Participation Program (PIPP)

Parts VI.D.5.a, VI.D.5.b, VI.D.5.c, and VI.D.5.d of the 2012 Permit require Claimants to implement a Public Information and Participation Program (PIPP); provide a means for public participation and public reporting of illicit discharges/dumping and other water quality impacts from MS4 discharges; and implement a residential outreach program through the distribution of educational materials on the proper handling of various waste material via the Permittee’s website or links to other websites, and to various points-of-purchase and school children.⁴⁵⁴ Claimants allege these requirements constitute new programs or higher levels of service because the 2001 Permit

⁴⁴⁸ *Id.*, subd. (d)(2)(iv)(B).

⁴⁴⁹ *Id.*, subd. (d)(2)(i)(F).

⁴⁵⁰ *Id.*, § 122.41, subds, (h), (l)(7).

⁴⁵¹ *Id.*, § 122.26(d)(2)(i)(B)-(C).

⁴⁵² *Id.*, subd. (d)(2)(iv)(B)(1) (emphasis added).

⁴⁵³ *Id.*, subds. (d)(2)(i)(F), (d)(2)(iv)(B)(1).

⁴⁵⁴ 2012 Permit, Part VI.D.5, pp. 89-91 (2015 AR, pp. SB-AR-013382 - 384).

“contained no requirements for permittees other than the District, the Principal Permittee under that permit, to undertake these PIPP obligations” and also that the requirements are not mandated by federal law.⁴⁵⁵

First, as a threshold matter, the PIPP requirements in the 2012 Permit do not constitute new programs on the part of Permittees other than the LACFCD. Claimants mischaracterize the 2001 Permit by alleging it had no requirements for Permittees other than the LACFCD, as the former Principal Permittee, to implement a PIPP. They use this mischaracterization to argue that the 2012 Permit requirement to implement a PIPP is a new program for all Permittees except the LACFCD. It is disingenuous of the history of the Los Angeles County MS4 Permit, including the collective decision of the Permittees to designate the LACFCD as the Principal Permittee in their 2001 Permit reapplication package and the Los Angeles Water Board’s subsequent naming of the LACFCD as the Principal Permittee, to now suggest that the PIPP requirements constitute a new program for the rest of the co-Permittees.⁴⁵⁶ When co-Permittees designate one Permittee to act on others’ behalf, it does not alleviate the responsibility of each Permittee to ensure that all requirements are implemented for the Permittee’s discharges.

The 2001 Permit states, in part, “[e]ach Permittee shall, at a minimum, implement the SQMP [Storm Water Quality Management Program]” and that “[t]he SQMP shall, at a minimum, comply with the applicable storm water program requirements of 40 CFR 122.26(d)(2).”⁴⁵⁷ The PIPP is part of the SQMP. Part 3.E of the 2001 Permit states, “[e]ach Permittee is required to comply with the requirements of this Order applicable to discharges within its boundaries” including “comply[ing] with the requirements of the SQMP and any modifications thereto.” Nothing in Part 3.D of the 2001 Permit, which lists the responsibilities of the LACFCD as Principal Permittee, places all responsibility for implementing the PIPP on the LACFCD.⁴⁵⁸ Therefore, while Part 4.B of the 2001 Permit indicates that the Principal Permittee will implement a PIPP, it is clear from Parts 3.D and 3.E that this was a responsibility of all Permittees and not solely the Principal Permittee.

In 2006, the Permittees submitted reports of waste discharge (ROWDs), which serve as reapplication for a federal NPDES permit, to the Los Angeles Water Board.⁴⁵⁹ In November 2010, the LACFCD withdrew from its 2006 ROWD and submitted a new ROWD notifying the Los Angeles Water Board that it would no longer act as the Principal Permittee under the fourth-term Los Angeles County MS4 permit.⁴⁶⁰ As such, any responsibilities previously assumed by the Principal Permittee by mutual agreement of the co-Permittees must be implemented by the other Permittees as required by 40 C.F.R. section 122.26(d)(2).⁴⁶¹ To the extent needed, each

⁴⁵⁵ Test Claim 13-TC-01, pp. 18-19 and 13-TC-02, pp. 25-26.

⁴⁵⁶ County of Los Angeles Department of Public Works, Report of Waste Discharge for Municipal Stormwater and Urban Runoff Discharges in the County of Los Angeles (Order No. 96-054, NPDES No. CAS614001), January 31, 2001 (2001 AR, pp. R000001, R0000019).

⁴⁵⁷ 2001 Permit, Part 3.A., p. 26.

⁴⁵⁸ *Id.*, Part 3.D., pp. 26-27.

⁴⁵⁹ See generally 2012 AR, pp. RB-AR1 to 238.

⁴⁶⁰ Los Angeles County Flood Control District (LACFCD), Report of Waste Discharge for the Los Angeles County Flood Control District Municipal Separate Storm Sewer System, November 24, 2010, p. 3 (2012 AR, p. RB-AR239, at 247).

⁴⁶¹ 2012 Permit, Attachment F, Part VI.E.3, p. F-115 (2015 AR, p. SB-AR-013687).

Permittee is required to modify its stormwater management programs, protocols, practices, and municipal codes to be consistent with the requirements of the 2012 Permit.⁴⁶²

Therefore, Parts VI.D.5.a, VI.D.5.b, VI.D.5.c, and VI.D.5.d are not new programs or higher levels of service on *any* of the Claimants just because the co-Permittees designated a Principal Permittee to implement these activities on their behalf in the past, and the Los Angeles Water Board agreed to reflect the Permittees' collective choice in the 2001 Permit.

Second, the Los Angeles Water Board made specific findings concerning the PIPP requirements in the Fact Sheet to the 2012 Permit explaining why the requirements were necessary to implement federal law.⁴⁶³ This includes, but is not limited to, the Los Angeles Water Board's determination that implementation of a PIPP is a critical BMP and a necessary component of a stormwater management program and that to satisfy the public education and outreach minimum control measure, it is necessary for the Permittees to implement a PIPP that met the objectives discussed below.⁴⁶⁴ These findings are entitled to deference.

Third, as discussed in Section IV.B.3.ii, above, Permittees have broad discretion to propose alternative PIPP elements and activities through a WMP or EWMP to replace the specific requirements of Parts VI.D.5.a, VI.D.5.b, VI.D.5.c, and VI.D.5.d contained in the 2012 Permit.⁴⁶⁵ All Claimants elected to develop, and are now implementing, an approved WMP or EWMP. Therefore, the choice to implement the specific requirements of Parts VI.D.5.a, VI.D.5.b, VI.D.5.c, and VI.D.5.d rather than alternative activities consistent with federal regulations was the Claimants' and is, therefore, not a state mandate.

Fourth, as explained below, the PIPP requirements are not new and the 2012 Permit simply requires the Permittees to generally continue what was already required and taking place under the 2001 Permit. In most cases, Permittees have established programs with existing materials developed to educate the public. Since the majority of costs were incurred prior to issuance of the 2012 Permit, the Water Boards believe that any additional costs to meet the minimum requirement of the provision are *de minimus*.

Each provision is also addressed separately in more detail below.

1. General and PIPP Implementation (Parts VI.D.5.a and VI.D.5.b)

Parts VI.D.5.a and VI.D.5.b of the 2012 Permit require each Permittee to implement a PIPP and sets forth the objectives for a PIPP and options to implement the program.⁴⁶⁶ Permittees may participate in a County-wide program, participate in one or more Watershed Group sponsored programs, or conduct a program individually within its jurisdiction.⁴⁶⁷ The objectives of the PIPP identified in the 2012 Permit are the same as those in the 2001 Permit:

⁴⁶² *Id.*, Part VI.D.3.a, p. 72 (2015 AR, p. SB-AR-013365).

⁴⁶³ *Id.*, Attachment F (Fact Sheet), pp. F-59 to F-61 (2015 AR, pp. SB-AR-013631 - 633).

⁴⁶⁷ *Id.*, Part VI.D.5.b.i, p. 90 (2015 AR, p. SB-AR-013383).

- (1) To measurably increase the knowledge of the target audiences about the MS4, the adverse impacts of storm water pollution on receiving waters and potential solutions to mitigate the impacts.
- (2) To measurably change the waste disposal and storm water pollution generation behavior of target audiences by developing and encouraging the implementation of appropriate alternatives.
- (3) To involve and engage a diversity of socio-economic groups and ethnic communities in Los Angeles County to participate in mitigating the impacts of storm water pollution.⁴⁶⁸

The Provisions are Not New Programs or Higher Levels of Service

Parts VI.D.5.a and VI.D.5.b of the 2012 Permit are not a new program and do not require a higher level of service. The requirement for Permittees to implement a PIPP was carried over from the 2001 Permit.⁴⁶⁹ Since a Principal Permittee designation was not carried over from the 2001 Permit, Part VI.D.5.b of the 2012 Permit gives each Permittee the choice to individually or jointly implement a PIPP, including participating in a County-wide PIPP as under the 2001 Permit.⁴⁷⁰ As noted earlier, all Claimants are participants in a group WMP or EWMP and therefore are participating in a County-wide or Watershed Group PIPP.

Part VI.D.5.b.ii of the 2012 Permit requires a Permittee participating in a County-wide or Watershed Group PIPP “to provide the contact information for their appropriate staff responsible for storm water public education activities to the designated PIPP coordinator and contact information changes no later than 30 days after a change occurs.”⁴⁷¹ This requirement is the same as Part 4.B.1.c(8) of the 2001 Permit, which required Permittees to “provide the contact information for their appropriate staff responsible for storm water public education activities to the Principal Permittee no later than April 1, 2002, and changes to contact information no later than 30 days after a change occurs.”⁴⁷² There is no meaningful difference between providing such information to a Principal Permittee as compared to a PIPP coordinator.⁴⁷³

The Provisions are Not Unique to Local Government

The requirement to develop and implement a PIPP is not unique to local government. This requirement is a key provision in other permits issued to non-local government entities in order to effectively reduce and or prevent pollutants from reaching waterbodies. For example, Caltrans is required to implement a Statewide Public Education Program that includes the follow elements: a plan for conducting research on public behavior, a public education strategy, education of the general public, mass media advertising that focuses on behaviors of concern, and a process for

⁴⁶⁸ Compare PIPP objectives of the 2001 Permit, Part 4.B, p. 31 to the 2012 Permit, Part VI.D.5.a, pp.89-90 (2015 AR, pp. SB-AR-013382 - 383).

⁴⁶⁹ 2001 Permit, Part 4.B.

revising and updating the public education campaign based on research results.⁴⁷⁴ Additionally, Caltrans is required to identify measurable objectives for the Public Education Program and report on its progress in meeting the measurable objectives.⁴⁷⁵ The above demonstrates that Claimants are not being treated differently than non-local government entities.

The Provisions are Necessary to Implement Federal Law

Parts VI.D.5.a and VI.D.5.b are necessary to implement federal regulations applicable to MS4 discharges, which require that MS4 permittees have a comprehensive management program that includes public participation, educational activities, and public information activities, among other elements.⁴⁷⁶ Pursuant to these federal regulations, Part VI.D.5.b requires Permittees to develop and implement PIPP requirements.

The U.S. EPA Phase II Fact Sheet 2.3 finds that "An informed and knowledgeable community is critical to the success of a storm water management program since it helps insure the following: (i) greater support for the program as the public gains a greater understanding of the reasons why it is necessary and important, and (ii) greater compliance with the program as the public becomes aware of the personal responsibilities expected of them and others in the community, including the individual actions they can take to protect or improve the quality of area waters."⁴⁷⁷

The U.S. EPA MS4 Permit Improvement Guide recommends that the following provision is included in all MS4 permits: "Continue to implement, revise if necessary within [specify the time when the development of the program must be completed, e.g., within the first year after permit issuance], a comprehensive stormwater education/outreach program."⁴⁷⁸ Furthermore, many U.S. EPA issued Phase I permits such as the District of Columbia MS4 Permit,⁴⁷⁹ Boise/Garden City Area MS4 Permit,⁴⁸⁰ and the Middle Rio Grande MS4 Permit⁴⁸¹ include the requirement for Permittees to implement a PIPP.

The Fact Sheet for the 2012 Permit Fact states that "[t]he intent of these changes is to provide an increase in public knowledge of storm water pollution prevention practices in an effective cost

⁴⁷⁴ State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation, Part E.2.I, p. 50.

⁴⁷⁵ *Id.*, Part E.2.n, p. 51.

⁴⁷⁸ U.S. EPA. *MS4 Permit Improvement Guide* (2010), p. 18 (2012 AR, p. RB-AR53472).

⁴⁷⁹ U.S. EPA, Permit for District of Columbia Municipal Separate Storm Sewer System, Modified Permit No. DC0000221 (Oct. 7, 2011, mod. Nov. 9, 2012), Part 4.9, pp. 26 - 28 (2015 AR, pp. SB-AR-014177 - 179).

⁴⁸⁰ U.S. EPA, NPDES Permit No. IDS-027561, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to Ada County Highway District, Boise State University, City of Boise, and City of Garden City. Drainage District #3, and the Idaho Transportation Department District #3 (Dec. 12, 2012), Part II.B.6, p. 30.

⁴⁸¹ U.S. EPA, NPDES Permit No. NMR04A000, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to the Middle Rio Grande Watershed (Dec. 22, 2014), Parts I.D.5.g and h, pp. 44 and 47, respectively.

efficient manner, while still providing flexibility for the Permittees to implement the requirements on a watershed group basis.”⁴⁸²

The objectives in Part VI.D.5.a to measurably increase the knowledge and change the behavior of target audiences address federal requirements and U.S. EPA guidance on how to meet those requirements. With regards to assessing the effectiveness of a Permittee’s stormwater management program, such an assessment is specifically required of MS4 permittees by federal regulations at 40 C.F.R. sections 122.26(d)(2)(v) and 122.42(c)(3). Section 122.26(d)(2)(v) requires an assessment of controls [BMPs] proposed to be implemented as a result of the Permittees’ stormwater quality management programs,⁴⁸³ while section 122.42(c)(3) requires that Permittees revise their stormwater quality management program as necessary in each annual report based on actual program implementation outcomes (e.g., changes in public behavior).⁴⁸⁴

U.S. EPA’s Storm Water Menu of BMPs for the Minimum Control Measure: Public Education and Outreach on Stormwater Impacts states, “All successful programs incorporate methods of evaluation, to help them see what works and what does not. ... Evaluation will also help justify future funding or if the scope of the activity or product must be expanded or scaled down.”⁴⁸⁵ In Chapter 2 of the MS4 Permit Improvement Guide, U.S. EPA states:

[f]inally, the underlying principle of any public education and outreach effort is to change behaviors. The permittee must develop a process to assess how well its public education and outreach programs is changing public awareness and behaviors and to determine what changes are necessary to make its public education program more effective. This assessment of public education programs is typically conducted via phone surveys, but other assessment methods that quantify results can be used. The permittee is encouraged to use a variety of assessment methods to evaluate the effectiveness of different public education activities.⁴⁸⁶

Based on this, U.S. EPA’s MS4 Improvement Guide recommends the following provision be included in MS4 permits: “Within [insert deadline, e.g., within the permit term], the permittee must assess changes in public awareness and behavior resulting from the implementation of the program such as using a statistically valid survey and modify the education/outreach program accordingly.”⁴⁸⁷

Additionally, U.S. EPA-issued MS4 permits include similar provisions. The MS4 permit for the District of Columbia states, “[t]he permittee shall assess current education and outreach efforts

⁴⁸² 2012 Permit, Attachment F (Fact Sheet), Part VI.C.4.c, p. F-61 (2015 AR, p. SB-AR-013633).

⁴⁸³ 40 C.F.R. sections 122.26(d)(2)(v), 122.42(c)(3). Recall that public participation, educational activities, and public information activities are part of a Permittee’s required stormwater quality management program, and they are a type of BMP to control the discharge of pollutants by changing the behavior of residents.

⁴⁸⁴ Note, also, that 40 C.F.R. § 122.34(d)(1) dictates that permits “must require the permittee to evaluate compliance with the terms and conditions of the permit, including the effectiveness of the components of its storm water management program, and the status of achieving the measurable requirements in the permit.”

⁴⁸⁵ U.S. EPA. *Developing an Outreach Strategy, Minimum Measure: Public Education and Outreach on Stormwater Impacts: Developing Municipal Outreach Programs*, p. 3.

⁴⁸⁶ U.S. EPA. *MS4 Permit Improvement Guide* (2010), p. 20 (2012 AR, p. RB-AR53474).

⁴⁸⁷ *Id.*, at p. 19 (2012 AR, p. RB-AR53473).

and identify areas where additional outreach and education are needed.” The permit provision lists several audiences and subject areas to be considered including the general public and homeowners, and pet waste, vehicle maintenance, landscaping and household hazardous waste⁴⁸⁸ Part 4.9.2 states “The permittee shall continue to measure the understanding and adoption of selected targeted behaviors among the targeted audiences. The resulting measurements shall be used to direct education and outreach resources most effectively, as well as to evaluate changes in the adoption of the targeted behaviors.”⁴⁸⁹ Additionally, a similar provision is in the U.S. EPA-issued MS4 permit for the Boise/Garden City Area, which states, “[t]he Permittees must assess, or participate in an effort to assess understanding and adoption of behaviors by the target audiences. The resulting assessments must be used to direct storm water education and outreach resources most effectively.”⁴⁹⁰ Finally, Part 2.3.2 of the U.S. EPA-issued MS4 general permit for Massachusetts requires that permittees “identify methods that it will use to evaluate the effectiveness of the educational messages” and that “any methods ... shall be tied to ... the overall objective of changes in behavior and knowledge.”⁴⁹¹

As indicated above, Part VI.D.5.a of the 2012 Permit is necessary to implement federal requirements for assessing and reporting on program effectiveness.

Part VI.D.5.a.(3) of the 2012 Permit, which is the objective to involve and engage a diversity of socio-economic groups and ethnic communities to participate in mitigating the impacts of stormwater pollution, will be discussed in the response below for Part VI.D.5.d of the 2012 Permit.

2. Public Participation (Part VI.D.5.c)

Part VI.D.5.c.i requires each Permittee to provide a means for public reporting of clogged catch basin inlets and illicit discharges/dumping, faded or missing catch basin labels, and general stormwater and non-stormwater pollution prevention information, including a hotline and contact information. Permittees are required to provide information on the hotline and contacts in public information, including the government pages of the telephone book and on its website.⁴⁹²

Part VI.D.5.c.ii requires each Permittee to organize events targeted to residents and population subgroups to educate and involve the community in stormwater and non-storm water pollution prevention and clean-up, and gives some examples of events that a Permittee might implement.”⁴⁹³

⁴⁸⁸ U.S. EPA, Permit for District of Columbia Municipal Separate Storm Sewer System, Modified Permit No. DC0000221 (Oct. 7, 2011, mod. Nov. 9, 2012), Part 4.9.1.2, pp. 26 - 27 (2015 AR, pp. SB-AR-014177 - 178).

⁴⁹² 2012 Permit, Part VI.D.5.c.i, p. 90 (2015 AR, p. SB-AR-013383).

⁴⁹³ *Id.*, Part VI.D.5.c.ii, p. 90 (2015 AR, p. SB--AR-013383).

The Provision Is Not a New Program or Higher Level of Service

Part VI.D.5.c.i of the 2012 Permit is not a new program and does not require a higher level of service because each Permittee had to implement this requirement in the 2001 Permit. Part 4.B.1.b) of the 2001 Permit required a hotline to serve as the general public reporting contact for reporting clogged catch basins inlets and illicit discharges/dumping, faded or lack of catch basin stencils, and general stormwater management information. Each Permittee had the option of using 888-CLEAN-LA or, if preferred, establishing its own hotline. Furthermore, each Permittee was required to include the reporting information, updated when necessary, in public information, and the government pages of the telephone book, as they are developed or published.⁴⁹⁴ These are substantially the same requirements as the 2012 Permit. Permittees still have the option of using 888-CLEAN-LA as the general public reporting contact. The only difference in the requirements is that, in the 2001 Permit, the Permittees were required to provide reporting contacts and updated information to the Principal Permittee and the Principal Permittee was required to compile a list of all the reporting contacts and make the list available on the 888CleanLA.com website, while under the 2012 Permit, each Permittee is only required to make the reporting contact and hotline information available on its own website.

Part VI.D.5.c.ii of the 2012 Permit is a refinement of Part 4.B.1.c)(4) of the 2001 Permit and, therefore, is not a new program or higher level of service. Part 4.B.1.c)(4) of the 2001 Permit required each Permittee to conduct educational activities within its jurisdiction and to participate in countywide events.⁴⁹⁵ Furthermore, Permittees were already organizing events to educate their communities since the 2001 Permit. The June 12, 2006 report of water discharge/reapplication package submitted by the LACFCD and Los Angeles County on behalf of all the Permittees gave examples of such events. The reapplication package stated that Claimant City of Manhattan Beach “estimated that over half of the City’s residents (20,000) participated in the Hometown Fair, Household Hazardous Waste Awareness Week, and Earth Day events. The City operated a booth at each event and gave out stormwater educational material to both adults and children,” while Claimant City of Rancho Palos Verdes “promoted stormwater pollution prevention at several City sponsored events throughout the year.”⁴⁹⁶

The Provision is Necessary to Implement Federal Law

Federal regulations require Permittees to propose in their permit application, a description of a program to “promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from municipal separate storm sewers.”⁴⁹⁷ Additionally, federal regulations require Permittees to provide a “description of educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials.”⁴⁹⁸

⁴⁹⁴ 2001 Permit, Part 4.B.1.c)(4), p. 33.

⁴⁹⁵ *Ibid.*

⁴⁹⁶ LACFCD and Los Angeles County. *Report of Waste Discharge: Renewal Application for the County of Los Angeles National Pollutant Discharge Elimination System Municipal Stormwater Permit Order 01-182 NPDES Permit CAS004001*. June 12, 2016. Appendix A, p. 46 (2012 AR, p. RB-AR050). The cities of Manhattan Beach and Rancho Palos Verdes are claimants in Test Claim 13-TC-01.

⁴⁹⁷ 40 C.F.R. § 122.26(d)(2)(iv)(B)(5).

⁴⁹⁸ *Id.*, subd. (d)(2)(iv)(B)(6).

Part VI.D.5.d.i of the 2012 Permit, which requires Permittees to establish a public reporting process for illicit discharges and clogged/mislabeled catch basins, implements federal requirements to establish public reporting for illicit discharges and proper management/disposal of used oil and toxic materials.

Part VI.D.5.d.ii of the 2012 Permit also implements federal regulations by requiring Permittees to implement public education/information activities.⁴⁹⁹ Although Claimants allege that federal regulations for public education apply only to commercial applicators and distributors of pesticides, herbicides, and fertilizers and not the *general public*,⁵⁰⁰ the 1990 Federal Register states that “[m]any of the management programs depend upon an ongoing high level of *public education*.”⁵⁰¹ Furthermore, federal regulations require annual reports submitted by Permittees to provide a summary of *public education* programs.⁵⁰² Therefore, the federal requirement for Permittees to provide a summary of *public education* programs in the annual report clarifies that public education requirements in 40 C.F.R. § 122.26 apply to the *general public* as well as commercial distributors of pesticides, herbicides, and fertilizers.

With regards to Part VI.D.5.d.ii of the 2012 Permit, which requires Permittees to organize events targeted to residents and population subgroups for public education, the U.S. EPA MS4 Permit Improvement Guide states that the “public education and outreach program must be tailored and targeted to specific water quality issues of concern in the relevant community.”⁵⁰³ The U.S. EPA MS4 Permit Improvement Guide also recommends including the following provision among others in the permit: “Identify and analyze the target audience(s).”⁵⁰⁴

The U.S. EPA issued District of Columbia MS4 Permit and Boise/Garden City Area MS4 Permit both require Permittees to implement a public education program aimed at residents, businesses, industries, elected officials, policy makers, planning staff and other employees of the permittee to reduce or eliminate behaviors and practices that cause or contribute to adverse stormwater impacts.⁵⁰⁵ The U.S. EPA Middle Rio Grande MS4 Permit furthermore states:

[t]he permittee shall, individually or cooperatively, develop, revise, implement, and maintain a comprehensive stormwater program to educate the community, employees, businesses, and the general public of hazards associated with the illegal discharges and improper disposal of waste and about the impact that stormwater discharges on local waterways as well as the steps that the public can take to reduce pollutants in stormwater. The permittee must implement a public education program to distribute educational knowledge to the community or

conduct equivalent outreach activities about the impacts of stormwater discharges on water bodies and the steps that the public can take to reduce pollutants in stormwater runoff.⁵⁰⁶

3. Residential Outreach Program (Part VI.D.5.d)

Part VI.D.5.d of the 2012 Permit requires each Permittee in conjunction with a County-wide or Watershed Group sponsored PIPP or individually to implement activities, including: conducting public service announcements and advertising campaigns; providing public education materials on the proper handling of various waste materials and pesticides and fertilizers; distributing activity specific stormwater pollution prevention public education materials at various points of purchase; maintaining stormwater websites or providing links to stormwater websites via the Permittee's website; and providing schools within in each Permittee's jurisdiction with materials to educate school children (K-12) on stormwater pollution. The provisions also require that when implementing these activities Permittees use effective strategies to educate and involve ethnic communities in stormwater pollution prevention through culturally effective methods.⁵⁰⁷ Claimants are challenging six specific provisions within the Residential Outreach Program.

The Provision Is Not a New Program or Higher Level of Service

Part VI.D.5.d of the 2012 Permit is not a new program and does not require a higher level of service because all the requirements and/or substantially similar requirements were in the 2001 Permit.

The first requirement, Part VI.D.5.d.i.(1) of the 2012 Permit,⁵⁰⁸ carries over the requirement to conduct public service announcements and advertising campaigns from Part 4.B.1.c)(1) of the 2001 Permit.⁵⁰⁹ Permittees have already been involved in conducting public service announcements and advertising campaigns since the 2001 Permit. For example, the June 12, 2006 report of waste discharge/reapplication package submitted by the LACFCD and Los Angeles County on behalf of all the Permittees stated that the "Principal Permittee partnered with Cities in Malibu Creek Watershed to purchase '4 Our Planet' PSAs on KNBC television station targeting specific pollutants within the watershed."⁵¹⁰ There was also a "joint calendar project, coordinated across multiple watersheds, [which] allowed participating cities to distribute to residents a full color, one-page, poster-type calendar delivering the stormwater pollution prevention message through compelling photographic images."⁵¹¹

⁵⁰⁶ U.S. EPA, NPDES Permit No. NMR04A000, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to the Middle Rio Grande Watershed (Dec. 22, 2014), Parts I.D.5.g.(i)-(ii), p. 44.

⁵⁰⁷ 2012 Permit, Part VI.D.5.d, pp. 90-91 (2015 AR, pp. SB-AR-013383 - 384).

⁵⁰⁸ *Id.*, Part VI.D.4.d.i.(1), p. 91 (2015 AR, p. SB-AR-013384).

⁵⁰⁹ 2001 Permit, Part 4.B.1.c)(1), p. 32.

⁵¹⁰ LACFCD and Los Angeles County. *Report of Waste Discharge: Renewal Application for the County of Los Angeles National Pollutant Discharge Elimination System Municipal Stormwater Permit Order 01-182 NPDES Permit CAS004001*. June 12, 2016. Appendix A, p. 45 (2012 AR, p. RB-AR049). Claimants Agoura Hills and Westlake Village are located in the Malibu Creek Watershed.

⁵¹¹ *Id.*, at p. 46 (2012 AR, p. RB-AR050).

The second requirement, Part VI.D.5.d.i.(2) of the 2012 Permit,⁵¹² is a refinement of Part 4.B.1.d) of the 2001 Permit,⁵¹³ which required the Principal Permittee in coordination with co-Permittees to develop pollutant-specific outreach programs. Rather than specifying the targeted pollutants by watershed as done in the 2001 Permit, the 2012 Permit identifies the source of pollutants of concern, which includes vehicle waste fluids, household waste materials, construction waste materials, pesticides/fertilizers, green waste, and animal waste. Permittees have already been involved in developing and distributing education materials for proper handling of pollutant sources since the 2001 Permit. The Ballona Creek WMC Annual Assessment 2011-2012 report explains that Rancho Palos Verdes has a waste hauler newsletter mailer containing information about proper handling of vehicle waste fluids and household hazardous waste.⁵¹⁴ In another example, the June 12, 2006 report of waste discharge/reapplication package submitted by the LACFCD and Los Angeles County on behalf of all the Permittees states that the City of Alhambra distributed public education brochures and related promotional materials with an “emphasis on trash, pet waste, homeowner maintenance such as landscaping and painting, and fertilizer and pesticide use.”⁵¹⁵

Similarly, the third requirement, Part VI.D.4.d.i.(3) of the 2012 Permit,⁵¹⁶ is a refinement of Part 4.B.1.c)(1)(iv) of the 2001 Permit⁵¹⁷ which requires the distribution of “How To” instructional material in a targeted and activity-related manner. Since the 2001 Permit, Permittees have been developing educational materials that could be distributed to points of purchase because they are activity-specific. The June 12, 2006 report of waste discharge/reapplication package submitted by the LACFCD and Los Angeles County on behalf of all the Permittees gave the following example, the “Ballona WMC developed and distributed a joint mailer to promote stormwater pollution prevention throughout the watershed. A bifold pamphlet was developed providing a “To Do” list of activities that could cause pollution and suggested things that individuals can do to reduce or eliminate the adverse impacts of these activities.”⁵¹⁸

The fourth requirement, Part VI.D.5.d.i.(4) of the 2012 Permit,⁵¹⁹ is a refinement of Part 4.B.1.b) of the 2001 Permit,⁵²⁰ which requires general public reporting contacts from all Permittees to be made available on a website. Note that Part VI.D.5.d.i.(4) of the 2012 Permit gave Permittees the option to maintain existing stormwater websites or provide links to stormwater websites via the

⁵¹² 2012 Permit, Part VI.D.4.d.i.(2), p. 91 (2015 AR, p. SB-AR-013384).

⁵¹³ 2001 Permit, Part 4.B.1.d), p. 34.

⁵¹⁴ The Ballona Creek & Santa Monica Bay Watershed Management Committee, Annual Assessment 2010-2011 (Sept. 2012), p. 25. City of Rancho Palos Verdes is a Claimant in Test Claim 13-TC-01.

⁵¹⁵ LACFCD and Los Angeles County. *Report of Waste Discharge: Renewal Application for the County of Los Angeles National Pollutant Discharge Elimination System Municipal Stormwater Permit Order 01-182 NPDES Permit CAS004001*. June 12, 2016. Appendix A, p. 47 (2012 AR, p. RB-AR051).

⁵¹⁶ 2012 Permit, Part VI.D.4.d.i.(3), p. 91 (2015 AR, p. SB-AR-013384).

⁵¹⁷ 2001 Permit, Part 4.B.1.c)(1)(iv), p. 32.

⁵¹⁸ LACFCD and Los Angeles County. *Report of Waste Discharge: Renewal Application for the County of Los Angeles National Pollutant Discharge Elimination System Municipal Stormwater Permit Order 01-182 NPDES Permit CAS004001*. June 12, 2016. Appendix A, p. 46 (2012 AR, p. RB-AR050); Claimants Beverly Hills, Manhattan Beach, Rancho Palos Verdes, and Redondo Beach are part of the Ballona Creek Watershed Management Committee (Ballona Creek WMC).

⁵¹⁹ 2012 Permit, Part VI.D.4.d.i.(4), p. 91 (2015 AR, p. SB-AR-013384).

⁵²⁰ 2001 Permit, Part 4.B.1.b), p. 32.

Permittee's website. Therefore, all Claimants had the choice to continue to maintain the countywide website that was already established to implement Part 4.B.1.b) of the 2001 Permit. The June 12, 2006 report of waste discharge/reapplication package submitted by the LACFCD and Los Angeles County on behalf of all the Permittees states that the "City of Los Angeles' Stormwater Program website had over 95,000 more hits in 2004-05 than the previous year...indicate[s] that the messages on preventing storm water pollution...[is] reaching an expanded audience."⁵²¹

The fifth requirement, Part VI.D.5.d.i.(5) of the 2012 Permit,⁵²² carries over the requirement that the Principal Permittee in cooperation with co-Permittees provide schools with materials to educate school children on stormwater pollution from Part 4.B.1.c)(7) of the 2001 Permit.⁵²³ Part VI.D.5.d.i.(5) of the 2012 Permit gives Permittees the option to use existing materials produced by other statewide agencies and associations. Since the 2001 Permit, Permittees have already been distributing educational materials to school children. The June 12, 2006 report of waste discharge/reapplication package submitted by the LACFCD and Los Angeles County on behalf of all the Permittees states that the "Cities of Rolling Hills Estates and Rolling Hills distributed copies of USEPA/Weather Channel's video After the Storm and Algalita Marine Research Foundation's video Plastics in the Open Ocean to middle and high school environmental science teachers in public and private schools. All 6 periods of AP Environmental Science students at Palos Verdes Peninsula High School were shown these videos."⁵²⁴ Hence, Permittees have existing materials developed and/or used under the 2001 Permit as well as the option to use other available materials for distribution to school children.

The final requirement, Part VI.D.5.d.i.(6) of the 2012 Permit,⁵²⁵ carries over the requirement from Part 4.B.1.c)(2) of the 2001 Permit⁵²⁶ to develop a strategy to educate ethnic communities and businesses through culturally effective methods. Under the 2001 Permit, Permittees were already reaching out to different ethnic communities through culturally effective methods. The June 12, 2006 report of waste discharge/reapplication package submitted by the LACFCD and Los Angeles County on behalf of all the Permittees states that "West Hollywood received a Partners in Education grant from the Santa Monica Bay Restoration Commission to provide Russian/English pollution prevention posters/flyers, waterbrooms, and follow-up visits to area restaurants."⁵²⁷

As such, all six requirements in the 2012 Permit are simply continuing what was already required and taking place under the 2001 Permit.

⁵²¹ LACFCD and Los Angeles County. *Report of Waste Discharge: Renewal Application for the County of Los Angeles National Pollutant Discharge Elimination System Municipal Stormwater Permit Order 01-182 NPDES Permit CAS004001*. June 12, 2016. Appendix A, p. 46 (2012 AR, p. RB-AR050).

⁵²⁶ 2001 Permit, Part 4.B.1.c)(2), p. 32.

⁵²⁷ LACFCD and Los Angeles County. *Report of Waste Discharge: Renewal Application for the County of Los Angeles National Pollutant Discharge Elimination System Municipal Stormwater Permit Order 01-182 NPDES Permit CAS004001*. June 12, 2016. Appendix A, p. 48 (2012 AR, p. RB-AR052).

The Provision Is Not Unique to Local Government

The requirement to develop and implement a PIPP is not unique to local government. This requirement is a key provision in other permits issued to non-local government entities in order to effectively reduce and or prevent pollutants from reaching waterbodies. For example, Caltrans is required to implement a Statewide Public Education Program that includes the follow elements: a plan for conducting research on public behavior, a public education strategy, education of the general public, mass media advertising that focuses on behaviors of concern, and a process for revising and updating the public education campaign based on research results.⁵²⁸ Additionally, Caltrans is required to identify measurable objectives for the Public Education Program and report on its progress in meeting the measurable objectives.⁵²⁹ The above demonstrates that Claimants are not being treated differently than non-local government entities.

The Provision is Necessary to Implement Federal Law

Residential outreach is necessary to meet federal standards applicable to MS4 discharges. As noted above, one of the required means of achieving these federal requirements is through a comprehensive stormwater management program.⁵³⁰ Federal regulations identify four broad sources of pollutants within a MS4 service area that must be addressed by MS4 dischargers: runoff from commercial and residential areas, stormwater runoff from industrial areas, runoff from construction sites, and non-stormwater discharges.⁵³¹ Residential outreach is critical to addressing the first and last of these sources, and is a required element of a Permittee's stormwater management program.⁵³²

Part VI.D.5.d addressing residential outreach and education was included pursuant to 40 C.F.R. section 122.26(d)(2)(iv) including the overarching provision requiring public participation as well as subsections (A)(6) and (B)(6), which require educational outreach for pollutants in discharges of pesticides/herbicides, fertilizers, oil, and toxic materials. The 2012 Permit Fact Sheet states in Finding B that “[s]torm water and non-storm water discharges are often contaminated with pesticides, fertilizers, fecal indicator bacteria and associated pathogens, trash, automotive byproducts...” among others.⁵³³

The U.S. EPA MS4 Permit Improvement Guide presents the following as an appropriate provision to include in the permit: “Develop appropriate educational materials (e.g. the materials can utilize various media such as printed materials, billboard and mass transit advertisements, signage at

⁵²⁸ State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation, Part E.2.I, p. 50.

⁵²⁹ *Id.*, Part E.2.n, p. 51.

⁵³⁰ 40 C.F.R. § 122.26(d)(2)(iv).

⁵³¹ 55 Fed. Reg. 47990, 48052 (Nov. 16, 1990) (2012 AR, p. RB-AR23779).

⁵³² See, 40 C.F.R. § 122.26(d)(2)(iv), including, in particular, subsections (A) [regarding structural and source control measures to reduce pollutants from commercial and residential areas], (A)(6) [regarding reduction of pollutants associated with application of pesticides, herbicides and fertilizer], (B)(5) [regarding facilitate public reporting of illicit discharges or water quality impacts from MS4 discharges], and (B)(6) [regarding educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials].

⁵³³ 2012 Permit, Attachment F (Fact Sheet), Part II.B, p. F-7 (2015 AR, p. SB-AR-013579).

select locations, radio advertisements, television advertisements, websites).⁵³⁴ Part VI.D.5.d.i.(1) and (4) of the 2012 Permit therefore required Permittees to conduct public service announcements and advertising campaigns and use websites to provide educational material.

Part VI.D.5.d.i.(2)-(3) and (5)-(6) of the 2012 Permit targets pollutants of concern and relevant audiences. In Chapter 2 of the MS4 Permit Improvement Guide, U.S. EPA states:

[t]he public education and outreach program must be tailored and targeted to specific water quality issues of concern in the relevant community...EPA recommends that the permit writer consider requiring permittees to identify and describe issues, such as specific pollutants, the sources of those pollutants, impacts on biology, and the physical attributes of stormwater runoff, in their education/outreach program, which affect local watershed(s)...For Phase I, individual permits, it may be appropriate for the permit writer to specify the priority issues based on known issues, monitoring data, historical trends, etc.⁵³⁵

U.S. EPA's MS4 Permit Improvement Guide also provides an example permit provision to target three residential issues for stormwater education/outreach messaging, and includes in the list of examples residential car washing and auto maintenance control measures, home and garden care activities, disposal of household hazardous waste (e.g., paints, cleaning products), and pet and other animal waste.⁵³⁶ Part VI.D.5.d.i.(2) of the 2012 Permit identifies various residential issues based on pollutants of concern in Los Angeles County; these pollutants of concern include indicator bacteria (found in animal wastes), total aluminum, copper, lead, zinc (sources can be household hazardous waste, construction waste, pesticides and fertilizers), diazinon (a pesticide), and trash/debris (including construction debris and household waste).⁵³⁷ Nutrients (found in green waste) are also pollutants of concern in four watersheds in Los Angeles County.⁵³⁸

This is consistent with the federal intent for a permittee(s) to tailor their stormwater management program, including public education efforts, based on an understanding of the pollutant sources in their MS4 service area. With regard to the specific distribution points for educational materials, the 1990 Federal Register notice states that, "... improper disposal of oil into storm drains is often associated with do-it-yourself automobile oil changes in residential areas, or improper application or over-use of herbicides and pesticides in residential areas ..."⁵³⁹ To effectively reach the appropriate audiences, Part VI.D.5.i.(3) of the 2012 Permit correlates target pollutants for outreach previously specified in Part 4.B.1.d) of the 2001 Permit with key purchase points associated with these residential activities as follows: (i) metals with automotive parts stores; (ii) nutrients and pesticides with home improvement centers/lumber yards/hardware stores and landscaping/gardening centers; and (iii) indicator bacteria with pet shops/feed stores.

Additionally, U.S. EPA's Storm Water Menu of BMPs for the Minimum Control Measure: Public Education and Outreach on Stormwater Impacts states:

⁵³⁴ U.S. EPA. *MS4 Permit Improvement Guide* (2010), p. 19 (2012 AR, p. RB-AR53473).

⁵³⁵ *Id.*, at pp. 20-21 (2012 AR, pp. RB-AR53474 - 75).

⁵³⁶ *Id.*, at pp. 18-20 (2012 AR, pp. RB-AR53472 - 74).

⁵³⁷ 2012 Permit, Attachment F (Fact Sheet), Part II.B, pp. F-10 to F-11 (2015 AR, pp. SB-AR-013582 - 583).

⁵³⁸ *Id.*, Part VI.D, pp. F-92 to F-100 (2015 AR, pp. SB-AR-013664 - 672).

⁵³⁹ 55 Fed. Reg. 47990, 48052 (Nov. 16, 1990) (2012 AR, p. RB-AR23779).

[m]ultiple goals are common for an outreach strategy. You should match outreach goals with the goals of the overall stormwater program and its environmental and water protection concerns. With specific goals that dovetail with the environmental goals for the affected waterbodies, you can more efficiently spend dollars to reduce the pollution issue. If reducing nutrients in local waterbodies is a concern, outreach goals should address nutrients generated by the public. For example, you could target the public's gardening practices. An example of an outreach goal might be: "Increase residential awareness of nutrient runoff and encourage behaviors that will reduce nutrient pollution in local streams and lakes."⁵⁴⁰

U.S. EPA-issued MS4 permits such as the one for Massachusetts include requirements to implement an education program that is based on stormwater issues of significance within the MS4 area.⁵⁴¹

In addition to targeting audiences at points of purchase, Part VI.D.5.d.i.(5) of the 2012 Permit targets children (K-12) at schools. Federal regulations state that MS4 permits should require permittees to tailor the public education program to specific audiences and lists implementing educational programs targeted at school age children.⁵⁴² The U.S. EPA's Storm Water Menu of BMPs for the Minimum Control Measure: Public Education and Outreach on Stormwater Impacts states, "[c]lassroom education plays an integral role in any stormwater pollution outreach program. Providing stormwater education through schools conveys the message not only to students but to their parents. Many municipal stormwater programs partner with educators and experts to develop storm water-related programs for the classroom. These lessons need not be elaborate or expensive to be effective."⁵⁴³ Furthermore, a similar provision was included in the U.S. EPA-issued Middle Rio Grande MS4 permit, which states, "[u]se tailored public education program, using a mix of locally appropriate strategies, to target specific audiences and communities. Examples of strategies include distributing brochures or fact sheets, sponsoring speaking engagements before community groups, providing public service announcements, implementing educational programs targeted at school age children..."⁵⁴⁴

To be consistent with U.S. EPA guidance that schools can be one of the most effective mediums to target school-aged children in comparison to public counters and events, Part VI.D.5.d.i.(5) of the 2012 Permit continued and refined the requirement in the 2001 Permit to target school-aged children in schools.

⁵⁴⁰ U.S. EPA. *Developing an Outreach Strategy, Minimum Measure: Public Education and Outreach on Stormwater Impacts. Developing Municipal Outreach Programs*, p. 2.

⁵⁴¹ U.S. EPA, General Permits For Stormwater Discharges From Small Municipal Separate Storm Sewer Systems (MS4s) In Massachusetts, Authorization to Discharge Under the National Pollutant Discharge Elimination System, issued to MS4s located in the Commonwealth of Massachusetts, NPDES Permits No. MAR041000, MAR042000, and MAR043000 (Apr. 4, 2016), Part 2.3.2, pp. 27-28.

⁵⁴² 40 C.F.R. § 122.34(b)(1)(ii).

⁵⁴³ U.S. EPA. *Classroom Education on Stormwater, Minimum Measure: Public Education and Outreach on Stormwater Impacts: Promoting the Stormwater Message*, p. 1.

⁵⁴⁴ U.S. EPA, NPDES Permit No. NMR04A000, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to the Middle Rio Grande Watershed (Dec. 22, 2014), Part 1.D.5.g(ii)(e), p. 45.

To meet the federal standards applicable to MS4 discharges, Part VI.D.5.d.i.(5) of the 2012 Permit promotes public awareness about stormwater pollution prevention on a long-term basis by encouraging behavior changes as school-aged residents mature. Given the population characteristics of Los Angeles County where over 22% of the population are children under 18 years old, this provision is necessary per the U.S. EPA guidance and U.S. EPA issued MS4 permits.⁵⁴⁵

In order to target the entire array of population groups within Los Angeles County, Part VI.D.5.d.i.(6) of the 2012 Permit, consistent with federal regulations, targets ethnic communities. Federal regulations state that “[t]he permit should encourage the permittee to tailor the outreach program to address the viewpoints and concerns of all communities, particularly minority and disadvantaged communities, as well as any special concerns relating to children.”⁵⁴⁶ This particular provision is included to ensure the Permittees’ PIPP reaches population segments that might otherwise be overlooked.⁵⁴⁷ Further, it ensures that the public outreach required as part of Permittees’ stormwater management programs is not ineffective due to language/cultural barriers.

As in federal regulations, U.S. EPA’s Fact Sheet on the Public Education and Outreach Minimum Control Measure states, “the public education program should use a mix of appropriate local strategies to address the viewpoints and concerns of a variety of audiences and communities, including minority and disadvantaged communities, as well as children.”⁵⁴⁸ Part 1.D.5.g(ii)(f) of the 2014 U.S. EPA issued Middle Rio Grande MS4 Permit states that “[t]he permittee may tailor the outreach program to address the viewpoints and concerns of all communities, particularly minority and disadvantaged communities, as well as any special concerns relating to children. The permittee *must make information available for non-English speaking residents*, where appropriate” (emphasis added).⁵⁴⁹

The U.S. EPA Fact Sheet “Tailoring Outreach Programs to Minority and Disadvantaged Communities and Children” finds that, “Many residents of ethnically and culturally diverse communities don't speak English. English messages contained in signs, brochures, advertisements, newsletters and other outreach materials are mostly lost on these groups.”⁵⁵⁰ Furthermore, the U.S. EPA’s Storm Water Menu of BMPs for the Minimum Measure: Public Education and Outreach on Stormwater Impacts states:

Basic census research on income and educational demographics might be supplemented by feedback from small focus groups of the target audience with whose help you can better understand them. Research can tell you where the audience needs help to overcome barriers that perpetuate polluting behaviors (for

⁵⁴⁶ 40 C.F.R. § 122.34(b)(1)(ii).

⁵⁴⁷ 2012 Permit, Attachment F (Fact Sheet), Part VI.C.4, p. F-61 (2015 AR, p. SB-AR-013633).

⁵⁴⁸ U.S. EPA. *Stormwater Phase II Final Rule Fact Sheet: Public Education and Outreach Minimum Control Measure* December 2005. p. 2 (2012 AR, p. RB-AR35134).

⁵⁴⁹ U.S. EPA, NPDES Permit No. NMR04A000, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to the Middle Rio Grande Watershed (Dec. 22, 2014), p. 44-45.

⁵⁵⁰ U.S. EPA. *Promoting the Stormwater Message: Public Education and Outreach on Stormwater Impacts Minimum Control Measure, Tailoring Outreach Programs to Minority and Disadvantaged Communities and Children*. p. 1 (2012 AR, p. RB-AR35136).

example, all pollution prevention messages are in English, but a large section of the audience speaks Spanish.) It is worth getting to know the target audiences specifically to develop outreach messages that both resonate with, and more importantly, reach them.⁵⁵¹

The contested provision merely requires that public education messages must be available to and comprehensible by the entire population group. Given the population characteristics of Los Angeles County, where over 56% of the population speaks a language other than English at home, over 34% of the population is foreign-born, and over 48% of the population is Hispanic or Latino, this provision is a federal requirement as evidenced by U.S. EPA guidance and U.S. EPA issued MS4 permits.⁵⁵²

In summary, the requirements of Part VI.D.5.d in the 2012 Permit are designed to meet federal requirements by establishing provisions tailored to pollutants of concern in Los Angeles County and the target audiences associated with those pollutants of concern. Consistent with U.S. EPA guidance, these provisions ensure residential outreach is done in a manner appropriate to the audience and targets points in their activities where they are most likely to engage in polluting behaviors and where they purchase materials that are likely to end up as pollution (e.g., motor oil, fertilizers).⁵⁵³ This program is intended to increase public knowledge of stormwater pollution and change behaviors in an effective and cost-efficient manner.

Part VI.D.5.d of the 2012 Permit therefore implements the federal requirement for MS4 permittees to shape their stormwater management program, including public education efforts, based on an understanding of the pollutant sources in their MS4 service area.

For all these reasons, and for the additional reasons discussed in Section IV above, the Commission should find that Parts VI.D.5.a, VI.D.5.b, VI.D.5.c, and VI.D.5.d of the 2012 Permit are not state mandates subject to subvention.

D. Industrial/Commercial Facilities Program

Part VI.D.6 of the 2012 Permit sets forth provisions designed to prevent illicit discharges from industrial and commercial facilities and to reduce pollutants in stormwater discharges from these facilities.⁵⁵⁴ Claimants allege that the requirements to: track nurseries and nursery centers, include certain information in the inventory of critical sources, maintain tracking in an electronic database, update the critical sources inventory annually, and evaluate the effectiveness of BMPs at the facilities are new programs or higher levels of service and are not mandated by federal law.⁵⁵⁵

⁵⁵⁴ 2012 Permit, Part VI.D.6, pp. 91-97 (2015 AR, pp. SB- AR-013384 - 390).

⁵⁵⁵ Test Claim 13-TC-01, pp. 20-21 and 13-TC-02, pp. 28-29.

As discussed in Section IV.B.3.ii, above, Part VI.D.6 of the 2012 Permit, including all its subparts, is one of the permit provisions that Permittees can customize in an approved WMP or EWMP.⁵⁵⁶ All Claimants elected to develop, and are now implementing, an approved WMP or EWMP. Therefore, the choice to implement the specific requirements of Parts VI.D.6.b, VI.D.6.d, and VI.D.6.e rather than alternative activities consistent with federal regulations was the Claimants' and is, therefore, not a state mandate.

1. Track Critical Industrial / Commercial Sources (Part VI.D.6.b)

Part VI.D.6.b of the 2012 Permit requires each Permittee to identify and track critical industrial and commercial sources of stormwater that may discharge to the Permittees' MS4. Permittees are required to maintain an updated watershed-based inventory or database of all industrial and commercial facilities that are critical sources of stormwater pollution within their jurisdictions.⁵⁵⁷

The Provision is Not a New Program or Higher Level of Service

While the specific information required under Part VI.D.6.b of the 2012 Permit is slightly modified from that of the 2001 Permit, the requirement to track critical sources by maintaining a watershed-based inventory is directly carried over from Part 4.C.1 of the 2001 Permit.⁵⁵⁸ Regarding Claimants' contentions about the inclusion of certain information such as the source, NAICS code, status of exposure, including whether a facility has filed a "No Exposure Certification" with the State Water Board, name of the receiving water, and whether the facility is tributary to a waterbody listed as impaired, this information is the same as that required in the 2001 Permit. Permittees would have already compiled information on source, receiving water, and whether the facility is tributary to an impaired waterbody.⁵⁵⁹ Part 4.C.1.b of the 2001 Permit required Permittees to verify coverage of pertinent facilities under the General Permit for Storm Water Discharges Associated with Industrial Activities (IGP); exposure of industrial activities to stormwater is a major factor in determining whether coverage under the IGP is required and documentation regarding certification is available in the State Water Board's online database of IGP enrollees. As for tracking of the NAICS code, the NAICS was established in 1997 to address insufficiencies in the SIC system and there are readily available "crosswalk" tables to identify the NAICS code from the SIC code.

Additionally, the requirement in Part VI.D.6.b.iii of the 2012 Permit for Permittees to update their inventory of critical sources at least annually through collection of new information obtained through field activities or through other readily available intra-agency informational databases is the same as the requirement in Part 4.C.1.c of the 2001 Permit.⁵⁶⁰ Regarding the requirement to maintain tracking in an electronic database, this simply builds on the 2001 Permit provision

⁵⁵⁶ 2012 Permit, Part VI.C.1.b, p. 48 (2015 AR, p. SB-AR-013341) and Part VI.C.5.b.iv.(1), p. 63 (2015 AR, p. SB-AR-013356).

⁵⁵⁷ *Id.*, Part VI.D.6.b, pp. 92-92 (2015 AR, pp. SB-AR-013385 - 386).

⁵⁵⁸ 2001 Permit, Part 4.C.1, pp. 35-36.

⁵⁵⁹ 2001 Permit, Parts 4.C.1 and 4.C.3.b, pp. 35-36, 40. Part 4.C.3.b states that Permittees must consider requiring facility operators to implement additional controls to reduce pollutants if the facility is in an environmentally sensitive area or tributary to a CWA § 303(d) listed impaired waterbody. To fulfill this requirement, Permittees had to identify, for each facility, the receiving water and whether the receiving water was impaired. Thus, this is not new information required.

⁵⁶⁰ 2012 Permit, Part VI.D.6.b.iii, p. 93 (20152 AR, p. SB-AR-013386); 2001 Permit, Part 4.C.1.c, p. 36.

recommending use of an automated database system, recognizing current technology and the efficiency to be gained with an electronic format when updating the inventory.⁵⁶¹ It is also consistent with the 2001 Permit Monitoring and Reporting Program requirement that each Permittee submit a quarterly electronic submittal of its Industrial/Commercial Facilities Program activities.⁵⁶² For these reasons, the contested elements of Part VI.D.6.b do not constitute a new program or higher level of service.

Lastly, Claimants appear to argue that the Commission has previously determined that certain critical source tracking requirements related to the Industrial/Commercial Facilities Control Program in the 2001 Permit represented a new program or higher level of service.⁵⁶³ That is incorrect. The requirement to track critical sources for the Industrial/Commercial Facilities Control Program in the 2001 Permit was contained in Part 4.C.1, which the claimants did not challenge in their test claim on the 2001 Permit. As such, Claimants are wrong that the Commission has previously made a determination that tracking requirements related to the Industrial/Commercial Facilities Control Program in the 2001 Permit constitute a new program or higher level of service.

The Provision is Necessary to Implement Federal Law

The U.S. EPA MS4 Permit Improvement Guide states that, "Phase I MS4 regulations specify that several key elements be included in Phase I MS4 stormwater management programs [to control pollutants in stormwater discharges to the MS4 from industrial and commercial facilities]. These elements include: adequate legal authority to require compliance and inspect sites, inspection of priority industrial and commercial facilities, establishing control measure requirements for facilities that may pose a threat to water quality, and enforcing stormwater requirements. *In order to implement these requirements, MS4 permits require the development of an inventory of facilities and prioritization protocol and adequate staff training to ensure proper inspection and enforcement of requirements.*"⁵⁶⁴

Federal regulations at 40 C.F.R. section 122.26(d)(2)(ii) require MS4 operators to "[p]rovide an inventory, organized by watershed of the name and address, and a description (such as SIC codes) which best reflects the principal products or services provided by each facility which may discharge, to the municipal separate storm sewer, storm water associated with industrial activity."⁵⁶⁵ U.S. EPA's MS4 Permit Improvement Guide provides a draft permit provision for permitting authorities, which states "[t]he permittee must continue to maintain an inventory of all industrial and commercial sites/sources within its jurisdiction (regardless of ownership) that could discharge pollutants in stormwater to the MS4. The inventory must be updated [*insert frequency, e.g. annually*] and available for review by the permitting authority upon request."⁵⁶⁶ The Guide provides the following rationale for the inventory requirement:

The inventory information will provide the permittee with information on potential pollutant sources that contribute to its MS4 system, and at what locations in the

⁵⁶¹ 2001 Permit, Part 4.C.1.b, p. 36.

⁵⁶² *Id.*, Attachment U-4, p. 17.

⁵⁶³ Test Claim 13-TC-01, 20 and 13-TC-02, p. 28.

⁵⁶⁴ U.S. EPA. *MS4 Permit Improvement Guide* (2010), Chapter 7, p. 85 (2012 AR, p. RB-AR53539) (emphasis added).

⁵⁶⁵ 40 C.F.R. § 122.26(d)(2)(ii).

⁵⁶⁶ U.S. EPA. *MS4 Permit Improvement Guide* (2010), Chapter 7, p. 85 (2012 AR, p. RB-AR53539).

system into which they discharge. This information will also allow the permittee to prioritize inspections and tailor education and outreach efforts, which will best assist the facility in implementing appropriate pollution prevention practices or other on-site stormwater controls. In addition, the inventory data will allow the permittee to determine whether the facilities may discharge pollutants of concern into impaired waters. Finally, the information contained in the inventory will enable permittees to characterize these facilities and prioritize them based on their potential impact on stormwater quality. By prioritizing facilities in such a manner, the permittee may then establish a targeted approach towards conducting inspections...⁵⁶⁷

Regarding the inclusion of nurseries and nursery centers as critical commercial sources in the 2012 Permit, nurseries and nursery centers are commercial facilities.⁵⁶⁸ Furthermore, nurseries and nursery centers are associated with loose soil and chemicals contained in pesticides, herbicides, and fertilizer. These materials contribute to stormwater pollution. In the 2012 Permit Fact Sheet, the Los Angeles Water Board found that “[s]torm water and non-storm water discharges are often contaminated with pesticides, fertilizers,” among other pollutants.⁵⁶⁹ Federal regulations at 40 C.F.R. § 122.26(d)(2)(iv)(A)(6) requires the reduction of pollutants in discharges from MS4s associated with the application of pesticides, herbicides and fertilizer.⁵⁷⁰ U.S. EPA’s MS4 Permit Improvement Guide provides a draft permit provision, which states that “[a]t a minimum, the following sites/sources must be included in the inventory: 1. Commercial Sites/Sources: ... Landscaping ...Nurseries and greenhouses...”⁵⁷¹ As such, nurseries and nursery centers must be listed and tracked as critical commercial sources of stormwater pollution.

Regarding the fields and electronic format of the inventory, federal regulations at 40 C.F.R. § 122.26(d)(1)(iv)(C) requires Permittees to provide “a list of water bodies that receive discharges from the municipal separate storm sewer system, including downstream segments, lakes and estuaries, where pollutants from the system discharges may accumulate and cause water degradation, and a brief description of known water quality impacts. At a minimum, the description of impacts shall include a description of whether the water bodies receiving such discharges have been: (1) assessed and reported in section 305(b) reports ...”⁵⁷² U.S. EPA’s MS4 Permit Improvement Guide provides a draft permit provision pertaining to the inventory of facilities that states, “The inventory must include the following minimum information for each industrial and commercial site/source: ... 4. Name of receiving water ... 6. Identification of whether the site/source is (1) tributary to an impaired water body segment (i.e., whether it is listed under

⁵⁶⁷ *Id.*, at p. 87 (2012 AR, p. RB-AR53541).

⁵⁶⁸ The 2001 Permit defines “Industrial/Commercial Facility” as any facility involved and/or used in the production, manufacture, storage, transportation, distribution, exchange or sale of goods and/or commodities, and any facility involved and/or used in providing professional and non-professional services. This category of facilities includes, but is not limited to, any facility defined by the Standard Industrial Classifications (SIC). Facility ownership (federal, state, municipal, private) and profit motive of the facility are not factors in this definition.”

⁵⁶⁹ 2012 Permit, Attachment F (Fact Sheet), p. F-7 (2015 AR, p. SB-AR-013579).

⁵⁷⁰ 40 C.F.R. § 122.26(d)(2)(iv)(A)(6).

⁵⁷¹ U.S. EPA. *MS4 Permit Improvement Guide* (2010), Chapter 7, pp. 86-87 (2012 AR, p. RB-AR53540 - 541).

⁵⁷² 40 C.F.R. § 122.26(d)(1)(iv)(C).

Section 303(d) of the Clean Water Act) and (2) whether it generates pollutants for which the water body segment is impaired ...”⁵⁷³

Therefore, the requirement to maintain an inventory is a federal requirement designed to ensure control of pollutant discharges in stormwater from industrial and commercial facilities, paying particular areas attention to facilities where stormwater is discharged to waterbodies listed as impaired under CWA section 303(d).

Furthermore, the U.S. EPA-issued MS4 permit for the Boise/Garden City Area includes provisions that require inventory and inspection of industrial and commercial facilities,⁵⁷⁴ demonstrating that these are federal requirements.

Other Mandates Exceptions Apply

Because the Permittees would have completed the majority of the work to establish and maintain an inventory of critical sources as required under the previous permits, the Water Boards believe that any additional costs to meet the minimum requirements of Part VI.D.6.b are *de minimis*. For example, in the 1994 Report of Waste Discharge (ROWD), Volume 2, Section III, Permittees state that “[a]s required under the current [1990] Permit, the Permittees have produced a listing of industries by SIC category for each drainage area.” In that ROWD, the Permittees also proposed an updated procedure through the annual report to the Los Angeles Water Board.⁵⁷⁵

Additionally, as discussed in Section IV.B.2, above, it is feasible and reasonable for Permittees to collect fees from commercial and industrial facilities for the costs associated with implementing these permit provisions. Notably, in its Statement of Decision concerning the trash receptacle and inspection requirements in the 2001 Permit, the Commission specifically determined that the claimants have fee authority under article XI, section 7 of the California Constitution for inspections of industrial and commercial facilities, and construction sites.⁵⁷⁶ The Commission even noted that, in June 2005, the City of Covina “adopted stormwater inspection fees on restaurant, retail gasoline outlets, automotive service facilities, etc., as part of its business license fee, expressly for the purpose of complying with the [2001 Permit].”⁵⁷⁷ The Commission further found that “a local regulatory stormwater fee, if appropriately calculated and charged, would not be a special tax” and that “local fees for inspections... would not be subject to the vote requirement of Proposition 218.”⁵⁷⁸ Here, Claimants likewise have fee authority for compliance with the provisions in Part VI.D.6.b as they are related to inspections of critical commercial and industrial sources.

⁵⁷⁷ *Id.*, at p. 56 (referring to City of Covina, Resolution No. 05-6455).

⁵⁷⁸ *Id.*, at pp. 66-70.

In addition, it is worth noting that the City of Glendora recently participated in a presentation to the Los Angeles Water Board in which it presented information on its inspection fee schedule, which covers inspections of commercial and industrial facilities, including nurseries and those facilities enrolled in the IGP.⁵⁷⁹

2. Inspect Critical Commercial and Industrial Sources (Parts VI.D.6.d and VI.D.6.e)

To ensure BMPs are effectively implemented, Parts VI.D.6.d and VI.D.6.e of the 2012 Permit require each Permittee to inspect all commercial and industrial facilities identified as critical sources.⁵⁸⁰

The Provisions are Not New Programs or Higher Levels of Service

The requirement to visit industrial/commercial sites stems from the 1996 Permit.⁵⁸¹ Part V.B of the 1996 Permit required each permittee to develop and implement an “industrial/commercial site visit program.”⁵⁸² Permittees were required to develop a list of specific stormwater BMPs for each industrial/commercial SIC group of facilities requiring educational site visits no later than May 30, 1997. Upon approval by the Los Angeles Water Board, the BMP lists were incorporated in each Permittee's outreach measures conducted during industrial/commercial site visits.⁵⁸³ While the stated purpose of this program was identified as educational, the real intent was to provide facility operators sufficient knowledge to enable them to appropriately manage their site to reduce pollutants being discharged in stormwater runoff from their site to the MS4 through use of the BMP list in conjunction with stormwater guidance/advice provided during the site visits.

The “industrial/commercial site visit program” from the 1996 Permit was carried over to the 2001 Permit, but with more of a focus on inspections and BMP verification rather than education. However, whether it is called an “educational site visit” or an “inspection,” the 2001 Permit required an almost identical level of effort, since Permittees had to physically visit an industrial/commercial site. Further, both permits required visits to a site at the same frequency, once in 24 months with a minimum of 2 inspections/site visits to occur within the five-year term of each respective permit.

These requirements from the 2001 Permit were largely carried over to the 2012 Permit. Claimants allege that the 2001 Permit “did not require the inspectors to evaluate the effectiveness of the BMPs at the [industrial and commercial] facilities.”⁵⁸⁴ However, Parts 4.C.2 and 4.C.3.a of the 2001 Permit specifically required each Permittee to confirm that BMPs were being effectively implemented at the subject facility, and to require implementation of other BMPs where

⁵⁷⁹ “Industrial Sites Task Force,” Presentation to the Los Angeles Water Board (Oct. 5, 2017), pp. 41-45.

⁵⁸⁰ 2012 Permit, Parts VI.D.6.d-e, pp. 94-96 (2015 AR, pp. SB-AR-013387-389).

⁵⁸¹ Claimants note that while some inspection requirements were carried over from the 2001 Permit, those requirements were previously determined by the Commission to represent a new program or higher level of service. The Water Boards recognize that the Commission found provisions related to inspections of industrial/commercial sites in the 2001 Permit to constitute a new program or higher level of service. The Water Boards, however, continue to dispute that determination and the issue has been appealed. However, whether the inspection provisions in the 2001 Permit constitute a new program or higher level of service as compared to the 1996 Permit has yet to be addressed by the courts.

⁵⁸² 1996 Permit, Part 2.V.B, p. 53 (2001 AR, p. R0028712).

⁵⁸³ *Id.*, Part V.B.2, pp. 54-55 (2001 AR, pp. R0028713-R0028714).

⁵⁸⁴ Test Claim 13-TC-01, p. 21 and 13-TC-02, p. 28.

necessary.⁵⁸⁵ The minor language difference between the provisions in the 2001 Permit and the 2012 Permit are merely semantic. Furthermore, Part 4.C.3.b of the 2001 Permit prescribed that Permittees must consider requiring implementation of additional BMPs where critical sources discharge to an environmentally sensitive area or a CWA section 303(d) listed impaired water body.⁵⁸⁶ Therefore, these requirements related to inspections of these critical sources are not new.

Thus, the verification of appropriate BMPs at facilities represents a *de minimis* change in effort from requirements first stemming from the 1996 Permit.

The Provisions are Necessary to Implement Federal Law

Claimants allege that inspections of commercial facilities and some of the industrial facilities identified in the 2012 Permit are not mandated by federal law.⁵⁸⁷ However, federal regulations at 40 C.F.R. section 122.26(d)(2)(iv)(A) require a program to reduce pollutants in stormwater discharges to MS4s from commercial and residential areas, while 40 C.F.R. section 122.26(d)(2)(iv)(C) requires a program to monitor and control pollutants in stormwater discharges to MS4s from industrial facilities. Federal regulations further state that the program shall “Identify priorities and procedures for inspections and establishing and implementing control measures for such discharges.”⁵⁸⁸ Additionally, 40 C.F.R. § 122.26(d)(2)(i)(F) requires Permittees to “[c]arry out all inspection, surveillance and monitoring procedures necessary to determine compliance and noncompliance with permit conditions including the prohibition on illicit discharges to the municipal separate storm sewer.”⁵⁸⁹ Therefore, per federal requirements, Permittees must require implementation of controls, such as BMPs, to reduce the discharge of pollutants and carry out inspections to determine compliance with this requirement.

In U.S. EPA’s MS4 Permit Improvement Guide, “EPA expects the permitting authority to continue to make significant progress and ensure that the intent of the regulations or more stringent requirements is captured in the permit.”⁵⁹⁰ In the same document, U.S. EPA provides a draft permit provision for Industrial and Commercial Facility Inspections that closely resembles that of the 2012 Permit.⁵⁹¹ U.S. EPA developed this provision based on the regulations at 40 C.F.R. section 122.26(d)(2)(iv).⁵⁹²

Moreover, in a letter dated April 10, 2008, the U.S. EPA Region 9 Director of the Water Division stated that “[a] program for commercial and industrial facility inspection and enforcement that includes restaurants and automobile facilities, would appear to be both practicable and effective. Such an inspection program ensures that stormwater discharges from such facilities are reducing their contribution of pollutants and that there are no non-stormwater discharges or illicit

⁵⁸⁵ 2001 Permit, Part 4.C.2, pp. 36-39.

⁵⁸⁷ Test Claim 13-TC-01, p. 21 and 13-TC-02, pp. 28-29.

⁵⁸⁸ 40 C.F.R. § 122.26(d)(2)(iv)(C)(1).

⁵⁸⁹ *Id.*, subd. (d)(2)(i)(F).

⁵⁹⁰ U.S. EPA. *MS4 Permit Improvement Guide* (2010), Cover Letter (2012 AR, p. RB-AR53452).

⁵⁹¹ *Id.*, Chapter 7.3, pp. 91-92 (2012 AR, pp. RB-AR53545 - 546).

⁵⁹² *Id.*, Chapter 7, p. 85 (2012 AR, p. RB-AR53539).

connections. Thus, these programs are founded in both 402(p)(3)(B)(ii) and (iii) and are well within the scope of 40 C.F.R. § 122.26(d)(2)(iv)(A) and (B).⁵⁹³

Furthermore, the U.S. EPA-issued MS4 permit for the Boise/Garden City Area includes provisions that require inventory and inspection of industrial and commercial facilities,⁵⁹⁴ demonstrating that these are federal requirements.

The above clearly demonstrates that Parts VI.D.6.d and VI.D.6.e of the 2012 Permit are based on federal requirements.

Other Mandates Exceptions Apply

Additionally, as discussed in Section IV.B.2, above, it is feasible and reasonable for Permittees to collect fees from commercial and industrial facilities for the costs associated with implementing these permit provisions. Notably, in its Statement of Decision concerning the trash receptacle and inspection requirements in the 2001 Permit, the Commission specifically determined that the claimants have fee authority under article XI, section 7 of the California Constitution for inspections of industrial and commercial facilities, and construction sites.⁵⁹⁵ The Commission even noted that, in June 2005, the City of Covina “adopted stormwater inspection fees on restaurant, retail gasoline outlets, automotive service facilities, etc., as part of its business license fee, expressly for the purpose of complying with the [2001 Permit].”⁵⁹⁶ The Commission further found that “a local regulatory stormwater fee, if appropriately calculated and charged, would not be a special tax” and that “local fees for inspections... would not be subject to the vote requirement of Proposition 218.”⁵⁹⁷ Thus, Claimants have fee authority for compliance with the provisions in Parts VI.D.6.d and VI.D.6.e to inspect critical commercial and industrial sources.

In addition, it is worth noting that the City of Glendora recently participated in a presentation to the Los Angeles Water Board in which it presented information on its inspection fee schedule, which covers inspections of commercial and industrial facilities, including nurseries and those facilities enrolled in the IGP.⁵⁹⁸

For all these reasons, and for the additional reasons discussed in Section IV above, the Commission should find that Parts VI.D.6.b, VI.D.6.d, and VI.D.6.e of the 2012 Permit are not state mandates subject to subvention.

E. Planning and Land Development Program

Part VI.D.7.d.iv of the 2012 Permit includes requirements to implement a tracking system and inspection and enforcement program for new development and redevelopment projects requiring implementation of post-construction BMPs. These requirements include:

- (1) Part VI.D.7.d.iv.(1)(a) and Attachment E, Part X – requirements to implement a Geographic Information System (GIS) or other electronic system for tracking projects that have been conditioned for post-construction BMPs;⁵⁹⁹ and to maintain a database providing information on applicable new development and redevelopment projects;⁶⁰⁰
- (2) Part VI.D.7.d.iv.(1)(b) – a requirement to inspect all development sites upon completion of construction and prior to the issuance of occupancy certificates to ensure proper installation of low impact development (LID) measures, structural BMPs, treatment control BMPs and hydromodification control BMPs;⁶⁰¹ and
- (3) Part VI.D.7.d.iv.(1)(c) – a requirement to verify proper maintenance of operation of post-construction BMPs previously approved for new development and redevelopment and operated by the Permittee. Additionally, this maintenance inspection program should include the development of an inspection checklist and inspections of Permittee-operated post-construction BMPs at an interval of at least once every two years after project completion.⁶⁰²

Each of these requirements is addressed separately, below.

1. Implementation of an Electronic System for Tracking Projects (Part VI.D.7.d.iv.(1)(a) and Attachment E, Part X)

The challenged aspects of Part VI.D.7.d.iv.(1)(a) and Attachment E, Part X specify that the Permittees track and maintain information on projects that have been conditioned for post-construction BMPs.

Part VI.D.7.d.iv.(1)(a) requires that Permittees implement a GIS or other electronic system for tracking projects that have been conditioned for post-construction BMPs. Information to be tracked includes project identification, acreage, BMP type and description, BMP locations, dates of acceptance and maintenance agreement, inspection dates and summaries, and corrective actions.⁶⁰³

Attachment E, Part X requires that Permittees maintain a database that contains information on each applicable new development and redevelopment project approved by the Permittee. Information, if applicable, to be included in the database includes project name; project location; date of certificate of occupancy; size of specific storm events; hydromodification criteria; project

⁵⁹⁹ 2012 Permit, Part VI.D.7.d.iv.(1)(a), p. 115 (2015 AR, p. SB-AR-013408).

⁶⁰² *Id.*, Part VI.D.7.d.iv.(1)(c), pp. 115-116 (2015 AR, pp. SB-AR-013408 - 409).

⁶⁰³ *Id.*, Part VI.D.7.d.iv.(1)(a), p. 115 (2015 AR, p. SB-AR-013408).

design parameters; locations for off-site mitigation sites; and documentation of issuance of requirements to the developer.⁶⁰⁴

The Provisions are Not New Programs or Higher Levels of Service

Part VI.D.7.d.iv.(1)(a) of the 2012 Permit is a refinement of Part 4.D and Attachment U-4 of the 2001 Permit⁶⁰⁵ and, therefore, is not a new program or higher level of service. As is required in the 2012 Permit, the 2001 Permit required that each Permittee require the implementation of post-construction treatment controls for specific categories of new development and redevelopment projects. The 2001 Permit Monitoring and Reporting Program required that each Permittee track these projects and BMPs in order to report on the number of projects by category that were conditioned for post-construction BMPs, and the types and numbers of BMPs required for priority projects.⁶⁰⁶

Further, although the 2001 Permit did not list all the fields of information that the 2012 Permit lists in Part VI.D.7.d.iv.(1), the 2001 Permit contained provisions that directly rely on information included under the 2012 Permit tracking provision. These 2001 Permit provisions outline the categories of projects requiring implementation for post-construction treatment controls, including project categories based on the project's area; provisions for the numerical design criteria of post-construction treatment control BMPs; and provisions for the verification of maintenance of post-construction BMPs. Permittees should already have been collecting much, if not all, of the information required in Part VI.D.7.d.iv.(1) to implement the 2001 Permit to ensure that projects are appropriately implementing post-construction BMPs and that these post-construction BMPs are adequately maintained and reducing the discharge of pollutants to the MS4.

As such, the tracking of information related to projects that have been conditioned for post-construction BMPs is not a new program or higher level of service.

The Provisions are Necessary to Implement Federal Law

Federal regulations identify the need to develop, implement, and enforce controls to reduce the discharge of pollutants from MS4s, which receive discharges from areas of new development and significant redevelopment; and to reduce pollutants in discharges from MS4s after construction is completed.⁶⁰⁷

The tracking provisions outlined in Part VI.D.7.d.iv.(1)(a) and Attachment E, Part X address the above federal requirements by ensuring that permittees are properly implementing permit requirements for new development and redevelopment projects and by ensuring that permittees are tracking the operation and maintenance of post-construction BMPs. The importance of these provisions in relation to the 2012 Permit's Planning and Land Development Program is noted in the 2012 Permit Fact Sheet, where the Los Angeles Water Board found that a "tracking system is deemed critical to the success of the [Planning and Land Development Program]."⁶⁰⁸

⁶⁰⁴ *Id.*, Attachment E, Part X, pp. E-28 to E-29 (2015 AR, pp. SB-AR-013537 - 538).

⁶⁰⁵ 2001 Permit, Part 4.D, pp. 42-50.

⁶⁰⁶ *Id.*, Attachment U-4, Section IV.C, pp. 18-19.

⁶⁰⁷ 40 C.F.R. § 122.26(d)(2)(iv)(A)(2).

⁶⁰⁸ 2012 Permit, Attachment F, Part VI.C.1.b, p. F-55 (2015 AR, p. SB-AR-013627).

A similar tracking provision is provided in U.S. EPA's MS4 Permit Improvement Guide. This provision requires that "[t]he permittee must continue to maintain an inventory of all post-construction structural stormwater control measures installed and implemented at new development and redeveloped sites, including both public and private sector sites located within the permit area."⁶⁰⁹ Furthermore, the provision also requires that "[e]ach entry to the inventory must include basic information on each project, such as project name, owner's name and contact information, location, start/end date, etc." and that inventory entries include a short description of each stormwater control measure type; latitude and longitude coordinates; short description of maintenance requirements; and inspection information.⁶¹⁰

Additionally, U.S. EPA requires tracking of post-construction BMPs in MS4 permits that it issues such as for the Boise/Garden City Area.⁶¹¹ The inclusion of a similar provision in U.S. EPA-issued MS4 permits and U.S. EPA's MS4 Permit Improvement Guide supports the conclusion that the 2012 Permit's tracking provisions are a federal requirement.

This Provisions are Not Unique to Local Government

The requirement to track post-construction BMPs is not unique to local government. This requirement is a key provision in other permits issued to non-local government entities in order to effectively reduce and or prevent pollutants from reaching waterbodies. For example, Caltrans is required as an element of its Storm Water Management Plan (SWMP) to track treatment BMPs and treatment BMP maintenance within its jurisdiction. Caltrans must track for each BMP: name, location, size, capacity, type, date of installation, maintenance certificates, inspection dates and findings, compliance status, and corrective actions.⁶¹² The above demonstrates that Claimants are not being treated differently than non-local government entities.

Other Mandates Exceptions Apply

Even if the Commission concludes that some aspect of these provisions imposes state mandates, the costs to implement these provisions are *de minimis* and therefore not entitled to subvention. This is apparent in the provision's language, which simply requires Permittees to implement an "electronic system" or "database," which could entail simple spreadsheets and other readily available software. The provisions do not specify any requirements for the electronic system or database that a Permittee uses to track this information. In describing the tracking provisions, the 2012 Permit's Fact Sheet states that "a tracking system need not be complex and can, and has, been developed using spreadsheets or equivalent."⁶¹³ This underscores that the challenged provisions are not requiring Permittees to procure a new technology for tracking, but to perform

⁶⁰⁹ U.S. EPA. *MS4 Permit Improvement Guide* (2010), p. 62 (2012 AR, p. RB-AR53516).

⁶¹² State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation, Part E.2.d, pp. 41-42.

⁶¹³ 2012 Permit, Attachment F, Part VI.C.1.b, p. F-55 (2015 AR, p. SB-AR-013627).

routine tracking with existing technology that would be expected for the successful implementation of the new development and redevelopment requirements.

Furthermore, the tracking provisions require Permittees to maintain information that they should already be obtaining to implement Planning and Land Development Program requirements. For example, to implement the new development and redevelopment requirements in Part VI.D.7.b and the new development and redevelopment project performance criteria in Part VI.D.7.c, Permittees should be obtaining and evaluating basic project information such as project acreage, the descriptions of BMPs to be installed at the site, and the locations of BMPs. If a Permittee were not obtaining this information, there would be reason for concern that the Permittee is not adequately conditioning and reviewing new development and redevelopment projects in their jurisdiction.

2. Inspection of Development Sites Upon Completion and Before Issuance of an Occupancy Certificate (Part VI.D.7.d.iv.(1)(b))

The challenged aspects of Part VI.D.7.d.iv.(1)(b) specify that the Permittees inspect all development sites upon completion of construction and before issuance of an occupancy certificate to “ensure proper installation” of LID measures, structural BMPs, treatment control BMPs and hydromodification control BMPs.

The Provision is Not a New Program or Higher Level of Service

Part VI.D.7.d.iv.(1)(b) of the 2012 Permit is a refinement of Part 4.D of the 2001 Permit⁶¹⁴ and, therefore, is not a new program or higher level of service. As is required in the 2012 Permit, the 2001 Permit required that each Permittee require the implementation of post-construction treatment controls for specific categories of new development and redevelopment projects, and the control of post-development peak stormwater runoff discharge rates, velocities, and duration in Natural Drainage Systems to prevent accelerated stream erosion and to protect natural habitat.⁶¹⁵ The inspection provision is necessary to ensure the appropriate implementation of permit-required post-construction treatment controls and hydromodification controls in new development and redevelopment projects that have been in place since the 2001 Permit. Therefore, Part VI.D.7.d.iv.(1)(b) is not a new program or higher level of service.

The Provision is Necessary to Implement Federal Law

The challenged inspection provision requires that Permittees inspect BMPs constructed by third parties within their jurisdiction so that there is assurance that BMPs are being appropriately implemented. This directly addresses federal regulations, which identify the need to develop, implement, and enforce controls to reduce MS4 discharges of pollutants due to new development and redevelopment after construction is completed.⁶¹⁶

Federal regulations for small MS4s specifically highlight the need for such an inspection provision and/or other provisions related to BMP verification. It is logical to consider these federal regulations, which state:

⁶¹⁴ 2001 Permit, Part 4.D, pp. 42-50.

⁶¹⁵ *Id.*, Part 4.D.2.a-e, pp. 43-44 and Part 4.D.1.a-f, pp. 42-43.

⁶¹⁶ 40 C.F.R. § 122.26(d)(2)(iv)(A)(2).

“EPA recommends that the permit ensure the appropriate implementation of the structural BMPs, by considering some or all of the following: Pre-construction review of BMP designs; inspections during construction to verify BMPs are built as designed; post-construction inspection and maintenance of BMPs; and penalty provisions for noncompliance with design, construction or operation and maintenance.”⁶¹⁷

U.S. EPA’s MS4 Permit Improvement Guide provides a draft permit provision for post-construction inspections, which states that “the permittee must conduct a post-construction inspection to verify that the permittee’s performance standards have been met.”⁶¹⁸ The Guide provides rationale for such a provision, stating that “[i]nspection of post-construction control measures is key to ensuring the protection of water quality. If control measures are not inspected and maintained they could become sources of pollution rather than reducing pollution.”⁶¹⁹

Furthermore, the U.S. EPA-issued MS4 Permit for the District of Columbia includes a requirement that the permittee “must establish/update and maintain” a “post-construction verification process, and the U.S. EPA-issued MS4 permit for the Boise/Garden City Area includes a requirement for Permittees to implement an inspection program for permanent stormwater management controls.”⁶²⁰

The inclusion of similar provisions in these U.S. EPA guidance documents and MS4 permits further supports the conclusion that the 2012 Permit’s inspection provision is necessary to meet federal requirements.

This Provision Is Not Unique to Local Government

The requirement to inspect development sites to ensure proper installation of post-construction BMPs is not unique to local government. This requirement is a key provision in other permits issued to non-local government entities in order to effectively reduce and or prevent pollutants from reaching waterbodies. For example, Caltrans is required as an element of its Storm Water Management Plan (SWMP) to inspect all newly installed treatment BMPs within 45 days of installation to ensure they have been installed and constructed correctly.⁶²¹ The above demonstrates that Claimants are not being treated differently than non-local government entities.

⁶¹⁷ *Id.*, § 122.34(b)(5)(ii).

⁶²¹ State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation, Part E.2.a, p. 41.

Other Mandates Exceptions Apply

Even if the Commission concludes that some aspect of this provision imposes a state mandate, the cost to implement this provision is *de minimis* and therefore not entitled to subvention. This is because the 2012 Permit states that, “[t]he inspection may be combined with other inspections provided it is conducted by trained personnel.” Local codes regulate the design and construction of buildings and structures, and often require inspections including “final inspections” following project completion and prior to issuing a certificate of occupancy.⁶²² Additionally, as discussed below under Section V.F, Development Construction Program, Part VI.D.8.j.ii.(2)(c) of the 2012 Permit requires that each Permittee inspect project sites at the conclusion of construction and as a condition of approving and/or issuing a certificate of occupancy. Therefore, the requirement of Part VI.D.7.d.iv.(1)(b) can be met at no additional cost when fulfilling the requirement for a final inspection under Part VI.D.8.j.

3. Development of a Post-Construction BMP Maintenance Program (Part VI.D.7.d.iv.(1)(c))

The challenged aspects of Part VI.D.7.d.iv.(1)(c) specify that the Permittees develop a post-construction BMP maintenance inspection checklist and inspect at an interval of at least once every two years Permittee-operated post-construction BMPs to assess operation conditions.

The Provision is Not a New Program or Higher Level of Service

Part VI.D.7.d.iv.(1)(c) of the 2012 Permit is a refinement of Part 4.D of the 2001 Permit⁶²³ and, therefore, is not a new program or higher level of service. As is required in the 2012 Permit, the 2001 Permit required that each Permittee require the implementation of post-construction BMPs for development projects. For these post-construction BMPs, the 2001 Permit specifically included verification of maintenance provisions that required written conditions in sales or lease agreements that require recipients to assume responsibility for maintenance of structural or treatment control BMPs and to conduct a maintenance inspection at least once a year.⁶²⁴

The challenged provision does not require an inspection program for facilities not operated by the Permittee, but only requires that Permittees inspect post-construction BMPs that they operate. As such, the provision is a refinement of the 2001 Permit’s verification of maintenance provisions, which ensures that maintenance inspections are conducted at Permittee-operated facilities that may not have sales or lease agreements to ensure consistent and even-handed oversight of post-construction BMPs.

The Provision is Necessary to Implement Federal Law

Part VI.D.7.d.iv.(1)(c) complies with federal regulations that require that Permittees implement a management program that includes maintenance activities and a maintenance schedule for structural controls to reduce pollutants in discharges from MS4s and procedures to develop, implement, and enforce controls to reduce the discharge of pollutants from areas of new

⁶²² County of Los Angeles Building Code (Title 26) 101.2.

⁶²³ 2001 Permit, Part 4.D, pp. 42-50.

⁶²⁴ *Id.*, Part 4.D.8, p. 47.

development and significant redevelopment after construction is completed.⁶²⁵ The regular inspection of Permittee-operated BMPs ensures that BMPs under the Permittee's direct control are properly maintained and functioning.

The inclusion of similar provisions in U.S. EPA- issued MS4 permits supports the conclusion that Part VI.D.7.d.iv.(1)(c) is necessary to meet federal requirements. As an example, the U.S. EPA-issued Boise/Garden City Area MS4 Permit has an inspection program for new development and redevelopment sites, which states that "all high priority locations must be inventoried and associated inspections must be scheduled to occur at least once annually" and that "Permittees must develop checklists."⁶²⁶

The Provision Is Not Unique to Local Government

The requirement to inspect post-construction BMPs is not unique to local government. This requirement is a key provision in other permits issued to non-local government entities in order to effectively reduce and or prevent pollutants from reaching waterbodies. For example, Caltrans is required to inspect all installed stormwater treatment BMPs at least once every year."⁶²⁷ Permittees enrolled under the IGP are required to conduct annual comprehensive facility compliance evaluations, including "an inspection of any BMPs" and "a review and effectiveness assessment of all BMPs ... to determine if the BMPs are properly designed, implemented, and are effective in reducing and preventing pollutants in industrial storm water discharges ..."⁶²⁸ The above demonstrates that Claimants are not being treated differently than non-local government entities.

Other Mandates Exceptions Apply

Even if the Commission concludes that this provision imposes requirements that are state mandates, the costs to implement this provision is *de minimis* and therefore not entitled to subvention. Regarding the challenged provision's requirement to develop an inspection checklist, Part VI.D.7.d.iv.(1)(c)(i) does not specify what items Permittees must include in a post-construction BMP maintenance inspection checklist. This lack of specificity gives Permittees the flexibility to determine the checklist items and the overall level of detail necessary. Although Permittees can develop a complex checklist with several technical items, they can also develop a simple checklist with a few items and still comply with the permit provision. Therefore, the challenged provision's requirement to develop a checklist is a minimal cost.

Further, the requirement to conduct an inspection at least every two years represents a *de minimus* cost, since it only requires inspections of Permittee-operated post-construction BMPs, which Permittees should be already maintaining and checking for proper operation. In effect, the

⁶²⁵ 40 C.F.R. § 122.26(d)(2)(iv)(A)(1)-(2).

⁶²⁶ U.S. EPA, NPDES Permit No. IDS-027561, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to Ada County Highway District, Boise State University, City of Boise, and City of Garden City. Drainage District #3, and the Idaho Transportation Department District #3 (Dec. 12, 2012), Part II.B.2.f.(i)-(ii), p. 19.

⁶²⁷ State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation, Part E.2.b, p. 41.

⁶²⁸ State Water Board, Order No. 2014-0057-DWQ, NPDES General Permit for Storm Water Discharges Associated with Industrial Activities, Part XV.E-F, p. 59.

provision requires Permittees to inspect their own work. Finally, this provision overlaps with the requirements in Parts VI.D.4.c.vii.(7)(a) and VI.D.9.h.x.(1) of the 2012 Permit, which requires each Permittee to implement an inspection and maintenance program for all Permittee-owned treatment control BMPs, including post-construction treatment control BMPs.⁶²⁹

For all these reasons, and for the additional reasons discussed in Section IV above, the Commission should find that Parts VI.D.7.d.iv.(1)(a), VI.D.7.d.iv.(1)(b), VI.D.7.d.iv.(1)(c), and Attachment E, Part X of the 2012 Permit are not state mandates subject to subvention.

F. Development Construction Program

Part VI.D.8 of the 2012 Permit sets forth requirements to ensure pollutants in stormwater runoff from construction sites are controlled such that those pollutants do not reach receiving waters.⁶³⁰ The 2012 Permit Fact Sheet identifies the basis in federal regulations for these provisions and others as 40 C.F.R. section 122.26(d)(2)(iv).⁶³¹

Claimants reference the Commission's prior determination that Part 4.E. of the 2001 Permit constituted a state mandate and assert that inclusion of those requirements in the 2012 Permit means it still represents a state mandate. However, Claimants neglect to mention that, while the Commission did determine Part 4.E of the 2001 Permit constituted a state mandate, it also found that the claimants were not subject to subvention as claimants had fee authority. In its Statement of Decision, the Commission specifically determined that the claimants have fee authority under article XI, section 7 of the California Constitution for inspections of industrial and commercial facilities, and construction sites.⁶³² The Commission further found that "a local regulatory stormwater fee, if appropriately calculated and charged, would not be a special tax" and that "local fees for inspections...would not be subject to the vote requirement of Proposition 218."⁶³³ The Commission found that a fee "would not be an incident of property ownership because it results from the owner's voluntary decision to build on or develop the property."⁶³⁴ Thus, Claimants have fee authority for compliance with the provisions in Parts VI.D.8 related to inspections of construction sites. As discussed in Section IV.B.2, above, it is feasible and reasonable for

⁶²⁹ 2012 Permit, Parts VI.D.4.c.vii.(7)(a) and VI.D.9.h.x.(1), pp. 82, 137 (2015 AR, pp. SB-AR-013376, 430).

⁶³⁰ *Id.*, Part VI.D.8, pp. 116-125 (2015 AR, pp. SB-AR-013409 - 418).

⁶³¹ *Id.*, Attachment F (Fact Sheet), Part VI.C.1.a, p. F-50 (2015 AR, p. SB-AR-013623) ("The previous permit, Order No. 01-182, included six categories of minimum control measures that are considered to be baseline or default requirements for meeting the requirements of 40 CFR section 122.26(d)(2)(iv). These requirements were determined appropriate within Order No. 01-182 and again appropriate for this Order. The minimum control measures require Permittees to implement BMPs that are considered necessary to reduce pollutants in storm water to the MEP and to effectively prohibit non-storm water discharges."). Claimants suggest that the Los Angeles Water Board improperly cites 40 C.F.R. § 122.34(b)(4) as the legal authority for Part VI.D.8; however, it is clear from the abovementioned citation as well as the 2012 Permit itself (Part VI.D.1.a, p. 70 (2015 AR, p. SB-AR-013363) that the Board is primarily relying on 40 C.F.R. § 122.26(d)(2)(iv) as the federal authority for these minimum control measure provisions.

⁶³² *In re Test Claim on: Los Angeles Regional Water Quality Control Board Order No. 01-182, Case Nos. 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21* (July 31, 2009), pp. 54-56.

Permittees to collect fees from developers for the costs associated with implementing these permit provisions.

The Water Boards recognize that the Commission found provisions related to inspections of construction sites in the 2001 Permit to constitute a new program or higher level of service.⁶³⁵ Nevertheless, the Water Boards assert that the provisions in Part VI.D.8 of the 2012 Permit relating to inspections of construction sites continue to stem from the 1996 Permit. Part 2.III.B.3 of the 1996 Permit required the Permittees to develop a model “construction activity inspection program,” no later than September 30, 1997. The model program was required to include procedures for construction site inspection, procedures to require corrective action be undertaken by contractors at noncomplying sites, procedures for enforcement against noncomplying construction activity, and appropriate training for program staff.⁶³⁶ Upon approval of the model program by the Los Angeles Water Board, the Permittees were required to implement a construction activities inspection program no later than July 30, 1999.⁶³⁷ Permittees were allowed to integrate this program with the Permittees’ regular program of construction inspection “for maximum efficiency.”⁶³⁸ The Permittees were also required in the 1996 Permit to develop, by September 30, 1998, countywide development construction guidance materials for all development project construction activities, including BMPs appropriate for various activities and checklists for use in design and inspection. The countywide minimum requirements and recommended BMPs were required to, among other things, include erosion and sediment control practices; target construction areas and activities with the potential to general significant pollutant loads; require on-site retention (to the MEP) of sediment and other pollutants from construction activity; and require use of structural drainage controls to minimize the escape of sediment and other pollutants from the site.⁶³⁹

The construction activity inspection program from the 1996 Permit was largely carried over to the 2001 Permit. The programs were substantively the same, with both permits requiring verification of appropriate BMPs for pollutant generating activities on construction sites during Permittee inspections. While the Water Boards continue to assert that the construction activity inspection program stemmed from the 1996 Permit, for purposes of the sections below, the Water Boards only compare the provisions from the 2012 Permit to the 2001 Permit.

Moreover, as discussed in Section IV.B.3.ii, above, Part VI.D.8 of the 2012 Permit, including all its subparts, is one of the permit provisions that Permittees can customize in an approved WMP or EWMP.⁶⁴⁰ All Claimants elected to develop, and are now implementing, an approved WMP or EWMP. Therefore, regardless of the specificity, the choice to implement the specific requirements of Part VI.D.8, subdivisions g-j and l, rather than alternative activities consistent with federal regulations was the Claimants’ and is, therefore, not a state mandate.

⁶³⁵ The Water Boards, however, continue to dispute that determination and the issue has been appealed. However, whether the inspection provisions in the 2001 Permit constitute a new program or higher level of service as compared to the 1996 Permit has yet to be addressed by the courts.

⁶³⁶ 1996 Permit, Part 2.III.B.3a, p. 40 (2001 AR, p. R0028699).

⁶⁴⁰ 2012 Permit, Part VI.C.1.b, p. 48 (2015 AR, p. SB-AR-013341) and Part VI.C.5.b.iv.(1), p. 63 (2015 AR, p. SB-AR-013356).

1. Construction Site Inventory / Electronic Tracking System (Part VI.D.8.g)

To effectively track the sources of pollution associated with construction activities, Part VI.D.8.g of the 2012 Permit requires each Permittee to maintain an inventory of any permits or other municipal authorization it issues for activities that involve land disturbance. In order to ensure proper and complete implementation of inspection requirements in Part VI.D.8.j, the 2012 Permit requires the inclusion of certain information for each site in the inventory.⁶⁴¹

The Provision is Not a New Program or Higher Level of Service

Claimants allege that the 2001 Permit did not include the tracking requirements contained in Part VI.D.8.g of the 2012 Permit and, thus, this requirement constitutes a new program or higher level of service. While the specific tracking requirements of the Development Construction Program in the 2012 Permit are better defined, this program existed in the 2001 Permit.⁶⁴²

Part 4.E.3.c of the 2001 Permit required the use an effective system to track grading permits issued by each Permittee.⁶⁴³ This previous requirement is analogous to, and the basis for, Part VI.D.8.g of the 2012 Permit.

The Provision is Necessary to Implement Federal Law

Federal regulations at 40 C.F.R. section 122.26(d)(2)(iv)(D) require that Permittees have a program “to implement and maintain structural and non-structural best management practices to reduce pollutants in storm water runoff from construction sites to the municipal storm sewer system” that includes several elements. One of these elements, identified in 40 C.F.R. section 122.26(d)(2)(iv)(D)(3) requires a description of procedures for identifying priorities for inspecting sites and enforcing control measures which consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality.⁶⁴⁴

According to U.S. EPA’s MS4 Permit Improvement Guide, “[t]o effectively conduct inspections, the permittee must know where construction activity is occurring. A construction site inventory tracks information such as project size, disturbed area, distance to any waterbody or flow channel, when the erosion and sediment control/stormwater plan was approved by the Permittee, and whether the project is covered by the permitting authority’s construction general permit. This inventory will allow the permittee to track and target its inspections.”⁶⁴⁵ U.S. EPA also states in a draft permit provision to guide permit development that “[t]he inventory must be continuously updated as new projects are permitted and projects are completed.”⁶⁴⁶ Therefore, the requirements of Part VI.D.8.g, including but not limited to the tracking of information on site characteristics (ii(2)), proximity to receiving waters and water body impairment status (ii(3)), threat to water quality (ii(4)), construction phase (ii(5)), and project start date and anticipated completion date (ii(7)), are necessary to implement federal requirements. Additionally, 40 C.F.R. section 122.26(d)(2)(iv)(A)(2) requires that Permittees have a comprehensive master plan “to develop,

⁶⁴¹ *Id.*, Part VI.D.8.g, p. 118 (2015 AR, pp. SB-AR-013411).

⁶⁴² 2001 Permit, Part 4.E, pp. 50-53.

⁶⁴³ *Id.*, Part 4.E.3.c, p. 52.

⁶⁴⁴ 40 C.F.R. § 122.26(d)(2)(iv)(D)(3).

⁶⁴⁵ U.S. EPA. *MS4 Permit Improvement Guide* (2010), Chapter 4, p. 41 (2012 AR, p. RB-AR53495).

⁶⁴⁶ *Ibid.*

implement and enforce controls to reduce the discharge of pollutants ... from areas of new development and significant redevelopment” and that “[s]uch plan shall address controls to reduce pollutants ... after construction is completed.” As such, tracking post-construction structural BMPs as required in Part VI.D.8.g.ii(10) is necessary to meet this federal requirement.

Other Mandates Exceptions Apply

The information to be tracked per Part VI.D.8.g of the 2012 Permit is readily available to each Permittee as part of their own local permitting requirements for construction activities (e.g., issuance of local grading permits, encroachment permits, demolition permits, and building permits) or from information previously collected by Permittees as required by federal regulation such as documentation of waterbodies that receiving MS4 discharges and whether these waterbodies are impaired.⁶⁴⁷ Furthermore, in a comment letter submitted by the City of La Cañada Flintridge on January 31, 2012, commenting on the draft core requirements of the 2012 Permit, the City, which is one of the Permittees under the 2012 Permit, stated that verification of coverage under the Construction General Permit (CGP) “is a normal requirement today for every City.”⁶⁴⁸ Additionally, a number of Permittees already reported using electronic tracking systems to track grading and building permits under prior permits.⁶⁴⁹ Because the information to be tracked is readily available as part of Permittees’ local permitting processes or is information that Permittees would have previously compiled as required under previous permits, and in many cases electronic tracking systems were already in place, the Water Boards believe that any additional costs to meet the minimum requirements of Part VI.D.8.g are *de minimis*.

2. Construction Plan Review and Approval Procedures (Part VI.D.8.h)

Part VI.D.8.h of the 2012 Permit requires Permittees to have procedures to review and approve relevant construction plan documents to ensure implementation of BMPs at construction sites to prevent illicit discharges and reduce pollutants in stormwater runoff.⁶⁵⁰ Claimants allege that the 2001 Permit did not include the requirement in Part VI.D.8.h of the 2012 Permit to develop and implement procedures for reviewing construction plan documents, or to develop a checklist to conduct and document the review of the Erosion and Sediment Control Plan (ESCP) and, thus, this requirement constitutes a new program or higher level of service. Claimants further allege that Part VI.D.8.h of the 2012 Permit is not mandated by federal law.⁶⁵¹

The Provision is Not a New Program or Higher Level of Service

Part 4.E.2.a of the 2001 Permit stated that Permittees must require preparation and submittal of a Local SWPPP for approval prior to issuance of a grading permit for construction projects, which

⁶⁴⁷ 40 C.F.R. § 122.26(d)(1)(iv)(C).

⁶⁴⁸ Comments Received on Staff Presentation at January 23, 2012 Staff Workshop, City of La Cañada Flintridge, p. 3 (2012 AR, p. RB-AR1102).

⁶⁴⁹ See, e.g., City of Manhattan Beach, 2011-12 NPDES Annual Report, p. 26; City of Norwalk, 2011-12 NPDES Annual Report, p. 26; City of Westlake Village, 2011-12 NPDES Annual Report, p. 24 (Westlake Village is one of a number of cities that contract with Los Angeles County for various services. The City indicates that Los Angeles County uses a computerized database to track all grading and building permits).

⁶⁵⁰ 2012 Permit, Part VI.D.8.h, pp. 118-120 (2015 AR, pp. SB-AR-013411 - 413).

⁶⁵¹ Test Claim 13-TC-01, pp. 25-27 and 13-TC-02, pp. 32, 34.

is analogous to, and the basis for, the requirement of Part VI.D.8.h of the 2012 Permit.⁶⁵² Just as in the 2001 Permit, a SWPPP prepared in accordance with the requirements of the CGP can be accepted by the Permittee as meeting the requirement for an ESCP.⁶⁵³

The Provision is Necessary to Implement Federal Law

Federal regulations at 40 C.F.R. section 122.26(d)(2)(iv)(D) require that Permittees develop and implement a program to reduce pollutants in stormwater runoff from construction sites to MS4s.⁶⁵⁴ More specifically, 40 C.F.R. section 122.26(d)(2)(iv)(D)(1) requires that Permittees have “procedures for site planning which incorporate consideration of potential water quality impacts,” and subpart (D)(3) requires that Permittees have “procedures for identifying priorities for inspecting sites and enforcing control measures...”⁶⁵⁵ These federal requirements are the basis for Part IV.D.8.h of the 2012 Permit.

The U.S. EPA MS4 Permit Improvement Guide states, “[p]ermits must require that MS4 permittees ensure that construction site operators select and implement appropriate erosion and sediment control measures to reduce or eliminate the impacts to receiving waters. The permit can require that permittees develop their own standards and specifications, but often it is preferable to require the permittees to utilize existing guidance that is approved by the permitting authority.”⁶⁵⁶ A permit provision to develop procedures to review and approve relevant construction plan documents is necessary to achieve this requirement. The U.S. EPA MS4 Permit Improvement Guide further states, “[t]he permit must require that the permittee establish review procedures for construction site plans to determine potential water quality impacts and ensure the proposed controls are adequate. These procedures must include the review of individual pre-construction site plans...” and “[a] formalized review procedure ensures consistent review of plans by specifying the requirements for plans being submitted, the schedule for review, and general conditions for approval.”⁶⁵⁷ U.S. EPA concludes with “plan reviewers must be trained and must document their review. For example, this can be done by using a checklist or similar process.”⁶⁵⁸ U.S. EPA included an example permit provision that includes similar provisions to those being challenged here, which requires in part:

“The permittee must continue to implement site plan review procedures that meet the following minimum requirements:

a. The permittee must not approve any [*insert name of local erosion and sediment control/stormwater plan*] unless it contains appropriate site-specific construction site control measures that meet the minimum requirements in Part 4.1.1 of this permit.

...

⁶⁵² 2001 Permit, Part 4.E.2.a, pp. 50-51.

⁶⁵³ See 2001 Permit, Part 4.E.2, pp. 50, 52 and 2012 Permit, Part VI.D.8.h.ii.(2), p. 119 (2015 AR, SB-AR-013412).

⁶⁵⁴ 40 C.F.R. § 122.26(d)(2)(iv)(D).

⁶⁵⁵ *Id.*, subd. (d)(2)(iv)(D)(1).

⁶⁵⁶ U.S. EPA. *MS4 Permit Improvement Guide* (2010), Chapter 4, p. 37 (2012 AR, p. RB-AR53491).

⁶⁵⁷ *Id.*, at p. 42 (2012 AR, p. RB-AR53496).

⁶⁵⁸ *Id.*, at p. 43 (2012 AR, p. RB-AR53497).

- d. The permittee must use qualified individuals, knowledgeable in the technical review of *[insert name of local erosion and sediment control/stormwater plan]* to conduct such reviews.
- e. The permittee must document its review of each *[insert name of local erosion and sediment control/stormwater plan]* using a checklist or similar process.”⁶⁵⁹

This requirement is also included in U.S. EPA issued MS4 permits such as for the Boise/Garden City Area and the Middle Rio Grande.⁶⁶⁰

Therefore, the provision to develop procedures, including a checklist, is necessary to implement federal requirements.

3. Implementation of BMP Technical Standards (Parts VI.D.8.i.(i), VI.D.8.i.(ii), VI.D.8.i.(iv), and VI.D.8.i.(v))

Part VI.D.8.i of the 2012 Permit requires each Permittee to implement appropriate technical standards for the selection, installation, and maintenance of construction BMPs for all construction sites to ensure appropriate BMPs are selected to prevent illicit discharges and reduce pollutants in stormwater runoff from construction sites. These technical standards are required to be readily available to the development community.⁶⁶¹ Claimants allege that the 2001 Permit did not include the requirements listed in Parts VI.D.8.i.(i), VI.D.8.i.(ii), VI.D.8.i.(iv), and VI.D.8.i.(v) of the 2012 Permit and, thus, these requirements constitute a new program or higher level of service. Claimants also allege that these requirements are not mandated by federal law.

The Provisions are Not New Programs or Higher Levels of Service

Part 4.E.1 of the 2001 Permit required Permittees to implement a program to control runoff from construction activity at all construction sites within their jurisdictions. Subparts 4.E.1.a through d of the 2001 Permit required Permittees to ensure the implementation of adequate/effective BMPs to control erosion, control discharge of sediment, and prevent release of construction related material, wastes, spills, and non-stormwater from the site.⁶⁶² The requirements of Part 4.E.1 of the 2001 Permit are the basis for the requirements of Part VI.D.8.i of the 2012 Permit.

The Provisions are Necessary to Implement Federal Law

Federal regulations at 40 C.F.R. section 122.26(d)(2)(iv)(D)(2) requires that Permittees have established requirements for nonstructural and structural BMPs to be implemented at construction sites.⁶⁶³ Additionally, 40 C.F.R. section 122.26(d)(2)(iv)(D)(4) requires that Permittees have

⁶⁵⁹ *Id.*, at pp. 41-42 (2012 AR, pp. RB-AR53495 – 496).

⁶⁶⁰ U.S. EPA, NPDES Permit No. IDS-027561, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to Ada County Highway District, Boise State University, City of Boise, and City of Garden City. Drainage District #3, and the Idaho Transportation Department District #3 (Dec. 12, 2012), Part II.B.1.c.iv, p. 9; U.S. EPA, NPDES Permit No. NMR04A000, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to the Middle Rio Grande Watershed (Dec. 22, 2014), Part I.D.5.a, p. 25.

⁶⁶¹ 2012 Permit, Part VI.D.8.i, pp. 120-123 (2015 AR, pp. SB-AR-013413 - 416).

⁶⁶² 2001 Permit, Part 4.E.1.a through d, p. 50.

⁶⁶³ 40 C.F.R. § 122.26(d)(2)(iv)(D)(2).

appropriate educational and training measures for construction site operators.⁶⁶⁴ Part VI.D.8.i of the 2012 Permit is necessary to meet these federal requirements, by ensuring that Permittees have technical standards for BMPs and that they make these technical standards readily available to the development community as educational and training measures.

The requirements of Part VI.D.8.i are consistent with those of U.S. EPA-issued permits such as the MS4 permit for the Boise/Garden City Area, which requires that permittees have manuals describing construction stormwater management controls and specifications, including requirements for the proper installation and maintenance of erosion controls, sediment controls, and material containment/pollution prevention controls during all phases of construction activity. The manuals must also include all acceptable control practices, selection and sizing criteria, illustrations, and design examples, as well as recommended operation and maintenance of each practice.⁶⁶⁵

The Provisions are Not Unique to Local Government

The requirement to implement appropriate technical standards for the selection, installation, and maintenance of construction BMPs is not unique to local government. This requirement is a key provision in other permits issued to non-local government entities in order to effectively reduce and or prevent pollutants from reaching waterbodies. For example, Caltrans is required to have as an element of its Storm Water Management Plan (SWMP) a description of how BMPs will be developed, constructed and maintained and must submit updates to its “Storm Water Treatment BMP Technology Report.”⁶⁶⁶ The above demonstrates that Claimants are not being treated differently than non-local government entities.

Other Mandates Exceptions Apply

Claimants do not challenge one subpart of Part VI.D.8.i, namely subpart i.(iii). Part VI.D.8.i.(iii) of the 2012 Permit provides Permittees the flexibility to use existing BMP manuals developed by their own member agency, the California Association of Stormwater Quality Agencies (CASQA) or Caltrans to meet the requirements of Parts VI.D.8.i.(i)-(ii) and (v) to implement technical standards for construction site BMPs.⁶⁶⁷ These manuals include detailed installation designs (or “cut sheets”) and maintenance expectations.⁶⁶⁸ As such, the cost associated with implementation of Part VI.D.8.i is *de minimus*.

⁶⁶⁴ *Id.*, subd. (d)(2)(iv)(D)(4).

⁶⁶⁵ U.S. EPA, NPDES Permit No. IDS-027561, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to Ada County Highway District, Boise State University, City of Boise, and City of Garden City. Drainage District #3, and the Idaho Transportation Department District #3 (Dec. 12, 2012), p. 9.

⁶⁶⁶ State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation, Part E.2.e, pp. 40-42; see also Caltrans, Treatment BMP Technology Report (2010 Edition), Appendix C, which presents technical standards for BMPs approved for installation on Caltrans facilities.

⁶⁶⁷ 2012 Permit, Part VI.D.8.i.iii, p. 120 (2015 AR, p. SB-AR-013413).

⁶⁶⁸ See, e.g., Caltrans, Construction Site Best Management Practices (BMP) Manual (May 2017), “Temporary Silt Fence,” Section 4, SC-1, pp. 3, 5-6; Caltrans, Treatment BMP Technology Report (2010 Edition), Appendices B and C.

4. Construction Site Inspection (Part VI.D.8.j)

Part VI.D.8.j of the 2012 Permit requires each Permittee to inspect construction sites to ensure appropriate BMPs are implemented to prevent illicit discharges and reduce pollutants in stormwater runoff from construction sites. As part of the inspection, the Permittee is required to verify coverage under the CGP for projects that disturb 1 acre or more of land, review the ESCP/SWPPP and inspect the BMPs to ensure they have been selected and implemented properly, observe and record illicit discharges and illicit connections, and develop a written or electronic inspection report generated from an inspection checklist used in the field. Permittees are required to keep track of inspections to ensure they meet the required frequencies.⁶⁶⁹

The Provision is Not a New Program or Higher Level of Service

Part 4.E.2.b of the 2001 Permit required Permittees to inspect all construction sites, including reviewing the Local SWPPP for compliance with local codes, ordinances, and permits and assess the adequacy of BMP implementation, and the 2001 Permit Monitoring and Reporting Program, Attachment U-4 required Permittees to report on their inspection procedures and results (i.e., number of inspections and outcomes).⁶⁷⁰ Part VI.D.8.j of the 2012 Permit essentially sets forth the same requirement, but requires an increased frequency of inspections (from 2-4 more inspections per site, depending on the length of the construction period) to ensure that illicit discharges are prevented and pollutants in stormwater runoff are controlled at each stage of construction.

The Provision is Necessary to Implement Federal Law

Federal regulations at 40 C.F.R. section 122.26(d)(2)(iv)(D)(3) require Permittees to implement procedures for identifying priorities for inspecting sites and enforcing control measures which consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality.⁶⁷¹ Additionally, 40 C.F.R. sections 122.26(d)(2)(i)(A)-(C), (E)-(F) require Permittees to have adequate legal authority to control pollutants to the MS4 from discharges associated with industrial activity, including construction activity,⁶⁷² prohibit illicit discharges, control discharge of spills, dumping or disposal of material other than stormwater, require compliance with ordinances, permits, contracts or orders, and carry out all inspection, surveillance and monitoring necessary to determine compliance and noncompliance with permit conditions. These provisions require inspection of construction sites and are the basis for Part IV.D.8.j of the 2012 Permit.

Further, U.S. EPA's MS4 Permit Improvement Guide provides a draft permit provision that is identical to Part VI.D.8.j along with a discussion of the necessity of the permit provision to meet federal requirements.⁶⁷³

⁶⁶⁹ 2012 Permit, Part VI.D.8.j, pp. 123-125 (2015 AR, pp. SB-AR-013416 - 418).

⁶⁷⁰ 2001 Permit, Part 4.E.2.b, p. 51 and Attachment U-4, pp. 22-23.

⁶⁷¹ 40 C.F.R. § 122.26(d)(2)(iv)(D)(3).

⁶⁷² *Id.*, subd. (b)(14)(x) (defining construction activity as a category of "industrial activity").

⁶⁷³ U.S. EPA. *MS4 Permit Improvement Guide* (2010), Chapter 4, pp. 43-45 (2012 AR, pp. RB-AR53497-499).

Provisions for inspection of construction sites are also included in U.S. EPA-issued MS4 permits such as for the Boise/Garden City Area and the Middle Rio Grande.⁶⁷⁴

As such, Part VI.D.8.j of the 2012 Permit is necessary to meet federal requirements.

The Provision Is Not Unique to Local Government

The requirement to inspect construction sites to ensure appropriate BMPs are implemented to prevent illicit discharges and reduce pollutants in stormwater runoff is not unique to local government. This requirement is a key provision in other permits issued to non-local government entities in order to effectively reduce and or prevent pollutants from reaching waterbodies. For example, Caltrans is required to have an inspection program as an element of its SWMP “to ensure ... that facilities are constructed, operated, and maintained in accordance with this Order and the SWMP. The program shall include training for inspection personnel, documentation of field activities, a reporting system that can be used to track effectiveness of control measures, enforcement procedures (or referral for enforcement) for non-compliance, procedures for taking corrective action, and responsibilities and responsible personnel of all affected functional offices and branches. The inspection program shall also include standard operating procedures for documenting inspection findings...”⁶⁷⁵

The 2012 Permit Fact Sheet also indicates that requirements of Part VI.D.8.j.ii(1) are consistent with the State Water Board’s CGP.⁶⁷⁶ Specifically, non-local government entities enrolled under the CGP are required to have a Qualified SWPPP Practitioner (QSP) conduct visual inspections of all BMPs implemented at the site to ensure their effectiveness.⁶⁷⁷

This demonstrates that Claimants are not being treated differently than non-local government entities.

5. Permittee Staff Training (Part VI.D.8.I)

Part VI.D.8.I of the 2012 Permit requires each Permittee to ensure that all staff, inspectors, and third-party plan reviewers, permitting staff and inspectors whose primary duties are related to implementing this program are adequately trained in order to ensure that the Development Construction Program is effectively implemented.⁶⁷⁸ Claimants allege that the 2001 Permit did not

⁶⁷⁴ U.S. EPA, NPDES Permit No. IDS-027561, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to Ada County Highway District, Boise State University, City of Boise, and City of Garden City. Drainage District #3, and the Idaho Transportation Department District #3 (Dec. 12, 2012), pp. 9-10; U.S. EPA, NPDES Permit No. NMR04A000, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to the Middle Rio Grande Watershed (Dec. 22, 2014), Part I, pp. 25-26.

⁶⁷⁵ State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation, Part E.2.b.5), pp. 22-23.

⁶⁷⁶ 2012 Permit, Attachment F (Fact Sheet), p. F-55 (2015 AR, p. SB-AR013627).

⁶⁷⁷ See, for example, State Water Board, Order No. 2009-0009-DWQ (as amended by 2010-0014-DWQ and 2012-0006-DWQ), NPDES General Permit for Storm Water Discharges Associated With Construction And Land Disturbance Activities, Attachment D – Risk Level 2 Requirements, Section G, pp. 6-7 and Attachment E – Risk Level 3 Requirements, Section G, pp. 6-8.

⁶⁷⁸ 2012 Permit, Part VI.D.8.I, p. 125 (2015 AR, p. SB-AR013418).

require the specificity of training that Part VI.D.8.I of the 2012 Permit requires or that, if outside parties conducted inspections or review plans, each permittee was required to ensure that such staff was trained under the same requirements.⁶⁷⁹

The Provision is Not a New Program or Higher Level of Service

Part 4.E.5 of the 2001 Permit required each Permittee to train employees in targeted positions (whose jobs or activities are engaged in construction activities including construction inspection staff) regarding the requirements of the stormwater management program.⁶⁸⁰ The clear objective of this requirement was to ensure that the staff involved in carrying out all the requirements of the Development Construction Program had adequate knowledge to do so. This requirement is this basis for Part VI.D.8.I of the 2012 Permit. The requirement of the 2012 Permit simply recognizes that many Permittees choose to contract out plan review and site inspections and requires that the same training that has been required of employees since the 2001 Permit is also required when contractors act in place of employees. It would be disingenuous to think that a requirement applied to employees would not equally apply to contractors who are performing the work that employees would otherwise be performing. Therefore, Part VI.D.8.I of the 2012 Permit is not a new program or higher level of service.

The Provision is Necessary to Implement Federal Law

Federal regulations at 40 C.F.R. section 122.26(d)(2)(iv)(D) require that Permittees develop and implement a program to implement to reduce pollutants in stormwater runoff from construction sites to MS4s.⁶⁸¹ More specifically, 40 C.F.R. section 122.26(d)(2)(iv)(D)(3) requires that Permittees have “procedures for identifying priorities for inspecting sites and enforcing control measures...”⁶⁸² An important element of such procedures is training for the individuals tasked with implementing the program.

The U.S. EPA MS4 Permit Improvement Guide provides draft permit provisions that closely resemble the requirements of Part VI.D.8.I, including training for staff as well as third-party inspectors and plan reviewers.⁶⁸³

This requirement is also included in U.S. EPA issued MS4 permits such as for the Boise/Garden City Area.⁶⁸⁴ As such, Part VI.D.8.I of the 2012 Permit is necessary to meet federal requirements.

This Provision Is Not Unique to Local Government

The requirement to ensure that all staff, inspectors, and third-party plan reviewers, permitting staff and inspectors whose primary duties are related to implementing the Construction Development

⁶⁷⁹ Test Claim 13-TC-01, p. 26 and 13-TC-02, p. 32.

⁶⁸⁰ 2001 Permit, Part 4.E.5, pp. 52-53.

⁶⁸¹ 40 C.F.R. § 122.26(d)(2)(iv)(D).

⁶⁸² *Id.*, subd. (d)(2)(iv)(D)(1).

⁶⁸³ U.S. EPA. *MS4 Permit Improvement Guide* (2010), Chapter 4, p. 46 (2012 AR, p. RB-AR53500).

⁶⁸⁴ U.S. EPA, NPDES Permit No. IDS-027561, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to Ada County Highway District, Boise State University, City of Boise, and City of Garden City. Drainage District #3, and the Idaho Transportation Department District #3 (Dec. 12, 2012), Part II.B.1.g, pp. 12-13.

Program are adequately trained is not unique to local government. This requirement is a key provision in other permits issued to non-local government entities in order to effectively reduce and or prevent pollutants from reaching waterbodies. For example, Caltrans is required to have a training program for Caltrans employees and construction contractors as an element of its SWMP.⁶⁸⁵ Additionally, non-local government entities enrolled under the CGP are required to “ensure that all persons responsible for implementing requirements of this General Permit shall be appropriately trained...training should be both formal and informal, occur on an ongoing basis, and should include training offered by recognized government agencies or professional organizations.”⁶⁸⁶ The above demonstrates that Claimants are not being treated differently than non-local government entities.

For all these reasons, and for the additional reasons discussed in Section IV above, the Commission should find that Parts VI.D.8.g, VI.D.8.h, VI.D.8.i.i, VI.D.8.i.ii, VI.D.8.i.iv, VI.D.8.i.v, VI.D.8.j, and VI.D.8.l of the 2012 Permit are not state mandates subject to subvention.

G. Public Agency Activities Program

Parts VI.D.4.c.iii, VI.D.4.c.vi, VI.D.4.c.x(2), VI.D.9.c, VI.D.9.d.i, VI.D.9.d.ii, VI.D.9.d.iv, VI.D.9.d.v, VI.D.9.g.ii, VI.D.9.h.vii, and VI.D.9.k.ii of the 2012 Permit require Claimants to develop an inventory of public facilities that are potential sources of stormwater pollution; identify, evaluate, and consider retrofitting opportunities in existing development; implement an Integrated Pest Management Program; implement trash excluders or equivalent BMPs in high priority “Priority A” areas; and train employees and contractors on proposer pesticide use.⁶⁸⁷

As discussed in Section IV.B.3.ii, above, Parts VI.D.4 and VI.D.9 of the 2012 Permit, including all their subparts, are provisions that Permittees can customize in an approved WMP or EWMP.⁶⁸⁸ All Claimants elected to develop, and are now implementing, an approved WMP or EWMP. Therefore, regardless of the specificity, the choice to implement the specific requirements of Parts VI.D.4 and VI.D.9, rather than alternative activities consistent with federal regulations was the Claimants’ and is, therefore, not a state mandate.

1. Public Facility Inventory (Parts VI.D.4.c.iii and VI.D.9.c)

Parts VI.D.4.c.iii and VI.D.9.c require that each Permittee maintain an updated inventory of all Permittee-owned or operated (i.e., public) facilities within its jurisdiction that are potential sources of stormwater pollution. The requirement also outlines the types of sources to be tracked and the minimum fields of information to be used in the inventory. Additionally, Permittees must update

⁶⁸⁵ State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation, Part E.2.k, p. 49.

⁶⁸⁶ State Water Board, Order No. 2009-0009-DWQ (as amended by 2010-0014-DWQ and 2012-0006-DWQ), NPDES General Permit for Storm Water Discharges Associated With Construction And Land Disturbance Activities, Part VII, pp. 32-33. Permittees are required to provide documentation of all training in their Annual Reports.

⁶⁸⁷ 2012 Permit, Part VI.D.4.c, pp. 75-84 (2015 AR, pp. SB-AR-013368 - 377) and Part VI.D.9, pp. 125-140 (2015 AR, pp. SB-AR-013418 – 433).

⁶⁸⁸ *Id.*, Part VI.C.1.b, p. 48 (2015 AR, p. SB-AR-013341) and Part VI.C.5.b.iv.(1), p. 63 (2015 AR, p. SB-AR-013356).

the inventory at least once during the 5-year term of the permit with information obtained through field activities or other readily available inter- and intra-agency informational databases.⁶⁸⁹

The Provisions are Not New Programs or Higher Levels of Service

The 2001 Permit, as part of the Industrial/Commercial Facilities Program, included a provision that required each Permittee to “maintain a watershed-based inventory or database of all facilities within its jurisdiction that are critical sources of storm water pollution.”⁶⁹⁰ The types of facilities defined as “critical sources” include: restaurants; automotive service facilities; retail gasoline outlets and automotive dealerships; U.S. EPA Phase I industrial facilities; municipal landfills; hazardous treatment, disposal, and recovery facilities; and industrial facilities that are subject to section 313 of title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA).⁶⁹¹ The provision also required that this inventory include minimum fields of information and that the Permittee update the inventory annually.

While this provision was contained within the Industrial/Commercial Facilities Program in the 2001 Permit, the 2012 Permit’s provision to develop an inventory of public facilities that are potential sources of stormwater pollution simply clarifies that there are also “critical sources” that are owned by Permittees that should be tracked consistent with the tracking of critical commercial and industrial sources. Such tracking is necessary in order to ensure that other provisions of the permit are implemented, and to enable the Permittee to report its stormwater control activities at these facilities in its annual report as required.

The connection to the 2001 Permit provisions is supported by the categories of facilities required to be tracked under the contested provisions. Among the twenty-four (24) categories of facilities are categories previously tracked under the 2001 Permit’s Industrial/Commercial Facilities Program inventory for critical sources.⁶⁹² Note that for industrial facilities, the 2001 Permit requirement clearly included both public and private facilities as evidenced by the inclusion of municipal landfills. Categories in Part VI.D.9.c that were previously tracked under the 2001 Permit include hazardous waste treatment, disposal and recovery facilities (identified as #6, #7, #8, #20 in Part VI.D.9.c.i), municipal landfills (identified as #9), vehicle service facilities (identified as #4, #22), and retail gasoline outlets (identified as #5)⁶⁹³ as well as several facility categories that have facility-specific requirements under the 2001 Permit’s Public Agency Activities Program, including vehicle maintenance and material storage facilities and corporate yards (identified as #2, #4, #5, #10, #11, #18, #22), landscape and recreational facilities (identified as #4, #15-17, #19), including pesticide storage areas (#11), and parking lots (identified as #14).⁶⁹⁴ Further, under the 2001 Permit, Permittees were required to report information such as whether all Permittee-owned parking lots were swept at the required frequency and whether all municipal activity considered

⁶⁸⁹ *Id.*, Part VI.D.4.c.iii, pp. 76-77 (2015 AR, pp. SB-AR-013369 – 370) and Part VI.D.9.c, pp. 126-128 (2015 AR, pp. SB-AR-013419 - 421).

⁶⁹⁰ 2001 Permit, Part 4.C.1, pp. 35-36.

⁶⁹¹ *Id.*, Attachment B, p. B-1 to B-2.

⁶⁹² Note that Part VI.D.4.c.iii.(1) of the 2012 Permit identifies a more limited set of LACFCD-owned facilities that must be inventoried as compared to Part VI.D.9.c.i. (2015 AR, pp. SB-AR-013369, 013419 - 420).

⁶⁹³ 2001 Permit, Part 4.C.1.a, pp. 35-36.

⁶⁹⁴ *Id.*, Part 4.F.3, 4.F.4.i, 4.F.7,

an industrial activity had been separately permitted under the IGP.⁶⁹⁵ Without an inventory of Permittee-owned facilities, it would be difficult to report this information as required.

The Provisions are Necessary to Implement Federal Law

Maintaining an inventory of Permittee-owned or operated facilities that are potential sources of stormwater pollution is a requisite first step to reduce pollutants in stormwater discharges and to prevent illicit discharges that may originate from public facilities and public agency activities. Federal regulations at 40 C.F.R. section 122.26(d)(2)(iv) require that Permittees have a management program that includes a comprehensive planning process and management practices and control techniques to reduce pollutants in stormwater and prevent illicit discharges. For a Permittee to ignore its own facilities that are potential sources of pollutants in a comprehensive planning process and management program would be illogical and irresponsible.

This interpretation is in line with U.S. EPA's MS4 Permit Improvement Guide, which emphasizes the need for permittees to evaluate and assess *their own facilities* in pollution prevention and good housekeeping programs to meet federal stormwater regulations at 40 C.F.R. section 122.26(d)(2)(iv)(A). U.S. EPA states, "[t]he first step for the permittee is to evaluate and assess the areas and municipal facilities that it controls to determine which activities may currently have a negative impact on water quality and to find solutions for these activities."⁶⁹⁶ U.S. EPA's MS4 Permit Improvement Guide provides a draft permit provision for the development of a "Municipal Facility and Stormwater Control Inventory," which was the basis for the contested provision.⁶⁹⁷ This example provision directs permittees to "continue to update and maintain an inventory of municipally-owned or operated facilities and stormwater controls;" provide a list of the types of facilities that permittees must include in the inventory; and map the locations of facilities. Additionally, U.S. EPA has included a similar provision in its Massachusetts General MS4 Permit; the provision requires that "the permittee shall develop an inventory of all permittee owned facilities within the categories below. The permittee shall review this inventory annually and update as necessary."⁶⁹⁸ The inclusion of a similar provision in the U.S. EPA MS4 Permit Improvement Guide and a U.S. EPA-issued MS4 permit supports the conclusion that the provision is necessary to meet federal requirements.

⁶⁹⁵ *Id.*, Attachment U-4, pp. 24-33.

⁶⁹⁶ U.S. EPA. *MS4 Improvement Guide* (2010), p. 67 (2012 AR, p. RB-AR53521).

⁶⁹⁷ *Id.*, at pp. 68-69 (2012 AR, pp. RB-AR53522 - 523). The only source included in the 2012 Permit, but not included in the U.S. EPA draft permit provision, is animal control facilities. However, U.S. EPA states that "Permit writers should tailor the facilities listed in the assessment as best they can to include the facilities most likely to be owned or operated by the permittee." Given that bacteria is a pollutant of concern as discussed in the 2012 Permit, Attachment F (Fact Sheet), Section II.B (2015 AR, p. SB-AR-013579), and Permittees own many animal control facilities, the Los Angeles Board included these in the list of facilities to inventory. (Note that the draft permit provision in the MS4 Improvement Guide includes "landscape maintenance on municipal property," which would include at public parks and public marinas as identified in the 2012 Permit.)

⁶⁹⁸ U.S. EPA, General Permits For Stormwater Discharges From Small Municipal Separate Storm Sewer Systems (MS4s) In Massachusetts, Authorization to Discharge Under the National Pollutant Discharge Elimination System, issued to MS4s located in the Commonwealth of Massachusetts, NPDES Permits No. MAR041000, MAR042000, and MAR043000 (Apr. 4, 2016), Part 2.3.7.a.ii, p. 48.

Other Mandates Exceptions Apply

As previously discussed, many Permittee-owned facilities were previously tracked under the 2001 Permit's critical sources inventory requirement (Part 4.C.1), or had to be internally tracked to implement and report on public agency activities under the 2001 Permit. Further, to implement the provision, Permittees do not need to procure any new technology, since an inventory can be created and maintained using conventional technology. Finally, the information to be maintained in the inventory is readily available, since the tracked facilities are all Permittee-owned. For these reasons, even if the Commission concludes that some aspect of these provisions imposes requirements that exceed a federal mandate, the costs to implement these provisions is *de minimis* and therefore not entitled to subvention.

In addition, regarding the provision in Part VI.D.4.c applicable to the LACFCD only, the LACFCD proposed to the Los Angeles Water its own section of permit provisions in a meeting with the Board on April 25, 2012.⁶⁹⁹ In this meeting, the LACFCD presented its written proposal for the requirements in Part VI.D of the 2012 Permit that would apply to it. The Board accepted the LACFCD written proposal in large part, and describes in the 2012 Permit Fact Sheet the rationale for a separate "Minimum Control Measure" section to set forth the requirements applicable to the LACFCD only.⁷⁰⁰ In the case of Part VI.D.4.c.(iii), the LACFCD proposed subparts (1) and (3), which the Board accepted.⁷⁰¹ The LACFCD did not propose the list of minimum fields of information required in subpart (2). Because the LACFCD proposed the requirements they are challenging now, which the Board included in the 2012 Permit at their request, the LACFCD is surely not entitled to subvention for the costs to implement the provisions they proposed.

2. Inventory of Retrofitting Opportunities (Part VI.D.9.d.i); Screening of Existing Areas of Development (Part VI.D.9.d.ii); Consideration of Screening Evaluation for Permit Programs (Part VI.D.9.d.iv); and Cooperation with Private Landowners (Part VI.D.9.d.v)

Part VI.D.9.d.i requires Permittees to develop an inventory of retrofitting opportunities in existing development.⁷⁰²

Part VI.D.9.d.ii requires Permittees to screen existing areas of development to identify candidate areas for retrofitting using watershed models or other screening level tools.⁷⁰³

Part VI.D.9.d.iv requires Permittees to consider the results of the evaluation in Part VI.D.9.ii in its stormwater management program, New Development and Redevelopment program and specifically for off-site mitigation, and in coordination with flood control projects.⁷⁰⁴

⁶⁹⁹ See April 25, 2012 meeting sign-in sheet, agenda, and written LACFCD proposal for permit provisions (2012 AR, pp. RB-AR3063 – 84).

⁷⁰² 2012 Permit, Part VI.D.9.d.i, p. 128 (2015 AR, p. SB-AR-013421).

⁷⁰³ *Ibid.*

⁷⁰⁴ *Id.*, Part VI.D.9.d.iv, pp. 128-129 (2015 AR, pp. SB-AR-013421 - 422).

Part VI.D.9.d.v requires Permittees to cooperate with private landowners to encourage site specific retrofitting projects.⁷⁰⁵

The Provisions are Not New Programs or Higher Levels of Service

The 2001 Permit's Development Planning Program had express objectives to "[m]aximize the percentage of pervious surfaces to allow percolation of storm water into the ground," "[m]inimize the quantity of storm water directed to impervious surfaces and the MS4," and "[p]rovide for appropriate permanent measures to reduce storm water pollutant loads ... from the development site."⁷⁰⁶ While these provisions were limited to new development and redevelopment projects in the 2001 Permit, the contested provisions recognize that these same objectives should apply to existing development in the largely built-out Los Angeles Region. These provisions are also in line with the 2001 Permit's Storm Water Quality Management Program (SQMP) provisions, which required that Permittees "at a minimum, comply with the applicable storm water program requirements of 40 C.F.R. 122.26(d)(2). The SQMP and its components shall be implemented to reduce the discharges of pollutants in storm water to the MEP."⁷⁰⁷

The Provisions are Necessary to Implement Federal Law

As noted in U.S. EPA's MS4 Permit Improvement Guide, existing development contributes significant amounts of pollutants to the MS4.⁷⁰⁸ Including provisions to address existing development is, therefore, necessary as part of the management program required by 40 C.F.R. section 122.26(d)(2)(iv), including as part of a "comprehensive planning process," and "description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas."

The contested provision encourages, but does not require itself, the reduction of pollutants from existing development. It simply requires that Permittees identify potential opportunities for retrofit and cooperate with private landowners consistent with the federal requirement for "a comprehensive planning process which involves public participation." Given that much of the land area under the Permittees' jurisdiction is built-out, this 2012 Permit requirement is necessary to meaningfully control pollutants from commercial and residential areas.

This is supported by U.S. EPA in their MS4 Permit Improvement Guide, which includes an example permit provision that requires permittees to develop a plan to retrofit existing developed sites that are impacting water quality. This plan must emphasize controls that infiltrate, evapotranspire, or harvest and use stormwater discharges and include an "inventory of potential retrofit locations" and an "evaluation and ranking of the inventoried locations to prioritize retrofitting."⁷⁰⁹

Additionally, in the MS4 Permit Improvement Guide, U.S. EPA provides strongly worded rationale emphasizing the need for retrofit provisions in MS4 permits:

⁷⁰⁵ *Id.*, Part VI.D.9.d.v, p. 129 (2015 AR, p. SB-AR-013422).

⁷⁰⁶ 2001 Permit, Part 4.D, p. 47.

⁷⁰⁷ *Id.*, Part 3.A.2, p. 26.

⁷⁰⁸ U.S. EPA. *MS4 Improvement Guide* (2010), p. 65 (2012 AR, p. RB-AR53520).

⁷⁰⁹ *Id.*, at pp. 64-65 (2012 AR, pp. RB-AR53518 - 519)

It is clear that we cannot protect the nation's waters without also addressing degradation caused by stormwater discharges from existing developed sites. For that reason stormwater programs must include substantive retrofit provisions.

It is possible and reasonable to significantly improve water quality in many urban receiving waters. This requires more than just a new development and redeveloped sites program, however, which at best can only hold the line. To actually improve the quality of receiving waters it is necessary to mitigate discharges from existing developed sites, which generally means implementation of measures to bring about the retrofit the [sic] stormwater control measures at existing sites to retain most stormwater on site.

In addition, research indicates that most streambank restoration projects that actively stabilize eroding channels should not be implemented until after hydrologic retrofits have been completed that restore the hydrologic regime not concurrently with the implementation of the retrofits.

Municipal projects, such as traffic calming sites could also include stormwater retrofit components, such as curb bump outs that include bioretention features, rain gardens, and curb cuts.

Information on retrofit options and the development of a retrofit plan can be found in the Center for Watershed Protection's guidance on Urban Stormwater Retrofit Practices (available at www.cwp.org as Manual No. 3 under the Urban Subwatershed Restoration Manual Series).⁷¹⁰

U.S. EPA has also included similar requirements in MS4 permits that it has issued. The Massachusetts General MS4 Permit requires permittees to identify permittee-owned properties that could be retrofitted to reduce pollutants in stormwater discharges. That permit also lists the factors that permittees must consider when identifying these retrofit opportunities.⁷¹¹

All of the above supports the conclusion that Parts VI.D.9.d.i, VI.D.9.d.ii, VI.D.9.d.iv, and VI.D.9.d.v are necessary to meet federal requirements.

Other Mandates Exceptions Apply

Because Permittees can implement the provisions through an inventory and screening-level analyses with conventional tools and technology and may choose the criteria for evaluating and ranking areas, the costs of implementing the contested provisions are *de minimus*. Additionally, Part VI.D.9.d.iv chiefly requires Permittees to consider the results of the retrofit inventory and the corresponding analyses as they implement other requirements of the 2012 Permit such as Part VI.D.7.c.iii.(4)-(5), which provides that Permittees may allow developers to implement offsite mitigation in some cases. Part VI.D.7.c.iii.(5) in particular requires each Permittee to develop a prioritized list of offsite mitigation, groundwater replenishment and/or retrofit projects.

⁷¹⁰ *Id.*, at p. 65 (2012 AR, p. RB-AR53519)

3. Implementation of an Integrated Pest Management Program (Parts VI.D.4.c.vi and VI.D.9.g.ii)

Parts VI.D.4.c.vi and VI.D.9.g.ii require Permittees to implement an Integrated Pest Management (IPM) program. These provisions require that the IPM program include the following requirements or activities:

- Pesticides are used only if monitoring indicates they are needed, and pesticides are applied according to applicable permits and established guidelines;
- Treatments are made with the goal of removing only the target organism;
- Pest controls are selected and applied in a manner that minimizes risks to human health, beneficial non-target organisms, and the environment;
- The use of pesticides, including organophosphates and pyrethroids, does not threaten water quality;
- Partner with other agencies and organizations to encourage the use of IPM;
- Adopt and verifiably implement policies, procedures, and/or ordinances requiring the minimization of pesticide use and encouraging the use of IPM techniques (including beneficial insects) for public agency facilities and activities;
- Policies, procedures, and ordinances shall include commitments and a schedule to reduce the use of pesticides that cause impairment of surface waters by implementing the following procedures: prepare and annually update an inventory of pesticides used by all internal departments, divisions, and other operational units; quantify pesticide use by staff and hired contractors; and demonstrate implementation of IPM alternatives where feasible to reduce pesticide use.⁷¹²

The Provisions are Not New Programs or Higher Levels of Service

Parts VI.D.4.c.vi and VI.D.9.g.ii are a refinement of the pesticide provisions included in the 2001 Permit and therefore, are not a new program or higher level of service. Specifically, Part 4.F.4 of the 2001 Permit required each Permittee to implement a set of requirements related to landscape and recreational facilities management that included several pesticide-related requirements such as a requirement to “[i]mplement procedures to encourage retention and planting of native vegetation and to reduce water, fertilizer, and pesticide needs.”⁷¹³ This reflects the principle of IPM to use biological control, habitat manipulation, and use of resistant varieties to prevent pests.⁷¹⁴

The requirements of the contested provision are also elaborations of the 2001 Permit’s general requirement to “reduce water, fertilizer, and pesticide needs” and ground the permit in the well-established IPM approach to pest control.⁷¹⁵ Examples include the IPM requirements that “[p]esticides are used only if monitoring indicates that they are needed;” “[t]reatments are made with the goal of removing only the target organism;” and “pest controls are selected and applied in a manner that minimizes risks to human health, beneficial non-target organisms, and the

⁷¹³ 2001 Permit, Part 4.F.4.f, p. 55.

⁷¹⁴ 2012 Permit, Attachment A, p. A-10 (2015 AR, p. SB-AR-013460).

⁷¹⁵ What is Integrated Pest Management (IPM)? <http://www2.ipm.ucanr.edu/WhatIsIPM/> (accessed March 5, 2018).

environment.” As such, the contested provision does not constitute a new program or higher level of service, but simply reflects the prevailing approach to pesticide management.

The Provisions are Necessary to Implement Federal Law

Integrated Pest Management (IPM) has a long history of being the established and preferred approach for pest control, including being mentioned and promoted by the Nixon⁷¹⁶ and Carter⁷¹⁷ Administrations and funding of the University of California to establish a Statewide IPM Program in 1979.⁷¹⁸ The Statewide IPM Program gives an expanded definition of IPM that describes its relation to pesticide application and its environmental benefits.

IPM is an ecosystem-based strategy that focuses on long-term prevention of pests or their damage through a combination of techniques such as biological control, habitat manipulation, modification of cultural practices, and use of resistant varieties. Pesticides are used only after monitoring indicates they are needed according to established guidelines, and treatments are made with the goal of removing only the target organism. Pest control materials are selected and applied in a manner that minimizes risks to human health, beneficial and nontarget organisms, and the environment.⁷¹⁹

This definition is relied upon in Appendix A and Parts VI.D.4.c.vi.(2) and VI.D.9.g.ii of the 2012 Permit.⁷²⁰

Such an approach, or an effective IPM alternative, is consistent with federal stormwater regulations, which require Permittees to have as part of their management programs a description of structural and source control measures that includes:

A description of a program to reduce to the maximum extent practicable, pollutants in discharges from municipal separate storm sewers associated with the application of pesticides, herbicides and fertilizer which will include, as appropriate, controls such as educational activities, permits, certifications and other measures for commercial applicators and distributors, and controls for application in public right-of-ways and at municipal facilities.⁷²¹

In its MS4 Permit Improvement Guide, U.S. EPA cites the federal stormwater regulations outlined in 40 C.F.R. section 122.26(d)(2)(iv)(A) and provides an example permit provision for landscape maintenance that includes IPM requirements including requirements to implement “[i]ntegrated

⁷²¹ 40 C.F.R. § 122.26(d)(2)(iv)(A)(6).

pest management measures that rely on non-chemical solutions” and “limiting or replacing pesticide use.”⁷²²

The above support the Board’s determination that the contested IPM provision is necessary to meet federal requirements.

The Provisions are Not Unique to Local Government

The requirement to implement an IPM program is not unique to local government. This requirement is a key provision in other permits issued to non-local government entities to effectively reduce and or prevent pollutants from reaching waterbodies. For example, Caltrans is required to incorporate integrated pest management into its maintenance program activities and facilities operations.⁷²³

Further, the Food Quality Protection Act of 1996 (FQPA), which amended the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), provides an example of federal law that directs federal agencies to use and promote IPM. The FQPA describes IPM and directs federal agencies to use and promote IPM techniques:

“The Secretary of Agriculture, in cooperation with the Administrator, shall implement research, demonstration, and education programs to support adoption of Integrated Pest Management. Integrated Pest Management is a sustainable approach to managing pests by combining biological, cultural, physical, and chemical tools in a way that minimizes economic, health, and environmental risks. The Secretary of Agriculture and the Administrator shall make information on Integrated Pest Management widely available to pesticide users, including Federal agencies. Federal agencies shall use Integrated Pest Management techniques in carrying out pest management activities and shall promote Integrated Pest Management through procurement and regulatory policies, and other activities.”⁷²⁴

The above demonstrates that Claimants are not being treated differently than non-local government entities.

Other Mandates Exceptions Apply

Regarding the provision in Part VI.D.4.c applicable to the LACFCD only, the LACFCD proposed to the Los Angeles Water Board its own section of permit provisions in a meeting with the Board on April 25, 2012.⁷²⁵ In this meeting, the LACFCD presented its written proposal for the requirements in Part VI.D of the 2012 Permit that would apply to it. The Board accepted the LACFCD written proposal in large part, and describes in the 2012 Permit Fact Sheet the rationale for a separate “Minimum Control Measure” section to set forth the requirements applicable to the

⁷²² U.S. EPA. *MS4 Improvement Guide* (2010), pp. 82-83 (2012 AR, pp. RB-AR53536 - 537).

⁷²³ State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation, Part E.2.h.3.b, pp. 44-46.

⁷²⁴ FIFRA, 7 U.S.C. § 136r-1.

⁷²⁵ See April 25, 2012 meeting sign-in sheet, agenda, and initial proposal for separate permit provisions submitted by LACFCD (2012 AR, pp. RB-AR3063 – 84).

LACFCD only.⁷²⁶ In the case of Part VI.D.4.c.(vi), the LACFCD proposed that it implement these requirements and the Board accepted the LACFCD's proposal.⁷²⁷ Because the LACFCD proposed the requirements they are challenging now, which the Board included in the 2012 Permit at their request, the LACFCD is surely not entitled to subvention for the costs to implement the provisions they proposed.

4. Installation of Trash Excluders or Equivalent (Part VI.D.9.h.vii)

Part VI.D.9.h.vii requires Permittees to install trash excluders, or equivalent devices, on or in catch basins or outfalls to prevent the discharge of trash to the MS4 or receiving water. This requirement only applies to areas not subject to a trash TMDL and identified as a "Priority A" area; and does not apply to sites where the application of such BMP(s) alone will cause flooding. Alternatively, Permittees may implement alternative or enhanced BMPs that provide substantially equivalent removal of trash.⁷²⁸

The Provision is Not a New Program or Higher Level of Service

The 2001 Permit included a requirement for BMP implementation that states, "Permittees shall implement or require the implementation of the most effective combination of BMPs for storm water/urban runoff pollution control. When implemented, BMPs are intended to result in the reduction of pollutants in storm water to the MEP."⁷²⁹

Although the contested provision is specific to trash, it is still an elaboration of this 2001 Permit requirement for BMP implementation and is not a new program or higher level of service. The specificity of this provision in the 2012 Permit is reasonable given the known impairments of receiving waters due to trash and the identification of MS4 permittees as a source of trash discharged to receiving waters.⁷³⁰ Since trash is a known pollutant, Permittees should have already been implementing BMPs to reduce trash in stormwater discharges under the 2001 Permit.

The Provision is Necessary to Implement Federal Law

Federal regulations identify the need to develop, implement, and enforce controls to reduce the discharge of pollutants from MS4s.⁷³¹ They further specify that Permittees must include in their management program, maintenance activities and a maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from MS4s.⁷³² Trash is a floatable

⁷²⁶ 2012 Permit, Attachment F (Fact Sheet), p. 86 (2015 AR, SB-AR-013658).

⁷²⁷ See April 25, 2012 meeting sign-in sheet, agenda, and initial proposal for separate permit provisions submitted by LACFCD (2012 AR, pp. RB-AR3070 – 71). The only difference between LACFCD's proposal and Part VI.D.4.c(vi) of the 2012 Permit is the addition of Part VI.D.4.c(vi)(2)(g)(iii), which requires that the LACFCD "demonstrate implementation of IPM alternatives where feasible to reduce pesticide use." Details of such demonstration are left to the discretion of the LACFCD. (Compare 2012 AR, pp. RB-AR3070 - 71 with 2015 AR, p. SB-AR-013372).

⁷²⁸ 2012 Permit, Part VI.D.9.h.viii, p. 136 (2015 AR, p. SB-AR-013429).

⁷²⁹ 2001 Permit, Part 3.B, p. 26.

⁷³⁰ 2012 Permit, Part II.A, p. 13 (2015 AR, p. SB-AR-013306).

⁷³¹ 40 C.F.R. § 122.26(d)(2)(iv).

⁷³² *Id.*, subd. (d)(2)(iv)(A)(1).

pollutant. The contested provision is consistent with these regulations in that it requires Permittees to implement controls to reduce the discharge of trash from MS4s.

U.S. EPA's Stormwater Menu of BMPs fact sheet on Trash and Debris Management emphasizes structural controls that collect and remove trash before entering nearby waterways.⁷³³ In particular, the fact sheet highlights the use of "physical filtering structures" such as trash racks, mesh nets, bar screen, and trash booms, which concentrate floating debris and trash and prevent it from traveling downstream. These physical filtering structures are trash excluders, or are viable equivalents to trash excluders, under the contested permit provision.

These reasons support the conclusion that the contested provision is necessary to meet federal requirements.

The Provision Is Not Unique to Local Government

The requirement to install trash excluders or equivalent devices is not unique to local government. This requirement is also imposed by the State on non-local government entities discharging stormwater to effectively prevent trash from reaching waterbodies. The statewide water quality control plans for ocean waters and inland surface waters in California require both local government and non-local government entities that are covered under a NPDES stormwater permit to prohibit the discharge of trash by installing full capture systems for excluding trash from stormwater discharges or equivalent devices.⁷³⁴ These non-local government entities include industrial facilities, construction sites, Caltrans, and other public entities such as military bases and public educational institutions.

The NPDES permit issued by the State Water Board for stormwater discharges by Caltrans states that Caltrans is required to install, operate, and maintain full trash capture systems, treatment controls, and/or enhanced maintenance controls for storm drains or catchments that service significant trash generating areas.⁷³⁵ This requirement is equivalent to the requirement in the 2012 Permit to install trash excluders or equivalent devices on or in catch basins or outfalls in areas defined as Priority A.

The above demonstrates that Claimants are not being treated differently than non-local government entities.

Other Mandates Exceptions Apply

Despite the Claimants' emphasis on trash excluders, Part VI.D.9.h.(vii) does not require or impose the installation of these particular devices. Instead, the contested provision provides significant flexibility for Permittees to choose structural controls and/or non-structural BMPs that are not trash excluders to comply with the requirement. If selecting an option other than trash excluders,

⁷³³ U.S. EPA. *Trash and Debris Management, Public Education and Outreach on Stormwater Impacts: Education for Homeowners*.

⁷³⁵ State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation, Part E.2.h.3.b, pp. 44-46.

Permittees must demonstrate equivalency with the performance of trash excluders. However, this is a reasonable expectation, since trash excluders are an established BMP to effectively control discharges of trash and debris.

5. Pesticide Training for Employees and Contractors (Parts VI.D.4.c.x.(2) and VI.D.9.k.ii)

Parts VI.D.4.c.x.(2) and VI.D.9.k.ii require Permittees to train their employees and contractors who use or have the potential to use pesticides or fertilizers in the potential for pesticide-related surface water toxicity; the proper use, handling, and disposal of pesticides; the least toxic methods of pest prevention and control, including IPM; and the reduction of pesticide use.⁷³⁶

The Provisions are Not New Programs or Higher Levels of Service

The 2001 Permit contained requirements to implement landscaping and recreational facilities protocols and ensure proper application of pesticides. Specific requirements, included:

- A requirement to implement a standardized protocol for the routine and non-routine application of pesticides, herbicides (including pre-emergents), and fertilizers;
- A requirement to ensure no application of pesticides or fertilizers immediately before, during, or immediately after a rain event or when water is flowing off the area to be applied;
- A requirement to ensure that staff applying pesticides are certified by the California Department of Food and Agriculture, or are under the direct supervision of a certified pesticide applicator;
- A requirement to implement procedures to encourage retention and planting of native vegetation and to reduce water, fertilizer, and pesticide needs; and
- A requirement to store fertilizers and pesticides indoors or under cover on paved surfaces or use secondary containment.⁷³⁷

The training of employees and contractors in proper pesticide use is a necessary requirement to ensure compliance with these requirements and thus only clarifies expectations under the 2001 Permit. Further, under the 2001 Permit, Permittees were responsible for coordinating among its internal departments and agencies to facilitate the implementation of the 2001 Permit's requirements.⁷³⁸ Training is an important component of such coordination. As such, the contested provisions are not a new program or higher level of service.

The Provisions are Necessary to Implement Federal Law

Federal regulations identify the need for a program to reduce pollutants in discharges from MS4s associated with the application of pesticides, herbicides and fertilizer.⁷³⁹ Training programs for the application of pesticides are necessary to comply with these regulations.

⁷³⁶ 2012 Permit, Part VI.D.4.c.x.(2), p. 84 (2015 AR, p. SB-AR-013 377) and Part VI.D.9.k.ii, p. 139 (2015 AR, p. SB-AR-013432).

⁷³⁷ 2001 Permit, Part 4.F.4, p. 55.

⁷³⁸ *Id.*, Parts 3.D.8, 3.E.2, and 3.E.4, p. 27.

⁷³⁹ 40 C.F.R. § 122.26(d)(2)(iv)(A)(6).

Later federal regulations for small MS4s, which are generally held to a less stringent standard, explicitly outline the requirement for permits to include training provisions:

“The permit must identify the minimum elements and require the development and implementation of an operation and maintenance program that includes a training component and has the ultimate goal of preventing or reducing pollutant runoff from municipal operations. Using training materials that are available from EPA, the State, Tribe, or other organizations, the program must include employee training to prevent and reduce storm water pollution from activities such as park and open space maintenance, fleet and building maintenance, new construction and land disturbances, and storm water system maintenance.”⁷⁴⁰

U.S. EPA’s MS4 Permit Improvement Guide supports the conclusion that the contested provision is necessary to meet federal requirements. U.S. EPA states, “[f]ederal stormwater regulations (see 40 C.F.R. 122.34(b)(6) and 40 C.F.R. 122.26(d)(2)(iv)(A)) require the operator of a regulated MS4 community to develop a program to... [t]rain employees on how to incorporate pollution prevention/good housekeeping techniques into municipal operations.”⁷⁴¹ The Guide includes an example permit provisions that state, “[p]ermitees must develop an annual training program for appropriate employees involved in implementing pollution prevention and good housekeeping practices in the preceding Parts” and “[t]he permittee must provide oversight of contractor activities to ensure that contractors are using appropriate control measures and [standard operating procedures].”⁷⁴²

The Provisions are Not Unique to Local Government

The requirement to train municipal employees and contractors in proper pesticide use is not unique to local government. This requirement is a key provision in other permits issued to non-local government entities to effectively reduce pollutants from reaching waterbodies. For example, Caltrans is required to “ensure that all employees or contractors who, within the scope of their duties, prescribe or apply herbicides, pesticides, or fertilizers (including over-the-counter products) are appropriately trained and licensed to comply with these provisions.”⁷⁴³

The above demonstrates that Claimants are not being treated differently than non-local government entities.

Other Mandates Exceptions Apply

Regarding the provision in Part VI.D.4.c applicable to the LACFCD only, the LACFCD proposed to the Los Angeles Water Board its own section of permit provisions in a meeting with the Board on April 25, 2012.⁷⁴⁴ In this meeting, the LACFCD presented its written proposal for the

⁷⁴⁰ *Id.*, § 122.34(b)(6)(i).

⁷⁴¹ U.S. EPA. *MS4 Improvement Guide* (2010), p. 83 (2012 AR, p. RB-AR53537).

⁷⁴² *Id.*, at p. 84 (2012 AR, p. RB-AR53538).

⁷⁴³ State Water Board, Order 2012-0011-DWQ (as amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, and WQ 2015-0036-EXEC), NPDES Statewide Storm Water Permit, Waste Discharge Requirements for State of California, Department of Transportation, Part E.2.h.3.b.v, p. 45.

⁷⁴⁴ See April 25, 2012 meeting sign-in sheet, agenda, and initial proposal for separate permit provisions submitted by LACFCD (2012 AR, pp. RB-AR3063 – 84).

requirements in Part VI.D of the 2012 Permit that would apply to it. The Board accepted the LACFCD written proposal in large part, and describes in the 2012 Permit Fact Sheet the rationale for a separate “Minimum Control Measure” section to set forth the requirements applicable to the LACFCD only.⁷⁴⁵ In the case of Part VI.D.4.c.(x)(2), the LACFCD proposed that it implement these requirements and the Board accepted the LACFCD proposal.⁷⁴⁶ Because the LACFCD proposed the requirements they are challenging now, which the Board included in the 2012 Permit at their request, the LACFCD is surely not entitled to subvention for the costs to implement the provisions they proposed.

For all these reasons, and for the additional reasons discussed in Section IV above, the Commission should find that Parts VI.D.4.c.iii, VI.D.4.c.vi, VI.D.4.c.x(2), VI.D.9.c, VI.D.9.d.i, VI.D.9.d.ii, VI.D.9.d.iv, VI.D.9.d.v, VI.D.9.g.ii, VI.D.9.h.vii, and VI.D.9.k.ii of the 2012 Permit are not state mandates subject to subvention.

H. Illicit Connections and Illicit Discharges (IC/ID) Elimination Program

Parts VI.D.4.d.v.(2), VI.D.4.d.v.(3), VI.D.4.d.v.(4), VI.D.4.d.vi.(1)(a), VI.D.4.d.vi.(1)(c), VI.D.4.d.vi.(1)(d), VI.D.10.d.iii, VI.D.10.d.iv, VI.D.10.d.v, VI.D.10.e.i.(1), VI.D.10.e.i.(3), and VI.D.10.e.i.(4) of the 2012 Permit require Permittees to include information regarding dumping prohibitions and public reporting of illicit discharges on signage adjacent to open channels; develop and maintain written procedures that document how complaint calls are received, documented and tracked; maintain documentation of complaint calls and record the location of the reported spill or Illicit Connection and Illicit Discharges (IC/ID) and the actions undertaken; implement a spill response plan for all spills that may discharge into its MS4; coordinate with spill response teams; respond to spills for containment within 4 hours of becoming aware of the spill; and report spills that may endanger health or the environment to the appropriate public health agencies and the Office of Emergency Services (OES).⁷⁴⁷ These provisions are addressed in two subgroups, listed below.

Section 402(p)(3)(B)(ii) requires MS4 permits to “effectively prohibit non-stormwater discharges into the storm sewers.” Federal regulations define “illicit discharge” as “any discharge to a municipal separate storm sewer that is not composed entirely of stormwater” except discharges resulting from fire fighting activities and discharges from NPDES permitted sources.⁷⁴⁸ “Illicit discharge” is the mostly closely applicable definition of “non-stormwater” contained in the CWA and the terms are often used interchangeably.

The objective of a Permittee’s IC/ID elimination program is to detect illicit connections and illicit discharges to the MS4 and to promptly remove such discharges and connections. Federal

⁷⁴⁵ 2012 Permit, Attachment F (Fact Sheet), p. 86 (2015 AR, SB-AR-013658).

⁷⁴⁶ See April 25, 2012 meeting sign-in sheet, agenda, and initial proposal for separate permit provisions submitted by LACFCD (2012 AR, pp. RB-AR3076 – 77). Note that while the LACFCD proposed to strike the reference to “and contractors” in Part VI.D.4.c(x)(2) as shown in Part B.2.i.ii of its proposal (2012 AR, p. RB-AR3076), it proposed to add a provision that it would “require appropriate training of contractor employees in targeted positions as described above” (2012 AR, p. RB-AR3077). The Los Angeles Water Board accepted the proposed additional provision and clarified in Part VI.D.4.c.(x)(2) that “[o]utside contractors can self-certify...” (2015 AR, p. SB-AR-013377). The requirement, therefore, is the same as the LACFCD proposal.

⁷⁴⁷ 2012 Permit, Part VI.D.4.d, pp. 84 – 89 (2015 AR, pp. SB-AR-013377 – 382); 2012 Permit, Part VI.D.10, pp. 140 - 144 (2015 AR, pp. SB-AR-013433 - 437).

⁷⁴⁸ 40 C.F.R. § 122.26(b)(2).

regulations require that Permittees must have “a program, including a schedule, to detect and remove (or require the discharger to the [MS4] to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer.”⁷⁴⁹ This program must include “a program, including inspections, to implement and enforce an ordinance, orders or similar means to prevent illicit discharges to the [MS4]” for “all types of illicit discharges.”⁷⁵⁰

As discussed in Section IV.B.3.ii, above, Parts VI.D.4.d and VI.D.10 of the 2012 Permit, including all their subparts, are provisions that Permittees can customize in an approved WMP or EWMP.⁷⁵¹ All Claimants elected to develop, and are now implementing, an approved WMP or EWMP. Therefore, regardless of the specificity, the choice to implement the specific requirements of Parts VI.D.4.d and VI.D.10, rather than alternative activities consistent with federal regulations was the Claimants’ and is, therefore, not a state mandate.

Additionally, regarding Parts VI.D.4.d(v)(2), VI.D.4.d(v)(3), VI.D.4.d(v)(4) and VI.D.4.d(vi)(1), which are applicable to the LACFCD only, the requirements included in these provisions were proposed by the LACFCD to the Los Angeles Water Board during development of the 2012 Permit. Specifically, in meetings with the Board and in its written comments on the draft tentative 2012 Permit, the LACFCD requested to either have its own separate permit, or for the Board to include a separate section in the 2012 Permit that clearly describes the requirements applicable to the LACFCD only, particularly related to the provisions of Part VI.D of the 2012 Permit.⁷⁵² The LACFCD provided a written proposal of requirements under Part VI.D of the 2012 Permit that would be applied to the LACFCD in Exhibit W to its July 23, 2012 comments on the Draft Tentative Permit.⁷⁵³ As requested, the Board included a section specific to the LACFCD under Part VI.D of the 2012 Permit. The Board accepted the requirements proposed by the LACFCD in large part, and describes in the 2012 Permit Fact Sheet the rationale for a separate “Minimum Control Measure” section under Part VI.D to set forth the requirements applicable to the LACFCD only.⁷⁵⁴ In the case of Part VI.D.4.d(v)-(vi), the LACFCD proposed that it implement these requirements and the Board accepted the LACFCD proposal.⁷⁵⁵ Because the LACFCD proposed the requirements they are challenging now, which the Board included in the 2012 Permit at their

⁷⁴⁹ *Id.*, subd. (d)(2)(iv)(B).

⁷⁵² Los Angeles County Flood Control District Comments Draft Tentative Order No. R4-2012-XXXX, NPDES No. CAS004001, p. 4 (2012 AR, p. RB-AR12460); see also April 25, 2012 meeting sign-in sheet, agenda, and initial proposal for separate permit provisions submitted by LACFCD (2012 AR, pp. RB-AR3063 - 84).

⁷⁵³ See Attachment W to Los Angeles County Flood Control District – Comments on the Draft National Pollutant Discharge Elimination System Permit for Municipal Separate Storm Sewer Systems within the County of Los Angeles letter dated July 23, 2012 (2012 AR, pp. RB-AR13653 – 673).

⁷⁵⁴ 2012 Permit, Attachment F (Fact Sheet), pp. F-18, F-86 (2015 AR, pp. SB-AR-013590, 658).

⁷⁵⁵ See Attachment W to Los Angeles County Flood Control District – Comments on the Draft National Pollutant Discharge Elimination System Permit for Municipal Separate Storm Sewer Systems within the County of Los Angeles letter dated July 23, 2012 (2012 AR, pp. RB-AR13671-13672). The only difference between the LACFCD proposal and the 2012 Permit is in Part VI.D.4.d(v)(4), where the 2012 Permit requires that the LACFCD document internet submissions regarding public reports of non-stormwater discharges and spills in addition to complaint calls. This is consistent with its proposal in Part B.3.f.i, in which it references maintaining the 888-CLEAN-LA hotline *internet site* (emphasis added). Compare Part VI.D.4.d(v)(4) of the 2012 Permit to Part B.3.f.iv of the LACFCD proposal (2015 AR, p. SB-AR-013381; 2012 AR, p. RB-AR13671).

request, the LACFCD is surely not entitled to subvention for the costs to implement the provisions they proposed.

1. Public Reporting of Non-Stormwater Discharges and Spills

Parts VI.D.4.d.v and VI.D.10.d of the 2012 Permit include requirements for Public Reporting of Non-Stormwater Discharges and Spills, including information requirements for signage adjacent to open channels, development of written procedures for receiving, documenting and tracking complaint calls, and for maintaining documentation about reported illicit discharges and spills and actions taken in response. These requirements are intended to ensure that reliable and consistent practices are deployed to address IC/ID.⁷⁵⁶

The requirements included in Part VI.D.4.d.v (applicable to LACFCD only) are identical to the provisions required for the other Permittees in Part VI.D.10.d.⁷⁵⁷ Claimants are challenging three specific provisions within the Public Reporting of Non-Stormwater Discharges and Spills. Each pair of requirements is addressed separately, below.

i. Information to include on signage adjacent to open channels (Parts VI.D.4.d.v.(2) and VI.D.10.d.iii)

Part VI.D.4.d.v.(2) requires the LACFCD to “include information regarding public reporting of illicit discharges or improper disposal on the signage adjacent to open channels as required in Part VI.D.9.h.vi.(4).”⁷⁵⁸

Part VI.D.10.d.iii requires each Permittee to “ensure that signage adjacent to open channels, as required in Part VI.D.9.h.vi.(4), include information regarding dumping prohibitions and public reporting of illicit discharges.”⁷⁵⁹

The Provisions are Not New Programs or Higher Levels of Service

Parts VI.D.4.d.v.(2) and VI.D.10.d.iii of the 2012 Permit are not new programs and do not require a higher level of service because Part 4.B.1(a) of the 2001 Permit required each Permittee to post signs with prohibitive language discouraging illegal dumping at designated public access points to creeks and channels no later than February 2, 2004. The signage needed to be legible and maintained as necessary during the term of the permit; therefore, these requirements are a continuation of previous requirements.⁷⁶⁰

The Provisions are Necessary to Implement Federal Law

The U.S. EPA Guidance Manual for Implementing Municipal Storm Water Management Programs states, “Applicants must develop and implement an effective program to prohibit illicit and/or

⁷⁵⁶ 2012 Permit, Attachment F (Fact Sheet), Part VI.C.9.d, p. F-85 (2015 AR, p. SB-AR-013657).

⁷⁵⁷ *Id.*, Attachment F (Fact Sheet), Part VI.C.10, p. F-86 (2015 AR, p. SB-AR-013658).

⁷⁵⁸ 2012 Permit, Part VI.D.4.d.v.(2), p. 88 (2015 AR, p. SB-AR-013381).

⁷⁵⁹ *Id.*, Part VI.D.10.d.iii, p. 142 (2015 AR, p. SB-AR-013436).

⁷⁶⁰ 2001 Permit, Part 4.B.1.(a), p. 32.

inappropriate discharges from entering MS4s.”⁷⁶¹ Requiring signage that includes information regarding dumping prohibitions and public reporting of illicit discharges facilitates the achievement of that objective by preventing illicit discharges from occurring and providing information on how the public can report illicit discharges and illegal dumping. Federal regulations at 40 C.F.R. section 122.26(d)(2)(iv)(B)(5), in part, requires a description of a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from MS4s, and 40 C.F.R. section 122.26(d)(2)(iv)(B)(6) requires, in part, “public information activities ... to facilitate the proper management and disposal of used oil and toxic materials.” The 2012 Permit provisions promote increased public awareness of what constitutes an illicit discharge by clearly stating dumping is an illicit discharge and provides the public with information on how to report illicit discharges. Raising public awareness increases the likelihood that the public will not illegally dispose of wastes into the MS4 and that the public will report incidents of dumping and other illicit discharges when they are observed.

In addition, U.S. EPA’s MS4 Permit Improvement Guide provides example MS4 permit language requiring a MS4 permittee to implement a program for Public Reporting of Non-Stormwater Discharges and Spills.⁷⁶² The example permit provision 3.6.1 states in part, “The permittee must promote, publicize, and facilitate public reporting of illicit discharges or water quality impacts associated with discharges into or from MS4s through a central contact point, including phone numbers for complaints and spill reporting, and publicize to both internal permittee staff and the public.”⁷⁶³ Including reporting information on signage posted adjacent to open channels facilitates reporting of illicit discharges by the public.

Other Mandates Exceptions Apply

Parts VI.D.4.c.vii.(4) and VI.D.9.h.vi.(4) require the Permittees to provide signage at catch basin inlets and open channels regarding illegal dumping, including “post[ing] signs, referencing local code(s) that prohibit littering and illegal dumping, at designated public access points to open channels...”⁷⁶⁴ The requirements of these two sections are essentially equivalent to Parts VI.D.4.d.v.(2) and VI.D.10.d.iii; therefore, any additional costs to comply with Parts VI.D.4.d.v.(2) and VI.D.10.d.iii are *de minimus* and not entitled to subvention.

ii. Develop and maintain written procedures that document complaint calls (Parts VI.D.4.d.v.(3) and VI.D.10.d.iv)

Part VI.D.4.d.v.(3) requires the LACFCD to “develop and maintain written procedures that document how complaint calls and internet submissions are received, documented, and tracked to ensure that all complaints are adequately addressed. The procedures shall be evaluated annually to determine whether changes or updates are needed to ensure that the procedures accurately document the methods employed by the LACFCD. Any identified changes shall be made to the procedures subsequent to the annual evaluation.”⁷⁶⁵

⁷⁶¹ U.S. EPA. *Guidance Manual for Implementing Municipal Storm Water Management Programs*. August 17, 1994. Chapter 4, p. 4-3 (2001 AR, p. R0014141).

⁷⁶² U.S. EPA. *MS4 Improvement Guide* (2010), Chapter 3.6 (2012 AR, p. RB-AR53488).

⁷⁶³ *Ibid.*

⁷⁶⁴ 2012 Permit, Parts VI.D.4.c.vii.(4) and VI.D.9.h.vi.(4), pp. 81 and 135 (2015 AR, p. SB-AR-013374, 428).

⁷⁶⁵ 2012 Permit, Part VI.D.4.v.(3), p. 88 (2015 AR, p. SB-AR-013381).

Part VI.D.10.d.iv requires each Permittee to “develop and maintain written procedures that document how complaint calls are received, documented, and tracked to ensure that all complaints are adequately addressed. The procedures shall be evaluated to determine whether changes or updates are needed to ensure that the procedures accurately document the methods employed by the Permittee. Any identified changes shall be made to the procedures subsequent to the evaluation.”⁷⁶⁶

The Provisions are Not New Programs or Higher Levels of Service

Parts VI.D.4.d.v.(3) and VI.D.10.d.iv of the 2012 Permit are not new programs and do not require a higher level of service because these requirements are consistent with the 2001 Permit. Part 4.G (Illicit Connections and Illicit Discharges Elimination Program) of the 2001 Permit required Permittees to eliminate all illicit connections and illicit discharges to the MS4. The Permittees were required to document, track and report all cases of IC/ID.⁷⁶⁷ Part 4.G.1.(a) of the 2001 Permit states that each Permittee must develop an “Implementation Program” that specifies how each Permittee is implementing revisions to the IC/ID program. The Implementation Program must be documented and available for review and approval by the Los Angeles Water Board Executive Officer, upon request.⁷⁶⁸ Therefore, the requirements in Parts VI.D.4.d.v.(3) and VI.D.10.d.iv of the 2012 Permit are not new, they just continue those contained in the 2001 Permit.

The Provisions are Necessary to Implement Federal Law

U.S. EPA’s MS4 Permit Improvement Guide provides a draft permit provision requiring a MS4 permittee to implement a program for Public Reporting of Non-Stormwater Discharges and Spills.⁷⁶⁹ U.S. EPA states:

An effective IDDE [Illicit Discharge Detection Elimination] program is more than just a program to respond to complaints about illicit discharges or spills. Permittees must proactively seek out illicit discharges, or activities that could result in discharges, such as illegal connections to the storm sewer system, improper disposal of wastes, or dumping of used motor oil or other chemicals.

In order to trace the origin of a suspected illicit discharge or connection, the permittee must have an updated map of the storm drain system and a formal plan of how to locate illicit discharges and how to respond to them once they are located or reported. The permittee must provide a mechanism for public reporting of illicit discharges and spills, as well as an effective way for staff to be alerted to such reports. Regular field screening of outfalls for non-stormwater discharges needs to occur in areas determined to have a higher likelihood for illicit discharges and illegal connections. Proper investigation and enforcement procedures must be in place to eliminate the sources of the discharges, as well. Finally, in order for the permittee to adequately detect and eliminate sources of illicit discharges, both field

⁷⁶⁶ *Id.*, Part VI.D.10.d.iv, p. 142 (2015 AR, p. SB-AR-013435).

⁷⁶⁷ 2001 Permit, Part 4.G, p. 59.

⁷⁶⁸ *Ibid.*

⁷⁶⁹ U.S. EPA. *MS4 Improvement Guide* (2010), Chapter 3.6 (2012 AR, p. RB-AR53488).

and office staff must be properly trained to recognize and report the discharges to the appropriate parties.⁷⁷⁰

Draft permit provision 3.6.2 states, “The permittee must develop a written spill/dumping response procedure, and a flow chart or phone tree, or similar list for internal use, that shows the procedures for responding to public notices of illicit discharges, the various responsible agencies and their contacts, and who would be involved in illicit discharge incidence response, even if it is a different entity other than the permittee.”⁷⁷¹

U.S. EPA’s MS4 permit for the Boise/Garden City Area requires the following to prevent and respond to spills to the MS4: “Throughout the Permit term, the Permittees must coordinate appropriate spill prevention, containment and response activities throughout all appropriate departments, programs and agencies to ensure maximum water quality protection at all times. The Permittees must respond to, contain and clean up all sewage and other spills that may discharge into the MS4 from any source (including private laterals and failing septic systems).”⁷⁷² To achieve the objective within this U.S. EPA-issued permit, appropriate documentation, tracking, and reporting of all discovered illicit discharges and illicit connections must occur. Parts VI.D.4.d.v.(3) and VI.D.10.d.iv of the 2012 Permit are consistent with the aforementioned U.S. EPA guidance and U.S. EPA-issued MS4 permits.

The above demonstrates these provisions are required to implement federal law.

iii. Maintain documentation of complaint calls (Parts VI.D.4.d.v.(4) and VI.D.10.d.v)

Part VI.D.4.d.v.(4) requires the LACFCD to “maintain documentation of the complaint calls and internet submissions and record the location of the reported spill or IC/ ID and the actions undertaken, including referrals to other agencies, in response to all IC/ID complaints.”⁷⁷³

Part VI.D.10.d.v requires each Permittee to “maintain documentation of the complaint calls and record the location of the reported spill or IC/ ID and the actions undertaken in response to all IC/ID complaints, including referrals to other agencies.”⁷⁷⁴

The Provisions are Not New Programs or Higher Levels of Service

Parts VI.D.4.d.v.(4) and VI.D.10.d.v of the 2012 Permit are not new programs and do not require a higher level of service because these requirements are consistent with those in the 2001 Permit. As stated above, Part 4.G of the 2001 Permit required Permittees to document, track and report all illicit connections and illicit discharges to the MS4.⁷⁷⁵ Therefore, Parts VI.D.4.d.v.(4) and

⁷⁷⁰ U.S. EPA. *MS4 Improvement Guide* (2010), Chapter 3 (2012 AR, p. RB-AR53478).

⁷⁷¹ *Id.*, Chapter 3.6 (2012 AR, pp. RB-AR53488 – 489).

⁷⁷² U.S. EPA, NPDES Permit No. IDS-027561, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to Ada County Highway District, Boise State University, City of Boise, and City of Garden City. Drainage District #3, and the Idaho Transportation Department District #3 (Dec. 12, 2012), Part II.B.5.(f), p. 29.

⁷⁷³ 2012 Permit, Part VI.D.4.d.v.(4), p. 88 (2015 AR, p. SB-AR-013381).

⁷⁷⁴ *Id.*, Part VI.D.10.d.v, p. 143 (2015 AR, p. SB-AR-013436).

⁷⁷⁵ 2001 Permit, Part 4.G, p. 59.

VI.D.10.d.v of the 2012 Permit are not new requirements. In addition, Part 4.G.1.(b) of the 2001 required all Permittees to map all illicit connections and illicit discharges to their MS4, with the objective of identifying and eliminating illicit connections and illicit discharges.⁷⁷⁶ Therefore, Parts VI.D.4.d.v.(4) and VI.D.10.d.v of the 2012 Permit that require Permittees to “record the location of the reported spill or IC/ID” are also not new requirements or a higher levels of service. These requirements simply continue the requirements of the 2001 Permit.

The Provisions are Necessary to Implement Federal Law

Federal law specifies that the “Administrator shall prescribe conditions for [NPDES] permits to assure compliance with the requirements of paragraph (1) of this subsection, including conditions on data and information collection, reporting, and such other requirements as he deems appropriate.”⁷⁷⁷ The requirement that Permittees maintain documentation of complaint calls and record the location and actions taken of the reported spill or IC/ID is a condition imposed for data and information collection. The Los Angeles Water Board has determined that this is necessary to ensure compliance with the regulatory requirements to detect and remove illicit discharges, in furtherance of the CWA’s requirement that MS4 permittees effectively prohibit non-stormwater discharges from the MS4.⁷⁷⁸

U.S. EPA’s MS4 permit for the Boise/Garden City Area requires the following for permittees to document complaints they receive: “The Permittees must maintain a record documenting all complaints or reports of illicit discharges and responses taken by the Permittees.”⁷⁷⁹ Parts VI.D.4.d.v.(4) and VI.D.10.d.v of the 2012 Permit are consistent with this permit provision.

The above demonstrates that these provisions are required to implement federal law.

2. Illicit Discharge and Spill Response Plan (Parts VI.D.4.d.vi.(1)(a), VI.D.4.d.vi.(1)(c), VI.D.4.d.vi.(1)(d), VI.D.10.e.i.(1), VI.D.10.e.(3), and VI.D.10.e.(4))

Part VI.D.4.d.vi includes requirements for the LACFCD to implement an Illicit Discharge and Spill Response Plan and Part VI.D.10.e.i includes requirements for the other Permittees to implement a Spill Response Plan. Permittees must develop a spill response plan that includes an investigation procedure similar to, or in conjunction with, the investigation procedures developed for illicit discharges. Often, a different entity may be responsible for spill response in a community (e.g., fire department), therefore, it is imperative that adequate communication exists between MS4 staff and spill response teams to ensure that spills are documented and investigated in a timely manner.⁷⁸⁰ The requirements included in Part VI.D.4.d.vi are the same as those required for the other Permittees in Part VI.D.10.e.⁷⁸¹ The LACFCD is challenging Part VI.D.4.d.vi Illicit

⁷⁷⁶ *Id.*, at p. 60.

⁷⁷⁷ CWA § 402(a)(2).

⁷⁷⁹ U.S. EPA, NPDES Permit No. IDS-027561, Authorization to Discharge Under the National Pollutant Discharge Elimination System, Municipal Separate Storm Sewer System Permit, issued to Ada County Highway District, Boise State University, City of Boise, and City of Garden City. Drainage District #3, and the Idaho Transportation Department District #3 (Dec. 12, 2012), Part II.B.5.(b)(iii), p. 27.

⁷⁸⁰ 2012 Permit, Attachment F (Fact Sheet), p. F-85 (2015 AR, p. SB-AR-013657).

⁷⁸¹ *Id.*, Attachment F (Fact Sheet), p. F-86 (2015 AR, p. SB-AR-013658).

Discharge and Spill Response Plan and the other Claimants are challenging Part VI.D.10.e Spill Response Plan.

Part VI.D.4.d.vi.(1) requires the LACFCD to “implement an ID and spill response plan for all spills that may discharge into its system. The ID and spill response plan shall clearly identify agencies responsible for ID and spill response and cleanup, contact information, and shall contain at a minimum the following requirements:

- (a) Coordination with spill response teams throughout all appropriate departments, programs and agencies so that maximum water quality protection is provided...
- (c) Response to ID [illicit discharges] and spills within 4 hours of becoming aware of the ID or spill, except where such IDs or spills occur on private property, in which case the response should be within 2 hours of gaining legal access to the property.
- (d) IDs or spills that may endanger health or the environment shall be reported to appropriate public health agencies and the Office of Emergency Services (OES).⁷⁸²

Part VI.D.10.e.i requires each Permittee to “implement a spill response plan for all sewage and other spills that may discharge into its MS4. The spill response plan shall clearly identify agencies responsible for spill response and cleanup, telephone numbers and e-mail address for contacts, and shall contain at a minimum the following requirements:

- (1) Coordination with spill response teams throughout all appropriate departments, programs and agencies so that maximum water quality protection is provided...
- (3) Response to spills for containment within 4 hours of becoming aware of the spill, except where such spills occur on private property, in which case the response should be within 2 hours of gaining legal access to the property.
- (4) Spills that may endanger health or the environment shall be reported to appropriate public health agencies and the Office of Emergency Services (OES).⁷⁸³

The Provisions are Not New Programs or Higher Levels of Service

The requirement for Permittees to implement a spill response plan is not a new requirement. Part 4.F.1.(a) of the 2001 Permit required each Permittee to implement a response plan for sanitary sewer overflows, which included investigation of any complaints received, immediate response to overflows for containment, and notification to appropriate sewer and public health agencies.⁷⁸⁴ The Permittees were required to investigate any complaints of illicit discharges they received, not limited to only sanitary sewer overflows. In addition, Part 4.G.1.(a) of the 2001 Permit required each Permittee to develop an implementation program specifying how it was implementing its

⁷⁸² *Id.*, Part VI.D.4.d.vi.(1), p. 88 (2015 AR, p. SB-AR-013381).

⁷⁸³ *Id.*, Part VI.D.10.e.i, p. 143 (2015 AR, p. SB-AR-013436).

⁷⁸⁴ 2001 Permit, Part 4.F.1.(a), p. 53.

IC/ID elimination program. Spills are a type of illicit discharge.⁷⁸⁵ Part 4.G.3.(a) of the 2001 Permit required Permittees to abate, contain and clean up all illicit discharges, including hazardous substances.⁷⁸⁶ Regarding the spill response plan, the 2012 Permit Fact Sheet explains that “[t]he permittee must develop a spill response plan that includes *an investigation procedure similar to or in conjunction with the investigation procedures developed for illicit discharges in general*” (emphasis added).⁷⁸⁷ The requirements in Parts VI.D.4.d.vi and VI.D.10.e of the 2012 Permit are substantially the same as the provisions in the 2001 Permit; the requirements in the 2012 Permit just provide additional detail.

The Provisions are Necessary to Implement Federal Law

Section 402(p)(3)(B)(ii) of the Clean Water Act requires MS4 permits “to effectively prohibit non-stormwater discharges into the storm sewers.” Therefore, MS4 permittees are required to effectively prohibit the discharge of non-stormwater by implementing a comprehensive, proactive IC/ID elimination program to detect and eliminate illicit discharges and connections.⁷⁸⁸

The U.S. EPA MS4 Permit Improvement Guide provides the following example permit provision: “The permittee must develop a written spill/dumping response procedure, and a flow chart or phone tree, or similar list for internal use, that shows the procedures for responding to public notices of illicit discharges, the various responsible agencies and their contacts, and who would be involved in illicit discharge incidence response, even if it is a different entity other than the permittee.”⁷⁸⁹ It provides the following rationale for the requirement: “The permittee must develop a spill response SOP that includes an investigation procedure similar to or in conjunction with the investigation SOP developed for illicit discharges in general (see Section 3.5). Often, a different entity might be responsible for spill response in a community (i.e. fire department), therefore, it is imperative that adequate communication exists between stormwater and spill response staff to ensure that spills are documented and investigated in a timely manner.”⁷⁹⁰

Therefore, the requirements in Parts VI.D.4.d.vi and VI.D.10.e of the 2012 Permit, including requirements for coordination and timely response, that require Permittees to implement a comprehensive spill response plan are necessary to meet CWA requirements, including 40 C.F.R. section 122.26(d)(2)(iv)(B)(4), which requires that Permittees have procedures to prevent, contain, and respond to spills that may discharge into the MS4.

The Provisions are Not Unique to Local Government

The requirement for a spill response plan is not unique to local government. This requirement is a key provision in other permits issued to non-local government entities to prevent illicit discharges

⁷⁸⁵ See 40 C.F.R. § 122.26(d)(2)(iv)(B), subpart (4); 2012 Permit, Attachment F (Fact Sheet), pp. F-83 to F-84 (2015 AR, pp. SB-AR-013656 - 657).

⁷⁸⁶ 2001 Permit, Part 4.G.3.(a), p. 61.

⁷⁸⁷ 2012 Permit, Attachment F (Fact Sheet), pp. F-85 to F-86 (2015 AR, pp. SB-AR-013657 - 658).

⁷⁸⁸ 40 C.F.R. § 122.26, subds. (d)(1)(v)(B) and (d)(2)(iv)(B).

⁷⁸⁹ U.S. EPA. *MS4 Improvement Guide* (2010), Chapter 3.6 (2012 AR, pp. RB-AR53488 – 489).

⁷⁹⁰ *Id.*, at p. 35 (2012 AR, p. RB-AR53489).

of pollutants to waterbodies. For example, Caltrans is required to implement surveillance activities, including developing an "IC/ID and Illegal Dumping Response Plan."⁷⁹¹

Further, regarding reporting of illicit discharges or spills to appropriate public health agencies and the Office of Emergency Services (Parts VI.D.4.d.vi.(d) and VI.D.10.e.(i)(4)), this requirement is consistent with Water Code sections 13271 and 13272, which apply to the public at large.⁷⁹²

The above demonstrates that Claimants are not being treated differently than non-local government entities.

For all these reasons, and for the additional reasons discussed in Section IV above, the Commission should find that Parts VI.D.4.d.v.(2), VI.D.4.d.v.(3), VI.D.4.d.v.(4), VI.D.4.d.vi.(1)(a), VI.D.4.d.vi.(1)(c), VI.D.4.d.vi.(1)(d), VI.D.10.d.iii, VI.D.10.d.iv, VI.D.10.d.v, VI.D.10.e.i.(1), VI.D.10.e.i.(3), and VI.D.10.e.i.(4) of the 2012 Permit are not state mandates subject to subvention.

VI. CONCLUSION

The above response establishes that the challenged provisions are not state mandates because they do not impose new programs or higher levels of service on Claimants. For any challenged provision that the Commission nonetheless finds to be mandated by the state, the Commission should find that the provisions are instead mandated by federal law and/or that other exceptions apply, precluding a finding that subvention is required for any of the provisions challenged in the Test Claims.

The focus of consideration of the federal mandate exception in *Department of Finance* was the application of the MEP standard to two requirements in Order No. 01-182, where the Los Angeles Water Board had not explicitly found that the provisions met that standard.⁷⁹³ In reaching the conclusion that those two provisions did *not* meet MEP, the Court suggested that the result might have been different if the agency *had* found that permit conditions were necessary to satisfy the MEP standard, and specifically noted that deference to the agency would be appropriate.⁷⁹⁴ Here, the Los Angeles Water Board *did* find that the permit conditions of the MS4 Permit were necessary to satisfy the CWA standards and that the permit was based entirely on federal law. Those findings are entitled to deference.

Even if the Commission does not defer to the Los Angeles Water Board's findings, analogous provisions in U.S. EPA-issued permits or U.S. EPA permit guidance and model permit language independently demonstrate that the 2012 Permit's provisions were federally mandated.⁷⁹⁵ In addition, the 2012 Permit's provisions implement other independent federal standards, discussed above, that the Supreme Court did not evaluate. Furthermore, the Supreme Court's decision did not address a number of the other exceptions to mandates law present here, such as the absence

⁷⁹⁴ *Ibid.*

⁷⁹⁵ *Id.*, at p. 772.

of a new program or higher level of service, the absence of requirements "unique" to local governments, the existence of fee authority, the opportunity for Permittees to propose and substitute other BMPs and control measures for many of the requirements in the 2012 Permit through voluntary participation in a WMP or EWMP, and situations where costs are *de minimis*.

For these reasons, the Commission should find that the 2012 Permit provisions do not impose state mandates requiring subvention and the Commission should deny the Test Claims in their entirety.

I certify and declare under penalty of perjury under the laws of the State of California that the foregoing facts are true and correct to the best of my personal knowledge, information, or belief. I further declare that all documents attached are true and correct copies of such documents as they exist in the Los Angeles Water Board's files, or were obtained from publicly available sources.

Title 33. Navigation and Navigable Waters (Refs & Annos)
Chapter 26. Water Pollution Prevention and Control (Refs & Annos)
Subchapter I. Research and Related Programs (Refs & Annos)

33 U.S.C.A. § 1251

§ 1251. Congressional declaration of goals and policy

Currentness

(a) Restoration and maintenance of chemical, physical and biological integrity of Nation's waters; national goals for achievement of objective

The objective of this chapter is to restore and maintain the chemical, physical, and biological integrity of the Nation's waters. In order to achieve this objective it is hereby declared that, consistent with the provisions of this chapter--

- (1) it is the national goal that the discharge of pollutants into the navigable waters be eliminated by 1985;
- (2) it is the national goal that wherever attainable, an interim goal of water quality which provides for the protection and propagation of fish, shellfish, and wildlife and provides for recreation in and on the water be achieved by July 1, 1983;
- (3) it is the national policy that the discharge of toxic pollutants in toxic amounts be prohibited;
- (4) it is the national policy that Federal financial assistance be provided to construct publicly owned waste treatment works;
- (5) it is the national policy that areawide waste treatment management planning processes be developed and implemented to assure adequate control of sources of pollutants in each State;
- (6) it is the national policy that a major research and demonstration effort be made to develop technology necessary to eliminate the discharge of pollutants into the navigable waters, waters of the contiguous zone, and the oceans; and
- (7) it is the national policy that programs for the control of nonpoint sources of pollution be developed and implemented in an expeditious manner so as to enable the goals of this chapter to be met through the control of both point and nonpoint sources of pollution.

(b) Congressional recognition, preservation, and protection of primary responsibilities and rights of States

It is the policy of the Congress to recognize, preserve, and protect the primary responsibilities and rights of States to prevent, reduce, and eliminate pollution, to plan the development and use (including restoration, preservation, and enhancement) of land and water resources, and to consult with the Administrator in the exercise of his authority under this chapter. It is the policy of Congress that the States manage the construction grant program under this chapter and implement the permit programs under [sections 1342](#) and [1344](#) of this title. It is further the policy of the Congress to support and aid research relating to the prevention, reduction, and elimination of pollution and to provide Federal technical services and financial aid to State and interstate agencies and municipalities in connection with the prevention, reduction, and elimination of pollution.

(c) Congressional policy toward Presidential activities with foreign countries

It is further the policy of Congress that the President, acting through the Secretary of State and such national and international organizations as he determines appropriate, shall take such action as may be necessary to insure that to the fullest extent possible all foreign countries shall take meaningful action for the prevention, reduction, and elimination of pollution in their waters and in international waters and for the achievement of goals regarding the elimination of discharge of pollutants and the improvement of water quality to at least the same extent as the United States does under its laws.

(d) Administrator of Environmental Protection Agency to administer chapter

Except as otherwise expressly provided in this chapter, the Administrator of the Environmental Protection Agency (hereinafter in this chapter called “Administrator”) shall administer this chapter.

(e) Public participation in development, revision, and enforcement of any regulation, etc.

Public participation in the development, revision, and enforcement of any regulation, standard, effluent limitation, plan, or program established by the Administrator or any State under this chapter shall be provided for, encouraged, and assisted by the Administrator and the States. The Administrator, in cooperation with the States, shall develop and publish regulations specifying minimum guidelines for public participation in such processes.

(f) Procedures utilized for implementing chapter

It is the national policy that to the maximum extent possible the procedures utilized for implementing this chapter shall encourage the drastic minimization of paperwork and interagency decision procedures, and the best use of available manpower and funds, so as to prevent needless duplication and unnecessary delays at all levels of government.

(g) Authority of States over water

It is the policy of Congress that the authority of each State to allocate quantities of water within its jurisdiction shall not be superseded, abrogated or otherwise impaired by this chapter. It is the further policy of Congress that nothing in this chapter shall be construed to supersede or abrogate rights to quantities of water which have been established by any State. Federal agencies shall co-operate with State and local agencies to develop comprehensive solutions to prevent, reduce and eliminate pollution in concert with programs for managing water resources.

Subchapter III. Standards and Enforcement (Refs & Annos)

33 U.S.C.A. § 1311

§ 1311. Effluent limitations

Currentness

(a) Illegality of pollutant discharges except in compliance with law

Except as in compliance with this section and [sections 1312](#), [1316](#), [1317](#), [1328](#), [1342](#), and [1344](#) of this title, the discharge of any pollutant by any person shall be unlawful.

(b) Timetable for achievement of objectives

In order to carry out the objective of this chapter there shall be achieved--

(1)(A) not later than July 1, 1977, effluent limitations for point sources, other than publicly owned treatment works, (i) which shall require the application of the best practicable control technology currently available as defined by the Administrator pursuant to [section 1314\(b\)](#) of this title, or (ii) in the case of a discharge into a publicly owned treatment works which meets the requirements of subparagraph (B) of this paragraph, which shall require compliance with any applicable pretreatment requirements and any requirements under [section 1317](#) of this title; and

(B) for publicly owned treatment works in existence on July 1, 1977, or approved pursuant to [section 1283](#) of this title prior to June 30, 1974 (for which construction must be completed within four years of approval), effluent limitations based upon secondary treatment as defined by the Administrator pursuant to [section 1314\(d\)\(1\)](#) of this title; or,

(C) not later than July 1, 1977, any more stringent limitation, including those necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by [section 1370](#) of this title) or any other Federal law or regulation, or required to implement any applicable water quality standard established pursuant to this chapter.

(2)(A) for pollutants identified in subparagraphs (C), (D), and (F) of this paragraph, effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which (i) shall require application of the best available technology economically achievable for such category or class, which will result in reasonable further progress toward the national goal of eliminating the discharge of all pollutants, as determined in accordance with regulations issued by the Administrator pursuant to [section 1314\(b\)\(2\)](#) of this title, which such effluent limitations shall require the elimination of discharges of all pollutants if the Administrator finds, on the basis of information available to him (including information developed pursuant to [section 1325](#) of this title), that such elimination is technologically

and economically achievable for a category or class of point sources as determined in accordance with regulations issued by the Administrator pursuant to [section 1314\(b\)\(2\)](#) of this title, or (ii) in the case of the introduction of a pollutant into a publicly owned treatment works which meets the requirements of subparagraph (B) of this paragraph, shall require compliance with any applicable pretreatment requirements and any other requirement under [section 1317](#) of this title;

(B) Repealed. [Pub.L. 97-117, § 21\(b\)](#), Dec. 29, 1981, 95 Stat. 1632.

(C) with respect to all toxic pollutants referred to in table 1 of Committee Print Numbered 95-30 of the Committee on Public Works and Transportation of the House of Representatives compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under [section 1314\(b\)](#) of this title, and in no case later than March 31, 1989;

(D) for all toxic pollutants listed under [paragraph \(1\) of subsection \(a\) of section 1317](#) of this title which are not referred to in subparagraph (C) of this paragraph compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable, but in no case later than three years after the date such limitations are promulgated under [section 1314\(b\)](#) of this title, and in no case later than March 31, 1989;

(E) as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under [section 1314\(b\)](#) of this title, and in no case later than March 31, 1989, compliance with effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which in the case of pollutants identified pursuant to [section 1314\(a\)\(4\)](#) of this title shall require application of the best conventional pollutant control technology as determined in accordance with regulations issued by the Administrator pursuant to [section 1314\(b\)\(4\)](#) of this title; and

(F) for all pollutants (other than those subject to subparagraphs (C), (D), or (E) of this paragraph) compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable but in no case later than 3 years after the date such limitations are established, and in no case later than March 31, 1989.

(3)(A) for effluent limitations under paragraph (1)(A)(i) of this subsection promulgated after January 1, 1982, and requiring a level of control substantially greater or based on fundamentally different control technology than under permits for an industrial category issued before such date, compliance as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under [section 1314\(b\)](#) of this title, and in no case later than March 31, 1989; and

(B) for any effluent limitation in accordance with paragraph (1)(A)(i), (2)(A)(i), or (2)(E) of this subsection established only on the basis of [section 1342\(a\)\(1\)](#) of this title in a permit issued after February 4, 1987, compliance as expeditiously as practicable but in no case later than three years after the date such limitations are established, and in no case later than March 31, 1989.

(c) Modification of timetable

The Administrator may modify the requirements of subsection (b)(2)(A) of this section with respect to any point source for which a permit application is filed after July 1, 1977, upon a showing by the owner or operator of such point source satisfactory to the Administrator that such modified requirements (1) will represent the maximum use of technology within the economic capability of the owner or operator; and (2) will result in reasonable further progress toward the elimination of the discharge of pollutants.

(d) Review and revision of effluent limitations

Any effluent limitation required by paragraph (2) of subsection (b) of this section shall be reviewed at least every five years and, if appropriate, revised pursuant to the procedure established under such paragraph.

(e) All point discharge source application of effluent limitations

Effluent limitations established pursuant to this section or [section 1312](#) of this title shall be applied to all point sources of discharge of pollutants in accordance with the provisions of this chapter.

(f) Illegality of discharge of radiological, chemical, or biological warfare agents, high-level radioactive waste, or medical waste

Notwithstanding any other provisions of this chapter it shall be unlawful to discharge any radiological, chemical, or biological warfare agent, any high-level radioactive waste, or any medical waste, into the navigable waters.

(g) Modifications for certain nonconventional pollutants

(1) General authority

The Administrator, with the concurrence of the State, may modify the requirements of subsection (b)(2)(A) of this section with respect to the discharge from any point source of ammonia, chlorine, color, iron, and total phenols (4AAP) (when determined by the Administrator to be a pollutant covered by subsection (b)(2)(F)) and any other pollutant which the Administrator lists under paragraph (4) of this subsection.

(2) Requirements for granting modifications

A modification under this subsection shall be granted only upon a showing by the owner or operator of a point source satisfactory to the Administrator that--

(A) such modified requirements will result at a minimum in compliance with the requirements of subsection (b)(1)(A) or (C) of this section, whichever is applicable;

(B) such modified requirements will not result in any additional requirements on any other point or nonpoint source; and

(C) such modification will not interfere with the attainment or maintenance of that water quality which shall assure protection of public water supplies, and the protection and propagation of a balanced population of shellfish, fish, and wildlife, and allow recreational activities, in and on the water and such modification will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity or teratogenicity), or synergistic propensities.

(3) Limitation on authority to apply for subsection (c) modification

If an owner or operator of a point source applies for a modification under this subsection with respect to the discharge of any pollutant, such owner or operator shall be eligible to apply for modification under subsection (c) of this section with respect to such pollutant only during the same time period as he is eligible to apply for a modification under this subsection.

(4) Procedures for listing additional pollutants

(A) General authority

Upon petition of any person, the Administrator may add any pollutant to the list of pollutants for which modification under this section is authorized (except for pollutants identified pursuant to [section 1314\(a\)\(4\)](#) of this title, toxic pollutants subject to [section 1317\(a\)](#) of this title, and the thermal component of discharges) in accordance with the provisions of this paragraph.

(B) Requirements for listing

(i) Sufficient information

The person petitioning for listing of an additional pollutant under this subsection shall submit to the Administrator sufficient information to make the determinations required by this subparagraph.

(ii) Toxic criteria determination

The Administrator shall determine whether or not the pollutant meets the criteria for listing as a toxic pollutant under [section 1317\(a\)](#) of this title.

(iii) Listing as toxic pollutant

If the Administrator determines that the pollutant meets the criteria for listing as a toxic pollutant under [section 1317\(a\)](#) of this title, the Administrator shall list the pollutant as a toxic pollutant under [section 1317\(a\)](#) of this title.

(iv) Nonconventional criteria determination

If the Administrator determines that the pollutant does not meet the criteria for listing as a toxic pollutant under such section and determines that adequate test methods and sufficient data are available to make the determinations required by paragraph (2) of this subsection with respect to the pollutant, the Administrator shall add the pollutant to the list of pollutants specified in paragraph (1) of this subsection for which modifications are authorized under this subsection.

(C) Requirements for filing of petitions

A petition for listing of a pollutant under this paragraph--

(i) must be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under [section 1314](#) of this title;

(ii) may be filed before promulgation of such guideline; and

(iii) may be filed with an application for a modification under paragraph (1) with respect to the discharge of such pollutant.

(D) Deadline for approval of petition

A decision to add a pollutant to the list of pollutants for which modifications under this subsection are authorized must be made within 270 days after the date of promulgation of an applicable effluent guideline under [section 1314](#) of this title.

(E) Burden of proof

The burden of proof for making the determinations under subparagraph (B) shall be on the petitioner.

(5) Removal of pollutants

The Administrator may remove any pollutant from the list of pollutants for which modifications are authorized under this subsection if the Administrator determines that adequate test methods and sufficient data are no longer available for determining whether or not modifications may be granted with respect to such pollutant under paragraph (2) of this subsection.

(h) Modification of secondary treatment requirements

The Administrator, with the concurrence of the State, may issue a permit under [section 1342](#) of this title which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant from a publicly owned treatment works into marine waters, if the applicant demonstrates to the satisfaction of the Administrator that--

(1) there is an applicable water quality standard specific to the pollutant for which the modification is requested, which has been identified under [section 1314\(a\)\(6\)](#) of this title;

- (2) the discharge of pollutants in accordance with such modified requirements will not interfere, alone or in combination with pollutants from other sources, with the attainment or maintenance of that water quality which assures protection of public water supplies and the protection and propagation of a balanced, indigenous population of shellfish, fish, and wildlife, and allows recreational activities, in and on the water;
- (3) the applicant has established a system for monitoring the impact of such discharge on a representative sample of aquatic biota, to the extent practicable, and the scope of such monitoring is limited to include only those scientific investigations which are necessary to study the effects of the proposed discharge;
- (4) such modified requirements will not result in any additional requirements on any other point or nonpoint source;
- (5) all applicable pretreatment requirements for sources introducing waste into such treatment works will be enforced;
- (6) in the case of any treatment works serving a population of 50,000 or more, with respect to any toxic pollutant introduced into such works by an industrial discharger for which pollutant there is no applicable pretreatment requirement in effect, sources introducing waste into such works are in compliance with all applicable pretreatment requirements, the applicant will enforce such requirements, and the applicant has in effect a pretreatment program which, in combination with the treatment of discharges from such works, removes the same amount of such pollutant as would be removed if such works were to apply secondary treatment to discharges and if such works had no pretreatment program with respect to such pollutant;
- (7) to the extent practicable, the applicant has established a schedule of activities designed to eliminate the entrance of toxic pollutants from nonindustrial sources into such treatment works;
- (8) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;
- (9) the applicant at the time such modification becomes effective will be discharging effluent which has received at least primary or equivalent treatment and which meets the criteria established under [section 1314\(a\)\(1\)](#) of this title after initial mixing in the waters surrounding or adjacent to the point at which such effluent is discharged.

For the purposes of this subsection the phrase “the discharge of any pollutant into marine waters” refers to a discharge into deep waters of the territorial sea or the waters of the contiguous zone, or into saline estuarine waters where there is strong tidal movement and other hydrological and geological characteristics which the Administrator determines necessary to allow compliance with paragraph (2) of this subsection, and [section 1251\(a\)\(2\)](#) of this title. For the purposes of paragraph (9), “primary or equivalent treatment” means treatment by screening, sedimentation, and skimming adequate to remove at least 30 percent of the biological oxygen demanding material and of the suspended solids in the treatment works influent, and disinfection, where appropriate. A municipality which applies secondary treatment shall be eligible to receive a permit pursuant to this subsection which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant from any treatment works owned by such municipality into marine waters. No permit issued under this subsection shall authorize the discharge of sewage sludge into marine waters. In order for a permit to be issued under this subsection for the discharge of a pollutant into marine waters, such

marine waters must exhibit characteristics assuring that water providing dilution does not contain significant amounts of previously discharged effluent from such treatment works. No permit issued under this subsection shall authorize the discharge of any pollutant into saline estuarine waters which at the time of application do not support a balanced indigenous population of shellfish, fish and wildlife, or allow recreation in and on the waters or which exhibit ambient water quality below applicable water quality standards adopted for the protection of public water supplies, shellfish, fish and wildlife or recreational activities or such other standards necessary to assure support and protection of such uses. The prohibition contained in the preceding sentence shall apply without regard to the presence or absence of a causal relationship between such characteristics and the applicant's current or proposed discharge. Notwithstanding any other provisions of this subsection, no permit may be issued under this subsection for discharge of a pollutant into the New York Bight Apex consisting of the ocean waters of the Atlantic Ocean westward of 73 degrees 30 minutes west longitude and northward of 40 degrees 10 minutes north latitude.

(i) Municipal time extensions

(1) Where construction is required in order for a planned or existing publicly owned treatment works to achieve limitations under subsection (b)(1)(B) or (b)(1)(C) of this section, but **(A)** construction cannot be completed within the time required in such subsection, or **(B)** the United States has failed to make financial assistance under this chapter available in time to achieve such limitations by the time specified in such subsection, the owner or operator of such treatment works may request the Administrator (or if appropriate the State) to issue a permit pursuant to [section 1342](#) of this title or to modify a permit issued pursuant to that section to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after February 4, 1987. The Administrator (or if appropriate the State) may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the publicly owned treatment works based on the earliest date by which such financial assistance will be available from the United States and construction can be completed, but in no event later than July 1, 1988, and shall contain such other terms and conditions, including those necessary to carry out [subsections \(b\) through \(g\) of section 1281](#) of this title, [section 1317](#) of this title, and such interim effluent limitations applicable to that treatment works as the Administrator determines are necessary to carry out the provisions of this chapter.

(2)(A) Where a point source (other than a publicly owned treatment works) will not achieve the requirements of subsections (b)(1)(A) and (b)(1)(C) of this section and--

(i) if a permit issued prior to July 1, 1977, to such point source is based upon a discharge into a publicly owned treatment works; or

(ii) if such point source (other than a publicly owned treatment works) had before July 1, 1977, a contract (enforceable against such point source) to discharge into a publicly owned treatment works; or

(iii) if either an application made before July 1, 1977, for a construction grant under this chapter for a publicly owned treatment works, or engineering or architectural plans or working drawings made before July 1, 1977, for a publicly owned treatment works, show that such point source was to discharge into such publicly owned treatment works,

and such publicly owned treatment works is presently unable to accept such discharge without construction, and in the case of a discharge to an existing publicly owned treatment works, such treatment works has an extension pursuant to paragraph (1) of this subsection, the owner or operator of such point source may request the Administrator (or if appropriate the State) to issue or modify such a permit pursuant to such [section 1342](#) of this title to extend such time

for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after December 27, 1977, or the filing of a request by the appropriate publicly owned treatment works under paragraph (1) of this subsection, whichever is later. If the Administrator (or if appropriate the State) finds that the owner or operator of such point source has acted in good faith, he may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the point source to achieve the requirements of subsections (b)(1)(A) and (C) of this section and shall contain such other terms and conditions, including pretreatment and interim effluent limitations and water conservation requirements applicable to that point source, as the Administrator determines are necessary to carry out the provisions of this chapter.

(B) No time modification granted by the Administrator (or if appropriate the State) pursuant to paragraph (2)(A) of this subsection shall extend beyond the earliest date practicable for compliance or beyond the date of any extension granted to the appropriate publicly owned treatment works pursuant to paragraph (1) of this subsection, but in no event shall it extend beyond July 1, 1988; and no such time modification shall be granted unless (i) the publicly owned treatment works will be in operation and available to the point source before July 1, 1988, and will meet the requirements of subsections (b)(1)(B) and (C) of this section after receiving the discharge from that point source; and (ii) the point source and the publicly owned treatment works have entered into an enforceable contract requiring the point source to discharge into the publicly owned treatment works, the owner or operator of such point source to pay the costs required under [section 1284](#) of this title, and the publicly owned treatment works to accept the discharge from the point source; and (iii) the permit for such point source requires that point source to meet all requirements under [section 1317\(a\)](#) and (b) of this title during the period of such time modification.

(j) Modification procedures

(1) Any application filed under this section for a modification of the provisions of--

(A) subsection (b)(1)(B) under subsection (h) of this section shall be filed not later than ¹ the 365th day which begins after December 29, 1981, except that a publicly owned treatment works which prior to December 31, 1982, had a contractual arrangement to use a portion of the capacity of an ocean outfall operated by another publicly owned treatment works which has applied for or received modification under subsection (h), may apply for a modification of subsection (h) in its own right not later than 30 days after February 4, 1987, and except as provided in paragraph (5);

(B) subsection (b)(2)(A) as it applies to pollutants identified in subsection (b)(2)(F) shall be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under [section 1314](#) of this title or not later than 270 days after December 27, 1977, whichever is later.

(2) Subject to paragraph (3) of this section, any application for a modification filed under subsection (g) of this section shall not operate to stay any requirement under this chapter, unless in the judgment of the Administrator such a stay or the modification sought will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity, or teratogenicity), or synergistic propensities, and that there is a substantial likelihood that the applicant will succeed on the merits of such application. In the case of an application filed under subsection (g) of this section, the Administrator may condition any stay granted under this paragraph on requiring the filing of a bond or other appropriate security to assure timely compliance with the requirements from which a modification is sought.

(3) Compliance requirements under subsection (g)

(A) Effect of filing

An application for a modification under subsection (g) and a petition for listing of a pollutant as a pollutant for which modifications are authorized under such subsection shall not stay the requirement that the person seeking such modification or listing comply with effluent limitations under this chapter for all pollutants not the subject of such application or petition.

(B) Effect of disapproval

Disapproval of an application for a modification under subsection (g) shall not stay the requirement that the person seeking such modification comply with all applicable effluent limitations under this chapter.

(4) Deadline for subsection (g) decision

An application for a modification with respect to a pollutant filed under subsection (g) must be approved or disapproved not later than 365 days after the date of such filing; except that in any case in which a petition for listing such pollutant as a pollutant for which modifications are authorized under such subsection is approved, such application must be approved or disapproved not later than 365 days after the date of approval of such petition.

(5) Extension of application deadline

(A) In general

In the 180-day period beginning on October 31, 1994, the city of San Diego, California, may apply for a modification pursuant to subsection (h) of the requirements of subsection (b)(1)(B) with respect to biological oxygen demand and total suspended solids in the effluent discharged into marine waters.

(B) Application

An application under this paragraph shall include a commitment by the applicant to implement a waste water reclamation program that, at a minimum, will--

- (i) achieve a system capacity of 45,000,000 gallons of reclaimed waste water per day by January 1, 2010; and
- (ii) result in a reduction in the quantity of suspended solids discharged by the applicant into the marine environment during the period of the modification.

(C) Additional conditions

The Administrator may not grant a modification pursuant to an application submitted under this paragraph unless the Administrator determines that such modification will result in removal of not less than 58 percent of the biological oxygen demand (on an annual average) and not less than 80 percent of total suspended solids (on a monthly average) in the discharge to which the application applies.

(D) Preliminary decision deadline

The Administrator shall announce a preliminary decision on an application submitted under this paragraph not later than 1 year after the date the application is submitted.

(k) Innovative technology

In the case of any facility subject to a permit under [section 1342](#) of this title which proposes to comply with the requirements of subsection (b)(2)(A) or (b)(2)(E) of this section by replacing existing production capacity with an innovative production process which will result in an effluent reduction significantly greater than that required by the limitation otherwise applicable to such facility and moves toward the national goal of eliminating the discharge of all pollutants, or with the installation of an innovative control technique that has a substantial likelihood for enabling the facility to comply with the applicable effluent limitation by achieving a significantly greater effluent reduction than that required by the applicable effluent limitation and moves toward the national goal of eliminating the discharge of all pollutants, or by achieving the required reduction with an innovative system that has the potential for significantly lower costs than the systems which have been determined by the Administrator to be economically achievable, the Administrator (or the State with an approved program under [section 1342](#) of this title, in consultation with the Administrator) may establish a date for compliance under subsection (b)(2)(A) or (b)(2)(E) of this section no later than two years after the date for compliance with such effluent limitation which would otherwise be applicable under such subsection, if it is also determined that such innovative system has the potential for industrywide application.

(l) Toxic pollutants

Other than as provided in subsection (n) of this section, the Administrator may not modify any requirement of this section as it applies to any specific pollutant which is on the toxic pollutant list under [section 1317\(a\)\(1\)](#) of this title.

(m) Modification of effluent limitation requirements for point sources

(1) The Administrator, with the concurrence of the State, may issue a permit under [section 1342](#) of this title which modifies the requirements of subsections (b)(1)(A) and (b)(2)(E) of this section, and of [section 1343](#) of this title, with respect to effluent limitations to the extent such limitations relate to biochemical oxygen demand and pH from discharges by an industrial discharger in such State into deep waters of the territorial seas, if the applicant demonstrates and the Administrator finds that--

(A) the facility for which modification is sought is covered at the time of the enactment of this subsection by National Pollutant Discharge Elimination System permit number CA0005894 or CA0005282;

(B) the energy and environmental costs of meeting such requirements of subsections (b)(1)(A) and (b)(2)(E) and [section 1343](#) of this title exceed by an unreasonable amount the benefits to be obtained, including the objectives of this chapter;

- (C) the applicant has established a system for monitoring the impact of such discharges on a representative sample of aquatic biota;
- (D) such modified requirements will not result in any additional requirements on any other point or nonpoint source;
- (E) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;
- (F) the discharge is into waters where there is strong tidal movement and other hydrological and geological characteristics which are necessary to allow compliance with this subsection and [section 1251\(a\)\(2\)](#) of this title;
- (G) the applicant accepts as a condition to the permit a contractual² obligation to use funds in the amount required (but not less than \$250,000 per year for ten years) for research and development of water pollution control technology, including but not limited to closed cycle technology;
- (H) the facts and circumstances present a unique situation which, if relief is granted, will not establish a precedent or the relaxation of the requirements of this chapter applicable to similarly situated discharges; and
- (I) no owner or operator of a facility comparable to that of the applicant situated in the United States has demonstrated that it would be put at a competitive disadvantage to the applicant (or the parent company or any subsidiary thereof) as a result of the issuance of a permit under this subsection.
- (2) The effluent limitations established under a permit issued under paragraph (1) shall be sufficient to implement the applicable State water quality standards, to assure the protection of public water supplies and protection and propagation of a balanced, indigenous population of shellfish, fish, fauna, wildlife, and other aquatic organisms, and to allow recreational activities in and on the water. In setting such limitations, the Administrator shall take into account any seasonal variations and the need for an adequate margin of safety, considering the lack of essential knowledge concerning the relationship between effluent limitations and water quality and the lack of essential knowledge of the effects of discharges on beneficial uses of the receiving waters.
- (3) A permit under this subsection may be issued for a period not to exceed five years, and such a permit may be renewed for one additional period not to exceed five years upon a demonstration by the applicant and a finding by the Administrator at the time of application for any such renewal that the provisions of this subsection are met.
- (4) The Administrator may terminate a permit issued under this subsection if the Administrator determines that there has been a decline in ambient water quality of the receiving waters during the period of the permit even if a direct cause and effect relationship cannot be shown: *Provided*, That if the effluent from a source with a permit issued under this subsection is contributing to a decline in ambient water quality of the receiving waters, the Administrator shall terminate such permit.

(n) Fundamentally different factors

(1) General rule

The Administrator, with the concurrence of the State, may establish an alternative requirement under subsection (b) (2) or [section 1317\(b\)](#) of this title for a facility that modifies the requirements of national effluent limitation guidelines or categorical pretreatment standards that would otherwise be applicable to such facility, if the owner or operator of such facility demonstrates to the satisfaction of the Administrator that--

(A) the facility is fundamentally different with respect to the factors (other than cost) specified in [section 1314\(b\)](#) or [1314\(g\)](#) of this title and considered by the Administrator in establishing such national effluent limitation guidelines or categorical pretreatment standards;

(B) the application--

(i) is based solely on information and supporting data submitted to the Administrator during the rulemaking for establishment of the applicable national effluent limitation guidelines or categorical pretreatment standard specifically raising the factors that are fundamentally different for such facility; or

(ii) is based on information and supporting data referred to in clause (i) and information and supporting data the applicant did not have a reasonable opportunity to submit during such rulemaking;

(C) the alternative requirement is no less stringent than justified by the fundamental difference; and

(D) the alternative requirement will not result in a non-water quality environmental impact which is markedly more adverse than the impact considered by the Administrator in establishing such national effluent limitation guideline or categorical pretreatment standard.

(2) Time limit for applications

An application for an alternative requirement which modifies the requirements of an effluent limitation or pretreatment standard under this subsection must be submitted to the Administrator within 180 days after the date on which such limitation or standard is established or revised, as the case may be.

(3) Time limit for decision

The Administrator shall approve or deny by final agency action an application submitted under this subsection within 180 days after the date such application is filed with the Administrator.

(4) Submission of information

The Administrator may allow an applicant under this subsection to submit information and supporting data until the earlier of the date the application is approved or denied or the last day that the Administrator has to approve or deny such application.

(5) Treatment of pending applications

For the purposes of this subsection, an application for an alternative requirement based on fundamentally different factors which is pending on February 4, 1987, shall be treated as having been submitted to the Administrator on the 180th day following February 4, 1987. The applicant may amend the application to take into account the provisions of this subsection.

(6) Effect of submission of application

An application for an alternative requirement under this subsection shall not stay the applicant's obligation to comply with the effluent limitation guideline or categorical pretreatment standard which is the subject of the application.

(7) Effect of denial

If an application for an alternative requirement which modifies the requirements of an effluent limitation or pretreatment standard under this subsection is denied by the Administrator, the applicant must comply with such limitation or standard as established or revised, as the case may be.

(8) Reports

By January 1, 1997, and January 1 of every odd-numbered year thereafter, the Administrator shall submit to the Committee on Environment and Public Works of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives a report on the status of applications for alternative requirements which modify the requirements of effluent limitations under section 1311 or [1314](#) of this title or any national categorical pretreatment standard under [section 1317\(b\)](#) of this title filed before, on, or after February 4, 1987.

(o) Application fees

The Administrator shall prescribe and collect from each applicant fees reflecting the reasonable administrative costs incurred in reviewing and processing applications for modifications submitted to the Administrator pursuant to subsections (c), (g), (i), (k), (m), and (n) of this section, [section 1314\(d\)\(4\)](#) of this title, and [section 1326\(a\)](#) of this title. All amounts collected by the Administrator under this subsection shall be deposited into a special fund of the Treasury entitled "Water Permits and Related Services" which shall thereafter be available for appropriation to carry out activities of the Environmental Protection Agency for which such fees were collected.

(p) Modified permit for coal remining operations

(1) In general

Subject to paragraphs (2) through (4) of this subsection, the Administrator, or the State in any case which the State has an approved permit program under [section 1342\(b\)](#) of this title, may issue a permit under [section 1342](#) of this title which modifies the requirements of subsection (b)(2)(A) of this section with respect to the pH level of any pre-existing discharge, and with respect to pre-existing discharges of iron and manganese from the remined area of any coal remining operation or with respect to the pH level or level of iron or manganese in any pre-existing discharge affected by the remining operation. Such modified requirements shall apply the best available technology economically achievable on a case-by-case basis, using best professional judgment, to set specific numerical effluent limitations in each permit.

(2) Limitations

The Administrator or the State may only issue a permit pursuant to paragraph (1) if the applicant demonstrates to the satisfaction of the Administrator or the State, as the case may be, that the coal remining operation will result in the potential for improved water quality from the remining operation but in no event shall such a permit allow the pH level of any discharge, and in no event shall such a permit allow the discharges of iron and manganese, to exceed the levels being discharged from the remined area before the coal remining operation begins. No discharge from, or affected by, the remining operation shall exceed State water quality standards established under [section 1313](#) of this title.

(3) Definitions

For purposes of this subsection--

(A) Coal remining operation

The term “coal remining operation” means a coal mining operation which begins after February 4, 1987 at a site on which coal mining was conducted before August 3, 1977.

(B) Remined area

The term “remined area” means only that area of any coal remining operation on which coal mining was conducted before August 3, 1977.

(C) Pre-existing discharge

The term “pre-existing discharge” means any discharge at the time of permit application under this subsection.

(4) Applicability of strip mining laws

Nothing in this subsection shall affect the application of the Surface Mining Control and Reclamation Act of 1977 [[30 U.S.C.A. § 1201 et seq.](#)] to any coal remining operation, including the application of such Act to suspended solids.

33 U.S.C.A. § 1313

§ 1313. Water quality standards and implementation plans

Effective: October 10, 2000

[Currentness](#)

(a) Existing water quality standards

(1) In order to carry out the purpose of this chapter, any water quality standard applicable to interstate waters which was adopted by any State and submitted to, and approved by, or is a waiting approval by, the Administrator pursuant to this Act as in effect immediately prior to October 18, 1972, shall remain in effect unless the Administrator determined that such standard is not consistent with the applicable requirements of this Act as in effect immediately prior to October 18, 1972. If the Administrator makes such a determination he shall, within three months after October 18, 1972, notify the State and specify the changes needed to meet such requirements. If such changes are not adopted by the State within ninety days after the date of such notification, the Administrator shall promulgate such changes in accordance with subsection (b) of this section.

(2) Any State which, before October 18, 1972, has adopted, pursuant to its own law, water quality standards applicable to intrastate waters shall submit such standards to the Administrator within thirty days after October 18, 1972. Each such standard shall remain in effect, in the same manner and to the same extent as any other water quality standard established under this chapter unless the Administrator determines that such standard is inconsistent with the applicable requirements of this Act as in effect immediately prior to October 18, 1972. If the Administrator makes such a determination he shall not later than the one hundred and twentieth day after the date of submission of such standards, notify the State and specify the changes needed to meet such requirements. If such changes are not adopted by the State within ninety days after such notification, the Administrator shall promulgate such changes in accordance with subsection (b) of this section.

(3)(A) Any State which prior to October 18, 1972, has not adopted pursuant to its own laws water quality standards applicable to intrastate waters shall, not later than one hundred and eighty days after October 18, 1972, adopt and submit such standards to the Administrator.

(B) If the Administrator determines that any such standards are consistent with the applicable requirements of this Act as in effect immediately prior to October 18, 1972, he shall approve such standards.

(C) If the Administrator determines that any such standards are not consistent with the applicable requirements of this Act as in effect immediately prior to October 18, 1972, he shall, not later than the ninetieth day after the date of

submission of such standards, notify the State and specify the changes to meet such requirements. If such changes are not adopted by the State within ninety days after the date of notification, the Administrator shall promulgate such standards pursuant to subsection (b) of this section.

(b) Proposed regulations

(1) The Administrator shall promptly prepare and publish proposed regulations setting forth water quality standards for a State in accordance with the applicable requirements of this Act as in effect immediately prior to October 18, 1972, if--

(A) the State fails to submit water quality standards within the times prescribed in subsection (a) of this section.

(B) a water quality standard submitted by such State under subsection (a) of this section is determined by the Administrator not to be consistent with the applicable requirements of subsection (a) of this section.

(2) The Administrator shall promulgate any water quality standard published in a proposed regulation not later than one hundred and ninety days after the date he publishes any such proposed standard, unless prior to such promulgation, such State has adopted a water quality standard which the Administrator determines to be in accordance with subsection (a) of this section.

(c) Review; revised standards; publication

(1) The Governor of a State or the State water pollution control agency of such State shall from time to time (but at least once each three year period beginning with October 18, 1972) hold public hearings for the purpose of reviewing applicable water quality standards and, as appropriate, modifying and adopting standards. Results of such review shall be made available to the Administrator.

(2)(A) Whenever the State revises or adopts a new standard, such revised or new standard shall be submitted to the Administrator. Such revised or new water quality standard shall consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses. Such standards shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of this chapter. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.

(B) Whenever a State reviews water quality standards pursuant to paragraph (1) of this subsection, or revises or adopts new standards pursuant to this paragraph, such State shall adopt criteria for all toxic pollutants listed pursuant to [section 1317\(a\)\(1\)](#) of this title for which criteria have been published under [section 1314\(a\)](#) of this title, the discharge or presence of which in the affected waters could reasonably be expected to interfere with those designated uses adopted by the State, as necessary to support such designated uses. Such criteria shall be specific numerical criteria for such toxic pollutants. Where such numerical criteria are not available, whenever a State reviews water quality standards pursuant to paragraph (1), or revises or adopts new standards pursuant to this paragraph, such State shall adopt criteria based on biological monitoring or assessment methods consistent with information published pursuant to [section 1314\(a\)\(8\)](#) of this title.

Nothing in this section shall be construed to limit or delay the use of effluent limitations or other permit conditions based on or involving biological monitoring or assessment methods or previously adopted numerical criteria.

(3) If the Administrator, within sixty days after the date of submission of the revised or new standard, determines that such standard meets the requirements of this chapter, such standard shall thereafter be the water quality standard for the applicable waters of that State. If the Administrator determines that any such revised or new standard is not consistent with the applicable requirements of this chapter, he shall not later than the ninetieth day after the date of submission of such standard notify the State and specify the changes to meet such requirements. If such changes are not adopted by the State within ninety days after the date of notification, the Administrator shall promulgate such standard pursuant to paragraph (4) of this subsection.

(4) The Administrator shall promptly prepare and publish proposed regulations setting forth a revised or new water quality standard for the navigable waters involved--

(A) if a revised or new water quality standard submitted by such State under paragraph (3) of this subsection for such waters is determined by the Administrator not to be consistent with the applicable requirements of this chapter, or

(B) in any case where the Administrator determines that a revised or new standard is necessary to meet the requirements of this chapter.

The Administrator shall promulgate any revised or new standard under this paragraph not later than ninety days after he publishes such proposed standards, unless prior to such promulgation, such State has adopted a revised or new water quality standard which the Administrator determines to be in accordance with this chapter.

(d) Identification of areas with insufficient controls; maximum daily load; certain effluent limitations revision

(1)(A) Each State shall identify those waters within its boundaries for which the effluent limitations required by [section 1311\(b\)\(1\)\(A\)](#) and [section 1311\(b\)\(1\)\(B\)](#) of this title are not stringent enough to implement any water quality standard applicable to such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters.

(B) Each State shall identify those waters or parts thereof within its boundaries for which controls on thermal discharges under [section 1311](#) of this title are not stringent enough to assure protection and propagation of a balanced indigenous population of shellfish, fish, and wildlife.

(C) Each State shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, the total maximum daily load, for those pollutants which the Administrator identifies under [section 1314\(a\)\(2\)](#) of this title as suitable for such calculation. Such load shall be established at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.

(D) Each State shall estimate for the waters identified in paragraph (1)(B) of this subsection the total maximum daily thermal load required to assure protection and propagation of a balanced, indigenous population of shellfish, fish, and

wildlife. Such estimates shall take into account the normal water temperatures, flow rates, seasonal variations, existing sources of heat input, and the dissipative capacity of the identified waters or parts thereof. Such estimates shall include a calculation of the maximum heat input that can be made into each such part and shall include a margin of safety which takes into account any lack of knowledge concerning the development of thermal water quality criteria for such protection and propagation in the identified waters or parts thereof.

(2) Each State shall submit to the Administrator from time to time, with the first such submission not later than one hundred and eighty days after the date of publication of the first identification of pollutants under [section 1314\(a\)\(2\)\(D\)](#) of this title, for his approval the waters identified and the loads established under paragraphs (1)(A), (1)(B), (1)(C), and (1)(D) of this subsection. The Administrator shall either approve or disapprove such identification and load not later than thirty days after the date of submission. If the Administrator approves such identification and load, such State shall incorporate them into its current plan under subsection (e) of this section. If the Administrator disapproves such identification and load, he shall not later than thirty days after the date of such disapproval identify such waters in such State and establish such loads for such waters as he determines necessary to implement the water quality standards applicable to such waters and upon such identification and establishment the State shall incorporate them into its current plan under subsection (e) of this section.

(3) For the specific purpose of developing information, each State shall identify all waters within its boundaries which it has not identified under paragraph (1)(A) and (1)(B) of this subsection and estimate for such waters the total maximum daily load with seasonal variations and margins of safety, for those pollutants which the Administrator identifies under [section 1314\(a\)\(2\)](#) of this title as suitable for such calculation and for thermal discharges, at a level that would assure protection and propagation of a balanced indigenous population of fish, shellfish, and wildlife.

(4) Limitations on revision of certain effluent limitations

(A) Standard not attained

For waters identified under paragraph (1)(A) where the applicable water quality standard has not yet been attained, any effluent limitation based on a total maximum daily load or other waste load allocation established under this section may be revised only if (i) the cumulative effect of all such revised effluent limitations based on such total maximum daily load or waste load allocation will assure the attainment of such water quality standard, or (ii) the designated use which is not being attained is removed in accordance with regulations established under this section.

(B) Standard attained

For waters identified under paragraph (1)(A) where the quality of such waters equals or exceeds levels necessary to protect the designated use for such waters or otherwise required by applicable water quality standards, any effluent limitation based on a total maximum daily load or other waste load allocation established under this section, or any water quality standard established under this section, or any other permitting standard may be revised only if such revision is subject to and consistent with the antidegradation policy established under this section.

(e) Continuing planning process

(1) Each State shall have a continuing planning process approved under paragraph (2) of this subsection which is consistent with this chapter.

(2) Each State shall submit not later than 120 days after October 18, 1972, to the Administrator for his approval a proposed continuing planning process which is consistent with this chapter. Not later than thirty days after the date of submission of such a process the Administrator shall either approve or disapprove such process. The Administrator shall from time to time review each State's approved planning process for the purpose of insuring that such planning process is at all times consistent with this chapter. The Administrator shall not approve any State permit program under subchapter IV of this chapter for any State which does not have an approved continuing planning process under this section.

(3) The Administrator shall approve any continuing planning process submitted to him under this section which will result in plans for all navigable waters within such State, which include, but are not limited to, the following:

(A) effluent limitations and schedules of compliance at least as stringent as those required by [section 1311\(b\)\(1\)](#), [section 1311\(b\)\(2\)](#), [section 1316](#), and [section 1317](#) of this title, and at least as stringent as any requirements contained in any applicable water quality standard in effect under authority of this section;

(B) the incorporation of all elements of any applicable area-wide waste management plans under [section 1288](#) of this title, and applicable basin plans under [section 1289](#) of this title;

(C) total maximum daily load for pollutants in accordance with subsection (d) of this section;

(D) procedures for revision;

(E) adequate authority for intergovernmental cooperation;

(F) adequate implementation, including schedules of compliance, for revised or new water quality standards, under subsection (c) of this section;

(G) controls over the disposition of all residual waste from any water treatment processing;

(H) an inventory and ranking, in order of priority, of needs for construction of waste treatment works required to meet the applicable requirements of [sections 1311](#) and [1312](#) of this title.

(f) Earlier compliance

Nothing in this section shall be construed to affect any effluent limitation, or schedule of compliance required by any State to be implemented prior to the dates set forth in [sections 1311\(b\)\(1\)](#) and [1311\(b\)\(2\)](#) of this title nor to preclude any State from requiring compliance with any effluent limitation or schedule of compliance at dates earlier than such dates.

(g) Heat standards

Water quality standards relating to heat shall be consistent with the requirements of [section 1326](#) of this title.

(h) Thermal water quality standards

For the purposes of this chapter the term “water quality standards” includes thermal water quality standards.

(i) Coastal recreation water quality criteria

(1) Adoption by States

(A) Initial criteria and standards

Not later than 42 months after October 10, 2000, each State having coastal recreation waters shall adopt and submit to the Administrator water quality criteria and standards for the coastal recreation waters of the State for those pathogens and pathogen indicators for which the Administrator has published criteria under [section 1314\(a\)](#) of this title.

(B) New or revised criteria and standards

Not later than 36 months after the date of publication by the Administrator of new or revised water quality criteria under [section 1314\(a\)\(9\)](#) of this title, each State having coastal recreation waters shall adopt and submit to the Administrator new or revised water quality standards for the coastal recreation waters of the State for all pathogens and pathogen indicators to which the new or revised water quality criteria are applicable.

(2) Failure of States to adopt

(A) In general

If a State fails to adopt water quality criteria and standards in accordance with paragraph (1)(A) that are as protective of human health as the criteria for pathogens and pathogen indicators for coastal recreation waters published by the Administrator, the Administrator shall promptly propose regulations for the State setting forth revised or new water quality standards for pathogens and pathogen indicators described in paragraph (1)(A) for coastal recreation waters of the State.

(B) Exception

If the Administrator proposes regulations for a State described in subparagraph (A) under subsection (c)(4)(B), the Administrator shall publish any revised or new standard under this subsection not later than 42 months after October 10, 2000.

(3) Applicability

Except as expressly provided by this subsection, the requirements and procedures of subsection (c) apply to this subsection, including the requirement in subsection (c)(2)(A) that the criteria protect public health and welfare.

Subchapter III. Standards and Enforcement (Refs & Annos)

33 U.S.C.A. § 1318

§ 1318. Records and reports; inspections

Currentness

(a) Maintenance; monitoring equipment; entry; access to information

Whenever required to carry out the objective of this chapter, including but not limited to (1) developing or assisting in the development of any effluent limitation, or other limitation, prohibition, or effluent standard, pretreatment standard, or standard of performance under this chapter; (2) determining whether any person is in violation of any such effluent limitation, or other limitation, prohibition or effluent standard, pretreatment standard, or standard of performance; (3) any requirement established under this section; or (4) carrying out [sections 1315, 1321, 1342, 1344](#) (relating to State permit programs), 1345, and 1364 of this title--

(A) the Administrator shall require the owner or operator of any point source to (i) establish and maintain such records, (ii) make such reports, (iii) install, use, and maintain such monitoring equipment or methods (including where appropriate, biological monitoring methods), (iv) sample such effluents (in accordance with such methods, at such locations, at such intervals, and in such manner as the Administrator shall prescribe), and (v) provide such other information as he may reasonably require; and

(B) the Administrator or his authorized representative (including an authorized contractor acting as a representative of the Administrator), upon presentation of his credentials--

(i) shall have a right of entry to, upon, or through any premises in which an effluent source is located or in which any records required to be maintained under clause (A) of this subsection are located, and

(ii) may at reasonable times have access to and copy any records, inspect any monitoring equipment or method required under clause (A), and sample any effluents which the owner or operator of such source is required to sample under such clause.

(b) Availability to public; trade secrets exception; penalty for disclosure of confidential information

Any records, reports, or information obtained under this section (1) shall, in the case of effluent data, be related to any applicable effluent limitations, toxic, pretreatment, or new source performance standards, and (2) shall be available to the public, except that upon a showing satisfactory to the Administrator by any person that records, reports, or information, or particular part thereof (other than effluent data), to which the Administrator has access under this section, if made public would divulge methods or processes entitled to protection as trade secrets of such person, the Administrator shall consider such record, report, or information, or particular portion thereof confidential in accordance with the purposes

of [section 1905 of Title 18](#). Any authorized representative of the Administrator (including an authorized contractor acting as a representative of the Administrator) who knowingly or willfully publishes, divulges, discloses, or makes known in any manner or to any extent not authorized by law any information which is required to be considered confidential under this subsection shall be fined not more than \$1,000 or imprisoned not more than 1 year, or both. Nothing in this subsection shall prohibit the Administrator or an authorized representative of the Administrator (including any authorized contractor acting as a representative of the Administrator) from disclosing records, reports, or information to other officers, employees, or authorized representatives of the United States concerned with carrying out this chapter or when relevant in any proceeding under this chapter.

(c) Application of State law

Each State may develop and submit to the Administrator procedures under State law for inspection, monitoring, and entry with respect to point sources located in such State. If the Administrator finds that the procedures and the law of any State relating to inspection, monitoring, and entry are applicable to at least the same extent as those required by this section, such State is authorized to apply and enforce its procedures for inspection, monitoring, and entry with respect to point sources located in such State (except with respect to point sources owned or operated by the United States).

(d) Access by Congress

Notwithstanding any limitation contained in this section or any other provision of law, all information reported to or otherwise obtained by the Administrator (or any representative of the Administrator) under this chapter shall be made available, upon written request of any duly authorized committee of Congress, to such committee.

[Title 33. Navigation and Navigable Waters \(Refs & Annos\)](#)

[Chapter 26. Water Pollution Prevention and Control \(Refs & Annos\)](#)

[Subchapter IV. Permits and Licenses \(Refs & Annos\)](#)

33 U.S.C.A. § 1342

§ 1342. National pollutant discharge elimination system

Effective: February 7, 2014

[Currentness](#)

(a) Permits for discharge of pollutants

(1) Except as provided in [sections 1328](#) and [1344](#) of this title, the Administrator may, after opportunity for public hearing issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding [section 1311\(a\)](#) of this title, upon condition that such discharge will meet either (A) all applicable requirements under [sections 1311](#), [1312](#), [1316](#), [1317](#), [1318](#), and [1343](#) of this title, or (B) prior to the taking of necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this chapter.

(2) The Administrator shall prescribe conditions for such permits to assure compliance with the requirements of paragraph (1) of this subsection, including conditions on data and information collection, reporting, and such other requirements as he deems appropriate.

(3) The permit program of the Administrator under paragraph (1) of this subsection, and permits issued thereunder, shall be subject to the same terms, conditions, and requirements as apply to a State permit program and permits issued thereunder under subsection (b) of this section.

(4) All permits for discharges into the navigable waters issued pursuant to [section 407](#) of this title shall be deemed to be permits issued under this subchapter, and permits issued under this subchapter shall be deemed to be permits issued under [section 407](#) of this title, and shall continue in force and effect for their term unless revoked, modified, or suspended in accordance with the provisions of this chapter.

(5) No permit for a discharge into the navigable waters shall be issued under [section 407](#) of this title after October 18, 1972. Each application for a permit under [section 407](#) of this title, pending on October 18, 1972, shall be deemed to be an application for a permit under this section. The Administrator shall authorize a State, which he determines has the capability of administering a permit program which will carry out the objectives of this chapter to issue permits for discharges into the navigable waters within the jurisdiction of such State. The Administrator may exercise the authority granted him by the preceding sentence only during the period which begins on October 18, 1972, and ends either on the ninetieth day after the date of the first promulgation of guidelines required by [section 1314\(i\)\(2\)](#) of this title, or the date of approval by the Administrator of a permit program for such State under subsection (b) of this section, whichever date first occurs, and no such authorization to a State shall extend beyond the last day of such period. Each such permit shall

be subject to such conditions as the Administrator determines are necessary to carry out the provisions of this chapter. No such permit shall issue if the Administrator objects to such issuance.

(b) State permit programs

At any time after the promulgation of the guidelines required by [subsection \(i\)\(2\) of section 1314](#) of this title, the Governor of each State desiring to administer its own permit program for discharges into navigable waters within its jurisdiction may submit to the Administrator a full and complete description of the program it proposes to establish and administer under State law or under an interstate compact. In addition, such State shall submit a statement from the attorney general (or the attorney for those State water pollution control agencies which have independent legal counsel), or from the chief legal officer in the case of an interstate agency, that the laws of such State, or the interstate compact, as the case may be, provide adequate authority to carry out the described program. The Administrator shall approve each submitted program unless he determines that adequate authority does not exist:

(1) To issue permits which--

(A) apply, and insure compliance with, any applicable requirements of [sections 1311, 1312, 1316, 1317, and 1343](#) of this title;

(B) are for fixed terms not exceeding five years; and

(C) can be terminated or modified for cause including, but not limited to, the following:

(i) violation of any condition of the permit;

(ii) obtaining a permit by misrepresentation, or failure to disclose fully all relevant facts;

(iii) change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge;

(D) control the disposal of pollutants into wells;

(2)(A) To issue permits which apply, and insure compliance with, all applicable requirements of [section 1318](#) of this title; or

(B) To inspect, monitor, enter, and require reports to at least the same extent as required in [section 1318](#) of this title;

(3) To insure that the public, and any other State the waters of which may be affected, receive notice of each application for a permit and to provide an opportunity for public hearing before a ruling on each such application;

(4) To insure that the Administrator receives notice of each application (including a copy thereof) for a permit;

(5) To insure that any State (other than the permitting State), whose waters may be affected by the issuance of a permit may submit written recommendations to the permitting State (and the Administrator) with respect to any permit application and, if any part of such written recommendations are not accepted by the permitting State, that the permitting State will notify such affected State (and the Administrator) in writing of its failure to so accept such recommendations together with its reasons for so doing;

(6) To insure that no permit will be issued if, in the judgment of the Secretary of the Army acting through the Chief of Engineers, after consultation with the Secretary of the department in which the Coast Guard is operating, anchorage and navigation of any of the navigable waters would be substantially impaired thereby;

(7) To abate violations of the permit or the permit program, including civil and criminal penalties and other ways and means of enforcement;

(8) To insure that any permit for a discharge from a publicly owned treatment works includes conditions to require the identification in terms of character and volume of pollutants of any significant source introducing pollutants subject to pretreatment standards under [section 1317\(b\)](#) of this title into such works and a program to assure compliance with such pretreatment standards by each such source, in addition to adequate notice to the permitting agency of (A) new introductions into such works of pollutants from any source which would be a new source as defined in [section 1316](#) of this title if such source were discharging pollutants, (B) new introductions of pollutants into such works from a source which would be subject to [section 1311](#) of this title if it were discharging such pollutants, or (C) a substantial change in volume or character of pollutants being introduced into such works by a source introducing pollutants into such works at the time of issuance of the permit. Such notice shall include information on the quality and quantity of effluent to be introduced into such treatment works and any anticipated impact of such change in the quantity or quality of effluent to be discharged from such publicly owned treatment works; and

(9) To insure that any industrial user of any publicly owned treatment works will comply with [sections 1284\(b\)](#), [1317](#), and [1318](#) of this title.

(c) Suspension of Federal program upon submission of State program; withdrawal of approval of State program; return of State program to Administrator

(1) Not later than ninety days after the date on which a State has submitted a program (or revision thereof) pursuant to subsection (b) of this section, the Administrator shall suspend the issuance of permits under subsection (a) of this section as to those discharges subject to such program unless he determines that the State permit program does not meet the requirements of subsection (b) of this section or does not conform to the guidelines issued under [section 1314\(i\)\(2\)](#) of this title. If the Administrator so determines, he shall notify the State of any revisions or modifications necessary to conform to such requirements or guidelines.

(2) Any State permit program under this section shall at all times be in accordance with this section and guidelines promulgated pursuant to [section 1314\(i\)\(2\)](#) of this title.

(3) Whenever the Administrator determines after public hearing that a State is not administering a program approved under this section in accordance with requirements of this section, he shall so notify the State and, if appropriate corrective action is not taken within a reasonable time, not to exceed ninety days, the Administrator shall withdraw approval of such program. The Administrator shall not withdraw approval of any such program unless he shall first have notified the State, and made public, in writing, the reasons for such withdrawal.

(4) Limitations on partial permit program returns and withdrawals

A State may return to the Administrator administration, and the Administrator may withdraw under paragraph (3) of this subsection approval, of--

(A) a State partial permit program approved under subsection (n)(3) only if the entire permit program being administered by the State department or agency at the time is returned or withdrawn; and

(B) a State partial permit program approved under subsection (n)(4) only if an entire phased component of the permit program being administered by the State at the time is returned or withdrawn.

(d) Notification of Administrator

(1) Each State shall transmit to the Administrator a copy of each permit application received by such State and provide notice to the Administrator of every action related to the consideration of such permit application, including each permit proposed to be issued by such State.

(2) No permit shall issue (A) if the Administrator within ninety days of the date of his notification under subsection (b)(5) of this section objects in writing to the issuance of such permit, or (B) if the Administrator within ninety days of the date of transmittal of the proposed permit by the State objects in writing to the issuance of such permit as being outside the guidelines and requirements of this chapter. Whenever the Administrator objects to the issuance of a permit under this paragraph such written objection shall contain a statement of the reasons for such objection and the effluent limitations and conditions which such permit would include if it were issued by the Administrator.

(3) The Administrator may, as to any permit application, waive paragraph (2) of this subsection.

(4) In any case where, after December 27, 1977, the Administrator, pursuant to paragraph (2) of this subsection, objects to the issuance of a permit, on request of the State, a public hearing shall be held by the Administrator on such objection. If the State does not resubmit such permit revised to meet such objection within 30 days after completion of the hearing, or, if no hearing is requested within 90 days after the date of such objection, the Administrator may issue the permit pursuant to subsection (a) of this section for such source in accordance with the guidelines and requirements of this chapter.

(e) Waiver of notification requirement

In accordance with guidelines promulgated pursuant to [subsection \(i\)\(2\) of section 1314](#) of this title, the Administrator is authorized to waive the requirements of subsection (d) of this section at the time he approves a program pursuant to

subsection (b) of this section for any category (including any class, type, or size within such category) of point sources within the State submitting such program.

(f) Point source categories

The Administrator shall promulgate regulations establishing categories of point sources which he determines shall not be subject to the requirements of subsection (d) of this section in any State with a program approved pursuant to subsection (b) of this section. The Administrator may distinguish among classes, types, and sizes within any category of point sources.

(g) Other regulations for safe transportation, handling, carriage, storage, and stowage of pollutants

Any permit issued under this section for the discharge of pollutants into the navigable waters from a vessel or other floating craft shall be subject to any applicable regulations promulgated by the Secretary of the department in which the Coast Guard is operating, establishing specifications for safe transportation, handling, carriage, storage, and stowage of pollutants.

(h) Violation of permit conditions; restriction or prohibition upon introduction of pollutant by source not previously utilizing treatment works

In the event any condition of a permit for discharges from a treatment works (as defined in [section 1292](#) of this title) which is publicly owned is violated, a State with a program approved under subsection (b) of this section or the Administrator, where no State program is approved or where the Administrator determines pursuant to [section 1319\(a\)](#) of this title that a State with an approved program has not commenced appropriate enforcement action with respect to such permit, may proceed in a court of competent jurisdiction to restrict or prohibit the introduction of any pollutant into such treatment works by a source not utilizing such treatment works prior to the finding that such condition was violated.

(i) Federal enforcement not limited

Nothing in this section shall be construed to limit the authority of the Administrator to take action pursuant to [section 1319](#) of this title.

(j) Public information

A copy of each permit application and each permit issued under this section shall be available to the public. Such permit application or permit, or portion thereof, shall further be available on request for the purpose of reproduction.

(k) Compliance with permits

Compliance with a permit issued pursuant to this section shall be deemed compliance, for purposes of [sections 1319](#) and [1365](#) of this title, with [sections 1311](#), [1312](#), [1316](#), [1317](#), and [1343](#) of this title, except any standard imposed under [section 1317](#) of this title for a toxic pollutant injurious to human health. Until December 31, 1974, in any case where a permit for discharge has been applied for pursuant to this section, but final administrative disposition of such application has not been made, such discharge shall not be a violation of (1) [section 1311](#), [1316](#), or [1342](#) of this title, or (2) [section 407](#) of this title, unless the Administrator or other plaintiff proves that final administrative disposition of such application

has not been made because of the failure of the applicant to furnish information reasonably required or requested in order to process the application. For the 180-day period beginning on October 18, 1972, in the case of any point source discharging any pollutant or combination of pollutants immediately prior to such date which source is not subject to [section 407](#) of this title, the discharge by such source shall not be a violation of this chapter if such a source applies for a permit for discharge pursuant to this section within such 180-day period.

(l) Limitation on permit requirement

(1) Agricultural return flows

The Administrator shall not require a permit under this section for discharges composed entirely of return flows from irrigated agriculture, nor shall the Administrator directly or indirectly, require any State to require such a permit.

(2) Stormwater runoff from oil, gas, and mining operations

The Administrator shall not require a permit under this section, nor shall the Administrator directly or indirectly require any State to require a permit, for discharges of stormwater runoff from mining operations or oil and gas exploration, production, processing, or treatment operations or transmission facilities, composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and which are not contaminated by contact with, or do not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations.

(3) Silvicultural activities

(A) NPDES permit requirements for silvicultural activities

The Administrator shall not require a permit under this section nor directly or indirectly require any State to require a permit under this section for a discharge from runoff resulting from the conduct of the following silviculture activities conducted in accordance with standard industry practice: nursery operations, site preparation, reforestation and subsequent cultural treatment, thinning, prescribed burning, pest and fire control, harvesting operations, surface drainage, or road construction and maintenance.

(B) Other requirements

Nothing in this paragraph exempts a discharge from silvicultural activity from any permitting requirement under [section 1344](#) of this title, existing permitting requirements under section 1342 of this title, or from any other federal law.

(C) The authorization provided in Section ¹ 1365(a) of this title does not apply to any non-permitting program established under 1342(p)(6) ² of this title for the silviculture activities listed in 1342(l)(3)(A) ³ of this title, or to any other limitations that might be deemed to apply to the silviculture activities listed in 1342(l)(3)(A) ³ of this title.

(m) Additional pretreatment of conventional pollutants not required

To the extent a treatment works (as defined in [section 1292](#) of this title) which is publicly owned is not meeting the requirements of a permit issued under this section for such treatment works as a result of inadequate design or operation of such treatment works, the Administrator, in issuing a permit under this section, shall not require pretreatment by a person introducing conventional pollutants identified pursuant to [section 1314\(a\)\(4\)](#) of this title into such treatment works other than pretreatment required to assure compliance with pretreatment standards under subsection (b)(8) of this section and [section 1317\(b\)\(1\)](#) of this title. Nothing in this subsection shall affect the Administrator's authority under [sections 1317](#) and [1319](#) of this title, affect State and local authority under [sections 1317\(b\)\(4\)](#) and [1370](#) of this title, relieve such treatment works of its obligations to meet requirements established under this chapter, or otherwise preclude such works from pursuing whatever feasible options are available to meet its responsibility to comply with its permit under this section.

(n) Partial permit program

(1) State submission

The Governor of a State may submit under subsection (b) of this section a permit program for a portion of the discharges into the navigable waters in such State.

(2) Minimum coverage

A partial permit program under this subsection shall cover, at a minimum, administration of a major category of the discharges into the navigable waters of the State or a major component of the permit program required by subsection (b).

(3) Approval of major category partial permit programs

The Administrator may approve a partial permit program covering administration of a major category of discharges under this subsection if--

(A) such program represents a complete permit program and covers all of the discharges under the jurisdiction of a department or agency of the State; and

(B) the Administrator determines that the partial program represents a significant and identifiable part of the State program required by subsection (b).

(4) Approval of major component partial permit programs

The Administrator may approve under this subsection a partial and phased permit program covering administration of a major component (including discharge categories) of a State permit program required by subsection (b) if--

(A) the Administrator determines that the partial program represents a significant and identifiable part of the State program required by subsection (b); and

(B) the State submits, and the Administrator approves, a plan for the State to assume administration by phases of the remainder of the State program required by subsection (b) by a specified date not more than 5 years after submission of the partial program under this subsection and agrees to make all reasonable efforts to assume such administration by such date.

(o) Anti-backsliding

(1) General prohibition

In the case of effluent limitations established on the basis of subsection (a)(1)(B) of this section, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under [section 1314\(b\)](#) of this title subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit. In the case of effluent limitations established on the basis of [section 1311\(b\)\(1\)\(C\)](#) or [section 1313\(d\)](#) or (e) of this title, a permit may not be renewed, reissued, or modified to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit except in compliance with [section 1313\(d\)\(4\)](#) of this title.

(2) Exceptions

A permit with respect to which paragraph (1) applies may be renewed, reissued, or modified to contain a less stringent effluent limitation applicable to a pollutant if--

(A) material and substantial alterations or additions to the permitted facility occurred after permit issuance which justify the application of a less stringent effluent limitation;

(B)(i) information is available which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of a less stringent effluent limitation at the time of permit issuance; or

(ii) the Administrator determines that technical mistakes or mistaken interpretations of law were made in issuing the permit under subsection (a)(1)(B);

(C) a less stringent effluent limitation is necessary because of events over which the permittee has no control and for which there is no reasonably available remedy;

(D) the permittee has received a permit modification under [section 1311\(c\)](#), [1311\(g\)](#), [1311\(h\)](#), [1311\(i\)](#), [1311\(k\)](#), [1311\(n\)](#), or [1326\(a\)](#) of this title; or

(E) the permittee has installed the treatment facilities required to meet the effluent limitations in the previous permit and has properly operated and maintained the facilities but has nevertheless been unable to achieve the previous effluent limitations, in which case the limitations in the reviewed, reissued, or modified permit may reflect the level of pollutant control actually achieved (but shall not be less stringent than required by effluent guidelines in effect at the time of permit renewal, reissuance, or modification).

Subparagraph (B) shall not apply to any revised waste load allocations or any alternative grounds for translating water quality standards into effluent limitations, except where the cumulative effect of such revised allocations results in a decrease in the amount of pollutants discharged into the concerned waters, and such revised allocations are not the result of a discharger eliminating or substantially reducing its discharge of pollutants due to complying with the requirements of this chapter or for reasons otherwise unrelated to water quality.

(3) Limitations

In no event may a permit with respect to which paragraph (1) applies be renewed, reissued, or modified to contain an effluent limitation which is less stringent than required by effluent guidelines in effect at the time the permit is renewed, reissued, or modified. In no event may such a permit to discharge into waters be renewed, reissued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under [section 1313](#) of this title applicable to such waters.

(p) Municipal and industrial stormwater discharges

(1) General rule

Prior to October 1, 1994, the Administrator or the State (in the case of a permit program approved under this section) shall not require a permit under this section for discharges composed entirely of stormwater.

(2) Exceptions

Paragraph (1) shall not apply with respect to the following stormwater discharges:

(A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.

(B) A discharge associated with industrial activity.

(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.

(E) A discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(3) Permit requirements

(A) Industrial discharges

Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and [section 1311](#) of this title.

(B) Municipal discharge

Permits for discharges from municipal storm sewers--

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.

(4) Permit application requirements

(A) Industrial and large municipal discharges

Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(B) Other municipal discharges

Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(5) Studies

The Administrator, in consultation with the States, shall conduct a study for the purposes of--

(A) identifying those stormwater discharges or classes of stormwater discharges for which permits are not required pursuant to paragraphs (1) and (2) of this subsection;

(B) determining, to the maximum extent practicable, the nature and extent of pollutants in such discharges; and

(C) establishing procedures and methods to control stormwater discharges to the extent necessary to mitigate impacts on water quality.

Not later than October 1, 1988, the Administrator shall submit to Congress a report on the results of the study described in subparagraphs (A) and (B). Not later than October 1, 1989, the Administrator shall submit to Congress a report on the results of the study described in subparagraph (C).

(6) Regulations

Not later than October 1, 1993, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate.

(q) Combined sewer overflows

(1) Requirement for permits, orders, and decrees

Each permit, order, or decree issued pursuant to this chapter after December 21, 2000, for a discharge from a municipal combined storm and sanitary sewer shall conform to the Combined Sewer Overflow Control Policy signed by the Administrator on April 11, 1994 (in this subsection referred to as the “CSO control policy”).

(2) Water quality and designated use review guidance

Not later than July 31, 2001, and after providing notice and opportunity for public comment, the Administrator shall issue guidance to facilitate the conduct of water quality and designated use reviews for municipal combined sewer overflow receiving waters.

(3) Report

Not later than September 1, 2001, the Administrator shall transmit to Congress a report on the progress made by the Environmental Protection Agency, States, and municipalities in implementing and enforcing the CSO control policy.

(r) Discharges incidental to the normal operation of recreational vessels

No permit shall be required under this chapter by the Administrator (or a State, in the case of a permit program approved under subsection (b)) for the discharge of any graywater, bilge water, cooling water, weather deck runoff, oil water separator effluent, or effluent from properly functioning marine engines, or any other discharge that is incidental to the normal operation of a vessel, if the discharge is from a recreational vessel.

[Title 33. Navigation and Navigable Waters \(Refs & Annos\)](#)

[Chapter 26. Water Pollution Prevention and Control \(Refs & Annos\)](#)

[Subchapter V. General Provisions](#)

33 U.S.C.A. § 1362

§ 1362. Definitions

Effective: October 1, 2014

[Currentness](#)

Except as otherwise specifically provided, when used in this chapter:

(1) The term “State water pollution control agency” means the State agency designated by the Governor having responsibility for enforcing State laws relating to the abatement of pollution.

(2) The term “interstate agency” means an agency of two or more States established by or pursuant to an agreement or compact approved by the Congress, or any other agency of two or more States, having substantial powers or duties pertaining to the control of pollution as determined and approved by the Administrator.

(3) The term “State” means a State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, and the Trust Territory of the Pacific Islands.

(4) The term “municipality” means a city, town, borough, county, parish, district, association, or other public body created by or pursuant to State law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under [section 1288](#) of this title.

(5) The term “person” means an individual, corporation, partnership, association, State, municipality, commission, or political subdivision of a State, or any interstate body.

(6) The term “pollutant” means dredged spoil, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt and industrial, municipal, and agricultural waste discharged into water. This term does not mean (A) “sewage from vessels or a discharge incidental to the normal operation of a vessel of the Armed Forces” within the meaning of [section 1322](#) of this title; or (B) water, gas, or other material which is injected into a well to facilitate production of oil or gas, or water derived in association with oil or gas production and disposed of in a well, if the well used either to facilitate production or for disposal purposes is approved by authority of the State in which the well

is located, and if such State determines that such injection or disposal will not result in the degradation of ground or surface water resources.

(7) The term “navigable waters” means the waters of the United States, including the territorial seas.

(8) The term “territorial seas” means the belt of the seas measured from the line of ordinary low water along that portion of the coast which is in direct contact with the open sea and the line marking the seaward limit of inland waters, and extending seaward a distance of three miles.

(9) The term “contiguous zone” means the entire zone established or to be established by the United States under article 24 of the Convention of the Territorial Sea and the Contiguous Zone.

(10) The term “ocean” means any portion of the high seas beyond the contiguous zone.

(11) The term “effluent limitation” means any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.

(12) The term “discharge of a pollutant” and the term “discharge of pollutants” each means (A) any addition of any pollutant to navigable waters from any point source, (B) any addition of any pollutant to the waters of the contiguous zone or the ocean from any point source other than a vessel or other floating craft.

(13) The term “toxic pollutant” means those pollutants, or combinations of pollutants, including disease-causing agents, which after discharge and upon exposure, ingestion, inhalation or assimilation into any organism, either directly from the environment or indirectly by ingestion through food chains, will, on the basis of information available to the Administrator, cause death, disease, behavioral abnormalities, cancer, genetic mutations, physiological malfunctions (including malfunctions in reproduction) or physical deformations, in such organisms or their offspring.

(14) The term “point source” means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include agricultural stormwater discharges and return flows from irrigated agriculture.

(15) The term “biological monitoring” shall mean the determination of the effects on aquatic life, including accumulation of pollutants in tissue, in receiving waters due to the discharge of pollutants (A) by techniques and procedures, including sampling of organisms representative of appropriate levels of the food chain appropriate to the volume and the physical, chemical, and biological characteristics of the effluent, and (B) at appropriate frequencies and locations.

(16) The term “discharge” when used without qualification includes a discharge of a pollutant, and a discharge of pollutants.

(17) The term “schedule of compliance” means a schedule of remedial measures including an enforceable sequence of actions or operations leading to compliance with an effluent limitation, other limitation, prohibition, or standard.

(18) The term “industrial user” means those industries identified in the Standard Industrial Classification Manual, Bureau of the Budget, 1967, as amended and supplemented, under the category of “Division D--Manufacturing” and such other classes of significant waste producers as, by regulation, the Administrator deems appropriate.

(19) The term “pollution” means the man-made or man-induced alteration of the chemical, physical, biological, and radiological integrity of water.

(20) The term “medical waste” means isolation wastes; infectious agents; human blood and blood products; pathological wastes; sharps; body parts; contaminated bedding; surgical wastes and potentially contaminated laboratory wastes; dialysis wastes; and such additional medical items as the Administrator shall prescribe by regulation.

(21) Coastal recreation waters

(A) In general

The term “coastal recreation waters” means--

(i) the Great Lakes; and

(ii) marine coastal waters (including coastal estuaries) that are designated under [section 1313\(c\)](#) of this title by a State for use for swimming, bathing, surfing, or similar water contact activities.

(B) Exclusions

The term “coastal recreation waters” does not include--

(i) inland waters; or

(ii) waters upstream of the mouth of a river or stream having an unimpaired natural connection with the open sea.

(22) Floatable material

(A) In general

The term “floatable material” means any foreign matter that may float or remain suspended in the water column.

(B) Inclusions

The term “floatable material” includes--

- (i) plastic;
- (ii) aluminum cans;
- (iii) wood products;
- (iv) bottles; and
- (v) paper products.

(23) Pathogen indicator

The term “pathogen indicator” means a substance that indicates the potential for human infectious disease.

(24) Oil and gas exploration and production

The term “oil and gas exploration, production, processing, or treatment operations or transmission facilities” means all field activities or operations associated with exploration, production, processing, or treatment operations, or transmission facilities, including activities necessary to prepare a site for drilling and for the movement and placement of drilling equipment, whether or not such field activities or operations may be considered to be construction activities.

(25) Recreational vessel

(A) In general

The term “recreational vessel” means any vessel that is--

- (i) manufactured or used primarily for pleasure; or
- (ii) leased, rented, or chartered to a person for the pleasure of that person.

(B) Exclusion

The term “recreational vessel” does not include a vessel that is subject to Coast Guard inspection and that--

(i) is engaged in commercial use; or

(ii) carries paying passengers.

(26) Treatment works

The term “treatment works” has the meaning given the term in [section 1292](#) of this title.

Subchapter II. Environmental Pesticide Control (Refs & Annos)

7 U.S.C.A. § 136r-1

§ 136r-1. Integrated Pest Management

Effective: August 3, 1996

[Currentness](#)

The Secretary of Agriculture, in cooperation with the Administrator, shall implement research, demonstration, and education programs to support adoption of Integrated Pest Management. Integrated Pest Management is a sustainable approach to managing pests by combining biological, cultural, physical, and chemical tools in a way that minimizes economic, health, and environmental risks. The Secretary of Agriculture and the Administrator shall make information on Integrated Pest Management widely available to pesticide users, including Federal agencies. Federal agencies shall use Integrated Pest Management techniques in carrying out pest management activities and shall promote Integrated Pest Management through procurement and regulatory policies, and other activities.

[Subpart A. Definitions and General Program Requirements](#)

40 C.F.R. § 122.2

§ 122.2 Definitions.

Effective: February 7, 2018

[Currentness](#)

<[In re E.P.A.](#), 803 F.3d 804, 2015 WL 5893814 (C.A.6,2015) held: “The Clean Water Rule is hereby STAYED, nationwide, pending further order of the court.” See also [Exec. Order No. 13778](#), 82 FR 12497, 2017 WL 819672(Pres.) (Feb. 28, 2017). For text of section 2(a) of [Exec. Order No. 13778](#), see note following this section. For proposed rule proposing to add applicability dates to this section, see [82 FR 55542-01 \(Nov. 22, 2017\)](#).>

The following definitions apply to parts 122, 123, and 124. Terms not defined in this section have the meaning given by CWA. When a defined term appears in a definition, the defined term is sometimes placed in quotation marks as an aid to readers.

Administrator means the Administrator of the United States Environmental Protection Agency, or an authorized representative.

Animal feeding operation is defined at [§ 122.23](#).

Applicable standards and limitations means all State, interstate, and federal standards and limitations to which a “discharge,” a “sewage sludge use or disposal practice,” or a related activity is subject under the CWA, including “effluent limitations,” water quality standards, standards of performance, toxic effluent standards or prohibitions, “best management practices,” pretreatment standards, and “standards for sewage sludge use or disposal” under [sections 301, 302, 303, 304, 306, 307, 308, 403 and 405](#) of CWA.

Application means the EPA standard national forms for applying for a permit, including any additions, revisions or modifications to the forms; or forms approved by EPA for use in “approved States,” including any approved modifications or revisions.

Approved program or approved State means a State or interstate program which has been approved or authorized by EPA under part 123.

Aquaculture project is defined at [§ 122.25](#).

Average monthly discharge limitation means the highest allowable average of “daily discharges” over a calendar month, calculated as the sum of all “daily discharges” measured during a calendar month divided by the number of “daily discharges” measured during that month.

Average weekly discharge limitation means the highest allowable average of “daily discharges” over a calendar week, calculated as the sum of all “daily discharges” measured during a calendar week divided by the number of “daily discharges” measured during that week.

Best management practices (“BMPs”) means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of “waters of the United States.” BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

BMPs means “best management practices.”

Bypass is defined at [§ 122.41\(m\)](#).

Class I sludge management facility means any POTW identified under [40 CFR 403.8\(a\)](#) as being required to have an approved pretreatment program (including such POTWs located in a State that has elected to assume local program responsibilities pursuant to [40 CFR 403.10\(e\)](#)) and any other treatment works treating domestic sewage classified as a Class I sludge management facility by the Regional Administrator, or, in the case of approved State programs, the Regional Administrator in conjunction with the State Director, because of the potential for its sludge use or disposal practices to adversely affect public health and the environment.

Combined sewer overflow (CSO) means a discharge from a combined sewer system (CSS) at a point prior to the Publicly Owned Treatment Works (POTW) Treatment Plant (defined at [§ 403.3\(r\)](#) of this chapter).

Combined sewer system (CSS) means a wastewater collection system owned by a State or municipality (as defined by section 502(4) of the CWA) which conveys sanitary wastewaters (domestic, commercial and industrial wastewaters) and storm water through a single-pipe system to a Publicly Owned Treatment Works (POTW) Treatment Plant (as defined at [§ 403.3\(r\)](#) of this chapter).

Concentrated animal feeding operation is defined at [§ 122.23](#).

Concentrated aquatic animal feeding operation is defined at [§ 122.24](#).

Contiguous zone means the entire zone established by the United States under Article 24 of the Convention on the Territorial Sea and the Contiguous Zone.

Continuous discharge means a “discharge” which occurs without interruption throughout the operating hours of the facility, except for infrequent shutdowns for maintenance, process changes, or other similar activities.

CWA means the Clean Water Act (formerly referred to as the Federal Water Pollution Control Act or Federal Water Pollution Control Act Amendments of 1972) [Pub.L. 92–500](#), as amended by [Pub.L. 95–217](#), [Pub.L. 95–576](#), [Pub.L. 96–483](#) and [Pub.L. 97–117](#), 33 U.S.C. 1251 et seq.

CWA and regulations means the Clean Water Act (CWA) and applicable regulations promulgated thereunder. In the case of an approved State program, it includes State program requirements.

Daily discharge means the “discharge of a pollutant” measured during a calendar day or any 24-hour period that reasonably represents the calendar day for purposes of sampling. For pollutants with limitations expressed in units of mass, the “daily discharge” is calculated as the total mass of the pollutant discharged over the day. For pollutants with limitations expressed in other units of measurement, the “daily discharge” is calculated as the average measurement of the pollutant over the day.

Direct discharge means the “discharge of a pollutant.”

Director means the Regional Administrator or the State Director, as the context requires, or an authorized representative. When there is no “approved State program,” and there is an EPA administered program, “Director” means the Regional Administrator. When there is an approved State program, “Director” normally means the State Director. In some circumstances, however, EPA retains the authority to take certain actions even when there is an approved State program. (For example, when EPA has issued an NPDES permit prior to the approval of a State program, EPA may retain jurisdiction over that permit after program approval, see § 123.1.) In such cases, the term “Director” means the Regional Administrator and not the State Director.

Discharge when used without qualification means the “discharge of a pollutant.”

Discharge of a pollutant means:

(a) Any addition of any “pollutant” or combination of pollutants to “waters of the United States” from any “point source,” or

(b) Any addition of any pollutant or combination of pollutants to the waters of the “contiguous zone” or the ocean from any point source other than a vessel or other floating craft which is being used as a means of transportation.

This definition includes additions of pollutants into waters of the United States from: surface runoff which is collected or channelled by man; discharges through pipes, sewers, or other conveyances owned by a State, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works. This term does not include an addition of pollutants by any “indirect discharger.”

Discharge Monitoring Report (“DMR”) means the EPA uniform national form, including any subsequent additions, revisions, or modifications for the reporting of self-monitoring results by permittees. DMRs must be used by “approved States” as well as by EPA. EPA will supply DMRs to any approved State upon request. The EPA national forms may be modified to substitute the State Agency name, address, logo, and other similar information, as appropriate, in place of EPA's.

DMR means “Discharge Monitoring Report.”

Draft permit means a document prepared under § 124.6 indicating the Director's tentative decision to issue or deny, modify, revoke and reissue, terminate, or reissue a “permit.” A notice of intent to terminate a permit, and a notice of intent to deny a permit, as discussed in § 124.5, are types of “draft permits.” A denial of a request for modification, revocation and reissuance, or termination, as discussed in § 124.5, is not a “draft permit.” A “proposed permit” is not a “draft permit.”

Effluent limitation means any restriction imposed by the Director on quantities, discharge rates, and concentrations of “pollutants” which are “discharged” from “point sources” into “waters of the United States,” the waters of the “contiguous zone,” or the ocean.

Effluent limitations guidelines means a regulation published by the Administrator under [section 304\(b\)](#) of CWA to adopt or revise “effluent limitations.”

Environmental Protection Agency (“EPA”) means the United States Environmental Protection Agency.

EPA means the United States “Environmental Protection Agency.”

Facility or activity means any NPDES “point source” or any other facility or activity (including land or appurtenances thereto) that is subject to regulation under the NPDES program.

Federal Indian reservation means all land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, and including rights-of-way running through the reservation.

General permit means an NPDES “permit” issued under [§ 122.28](#) authorizing a category of discharges under the CWA within a geographical area.

Great Lakes Basin means the waters defined as “Great Lakes” and “Great Lakes System” as those terms are defined in [§ 132.2](#) of this chapter.

Hazardous substance means any substance designated under 40 CFR part 116 pursuant to [section 311](#) of CWA.

Indian country means:

- (1) All land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, and, including rights-of-way running through the reservation;
- (2) All dependent Indian communities with the borders of the United States whether within the originally or subsequently acquired territory thereof, and whether within or without the limits of a state; and
- (3) All Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same.

Indian Tribe means any Indian Tribe, band, group, or community recognized by the Secretary of the Interior and exercising governmental authority over a Federal Indian reservation.

Indirect discharger means a nondomestic discharger introducing “pollutants” to a “publicly owned treatment works.”

Individual control strategy is defined at [40 CFR 123.46\(c\)](#).

Interstate agency means an agency of two or more States established by or under an agreement or compact approved by the Congress, or any other agency of two or more States having substantial powers or duties pertaining to the control of pollution as determined and approved by the Administrator under the CWA and regulations.

Major facility means any NPDES “facility or activity” classified as such by the Regional Administrator, or, in the case of “approved State programs,” the Regional Administrator in conjunction with the State Director.

Maximum daily discharge limitation means the highest allowable “daily discharge.”

Municipal separate storm sewer system is defined at § 122.26 (b)(4) and (b)(7).

Municipality means a city, town, borough, county, parish, district, association, or other public body created by or under State law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under [section 208](#) of CWA.

National Pollutant Discharge Elimination System (NPDES) means the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under [sections 307, 402, 318, and 405](#) of CWA. The term includes an “approved program.”

New discharger means any building, structure, facility, or installation:

- (a) From which there is or may be a “discharge of pollutants;”
- (b) That did not commence the “discharge of pollutants” at a particular “site” prior to August 13, 1979;
- (c) Which is not a “new source;” and
- (d) Which has never received a finally effective NPDES permit for discharges at that “site.”

This definition includes an “indirect discharger” which commences discharging into “waters of the United States” after August 13, 1979. It also includes any existing mobile point source (other than an offshore or coastal oil and gas exploratory drilling rig or a coastal oil and gas developmental drilling rig) such as a seafood processing rig, seafood processing vessel, or aggregate plant, that begins discharging at a “site” for which it does not have a permit; and any offshore or coastal mobile oil and gas exploratory drilling rig or coastal mobile oil and gas developmental drilling rig that commences the discharge of pollutants after August 13, 1979, at a “site” under EPA's permitting jurisdiction for which it is not covered by an individual or general permit and which is located in an area determined by the Regional Administrator in the issuance of a final permit to be an area of biological concern. In determining whether an area is an area of biological concern, the Regional Administrator shall consider the factors specified in [40 CFR 125.122\(a\)\(1\) through \(10\)](#).

An offshore or coastal mobile exploratory drilling rig or coastal mobile developmental drilling rig will be considered a “new discharger” only for the duration of its discharge in an area of biological concern.

New source means any building, structure, facility, or installation from which there is or may be a “discharge of pollutants,” the construction of which commenced:

- (a) After promulgation of standards of performance under [section 306](#) of CWA which are applicable to such source, or
- (b) After proposal of standards of performance in accordance with [section 306](#) of CWA which are applicable to such source, but only if the standards are promulgated in accordance with [section 306](#) within 120 days of their proposal.

NPDES means “National Pollutant Discharge Elimination System.”

Owner or operator means the owner or operator of any “facility or activity” subject to regulation under the NPDES program.

Permit means an authorization, license, or equivalent control document issued by EPA or an “approved State” to implement the requirements of this part and parts 123 and 124. “Permit” includes an NPDES “general permit” ([§ 122.28](#)).

Permit does not include any permit which has not yet been the subject of final agency action, such as a “draft permit” or a “proposed permit.”

Person means an individual, association, partnership, corporation, municipality, State or Federal agency, or an agent or employee thereof.

Point source means any discernible, confined, and discrete conveyance, including but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, landfill leachate collection system, vessel or other floating craft from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture or agricultural storm water runoff. (See § 122.3).

Pollutant means dredged spoil, solid waste, incinerator residue, filter backwash, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials (except those regulated under the Atomic Energy Act of 1954, as amended (42 U.S.C. 2011 et seq.)), heat, wrecked or discarded equipment, rock, sand, cellar dirt and industrial, municipal, and agricultural waste discharged into water. It does not mean:

(a) Sewage from vessels; or

(b) Water, gas, or other material which is injected into a well to facilitate production of oil or gas, or water derived in association with oil and gas production and disposed of in a well, if the well used either to facilitate production or for disposal purposes is approved by authority of the State in which the well is located, and if the State determines that the injection or disposal will not result in the degradation of ground or surface water resources.

NOTE: Radioactive materials covered by the Atomic Energy Act are those encompassed in its definition of source, byproduct, or special nuclear materials. Examples of materials not covered include radium and accelerator-produced isotopes. See [Train v. Colorado Public Interest Research Group, Inc.](#), 426 U.S. 1 (1976).

POTW is defined at § 403.3 of this chapter.

Primary industry category means any industry category listed in the NRDC settlement agreement (Natural Resources Defense Council et al. v. Train, 8 E.R.C. 2120 (D.D.C. 1976), modified 12 E.R.C. 1833 (D.D.C. 1979)); also listed in appendix A of part 122.

Privately owned treatment works means any device or system which is (a) used to treat wastes from any facility whose operator is not the operator of the treatment works and (b) not a “POTW.”

Process wastewater means any water which, during manufacturing or processing, comes into direct contact with or results from the production or use of any raw material, intermediate product, finished product, byproduct, or waste product.

Proposed permit means a State NPDES “permit” prepared after the close of the public comment period (and, when applicable, any public hearing and administrative appeals) which is sent to EPA for review before final issuance by the State. A “proposed permit” is not a “draft permit.”

Publicly owned treatment works is defined at [40 CFR 403.3](#).

Recommencing discharger means a source which recommences discharge after terminating operations.

Regional Administrator means the Regional Administrator of the appropriate Regional Office of the Environmental Protection Agency or the authorized representative of the Regional Administrator.

Schedule of compliance means a schedule of remedial measures included in a “permit”, including an enforceable sequence of interim requirements (for example, actions, operations, or milestone events) leading to compliance with the CWA and regulations.

Secondary industry category means any industry category which is not a “primary industry category.”

Secretary means the Secretary of the Army, acting through the Chief of Engineers.

Septage means the liquid and solid material pumped from a septic tank, cesspool, or similar domestic sewage treatment system, or a holding tank when the system is cleaned or maintained.

Sewage from vessels means human body wastes and the wastes from toilets and other receptacles intended to receive or retain body wastes that are discharged from vessels and regulated under [section 312](#) of CWA, except that with respect to commercial vessels on the Great Lakes this term includes graywater. For the purposes of this definition, “graywater” means galley, bath, and shower water.

Sewage Sludge means any solid, semi-solid, or liquid residue removed during the treatment of municipal waste water or domestic sewage. Sewage sludge includes, but is not limited to, solids removed during primary, secondary, or advanced waste water treatment, scum, septage, portable toilet pumpings, type III marine sanitation device pumpings (33 CFR part 159), and sewage sludge products. Sewage sludge does not include grit or screenings, or ash generated during the incineration of sewage sludge.

Sewage sludge use or disposal practice means the collection, storage, treatment, transportation, processing, monitoring, use, or disposal of sewage sludge.

Silvicultural point source is defined at [§ 122.27](#).

Site means the land or water area where any “facility or activity” is physically located or conducted, including adjacent land used in connection with the facility or activity.

Sludge-only facility means any “treatment works treating domestic sewage” whose methods of sewage sludge use or disposal are subject to regulations promulgated pursuant to section 405(d) of the CWA and is required to obtain a permit under [§ 122.1\(b\)\(2\)](#).

Standards for sewage sludge use or disposal means the regulations promulgated pursuant to section 405(d) of the CWA which govern minimum requirements for sludge quality, management practices, and monitoring and reporting applicable to sewage sludge or the use or disposal of sewage sludge by any person.

State means any of the 50 States, the District of Columbia, Guam, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, the Commonwealth of the Northern Mariana Islands, the Trust Territory of the Pacific Islands, or an Indian Tribe as defined in these regulations which meets the requirements of [§ 123.31](#) of this chapter.

State Director means the chief administrative officer of any State or interstate agency operating an “approved program,” or the delegated representative of the State Director. If responsibility is divided among two or more State or interstate agencies, “State Director” means the chief administrative officer of the State or interstate agency authorized to perform the particular procedure or function to which reference is made.

State/EPA Agreement means an agreement between the Regional Administrator and the State which coordinates EPA and State activities, responsibilities and programs including those under the CWA programs.

Storm water is defined at § 122.26(b)(13).

Storm water discharge associated with industrial activity is defined at § 122.26(b)(14).

Total dissolved solids means the total dissolved (filterable) solids as determined by use of the method specified in 40 CFR part 136.

Toxic pollutant means any pollutant listed as toxic under section 307(a)(1) or, in the case of “sludge use or disposal practices,” any pollutant identified in regulations implementing section 405(d) of the CWA.

Treatment works treating domestic sewage means a POTW or any other sewage sludge or waste water treatment devices or systems, regardless of ownership (including federal facilities), used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated for the disposal of sewage sludge. This definition does not include septic tanks or similar devices. For purposes of this definition, “domestic sewage” includes waste and waste water from humans or household operations that are discharged to or otherwise enter a treatment works. In States where there is no approved State sludge management program under section 405(f) of the CWA, the Regional Administrator may designate any person subject to the standards for sewage sludge use and disposal in 40 CFR part 503 as a “treatment works treating domestic sewage,” where he or she finds that there is a potential for adverse effects on public health and the environment from poor sludge quality or poor sludge handling, use or disposal practices, or where he or she finds that such designation is necessary to ensure that such person is in compliance with 40 CFR part 503.

TWTDS means “treatment works treating domestic sewage.”

Upset is defined at § 122.41(n).

Variance means any mechanism or provision under section 301 or 316 of CWA or under 40 CFR part 125, or in the applicable “effluent limitations guidelines” which allows modification to or waiver of the generally applicable effluent limitation requirements or time deadlines of CWA. This includes provisions which allow the establishment of alternative limitations based on fundamentally different factors or on sections 301(c), 301(g), 301(h), 301(i), or 316(a) of CWA.

Waters of the United States or waters of the U.S. means:

(1) For purposes of the Clean Water Act, 33 U.S.C. 1251 et seq. and its implementing regulations, subject to the exclusions in paragraph (2) of this definition, the term “waters of the United States” means:

(i) All waters which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;

(ii) All interstate waters, including interstate wetlands;

(iii) The territorial seas;

(iv) All impoundments of waters otherwise identified as waters of the United States under this section;

(v) All tributaries, as defined in paragraph (3)(iii) of this section, of waters identified in paragraphs (1)(i) through (iii) of this section;

(vi) All waters adjacent to a water identified in paragraphs (1)(i) through (v) of this definition, including wetlands, ponds, lakes, oxbows, impoundments, and similar waters;

(vii) All waters in paragraphs (1)(vii)(A) through (E) of this definition where they are determined, on a case-specific basis, to have a significant nexus to a water identified in paragraphs (1)(i) through (iii) of this definition. The waters identified in each of paragraphs (1)(vii)(A) through (E) of this definition are similarly situated and shall be combined, for purposes of a significant nexus analysis, in the watershed that drains to the nearest water identified in paragraphs (1)(i) through (iii) of this definition. Waters identified in this paragraph shall not be combined with waters identified in paragraph (1)(vi) of this definition when performing a significant nexus analysis. If waters identified in this paragraph are also an adjacent water under paragraph (1)(vi), they are an adjacent water and no case-specific significant nexus analysis is required.

(A) Prairie potholes. Prairie potholes are a complex of glacially formed wetlands, usually occurring in depressions that lack permanent natural outlets, located in the upper Midwest.

(B) Carolina bays and Delmarva bays. Carolina bays and Delmarva bays are ponded, depressional wetlands that occur along the Atlantic coastal plain.

(C) Pocosins. Pocosins are evergreen shrub and tree dominated wetlands found predominantly along the Central Atlantic coastal plain.

(D) Western vernal pools. Western vernal pools are seasonal wetlands located in parts of California and associated with topographic depression, soils with poor drainage, mild, wet winters and hot, dry summers.

(E) Texas coastal prairie wetlands. Texas coastal prairie wetlands are freshwater wetlands that occur as a mosaic of depressions, ridges, intermound flats, and mima mound wetlands located along the Texas Gulf Coast.

(viii) All waters located within the 100-year floodplain of a water identified in paragraphs (1)(i) through (iii) of this definition and all waters located within 4,000 feet of the high tide line or ordinary high water mark of a water identified in paragraphs (1)(i) through (v) of this definition where they are determined on a case-specific basis to have a significant nexus to a water identified in paragraphs (1)(i) through (v) of this definition. For waters determined to have a significant nexus, the entire water is a water of the United States if a portion is located within the 100-year floodplain of a water identified in (1)(i) through (iii) of this definition or within 4,000 feet of the high tide line or ordinary high water mark. Waters identified in this paragraph shall not be combined with waters identified in paragraph (1)(vi) of this definition when performing a significant nexus analysis. If waters identified in this paragraph are also an adjacent water under paragraph (1)(vi), they are an adjacent water and no case-specific significant nexus analysis is required.

(2) The following are not “waters of the United States” even where they otherwise meet the terms of paragraphs (1)(iv) through (viii) of this definition.

(i) Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of the Clean Water Act. This exclusion applies only to manmade bodies of water which neither were originally created in waters of the United States (such as disposal area in wetlands) nor resulted from the impoundment of waters of the United States. [See Note 1 of this section.]

(ii) Prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other Federal agency, for the purposes of the Clean Water Act, the final authority regarding Clean Water Act jurisdiction remains with EPA.

(iii) The following ditches:

(A) Ditches with ephemeral flow that are not a relocated tributary or excavated in a tributary.

(B) Ditches with intermittent flow that are not a relocated tributary, excavated in a tributary, or drain wetlands.

(C) Ditches that do not flow, either directly or through another water, into a water identified in paragraphs (1)(i) through (iii) of this definition.

(iv) The following features:

(A) Artificially irrigated areas that would revert to dry land should application of water to that area cease;

(B) Artificial, constructed lakes and ponds created in dry land such as farm and stock watering ponds, irrigation ponds, settling basins, fields flooded for rice growing, log cleaning ponds, or cooling ponds;

(C) Artificial reflecting pools or swimming pools created in dry land;

(D) Small ornamental waters created in dry land;

(E) Water-filled depressions created in dry land incidental to mining or construction activity, including pits excavated for obtaining fill, sand, or gravel that fill with water;

(F) Erosional features, including gullies, rills, and other ephemeral features that do not meet the definition of tributary, non-wetland swales, and lawfully constructed grassed waterways; and

(G) Puddles.

(v) Groundwater, including groundwater drained through subsurface drainage systems.

(vi) Stormwater control features constructed to convey, treat, or store stormwater that are created in dry land.

(vii) Wastewater recycling structures constructed in dry land; detention and retention basins built for wastewater recycling; groundwater recharge basins; percolation ponds built for wastewater recycling; and water distributary structures built for wastewater recycling.

(3) In this definition, the following terms apply:

(i) **Adjacent.** The term adjacent means bordering, contiguous, or neighboring a water identified in paragraphs (1)(i) through (v) of this definition, including waters separated by constructed dikes or barriers, natural river berms, beach dunes, and the like. For purposes of adjacency, an open water such as a pond or lake includes any wetlands within or abutting its ordinary high water mark. Adjacency is not limited to waters located laterally to a water identified in paragraphs (1)(i) through (v) of this definition. Adjacent waters also include all waters that connect segments of a water identified in paragraphs (1)(i) through (v) or are located at the head of a water identified in paragraphs (1)(i) through (v) of this definition and are bordering, contiguous, or neighboring such water. Waters being used for established normal farming, ranching, and silviculture activities ([33 U.S.C. 1344\(f\)](#)) are not adjacent.

(ii) **Neighboring.** The term neighboring means:

(A) All waters located within 100 feet of the ordinary high water mark of a water identified in paragraphs (1)(i) through (v) of this definition. The entire water is neighboring if a portion is located within 100 feet of the ordinary high water mark;

(B) All waters located within the 100-year floodplain of a water identified in paragraphs (1)(i) through (v) of this definition and not more than 1,500 feet from the ordinary high water mark of such water. The entire water is neighboring if a portion is located within 1,500 feet of the ordinary high water mark and within the 100-year floodplain;

(C) All waters located within 1,500 feet of the high tide line of a water identified in paragraphs (1)(i) or (iii) of this definition, and all waters within 1,500 feet of the ordinary high water mark of the Great Lakes. The entire water is neighboring if a portion is located within 1,500 feet of the high tide line or within 1,500 feet of the ordinary high water mark of the Great Lakes.

(iii) Tributary and tributaries. The terms tributary and tributaries each mean a water that contributes flow, either directly or through another water (including an impoundment identified in paragraph (1)(iv) of this definition), to a water identified in paragraphs (1)(i) through (iii) of this definition that is characterized by the presence of the physical indicators of a bed and banks and an ordinary high water mark. These physical indicators demonstrate there is volume, frequency, and duration of flow sufficient to create a bed and banks and an ordinary high water mark, and thus to qualify as a tributary. A tributary can be a natural, man-altered, or man-made water and includes waters such as rivers, streams, canals, and ditches not excluded under paragraph (2) of this definition. A water that otherwise qualifies as a tributary under this definition does not lose its status as a tributary if, for any length, there are one or more constructed breaks (such as bridges, culverts, pipes, or dams), or one or more natural breaks (such as wetlands along the run of a stream, debris piles, boulder fields, or a stream that flows underground) so long as a bed and banks and an ordinary high water mark can be identified upstream of the break. A water that otherwise qualifies as a tributary under this definition does not lose its status as a tributary if it contributes flow through a water of the United States that does not meet the definition of tributary or through a non-jurisdictional water to a water identified in paragraphs (1)(i) through (iii) of this definition.

(iv) Wetlands. The term wetlands means those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

(v) Significant nexus. The term significant nexus means that a water, including wetlands, either alone or in combination with other similarly situated waters in the region, significantly affects the chemical, physical, or biological integrity of a water identified in paragraphs (1)(i) through (iii) of this definition. The term “in the region” means the watershed that drains to the nearest water identified in paragraphs (1)(i) through (iii) of this definition. For an effect to be significant, it must be more than speculative or insubstantial. Waters are similarly situated when they function alike and are sufficiently close to function together in affecting downstream waters. For purposes of determining whether or not a water has a significant nexus, the water's effect on downstream (1)(i) through (iii) waters shall be assessed by evaluating the aquatic functions identified in paragraphs (3)(v)(A) through (I) of this definition. A water has a significant nexus when any single function or combination of functions performed by the water, alone or together with similarly situated waters in the region, contributes significantly to the chemical, physical, or biological integrity of the nearest water identified in paragraphs (1)(i) through (iii) of this definition. Functions relevant to the significant nexus evaluation are the following:

(A) Sediment trapping,

(B) Nutrient recycling,

(C) Pollutant trapping, transformation, filtering, and transport,

(D) Retention and attenuation of flood waters,

(E) Runoff storage,

(F) Contribution of flow,

(G) Export of organic matter,

(H) Export of food resources, and

(I) Provision of life cycle dependent aquatic habitat (such as foraging, feeding, nesting, breeding, spawning, or use as a nursery area) for species located in a water identified in paragraphs (1)(i) through (iii) of this definition.

(vi) Ordinary high water mark. The term ordinary high water mark means that line on the shore established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas.

(vii) High tide line. The term high tide line means the line of intersection of the land with the water's surface at the maximum height reached by a rising tide. The high tide line may be determined, in the absence of actual data, by a line of oil or scum along shore objects, a more or less continuous deposit of fine shell or debris on the foreshore or berm, other physical markings or characteristics, vegetation lines, tidal gages, or other suitable means that delineate the general height reached by a rising tide. The line encompasses spring high tides and other high tides that occur with periodic frequency but does not include storm surges in which there is a departure from the normal or predicted reach of the tide due to the piling up of water against a coast by strong winds such as those accompanying a hurricane or other intense storm.

Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA (other than cooling ponds as defined in [40 CFR § 423.11\(m\)](#) which also meet the criteria of this definition) are not waters of the United States. This exclusion applies only to manmade bodies of water which neither were originally created in waters of the United States (such as disposal area in wetlands) nor resulted from the impoundment of waters of the United States. [See Note 1 of this section.] Waters of the United States do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the Clean Water Act jurisdiction remains with EPA.

Whole effluent toxicity means the aggregate toxic effect of an effluent measured directly by a toxicity test.

Note: At [45 FR 48620](#), July 21, 1980, the Environmental Protection Agency suspended until further notice in § 122.2, the last sentence, beginning “This exclusion applies ___” in the definition of “Waters of the United States.” This revision continues that suspension.¹

Note: Section 2(a) of [Exec. Order No. 13778](#) provides: “The Administrator of the Environmental Protection Agency (Administrator) and the Assistant Secretary of the Army for Civil Works (Assistant Secretary) shall review the final rule entitled “[Clean Water Rule: Definition of ‘Waters of the United States,’](#)” [80 Fed. Reg. 37054 \(June 29, 2015\)](#), for consistency with the policy set forth in section 1 of this order and publish for notice and comment a proposed rule rescinding or revising the rule, as appropriate and consistent with law.”

ATTACHMENT A-9

Code of Federal Regulations

Title 40. Protection of Environment

Chapter I. Environmental Protection Agency (Refs & Annos)

Subchapter D. Water Programs

Part 122. EPA Administered Permit Programs: The National Pollutant Discharge Elimination System
(Refs & Annos)

Subpart A. Definitions and General Program Requirements

40 C.F.R. § 122.6

§ 122.6 Continuation of expiring permits.

Currentness

(a) EPA permits. When EPA is the permit-issuing authority, the conditions of an expired permit continue in force under 5 U.S.C. 558(c) until the effective date of a new permit (see § 124.15) if:

- (1) The permittee has submitted a timely application under § 122.21 which is a complete (under § 122.21(e)) application for a new permit; and
- (2) The Regional Administrator, through no fault of the permittee does not issue a new permit with an effective date under § 124.15 on or before the expiration date of the previous permit (for example, when issuance is impracticable due to time or resource constraints).

(b) Effect. Permits continued under this section remain fully effective and enforceable.

(c) Enforcement. When the permittee is not in compliance with the conditions of the expiring or expired permit the Regional Administrator may choose to do any or all of the following:

- (1) Initiate enforcement action based upon the permit which has been continued;
- (2) Issue a notice of intent to deny the new permit under § 124.6. If the permit is denied, the owner or operator would then be required to cease the activities authorized by the continued permit or be subject to enforcement action for operating without a permit;
- (3) Issue a new permit under part 124 with appropriate conditions; or
- (4) Take other actions authorized by these regulations.

(d) State continuation. (1) An EPA-issued permit does not continue in force beyond its expiration date under Federal law if at that time a State is the permitting authority. States authorized to administer the NPDES program may continue

either EPA or State-issued permits until the effective date of the new permits, if State law allows. Otherwise, the facility or activity is operating without a permit from the time of expiration of the old permit to the effective date of the State-issued new permit.

ATTACHMENT A-10

Code of Federal Regulations

Title 40. Protection of Environment

Chapter I. Environmental Protection Agency (Refs & Annos)

Subchapter D. Water Programs

Part 122. EPA Administered Permit Programs: The National Pollutant Discharge Elimination System
(Refs & Annos)

Subpart B. Permit Application and Special NPDES Program Requirements

40 C.F.R. § 122.21

§ 122.21 Application for a permit (applicable to State programs, see § 123.25).

Effective: February 7, 2018

Currentness

(a) Duty to apply.

(1) Any person who discharges or proposes to discharge pollutants or who owns or operates a “sludge-only facility” whose sewage sludge use or disposal practice is regulated by part 503 of this chapter, and who does not have an effective permit, except persons covered by general permits under § 122.28, excluded under § 122.3, or a user of a privately owned treatment works unless the Director requires otherwise under § 122.44(m), must submit a complete application to the Director in accordance with this section and part 124 of this chapter. The requirements for concentrated animal feeding operations are described in § 122.23(d).

(2) Application Forms:

(i) All applicants for EPA-issued permits must submit applications on EPA permit application forms. More than one application form may be required from a facility depending on the number and types of discharges or outfalls found there. Application forms may be obtained by contacting the EPA water resource center at (202) 260-7786 or Water Resource Center, U.S. EPA, Mail Code 4100, 1200 Pennsylvania Ave., NW., Washington, DC 20460 or at the EPA Internet site www.epa.gov/owm/npdes.htm. Applications for EPA-issued permits must be submitted as follows:

(A) All applicants, other than POTWs and TWTDS, must submit Form 1.

(B) Applicants for new and existing POTWs must submit the information contained in paragraph (j) of this section using Form 2A or other form provided by the director.

(C) Applicants for concentrated animal feeding operations or aquatic animal production facilities must submit Form 2B.

(D) Applicants for existing industrial facilities (including manufacturing facilities, commercial facilities, mining activities, and silvicultural activities), must submit Form 2C.

(E) Applicants for new industrial facilities that discharge process wastewater must submit Form 2D.

(F) Applicants for new and existing industrial facilities that discharge only nonprocess wastewater must submit Form 2E.

(G) Applicants for new and existing facilities whose discharge is composed entirely of storm water associated with industrial activity must submit Form 2F, unless exempted by § 122.26(c)(1)(ii). If the discharge is composed of storm water and non-storm water, the applicant must also submit, Forms 2C, 2D, and/or 2E, as appropriate (in addition to Form 2F).

(H) Applicants for new and existing TWTDS, subject to paragraph (c)(2)(i) of this section must submit the application information required by paragraph (q) of this section, using Form 2S or other form provided by the director.

(ii) The application information required by paragraph (a)(2)(i) of this section may be electronically submitted if such method of submittal is approved by EPA or the Director.

(iii) Applicants can obtain copies of these forms by contacting the Water Management Divisions (or equivalent division which contains the NPDES permitting function) of the EPA Regional Offices. The Regional Offices' addresses can be found at § 1.7 of this chapter.

(iv) Applicants for State-issued permits must use State forms which must require at a minimum the information listed in the appropriate paragraphs of this section.

(b) Who applies? When a facility or activity is owned by one person but is operated by another person, it is the operator's duty to obtain a permit.

(c) Time to apply.

(1) Any person proposing a new discharge, shall submit an application at least 180 days before the date on which the discharge is to commence, unless permission for a later date has been granted by the Director. Facilities proposing a new discharge of storm water associated with industrial activity shall submit an application 180 days before that facility commences industrial activity which may result in a discharge of storm water associated with that industrial activity. Facilities described under § 122.26(b)(14)(x) or (b)(15)(i) shall submit applications at least 90 days before the date on which construction is to commence. Different submittal dates may be required under the terms of applicable general permits. Persons proposing a new discharge are encouraged to submit their applications well in advance of the 90 or 180 day requirements to avoid delay. See also paragraph (k) of this section and § 122.26(c)(1)(i)(G) and (c)(1)(ii).

(2) Permits under section 405(f) of CWA. All TWTDS whose sewage sludge use or disposal practices are regulated by part 503 of this chapter must submit permit applications according to the applicable schedule in paragraphs (c)(2)(i) or (ii) of this section.

(i) A TWTDS with a currently effective NPDES permit must submit a permit application at the time of its next NPDES permit renewal application. Such information must be submitted in accordance with paragraph (d) of this section.

(ii) Any other TWTDS not addressed under paragraph (c)(2)(i) of this section must submit the information listed in paragraphs (c)(2)(ii)(A) through (E) of this section to the Director within 1 year after publication of a standard applicable to its sewage sludge use or disposal practice(s), using Form 2S or another form provided by the Director. The Director will determine when such TWTDS must submit a full permit application.

(A) The TWTDS's name, mailing address, location, and status as federal, State, private, public or other entity;

(B) The applicant's name, address, telephone number, and ownership status;

(C) A description of the sewage sludge use or disposal practices. Unless the sewage sludge meets the requirements of paragraph (q)(8)(iv) of this section, the description must include the name and address of any facility where sewage sludge is sent for treatment or disposal, and the location of any land application sites;

(D) Annual amount of sewage sludge generated, treated, used or disposed (estimated dry weight basis); and

(E) The most recent data the TWTDS may have on the quality of the sewage sludge.

(iii) Notwithstanding paragraphs (c)(2)(i) or (ii) of this section, the Director may require permit applications from any TWTDS at any time if the Director determines that a permit is necessary to protect public health and the environment from any potential adverse effects that may occur from toxic pollutants in sewage sludge.

(iv) Any TWTDS that commences operations after promulgation of an applicable “standard for sewage sludge use or disposal” must submit an application to the Director at least 180 days prior to the date proposed for commencing operations.

(d) Duty to reapply.

(1) Any POTW with a currently effective permit shall submit a new application at least 180 days before the expiration date of the existing permit, unless permission for a later date has been granted by the Director. (The Director shall not grant permission for applications to be submitted later than the expiration date of the existing permit.)

(2) All other permittees with currently effective permits shall submit a new application 180 days before the existing permit expires, except that:

(i) The Regional Administrator may grant permission to submit an application later than the deadline for submission otherwise applicable, but no later than the permit expiration date; and

(3) [Reserved]

(e) Completeness.

(1) The Director shall not issue a permit before receiving a complete application for a permit except for NPDES general permits. An application for a permit is complete when the Director receives an application form and any supplemental information which are completed to his or her satisfaction. The completeness of any application for a permit shall be judged independently of the status of any other permit application or permit for the same facility or activity. For EPA administered NPDES programs, an application which is reviewed under § 124.3 of this chapter is complete when the Director receives either a complete application or the information listed in a notice of deficiency.

(2) A permit application shall not be considered complete if a permitting authority has waived application requirements under paragraphs (j) or (q) of this section and EPA has disapproved the waiver application. If a waiver request has been submitted to EPA more than 210 days prior to permit expiration and EPA has not disapproved the waiver application 181 days prior to permit expiration, the permit application lacking the information subject to the waiver application shall be considered complete.

(3) Except as specified in 122.21(e)(3)(ii), a permit application shall not be considered complete unless all required quantitative data are collected in accordance with sufficiently sensitive analytical methods approved under 40 CFR part 136 or required under 40 CFR chapter I, subchapter N or O.

(i) For the purposes of this requirement, a method approved under 40 CFR part 136 or required under 40 CFR chapter I, subchapter N or O is “sufficiently sensitive” when:

(A) The method minimum level (ML) is at or below the level of the applicable water quality criterion for the measured pollutant or pollutant parameter; or

(B) The method ML is above the applicable water quality criterion, but the amount of the pollutant or pollutant parameter in a facility's discharge is high enough that the method detects and quantifies the level of the pollutant or pollutant parameter in the discharge; or

(C) The method has the lowest ML of the analytical methods approved under 40 CFR part 136 or required under 40 CFR chapter I, subchapter N or O for the measured pollutant or pollutant parameter.

Note to paragraph (e)(3)(i): Consistent with 40 CFR part 136, applicants have the option of providing matrix or sample specific minimum levels rather than the published levels. Further, where an applicant can demonstrate that, despite a good faith effort to use a method that would otherwise meet the definition of “sufficiently sensitive”, the analytical results are not consistent with the QA/QC specifications for that method, then the Director may determine that the method is not performing adequately and the applicant should select a different method from the remaining EPA–approved methods that is sufficiently sensitive consistent with 40 CFR 122.21(e)(3)(i). Where no other EPA–approved methods exist, the applicant should select a method consistent with 40 CFR 122.21(e)(3)(ii).

(ii) When there is no analytical method that has been approved under 40 CFR part 136, required under 40 CFR chapter I, subchapter N or O, and is not otherwise required by the Director, the applicant may use any suitable method but shall provide a description of the method. When selecting a suitable method, other factors such as a method's precision, accuracy, or resolution, may be considered when assessing the performance of the method.

(f) Information requirements. All applicants for NPDES permits, other than POTWs and other TWTDS, must provide the following information to the Director, using the application form provided by the Director. Additional information required of applicants is set forth in paragraphs (g) through (k) of this section.

(1) The activities conducted by the applicant which require it to obtain an NPDES permit.

(2) Name, mailing address, and location of the facility for which the application is submitted.

(3) Up to four SIC codes which best reflect the principal products or services provided by the facility.

(4) The operator's name, address, telephone number, ownership status, and status as Federal, State, private, public, or other entity.

(5) Whether the facility is located on Indian lands.

(6) A listing of all permits or construction approvals received or applied for under any of the following programs:

(i) Hazardous Waste Management program under RCRA.

(ii) UIC program under SDWA.

(iii) NPDES program under CWA.

(iv) Prevention of Significant Deterioration (PSD) program under the Clean Air Act.

(v) Nonattainment program under the Clean Air Act.

(vi) National Emission Standards for Hazardous Pollutants (NESHAPS) preconstruction approval under the Clean Air Act.

(vii) Ocean dumping permits under the Marine Protection Research and Sanctuaries Act.

(viii) Dredge or fill permits under section 404 of CWA.

(ix) Other relevant environmental permits, including State permits.

(7) A topographic map (or other map if a topographic map is unavailable) extending one mile beyond the property boundaries of the source, depicting the facility and each of its intake and discharge structures; each of its hazardous waste treatment, storage, or disposal facilities; each well where fluids from the facility are injected underground; and those wells, springs, other surface water bodies, and drinking water wells listed in public records or otherwise known to the applicant in the map area.

(8) A brief description of the nature of the business.

(g) Application requirements for existing manufacturing, commercial, mining, and silvicultural dischargers. Existing manufacturing, commercial mining, and silvicultural dischargers applying for NPDES permits, except for those facilities subject to the requirements of § 122.21(h), shall provide the following information to the Director, using application forms provided by the Director.

(1) Outfall location. The latitude and longitude to the nearest 15 seconds and the name of the receiving water.

(2) Line drawing. A line drawing of the water flow through the facility with a water balance, showing operations contributing wastewater to the effluent and treatment units. Similar processes, operations, or production areas may be indicated as a single unit, labeled to correspond to the more detailed identification under paragraph (g)(3) of this section. The water balance must show approximate average flows at intake and discharge points and between units, including treatment units. If a water balance cannot be determined (for example, for certain mining activities), the applicant may provide instead a pictorial description of the nature and amount of any sources of water and any collection and treatment measures.

(3) Average flows and treatment. A narrative identification of each type of process, operation, or production area which contributes wastewater to the effluent for each outfall, including process wastewater, cooling water, and stormwater runoff; the average flow which each process contributes; and a description of the treatment the wastewater receives, including the ultimate disposal of any solid or fluid wastes other than by discharge. Processes, operations, or production areas may be described in general terms (for example, “dye-making reactor”, “distillation tower”). For a privately owned treatment works, this information shall include the identity of each user of the treatment works. The average flow of point sources composed of storm water may be estimated. The basis for the rainfall event and the method of estimation must be indicated.

(4) Intermittent flows. If any of the discharges described in paragraph (g)(3) of this section are intermittent or seasonal, a description of the frequency, duration and flow rate of each discharge occurrence (except for stormwater runoff, spillage or leaks).

(5) Maximum production. If an effluent guideline promulgated under [section 304](#) of CWA applies to the applicant and is expressed in terms of production (or other measure of operation), a reasonable measure of the applicant's actual production reported in the units used in the applicable effluent guideline. The reported measure must reflect the actual production of the facility as required by [§ 122.45\(b\)\(2\)](#).

(6) Improvements. If the applicant is subject to any present requirements or compliance schedules for construction, upgrading or operation of waste treatment equipment, an identification of the abatement requirement, a description of the abatement project, and a listing of the required and projected final compliance dates.

(7) Effluent characteristics.

(i) Information on the discharge of pollutants specified in this paragraph (g)(7) (except information on storm water discharges which is to be provided as specified in [§ 122.26](#)). When “quantitative data” for a pollutant are required, the applicant must collect a sample of effluent and analyze it for the pollutant in accordance with analytical methods approved under Part 136 of this chapter unless use of another method is required for the pollutant under 40 CFR subchapters N or O. When no analytical method is approved under Part 136 or required under subchapters N or O, the applicant may use any suitable method but must provide a description of the method. When an applicant has two or more outfalls with substantially identical effluents, the Director may allow the applicant to test only one outfall and report that quantitative data as applying to the substantially identical outfall. The requirements in paragraphs (g)(7)(vi) and (vii) of this section state that an applicant must provide quantitative data for certain pollutants known or believed to be present do not apply to pollutants present in a discharge solely as the result of their presence in intake water; however, an applicant must report such pollutants as present. When paragraph (g) (7) of this section requires analysis of pH, temperature, cyanide, total phenols, residual chlorine, oil and grease, fecal coliform (including E. coli), and Enterococci (previously known as fecal streptococcus at [§ 122.26 \(d\)\(2\)\(iii\) \(A\)\(3\)](#)), or volatile organics, grab samples must be collected for those pollutants. For all other pollutants, a 24–hour composite sample, using a minimum of four (4) grab samples, must be used unless specified otherwise at 40 CFR Part 136. However, a minimum of one grab sample may be taken for effluents from holding ponds or other impoundments with a retention period greater than 24 hours. In addition, for discharges other than storm water discharges, the Director may waive composite sampling for any outfall for which the applicant demonstrates that the use of an automatic sampler is infeasible and that the minimum of four (4) grab samples will be a representative sample of the effluent being discharged. Results of analyses of individual grab samples for any parameter may be averaged to obtain the daily average. Grab samples that are not required to be analyzed immediately (see Table II at [40 CFR 136.3 \(e\)](#)) may be composited in the laboratory, provided that container, preservation, and holding time requirements are met (see Table II at [40 CFR 136.3 \(e\)](#)) and that sample integrity is not compromised by compositing.

(ii) Storm water discharges. For storm water discharges, all samples shall be collected from the discharge resulting from a storm event that is greater than 0.1 inch and at least 72 hours from the previously measurable (greater than 0.1 inch rainfall) storm event. Where feasible, the variance in the duration of the event and the total rainfall of the event should not exceed 50 percent from the average or median rainfall event in that area. For all applicants, a flow-weighted composite shall be taken for either the entire discharge or for the first three hours of the discharge.

The flow-weighted composite sample for a storm water discharge may be taken with a continuous sampler or as a combination of a minimum of three sample aliquots taken in each hour of discharge for the entire discharge or for the first three hours of the discharge, with each aliquot being separated by a minimum period of fifteen minutes (applicants submitting permit applications for storm water discharges under § 122.26(d) may collect flow-weighted composite samples using different protocols with respect to the time duration between the collection of sample aliquots, subject to the approval of the Director). However, a minimum of one grab sample may be taken for storm water discharges from holding ponds or other impoundments with a retention period greater than 24 hours. For a flow-weighted composite sample, only one analysis of the composite of aliquots is required. For storm water discharge samples taken from discharges associated with industrial activities, quantitative data must be reported for the grab sample taken during the first thirty minutes (or as soon thereafter as practicable) of the discharge for all pollutants specified in § 122.26(c)(1). For all storm water permit applicants taking flow-weighted composites, quantitative data must be reported for all pollutants specified in § 122.26 except pH, temperature, cyanide, total phenols, residual chlorine, oil and grease, fecal coliform, and fecal streptococcus. The Director may allow or establish appropriate site-specific sampling procedures or requirements, including sampling locations, the season in which the sampling takes place, the minimum duration between the previous measurable storm event and the storm event sampled, the minimum or maximum level of precipitation required for an appropriate storm event, the form of precipitation sampled (snow melt or rain fall), protocols for collecting samples under part 136 of this chapter, and additional time for submitting data on a case-by-case basis. An applicant is expected to “know or have reason to believe” that a pollutant is present in an effluent based on an evaluation of the expected use, production, or storage of the pollutant, or on any previous analyses for the pollutant. (For example, any pesticide manufactured by a facility may be expected to be present in contaminated storm water runoff from the facility.)

(iii) Reporting requirements. Every applicant must report quantitative data for every outfall for the following pollutants:

Biochemical Oxygen Demand (BOD5)

Chemical Oxygen Demand

Total Organic Carbon

Total Suspended Solids

Ammonia (as N)

Temperature (both winter and summer)

pH

(iv) The Director may waive the reporting requirements for individual point sources or for a particular industry category for one or more of the pollutants listed in paragraph (g)(7)(iii) of this section if the applicant has demonstrated that such a waiver is appropriate because information adequate to support issuance of a permit can be obtained with less stringent requirements.

(v) Each applicant with processes in one or more primary industry category (see appendix A of this part) contributing to a discharge must report quantitative data for the following pollutants in each outfall containing process wastewater:

(A) The organic toxic pollutants in the fractions designated in table I of appendix D of this part for the applicant's industrial category or categories unless the applicant qualifies as a small business under paragraph (g)(8) of this section. Table II of appendix D of this part lists the organic toxic pollutants in each fraction. The fractions result from the sample preparation required by the analytical procedure which uses gas chromatography/mass spectrometry. A determination that an applicant falls within a particular industrial category for the purposes of selecting fractions for testing is not conclusive as to the applicant's inclusion in that category for any other purposes. See Notes 2, 3, and 4 of this section.

(B) The pollutants listed in table III of appendix D of this part (the toxic metals, cyanide, and total phenols).

(vi)(A) Each applicant must indicate whether it knows or has reason to believe that any of the pollutants in table IV of appendix D of this part (certain conventional and nonconventional pollutants) is discharged from each outfall. If an applicable effluent limitations guideline either directly limits the pollutant or, by its express terms, indirectly limits the pollutant through limitations on an indicator, the applicant must report quantitative data. For every pollutant discharged which is not so limited in an effluent limitations guideline, the applicant must either report quantitative data or briefly describe the reasons the pollutant is expected to be discharged.

(B) Each applicant must indicate whether it knows or has reason to believe that any of the pollutants listed in table II or table III of appendix D of this part (the toxic pollutants and total phenols) for which quantitative data are not otherwise required under paragraph (g)(7)(v) of this section are discharged from each outfall. For every pollutant expected to be discharged in concentrations of 10 ppb or greater the applicant must report quantitative data. For acrolein, acrylonitrile, 2,4 dinitrophenol, and 2-methyl-4, 6 dinitrophenol, where any of these four pollutants are expected to be discharged in concentrations of 100 ppb or greater the applicant must report quantitative data. For every pollutant expected to be discharged in concentrations less than 10 ppb, or in the case of acrolein, acrylonitrile, 2,4 dinitrophenol, and 2-methyl-4, 6 dinitrophenol, in concentrations less than 100 ppb, the applicant must either submit quantitative data or briefly describe the reasons the pollutant is expected to be discharged. An applicant qualifying as a small business under paragraph (g)(8) of this section is not required to analyze for pollutants listed in table II of appendix D of this part (the organic toxic pollutants).

(vii) Each applicant must indicate whether it knows or has reason to believe that any of the pollutants in table V of appendix D of this part (certain hazardous substances and asbestos) are discharged from each outfall. For every pollutant expected to be discharged, the applicant must briefly describe the reasons the pollutant is expected to be discharged, and report any quantitative data it has for any pollutant.

(viii) Each applicant must report qualitative data, generated using a screening procedure not calibrated with analytical standards, for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD) if it:

(A) Uses or manufactures 2,4,5-trichlorophenoxy acetic acid (2,4,5,-T); 2-(2,4,5-trichlorophenoxy) propanoic acid (Silvex, 2,4,5,-TP); 2-(2,4,5-trichlorophenoxy) ethyl, 2,2-dichloropropionate (Erbon); O,O-dimethyl O-(2,4,5-trichlorophenyl) phosphorothioate (Ronnell); 2,4,5-trichlorophenol (TCP); or hexachlorophene (HCP);
or

(B) Knows or has reason to believe that TCDD is or may be present in an effluent.

(8) Small business exemption. An application which qualifies as a small business under one of the following criteria is exempt from the requirements in paragraph (g)(7)(v)(A) or (g)(7)(vi)(A) of this section to submit quantitative data for the pollutants listed in table II of appendix D of this part (the organic toxic pollutants):

(i) For coal mines, a probable total annual production of less than 100,000 tons per year.

(ii) For all other applicants, gross total annual sales averaging less than \$100,000 per year (in second quarter 1980 dollars).

(9) Used or manufactured toxics. A listing of any toxic pollutant which the applicant currently uses or manufactures as an intermediate or final product or byproduct. The Director may waive or modify this requirement for any applicant if the applicant demonstrates that it would be unduly burdensome to identify each toxic pollutant and the Director has adequate information to issue the permit.

(10) [Reserved]

(11) Biological toxicity tests. An identification of any biological toxicity tests which the applicant knows or has reason to believe have been made within the last 3 years on any of the applicant's discharges or on a receiving water in relation to a discharge.

(12) Contract analyses. If a contract laboratory or consulting firm performed any of the analyses required by paragraph (g)(7) of this section, the identity of each laboratory or firm and the analyses performed.

(13) Additional information. In addition to the information reported on the application form, applicants shall provide to the Director, at his or her request, such other information as the Director may reasonably require to assess the discharges of the facility and to determine whether to issue an NPDES permit. The additional information may include additional quantitative data and bioassays to assess the relative toxicity of discharges to aquatic life and requirements to determine the cause of the toxicity.

(h) Application requirements for manufacturing, commercial, mining and silvicultural facilities which discharge only non-process wastewater. Except for stormwater discharges, all manufacturing, commercial, mining and silvicultural dischargers applying for NPDES permits which discharge only non-process wastewater not regulated by an effluent limitations guideline or new source performance standard shall provide the following information to the Director, using application forms provided by the Director:

(1) Outfall location. Outfall number, latitude and longitude to the nearest 15 seconds, and the name of the receiving water.

(2) Discharge date (for new dischargers). Date of expected commencement of discharge.

(3) Type of waste. An identification of the general type of waste discharged, or expected to be discharged upon commencement of operations, including sanitary wastes, restaurant or cafeteria wastes, or noncontact cooling water. An identification of cooling water additives (if any) that are used or expected to be used upon commencement of operations, along with their composition if existing composition is available.

(4) Effluent characteristics.

(i) Quantitative data for the pollutants or parameters listed below, unless testing is waived by the Director. The quantitative data may be data collected over the past 365 days, if they remain representative of current operations, and must include maximum daily value, average daily value, and number of measurements taken. The applicant must collect and analyze samples in accordance with 40 CFR Part 136. When analysis of pH, temperature, residual chlorine, oil and grease, or fecal coliform (including *E. coli*), and Enterococci (previously known as fecal streptococcus) and volatile organics is required in paragraphs (h)(4)(i)(A) through (K) of this section, grab samples must be collected for those pollutants. For all other pollutants, a 24-hour composite sample, using a minimum of four (4) grab samples, must be used unless specified otherwise at 40 CFR Part 136. For a composite sample, only one analysis of the composite of aliquots is required. New dischargers must include estimates for the pollutants or parameters listed below instead of actual sampling data, along with the source of each estimate. All levels must be reported or estimated as concentration and as total mass, except for flow, pH, and temperature.

(A) Biochemical Oxygen Demand (BOD₅).

(B) Total Suspended Solids (TSS).

(C) Fecal Coliform (if believed present or if sanitary waste is or will be discharged).

(D) Total Residual Chlorine (if chlorine is used).

(E) Oil and Grease.

(F) Chemical Oxygen Demand (COD) (if non-contact cooling water is or will be discharged).

(G) Total Organic Carbon (TOC) (if non-contact cooling water is or will be discharged).

(H) Ammonia (as N).

(I) Discharge Flow.

(J) pH.

(K) Temperature (Winter and Summer).

(ii) The Director may waive the testing and reporting requirements for any of the pollutants or flow listed in paragraph (h)(4)(i) of this section if the applicant submits a request for such a waiver before or with his application which demonstrates that information adequate to support issuance of a permit can be obtained through less stringent requirements.

(iii) If the applicant is a new discharger, he must complete and submit Item IV of Form 2e (see § 122.21(h)(4)) by providing quantitative data in accordance with that section no later than two years after commencement of discharge. However, the applicant need not complete those portions of Item IV requiring tests which he has already performed and reported under the discharge monitoring requirements of his NPDES permit.

(iv) The requirements of parts i and iii of this section that an applicant must provide quantitative data or estimates of certain pollutants do not apply to pollutants present in a discharge solely as a result of their presence in intake water. However, an applicant must report such pollutants as present. Net credit may be provided for the presence of pollutants in intake water if the requirements of § 122.45(g) are met.

(5) Flow. A description of the frequency of flow and duration of any seasonal or intermittent discharge (except for stormwater runoff, leaks, or spills).

(6) Treatment system. A brief description of any system used or to be used.

(7) Optional information. Any additional information the applicant wishes to be considered, such as influent data for the purpose of obtaining “net” credits pursuant to § 122.45(g).

(8) Certification. Signature of certifying official under § 122.22.

(i) Application requirements for new and existing concentrated animal feeding operations and aquatic animal production facilities. New and existing concentrated animal feeding operations (defined in § 122.23) and concentrated aquatic animal production facilities (defined in § 122.24) shall provide the following information to the Director, using the application form provided by the Director:

(1) For concentrated animal feeding operations:

(i) The name of the owner or operator;

(ii) The facility location and mailing addresses;

(iii) Latitude and longitude of the production area (entrance to production area);

(iv) A topographic map of the geographic area in which the CAFO is located showing the specific location of the production area, in lieu of the requirements of paragraph (f)(7) of this section;

(v) Specific information about the number and type of animals, whether in open confinement or housed under roof (beef cattle, broilers, layers, swine weighing 55 pounds or more, swine weighing less than 55 pounds, mature dairy cows, dairy heifers, veal calves, sheep and lambs, horses, ducks, turkeys, other);

(vi) The type of containment and storage (anaerobic lagoon, roofed storage shed, storage ponds, underfloor pits, above ground storage tanks, below ground storage tanks, concrete pad, impervious soil pad, other) and total capacity for manure, litter, and process wastewater storage (tons/gallons);

(vii) The total number of acres under control of the applicant available for land application of manure, litter, or process wastewater;

(viii) Estimated amounts of manure, litter, and process wastewater generated per year (tons/gallons);

(ix) Estimated amounts of manure, litter and process wastewater transferred to other persons per year (tons/gallons);
and

(x) A nutrient management plan that at a minimum satisfies the requirements specified in § 122.42(e), including, for all CAFOs subject to 40 CFR part 412, subpart C or subpart D, the requirements of 40 CFR 412.4(c), as applicable.

(2) For concentrated aquatic animal production facilities:

(i) The maximum daily and average monthly flow from each outfall.

(ii) The number of ponds, raceways, and similar structures.

(iii) The name of the receiving water and the source of intake water.

(iv) For each species of aquatic animals, the total yearly and maximum harvestable weight.

(v) The calendar month of maximum feeding and the total mass of food fed during that month.

(j) Application requirements for new and existing POTWs. Unless otherwise indicated, all POTWs and other dischargers designated by the Director must provide, at a minimum, the information in this paragraph to the Director, using Form 2A or another application form provided by the Director. Permit applicants must submit all information available at the time of permit application. The information may be provided by referencing information previously submitted to the Director. The Director may waive any requirement of this paragraph if he or she has access to substantially identical

information. The Director may also waive any requirement of this paragraph that is not of material concern for a specific permit, if approved by the Regional Administrator. The waiver request to the Regional Administrator must include the State's justification for the waiver. A Regional Administrator's disapproval of a State's proposed waiver does not constitute final Agency action, but does provide notice to the State and permit applicant(s) that EPA may object to any State-issued permit issued in the absence of the required information.

(1) Basic application information. All applicants must provide the following information:

(i) Facility information. Name, mailing address, and location of the facility for which the application is submitted;

(ii) Applicant information. Name, mailing address, and telephone number of the applicant, and indication as to whether the applicant is the facility's owner, operator, or both;

(iii) Existing environmental permits. Identification of all environmental permits or construction approvals received or applied for (including dates) under any of the following programs:

(A) Hazardous Waste Management program under the Resource Conservation and Recovery Act (RCRA), Subpart C;

(B) Underground Injection Control program under the Safe Drinking Water Act (SDWA);

(C) NPDES program under Clean Water Act (CWA);

(D) Prevention of Significant Deterioration (PSD) program under the Clean Air Act;

(E) Nonattainment program under the Clean Air Act;

(F) National Emission Standards for Hazardous Air Pollutants (NESHAPS) preconstruction approval under the Clean Air Act;

(G) Ocean dumping permits under the Marine Protection Research and Sanctuaries Act;

(H) Dredge or fill permits under section 404 of the CWA; and

(I) Other relevant environmental permits, including State permits;

(iv) Population. The name and population of each municipal entity served by the facility, including unincorporated connector districts. Indicate whether each municipal entity owns or maintains the collection system and whether the collection system is separate sanitary or combined storm and sanitary, if known;

(v) Indian country. Information concerning whether the facility is located in Indian country and whether the facility discharges to a receiving stream that flows through Indian country;

(vi) Flow rate. The facility's design flow rate (the wastewater flow rate the plant was built to handle), annual average daily flow rate, and maximum daily flow rate for each of the previous 3 years;

(vii) Collection system. Identification of type(s) of collection system(s) used by the treatment works (i.e., separate sanitary sewers or combined storm and sanitary sewers) and an estimate of the percent of sewer line that each type comprises; and

(viii) Outfalls and other discharge or disposal methods. The following information for outfalls to waters of the United States and other discharge or disposal methods:

(A) For effluent discharges to waters of the United States, the total number and types of outfalls (e.g, treated effluent, combined sewer overflows, bypasses, constructed emergency overflows);

(B) For wastewater discharged to surface impoundments:

(1) The location of each surface impoundment;

(2) The average daily volume discharged to each surface impoundment; and

(3) Whether the discharge is continuous or intermittent;

(C) For wastewater applied to the land:

(1) The location of each land application site;

(2) The size of each land application site, in acres;

(3) The average daily volume applied to each land application site, in gallons per day; and

(4) Whether land application is continuous or intermittent;

(D) For effluent sent to another facility for treatment prior to discharge:

(1) The means by which the effluent is transported;

(2) The name, mailing address, contact person, and phone number of the organization transporting the discharge, if the transport is provided by a party other than the applicant;

(3) The name, mailing address, contact person, phone number, and NPDES permit number (if any) of the receiving facility; and

(4) The average daily flow rate from this facility into the receiving facility, in millions of gallons per day; and

(E) For wastewater disposed of in a manner not included in paragraphs (j)(1)(viii)(A) through (D) of this section (e.g., underground percolation, underground injection):

(1) A description of the disposal method, including the location and size of each disposal site, if applicable;

(2) The annual average daily volume disposed of by this method, in gallons per day; and

(3) Whether disposal through this method is continuous or intermittent;

(2) Additional Information. All applicants with a design flow greater than or equal to 0.1 mgd must provide the following information:

(i) Inflow and infiltration. The current average daily volume of inflow and infiltration, in gallons per day, and steps the facility is taking to minimize inflow and infiltration;

(ii) Topographic map. A topographic map (or other map if a topographic map is unavailable) extending at least one mile beyond property boundaries of the treatment plant, including all unit processes, and showing:

(A) Treatment plant area and unit processes;

(B) The major pipes or other structures through which wastewater enters the treatment plant and the pipes or other structures through which treated wastewater is discharged from the treatment plant. Include outfalls from bypass piping, if applicable;

(C) Each well where fluids from the treatment plant are injected underground;

(D) Wells, springs, and other surface water bodies listed in public records or otherwise known to the applicant within ¼ mile of the treatment works' property boundaries;

(E) Sewage sludge management facilities (including on-site treatment, storage, and disposal sites); and

(F) Location at which waste classified as hazardous under RCRA enters the treatment plant by truck, rail, or dedicated pipe;

(iii) Process flow diagram or schematic.

(A) A diagram showing the processes of the treatment plant, including all bypass piping and all backup power sources or redundancy in the system. This includes a water balance showing all treatment units, including disinfection, and showing daily average flow rates at influent and discharge points, and approximate daily flow rates between treatment units; and

(B) A narrative description of the diagram; and

(iv) Scheduled improvements, schedules of implementation. The following information regarding scheduled improvements:

(A) The outfall number of each outfall affected;

(B) A narrative description of each required improvement;

(C) Scheduled or actual dates of completion for the following:

(1) Commencement of construction;

(2) Completion of construction;

(3) Commencement of discharge; and

(4) Attainment of operational level;

(D) A description of permits and clearances concerning other Federal and/or State requirements;

(3) Information on effluent discharges. Each applicant must provide the following information for each outfall, including bypass points, through which effluent is discharged, as applicable:

(i) Description of outfall. The following information about each outfall:

(A) Outfall number;

(B) State, county, and city or town in which outfall is located;

(C) Latitude and longitude, to the nearest second;

(D) Distance from shore and depth below surface;

(E) Average daily flow rate, in million gallons per day;

(F) The following information for each outfall with a seasonal or periodic discharge:

(1) Number of times per year the discharge occurs;

(2) Duration of each discharge;

(3) Flow of each discharge; and

(4) Months in which discharge occurs; and

(G) Whether the outfall is equipped with a diffuser and the type (e.g., high-rate) of diffuser used;

(ii) Description of receiving waters. The following information (if known) for each outfall through which effluent is discharged to waters of the United States:

(A) Name of receiving water;

(B) Name of watershed/river/stream system and United States Soil Conservation Service 14-digit watershed code;

(C) Name of State Management/River Basin and United States Geological Survey 8-digit hydrologic cataloging unit code; and

(D) Critical flow of receiving stream and total hardness of receiving stream at critical low flow (if applicable);

(iii) Description of treatment. The following information describing the treatment provided for discharges from each outfall to waters of the United States:

(A) The highest level of treatment (e.g., primary, equivalent to secondary, secondary, advanced, other) that is provided for the discharge for each outfall and:

- (1) Design biochemical oxygen demand (BOD₅ or CBOD₅) removal (percent);
- (2) Design suspended solids (SS) removal (percent); and, where applicable,
- (3) Design phosphorus (P) removal (percent);
- (4) Design nitrogen (N) removal (percent); and
- (5) Any other removals that an advanced treatment system is designed to achieve.

(B) A description of the type of disinfection used, and whether the treatment plant dechlorinates (if disinfection is accomplished through chlorination);

(4) Effluent monitoring for specific parameters.

(i) As provided in paragraphs (j)(4)(ii) through (x) of this section, all applicants must submit to the Director effluent monitoring information for samples taken from each outfall through which effluent is discharged to waters of the United States, except for CSOs. The Director may allow applicants to submit sampling data for only one outfall on a case-by-case basis, where the applicant has two or more outfalls with substantially identical effluent. The Director may also allow applicants to composite samples from one or more outfalls that discharge into the same mixing zone;

(ii) All applicants must sample and analyze for the pollutants listed in appendix J, Table 1A of this part;

(iii) All applicants with a design flow greater than or equal to 0.1 mgd must sample and analyze for the pollutants listed in appendix J, Table 1 of this part. Facilities that do not use chlorine for disinfection, do not use chlorine elsewhere in the treatment process, and have no reasonable potential to discharge chlorine in their effluent may delete chlorine from Table 1;

(iv) The following applicants must sample and analyze for the pollutants listed in appendix J, Table 2 of this part, and for any other pollutants for which the State or EPA have established water quality standards applicable to the receiving waters:

(A) All POTWs with a design flow rate equal to or greater than one million gallons per day;

(B) All POTWs with approved pretreatment programs or POTWs required to develop a pretreatment program;

- (C) Other POTWs, as required by the Director;

- (v) The Director should require sampling for additional pollutants, as appropriate, on a case-by-case basis;

- (vi) Applicants must provide data from a minimum of three samples taken within four and one-half years prior to the date of the permit application. Samples must be representative of the seasonal variation in the discharge from each outfall. Existing data may be used, if available, in lieu of sampling done solely for the purpose of this application. The Director should require additional samples, as appropriate, on a case-by-case basis.

- (vii) All existing data for pollutants specified in paragraphs (j)(4)(ii) through (v) of this section that is collected within four and one-half years of the application must be included in the pollutant data summary submitted by the applicant. If, however, the applicant samples for a specific pollutant on a monthly or more frequent basis, it is only necessary, for such pollutant, to summarize all data collected within one year of the application.

- (viii) Applicants must collect samples of effluent and analyze such samples for pollutants in accordance with analytical methods approved under 40 CFR Part 136 unless an alternative is specified in the existing NPDES permit. When analysis of pH, temperature, cyanide, total phenols, residual chlorine, oil and grease, fecal coliform (including *E. coli*), or volatile organics is required in paragraphs (j)(4)(ii) through (iv) of this section, grab samples must be collected for those pollutants. For all other pollutants, 24-hour composite samples must be used. For a composite sample, only one analysis of the composite of aliquots is required.

- (ix) The effluent monitoring data provided must include at least the following information for each parameter:
 - (A) Maximum daily discharge, expressed as concentration or mass, based upon actual sample values;

 - (B) Average daily discharge for all samples, expressed as concentration or mass, and the number of samples used to obtain this value;

 - (C) The analytical method used; and

 - (D) The threshold level (i.e., method detection limit, minimum level, or other designated method endpoints) for the analytical method used.

- (x) Unless otherwise required by the Director, metals must be reported as total recoverable.

- (5) Effluent monitoring for whole effluent toxicity.

(i) All applicants must provide an identification of any whole effluent toxicity tests conducted during the four and one-half years prior to the date of the application on any of the applicant's discharges or on any receiving water near the discharge.

(ii) As provided in paragraphs (j)(5)(iii)–(ix) of this section, the following applicants must submit to the Director the results of valid whole effluent toxicity tests for acute or chronic toxicity for samples taken from each outfall through which effluent is discharged to surface waters, except for combined sewer overflows:

(A) All POTWs with design flow rates greater than or equal to one million gallons per day;

(B) All POTWs with approved pretreatment programs or POTWs required to develop a pretreatment program;

(C) Other POTWs, as required by the Director, based on consideration of the following factors:

(1) The variability of the pollutants or pollutant parameters in the POTW effluent (based on chemical-specific information, the type of treatment plant, and types of industrial contributors);

(2) The ratio of effluent flow to receiving stream flow;

(3) Existing controls on point or non-point sources, including total maximum daily load calculations for the receiving stream segment and the relative contribution of the POTW;

(4) Receiving stream characteristics, including possible or known water quality impairment, and whether the POTW discharges to a coastal water, one of the Great Lakes, or a water designated as an outstanding natural resource water; or

(5) Other considerations (including, but not limited to, the history of toxic impacts and compliance problems at the POTW) that the Director determines could cause or contribute to adverse water quality impacts.

(iii) Where the POTW has two or more outfalls with substantially identical effluent discharging to the same receiving stream segment, the Director may allow applicants to submit whole effluent toxicity data for only one outfall on a case-by-case basis. The Director may also allow applicants to composite samples from one or more outfalls that discharge into the same mixing zone.

(iv) Each applicant required to perform whole effluent toxicity testing pursuant to paragraph (j)(5)(ii) of this section must provide:

(A) Results of a minimum of four quarterly tests for a year, from the year preceding the permit application; or

- (B) Results from four tests performed at least annually in the four and one half year period prior to the application, provided the results show no appreciable toxicity using a safety factor determined by the permitting authority.
- (v) Applicants must conduct tests with multiple species (no less than two species; e.g., fish, invertebrate, plant), and test for acute or chronic toxicity, depending on the range of receiving water dilution. EPA recommends that applicants conduct acute or chronic testing based on the following dilutions:
- (A) Acute toxicity testing if the dilution of the effluent is greater than 1000:1 at the edge of the mixing zone;
 - (B) Acute or chronic toxicity testing if the dilution of the effluent is between 100:1 and 1000:1 at the edge of the mixing zone. Acute testing may be more appropriate at the higher end of this range (1000:1), and chronic testing may be more appropriate at the lower end of this range (100:1); and
 - (C) Chronic testing if the dilution of the effluent is less than 100:1 at the edge of the mixing zone.
- (vi) Each applicant required to perform whole effluent toxicity testing pursuant to paragraph (j)(5)(ii) of this section must provide the number of chronic or acute whole effluent toxicity tests that have been conducted since the last permit reissuance.
- (vii) Applicants must provide the results using the form provided by the Director, or test summaries if available and comprehensive, for each whole effluent toxicity test conducted pursuant to paragraph (j)(5)(ii) of this section for which such information has not been reported previously to the Director.
- (viii) Whole effluent toxicity testing conducted pursuant to paragraph (j)(5)(ii) of this section must be conducted using methods approved under 40 CFR part 136. West coast facilities in Washington, Oregon, California, Alaska, Hawaii, and the Pacific Territories are exempted from 40 CFR part 136 chronic methods and must use alternative guidance as directed by the permitting authority.
- (ix) For whole effluent toxicity data submitted to the Director within four and one-half years prior to the date of the application, applicants must provide the dates on which the data were submitted and a summary of the results.
- (x) Each POTW required to perform whole effluent toxicity testing pursuant to paragraph (j)(5)(ii) of this section must provide any information on the cause of toxicity and written details of any toxicity reduction evaluation conducted, if any whole effluent toxicity test conducted within the past four and one-half years revealed toxicity.
- (6) Industrial discharges. Applicants must submit the following information about industrial discharges to the POTW:
- (i) Number of significant industrial users (SIUs) and categorical industrial users (CIUs) discharging to the POTW; and

(ii) POTWs with one or more SIUs shall provide the following information for each SIU, as defined at [40 CFR 403.3\(v\)](#), that discharges to the POTW:

(A) Name and mailing address;

(B) Description of all industrial processes that affect or contribute to the SIU's discharge;

(C) Principal products and raw materials of the SIU that affect or contribute to the SIU's discharge;

(D) Average daily volume of wastewater discharged, indicating the amount attributable to process flow and non-process flow;

(E) Whether the SIU is subject to local limits;

(F) Whether the SIU is subject to categorical standards, and if so, under which category(ies) and subcategory(ies); and

(G) Whether any problems at the POTW (e.g., upsets, pass through, interference) have been attributed to the SIU in the past four and one-half years.

(iii) The information required in paragraphs (j)(6)(i) and (ii) of this section may be waived by the Director for POTWs with pretreatment programs if the applicant has submitted either of the following that contain information substantially identical to that required in paragraphs (j)(6)(i) and (ii) of this section.

(A) An annual report submitted within one year of the application; or

(B) A pretreatment program;

(7) Discharges from hazardous waste generators and from waste cleanup or remediation sites. POTWs receiving Resource Conservation and Recovery Act (RCRA), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), or RCRA Corrective Action wastes or wastes generated at another type of cleanup or remediation site must provide the following information:

(i) If the POTW receives, or has been notified that it will receive, by truck, rail, or dedicated pipe any wastes that are regulated as RCRA hazardous wastes pursuant to 40 CFR part 261, the applicant must report the following:

(A) The method by which the waste is received (i.e., whether by truck, rail, or dedicated pipe); and

(B) The hazardous waste number and amount received annually of each hazardous waste;

(ii) If the POTW receives, or has been notified that it will receive, wastewaters that originate from remedial activities, including those undertaken pursuant to CERCLA and sections 3004(u) or 3008(h) of RCRA, the applicant must report the following:

(A) The identity and description of the site(s) or facility(ies) at which the wastewater originates;

(B) The identities of the wastewater's hazardous constituents, as listed in appendix VIII of part 261 of this chapter; if known; and

(C) The extent of treatment, if any, the wastewater receives or will receive before entering the POTW;

(iii) Applicants are exempt from the requirements of paragraph (j)(7)(ii) of this section if they receive no more than fifteen kilograms per month of hazardous wastes, unless the wastes are acute hazardous wastes as specified in [40 CFR 261.30\(d\)](#) and [261.33\(e\)](#).

(8) Combined sewer overflows. Each applicant with combined sewer systems must provide the following information:

(i) Combined sewer system information. The following information regarding the combined sewer system:

(A) System map. A map indicating the location of the following:

(1) All CSO discharge points;

(2) Sensitive use areas potentially affected by CSOs (e.g., beaches, drinking water supplies, shellfish beds, sensitive aquatic ecosystems, and outstanding national resource waters); and

(3) Waters supporting threatened and endangered species potentially affected by CSOs; and

(B) System diagram. A diagram of the combined sewer collection system that includes the following information:

(1) The location of major sewer trunk lines, both combined and separate sanitary;

(2) The locations of points where separate sanitary sewers feed into the combined sewer system;

(3) In-line and off-line storage structures;

(4) The locations of flow-regulating devices; and

(5) The locations of pump stations;

(ii) Information on CSO outfalls. The following information for each CSO discharge point covered by the permit application:

(A) Description of outfall. The following information on each outfall:

(1) Outfall number;

(2) State, county, and city or town in which outfall is located;

(3) Latitude and longitude, to the nearest second; and

(4) Distance from shore and depth below surface;

(5) Whether the applicant monitored any of the following in the past year for this CSO:

(i) Rainfall;

(ii) CSO flow volume;

(iii) CSO pollutant concentrations;

(iv) Receiving water quality;

(v) CSO frequency; and

(6) The number of storm events monitored in the past year;

(B) CSO events. The following information about CSO overflows from each outfall:

(1) The number of events in the past year;

(2) The average duration per event, if available;

(3) The average volume per CSO event, if available; and

(4) The minimum rainfall that caused a CSO event, if available, in the last year;

(C) Description of receiving waters. The following information about receiving waters:

(1) Name of receiving water;

(2) Name of watershed/stream system and the United States Soil Conservation Service watershed (14-digit) code (if known); and

(3) Name of State Management/River Basin and the United States Geological Survey hydrologic cataloging unit (8-digit) code (if known); and

(D) CSO operations. A description of any known water quality impacts on the receiving water caused by the CSO (e.g., permanent or intermittent beach closings, permanent or intermittent shellfish bed closings, fish kills, fish advisories, other recreational loss, or exceedance of any applicable State water quality standard);

(iii) Public notification plan for CSO discharges to the Great Lakes Basin. Each permittee authorized to discharge a combined sewer overflow to the Great Lakes Basin as defined in § 122.2 must submit a public notification plan developed in accordance with § 122.38 as part of its permit application. The public notification plan shall describe any significant updates to the plan that may have occurred since the last plan submission.

(9) Contractors. All applicants must provide the name, mailing address, telephone number, and responsibilities of all contractors responsible for any operational or maintenance aspects of the facility; and

(10) Signature. All applications must be signed by a certifying official in compliance with § 122.22.

(k) Application requirements for new sources and new discharges. New manufacturing, commercial, mining and silvicultural dischargers applying for NPDES permits (except for new discharges of facilities subject to the requirements of paragraph (h) of this section or new discharges of storm water associated with industrial activity which are subject to the requirements of § 122.26(c)(1) and this section (except as provided by § 122.26(c)(1)(ii)) shall provide the following information to the Director, using the application forms provided by the Director:

(1) Expected outfall location. The latitude and longitude to the nearest 15 seconds and the name of the receiving water.

(2) Discharge dates. The expected date of commencement of discharge.

(3) Flows, Sources of Pollution, and Treatment Technologies.—

(i) Expected treatment of wastewater. Description of the treatment that the wastewater will receive, along with all operations contributing wastewater to the effluent, average flow contributed by each operation, and the ultimate disposal of any solid or liquid wastes not discharged.

(ii) Line drawing. A line drawing of the water flow through the facility with a water balance as described in § 122.21(g)(2).

(iii) Intermittent flows. If any of the expected discharges will be intermittent or seasonal, a description of the frequency, duration and maximum daily flow rate of each discharge occurrence (except for stormwater runoff, spillage, or leaks).

(4) Production. If a new source performance standard promulgated under [section 306](#) of CWA or an effluent limitation guideline applies to the applicant and is expressed in terms of production (or other measure of operation), a reasonable measure of the applicant's expected actual production reported in the units used in the applicable effluent guideline or new source performance standard as required by [§ 122.45\(b\)\(2\)](#) for each of the first three years. Alternative estimates may also be submitted if production is likely to vary.

(5) Effluent characteristics. The requirements in paragraphs (h)(4)(i), (ii), and (iii) of this section that an applicant must provide estimates of certain pollutants expected to be present do not apply to pollutants present in a discharge solely as a result of their presence in intake water; however, an applicant must report such pollutants as present. Net credits may be provided for the presence of pollutants in intake water if the requirements of [§ 122.45\(g\)](#) are met. All levels (except for discharge flow, temperature, and pH) must be estimated as concentration and as total mass.

(i) Each applicant must report estimated daily maximum, daily average, and source of information for each outfall for the following pollutants or parameters. The Director may waive the reporting requirements for any of these pollutants and parameters if the applicant submits a request for such a waiver before or with his application which demonstrates that information adequate to support issuance of the permit can be obtained through less stringent reporting requirements.

(A) Biochemical Oxygen Demand (BOD).

(B) Chemical Oxygen Demand (COD).

(C) Total Organic Carbon (TOC).

(D) Total Suspended Solids (TSS).

(E) Flow.

(F) Ammonia (as N).

(G) Temperature (winter and summer).

(H) pH.

(ii) Each applicant must report estimated daily maximum, daily average, and source of information for each outfall for the following pollutants, if the applicant knows or has reason to believe they will be present or if they are limited by an effluent limitation guideline or new source performance standard either directly or indirectly through limitations on an indicator pollutant: all pollutants in table IV of appendix D of part 122 (certain conventional and nonconventional pollutants).

(iii) Each applicant must report estimated daily maximum, daily average and source of information for the following pollutants if he knows or has reason to believe that they will be present in the discharges from any outfall:

(A) The pollutants listed in table III of appendix D (the toxic metals, in the discharge from any outfall: Total cyanide, and total phenols);

(B) The organic toxic pollutants in table II of appendix D (except bis (chloromethyl) ether, dichlorofluoromethane and trichlorofluoromethane). This requirement is waived for applicants with expected gross sales of less than \$100,000 per year for the next three years, and for coal mines with expected average production of less than 100,000 tons of coal per year.

(iv) The applicant is required to report that 2,3,7,8 Tetrachlorodibenzo-P-Dioxin (TCDD) may be discharged if he uses or manufactures one of the following compounds, or if he knows or has reason to believe that TCDD will or may be present in an effluent:

(A) 2,4,5-trichlorophenoxy acetic acid (2,4,5-T) (CAS #93-76-5);

(B) 2-(2,4,5-trichlorophenoxy) propanoic acid (Silvex, 2,4,5-TP) (CAS #93-72-1);

(C) 2-(2,4,5-trichlorophenoxy) ethyl 2,2-dichloropropionate (Erbon) (CAS #136-25-4);

(D) 0,0-dimethyl 0-(2,4,5-trichlorophenyl) phosphorothioate (Ronnel) (CAS #299-84-3);

(E) 2,4,5-trichlorophenol (TCP) (CAS #95-95-4); or

(F) Hexachlorophene (HCP) (CAS #70-30-4);

(v) Each applicant must report any pollutants listed in table V of appendix D (certain hazardous substances) if he believes they will be present in any outfall (no quantitative estimates are required unless they are already available).

(vi) No later than two years after the commencement of discharge from the proposed facility, the applicant is required to complete and submit Items V and VI of NPDES application Form 2c (see § 122.21(g)). However, the applicant need not complete those portions of Item V requiring tests which he has already performed and reported under the discharge monitoring requirements of his NPDES permit.

(6) Engineering Report. Each applicant must report the existence of any technical evaluation concerning his wastewater treatment, along with the name and location of similar plants of which he has knowledge.

(7) Other information. Any optional information the permittee wishes to have considered.

(8) Certification. Signature of certifying official under [§ 122.22](#).

(I) Special provisions for applications from new sources.

(1) The owner or operator of any facility which may be a new source (as defined in [§ 122.2](#)) and which is located in a State without an approved NPDES program must comply with the provisions of this paragraph (I)(1).

(2)(i) Before beginning any on-site construction as defined in [§ 122.29](#), the owner or operator of any facility which may be a new source must submit information to the Regional Administrator so that he or she can determine if the facility is a new source. The Regional Administrator may request any additional information needed to determine whether the facility is a new source.

(ii) The Regional Administrator shall make an initial determination whether the facility is a new source within 30 days of receiving all necessary information under paragraph (I)(2)(i) of this section.

(3) The Regional Administrator shall issue a public notice in accordance with [§ 124.10](#) of this chapter of the new source determination under paragraph (I)(2) of this section. If the Regional Administrator has determined that the facility is a new source, the notice shall state that the applicant must comply with the environmental review requirements of [40 CFR 6.600](#) through [6.607](#).

(4) Any interested party may challenge the Regional Administrator's initial new source determination by requesting review of the determination under [§ 124.19](#) of this chapter within 30 days of the public notice of the initial determination. If all interested parties agree, the Environmental Appeals Board may defer review until after a final permit decision is made, and consolidate review of the determination with any review of the permit decision.

(m) Variance requests by non-POTWs. A discharger which is not a publicly owned treatment works (POTW) may request a variance from otherwise applicable effluent limitations under any of the following statutory or regulatory provisions within the times specified in this paragraph:

(1) Fundamentally different factors.

(i) A request for a variance based on the presence of “fundamentally different factors” from those on which the effluent limitations guideline was based shall be filed as follows:

(A) For a request from best practicable control technology currently available (BPT), by the close of the public comment period under § 124.10.

(B) For a request from best available technology economically achievable (BAT) and/or best conventional pollutant control technology (BCT), by no later than:

(1) July 3, 1989, for a request based on an effluent limitation guideline promulgated before February 4, 1987, to the extent July 3, 1989 is not later than that provided under previously promulgated regulations; or

(2) 180 days after the date on which an effluent limitation guideline is published in the Federal Register for a request based on an effluent limitation guideline promulgated on or after February 4, 1987.

(ii) The request shall explain how the requirements of the applicable regulatory and/or statutory criteria have been met.

(2) Non-conventional pollutants. A request for a variance from the BAT requirements for CWA [section 301\(b\)\(2\)\(F\)](#) pollutants (commonly called “non-conventional” pollutants) pursuant to [section 301\(c\)](#) of CWA because of the economic capability of the owner or operator, or pursuant to [section 301\(g\)](#) of the CWA (provided however that a [§ 301\(g\)](#) variance may only be requested for ammonia; chlorine; color; iron; total phenols (4AAP) (when determined by the Administrator to be a pollutant covered by [section 301\(b\)\(2\)\(F\)](#)) and any other pollutant which the Administrator lists under [section 301\(g\)\(4\)](#) of the CWA) must be made as follows:

(i) For those requests for a variance from an effluent limitation based upon an effluent limitation guideline by:

(A) Submitting an initial request to the Regional Administrator, as well as to the State Director if applicable, stating the name of the discharger, the permit number, the outfall number(s), the applicable effluent guideline, and whether the discharger is requesting a [section 301\(c\)](#) or [section 301\(g\)](#) modification or both. This request must have been filed not later than:

(1) September 25, 1978, for a pollutant which is controlled by a BAT effluent limitation guideline promulgated before December 27, 1977; or

(2) 270 days after promulgation of an applicable effluent limitation guideline for guidelines promulgated after December 27, 1977; and

(B) Submitting a completed request no later than the close of the public comment period under § 124.10 demonstrating that the requirements of § 124.13 and the applicable requirements of part 125 have been met. Notwithstanding this provision, the complete application for a request under section 301(g) shall be filed 180 days before EPA must make a decision (unless the Regional Division Director establishes a shorter or longer period).

(ii) For those requests for a variance from effluent limitations not based on effluent limitation guidelines, the request need only comply with paragraph (m)(2)(i)(B) of this section and need not be preceded by an initial request under paragraph (m)(2)(i)(A) of this section.

(3) [Reserved]

(4) [Reserved]

(5) Water quality related effluent limitations. A modification under section 302(b)(2) of requirements under section 302(a) for achieving water quality related effluent limitations may be requested no later than the close of the public comment period under § 124.10 on the permit from which the modification is sought.

(6) Thermal discharges. A variance under CWA section 316(a) for the thermal component of any discharge must be filed with a timely application for a permit under this section, except that if thermal effluent limitations are established under CWA section 402(a)(1) or are based on water quality standards the request for a variance may be filed by the close of the public comment period under § 124.10. A copy of the request as required under 40 CFR part 125, subpart H, shall be sent simultaneously to the appropriate State or interstate certifying agency as required under 40 CFR part 125. (See § 124.65 for special procedures for section 316(a) thermal variances.)

(n) Variance requests by POTWs. A discharger which is a publicly owned treatment works (POTW) may request a variance from otherwise applicable effluent limitations under any of the following statutory provisions as specified in this paragraph:

(1) Discharges into marine waters. A request for a modification under CWA section 301(h) of requirements of CWA section 301(b)(1)(B) for discharges into marine waters must be filed in accordance with the requirements of 40 CFR part 125, subpart G.

(2) [Reserved]

(3) Water quality based effluent limitation. A modification under CWA section 302(b)(2) of the requirements under section 302(a) for achieving water quality based effluent limitations shall be requested no later than the close of the public comment period under § 124.10 on the permit from which the modification is sought.

(o) Expedited variance procedures and time extensions.

(1) Notwithstanding the time requirements in paragraphs (m) and (n) of this section, the Director may notify a permit applicant before a draft permit is issued under § 124.6 that the draft permit will likely contain limitations which are eligible for variances. In the notice the Director may require the applicant as a condition of consideration of any potential variance request to submit a request explaining how the requirements of part 125 applicable to the variance have been met and may require its submission within a specified reasonable time after receipt of the notice. The notice may be sent before the permit application has been submitted. The draft or final permit may contain the alternative limitations which may become effective upon final grant of the variance.

(2) A discharger who cannot file a timely complete request required under paragraph (m)(2)(i)(B) or (m)(2)(ii) of this section may request an extension. The extension may be granted or denied at the discretion of the Director. Extensions shall be no more than 6 months in duration.

(p) Recordkeeping. Except for information required by paragraph (d)(3)(ii) of this section, which shall be retained for a period of at least five years from the date the application is signed (or longer as required by 40 CFR part 503), applicants shall keep records of all data used to complete permit applications and any supplemental information submitted under this section for a period of at least 3 years from the date the application is signed.

(q) Sewage sludge management. All TWTDS subject to paragraph (c)(2)(i) of this section must provide the information in this paragraph to the Director, using Form 2S or another application form approved by the Director. New applicants must submit all information available at the time of permit application. The information may be provided by referencing information previously submitted to the Director. The Director may waive any requirement of this paragraph if he or she has access to substantially identical information. The Director may also waive any requirement of this paragraph that is not of material concern for a specific permit, if approved by the Regional Administrator. The waiver request to the Regional Administrator must include the State's justification for the waiver. A Regional Administrator's disapproval of a State's proposed waiver does not constitute final Agency action, but does provide notice to the State and permit applicant(s) that EPA may object to any State-issued permit issued in the absence of the required information.

(1) Facility information. All applicants must submit the following information:

(i) The name, mailing address, and location of the TWTDS for which the application is submitted;

(ii) Whether the facility is a Class I Sludge Management Facility;

(iii) The design flow rate (in million gallons per day);

(iv) The total population served; and

(v) The TWTDS's status as Federal, State, private, public, or other entity;

(2) Applicant information. All applicants must submit the following information:

(i) The name, mailing address, and telephone number of the applicant; and

(ii) Indication whether the applicant is the owner, operator, or both;

(3) Permit information. All applicants must submit the facility's NPDES permit number, if applicable, and a listing of all other Federal, State, and local permits or construction approvals received or applied for under any of the following programs:

(i) Hazardous Waste Management program under the Resource Conservation and Recovery Act (RCRA);

(ii) UIC program under the Safe Drinking Water Act (SDWA);

(iii) NPDES program under the Clean Water Act (CWA);

(iv) Prevention of Significant Deterioration (PSD) program under the Clean Air Act;

(v) Nonattainment program under the Clean Air Act;

(vi) National Emission Standards for Hazardous Air Pollutants (NESHAPS) preconstruction approval under the Clean Air Act;

(vii) Dredge or fill permits under section 404 of CWA;

(viii) Other relevant environmental permits, including State or local permits;

(4) Indian country. All applicants must identify any generation, treatment, storage, land application, or disposal of sewage sludge that occurs in Indian country;

(5) Topographic map. All applicants must submit a topographic map (or other map if a topographic map is unavailable) extending one mile beyond property boundaries of the facility and showing the following information:

(i) All sewage sludge management facilities, including on-site treatment, storage, and disposal sites; and

(ii) Wells, springs, and other surface water bodies that are within $\frac{1}{4}$ mile of the property boundaries and listed in public records or otherwise known to the applicant;

(6) Sewage sludge handling. All applicants must submit a line drawing and/or a narrative description that identifies all sewage sludge management practices employed during the term of the permit, including all units used for collecting, dewatering, storing, or treating sewage sludge, the destination(s) of all liquids and solids leaving each such unit, and all processes used for pathogen reduction and vector attraction reduction;

(7) Sewage sludge quality. The applicant must submit sewage sludge monitoring data for the pollutants for which limits in sewage sludge have been established in 40 CFR part 503 for the applicant's use or disposal practices on the date of permit application.

(i) The Director may require sampling for additional pollutants, as appropriate, on a case-by-case basis;

(ii) Applicants must provide data from a minimum of three samples taken within four and one-half years prior to the date of the permit application. Samples must be representative of the sewage sludge and should be taken at least one month apart. Existing data may be used in lieu of sampling done solely for the purpose of this application;

(iii) Applicants must collect and analyze samples in accordance with analytical methods approved under SW-846 unless an alternative has been specified in an existing sewage sludge permit;

(iv) The monitoring data provided must include at least the following information for each parameter:

(A) Average monthly concentration for all samples (mg/kg dry weight), based upon actual sample values;

(B) The analytical method used; and

(C) The method detection level.

(8) Preparation of sewage sludge. If the applicant is a “person who prepares” sewage sludge, as defined at [40 CFR 503.9\(r\)](#), the applicant must provide the following information:

(i) If the applicant's facility generates sewage sludge, the total dry metric tons per 365-day period generated at the facility;

(ii) If the applicant's facility receives sewage sludge from another facility, the following information for each facility from which sewage sludge is received:

(A) The name, mailing address, and location of the other facility;

(B) The total dry metric tons per 365-day period received from the other facility; and

(C) A description of any treatment processes occurring at the other facility, including blending activities and treatment to reduce pathogens or vector attraction characteristics;

(iii) If the applicant's facility changes the quality of sewage sludge through blending, treatment, or other activities, the following information:

(A) Whether the Class A pathogen reduction requirements in [40 CFR 503.32\(a\)](#) or the Class B pathogen reduction requirements in [40 CFR 503.32\(b\)](#) are met, and a description of any treatment processes used to reduce pathogens in sewage sludge;

(B) Whether any of the vector attraction reduction options of [40 CFR 503.33\(b\)\(1\)](#) through [\(b\)\(8\)](#) are met, and a description of any treatment processes used to reduce vector attraction properties in sewage sludge; and

(C) A description of any other blending, treatment, or other activities that change the quality of sewage sludge;

(iv) If sewage sludge from the applicant's facility meets the ceiling concentrations in [40 CFR 503.13\(b\)\(1\)](#), the pollutant concentrations in [§ 503.13\(b\)\(3\)](#), the Class A pathogen requirements in [§ 503.32\(a\)](#), and one of the vector attraction reduction requirements in [§ 503.33\(b\)\(1\)](#) through [\(b\)\(8\)](#), and if the sewage sludge is applied to the land, the applicant must provide the total dry metric tons per 365-day period of sewage sludge subject to this paragraph that is applied to the land;

(v) If sewage sludge from the applicant's facility is sold or given away in a bag or other container for application to the land, and the sewage sludge is not subject to paragraph (q)(8)(iv) of this section, the applicant must provide the following information:

(A) The total dry metric tons per 365-day period of sewage sludge subject to this paragraph that is sold or given away in a bag or other container for application to the land; and

(B) A copy of all labels or notices that accompany the sewage sludge being sold or given away;

(vi) If sewage sludge from the applicant's facility is provided to another "person who prepares," as defined at [40 CFR 503.9\(r\)](#), and the sewage sludge is not subject to paragraph (q)(8)(iv) of this section, the applicant must provide the following information for each facility receiving the sewage sludge:

(A) The name and mailing address of the receiving facility;

(B) The total dry metric tons per 365-day period of sewage sludge subject to this paragraph that the applicant provides to the receiving facility;

(C) A description of any treatment processes occurring at the receiving facility, including blending activities and treatment to reduce pathogens or vector attraction characteristic;

(D) A copy of the notice and necessary information that the applicant is required to provide the receiving facility under [40 CFR 503.12\(g\)](#); and

(E) If the receiving facility places sewage sludge in bags or containers for sale or give-away to application to the land, a copy of any labels or notices that accompany the sewage sludge;

(9) Land application of bulk sewage sludge. If sewage sludge from the applicant's facility is applied to the land in bulk form, and is not subject to paragraphs (q)(8)(iv), (v), or (vi) of this section, the applicant must provide the following information:

(i) The total dry metric tons per 365-day period of sewage sludge subject to this paragraph that is applied to the land;

(ii) If any land application sites are located in States other than the State where the sewage sludge is prepared, a description of how the applicant will notify the permitting authority for the State(s) where the land application sites are located;

(iii) The following information for each land application site that has been identified at the time of permit application:

(A) The name (if any), and location for the land application site;

(B) The site's latitude and longitude to the nearest second, and method of determination;

(C) A topographic map (or other map if a topographic map is unavailable) that shows the site's location;

(D) The name, mailing address, and telephone number of the site owner, if different from the applicant;

(E) The name, mailing address, and telephone number of the person who applies sewage sludge to the site, if different from the applicant;

(F) Whether the site is agricultural land, forest, a public contact site, or a reclamation site, as such site types are defined under [40 CFR 503.11](#);

(G) The type of vegetation grown on the site, if known, and the nitrogen requirement for this vegetation;

(H) Whether either of the vector attraction reduction options of [40 CFR 503.33\(b\)\(9\)](#) or [\(b\)\(10\)](#) is met at the site, and a description of any procedures employed at the time of use to reduce vector attraction properties in sewage sludge; and

(I) Other information that describes how the site will be managed, as specified by the permitting authority.

(iv) The following information for each land application site that has been identified at the time of permit application, if the applicant intends to apply bulk sewage sludge subject to the cumulative pollutant loading rates in [40 CFR 503.13\(b\)\(2\)](#) to the site:

(A) Whether the applicant has contacted the permitting authority in the State where the bulk sewage sludge subject to [§ 503.13\(b\)\(2\)](#) will be applied, to ascertain whether bulk sewage sludge subject to [§ 503.13\(b\)\(2\)](#) has been applied to the site on or since July 20, 1993, and if so, the name of the permitting authority and the name and phone number of a contact person at the permitting authority;

(B) Identification of facilities other than the applicant's facility that have sent, or are sending, sewage sludge subject to the cumulative pollutant loading rates in [§ 503.13\(b\)\(2\)](#) to the site since July 20, 1993, if, based on the inquiry in paragraph (q)(iv)(A), bulk sewage sludge subject to cumulative pollutant loading rates in [§ 503.13\(b\)\(2\)](#) has been applied to the site since July 20, 1993;

(v) If not all land application sites have been identified at the time of permit application, the applicant must submit a land application plan that, at a minimum:

(A) Describes the geographical area covered by the plan;

(B) Identifies the site selection criteria;

(C) Describes how the site(s) will be managed;

(D) Provides for advance notice to the permit authority of specific land application sites and reasonable time for the permit authority to object prior to land application of the sewage sludge; and

(E) Provides for advance public notice of land application sites in the manner prescribed by State and local law. When State or local law does not require advance public notice, it must be provided in a manner reasonably calculated to apprise the general public of the planned land application.

(10) Surface disposal. If sewage sludge from the applicant's facility is placed on a surface disposal site, the applicant must provide the following information:

(i) The total dry metric tons of sewage sludge from the applicant's facility that is placed on surface disposal sites per 365-day period;

(ii) The following information for each surface disposal site receiving sewage sludge from the applicant's facility that the applicant does not own or operate:

(A) The site name or number, contact person, mailing address, and telephone number for the surface disposal site; and

(B) The total dry metric tons from the applicant's facility per 365-day period placed on the surface disposal site;

(iii) The following information for each active sewage sludge unit at each surface disposal site that the applicant owns or operates:

(A) The name or number and the location of the active sewage sludge unit;

(B) The unit's latitude and longitude to the nearest second, and method of determination;

(C) If not already provided, a topographic map (or other map if a topographic map is unavailable) that shows the unit's location;

(D) The total dry metric tons placed on the active sewage sludge unit per 365-day period;

(E) The total dry metric tons placed on the active sewage sludge unit over the life of the unit;

(F) A description of any liner for the active sewage sludge unit, including whether it has a maximum permeability of 1×10^{-7} cm/sec;

(G) A description of any leachate collection system for the active sewage sludge unit, including the method used for leachate disposal, and any Federal, State, and local permit number(s) for leachate disposal;

(H) If the active sewage sludge unit is less than 150 meters from the property line of the surface disposal site, the actual distance from the unit boundary to the site property line;

(I) The remaining capacity (dry metric tons) for the active sewage sludge unit;

(J) The date on which the active sewage sludge unit is expected to close, if such a date has been identified;

(K) The following information for any other facility that sends sewage sludge to the active sewage sludge unit:

(1) The name, contact person, and mailing address of the facility; and

(2) Available information regarding the quality of the sewage sludge received from the facility, including any treatment at the facility to reduce pathogens or vector attraction characteristics;

(L) Whether any of the vector attraction reduction options of 40 CFR 503.33(b)(9) through (b)(11) is met at the active sewage sludge unit, and a description of any procedures employed at the time of disposal to reduce vector attraction properties in sewage sludge;

(M) The following information, as applicable to any ground-water monitoring occurring at the active sewage sludge unit:

(1) A description of any ground-water monitoring occurring at the active sewage sludge unit;

(2) Any available ground-water monitoring data, with a description of the well locations and approximate depth to ground water;

(3) A copy of any ground-water monitoring plan that has been prepared for the active sewage sludge unit;

(4) A copy of any certification that has been obtained from a qualified ground-water scientist that the aquifer has not been contaminated; and

(N) If site-specific pollutant limits are being sought for the sewage sludge placed on this active sewage sludge unit, information to support such a request;

(11) Incineration. If sewage sludge from the applicant's facility is fired in a sewage sludge incinerator, the applicant must provide the following information:

(i) The total dry metric tons of sewage sludge from the applicant's facility that is fired in sewage sludge incinerators per 365-day period;

(ii) The following information for each sewage sludge incinerator firing the applicant's sewage sludge that the applicant does not own or operate:

(A) The name and/or number, contact person, mailing address, and telephone number of the sewage sludge incinerator; and

(B) The total dry metric tons from the applicant's facility per 365-day period fired in the sewage sludge incinerator;

(iii) The following information for each sewage sludge incinerator that the applicant owns or operates:

(A) The name and/or number and the location of the sewage sludge incinerator;

(B) The incinerator's latitude and longitude to the nearest second, and method of determination;

(C) The total dry metric tons per 365-day period fired in the sewage sludge incinerator;

(D) Information, test data, and documentation of ongoing operating parameters indicating that compliance with the National Emission Standard for Beryllium in 40 CFR part 61 will be achieved;

(E) Information, test data, and documentation of ongoing operating parameters indicating that compliance with the National Emission Standard for Mercury in 40 CFR part 61 will be achieved;

(F) The dispersion factor for the sewage sludge incinerator, as well as modeling results and supporting documentation;

(G) The control efficiency for parameters regulated in [40 CFR 503.43](#), as well as performance test results and supporting documentation;

(H) Information used to calculate the risk specific concentration (RSC) for chromium, including the results of incinerator stack tests for hexavalent and total chromium concentrations, if the applicant is requesting a chromium limit based on a site-specific RSC value;

(I) Whether the applicant monitors total hydrocarbons (THC) or Carbon Monoxide (CO) in the exit gas for the sewage sludge incinerator;

(J) The type of sewage sludge incinerator;

(K) The maximum performance test combustion temperature, as obtained during the performance test of the sewage sludge incinerator to determine pollutant control efficiencies;

(L) The following information on the sewage sludge feed rate used during the performance test:

(1) Sewage sludge feed rate in dry metric tons per day;

(2) Identification of whether the feed rate submitted is average use or maximum design; and

(3) A description of how the feed rate was calculated;

(M) The incinerator stack height in meters for each stack, including identification of whether actual or creditable stack height was used;

(N) The operating parameters for the sewage sludge incinerator air pollution control device(s), as obtained during the performance test of the sewage sludge incinerator to determine pollutant control efficiencies;

(O) Identification of the monitoring equipment in place, including (but not limited to) equipment to monitor the following:

(1) Total hydrocarbons or Carbon Monoxide;

(2) Percent oxygen;

(3) Percent moisture; and

(4) Combustion temperature; and

(P) A list of all air pollution control equipment used with this sewage sludge incinerator;

(12) Disposal in a municipal solid waste landfill. If sewage sludge from the applicant's facility is sent to a municipal solid waste landfill (MSWLF), the applicant must provide the following information for each MSWLF to which sewage sludge is sent:

(i) The name, contact person, mailing address, location, and all applicable permit numbers of the MSWLF;

(ii) The total dry metric tons per 365-day period sent from this facility to the MSWLF;

(iii) A determination of whether the sewage sludge meets applicable requirements for disposal of sewage sludge in a MSWLF, including the results of the paint filter liquids test and any additional requirements that apply on a site-specific basis; and

(iv) Information, if known, indicating whether the MSWLF complies with criteria set forth in 40 CFR part 258;

(13) Contractors. All applicants must provide the name, mailing address, telephone number, and responsibilities of all contractors responsible for any operational or maintenance aspects of the facility related to sewage sludge generation, treatment, use, or disposal;

(14) Other information. At the request of the permitting authority, the applicant must provide any other information necessary to determine the appropriate standards for permitting under 40 CFR part 503, and must provide any other information necessary to assess the sewage sludge use and disposal practices, determine whether to issue a permit, or identify appropriate permit requirements; and

(15) Signature. All applications must be signed by a certifying official in compliance with § 122.22.

(r) Applications for facilities with cooling water intake structures—

(1)(i) New facilities with new or modified cooling water intake structures. New facilities (other than offshore oil and gas extraction facilities) with cooling water intake structures as defined in part 125, subpart I of this chapter, must submit to the Director for review the information required under paragraphs (r)(2) (except (r)(2)(iv)), (3), and (4) (except (r)(4)(ix), (x), (xi), and (xii)) of this section and § 125.86 of this chapter as part of the permit application. New offshore oil and gas extraction facilities with cooling water intake structures as defined in part 125, subpart N, of this chapter that are fixed facilities must submit to the Director for review the information required under paragraphs (r)(2) (except (r)(2)(iv)), (3), and (4) (except (r)(4)(ix), (x), (xi), and (xii)) of this section and § 125.136 of this chapter as part of their permit application.

(ii) Existing facilities.

(A) All existing facilities. The owner or operator of an existing facility defined at 40 CFR 125.92(k) must submit to the Director for review the information required under paragraphs (r)(2) and (3) of this section and applicable provisions of paragraphs (r)(4), (5), (6), (7), and (8) of this section.

(B) Existing facilities greater than 125 mgd AIF. In addition, the owner or operator of an existing facility that withdraws greater than 125 mgd actual intake flow (AIF), as defined at 40 CFR 125.92 (a), of water for cooling purposes must also submit to the Director for review the information required under paragraphs (r)(9), (10), (11), (12), and (13) of this section. If the owner or operator of an existing facility intends to comply with the BTA (best technology available) standards for entrainment using a closed-cycle recirculating system as defined at 40 CFR 125.92(c), the Director may reduce or waive some or all of the information required under paragraphs (r)(9) through (13) of this section.

(C) Additional information. The owner or operator of an existing facility must also submit such additional information as the Director determines is necessary pursuant to 40 CFR 125.98(i).

(D) New units at existing facilities. The owner or operator of a new unit at an existing facility, as defined at 40 CFR 125.92(u), must submit or update any information previously provided to the Director by submitting the information required under paragraphs (r)(2), (3), (5), (8), and (14) of this section and applicable provisions of

paragraphs (r)(4), (6), and (7) of this section. Requests for and approvals of alternative requirements sought under [40 CFR 125.94\(e\)\(2\)](#) or [125.98\(b\)\(7\)](#) must be submitted with the permit application.

(E) New units at existing facilities not previously subject to Part 125. The owner or operator of a new unit as defined at [40 CFR 125.92\(u\)](#) at an existing facility not previously subject to part 125 of this chapter that increases the total capacity of the existing facility to more than 2 mgd DIF must submit the information required under paragraphs (r)(2), (3), (5), and (8) of this section and applicable provisions of paragraphs (r)(4), (6), and (7) of this section at the time of the permit application for the new unit. Requests for alternative requirements under [40 CFR 125.94\(e\)\(2\)](#) or [125.98\(b\)\(7\)](#) must be submitted with the permit application. If the total capacity of the facility will increase to more than 125 mgd AIF, the owner or operator must also submit the information required in paragraphs (r)(9) through (13) of this section. If the owner or operator of an existing facility intends to comply with the BTA (best technology available) standards for entrainment using a closed-cycle recirculating system as defined at [40 CFR 125.92\(e\)](#), the Director may reduce or waive some or all of the information required under paragraphs (r)(9) through (13) of this section.

(F) If the owner or operator of an existing facility plans to retire the facility before the current permit expires, then the requirements of paragraphs (r)(1)(ii)(A), (B), (C), (D), and (E) of this section do not apply.

(G) If the owner or operator of an existing facility plans to retire the facility after the current permit expires but within one permit cycle, then the Director may waive the requirements of paragraphs (r)(7), (9), (10), (11), (12), and (13) of this section pending a signed certification statement from the owner or operator of the facility specifying the last operating date of the facility.

(H) All facilities. The owner or operator of any existing facility or new unit at any existing facility must also submit with its permit application all information received as a result of any communication with a Field Office of the Fish and Wildlife Service and/or Regional Office of the National Marine Fisheries Service.

(2) Source water physical data. These include:

(i) A narrative description and scaled drawings showing the physical configuration of all source water bodies used by your facility, including areal dimensions, depths, salinity and temperature regimes, and other documentation that supports your determination of the water body type where each cooling water intake structure is located;

(ii) Identification and characterization of the source waterbody's hydrological and geomorphological features, as well as the methods you used to conduct any physical studies to determine your intake's area of influence within the waterbody and the results of such studies;

(iii) Locational maps; and

(iv) For new offshore oil and gas facilities that are not fixed facilities, a narrative description and/or locational maps providing information on predicted locations within the waterbody during the permit term in sufficient detail for the Director to determine the appropriateness of additional impingement requirements under [§ 125.134\(b\)\(4\)](#).

(3) Cooling water intake structure data. These include:

(i) A narrative description of the configuration of each of your cooling water intake structures and where it is located in the water body and in the water column;

(ii) Latitude and longitude in degrees, minutes, and seconds for each of your cooling water intake structures;

(iii) A narrative description of the operation of each of your cooling water intake structures, including design intake flows, daily hours of operation, number of days of the year in operation and seasonal changes, if applicable;

(iv) A flow distribution and water balance diagram that includes all sources of water to the facility, recirculating flows, and discharges; and

(v) Engineering drawings of the cooling water intake structure.

(4) Source water baseline biological characterization data. This information is required to characterize the biological community in the vicinity of the cooling water intake structure and to characterize the operation of the cooling water intake structures. The Director may also use this information in subsequent permit renewal proceedings to determine if your Design and Construction Technology Plan as required in § 125.86(b)(4) or § 125.136(b)(3) of this chapter should be revised. This supporting information must include existing data (if they are available). However, you may supplement the data using newly conducted field studies if you choose to do so. The information you submit must include:

(i) A list of the data in paragraphs (r)(4)(ii) through (vi) of this section that are not available and efforts made to identify sources of the data;

(ii) A list of species (or relevant taxa) for all life stages and their relative abundance in the vicinity of the cooling water intake structure;

(iii) Identification of the species and life stages that would be most susceptible to impingement and entrainment. Species evaluated should include the forage base as well as those most important in terms of significance to commercial and recreational fisheries;

(iv) Identification and evaluation of the primary period of reproduction, larval recruitment, and period of peak abundance for relevant taxa;

(v) Data representative of the seasonal and daily activities (e.g., feeding and water column migration) of biological organisms in the vicinity of the cooling water intake structure;

(vi) Identification of all threatened, endangered, and other protected species that might be susceptible to impingement and entrainment at your cooling water intake structures;

(vii) Documentation of any public participation or consultation with Federal or State agencies undertaken in development of the plan; and

(viii) If you supplement the information requested in paragraph (r)(4)(i) of this section with data collected using field studies, supporting documentation for the Source Water Baseline Biological Characterization must include a description of all methods and quality assurance procedures for sampling, and data analysis including a description of the study area; taxonomic identification of sampled and evaluated biological assemblages (including all life stages of fish and shellfish); and sampling and data analysis methods. The sampling and/or data analysis methods you use must be appropriate for a quantitative survey and based on consideration of methods used in other biological studies performed within the same source water body. The study area should include, at a minimum, the area of influence of the cooling water intake structure.

(ix) In the case of the owner or operator of an existing facility or new unit at an existing facility, the Source Water Baseline Biological Characterization Data is the information in paragraphs (r)(4)(i) through (xii) of this section.

(x) For the owner or operator of an existing facility, identification of protective measures and stabilization activities that have been implemented, and a description of how these measures and activities affected the baseline water condition in the vicinity of the intake.

(xi) For the owner or operator of an existing facility, a list of fragile species, as defined at [40 CFR 125.92\(m\)](#), at the facility. The applicant need only identify those species not already identified as fragile at [40 CFR 125.92\(m\)](#). New units at an existing facility are not required to resubmit this information if the cooling water withdrawals for the operation of the new unit are from an existing intake.

(xii) For the owner or operator of an existing facility that has obtained incidental take exemption or authorization for its cooling water intake structure(s) from the U.S. Fish and Wildlife Service or the National Marine Fisheries Service, any information submitted in order to obtain that exemption or authorization may be used to satisfy the permit application information requirement of paragraph [40 CFR 125.95\(f\)](#) if included in the application.

(5) Cooling Water System Data. The owner or operator of an existing facility must submit the following information for each cooling water intake structure used or intended to be used:

(i) A narrative description of the operation of the cooling water system and its relationship to cooling water intake structures; the proportion of the design intake flow that is used in the system; the number of days of the year the cooling water system is in operation and seasonal changes in the operation of the system, if applicable; the proportion of design intake flow for contact cooling, non-contact cooling, and process uses; a distribution of water reuse to include cooling water reused as process water, process water reused for cooling, and the use of gray water for cooling; a description of reductions in total water withdrawals including cooling water intake flow reductions already achieved through minimized process water withdrawals; a description of any cooling water that is used in

a manufacturing process either before or after it is used for cooling, including other recycled process water flows; the proportion of the source waterbody withdrawn (on a monthly basis);

(ii) Design and engineering calculations prepared by a qualified professional and supporting data to support the description required by paragraph (r)(5)(i) of this section; and

(iii) Description of existing impingement and entrainment technologies or operational measures and a summary of their performance, including but not limited to reductions in impingement mortality and entrainment due to intake location and reductions in total water withdrawals and usage.

(6) Chosen Method(s) of Compliance with Impingement Mortality Standard. The owner or operator of the facility must identify the chosen compliance method for the entire facility; alternatively, the applicant must identify the chosen compliance method for each cooling water intake structure at its facility. The applicant must identify any intake structure for which a BTA determination for Impingement Mortality under [40 CFR 125.94 \(c\)\(11\) or \(12\)](#) is requested. In addition, the owner or operator that chooses to comply via [40 CFR 125.94 \(c\)\(5\) or \(6\)](#) must also submit an impingement technology performance optimization study as described below:

(i) If the applicant chooses to comply with [40 CFR 125.94\(c\)\(5\)](#), subject to the flexibility for timing provided in [40 CFR 125.95\(a\)\(2\)](#), the impingement technology performance optimization study must include two years of biological data collection measuring the reduction in impingement mortality achieved by the modified traveling screens as defined at [40 CFR 125.92\(s\)](#) and demonstrating that the operation has been optimized to minimize impingement mortality. A complete description of the modified traveling screens and associated equipment must be included, including, for example, type of mesh, mesh slot size, pressure sprays and fish return mechanisms. A description of any biological data collection and data collection approach used in measuring impingement mortality must be included:

(A) Collecting data no less frequently than monthly. The Director may establish more frequent data collection;

(B) Biological data collection representative of the impingement and the impingement mortality at the intakes subject to this provision;

(C) A taxonomic identification to the lowest taxon possible of all organisms collected;

(D) The method in which naturally moribund organisms are identified and taken into account;

(E) The method in which mortality due to holding times is taken into account;

(F) If the facility entraps fish or shellfish, a count of entrapment, as defined at [40 CFR 125.92\(j\)](#), as impingement mortality; and

(G) The percent impingement mortality reflecting optimized operation of the modified traveling screen and all supporting calculations.

(ii) If the applicant chooses to comply with [40 CFR 125.94\(c\)\(6\)](#), the impingement technology performance optimization study must include biological data measuring the reduction in impingement mortality achieved by operation of the system of technologies, operational measures and best management practices, and demonstrating that operation of the system has been optimized to minimize impingement mortality. This system of technologies, operational measures and best management practices may include flow reductions, seasonal operation, unit closure, credit for intake location, and behavioral deterrent systems. The applicant must document how each system element contributes to the system's performance. The applicant must include a minimum of two years of biological data measuring the reduction in impingement mortality achieved by the system. The applicant must also include a description of any sampling or data collection approach used in measuring the rate of impingement, impingement mortality, or flow reductions.

(A) **Rate of Impingement.** If the demonstration relies in part on a credit for reductions in the rate of impingement in the system, the applicant must provide an estimate of those reductions to be used as credit towards reducing impingement mortality, and any relevant supporting documentation, including previously collected biological data, performance reviews, and previously conducted performance studies not already submitted to the Director. The submission of studies more than 10 years old must include an explanation of why the data are still relevant and representative of conditions at the facility and explain how the data should be interpreted using the definitions of impingement and entrapment at [40 CFR 125.92\(n\)](#) and [\(j\)](#), respectively. The estimated reductions in rate of impingement must be based on a comparison of the system to a once-through cooling system with a traveling screen whose point of withdrawal from the surface water source is located at the shoreline of the source waterbody. For impoundments that are waters of the United States in whole or in part, the facility's rate of impingement must be measured at a location within the cooling water intake system that the Director deems appropriate. In addition, the applicant must include two years of biological data collection demonstrating the rate of impingement resulting from the system. For this demonstration, the applicant must collect data no less frequently than monthly. The Director may establish more frequent data collection.

(B) **Impingement Mortality.** If the demonstration relies in part on a credit for reductions in impingement mortality already obtained at the facility, the applicant must include two years of biological data collection demonstrating the level of impingement mortality the system is capable of achieving. The applicant must submit any relevant supporting documentation, including previously collected biological data, performance reviews, and previously conducted performance studies not already submitted to the Director. The applicant must provide a description of any sampling or data collection approach used in measuring impingement mortality. In addition, for this demonstration the applicant must:

(1) Collect data no less frequently than monthly. The Director may establish more frequent data collection;

(2) Conduct biological data collection that is representative of the impingement and the impingement mortality at an intake subject to this provision. In addition, the applicant must describe how the location of the cooling water intake structure in the waterbody and the water column are accounted for in the points of data collection;

- (3) Include a taxonomic identification to the lowest taxon possible of all organisms to be collected;
- (4) Describe the method in which naturally moribund organisms are identified and taken into account;
- (5) Describe the method in which mortality due to holding times is taken into account; and
- (6) If the facility entraps fish or shellfish, a count of the entrapment, as defined at [40 CFR 125.92\(j\)](#), as impingement mortality.

(C) Flow reduction. If the demonstration relies in part on flow reduction to reduce impingement, the applicant must include two years of intake flows, measured daily, as part of the demonstration, and describe the extent to which flow reductions are seasonal or intermittent. The applicant must document how the flow reduction results in reduced impingement. In addition, the applicant must describe how the reduction in impingement has reduced impingement mortality.

(D) Total system performance. The applicant must document the percent impingement mortality reflecting optimized operation of the total system of technologies, operational measures, and best management practices and all supporting calculations. The total system performance is the combination of the impingement mortality performance reflected in paragraphs (r)(6)(ii)(A), (B), and (C) of this section.

(7) Entrainment Performance Studies. The owner or operator of an existing facility must submit any previously conducted studies or studies obtained from other facilities addressing technology efficacy, through-facility entrainment survival, and other entrainment studies. Any such submittals must include a description of each study, together with underlying data, and a summary of any conclusions or results. Any studies conducted at other locations must include an explanation as to why the data from other locations are relevant and representative of conditions at your facility. In the case of studies more than 10 years old, the applicant must explain why the data are still relevant and representative of conditions at the facility and explain how the data should be interpreted using the definition of entrainment at [40 CFR 125.92\(h\)](#).

(8) Operational Status. The owner or operator of an existing facility must submit a description of the operational status of each generating, production, or process unit that uses cooling water, including but not limited to:

(i) For power production or steam generation, descriptions of individual unit operating status including age of each unit, capacity utilization rate (or equivalent) for the previous 5 years, including any extended or unusual outages that significantly affect current data for flow, impingement, entrainment, or other factors, including identification of any operating unit with a capacity utilization rate of less than 8 percent averaged over a 24-month block contiguous period, and any major upgrades completed within the last 15 years, including but not limited to boiler replacement, condenser replacement, turbine replacement, or changes to fuel type;

(ii) Descriptions of completed, approved, or scheduled uprates and Nuclear Regulatory Commission relicensing status of each unit at nuclear facilities;

(iii) For process units at your facility that use cooling water other than for power production or steam generation, if you intend to use reductions in flow or changes in operations to meet the requirements of 40 CFR 125.94(c), descriptions of individual production processes and product lines, operating status including age of each line, seasonal operation, including any extended or unusual outages that significantly affect current data for flow, impingement, entrainment, or other factors, any major upgrades completed within the last 15 years, and plans or schedules for decommissioning or replacement of process units or production processes and product lines;

(iv) For all manufacturing facilities, descriptions of current and future production schedules; and

(v) Descriptions of plans or schedules for any new units planned within the next 5 years.

(9) Entrainment Characterization Study. The owner or operator of an existing facility that withdraws greater than 125 mgd AIF, where the withdrawal of cooling water is measured at a location within the cooling water intake structure that the Director deems appropriate, must develop for submission to the Director an Entrainment Characterization Study that includes a minimum of two years of entrainment data collection. The Entrainment Characterization Study must include the following components:

(i) Entrainment Data Collection Method. The study should identify and document the data collection period and frequency. The study should identify and document organisms collected to the lowest taxon possible of all life stages of fish and shellfish that are in the vicinity of the cooling water intake structure(s) and are susceptible to entrainment, including any organisms identified by the Director, and any species protected under Federal, State, or Tribal law, including threatened or endangered species with a habitat range that includes waters in the vicinity of the cooling water intake structure. Biological data collection must be representative of the entrainment at the intakes subject to this provision. The owner or operator of the facility must identify and document how the location of the cooling water intake structure in the waterbody and the water column are accounted for by the data collection locations;

(ii) Biological Entrainment Characterization. Characterization of all life stages of fish, shellfish, and any species protected under Federal, State, or Tribal law (including threatened or endangered species), including a description of their abundance and their temporal and spatial characteristics in the vicinity of the cooling water intake structure(s), based on sufficient data to characterize annual, seasonal, and diel variations in entrainment, including but not limited to variations related to climate and weather differences, spawning, feeding, and water column migration. This characterization may include historical data that are representative of the current operation of the facility and of biological conditions at the site. Identification of all life stages of fish and shellfish must include identification of any surrogate species used, and identification of data representing both motile and non-motile life-stages of organisms;

(iii) Analysis and Supporting Documentation. Documentation of the current entrainment of all life stages of fish, shellfish, and any species protected under Federal, State, or Tribal law (including threatened or endangered species). The documentation may include historical data that are representative of the current operation of the facility and of biological conditions at the site. Entrainment data to support the facility's calculations must be collected during periods of representative operational flows for the cooling water intake structure, and the flows associated with the data collection must be documented. The method used to determine latent mortality along with data for specific organism mortality or survival that is applied to other life-stages or species must be identified. The owner or operator of the facility must identify and document all assumptions and calculations used to determine the total entrainment

for that facility together with all methods and quality assurance/quality control procedures for data collection and data analysis. The proposed data collection and data analysis methods must be appropriate for a quantitative survey.

(10) Comprehensive Technical Feasibility and Cost Evaluation Study. The owner or operator of an existing facility that withdraws greater than 125 mgd AIF must develop for submission to the Director an engineering study of the technical feasibility and incremental costs of candidate entrainment control technologies. In addition, the study must include the following:

(i) Technical feasibility. An evaluation of the technical feasibility of closed-cycle recirculating systems as defined at [40 CFR 125.92\(c\)](#), fine mesh screens with a mesh size of 2 millimeters or smaller, and water reuse or alternate sources of cooling water. In addition, this study must include:

(A) A description of all technologies and operational measures considered (including alternative designs of closed-cycle recirculating systems such as natural draft cooling towers, mechanical draft cooling towers, hybrid designs, and compact or multi-cell arrangements);

(B) A discussion of land availability, including an evaluation of adjacent land and acres potentially available due to generating unit retirements, production unit retirements, other buildings and equipment retirements, and potential for repurposing of areas devoted to ponds, coal piles, rail yards, transmission yards, and parking lots;

(C) A discussion of available sources of process water, grey water, waste water, reclaimed water, or other waters of appropriate quantity and quality for use as some or all of the cooling water needs of the facility; and

(D) Documentation of factors other than cost that may make a candidate technology impractical or infeasible for further evaluation.

(ii) Other entrainment control technologies. An evaluation of additional technologies for reducing entrainment may be required by the Director.

(iii) Cost evaluations. The study must include engineering cost estimates of all technologies considered in paragraphs (r)(10)(i) and (ii) of this section. Facility costs must also be adjusted to estimate social costs. All costs must be presented as the net present value (NPV) and the corresponding annual value. Costs must be clearly labeled as compliance costs or social costs. The applicant must separately discuss facility level compliance costs and social costs, and provide documentation as follows:

(A) Compliance costs are calculated as after-tax, while social costs are calculated as pre-tax. Compliance costs include the facility's administrative costs, including costs of permit application, while the social cost adjustment includes the Director's administrative costs. Any outages, downtime, or other impacts to facility net revenue, are included in compliance costs, while only that portion of lost net revenue that does not accrue to other producers can be included in social costs. Social costs must also be discounted using social discount rates of 3 percent and 7 percent. Assumptions regarding depreciation schedules, tax rates, interest rates, discount rates and related assumptions must be identified;

(B) Costs and explanation of any additional facility modifications necessary to support construction and operation of technologies considered in paragraphs (r)(10)(i) and (ii) of this section, including but not limited to relocation of existing buildings or equipment, reinforcement or upgrading of existing equipment, and additional construction and operating permits. Assumptions regarding depreciation schedules, interest rates, discount rates, useful life of the technology considered, and any related assumptions must be identified; and

(C) Costs and explanation for addressing any non-water quality environmental and other impacts identified in paragraph (r)(12) of this section. The cost evaluation must include a discussion of all reasonable attempts to mitigate each of these impacts.

(11) **Benefits Valuation Study.** The owner or operator of an existing facility that withdraws greater than 125 mgd AIF must develop for submission to the Director an evaluation of the benefits of the candidate entrainment reduction technologies and operational measures evaluated in paragraph (r)(10) of this section including using the Entrainment Characterization Study completed in paragraph (r)(9) of this section. Each category of benefits must be described narratively, and when possible, benefits should be quantified in physical or biological units and monetized using appropriate economic valuation methods. The benefits valuation study must include, but is not limited to, the following elements:

(i) Incremental changes in the numbers of individual fish and shellfish lost due to impingement mortality and entrainment as defined in [40 CFR 125.92](#), for all life stages of each exposed species;

(ii) Description of basis for any estimates of changes in the stock sizes or harvest levels of commercial and recreational fish or shellfish species or forage fish species;

(iii) Description of basis for any monetized values assigned to changes in the stock size or harvest levels of commercial and recreational fish or shellfish species, forage fish, and to any other ecosystem or non use benefits;

(iv) A discussion of mitigation efforts completed prior to October 14, 2014 including how long they have been in effect and how effective they have been;

(v) Discussion, with quantification and monetization, where possible, of any other benefits expected to accrue to the environment and local communities, including but not limited to improvements for mammals, birds, and other organisms and aquatic habitats;

(vi) Discussion, with quantification and monetization, where possible, of any benefits expected to result from any reductions in thermal discharges from entrainment technologies.

(12) **Non-water Quality Environmental and Other Impacts Study.** The owner or operator of an existing facility that withdraws greater than 125 mgd AIF must develop for submission to the Director a detailed facility-specific discussion of the changes in non-water quality environmental and other impacts attributed to each technology and operational measure considered in paragraph (r)(10) of this section, including both impacts increased and impacts decreased. The study must include the following:

- (i) Estimates of changes to energy consumption, including but not limited to auxiliary power consumption and turbine backpressure energy penalty;
- (ii) Estimates of air pollutant emissions and of the human health and environmental impacts associated with such emissions;
- (iii) Estimates of changes in noise;
- (iv) A discussion of impacts to safety, including documentation of the potential for plumes, icing, and availability of emergency cooling water;
- (v) A discussion of facility reliability, including but not limited to facility availability, production of steam, impacts to production based on process unit heating or cooling, and reliability due to cooling water availability;
- (vi) Significant changes in consumption of water, including a facility-specific comparison of the evaporative losses of both once-through cooling and closed-cycle recirculating systems, and documentation of impacts attributable to changes in water consumption; and
- (vii) A discussion of all reasonable attempts to mitigate each of these factors.

(13) Peer Review. If the applicant is required to submit studies under paragraphs (r)(10) through (12) of this section, the applicant must conduct an external peer review of each report to be submitted with the permit application. The applicant must select peer reviewers and notify the Director in advance of the peer review. The Director may disapprove of a peer reviewer or require additional peer reviewers. The Director may confer with EPA, Federal, State and Tribal fish and wildlife management agencies with responsibility for fish and wildlife potentially affected by the cooling water intake structure, independent system operators, and state public utility regulatory agencies, to determine which peer review comments must be addressed. The applicant must provide an explanation for any significant reviewer comments not accepted. Peer reviewers must have appropriate qualifications and their names and credentials must be included in the peer review report.

(14) New Units. The applicant must identify the chosen compliance method for the new unit. In addition, the owner or operator that selects the BTA standards for new units at [40 CFR 125.94 \(e\)\(2\)](#) as its route to compliance must submit information to demonstrate entrainment reductions equivalent to 90 percent or greater of the reduction that could be achieved through compliance with [40 CFR 125.94\(e\)\(1\)](#). The demonstration must include the Entrainment Characterization Study at paragraph (r)(9) of this section. In addition, if data specific to your facility indicates that compliance with the requirements of [§ 125.94](#) of this chapter for each new unit would result in compliance costs wholly out of proportion to the costs EPA considered in establishing the requirements at issue, or would result in significant adverse impacts on local air quality, significant adverse impacts on local water resources other than impingement or entrainment, or significant adverse impacts on local energy markets, you must submit all supporting data as part of paragraph (r)(14) of this section. The Director may determine that additional data and information, including but not limited to monitoring, must be included as part of paragraph (r)(14) of this section.

Code of Federal Regulations

Title 40. Protection of Environment

Chapter I. Environmental Protection Agency (Refs & Annos)

Subchapter D. Water Programs

Part 122. EPA Administered Permit Programs: The National Pollutant Discharge Elimination System
(Refs & Annos)

Subpart B. Permit Application and Special NPDES Program Requirements

40 C.F.R. § 122.22

§ 122.22 Signatories to permit applications and reports (applicable to State programs, see § 123.25).

Effective: December 21, 2015

Currentness

(a) Applications. All permit applications shall be signed as follows:

(1) For a corporation. By a responsible corporate officer. For the purpose of this section, a responsible corporate officer means: (i) A president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation, or (ii) the manager of one or more manufacturing, production, or operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

Note: EPA does not require specific assignments or delegations of authority to responsible corporate officers identified in § 122.22(a)(1)(i). The Agency will presume that these responsible corporate officers have the requisite authority to sign permit applications unless the corporation has notified the Director to the contrary. Corporate procedures governing authority to sign permit applications may provide for assignment or delegation to applicable corporate positions under § 122.22(a)(1)(ii) rather than to specific individuals.

(2) For a partnership or sole proprietorship. By a general partner or the proprietor, respectively; or

(3) For a municipality, State, Federal, or other public agency. By either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes: (i) The chief executive officer of the agency, or (ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of EPA).

(b) All reports required by permits, and other information requested by the Director shall be signed by a person described in paragraph (a) of this section, or by a duly authorized representative of that person. A person is a duly authorized representative only if:

(1) The authorization is made in writing by a person described in paragraph (a) of this section;

(2) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity such as the position of plant manager, operator of a well or a well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position.) and,

(3) The written authorization is submitted to the Director.

(c) Changes to authorization. If an authorization under paragraph (b) of this section is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of paragraph (b) of this section must be submitted to the Director prior to or together with any reports, information, or applications to be signed by an authorized representative.

(d) Certification. Any person signing a document under paragraph (a) or (b) of this section shall make the following certification:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

(e) Electronic reporting. If documents described in paragraph (a) or (b) of this section are submitted electronically by or on behalf of the NPDES-regulated facility, any person providing the electronic signature for such documents shall meet all relevant requirements of this section, and shall ensure that all of the relevant requirements of 40 CFR part 3 (including, in all cases, subpart D to part 3) (Cross-Media Electronic Reporting) and 40 CFR part 127 (NPDES Electronic Reporting Requirements) are met for that submission.

[Subpart B. Permit Application and Special NPDES Program Requirements](#)

40 C.F.R. § 122.26

§ 122.26 Storm water discharges (applicable to State NPDES programs, see § 123.25).

Effective: December 21, 2015

[Currentness](#)

<For statute(s) affecting validity, see: The Clean Water Act, [33 USCA § 1251 et seq.](#)>

(a) Permit requirement.

(1) Prior to October 1, 1994, discharges composed entirely of storm water shall not be required to obtain a NPDES permit except:

(i) A discharge with respect to which a permit has been issued prior to February 4, 1987;

(ii) A discharge associated with industrial activity (see § 122.26(a)(4));

(iii) A discharge from a large municipal separate storm sewer system;

(iv) A discharge from a medium municipal separate storm sewer system;

(v) A discharge which the Director, or in States with approved NPDES programs, either the Director or the EPA Regional Administrator, determines to contribute to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States. This designation may include a discharge from any conveyance or system of conveyances used for collecting and conveying storm water runoff or a system of discharges from municipal separate storm sewers, except for those discharges from conveyances which do not require a permit under paragraph (a)(2) of this section or agricultural storm water runoff which is exempted from the definition of point source at [§ 122.2](#).

The Director may designate discharges from municipal separate storm sewers on a system-wide or jurisdiction-wide basis. In making this determination the Director may consider the following factors:

- (A) The location of the discharge with respect to waters of the United States as defined at [40 CFR 122.2](#).
- (B) The size of the discharge;
- (C) The quantity and nature of the pollutants discharged to waters of the United States; and
- (D) Other relevant factors.

(2) The Director may not require a permit for discharges of storm water runoff from the following:

(i) Mining operations composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and which are not contaminated by contact with or that have not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations, except in accordance with paragraph (c)(1)(iv) of this section.

(ii) All field activities or operations associated with oil and gas exploration, production, processing, or treatment operations or transmission facilities, including activities necessary to prepare a site for drilling and for the movement and placement of drilling equipment, whether or not such field activities or operations may be considered to be construction activities, except in accordance with paragraph (c)(1)(iii) of this section. Discharges of sediment from construction activities associated with oil and gas exploration, production, processing, or treatment operations or transmission facilities are not subject to the provisions of paragraph (c)(1)(iii)(C) of this section.

Note to paragraph (a)(2)(ii): EPA encourages operators of oil and gas field activities or operations to implement and maintain Best Management Practices (BMPs) to minimize discharges of pollutants, including sediment, in storm water both during and after construction activities to help ensure protection of surface water quality during storm events. Appropriate controls would be those suitable to the site conditions and consistent with generally accepted engineering design criteria and manufacturer specifications. Selection of BMPs could also be affected by seasonal or climate conditions.

(3) Large and medium municipal separate storm sewer systems.

(i) Permits must be obtained for all discharges from large and medium municipal separate storm sewer systems.

(ii) The Director may either issue one system-wide permit covering all discharges from municipal separate storm sewers within a large or medium municipal storm sewer system or issue distinct permits for appropriate categories of discharges within a large or medium municipal separate storm sewer system including, but not limited to: all discharges owned or operated by the same municipality; located within the same jurisdiction; all discharges within a system that discharge to the same watershed; discharges within a system that are similar in nature; or for individual discharges from municipal separate storm sewers within the system.

(iii) The operator of a discharge from a municipal separate storm sewer which is part of a large or medium municipal separate storm sewer system must either:

(A) Participate in a permit application (to be a permittee or a co-permittee) with one or more other operators of discharges from the large or medium municipal storm sewer system which covers all, or a portion of all, discharges from the municipal separate storm sewer system;

(B) Submit a distinct permit application which only covers discharges from the municipal separate storm sewers for which the operator is responsible; or

(C) A regional authority may be responsible for submitting a permit application under the following guidelines:

(1) The regional authority together with co-applicants shall have authority over a storm water management program that is in existence, or shall be in existence at the time part 1 of the application is due;

(2) The permit applicant or co-applicants shall establish their ability to make a timely submission of part 1 and part 2 of the municipal application;

(3) Each of the operators of municipal separate storm sewers within the systems described in paragraphs (b)(4)(i), (ii), and (iii) or (b)(7)(i), (ii), and (iii) of this section, that are under the purview of the designated regional authority, shall comply with the application requirements of paragraph (d) of this section.

(iv) One permit application may be submitted for all or a portion of all municipal separate storm sewers within adjacent or interconnected large or medium municipal separate storm sewer systems. The Director may issue one system-wide permit covering all, or a portion of all municipal separate storm sewers in adjacent or interconnected large or medium municipal separate storm sewer systems.

(v) Permits for all or a portion of all discharges from large or medium municipal separate storm sewer systems that are issued on a system-wide, jurisdiction-wide, watershed or other basis may specify different conditions relating to different discharges covered by the permit, including different management programs for different drainage areas which contribute storm water to the system.

(vi) Co-permittees need only comply with permit conditions relating to discharges from the municipal separate storm sewers for which they are operators.

(4) Discharges through large and medium municipal separate storm sewer systems. In addition to meeting the requirements of paragraph (c) of this section, an operator of a storm water discharge associated with industrial activity which discharges through a large or medium municipal separate storm sewer system shall submit, to the operator of the municipal separate storm sewer system receiving the discharge no later than May 15, 1991, or 180 days prior to commencing such discharge: the name of the facility; a contact person and phone number; the

location of the discharge; a description, including Standard Industrial Classification, which best reflects the principal products or services provided by each facility; and any existing NPDES permit number.

(5) Other municipal separate storm sewers. The Director may issue permits for municipal separate storm sewers that are designated under paragraph (a)(1)(v) of this section on a system-wide basis, jurisdiction-wide basis, watershed basis or other appropriate basis, or may issue permits for individual discharges.

(6) Non-municipal separate storm sewers. For storm water discharges associated with industrial activity from point sources which discharge through a non-municipal or non-publicly owned separate storm sewer system, the Director, in his discretion, may issue: a single NPDES permit, with each discharger a co-permittee to a permit issued to the operator of the portion of the system that discharges into waters of the United States; or, individual permits to each discharger of storm water associated with industrial activity through the non-municipal conveyance system.

(i) All storm water discharges associated with industrial activity that discharge through a storm water discharge system that is not a municipal separate storm sewer must be covered by an individual permit, or a permit issued to the operator of the portion of the system that discharges to waters of the United States, with each discharger to the non-municipal conveyance a co-permittee to that permit.

(ii) Where there is more than one operator of a single system of such conveyances, all operators of storm water discharges associated with industrial activity must submit applications.

(iii) Any permit covering more than one operator shall identify the effluent limitations, or other permit conditions, if any, that apply to each operator.

(7) Combined sewer systems. Conveyances that discharge storm water runoff combined with municipal sewage are point sources that must obtain NPDES permits in accordance with the procedures of § 122.21 and are not subject to the provisions of this section.

(8) Whether a discharge from a municipal separate storm sewer is or is not subject to regulation under this section shall have no bearing on whether the owner or operator of the discharge is eligible for funding under title II, title III or title VI of the Clean Water Act. See 40 CFR part 35, subpart I, appendix A(b)H.2.j.

(9)(i) On and after October 1, 1994, for discharges composed entirely of storm water, that are not required by paragraph (a)(1) of this section to obtain a permit, operators shall be required to obtain a NPDES permit only if:

(A) The discharge is from a small MS4 required to be regulated pursuant to § 122.32;

(B) The discharge is a storm water discharge associated with small construction activity pursuant to paragraph (b)(15) of this section;

(C) The Director, or in States with approved NPDES programs either the Director or the EPA Regional Administrator, determines that storm water controls are needed for the discharge based on wasteload allocations that are part of “total maximum daily loads” (TMDLs) that address the pollutant(s) of concern; or

(D) The Director, or in States with approved NPDES programs either the Director or the EPA Regional Administrator, determines that the discharge, or category of discharges within a geographic area, contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(ii) Operators of small MS4s designated pursuant to paragraphs (a)(9)(i)(A), (a)(9)(i)(C), and (a)(9)(i)(D) of this section shall seek coverage under an NPDES permit in accordance with §§ 122.33 through 122.35. Operators of non-municipal sources designated pursuant to paragraphs (a)(9)(i)(B), (a)(9)(i)(C), and (a)(9)(i)(D) of this section shall seek coverage under an NPDES permit in accordance with paragraph (c)(1) of this section.

(iii) Operators of storm water discharges designated pursuant to paragraphs (a)(9)(i)(C) and (a)(9)(i)(D) of this section shall apply to the Director for a permit within 180 days of receipt of notice, unless permission for a later date is granted by the Director (see § 124.52(c) of this chapter).

(b) Definitions.

(1) Co-permittee means a permittee to a NPDES permit that is only responsible for permit conditions relating to the discharge for which it is operator.

(2) Illicit discharge means any discharge to a municipal separate storm sewer that is not composed entirely of storm water except discharges pursuant to a NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer) and discharges resulting from fire fighting activities.

(3) Incorporated place means the District of Columbia, or a city, town, township, or village that is incorporated under the laws of the State in which it is located.

(4) Large municipal separate storm sewer system means all municipal separate storm sewers that are either:

(i) Located in an incorporated place with a population of 250,000 or more as determined by the 1990 Decennial Census by the Bureau of the Census (Appendix F of this part); or

(ii) Located in the counties listed in appendix H, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or

(iii) Owned or operated by a municipality other than those described in paragraph (b)(4)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal

separate storm sewers described under paragraph (b)(4)(i) or (ii) of this section. In making this determination the Director may consider the following factors:

(A) Physical interconnections between the municipal separate storm sewers;

(B) The location of discharges from the designated municipal separate storm sewer relative to discharges from municipal separate storm sewers described in paragraph (b)(4)(i) of this section;

(C) The quantity and nature of pollutants discharged to waters of the United States;

(D) The nature of the receiving waters; and

(E) Other relevant factors; or

(iv) The Director may, upon petition, designate as a large municipal separate storm sewer system, municipal separate storm sewers located within the boundaries of a region defined by a storm water management regional authority based on a jurisdictional, watershed, or other appropriate basis that includes one or more of the systems described in paragraph (b)(4)(i), (ii), (iii) of this section.

(5) Major municipal separate storm sewer outfall (or “major outfall”) means a municipal separate storm sewer outfall that discharges from a single pipe with an inside diameter of 36 inches or more or its equivalent (discharge from a single conveyance other than circular pipe which is associated with a drainage area of more than 50 acres); or for municipal separate storm sewers that receive storm water from lands zoned for industrial activity (based on comprehensive zoning plans or the equivalent), an outfall that discharges from a single pipe with an inside diameter of 12 inches or more or from its equivalent (discharge from other than a circular pipe associated with a drainage area of 2 acres or more).

(6) Major outfall means a major municipal separate storm sewer outfall.

(7) Medium municipal separate storm sewer system means all municipal separate storm sewers that are either:

(i) Located in an incorporated place with a population of 100,000 or more but less than 250,000, as determined by the 1990 Decennial Census by the Bureau of the Census (appendix G of this part); or

(ii) Located in the counties listed in appendix I, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or

(iii) Owned or operated by a municipality other than those described in paragraph (b)(7)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal

separate storm sewers described under paragraph (b)(7)(i) or (ii) of this section. In making this determination the Director may consider the following factors:

(A) Physical interconnections between the municipal separate storm sewers;

(B) The location of discharges from the designated municipal separate storm sewer relative to discharges from municipal separate storm sewers described in paragraph (b)(7)(i) of this section;

(C) The quantity and nature of pollutants discharged to waters of the United States;

(D) The nature of the receiving waters; or

(E) Other relevant factors; or

(iv) The Director may, upon petition, designate as a medium municipal separate storm sewer system, municipal separate storm sewers located within the boundaries of a region defined by a storm water management regional authority based on a jurisdictional, watershed, or other appropriate basis that includes one or more of the systems described in paragraphs (b)(7) (i), (ii), (iii) of this section.

(8) Municipal separate storm sewer means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States;

(ii) Designed or used for collecting or conveying storm water;

(iii) Which is not a combined sewer; and

(iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at [40 CFR 122.2](#).

(9) Outfall means a point source as defined by [40 CFR 122.2](#) at the point where a municipal separate storm sewer discharges to waters of the United States and does not include open conveyances connecting two municipal separate storm sewers, or pipes, tunnels or other conveyances which connect segments of the same stream or other waters of the United States and are used to convey waters of the United States.

(10) Overburden means any material of any nature, consolidated or unconsolidated, that overlies a mineral deposit, excluding topsoil or similar naturally-occurring surface materials that are not disturbed by mining operations.

(11) Runoff coefficient means the fraction of total rainfall that will appear at a conveyance as runoff.

(12) Significant materials includes, but is not limited to: raw materials; fuels; materials such as solvents, detergents, and plastic pellets; finished materials such as metallic products; raw materials used in food processing or production; hazardous substances designated under section 101(14) of CERCLA; any chemical the facility is required to report pursuant to section 313 of title III of SARA; fertilizers; pesticides; and waste products such as ashes, slag and sludge that have the potential to be released with storm water discharges.

(13) Storm water means storm water runoff, snow melt runoff, and surface runoff and drainage.

(14) Storm water discharge associated with industrial activity means the discharge from any conveyance that is used for collecting and conveying storm water and that is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. The term does not include discharges from facilities or activities excluded from the NPDES program under this part 122. For the categories of industries identified in this section, the term includes, but is not limited to, storm water discharges from industrial plant yards; immediate access roads and rail lines used or traveled by carriers of raw materials, manufactured products, waste material, or by-products used or created by the facility; material handling sites; refuse sites; sites used for the application or disposal of process waste waters (as defined at part 401 of this chapter); sites used for the storage and maintenance of material handling equipment; sites used for residual treatment, storage, or disposal; shipping and receiving areas; manufacturing buildings; storage areas (including tank farms) for raw materials, and intermediate and final products; and areas where industrial activity has taken place in the past and significant materials remain and are exposed to storm water. For the purposes of this paragraph, material handling activities include storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, final product, by-product or waste product. The term excludes areas located on plant lands separate from the plant's industrial activities, such as office buildings and accompanying parking lots as long as the drainage from the excluded areas is not mixed with storm water drained from the above described areas. Industrial facilities (including industrial facilities that are federally, State, or municipally owned or operated that meet the description of the facilities listed in paragraphs (b)(14)(i) through (xi) of this section) include those facilities designated under the provisions of paragraph (a)(1)(v) of this section. The following categories of facilities are considered to be engaging in "industrial activity" for purposes of paragraph (b)(14):

(i) Facilities subject to storm water effluent limitations guidelines, new source performance standards, or toxic pollutant effluent standards under 40 CFR subchapter N (except facilities with toxic pollutant effluent standards which are exempted under category (xi) in paragraph (b)(14) of this section);

(ii) Facilities classified within Standard Industrial Classification 24, Industry Group 241 that are rock crushing, gravel washing, log sorting, or log storage facilities operated in connection with silvicultural activities defined in [40 CFR 122.27\(b\)\(2\)-\(3\)](#) and Industry Groups 242 through 249; 26 (except 265 and 267), 28 (except 283), 29, 311, 32 (except 323), 33, 3441, 373; (not included are all other types of silviculture facilities);

(iii) Facilities classified as Standard Industrial Classifications 10 through 14 (mineral industry) including active or inactive mining operations (except for areas of coal mining operations no longer meeting the definition of a reclamation area under 40 CFR 434.11(1) because the performance bond issued to the facility by the appropriate SMCRA authority has been released, or except for areas of non-coal mining operations which have been released from applicable State or Federal reclamation requirements after December 17, 1990) and oil and gas exploration, production, processing, or treatment operations, or transmission facilities that discharge storm water contaminated by contact with or that has come into contact with, any overburden, raw material, intermediate products, finished products, byproducts or waste products located on the site of such operations; (inactive mining operations are mining sites that are not being actively mined, but which have an identifiable owner/operator; inactive mining sites do not include sites where mining claims are being maintained prior to disturbances associated with the extraction, beneficiation, or processing of mined materials, nor sites where minimal activities are undertaken for the sole purpose of maintaining a mining claim);

(iv) Hazardous waste treatment, storage, or disposal facilities, including those that are operating under interim status or a permit under subtitle C of RCRA;

(v) Landfills, land application sites, and open dumps that receive or have received any industrial wastes (waste that is received from any of the facilities described under this subsection) including those that are subject to regulation under subtitle D of RCRA;

(vi) Facilities involved in the recycling of materials, including metal scrapyards, battery reclaimers, salvage yards, and automobile junkyards, including but limited to those classified as Standard Industrial Classification 5015 and 5093;

(vii) Steam electric power generating facilities, including coal handling sites;

(viii) Transportation facilities classified as Standard Industrial Classifications 40, 41, 42 (except 4221–25), 43, 44, 45, and 5171 which have vehicle maintenance shops, equipment cleaning operations, or airport deicing operations. Only those portions of the facility that are either involved in vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling, and lubrication), equipment cleaning operations, airport deicing operations, or which are otherwise identified under paragraphs (b)(14) (i)–(vii) or (ix)–(xi) of this section are associated with industrial activity;

(ix) Treatment works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge that are located within the confines of the facility, with a design flow of 1.0 mgd or more, or required to have an approved pretreatment program under 40 CFR part 403. Not included are farm lands, domestic gardens or lands used for sludge management where sludge is beneficially reused and which are not physically located in the confines of the facility, or areas that are in compliance with section 405 of the CWA;

(x) Construction activity including clearing, grading and excavation, except operations that result in the disturbance of less than five acres of total land area. Construction activity also includes the disturbance of less than five acres

of total land area that is a part of a larger common plan of development or sale if the larger common plan will ultimately disturb five acres or more;

(xi) Facilities under Standard Industrial Classifications 20, 21, 22, 23, 2434, 25, 265, 267, 27, 283, 285, 30, 31 (except 311), 323, 34 (except 3441), 35, 36, 37 (except 373), 38, 39, and 4221–25;

(15) Storm water discharge associated with small construction activity means the discharge of storm water from:

(i) Construction activities including clearing, grading, and excavating that result in land disturbance of equal to or greater than one acre and less than five acres. Small construction activity also includes the disturbance of less than one acre of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb equal to or greater than one and less than five acres. Small construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of the facility. The Director may waive the otherwise applicable requirements in a general permit for a storm water discharge from construction activities that disturb less than five acres where:

(A) The value of the rainfall erosivity factor (“R” in the Revised Universal Soil Loss Equation) is less than five during the period of construction activity. The rainfall erosivity factor is determined in accordance with Chapter 2 of Agriculture Handbook Number 703, Predicting Soil Erosion by Water: A Guide to Conservation Planning with the Revised Universal Soil Loss Equation (RUSLE), pages 21–64, dated January 1997. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained at EPA’s Water Docket, 1200 Pennsylvania Avenue NW, Washington, DC 20460. For information on the availability of this material at National Archives and Records Administration, call 202–741–6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html. An operator must certify to the Director that the construction activity will take place during a period when the value of the rainfall erosivity factor is less than five; or

(B) Storm water controls are not needed based on a “total maximum daily load” (TMDL) approved or established by EPA that addresses the pollutant(s) of concern or, for non-impaired waters that do not require TMDLs, an equivalent analysis that determines allocations for small construction sites for the pollutant(s) of concern or that determines that such allocations are not needed to protect water quality based on consideration of existing in-stream concentrations, expected growth in pollutant contributions from all sources, and a margin of safety. For the purpose of this paragraph, the pollutant(s) of concern include sediment or a parameter that addresses sediment (such as total suspended solids, turbidity or siltation) and any other pollutant that has been identified as a cause of impairment of any water body that will receive a discharge from the construction activity. The operator must certify to the Director that the construction activity will take place, and storm water discharges will occur, within the drainage area addressed by the TMDL or equivalent analysis.

(C) As of December 21, 2020 all certifications submitted in compliance with paragraphs (b)(15)(i)(A) and (B) of this section must be submitted electronically by the owner or operator to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements

for electronic reporting. Prior to this date, and independent of part 127, owners or operators may be required to report electronically if specified by a particular permit or if required to do so by state law.

(ii) Any other construction activity designated by the Director, or in States with approved NPDES programs either the Director or the EPA Regional Administrator, based on the potential for contribution to a violation of a water quality standard or for significant contribution of pollutants to waters of the United States.

Exhibit 1 to § 122.26(b)(15).—Summary of Coverage of “Storm Water Discharges Associated with Small Construction Activity” Under the NPDES Storm Water Program

Automatic Designation: Required Nationwide Coverage	<ul style="list-style-type: none"> · Construction activities that result in a land disturbance of equal to or greater than one acre and less than five acres. · Construction activities disturbing less than one acre if part of a larger common plan of development or sale with a planned disturbance of equal to or greater than one acre and less than five acres. (see § 122.26(b)(15)(i).)
Potential Designation: Optional Evaluation and Designation by the NPDES Permitting Authority or EPA Regional Administrator.	<ul style="list-style-type: none"> · Construction activities that result in a land disturbance of less than one acre based on the potential for contribution to a violation of a water quality standard or for significant contribution of pollutants. (see § 122.26(b)(15)(ii).)
Potential Waiver: Waiver from Requirements as Determined by the NPDES Permitting Authority.	<p>Any automatically designated construction activity where the operator certifies: (1) A rainfall erosivity factor of less than five, or (2) That the activity will occur within an area where controls are not needed based on a TMDL or, for non-impaired waters that do not require a TMDL, an equivalent analysis for the pollutant(s) of concern. (see § 122.26(b)(15)(i).)</p>

(16) Small municipal separate storm sewer system means all separate storm sewers that are:

(i) Owned or operated by the United States, a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States.

(ii) Not defined as “large” or “medium” municipal separate storm sewer systems pursuant to paragraphs (b)(4) and (b)(7) of this section, or designated under paragraph (a)(1)(v) of this section.

(iii) This term includes systems similar to separate storm sewer systems in municipalities, such as systems at military bases, large hospital or prison complexes, and highways and other thoroughfares. The term does not include separate storm sewers in very discrete areas, such as individual buildings.

(17) Small MS4 means a small municipal separate storm sewer system.

(18) Municipal separate storm sewer system means all separate storm sewers that are defined as “large” or “medium” or “small” municipal separate storm sewer systems pursuant to paragraphs (b)(4), (b)(7), and (b)(16) of this section, or designated under paragraph (a)(1)(v) of this section.

(19) MS4 means a municipal separate storm sewer system.

(20) Uncontrolled sanitary landfill means a landfill or open dump, whether in operation or closed, that does not meet the requirements for runoff or runoff controls established pursuant to subtitle D of the Solid Waste Disposal Act.

(c) Application requirements for storm water discharges associated with industrial activity and storm water discharges associated with small construction activity—

(1) Individual application. Dischargers of storm water associated with industrial activity and with small construction activity are required to apply for an individual permit or seek coverage under a promulgated storm water general permit. Facilities that are required to obtain an individual permit or any discharge of storm water which the Director is evaluating for designation (see 124.52(c) of this chapter) under paragraph (a)(1)(v) of this section and is not a municipal storm sewer, shall submit an NPDES application in accordance with the requirements of § 122.21 as modified and supplemented by the provisions of this paragraph.

(i) Except as provided in § 122.26(c)(1)(ii)–(iv), the operator of a storm water discharge associated with industrial activity subject to this section shall provide:

(A) A site map showing topography (or indicating the outline of drainage areas served by the outfall(s) covered in the application if a topographic map is unavailable) of the facility including: each of its drainage and discharge structures; the drainage area of each storm water outfall; paved areas and buildings within the drainage area of each storm water outfall, each past or present area used for outdoor storage or disposal of significant materials, each existing structural control measure to reduce pollutants in storm water runoff, materials loading and access areas, areas where pesticides, herbicides, soil conditioners and fertilizers are applied, each of its hazardous waste treatment, storage or disposal facilities (including each area not required to have a RCRA permit which is used for accumulating hazardous waste under 40 CFR 262.34); each well where fluids from the facility are injected underground; springs, and other surface water bodies which receive storm water discharges from the facility;

(B) An estimate of the area of impervious surfaces (including paved areas and building roofs) and the total area drained by each outfall (within a mile radius of the facility) and a narrative description of the following: Significant materials that in the three years prior to the submittal of this application have been treated, stored

or disposed in a manner to allow exposure to storm water; method of treatment, storage or disposal of such materials; materials management practices employed, in the three years prior to the submittal of this application, to minimize contact by these materials with storm water runoff; materials loading and access areas; the location, manner and frequency in which pesticides, herbicides, soil conditioners and fertilizers are applied; the location and a description of existing structural and non-structural control measures to reduce pollutants in storm water runoff; and a description of the treatment the storm water receives, including the ultimate disposal of any solid or fluid wastes other than by discharge;

(C) A certification that all outfalls that should contain storm water discharges associated with industrial activity have been tested or evaluated for the presence of non-storm water discharges which are not covered by a NPDES permit; tests for such non-storm water discharges may include smoke tests, fluorometric dye tests, analysis of accurate schematics, as well as other appropriate tests. The certification shall include a description of the method used, the date of any testing, and the on-site drainage points that were directly observed during a test;

(D) Existing information regarding significant leaks or spills of toxic or hazardous pollutants at the facility that have taken place within the three years prior to the submittal of this application;

(E) Quantitative data based on samples collected during storm events and collected in accordance with § 122.21 of this part from all outfalls containing a storm water discharge associated with industrial activity for the following parameters:

(1) Any pollutant limited in an effluent guideline to which the facility is subject;

(2) Any pollutant listed in the facility's NPDES permit for its process wastewater (if the facility is operating under an existing NPDES permit);

(3) Oil and grease, pH, BOD5, COD, TSS, total phosphorus, total Kjeldahl nitrogen, and nitrate plus nitrite nitrogen;

(4) Any information on the discharge required under § 122.21(g)(7)(vi) and (vii);

(5) Flow measurements or estimates of the flow rate, and the total amount of discharge for the storm event(s) sampled, and the method of flow measurement or estimation; and

(6) The date and duration (in hours) of the storm event(s) sampled, rainfall measurements or estimates of the storm event (in inches) which generated the sampled runoff and the duration between the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event (in hours);

(F) Operators of a discharge which is composed entirely of storm water are exempt from the requirements of § 122.21(g)(2), (g)(3), (g)(4), (g)(5), (g)(7)(iii), (g)(7)(iv), (g)(7)(v), and (g)(7)(viii); and

(G) Operators of new sources or new discharges (as defined in § 122.2 of this part) which are composed in part or entirely of storm water must include estimates for the pollutants or parameters listed in paragraph (c)(1)(i)(E) of this section instead of actual sampling data, along with the source of each estimate. Operators of new sources or new discharges composed in part or entirely of storm water must provide quantitative data for the parameters listed in paragraph (c)(1)(i)(E) of this section within two years after commencement of discharge, unless such data has already been reported under the monitoring requirements of the NPDES permit for the discharge. Operators of a new source or new discharge which is composed entirely of storm water are exempt from the requirements of § 122.21 (k)(3)(ii), (k)(3)(iii), and (k)(5).

(ii) An operator of an existing or new storm water discharge that is associated with industrial activity solely under paragraph (b)(14)(x) of this section or is associated with small construction activity solely under paragraph (b)(15) of this section, is exempt from the requirements of § 122.21(g) and paragraph (c)(1)(i) of this section. Such operator shall provide a narrative description of:

(A) The location (including a map) and the nature of the construction activity;

(B) The total area of the site and the area of the site that is expected to undergo excavation during the life of the permit;

(C) Proposed measures, including best management practices, to control pollutants in storm water discharges during construction, including a brief description of applicable State and local erosion and sediment control requirements;

(D) Proposed measures to control pollutants in storm water discharges that will occur after construction operations have been completed, including a brief description of applicable State or local erosion and sediment control requirements;

(E) An estimate of the runoff coefficient of the site and the increase in impervious area after the construction addressed in the permit application is completed, the nature of fill material and existing data describing the soil or the quality of the discharge; and

(F) The name of the receiving water.

(iii) The operator of an existing or new discharge composed entirely of storm water from an oil or gas exploration, production, processing, or treatment operation, or transmission facility is not required to submit a permit application in accordance with paragraph (c)(1)(i) of this section, unless the facility:

(A) Has had a discharge of storm water resulting in the discharge of a reportable quantity for which notification is or was required pursuant to 40 CFR 117.21 or 40 CFR 302.6 at anytime since November 16, 1987; or

(B) Has had a discharge of storm water resulting in the discharge of a reportable quantity for which notification is or was required pursuant to [40 CFR 110.6](#) at any time since November 16, 1987; or

(C) Contributes to a violation of a water quality standard.

(iv) The operator of an existing or new discharge composed entirely of storm water from a mining operation is not required to submit a permit application unless the discharge has come into contact with, any overburden, raw material, intermediate products, finished product, byproduct or waste products located on the site of such operations.

(v) Applicants shall provide such other information the Director may reasonably require under [§ 122.21\(g\)\(13\)](#) of this part to determine whether to issue a permit and may require any facility subject to paragraph (c)(1)(ii) of this section to comply with paragraph (c)(1)(i) of this section.

(2) [Reserved]

(d) Application requirements for large and medium municipal separate storm sewer discharges. The operator of a discharge from a large or medium municipal separate storm sewer or a municipal separate storm sewer that is designated by the Director under paragraph (a)(1)(v) of this section, may submit a jurisdiction-wide or system-wide permit application. Where more than one public entity owns or operates a municipal separate storm sewer within a geographic area (including adjacent or interconnected municipal separate storm sewer systems), such operators may be a coapplicant to the same application. Permit applications for discharges from large and medium municipal storm sewers or municipal storm sewers designated under paragraph (a)(1)(v) of this section shall include;

(1) Part 1. Part 1 of the application shall consist of;

(i) General information. The applicants' name, address, telephone number of contact person, ownership status and status as a State or local government entity.

(ii) Legal authority. A description of existing legal authority to control discharges to the municipal separate storm sewer system. When existing legal authority is not sufficient to meet the criteria provided in paragraph (d)(2)(i) of this section, the description shall list additional authorities as will be necessary to meet the criteria and shall include a schedule and commitment to seek such additional authority that will be needed to meet the criteria.

(iii) Source identification.

(A) A description of the historic use of ordinances, guidance or other controls which limited the discharge of non-storm water discharges to any Publicly Owned Treatment Works serving the same area as the municipal separate storm sewer system.

(B) A USGS 7.5 minute topographic map (or equivalent topographic map with a scale between 1:10,000 and 1:24,000 if cost effective) extending one mile beyond the service boundaries of the municipal storm sewer system covered by the permit application. The following information shall be provided:

- (1) The location of known municipal storm sewer system outfalls discharging to waters of the United States;
- (2) A description of the land use activities (e.g. divisions indicating undeveloped, residential, commercial, agricultural and industrial uses) accompanied with estimates of population densities and projected growth for a ten year period within the drainage area served by the separate storm sewer. For each land use type, an estimate of an average runoff coefficient shall be provided;
- (3) The location and a description of the activities of the facility of each currently operating or closed municipal landfill or other treatment, storage or disposal facility for municipal waste;
- (4) The location and the permit number of any known discharge to the municipal storm sewer that has been issued a NPDES permit;
- (5) The location of major structural controls for storm water discharge (retention basins, detention basins, major infiltration devices, etc.); and
- (6) The identification of publicly owned parks, recreational areas, and other open lands.

(iv) Discharge characterization.

(A) Monthly mean rain and snow fall estimates (or summary of weather bureau data) and the monthly average number of storm events.

(B) Existing quantitative data describing the volume and quality of discharges from the municipal storm sewer, including a description of the outfalls sampled, sampling procedures and analytical methods used.

(C) A list of water bodies that receive discharges from the municipal separate storm sewer system, including downstream segments, lakes and estuaries, where pollutants from the system discharges may accumulate and cause water degradation and a brief description of known water quality impacts. At a minimum, the description of impacts shall include a description of whether the water bodies receiving such discharges have been:

- (1) Assessed and reported in [section 305\(b\)](#) reports submitted by the State, the basis for the assessment (evaluated or monitored), a summary of designated use support and attainment of Clean Water Act (CWA) goals (fishable and swimmable waters), and causes of nonsupport of designated uses;

- (2) Listed under [section 304\(l\)\(1\)\(A\)\(i\)](#), section 304(l)(1)(A)(ii), or section 304(l)(1)(B) of the CWA that is not expected to meet water quality standards or water quality goals;
- (3) Listed in State Nonpoint Source Assessments required by section 319(a) of the CWA that, without additional action to control nonpoint sources of pollution, cannot reasonably be expected to attain or maintain water quality standards due to storm sewers, construction, highway maintenance and runoff from municipal landfills and municipal sludge adding significant pollution (or contributing to a violation of water quality standards);
- (4) Identified and classified according to eutrophic condition of publicly owned lakes listed in State reports required under section 314(a) of the CWA (include the following: A description of those publicly owned lakes for which uses are known to be impaired; a description of procedures, processes and methods to control the discharge of pollutants from municipal separate storm sewers into such lakes; and a description of methods and procedures to restore the quality of such lakes);
- (5) Areas of concern of the Great Lakes identified by the International Joint Commission;
- (6) Designated estuaries under the National Estuary Program under section 320 of the CWA;
- (7) Recognized by the applicant as highly valued or sensitive waters;
- (8) Defined by the State or U.S. Fish and Wildlife Services's National Wetlands Inventory as wetlands; and
- (9) Found to have pollutants in bottom sediments, fish tissue or biosurvey data.

(D) Field screening. Results of a field screening analysis for illicit connections and illegal dumping for either selected field screening points or major outfalls covered in the permit application. At a minimum, a screening analysis shall include a narrative description, for either each field screening point or major outfall, of visual observations made during dry weather periods. If any flow is observed, two grab samples shall be collected during a 24 hour period with a minimum period of four hours between samples. For all such samples, a narrative description of the color, odor, turbidity, the presence of an oil sheen or surface scum as well as any other relevant observations regarding the potential presence of non-storm water discharges or illegal dumping shall be provided. In addition, a narrative description of the results of a field analysis using suitable methods to estimate pH, total chlorine, total copper, total phenol, and detergents (or surfactants) shall be provided along with a description of the flow rate. Where the field analysis does not involve analytical methods approved under 40 CFR part 136, the applicant shall provide a description of the method used including the name of the manufacturer of the test method along with the range and accuracy of the test. Field screening points shall be either major outfalls or other outfall points (or any other point of access such as manholes) randomly located throughout the storm sewer system by placing a grid over a drainage system map and identifying those cells of the grid which contain a segment of the storm sewer system or major outfall. The field screening points shall be established using the following guidelines and criteria:

(1) A grid system consisting of perpendicular north-south and east-west lines spaced ¼ mile apart shall be overlaid on a map of the municipal storm sewer system, creating a series of cells;

(2) All cells that contain a segment of the storm sewer system shall be identified; one field screening point shall be selected in each cell; major outfalls may be used as field screening points;

(3) Field screening points should be located downstream of any sources of suspected illegal or illicit activity;

(4) Field screening points shall be located to the degree practicable at the farthest manhole or other accessible location downstream in the system, within each cell; however, safety of personnel and accessibility of the location should be considered in making this determination;

(5) Hydrological conditions; total drainage area of the site; population density of the site; traffic density; age of the structures or buildings in the area; history of the area; and land use types;

(6) For medium municipal separate storm sewer systems, no more than 250 cells need to have identified field screening points; in large municipal separate storm sewer systems, no more than 500 cells need to have identified field screening points; cells established by the grid that contain no storm sewer segments will be eliminated from consideration; if fewer than 250 cells in medium municipal sewers are created, and fewer than 500 in large systems are created by the overlay on the municipal sewer map, then all those cells which contain a segment of the sewer system shall be subject to field screening (unless access to the separate storm sewer system is impossible); and

(7) Large or medium municipal separate storm sewer systems which are unable to utilize the procedures described in paragraphs (d)(1)(iv)(D) (1) through (6) of this section, because a sufficiently detailed map of the separate storm sewer systems is unavailable, shall field screen no more than 500 or 250 major outfalls respectively (or all major outfalls in the system, if less); in such circumstances, the applicant shall establish a grid system consisting of north-south and east-west lines spaced ¼ mile apart as an overlay to the boundaries of the municipal storm sewer system, thereby creating a series of cells; the applicant will then select major outfalls in as many cells as possible until at least 500 major outfalls (large municipalities) or 250 major outfalls (medium municipalities) are selected; a field screening analysis shall be undertaken at these major outfalls.

(E) Characterization plan. Information and a proposed program to meet the requirements of paragraph (d)(2)(iii) of this section. Such description shall include: the location of outfalls or field screening points appropriate for representative data collection under paragraph (d)(2)(iii)(A) of this section, a description of why the outfall or field screening point is representative, the seasons during which sampling is intended, a description of the sampling equipment. The proposed location of outfalls or field screening points for such sampling should reflect water quality concerns (see paragraph (d)(1)(iv)(C) of this section) to the extent practicable.

(v) Management programs.

(A) A description of the existing management programs to control pollutants from the municipal separate storm sewer system. The description shall provide information on existing structural and source controls, including operation and maintenance measures for structural controls, that are currently being implemented. Such controls may include, but are not limited to: Procedures to control pollution resulting from construction activities; floodplain management controls; wetland protection measures; best management practices for new subdivisions; and emergency spill response programs. The description may address controls established under State law as well as local requirements.

(B) A description of the existing program to identify illicit connections to the municipal storm sewer system. The description should include inspection procedures and methods for detecting and preventing illicit discharges, and describe areas where this program has been implemented.

(vi) Fiscal resources.

(A) A description of the financial resources currently available to the municipality to complete part 2 of the permit application. A description of the municipality's budget for existing storm water programs, including an overview of the municipality's financial resources and budget, including overall indebtedness and assets, and sources of funds for storm water programs.

(2) Part 2. Part 2 of the application shall consist of:

(i) Adequate legal authority. A demonstration that the applicant can operate pursuant to legal authority established by statute, ordinance or series of contracts which authorizes or enables the applicant at a minimum to:

(A) Control through ordinance, permit, contract, order or similar means, the contribution of pollutants to the municipal storm sewer by storm water discharges associated with industrial activity and the quality of storm water discharged from sites of industrial activity;

(B) Prohibit through ordinance, order or similar means, illicit discharges to the municipal separate storm sewer;

(C) Control through ordinance, order or similar means the discharge to a municipal separate storm sewer of spills, dumping or disposal of materials other than storm water;

(D) Control through interagency agreements among coapplicants the contribution of pollutants from one portion of the municipal system to another portion of the municipal system;

(E) Require compliance with conditions in ordinances, permits, contracts or orders; and

(F) Carry out all inspection, surveillance and monitoring procedures necessary to determine compliance and noncompliance with permit conditions including the prohibition on illicit discharges to the municipal separate storm sewer.

(ii) Source identification. The location of any major outfall that discharges to waters of the United States that was not reported under paragraph (d)(1)(iii)(B)(1) of this section. Provide an inventory, organized by watershed of the name and address, and a description (such as SIC codes) which best reflects the principal products or services provided by each facility which may discharge, to the municipal separate storm sewer, storm water associated with industrial activity;

(iii) Characterization data. When “quantitative data” for a pollutant are required under paragraph (d)(2)(iii)(A)(3) of this section, the applicant must collect a sample of effluent in accordance with 40 CFR 122.21(g)(7) and analyze it for the pollutant in accordance with analytical methods approved under part 136 of this chapter. When no analytical method is approved the applicant may use any suitable method but must provide a description of the method. The applicant must provide information characterizing the quality and quantity of discharges covered in the permit application, including:

(A) Quantitative data from representative outfalls designated by the Director (based on information received in part 1 of the application, the Director shall designate between five and ten outfalls or field screening points as representative of the commercial, residential and industrial land use activities of the drainage area contributing to the system or, where there are less than five outfalls covered in the application, the Director shall designate all outfalls) developed as follows:

(1) For each outfall or field screening point designated under this subparagraph, samples shall be collected of storm water discharges from three storm events occurring at least one month apart in accordance with the requirements at § 122.21(g)(7) (the Director may allow exemptions to sampling three storm events when climatic conditions create good cause for such exemptions);

(2) A narrative description shall be provided of the date and duration of the storm event(s) sampled, rainfall estimates of the storm event which generated the sampled discharge and the duration between the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event;

(3) For samples collected and described under paragraphs (d)(2)(iii)(A)(1) and (A)(2) of this section, quantitative data shall be provided for: the organic pollutants listed in Table II; the pollutants listed in Table III (toxic metals, cyanide, and total phenols) of appendix D of 40 CFR part 122, and for the following pollutants:

Total suspended solids (TSS)

Total dissolved solids (TDS)

COD

BOD₅

Oil and grease

Fecal coliform

Fecal streptococcus

pH

Total Kjeldahl nitrogen

Nitrate plus nitrite

Dissolved phosphorus

Total ammonia plus organic nitrogen

Total phosphorus

(4) Additional limited quantitative data required by the Director for determining permit conditions (the Director may require that quantitative data shall be provided for additional parameters, and may establish sampling conditions such as the location, season of sample collection, form of precipitation (snow melt, rainfall) and other parameters necessary to insure representativeness);

(B) Estimates of the annual pollutant load of the cumulative discharges to waters of the United States from all identified municipal outfalls and the event mean concentration of the cumulative discharges to waters of the United States from all identified municipal outfalls during a storm event (as described under § 122.21(c)(7)) for BOD₅, COD, TSS, dissolved solids, total nitrogen, total ammonia plus organic nitrogen, total phosphorus, dissolved phosphorus, cadmium, copper, lead, and zinc. Estimates shall be accompanied by a description of the procedures for estimating constituent loads and concentrations, including any modelling, data analysis, and calculation methods;

(C) A proposed schedule to provide estimates for each major outfall identified in either paragraph (d)(2)(ii) or (d)(1)(iii)(B)(1) of this section of the seasonal pollutant load and of the event mean concentration of a representative storm for any constituent detected in any sample required under paragraph (d)(2)(iii)(A) of this section; and

(D) A proposed monitoring program for representative data collection for the term of the permit that describes the location of outfalls or field screening points to be sampled (or the location of instream stations), why the location is representative, the frequency of sampling, parameters to be sampled, and a description of sampling equipment.

(iv) Proposed management program. A proposed management program covers the duration of the permit. It shall include a comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate. The program shall also include a description of staff and equipment available to implement the program. Separate proposed programs may be submitted by each coapplicant. Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. Proposed programs will be considered by the Director when developing permit conditions to reduce pollutants in discharges to the

maximum extent practicable. Proposed management programs shall describe priorities for implementing controls. Such programs shall be based on:

(A) A description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls. At a minimum, the description shall include:

(1) A description of maintenance activities and a maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from municipal separate storm sewers;

(2) A description of planning procedures including a comprehensive master plan to develop, implement and enforce controls to reduce the discharge of pollutants from municipal separate storm sewers which receive discharges from areas of new development and significant redevelopment. Such plan shall address controls to reduce pollutants in discharges from municipal separate storm sewers after construction is completed. (Controls to reduce pollutants in discharges from municipal separate storm sewers containing construction site runoff are addressed in paragraph (d)(2)(iv)(D) of this section;

(3) A description of practices for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems, including pollutants discharged as a result of deicing activities;

(4) A description of procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies and that existing structural flood control devices have been evaluated to determine if retrofitting the device to provide additional pollutant removal from storm water is feasible;

(5) A description of a program to monitor pollutants in runoff from operating or closed municipal landfills or other treatment, storage or disposal facilities for municipal waste, which shall identify priorities and procedures for inspections and establishing and implementing control measures for such discharges (this program can be coordinated with the program developed under paragraph (d)(2)(iv)(C) of this section); and

(6) A description of a program to reduce to the maximum extent practicable, pollutants in discharges from municipal separate storm sewers associated with the application of pesticides, herbicides and fertilizer which will include, as appropriate, controls such as educational activities, permits, certifications and other measures for commercial applicators and distributors, and controls for application in public right-of-ways and at municipal facilities.

(B) A description of a program, including a schedule, to detect and remove (or require the discharger to the municipal separate storm sewer to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer. The proposed program shall include:

(1) A description of a program, including inspections, to implement and enforce an ordinance, orders or similar means to prevent illicit discharges to the municipal separate storm sewer system; this program description shall address all types of illicit discharges, however the following category of non-storm water discharges or flows shall be addressed where such discharges are identified by the municipality as sources of pollutants to waters of the United States: water line flushing, landscape irrigation, diverted stream flows, rising ground waters, uncontaminated ground water infiltration (as defined at 40 CFR 35.2005(20)) to separate storm sewers, uncontaminated pumped ground water, discharges from potable water sources, foundation drains, air conditioning condensation, irrigation water, springs, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, flows from riparian habitats and wetlands, dechlorinated swimming pool discharges, and street wash water (program descriptions shall address discharges or flows from fire fighting only where such discharges or flows are identified as significant sources of pollutants to waters of the United States);

(2) A description of procedures to conduct on-going field screening activities during the life of the permit, including areas or locations that will be evaluated by such field screens;

(3) A description of procedures to be followed to investigate portions of the separate storm sewer system that, based on the results of the field screen, or other appropriate information, indicate a reasonable potential of containing illicit discharges or other sources of non-storm water (such procedures may include: sampling procedures for constituents such as fecal coliform, fecal streptococcus, surfactants (MBAS), residual chlorine, fluorides and potassium; testing with fluorometric dyes; or conducting in storm sewer inspections where safety and other considerations allow. Such description shall include the location of storm sewers that have been identified for such evaluation);

(4) A description of procedures to prevent, contain, and respond to spills that may discharge into the municipal separate storm sewer;

(5) A description of a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from municipal separate storm sewers;

(6) A description of educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials; and

(7) A description of controls to limit infiltration of seepage from municipal sanitary sewers to municipal separate storm sewer systems where necessary;

(C) A description of a program to monitor and control pollutants in storm water discharges to municipal systems from municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA), and industrial facilities that the municipal permit applicant determines are contributing a substantial pollutant loading to the municipal storm sewer system. The program shall:

(1) Identify priorities and procedures for inspections and establishing and implementing control measures for such discharges;

(2) Describe a monitoring program for storm water discharges associated with the industrial facilities identified in paragraph (d)(2)(iv)(C) of this section, to be implemented during the term of the permit, including the submission of quantitative data on the following constituents: any pollutants limited in effluent guidelines subcategories, where applicable; any pollutant listed in an existing NPDES permit for a facility; oil and grease, COD, pH, BOD₅, TSS, total phosphorus, total Kjeldahl nitrogen, nitrate plus nitrite nitrogen, and any information on discharges required under § 122.21(g)(7)(vi) and (vii).

(D) A description of a program to implement and maintain structural and non-structural best management practices to reduce pollutants in storm water runoff from construction sites to the municipal storm sewer system, which shall include:

(1) A description of procedures for site planning which incorporate consideration of potential water quality impacts;

(2) A description of requirements for nonstructural and structural best management practices;

(3) A description of procedures for identifying priorities for inspecting sites and enforcing control measures which consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality; and

(4) A description of appropriate educational and training measures for construction site operators.

(v) Assessment of controls. Estimated reductions in loadings of pollutants from discharges of municipal storm sewer constituents from municipal storm sewer systems expected as the result of the municipal storm water quality management program. The assessment shall also identify known impacts of storm water controls on ground water.

(vi) Fiscal analysis. For each fiscal year to be covered by the permit, a fiscal analysis of the necessary capital and operation and maintenance expenditures necessary to accomplish the activities of the programs under paragraphs (d)(2) (iii) and (iv) of this section. Such analysis shall include a description of the source of funds that are proposed to meet the necessary expenditures, including legal restrictions on the use of such funds.

(vii) Where more than one legal entity submits an application, the application shall contain a description of the roles and responsibilities of each legal entity and procedures to ensure effective coordination.

(viii) Where requirements under paragraph (d)(1)(iv)(E), (d)(2)(ii), (d)(2)(iii)(B) and (d)(2)(iv) of this section are not practicable or are not applicable, the Director may exclude any operator of a discharge from a municipal separate storm sewer which is designated under paragraph (a)(1)(v), (b)(4)(ii) or (b)(7)(ii) of this section from such requirements. The Director shall not exclude the operator of a discharge from a municipal separate storm sewer

identified in appendix F, G, H or I of part 122, from any of the permit application requirements under this paragraph except where authorized under this section.

(e) Application deadlines. Any operator of a point source required to obtain a permit under this section that does not have an effective NPDES permit authorizing discharges from its storm water outfalls shall submit an application in accordance with the following deadlines:

(1) Storm water discharges associated with industrial activity.

(i) Except as provided in paragraph (e)(1)(ii) of this section, for any storm water discharge associated with industrial activity identified in paragraphs (b)(14)(i) through (xi) of this section, that is not part of a group application as described in paragraph (c)(2) of this section or that is not authorized by a storm water general permit, a permit application made pursuant to paragraph (c) of this section must be submitted to the Director by October 1, 1992;

(ii) For any storm water discharge associated with industrial activity from a facility that is owned or operated by a municipality with a population of less than 100,000 that is not authorized by a general or individual permit, other than an airport, powerplant, or uncontrolled sanitary landfill, the permit application must be submitted to the Director by March 10, 2003.

(2) For any group application submitted in accordance with paragraph (c)(2) of this section:

(i) Part 1.

(A) Except as provided in paragraph (e)(2)(i)(B) of this section, part 1 of the application shall be submitted to the Director, Office of Wastewater Enforcement and Compliance by September 30, 1991;

(B) Any municipality with a population of less than 250,000 shall not be required to submit a part 1 application before May 18, 1992.

(C) For any storm water discharge associated with industrial activity from a facility that is owned or operated by a municipality with a population of less than 100,000 other than an airport, powerplant, or uncontrolled sanitary landfill, permit applications requirements are reserved.

(ii) Based on information in the part 1 application, the Director will approve or deny the members in the group application within 60 days after receiving part 1 of the group application.

(iii) Part 2.

(A) Except as provided in paragraph (e)(2)(iii)(B) of this section, part 2 of the application shall be submitted to the Director, Office of Wastewater Enforcement and Compliance by October 1, 1992;

(B) Any municipality with a population of less than 250,000 shall not be required to submit a part 1 application before May 17, 1993.

(C) For any storm water discharge associated with industrial activity from a facility that is owned or operated by a municipality with a population of less than 100,000 other than an airport, powerplant, or uncontrolled sanitary landfill, permit applications requirements are reserved.

(iv) Rejected facilities.

(A) Except as provided in paragraph (e)(2)(iv)(B) of this section, facilities that are rejected as members of the group shall submit an individual application (or obtain coverage under an applicable general permit) no later than 12 months after the date of receipt of the notice of rejection or October 1, 1992, whichever comes first.

(B) Facilities that are owned or operated by a municipality and that are rejected as members of part 1 group application shall submit an individual application no later than 180 days after the date of receipt of the notice of rejection or October 1, 1992, whichever is later.

(v) A facility listed under paragraph (b)(14) (i)–(xi) of this section may add on to a group application submitted in accordance with paragraph (e)(2)(i) of this section at the discretion of the Office of Water Enforcement and Permits, and only upon a showing of good cause by the facility and the group applicant; the request for the addition of the facility shall be made no later than February 18, 1992; the addition of the facility shall not cause the percentage of the facilities that are required to submit quantitative data to be less than 10%, unless there are over 100 facilities in the group that are submitting quantitative data; approval to become part of group application must be obtained from the group or the trade association representing the individual facilities.

(3) For any discharge from a large municipal separate storm sewer system;

(i) Part 1 of the application shall be submitted to the Director by November 18, 1991;

(ii) Based on information received in the part 1 application the Director will approve or deny a sampling plan under paragraph (d)(1)(iv)(E) of this section within 90 days after receiving the part 1 application;

(iii) Part 2 of the application shall be submitted to the Director by November 16, 1992.

(4) For any discharge from a medium municipal separate storm sewer system;

(i) Part 1 of the application shall be submitted to the Director by May 18, 1992.

(ii) Based on information received in the part 1 application the Director will approve or deny a sampling plan under paragraph (d)(1)(iv)(E) of this section within 90 days after receiving the part 1 application.

(iii) Part 2 of the application shall be submitted to the Director by May 17, 1993.

(5) A permit application shall be submitted to the Director within 180 days of notice, unless permission for a later date is granted by the Director (see § 124.52(c) of this chapter), for:

(i) A storm water discharge that the Director, or in States with approved NPDES programs, either the Director or the EPA Regional Administrator, determines that the discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States (see paragraphs (a)(1)(v) and (b)(15)(ii) of this section);

(ii) A storm water discharge subject to paragraph (c)(1)(v) of this section.

(6) Facilities with existing NPDES permits for storm water discharges associated with industrial activity shall maintain existing permits. Facilities with permits for storm water discharges associated with industrial activity which expire on or after May 18, 1992 shall submit a new application in accordance with the requirements of 40 CFR 122.21 and 40 CFR 122.26(c) (Form 1, Form 2F, and other applicable Forms) 180 days before the expiration of such permits.

(7) The Director shall issue or deny permits for discharges composed entirely of storm water under this section in accordance with the following schedule:

(i)(A) Except as provided in paragraph (e)(7)(i)(B) of this section, the Director shall issue or deny permits for storm water discharges associated with industrial activity no later than October 1, 1993, or, for new sources or existing sources which fail to submit a complete permit application by October 1, 1992, one year after receipt of a complete permit application;

(B) For any municipality with a population of less than 250,000 which submits a timely Part I group application under paragraph (e)(2)(i)(B) of this section, the Director shall issue or deny permits for storm water discharges associated with industrial activity no later than May 17, 1994, or, for any such municipality which fails to submit a complete Part II group permit application by May 17, 1993, one year after receipt of a complete permit application;

(ii) The Director shall issue or deny permits for large municipal separate storm sewer systems no later than November 16, 1993, or, for new sources or existing sources which fail to submit a complete permit application by November 16, 1992, one year after receipt of a complete permit application;

(iii) The Director shall issue or deny permits for medium municipal separate storm sewer systems no later than May 17, 1994, or, for new sources or existing sources which fail to submit a complete permit application by May 17, 1993, one year after receipt of a complete permit application.

(8) For any storm water discharge associated with small construction activities identified in paragraph (b)(15)(i) of this section, see § 122.21(c)(1). Discharges from these sources require permit authorization by March 10, 2003, unless designated for coverage before then.

(9) For any discharge from a regulated small MS4, the permit application made under § 122.33 must be submitted to the Director by:

(i) March 10, 2003 if designated under § 122.32(a)(1) unless your MS4 serves a jurisdiction with a population under 10,000 and the NPDES permitting authority has established a phasing schedule under § 123.35(d)(3) (see § 122.33(c)(1)); or

(ii) Within 180 days of notice, unless the NPDES permitting authority grants a later date, if designated under § 122.32(a)(2) (see § 122.33(c)(2)).

(f) Petitions.

(1) Any operator of a municipal separate storm sewer system may petition the Director to require a separate NPDES permit (or a permit issued under an approved NPDES State program) for any discharge into the municipal separate storm sewer system.

(2) Any person may petition the Director to require a NPDES permit for a discharge which is composed entirely of storm water which contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(3) The owner or operator of a municipal separate storm sewer system may petition the Director to reduce the Census estimates of the population served by such separate system to account for storm water discharged to combined sewers as defined by 40 CFR 35.2005(b)(11) that is treated in a publicly owned treatment works. In municipalities in which combined sewers are operated, the Census estimates of population may be reduced proportional to the fraction, based on estimated lengths, of the length of combined sewers over the sum of the length of combined sewers and municipal separate storm sewers where an applicant has submitted the NPDES permit number associated with each discharge point and a map indicating areas served by combined sewers and the location of any combined sewer overflow discharge point.

(4) Any person may petition the Director for the designation of a large, medium, or small municipal separate storm sewer system as defined by paragraph (b)(4)(iv), (b)(7)(iv), or (b)(16) of this section.

(5) The Director shall make a final determination on any petition received under this section within 90 days after receiving the petition with the exception of petitions to designate a small MS4 in which case the Director shall make a final determination on the petition within 180 days after its receipt.

(g) Conditional exclusion for “no exposure” of industrial activities and materials to storm water. Discharges composed entirely of storm water are not storm water discharges associated with industrial activity if there is “no exposure” of industrial materials and activities to rain, snow, snowmelt and/or runoff, and the discharger satisfies the conditions in paragraphs (g)(1) through (g)(4) of this section. “No exposure” means that all industrial materials and activities are protected by a storm resistant shelter to prevent exposure to rain, snow, snowmelt, and/or runoff. Industrial materials or activities include, but are not limited to, material handling equipment or activities, industrial machinery, raw materials, intermediate products, by-products, final products, or waste products. Material handling activities include the storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, final product or waste product.

(1) Qualification. To qualify for this exclusion, the operator of the discharge must:

(i) Provide a storm resistant shelter to protect industrial materials and activities from exposure to rain, snow, snow melt, and runoff;

(ii) Complete and sign (according to § 122.22) a certification that there are no discharges of storm water contaminated by exposure to industrial materials and activities from the entire facility, except as provided in paragraph (g)(2) of this section;

(iii) Submit the signed certification to the NPDES permitting authority once every five years. As of December 21, 2020 all certifications submitted in compliance with this section must be submitted electronically by the owner or operator to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, owners or operators may be required to report electronically if specified by a particular permit or if required to do so by state law.

(iv) Allow the Director to inspect the facility to determine compliance with the “no exposure” conditions;

(v) Allow the Director to make any “no exposure” inspection reports available to the public upon request; and

(vi) For facilities that discharge through an MS4, upon request, submit a copy of the certification of “no exposure” to the MS4 operator, as well as allow inspection and public reporting by the MS4 operator.

(2) Industrial materials and activities not requiring storm resistant shelter. To qualify for this exclusion, storm resistant shelter is not required for:

(i) Drums, barrels, tanks, and similar containers that are tightly sealed, provided those containers are not deteriorated and do not leak (“Sealed” means banded or otherwise secured and without operational taps or valves);

(ii) Adequately maintained vehicles used in material handling; and

(iii) Final products, other than products that would be mobilized in storm water discharge (e.g., rock salt).

(3) Limitations.

(i) Storm water discharges from construction activities identified in paragraphs (b)(14)(x) and (b)(15) are not eligible for this conditional exclusion.

(ii) This conditional exclusion from the requirement for an NPDES permit is available on a facility-wide basis only, not for individual outfalls. If a facility has some discharges of storm water that would otherwise be “no exposure” discharges, individual permit requirements should be adjusted accordingly.

(iii) If circumstances change and industrial materials or activities become exposed to rain, snow, snow melt, and/or runoff, the conditions for this exclusion no longer apply. In such cases, the discharge becomes subject to enforcement for un-permitted discharge. Any conditionally exempt discharger who anticipates changes in circumstances should apply for and obtain permit authorization prior to the change of circumstances.

(iv) Notwithstanding the provisions of this paragraph, the NPDES permitting authority retains the authority to require permit authorization (and deny this exclusion) upon making a determination that the discharge causes, has a reasonable potential to cause, or contributes to an instream excursion above an applicable water quality standard, including designated uses.

(4) Certification. The no exposure certification must require the submission of the following information, at a minimum, to aid the NPDES permitting authority in determining if the facility qualifies for the no exposure exclusion:

(i) The legal name, address and phone number of the discharger (see § 122.21(b));

(ii) The facility name and address, the county name and the latitude and longitude where the facility is located;

(iii) The certification must indicate that none of the following materials or activities are, or will be in the foreseeable future, exposed to precipitation:

(A) Using, storing or cleaning industrial machinery or equipment, and areas where residuals from using, storing or cleaning industrial machinery or equipment remain and are exposed to storm water;

(B) Materials or residuals on the ground or in storm water inlets from spills/leaks;

- (C) Materials or products from past industrial activity;
- (D) Material handling equipment (except adequately maintained vehicles);
- (E) Materials or products during loading/unloading or transporting activities;
- (F) Materials or products stored outdoors (except final products intended for outside use, e.g., new cars, where exposure to storm water does not result in the discharge of pollutants);
- (G) Materials contained in open, deteriorated or leaking storage drums, barrels, tanks, and similar containers;
- (H) Materials or products handled/stored on roads or railways owned or maintained by the discharger;
- (I) Waste material (except waste in covered, non-leaking containers, e.g., dumpsters);
- (J) Application or disposal of process wastewater (unless otherwise permitted); and
- (K) Particulate matter or visible deposits of residuals from roof stacks/vents not otherwise regulated, i.e., under an air quality control permit, and evident in the storm water outflow;

(iv) All “no exposure” certifications must include the following certification statement, and be signed in accordance with the signatory requirements of § 122.22: “I certify under penalty of law that I have read and understand the eligibility requirements for claiming a condition of “no exposure” and obtaining an exclusion from NPDES storm water permitting; and that there are no discharges of storm water contaminated by exposure to industrial activities or materials from the industrial facility identified in this document (except as allowed under paragraph (g)(2)) of this section. I understand that I am obligated to submit a no exposure certification form once every five years to the NPDES permitting authority and, if requested, to the operator of the local MS4 into which this facility discharges (where applicable). I understand that I must allow the NPDES permitting authority, or MS4 operator where the discharge is into the local MS4, to perform inspections to confirm the condition of no exposure and to make such inspection reports publicly available upon request. I understand that I must obtain coverage under an NPDES permit prior to any point source discharge of storm water from the facility. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.”

Code of Federal Regulations

Title 40. Protection of Environment

Chapter I. Environmental Protection Agency (Refs & Annos)

Subchapter D. Water Programs

Part 122. EPA Administered Permit Programs: The National Pollutant Discharge Elimination System
(Refs & Annos)

Subpart B. Permit Application and Special NPDES Program Requirements

40 C.F.R. § 122.34

§ 122.34 Permit requirements for regulated small MS4 permits.

Effective: January 9, 2017

[Currentness](#)

(a) General requirements. For any permit issued to a regulated small MS4, the NPDES permitting authority must include permit terms and conditions to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP), to protect water quality, and to satisfy the appropriate water quality requirements of the Clean Water Act. Terms and conditions that satisfy the requirements of this section must be expressed in clear, specific, and measurable terms. Such terms and conditions may include narrative, numeric, or other types of requirements (e.g., implementation of specific tasks or best management practices (BMPs), BMP design requirements, performance requirements, adaptive management requirements, schedules for implementation and maintenance, and frequency of actions).

(1) For permits providing coverage to any small MS4s for the first time, the NPDES permitting authority may specify a time period of up to 5 years from the date of permit issuance for the permittee to fully comply with the conditions of the permit and to implement necessary BMPs.

(2) For each successive permit, the NPDES permitting authority must include terms and conditions that meet the requirements of this section based on its evaluation of the current permit requirements, record of permittee compliance and program implementation progress, current water quality conditions, and other relevant information.

(b) Minimum control measures. The permit must include requirements that ensure the permittee implements, or continues to implement, the minimum control measures in paragraphs (b)(1) through (6) of this section during the permit term. The permit must also require a written storm water management program document or documents that, at a minimum, describes in detail how the permittee intends to comply with the permit's requirements for each minimum control measure.

(1) Public education and outreach on storm water impacts.

(i) The permit must identify the minimum elements and require implementation of a public education program to distribute educational materials to the community or conduct equivalent outreach activities about the impacts of storm water discharges on water bodies and the steps that the public can take to reduce pollutants in storm water runoff.

(ii) Guidance for NPDES permitting authorities and regulated small MS4s: The permittee may use storm water educational materials provided by the State, Tribe, EPA, environmental, public interest or trade organizations, or other MS4s. The public education program should inform individuals and households about the steps they can take to reduce storm water pollution, such as ensuring proper septic system maintenance, ensuring the proper use and disposal of landscape and garden chemicals including fertilizers and pesticides, protecting and restoring riparian vegetation, and properly disposing of used motor oil or household hazardous wastes. EPA recommends that the program inform individuals and groups how to become involved in local stream and beach restoration activities as well as activities that are coordinated by youth service and conservation corps or other citizen groups. EPA recommends that the permit require the permittee to tailor the public education program, using a mix of locally appropriate strategies, to target specific audiences and communities. Examples of strategies include distributing brochures or fact sheets, sponsoring speaking engagements before community groups, providing public service announcements, implementing educational programs targeted at school age children, and conducting community-based projects such as storm drain stenciling, and watershed and beach cleanups. In addition, EPA recommends that the permit require that some of the materials or outreach programs be directed toward targeted groups of commercial, industrial, and institutional entities likely to have significant storm water impacts. For example, providing information to restaurants on the impact of grease clogging storm drains and to garages on the impact of oil discharges. The permit should encourage the permittee to tailor the outreach program to address the viewpoints and concerns of all communities, particularly minority and disadvantaged communities, as well as any special concerns relating to children.

(2) Public involvement/participation.

(i) The permit must identify the minimum elements and require implementation of a public involvement/participation program that complies with State, Tribal, and local public notice requirements.

(ii) Guidance for NPDES permitting authorities and regulated small MS4s: EPA recommends that the permit include provisions addressing the need for the public to be included in developing, implementing, and reviewing the storm water management program and that the public participation process should make efforts to reach out and engage all economic and ethnic groups. Opportunities for members of the public to participate in program development and implementation include serving as citizen representatives on a local storm water management panel, attending public hearings, working as citizen volunteers to educate other individuals about the program, assisting in program coordination with other pre-existing programs, or participating in volunteer monitoring efforts. (Citizens should obtain approval where necessary for lawful access to monitoring sites.)

(3) Illicit discharge detection and elimination.

(i) The permit must identify the minimum elements and require the development, implementation, and enforcement of a program to detect and eliminate illicit discharges (as defined at § 122.26(b)(2)) into the small MS4. At a minimum, the permit must require the permittee to:

(A) Develop, if not already completed, a storm sewer system map, showing the location of all outfalls and the names and location of all waters of the United States that receive discharges from those outfalls;

(B) To the extent allowable under State, Tribal or local law, effectively prohibit, through ordinance, or other regulatory mechanism, non-storm water discharges into the storm sewer system and implement appropriate enforcement procedures and actions;

(C) Develop and implement a plan to detect and address non-storm water discharges, including illegal dumping, to the system; and

(D) Inform public employees, businesses, and the general public of hazards associated with illegal discharges and improper disposal of waste.

(ii) The permit must also require the permittee to address the following categories of non-storm water discharges or flows (i.e., illicit discharges) only if the permittee identifies them as a significant contributor of pollutants to the small MS4: Water line flushing, landscape irrigation, diverted stream flows, rising ground waters, uncontaminated ground water infiltration (as defined at [40 CFR 35.2005\(b\)\(20\)](#)), uncontaminated pumped ground water, discharges from potable water sources, foundation drains, air conditioning condensation, irrigation water, springs, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, flows from riparian habitats and wetlands, dechlorinated swimming pool discharges, and street wash water (discharges or flows from firefighting activities are excluded from the effective prohibition against non-storm water and need only be addressed where they are identified as significant sources of pollutants to waters of the United States).

(iii) Guidance for NPDES permitting authorities and regulated small MS4s: EPA recommends that the permit require the plan to detect and address illicit discharges include the following four components: Procedures for locating priority areas likely to have illicit discharges; procedures for tracing the source of an illicit discharge; procedures for removing the source of the discharge; and procedures for program evaluation and assessment. EPA recommends that the permit require the permittee to visually screen outfalls during dry weather and conduct field tests of selected pollutants as part of the procedures for locating priority areas. Illicit discharge education actions may include storm drain stenciling, a program to promote, publicize, and facilitate public reporting of illicit connections or discharges, and distribution of outreach materials.

(4) Construction site storm water runoff control.

(i) The permit must identify the minimum elements and require the development, implementation, and enforcement of a program to reduce pollutants in any storm water runoff to the small MS4 from construction activities that result in a land disturbance of greater than or equal to one acre. Reduction of storm water discharges from construction activity disturbing less than one acre must be included in the program if that construction activity is part of a larger common plan of development or sale that would disturb one acre or more. If the Director waives requirements for storm water discharges associated with small construction activity in accordance with [§ 122.26\(b\)\(15\)\(i\)](#), the permittee is not required to develop, implement, and/or enforce a program to reduce pollutant discharges from such sites. At a minimum, the permit must require the permittee to develop and implement:

(A) An ordinance or other regulatory mechanism to require erosion and sediment controls, as well as sanctions to ensure compliance, to the extent allowable under State, Tribal, or local law;

(B) Requirements for construction site operators to implement appropriate erosion and sediment control best management practices;

(C) Requirements for construction site operators to control waste such as discarded building materials, concrete truck washout, chemicals, litter, and sanitary waste at the construction site that may cause adverse impacts to water quality;

(D) Procedures for site plan review which incorporate consideration of potential water quality impacts;

(E) Procedures for receipt and consideration of information submitted by the public, and

(F) Procedures for site inspection and enforcement of control measures.

(ii) Guidance for NPDES permitting authorities and regulated small MS4s: Examples of sanctions to ensure compliance include non-monetary penalties, fines, bonding requirements and/or permit denials for non-compliance. EPA recommends that the procedures for site plan review include the review of individual pre-construction site plans to ensure consistency with local sediment and erosion control requirements. Procedures for site inspections and enforcement of control measures could include steps to identify priority sites for inspection and enforcement based on the nature of the construction activity, topography, and the characteristics of soils and receiving water quality. EPA also recommends that the permit require the permittee to provide appropriate educational and training measures for construction site operators, and require storm water pollution prevention plans for construction sites within the MS4's jurisdiction that discharge into the system. See § 122.44(s) (NPDES permitting authorities' option to incorporate qualifying State, Tribal and local erosion and sediment control programs into NPDES permits for storm water discharges from construction sites). Also see § 122.35(b) (The NPDES permitting authority may recognize that another government entity, including the NPDES permitting authority, may be responsible for implementing one or more of the minimum measures on the permittee's behalf).

(5) Post-construction storm water management in new development and redevelopment.

(i) The permit must identify the minimum elements and require the development, implementation, and enforcement of a program to address storm water runoff from new development and redevelopment projects that disturb greater than or equal to one acre, including projects less than one acre that are part of a larger common plan of development or sale, that discharge into the small MS4. The permit must ensure that controls are in place that would prevent or minimize water quality impacts. At a minimum, the permit must require the permittee to:

(A) Develop and implement strategies which include a combination of structural and/or non-structural best management practices (BMPs) appropriate for the community;

(B) Use an ordinance or other regulatory mechanism to address post-construction runoff from new development and redevelopment projects to the extent allowable under State, Tribal or local law; and

(C) Ensure adequate long-term operation and maintenance of BMPs.

(ii) Guidance for NPDES permitting authorities and regulated small MS4s: If water quality impacts are considered from the beginning stages of a project, new development and potentially redevelopment provide more opportunities for water quality protection. EPA recommends that the permit ensure that BMPs included in the program: Be appropriate for the local community; minimize water quality impacts; and attempt to maintain pre-development runoff conditions. EPA encourages the permittee to participate in locally-based watershed planning efforts which attempt to involve a diverse group of stakeholders including interested citizens. When developing a program that is consistent with this measure's intent, EPA recommends that the permit require the permittee to adopt a planning process that identifies the municipality's program goals (e.g., minimize water quality impacts resulting from post-construction runoff from new development and redevelopment), implementation strategies (e.g., adopt a combination of structural and/or non-structural BMPs), operation and maintenance policies and procedures, and enforcement procedures. In developing the program, the permit should also require the permittee to assess existing ordinances, policies, programs and studies that address storm water runoff quality. In addition to assessing these existing documents and programs, the permit should require the permittee to provide opportunities to the public to participate in the development of the program. Non-structural BMPs are preventative actions that involve management and source controls such as: Policies and ordinances that provide requirements and standards to direct growth to identified areas, protect sensitive areas such as wetlands and riparian areas, maintain and/or increase open space (including a dedicated funding source for open space acquisition), provide buffers along sensitive water bodies, minimize impervious surfaces, and minimize disturbance of soils and vegetation; policies or ordinances that encourage infill development in higher density urban areas, and areas with existing infrastructure; education programs for developers and the public about project designs that minimize water quality impacts; and measures such as minimization of percent impervious area after development and minimization of directly connected impervious areas. Structural BMPs include: Storage practices such as wet ponds and extended-detention outlet structures; filtration practices such as grassed swales, sand filters and filter strips; and infiltration practices such as infiltration basins and infiltration trenches. EPA recommends that the permit ensure the appropriate implementation of the structural BMPs by considering some or all of the following: Pre-construction review of BMP designs; inspections during construction to verify BMPs are built as designed; post-construction inspection and maintenance of BMPs; and penalty provisions for the noncompliance with design, construction or operation and maintenance. Storm water technologies are constantly being improved, and EPA recommends that the permit requirements be responsive to these changes, developments or improvements in control technologies.

(6) Pollution prevention/good housekeeping for municipal operations.

(i) The permit must identify the minimum elements and require the development and implementation of an operation and maintenance program that includes a training component and has the ultimate goal of preventing or reducing pollutant runoff from municipal operations. Using training materials that are available from EPA, the State, Tribe, or other organizations, the program must include employee training to prevent and reduce storm water pollution from activities such as park and open space maintenance, fleet and building maintenance, new construction and land disturbances, and storm water system maintenance.

(ii) Guidance for NPDES permitting authorities and regulated small MS4s: EPA recommends that the permit address the following: Maintenance activities, maintenance schedules, and long-term inspection procedures for structural and non-structural storm water controls to reduce floatables and other pollutants discharged from the separate storm sewers; controls for reducing or eliminating the discharge of pollutants from streets, roads, highways, municipal parking lots, maintenance and storage yards, fleet or maintenance shops with outdoor storage areas, salt/sand storage locations and snow disposal areas operated by the permittee, and waste transfer stations; procedures for properly disposing of waste removed from the separate storm sewers and areas listed above (such as dredge spoil, accumulated sediments, floatables, and other debris); and ways to ensure that new flood management projects assess the impacts on water quality and examine existing projects for incorporating additional water quality protection devices or practices. Operation and maintenance should be an integral component of all storm water management programs. This measure is intended to improve the efficiency of these programs and require new programs where necessary. Properly developed and implemented operation and maintenance programs reduce the risk of water quality problems.

(c) Other applicable requirements. As appropriate, the permit will include:

(1) More stringent terms and conditions, including permit requirements that modify, or are in addition to, the minimum control measures based on an approved total maximum daily load (TMDL) or equivalent analysis, or where the Director determines such terms and conditions are needed to protect water quality.

(2) Other applicable NPDES permit requirements, standards and conditions established in the individual or general permit, developed consistent with the provisions of §§ 122.41 through 122.49.

(d) Evaluation and assessment requirements—

(1) Evaluation. The permit must require the permittee to evaluate compliance with the terms and conditions of the permit, including the effectiveness of the components of its storm water management program, and the status of achieving the measurable requirements in the permit.

Note to paragraph (d)(1): The NPDES permitting authority may determine monitoring requirements for the permittee in accordance with State/Tribal monitoring plans appropriate to the watershed. Participation in a group monitoring program is encouraged.

(2) Recordkeeping. The permit must require that the permittee keep records required by the NPDES permit for at least 3 years and submit such records to the NPDES permitting authority when specifically asked to do so. The permit must require the permittee to make records, including a written description of the storm water management program, available to the public at reasonable times during regular business hours (see § 122.7 for confidentiality

provision). (The permittee may assess a reasonable charge for copying. The permit may allow the permittee to require a member of the public to provide advance notice.)

(3) Reporting. Unless the permittee is relying on another entity to satisfy its NPDES permit obligations under § 122.35(a), the permittee must submit annual reports to the NPDES permitting authority for its first permit term. For subsequent permit terms, the permittee must submit reports in year two and four unless the NPDES permitting authority requires more frequent reports. As of December 21, 2020 all reports submitted in compliance with this section must be submitted electronically by the owner, operator, or the duly authorized representative of the small MS4 to the NPDES permitting authority or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, the owner, operator, or the duly authorized representative of the small MS4 may be required to report electronically if specified by a particular permit or if required to do so by state law. The report must include:

- (i) The status of compliance with permit terms and conditions;
- (ii) Results of information collected and analyzed, including monitoring data, if any, during the reporting period;
- (iii) A summary of the storm water activities the permittee proposes to undertake to comply with the permit during the next reporting cycle;
- (iv) Any changes made during the reporting period to the permittee's storm water management program; and
- (v) Notice that the permittee is relying on another governmental entity to satisfy some of the permit obligations (if applicable), consistent with § 122.35(a).

(e) Qualifying local program. If an existing qualifying local program requires the permittee to implement one or more of the minimum control measures of paragraph (b) of this section, the NPDES permitting authority may include conditions in the NPDES permit that direct the permittee to follow that qualifying program's requirements rather than the requirements of paragraph (b). A qualifying local program is a local, State or Tribal municipal storm water management program that imposes, at a minimum, the relevant requirements of paragraph (b).

Code of Federal Regulations

Title 40. Protection of Environment

Chapter I. Environmental Protection Agency (Refs & Annos)

Subchapter D. Water Programs

Part 122. EPA Administered Permit Programs: The National Pollutant Discharge Elimination System
(Refs & Annos)

Subpart C. Permit Conditions

40 C.F.R. § 122.41

§ 122.41 Conditions applicable to all permits (applicable to State programs, see § 123.25).

Effective: December 21, 2015

Currentness

The following conditions apply to all NPDES permits. Additional conditions applicable to NPDES permits are in § 122.42. All conditions applicable to NPDES permits shall be incorporated into the permits either expressly or by reference. If incorporated by reference, a specific citation to these regulations (or the corresponding approved State regulations) must be given in the permit.

(a) Duty to comply. The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the Clean Water Act and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or denial of a permit renewal application.

(1) The permittee shall comply with effluent standards or prohibitions established under section 307(a) of the Clean Water Act for toxic pollutants and with standards for sewage sludge use or disposal established under section 405(d) of the CWA within the time provided in the regulations that establish these standards or prohibitions or standards for sewage sludge use or disposal, even if the permit has not yet been modified to incorporate the requirement.

(2) The Clean Water Act provides that any person who violates section 301, 302, 306, 307, 308, 318 or 405 of the Act, or any permit condition or limitation implementing any such sections in a permit issued under section 402, or any requirement imposed in a pretreatment program approved under sections 402(a)(3) or 402(b)(8) of the Act, is subject to a civil penalty not to exceed \$25,000 per day for each violation. The Clean Water Act provides that any person who negligently violates sections 301, 302, 306, 307, 308, 318, or 405 of the Act, or any condition or limitation implementing any of such sections in a permit issued under section 402 of the Act, or any requirement imposed in a pretreatment program approved under section 402(a)(3) or 402(b)(8) of the Act, is subject to criminal penalties of \$2,500 to \$25,000 per day of violation, or imprisonment of not more than 1 year, or both. In the case of a second or subsequent conviction for a negligent violation, a person shall be subject to criminal penalties of not more than \$50,000 per day of violation, or by imprisonment of not more than 2 years, or both. Any person who knowingly violates such sections, or such conditions or limitations is subject to criminal penalties of \$5,000 to \$50,000 per day of violation, or imprisonment for not more than 3 years, or both. In the case of a second or subsequent conviction for a knowing violation, a person shall be subject to criminal penalties of not more than \$100,000 per day of violation, or imprisonment of not more than 6 years, or both. Any person who knowingly violates section 301, 302, 303, 306, 307, 308, 318 or 405 of the Act, or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of the Act, and who knows at that time that he thereby places another person in imminent danger of death or serious bodily injury, shall, upon conviction, be subject to a fine of not more than

\$250,000 or imprisonment of not more than 15 years, or both. In the case of a second or subsequent conviction for a knowing endangerment violation, a person shall be subject to a fine of not more than \$500,000 or by imprisonment of not more than 30 years, or both. An organization, as defined in section 309(c)(3)(B)(iii) of the CWA, shall, upon conviction of violating the imminent danger provision, be subject to a fine of not more than \$1,000,000 and can be fined up to \$2,000,000 for second or subsequent convictions.

(3) Any person may be assessed an administrative penalty by the Administrator for violating [section 301](#), [302](#), [306](#), [307](#), [308](#), [318](#) or 405 of this Act, or any permit condition or limitation implementing any of such sections in a permit issued under [section 402](#) of this Act. Administrative penalties for Class I violations are not to exceed \$10,000 per violation, with the maximum amount of any Class I penalty assessed not to exceed \$25,000. Penalties for Class II violations are not to exceed \$10,000 per day for each day during which the violation continues, with the maximum amount of any Class II penalty not to exceed \$125,000.

(b) Duty to reapply. If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee must apply for and obtain a new permit.

(c) Need to halt or reduce activity not a defense. It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

(d) Duty to mitigate. The permittee shall take all reasonable steps to minimize or prevent any discharge or sludge use or disposal in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

(e) Proper operation and maintenance. The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems which are installed by a permittee only when the operation is necessary to achieve compliance with the conditions of the permit.

(f) Permit actions. This permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any permit condition.

(g) Property rights. This permit does not convey any property rights of any sort, or any exclusive privilege.

(h) Duty to provide information. The permittee shall furnish to the Director, within a reasonable time, any information which the Director may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit or to determine compliance with this permit. The permittee shall also furnish to the Director upon request, copies of records required to be kept by this permit.

(i) Inspection and entry. The permittee shall allow the Director, or an authorized representative (including an authorized contractor acting as a representative of the Administrator), upon presentation of credentials and other documents as may be required by law, to:

- (1) Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;
- (2) Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;
- (3) Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit; and
- (4) Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the Clean Water Act, any substances or parameters at any location.

(j) Monitoring and records.

- (1) Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.
- (2) Except for records of monitoring information required by this permit related to the permittee's sewage sludge use and disposal activities, which shall be retained for a period of at least five years (or longer as required by 40 CFR part 503), the permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least 3 years from the date of the sample, measurement, report or application. This period may be extended by request of the Director at any time.
- (3) Records of monitoring information shall include:
 - (i) The date, exact place, and time of sampling or measurements;
 - (ii) The individual(s) who performed the sampling or measurements;
 - (iii) The date(s) analyses were performed;
 - (iv) The individual(s) who performed the analyses;
 - (v) The analytical techniques or methods used; and

(vi) The results of such analyses.

(4) Monitoring must be conducted according to test procedures approved under 40 CFR Part 136 unless another method is required under 40 CFR subchapters N or O.

(5) The Clean Water Act provides that any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this permit shall, upon conviction, be punished by a fine of not more than \$10,000, or by imprisonment for not more than 2 years, or both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment is a fine of not more than \$20,000 per day of violation, or by imprisonment of not more than 4 years, or both.

(k) Signatory requirements.

(1) All applications, reports, or information submitted to the Director shall be signed and certified. (See § 122.22)

(2) The CWA provides that any person who knowingly makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this permit, including monitoring reports or reports of compliance or non-compliance shall, upon conviction, be punished by a fine of not more than \$10,000 per violation, or by imprisonment for not more than 6 months per violation, or by both.

(l) Reporting requirements.—

(1) Planned changes. The permittee shall give notice to the Director as soon as possible of any planned physical alterations or additions to the permitted facility. Notice is required only when:

(i) The alteration or addition to a permitted facility may meet one of the criteria for determining whether a facility is a new source in § 122.29(b); or

(ii) The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants which are subject neither to effluent limitations in the permit, nor to notification requirements under § 122.42(a)(1).

(iii) The alteration or addition results in a significant change in the permittee's sludge use or disposal practices, and such alteration, addition, or change may justify the application of permit conditions that are different from or absent in the existing permit, including notification of additional use or disposal sites not reported during the permit application process or not reported pursuant to an approved land application plan;

(2) Anticipated noncompliance. The permittee shall give advance notice to the Director of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements.

(3) Transfers. This permit is not transferable to any person except after notice to the Director. The Director may require modification or revocation and reissuance of the permit to change the name of the permittee and incorporate such other requirements as may be necessary under the Clean Water Act. (See § 122.61; in some cases, modification or revocation and reissuance is mandatory.)

(4) Monitoring reports. Monitoring results shall be reported at the intervals specified elsewhere in this permit.

(i) Monitoring results must be reported on a Discharge Monitoring Report (DMR) or forms provided or specified by the Director for reporting results of monitoring of sludge use or disposal practices. As of December 21, 2016 all reports and forms submitted in compliance with this section must be submitted electronically by the permittee to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, permittees may be required to report electronically if specified by a particular permit or if required to do so by state law.

(ii) If the permittee monitors any pollutant more frequently than required by the permit using test procedures approved under 40 CFR Part 136, or another method required for an industry-specific waste stream under 40 CFR subchapters N or O, the results of such monitoring shall be included in the calculation and reporting of the data submitted in the DMR or sludge reporting form specified by the Director.

(iii) Calculations for all limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified by the Director in the permit.

(5) Compliance schedules. Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this permit shall be submitted no later than 14 days following each schedule date.

(6) Twenty-four hour reporting.

(i) The permittee shall report any noncompliance which may endanger health or the environment. Any information shall be provided orally within 24 hours from the time the permittee becomes aware of the circumstances. A report shall also be provided within 5 days of the time the permittee becomes aware of the circumstances. The report shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times), and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance. For noncompliance events related to combined sewer overflows, sanitary sewer overflows, or bypass events, these reports must include the data described above (with the exception of time of discovery) as well as the type of event (combined sewer overflows, sanitary sewer overflows, or bypass events), type of sewer overflow structure (e.g., manhole, combine sewer overflow outfall), discharge volumes untreated by the treatment works treating domestic sewage, types of human health and environmental impacts of the sewer overflow event, and whether the noncompliance was related to wet weather. As of December 21, 2020 all reports related to combined sewer overflows, sanitary sewer overflows,

or bypass events submitted in compliance with this section must be submitted electronically by the permittee to the Director or initial recipient, as defined in [40 CFR 127.2\(b\)](#), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), [§ 122.22](#), and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, permittees may be required to electronically submit reports related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section by a particular permit or if required to do so by state law. The Director may also require permittees to electronically submit reports not related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section.

(ii) The following shall be included as information which must be reported within 24 hours under this paragraph.

(A) Any unanticipated bypass which exceeds any effluent limitation in the permit. (See [§ 122.41\(g\)](#).)

(B) Any upset which exceeds any effluent limitation in the permit.

(C) Violation of a maximum daily discharge limitation for any of the pollutants listed by the Director in the permit to be reported within 24 hours. (See [§ 122.44\(g\)](#).)

(iii) The Director may waive the written report on a case-by-case basis for reports under paragraph (l)(6)(ii) of this section if the oral report has been received within 24 hours.

(7) Other noncompliance. The permittee shall report all instances of noncompliance not reported under paragraphs (l)(4), (5), and (6) of this section, at the time monitoring reports are submitted. The reports shall contain the information listed in paragraph (l)(6). For noncompliance events related to combined sewer overflows, sanitary sewer overflows, or bypass events, these reports shall contain the information described in paragraph (l)(6) and the applicable required data in appendix A to 40 CFR part 127. As of December 21, 2020 all reports related to combined sewer overflows, sanitary sewer overflows, or bypass events submitted in compliance with this section must be submitted electronically by the permittee to the Director or initial recipient, as defined in [40 CFR 127.2\(b\)](#), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), [§ 122.22](#), and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, permittees may be required to electronically submit reports related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section by a particular permit or if required to do so by state law. The Director may also require permittees to electronically submit reports not related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section.

(8) Other information. Where the permittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the Director, it shall promptly submit such facts or information.

(9) Identification of the initial recipient for NPDES electronic reporting data. The owner, operator, or the duly authorized representative of an NPDES-regulated entity is required to electronically submit the required NPDES information (as specified in appendix A to 40 CFR part 127) to the appropriate initial recipient, as determined by

EPA, and as defined in § 127.2(b) of this chapter. EPA will identify and publish the list of initial recipients on its Web site and in the Federal Register, by state and by NPDES data group [see § 127.2(c) of this chapter]. EPA will update and maintain this listing.

(m) Bypass—

(1) Definitions.

(i) Bypass means the intentional diversion of waste streams from any portion of a treatment facility.

(ii) Severe property damage means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

(2) Bypass not exceeding limitations. The permittee may allow any bypass to occur which does not cause effluent limitations to be exceeded, but only if it also it for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions of paragraphs (m)(3) and (m)(4) of this section.

(3) Notice—

(i) Anticipated bypass. If the permittee knows in advance of the need for a bypass, it shall submit prior notice, if possible at least ten days before the date of the bypass. As of December 21, 2020 all notices submitted in compliance with this section must be submitted electronically by the permittee to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, permittees may be required to report electronically if specified by a particular permit or if required to do so by state law.

(ii) Unanticipated bypass. The permittee shall submit notice of an unanticipated bypass as required in paragraph (l) (6) of this section (24-hour notice). As of December 21, 2020 all notices submitted in compliance with this section must be submitted electronically by the permittee to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, permittees may be required to report electronically if specified by a particular permit or if required to do so by state law.

(4) Prohibition of bypass.

(i) Bypass is prohibited, and the Director may take enforcement action against a permittee for bypass, unless:

(A) Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;

(B) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and

(C) The permittee submitted notices as required under paragraph (m)(3) of this section.

(ii) The Director may approve an anticipated bypass, after considering its adverse effects, if the Director determines that it will meet the three conditions listed above in paragraph (m)(4)(i) of this section.

(n) Upset—

(1) Definition. Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

(2) Effect of an upset. An upset constitutes an affirmative defense to an action brought for noncompliance with such technology based permit effluent limitations if the requirements of paragraph (n)(3) of this section are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.

(3) Conditions necessary for a demonstration of upset. A permittee who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:

(i) An upset occurred and that the permittee can identify the cause(s) of the upset;

(ii) The permitted facility was at the time being properly operated; and

(iii) The permittee submitted notice of the upset as required in paragraph (1)(6)(ii)(B) of this section (24 hour notice).

(iv) The permittee complied with any remedial measures required under paragraph (d) of this section.

(4) Burden of proof. In any enforcement proceeding the permittee seeking to establish the occurrence of an upset has the burden of proof.

(Clean Water Act ([33 U.S.C. 1251 et seq.](#)), Safe Drinking Water Act ([42 U.S.C. 300f et seq.](#)), Clean Air Act ([42 U.S.C. 7401 et seq.](#)), Resource Conservation and Recovery Act ([42 U.S.C. 6901 et seq.](#)))

[Title 40. Protection of Environment](#)

[Chapter I. Environmental Protection Agency \(Refs & Annos\)](#)

[Subchapter D. Water Programs](#)

[Part 122. EPA Administered Permit Programs: The National Pollutant Discharge Elimination System \(Refs & Annos\)](#)

[Subpart C. Permit Conditions](#)

40 C.F.R. § 122.42

§ 122.42 Additional conditions applicable to specified categories of NPDES permits (applicable to State NPDES programs, see § 123.25).

Effective: February 7, 2018

[Currentness](#)

The following conditions, in addition to those set forth in [§ 122.41](#), apply to all NPDES permits within the categories specified below:

(a) Existing manufacturing, commercial, mining, and silvicultural dischargers. In addition to the reporting requirements under [§ 122.41\(1\)](#), all existing manufacturing, commercial, mining, and silvicultural dischargers must notify the Director as soon as they know or have reason to believe:

(1) That any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, of any toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following “notification levels”:

(i) One hundred micrograms per liter (100 µg/l);

(ii) Two hundred micrograms per liter (200 µg/l) for acrolein and acrylonitrile; five hundred micrograms per liter (500 µg/l) for 2,4-dinitrophenol and for 2-methyl-4,6-dinitrophenol; and one milligram per liter (1 mg/l) for antimony;

(iii) Five (5) times the maximum concentration value reported for that pollutant in the permit application in accordance with [§ 122.21\(g\)\(7\)](#); or

(iv) The level established by the Director in accordance with [§ 122.44\(f\)](#).

(2) That any activity has occurred or will occur which would result in any discharge, on a non-routine or infrequent basis, of a toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following “notification levels”:

- (i) Five hundred micrograms per liter (500 µg/l);
- (ii) One milligram per liter (1 mg/l) for antimony;
- (iii) Ten (10) times the maximum concentration value reported for that pollutant in the permit application in accordance with § 122.21(g)(7).
- (iv) The level established by the Director in accordance with § 122.44(f).

(b) Publicly owned treatment works. All POTWs must provide adequate notice to the Director of the following:

- (1) Any new introduction of pollutants into the POTW from an indirect discharger which would be subject to sections 301 or 306 of CWA if it were directly discharging those pollutants; and
- (2) Any substantial change in the volume or character of pollutants being introduced into that POTW by a source introducing pollutants into the POTW at the time of issuance of the permit.
- (3) For purposes of this paragraph, adequate notice shall include information on (i) the quality and quantity of effluent introduced into the POTW, and (ii) any anticipated impact of the change on the quantity or quality of effluent to be discharged from the POTW.

(c) Municipal separate storm sewer systems. The operator of a large or medium municipal separate storm sewer system or a municipal separate storm sewer that has been designated by the Director under § 122.26(a)(1)(v) must submit an annual report by the anniversary of the date of the issuance of the permit for such system. As of December 21, 2020 all reports submitted in compliance with this section must be submitted electronically by the owner, operator, or the duly authorized representative of the MS4 to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, the owner, operator, or the duly authorized representative of the MS4 may be required to report electronically if specified by a particular permit or if required to do so by state law. The report shall include:

- (1) The status of implementing the components of the storm water management program that are established as permit conditions;
- (2) Proposed changes to the storm water management programs that are established as permit condition. Such proposed changes shall be consistent with § 122.26(d)(2)(iii) of this part; and
- (3) Revisions, if necessary, to the assessment of controls and the fiscal analysis reported in the permit application under § 122.26(d)(2)(iv) and (d)(2)(v) of this part;

(4) A summary of data, including monitoring data, that is accumulated throughout the reporting year;

(5) Annual expenditures and budget for year following each annual report;

(6) A summary describing the number and nature of enforcement actions, inspections, and public education programs;

(7) Identification of water quality improvements or degradation;

(d) Storm water discharges. The initial permits for discharges composed entirely of storm water issued pursuant to § 122.26(e)(7) of this part shall require compliance with the conditions of the permit as expeditiously as practicable, but in no event later than three years after the date of issuance of the permit.

(e) Concentrated animal feeding operations (CAFOs). Any permit issued to a CAFO must include the requirements in paragraphs (e)(1) through (e)(6) of this section.

(1) Requirement to implement a nutrient management plan. Any permit issued to a CAFO must include a requirement to implement a nutrient management plan that, at a minimum, contains best management practices necessary to meet the requirements of this paragraph and applicable effluent limitations and standards, including those specified in 40 CFR part 412. The nutrient management plan must, to the extent applicable:

(i) Ensure adequate storage of manure, litter, and process wastewater, including procedures to ensure proper operation and maintenance of the storage facilities;

(ii) Ensure proper management of mortalities (i.e., dead animals) to ensure that they are not disposed of in a liquid manure, storm water, or process wastewater storage or treatment system that is not specifically designed to treat animal mortalities;

(iii) Ensure that clean water is diverted, as appropriate, from the production area;

(iv) Prevent direct contact of confined animals with waters of the United States;

(v) Ensure that chemicals and other contaminants handled on-site are not disposed of in any manure, litter, process wastewater, or storm water storage or treatment system unless specifically designed to treat such chemicals and other contaminants;

(vi) Identify appropriate site specific conservation practices to be implemented, including as appropriate buffers or equivalent practices, to control runoff of pollutants to waters of the United States;

(vii) Identify protocols for appropriate testing of manure, litter, process wastewater, and soil;

(viii) Establish protocols to land apply manure, litter or process wastewater in accordance with site specific nutrient management practices that ensure appropriate agricultural utilization of the nutrients in the manure, litter or process wastewater; and

(ix) Identify specific records that will be maintained to document the implementation and management of the minimum elements described in paragraphs (e)(1)(i) through (e)(1)(viii) of this section.

(2) Recordkeeping requirements.

(i) The permittee must create, maintain for five years, and make available to the Director, upon request, the following records:

(A) All applicable records identified pursuant paragraph (e)(1)(ix) of this section;

(B) In addition, all CAFOs subject to 40 CFR part 412 must comply with record keeping requirements as specified in § 412.37(b) and (c) and § 412.47(b) and (c).

(ii) A copy of the CAFO's site-specific nutrient management plan must be maintained on site and made available to the Director upon request.

(3) Requirements relating to transfer of manure or process wastewater to other persons. Prior to transferring manure, litter or process wastewater to other persons, Large CAFOs must provide the recipient of the manure, litter or process wastewater with the most current nutrient analysis. The analysis provided must be consistent with the requirements of 40 CFR part 412. Large CAFOs must retain for five years records of the date, recipient name and address, and approximate amount of manure, litter or process wastewater transferred to another person.

(4) Annual reporting requirements for CAFOs. The permittee must submit an annual report to the Director. As of December 21, 2020 all annual reports submitted in compliance with this section must be submitted electronically by the permittee to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, the permittee may be required to report electronically if specified by a particular permit or if required to do so by state law. The annual report must include:

(i) The number and type of animals, whether in open confinement or housed under roof (beef cattle, broilers, layers, swine weighing 55 pounds or more, swine weighing less than 55 pounds, mature dairy cows, dairy heifers, veal calves, sheep and lambs, horses, ducks, turkeys, other);

(ii) Estimated amount of total manure, litter and process wastewater generated by the CAFO in the previous 12 months (tons/gallons);

(iii) Estimated amount of total manure, litter and process wastewater transferred to other person by the CAFO in the previous 12 months (tons/gallons);

(iv) Total number of acres for land application covered by the nutrient management plan developed in accordance with paragraph (e)(1) of this section;

(v) Total number of acres under control of the CAFO that were used for land application of manure, litter and process wastewater in the previous 12 months;

(vi) Summary of all manure, litter and process wastewater discharges from the production area that have occurred in the previous 12 months, including, for each discharge, the date of discovery, duration of discharge, and approximate volume; and

(vii) A statement indicating whether the current version of the CAFO's nutrient management plan was developed or approved by a certified nutrient management planner; and

(viii) The actual crop(s) planted and actual yield(s) for each field, the actual nitrogen and phosphorus content of the manure, litter, and process wastewater, the results of calculations conducted in accordance with paragraphs (e)(5)(i)(B) and (e)(5)(ii)(D) of this section, and the amount of manure, litter, and process wastewater applied to each field during the previous 12 months; and, for any CAFO that implements a nutrient management plan that addresses rates of application in accordance with paragraph (e)(5)(ii) of this section, the results of any soil testing for nitrogen and phosphorus taken during the preceding 12 months, the data used in calculations conducted in accordance with paragraph (e)(5)(ii)(D) of this section, and the amount of any supplemental fertilizer applied during the previous 12 months.

(5) Terms of the nutrient management plan. Any permit issued to a CAFO must require compliance with the terms of the CAFO's site-specific nutrient management plan. The terms of the nutrient management plan are the information, protocols, best management practices, and other conditions in the nutrient management plan determined by the Director to be necessary to meet the requirements of paragraph (e)(1) of this section. The terms of the nutrient management plan, with respect to protocols for land application of manure, litter, or process wastewater required by paragraph (e)(1)(viii) of this section and, as applicable, [40 CFR 412.4\(c\)](#), must include the fields available for land application; field-specific rates of application properly developed, as specified in paragraphs (e)(5)(i) through (ii) of this section, to ensure appropriate agricultural utilization of the nutrients in the manure, litter, or process wastewater; and any timing limitations identified in the nutrient management plan concerning land application on the fields available for land application. The terms must address rates of application using one of the following two approaches, unless the Director specifies that only one of these approaches may be used:

(i) Linear approach. An approach that expresses rates of application as pounds of nitrogen and phosphorus, according to the following specifications:

(A) The terms include maximum application rates from manure, litter, and process wastewater for each year of permit coverage, for each crop identified in the nutrient management plan, in chemical forms determined to be acceptable to the Director, in pounds per acre, per year, for each field to be used for land application, and certain factors necessary to determine such rates. At a minimum, the factors that are terms must include: The outcome of the field-specific assessment of the potential for nitrogen and phosphorus transport from each field; the crops to be planted in each field or any other uses of a field such as pasture or fallow fields; the realistic yield goal for each crop or use identified for each field; the nitrogen and phosphorus recommendations from sources specified by the Director for each crop or use identified for each field; credits for all nitrogen in the field that will be plant available; consideration of multi-year phosphorus application; and accounting for all other additions of plant available nitrogen and phosphorus to the field. In addition, the terms include the form and source of manure, litter, and process wastewater to be land-applied; the timing and method of land application; and the methodology by which the nutrient management plan accounts for the amount of nitrogen and phosphorus in the manure, litter, and process wastewater to be applied.

(B) Large CAFOs that use this approach must calculate the maximum amount of manure, litter, and process wastewater to be land applied at least once each year using the results of the most recent representative manure, litter, and process wastewater tests for nitrogen and phosphorus taken within 12 months of the date of land application; or

(ii) Narrative rate approach. An approach that expresses rates of application as a narrative rate of application that results in the amount, in tons or gallons, of manure, litter, and process wastewater to be land applied, according to the following specifications:

(A) The terms include maximum amounts of nitrogen and phosphorus derived from all sources of nutrients, for each crop identified in the nutrient management plan, in chemical forms determined to be acceptable to the Director, in pounds per acre, for each field, and certain factors necessary to determine such amounts. At a minimum, the factors that are terms must include: the outcome of the field-specific assessment of the potential for nitrogen and phosphorus transport from each field; the crops to be planted in each field or any other uses such as pasture or fallow fields (including alternative crops identified in accordance with paragraph (e) (5)(ii)(B) of this section); the realistic yield goal for each crop or use identified for each field; and the nitrogen and phosphorus recommendations from sources specified by the Director for each crop or use identified for each field. In addition, the terms include the methodology by which the nutrient management plan accounts for the following factors when calculating the amounts of manure, litter, and process wastewater to be land applied: Results of soil tests conducted in accordance with protocols identified in the nutrient management plan, as required by paragraph (e)(1)(vii) of this section; credits for all nitrogen in the field that will be plant available; the amount of nitrogen and phosphorus in the manure, litter, and process wastewater to be applied; consideration of multi-year phosphorus application; accounting for all other additions of plant available nitrogen and phosphorus to the field; the form and source of manure, litter, and process wastewater; the timing and method of land application; and volatilization of nitrogen and mineralization of organic nitrogen.

(B) The terms of the nutrient management plan include alternative crops identified in the CAFO's nutrient management plan that are not in the planned crop rotation. Where a CAFO includes alternative crops in its nutrient management plan, the crops must be listed by field, in addition to the crops identified in the planned crop rotation for that field, and the nutrient management plan must include realistic crop yield goals and the nitrogen and phosphorus recommendations from sources specified by the Director for each crop. Maximum amounts of nitrogen and phosphorus from all sources of nutrients and the amounts of manure,

litter, and process wastewater to be applied must be determined in accordance with the methodology described in paragraph (e)(5)(ii)(A) of this section.

(C) For CAFOs using this approach, the following projections must be included in the nutrient management plan submitted to the Director, but are not terms of the nutrient management plan: The CAFO's planned crop rotations for each field for the period of permit coverage; the projected amount of manure, litter, or process wastewater to be applied; projected credits for all nitrogen in the field that will be plant available; consideration of multi-year phosphorus application; accounting for all other additions of plant available nitrogen and phosphorus to the field; and the predicted form, source, and method of application of manure, litter, and process wastewater for each crop. Timing of application for each field, insofar as it concerns the calculation of rates of application, is not a term of the nutrient management plan.

(D) CAFOs that use this approach must calculate maximum amounts of manure, litter, and process wastewater to be land applied at least once each year using the methodology required in paragraph (e)(5)(ii)(A) of this section before land applying manure, litter, and process wastewater and must rely on the following data:

(1) A field-specific determination of soil levels of nitrogen and phosphorus, including, for nitrogen, a concurrent determination of nitrogen that will be plant available consistent with the methodology required by paragraph (e)(5)(ii)(A) of this section, and for phosphorus, the results of the most recent soil test conducted in accordance with soil testing requirements approved by the Director; and

(2) The results of most recent representative manure, litter, and process wastewater tests for nitrogen and phosphorus taken within 12 months of the date of land application, in order to determine the amount of nitrogen and phosphorus in the manure, litter, and process wastewater to be applied.

(6) Changes to a nutrient management plan. Any permit issued to a CAFO must require the following procedures to apply when a CAFO owner or operator makes changes to the CAFO's nutrient management plan previously submitted to the Director:

(i) The CAFO owner or operator must provide the Director with the most current version of the CAFO's nutrient management plan and identify changes from the previous version, except that the results of calculations made in accordance with the requirements of paragraphs (e)(5)(i)(B) and (e)(5)(ii)(D) of this section are not subject to the requirements of paragraph (e)(6) of this section.

(ii) The Director must review the revised nutrient management plan to ensure that it meets the requirements of this section and applicable effluent limitations and standards, including those specified in 40 CFR part 412, and must determine whether the changes to the nutrient management plan necessitate revision to the terms of the nutrient management plan incorporated into the permit issued to the CAFO. If revision to the terms of the nutrient management plan is not necessary, the Director must notify the CAFO owner or operator and upon such notification the CAFO may implement the revised nutrient management plan. If revision to the terms of the nutrient management plan is necessary, the Director must determine whether such changes are substantial changes as described in paragraph (e)(6)(iii) of this section.

(A) If the Director determines that the changes to the terms of the nutrient management plan are not substantial, the Director must make the revised nutrient management plan publicly available and include it in the permit record, revise the terms of the nutrient management plan incorporated into the permit, and notify the owner or operator and inform the public of any changes to the terms of the nutrient management plan that are incorporated into the permit.

(B) If the Director determines that the changes to the terms of the nutrient management plan are substantial, the Director must notify the public and make the proposed changes and the information submitted by the CAFO owner or operator available for public review and comment. The process for public comments, hearing requests, and the hearing process if a hearing is held must follow the procedures applicable to draft permits set forth in [40 CFR 124.11](#) through [124.13](#). The Director may establish, either by regulation or in the CAFO's permit, an appropriate period of time for the public to comment and request a hearing on the proposed changes that differs from the time period specified in [40 CFR 124.10](#). The Director must respond to all significant comments received during the comment period as provided in [40 CFR 124.17](#), and require the CAFO owner or operator to further revise the nutrient management plan if necessary, in order to approve the revision to the terms of the nutrient management plan incorporated into the CAFO's permit. Once the Director incorporates the revised terms of the nutrient management plan into the permit, the Director must notify the owner or operator and inform the public of the final decision concerning revisions to the terms and conditions of the permit.

(iii) Substantial changes to the terms of a nutrient management plan incorporated as terms and conditions of a permit include, but are not limited to:

(A) Addition of new land application areas not previously included in the CAFO's nutrient management plan. Except that if the land application area that is being added to the nutrient management plan is covered by terms of a nutrient management plan incorporated into an existing NPDES permit in accordance with the requirements of paragraph (e)(5) of this section, and the CAFO owner or operator applies manure, litter, or process wastewater on the newly added land application area in accordance with the existing field-specific permit terms applicable to the newly added land application area, such addition of new land would be a change to the new CAFO owner or operator's nutrient management plan but not a substantial change for purposes of this section;

(B) Any changes to the field-specific maximum annual rates for land application, as set forth in paragraphs (e)(5)(i) of this section, and to the maximum amounts of nitrogen and phosphorus derived from all sources for each crop, as set forth in paragraph (e)(5)(ii) of this section;

(C) Addition of any crop or other uses not included in the terms of the CAFO's nutrient management plan and corresponding field-specific rates of application expressed in accordance with paragraph (e)(5) of this section; and

(D) Changes to site-specific components of the CAFO's nutrient management plan, where such changes are likely to increase the risk of nitrogen and phosphorus transport to waters of the U.S.

(iv) For EPA-issued permits only. Upon incorporation of the revised terms of the nutrient management plan into the permit, [40 CFR 124.19](#) specifies procedures for appeal of the permit decision. In addition to the procedures specified at [40 CFR 124.19](#), a person must have submitted comments or participated in the public hearing in order to appeal the permit decision.

(f) Public notification requirements for CSO discharges to the Great Lakes Basin. Any permit issued authorizing the discharge of a combined sewer overflow (CSO) to the Great Lakes Basin must:

- (1) Require implementation of the public notification requirements in [§ 122.38\(a\)](#);
- (2) Specify the information that must be included on discharge point signage, which, at a minimum, must include those elements in [§ 122.38\(a\)\(1\)\(ii\)](#);
- (3) Specify discharge points and public access areas where signs are required pursuant to [§ 122.38\(a\)\(1\)\(i\)](#);
- (4) Specify the timing and minimum information required for providing initial and supplemental notification to:
 - (i) Local public health department and other potentially affected entities under [§ 122.38\(a\)\(2\)](#); and
 - (ii) The public under [§ 122.38\(a\)\(3\)](#).
- (5) Specify the location of CSO discharges that must be monitored for volume and discharge duration and the location of CSO discharges where CSO volume and duration may be estimated; and
- (6) Require submittal of an annual notice in accordance with [§ 122.38\(b\)](#);
- (7) Specify protocols for making the annual notice under [§ 122.38\(b\)](#) available to the public.

Code of Federal Regulations

Title 40. Protection of Environment

Chapter I. Environmental Protection Agency (Refs & Annos)

Subchapter D. Water Programs

Part 122. EPA Administered Permit Programs: The National Pollutant Discharge Elimination System
(Refs & Annos)

Subpart C. Permit Conditions

40 C.F.R. § 122.44

§ 122.44 Establishing limitations, standards, and other permit conditions (applicable to State NPDES programs, see § 123.25).

Effective: December 21, 2015

Currentness

In addition to the conditions established under § 122.43(a), each NPDES permit shall include conditions meeting the following requirements when applicable.

(a)(1) Technology-based effluent limitations and standards based on: effluent limitations and standards promulgated under section 301 of the CWA, or new source performance standards promulgated under section 306 of CWA, on case-by-case effluent limitations determined under section 402(a)(1) of CWA, or a combination of the three, in accordance with § 125.3 of this chapter. For new sources or new dischargers, these technology based limitations and standards are subject to the provisions of § 122.29(d) (protection period).

(2) Monitoring waivers for certain guideline-listed pollutants.

(i) The Director may authorize a discharger subject to technology-based effluent limitations guidelines and standards in an NPDES permit to forego sampling of a pollutant found at 40 CFR Subchapter N of this chapter if the discharger has demonstrated through sampling and other technical factors that the pollutant is not present in the discharge or is present only at background levels from intake water and without any increase in the pollutant due to activities of the discharger.

(ii) This waiver is good only for the term of the permit and is not available during the term of the first permit issued to a discharger.

(iii) Any request for this waiver must be submitted when applying for a reissued permit or modification of a reissued permit. The request must demonstrate through sampling or other technical information, including information generated during an earlier permit term that the pollutant is not present in the discharge or is present only at background levels from intake water and without any increase in the pollutant due to activities of the discharger.

(iv) Any grant of the monitoring waiver must be included in the permit as an express permit condition and the reasons supporting the grant must be documented in the permit's fact sheet or statement of basis.

(v) This provision does not supersede certification processes and requirements already established in existing effluent limitations guidelines and standards.

(b)(1) Other effluent limitations and standards under [sections 301, 302, 303, 307, 318, and 405](#) of CWA. If any applicable toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under [section 307\(a\)](#) of CWA for a toxic pollutant and that standard or prohibition is more stringent than any limitation on the pollutant in the permit, the Director shall institute proceedings under these regulations to modify or revoke and reissue the permit to conform to the toxic effluent standard or prohibition. See also [§ 122.41\(a\)](#).

(2) Standards for sewage sludge use or disposal under section 405(d) of the CWA unless those standards have been included in a permit issued under the appropriate provisions of subtitle C of the Solid Waste Disposal Act, Part C of Safe Drinking Water Act, the Marine Protection, Research, and Sanctuaries Act of 1972, or the Clean Air Act, or under State permit programs approved by the Administrator. When there are no applicable standards for sewage sludge use or disposal, the permit may include requirements developed on a case-by-case basis to protect public health and the environment from any adverse effects which may occur from toxic pollutants in sewage sludge. If any applicable standard for sewage sludge use or disposal is promulgated under section 405(d) of the CWA and that standard is more stringent than any limitation on the pollutant or practice in the permit, the Director may initiate proceedings under these regulations to modify or revoke and reissue the permit to conform to the standard for sewage sludge use or disposal.

(3) Requirements applicable to cooling water intake structures under section 316(b) of the CWA, in accordance with part 125, subparts I, J, and N of this chapter.

(c) Reopener clause: For any permit issued to a treatment works treating domestic sewage (including “sludge-only facilities”), the Director shall include a reopener clause to incorporate any applicable standard for sewage sludge use or disposal promulgated under section 405(d) of the CWA. The Director may promptly modify or revoke and reissue any permit containing the reopener clause required by this paragraph if the standard for sewage sludge use or disposal is more stringent than any requirements for sludge use or disposal in the permit, or controls a pollutant or practice not limited in the permit.

(d) Water quality standards and State requirements: any requirements in addition to or more stringent than promulgated effluent limitations guidelines or standards under [sections 301, 304, 306, 307, 318, and 405](#) of CWA necessary to:

(1) Achieve water quality standards established under section 303 of the CWA, including State narrative criteria for water quality.

(i) Limitations must control all pollutants or pollutant parameters (either conventional, nonconventional, or toxic pollutants) which the Director determines are or may be discharged at a level which will cause, have the reasonable potential to cause, or contribute to an excursion above any State water quality standard, including State narrative criteria for water quality.

(ii) When determining whether a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above a narrative or numeric criteria within a State water quality standard, the permitting authority shall use procedures which account for existing controls on point and nonpoint sources of pollution, the variability of the pollutant or pollutant parameter in the effluent, the sensitivity of the species to toxicity testing (when evaluating whole effluent toxicity), and where appropriate, the dilution of the effluent in the receiving water.

(iii) When the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above the allowable ambient concentration of a State numeric criteria within a State water quality standard for an individual pollutant, the permit must contain effluent limits for that pollutant.

(iv) When the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above the numeric criterion for whole effluent toxicity, the permit must contain effluent limits for whole effluent toxicity.

(v) Except as provided in this subparagraph, when the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, toxicity testing data, or other information, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above a narrative criterion within an applicable State water quality standard, the permit must contain effluent limits for whole effluent toxicity. Limits on whole effluent toxicity are not necessary where the permitting authority demonstrates in the fact sheet or statement of basis of the NPDES permit, using the procedures in paragraph (d)(1)(ii) of this section, that chemical-specific limits for the effluent are sufficient to attain and maintain applicable numeric and narrative State water quality standards.

(vi) Where a State has not established a water quality criterion for a specific chemical pollutant that is present in an effluent at a concentration that causes, has the reasonable potential to cause, or contributes to an excursion above a narrative criterion within an applicable State water quality standard, the permitting authority must establish effluent limits using one or more of the following options:

(A) Establish effluent limits using a calculated numeric water quality criterion for the pollutant which the permitting authority demonstrates will attain and maintain applicable narrative water quality criteria and will fully protect the designated use. Such a criterion may be derived using a proposed State criterion, or an explicit State policy or regulation interpreting its narrative water quality criterion, supplemented with other relevant information which may include: EPA's Water Quality Standards Handbook, October 1983, risk assessment data, exposure data, information about the pollutant from the Food and Drug Administration, and current EPA criteria documents; or

(B) Establish effluent limits on a case-by-case basis, using EPA's water quality criteria, published under section 304(a) of the CWA, supplemented where necessary by other relevant information; or

(C) Establish effluent limitations on an indicator parameter for the pollutant of concern, provided:

(1) The permit identifies which pollutants are intended to be controlled by the use of the effluent limitation;

(2) The fact sheet required by § 124.56 sets forth the basis for the limit, including a finding that compliance with the effluent limit on the indicator parameter will result in controls on the pollutant of concern which are sufficient to attain and maintain applicable water quality standards;

(3) The permit requires all effluent and ambient monitoring necessary to show that during the term of the permit the limit on the indicator parameter continues to attain and maintain applicable water quality standards; and

(4) The permit contains a reopener clause allowing the permitting authority to modify or revoke and reissue the permit if the limits on the indicator parameter no longer attain and maintain applicable water quality standards.

(vii) When developing water quality-based effluent limits under this paragraph the permitting authority shall ensure that:

(A) The level of water quality to be achieved by limits on point sources established under this paragraph is derived from, and complies with all applicable water quality standards; and

(B) Effluent limits developed to protect a narrative water quality criterion, a numeric water quality criterion, or both, are consistent with the assumptions and requirements of any available wasteload allocation for the discharge prepared by the State and approved by EPA pursuant to 40 CFR 130.7.

(2) Attain or maintain a specified water quality through water quality related effluent limits established under section 302 of CWA;

(3) Conform to the conditions to a State certification under section 401 of the CWA that meets the requirements of § 124.53 when EPA is the permitting authority. If a State certification is stayed by a court of competent jurisdiction or an appropriate State board or agency, EPA shall notify the State that the Agency will deem certification waived unless a finally effective State certification is received within sixty days from the date of the notice. If the State does not forward a finally effective certification within the sixty day period, EPA shall include conditions in the permit that may be necessary to meet EPA's obligation under section 301(b)(1)(C) of the CWA;

(4) Conform to applicable water quality requirements under section 401(a)(2) of CWA when the discharge affects a State other than the certifying State;

(5) Incorporate any more stringent limitations, treatment standards, or schedule of compliance requirements established under Federal or State law or regulations in accordance with section 301(b)(1)(C) of CWA;

(6) Ensure consistency with the requirements of a Water Quality Management plan approved by EPA under section 208(b) of CWA;

(7) Incorporate section 403(c) criteria under part 125, subpart M, for ocean discharges;

(8) Incorporate alternative effluent limitations or standards where warranted by “fundamentally different factors,” under 40 CFR part 125, subpart D;

(9) Incorporate any other appropriate requirements, conditions, or limitations (other than effluent limitations) into a new source permit to the extent allowed by the National Environmental Policy Act, 42 U.S.C. 4321 et seq. and section 511 of the CWA, when EPA is the permit issuing authority. (See § 122.29(c)).

(e) Technology-based controls for toxic pollutants. Limitations established under paragraphs (a), (b), or (d) of this section, to control pollutants meeting the criteria listed in paragraph (e)(1) of this section. Limitations will be established in accordance with paragraph (e)(2) of this section. An explanation of the development of these limitations shall be included in the fact sheet under § 124.56(b)(1)(i).

(1) Limitations must control all toxic pollutants which the Director determines (based on information reported in a permit application under § 122.21(g)(7) or in a notification under § 122.42(a)(1) or on other information) are or may be discharged at a level greater than the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under § 125.3(c) of this chapter; or

(2) The requirement that the limitations control the pollutants meeting the criteria of paragraph (e)(1) of this section will be satisfied by:

(i) Limitations on those pollutants; or

(ii) Limitations on other pollutants which, in the judgment of the Director, will provide treatment of the pollutants under paragraph (e)(1) of this section to the levels required by § 125.3(c).

(f) Notification level. A “notification level” which exceeds the notification level of § 122.42(a)(1)(i), (ii) or (iii), upon a petition from the permittee or on the Director's initiative. This new notification level may not exceed the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under § 125.3(c).

(g) Twenty-four hour reporting. Pollutants for which the permittee must report violations of maximum daily discharge limitations under § 122.41(1)(6)(ii)(C) (24-hour reporting) shall be listed in the permit. This list shall include any toxic pollutant or hazardous substance, or any pollutant specifically identified as the method to control a toxic pollutant or hazardous substance.

(h) Durations for permits, as set forth in § 122.46.

(i) Monitoring requirements. In addition to § 122.48, the following monitoring requirements:

(1) To assure compliance with permit limitations, requirements to monitor:

(i) The mass (or other measurement specified in the permit) for each pollutant limited in the permit;

(ii) The volume of effluent discharged from each outfall;

(iii) Other measurements as appropriate including pollutants in internal waste streams under § 122.45(i); pollutants in intake water for net limitations under § 122.45(f); frequency, rate of discharge, etc., for noncontinuous discharges under § 122.45(e); pollutants subject to notification requirements under § 122.42(a); and pollutants in sewage sludge or other monitoring as specified in 40 CFR part 503; or as determined to be necessary on a case-by-case basis pursuant to section 405(d)(4) of the CWA.

(iv) According to sufficiently sensitive test procedures (i.e., methods) approved under 40 CFR part 136 for the analysis of pollutants or pollutant parameters or required under 40 CFR chapter I, subchapter N or O.

(A) For the purposes of this paragraph, a method is “sufficiently sensitive” when:

(1) The method minimum level (ML) is at or below the level of the effluent limit established in the permit for the measured pollutant or pollutant parameter; or

(2) The method has the lowest ML of the analytical methods approved under 40 CFR part 136 or required under 40 CFR chapter I, subchapter N or O for the measured pollutant or pollutant parameter.

Note to paragraph (i)(1)(iv)(A): Consistent with 40 CFR part 136, applicants or permittees have the option of providing matrix or sample specific minimum levels rather than the published levels. Further, where an applicant or permittee can demonstrate that, despite a good faith effort to use a method that would otherwise meet the definition of “sufficiently sensitive”, the analytical results are not consistent with the QA/QC specifications for that method, then the Director may determine that the method is not performing adequately and the Director should select a different method from the remaining EPA–approved methods that is sufficiently sensitive consistent with 40 CFR 122.44(i)(1)(iv)(A). Where no other EPA–approved methods exist, the Director should select a method consistent with 40 CFR 122.44(i)(1)(iv)(B).

(B) In the case of pollutants or pollutant parameters for which there are no approved methods under 40 CFR part 136 or methods are not otherwise required under 40 CFR chapter I, subchapter N or O, monitoring shall be conducted according to a test procedure specified in the permit for such pollutants or pollutant parameters.

(2) Except as provided in paragraphs (i)(4) and (5) of this section, requirements to report monitoring results shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge, but in no case less than once a year. For sewage sludge use or disposal practices, requirements to monitor and report results shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the sewage sludge use or disposal practice; minimally this shall be as specified in 40 CFR part 503 (where applicable), but in no case

less than once a year. All results must be electronically reported in compliance with 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127.

(3) Requirements to report monitoring results for storm water discharges associated with industrial activity which are subject to an effluent limitation guideline shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge, but in no case less than once a year.

(4) Requirements to report monitoring results for storm water discharges associated with industrial activity (other than those addressed in paragraph (i)(3) of this section) shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge. At a minimum, a permit for such a discharge must require:

(i) The discharger to conduct an annual inspection of the facility site to identify areas contributing to a storm water discharge associated with industrial activity and evaluate whether measures to reduce pollutant loadings identified in a storm water pollution prevention plan are adequate and properly implemented in accordance with the terms of the permit or whether additional control measures are needed;

(ii) The discharger to maintain for a period of three years a record summarizing the results of the inspection and a certification that the facility is in compliance with the plan and the permit, and identifying any incidents of non-compliance;

(iii) Such report and certification be signed in accordance with § 122.22; and

(iv) Permits for storm water discharges associated with industrial activity from inactive mining operations may, where annual inspections are impracticable, require certification once every three years by a Registered Professional Engineer that the facility is in compliance with the permit, or alternative requirements.

(5) Permits which do not require the submittal of monitoring result reports at least annually shall require that the permittee report all instances of noncompliance not reported under § 122.41(l) (1), (4), (5), and (6) at least annually.

(j) Pretreatment program for POTWs. Requirements for POTWs to:

(1) Identify, in terms of character and volume of pollutants, any Significant Industrial Users discharging into the POTW subject to Pretreatment Standards under section 307(b) of CWA and 40 CFR part 403.

(2)(i) Submit a local program when required by and in accordance with 40 CFR part 403 to assure compliance with pretreatment standards to the extent applicable under section 307(b). The local program shall be incorporated into the permit as described in 40 CFR part 403. The program must require all indirect dischargers to the POTW to comply with the reporting requirements of 40 CFR part 403.

(ii) Provide a written technical evaluation of the need to revise local limits under 40 CFR 403.5(c)(1), following permit issuance or reissuance.

(3) For POTWs which are “sludge-only facilities,” a requirement to develop a pretreatment program under 40 CFR part 403 when the Director determines that a pretreatment program is necessary to assure compliance with Section 405(d) of the CWA.

(k) Best management practices (BMPs) to control or abate the discharge of pollutants when:

(1) Authorized under section 304(e) of the CWA for the control of toxic pollutants and hazardous substances from ancillary industrial activities;

(2) Authorized under section 402(p) of the CWA for the control of storm water discharges;

(3) Numeric effluent limitations are infeasible; or

(4) The practices are reasonably necessary to achieve effluent limitations and standards or to carry out the purposes and intent of the CWA.

Note to paragraph (k)(4): Additional technical information on BMPs and the elements of BMPs is contained in the following documents: Guidance Manual for Developing Best Management Practices (BMPs), October 1993, EPA No. 833/B-93-004, NTIS No. PB 94-178324, ERIC No. W498); Storm Water Management for Construction Activities: Developing Pollution Prevention Plans and Best Management Practices, September 1992, EPA No. 832/R-92-005, NTIS No. PB 92-235951, ERIC No. N482); Storm Water Management for Construction Activities, Developing Pollution Prevention Plans and Best Management Practices: Summary Guidance, EPA No. 833/R-92-001, NTIS No. PB 93-223550; ERIC No. W139; Storm Water Management for Industrial Activities, Developing Pollution Prevention Plans and Best Management Practices, September 1992; EPA 832/R-92-006, NTIS No. PB 92-235969, ERIC No. N477; Storm Water Management for Industrial Activities, Developing Pollution Prevention Plans and Best Management Practices: Summary Guidance, EPA 833/R-92-002, NTIS No. PB 94-133782; ERIC No. W492. Copies of those documents (or directions on how to obtain them) can be obtained by contacting either the Office of Water Resource Center (using the EPA document number as a reference) at (202) 260-7786; or the Educational Resources Information Center (ERIC) (using the ERIC number as a reference) at (800) 276-0462. Updates of these documents or additional BMP documents may also be available. A list of EPA BMP guidance documents is available on the OWM Home Page at <http://www.epa.gov/owm>. In addition, States may have BMP guidance documents.

These EPA guidance documents are listed here only for informational purposes; they are not binding and EPA does not intend that these guidance documents have any mandatory, regulatory effect by virtue of their listing in this note.

(l) Reissued permits.

(1) Except as provided in paragraph (l)(2) of this section when a permit is renewed or reissued, interim effluent limitations, standards or conditions must be at least as stringent as the final effluent limitations, standards, or conditions in the previous permit (unless the circumstances on which the previous permit was based have materially and substantially changed since the time the permit was issued and would constitute cause for permit modification or revocation and reissuance under § 122.62.)

(2) In the case of effluent limitations established on the basis of Section 402(a)(1)(B) of the CWA, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under [section 304\(b\)](#) subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit.

(i) Exceptions—A permit with respect to which paragraph (1)(2) of this section applies may be renewed, reissued, or modified to contain a less stringent effluent limitation applicable to a pollutant, if—

(A) Material and substantial alterations or additions to the permitted facility occurred after permit issuance which justify the application of a less stringent effluent limitation;

(B)(1) Information is available which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of a less stringent effluent limitation at the time of permit issuance; or

(2) The Administrator determines that technical mistakes or mistaken interpretations of law were made in issuing the permit under [section 402\(a\)\(1\)\(b\)](#);

(C) A less stringent effluent limitation is necessary because of events over which the permittee has no control and for which there is no reasonably available remedy;

(D) The permittee has received a permit modification under [section 301\(c\)](#), [301\(g\)](#), [301\(h\)](#), [301\(i\)](#), [301\(k\)](#), [301\(n\)](#), or [316\(a\)](#); or

(E) The permittee has installed the treatment facilities required to meet the effluent limitations in the previous permit and has properly operated and maintained the facilities but has nevertheless been unable to achieve the previous effluent limitations, in which case the limitations in the reviewed, reissued, or modified permit may reflect the level of pollutant control actually achieved (but shall not be less stringent than required by effluent guidelines in effect at the time of permit renewal, reissuance, or modification).

(ii) Limitations. In no event may a permit with respect to which paragraph (1)(2) of this section applies be renewed, reissued, or modified to contain an effluent limitation which is less stringent than required by effluent guidelines in effect at the time the permit is renewed, reissued, or modified. In no event may such a permit to discharge into waters be renewed, issued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under [section 303](#) applicable to such waters.

(m) Privately owned treatment works. For a privately owned treatment works, any conditions expressly applicable to any user, as a limited copermitttee, that may be necessary in the permit issued to the treatment works to ensure compliance with applicable requirements under this part. Alternatively, the Director may issue separate permits to the treatment works and to its users, or may require a separate permit application from any user. The Director's decision to issue a permit with no conditions applicable to any user, to impose conditions on one or more users, to issue separate permits,

or to require separate applications, and the basis for that decision, shall be stated in the fact sheet for the draft permit for the treatment works.

(n) Grants. Any conditions imposed in grants made by the Administrator to POTWs under [sections 201](#) and [204](#) of CWA which are reasonably necessary for the achievement of effluent limitations under [section 301](#) of CWA.

(o) Sewage sludge. Requirements under section 405 of CWA governing the disposal of sewage sludge from publicly owned treatment works or any other treatment works treating domestic sewage for any use for which regulations have been established, in accordance with any applicable regulations.

(p) Coast Guard. When a permit is issued to a facility that may operate at certain times as a means of transportation over water, a condition that the discharge shall comply with any applicable regulations promulgated by the Secretary of the department in which the Coast Guard is operating, that establish specifications for safe transportation, handling, carriage, and storage of pollutants.

(q) Navigation. Any conditions that the Secretary of the Army considers necessary to ensure that navigation and anchorage will not be substantially impaired, in accordance with [§ 124.59](#) of this chapter.

(r) Great Lakes. When a permit is issued to a facility that discharges into the Great Lakes System (as defined in [40 CFR 132.2](#)), conditions promulgated by the State, Tribe, or EPA pursuant to 40 CFR part 132.

(s) Qualifying State, Tribal, or local programs.

(1) For storm water discharges associated with small construction activity identified in [§ 122.26\(b\)\(15\)](#), the Director may include permit conditions that incorporate qualifying State, Tribal, or local erosion and sediment control program requirements by reference. Where a qualifying State, Tribal, or local program does not include one or more of the elements in this paragraph (s)(1), then the Director must include those elements as conditions in the permit. A qualifying State, Tribal, or local erosion and sediment control program is one that includes:

(i) Requirements for construction site operators to implement appropriate erosion and sediment control best management practices;

(ii) Requirements for construction site operators to control waste such as discarded building materials, concrete truck washout, chemicals, litter, and sanitary waste at the construction site that may cause adverse impacts to water quality;

(iii) Requirements for construction site operators to develop and implement a storm water pollution prevention plan. (A storm water pollution prevention plan includes site descriptions, descriptions of appropriate control measures, copies of approved State, Tribal or local requirements, maintenance procedures, inspection procedures, and identification of non-storm water discharges); and

(iv) Requirements to submit a site plan for review that incorporates consideration of potential water quality impacts.

(2) For storm water discharges from construction activity identified in § 122.26(b)(14)(x), the Director may include permit conditions that incorporate qualifying State, Tribal, or local erosion and sediment control program requirements by reference. A qualifying State, Tribal or local erosion and sediment control program is one that includes the elements listed in paragraph (s)(1) of this section and any additional requirements necessary to achieve the applicable technology-based standards of “best available technology” and “best conventional technology” based on the best professional judgment of the permit writer.

Subpart C. Permit Conditions

40 C.F.R. § 122.48

§ 122.48 Requirements for recording and reporting of
monitoring results (applicable to State programs, see § 123.25).

Effective: December 21, 2015

[Currentness](#)

All permits shall specify:

(a) Requirements concerning the proper use, maintenance, and installation, when appropriate, of monitoring equipment or methods (including biological monitoring methods when appropriate);

(b) Required monitoring including type, intervals, and frequency sufficient to yield data which are representative of the monitored activity including, when appropriate, continuous monitoring;

(c) Applicable reporting requirements based upon the impact of the regulated activity and as specified in 40 CFR part 3 (Cross-Media Electronic Reporting Regulation), [§ 122.44](#), and 40 CFR part 127 (NPDES Electronic Reporting). Reporting shall be no less frequent than specified in [§ 122.44](#). EPA will maintain the start dates for the electronic reporting of monitoring results for each state on its Web site.

(a) All State Programs under this part must have legal authority to implement each of the following provisions and must be administered in conformance with each, except that States are not precluded from omitting or modifying any provisions to impose more stringent requirements:

- (1) [§ 122.4](#)—(Prohibitions);
- (2) [§ 122.5\(a\)](#) and [\(b\)](#)—(Effect of permit);
- (3) [§ 122.7\(b\)](#) and [\(c\)](#)—(Confidential information);
- (4) [§ 122.21 \(a\)-\(b\), \(c\)\(2\), \(e\)-\(k\), \(m\)-\(p\), \(q\), and \(r\)](#)—(Application for a permit);
- (5) [§ 122.22](#)—(Signatories);
- (6) [§ 122.23](#)—(Concentrated animal feeding operations);
- (7) [§ 122.24](#)—(Concentrated aquatic animal production facilities);
- (8) [§ 122.25](#)—(Aquaculture projects);
- (9) [§ 122.26](#)—(Storm water discharges);
- (10) [§ 122.27](#)—(Silviculture);
- (11) [§ 122.28](#)—(General permits), *Provided* that States which do not seek to implement the general permit program under [§ 122.28](#) need not do so.

- (12) Section 122.41(a)(1) and (b) through (n)—(Applicable permit conditions) (Indian Tribes can satisfy enforcement authority requirements under § 123.34);
- (13) § 122.42—(Conditions applicable to specified categories of permits);
- (14) § 122.43—(Establishing permit conditions);
- (15) § 122.44—(Establishing NPDES permit conditions);

- (21) § 122.61—(Permit transfer);
- (22) § 122.62—(Permit modification);
- (23) § 122.64—(Permit termination);
- (24) § 124.3(a)—(Application for a permit);
- (25) § 124.5(a), (c), (d), and (f)—(Modification of permits);
- (26) § 124.6(a), (c), (d), and (e)—(Draft permit);
- (27) § 124.8—(Fact sheets);
- (28) § 124.10(a)(1)(ii), (a)(1)(iii), (a)(1)(v), (b), (c), (d), and (e)—(Public notice);

- (29) § 124.11—(Public comments and requests for hearings);
- (30) § 124.12(a)—(Public hearings); and
- (31) § 124.17(a) and (c)—(Response to comments);
- (32) § 124.56—(Fact sheets);
- (33) § 124.57(a)—(Public notice);
- (34) § 124.59—(Comments from government agencies);
- (35) § 124.62—(Decision on variances);
- (36) Subparts A, B, D, H, I, J, and N of part 125 of this chapter;
- (37) 40 CFR parts 129, 133, and subchapter N;
- (38) For a Great Lakes State or Tribe (as defined in 40 CFR 132.2), 40 CFR part 132 (NPDES permitting implementation procedures only);
- (39) § 122.30 (What are the objectives of the storm water regulations for small MS4s?);
- (40) § 122.31 (For Indian Tribes only) (As a Tribe, what is my role under the NPDES storm water program?);
- (41) § 122.32 (As an operator of a small MS4, am I regulated under the NPDES storm water program?);
- (42) § 122.33 (If I am an operator of a regulated small MS4, how do I apply for an NPDES permit? When do I have to apply?);
- (43) § 122.34 (As an operator of a regulated small MS4, what will my NPDES MS4 storm water permit require?);
- (44) § 122.35 (As an operator of a regulated small MS4, may I share the responsibility to implement the minimum control measures with other entities?);
- (45) § 122.36 (As an operator of a regulated small MS4, what happens if I don't comply with the application or permit requirements in §§ 122.33 through 122.35?); and

(46) 40 CFR part 3 (Cross-Media Electronic Reporting Regulation) and 40 CFR part 127 (NPDES Electronic Reporting Requirements).

Note to paragraph (a): Except for paragraph (a)(46) of this section, states need not implement provisions identical to the above listed provisions. Implemented provisions must, however, establish requirements at least as stringent as the corresponding listed provisions. While States may impose more stringent requirements, they may not make one requirement more lenient as a tradeoff for making another requirement more stringent; for example, by requiring that public hearings be held prior to issuing any permit while reducing the amount of advance notice of such a hearing.

State programs may, if they have adequate legal authority, implement any of the provisions of parts 122 and 124. See, for example, §§ 122.5(d) (continuation of permits) and 124.4 (consolidation of permit processing) of this chapter.

For example, a State may impose more stringent requirements in an NPDES program by omitting the upset provision of § 122.41 of this chapter or by requiring more prompt notice of an upset.

(47) For a Great Lakes State, § 122.38.

(b) State NPDES programs shall have an approved continuing planning process under 40 CFR 130.5 and shall assure that the approved planning process is at all times consistent with the CWA.

(c) State NPDES programs shall ensure that any board or body which approves all or portions of permits shall not include as a member any person who receives, or has during the previous 2 years received, a significant portion of income directly or indirectly from permit holders or applicants for a permit.

(1) For the purposes of this paragraph:

(i) Board or body includes any individual, including the Director, who has or shares authority to approve all or portions of permits either in the first instance, as modified or reissued, or on appeal.

(ii) Significant portion of income means 10 percent or more of gross personal income for a calendar year, except that it means 50 percent or more of gross personal income for a calendar year if the recipient is over 60 years of age and is receiving that portion under retirement, pension, or similar arrangement.

(iii) Permit holders or applicants for a permit does not include any department or agency of a State government, such as a Department of Parks or a Department of Fish and Wildlife.

(iv) Income includes retirement benefits, consultant fees, and stock dividends.

(2) For the purposes of paragraph (c) of this section, income is not received “directly or indirectly from permit holders or applicants for a permit” when it is derived from mutual fund payments, or from other diversified investments for which the recipient does not know the identity of the primary sources of income.

ATTACHMENT A-19

Code of Federal Regulations
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 123. State Program Requirements (Refs & Annos)
Subpart C. Transfer of Information and Permit Review

40 C.F.R. § 123.44

§ 123.44 EPA review of and objections to State permits.

Currentness

(a)(1) The Memorandum of Agreement shall provide a period of time (up to 90 days from receipt of proposed permits) to which the Regional Administrator may make general comments upon, objections to, or recommendations with respect to proposed permits. EPA reserves the right to take 90 days to supply specific grounds for objection, notwithstanding any shorter period specified in the Memorandum of Agreement, when a general objection is filed within the review period specified in the Memorandum of Agreement. The Regional Administrator shall send a copy of any comment, objection or recommendation to the permit applicant.

(2) In the case of general permits, EPA shall have 90 days from the date of receipt of the proposed general permit to comment upon, object to or make recommendations with respect to the proposed general permit, and is not bound by any shorter time limits set by the Memorandum of Agreement for general comments, objections or recommendations.

(b)(1) Within the period of time provided under the Memorandum of Agreement for making general comments upon, objections to or recommendations with respect to proposed permits, the Regional Administrator shall notify the State Director of any objection to issuance of a proposed permit (except as provided in paragraph (a)(2) of this section for proposed general permits). This notification shall set forth in writing the general nature of the objection.

(2) Within 90 days following receipt of a proposed permit to which he or she has objected under paragraph (b)(1) of this section, or in the case of general permits within 90 days after receipt of the proposed general permit, the Regional Administrator shall set forth in writing and transmit to the State Director:

(i) A statement of the reasons for the objection (including the section of CWA or regulations that support the objection), and

(ii) The actions that must be taken by the State Director to eliminate the objection (including the effluent limitations and conditions which the permit would include if it were issued by the Regional Administrator.)

Note: Paragraphs (a) and (b) of this section, in effect, modify any existing agreement between EPA and the State which provides less than 90 days for EPA to supply the specific grounds for an objection. However, when an agreement provides for an EPA review period of less than 90 days, EPA must file a general objection, in accordance with paragraph (b) (1) of this section within the time specified in the agreement. This general objection must be followed by a specific

objection within the 90-day period. This modification to MOA's allows EPA to provide detailed information concerning acceptable permit conditions, as required by section 402(d) of CWA. To avoid possible confusion, MOA's should be changed to reflect this arrangement.

(c) The Regional Administrator's objection to the issuance of a proposed permit must be based upon one or more of the following grounds:

(1) The permit fails to apply, or to ensure compliance with, any applicable requirement of this part;

Note: For example, the Regional Administrator may object to a permit not requiring the achievement of required effluent limitations by applicable statutory deadlines.

(2) In the case of a proposed permit for which notification to the Administrator is required under [section 402\(b\)\(5\)](#) of CWA, the written recommendations of an affected State have not been accepted by the permitting State and the Regional Administrator finds the reasons for rejecting the recommendations are inadequate;

(3) The procedures followed in connection with formulation of the proposed permit failed in a material respect to comply with procedures required by CWA or by regulations thereunder or by the Memorandum of Agreement;

(4) Any finding made by the State Director in connection with the proposed permit misinterprets CWA or any guidelines or regulations under CWA, or misapplies them to the facts;

(5) Any provisions of the proposed permit relating to the maintenance of records, reporting, monitoring, sampling, or the provision of any other information by the permittee are inadequate, in the judgment of the Regional Administrator, to assure compliance with permit conditions, including effluent standards and limitations or standards for sewage sludge use and disposal required by CWA, by the guidelines and regulations issued under CWA, or by the proposed permit;

(6) In the case of any proposed permit with respect to which applicable effluent standards and limitations or standards for sewage sludge use and disposal under [sections 301, 302, 306, 307, 318, 403, and 405](#) of CWA have not yet been promulgated by the Agency, the proposed permit, in the judgment of the Regional Administrator, fails to carry out the provisions of CWA or of any regulations issued under CWA; the provisions of this paragraph apply to determinations made pursuant to § 125.3(c)(2) in the absence of applicable guidelines, to best management practices under [section 304\(e\)](#) of CWA, which must be incorporated into permits as requirements under [section 301, 306, 307, 318, 403 or 405](#), and to sewage sludge use and disposal requirements developed on a case-by-case basis pursuant to [section 405\(d\)](#) of CWA, as the case may be;

(7) Issuance of the proposed permit would in any other respect be outside the requirements of CWA, or regulations issued under CWA.

(8) The effluent limits of a permit fail to satisfy the requirements of [40 CFR 122.44\(d\)](#).

(9) For a permit issued by a Great Lakes State or Tribe (as defined in [40 CFR 132.2](#)), the permit does not satisfy the conditions promulgated by the State, Tribe, or EPA pursuant to 40 CFR part 132.

(d) Prior to notifying the State Director of an objection based upon any of the grounds set forth in paragraph (c) of this section, the Regional Administrator:

(1) Will consider all data transmitted pursuant to [§ 123.43](#) (or, in the case of a sewage sludge management program, [§ 501.21](#) of this chapter);

(2) May, if the information provided is inadequate to determine whether the proposed permit meets the guidelines and requirements of CWA, request the State Director to transmit to the Regional Administrator the complete record of the permit proceedings before the State, or any portions of the record that the Regional Administrator determines are necessary for review. If this request is made within 30 days of receipt of the State submittal under [§ 123.43](#) (or, in the case of a sewage sludge management program, [§ 501.21](#) of this chapter), it will constitute an interim objection to the issuance of the permit, and the full period of time specified in the Memorandum of Agreement for the Regional Administrator's review will recommence when the Regional Administrator has received such record or portions of the record; and

(3) May, in his or her discretion, and to the extent feasible within the period of time available under the Memorandum of Agreement, afford to interested persons an opportunity to comment on the basis for the objection;

(e) Within 90 days of receipt by the State Director of an objection by the Regional Administrator, the State or interstate agency or any interested person may request that a public hearing be held by the Regional Administrator on the objection. A public hearing in accordance with the procedures of [§ 124.12\(c\)](#) and [\(d\)](#) of this chapter (or, in the case of a sewage sludge management program, [§ 501.15\(d\)\(7\)](#) of this chapter) will be held, and public notice provided in accordance with [§ 124.10](#) of this chapter, (or, in the case of a sewage sludge management program, [§ 501.15\(d\)\(5\)](#) of this chapter), whenever requested by the State or the interstate agency which proposed the permit or if warranted by significant public interest based on requests received.

(f) A public hearing held under paragraph (e) of this section shall be conducted by the Regional Administrator, and, at the Regional Administrator's discretion, with the assistance of an EPA panel designated by the Regional Administrator, in an orderly and expeditious manner.

(g) Following the public hearing, the Regional Administrator shall reaffirm the original objection, modify the terms of the objection, or withdraw the objection, and shall notify the State of this decision.

(h)(1) If no public hearing is held under paragraph (e) of this section and the State does not resubmit a permit revised to meet the Regional Administrator's objection within 90 days of receipt of the objection, the Regional Administrator may issue the permit in accordance with parts 121, 122, and 124 of this chapter and any other guidelines and requirements of CWA.

(2) If a public hearing is held under paragraph (e) of this section, the Regional Administrator does not withdraw the objection, and the State does not resubmit a permit revised to meet the Regional Administrator's objection or modified objection within 30 days of the date of the Regional Administrator's notification under paragraph (g) of this section, the Regional Administrator may issue the permit in accordance with parts 121, 122, and 124 of this chapter and any other guidelines and requirements of CWA.

(3) Exclusive authority to issue the permit passes to EPA when the times set out in this paragraph expire.

(i) [Reserved]

(j) The Regional Administrator may agree, in the Memorandum of Agreement under § 123.24 (or, in the case of a sewage sludge management program, § 501.14 of this chapter), to review draft permits rather than proposed permits. In such a case, a proposed permit need not be prepared by the State and transmitted to the Regional Administrator for review in accordance with this section unless the State proposes to issue a permit which differs from the draft permit reviewed by the Regional Administrator, the Regional Administrator has objected to the draft permit, or there is significant public comment.

ATTACHMENT A-20

Code of Federal Regulations

Title 40. Protection of Environment

Chapter I. Environmental Protection Agency (Refs & Annos)

Subchapter D. Water Programs

Part 130. Water Quality Planning and Management (Refs & Annos)

40 C.F.R. § 130.2

§ 130.2 Definitions.

Currentness

- (a) The Act. The Clean Water Act, as amended, [33 U.S.C. 1251 et seq.](#)
- (b) Indian Tribe. Any Indian Tribe, band, group, or community recognized by the Secretary of the Interior and exercising governmental authority over a Federal Indian reservation.
- (c) Pollution. The man-made or man-induced alteration of the chemical, physical, biological, and radiological integrity of water.
- (d) Water quality standards (WQS). Provisions of State or Federal law which consist of a designated use or uses for the waters of the United States and water quality criteria for such waters based upon such uses. Water quality standards are to protect the public health or welfare, enhance the quality of water and serve the purposes of the Act.
- (e) Load or loading. An amount of matter or thermal energy that is introduced into a receiving water; to introduce matter or thermal energy into a receiving water. Loading may be either man-caused (pollutant loading) or natural (natural background loading).
- (f) Loading capacity. The greatest amount of loading that a water can receive without violating water quality standards.
- (g) Load allocation (LA). The portion of a receiving water's loading capacity that is attributed either to one of its existing or future nonpoint sources of pollution or to natural background sources. Load allocations are best estimates of the loading, which may range from reasonably accurate estimates to gross allotments, depending on the availability of data and appropriate techniques for predicting the loading. Wherever possible, natural and nonpoint source loads should be distinguished.
- (h) Wasteload allocation (WLA). The portion of a receiving water's loading capacity that is allocated to one of its existing or future point sources of pollution. WLAs constitute a type of water quality-based effluent limitation.
- (i) Total maximum daily load (TMDL). The sum of the individual WLAs for point sources and LAs for nonpoint sources and natural background. If a receiving water has only one point source discharger, the TMDL is the sum of that point source WLA plus the LAs for any nonpoint sources of pollution and natural background sources, tributaries, or

adjacent segments. TMDLs can be expressed in terms of either mass per time, toxicity, or other appropriate measure. If Best Management Practices (BMPs) or other nonpoint source pollution controls make more stringent load allocations practicable, then wasteload allocations can be made less stringent. Thus, the TMDL process provides for nonpoint source control tradeoffs.

(j) Water quality limited segment. Any segment where it is known that water quality does not meet applicable water quality standards, and/or is not expected to meet applicable water quality standards, even after the application of the technology-based effluent limitations required by sections 301(b) and 306 of the Act.

(k) Water quality management (WQM) plan. A State or areawide waste treatment management plan developed and updated in accordance with the provisions of sections 205(j), 208 and 303 of the Act and this regulation.

(l) Areawide agency. An agency designated under section 208 of the Act, which has responsibilities for WQM planning within a specified area of a State.

(m) Best Management Practice (BMP). Methods, measures or practices selected by an agency to meet its nonpoint source control needs. BMPs include but are not limited to structural and nonstructural controls and operation and maintenance procedures. BMPs can be applied before, during and after pollution-producing activities to reduce or eliminate the introduction of pollutants into receiving waters.

(n) Designated management agency (DMA). An agency identified by a WQM plan and designated by the Governor to implement specific control recommendations.

ATTACHMENT A-21

Code of Federal Regulations
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 130. Water Quality Planning and Management (Refs & Annos)

40 C.F.R. § 130.6

§ 130.6 Water quality management plans.

Currentness

(a) Water quality management (WQM) plans. WQM plans consist of initial plans produced in accordance with sections 208 and 303(e) of the Act and certified and approved updates to those plans. Continuing water quality planning shall be based upon WQM plans and water quality problems identified in the latest 305(b) reports. State water quality planning should focus annually on priority issues and geographic areas and on the development of water quality controls leading to implementation measures. Water quality planning directed at the removal of conditions placed on previously certified and approved WQM plans should focus on removal of conditions which will lead to control decisions.

(b) Use of WQM plans. WQM plans are used to direct implementation. WQM plans draw upon the water quality assessments to identify priority point and nonpoint water quality problems, consider alternative solutions and recommend control measures, including the financial and institutional measures necessary for implementing recommended solutions. State annual work programs shall be based upon the priority issues identified in the State WQM plan.

(c) WQM plan elements. Sections 205(j), 208 and 303 of the Act specify water quality planning requirements. The following plan elements shall be included in the WQM plan or referenced as part of the WQM plan if contained in separate documents when they are needed to address water quality problems.

(1) Total maximum daily loads. TMDLs in accordance with sections 303(d) and (e)(3)(C) of the Act and § 130.7 of this part.

(2) Effluent limitations. Effluent limitations including water quality based effluent limitations and schedules of compliance in accordance with section 303(e)(3)(A) of the Act and § 130.5 of this part.

(3) Municipal and industrial waste treatment. Identification of anticipated municipal and industrial waste treatment works, including facilities for treatment of stormwater-induced combined sewer overflows; programs to provide necessary financial arrangements for such works; establishment of construction priorities and schedules for initiation and completion of such treatment works including an identification of open space and recreation opportunities from improved water quality in accordance with section 208(b)(2) (A) and (B) of the Act.

(4) Nonpoint source management and control.

(i) The plan shall describe the regulatory and non-regulatory programs, activities and Best Management Practices (BMPs) which the agency has selected as the means to control nonpoint source pollution where necessary to protect or achieve approved water uses. Economic, institutional, and technical factors shall be considered in a continuing process of identifying control needs and evaluating and modifying the BMPs as necessary to achieve water quality goals.

(ii) Regulatory programs shall be identified where they are determined to be necessary by the State to attain or maintain an approved water use or where non-regulatory approaches are inappropriate in accomplishing that objective.

(iii) BMPs shall be identified for the nonpoint sources identified in section 208(b)(2)(F)–(K) of the Act and other nonpoint sources as follows:

(A) Residual waste. Identification of a process to control the disposition of all residual waste in the area which could affect water quality in accordance with section 208(b)(2)(J) of the Act.

(B) Land disposal. Identification of a process to control the disposal of pollutants on land or in subsurface excavations to protect ground and surface water quality in accordance with section 208(b)(2)(K) of the Act.

(C) Agricultural and silvicultural. Identification of procedures to control agricultural and silvicultural sources of pollution in accordance with section 208(b)(2)(F) of the Act.

(D) Mines. Identification of procedures to control mine-related sources of pollution in accordance with section 208(b)(2)(G) of the Act.

(E) Construction. Identification of procedures to control construction related sources of pollution in accordance with section 208(b)(2)(H) of the Act.

(F) Saltwater intrusion. Identification of procedures to control saltwater intrusion in accordance with section 208(b)(2)(I) of the Act.

(G) Urban stormwater. Identification of BMPs for urban stormwater control to achieve water quality goals and fiscal analysis of the necessary capital and operations and maintenance expenditures in accordance with section 208(b)(2)(A) of the Act.

(iv) The nonpoint source plan elements outlined in § 130.6(c) (4)(iii)(A)(G) of this regulation shall be the basis of water quality activities implemented through agreements or memoranda of understanding between EPA and other departments, agencies or instrumentalities of the United States in accordance with section 304(k) of the Act.

(5) Management agencies. Identification of agencies necessary to carry out the plan and provision for adequate authority for intergovernmental cooperation in accordance with sections 208(b)(2)(D) and 303(e)(3)(E) of the Act.

Management agencies must demonstrate the legal, institutional, managerial and financial capability and specific activities necessary to carry out their responsibilities in accordance with section 208(c)(2)(A) through (I) of the Act.

(6) Implementation measures. Identification of implementation measures necessary to carry out the plan, including financing, the time needed to carry out the plan, and the economic, social and environmental impact of carrying out the plan in accordance with [section 208\(b\)\(2\)\(E\)](#).

(7) Dredge or fill program. Identification and development of programs for the control of dredge or fill material in accordance with section 208(b)(4)(B) of the Act.

(8) Basin plans. Identification of any relationship to applicable basin plans developed under section 209 of the Act.

(9) Ground water. Identification and development of programs for control of ground-water pollution including the provisions of section 208(b)(2)(K) of the Act. States are not required to develop ground-water WQM plan elements beyond the requirements of section 208(b)(2)(K) of the Act, but may develop a ground-water plan element if they determine it is necessary to address a ground-water quality problem. If a State chooses to develop a ground-water plan element, it should describe the essentials of a State program and should include, but is not limited to:

(i) Overall goals, policies and legislative authorities for protection of ground-water.

(ii) Monitoring and resource assessment programs in accordance with section 106(e)(1) of the Act.

(iii) Programs to control sources of contamination of ground-water including Federal programs delegated to the State and additional programs authorized in State statutes.

(iv) Procedures for coordination of ground-water protection programs among State agencies and with local and Federal agencies.

(v) Procedures for program management and administration including provision of program financing, training and technical assistance, public participation, and emergency management.

(d) Indian Tribes. An Indian Tribe is eligible for the purposes of this rule and the Clean Water Act assistance programs under 40 CFR part 35, subparts A and H if:

(1) The Indian Tribe has a governing body carrying out substantial governmental duties and powers;

(2) The functions to be exercised by the Indian Tribe pertain to the management and protection of water resources which are held by an Indian Tribe, held by the United States in trust for Indians, held by a member of an Indian Tribe if such property interest is subject to a trust restriction on alienation, or otherwise within the borders of an Indian reservation; and

(3) The Indian Tribe is reasonably expected to be capable, in the Regional Administrator's judgment, of carrying out the functions to be exercised in a manner consistent with the terms and purposes of the Clean Water Act and applicable regulations.

(e) Update and certification. State and/or areawide agency WQM plans shall be updated as needed to reflect changing water quality conditions, results of implementation actions, new requirements or to remove conditions in prior conditional or partial plan approvals. Regional Administrators may require that State WQM plans be updated as needed. State Continuing Planning Processes (CPPs) shall specify the process and schedule used to revise WQM plans. The State shall ensure that State and areawide WQM plans together include all necessary plan elements and that such plans are consistent with one another. The Governor or the Governor's designee shall certify by letter to the Regional Administrator for EPA approval that WQM plan updates are consistent with all other parts of the plan. The certification may be contained in the annual State work program.

(f) Consistency. Construction grant and permit decisions must be made in accordance with certified and approved WQM plans as described in § 130.12(a) and § 130.12(b).

ATTACHMENT A-22

Code of Federal Regulations

Title 40. Protection of Environment

Chapter I. Environmental Protection Agency (Refs & Annos)

Subchapter D. Water Programs

Part 130. Water Quality Planning and Management (Refs & Annos)

40 C.F.R. § 130.7

§ 130.7 Total maximum daily loads (TMDL) and individual water quality-based effluent limitations.

Currentness

(a) General. The process for identifying water quality limited segments still requiring wasteload allocations, load allocations and total maximum daily loads (WLA/LAs and TMDLs), setting priorities for developing these loads; establishing these loads for segments identified, including water quality monitoring, modeling, data analysis, calculation methods, and list of pollutants to be regulated; submitting the State's list of segments identified, priority ranking, and loads established (WLA/LAs/TMDLs) to EPA for approval; incorporating the approved loads into the State's WQM plans and NPDES permits; and involving the public, affected dischargers, designated areawide agencies, and local governments in this process shall be clearly described in the State Continuing Planning Process (CPP).

(b) Identification and priority setting for water quality-limited segments still requiring TMDLs.

(1) Each State shall identify those water quality-limited segments still requiring TMDLs within its boundaries for which:

(i) Technology-based effluent limitations required by [sections 301\(b\)](#), [306](#), [307](#), or other sections of the Act;

(ii) More stringent effluent limitations (including prohibitions) required by either State or local authority preserved by [section 510](#) of the Act, or Federal authority (law, regulation, or treaty); and

(iii) Other pollution control requirements (e.g., best management practices) required by local, State, or Federal authority are not stringent enough to implement any water quality standards (WQS) applicable to such waters.

(2) Each State shall also identify on the same list developed under paragraph (b)(1) of this section those water quality-limited segments still requiring TMDLs or parts thereof within its boundaries for which controls on thermal discharges under [section 301](#) or State or local requirements are not stringent enough to assure protection and propagation of a balanced indigenous population of shellfish, fish and wildlife.

(3) For the purposes of listing waters under § 130.7(b), the term “water quality standard applicable to such waters” and “applicable water quality standards” refer to those water quality standards established under [section 303](#) of the Act, including numeric criteria, narrative criteria, waterbody uses, and antidegradation requirements.

(4) The list required under §§ 130.7(b)(1) and 130.7(b)(2) of this section shall include a priority ranking for all listed water quality-limited segments still requiring TMDLs, taking into account the severity of the pollution and the uses to be made of such waters and shall identify the pollutants causing or expected to cause violations of the applicable water quality standards. The priority ranking shall specifically include the identification of waters targeted for TMDL development in the next two years.

(5) Each State shall assemble and evaluate all existing and readily available water quality-related data and information to develop the list required by §§ 130.7(b)(1) and 130.7(b)(2). At a minimum “all existing and readily available water quality-related data and information” includes but is not limited to all of the existing and readily available data and information about the following categories of waters:

(i) Waters identified by the State in its most recent [section 305\(b\)](#) report as “partially meeting” or “not meeting” designated uses or as “threatened”;

(ii) Waters for which dilution calculations or predictive models indicate nonattainment of applicable water quality standards;

(iii) Waters for which water quality problems have been reported by local, state, or federal agencies; members of the public; or academic institutions. These organizations and groups should be actively solicited for research they may be conducting or reporting. For example, university researchers, the United States Department of Agriculture, the National Oceanic and Atmospheric Administration, the United States Geological Survey, and the United States Fish and Wildlife Service are good sources of field data; and

(iv) Waters identified by the State as impaired or threatened in a nonpoint assessment submitted to EPA under section 319 of the CWA or in any updates of the assessment.

(6) Each State shall provide documentation to the Regional Administrator to support the State's determination to list or not to list its waters as required by §§ 130.7(b)(1) and 130.7(b)(2). This documentation shall be submitted to the Regional Administrator together with the list required by §§ 130.7(b)(1) and 130.7(b)(2) and shall include at a minimum:

(i) A description of the methodology used to develop the list; and

(ii) A description of the data and information used to identify waters, including a description of the data and information used by the State as required by § 130.7(b)(5); and

(iii) A rationale for any decision to not use any existing and readily available data and information for any one of the categories of waters as described in § 130.7(b)(5); and

(iv) Any other reasonable information requested by the Regional Administrator. Upon request by the Regional Administrator, each State must demonstrate good cause for not including a water or waters on the list. Good cause

includes, but is not limited to, more recent or accurate data; more sophisticated water quality modeling; flaws in the original analysis that led to the water being listed in the categories in § 130.7(b)(5); or changes in conditions, e.g., new control equipment, or elimination of discharges.

(c) Development of TMDLs and individual water quality based effluent limitations.

(1) Each State shall establish TMDLs for the water quality limited segments identified in paragraph (b)(1) of this section, and in accordance with the priority ranking. For pollutants other than heat, TMDLs shall be established at levels necessary to attain and maintain the applicable narrative and numerical WQS with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality. Determinations of TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters.

(i) TMDLs may be established using a pollutant-by-pollutant or biomonitoring approach. In many cases both techniques may be needed. Site-specific information should be used wherever possible.

(ii) TMDLs shall be established for all pollutants preventing or expected to prevent attainment of water quality standards as identified pursuant to paragraph (b)(1) of this section. Calculations to establish TMDLs shall be subject to public review as defined in the State CPP.

(2) Each State shall estimate for the water quality limited segments still requiring TMDLs identified in paragraph (b)(2) of this section, the total maximum daily thermal load which cannot be exceeded in order to assure protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife. Such estimates shall take into account the normal water temperatures, flow rates, seasonal variations, existing sources of heat input, and the dissipative capacity of the identified waters or parts thereof. Such estimates shall include a calculation of the maximum heat input that can be made into each such part and shall include a margin of safety which takes into account any lack of knowledge concerning the development of thermal water quality criteria for protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife in the identified waters or parts thereof.

(d) Submission and EPA approval.

(1) Each State shall submit biennially to the Regional Administrator beginning in 1992 the list of waters, pollutants causing impairment, and the priority ranking including waters targeted for TMDL development within the next two years as required under paragraph (b) of this section. For the 1992 biennial submission, these lists are due no later than October 22, 1992. Thereafter, each State shall submit to EPA lists required under paragraph (b) of this section on April 1 of every even-numbered year. For the year 2000 submission, a State must submit a list required under paragraph (b) of this section only if a court order or consent decree, or commitment in a settlement agreement dated prior to January 1, 2000, expressly requires EPA to take action related to that State's year 2000 list. For the year 2002 submission, a State must submit a list required under paragraph (b) of this section by October 1, 2002, unless a court order, consent decree or commitment in a settlement agreement expressly requires EPA to take an action related to that State's 2002 list prior to October 1, 2002, in which case, the State must submit a list by April 1, 2002. The list of waters may be submitted as part of the State's biennial water quality report required by § 130.8 of this part and section 305(b) of the CWA or submitted under separate cover. All WLAs/LAs and TMDLs established under

paragraph (c) for water quality limited segments shall continue to be submitted to EPA for review and approval. Schedules for submission of TMDLs shall be determined by the Regional Administrator and the State.

(2) The Regional Administrator shall either approve or disapprove such listing and loadings not later than 30 days after the date of submission. The Regional Administrator shall approve a list developed under § 130.7(b) that is submitted after the effective date of this rule only if it meets the requirements of § 130.7(b). If the Regional Administrator approves such listing and loadings, the State shall incorporate them into its current WQM plan. If the Regional Administrator disapproves such listing and loadings, he shall, not later than 30 days after the date of such disapproval, identify such waters in such State and establish such loads for such waters as determined necessary to implement applicable WQS. The Regional Administrator shall promptly issue a public notice seeking comment on such listing and loadings. After considering public comment and making any revisions he deems appropriate, the Regional Administrator shall transmit the listing and loads to the State, which shall incorporate them into its current WQM plan.

(e) For the specific purpose of developing information and as resources allow, each State shall identify all segments within its boundaries which it has not identified under paragraph (b) of this section and estimate for such waters the TMDLs with seasonal variations and margins of safety, for those pollutants which the Regional Administrator identifies under [section 304\(a\)\(2\)](#) as suitable for such calculation and for thermal discharges, at a level that would assure protection and propagation of a balanced indigenous population of fish, shellfish and wildlife. However, there is no requirement for such loads to be submitted to EPA for approval, and establishing TMDLs for those waters identified in paragraph (b) of this section shall be given higher priority.

National Pollutant Discharge Elimination System (NPDES) Municipal
Separate Storm Sewer System General Permit Remand Rule

Friday, December 9, 2016

AGENCY: Environmental Protection Agency (EPA).

***89320 ACTION:** Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is revising the regulations governing regulated small municipal separate storm sewer system (MS4) permits to respond to a remand from the United States Court of Appeals for the Ninth Circuit in [Environmental Defense Center, et al. v. EPA, 344 F.3d 832 \(9th Cir. 2003\)](#). In that decision, the court determined that the regulations for providing coverage under small MS4 general permits did not provide for adequate public notice and opportunity to request a hearing. Additionally, the court found that EPA failed to require permitting authority review of the best management practices (BMPs) to be used at a particular MS4 to ensure that the small MS4 permittee reduces pollutants in the discharge from their systems to the “maximum extent practicable” (MEP), the standard established by the Clean Water Act (CWA) for such permits. The final rule establishes two alternative approaches a permitting authority can use to issue National Pollutant Discharge Elimination (NPDES) general permits for small MS4s and meet the requirements of the court remand. The first option is to establish all necessary permit terms and conditions to require the MS4 operator to reduce the discharge of pollutants from its MS4 to the MEP, to protect water quality, and to satisfy the appropriate water quality requirements of the Clean Water Act (“MS4 permit standard”) upfront in one comprehensive permit. The second option allows the permitting authority to establish the necessary permit terms and conditions in two steps: A first step to issue a base general permit that contains terms and conditions applicable to all small MS4s covered by the permit and a second step to establish necessary permit terms and conditions for individual MS4s that are not in the base general permit. Public notice and comment and opportunity to request a hearing would be necessary for both steps of this two-step general permit. This final rule does not establish any new substantive requirements for small MS4 permits.

DATES: This final rule is effective on January 9, 2017.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA-HQ-OW-2015-0671. All documents in the docket are listed on the <http://www.regulations.gov> Web site. Although listed in the index, some information is not publicly available, e.g., confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Greg Schaner, Office of Wastewater Management, Water Permits Division (4203M), Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460; telephone number: (202) 564-0721; email address: schaner.greg@epa.gov. Refer also to EPA's Web site for further information related to the final rule at <https://www.epa.gov/npdes/stormwater-rules-and-notices1B> proposed.

SUPPLEMENTARY INFORMATION: The Federal Register published EPA's proposed rule on January 6, 2016 ([81 FR 415](#)).

I. General Information**A. Does this action apply to me?**

Entities regulated [or affected] by this rule include:

Category	Examples of regulated entities	North American industry classification system (NAICS) code
Part IV		
Federal and state government	EPA or state NPDES stormwater permitting authorities; operators of small municipal separate storm sewer systems	924110
Local governments	Operators of small municipal separate storm sewer systems	924110

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be regulated by this action. This table lists the types of entities that EPA is now aware could potentially be regulated or otherwise affected by this action. Other types of entities not listed in the table could also be regulated. To determine whether your entity is regulated by this action, you should carefully examine the applicability criteria found in [40 CFR 122.32](#), and the discussion in the preamble. If you have questions regarding the applicability of this action to a particular entity, consult the person listed in the FOR FURTHER INFORMATION CONTACT section.

B. What action is the Agency taking?

EPA is issuing a final rule to revise its regulations governing the way in which small municipal separate storm sewer systems (MS4s) obtain coverage under National Pollutant Discharge Elimination System (NPDES) general permits and how required permit conditions are established. The rule results from a decision by the U.S. Court of Appeals for the Ninth Circuit in [Environmental Defense Center, et al. v. EPA, at 344 F.3d 832 \(9th Cir. 2003\)](#) (“EDC decision”), which found that EPA regulations for obtaining coverage under a small MS4 general permit did not provide for adequate public notice, the opportunity to request a hearing, or permitting authority review to determine whether the best management practices (BMPs) selected by each MS4 in its stormwater management program (SWMP) meets the CWA requirements including the requirement to “reduce pollutants to the maximum extent practicable.” The Federal Register published EPA’s proposed rule on January 6, 2016 ([81 FR 415](#)). EPA proposed and solicited public comment on three options for addressing the remand. One option (called the “Traditional General Permit Approach”) would require the permitting authority to establish within the general permit all requirements necessary for the regulated small MS4s to meet the applicable permit standard (to reduce pollutants to the maximum extent practicable (MEP), to protect water quality,

and to satisfy the appropriate water quality requirements of the CWA), which would be subject to public notice and comment and an opportunity to request a hearing. The second proposed option (called the “Procedural Approach”) would require the permitting authority to incorporate an additional review and public comment step into the existing Phase II regulatory framework for permitting small MS4s through general permits. More specifically, once an MS4 operator submitted its Notice of Intent (NOI) requesting coverage under the general permit, an additional step would take place in which the permitting authority would review, and the public would be given an opportunity to comment and request a hearing on, the merits of the MS4’s proposed BMPs and measurable goals for complying with the requirement to reduce discharges to the MEP, to protect water quality, and to satisfy the appropriate water quality requirements of the CWA. A third proposed option (called the “State Choice Approach”) would enable the permitting authority to choose between the Traditional General Permit and Procedural Approaches, or to implement a combination of these approaches in issuing and authorizing coverage under a general permit. Today, EPA is issuing a rule that promulgates the “State Choice Approach” and has renamed it as the “Permitting Authority Choice Approach.”

C. What is the Agency’s authority for taking this action?

The authority for this rule is the Federal Water Pollution Control Act, [33 U.S.C. 1251 et seq.](#), including sections 402 and 501.

D. What are the incremental costs of this action?

The Economic Analysis estimates the incremental costs to implement the final rule. EPA assumed that all other costs accrued as a result of the existing small MS4 program, which were accounted for in the Economic Analysis accompanying the 1999 final Phase II MS4 regulations, remain the same and are not germane to the Economic Analysis, unless the rule change would affect the baseline program costs. In this respect, EPA focused only on new costs that may be imposed as a result of implementing the final rule. It is, therefore, unnecessary to reevaluate the total program costs of the Phase II rule, since those costs were part of the original economic analysis conducted for the 1999 Phase II rule (see [64 FR 68722](#), December 8, 1999). For further information, refer to the Economic Analysis that is included in the rule docket.

EPA estimates the annualized cost of the final rule to be between \$558,025 and \$604,770, depending on the assumed discount rate. This can be thought of as the annual budgeted amounts each permitting authority would need to make available each year in order to be able to cover the increase in permitting authority efforts that would result every 5 years. The total net present value of the compliance cost ranges from \$5.5 million to \$8.4 million, depending on the assumed discount rate. These estimates are all below the threshold level established by statute and various executive orders for determining that a rule has an economically significant or substantial impact on affected entities. See further discussion in Section X of this preamble.

The Economic Analysis assumes that permitting authorities are the only entities that are expected to be impacted from this rule because the requirements modified by the rule focus only on the administrative manner in which general ***89322** permits are issued and how coverage under those permits is granted. EPA emphasizes that this final rule does not change the stringency of the underlying requirements in the statute or Phase II regulations to which small MS4 permittees are subject, nor does it establish new substantive requirements for MS4 permittees. Therefore, the Economic Analysis does not attribute new costs to regulated small MS4s beyond what they are already subject to under the statute and Phase II regulations. EPA acknowledges that many permitting authorities consider permitting a cost-neutral function, therefore some may increase permit fees to cover the increased costs associated with this rule.

EPA used conservative assumptions about impacts on state workloads, meaning that the actual economic costs of complying with the final rule and implementing any new procedural changes are most likely lower than what is actually presented. EPA considers the cost assumptions to be conservative because as more permitting authorities issue general permits consistent with the new rule, other permitting authorities can use and build on those examples, reducing the amount of time it takes to draft the permit requirements, and permitting authorities will likely learn from experience as

they move forward how to work more efficiently to issue and administer their general permits. EPA has issued guidance to permitting authorities on how to write better MS4 permits (MS4 Permit Improvement Guide (EPA, 2010); Compendium of MS4 Permitting Approaches—Part 2: Post Construction Standards (EPA, 2016); Compendium of MS4 Permitting Approaches—Part 3: Water Quality-Based Requirements (EPA, 2016)), and additional examples of permit provisions that are written in a “clear, specific, and measurable” manner for the six minimum control measures are included in the preamble to this rule. EPA also anticipates issuing further guidance once the rule is promulgated to assist permitting authorities in implementing the new rule requirements, which will in turn hopefully make permit writing more efficient. These gained efficiencies were not, however, accounted for in the option-specific cost assumptions.

II. Background

A. Statutory and Regulatory Overview

Stormwater discharges are a significant cause of water quality impairment because they can contain a variety of pollutants such as sediment, nutrients, chlorides, pathogens, metals, and trash that are mobilized and ultimately discharged to storm sewers or directly to water bodies. Furthermore, the increased volume and velocity of stormwater discharges that result from the creation of impervious cover can alter streams and rivers by causing scouring and erosion. These surface water impacts can threaten public health and safety due to the increased risk of flooding and increased level of pollutants; can lead to economic losses to property and fishing industries; can increase drinking water treatment costs; and can decrease opportunities for recreation, swimming, and wildlife uses.

Stormwater discharges are subject to regulation under section 402(p) of the CWA. Under this provision, Congress required the following stormwater discharges initially to be subject to NPDES permitting requirements: Stormwater discharges for which NPDES permits were issued prior to February 4, 1987; discharges “associated with industrial activity”; discharges from MS4s serving populations of 100,000 or more; and any stormwater discharge determined by EPA or a state to “contribute . . . to a violation of a water quality standard or to be a significant contributor of pollutants to waters of the United States.” Congress further directed EPA to study other stormwater discharges and determine which needed additional controls. With respect to MS4s, section 402(p)(3)(B) provides that NPDES permits may be issued on a system-wide or jurisdiction-wide basis, and requires that MS4 NPDES permits “include a requirement to effectively prohibit non-stormwater discharges into the storm sewers” and require “controls to reduce the discharge of pollutants to the maximum extent practicable . . . and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.”

EPA developed the stormwater regulations under section 402(p) of the CWA in two phases, as directed by the statute. In the first phase, under section 402(p)(4) of the CWA, EPA promulgated regulations establishing application and other NPDES permit requirements for stormwater discharges from medium (serving populations of 100,000 to 250,000) and large (serving populations of 250,000 or more) MS4s, and stormwater discharges associated with industrial activity. EPA published the final Phase I rule on November 16, 1990 ([55 FR 47990](#)). The Phase I rule, among other things, defined “municipal separate storm sewer” as publicly-owned conveyances or systems of conveyances that discharge to waters of the U.S. and are designed or used for collecting or conveying stormwater, are not combined sewers, and are not part of a publicly-owned treatment works at § 122.26(b)(8). EPA included construction sites disturbing five acres or more in the definition of “stormwater discharges associated with industrial activity” at § 122.26(b)(14)(x).

In the second phase, section 402(p)(5) and (6) of the CWA required EPA to conduct a study to identify other stormwater discharges that needed further controls “to protect water quality,” report to Congress on the results of the study, and to designate for regulation additional categories of stormwater discharges not regulated in Phase I on the basis of the study and in consultation with state and local officials. EPA promulgated the Phase II rule on December 8, 1999, designating discharges from certain small MS4s and from small construction sites (disturbing equal to or greater than one acre and less than five acres) and requiring NPDES permits for these discharges ([64 FR 68722](#), December 8, 1999). A regulated small MS4 is generally defined as any MS4 that is not already covered by the Phase I program and that is located

within the urbanized area boundary as determined by the latest U.S. Decennial Census. Separate storm sewer systems such as those serving military bases, universities, large hospitals or prison complexes, and highways are also included in the definition of “small MS4.” See § 122.26(b)(16). In addition, the Phase II rule includes authority for EPA (or states authorized to administer the NPDES program) to require NPDES permits for currently unregulated stormwater discharges through a designation process. See § 122.26(a)(9)(i)(C) and (D). Other small MS4s located outside of an urbanized area may be designated as a regulated small MS4 if the NPDES permitting authority determines that its discharges cause, or have the potential to cause, an adverse impact on water quality. See §§ 122.32(a)(2) and 123.35(b)(3).

B. MS4 Permitting Requirements

The Phase I regulations are primarily comprised of requirements that must be addressed in applications for individual permits from large and medium MS4s. The regulations at § 122.26(d)(2)(iv) require these MS4s to develop a proposed stormwater management program (SWMP), which is considered by EPA or the authorized state permitting authority when establishing permit conditions to reduce pollutants to the “maximum extent practicable” (MEP).

***89323** Like the Phase I rule, the Phase II rule requires regulated small MS4s to develop and implement SWMPs. The regulations at § 122.34(a) requires that SWMPs be designed to reduce pollutants discharged from the MS4 “to the maximum extent practicable (MEP), to protect water quality, and to satisfy the appropriate water quality requirements of the Clean Water Act,” and requires that the SWMPs include six “minimum control measures.” The minimum control measures are: Public education and outreach, public participation and involvement, illicit discharge detection and elimination, construction site runoff control, post construction runoff control, pollution prevention and good housekeeping. See § 122.34(b). Under the Phase II rule, a regulated small MS4 may seek coverage under an available general permit or may apply for an individual permit. To be authorized to discharge under a general permit, the rule requires submission of a Notice of Intent (NOI) to be covered by the general permit containing a description of the best management practices (BMPs) to be implemented and the measurable goals for each of the BMPs, including timing and frequency, as appropriate. See §§ 122.33(a)(1), 122.34(d)(1).

EPA anticipated that under the first two or three permit cycles, whether required in individual permits or in general permits, BMP-based controls implementing the six minimum control measures would, if properly implemented, “be sufficiently stringent to protect water quality, including water quality standards, so that additional, more stringent and/or more prescriptive water quality based effluent limitations will be unnecessary.” (64 FR 68753, December 8, 1999). In the final Phase II rule preamble, EPA also stated that it “has intentionally not provided a precise definition of MEP to allow maximum flexibility in MS4 permitting. MS4s need the flexibility to optimize reductions in storm water pollutants on a location-by-location basis. . . . Therefore, each permittee will determine appropriate BMPs to satisfy each of the six minimum control measures through an evaluative process.” (64 FR 68754, December 8, 1999).

The agency described the approach to meet the MS4 permit standard in the preamble to the Phase II rule as an “iterative process” of developing, implementing, and improving stormwater control measures contained in SWMPs. As EPA further stated in the preamble to the Phase II rule, “MEP should continually adapt to current conditions and BMP effectiveness and should strive to attain water quality standards. Successive iterations of the mix of BMPs and measurable goals will be driven by the objective of assuring maintenance of water quality standards. . . . If, after implementing the six minimum control measures there is still water quality impairment associated with discharges from the MS4, after successive permit terms the permittee will need to expand or better tailor its BMPs within the scope of the six minimum control measures for each subsequent permit.” (64 FR 68754, December 8, 1999).

C. Judicial Review of the Phase II Rule and Partial Remand

The Phase II rule was challenged in petitions for review filed by environmental groups, municipal organizations, and industry groups, resulting in a partial remand of the rule. [Environmental Defense Center v. U.S. Environmental Protection Agency](#), 344 F.3d. 832 (9th Cir. 2003) (EDC). The court remanded the Phase II rule's provisions for small MS4

general permits because they lacked procedures for permitting authority review and public notice and the opportunity to request a hearing on NOIs submitted under general MS4 permits.

In reviewing how the Phase II rule provided for general permit coverage for small MS4s, the court found that the way in which NOIs function under the rule was not the same as in other NPDES general permits. Other general permits contain within the body of the general permit the specific effluent limitations and conditions applicable to the class of dischargers for which the permit is available. In this situation, authorization to discharge under a general permit is obtained by filing an NOI in which the discharger agrees to comply with the terms of the general permit and in which the operator provides some basic information (e.g., site location, receiving waters) to help determine eligibility. In contrast, the court held that under the Phase II rule, because the NOI submitted by the MS4 contains the information describing what the MS4 will do to reduce pollutants to the MEP, it is the “functional equivalent” of an individual permit application. See EDC, 344 F.3d. at 857. Because the CWA requires public notice and the opportunity to request a public hearing for all permit applications, the court held that failure to require public notice and the opportunity for a public hearing for NOIs under the Phase II rule is contrary to the Act. See EDC, 344 F.3d. at 858.

Similarly, the court found the Phase II rule allows the MS4 to identify the BMPs that it will undertake in its SWMP without any permitting authority review. The court held that the lack of review “to ensure that the measures that any given operator of a small MS4 has decided to undertake will in fact reduce discharges of pollutants to the maximum extent practicable” also does not comport with CWA requirements. The court stated, “That the Rule allows a permitting authority to review an NOI is not enough; every permit must comply with the standards articulated by the Clean Water Act, and unless every NOI issued under general permit is reviewed, there is no way to ensure that such compliance has been achieved.” See EDC, 344 F.3d. at 855 n.32. The court therefore vacated and remanded “those portions of the Phase II Rule that address these procedural issues . . . so that EPA may take appropriate action to comply with Clean Water Act.” See EDC, 344 F.3d. at 858.

III. Summary of the Proposed Rule and Comments Received

A. Scope of the Proposed Rule

EPA proposed revisions to the Phase II MS4 NPDES permitting requirements on January 6, 2016 (81 FR 415) to respond to the Ninth Circuit's remand in *Environmental Defense Center v. U.S. Environmental Protection Agency*, 344 F.3d. 832 (9th Cir. 2003). To address the remand, the regulations must ensure that permitting authorities determine what permit requirements are needed to reduce pollutants from each permitted small MS4 “to the maximum extent practicable (MEP), to protect water quality, and to satisfy the appropriate water quality requirements of the Clean Water Act” (referred to hereinafter as the “MS4 permit standard”). The rule must also require NPDES permitting authorities to provide the public with the opportunity to review, submit comments, and request a public hearing on these permit requirements. EPA did not propose modifications to any of the substantive requirements that were promulgated in the Phase II rule (nor did EPA reopen or seek comment on any aspect of the Phase I rule, which was described in the preamble of the proposed rule for informational purposes only).

In the remand decision, the court established in broad and clear terms what is needed for general permits that cover regulated small MS4s and therefore provided EPA with what minimum attributes should be part of any revisions to the Phase II regulations. The court stated that “every permit must comply with the standards articulated by the Clean Water Act, and *89324 unless every NOI issued under a general permit is reviewed, there is no way to ensure that such compliance has been achieved.” See EDC, 344 F.3d at 855, n. 32. In the court's view, the NOI served as the document that established how the MEP standard would be met: “Because a Phase II NOI establishes what the discharger will do to reduce discharges to the ‘maximum extent practicable,’ the Phase II NOI crosses the threshold from being an item of procedural correspondence to being a substantive component of a regulatory scheme.” See EDC, 344 F.3d at 853. Since review of the NOI by the permitting authority was not specified in the regulation, and § 122.34(a) stated that compliance with the storm water management program developed by the permittee constituted compliance with the MEP standard,

the court also expressed concern that the regulation put the MS4 in charge of establishing its own requirements. “[U]nder the Phase II Rule nothing prevents the operator of a small MS4 from misunderstanding or misrepresenting its own stormwater situation and proposing a set of minimum measures for itself that would reduce discharges by far less than the maximum extent practicable.” See EDC, 344 F.3d at 855. Further, the court found that the failure to require public notice or opportunity to submit comments or request a public hearing for each NOI violated requirements applicable to all CWA permits in accordance with section 402(b)(3). See EDC, 344 F.3d at 857.

B. Description of Options Proposed

EPA proposed for comment the following three options to address the regulatory shortcomings found in the remand decision.

1. Option 1 (“Traditional General Permit Approach”)

Under the proposed Traditional General Permit Approach, the permitting authority must establish in any small MS4 general permit the full set of requirements that are deemed necessary to meet the MS4 permit standard (“reduce pollutants to the maximum extent practicable, protect water quality and satisfy the appropriate water quality requirements of the Clean Water Act”), and the administrative record would include an explanation of the rationale for its determination. (This approach contrasts with the original regulations, which appeared to the court to provide the permittee with the ability to establish its own requirements.) Once the permit is issued, and the terms and conditions in the permit are fixed for the term of the permit, neither the development of a SWMP document nor the submittal of an NOI for coverage would represent new permit requirements. Thus, because the permit contains all of the requirements that will be used to assess permittee compliance, the permitting authority would no longer need to rely on the MS4’s NOI as the mechanism for ascertaining what will occur during the permit term. Under this approach, the function of the NOI would be more similar to that of any other general permit NOI, and more specifically other stormwater general permits, whereby the NOI is used to establish certain minimum facts about the discharger, including the operator’s contact details, the discharge location(s), and confirmation that the operator is eligible for permit coverage and has agreed to comply with the terms of the permit. By removing the possibility that effluent limits could be proposed in the NOI (and for that matter in the SWMP) and made part of the permit once permit coverage is provided, the NOI would no longer look and function like an individual permit application, as the court found with respect to MS4 NOIs under the Phase II regulations currently in effect. Therefore, it would not be necessary to carry out the type of additional permitting authority review and public participation procedures contemplated by the Ninth Circuit court in the remand decision. These requirements would be met during the process of issuing the general permit.

2. Option 2 (“Procedural Approach”)

Under the proposed Procedural Approach, the permitting authority would establish applicable permit requirements to meet the MS4 permit standard by going through a second permitting step following the issuance of the general permit (referred to as the “base general permit”), similar to the procedures used to issue individual NPDES permits. Eligible MS4 operators would be required to submit NOIs with the same information that has always been required under the Phase II regulations, that is, a description of the BMPs to be implemented by the MS4 operator during the permit term, and the measurable goals associated with each BMP. Following the receipt of the NOI, the permitting authority would review the NOI to assess whether the proposed BMPs and measurable goals meet the MS4 permit standard. If not, the permitting authority would request supplemental information or revisions as necessary to ensure that the submission satisfies the regulatory requirements. Once satisfied with the submission, the permitting authority would be required to propose incorporating the BMPs and measurable goals in the NOI as permit requirements and to provide public notice of the NOI and an opportunity to submit comments and to request a hearing in accordance with §§ 124.10 through 124.13. After consideration of comments received and a hearing, if held, the permitting authority would provide notice of its decision to authorize coverage under the general permit, along with any MS4-specific requirements established during

this second process. Upon completion of this process, the MS4 would be required to comply with the requirements set forth in the base general permit and the additional terms and conditions established through the second-step process.

3. Option 3 (“State Choice Approach”)

The proposed rule also requested comment on a State Choice Approach, which would allow permitting authorities to choose either the Traditional General Permit Approach or the Procedural Approach, or some combination of the two as would best suit their needs and circumstances. As described in the proposed rule, the permitting authority could, for example, choose to use Option 1 for small MS4s that have fully established programs and uniform core requirements, and Option 2 for MS4s that it finds would benefit from the additional flexibility to address unique circumstances, such as those encountered by non-traditional MS4s (e.g., state departments of transportation, public universities, military bases). Alternatively, a state could apply a hybrid of the two approaches within one permit by defining some elements within the general permit, which, consistent with the Option 1 approach, are deemed to meet the MS4 permit standard, and establishing additional permit requirements through the Option 2 procedural approach for each MS4 seeking coverage under the General Permit. Under a hybrid approach, any requirements established in the general permit that fully articulate what is required to meet the MS4 permit standard would require no further permitting authority review and public notice proceedings; however, for any terms and conditions established for individual MS4s based in part on information submitted with the NOI would need to follow the Option 2 approach for incorporating these requirements into the permit as enforceable requirements.

**89325 C. General Summary of Comments Received*

EPA received about 70 unique comments on the proposed rule from the MS4 community, states, environmental groups, industry associations, and engineering firms. Most commenters favored Option 3—the “State Choice” option. While several expressed support for their states using the Traditional General Permit or Procedural Approach, a number of these same commenters acknowledged that these approaches would likely not work in all situations if EPA were to adopt either one as the sole option under the final rule. EPA notes that while most of the environmental organization commenters expressed support for a hybrid option, which technically falls under the State Choice option, they also strongly recommended mandating that the Traditional General Permit Approach be used for permit requirements related to the six minimum control measures and that the Procedural Approach be used for water quality-based requirements, such as requirements for implementing total maximum daily loads (TMDLs).

A common reason given for supporting the State Choice approach included the flexibility it would give authorized states to use different options to address different situations and that it would minimize disruption to existing programs. Several states that now use a traditional general permit approach or a procedural approach stressed the importance of providing choices for other states. EPA notes that no commenter expressly opposed the State Choice approach. EPA discusses these comments in the context of its decision to adopt the State Choice approach in the final rule in Section IV of the preamble below.

EPA received a significant number of comments concerning its proposed changes to the way in which permit terms and conditions must be expressed, particularly with respect to the proposed deletion of the word “narrative” in § 122.34(a). These comments focused on the concern that EPA was moving away from support of the use of BMPs to comply with stormwater permits and from the longstanding “iterative approach” to meeting MS4 permit requirements. EPA discusses these comments and the changes made in response to these comments in the final rule in Section V of the preamble.

In addition to responding to major comments in the preamble, EPA has prepared a Response to Comment document, which can be found in the docket for this rulemaking.

IV. Summary of the Final Rule

A. Selection of the “Permitting Authority Choice” Approach

EPA is selecting proposed Option 3 (the “State Choice Approach”) for the final rule, described in Section III.B.3. The new name for this option better captures the universe of entities that will implement the rule, i.e., any NPDES permitting authority including EPA Regions and authorized states. Under this approach, the NPDES permitting authority may choose between two alternative means of establishing permit requirements in general permits for small MS4s. The final rule amends § 122.28(d) to require permitting authorities to choose one of these two types of general permits whenever issuing a small MS4 general permit. Permitting authorities are required to select either the “Comprehensive General Permit” or “Two-Step General Permit”. The “Comprehensive General Permit” is essentially the “Traditional General Permit”, or “Option 1”, from the proposed rule. The “Two-Step General Permit” encompasses both the “Procedural Approach”, or “Option 2” and the “hybrid approach” that was described as part of “Option 3” from the proposed rule. The Two-Step General Permit allows the permitting authority to establish some requirements in the general permit and others applicable to individual MS4s through a second proposal and public comment process.

B. Description of the Two Permitting Alternatives Under the Permitting Authority Choice Approach

As described in Section IV.A, the Permitting Authority Choice Approach requires permitting authorities to choose between two alternative approaches to issue general permits for small MS4s. These two types of general permits are described briefly as follows:

- **Comprehensive General Permit**—For this type of general permit, the permitting authority issues a small MS4 general permit that includes the full set of requirements necessary to meet the MS4 permit standard of “reducing pollutant discharges from the MS4 to the maximum extent practicable (MEP), to protect water quality, and to satisfy the appropriate water quality requirements of the CWA.” Under the Comprehensive General Permit, all requirements are contained within the general permit, and no additional requirements are established after permit issuance, as is the case with the “Two-Step General Permit” described below. For this reason, to provide coverage to eligible small MS4s, the permitting authority can use a traditional general permit NOI as described in § 122.28(b)(2)(ii), and does not need to require additional information from each operator concerning how they will comply with the permit, for instance the BMPs that will be implemented and the measurable goals for each control measure, as a prerequisite to authorizing the discharge. See further discussion of the role of the NOI in Section IV.E.
- **Two-Step General Permit (combination of the proposed Procedural and Hybrid Approaches)**— For the Two-Step General Permit, after issuing a base general permit, the permitting authority establishes through the completion of a second permitting step additional permit terms and conditions that are necessary to meet the MS4 permit standard for each MS4 seeking authorization to discharge under the general permit. These additional terms and conditions supplement the requirements of the general permit for individual MS4 permittees. It is in the second permitting step where the permitting authority satisfies its obligation to review the NOI for adequacy, determine what additional requirements are needed for the MS4 to meet the MS4 permit standard, and provide public notice and an opportunity for the public to submit comments and to request a hearing. See discussion of the second permitting step in Section V.B. Upon completion of this process, the MS4 permittee is authorized to discharge subject to the terms of the general permit and the additional requirements that apply individually to that MS4.

The Two-Step General Permit encompasses the “hybrid” approach described in the proposed rule (see Section VI.C), where the permitting authority includes specific permit terms and conditions within the base general permit, but also establishes additional requirements to meet the MS4 permit standard through a second permitting step. For the final rule, EPA intentionally used rule language that would enable permitting authorities to use a Two-Step General Permit to implement a hybrid approach by referring to both “required permit terms and conditions in the general permit applicable to all eligible small MS4s” and “additional terms and conditions to satisfy one or more of the permit requirements in § 122.34 for individual small MS4 operators.” See § 122.28(d)(2).

The final rule requires that the permitting authority indicate which ***89326** type of general permit it is using for any small MS4 general permit. This statement or explanation may be included in the general permit itself or in the permit fact sheet. EPA notes that the permitting authority may choose to change the permitting approach for subsequent permits. Questions concerning when the final rule change takes effect are discussed in Section VIII.A.

C. Summary of Regulatory Changes To Adopt the Permitting Authority Choice Approach

The final rule implements the Permitting Authority Choice option in several different sections of the NPDES regulations. Below is a brief summary of the most significant changes and where they can be found in the final rule:

- **Permitting Authority Choice Approach (§ 122.28(d)):** The final rule adds a new paragraph (d) to § 122.28 that requires the permitting authority to select between two alternative general permits. This section describes both types of general permits (the “Comprehensive General Permit” and the “Two-Step General Permit”) and the minimum requirements associated with each. EPA chose to include the Permitting Authority Choice in a different section of the regulations than was proposed. EPA determined upon further consideration that rather than including all of the requirements within the application and NOI section of the Phase II regulations now at § 122.33, the two alternatives comprising the Permitting Authority Choice Approach fit better within the general permit regulations as a unique set of requirements affecting general permits for regulated small MS4s.
- **Changes to the NOI requirements (§ 122.33):** The final rule includes modifications to the requirements for what must be included in NOIs submitted for coverage under small MS4 general permits. The required contents of the NOI vary depending on the type of general permit used. For permitting authorities choosing a Comprehensive General Permit, the final rule enables the permitting authority to reduce the information required in NOIs to the minimum information required for any general permit NOI in § 122.28(b)(2)(ii). See § 122.33(b)(1)(i). For permitting authorities choosing the Two-Step General Permit, the final rule provides the permitting authority with the ability to determine what information it deems necessary to establish individual requirements for MS4 operators that meet the MS4 permit standard. See § 122.33(b)(1)(ii), and additional discussion of these and other changes to § 122.33 in Section V.D.1.
- **Clarifications to the requirements for small MS4 permits (§ 122.34):** Regardless of the permitting approach chosen by the NPDES authority, the terms and conditions of the resulting general permits must adhere to the requirements of § 122.34. The final rule retains modifications from the proposed rule that clarify that it is the permitting authority's responsibility, and not that of the small MS4 permittee, to establish permit terms and conditions that meet the MS4 regulatory standard and to delineate the requirements for implementing the six minimum control measures, other terms and conditions deemed necessary by the permitting authority to protect water quality, as well as any other requirement. The final rule also emphasizes that permit requirements must be expressed in “clear, specific, and measurable” terms. These modifications do not alter the existing, substantive requirements of the six minimum control measures in § 122.34(b). See further discussion of these changes in Section VI.

D. Commonalities Among the Two Types of General Permits

The two options available to the permitting authority under the final rule involve different steps and require differing levels of administrative oversight; however, at a basic level, they share the same underlying characteristics. Each type of general permit shares in common that through the permitting process, the permitting authority must determine which requirements a small MS4 must meet in order to satisfy the MS4 permit standard. Both types of general permits also require that the specific actions that comprise what is necessary to meet the MS4 permit standard be established through the permitting process. The key distinction between the two types of permits is that they establish permit terms and conditions at different points in time during the permitting process. For Comprehensive General Permits, the determination as to what requirements are needed to satisfy the MS4 permit standard is made as part of the issuance of the general permit. By contrast, for Two-Step General Permits, the permitting authority makes this determination both

in the process of issuing the general permit and in the process of establishing additional permit requirements applicable on an individual basis to each MS4 covered under the general permit, based on information in the NOI.

The final rule also places both types of general permits on a level playing field with respect to the requirements that must be addressed in any general permit issued to a small MS4. Regardless of which type of general permit is used to establish permit terms and conditions, every small MS4 general permit must include requirements that address the minimum control measures (§ 122.34(b)), water quality-based requirements where needed (§ 122.34(c)), and evaluation and assessment requirements (§ 122.34(d)). The final rule clarifies that all such terms and conditions must be expressed in terms that are “clear, specific, and measurable.” The important attribute here is that permit requirements must be enforceable, and must provide a set of performance expectations and schedules that are readily understood by the permittee, the public, and the permitting authority alike. For both types of general permits, requirements may be expressed in narrative or numeric form, as long as they are clear, specific, and measurable. This requirement for clear, specific, and measurable requirements applies to any permit term or condition established under § 122.34, including requirements addressing the minimum control measures, any water quality-based requirements, and the evaluation, recordkeeping, and reporting requirements. Section VII of this preamble contains a detailed discussion about establishing permit terms and conditions.

Importantly, the final rule also ensures that the process for issuing both types of general permit addresses the deficiencies found by the Ninth Circuit to exist in the Phase II regulations. While the court's opinion focused on the role of the NOI in the Phase II rule for MS4 general permits, the court made it clear that under the CWA, the permitting authority must determine which MS4 permit requirements are adequate to meet the MS4 permit standard, and that the public must have the opportunity to review and comment on those permit requirements and to request a hearing. All of these core CWA requirements are present in the final rule. For Comprehensive General Permits, once the permit is issued it has gone through permitting authority review, public notice and comment, and the opportunity to request a hearing. Permitting authority review and public comment and opportunity for a hearing occurs in the process of drafting permit conditions and soliciting comment on the draft general permit. Permitting authority determination of what an MS4 must do to meet the MS4 permit standard occurs in the process of issuing ***89327** the final permit after consideration of comments. By comparison, for Two-Step General Permits, permitting authority review, public notice and comment, and the opportunity to request a hearing occur first on the draft general permit and again on the additional terms and conditions applicable to each MS4 authorized to discharge under the general permit. Under the Two-Step process, the CWA requirements for permitting authority review and public comment and opportunity for hearing are only fully addressed after the completion of the discharge authorization process for each individual small MS4 operator seeking coverage under the general permit. To ensure that these CWA requirements are met, the final rule supplements the administrative steps necessary to issue the base general permit with procedures that ensure that any decision to authorize an individual MS4 to discharge based on information included in the NOI is subject to review by the permitting authority, and the public has the opportunity to review and submit comments, and to request a hearing on the terms and conditions that will be incorporated as enforceable permit terms.

E. Role of the NOI Under the Permitting Authority Choice Approach

The two permitting options available under the final rule include important changes in the relationship between the MS4 operator's NOI and the general permit. Under the 1999 Phase II regulations, any MS4 operator seeking coverage under a small MS4 general permit has been required to submit information in the NOI describing, at a minimum, the BMPs that would be implemented for each minimum control measure during the permit term, and the measurable goals associated with each BMP. These NOIs differ significantly from the typical general permit NOI, which is required to include far less information, and “represents no more than a formal acceptance of [permit] terms elaborated elsewhere” in the general permit. See *EDC*, 344 F. 3d. at 852. Under the NPDES regulations at § 122.28(b)(2)(ii), the NOI is a procedural mechanism to document operator eligibility, to certify that the information submitted by the operator is accurate and truthful, and to confirm the operator's intention to be covered by the terms and conditions of the general permit.

The Ninth Circuit court, in its remand decision, likened the NOI under the remanded regulations to being “functionally equivalent to a detailed application for an individualized permit,” since the MS4 operator was in essence proposing to the permitting authority what it intended to accomplish to satisfy the MS4 permit standard. The court found it to differ markedly from the NOI utilized for most general permits, that is, limited to “an item of procedural correspondence.” 344 F. 3d. at 853. The similarity in the court's view between the NOI under the Phase II regulations and an individual permit application, combined with the failure of the regulations to require permitting authority review or to provide the opportunity for the public to comment and request a hearing on the NOI, were key factors in the Ninth Circuit finding that the regulations had violated the CWA.

The final rule modifies the way in which the NOI functions in important respects so that it addresses the problems found by the Ninth Circuit. For a Comprehensive General Permit, because the permit contains all of the requirements that will be used to assess permittee compliance, the permitting authority no longer needs to rely on the MS4's NOI as the mechanism for ascertaining what will occur during the permit term. In this way, the function of the NOI is the same as that of any other general permit NOI, and more specifically other stormwater general permits, where the NOI is used to establish certain minimum facts about the discharger, including the operator's contact details, the discharge location(s), and confirmation that the operator is eligible for permit coverage and has agreed to comply with the terms of the permit. It is for this reason, therefore, that the final rule establishes no additional requirements for the information required to be included in NOIs beyond what is already required for other general permits in § 122.28(b)(2)(ii). See § 122.33(b)(1) in the final rule. By removing the possibility that permit requirements could be proposed in the NOI (or in the SWMP) and made part of the permit once permit coverage is provided under the Comprehensive General Permit approach, the NOI will no longer look and function like an individual permit application, as the court found with respect to MS4 NOIs under the original Phase II regulations. Similarly, because the NOI no longer bears the similarity of an individual permit application, it is no longer necessary to carry out the type of additional permitting authority review and public participation steps contemplated by the Ninth Circuit.

By contrast, for coverage under a Two-Step General Permit, the NOI needs to include information to assist the permitting authority in developing the additional permit requirements for each permittee. For this NOI, the permitting authority requires more detailed information from the MS4 operator so that it can determine what additional permit terms and conditions are necessary in order to satisfy the MS4 permit standard. The NOI in the Two-Step General Permit is likely to include much of the same information that has been required of MS4 operators under the regulations since they were promulgated in 1999. The major difference now is that the permitting authority reviews the NOI materials to determine what additional permit terms and conditions are necessary for the individual MS4 to meet the MS4 permit standard, and to provide an opportunity for the public to comment and request a hearing on this determination.

The proposed rule would have required the full set of information required for individual permit applications in § 122.33(b)(2)(i), including the proposed BMPs to be implemented for the minimum control measures, measurable goals for each BMP (as required by § 122.34(d) of the original regulations), the persons responsible for implementing the stormwater management program, the square mileage served by the MS4, and any other information deemed necessary. In the final rule, EPA is taking a slightly different approach and giving the permitting authority the flexibility to determine what information it needs to request in its Two-Step General Permit NOI rather than requiring by default that all of the individual permit application information be submitted. This will give the permitting authority the ability to request what information it needs to establish the necessary additional terms and conditions for each individual MS4 to meet the MS4 permit standard. If the permitting authority needs information from all of its MS4s on the BMPs and measurable goals they propose for the permit term in order to establish suitable permit requirements, then it has the discretion to require this information. See §§ 122.28(d)(2)(i) and 122.33(b)(1)(ii), which states that the information requested by the permitting authority “may include, but is not limited to, the information required under § 122.33(b)(2)(i).”

Alternatively, under the final rule, if the general permit terms and conditions already define what is required to meet the MS4 permit standard for several of the minimum control measures then the permitting authority could decide that it is no longer necessary to require the submittal of information on the BMPs and measurable goals associated with *89328 those minimum control measures. As noted by a commenter, requiring information from MS4s related to permit terms and conditions that have already been established is likely to be redundant and represent an unnecessary burden. At the same time, the permitting authority must be able to obtain sufficient information to establish clear, specific, and measurable permit terms and conditions. Under the final rule, there is no minimum requirement with respect to what information is needed. In short, the permitting authority must request the information it needs to be able to make an informed decision when establishing clear, specific, and measurable permit terms and conditions for the permittee to ensure that it will meet the MS4 permit standard. The final rule enables the permitting authority to determine what the right amount of information is needed to meet this requirement.

F. Permitting Authority Flexibility To Choose the Most Suitable Approach

The final rule provides permitting authorities with full discretion to choose which option is best suited for its permitting needs and specific circumstances. While there are significant considerations, advantages, and disadvantages to selecting either of the two permitting approaches, EPA is leaving the decision of which method to adopt for each general permit up to the permitting authority. In providing full discretion to the permitting authority to choose which approach to use, EPA agreed with commenters that recommended against adopting conditions or constraints on the selection of either of the two options. EPA also expects that the decision as to which approach to adopt for any given small MS4 general permit may change from one permit term to the next. Therefore, if the permitting authority elects to issue its next general permit by implementing the “Comprehensive General Permit Approach” there is nothing preventing the permitting authority from switching approaches to the “Two-Step General Permit Approach” in subsequent permit terms, or vice versa.

EPA requested comment on whether the agency should constrain the permitting authority's discretion under Option 3 by requiring the use of the “Traditional General Permit Approach” (now the “Comprehensive General Permit”) for some types of permit terms and conditions, while allowing the “Procedural Approach (now the “Two-Step General Permit”) to be used for other requirements. Several commenters recommended that EPA require permitting authorities to use the proposed “Traditional General Permit Approach” to establish permit requirements for the minimum control measures in § 122.34(b) and to allow the use of the proposed “Procedural Approach” for the establishment of water quality-based effluent limits, such as those implementing total maximum daily loads (TMDLs). EPA refers to this approach below as a “fixed hybrid approach.” Other commenters were opposed to a fixed hybrid approach and urged EPA to provide permitting authorities with maximum discretion to choose which option works best without stipulating which option must be used for specific types of permit requirements.

After consideration of these comments, EPA has determined that it is unnecessary to mandate which permitting approach is used for specific types of requirements. Primarily, EPA does not wish to prejudice what approach permitting authorities use to arrive at clear, specific, and measurable requirements that result in achieving the MS4 permit standard. As an overall matter, EPA views both of the approaches in the final rule as equally valid ways of establishing the required permit terms and conditions and meeting the remand requirements.

Having said this, however, EPA recognizes that some types of requirements are more easily established through the general permit than others. For instance, clear, specific, and measurable permit requirements that address the minimum control measures, due to their broad applicability to all MS4s, may be easier to develop and include within the general permit, than requirements addressing TMDLs. EPA's MS4 Permit Improvement Guide (EPA, 2010) and the MS4 permit compendia [FN1] provide a number of ready examples for how permits may establish clear, specific, and measurable requirements that implement the six minimum control measures. On the other hand, the necessarily site- and watershed-specific nature of TMDLs, combined with the fact that effective implementation of TMDLs is enhanced through involvement of the public at the local level, makes these types of requirements more amenable to being developed through the procedural requirements of the second permitting step within the Two-Step General Permit. To illustrate this point,

a number of states have already adopted approaches that enable the MS4s to first develop and propose something like a TMDL implementation plan, followed by a step where the state permitting authority reviews and approves the plan to make it an enforceable part of the permit. See related examples in EPA's Compendium of MS4 Permitting Approaches—Part 3: Water Quality-Based Requirements (EPA, 2016).[FN2] In this situation, under the final rule, the permitting authority would establish the MS4's TMDL implementation requirements as part of the second step of the general permit and follow the procedures applicable to the Two-Step General Permit in § 122.28(d)(2).

EPA anticipates that some permitting authorities may over time appreciate the benefits of not having to go through a second process step for individual review and individualized public notices for each MS4, and may as an alternative choose to establish the required permit terms and conditions necessary to meet the MS4 permit standard in the general permit. Under the Two-Step General Permit, the permitting authority must provide public notice for each MS4's NOI and the proposed additional permit terms and conditions to be applied to the MS4, and review and process comments and any requests for a public hearing before finalizing the permit terms and conditions. By comparison, there is only one public notice for an opportunity to comment and request a hearing for a Comprehensive General Permit. Even if deciding that a Comprehensive General Permit is not the best fit, some permitting authorities may find it easier over time to move more requirements into the base general permit so that the number of permitting provisions subject to the additional individualized review and public notice is reduced.

G. Why EPA Did Not Choose Proposed Option 1 or 2 as Stand-Alone Options

By adopting the proposed State Choice Approach (Option 3) (now called the “Permit Authority Choice Approach”) for the final rule, EPA is making a decision to not adopt Option 1 (the “Traditional General Permit Approach”) or Option 2 (the “Procedural Approach”) from the proposal as the sole approach by which permitting authorities issue and administer their small MS4 general permits. As stated in Section V.B., the public comments were heavily in favor of adopting Option 3, although there were also proponents for finalizing *89329 proposed Option 1 and for finalizing an approach that would require use of proposed Option 1 for the minimum control measures and proposed Option 2 for water quality-based requirements. EPA ultimately found most persuasive the comments arguing in favor of choosing Option 3 to give permitting authorities flexibility and discretion to determine how it would develop different permit requirements.

A major theme among comments favoring Option 3 was the emphasis on the flexibility it would provide permitting authorities to choose which approach works best in their state. This flexibility will be important, according to a number of commenters, to continue to be able to administer a program that includes local governments with divergent geography, land resources and uses, and financial and resource capacities. According to a number of commenters, Option 3 would also give permitting authorities a range of options for crafting permit conditions for non-traditional MS4s (e.g., universities, hospitals, military bases, road and highway systems), which in many cases require different types of permit provisions than traditional MS4s due to their lack of regulatory, land use, and/or police powers and more limited audiences. Other comments focused on the significant burden that would be placed on states and regulated MS4s if required to adopt one uniform approach, especially in cases where the permitting authority is already implementing approaches that are similar to either proposed Option 1 or 2. In some cases, the way in which permitting authorities write and administer their small MS4 general permits is a direct result of state case law or concern about the risk of state litigation, and these states argue forcefully in their comments about the importance of retaining their approach in light of this history. According to these comments, those permitting authorities that have chosen one or the other of Option 1 or 2 should be able to continue implementing that approach.

Another related common theme among the comments was an argument against adopting either proposed Option 1 or Option 2 as a national, one size fits all approach. These comments emphasized the difficulties associated with forcing all permit terms and conditions into one general permit for all MS4 types and all water quality considerations using the proposed Option 1 approach, and underscored the resource demands associated with implementing an Option 2

approach. Many of these commenters concluded that Option 3 would be the best way of preserving the permitting authority's flexibility to tailor their approach based on what would work best for each state's circumstances.

Based on these comments, EPA chose Option 3, the Permitting Authority Choice option, because both options are valid ways of addressing the court's remand and there is no reason to compel permitting authorities to adopt one or the other of the approaches in proposed Option 1 or Option 2. EPA also appreciates that those state permitting authorities that are already moving their small MS4 permitting approaches in the direction of either Option 1 or 2 are doing so for a number of legitimate reasons that relate to these states' individual circumstances. By enabling permitting authorities to choose which option works best, EPA is avoiding disrupting already established state preferences. This is not to say that permitting authorities will not have to make changes to conform their procedures to the requirements of the final rule.

EPA also received comments urging the Agency not to adopt Option 2 as the only permitting choice available to permitting authorities because of the resource burdens associated with the Option 2 approach, especially the requirement to individually review and approve terms and conditions for their small MS4s. EPA does not dispute the fact that Option 2, which has been finalized as the "Two-Step General Permit", is resource intensive; this approach requires significant administrative oversight by design. The process of conducting an individual review of each MS4 operator's NOI, developing a proposal for comment of unique terms and conditions based on the NOI, and processing any public comments or requests for public hearings will require additional resources of the permitting authority if it is not already implementing this type of approach. Any permitting authority choosing this approach will need to carefully consider whether it has the resource capacity to handle the large amount of administrative oversight and review responsibilities that the Two-Step General Permit requires. EPA expects that the resource requirements alone will provide sufficient enough reason for a number of permitting authorities to choose the Comprehensive General Permit, or to minimize the number of terms and conditions it develops for individual MS4 to lessen the administrative burden associated with the Two-Step General Permit.

EPA understands that a permitting authority's decision to adopt the Two-Step General Permit will mean that members of the public interested in commenting on small MS4 permit conditions may end up needing to review not only the draft general permit but also the public notice that proposes the additional terms and conditions for each MS4 that seeks coverage under the general permit. Some commenters considered this a disadvantage because it would be burdensome for the public as well. EPA does not see this as sufficient reason for EPA to choose Option 1 as the only option and deprive permitting authorities of the flexibility to use a two-step procedure. The Two-Step General Permit closely resembles, after all, the approach suggested in the EDC remand decision, which emphasized the need for permitting authority review and public participation procedures prior to the establishment of enforceable permit requirements. EPA appreciates the level of interest and concern there is among the public for ensuring that MS4 discharges are being adequately controlled and are making improvements in water quality. EPA notes that any permitting authority that takes on the Two-Step permitting process will need to be prepared to review and respond to any comments that it receives in response to the individual public notices it publishes, and will need to provide a rationale for any final permit terms and conditions established through the process. While states currently using a two-step type of procedure report that they receive few, if any public comments about requirements for individual MS4s, this will not necessarily hold true for the future. With this in mind, EPA found it important to clarify in the final rule that permitting authorities may switch to a Comprehensive General Permit for the next permit term simply by explaining which option they will use to provide coverage under the general permit.

V. How the Two General Permit Options Work

A. Comprehensive General Permit Approach

Permitting authorities opting to issue Comprehensive General Permits must establish the full set of requirements that are deemed necessary to meet the MS4 permit standard in § 122.34. (See § 122.28(d)(1), which requires that "the Director includes all required permit terms and conditions in the general permit.") The permit must therefore include terms and

conditions that define what is required to meet the MS4 permit standard for the minimum control measures (§ 122.34(b)), *89330 additional permit terms and conditions based on an approved total maximum daily load (TMDL) or other appropriate requirements to protect water quality (§ 122.34(c)), and requirements to evaluate and report on compliance with the permit (§ 122.34(d)). As a result, the Comprehensive General Permit is no different than other general permits in that all applicable effluent limitations and other conditions are included within the permit itself, and the NOI is used primarily to determine whether a specific MS4 is eligible and to secure coverage for that MS4 under the permit subject to its limits and conditions.

While a number of comments expressed support for the proposed Option 1 approach (now called the “Comprehensive General Permit” in the final rule), there were also comments expressing concern about the difficulty of putting together a permit that would comprehensively establish terms and conditions that would be suitable for and achievable by all eligible MS4s, including both traditional and non-traditional MS4s. Others questioned the ability of permitting authorities to write a single permit that would establish uniform requirements that would contain appropriate requirements for MS4s that have been regulated since the beginning of the Phase II program as well as for MS4s brought into the Phase II program by the latest Census, not to mention a permit that would be able to establish watershed-specific requirements addressing TMDLs. EPA acknowledges the challenge that permitting authorities will face in developing and issuing a Comprehensive General Permit. Synthesizing the collective understanding of MS4 capabilities across an entire state, and translating this into effective and achievable permit requirements, will require a greater effort up front in developing one of these permits. However, as described in further detail below, there are ways of addressing challenges such as these, for example, by subcategorizing MS4s by experience, size, or other factors, and creating different requirements for each subcategory.

To assist permitting authorities in developing permit conditions for a Comprehensive General Permit, EPA has compiled examples of permit provisions from existing permits that implement the minimum control measures, which are written in a “clear, specific, and measurable” manner. These examples are included in a document entitled *Compendium of MS4 Permitting Approaches—Part 1: Six Minimum Control Measure Provisions* (EPA, 2016). EPA has also included in a separate compendium examples of permit provisions to consider when addressing approved TMDLs.[FN3] A number of commenters requested that EPA continue to provide these types of examples to help permitting authorities implement the final rule. EPA agrees with these comments, and plans to regularly update these compendia and provide other similar types of technical assistance.

There are a variety of permitting approaches that should be considered to address the concerns raised about developing a Comprehensive General Permit for the large number and variety of regulated MS4s, and which address the array of localized or watershed-based issues. One approach that may work is to issue two different comprehensive general permits or to subdivide the permitted universe, establish in the main body of the permit requirements that apply to all MS4s, and to provide a separate appendix that establishes MS4-specific terms and conditions, which apply uniquely to different categories of MS4s. For instance, the state of Washington has issued two MS4 general permits, one for the eastern part of the state and the other for the western part of the state. Further, the Western Washington Small MS4 General Permit includes a TMDL appendix, which establishes additional permit requirements for specific MS4s based on the watershed in which they are located and the waterbody to which they discharge. These additional requirements are each translated from the approved TMDL for that watershed and the specific waterbody. Another approach that permitting authorities can consider is to establish different requirements for each minimum control measure for separate sub-categories of MS4s based on type of MS4 or other factors.[FN4] Permits could also include separate sections for traditional versus non-traditional MS4s,[FN5] or alternatively separate permits may be issued for these different categories of MS4s, as several states are doing for departments of transportation MS4s. The main benefit of these different approaches is that they provide the permitting authority with a way of dividing up the universe of small MS4s into smaller categories, which are composed of municipalities with a greater degree of similarity among them.

B. Two-Step General Permit Approach

Inherent in the Two-Step General Permit approach is the fact that the general permit requirements are not on their own adequate to meet the MS4 permit standard in § 122.34. In order to fill in the gaps, the permitting authority must individually review information submitted with each eligible MS4 operator's NOI, and propose additional permit requirements to apply to the MS4 individually that, together with the base general permit requirements, meet the MS4 permit standard for that MS4. These proposed additional permit requirements and the information on which it is based is then subject to public notice and comment, and the opportunity to request a hearing.

The first step of the Two-Step General Permit is to develop and issue the final small MS4 general permit, or “base general permit.” The need for the second step arises because the base general permit does not include all of the terms and conditions necessary to meet the MS4 permit standard, and therefore has left the development of the additional requirements to a second process. NOIs for general permits using this approach must include more information than NOIs for typical general permits.

The proposed rule described the steps that would be involved in the second step of the permitting process in Section VI.B of the preamble (81 FR 427, January 6, 2016). EPA requested comment on modifying the applicable parts of the NPDES regulations to enable permitting authorities to incorporate additional, enforceable elements of the Two-Step General Permit for individual MS4s following a process that would require public notice, the opportunity to request a public hearing, and a final permitting determination. The model that EPA proposed for this procedure was based on several of the key components of the permitting framework adopted for Concentrated Animal Feeding Operations (CAFOs) in § 122.23(h). EPA proposed that the new “Option 2” process would be contained in § 122.33(b)(1), where the NOI requirements for small MS4 general permits are located. The proposal described the rule provisions as follows:

- At a minimum, the operator must include in the NOI the BMPs that it proposes to implement to comply with the permit, the measurable goals for each BMP, the person or persons responsible for implementing the SWMP, and any additional information *89331 required in the NOI by the general permit. The Director must review the NOI to ensure that it includes adequate information to determine if the proposed BMPs, timelines, and any other actions are adequate to reduce the discharge of pollutants from the MS4 to the maximum extent practicable, to protect water quality, and to satisfy the appropriate water quality requirements of the Clean Water Act. When the Director finds that additional information is necessary to complete the NOI or clarify, modify, or supplement previously submitted material, the Director may request such additional information from the MS4 operator.
- If the Director makes a preliminary determination that the NOI contains the required information and that the proposed BMPs, schedules, and any other actions necessary to reduce the discharge of pollutants from the MS4 to the maximum extent practicable, to protect water quality, and to satisfy the appropriate water quality requirements of the Clean Water Act, the permitting authority must notify the public of its proposal to authorize the MS4 to discharge under the general permit and, consistent with § 124.10, make available for public review and comment and opportunity for public hearing the NOI, and the specific BMPs, milestones, and schedules from the NOI that the Director proposes to be incorporated into the permit as enforceable requirements. The process for submitting public comments and hearing requests, and the hearing process if a hearing is granted, must follow the procedures applicable to draft permits in §§ 124.11 through 124.13. The permitting authority must respond to significant comments received during the comment period, as provided in § 124.17, and, if necessary revise the proposed BMPs and/or timelines to be included as terms of the permit.
- When the Director authorizes coverage for the MS4 to discharge under the general permit, the specific elements identified in the NOI are incorporated as terms and conditions of the general permit for that MS4. The permitting authority must, consistent with § 124.15, notify the MS4 operator and inform the public that coverage has been authorized and of the elements from the NOI that are incorporated as terms and conditions of the general permit applicable to the MS4 (81 FR at 427-420, January 6, 2016).

The final rule matches closely with what was proposed as the steps necessary to implement Option 2. These steps, which are part of what was finalized as the “Two-Step General Permit,” are described as follows in § 122.28(d)(2):

- (1) The MS4 operator submits the NOI with the information about its activities as specified in the general permit.
- (2) The permitting authority reviews the NOI to determine if the information is complete and to develop proposed additional permit requirements necessary to meet the MS4 permit standard;
- (3) If the permitting authority makes a preliminary determination to authorize the small MS4 operator to discharge it must give the public notice of and opportunity to comment and request a public hearing on the proposed additional permit terms and conditions, and the basis for these additional requirements, including the NOI and other relevant information submitted by the MS4. These procedures must be carried out in accordance with 40 CFR part 124.
- (4) Upon completion of the procedures in step (3), the permitting authority may authorize the discharge from the MS4 subject to the requirements of the base general permit and the final requirements established in the second step. Using this approach, the permitting authority may choose to rely fully on the completion of this process to establish most of required permit terms and conditions for a particular MS4, or it may rely on a hybrid approach wherein some of the necessary requirements are established within the base general permit at permit issuance while the remaining set of requirements are developed during the process of authorizing individual MS4 discharges in the second step.

Where EPA has modified the Two-Step General Permit from the proposed rule, it is to clarify a point made in the proposed rule. For instance, EPA makes a clarification in the final rule regarding the requirements for NOI review in the Two-Step approach. The proposed rule explained that the purpose of the permitting authority's review is to determine whether the NOI is complete and whether the operator's proposed set of BMPs and measurable goals are adequate to meet the MS4 permit standard. The final rule places emphasis on the fact that the information submitted by the MS4 operator with its NOI is for the purpose of informing the permitting authority's determination as to what “additional terms and conditions necessary to meet the requirements of § 122.34.” See § 122.28(d)(2)(ii). What the operator submits in the NOI is determined by the permitting authority when establishing the base general permit. The permitting authority may request descriptions of BMPs to be implemented and measurable goals as the MS4's proposal for what it considers to be adequate to “reduce pollutants to the maximum extent practicable, protect water quality and satisfy the appropriate water quality requirements of the Clean Water Act.” Under the Two-Part General Permit in the final rule, the permitting authority reviews this information to craft what it determines are the necessary permit terms and conditions to meet this MS4 permit standard; these terms and conditions are then subject to the permitting procedures for public comment and the opportunity to request a hearing. The specific requirements developed out of this process may bear a substantial similarity to the operator's proposed BMPs and measurable goals, but they also may be modified or further refined based on the permitting authority's own determination as to the specific requirements that it deems necessary to meet the MS4 permit standard. For instance, instead of proposing to adopt all of the BMP details that are submitted by the MS4 operator with the NOI as enforceable permit requirements, the permitting authority may instead develop proposed requirements that focus in on the specific actions and milestones that it believes would represent significant progress during the permit term. This is a clarification from the proposed rule description of the NOI review process, which did not clearly articulate the permitting authority's role in reviewing the operator's BMP and measurable goal information, or other information requested in the base general permit (or fact sheet).

Another clarification made to the proposed Two-Step process relates to the 40 CFR part 124 procedures to follow during the second step. The final rule incorporates by reference several specific sections of part 124. These specific references are consistent with the proposed rule's reference generally to part 124, however, in the final rule EPA focused in on the specific procedural requirements that ensure that the public participation aspects of the Two-Step General Permit are consistent with the NPDES regulations. These part 124 requirements are necessary because the permitting authority is proposing to add additional terms and conditions to the general permit applicable to individual MS4 permittees. EPA

likens these additional terms and conditions to the development of a “draft permit” under § 124.6, and, as such, these draft requirements must undergo minimum permitting procedures for public notice, *89332 comments, and hearings before they are established in final form. The following procedural requirements are referenced directly:

Public Notice of Permit Actions and Public Comment Period (§ 124.10, Excluding (c)(2))

—By incorporating these provisions of § 124.10 for the Two-Part General Permit, this means that the permitting authority's notice must adhere to the following minimum public notice requirements for the draft permit conditions:

- The notice must provide a minimum of 30 days for the public to provide comment on the draft permit terms and conditions. The permitting authority must provide notice to the public at least 30 days prior to holding a public hearing on these draft requirements. See § 124.10(b).

- The permitting authority must provide public notice to the MS4 operator who submitted the NOI, to any relevant agencies or other entities referenced in § 124.10(c)(1), and members of the public on the permitting authority's mailing list pursuant to § 124.10(c)(1)(ix). The public notice must also be sent in a manner constituting legal notice to the public under state law (if the permit program is administered by an approved state), and by using “any other method reasonably calculated to give actual notice” of the draft terms and conditions being added to the permit. See § 124.10(c)(3) and (4).

- The public notice must consist of: (1) The name and address of the office processing the NOI and draft terms and conditions for the MS4 operator; (2) name, address, and telephone number of a person from whom interested persons may obtain further information, including copies of the draft terms and conditions, statement of basis or fact sheet, and the NOI; (3) a brief description of the comment procedures required by §§ 124.11 and 124.12 and the time and place of any hearing that will be held, including a statement of procedures to request a hearing, and any other procedures by which the public may participate in the final authorization decision; (4) for EPA-issued permits, the location of the administrative record required by § 124.9, the times when the record will be open for public inspection, and a statement that all data submitted by the operator is available as part of the administrative record; (5) a general description of the location of each discharge point and the name of the receiving water; and (6) any additional information considered “necessary or proper.” The public notice of a hearing under § 124.12 must include: (1) Reference to the date of previous public notices relating to the same MS4; (2) date, time, and place of the hearing; and (3) a brief description of the nature and purpose of the hearing, including the applicable rules and procedures. See § 124.10(d).

- In addition to the public notice, the permitting authority must mail a copy of the fact sheet or statement of basis, the NOI, and the draft terms and conditions to the operator and other agencies and entities listed in § 124.10(c)(1)(ii) and (iii). See § 124.10(e).

A cross-reference to § 124.10(c)(2) is not included in the final rule. Although these requirements apply to general permits, EPA distinguishes in the Two-Step General Permit between the base general permit and the terms and conditions that are added through the second permitting step for individual MS4 permittees. The permitting authority is required to comply with § 124.10(c)(2) when issuing the general permit (i.e., the base general permit). However, because the additional MS4-specific terms and conditions are developed in a manner that is similar to the way in which terms in an individual permit would be developed, EPA concluded that the public notice requirements that apply to individual permits are more appropriate for the second step in the process of authorizing an MS4 to discharge under a Two-Step General Permit. For this reason, EPA does not apply the specific requirements of § 124.10(c)(2) to the proposed additional terms and conditions, but does apply the other applicable public notice requirements of § 124.10.

Public Comments and Public Hearings (§§ 124.11 and 124.17)

Consistent with § 124.11, during the public comment period for the draft permit conditions, any member of the public may submit comments and may request a hearing, if none has already been scheduled. The permitting authority is required

to consider comments received during the comment period in making the decision to authorize the discharge. When the permitting authority has made a final determination to authorize an individual small MS4 to discharge under the general permit, subject to the additional incorporated requirements, it must also make available to the public its responses to comments received, subject to the applicable requirements of § 124.17.

Public Hearings (§ 124.12)

If the permitting authority holds a public hearing on the draft permit conditions, public notice of the hearing must be provided as specified in § 124.10 and the hearing must be conducted in accordance with the requirements of § 124.12.

Obligation To Raise Issues During the Public Comment Period (§ 124.13)

During the public comment period for the draft permit conditions, commenters are obligated to raise “all reasonably ascertainable issues and submit all reasonably available arguments supporting their position” as required in § 124.13.

Upon completion of these procedures, in which permitting authority review, public notice and comment, and any public hearings take place in accordance with the appropriate sections of part 124, the permitting authority may authorize the MS4 to discharge under the terms of the permit. When authorization occurs, the final terms and conditions that were the subject of the public comment and hearing process described above become enforceable permit terms and conditions for that MS4 permittee. No significant changes were made to this step from the proposed rule. EPA clarifies that the permitting authority may choose the method by which the permittee is notified of the final decision to authorize the discharge and the final permit conditions, and by which the public is informed of the same. EPA oversight of state-issued NPDES permits must also be taken into account. Under the Two-Step General Permit, EPA has authority to review all terms and conditions of the permit, whether established in a base general permit or in the second step that establishes terms and conditions for individual MS4s. See § 123.44.

C. Permittee Publication of Public Notice

A question arose during the development of the proposed rule as to whether the MS4 could carry out public notice requirements for the Procedural Approach (now referred to as the “Two-Step General Permit”). Several states currently require MS4 permittees to provide public notice of individual MS4 NOIs (and their proposed SWMPs in many states), including information on how the public can submit comments to the state and to request a public hearing. EPA requested comment on whether permitting authorities that have relied on the MS4 to place public notices in the past should be able to use this ***89333** approach to satisfy their public notice requirements for individual NOIs under the Two-Part General Permit. EPA did not propose this approach to be adopted as part of the rulemaking effort, and is not including in the final rule any specific requirements related to this practice.

EPA received several comments in response to this question. State permitting authorities and one statewide MS4 association voiced their support for allowing permitting authorities to require MS4 permittees to publish public notices, and to establish procedures within the final rule to accommodate this practice. One state suggested that if a permitting authority is allowed to rely on the MS4 to publish the public notice of the NOI, such public notice must follow all of the minimum requirements related to the contents and methods of providing notice, and any public comments received should be acknowledged and considered by the state and documented in the final permit decision. Another commenter recommended that the permitting authority be the only entity authorized to conduct public notice and comment procedures given the differences of opinion that may arise during the process, but suggested that as an alternative EPA could allow states to establish their own process for these procedures as long as they are consistent with the regulations.

Other commenters were opposed to allowing permitting authorities to rely on the MS4 permittee to carry out applicable public participation requirements. These commenters emphasized the clear requirement in the regulations for the permitting authority to conduct these activities, pointing to the fact that the NOI should be treated no differently than

any permit application. These comments noted that members of the public wishing to review and potentially submit comments and request a hearing on NOIs should have a centralized place to refer to for reviewing public notices of NOIs, and feared that allowing a decentralized approach where the MS4 handles the public notice would be unlikely to reach the intended audience. Another point made was that in keeping with the permitting authority's responsibility to review and determine the adequacy of each MS4's NOI, the public notice and comment proceedings that are associated with the NOIs should be managed by the same entity. These commenters also questioned whether delegating these responsibilities to the MS4 made sense given the fact that it is the state that is most familiar with how to meet its own administrative rules and protocols, and that is best equipped from a technical and physical capacity standpoint to receive and process comments, many of which will be submitted electronically, and potentially hold hearings. Additionally, some commenters worried about the effect of placing more burden on the municipalities.

The final rule does not address the issue of whether the permitting authority may rely on its MS4 permittees to carry out public notice responsibilities on its behalf in the final rule, but instead incorporates by reference the existing set of requirements that apply to all draft permits in § 124.10. As to whether permitting authorities may rely on the permittee to publish the public notice, it is EPA's view that they may do so as long as the public notice meets all of the applicable requirements in § 124.10. The public notice responsibilities in the NPDES regulations apply to the permitting authority, therefore these are requirements that it must ensure are met. The state must conduct any public hearing, consider the comments received, respond to them, and make decisions as to what changes are necessary as a result of the comments.

VI. Requirements for Permit Terms and Conditions

EPA proposed several clarifying changes to the regulatory language in § 122.34 regarding the expression of permit limits for small MS4s. First, EPA proposed to clarify that the permitting authority is responsible for establishing permit requirements that meet the MS4 permit standard. Second, proposed changes would address issues of clarity in permit terms and the different ways in which permit requirements can be expressed. Third, the proposal would reinforce the expectation that the MS4 standard must be independently met for each 5-year permit term. Each of these categories of regulatory changes is discussed below. The final rule incorporates these proposed changes, with some modification to the proposed rule language in response to comments and for additional clarity.

A. Permitting Authority as the Ultimate Decision-Maker

To directly address the clear message from the Ninth Circuit remand that the regulations need to preclude the small MS4 from determining on its own what actions are sufficient to meet the MS4 standard “to reduce pollutants to the maximum extent practicable, protect water quality and satisfy the appropriate water quality requirements of the CWA,” EPA proposed revisions throughout § 122.34 to make it clear that the permitting authority is responsible for establishing permit requirements that meet the standard. For this reason, EPA proposed to shift the focus of the requirements in § 122.34 to the “NPDES permitting authority” rather than the regulated small MS4. Similarly, the proposed rule modified the guidance provisions to focus on permitting authorities as well as MS4s. In most cases, this meant substituting the term “NPDES permitting authority” for “you” or “your” (referring to the regulated small MS4) and referring to the regulated small MS4 as the “operator.” A related change tied to the remand was the proposed deletion of the sentence “Implementation of best management practices consistent with the provisions of the storm water management program required pursuant to this section and the provisions of the permit required pursuant to § 122.33 constitutes compliance with the standard of reducing pollutants to the ‘maximum extent practicable.’” The Ninth Circuit court specifically raised this sentence as a demonstration that “nothing in the Phase II regulations requires that NPDES permitting authorities review these Minimum Measures to ensure that the measures that any given operator of a small MS4 has decided to undertake will in fact reduce discharges to the maximum extent practicable.” See EDC, 344 F.3d at 832, 854. The proposal to remove this sentence, combined with the other changes, would reinforce the fact that the permitting authority is the entity responsible for establishing the terms and conditions of the permit necessary to meet the MS4 permit standard. These changes also would shift the focus of § 122.34 to the development of permit requirements and away from the identification of what the MS4 should include in its SWMP.

EPA received a relatively small number of comments responding to these proposed changes. Some commenters expressed a preference to continue to have the MS4 in charge of defining the MS4 standard for itself or requested that the deleted sentence (“Implementation of best management practices consistent with the provisions of the stormwater management plan. . . .”) be retained. Other commenters pointed out that the proposed changes should apply to all regulated small MS4 permits, regardless of the type of permit (e.g., Traditional General Permit, Procedural General Permit, or individual), and requested that EPA clarify this in the final rule.

The final rule retains the proposed rule changes that emphasize that it is ***89334** the permitting authority with the ultimate authority to determine what small MS4s must do to meet the MS4 permit standard. These changes respond to the Ninth Circuit's finding in the EDC decision that the Phase II rule did not, contrary to the CWA, require the permitting authority to determine whether the MS4 permittee's proposed program would in fact meet the MS4 permit standard. Indeed, while the EDC decision specifically addressed the general permit process, the underlying rationale for the court's rejection of the general permitting process—the failure of the rule to ensure that the permitting authority, not the permittee, determine what is needed to meet the standard applicable to MS4 permits under the CWA—applies whether the MS4 permit is a general permit or an individual permit. Therefore, EPA is amending § 122.34 to apply to any permit issued to regulated small MS4s (except those small MS4s applying for an individual permit under § 122.33(b)(2)(ii)).

These changes, including the deletion of the sentence “Implementation of best management practices consistent with the provisions of the storm water management program required pursuant to this section and the provisions of the permit required pursuant to § 122.33 constitutes compliance with the standard of reducing pollutants to the maximum extent practicable,” more clearly establish the permit as the enforceable document, not the stormwater management program or what has been described in the SWMP. (See VI.E of this preamble for a discussion of the function of the “SWMP” under EPA's small MS4 regulation.)

B. “Clear, Specific, and Measurable” Permit Requirements

EPA also proposed rule revisions related to the expression of permit terms. Consistent with current EPA guidance, the proposed rule specified that permit requirements be expressed in “clear, specific, and measurable” terms. The preamble to the proposed rule contained a detailed discussion about what “clear, specific, and measurable” meant and EPA put in the rulemaking docket a draft compendium of example language from actual permits to further illustrate the meaning of “clear specific, and measurable.” See updated permit compendium in the final rule docket, MS4 Compendium of Permitting Approaches: Part 1: Six Minimum Control Measures (EPA, 2016). EPA also included in the preamble to the proposed rule, examples of permit language that do not appear to have the type of detail that would be needed.

In addition to specifying that permit terms and conditions must be “clear, specific, and measurable,” the proposed rule text clarified that effluent limitations may be in the form of BMPs, and provided non-exclusive examples of how these BMP requirements may appear in the permit, such as in the form of specific tasks, BMP design requirements, performance requirements or benchmarks, schedules for implementation and maintenance, and the frequency of actions. This language was proposed to substitute for existing language that states: “Narrative effluent limitations requiring implementation of best management practices (BMPs) are generally the most appropriate form of effluent limitations when designed to satisfy technology requirements . . . and to protect water quality.”

EPA also proposed to delete a related guidance paragraph in § 123.34(e)(2). As explained in the proposed rule preamble, the guidance no longer reflects current practice.[FN6] The deletion of this paragraph is also consistent with EPA guidance developed since 1999 regarding the types of requirements that are recommended for MS4 permits.[FN7]

EPA received numerous comments on these proposed changes. For the most part, commenters from all stakeholder groups expressed approval for the “clear, specific, and measurable” language. However, a variety of commenters read the

deletion of “narrative” to mean that numeric effluent limitations (e.g., end-of-pipe pollutant concentration limitations) would be required in small MS4 permits or that “narrative” limits would no longer be acceptable. As stated in the preamble, EPA did not intend to make substantive changes to § 122.34 beyond what would be required to address the court remand. The term “narrative” was proposed to be deleted to recognize that other expressions of effluent limitations may be appropriate, not to preclude the use of narrative effluent limitations. To avoid misinterpretation of the regulation, however, the final rule instead describes appropriate requirements as being “narrative, numeric, or other requirements.” EPA intends for the final rule text to more broadly encompass the various types of controls for stormwater discharges that could be required of small MS4s.

Regarding the insertion of “clear, specific, and measurable” to describe permit requirements, most commenters perceived benefits for permittees, permitting authorities, and the public, particularly because it will be more clearly stated in the permit what is expected for compliance. Some commenters observed that “clear, specific, and measurable” terms would enable better enforcement of the MS4 permit requirements, and would provide a more effective path to improved water quality. Some small MS4s themselves pointed out that greater certainty in permit terms could put them into a better position to plan and to garner local political support and critical funding for their programs. Other MS4s, however, voiced uncertainty as to how the terms “clear, specific, and measurable” would be implemented and what would actually be required of them by their permits and concern that their flexibility would be unduly restricted. Some commenters also suggested that regulatory provisions associated with the expression of permit limits, while discussed in the preamble to the proposed rule in the context of Option 1, should apply regardless of the option chosen. Several groups requested that “clear, specific, and measurable” be changed instead to “focused, flexible, and effective.” Other commenters requested that “enforceable” be added to this phrase. Some groups representing MS4 permittees and industry expressed concern that “measurable” meant that permits would now contain water quality monitoring requirements or that “measurable,” together with the deletion of “narrative” to describe effluent limitations, meant that EPA was opening the door for small MS4 permits to now be required to contain numeric effluent limitations, e.g., end-of-pipe pollutant concentration limits for each outfall in the system. A concern that “clear, specific, and measurable” would preclude or reduce MS4 flexibility to change program elements as a program encountered successes or failures (i.e., adaptations made during the permit term or to meet MS4-specific circumstances) was also stated as a disadvantage associated with this language. In a related vein, several commenters warned against permit terms that were too specific and left very little discretion to the MS4. Some commenters requested that the regulatory text indicate that the expectation that permit requirements be “clear, specific, and measurable” apply *89335 to each BMP and other requirements in the permit, and accompanied by reporting requirements that related to measurable requirements, rather than measureable goals as in the current regulation.

The final rule retains the proposed rule requirement for “clear, specific, and measurable” permit terms and conditions. Accompanying the promulgation of this requirement, EPA is also publishing an updated version of its compendium of permit examples from the proposed rule (i.e., MS4 Compendium of Permitting Approaches: Part 1: Six Minimum Control Measures (EPA, 2016)), which includes provisions from EPA and state MS4 general permits that provide examples of clear, specific, and measurable requirements. EPA also retains the examples provided in the proposed rule preamble of permit language that would generally not qualify as clear, specific, and measurable, which is included here, with minor edits:

- Permit provisions that simply copy the language of the Phase II regulations verbatim without providing further detail on the level of effort required or that do not include the minimum actions that must be carried out during the permit term. For instance, where a permit includes the language in § 122.34(b)(4)(ii)(B) (i.e., requiring “. . . construction site operators to implement appropriate erosion and sediment control best management practices”) and does not provide further details on the minimum set of accepted practices, the requirement would not provide clear, specific, and measurable requirements within the intended meaning of the proposed Traditional General Permit Approach. The same would also be true if the permit just copies the language from the other minimum control measure provisions in § 122.34(b) without further detailing the particular actions and schedules that must be achieved during the permit term.

- Permit requirements that include “caveat” language, such as “if feasible,” “if practicable,” “to the maximum extent practicable,” and “as necessary” or “as appropriate” unless defined. Without defining parameters for such terms (for example, “infeasible” means “not technologically possible or not economically practicable and achievable in light of best industry practices”), this type of language creates uncertainty as to what specific actions the permittee is expected to take, and is therefore difficult to comply with and assess compliance.
- Permit provisions that preface the requirement with non-mandatory words, such as “should” or “the permittee is encouraged to” This type of permit language makes it difficult to assess compliance since it is ultimately left to the judgment of the permittee as to whether it will comply. EPA notes that the Phase II regulations include “guidance” in places (e.g., § 122.34(b)(1)(ii), (b)(2)(ii), and (b)(3)(iv)) that suggest practices for adoption by MS4s and within permits, but does not mandate that they be adopted. This guidance language is intended for permitting authorities to consider in establishing their permit requirements. Permitting authorities may find it helpful to their permittees to include guidance language within their permits in order to provide suggestions to their permittees, and it may be included. However, guidance language phrased as suggested guidelines would not qualify as an enforceable permit requirement under the final rule.
- Permit requirements that lack a measurable component. For instance, permit language implementing the construction minimum control measure that requires inspections “at a frequency determined by the permittee” based on a number of factors. This type of provision includes no minimum frequency that can be used to measure adequacy and, therefore, would not constitute a measurable requirement for the purposes of the rule.
- Provisions that require the development of a plan to implement one of the minimum control measures, but does not include details on the minimum contents or requirements for the plan, or the required outcomes, deadlines, and corresponding milestones. For example, permit language requiring the MS4 to develop a plan to implement the public education minimum control measure, which informs the public about steps they can take to reduce stormwater pollution. The requirement leaves all of the decisions on what specific actions will be taken during the permit term to comply with this provision to the MS4 permittee, thus enabling almost any type of activity, no matter how minor or insubstantial, to be considered in compliance with the permit.

Regarding the suggestion to add “enforceable,” in EPA’s view, clear, specific and measurable terms and conditions together define what makes a permit requirement enforceable. Therefore, adding “enforceable” to this list of attributes would not add to the enforceability of permit terms and conditions. With respect to the suggestion to replace “clear, specific, and measurable” with “focused, flexible, and effective,” EPA clarifies that nothing in the final rule prevents a permitting authority from developing permit requirements that are focused, flexible, and effective, as long as those requirements are articulated in clear, specific, and measurable terms.

The word “specific” also generated a number of comments. EPA proposed “specific” to indicate what activities an MS4 would be required to undertake to implement the various required elements of the minimum control measures described in § 122.34(b) or to achieve a specified level of performance that would constitute compliance with the permit. Some commenters advocated for more specificity in permits, while others cautioned against too much specificity. Still others simply asked for more guidance about how “specific” a general permit would need to be. EPA intends for “specific” to mean that a permitting authority describes in enough in detail that an MS4 can determine from permit terms and conditions what activity they need to undertake, when or how often they must undertake it, and whether they must undertake it in a particular way. It must be clear what does and does not constitute compliance. As noted in the preamble to the proposed regulation, a verbatim repetition of the minimum control measures described in § 122.34(b) does not provide a sufficient level of specificity.

At the same time, EPA intends for the permitting authority to retain discretion in determining how much specificity is needed for different permit requirements. The level of specificity may change over time, for example, to reflect a more robust understanding of more effective stormwater management controls or to meet specific state needs. There is a wide range of ways to implement a stormwater management program and the permitting authority will need to determine how to craft permit terms and conditions that establish clear expectations that implement the various requirements in § 122.34 in specific terms, and this can be done while also providing flexibility to MS4s to choose how they will comply with permit terms. For example, a requirement to “Develop a public education program about the effect of stormwater on water quality” is not a sufficiently specific permit requirement. To provide greater specificity, some permitting authorities have provided a menu of specific public education activities in the permit, and the MS4 must choose from among them indicating how they will comply with the permit. For a hypothetical example, the permit might require that the MS4 *89336 undertake four public education activities each year from a list of activities specified in the permit and include at least one each year that is directed at students in all public schools within the MS4 area, using an existing or new curriculum, to explain ways in which stormwater can harm water quality. In this hypothetical example, the MS4 has the flexibility to choose from a list of activities the permitting authority has determined are acceptable and, for the required activity involving public schools, and to choose a curriculum that already exists or develop a new one that is tailored to specific stormwater problems in the community. The specific (clear and measurable) permit terms are:

(1) To undertake four education activities per year from a specified list of allowable activities; and (2) to ensure that at least one of the activities involves education about stormwater at all public schools. Compliance would be completion of four activities each year. One type of activity is specified in the permit, but the MS4 can choose the audience, the medium, and the specific message for the other three required activities. Even within the more specific requirement related to public schools, the permittee would have discretion in determining the form and content of the curriculum. In this hypothetical example, the permit contained requirements of varying specificity, but the boundaries of what constitutes compliance is readily apparent and it is clear what the MS4 must do and the timeframe for compliance.

What is not specified in a permit implicitly defines the level of discretion the MS4 has to meet the terms and conditions of the permit. EPA recognizes that it can be useful for MS4s to retain the ability to change specific stormwater control activities during the term of the permit without the need to seek a permit modification for every change. In the above hypothetical example, if the MS4 finds that, after the second year of the permit term that the curriculum it chose was not effective, it could develop a different one or choose another curriculum, e.g., one that involves field work rather than just classroom instruction. The change in curriculum would not require a permit modification because the permit did not specify the particular curriculum that must be used. The permit terms in this case also provide the public with sufficient information to offer comments on the activities available, their number and frequency, and the degree of discretion left to the MS4. EPA emphasizes that it is not necessary that every detail be spelled out in a permit as an enforceable requirement under the CWA. See further discussion of the considerations related to permit modifications in Section VI.E.

In the above hypothetical example, the permitting authority could have chosen more specific terms. For example, it could have required that the MS4s undertake activities A and B in the first year, activities C and D in the second year, and so on. It could have specified the medium to be used, e.g., television or social media and each of the audiences that must be addressed in the outreach plan (e.g., businesses, commercial establishments, developers). EPA notes that increased specificity does not necessarily mean that the permit is more stringent. It does, however, decrease the flexibility left to the MS4 to determine how to meet the permit requirement. Conversely, the permitting authority in the above hypothetical example could have been less specific, for instance, by not requiring one activity each year to be carried out in public schools. Permitting authorities need to consider what level of specificity is appropriate based on the particular factors at play in their permit area. The level of specificity may change over time, and should be evaluated in each successive permit. There may be differences of opinion about the degree of specificity needed, but that call would be open for public comment on the general permit or, if the Two-Part General Permit is used, on the public notice for the additional terms and conditions applicable to individual MS4s.

Another example of how the permit can provide greater specificity is to include distinct requirements based on type of MS4. For example, Section 3.2.1.3 of the Arkansas general permit states: “The stormwater public education and outreach program shall include more than one mechanism and target at least five different stormwater themes or messages over the permit term. At a minimum, at least one theme or message shall be targeted to the land development community. For non-traditional MS4s, the land development community refers to landscaping and construction contractors working within its boundaries (emphasis added). The stormwater public education and outreach program shall reach at least 50 percent of the population over the permit term.” Here, the permitting authority further specifies the target audience as applied to non-traditional MS4s.

Alternatively, specific permit terms could be established uniformly for all eligible small MS4s, which would have the benefit of leveling the playing field among small MS4s. The final rule gives permitting authorities some discretion to decide how much specificity to include in the permit and how much flexibility to leave to the MS4 when working out the details of how it will comply with permit terms. The public would have an opportunity to provide comments on such preliminary decisions about the level of specificity in permit terms and conditions needed during the public comment period on the general permit or on the second step of a Two-Step General Permit, or in some cases on both.

EPA also received comments on the term “measurable.” In response to comments, EPA clarifies that “measurable” does not necessarily mean that water quality monitoring must be required in every instance to assess compliance. Likewise, it does not mean that numeric, end-of-pipe pollutant concentrations or loadings must be included in permits. While these examples do represent a type of measurable requirement, they are not required to be in every MS4 permit. Rather, the term “measurable” means that the permit requirement has been articulated in such a way that compliance with it can be assessed in a straightforward manner. For example, a permit provision that requires inspections at construction sites to be conducted once per week until final stabilization has been verified is a measurable requirement. To help assess compliance, the permit should also contain a way to track whether the requirement has been met, such as requiring the permittee to keep a log of each inspection, including the date and any relevant findings. On the other hand, a requirement that construction sites be inspected “after storms as needed” would not be a measurable requirement. For this requirement, the permittee would have to determine whether a “storm” occurred and, if so, whether an inspection was called for, both of which are determinations that are left completely up to the permittee to determine. A permitting authority could not easily assess that this requirement was or was not met.

Like the term “measurable,” “numeric” is another term that is often misunderstood to require numeric end-of-pipe concentration and/or mass pollutant limitations similar to those that commonly appear in permits issued to other types of point source dischargers (e.g., industrial process discharges and discharges from sewage treatment plants). EPA intends numeric to be read more broadly to include an objective, quantifiable value related to the performance of different requirements for small MS4 programs. For example, “numeric” can refer to the number or frequency of required actions to be taken such as a requirement to “clean 25% of the catch basins in your service area on a yearly basis” or “complete 6 of 10 public education events specified in the following table on an annual basis.” “Numeric” can also refer to a specified numeric performance levels, such as a retention standard for post-construction discharges from new development and re-development sites, e.g., “The first inch of any precipitation must be retained on-site.” Another example of a numeric performance requirement is exemplified by the following provision from the 2016 Vermont Small MS4 general permit: “The control measure(s) is designed to treat at a minimum the 80th percentile storm event. The control measure(s) shall be designed to treat stormwater runoff in a manner expected to reduce the event mean concentration of total suspended solids (TSS) to a median value of 30 mg/L or less.” See Section E.4.a.iv.B.

A commenter requested that EPA require measurable conditions for each BMP. EPA interprets this comment as recommending that permit terms implementing the minimum control measures, which are often articulated as narrative requirements, each be expressed in a measurable manner. EPA agrees that permit terms and conditions that are established to satisfy a minimum control measure need to have measurable (as well as clear and specific) requirements

associated with them that assist the MS4 and permitting authority in determining whether required elements of the minimum control measures or other permit terms and conditions have been achieved.

In the final rule, EPA has decided to substitute the term “terms and conditions” for “effluent limitations” because stakeholders asserted the term effluent limitations connotes end-of-pipe numeric limits even though EPA is not insisting that these types of limitations be used. In sum, EPA intends that terms and conditions are a type of effluent limitations and that they are interchangeable and both mean permit requirements. As defined in the Clean Water Act, “effluent limitation” means “any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.” See CWA section 502(11). The Clean Water Act also authorizes inclusion of permit conditions. See CWA section 402(a)(1) and (2). Both “effluent limitations or other limitations” under section 301 of the Act and “any permit or condition thereof” are an enforceable “effluent standard or limitation” under the citizen suit provision, section 505(f) of the Clean Water Act, and the general enforcement provisions, section 309 of the Act. EPA uses these terms interchangeably when referring to actions designed to reduce pollutant discharges. For the purposes of this final rule, changing the small MS4 regulations to refer instead to “terms and conditions” is intended to be read as consistent with the meaning of “effluent limitations” in the regulations and CWA.

C. Narrative, Numeric, and Other Forms of Permit Requirements

As explained in the previous section of this preamble, EPA has clarified that permit limits need not be expressed only as “narrative” limits but can consist of “narrative, numeric, and other types” of permit requirements. The final rule provides a non-exclusive list of the types of narrative, numeric, and other types of terms and conditions that would be appropriate for small MS4 permits by stating that allowable terms and conditions could include, among other things “implementation of specific tasks or best management practices (BMPs), BMP design requirements, performance requirements, adaptive management requirements, schedules for implementation and maintenance, and frequency of actions.” These examples are the same as those proposed, with the exception of removing the term “benchmarks” and adding in its place, “adaptive management requirements.” Several commenters noted that the term “benchmarks” is used in EPA’s and many states’ Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activity, or “MSGP,” to mean numeric pollutant concentration levels that must be measured, and if exceeded, trigger further monitoring or corrective action requirements. To eliminate any confusion, the commenters requested that a different term be used. EPA did not intend “benchmarks” to be precisely defined, but instead to generally refer to various types of identified measurements of performance and to undertake different actions or controls if performance is not at the measured level. To avoid confusion, EPA is replacing “benchmarks” with the phrase “adaptive management requirements,” since adaptive management approaches are used widely in the MS4 communities. Adaptive management enables MS4 permittees to iteratively improve their stormwater control strategies and practices as they implement their programs and learn from experience to better control pollutant discharges.

With respect to establishing permit terms and conditions, use of the term “BMP” in § 122.34(a) is intended to take on a broad meaning and could encompass both the enforceable terms and conditions of the permit as well as particular activities and practices selected by the permittee that will be undertaken to meet the permit requirements but that are not themselves enforceable. BMPs are defined in § 122.2. The term is defined to include schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce water pollution. The regulatory definition also includes treatment requirements, operating procedures, and practices to control runoff, spillage or leaks, sludge, or waste disposal, or drainage from raw material storages as BMPs. The defined regulatory term was developed to describe requirements to undertake certain activities to reduce the amount of pollutants discharged that are not described as numeric pollutant effluent discharge limitations or represent specific performance levels. See § 122.44(k). EPA intends, in § 122.34(a) of the final rule, to use BMP in its broadest sense to refer to any type of structural or non-structural practice or activity undertaken by the MS4 in the course of implementing its SWMP. Whether a BMP is an enforceable requirement depends on whether the permitting authority has established it as a term and condition of the

permit. The term BMP in § 122.34(a) is not intended to be used interchangeably with enforceable requirements necessary to demonstrate compliance with the permit. Instead, it refers to any type of activity that is used to reduce pollutants in the MS4's discharge. This distinction is important because, as discussed elsewhere in the preamble, some BMPs may be changed without first requiring a permit modification, but only if they are not included as enforceable requirements of the permit.

D. Considerations in Developing Requirements for Successive Permits

A final change to § 122.34(a) that EPA proposed was to reflect the iterative nature of the MS4 permit standard and require that what is considered adequate to meet the MS4 permit standard, including what constitutes “maximum *89338 extent practicable,” needs to be determined for each new permit term. The final rule provision is retained from the proposed rule, which requires that for each successive permit, the permitting authority must include terms and conditions that meet the requirements of § 122.34 based on its evaluation of the current permit requirements, record of permittee compliance and program implementation progress, current water quality conditions, and other relevant information. The preamble to the proposed rule explained: “A foundational principle of MS4 permits is that from permit term to permit term iterative progress will be made towards meeting water quality objectives, and that adjustments in the form of modified permit requirements will be made where necessary to reflect current water quality conditions, BMP effectiveness, and other current relevant information.” (81 FR 422, Jan. 6, 2015). The preamble further listed possible sources to inform the evaluation such as past annual reports, current SWMP documents, audit reports, receiving water monitoring results, existing permit requirements, and applicable TMDLs.

EPA received numerous comments on the language regarding the development of each successive permit. One commenter asked EPA to include additional factors in the rule text that would need to be considered when developing a new small MS4 permit, including impairment status of the waterbody and applicable TMDLs, and permits developed by other states. Other factors requested to be included in the text were discussed in the preamble to the proposed rule include: how long the MS4 has been permitted, the degree of progress made by the small MS4 permittees as a whole and by individual MS4s, the reasons for any lack of progress, and the capability of these MS4s to achieve more focused requirements. Another commenter stated that while it is appropriate to re-examine the permit requirements for continued applicability and effectiveness, EPA should not presume that successive permits would always require more stringent requirements. Instead, the commenter continues, the permit could only require adjustments of existing BMPs. EPA also received general comments about the nature of “maximum extent practicable” that were reflected in comments concerning the new language about successive permits.

EPA has retained substantially the same text as it proposed. In § 122.34(a)(2), permitting authorities are required to revisit permit terms and conditions during the permit issuance process, and to make any necessary changes in order to ensure that the subsequent permit continues to meet the MS4 permit standard. Thus, in advance of issuing any new small MS4 general permit, the permitting authority will need to review, among other things, available information on the relative progress made by permittees to meet any applicable milestones under the expiring permit, compliance problems that may have arisen, the effectiveness of the required activities and selected BMPs under the existing permit, and any improvements or degradation in water quality. This requirement applies regardless of the type of permit (individual or general) or the specific general permitting approach that is chosen by the permitting authority.

As commenters pointed out, there are other factors that the permitting authority can consider in establishing the permit requirements in successive permits that meet the MS4 permit standard. This provision, however, is intended to state a general requirement to update each permit and therefore uses broader, more general terms rather than trying to name all of the factors and considerations that may bear on the development of specific permit terms and conditions in successive permits. The crux of this requirement is that permitting authorities cannot simply reissue the same permit term after term without considering whether more progress can or should be made to meet water quality objectives or that other changes to the permit are in order. As is the case with NPDES permits generally, the permitting authority considers anew what is appropriate each time it issues a permit. For example, new stormwater management techniques may have arisen or

become affordable during the expiring permit term that should be taken into consideration. The factors identified by commenters and discussed in the proposed rule preamble are all relevant considerations. First and foremost, as noted by one commenter, “the understanding of which pollution control measures and standards are the most effective and practicable can evolve, requiring corresponding changes in permit conditions to meet the ‘MEP’ standard.” Likewise, the stressors affecting water quality can change over time. The water quality of the receiving water and any applicable TMDLs are factors that should be considered, but additional rule language is unnecessary since these factors are already encompassed within the final rule's reference to “current water quality conditions.” (Also see, § 122.34(c) which requires permit conditions based on applicable TMDLs.) How long an MS4 has been permitted also could point to establishing different or “tiered” requirements based on whether the MS4 is on its third or fourth permit with a mature program or is a newly regulated MS4 that must build its program “from scratch.” Using broad, general terms to describe considerations that may change over time provides critical flexibility, while ensuring that the assessment of current circumstances and information is done.

Contrary to the assumption that EPA presumes that each successive permit will contain more stringent conditions for each permit requirement, EPA recognizes that this is not the case. It is possible that some permit conditions remain relatively static in a successive permit. If a permit, however, contained a less stringent requirement or less specific language than had been included in the previous permit this would require an explanation, backed by empirical evidence or other objective rationale that the requirement was no longer practicable or that another approach is more effective, and that making this requirement less stringent would not result in greater levels of pollutant discharges. This would be especially true where the MS4 is discharging pollutants to an impaired water due to an excess of those pollutants. How quickly pollutants must be reduced and which elements of a program need greater or less emphasis are certainly considerations that an MS4 (or others) can raise during the comment period. Likewise, an MS4 that is seeking an individual permit or coverage under a Two-Step General Permit, can propose BMPs or other management measures to the permitting authority that reflect its judgment about how and to what extent permit terms and conditions should change or stay the same.

One commenter asserted that EPA should require consideration of other states' permits in determining permit conditions. The commenter reasoned that if one state adopts a requirement that achieves greater pollutant reduction than another state, the other state should have to adopt the more effective permit condition or explain why it is not practicable for MS4s in its state. The commenter also noted that EPA has taken similar positions with respect to technology-based requirements for other types of discharges. Finally, the commenter urged EPA to continue to provide and update examples of permit conditions developed by various states. EPA does not find it necessary to expressly require the rule to compel ***89339** permitting authorities to consider the terms and conditions of permits in other jurisdictions in determining the need to modify their own permits. Each permitting authority is required to issue permits that independently meet the MS4 permit standard based on an evaluation of, among other things, how well the past permit conditions worked and what more can be reasonably achieved in the next permit term. This evaluation involves factors that are necessarily unique to the permitting jurisdiction. Furthermore, the factors that led to one state permit's adoption of stricter requirements than another state makes a straightforward analysis between the two difficult, and potentially misleading. While EPA does not agree that permitting authorities should be required to consider other state permits, EPA agrees that much can be learned from other states' permitting approaches and it may be a relevant factor to consider in a particular permitting proceeding.

Commenters suggest that EPA's publication of its MS4 permit compendia (EPA, 2016), as well as EPA's MS4 Permit Improvement Guide (EPA, 2010), providing examples of permit provisions that are written in a “clear, specific, and measurable” manner, makes it easier for permitting authorities to write better permits. EPA agrees with commenters that sharing examples among states is an effective tool for developing permit conditions and has updated the compendium of state practices to accompany the final rule for this very reason. See *Compendium of MS4 Permitting Approaches—Part 1: Six Minimum Control Measures* (EPA, 2016) in the final rule docket.[FN8] EPA plans to facilitate information transfer on a continuing basis.

E. Relationship Between the SWMP and Required Permit Terms and Conditions

a. Enforceability of SWMP Documents

In the proposed rule, EPA clarified that the SWMP document does not include enforceable effluent limitations or any other term or condition of the permit. EPA also proposed to delete the language in the Phase II regulations stating that implementation of the SWMP would constitute compliance with the MS4 permit standard. This clarification is retained in the final rule. EPA is revising § 122.34(a) to clarify that the permit, not the stormwater management program, contains the requirements, including requirements for each of the six minimum measures, for reducing pollutants to the maximum extent practicable, protecting water quality and satisfying the appropriate water quality requirements of the CWA. See also Section VIII.A for further discussion of the deleted provision in § 122.34(a). The final rule at § 122.34(b) requires each permit to require the permittee to develop a “written storm water management program document or documents that, at a minimum, describes in detail how the permittee intends to comply with the permit's requirements for each minimum control measure.” Requiring that portions of the SWMP be in the form of written documentation is not a new requirement, but rather a clarification. The minimum control measure requirements have always required that certain aspects of the permittee's SWMP be documented in writing, e.g., the storm sewer system map, ordinances or other regulatory mechanisms to regulate illicit non-stormwater discharges into the MS4 and to require erosion and sediment controls. The written SWMP provides the permitting authority something concrete to review to understand how the MS4 will comply with permit requirements and implement its stormwater management program. EPA included a specific requirement for written documentation to clarify, as requested by some commenters, the difference between a MS4's stormwater management program itself from the written description of the program.

EPA received several comments regarding the role of the SWMP document under the different permitting options. Among these comments were several focusing on whether the implementation details described in the SWMP document itself, including the BMPs to be implemented and measurable goals to be achieved, would be enforceable as permit requirements. One commenter noted that some states consider a SWMP document to be an integral part of the permit and recommended that EPA do nothing in the rule to limit a permitting authority's ability to enforce against an MS4 for failure to implement any particular aspect of the SWMP and to require an accurate, up-to-date SWMP document that contains the provisions required by the permit. Other commenters, representing the regulated MS4 point of view, emphasized the role of the SWMP document as a planning tool for the permittee, one that is intended to be continually updated to reflect their adaptive management approach to permit compliance. These commenters cautioned against implying directly or indirectly that the SWMP document is an “effluent limitation” that is part of the permit, and felt that under Option 1 of the proposed rule, provisions in SWMP documents could be interpreted by the public to be effluent limitations, thereby opening all details described in the SWMP document to enforcement. These commenters recommended that EPA more narrowly define “effluent limitation” and clarify that SWMPs are for planning purposes only and not subject to challenge by outside parties.

In response to these comments, EPA clarifies that, under EPA's small MS4 regulations, the details included in the permittee's SWMP document are not directly enforceable as effluent limitations of the permit. The SWMP document is intended to be a tool that describes the means by which the MS4 establishes its stormwater controls and engages in the adaptive management process during the term of the permit. While the requirement to develop a SWMP document is an enforceable condition of the permit (see § 122.34(b) of the final rule), the contents of the SWMP document and the SWMP document itself are not enforceable as effluent limitations of the permit, unless the document or the specific details within the SWMP are specifically incorporated by the permitting authority into the permit. In accordance with the final rule, therefore, if an MS4 permittee fails to develop a SWMP document that meets the requirements of its permit, this failure constitutes a permit violation. By contrast, the details of any part of the permittee's program that are described in the SWMP, unless specifically incorporated into the permit, are not enforceable under the permit, and because they are not terms of the permit, the MS4 may revise those parts of the SWMP if necessary to meet any permit requirements or to make improvements to stormwater controls during the permit term. As discussed in more detail below, the permitting

authority has discretion to determine what elements, if any, of the SWMP are to be made enforceable, but in order to do so it must follow the procedural requirements for the second step under § 122.28(d)(2).

The regulations envision that the MS4 permittee will develop a written SWMP document that provides a road map for how the permittee will comply with the permit. The SWMP document(s) can be changed based on adaptations made during the course of the permit, which *89340 enable the permittee to react to circumstances and experiences on the ground and to make adjustments to its program to better comply with the permit. The fact that the SWMP is an external tool and not required to be part of the permit is intended to enable the MS4 permittee to be able to modify and retool its approach during the course of the permit term in order to continually improve how it complies with the permit and to do this without requiring the permitting authority to review and approve each change as a permit modification. The fact that the regulations do not require the implementation details of the SWMP document to be made enforceable under the permit does not mean that a permitting authority cannot decide to directly incorporate portions of the SWMP or the entire SWMP as enforceable terms and conditions of the permit. However, in order to adopt any part of the SWMP document as an enforceable term or condition it must go through the proper permitting steps to do so. If a permitting authority chooses to directly incorporate elements of the SWMP document as enforceable permit requirements, once completing the minimum permitting steps to propose and finalize NPDES permit conditions, those elements of the SWMP are no longer external to the permit, but instead become enforceable terms and conditions of the permit.

Lastly, EPA understands that some state permitting authorities already incorporate elements of their permittees' SWMP document using a process that is similar to the Two-Step General Permit process in the final rule. EPA emphasizes that under the final rule if a permitting authority chooses to adopt portions of their permittees' SWMPs using the Two-Step General Permit process this would be a valid way to formally incorporate these as permit terms and conditions; this is because in order to make these requirements enforceable under the permit the permitting authority provided the necessary review and public notice and comment procedures. By contrast, EPA generally would not consider general permits that state that the SWMP documents developed by the MS4 are enforceable under the permit, without first formally adopting the details of these documents to the individual permitting authority review and public participation required by the second step of the Two-Step General Permit, to be an adequate way in which to incorporate the details of the SWMP as enforceable requirements of the permit.

b. Permit Modification Considerations

EPA raised the issue in the proposed rule of whether under the Procedural Approach (now in the final rule as the “Two-Step General Permit” approach) a permit modification would be necessary during the permit term if BMPs or measurable goals were changed by the permittee from that which was submitted to the permitting authority. EPA specifically sought comment on what criteria should apply for distinguishing between when a change to BMPs is “substantial” requiring a full public participation process or “not substantial” that would be subject to public notice but not public comment under a permit modification process similar to the process in § 122.42(e)(6).

A number of commenters expressed support for treating some types of changes as non-substantial modifications to the permit. Commenters emphasized the fact that the types of plans, strategies, and practices implemented under MS4 SWMP are subject to considerable change, and that requiring these changes to undergo a review for a permit modification would stifle the process as well as innovation. Some commenters offered suggestions for what types of changes to the SWMP should constitute a substantial modification and should be reviewable by the permitting authority, and which types of changes should be considered non-substantial. Some thought that a complete change to a BMP should be reviewed by the permitting authority for a modification, while others felt that such changes should not be submitted for review if the replacement BMP would be considered to provide equal or better pollutant removal. Another commenter suggested that EPA incorporate applicable requirements from the CAFO regulations whereby the permittee submits proposed changes to the permitting authority and the permitting authority must determine whether such changes comply with applicable, substantive legal requirements, and if the changes are substantial, then the permitting authority must

require public notice, and an opportunity to provide comments or request a hearing before the determination is made on the modification.

The Two-Step approach requires the MS4 operator to provide information about what it intends to do during the permit term to satisfy some or even all of the permit requirements for meeting the MS4 permit standard. The rule then requires the permitting authority, through a review and public comment process, to establish MS4-specific permit terms and conditions that the permitting authority deems necessary to meet the MS4 permit standard. Once issued, these additional permit requirements are set for the permit term, and compliance is measured based on the permittee's ability to meet these enforceable terms and conditions. When the final permit terms and conditions are established, changes to those requirements can only be made through a formal modification process, which is subject to the requirements of § 122.62, or § 122.63 if the proposed change constitutes a minor modification.

A distinction between what constitutes a potential change in permit terms and what amounts to merely a change in implementation of the SWMP is important to consider in the context of the Two-Step General Permit. Where a permittee proposes to change a BMP that it is implementing, and the change does not require the enforceable permit conditions to be changed in any way, but rather offers an alternative means of complying with the same permit conditions, EPA would not consider this to be a permit modification. For instance, if the MS4's permit requires that it conduct field tests of 20 percent of its priority outfalls on an annual basis for illicit discharges, and the permittee changes its method of conducting such tests that is described in its SWMP document, even though a revision to the SWMP document maintained by the permittee may be necessary, no permit modification would be necessary because the 20 percent requirement is still in effect. By contrast, where a permittee proposes to substitute one of its BMPs for another one, and that change would alter the compliance expectations defined in the permit, the permittee will need to notify the permitting authority before proceeding to determine if a permit modification is necessary. For example, if the permittee's requirements specify in precise detail the field screening methodology that the MS4 will utilize for its priority outfalls, and the permittee has indicated it no longer intends to use this approach, then this proposed change will need to be evaluated by the permitting authority for whether a formal permit modification is needed. The important test here is to compare the permittee's proposed change with the terms and conditions of the permit.

EPA shares the views of commenters who emphasized the problems that would be created by any permitting scheme that would require permit modifications to be formally reviewed and approved for every SWMP change. Changes and adjustments made to the *89341 SWMP document during its implementation are a fundamental part of the Phase II program, which has always emphasized the need for adaptive management to make iterative progress towards water quality goals. Requiring every adaptive management change to undergo review and approval by the permitting authority would constrain implementation and innovation, as commenters suggested, and could greatly increase the burden on permitting authorities. Having said this, however, EPA recognizes that in some circumstances, as illustrated in the example above, the wording of a permit provision may require that a modification be made before a permittee may proceed with a proposed change to its SWMP document. If the permitting authority wants to minimize the instances when a permit modification would be needed, it could incorporate with specificity only those elements in the SWMP document that it deems essential for meeting the MS4 permit standard. For example, a permitting authority could decide that as an alternative to incorporating all of the details of the permittee's proposed outfall screening plan in its "illicit discharge detection and elimination" portion of its SWMP document into the permit, it might instead consider selecting the specific aspects of the screening plan that in its judgment would meet the MS4 permit standard, such as that the permittee will screen all "high priority" outfalls by a specific date and that all illicit discharges will be eliminated within a specified amount of time. By not incorporating every aspect of the specific plans and procedures described by the permittee in its SWMP document, the permittee can modify its implementation approach during the permit term without needing to check with the permitting authority before making any such changes and having that change approved under the permit.

Apart from the issue of whether or not proposed SWMP document changes require a permit modification is the need for permitting authorities to specify what procedures it will follow to review and process any permit modifications. EPA agrees with the commenter that suggested that such procedures are needed. Rather than establishing a unique set of procedures, however, it is EPA's view that the existing regulatory procedures in §§ 122.62 and 122.63, which apply to all NPDES permit modifications, are sufficient for modifications to a Two-Step General Permit. EPA advises permitting authorities to include in their permits a clear description of what types of proposed SWMP document changes will need to be reviewed as potential permit modifications, and the procedures for submitting and reviewing these changes.

F. Explaining How the Permit Terms and Conditions Meet the MS4 Permit Standard

Several commenters recommended that the final rule clarify, both in the preamble and in the rule language itself, that permitting authorities are required to include an explanation in the permit's administrative record as to why the adopted permit provisions meet the MS4 permit standard. The commenters specified that this requirement should apply regardless of the option EPA chooses to include in the final rule.

EPA agrees that the permitting authority's rationale for adopting specific small MS4 permit requirements should be documented consistent with the requirements for any NPDES permit requirements under § 124.8 and, if EPA is the permitting authority, § 124.9. This rationale should describe the basis for the draft permit terms and conditions, including support for why the permitting authority has determined that the requirements meet the required MS4 permit standard. EPA agrees with the commenters' suggestion that this rationale should be provided under both permitting approaches in the final rule. This position is consistent with the Ninth Circuit's remand decision, which emphasized the need for permitting authorities to determine that requirements satisfy the MS4 permit standard and that the public be given an opportunity to provide comments and to request a hearing on this determination.

For clarification purposes, EPA includes additional language in the final rule for the Two-Step General Permit approach to emphasize that the permitting authority's public notice for the second step (pursuant to § 122.28(d)(2)(ii)) must include, apart from the NOI and the proposed additional permit terms and conditions, "the basis for these additional requirements." This requirement is consistent with the requirements of § 124.8(b) for what must be included in a permit fact sheet. EPA does not find it necessary for the permitting authority to produce a full fact sheet for each individual MS4 permittee under a Two-Step General Permit, nor do the regulations require this for the type of permit requirements that are being established under the second step. A fact sheet is required for the issuance of the general permit, regardless of whether the general permit is a Comprehensive General Permit or the base general permit in a Two-Step General Permit. See § 124.8(a), which requires fact sheets to be prepared for general permits. However, the NPDES regulations do not require a separate fact sheet to be developed for the additional terms and conditions that are established for individual MS4s in the second step of the Two-Step General Permit, since these requirements are not themselves part of the base general permit, nor do they necessarily fall under any of the other types of permits listed in § 124.8(a) as requiring a fact sheet (e.g., a "major" NPDES facility or site). Short of requiring a separate fact sheet for the draft additional permit conditions, EPA finds it reasonable to expect the proposed additional permit terms and conditions to be accompanied by the supporting rationale for why these requirements satisfy the MS4 permit standard.

One commenter also suggested that permitting authorities be required to explain in the administrative record why any alternative standards recommended in public comments or included in any of EPA's MS4 permit compendia were not adopted. Permitting authorities are required to respond to significant comments received in response to the public notice for the Comprehensive General Permit and the base general permit of a Two-Step General Permit, and, in addition, to respond to the comments on the second step public notice under a Two-Step General Permit. Such comments could include alternative standards suggested for inclusion in the permit. EPA does not agree that permitting authorities should be required to explain in the administrative record why a provision included in any of the agency's MS4 permit compendia was not used in any particular permit. Again, the example permit provisions that are highlighted in the permit compendia are provided as guidance and are not intended to provide a floor for what types of provisions must be used in MS4 permits.

G. Minimum Federal Permit Requirements

Several commenters requested clarification or raised concerns about the extent to which the Phase II regulations establish minimum permit requirements. This question is often raised in the context of state laws that prohibit the permitting authority from including terms and conditions in a permit that are more stringent than the federal minimum requirements or include more than the federal minimum requirements. Some comments confuse *89342 “minimum permit requirements” with the specified elements of the minimum control measures described in § 122.34(b). In a related manner, a number of permitting authorities have shared with EPA their experiences in encountering resistance to a proposed permit requirement on the basis that it is not explicitly required in the federal regulations. In addition, some commenters asked EPA to clarify that suggestions made in the “guidance” paragraphs that are unique to the small MS4 regulations are not mandatory permit terms.

The regulations specify the elements that must be addressed in a permit. It is up to the permitting authority to establish the specific terms and conditions to meet the MS4 permit standard for each of these elements. The minimum control measures set forth in § 122.34(b), for instance, are not intended as minimum permit requirements, but rather areas of municipal stormwater management that must be addressed in permits through terms and conditions that are determined adequate to meet the MS4 permit standard. For that matter, if a permitting authority were to merely use the minimum control measure language from § 122.34(b) word-for-word and include no further enforceable permit terms and conditions, this permit would not satisfactorily meet the requirement to establish clear, specific, and measurable requirements that together ensure permittees will comply with the MS4 permit standard. EPA emphasizes that what constitutes compliance with the MS4 permit standard continues to evolve. The need to reevaluate what is meant by “maximum extent practicable” for each permit term, as well as the need to determine what is necessary to protect water quality and satisfy the appropriate water quality requirements of the CWA, means that what constitutes compliance will by necessity change over time. Therefore, in EPA's view, those that argue that the minimum federal requirements are what is included in the wording of the minimum control measures, are misconstruing the intent of the regulations, and are handicapping permits by artificially tying the MS4 permit standard to the minimum control measures.

EPA emphasizes that the minimum control measures do not restrict the permitting authority from regulating additional sources of stormwater pollutant discharges, not specifically mentioned in the minimum control measure language. For example, some states require small MS4s with very large populations to implement a program that addresses industrial sites due to the concentration of industrial sites in many of their larger urban areas. (Consider that some small MS4s can be the same size as “medium” MS4s, which are required to have a program for addressing stormwater discharges from industrial sites.) Such a requirement represents what is necessary, for those small MS4s, to reduce pollutants as necessary to meet the MS4 permit standard. This does not mean that the requirement is more stringent than the minimum control measures, but rather it constitutes what is needed in the permitting authority's view to satisfy the MS4 permit standard.

In response to the comments relating to the guidance language in § 122.34(b), EPA verifies that this “guidance” is intended to act as suggested methods of implementation, not mandatory permit terms. Having said this, EPA points out that these guidelines could form the basis of permit terms that meet the § 122.34(a) requirement to articulate requirements in a clear, specific, and measurable manner. EPA's interest in having more specific requirements in permits is to provide clarity of expectations and to hold MS4s accountable for implementing a program that continues to make progress toward achievement of water quality objectives. For a permitting authority to include requirements in a permit based on these “guidance requirements,” because in its view they are necessary to ensure MS4s meet the MS4 permit standard, does not mean that the permit has established requirements beyond the federal minimum or that the permitting authority impermissibly used guidance to develop enforceable requirements.

H. Comments Beyond the Scope of This Rulemaking

EPA received numerous public comments suggesting revisions to the substantive requirements in § 122.34. EPA clearly stated its intent in the preamble to the proposed rule that it was not proposing to change any substantive requirement and therefore the many comments suggesting the addition of specific requirements (e.g., establish or do not establish a numeric retention standard for post-construction stormwater controls) are outside the scope of this rulemaking.

VII. Revisions to Other Parts of § 122.34

A. Compliance Timeline for New MS4 Permittees

EPA proposed a minor revision to § 122.34(a) to include the word “new” before “permittees” to indicate that the five-year period allowed to develop and implement their stormwater management program applies to the initial permit for new permittees. New permittees could include small MS4s that are in urbanized areas for the first time because of demographic changes reflected in the latest decennial census, or they could be specifically designated by a permitting authority as needing an NPDES permit to protect water quality. This change is intended to preserve the flexibility included in Phase II regulations in place prior to this final rule, and to more clearly indicate that the extended time period for compliance is intended to apply to MS4s that must put a stormwater management program in place for the first time. This revision does not change the status quo; it merely recognizes that first-time small MS4 permittees have up to five years to develop and implement their SWMPs, while small MS4s that have already been permitted will have developed and implemented their SWMPs when they reapply for permit coverage under an individual permit or submit an NOI under the next small MS4 general permit. This is not to say that all actions necessary to achieve pollutant reductions must be completed in the first five years. EPA recognizes that MS4s may need more time, for example, to complete the various steps needed to get structural controls into place and operational (e.g., design project(s), secure funding, follow procurement procedures, etc. before installing structural BMPs). Therefore, EPA is retaining in the final rule the proposed clarification that permitting authorities may provide up to 5 years for small MS4s being permitted for the first time to come into compliance with the terms and conditions of the permit and to implement necessary BMPs.

B. Revisions to Evaluation and Assessment Provisions

EPA proposed to renumber existing § 122.34(g) as § 122.34(d) and to incorporate the stylistic changes described in Section VII.E of this preamble. Several commenters suggested that the terminology in this paragraph be changed to conform to the text changes made elsewhere. EPA agrees that changes to reflect the remand changes similar to the ones made elsewhere in the section are appropriate for the newly designated § 122.34(d)(1) concerning requirements for evaluation and assessment. The new § 122.34(d)(1) now states that the permit must require the permittee to evaluate compliance with the terms and conditions of the permit, the effectiveness of the components of its stormwater management program, and of achieving ***89343** the measurable requirements in the permit. Rather than evaluate the appropriateness of self-identified BMPs and measurable goals as previously required, the final rule requires permits to include terms and conditions to evaluate compliance with permit requirements, including achievement of measurable requirements established as permit requirements. This language more closely aligns the required evaluation and assessment requirements with the newly articulated requirements for developing permit conditions that are clear, specific, and measurable. It also more accurately describes the objectives of the evaluation and assessment requirements, given other revisions made in response to the remand to clarify that permitting authorities determine what constitutes compliance, not the regulated MS4s.

The proposed rule inadvertently omitted a recent amendment to § 122.34(g) (§ 122.34(d) in the final rule) that was added by the [eReporting rule \(80 FR 64064, Oct. 22, 2015\)](#). This omission is corrected in the rule text that appears in this Federal Register document. The relevant provision in § 122.34(d)(3) states that, among other things, starting on December 21, 2020 all reports submitted in compliance with this section must be submitted electronically by the owner, operator, or the duly authorized representative of the small MS4 to the permitting authority or initial recipient, as defined in [40 CFR 127.2\(b\)](#), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127, and that prior to this date, and independent of part 127, the owner, operator, or the duly authorized

representative of the small MS4 may be required to report electronically if specified by a particular permit or if required to do so by state law. Section IX addresses in more detail the relationship between this final rule and the eReporting rule.

EPA received a request to revise proposed § 122.34(d)(2) regarding recordkeeping requirements to mandate that MS4s post on-line the SWMP documents required under § 122.34(b). Currently, MS4s are only required to make summaries of their SWMP available to the public upon request. EPA is of the view that on-line posting of information is an effective way to communicate stormwater program information, and encourages MS4s to post on-line documents that describe their stormwater management plans, as well as provide other information about managing stormwater for various audiences. EPA, however, declines to adopt a regulatory requirement for MS4s to post documents on-line. EPA did not propose any changes to the recordkeeping requirements, and accordingly, the request is outside the scope of the proposal. EPA notes that some permitting authorities have required on-line posting of SWMP information and educational materials to implement minimum controls measures for public education and involvement, as well as elements of other minimum control measures such as the illicit discharge detection and elimination, construction and post-construction program minimum controls, and other permit requirements.

C. Establishing Water Quality-Based Requirements

EPA made minor changes to the provisions for establishing “other applicable requirements.” See § 122.34(c). The following discussion explains these changes and describes how the section has been rearranged. It then discusses issues raised about how water quality-based requirements can be established under the two general permit options.

EPA proposed to consolidate existing paragraphs (e)(1) and (f) into one paragraph and to move this consolidated provision to § 122.34(c). EPA also proposed to delete guidance paragraph (e)(2). Existing § 122.34(e)(1) addresses the need to comply with permit requirements that are in addition to the minimum control measures based on a TMDL or equivalent analysis. Existing § 122.34(f) requires compliance with permit requirements that have been developed consistent with provisions in §§ 122.41 through 122.49, as appropriate. EPA is promulgating the proposed revisions, with minor editorial changes, as discussed below.

The new § 122.34(c)(1) states that the permit will include, as appropriate, more stringent terms and conditions, including permit requirements that modify, or are in addition to, the minimum control measures, based on an approved total maximum daily load (TMDL) or equivalent analysis, or where the NPDES permitting authority determines such terms and conditions are needed to protect water quality. EPA replaced the term “effluent limitations” with “terms and conditions” to be consistent with changes made to § 122.34(a). In a minor change from the proposal, the paragraph now more clearly indicates that the permitting authority has the discretion to require additional measures to protect water quality, not limited to requirements based on a TMDL or equivalent analysis. This change reflects the authority granted by the statute to protect water quality in section 402(p)(6) of the CWA. It also responds to a comment that due to the time it takes for TMDL development, permitting authorities should not be limited to consideration of only TMDL or equivalent analyses before imposing water quality based requirements. As a general matter, EPA agrees that other types of watershed plans that identify sources that should be controlled can provide a valid basis for establishing additional permit terms and conditions. Additionally, EPA recognizes that there may be instances where other information about the water quality impacts of the MS4 discharges may be sufficient to indicate the need for additional controls. (Of course, permitting authorities must have a rational basis and record support for determining that additional requirements serve a water quality objective.)

The final rule deletes existing § 122.34(e)(2), as was proposed. As explained in the preamble to the proposed rule, the guidance in existing § 122.34(e)(2) reflects EPA's recommendation for the initial round of permit issuance, which has already occurred for all permitting authorities. The phrasing of the guidance language no longer represents EPA policy with respect to including additional requirements. EPA has found that an increasing number of permitting authorities are already including specific requirements in their small MS4 permits that address not only wasteload allocations in TMDLs, but also other requirements that are in addition to permit provisions implementing the six minimum control

measures irrespective of the status of EPA's § 122.37 evaluation. See EPA's Compendium of MS4 Permitting Approaches—Part 3: Water Quality-Based Requirements (EPA, 2016).[FN9] Based on the advancements made by specific permitting programs, and information that points to stormwater discharges continuing to cause waterbody impairments around the country, prior to the promulgation of this final rule, EPA has advised in guidance that permitting authorities write MS4 permits with provisions that are “clear, specific, measurable, and enforceable,” incorporating such requirements as clear performance standards, and including measurable goals or quantifiable targets for *89344 implementation. [FN10] This guidance is a more accurate reflection of the agency's current views on how the Phase II regulations should be implemented than the guidance currently in § 122.34(e)(2).

EPA received few comments about the proposed removal of § 122.34(e)(2). Several commenters strongly supported the deletion of § 122.34(e)(2), while others expressed concern that MS4s may not be in a position to implement additional controls. The MS4 permit standard embodies a great deal of flexibility and gives the permitting authority discretion to address particular water quality impairments. Where a waterbody is impaired in part due to discharges from small MS4s, especially where an approved TMDL allocates wasteload reduction responsibilities to those MS4s, additional controls to achieve reasonable progress towards attainment of water quality standards will need to be considered. The permitting authority has the ability under the final rule to develop requirements tailored to a particular MS4, either by issuing an individual permit or by employing the Two-Step General Permit process in § 122.28(d)(2). Some permitting authorities have successfully created requirements for specific MS4s in a more comprehensive general permit. For example, the 2013 California Small MS4 general permit establishes additional requirements for small MS4s discharging to waters with an approved TMDL. Each set of “deliverables” or “actions required” is tailored to the individual MS4, or groupings of MS4s, based on the pollutant of concern and the particular wasteload allocation. See Appendix G of the 2013 California Small MS4 general permit.

D. Establishing Water Quality-Based Requirements Under the Two General Permit Options

EPA received a number of questions and suggestions concerning how requirements to implement applicable TMDLs should be incorporated into general permits under any of the proposed options. Some comments asserted that there is incompatibility between the proposed Option 1 approach and the need to establish permit terms and conditions that address TMDLs, which require watershed- and MS4-specific provisions. One commenter questioned whether a general permit can incorporate different water quality-based effluent limitations for different MS4s asserting that the NPDES regulations require that general permits include the same water quality-based effluent limits for sources within the same category. Several commenters also suggested that requirements addressing TMDLs are ones that are amenable to using the Option 2 approach given their inherently watershed-specific nature and the fact that TMDL implementation plans often need to be developed with the involvement of the community so that issues such as implementation schedules and BMP approaches reflect the interests of the affected public and are attainable.

EPA clarifies that in order to comply fully with the Comprehensive General Permit approach, all terms and conditions established based on approved TMDLs must be included within the permit itself. Use of the Comprehensive General Permit approach means that the permit needs to spell out the requirements necessary for permittees “to achieve reasonable further progress toward attainment of water quality standards.” (64 FR 68753, December 8, 1999) Therefore, where a TMDL establishes wasteload allocations specifically or categorically for MS4 discharges to the impaired water, the permittee should expect to find “clear, specific, and measurable” requirements within the permit that delineate their responsibilities during the permit term relative to that TMDL and associated wasteload allocation(s). There are a variety of approaches for incorporating these TMDL-related requirements into general permits for specific MS4s. One noteworthy approach places all applicable water quality-based effluent limitations in an appendix to the general permit (e.g., Appendix 2 of the 2012 Western Washington Small MS4 General Permit). For this particular permit, the state evaluated all relevant TMDLs addressing discharges from small MS4s eligible for coverage under the permit and assigned additional requirements focused on reducing the discharge of the impairment pollutant. See EPA's Compendium of MS4 Permitting Approaches—Part 3: Water Quality-Based Requirements (EPA, 2016), which will be posted on EPA's Web site at <https://www.epa.gov/npdes/stormwater-discharges-municipal-sources> | Resources, for additional examples.

EPA does not view any of these approaches as inconsistent with the NPDES regulatory requirement that “where sources within a specific category or subcategory of dischargers are subject to water quality-based limits . . . the sources in that specific category or subcategory shall be subject to the same water quality-based effluent limitations.” See § 122.28(a)(3). It is certainly true that, due to the watershed-specific nature of TMDLs, requirements in general permit based on TMDLs can vary for individual MS4s based on the impaired water to which they discharge and the specific details of the applicable TMDL. EPA, however, does not view these differing water quality-based limit requirements within the same general permit as running afoul of the § 122.28(a)(3) requirement. EPA considers the different water quality-based requirements that are unique to a TMDL and/or to MS4s that are subject to the TMDL to be the equivalent of dividing the MS4 permittee universe into subcategories based on these requirements. This categorization is not dissimilar to the way in which EPA and many states issue their Multi-Sector General Permits for Stormwater Discharges Associated with Industrial Activity, in which there are requirements common to all facilities and a separate set of requirements that apply to different industrial sectors or subsectors. By establishing different permittee subcategories based on TMDLs, the permit remains consistent with the requirement in § 122.28(a)(3).

Use of a Two-Step General Permit similarly requires that where requirements are necessary under § 122.34(c) to address TMDLs that they be expressed in a clear, specific, and measurable manner. These requirements can be included in the base general permit or they can be developed through the second permitting step of the Two-Step General Permit approach where additional terms and conditions are established for individual MS4s. EPA agrees with the commenters that, given the watershed-specific nature of TMDLs and the strategies needed to address them, in many cases it may be that a Two-Step General Permit is the approach that provides the greatest amount of flexibility to account for these differences. The advantage of this approach is that it allows each MS4 to develop and propose stormwater control strategies that are supported by the community and that can then be reviewed by the permitting authority for adequacy. EPA notes that there are several states that have already set up permit approaches that require MS4s to first develop TMDL implementation plans that are then reviewed and approved by the permitting authority. These approaches may provide useful models to draw from especially for those permitting authorities that choose to establish water quality-based requirements through a Two-Step ***89345** General Permit. See examples in EPA's compendium document, *Compendium of MS4 Permitting Approaches—Part 3: Water Quality-Based Requirements* (EPA, 2016), which will be posted on EPA's Web site at <https://www.epa.gov/npdes/stormwater-discharges-municipal-sources> | Resources.

E. Restructuring, Consolidating, Conforming, and Other Editorial Revisions

EPA proposed a restructuring of certain provisions in § 122.34(c) through (e) and making a number of minor editorial revisions to reflect the changes made elsewhere to meet remand requirements and to change the style of regulatory text, as discussed earlier in this preamble. EPA proposed to update the cross-references in § 122.35 to conform to the rearrangement of provisions in § 122.34. The preamble at Section VIII.B addresses changes to address water quality-based permit provisions currently in § 122.34(e) and to consolidate existing paragraphs (e) and (f) into new paragraph (c). This section explains other revisions. For the most part, EPA is promulgating these proposed revisions and has added similar revisions to additional provisions that were identified in comments. The following discussion briefly explains those changes.

First, the current § 122.34(c) of the regulations concerning “qualifying local programs” has been moved to § 122.34(e) as proposed. The only changes to the text of the existing language are to remove the words “you” and replace it with “the permittee.” EPA received no comments on this proposed revision.

Second, the current § 122.34(d) that addresses information requirements for obtaining NPDES permit coverage under a general or individual permit has been moved to § 122.33(b)(2). All basic information requirements necessary to obtain permit coverage under the two types of individual permits and two types of general permits are now consolidated in § 122.33. EPA clarifies that these information requirements apply to individual permits, while the information required to be included in NOIs for general permits is to be determined by the permitting authority based on what it needs in

order to establish the permit terms and conditions necessary to meet the MS4 permit standard. See further discussion in Sections IV.C and E.

Third, EPA also proposed to delete paragraphs (d)(2) and (3) in § 122.34 that required the permitting authority to provide a menu of BMPs for each minimum control measure, and, where such a menu of BMPs had not been provided, stated that a small MS4 need not be held to any “measurable goal” for that BMP. The final rule deletes these paragraphs as no longer necessary. EPA provided a menu of BMPs that has been available on its Web site for a number of years. EPA expects that this menu and any similar state menus will continue to be available. In addition, the function of “measurable goals” in the permitting process is clarified under the final rule. In order to address the EDC court's concerns about the lack of permitting authority review of the NOI, which contains information such as the MS4 operator's proposed measurable goals, the final rule clarifies that measurable goals are submitted in proposed form and must be reviewed and approved, and modified where necessary, by the permitting authority prior to becoming effective as enforceable requirements. Therefore, in the final rule, “measurable goals” are now “proposed measurable goals” that are submitted by an MS4 seeking an individual permit to implement the requirements in § 122.34, and at the discretion of the permitting authority, if included as required to be submitted in an NOI for coverage under a Two-Step General Permit under § 122.28(d)(2) as information necessary to establish permit conditions.

Some commenters favored keeping the requirements for a menu of BMPs as a way to promote equitable treatment among MS4s that have similar circumstances. While EPA has deleted the proviso that MS4s will not be held accountable for their selected measurable goals if a menu of BMPs has not been developed by the permitting authority, EPA does not expect permitting authorities to eliminate existing and future BMPs menus. Under § 123.35(g), an approved state is still obligated to establish BMP menus for the minimum control measures to facilitate effective program implementation. Not making information about BMPs available would be counter to effective program implementation. EPA anticipates that equity amongst MS4s will be further enhanced by the requirement for clear, specific, and measurable permit terms and conditions. It should be clear from any proposed general permit if similar MS4s are not being treated equitably and the public will have an opportunity to voice (through comments or a public hearing, if one is held) support or objections to different permit terms and conditions among MS4s. MS4s include a broad range of entities that, as noted by several commenters, are likely to need different terms and conditions for their particular situations, e.g., state departments of transportation that generally do not have the same police powers as local governments and who serve a largely transient audience. EPA also expects that dissimilar requirements for similar MS4s would be explained in the fact sheet or other document that provides the rationale for permit terms and conditions.

Finally, in the proposed rule, EPA used the term “Director” in place of “NPDES Permitting Authority” in §§ 122.33-122.35. This proposed revision was intended to use terminology in the Phase II regulations that is used in other sections of part 122. “Director” and “NPDES Permitting Authority” mean the same thing, i.e., the Regional Administrator or the Director of an authorized State NPDES program, depending on which entity issues the NPDES permits in a particular area. EPA uses these terms interchangeably. However, for purposes of minimizing the number of changes not directly related to the remand, EPA has decided to retain the status quo with respect to how these terms are used currently. In the sections that address the small MS4 program (§§ 122.32—122.35), the final rule uses the term “NPDES permitting authority.” This is different than the terminology that was proposed. The other sections of part 122, for example, §§ 122.26 and 122.28, will continue to use the term “Director.”

VIII. Final Rule Implementation

A. When the Final Rule Must Be Implemented

EPA received comments from state permitting authorities requesting clarification on the implementation timeframe for the new rule. EPA also received comments from environmental organizations indicating that given the length of time since the Ninth Circuit found the procedural aspects of the Phase II regulations to be invalid, that permitting authorities should be required to modify their general permit procedures now to comport their program with the CWA requirements

for permitting authority review and public participation, and also recommended that EPA should require current permits to be reopened for this purposes.

To clarify, this final rule becomes effective on January 9, 2017. It is not EPA's expectation that permitting authorities be required to reopen permits currently in effect to comply with the requirements of this final rule. However, EPA does expect that permitting authorities comply with the final rule when the next permit is being *89346 issued following the expiration of the current permit. Having said this, EPA acknowledges that there are a small number of states whose permits are expiring within a few months of the final rule's effective date, and for these states it is likely too late in their process for them to make the necessary changes to fully comply with the final rule. Therefore, a permitting authority that has proposed a permit, is in the final stages of issuing a new permit (e.g., after the close of the public comment period), or has issued a final permit before this rule becomes effective will not be expected to re-open those permits. Where the permitting authority has not yet proposed a permit, EPA expects that these permits will be issued consistent with the final rule's requirements.

EPA recognizes that development of a new small MS4 general permit starts well in advance of the expiration of existing permits. Still, EPA anticipates that most states can develop clear, specific, and measurable permit terms and conditions without the need for a change to their legal authorities to implement the type(s) of general permits it plans to use. The substantive standard has not changed (i.e., the MS4 permit standard); the final rule merely clarifies the way in which permit terms and conditions that comply with the standard must be expressed and how they are established. Even where a state determines that it needs to change its regulations to establish new procedural requirements to implement the final rule, such as where a state establishes the general permit through a rulemaking process, it may be able to develop necessary permit terms and conditions consistent with the final rule based on its existing statutory authorities. In the event that states must change their legal authorities before they can act, the existing regulations at § 123.62 provides states up to one year to make the necessary changes and up to two years if a statutory change is needed.

B. Status of the 2004 Interim Guidance

This final rule, upon its effective date on January 9, 2017, establishes the requirements for issuing general permits for small MS4 discharges in response to the U.S. Court of Appeals for the Ninth Circuit's decision in *Environmental Defense Center v. EPA*. The 2004 Interim Guidance (Implementing the Partial Remand of the Stormwater Phase II Regulations Regarding Notices of Intent & NPDES General Permitting for Phase II MS4s, EPA (2004)), by its own terms, “provides interim guidance to EPA and State NPDES permitting authorities pending a rulemaking to conform the Phase II rule to the court's order.” With the promulgation of this final rule, the “interim guidance” is no longer needed.

IX. Consistency With the NPDES Electronic Reporting Rule

EPA issued a final NPDES Electronic Reporting Rule (referred to as the “eReporting Rule”) requiring that permitting authorities and regulated entities electronically submit permit and reporting information instead of submitting paper forms. (80 FR 64064, Oct. 22, 2015) The promulgation of the eReporting Rule includes “data elements” (in appendix A of the rule) that must be reported on by both Phase II small MS4s and permitting authorities related to individual NOIs submitted for general permit coverage and required program reports. The data elements included in the eReporting Rule for Phase II MS4s are based on the regulatory requirements in existence at the time that rule was promulgated. These data elements, therefore, do not reflect changes that are being made to the corresponding requirements as part of this MS4 remand rule.

EPA received two public comments, which were similarly focused on the need to ensure consistency between the final MS4 remand rule and the eReporting Rule. One commenter recommended that EPA be prepared once the MS4 remand rule is finalized to make conforming regulatory changes to the eReporting Rule so that programs are again aligned. The other commenter also gave examples of how the wording of the eReporting data elements would be inconsistent with the rule language under consideration for Option 1 of the proposed MS4 remand rule. More specifically, the commenter

questioned how permitting authorities would be able to populate the required data elements for the NOI for a general permit implemented under proposed Option 1 considering that information on the MS4 operator's BMPs and measurable goals would no longer be required as part of the NOI.

EPA agrees with the commenters on the importance of consistency between this final rule and the eReporting Rule. Because the appendix A data elements are no more than a reflection of what the NPDES regulations require for NOIs and compliance reports, where the underlying regulations change, as they are under the final MS4 remand rule, it is necessary to make conforming changes to appendix A. Now that the final MS4 remand rule language is set, there are some data elements that will need to be updated to conform to the new expectations for NOIs and program reports. EPA is aware of the following types of inconsistencies between the final MS4 remand rule and the appendix A data elements related to small MS4s:

- References to “measurable goals” in data name and data descriptions associated with minimum control measures—Under the final MS4 remand rule, the MS4 operator's measurable goals no longer take on the same role that they did under the previous regulations. See related discussion in Section VII.E. Under the new regulations, the final terms and conditions in the general permit and any additional requirements developed through the Two-Step process, are what is relevant. References in appendix A to the permittee's measurable goals will need to be substituted with appropriate references to the final terms and conditions of the permit. Additional updates are also needed in some places in appendix A to change the reference from “measurable goals” to the applicable schedule or deadline for compliance with the specific permit requirement.
- References to the permittee's intended actions during the permit term—The data elements in appendix A, Table 2 describe a number of the minimum control measure elements as reflecting what the permittee intends to accomplish during the permit term. Under the final MS4 remand rule, the MS4's intended actions are not what the permittee is held to, but rather the final permit terms and conditions. Therefore, EPA will need to update any references to intended actions to reflect the fact that the terms and conditions of the permit are what is necessary to report as a data element.
- Regulatory citations—Updates are also necessary to the citations in appendix A to reflect changes made to the Phase II regulations by the final MS4 remand rule.
- NPDES Data Group Number (appendix A, Table 2)—This number corresponds to the entity that is required to provide information on the data element under the eReporting Rule. Table 1 of appendix A assigns a “Data Provider” number to various entities, which is reflected in Table 2. In the portion of appendix A related to information from the NOIs, the “Data Provider” for most of the minimum control measure data elements is indicated as the “Authorized NPDES Program” (or permitting authority) and/or the “NPDES Permittee.” Because the permitting authority under the final MS4 remand rule is solely responsible for establishing final permit terms and conditions, EPA will need to update the *89347 Data Provider to remove references to the NPDES Permittee, where applicable.

EPA has also discovered in reviewing this issue that it inadvertently omitted two data elements from the final eReporting Rule. These data elements correspond to the schedules, deadlines, and milestones that are specified in the permit for the pollution prevention and good housekeeping for municipal operations requirements established under § 122.34(b)(6), and any additional requirements that may be established under § 122.34(c).

EPA is interested in taking the time needed to ensure that the edits required to appendix A are made precisely. Due to the time constraints associated with finalizing the MS4 remand rule, EPA has determined that the updates needed in appendix A require a separate regulatory action outside of this rulemaking. In addition, EPA notes that the deadline for implementation of the affected eReporting rule provisions is December 21, 2020, therefore there should be sufficient time to make the necessary changes before electronic reporting is required under the regulations. EPA will initiate the

rulemaking process immediately and will complete it as soon as possible. In the meantime, EPA will continue to work with its state counterparts to provide appropriate guidance on applying the data elements in the near term.

X. Statutory and Executive Orders Reviews

Additional information about these statutes and Executive Orders can be found at <http://www2.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is a significant regulatory action that was submitted to the Office of Management and Budget (OMB) for review. Any changes made in response to OMB recommendations have been documented in the docket for this action. In addition, EPA prepared an analysis of the potential costs associated with this action. This analysis, “Economic Analysis for the Municipal Separate Storm Sewer System (MS4) General Permit Remand Rule,” is summarized in Section I.D and is available in the docket.

B. Paperwork Reduction Act (PRA)

This action does not impose any new information collection burden under the PRA. OMB has previously approved the information collection activities contained in the existing regulations and has assigned OMB control number 2040-0004.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. Although small MS4s are regulated under the Phase II regulations, this rule does not change the underlying requirements to which these entities are subject. Instead, the focus of this rule is on ensuring that the process by which NPDES permitting authorities authorize discharges from small MS4s using general permits comports with the legal requirements of the Clean Water Act and the applicable NPDES regulations.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of \$100 million or more as described in UMRA, 2 U.S.C. 1531-1538. This action does not significantly or uniquely affect small governments because this rulemaking focuses on the way in which state permitting authorities administer general permit coverage to small MS4s, and does not modify the underlying permit requirements to which they are subject. Nonetheless, EPA consulted with small governments concerning the regulatory requirements that might indirectly affect them, as described in Section I.E.

E. Executive Order 13132: Federalism

This rule will not have substantial direct effects on the states, the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. The rule makes changes to the way in which NPDES permitting authorities, including authorized state government agencies, provide general permit coverage to small MS4s. The impact to states which are NPDES permitting authorities may range from \$558,025 and \$604,770 annually, depending upon the rule option that is finalized. Details of this analysis are presented in “Economic Analysis for the Final Municipal Separate Storm Sewer System General Permit Remand Rule,” which is available in the docket for the rule at <http://www.regulations.gov> under Docket ID No. EPA-HQ-OW-2015-0671.

Keeping with the spirit of [E.O. 13132](#) and consistent with EPA's policy to promote communications between EPA and state and local governments, EPA met with state and local officials throughout the process of developing the proposed rule and received feedback on how proposed options would affect them. EPA engaged in extensive outreach

via conference calls to authorized states (e.g., individual state permitting authorities, and the Association of Clean Water Administrators) and regulated MS4s (e.g., the National Association of Clean Water Agencies, Water Environment Federation, National Association of Flood & Stormwater Management Agencies, National Municipal Stormwater Alliance) to gather input on how EPA's current regulations are affecting them, and to enable officials of affected state and local governments to have meaningful and timely input into the development of the options presented in this rule. EPA also reached out to a number of environmental organizations (e.g., American Rivers, Chesapeake Bay Foundation, Cahaba River Society, Natural Resources Defense Council, PennFuture, River Network) and regulated industry (e.g., National Association of Home Builders).

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in [Executive Order 13175](#) since it does not have a direct substantial impact on one or more federally recognized tribes. The rule affects the way in which small MS4s are covered under a general permit for stormwater discharges and primarily affects the NPDES permitting authorities. No tribal governments are authorized NPDES permitting authorities at this time. The rule could have an indirect impact on an Indian tribe that is a regulated MS4 in that the NOI required for coverage under a general permit may be changed as a result of the rule (if finalized) or may be subject to closer scrutiny by the permitting authority and more of the requirements could be established as enforceable permit conditions. However, the substance of what an MS4 must do will not change significantly as a result of this rule. Thus, [Executive Order 13175](#) does not apply to this action.

Consistent with the EPA Policy on Consultation and Coordination with Indian Tribes, EPA conducted outreach to tribal officials during the development of this action. EPA spoke with tribal members during a conference call with the National Tribal Water Council to gather input on how tribal governments are currently affected by MS4 regulations and may be affected by [*89348](#) the options in this rule. Based on this outreach and additional, internal analysis, EPA confirmed that this action would have little tribal impact.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

EPA interprets [Executive Order 13045](#) as applying only to those regulatory actions that concern environmental health or safety risks that EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2-202 of the Executive Order. This action is not subject to [Executive Order 13045](#) because it does not concern an environmental health risk or safety risk.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution or Use

This action is not subject to [Executive Order 13211](#), because it does not significantly affect energy supply, distribution, or use.

I. National Technology Transfer and Advancement Act

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

EPA determined that the human health or environmental risk addressed by this action will not have potential disproportionately high and adverse human health or environmental effects on minority, low-income, or indigenous populations. This action affects the procedures by which NPDES permitting authorities provide general permit coverage for small MS4s, to help ensure that small MS4s “reduce the discharge of pollutants to the maximum extent practicable (MEP), to protect water quality and to satisfy the water quality requirements of the Clean Water Act.” It does not change any current human health or environmental risk standards.

K. Congressional Review Act

This action is subject to the CRA, and EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a “major rule” as defined by [5 U.S.C. 804\(2\)](#).

List of Subjects in 40 CFR Part 122

Environmental protection, Storm water, Water pollution.

Dated: November 17, 2016.

Gina McCarthy,

Administrator.

For the reasons stated in the preamble, EPA amends 40 CFR part 122 as set forth below:

PART 122—EPA ADMINISTERED PERMIT PROGRAMS: THE NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

1. The authority citation for part 122 continues to read as follows:

Authority: The Clean Water Act, [33 U.S.C. 1251 et seq.](#)

[40 CFR § 122.28](#)

2. Amend [§ 122.28](#) by adding paragraph (d) to read as follows:

[40 CFR § 122.28](#)

[§ 122.28](#) General permits (applicable to State NPDES programs, see [§ 123.25](#)).

* * * * *

(d) Small municipal separate storm sewer systems (MS4s) (Applicable to State programs). For general permits issued under paragraph (b) of this section for small MS4s, the Director must establish the terms and conditions necessary to meet the requirements of [§ 122.34](#) using one of the two permitting approaches in paragraph (d)(1) or (2) of this section. The Director must indicate in the permit or fact sheet which approach is being used.

(1) Comprehensive general permit. The Director includes all required permit terms and conditions in the general permit; or

(2) Two-step general permit. The Director includes required permit terms and conditions in the general permit applicable to all eligible small MS4s and, during the process of authorizing small MS4s to discharge, establishes additional terms and conditions not included in the general permit to satisfy one or more of the permit requirements in [§ 122.34](#) for individual small MS4 operators.

(i) The general permit must require that any small MS4 operator seeking authorization to discharge under the general permit submit a Notice of Intent (NOI) consistent with [§ 122.33\(b\)\(1\)\(ii\)](#).

(ii) The Director must review the NOI submitted by the small MS4 operator to determine whether the information in the NOI is complete and to establish the additional terms and conditions necessary to meet the requirements of [§ 122.34](#). The Director may require the small MS4 operator to submit additional information. If the Director makes a preliminary

decision to authorize the small MS4 operator to discharge under the general permit, the Director must give the public notice of and opportunity to comment and request a public hearing on its proposed authorization and the NOI, the proposed additional terms and conditions, and the basis for these additional requirements. The public notice, the process for submitting public comments and hearing requests, and the hearing process if a request for a hearing is granted, must follow the procedures applicable to draft permits set forth in §§ 124.10 through 124.13 (excluding § 124.10(c)(2)). The Director must respond to significant comments received during the comment period as provided in § 124.17.

(iii) Upon authorization for the MS4 to discharge under the general permit, the final additional terms and conditions applicable to the MS4 operator become effective. The Director must notify the permittee and inform the public of the decision to authorize the MS4 to discharge under the general permit and of the final additional terms and conditions specific to the MS4.

[40 CFR § 122.33](#)

3. Revise [§ 122.33](#) to read as follows:

[40 CFR § 122.33](#)

[§ 122.33](#) Requirements for obtaining permit coverage for regulated small MS4s.

(a) The operator of any regulated small MS4 under [§ 122.32](#) must seek coverage under an NPDES permit issued by the applicable NPDES permitting authority. If the small MS4 is located in an NPDES authorized State, Tribe, or Territory, then that State, Tribe, or Territory is the NPDES permitting authority. Otherwise, the NPDES permitting authority is the EPA Regional Office for the Region where the small MS4 is located.

(b) The operator of any regulated small MS4 must seek authorization to discharge under a general or individual NPDES permit, as follows:

(1) General permit. (i) If seeking coverage under a general permit issued by the NPDES permitting authority in accordance with [§ 122.28\(d\)\(1\)](#), the small MS4 operator must submit a Notice of Intent (NOI) to the NPDES permitting authority consistent with [§ 122.28\(b\)\(2\)](#). The small MS4 operator may file its own NOI, or the small MS4 operator and other municipalities or governmental entities may jointly submit an NOI. If the small MS4 operator wants to share responsibilities for meeting the minimum measures with other municipalities or governmental entities, the small MS4 operator must submit an NOI that describes which minimum measures it will implement and identify the entities that will implement the other minimum measures within the area served by the MS4. The general permit will explain any other steps necessary to obtain permit authorization.

***89349** (ii) If seeking coverage under a general permit issued by the NPDES permitting authority in accordance with [§ 122.28\(d\)\(2\)](#), the small MS4 operator must submit an NOI to the Director consisting of the minimum required information in [§ 122.28\(b\)\(2\)\(ii\)](#), and any other information the Director identifies as necessary to establish additional terms and conditions that satisfy the permit requirements of [§ 122.34](#), such as the information required under [§ 122.33\(b\)\(2\)\(i\)](#). The general permit will explain any other steps necessary to obtain permit authorization.

(2) Individual permit. (i) If seeking authorization to discharge under an individual permit to implement a program under [§ 122.34](#), the small MS4 operator must submit an application to the appropriate NPDES permitting authority that includes the information required under [§ 122.21\(f\)](#) and the following:

(A) The best management practices (BMPs) that the small MS4 operator or another entity proposes to implement for each of the storm water minimum control measures described in [§ 122.34\(b\)\(1\)](#) through (6);

(B) The proposed measurable goals for each of the BMPs including, as appropriate, the months and years in which the small MS4 operator proposes to undertake required actions, including interim milestones and the frequency of the action;

(C) The person or persons responsible for implementing or coordinating the storm water management program;

(D) An estimate of square mileage served by the small MS4;

(E) Any additional information that the NPDES permitting authority requests; and

(F) A storm sewer map that satisfies the requirement of § 122.34(b)(3)(i) satisfies the map requirement in § 122.21(f)(7).

(ii) If seeking authorization to discharge under an individual permit to implement a program that is different from the program under § 122.34, the small MS4 operator must comply with the permit application requirements in § 122.26(d). The small MS4 operator must submit both parts of the application requirements in § 122.26(d)(1) and (2). The small MS4 operator must submit the application at least 180 days before the expiration of the small MS4 operator's existing permit. Information required by § 122.26(d)(1)(ii) and (d)(2) regarding its legal authority is not required, unless the small MS4 operator intends for the permit writer to take such information into account when developing other permit conditions.

(iii) If allowed by your NPDES permitting authority, the small MS4 operator and another regulated entity may jointly apply under either paragraph (b)(2)(i) or (ii) of this section to be co-permittees under an individual permit.

(3) Co-permittee alternative. If the regulated small MS4 is in the same urbanized area as a medium or large MS4 with an NPDES storm water permit and that other MS4 is willing to have the small MS4 operator participate in its storm water program, the parties may jointly seek a modification of the other MS4 permit to include the small MS4 operator as a limited co-permittee. As a limited co-permittee, the small MS4 operator will be responsible for compliance with the permit's conditions applicable to its jurisdiction. If the small MS4 operator chooses this option it must comply with the permit application requirements of § 122.26, rather than the requirements of § 122.33(b)(2)(i). The small MS4 operator does not need to comply with the specific application requirements of § 122.26(d)(1)(iii) and (iv) and (d)(2)(iii) (discharge characterization). The small MS4 operator may satisfy the requirements in § 122.26 (d)(1)(v) and (d)(2)(iv) (identification of a management program) by referring to the other MS4's storm water management program.

(4) Guidance for paragraph (b)(3) of this section. In referencing the other MS4 operator's storm water management program, the small MS4 operator should briefly describe how the existing program will address discharges from the small MS4 or would need to be supplemented in order to adequately address the discharges. The small MS4 operator should also explain its role in coordinating storm water pollutant control activities in the MS4, and detail the resources available to the small MS4 operator to accomplish the program.

(c) If the regulated small MS4 is designated under § 122.32(a)(2), the small MS4 operator must apply for coverage under an NPDES permit, or apply for a modification of an existing NPDES permit under paragraph (b)(3) of this section, within 180 days of notice of such designation, unless the NPDES permitting authority grants a later date.

[40 CFR § 122.34](#)

4. Revise [§ 122.34](#) to read as follows:

[40 CFR § 122.34](#)

§ 122.34 Permit requirements for regulated small MS4 permits.

(a) General requirements. For any permit issued to a regulated small MS4, the NPDES permitting authority must include permit terms and conditions to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP), to protect water quality, and to satisfy the appropriate water quality requirements of the Clean Water Act. Terms and conditions that satisfy the requirements of this section must be expressed in clear, specific, and measurable terms. Such terms and conditions may include narrative, numeric, or other types of requirements (e.g., implementation of specific tasks or best management practices (BMPs), BMP design requirements, performance requirements, adaptive management requirements, schedules for implementation and maintenance, and frequency of actions).

(1) For permits providing coverage to any small MS4s for the first time, the NPDES permitting authority may specify a time period of up to 5 years from the date of permit issuance for the permittee to fully comply with the conditions of the permit and to implement necessary BMPs.

(2) For each successive permit, the NPDES permitting authority must include terms and conditions that meet the requirements of this section based on its evaluation of the current permit requirements, record of permittee compliance and program implementation progress, current water quality conditions, and other relevant information.

(b) Minimum control measures. The permit must include requirements that ensure the permittee implements, or continues to implement, the minimum control measures in paragraphs (b)(1) through (6) of this section during the permit term. The permit must also require a written storm water management program document or documents that, at a minimum, describes in detail how the permittee intends to comply with the permit's requirements for each minimum control measure.

(1) Public education and outreach on storm water impacts. (i) The permit must identify the minimum elements and require implementation of a public education program to distribute educational materials to the community or conduct equivalent outreach activities about the impacts of storm water discharges on water bodies and the steps that the public can take to reduce pollutants in storm water runoff.

(ii) Guidance for NPDES permitting authorities and regulated small MS4s: The permittee may use storm water educational materials provided by the State, Tribe, EPA, environmental, public interest or trade organizations, or other MS4s. The public education program ***89350** should inform individuals and households about the steps they can take to reduce storm water pollution, such as ensuring proper septic system maintenance, ensuring the proper use and disposal of landscape and garden chemicals including fertilizers and pesticides, protecting and restoring riparian vegetation, and properly disposing of used motor oil or household hazardous wastes. EPA recommends that the program inform individuals and groups how to become involved in local stream and beach restoration activities as well as activities that are coordinated by youth service and conservation corps or other citizen groups. EPA recommends that the permit require the permittee to tailor the public education program, using a mix of locally appropriate strategies, to target specific audiences and communities. Examples of strategies include distributing brochures or fact sheets, sponsoring speaking engagements before community groups, providing public service announcements, implementing educational programs targeted at school age children, and conducting community-based projects such as storm drain stenciling, and watershed and beach cleanups. In addition, EPA recommends that the permit require that some of the materials or outreach programs be directed toward targeted groups of commercial, industrial, and institutional entities likely to have significant storm water impacts. For example, providing information to restaurants on the impact of grease clogging storm drains and to garages on the impact of oil discharges. The permit should encourage the permittee to tailor the outreach program to address the viewpoints and concerns of all communities, particularly minority and disadvantaged communities, as well as any special concerns relating to children.

(2) Public involvement/participation. (i) The permit must identify the minimum elements and require implementation of a public involvement/participation program that complies with State, Tribal, and local public notice requirements.

(ii) Guidance for NPDES permitting authorities and regulated small MS4s: EPA recommends that the permit include provisions addressing the need for the public to be included in developing, implementing, and reviewing the storm water management program and that the public participation process should make efforts to reach out and engage all economic and ethnic groups. Opportunities for members of the public to participate in program development and implementation include serving as citizen representatives on a local storm water management panel, attending public hearings, working as citizen volunteers to educate other individuals about the program, assisting in program coordination with other pre-existing programs, or participating in volunteer monitoring efforts. (Citizens should obtain approval where necessary for lawful access to monitoring sites.)

(3) Illicit discharge detection and elimination. (i) The permit must identify the minimum elements and require the development, implementation, and enforcement of a program to detect and eliminate illicit discharges (as defined at § 122.26(b)(2)) into the small MS4. At a minimum, the permit must require the permittee to:

(A) Develop, if not already completed, a storm sewer system map, showing the location of all outfalls and the names and location of all waters of the United States that receive discharges from those outfalls;

(B) To the extent allowable under State, Tribal or local law, effectively prohibit, through ordinance, or other regulatory mechanism, non-storm water discharges into the storm sewer system and implement appropriate enforcement procedures and actions;

(C) Develop and implement a plan to detect and address non-storm water discharges, including illegal dumping, to the system; and

(D) Inform public employees, businesses, and the general public of hazards associated with illegal discharges and improper disposal of waste.

(ii) The permit must also require the permittee to address the following categories of non-storm water discharges or flows (i.e., illicit discharges) only if the permittee identifies them as a significant contributor of pollutants to the small MS4: Water line flushing, landscape irrigation, diverted stream flows, rising ground waters, uncontaminated ground water infiltration (as defined at [40 CFR 35.2005\(b\)\(20\)](#)), uncontaminated pumped ground water, discharges from potable water sources, foundation drains, air conditioning condensation, irrigation water, springs, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, flows from riparian habitats and wetlands, dechlorinated swimming pool discharges, and street wash water (discharges or flows from firefighting activities are excluded from the effective prohibition against non-storm water and need only be addressed where they are identified as significant sources of pollutants to waters of the United States).

(iii) Guidance for NPDES permitting authorities and regulated small MS4s: EPA recommends that the permit require the plan to detect and address illicit discharges include the following four components: Procedures for locating priority areas likely to have illicit discharges; procedures for tracing the source of an illicit discharge; procedures for removing the source of the discharge; and procedures for program evaluation and assessment. EPA recommends that the permit require the permittee to visually screen outfalls during dry weather and conduct field tests of selected pollutants as part of the procedures for locating priority areas. Illicit discharge education actions may include storm drain stenciling, a program to promote, publicize, and facilitate public reporting of illicit connections or discharges, and distribution of outreach materials.

(4) Construction site storm water runoff control. (i) The permit must identify the minimum elements and require the development, implementation, and enforcement of a program to reduce pollutants in any storm water runoff to the small MS4 from construction activities that result in a land disturbance of greater than or equal to one acre. Reduction of storm water discharges from construction activity disturbing less than one acre must be included in the program if that construction activity is part of a larger common plan of development or sale that would disturb one acre or more. If the Director waives requirements for storm water discharges associated with small construction activity in accordance with § 122.26(b)(15)(i), the permittee is not required to develop, implement, and/or enforce a program to reduce pollutant discharges from such sites. At a minimum, the permit must require the permittee to develop and implement:

(A) An ordinance or other regulatory mechanism to require erosion and sediment controls, as well as sanctions to ensure compliance, to the extent allowable under State, Tribal, or local law;

(B) Requirements for construction site operators to implement appropriate erosion and sediment control best management practices;

(C) Requirements for construction site operators to control waste such as discarded building materials, concrete truck washout, chemicals, litter, and sanitary waste at the construction site that may cause adverse impacts to water quality;

***89351** (D) Procedures for site plan review which incorporate consideration of potential water quality impacts;

(E) Procedures for receipt and consideration of information submitted by the public, and

(F) Procedures for site inspection and enforcement of control measures.

(ii) Guidance for NPDES permitting authorities and regulated small MS4s: Examples of sanctions to ensure compliance include non-monetary penalties, fines, bonding requirements and/or permit denials for non-compliance. EPA recommends that the procedures for site plan review include the review of individual pre-construction site plans to ensure consistency with local sediment and erosion control requirements. Procedures for site inspections and enforcement of control measures could include steps to identify priority sites for inspection and enforcement based on the nature of the construction activity, topography, and the characteristics of soils and receiving water quality. EPA also recommends that the permit require the permittee to provide appropriate educational and training measures for construction site operators, and require storm water pollution prevention plans for construction sites within the MS4's jurisdiction that discharge into the system. See § 122.44(s) (NPDES permitting authorities' option to incorporate qualifying State, Tribal and local erosion and sediment control programs into NPDES permits for storm water discharges from construction sites). Also see § 122.35(b) (The NPDES permitting authority may recognize that another government entity, including the NPDES permitting authority, may be responsible for implementing one or more of the minimum measures on the permittee's behalf).

(5) Post-construction storm water management in new development and redevelopment. (i) The permit must identify the minimum elements and require the development, implementation, and enforcement of a program to address storm water runoff from new development and redevelopment projects that disturb greater than or equal to one acre, including projects less than one acre that are part of a larger common plan of development or sale, that discharge into the small MS4. The permit must ensure that controls are in place that would prevent or minimize water quality impacts. At a minimum, the permit must require the permittee to:

(A) Develop and implement strategies which include a combination of structural and/or non-structural best management practices (BMPs) appropriate for the community;

(B) Use an ordinance or other regulatory mechanism to address post-construction runoff from new development and redevelopment projects to the extent allowable under State, Tribal or local law; and

(C) Ensure adequate long-term operation and maintenance of BMPs.

(ii) Guidance for NPDES permitting authorities and regulated small MS4s: If water quality impacts are considered from the beginning stages of a project, new development and potentially redevelopment provide more opportunities for water quality protection. EPA recommends that the permit ensure that BMPs included in the program: Be appropriate for the local community; minimize water quality impacts; and attempt to maintain pre-development runoff conditions. EPA encourages the permittee to participate in locally-based watershed planning efforts which attempt to involve a diverse group of stakeholders including interested citizens. When developing a program that is consistent with this measure's intent, EPA recommends that the permit require the permittee to adopt a planning process that identifies the municipality's program goals (e.g., minimize water quality impacts resulting from post-construction runoff from

new development and redevelopment), implementation strategies (e.g., adopt a combination of structural and/or non-structural BMPs), operation and maintenance policies and procedures, and enforcement procedures. In developing the program, the permit should also require the permittee to assess existing ordinances, policies, programs and studies that address storm water runoff quality. In addition to assessing these existing documents and programs, the permit should require the permittee to provide opportunities to the public to participate in the development of the program. Non-structural BMPs are preventative actions that involve management and source controls such as: Policies and ordinances that provide requirements and standards to direct growth to identified areas, protect sensitive areas such as wetlands and riparian areas, maintain and/or increase open space (including a dedicated funding source for open space acquisition), provide buffers along sensitive water bodies, minimize impervious surfaces, and minimize disturbance of soils and vegetation; policies or ordinances that encourage infill development in higher density urban areas, and areas with existing infrastructure; education programs for developers and the public about project designs that minimize water quality impacts; and measures such as minimization of percent impervious area after development and minimization of directly connected impervious areas. Structural BMPs include: Storage practices such as wet ponds and extended-detention outlet structures; filtration practices such as grassed swales, sand filters and filter strips; and infiltration practices such as infiltration basins and infiltration trenches. EPA recommends that the permit ensure the appropriate implementation of the structural BMPs by considering some or all of the following: Pre-construction review of BMP designs; inspections during construction to verify BMPs are built as designed; post-construction inspection and maintenance of BMPs; and penalty provisions for the noncompliance with design, construction or operation and maintenance. Storm water technologies are constantly being improved, and EPA recommends that the permit requirements be responsive to these changes, developments or improvements in control technologies.

(6) Pollution prevention/good housekeeping for municipal operations. (i) The permit must identify the minimum elements and require the development and implementation of an operation and maintenance program that includes a training component and has the ultimate goal of preventing or reducing pollutant runoff from municipal operations. Using training materials that are available from EPA, the State, Tribe, or other organizations, the program must include employee training to prevent and reduce storm water pollution from activities such as park and open space maintenance, fleet and building maintenance, new construction and land disturbances, and storm water system maintenance.

(ii) Guidance for NPDES permitting authorities and regulated small MS4s: EPA recommends that the permit address the following: Maintenance activities, maintenance schedules, and long-term inspection procedures for structural and non-structural storm water controls to reduce floatables and other pollutants discharged from the separate storm sewers; controls for reducing or eliminating the discharge of pollutants from streets, roads, highways, municipal parking lots, maintenance and storage yards, fleet or maintenance shops with outdoor storage areas, salt/sand storage locations and snow disposal areas operated by the permittee, and waste transfer stations; procedures for properly disposing of waste removed from the separate storm ***89352** sewers and areas listed above (such as dredge spoil, accumulated sediments, floatables, and other debris); and ways to ensure that new flood management projects assess the impacts on water quality and examine existing projects for incorporating additional water quality protection devices or practices. Operation and maintenance should be an integral component of all storm water management programs. This measure is intended to improve the efficiency of these programs and require new programs where necessary. Properly developed and implemented operation and maintenance programs reduce the risk of water quality problems.

(c) Other applicable requirements. As appropriate, the permit will include:

(1) More stringent terms and conditions, including permit requirements that modify, or are in addition to, the minimum control measures based on an approved total maximum daily load (TMDL) or equivalent analysis, or where the Director determines such terms and conditions are needed to protect water quality.

(2) Other applicable NPDES permit requirements, standards and conditions established in the individual or general permit, developed consistent with the provisions of §§ 122.41 through 122.49.

(d) Evaluation and assessment requirements—(1) Evaluation. The permit must require the permittee to evaluate compliance with the terms and conditions of the permit, including the effectiveness of the components of its storm water management program, and the status of achieving the measurable requirements in the permit.

Note to paragraph (d)(1): The NPDES permitting authority may determine monitoring requirements for the permittee in accordance with State/Tribal monitoring plans appropriate to the watershed. Participation in a group monitoring program is encouraged.

(2) Recordkeeping. The permit must require that the permittee keep records required by the NPDES permit for at least 3 years and submit such records to the NPDES permitting authority when specifically asked to do so. The permit must require the permittee to make records, including a written description of the storm water management program, available to the public at reasonable times during regular business hours (see § 122.7 for confidentiality provision). (The permittee may assess a reasonable charge for copying. The permit may allow the permittee to require a member of the public to provide advance notice.)

(3) Reporting. Unless the permittee is relying on another entity to satisfy its NPDES permit obligations under § 122.35(a), the permittee must submit annual reports to the NPDES permitting authority for its first permit term. For subsequent permit terms, the permittee must submit reports in year two and four unless the NPDES permitting authority requires more frequent reports. As of December 21, 2020 all reports submitted in compliance with this section must be submitted electronically by the owner, operator, or the duly authorized representative of the small MS4 to the NPDES permitting authority or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, the owner, operator, or the duly authorized representative of the small MS4 may be required to report electronically if specified by a particular permit or if required to do so by state law. The report must include:

- (i) The status of compliance with permit terms and conditions;
- (ii) Results of information collected and analyzed, including monitoring data, if any, during the reporting period;
- (iii) A summary of the storm water activities the permittee proposes to undertake to comply with the permit during the next reporting cycle;
- (iv) Any changes made during the reporting period to the permittee's storm water management program; and
- (v) Notice that the permittee is relying on another governmental entity to satisfy some of the permit obligations (if applicable), consistent with § 122.35(a).

(e) Qualifying local program. If an existing qualifying local program requires the permittee to implement one or more of the minimum control measures of paragraph (b) of this section, the NPDES permitting authority may include conditions in the NPDES permit that direct the permittee to follow that qualifying program's requirements rather than the requirements of paragraph (b). A qualifying local program is a local, State or Tribal municipal storm water management program that imposes, at a minimum, the relevant requirements of paragraph (b).

[40 CFR § 122.35](#)

5. Amend § 122.35 by revising the section heading and paragraph (a) to read as follows:

[40 CFR § 122.35](#)

§ 122.35 May the operator of a regulated small MS4 share the responsibility to implement the minimum control measures with other entities?

(a) The permittee may rely on another entity to satisfy its NPDES permit obligations to implement a minimum control measure if:

(1) The other entity, in fact, implements the control measure;

(2) The particular control measure, or component thereof, is at least as stringent as the corresponding NPDES permit requirement; and

(3) The other entity agrees to implement the control measure on the permittee's behalf. In the reports, the permittee must submit under § 122.34(d)(3), the permittee must also specify that it is relying on another entity to satisfy some of the permit obligations. If the permittee is relying on another governmental entity regulated under section 122 to satisfy all of the permit obligations, including the obligation to file periodic reports required by § 122.34(d)(3), the permittee must note that fact in its NOI, but the permittee is not required to file the periodic reports. The permittee remains responsible for compliance with the permit obligations if the other entity fails to implement the control measure (or component thereof). Therefore, EPA encourages the permittee to enter into a legally binding agreement with that entity if the permittee wants to minimize any uncertainty about compliance with the permit.

West's Ann.Cal.Const. Art. 13B, § 6

§ 6. New programs or services mandated by Legislature or state agencies; subvention; appropriation of funds or suspension of operation

Effective: June 4, 2014

[Currentness](#)

SEC. 6. (a) Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service, except that the Legislature may, but need not, provide a subvention of funds for the following mandates:

- (1) Legislative mandates requested by the local agency affected.
- (2) Legislation defining a new crime or changing an existing definition of a crime.
- (3) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.
- (4) Legislative mandates contained in statutes within the scope of paragraph (7) of [subdivision \(b\) of Section 3 of Article I](#).

(b)(1) Except as provided in paragraph (2), for the 2005-06 fiscal year and every subsequent fiscal year, for a mandate for which the costs of a local government claimant have been determined in a preceding fiscal year to be payable by the State pursuant to law, the Legislature shall either appropriate, in the annual Budget Act, the full payable amount that has not been previously paid, or suspend the operation of the mandate for the fiscal year for which the annual Budget Act is applicable in a manner prescribed by law.

(2) Payable claims for costs incurred prior to the 2004-05 fiscal year that have not been paid prior to the 2005-06 fiscal year may be paid over a term of years, as prescribed by law.

(3) Ad valorem property tax revenues shall not be used to reimburse a local government for the costs of a new program or higher level of service.

(4) This subdivision applies to a mandate only as it affects a city, county, city and county, or special district.

(5) This subdivision shall not apply to a requirement to provide or recognize any procedural or substantive protection, right, benefit, or employment status of any local government employee or retiree, or of any local government employee organization, that arises from, affects, or directly relates to future, current, or past local government employment and that constitutes a mandate subject to this section.

(c) A mandated new program or higher level of service includes a transfer by the Legislature from the State to cities, counties, cities and counties, or special districts of complete or partial financial responsibility for a required program for which the State previously had complete or partial financial responsibility.

[Article XIII C. \[Voter Approval for Local Tax Levies\] \(Refs & Annos\)](#)

West's Ann.Cal.Const. Art. 13C, § 1

§ 1. Definitions

Effective: November 3, 2010

[Currentness](#)

SECTION 1. Definitions. As used in this article:

- (a) “General tax” means any tax imposed for general governmental purposes.
- (b) “Local government” means any county, city, city and county, including a charter city or county, any special district, or any other local or regional governmental entity.
- (c) “Special district” means an agency of the State, formed pursuant to general law or a special act, for the local performance of governmental or proprietary functions with limited geographic boundaries including, but not limited to, school districts and redevelopment agencies.
- (d) “Special tax” means any tax imposed for specific purposes, including a tax imposed for specific purposes, which is placed into a general fund.
- (e) As used in this article, “tax” means any levy, charge, or exaction of any kind imposed by a local government, except the following:
 - (1) A charge imposed for a specific benefit conferred or privilege granted directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of conferring the benefit or granting the privilege.
 - (2) A charge imposed for a specific government service or product provided directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of providing the service or product.
 - (3) A charge imposed for the reasonable regulatory costs to a local government for issuing licenses and permits, performing investigations, inspections, and audits, enforcing agricultural marketing orders, and the administrative enforcement and adjudication thereof.

(4) A charge imposed for entrance to or use of local government property, or the purchase, rental, or lease of local government property.

(5) A fine, penalty, or other monetary charge imposed by the judicial branch of government or a local government, as a result of a violation of law.

(6) A charge imposed as a condition of property development.

(7) Assessments and property-related fees imposed in accordance with the provisions of Article XIII D.

The local government bears the burden of proving by a preponderance of the evidence that a levy, charge, or other exaction is not a tax, that the amount is no more than necessary to cover the reasonable costs of the governmental activity, and that the manner in which those costs are allocated to a payor bear a fair or reasonable relationship to the payor's burdens on, or benefits received from, the governmental activity.

Article XIIIID. [Assessment and Property Related Fee Reform] (Refs & Annos)

West's Ann.Cal.Const. Art. 13D, § 6

§ 6. New or existing increased fees and charges; procedures and requirements; voter approval

[Currentness](#)

Sec. 6. Property Related Fees and Charges. (a) Procedures for New or Increased Fees and Charges. An agency shall follow the procedures pursuant to this section in imposing or increasing any fee or charge as defined pursuant to this article, including, but not limited to, the following:

(1) The parcels upon which a fee or charge is proposed for imposition shall be identified. The amount of the fee or charge proposed to be imposed upon each parcel shall be calculated. The agency shall provide written notice by mail of the proposed fee or charge to the record owner of each identified parcel upon which the fee or charge is proposed for imposition, the amount of the fee or charge proposed to be imposed upon each, the basis upon which the amount of the proposed fee or charge was calculated, the reason for the fee or charge, together with the date, time, and location of a public hearing on the proposed fee or charge.

(2) The agency shall conduct a public hearing upon the proposed fee or charge not less than 45 days after mailing the notice of the proposed fee or charge to the record owners of each identified parcel upon which the fee or charge is proposed for imposition. At the public hearing, the agency shall consider all protests against the proposed fee or charge. If written protests against the proposed fee or charge are presented by a majority of owners of the identified parcels, the agency shall not impose the fee or charge.

(b) Requirements for Existing, New or Increased Fees and Charges. A fee or charge shall not be extended, imposed, or increased by any agency unless it meets all of the following requirements:

(1) Revenues derived from the fee or charge shall not exceed the funds required to provide the property related service.

(2) Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed.

(3) The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel.

(4) No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question. Fees or charges based on potential or future use of a service are not permitted. Standby charges, whether characterized as charges or assessments, shall be classified as assessments and shall not be imposed without compliance with [Section 4](#).

(5) No fee or charge may be imposed for general governmental services including, but not limited to, police, fire, ambulance or library services, where the service is available to the public at large in substantially the same manner as it is to property owners. Reliance by an agency on any parcel map, including, but not limited to, an assessor's parcel map, may be considered a significant factor in determining whether a fee or charge is imposed as an incident of property ownership for purposes of this article. In any legal action contesting the validity of a fee or charge, the burden shall be on the agency to demonstrate compliance with this article.

(c) Voter Approval for New or Increased Fees and Charges. Except for fees or charges for sewer, water, and refuse collection services, no property related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area. The election shall be conducted not less than 45 days after the public hearing. An agency may adopt procedures similar to those for increases in assessments in the conduct of elections under this subdivision.

(d) Beginning July 1, 1997, all fees or charges shall comply with this section.

Article 1. Commission Procedure (Refs & Annos)

West's Ann.Cal.Gov.Code § 17553

§ 17553. Procedures for receiving and hearing claims; filing of test claims; form and contents; incomplete test claims; determination of complete incorrect reduction claim

Effective: January 1, 2008

[Currentness](#)

(a) The commission shall adopt procedures for receiving claims filed pursuant to this article and [Section 17574](#) and for providing a hearing on those claims. The procedures shall do all of the following:

(1) Provide for presentation of evidence by the claimant, the Department of Finance, and any other affected department or agency, and any other interested person.

(2) Ensure that a statewide cost estimate is adopted within 12 months after receipt of a test claim, when a determination is made by the commission that a mandate exists. This deadline may be extended for up to six months upon the request of either the claimant or the commission.

(3) Permit the hearing of a claim to be postponed at the request of the claimant, without prejudice, until the next scheduled hearing.

(b) All test claims shall be filed on a form prescribed by the commission and shall contain at least the following elements and documents:

(1) A written narrative that identifies the specific sections of statutes or executive orders and the effective date and register number of regulations alleged to contain a mandate and shall include all of the following:

(A) A detailed description of the new activities and costs that arise from the mandate.

(B) A detailed description of existing activities and costs that are modified by the mandate.

(C) The actual increased costs incurred by the claimant during the fiscal year for which the claim was filed to implement the alleged mandate.

(D) The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.

(E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.

(F) Identification of all of the following:

(i) Dedicated state funds appropriated for this program.

(ii) Dedicated federal funds appropriated for this program.

(iii) Other nonlocal agency funds dedicated for this program.

(iv) The local agency's general purpose funds for this program.

(v) Fee authority to offset the costs of this program.

(G) Identification of prior mandate determinations made by the Commission on State Mandates or a predecessor agency that may be related to the alleged mandate.

(H) Identification of a legislatively determined mandate pursuant to [Section 17573](#) that is on the same statute or executive order.

(2) The written narrative shall be supported with declarations under penalty of perjury, based on the declarant's personal knowledge, information, or belief, and signed by persons who are authorized and competent to do so, as follows:

(A) Declarations of actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate.

(B) Declarations identifying all local, state, or federal funds, or fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs.

(C) Declarations describing new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program. Specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program.

(D) If applicable, declarations describing the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to [Section 17573](#), and the authority to file a test claim pursuant to [paragraph \(1\) of subdivision \(c\) of Section 17574](#).

(3)(A) The written narrative shall be supported with copies of all of the following:

(i) The test claim statute that includes the bill number or executive order, alleged to impose or impact a mandate.

(ii) Relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate.

(iii) Administrative decisions and court decisions cited in the narrative.

(B) State mandate determinations made by the Commission on State Mandates or a predecessor agency and published court decisions on state mandate determinations made by the Commission on State Mandates are exempt from this requirement.

(4) A test claim shall be signed at the end of the document, under penalty of perjury by the claimant or its authorized representative, with the declaration that the test claim is true and complete to the best of the declarant's personal knowledge, information, or belief. The date of signing, the declarant's title, address, telephone number, facsimile machine telephone number, and electronic mail address shall be included.

(c) If a completed test claim is not received by the commission within 30 calendar days from the date that an incomplete test claim was returned by the commission, the original test claim filing date may be disallowed, and a new test claim may be accepted on the same statute or executive order.

(d) In addition, the commission shall determine whether an incorrect reduction claim is complete within 10 days after the date that the incorrect reduction claim is filed. If the commission determines that an incorrect reduction claim is not complete, the commission shall notify the local agency and school district that filed the claim stating the reasons that the claim is not complete. The local agency or school district shall have 30 days to complete the claim. The commission shall serve a copy of the complete incorrect reduction claim on the Controller. The Controller shall have no more than 90 days after the date the claim is delivered or mailed to file any rebuttal to an incorrect reduction claim. The failure of the Controller to file a rebuttal to an incorrect reduction claim shall not serve to delay the consideration of the claim by the commission.

[Chapter 4. Identification and Payment of Costs Mandated by the State \(Refs & Annos\)](#)

[Article 1. Commission Procedure \(Refs & Annos\)](#)

West's Ann.Cal.Gov.Code § 17556

§ 17556. Findings; costs not mandated upon certain conditions

Effective: October 19, 2010

[Currentness](#)

The commission shall not find costs mandated by the state, as defined in [Section 17514](#), in any claim submitted by a local agency or school district, if, after a hearing, the commission finds any one of the following:

- (a) The claim is submitted by a local agency or school district that requests or previously requested legislative authority for that local agency or school district to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority. A resolution from the governing body or a letter from a delegated representative of the governing body of a local agency or school district that requests authorization for that local agency or school district to implement a given program shall constitute a request within the meaning of this subdivision. This subdivision applies regardless of whether the resolution from the governing body or a letter from a delegated representative of the governing body was adopted or sent prior to or after the date on which the statute or executive order was enacted or issued.
- (b) The statute or executive order affirmed for the state a mandate that has been declared existing law or regulation by action of the courts. This subdivision applies regardless of whether the action of the courts occurred prior to or after the date on which the statute or executive order was enacted or issued.
- (c) The statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation. This subdivision applies regardless of whether the federal law or regulation was enacted or adopted prior to or after the date on which the state statute or executive order was enacted or issued.
- (d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service. This subdivision applies regardless of whether the authority to levy charges, fees, or assessments was enacted or adopted prior to or after the date on which the statute or executive order was enacted or issued.

(e) The statute, executive order, or an appropriation in a Budget Act or other bill provides for offsetting savings to local agencies or school districts that result in no net costs to the local agencies or school districts, or includes additional revenue that was specifically intended to fund the costs of the state mandate in an amount sufficient to fund the cost of the state mandate. This subdivision applies regardless of whether a statute, executive order, or appropriation in the Budget Act or other bill that either provides for offsetting savings that result in no net costs or provides for additional revenue specifically intended to fund the costs of the state mandate in an amount sufficient to fund the cost of the state mandate was enacted or adopted prior to or after the date on which the statute or executive order was enacted or issued.

(f) The statute or executive order imposes duties that are necessary to implement, or are expressly included in, a ballot measure approved by the voters in a statewide or local election. This subdivision applies regardless of whether the statute or executive order was enacted or adopted before or after the date on which the ballot measure was approved by the voters.

(g) The statute created a new crime or infraction, eliminated a crime or infraction, or changed the penalty for a crime or infraction, but only for that portion of the statute relating directly to the enforcement of the crime or infraction.

Article 4.6. Proposition 218 Omnibus Implementation Act (Refs & Annos)

West's Ann.Cal.Gov.Code § 53750

§ 53750. Definitions

Effective: January 1, 2018

[Currentness](#)

For purposes of Article XIII C and Article XIII D of the California Constitution and this article, the following words have the following meanings, and shall be read and interpreted in light of the findings and declarations contained in [Section 53751](#):

- (a) “Agency” means any local government as defined in [subdivision \(b\) of Section 1 of Article XIII C of the California Constitution](#).
- (b) “Assessment” means any levy or charge by an agency upon real property that is based upon the special benefit conferred upon the real property by a public improvement or service, that is imposed to pay the capital cost of the public improvement, the maintenance and operation expenses of the public improvement, or the cost of the service being provided. “Assessment” includes, but is not limited to, “special assessment,” “benefit assessment,” “maintenance assessment,” and “special assessment tax.”
- (c) “District” means an area that is determined by an agency to contain all of the parcels that will receive a special benefit from a proposed public improvement or service.
- (d) “Drainage system” means any system of public improvements that is intended to provide for erosion control, for landslide abatement, or for other types of water drainage.
- (e) “Extended,” when applied to an existing tax or fee or charge, means a decision by an agency to extend the stated effective period for the tax or fee or charge, including, but not limited to, amendment or removal of a sunset provision or expiration date.
- (f) “Flood control” means any system of public improvements that is intended to protect property from overflow by water.

(g) “Identified parcel” means a parcel of real property that an agency has identified as having a special benefit conferred upon it and upon which a proposed assessment is to be imposed, or a parcel of real property upon which a proposed property-related fee or charge is proposed to be imposed.

(h)(1) “Increased,” when applied to a tax, assessment, or property-related fee or charge, means a decision by an agency that does either of the following:

(A) Increases any applicable rate used to calculate the tax, assessment, fee, or charge.

(B) Revises the methodology by which the tax, assessment, fee, or charge is calculated, if that revision results in an increased amount being levied on any person or parcel.

(2) A tax, fee, or charge is not deemed to be “increased” by an agency action that does either or both of the following:

(A) Adjusts the amount of a tax, fee, or charge in accordance with a schedule of adjustments, including a clearly defined formula for inflation adjustment that was adopted by the agency prior to November 6, 1996.

(B) Implements or collects a previously approved tax, fee, or charge, so long as the rate is not increased beyond the level previously approved by the agency, and the methodology previously approved by the agency is not revised so as to result in an increase in the amount being levied on any person or parcel.

(3) A tax, assessment, fee, or charge is not deemed to be “increased” in the case in which the actual payments from a person or property are higher than would have resulted when the agency approved the tax, assessment, fee, or charge, if those higher payments are attributable to events other than an increased rate or revised methodology, such as a change in the density, intensity, or nature of the use of land.

(i) “Notice by mail” means any notice required by Article XIII C or XIII D of the California Constitution that is accomplished through a mailing, postage prepaid, deposited in the United States Postal Service and is deemed given when so deposited. Notice by mail may be included in any other mailing to the record owner that otherwise complies with Article XIII C or XIII D of the California Constitution and this article, including, but not limited to, the mailing of a bill for the collection of an assessment or a property-related fee or charge.

(j) “Record owner” means the owner of a parcel whose name and address appears on the last equalized secured property tax assessment roll, or in the case of any public entity, the State of California, or the United States, means the representative of that public entity at the address of that entity known to the agency.

(k) “Sewer” includes systems, all real estate, fixtures, and personal property owned, controlled, operated, or managed in connection with or to facilitate sewage collection, treatment, or disposition for sanitary or drainage purposes, including lateral and connecting sewers, interceptors, trunk and outfall lines, sanitary sewage treatment or disposal plants or works, drains, conduits, outlets for surface or storm waters, and any and all other works, property, or structures necessary or

convenient for the collection or disposal of sewage, industrial waste, or surface or storm waters. “Sewer system” shall not include a sewer system that merely collects sewage on the property of a single owner.

(l) “Registered professional engineer” means an engineer registered pursuant to the Professional Engineers Act (Chapter 7 (commencing with [Section 6700](#)) of Division 3 of the Business and Professions Code).

(m) “Vector control” means any system of public improvements or services that is intended to provide for the surveillance, prevention, abatement, and control of vectors as defined in [subdivision \(k\) of Section 2002 of the Health and Safety Code](#) and a pest as defined in [Section 5006 of the Food and Agricultural Code](#).

(n) “Water” means any system of public improvements intended to provide for the production, storage, supply, treatment, or distribution of water from any source.

Chapter 4. Financial Affairs (Refs & Annos)
Article 4.6. Proposition 218 Omnibus Implementation Act (Refs & Annos)

West's Ann.Cal.Gov.Code § 53751

§ 53751. Legislative findings and declarations relating to sewers

Effective: January 1, 2018

[Currentness](#)

The Legislature finds and declares all of the following:

- (a) The ongoing, historic drought has made clear that California must invest in a 21st century water management system capable of effectively meeting the economic, social, and environmental needs of the state.
- (b) Sufficient and reliable funding to pay for local water projects is necessary to improve the state's water infrastructure.
- (c) Proposition 218 was approved by the voters at the November 5, 1996, statewide general election. Some court interpretations of the law have constrained important tools that local governments need to manage storm water and drainage runoff.
- (d) Storm waters are carried off in storm sewers, and careful management is necessary to ensure adequate state water supplies, especially during drought, and to reduce pollution. But a court decision has found storm water subject to the voter-approval provisions of Proposition 218 that apply to property-related fees, preventing many important projects from being built.
- (e) The court of appeal in [Howard Jarvis Taxpayers Ass'n v. City of Salinas \(2002\) 98 Cal.App.4th 1351](#) concluded that the term “sewer,” as used in Proposition 218, is “ambiguous” and declined to use the statutory definition of the term “sewer system,” which was part of the then-existing law as [Section 230.5 of the Public Utilities Code](#).
- (f) The court in [Howard Jarvis Taxpayers Ass'n v. City of Salinas \(2002\) 98 Cal.App.4th 1351](#) failed to follow long-standing principles of statutory construction by disregarding the plain meaning of the term “sewer.” Courts have long held that statutory construction rules apply to initiative measures, including in cases that apply specifically to Proposition 218 (see [People v. Bustamante \(1997\) 57 Cal.App.4th 693](#); [Keller v. Chowchilla Water Dist. \(2000\) 80 Cal.App.4th 1006](#)). When construing statutes, courts look first to the words of the statute, which should be given their usual, ordinary, and commonsense meaning ([People v. Mejia \(2012\) 211 Cal.App.4th 586, 611](#)). The purpose of utilizing the plain meaning of statutory language is to spare the courts the necessity of trying to divine the voters' intent by resorting to secondary or subjective indicators. The court in [Howard Jarvis Taxpayers Ass'n v. City of Salinas \(2002\) 98 Cal.App.4th 1351](#) asserted its belief as to what most voters thought when voting for Proposition 218, but did not cite the voter pamphlet or other

accepted sources for determining legislative intent. Instead, the court substituted its own judgment for the judgment of voters.

(g) Neither the words “sanitary” nor “sewerage” are used in Proposition 218, and the common meaning of the term “sewer services” is not “sanitary sewerage.” In fact, the phrase “sanitary sewerage” is uncommon.

(h) Proposition 218 exempts sewer and water services from the voter-approval requirement. Sewer and water services are commonly considered to have a broad reach, encompassing the provision of clean water and then addressing the conveyance and treatment of dirty water, whether that water is rendered unclean by coming into contact with sewage or by flowing over the built-out human environment and becoming urban runoff.

(i) Numerous sources predating Proposition 218 reject the notion that the term “sewer” applies only to sanitary sewers and sanitary sewerage, including, but not limited to:

(1) [Section 230.5 of the Public Utilities Code](#), added by Chapter 1109 of the Statutes of 1970.

(2) [Section 23010.3](#), added by Chapter 1193 of the Statutes of 1963.

(3) The Street Improvement Act of 1913.

(4) [L.A. County Flood Control Dist. v. Southern Cal. Edison Co. \(1958\) 51 Cal.2d 331](#), where the California Supreme Court stated that “no distinction has been made between sanitary sewers and storm drains or sewers.”

(5) Many other cases where the term “sewer” has been used interchangeably to refer to both sanitary and storm sewers include, but are not limited to, [County of Riverside v. Whitlock \(1972\) 22 Cal.App.3d 863](#), [Ramseier v. Oakley Sanitary Dist. \(1961\) 197 Cal.App.2d 722](#), and [Torson v. Fleming \(1928\) 91 Cal.App. 168](#).

(6) Dictionary definitions of sewer, which courts have found to be an objective source for determining common or ordinary meaning, including Webster's (1976), American Heritage (1969), and Oxford English Dictionary (1971).

(j) Prior legislation has affirmed particular interpretations of words in Proposition 218, specifically Assembly Bill 2403 of the 2013-14 Regular Session (Chapter 78 of the Statutes of 2014).

(k) In [Crawley v. Alameda Waste Management Authority \(2015\) 243 Cal.App.4th 396](#), the Court of Appeal relied on the statutory definition of “refuse collection services” to interpret the meaning of that phrase in Proposition 218, and found that this interpretation was further supported by the plain meaning of refuse. Consistent with this decision, in determining the definition of “sewer,” the plain meaning rule shall apply in conjunction with the definitions of terms as provided in [Section 53750](#).

(l) The Legislature reaffirms and reiterates that the definition found in [Section 230.5 of the Public Utilities Code](#) is the definition of “sewer” or “sewer service” that should be used in the Proposition 218 Omnibus Implementation Act.

(m) Courts have read the Legislature's definition of “water” in the Proposition 218 Omnibus Implementation Act to include related services. In [Griffith v. Pajaro Valley Water Management Agency \(2013\) 220 Cal.App.4th 586](#), the Court of Appeal concurred with the Legislature's view that “water service means more than just supplying water,” based upon the definition of water provided by the Proposition 218 Omnibus Implementation Act, and found that actions necessary to provide water can be funded through fees for water service. Consistent with this decision, “sewer” should be interpreted to include services necessary to collect, treat, or dispose of sewage, industrial waste, or surface or storm waters, and any entity that collects, treats, or disposes of any of these necessarily provides sewer service.

[Division 7. Water Quality \(Refs & Annos\)](#)

[Chapter 4. Regional Water Quality Control \(Refs & Annos\)](#)

[Article 4. Waste Discharge Requirements \(Refs & Annos\)](#)

West's Ann.Cal.Water Code § 13263

§ 13263. Discharge requirements; considerations by regional board; review of requirements; notice of requirements; no vested right; master reclamation permit

[Currentness](#)

(a) The regional board, after any necessary hearing, shall prescribe requirements as to the nature of any proposed discharge, existing discharge, or material change in an existing discharge, except discharges into a community sewer system, with relation to the conditions existing in the disposal area or receiving waters upon, or into which, the discharge is made or proposed. The requirements shall implement any relevant water quality control plans that have been adopted, and shall take into consideration the beneficial uses to be protected, the water quality objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and the provisions of [Section 13241](#).

(b) A regional board, in prescribing requirements, need not authorize the utilization of the full waste assimilation capacities of the receiving waters.

(c) The requirements may contain a time schedule, subject to revision in the discretion of the board.

(d) The regional board may prescribe requirements although no discharge report has been filed.

(e) Upon application by any affected person, or on its own motion, the regional board may review and revise requirements. All requirements shall be reviewed periodically.

(f) The regional board shall notify in writing the person making or proposing the discharge or the change therein of the discharge requirements to be met. After receipt of the notice, the person so notified shall provide adequate means to meet the requirements.

(g) No discharge of waste into the waters of the state, whether or not the discharge is made pursuant to waste discharge requirements, shall create a vested right to continue the discharge. All discharges of waste into waters of the state are privileges, not rights.

(h) The regional board may incorporate the requirements prescribed pursuant to this section into a master recycling permit for either a supplier or distributor, or both, of recycled water.

(i) The state board or a regional board may prescribe general waste discharge requirements for a category of discharges if the state board or that regional board finds or determines that all of the following criteria apply to the discharges in that category:

(1) The discharges are produced by the same or similar operations.

(2) The discharges involve the same or similar types of waste.

(3) The discharges require the same or similar treatment standards.

(4) The discharges are more appropriately regulated under general discharge requirements than individual discharge requirements.

(j) The state board, after any necessary hearing, may prescribe waste discharge requirements in accordance with this section.

Article 4. Waste Discharge Requirements (Refs & Annos)

West's Ann.Cal.Water Code § 13271

§ 13271. Discharge of hazardous substance or sewage; notice
requirement; violation; regulations establishing reportable quantities

Effective: July 1, 2013

[Currentness](#)

(a)(1) Except as provided by subdivision (b), any person who, without regard to intent or negligence, causes or permits any hazardous substance or sewage to be discharged in or on any waters of the state, or discharged or deposited where it is, or probably will be, discharged in or on any waters of the state, shall, as soon as (A) that person has knowledge of the discharge, (B) notification is possible, and (C) notification can be provided without substantially impeding cleanup or other emergency measures, immediately notify the Office of Emergency Services of the discharge in accordance with the spill reporting provision of the state toxic disaster contingency plan adopted pursuant to Article 3.7 (commencing with [Section 8574.16](#)) of Chapter 7 of Division 1 of Title 2 of the Government Code.

(2) The Office of Emergency Services shall immediately notify the appropriate regional board, the local health officer, and the director of environmental health of the discharge. The regional board shall notify the state board as appropriate.

(3) Upon receiving notification of a discharge pursuant to this section, the local health officer and the director of environmental health shall immediately determine whether notification of the public is required to safeguard public health and safety. If so, the local health officer and the director of environmental health shall immediately notify the public of the discharge by posting notices or other appropriate means. The notification shall describe measures to be taken by the public to protect the public health.

(b) The notification required by this section shall not apply to a discharge in compliance with waste discharge requirements or other provisions of this division.

(c) Any person who fails to provide the notice required by this section is guilty of a misdemeanor and shall be punished by a fine of not more than twenty thousand dollars (\$20,000) or imprisonment in a county jail for not more than one year, or both. Except where a discharge to the waters of this state would have occurred but for cleanup or emergency response by a public agency, this subdivision shall not apply to any discharge to land which does not result in a discharge to the waters of this state.

(d) Notification received pursuant to this section or information obtained by use of that notification shall not be used against any person providing the notification in any criminal case, except in a prosecution for perjury or giving a false statement.

(e) For substances listed as hazardous wastes or hazardous material pursuant to [Section 25140 of the Health and Safety Code](#), the state board, in consultation with the Department of Toxic Substances Control, shall by regulation establish reportable quantities for purposes of this section. The regulations shall be based on what quantities should be reported because they may pose a risk to public health or the environment if discharged to groundwater or surface water. Regulations need not set reportable quantities on all listed substances at the same time. Regulations establishing reportable quantities shall not supersede waste discharge requirements or water quality objectives adopted pursuant to this division, and shall not supersede or affect in any way the list, criteria, and guidelines for the identification of hazardous wastes and extremely hazardous wastes adopted by the Department of Toxic Substances Control pursuant to Chapter 6.5 (commencing with [Section 25100](#)) of Division 20 of the Health and Safety Code. The regulations of the Environmental Protection Agency for reportable quantities of hazardous substances for purposes of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended ([42 U.S.C. Sec. 9601 et seq.](#)) shall be in effect for purposes of the enforcement of this section until the time that the regulations required by this subdivision are adopted.

(f)(1) The state board shall adopt regulations establishing reportable quantities of sewage for purposes of this section. The regulations shall be based on the quantities that should be reported because they may pose a risk to public health or the environment if discharged to groundwater or surface water. Regulations establishing reportable quantities shall not supersede waste discharge requirements or water quality objectives adopted pursuant to this division. For purposes of this section, “sewage” means the effluent of a municipal wastewater treatment plant or a private utility wastewater treatment plant, as those terms are defined in [Section 13625](#), except that sewage does not include recycled water, as defined in [subdivisions \(c\) and \(d\) of Section 13529.2](#).

(2) A collection system owner or operator, as defined in [paragraph \(1\) of subdivision \(a\) of Section 13193](#), in addition to the reporting requirements set forth in this section, shall submit a report pursuant to [subdivision \(c\) of Section 13193](#).

(g) Except as otherwise provided in this section and [Section 8589.7 of the Government Code](#), a notification made pursuant to this section shall satisfy any immediate notification requirement contained in any permit issued by a permitting agency. When notifying the Office of Emergency Services, the person shall include all of the notification information required in the permit.

(h) For the purposes of this section, the reportable quantity for perchlorate shall be 10 pounds or more by discharge to the receiving waters, unless a more restrictive reporting standard for a particular body of water is adopted pursuant to subdivision (e).

(i) Notification under this section does not nullify a person's responsibility to notify the local health officer or the director of environmental health pursuant to [Section 5411.5 of the Health and Safety Code](#).

Unconstitutional or Preempted Prior Version Limited on Preemption Grounds by [Karuk Tribe of Northern California v. California Regional Water Quality Control Bd., North Coast Region](#), Cal.App. 1 Dist., Mar. 30, 2010

[West's Annotated California Codes](#)

[Water Code \(Refs & Annos\)](#)

[Division 7. Water Quality \(Refs & Annos\)](#)

[Chapter 4. Regional Water Quality Control \(Refs & Annos\)](#)

[Article 4. Waste Discharge Requirements \(Refs & Annos\)](#)

West's Ann.Cal.Water Code § 13272

§ 13272. Discharge of oil or petroleum product; notice requirement; violation; reportable quantity

Effective: June 20, 2014

[Currentness](#)

(a) Except as provided by subdivision (b), any person who, without regard to intent or negligence, causes or permits any oil or petroleum product to be discharged in or on any waters of the state, or discharged or deposited where it is, or probably will be, discharged in or on any waters of the state, shall, as soon as (1) that person has knowledge of the discharge, (2) notification is possible, and (3) notification can be provided without substantially impeding cleanup or other emergency measures, immediately notify the Office of Emergency Services of the discharge in accordance with the spill reporting provision of the California oil spill contingency plan adopted pursuant to Article 3.5 (commencing with [Section 8574.1](#)) of [Chapter 7 of Division 1 of Title 2 of the Government Code](#).

(b) The notification required by this section shall not apply to a discharge in compliance with waste discharge requirements or other provisions of this division.

(c) Any person who fails to provide the notice required by this section is guilty of a misdemeanor and shall be punished by a fine of not less than five hundred dollars (\$500) or more than five thousand dollars (\$5,000) per day for each day of failure to notify, or imprisonment of not more than one year, or both. Except where a discharge to the waters of this state would have occurred but for cleanup or emergency response by a public agency, this subdivision shall not apply to any discharge to land that does not result in a discharge to the waters of this state. This subdivision shall not apply to any person who is fined by the federal government for a failure to report a discharge of oil.

(d) Notification received pursuant to this section or information obtained by use of that notification shall not be used against any person providing the notification in any criminal case, except in a prosecution for perjury or giving a false statement.

(e) Immediate notification to the appropriate regional board of the discharge, in accordance with reporting requirements set under [Section 13267](#) or [13383](#), shall constitute compliance with the requirements of subdivision (a).

(f) The reportable quantity for oil or petroleum products shall be one barrel (42 gallons) or more, by direct discharge to the receiving waters, unless a more restrictive reporting standard for a particular body of water is adopted.

Division 7. Water Quality (Refs & Annos)
Chapter 5. Enforcement and Implementation (Refs & Annos)
Article 5. Civil Monetary Remedies (Refs & Annos)

West's Ann.Cal.Water Code § 13350

§ 13350. Civil liabilities; amount of liability; remedies; deposit of funds

Effective: July 1, 2017

[Currentness](#)

(a) A person who (1) violates a cease and desist order or cleanup and abatement order hereafter issued, reissued, or amended by a regional board or the state board, or (2) in violation of a waste discharge requirement, waiver condition, certification, or other order or prohibition issued, reissued, or amended by a regional board or the state board, discharges waste, or causes or permits waste to be deposited where it is discharged, into the waters of the state, or (3) causes or permits any oil or any residuary product of petroleum to be deposited in or on any of the waters of the state, except in accordance with waste discharge requirements or other actions or provisions of this division, shall be liable civilly, and remedies may be proposed, in accordance with subdivision (d) or (e).

(b)(1) A person who, without regard to intent or negligence, causes or permits a hazardous substance to be discharged in or on any of the waters of the state, except in accordance with waste discharge requirements or other provisions of this division, shall be strictly liable civilly in accordance with subdivision (d) or (e).

(2) For purposes of this subdivision, the term “discharge” includes only those discharges for which [Section 13260](#) directs that a report of waste discharge shall be filed with the regional board.

(3) For purposes of this subdivision, the term “discharge” does not include an emission excluded from the applicability of Section 311 of the Clean Water Act ([33 U.S.C. Sec. 1321](#)) pursuant to Environmental Protection Agency regulations interpreting Section 311(a)(2) of the Clean Water Act ([33 U.S.C. Sec. 1321\(a\)\(2\)](#)).

(c) A person shall not be liable under subdivision (b) if the discharge is caused solely by any one or combination of the following:

(1) An act of war.

(2) An unanticipated grave natural disaster or other natural phenomenon of an exceptional, inevitable, and irresistible character, the effects of which could not have been prevented or avoided by the exercise of due care or foresight.

(3) Negligence on the part of the state, the United States, or any department or agency thereof. However, this paragraph shall not be interpreted to provide the state, the United States, or any department or agency thereof a defense to liability for any discharge caused by its own negligence.

(4) An intentional act of a third party, the effects of which could not have been prevented or avoided by the exercise of due care or foresight.

(5) Any other circumstance or event that causes the discharge despite the exercise of every reasonable precaution to prevent or mitigate the discharge.

(d) The court may impose civil liability either on a daily basis or on a per gallon basis, but not on both.

(1) The civil liability on a daily basis shall not exceed fifteen thousand dollars (\$15,000) for each day the violation occurs.

(2) The civil liability on a per gallon basis shall not exceed twenty dollars (\$20) for each gallon of waste discharged.

(e) The state board or a regional board may impose civil liability administratively pursuant to Article 2.5 (commencing with [Section 13323](#)) of Chapter 5 either on a daily basis or on a per gallon basis, but not on both.

(1) The civil liability on a daily basis shall not exceed five thousand dollars (\$5,000) for each day the violation occurs.

(A) When there is a discharge, and a cleanup and abatement order is issued, except as provided in subdivision (f), the civil liability shall not be less than five hundred dollars (\$500) for each day in which the discharge occurs and for each day the cleanup and abatement order is violated.

(B) When there is no discharge, but an order issued by the regional board is violated, except as provided in subdivision (f), the civil liability shall not be less than one hundred dollars (\$100) for each day in which the violation occurs.

(2) The civil liability on a per gallon basis shall not exceed ten dollars (\$10) for each gallon of waste discharged.

(f) A regional board shall not administratively impose civil liability in accordance with paragraph (1) of subdivision (e) in an amount less than the minimum amount specified, unless the regional board makes express findings setting forth the reasons for its action based upon the specific factors required to be considered pursuant to [Section 13327](#).

(g) The Attorney General, upon request of a regional board or the state board, shall petition the superior court to impose, assess, and recover the sums. Except in the case of a violation of a cease and desist order, a regional board or the state board shall make the request only after a hearing, with due notice of the hearing given to all affected persons. In determining the amount to be imposed, assessed, or recovered, the court shall be subject to [Section 13351](#).

(h) Article 3 (commencing with [Section 13330](#)) and Article 6 (commencing with [Section 13360](#)) apply to proceedings to impose, assess, and recover an amount pursuant to this article.

(i) A person who incurs any liability established under this section shall be entitled to contribution for that liability from a third party, in an action in the superior court and upon proof that the discharge was caused in whole or in part by an act or omission of the third party, to the extent that the discharge is caused by the act or omission of the third party, in accordance with the principles of comparative fault.

(j) Remedies under this section are in addition to, and do not supersede or limit, any and all other remedies, civil or criminal, except that no liability shall be recoverable under subdivision (b) for any discharge for which liability is recovered under [Section 13385](#).

(k) Notwithstanding any other law, all funds generated by the imposition of liabilities pursuant to this section shall be deposited into the Waste Discharge Permit Fund. These moneys shall be separately accounted for, and shall be expended by the state board, upon appropriation by the Legislature, to assist regional boards, and other public agencies with authority to clean up waste or abate the effects of the waste, in cleaning up or abating the effects of the waste on waters of the state, or for the purposes authorized in [Section 13443](#), or to assist in implementing Chapter 7.3 (commencing with [Section 13560](#)).

(l) This section shall become operative on July 1, 2017.

Water Code (Refs & Annos)

Division 7. Water Quality (Refs & Annos)

Chapter 5.5. Compliance with the Provisions of the Federal Water Pollution Control Act as Amended in 1972 (Refs & Annos)

West's Ann.Cal.Water Code § 13370

§ 13370. Legislative findings and declarations

[Currentness](#)

The Legislature finds and declares as follows:

(a) The Federal Water Pollution Control Act ([33 U.S.C. Sec. 1251 et seq.](#)), as amended, provides for permit systems to regulate the discharge of pollutants and dredged or fill material to the navigable waters of the United States and to regulate the use and disposal of sewage sludge.

(b) The Federal Water Pollution Control Act, as amended, provides that permits may be issued by states which are authorized to implement the provisions of that act.

(c) It is in the interest of the people of the state, in order to avoid direct regulation by the federal government of persons already subject to regulation under state law pursuant to this division, to enact this chapter in order to authorize the state to implement the provisions of the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto, and federal regulations and guidelines issued pursuant thereto, provided, that the state board shall request federal funding under the Federal Water Pollution Control Act for the purpose of carrying out its responsibilities under this program.

Chapter 5.5. Compliance with the Provisions of the Federal Water Pollution Control Act as Amended in 1972 (Refs & Annos)

West's Ann.Cal.Water Code § 13372

§ 13372. Construction and application of chapter

Effective: January 1, 2004

[Currentness](#)

(a) This chapter shall be construed to ensure consistency with the requirements for state programs implementing the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto. To the extent other provisions of this division are consistent with the provisions of this chapter and with the requirements for state programs implementing the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto, those provisions apply to actions and procedures provided for in this chapter. The provisions of this chapter shall prevail over other provisions of this division to the extent of any inconsistency. The provisions of this chapter apply only to actions required under the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto.

(b) The provisions of [Section 13376](#) requiring the filing of a report for the discharge of dredged or fill material and the provisions of this chapter relating to the issuance of dredged or fill material permits by the state board or a regional board shall be applicable only to discharges for which the state has an approved permit program, in accordance with the provisions of the Federal Water Pollution Control Act, as amended, for the discharge of dredged or fill material.

Water Code (Refs & Annos)

Division 7. Water Quality (Refs & Annos)

Chapter 5.5. Compliance with the Provisions of the Federal Water Pollution Control Act as Amended in 1972 (Refs & Annos)

West's Ann.Cal.Water Code § 13385

§ 13385. Violations; civil liability; applicability; compliance projects; annual report

Effective: January 1, 2018

[Currentness](#)

(a) A person who violates any of the following shall be liable civilly in accordance with this section:

(1) [Section 13375](#) or [13376](#).

(2) A waste discharge requirement or dredged or fill material permit issued pursuant to this chapter or any water quality certification issued pursuant to [Section 13160](#).

(3) A requirement established pursuant to [Section 13383](#).

(4) An order or prohibition issued pursuant to [Section 13243](#) or Article 1 (commencing with [Section 13300](#)) of Chapter 5, if the activity subject to the order or prohibition is subject to regulation under this chapter.

(5) A requirement of Section 301, 302, 306, 307, 308, 318, 401, or 405 of the federal Clean Water Act ([33 U.S.C. Sec. 1311](#), [1312](#), [1316](#), [1317](#), [1318](#), [1341](#), or [1345](#)), as amended.

(6) A requirement imposed in a pretreatment program approved pursuant to waste discharge requirements issued under [Section 13377](#) or approved pursuant to a permit issued by the administrator.

(b)(1) Civil liability may be imposed by the superior court in an amount not to exceed the sum of both of the following:

(A) Twenty-five thousand dollars (\$25,000) for each day in which the violation occurs.

(B) Where there is a discharge, any portion of which is not susceptible to cleanup or is not cleaned up, and the volume discharged but not cleaned up exceeds 1,000 gallons, an additional liability not to exceed twenty-five dollars (\$25) multiplied by the number of gallons by which the volume discharged but not cleaned up exceeds 1,000 gallons.

(2) The Attorney General, upon request of a regional board or the state board, shall petition the superior court to impose the liability.

(c) Civil liability may be imposed administratively by the state board or a regional board pursuant to Article 2.5 (commencing with [Section 13323](#)) of Chapter 5 in an amount not to exceed the sum of both of the following:

(1) Ten thousand dollars (\$10,000) for each day in which the violation occurs.

(2) Where there is a discharge, any portion of which is not susceptible to cleanup or is not cleaned up, and the volume discharged but not cleaned up exceeds 1,000 gallons, an additional liability not to exceed ten dollars (\$10) multiplied by the number of gallons by which the volume discharged but not cleaned up exceeds 1,000 gallons.

(d) For purposes of subdivisions (b) and (c), “discharge” includes any discharge to navigable waters of the United States, any introduction of pollutants into a publicly owned treatment works, or any use or disposal of sewage sludge.

(e) In determining the amount of any liability imposed under this section, the regional board, the state board, or the superior court, as the case may be, shall take into account the nature, circumstances, extent, and gravity of the violation or violations, whether the discharge is susceptible to cleanup or abatement, the degree of toxicity of the discharge, and, with respect to the violator, the ability to pay, the effect on its ability to continue its business, any voluntary cleanup efforts undertaken, any prior history of violations, the degree of culpability, economic benefit or savings, if any, resulting from the violation, and other matters that justice may require. At a minimum, liability shall be assessed at a level that recovers the economic benefits, if any, derived from the acts that constitute the violation.

(f)(1) Except as provided in paragraph (2), for the purposes of this section, a single operational upset that leads to simultaneous violations of more than one pollutant parameter shall be treated as a single violation.

(2)(A) For the purposes of subdivisions (h) and (i), a single operational upset in a wastewater treatment unit that treats wastewater using a biological treatment process shall be treated as a single violation, even if the operational upset results in violations of more than one effluent limitation and the violations continue for a period of more than one day, if all of the following apply:

(i) The discharger demonstrates all of the following:

(I) The upset was not caused by wastewater treatment operator error and was not due to discharger negligence.

(II) But for the operational upset of the biological treatment process, the violations would not have occurred nor would they have continued for more than one day.

(III) The discharger carried out all reasonable and immediately feasible actions to reduce noncompliance with the applicable effluent limitations.

(ii) The discharger is implementing an approved pretreatment program, if so required by federal or state law.

(B) Subparagraph (A) only applies to violations that occur during a period for which the regional board has determined that violations are unavoidable, but in no case may that period exceed 30 days.

(g) Remedies under this section are in addition to, and do not supersede or limit, any other remedies, civil or criminal, except that no liability shall be recoverable under [Section 13261](#), [13265](#), [13268](#), or [13350](#) for violations for which liability is recovered under this section.

(h)(1) Notwithstanding any other provision of this division, and except as provided in subdivisions (j), (k), and (l), a mandatory minimum penalty of three thousand dollars (\$3,000) shall be assessed for each serious violation.

(2) For the purposes of this section, a “serious violation” means any waste discharge that violates the effluent limitations contained in the applicable waste discharge requirements for a Group II pollutant, as specified in Appendix A to [Section 123.45 of Title 40 of the Code of Federal Regulations](#), by 20 percent or more or for a Group I pollutant, as specified in Appendix A to [Section 123.45 of Title 40 of the Code of Federal Regulations](#), by 40 percent or more.

(i)(1) Notwithstanding any other provision of this division, and except as provided in subdivisions (j), (k), and (l), a mandatory minimum penalty of three thousand dollars (\$3,000) shall be assessed for each violation whenever the person does any of the following four or more times in any period of six consecutive months, except that the requirement to assess the mandatory minimum penalty shall not be applicable to the first three violations:

(A) Violates a waste discharge requirement effluent limitation.

(B) Fails to file a report pursuant to [Section 13260](#).

(C) Files an incomplete report pursuant to [Section 13260](#).

(D) Violates a toxicity effluent limitation contained in the applicable waste discharge requirements where the waste discharge requirements do not contain pollutant-specific effluent limitations for toxic pollutants.

(2) For the purposes of this section, a “period of six consecutive months” means the period commencing on the date that one of the violations described in this subdivision occurs and ending 180 days after that date.

(j) Subdivisions (h) and (i) do not apply to any of the following:

(1) A violation caused by one or any combination of the following:

(A) An act of war.

(B) An unanticipated, grave natural disaster or other natural phenomenon of an exceptional, inevitable, and irresistible character, the effects of which could not have been prevented or avoided by the exercise of due care or foresight.

(C) An intentional act of a third party, the effects of which could not have been prevented or avoided by the exercise of due care or foresight.

(D)(i) The operation of a new or reconstructed wastewater treatment unit during a defined period of adjusting or testing, not to exceed 90 days for a wastewater treatment unit that relies on a biological treatment process and not to exceed 30 days for any other wastewater treatment unit, if all of the following requirements are met:

(I) The discharger has submitted to the regional board, at least 30 days in advance of the operation, an operations plan that describes the actions the discharger will take during the period of adjusting and testing, including steps to prevent violations and identifies the shortest reasonable time required for the period of adjusting and testing, not to exceed 90 days for a wastewater treatment unit that relies on a biological treatment process and not to exceed 30 days for any other wastewater treatment unit.

(II) The regional board has not objected in writing to the operations plan.

(III) The discharger demonstrates that the violations resulted from the operation of the new or reconstructed wastewater treatment unit and that the violations could not have reasonably been avoided.

(IV) The discharger demonstrates compliance with the operations plan.

(V) In the case of a reconstructed wastewater treatment unit, the unit relies on a biological treatment process that is required to be out of operation for at least 14 days in order to perform the reconstruction, or the unit is required to be out of operation for at least 14 days and, at the time of the reconstruction, the cost of reconstructing the unit exceeds 50 percent of the cost of replacing the wastewater treatment unit.

(ii) For the purposes of this section, “wastewater treatment unit” means a component of a wastewater treatment plant that performs a designated treatment function.

(2)(A) Except as provided in subparagraph (B), a violation of an effluent limitation where the waste discharge is in compliance with either a cease and desist order issued pursuant to [Section 13301](#) or a time schedule order issued pursuant to [Section 13300](#), if all of the following requirements are met:

(i) The cease and desist order or time schedule order is issued after January 1, 1995, but not later than July 1, 2000, specifies the actions that the discharger is required to take in order to correct the violations that would otherwise be subject to subdivisions (h) and (i), and the date by which compliance is required to be achieved and, if the final date by which compliance is required to be achieved is later than one year from the effective date of the cease and desist order or time schedule order, specifies the interim requirements by which progress towards compliance will be measured and the date by which the discharger will be in compliance with each interim requirement.

(ii) The discharger has prepared and is implementing in a timely and proper manner, or is required by the regional board to prepare and implement, a pollution prevention plan that meets the requirements of [Section 13263.3](#).

(iii) The discharger demonstrates that it has carried out all reasonable and immediately feasible actions to reduce noncompliance with the waste discharge requirements applicable to the waste discharge and the executive officer of the regional board concurs with the demonstration.

(B) Subdivisions (h) and (i) shall become applicable to a waste discharge on the date the waste discharge requirements applicable to the waste discharge are revised and reissued pursuant to [Section 13380](#), unless the regional board does all of the following on or before that date:

(i) Modifies the requirements of the cease and desist order or time schedule order as may be necessary to make it fully consistent with the reissued waste discharge requirements.

(ii) Establishes in the modified cease and desist order or time schedule order a date by which full compliance with the reissued waste discharge requirements shall be achieved. For the purposes of this subdivision, the regional board may not establish this date later than five years from the date the waste discharge requirements were required to be reviewed pursuant to [Section 13380](#). If the reissued waste discharge requirements do not add new effluent limitations or do not include effluent limitations that are more stringent than those in the original waste discharge requirements, the date shall be the same as the final date for compliance in the original cease and desist order or time schedule order or five years from the date that the waste discharge requirements were required to be reviewed pursuant to [Section 13380](#), whichever is earlier.

(iii) Determines that the pollution prevention plan required by clause (ii) of subparagraph (A) is in compliance with the requirements of [Section 13263.3](#) and that the discharger is implementing the pollution prevention plan in a timely and proper manner.

(3) A violation of an effluent limitation where the waste discharge is in compliance with either a cease and desist order issued pursuant to [Section 13301](#) or a time schedule order issued pursuant to [Section 13300](#) or [13308](#), if all of the following requirements are met:

(A) The cease and desist order or time schedule order is issued on or after July 1, 2000, and specifies the actions that the discharger is required to take in order to correct the violations that would otherwise be subject to subdivisions (h) and (i).

(B) The regional board finds that, for one of the following reasons, the discharger is not able to consistently comply with one or more of the effluent limitations established in the waste discharge requirements applicable to the waste discharge:

(i) The effluent limitation is a new, more stringent, or modified regulatory requirement that has become applicable to the waste discharge after the effective date of the waste discharge requirements and after July 1, 2000, new or modified control measures are necessary in order to comply with the effluent limitation, and the new or modified control measures cannot be designed, installed, and put into operation within 30 calendar days.

(ii) New methods for detecting or measuring a pollutant in the waste discharge demonstrate that new or modified control measures are necessary in order to comply with the effluent limitation and the new or modified control measures cannot be designed, installed, and put into operation within 30 calendar days.

(iii) Unanticipated changes in the quality of the municipal or industrial water supply available to the discharger are the cause of unavoidable changes in the composition of the waste discharge, the changes in the composition of the waste discharge are the cause of the inability to comply with the effluent limitation, no alternative water supply is reasonably available to the discharger, and new or modified measures to control the composition of the waste discharge cannot be designed, installed, and put into operation within 30 calendar days.

(iv) The discharger is a publicly owned treatment works located in Orange County that is unable to meet effluent limitations for biological oxygen demand, suspended solids, or both, because the publicly owned treatment works meets all of the following criteria:

(I) Was previously operating under modified secondary treatment requirements pursuant to Section 301(h) of the Clean Water Act (33 U.S.C. Sec. 1311(h)).

(II) Did vote on July 17, 2002, not to apply for a renewal of the modified secondary treatment requirements.

(III) Is in the process of upgrading its treatment facilities to meet the secondary treatment standards required by Section 301(b)(1)(B) of the Clean Water Act (33 U.S.C. Sec. 1311(b)(1)(B)).

(C)(i) The regional board establishes a time schedule for bringing the waste discharge into compliance with the effluent limitation that is as short as possible, taking into account the technological, operational, and economic factors that affect the design, development, and implementation of the control measures that are necessary to comply with the effluent limitation. Except as provided in clause (ii), for the purposes of this subdivision, the time schedule shall not exceed five years in length.

(ii)(I) For purposes of the upgrade described in subclause (III) of clause (iv) of subparagraph (B), the time schedule shall not exceed 10 years in length.

(II) Following a public hearing, and upon a showing that the discharger is making diligent progress toward bringing the waste discharge into compliance with the effluent limitation, the regional board may extend the time schedule for an additional period not exceeding five years in length, if the discharger demonstrates that the additional time is necessary to comply with the effluent limitation. This subclause does not apply to a time schedule described in subclause (I).

(iii) If the time schedule exceeds one year from the effective date of the order, the schedule shall include interim requirements and the dates for their achievement. The interim requirements shall include both of the following:

(I) Effluent limitations for the pollutant or pollutants of concern.

(II) Actions and milestones leading to compliance with the effluent limitation.

(D) The discharger has prepared and is implementing in a timely and proper manner, or is required by the regional board to prepare and implement, a pollution prevention plan pursuant to [Section 13263.3](#).

(k)(1) In lieu of assessing all or a portion of the mandatory minimum penalties pursuant to subdivisions (h) and (i) against a publicly owned treatment works serving a small community, the state board or the regional board may elect to require the publicly owned treatment works to spend an equivalent amount towards the completion of a compliance project proposed by the publicly owned treatment works, if the state board or the regional board finds all of the following:

(A) The compliance project is designed to correct the violations within five years.

(B) The compliance project is in accordance with the enforcement policy of the state board, excluding any provision in the policy that is inconsistent with this section.

(C) The publicly owned treatment works has prepared a financing plan to complete the compliance project.

(2) For the purposes of this subdivision, “a publicly owned treatment works serving a small community” means a publicly owned treatment works serving a population of 20,000 persons or fewer or a rural county, with a financial hardship as determined by the state board after considering such factors as median income of the residents, rate of unemployment, or low population density in the service area of the publicly owned treatment works.

(l)(1) In lieu of assessing penalties pursuant to subdivision (h) or (i), the state board or the regional board, with the concurrence of the discharger, may direct a portion of the penalty amount to be expended on a supplemental environmental project in accordance with the enforcement policy of the state board. If the penalty amount exceeds fifteen thousand dollars (\$15,000), the portion of the penalty amount that may be directed to be expended on a supplemental environmental project may not exceed fifteen thousand dollars (\$15,000) plus 50 percent of the penalty amount that exceeds fifteen thousand dollars (\$15,000).

(2) For the purposes of this section, a “supplemental environmental project” means an environmentally beneficial project that a person agrees to undertake, with the approval of the regional board, that would not be undertaken in the absence of an enforcement action under this section.

(3) This subdivision applies to the imposition of penalties pursuant to subdivision (h) or (i) on or after January 1, 2003, without regard to the date on which the violation occurs.

(m) The Attorney General, upon request of a regional board or the state board, shall petition the appropriate court to collect any liability or penalty imposed pursuant to this section. Any person who fails to pay on a timely basis any liability or penalty imposed under this section shall be required to pay, in addition to that liability or penalty, interest, attorney's fees, costs for collection proceedings, and a quarterly nonpayment penalty for each quarter during which the

failure to pay persists. The nonpayment penalty shall be in an amount equal to 20 percent of the aggregate amount of the person's penalty and nonpayment penalties that are unpaid as of the beginning of the quarter.

(n)(1) Subject to paragraph (2), funds collected pursuant to this section shall be deposited in the State Water Pollution Cleanup and Abatement Account.

(2)(A) Notwithstanding any other provision of law, moneys collected for a violation of a water quality certification in accordance with paragraph (2) of subdivision (a) or for a violation of Section 401 of the federal Clean Water Act ([33 U.S.C. Sec. 1341](#)) in accordance with paragraph (5) of subdivision (a) shall be deposited in the Waste Discharge Permit Fund and separately accounted for in that fund.

(B) The funds described in subparagraph (A) shall be expended by the state board, upon appropriation by the Legislature, to assist regional boards, and other public agencies with authority to clean up waste or abate the effects of the waste, in cleaning up or abating the effects of the waste on waters of the state or for the purposes authorized in [Section 13443](#).

(o) The state board shall continuously report and update information on its Internet Web site. The state board shall report annually on or before December 31 regarding its enforcement activities. The information shall include all of the following:

(1) A compilation of the number of violations of waste discharge requirements in the previous calendar year, including stormwater enforcement violations.

(2) A record of the formal and informal compliance and enforcement actions taken for each violation, including stormwater enforcement actions.

(3) An analysis of the effectiveness of current enforcement policies, including mandatory minimum penalties.

(p) The amendments made to subdivisions (f), (h), (i), and (j) during the second year of the 2001-02 Regular Session apply only to violations that occur on or after January 1, 2003.

Chapter 27. California Watershed Improvement Act of 2009 (Refs & Annos)

West's Ann.Cal.Water Code § 16101

§ 16101. Development of watershed improvement plan; process; notice; elements

Effective: January 1, 2010

[Currentness](#)

(a) Each county, city, or special district that is a permittee or copermitttee under a national pollutant discharge elimination system (NPDES) permit for municipal separate storm sewer systems may develop, either individually or jointly with one or more permittees or copermitttees, a watershed improvement plan that addresses major sources of pollutants in receiving water, stormwater, urban runoff, or other surface runoff pollution within the watershed or subwatershed to which the plan applies. The principal purpose of a watershed improvement plan is to implement existing and future water quality requirements and regulations by, among other things, where appropriate, identifying opportunities for stormwater detention, infiltration, use of natural treatment systems, water recycling, reuse, and supply augmentation; and providing programs and measures designed to promote, maintain, or achieve compliance with water quality laws and regulations, including water quality standards and other requirements of statewide plans, regional water quality control plans, total maximum daily loads, and NPDES permits.

(b) The process of developing a watershed improvement plan shall be open and transparent, and shall be conducted consistent with all applicable open meeting laws. A county, city, special district, or combination thereof, shall solicit input from entities representing resource agencies, water agencies, sanitation districts, the environmental community, landowners, home builders, agricultural interests, and business and industry representatives.

(c) Each county, city, special district, or combination thereof shall notify the appropriate regional board of its intention to develop a watershed improvement plan. The regional board may, in its discretion, participate in the preparation of the plan. A watershed improvement plan shall be consistent with the regional board's water quality control plan.

(d) A watershed improvement plan shall include all of the following elements relevant to the waters within the watershed or subwatershed to which the plan applies:

(1) A description of the watershed or subwatershed improvement plan area, the rivers, streams, or manmade drainage channels within the plan area, the agencies with regulatory jurisdiction over matters to be addressed in the plan, the relevant receiving waters within or downstream from the plan area, and the county, city, special district, or combination thereof, participating in the plan.

(2) A description of the proposed facilities and actions that will improve the protection and enhancement of water quality and the designated beneficial uses of waters of the state, consistent with water quality laws and regulations.

(3) Recommendations for appropriate action by any entity, public or private, to facilitate achievement of, or consistency with, water quality objectives, standards, total maximum daily loads, or other water quality laws, regulations, standards, or requirements, a time schedule for the actions to be taken, and a description of appropriate measurement and monitoring to be undertaken to determine improvement in water quality.

(4) A coordinated economic analysis and financing plan that identifies the costs, effectiveness, and benefits of water quality improvements specified in the watershed improvement plan, and, where feasible, incorporates user-based and cost recovery approaches to financing, which place the cost of managing and treating surface runoff pollution on the generators of the pollutants.

(5) To the extent applicable, a description of regional best management practices, watershed-based natural treatment systems, low-flow diversion systems, stormwater capture, urban runoff capture, other measures constituting structural treatment best management practices, pollution prevention measures, low-impact development strategies, and site design, source control, and treatment control best management practices to promote improved water quality.

(6) A description of the proposed structure, operations, powers, and duties of the implementing entity for the watershed improvement plan.

§ 16102. Plan review and approval; cost reimbursement; utilization; compliance

Effective: January 1, 2010

[Currentness](#)

(a) A regional board shall review, in accordance with the reimbursement requirement described in subdivision (c), a watershed improvement plan developed pursuant to [Section 16101](#) and may approve the plan, including any appropriate conditions to the approval, if the regional board finds that the proposed watershed improvement plan will facilitate compliance with water quality requirements. A regional board's review and approval of the watershed improvement plan shall be limited to components described in [paragraphs \(1\), \(2\), \(3\), and \(5\) of subdivision \(d\) of Section 16101](#).

(b) A regional board may not approve a proposed watershed improvement plan that includes a geographical area included in an existing approved watershed improvement plan unless the regional board determines that it is infeasible to amend either the proposed watershed improvement plan or the approved watershed improvement plan to achieve the purposes of this chapter.

(c) The entity or entities that develop a watershed improvement plan that is submitted to the regional board for approval shall reimburse the regional board for its costs, including the costs to review and oversee the implementation of the plan, if nonstate funds are not available to cover the costs of the review and oversight. For the purpose of this paragraph, the state board shall adopt a fee schedule by emergency regulation in the manner prescribed in [paragraph \(2\) of subdivision \(f\) of Section 13260](#). Fees collected pursuant to this section shall be deposited in the Waste Discharge Permit Fund established by [Section 13260](#).

(d) A regional board may, if it deems appropriate, utilize provisions of approved watershed improvement plans to promote compliance with one or more of the regional board's regulatory plans or programs.

(e) Unless a regional board incorporates the provisions of a watershed improvement plan into waste discharge requirements issued to a permittee, the implementation of a watershed improvement plan by a permittee shall not be deemed to be compliance with those waste discharge requirements.

§ 16103. Fees for runoff; controls and facilities to improve water quality

Effective: January 1, 2010

[Currentness](#)

(a) In addition to making use of other financing mechanisms that are available to local agencies to fund watershed improvement plans and plan measures and facilities, a county, city, special district, or combination thereof may impose fees on activities that generate or contribute to runoff, stormwater, or surface runoff pollution, to pay the costs of the preparation of a watershed improvement plan, and the implementation of a watershed improvement plan if all of the following requirements are met:

(1) The regional board has approved the watershed improvement plan.

(2) The entity or entities that develop the watershed improvement plan make a finding, supported by substantial evidence, that the fee is reasonably related to the cost of mitigating the actual or anticipated past, present, or future adverse effects of the activities of the feepayer. "Activities," for the purposes of this paragraph, means the operations and existing structures and improvements subject to regulation under an NPDES permit for municipal separate storm sewer systems.

(3) The fee is not imposed solely as an incident of property ownership.

(b) A county, city, special district, or combination thereof may plan, design, implement, construct, operate, and maintain controls and facilities to improve water quality, including controls and facilities related to the infiltration, retention and reuse, diversion, interception, filtration, or collection of surface runoff, including urban runoff, stormwater, and other forms of runoff, the treatment of pollutants in runoff or other waters subject to water quality regulatory requirements, the return of diverted and treated waters to receiving water bodies, the enhancement of beneficial uses of waters of the state, or the beneficial use or reuse of diverted waters.

(c) The fees authorized under subdivision (a) may be imposed as user-based or regulatory fees consistent with this chapter.

§ 5471. Power to prescribe and collect fees, tolls, rates, rentals or other charges;
use of revenues; continuance of charges; new, increased, or extended assessments

Effective: January 1, 2017

[Currentness](#)

(a) In addition to the powers granted in the principal act, any entity shall have power, by an ordinance or resolution approved by a two-thirds vote of the members of the legislative body thereof, to prescribe, revise and collect, fees, tolls, rates, rentals, or other charges for services and facilities furnished by it, either within or without its territorial limits, in connection with its water, sanitation, storm drainage, or sewerage system.

(b) In addition to the powers granted in the principal act, any entity shall have power, pursuant to the notice, protest, and hearing procedures in [Section 53753 of the Government Code](#), to prescribe, revise, and collect water, sewer, or water and sewer standby or immediate availability charges for services and facilities furnished by it, either within or without its territorial limits, in connection with its water, sanitation, storm drainage, or sewerage system.

(c) The entity may provide that the charge for the service shall be collected with the rates, tolls, and charges for any other utility, and that any or all of these charges may be billed upon the same bill. Where the charge is to be collected with the charges for any other utility service furnished by a department or agency of the entity and over which its legislative body does not exercise control, the consent of the department or agency shall be obtained prior to collecting water, sanitation, storm drainage, or sewerage charges with the charges for any other utility. Revenues derived under the provisions in this section, shall be used only for the acquisition, construction, reconstruction, maintenance, and operation of water systems and sanitation, storm drainage, or sewerage facilities, to repay principal and interest on bonds issued for the construction or reconstruction of these water systems and sanitary, storm drainage, or sewerage facilities and to repay federal or state loans or advances made to the entity for the construction or reconstruction of water systems and sanitary, storm drainage, or sewerage facilities. However, the revenue shall not be used for the acquisition or construction of new local street sewers or laterals as distinguished from main trunk, interceptor, and outfall sewers.

(d) If the procedures set forth in this section as it read at the time a standby charge was established were followed, the entity may, by ordinance or resolution adopted by a two-thirds vote of the members of the legislative body thereof, continue the charge pursuant to this section in successive years at the same rate. If new, increased, or extended assessments are proposed, the entity shall comply with the notice, protest, and hearing procedures in [Section 53753 of the Government Code](#).

West's Ann.Cal.Pub.Res.Code § 40059

§ 40059. Local determinations; extent of services; means for providing services; abrogation of existing franchises, contracts, or licenses

Currentness

(a) Notwithstanding any other provision of law, each county, city, district, or other local governmental agency may determine all of the following:

(1) Aspects of solid waste handling which are of local concern, including, but not limited to, frequency of collection, means of collection and transportation, level of services, charges and fees, and nature, location, and extent of providing solid waste handling services.

(2) Whether the services are to be provided by means of nonexclusive franchise, contract, license, permit, or otherwise, either with or without competitive bidding, or if, in the opinion of its governing body, the public health, safety, and well-being so require, by partially exclusive or wholly exclusive franchise, contract, license, permit, or otherwise, either with or without competitive bidding. The authority to provide solid waste handling services may be granted under terms and conditions prescribed by the governing body of the local governmental agency by resolution or ordinance.

(b) Nothing in this division modifies or abrogates in any manner either of the following:

(1) Any franchise previously granted or extended by any county or other local governmental agency.

(2) Any contract, license, or any permit to collect solid waste previously granted or extended by a city, county, or a city and county.

ATTACHMENT B-21

Senate Bill No. 231

CHAPTER 536

An act to amend Section 53750 of, and to add Section 53751 to, the Government Code, relating to local government finance.

[Approved by Governor October 6, 2017. Filed with
Secretary of State October 6, 2017.]

LEGISLATIVE COUNSEL'S DIGEST

SB 231, Hertzberg. Local government: fees and charges.

Articles XIII C and XIII D of the California Constitution generally require that assessments, fees, and charges be submitted to property owners for approval or rejection after the provision of written notice and the holding of a public hearing. Existing law, the Proposition 218 Omnibus Implementation Act, prescribes specific procedures and parameters for local jurisdictions to comply with Articles XIII C and XIII D of the California Constitution and defines terms for these purposes.

This bill would define the term “sewer” for these purposes. The bill would also make findings and declarations relating to the definition of the term “sewer” for these purposes.

The people of the State of California do enact as follows:

SECTION 1. Section 53750 of the Government Code is amended to read:

53750. For purposes of Article XIII C and Article XIII D of the California Constitution and this article, the following words have the following meanings, and shall be read and interpreted in light of the findings and declarations contained in Section 53751:

(a) “Agency” means any local government as defined in subdivision (b) of Section 1 of Article XIII C of the California Constitution.

(b) “Assessment” means any levy or charge by an agency upon real property that is based upon the special benefit conferred upon the real property by a public improvement or service, that is imposed to pay the capital cost of the public improvement, the maintenance and operation expenses of the public improvement, or the cost of the service being provided. “Assessment” includes, but is not limited to, “special assessment,” “benefit assessment,” “maintenance assessment,” and “special assessment tax.”

(c) “District” means an area that is determined by an agency to contain all of the parcels that will receive a special benefit from a proposed public improvement or service.

(d) “Drainage system” means any system of public improvements that is intended to provide for erosion control, for landslide abatement, or for other types of water drainage.

(e) “Extended,” when applied to an existing tax or fee or charge, means a decision by an agency to extend the stated effective period for the tax or fee or charge, including, but not limited to, amendment or removal of a sunset provision or expiration date.

(f) “Flood control” means any system of public improvements that is intended to protect property from overflow by water.

(g) “Identified parcel” means a parcel of real property that an agency has identified as having a special benefit conferred upon it and upon which a proposed assessment is to be imposed, or a parcel of real property upon which a proposed property-related fee or charge is proposed to be imposed.

(h) (1) “Increased,” when applied to a tax, assessment, or property-related fee or charge, means a decision by an agency that does either of the following:

(A) Increases any applicable rate used to calculate the tax, assessment, fee, or charge.

(B) Revises the methodology by which the tax, assessment, fee, or charge is calculated, if that revision results in an increased amount being levied on any person or parcel.

(2) A tax, fee, or charge is not deemed to be “increased” by an agency action that does either or both of the following:

(A) Adjusts the amount of a tax, fee, or charge in accordance with a schedule of adjustments, including a clearly defined formula for inflation adjustment that was adopted by the agency prior to November 6, 1996.

(B) Implements or collects a previously approved tax, fee, or charge, so long as the rate is not increased beyond the level previously approved by the agency, and the methodology previously approved by the agency is not revised so as to result in an increase in the amount being levied on any person or parcel.

(3) A tax, assessment, fee, or charge is not deemed to be “increased” in the case in which the actual payments from a person or property are higher than would have resulted when the agency approved the tax, assessment, fee, or charge, if those higher payments are attributable to events other than an increased rate or revised methodology, such as a change in the density, intensity, or nature of the use of land.

(i) “Notice by mail” means any notice required by Article XIII C or XIII D of the California Constitution that is accomplished through a mailing, postage prepaid, deposited in the United States Postal Service and is deemed given when so deposited. Notice by mail may be included in any other mailing to the record owner that otherwise complies with Article XIII C or XIII D of the California Constitution and this article, including, but not limited to, the mailing of a bill for the collection of an assessment or a property-related fee or charge.

(j) “Record owner” means the owner of a parcel whose name and address appears on the last equalized secured property tax assessment roll, or in the

case of any public entity, the State of California, or the United States, means the representative of that public entity at the address of that entity known to the agency.

(k) “Sewer” includes systems, all real estate, fixtures, and personal property owned, controlled, operated, or managed in connection with or to facilitate sewage collection, treatment, or disposition for sanitary or drainage purposes, including lateral and connecting sewers, interceptors, trunk and outfall lines, sanitary sewage treatment or disposal plants or works, drains, conduits, outlets for surface or storm waters, and any and all other works, property, or structures necessary or convenient for the collection or disposal of sewage, industrial waste, or surface or storm waters. “Sewer system” shall not include a sewer system that merely collects sewage on the property of a single owner.

(l) “Registered professional engineer” means an engineer registered pursuant to the Professional Engineers Act (Chapter 7 (commencing with Section 6700) of Division 3 of the Business and Professions Code).

(m) “Vector control” means any system of public improvements or services that is intended to provide for the surveillance, prevention, abatement, and control of vectors as defined in subdivision (k) of Section 2002 of the Health and Safety Code and a pest as defined in Section 5006 of the Food and Agricultural Code.

(n) “Water” means any system of public improvements intended to provide for the production, storage, supply, treatment, or distribution of water from any source.

SEC. 2. Section 53751 is added to the Government Code, to read:

53751. The Legislature finds and declares all of the following:

(a) The ongoing, historic drought has made clear that California must invest in a 21st century water management system capable of effectively meeting the economic, social, and environmental needs of the state.

(b) Sufficient and reliable funding to pay for local water projects is necessary to improve the state’s water infrastructure.

(c) Proposition 218 was approved by the voters at the November 5, 1996, statewide general election. Some court interpretations of the law have constrained important tools that local governments need to manage storm water and drainage runoff.

(d) Storm waters are carried off in storm sewers, and careful management is necessary to ensure adequate state water supplies, especially during drought, and to reduce pollution. But a court decision has found storm water subject to the voter-approval provisions of Proposition 218 that apply to property-related fees, preventing many important projects from being built.

(e) The court of appeal in *Howard Jarvis Taxpayers Ass’n v. City of Salinas* (2002) 98 Cal.App.4th 1351 concluded that the term “sewer,” as used in Proposition 218, is “ambiguous” and declined to use the statutory definition of the term “sewer system,” which was part of the then-existing law as Section 230.5 of the Public Utilities Code.

(f) The court in *Howard Jarvis Taxpayers Ass’n v. City of Salinas* (2002) 98 Cal.App.4th 1351 failed to follow long-standing principles of statutory

construction by disregarding the plain meaning of the term “sewer.” Courts have long held that statutory construction rules apply to initiative measures, including in cases that apply specifically to Proposition 218 (see *People v. Bustamante* (1997) 57 Cal.App.4th 693; *Keller v. Chowchilla Water Dist.* (2000) 80 Cal.App.4th 1006). When construing statutes, courts look first to the words of the statute, which should be given their usual, ordinary, and commonsense meaning (*People v. Mejia* (2012) 211 Cal.App.4th 586, 611). The purpose of utilizing the plain meaning of statutory language is to spare the courts the necessity of trying to divine the voters’ intent by resorting to secondary or subjective indicators. The court in *Howard Jarvis Taxpayers Ass’n v. City of Salinas* (2002) 98 Cal.App.4th 1351 asserted its belief as to what most voters thought when voting for Proposition 218, but did not cite the voter pamphlet or other accepted sources for determining legislative intent. Instead, the court substituted its own judgment for the judgment of voters.

(g) Neither the words “sanitary” nor “sewerage” are used in Proposition 218, and the common meaning of the term “sewer services” is not “sanitary sewerage.” In fact, the phrase “sanitary sewerage” is uncommon.

(h) Proposition 218 exempts sewer and water services from the voter-approval requirement. Sewer and water services are commonly considered to have a broad reach, encompassing the provision of clean water and then addressing the conveyance and treatment of dirty water, whether that water is rendered unclean by coming into contact with sewage or by flowing over the built-out human environment and becoming urban runoff.

(i) Numerous sources predating Proposition 218 reject the notion that the term “sewer” applies only to sanitary sewers and sanitary sewerage, including, but not limited to:

(1) Section 230.5 of the Public Utilities Code, added by Chapter 1109 of the Statutes of 1970.

(2) Section 23010.3, added by Chapter 1193 of the Statutes of 1963.

(3) The Street Improvement Act of 1913.

(4) *L.A. County Flood Control Dist. v. Southern Cal. Edison Co.* (1958) 51 Cal.2d 331, where the California Supreme Court stated that “no distinction has been made between sanitary sewers and storm drains or sewers.”

(5) Many other cases where the term “sewer” has been used interchangeably to refer to both sanitary and storm sewers include, but are not limited to, *County of Riverside v. Whitlock* (1972) 22 Cal.App.3d 863, *Ramseier v. Oakley Sanitary Dist.* (1961) 197 Cal.App.2d 722, and *Torson v. Fleming* (1928) 91 Cal.App. 168.

(6) Dictionary definitions of sewer, which courts have found to be an objective source for determining common or ordinary meaning, including Webster’s (1976), American Heritage (1969), and Oxford English Dictionary (1971).

(j) Prior legislation has affirmed particular interpretations of words in Proposition 218, specifically Assembly Bill 2403 of the 2013–14 Regular Session (Chapter 78 of the Statutes of 2014).

(k) In *Crawley v. Alameda Waste Management Authority* (2015) 243 Cal.App.4th 396, the Court of Appeal relied on the statutory definition of “refuse collection services” to interpret the meaning of that phrase in Proposition 218, and found that this interpretation was further supported by the plain meaning of refuse. Consistent with this decision, in determining the definition of “sewer,” the plain meaning rule shall apply in conjunction with the definitions of terms as provided in Section 53750.

(l) The Legislature reaffirms and reiterates that the definition found in Section 230.5 of the Public Utilities Code is the definition of “sewer” or “sewer service” that should be used in the Proposition 218 Omnibus Implementation Act.

(m) Courts have read the Legislature’s definition of “water” in the Proposition 218 Omnibus Implementation Act to include related services. In *Griffith v. Pajaro Valley Water Management Agency* (2013) 220 Cal.App.4th 586, the Court of Appeal concurred with the Legislature’s view that “water service means more than just supplying water,” based upon the definition of water provided by the Proposition 218 Omnibus Implementation Act, and found that actions necessary to provide water can be funded through fees for water service. Consistent with this decision, “sewer” should be interpreted to include services necessary to collect, treat, or dispose of sewage, industrial waste, or surface or storm waters, and any entity that collects, treats, or disposes of any of these necessarily provides sewer service.

Assembly Bill No. 1180

CHAPTER 617

An act to amend Section 2 of the Los Angeles County Flood Control Act (Chapter 755 of the Statutes of 1915), relating to the Los Angeles County Flood Control District.

[Approved by Governor October 9, 2017. Filed with
Secretary of State October 9, 2017.]

LEGISLATIVE COUNSEL'S DIGEST

AB 1180, Holden. Los Angeles County Flood Control District: taxes, fees, and charges.

Existing law, the Los Angeles County Flood Control Act, establishes the Los Angeles County Flood Control District and authorizes the district to control and conserve the flood, storm, and other wastewater of the district. Existing law authorizes the district to impose a fee or charge, in compliance with Article XIII D of the California Constitution, to pay the costs and expenses of carrying out projects and providing services to improve water quality and reduce stormwater and urban runoff pollution in the district in accordance with specified criteria. The act requires that any fees imposed be levied and collected together with taxes for county purposes, and the revenues paid into the county treasury to the credit of the district, and requires the county board of supervisors to expend the funds to pay for those costs and expenses, to be allocated as prescribed.

This bill would authorize the district to levy a tax, in compliance with the applicable provisions of Article XIII C of the California Constitution, or impose a fee or charge, in compliance with the applicable provisions of Article XIII D of the California Constitution, to pay the costs and expenses of carrying out projects and programs to increase stormwater capture and reduce stormwater and urban runoff pollution in the district, and would specify that projects funded by the revenues from the tax, fee, or charge may include projects providing multiple benefits that increase water supply, improve water quality, and, where appropriate, provide community enhancements, as prescribed. The bill would revise certain provisions prescribing the allocation of those revenues derived from any tax, fee, or charge imposed pursuant to the above-described provisions for those water projects and programs.

The people of the State of California do enact as follows:

SECTION 1. Section 2 of the Los Angeles County Flood Control Act (Chapter 755 of the Statutes of 1915), as amended by Section 2 of Chapter 212 of the Statutes of 2012, is amended to read:

Sec. 2. The objects and purposes of this act are to provide for the control and conservation of the flood, storm and other waste waters of said district, and to conserve these waters for beneficial and useful purposes by spreading, storing, retaining or causing to percolate into the soil within the district, or to save or conserve in any manner, all or any of these waters, and to protect from damage from flood or storm waters, the harbors, waterways, public highways and property in the district, and to provide for public use of navigable waterways under the district's control that are suitable for recreational and educational purposes, when these purposes are not inconsistent with the use thereof by the district for flood control and water conservation.

The Los Angeles County Flood Control District is hereby declared to be a body corporate and politic, and has all the following powers:

1. To have perpetual succession.
2. To sue and be sued in the name of the district in all actions and proceedings in all courts and tribunals of competent jurisdiction.
3. To adopt a seal and alter it at pleasure.
4. To take by grant, purchase, gift, devise or lease, hold, use, enjoy, and to lease or dispose of real or personal property of every kind within or without the district necessary to the full exercise of its power.
5. To acquire or contract to acquire lands, rights-of-way, easements, privileges and property of every kind, and construct, maintain and operate any and all works or improvements within or without the district necessary or proper to carry out any of the objects or purposes of this act, and to complete, extend, add to, repair or otherwise improve any works or improvements acquired by it as herein authorized. Construction or improvement of existing facilities may involve landscaping and other aesthetic treatment in order that the facility will be compatible with existing or planned development in the area of improvement.
6. To exercise the right of eminent domain, either within or without the district, to take any property necessary to carry out any of the objects or purposes of this act.
7. To incur indebtedness, and to issue bonds in the manner herein provided.
- 7a. To borrow money from the United States of America, any agency or department thereof, or from any nonprofit corporation, organized under the laws of this state, to which the Reconstruction Finance Corporation, a corporation organized and existing under and by virtue of an act of Congress, entitled "Reconstruction Finance Corporation Act," or other agency, or department, of the United States government, has authorized, or shall hereafter authorize, a loan to enable nonprofit corporation to lend money to the Los Angeles County Flood Control District, for any flood control

work authorized under this act, and to repay the same, in annual installments, over a period of not to exceed twenty (20) years, with interest at a rate of not to exceed four and one-fourth per centum (4 ¼%) per annum, payable semiannually, and, without the necessity of an election when authorized by resolution of the board of supervisors, as evidences of that indebtedness, the district is hereby authorized to execute and deliver a note, or a series of notes, or bonds, or other evidences of indebtedness, signed by the chairperson of the board of supervisors of the district, which notes, bonds, or other evidences of indebtedness, shall be negotiable instruments if so declared in the resolution of the board of supervisors providing for their issuance, and notes, bonds, or other evidences of indebtedness, may have interest coupons attached to evidence interest payments, signed by the facsimile signature of the chairperson of the board. All applications for these loans shall specify the particular flood control work or projects for which the funds will be expended, and when received, the money shall be deposited in a special fund, and shall be expended for those purposes only which are described and referred to in the applications. If a surplus remains after the completion of the work, the surplus shall be applied to the payment of the note, notes, bonds, or other evidences of indebtedness, executed as aforesaid, for the loan including interest coupons. The board of supervisors shall annually levy a tax upon the taxable real property of the district, clearly sufficient to pay the interest and installments of principal, as the same shall become due and payable, under any loan made pursuant to the authority of this section, and to create and maintain a reserve fund to assure the prompt payment thereof, as may be provided by resolution of the board of supervisors. However, the amount of taxes levied in any year, pursuant to this subsection, shall, pro tanto, reduce the authority of the board of supervisors, during any year, to levy taxes under Section 14 of this act, but this proviso shall not be a limitation upon the power and duty to levy and collect taxes under this subsection. Notwithstanding any other provisions of law, interest earned on funds representing the proceeds of bonds of the district shall be deposited and retained in the reserve fund of the district to meet the principal and interest falling due on these bonds.

Notwithstanding anything in this subsection to the contrary, the total amount the district may borrow under the authority of any or all of the provisions of this subsection is limited to and shall not exceed in the aggregate the sum of four million five hundred thousand dollars (\$4,500,000).

7b. The power granted in the next preceding subsection is hereby extended to authorize the issuance and sale of bonds or other evidences of indebtedness of the district to the County of Los Angeles and the purchase thereof by the county in accordance with "An act authorizing the investment and reinvestment and disposition of any surplus moneys in the treasury of any county, city and county, incorporated city or town or municipal utility district or flood control district," approved April 23, 1913, as amended; all subject to the provisions and limitations of the next preceding subsection relative to the disposition and use of funds, interest rate, period of repayment, tax

rate and mode of issuance. The total amount of bonds or other evidence of indebtedness, in the aggregate, which the district may issue and sell under the authority of subsection 7a and of this subsection is limited to and shall not exceed four million five hundred thousand dollars (\$4,500,000).

8. To cause taxes to be levied and collected for the purpose of paying any obligation of the district in the manner provided in this section.

8a. To levy a tax, in compliance with the applicable provisions of Article XIII C of the California Constitution, or impose a fee or charge, in compliance with the applicable provisions of Article XIII D of the California Constitution, to pay the costs and expenses of carrying out projects and programs to increase stormwater capture and reduce stormwater and urban runoff pollution in the district in accordance with criteria established by the ordinance adopted pursuant to subsection 8c. Projects and programs funded by the revenues from the tax, fee, or charge may include projects providing multiple benefits that increase water supply, improve water quality, and, where appropriate, provide community enhancements such as the greening of schools, parks, and wetlands, and increased public access to rivers, lakes, and streams. Any tax, fee, or charge that is levied or imposed pursuant to this subsection shall be levied and collected together with, and not separately from, taxes for county purposes, and the revenues derived from the tax, fee, or charge shall be paid into the county treasury to the credit of the district, and the board of supervisors shall expend these funds to pay for costs and expenses in accordance with this subsection.

8b. The district shall allocate the revenues derived from any tax, fee, or charge imposed pursuant to subsection 8a as follows:

(A) Ten percent shall be allocated to the district for implementation and administration of projects and programs described in subsection 8a, and for payment of the costs incurred in connection with the levy and collection of the tax, fee, or charge and the distribution of the funds generated by imposition of the tax, fee, or charge, in accordance with the procedures established by the ordinance adopted pursuant to subsection 8c.

(B) Forty percent shall be allocated to cities within the boundaries of the district and to the County of Los Angeles, in the same proportion as the amount of revenues collected within each jurisdiction and within the unincorporated territories, to be expended by those cities within the cities' respective jurisdictions and by the County of Los Angeles within the unincorporated territories that are within the boundaries of the district, for the implementation, operation and maintenance, and administration of projects and programs described in subsection 8a, in accordance with the procedures established by the ordinance adopted pursuant to subsection 8c.

(C) Fifty percent shall be allocated to pay for the implementation, operation and maintenance, and administration of watershed-based projects and programs described in subsection 8a, including projects and programs identified in regional plans such as stormwater resource plans developed in accordance with Part 2.3 (commencing with Section 10560) of Division 6 of the Water Code, watershed management programs developed pursuant to waste discharge requirements for municipal separate storm sewer system

(MS4) discharges within the coastal watersheds of the County of Los Angeles, issued by the Los Angeles Regional Water Quality Control Board, and other regional water management plans, as appropriate, in accordance with the procedures established by the ordinance adopted pursuant to subsection 8c.

8c. The governing board of the district shall adopt an ordinance to establish criteria and procedures to implement the authority granted pursuant to subsections 8a and 8b.

9. To make contracts, and to employ for temporary services only, expert appraisers, consultants and technical advisers, and to do all acts necessary for the full exercise of all powers vested in the district, or any of the officers thereof, by this act.

10. To grant or otherwise convey to counties, cities and counties, cities or towns easements for street and highway purposes, over, along, upon, in, through, across or under any real property owned by the Los Angeles County Flood Control District.

11. To remove, carry away and dispose of any rubbish, trash, debris or other inconvenient matter that may be dislodged, transported, conveyed or carried by means of, through, in, or along the works and structures operated or maintained hereunder and deposited upon the property of the district or elsewhere.

12. To pay premiums on bonds of contractors required under any contract if the amount payable to the contractor exceeds five million dollars (\$5,000,000); provided, that the specifications in these cases shall specifically so provide and state that the bidder shall not include in his or her bids the cost of furnishing the required bonds.

13. To lease, sell or dispose of any property (or any interest therein) whenever in the judgment of the board of supervisors of the property, or any interest therein or part thereof, is no longer required for the purposes of the district, or may be leased for any purpose without interfering with the use of the same for the purposes of the district, and to pay any compensation received therefor into the general fund of the district and use the same for the purposes of this act. However, nothing herein shall authorize the board of supervisors or other governing body of the district or any officer thereof to sell, lease or otherwise dispose of any water, water right, reservoir space or storage capacity or any interest or space therein except to public agencies for recreational purposes when the use is not inconsistent with the use thereof by the district for flood control and water conservation purposes; or except as provided by Section 17 of this act. However, the district may grant and convey to the United States of America, or to any federal agency authorized to accept and pay for the land or interests in land, all lands and interests in land, now owned or hereafter acquired, lying within any channel, dam or reservoir site, improved or constructed, in whole or in part, with federal funds, upon payment to the district of sums equivalent to actual expenditures made by it in acquiring the lands and interests in land so conveyed and deemed reasonable by the Secretary of War and the Chief of Engineers.

14. To provide, by agreement with other public agencies or private persons or entities or otherwise, for the recreational use of the lands, facilities, and works of the district which shall not interfere, or be inconsistent, with the primary use and purpose of the lands, facilities, and works by the district.

15. In addition to its other powers, the district shall have the power to preserve, enhance, and add recreational features to its properties and upon a finding by the board of supervisors that the acquisition is necessary for those purposes, to acquire, preserve, enhance, and add recreational features to lands or interests in lands contiguous to its properties, for the protection, preservation, and use of the scenic beauty and natural environment for the properties or the lands and to collect admission or use fees for the recreational features where deemed appropriate.

The district by or through its board of supervisors, or other board or officers at any time succeeding to the duties or functions of its board of supervisors, is hereby authorized and empowered to warrant and defend the title to all land and interests therein so conveyed to the United States of America or to any agency and its respective assigns; to covenant and agree to indemnify and keep indemnified and to hold and save harmless and exonerated the United States of America or any agency, to which lands or any interest therein are so conveyed by the district, from and against all demands, claims, liabilities, liens, actions, suits, charges, costs, loss, damages, expenses and attorneys' fees of whatsoever kind or nature, resulting from, arising out of or occasioned by any defect or defects whatsoever in the title to any land or interest in land so conveyed by the district; to reimburse and save harmless and exonerated the United States of America or any agency for any and all amounts, paid, and expenses incurred, in the compromise or settlement of any demands, claims, liabilities, liens, actions, suits, charges, costs, loss, damages, expenses and attorneys' fees of whatsoever kind or nature, resulting from, arising out of or occasioned by any claim to or defect or defects whatsoever in the title to any land or interests in land so conveyed by the district; to pay all just compensation, costs and expenses, which may be incurred in any condemnation proceeding deemed necessary by the United States of America or that agency, in order to perfect title to any land or interests in land, including without limitation all attorneys' fees, court costs and fees, costs of abstracts and other evidences of title, and all other costs, expenses or damages incurred or suffered by the United States of America or that agency; and consent is hereby given to the bringing of suit or other legal proceedings against the district by the United States of America or that agency, as the case may be, in the proper district court of the United States, upon any cause of action arising out of any conveyance, contract or covenant made or entered into by the district pursuant to the authority granted in this act, or to enforce any claims, damages, loss or expenses arising out of or resulting from any defect

whatsoever in the title to the land or any interest therein or any claims of others in or to the land or interest therein.

ATTACHMENT B-23

Assembly Bill No. 2403

CHAPTER 78

An act to amend Section 53750 of the Government Code, relating to local government.

[Approved by Governor June 28, 2014. Filed with
Secretary of State June 28, 2014.]

LEGISLATIVE COUNSEL'S DIGEST

AB 2403, Rendon. Local government: assessments, fees, and charges.

Articles XIII C and XIII D of the California Constitution generally require that assessments, fees, and charges be submitted to property owners for approval or rejection after the provision of written notice and the holding of a public hearing. Existing law, the Proposition 218 Omnibus Implementation Act, prescribes specific procedures and parameters for local jurisdictions to comply with Articles XIII C and XIII D of the California Constitution and defines various terms for these purposes.

This bill would modify the definition of water to mean water from any source. The bill would also make legislative findings and declarations in this regard.

The people of the State of California do enact as follows:

SECTION 1. The Legislature finds and declares all of the following:

(a) The provisions of the Proposition 218 Omnibus Implementation Act (Article 4.6 (commencing with Section 53750) of Chapter 4 of Part 1 of Division 2 of Title 5 of the Government Code) shall be liberally construed to effectuate its purposes of limiting local government revenue and enhancing taxpayer consent.

(b) This act is in furtherance of the policy contained in Section 2 of Article X of the California Constitution and the policy that the use of potable domestic water for nonpotable uses, including, but not limited to, cemeteries, golf courses, parks, highway landscaped areas, and industrial and irrigation uses, is a waste or an unreasonable use of the water within the meaning of Section 2 of Article X of the California Constitution if recycled water is available.

(c) This act is declaratory of existing law.

SEC. 2. Section 53750 of the Government Code is amended to read:

53750. For purposes of Article XIII C and Article XIII D of the California Constitution and this article:

(a) "Agency" means any local government as defined in subdivision (b) of Section 1 of Article XIII C of the California Constitution.

(b) “Assessment” means any levy or charge by an agency upon real property that is based upon the special benefit conferred upon the real property by a public improvement or service, that is imposed to pay the capital cost of the public improvement, the maintenance and operation expenses of the public improvement, or the cost of the service being provided. “Assessment” includes, but is not limited to, “special assessment,” “benefit assessment,” “maintenance assessment,” and “special assessment tax.”

(c) “District” means an area that is determined by an agency to contain all of the parcels that will receive a special benefit from a proposed public improvement or service.

(d) “Drainage system” means any system of public improvements that is intended to provide for erosion control, for landslide abatement, or for other types of water drainage.

(e) “Extended,” when applied to an existing tax or fee or charge, means a decision by an agency to extend the stated effective period for the tax or fee or charge, including, but not limited to, amendment or removal of a sunset provision or expiration date.

(f) “Flood control” means any system of public improvements that is intended to protect property from overflow by water.

(g) “Identified parcel” means a parcel of real property that an agency has identified as having a special benefit conferred upon it and upon which a proposed assessment is to be imposed, or a parcel of real property upon which a proposed property-related fee or charge is proposed to be imposed.

(h) (1) “Increased,” when applied to a tax, assessment, or property-related fee or charge, means a decision by an agency that does either of the following:

(A) Increases any applicable rate used to calculate the tax, assessment, fee, or charge.

(B) Revises the methodology by which the tax, assessment, fee, or charge is calculated, if that revision results in an increased amount being levied on any person or parcel.

(2) A tax, fee, or charge is not deemed to be “increased” by an agency action that does either or both of the following:

(A) Adjusts the amount of a tax, fee, or charge in accordance with a schedule of adjustments, including a clearly defined formula for inflation adjustment that was adopted by the agency prior to November 6, 1996.

(B) Implements or collects a previously approved tax, fee, or charge, so long as the rate is not increased beyond the level previously approved by the agency, and the methodology previously approved by the agency is not revised so as to result in an increase in the amount being levied on any person or parcel.

(3) A tax, assessment, fee, or charge is not deemed to be “increased” in the case in which the actual payments from a person or property are higher than would have resulted when the agency approved the tax, assessment, fee, or charge, if those higher payments are attributable to events other than

an increased rate or revised methodology, such as a change in the density, intensity, or nature of the use of land.

(i) “Notice by mail” means any notice required by Article XIII C or XIII D of the California Constitution that is accomplished through a mailing, postage prepaid, deposited in the United States Postal Service and is deemed given when so deposited. Notice by mail may be included in any other mailing to the record owner that otherwise complies with Article XIII C or XIII D of the California Constitution and this article, including, but not limited to, the mailing of a bill for the collection of an assessment or a property-related fee or charge.

(j) “Record owner” means the owner of a parcel whose name and address appears on the last equalized secured property tax assessment roll, or in the case of any public entity, the State of California, or the United States, means the representative of that public entity at the address of that entity known to the agency.

(k) “Registered professional engineer” means an engineer registered pursuant to the Professional Engineers Act (Chapter 7 (commencing with Section 6700) of Division 3 of the Business and Professions Code).

(l) “Vector control” means any system of public improvements or services that is intended to provide for the surveillance, prevention, abatement, and control of vectors as defined in subdivision (k) of Section 2002 of the Health and Safety Code and a pest as defined in Section 5006 of the Food and Agricultural Code.

(m) “Water” means any system of public improvements intended to provide for the production, storage, supply, treatment, or distribution of water from any source.

Assembly Bill No. 2554

CHAPTER 602

An act to amend Sections 2 and 16 of the Los Angeles County Flood Control Act (Chapter 755 of the Statutes of 1915), relating to the Los Angeles County Flood Control District.

[Approved by Governor September 30, 2010. Filed with Secretary of State September 30, 2010.]

LEGISLATIVE COUNSEL'S DIGEST

AB 2554, Brownley. Los Angeles County Flood Control District: fees and charges.

Existing law, the Los Angeles County Flood Control Act, establishes the Los Angeles County Flood Control District and authorizes the district to control and conserve the flood, storm, and other wastewater of the district. The act declares the district to be a body corporate and politic, and to have various powers, including the power to cause taxes to be levied and collected for the purpose of paying any obligation of the district.

This bill would authorize the district to impose a fee or charge, in compliance with Article XIII D of the California Constitution, to pay the costs and expenses of carrying out projects and providing services to improve water quality and reduce stormwater and urban runoff pollution in the district in accordance with specified criteria. The bill would require that any fees imposed be levied and collected together with taxes for county purposes, and the revenues paid into the county treasury to the credit of the district. The bill would require the county board of supervisors to expend the funds to pay for those costs and expenses, to be allocated as prescribed.

The act authorizes the board of the district, subject to certain limitations, to do all acts or things necessary or useful for the promotion of the work or the control of the floodwater and stormwater of the district, to conserve those waters for beneficial and useful purposes, and to protect from damage from floodwater and stormwater, the harbors, waterways, public highways, and property of the district. One limitation upon the authority of the board of the district is that it is not authorized to raise money for the district by any method or system other than by issuing bonds, or the levying of a tax upon the assessed value of all the real property of the district, except from the sale and lease of its property.

This bill would instead provide that the board of the district is not authorized to raise money for the district by any method or system other than by issuing bonds, the levying of a tax, or the imposition of a fee or charge in compliance with Article XIII D of the California Constitution.

Vote: majority Appropriation: no Fiscal Committee: no Local Program: no

THE PEOPLE OF THE STATE OF CALIFORNIA DO ENACT AS FOLLOWS:

SECTION 1. Section 2 of the Los Angeles County Flood Control Act (Chapter 755 of the Statutes of 1915), as amended by Section 33 of Chapter 1276 of the Statutes of 1975, is amended to read:

Sec. 2. The objects and purposes of this act are to provide for the control and conservation of the flood, storm and other waste waters of said district, and to conserve these waters for beneficial and useful purposes by spreading, storing, retaining or causing to percolate into the soil within the district, or to save or conserve in any manner, all or any of these waters, and to protect from damage from flood or storm waters, the harbors, waterways, public highways and property in the district.

The Los Angeles County Flood Control District is hereby declared to be a body corporate and politic, and has all the following powers:

1. To have perpetual succession.
2. To sue and be sued in the name of the district in all actions and proceedings in all courts and tribunals of competent jurisdiction.
3. To adopt a seal and alter it at pleasure.
4. To take by grant, purchase, gift, devise or lease, hold, use, enjoy, and to lease or dispose of real or personal property of every kind within or without the district necessary to the full exercise of its power.
5. To acquire or contract to acquire lands, rights-of-way, easements, privileges and property of every kind, and construct, maintain and operate any and all works or improvements within or without the district necessary or proper to carry out any of the objects or purposes of this act, and to complete, extend, add to, repair or otherwise improve any works or improvements acquired by it as herein authorized. Construction or improvement of existing facilities may involve landscaping and other aesthetic treatment in order that the facility will be compatible with existing or planned development in the area of improvement.
6. To exercise the right of eminent domain, either within or without the district, to take any property necessary to carry out any of the objects or purposes of this act.
7. To incur indebtedness, and to issue bonds in the manner herein provided.
- 7a. To borrow money from the United States of America, any agency or department thereof, or from any nonprofit corporation, organized under the laws of this state, to which the Reconstruction Finance Corporation, a corporation organized and existing under and by virtue of an act of Congress, entitled "Reconstruction Finance Corporation Act," or other agency, or department, of the United States government, has authorized, or shall hereafter authorize, a loan to enable nonprofit corporation to lend money to the Los Angeles County Flood Control District, for any flood control work authorized under this act, and to repay the same, in annual installments, over a period of not to exceed twenty (20) years, with interest at a rate of not to exceed four and one-fourth per centum (4 1/4%) per annum, payable semiannually, and, without the necessity of an election when authorized by resolution of the board of supervisors, as evidences of that indebtedness, the district is hereby authorized to execute and deliver a note, or a series of notes, or bonds, or other evidences of indebtedness, signed by the chairperson of the board of supervisors of the district, which notes, bonds, or other evidences of indebtedness, shall be negotiable instruments if so declared in the resolution of the board of supervisors providing for their issuance, and notes, bonds, or other evidences of indebtedness, may have interest coupons attached to evidence interest payments, signed by the facsimile signature of the chairperson of the board. All applications for these loans shall specify the particular flood control work or projects for which the funds will be expended, and when received, the money shall be deposited in a special fund, and shall be expended for those purposes only which are described and referred to in the applications. If a surplus remains after the completion of the work, the surplus shall be applied to the payment of the note, notes, bonds, or other evidences of indebtedness, executed as aforesaid, for the loan including interest coupons. The board of supervisors shall annually levy a tax upon the taxable real property of the district, clearly sufficient to pay the interest and installments of principal, as the same shall become due and payable, under any loan made pursuant to the authority of this section, and to create and maintain a reserve fund to assure the prompt payment thereof, as may be provided by resolution of the board of supervisors. However, the amount of taxes levied in any year, pursuant to this subsection, shall, pro tanto, reduce the authority of the board of supervisors, during any year, to levy taxes under Section 14 of this act, but this proviso shall not be a limitation upon the power and duty to levy and collect taxes under this subsection. Notwithstanding any other provisions of law, interest earned on funds representing the proceeds of bonds of the district shall be deposited and retained in the reserve fund of the district to meet the principal and interest falling due on these bonds.

Notwithstanding anything in this subsection to the contrary, the total amount the district may borrow under the authority of any or all of the provisions of this subsection is limited to and shall not exceed in the aggregate the sum of four million five hundred thousand dollars (\$4,500,000).

7b. The power granted in the next preceding subsection is hereby extended to authorize the issuance and sale of bonds or other evidences of indebtedness of the district to the County of Los Angeles and the purchase thereof by the county in accordance with "An act authorizing the investment and reinvestment and disposition of any surplus moneys in the treasury of any county, city and county, incorporated city or town or municipal utility district or flood control district," approved April 23, 1913, as amended; all subject to the provisions and limitations of the next preceding subsection relative to the disposition and use of funds, interest rate, period of repayment, tax rate and mode of issuance. The total amount of bonds or other evidence of indebtedness, in the aggregate, which the district may issue and sell under the authority of subsection 7a and of this subsection is limited to and shall not exceed four million five hundred thousand dollars (\$4,500,000).

8. To cause taxes to be levied and collected for the purpose of paying any obligation of the district in the manner provided in this section.

8a. To impose a fee or charge, in compliance with the applicable provisions of Article XIII D of the California Constitution, to pay the costs and expenses of carrying out projects and providing services to improve water quality and reduce stormwater and urban runoff pollution in the district in accordance with criteria established by the ordinance adopted pursuant to subsection 8c. Any fee that is imposed pursuant to this subsection shall be levied and collected together with, and not separately from, taxes for county purposes, and the revenues derived from the fees shall be paid into the county treasury to the credit of the district, and the board of supervisors shall expend these funds to pay for costs and expenses in accordance with this subsection.

8b. The district shall allocate the revenues derived from any fee or charge imposed pursuant to subsection 8a as follows:

(A) Ten percent shall be allocated to the district for implementation and administration of water quality programs, as determined by the district, including activities such as planning, water quality monitoring, and any other related activities, and for payment of the costs incurred in connection with the levy and collection of the fee and the distribution of the funds generated by imposition of the fee, as established by the ordinance adopted pursuant to subsection 8c.

(B) Forty percent shall be allocated to cities within the boundaries of the district and to the County of Los Angeles, in the same proportion as the amount of fees collected within each jurisdiction and within the unincorporated territories, to be expended by those cities within the cities' respective jurisdictions and by the County of Los Angeles within the unincorporated territories that are within the boundaries of the district, for water quality improvement programs, as established by the ordinance adopted pursuant to subsection 8c.

(C) Fifty percent shall be allocated to nine watershed authority groups that shall be authorized by the ordinance adopted pursuant to subsection 8c, in the same proportion as the amount of fees collected within each watershed, to implement collaborative water quality improvement plans or programs in the watersheds as established by the ordinance adopted pursuant to subsection 8c. Those nine watershed authority groups shall be established for the Ballona Creek, Dominguez Channel, Upper Los Angeles River, Lower Los Angeles River, Rio Hondo, Upper San Gabriel River, Lower San Gabriel River, Santa Clara River, and Santa Monica Bay watersheds. The watershed authority groups shall be established pursuant to Article 1 (commencing with Section 6500) of Chapter 5 of Division 7 of Title 1 of the Government Code. The implementation of a collaborative water quality improvement plan or program by a watershed authority group shall require the consent of any watershed authority group member whose jurisdiction comprises more than 40 percent of the total land area in a watershed.

8c. The governing board of the district shall adopt an ordinance to implement the authority granted pursuant to subsections 8a and 8b.

9. To make contracts, and to employ for temporary services only, expert appraisers, consultants and technical advisers, and to do all acts necessary for the full exercise of all powers vested in the district, or any of the officers thereof, by this act.

10. To grant or otherwise convey to counties, cities and counties, cities or towns easements for street and highway purposes, over, along, upon, in, through, across or under any real property owned by the Los Angeles County Flood Control District.

11. To remove, carry away and dispose of any rubbish, trash, debris or other inconvenient matter that may be dislodged, transported, conveyed or carried by means of, through, in, or along the works and structures operated or maintained hereunder and deposited upon the property of the district or elsewhere.

12. To pay premiums on bonds of contractors required under any contract if the amount payable to the contractor exceeds five million dollars (\$5,000,000); provided, that the specifications in these cases shall specifically so provide and state that the bidder shall not include in his or her bids the cost of furnishing the required bonds.

13. To lease, sell or dispose of any property (or any interest therein) whenever in the judgment of the board of supervisors of the property, or any interest therein or part thereof, is no longer required for the purposes of the district, or may be leased for any purpose without interfering with the use of the same for the purposes of the district, and to pay any compensation received therefor into the general fund of the district and use the same for the purposes of this act. However, nothing herein shall authorize the board of supervisors or other governing body of the district or any officer thereof to sell, lease or otherwise dispose of any water, water right, reservoir space or storage capacity or any interest or space therein except to public agencies for recreational purposes when the use is not inconsistent with the use thereof by the district for flood control and water conservation purposes; or except as provided by Section 17 of this act. However, the district may grant and convey to the United States of America, or to any federal agency authorized to accept and pay for the land or interests in land, all lands and interests in land, now owned or hereafter acquired, lying within any channel, dam or reservoir site, improved or constructed, in whole or in part, with federal funds, upon payment to the district of sums equivalent to actual expenditures made by it in acquiring the lands and interests in land so conveyed and deemed reasonable by the Secretary of War and the Chief of Engineers.

14. To provide, by agreement with other public agencies or private persons or entities or otherwise, for the recreational use of the lands, facilities, and works of the district which shall not interfere, or be inconsistent, with the primary use and purpose of the lands, facilities, and works by the district.

15. In addition to its other powers, the district shall have the power to preserve, enhance, and add recreational features to its properties and upon a finding by the board of supervisors that the acquisition is necessary for those purposes, to acquire, preserve, enhance, and add recreational features to lands or interests in lands contiguous to its properties, for the protection, preservation, and use of the scenic beauty and natural environment for the properties or the lands and to collect admission or use fees for the recreational features where deemed appropriate.

The district by or through its board of supervisors, or other board or officers at any time succeeding to the duties or functions of its board of supervisors, is hereby authorized and empowered to warrant and defend the title to all land and interests therein so conveyed to the United States of America or to any agency and its respective assigns; to covenant and agree to indemnify and keep indemnified and to hold and save harmless and exonerated the United States of America or any agency, to which lands or any interest therein are so conveyed by the district, from and against all demands, claims, liabilities, liens, actions, suits, charges, costs, loss, damages, expenses and attorneys' fees of whatsoever kind or nature, resulting from, arising out of or occasioned by any defect or defects whatsoever in the title to any land or interest in land so conveyed by the district; to reimburse and save harmless and exonerated the United States of America or any agency for any and all amounts, paid, and expenses incurred, in the compromise or settlement of any demands, claims, liabilities, liens, actions, suits, charges, costs, loss, damages, expenses and attorneys' fees of whatsoever kind or nature, resulting from, arising out of or occasioned by any claim to or defect or defects whatsoever in the title to any land or interests in land so conveyed by the district; to pay all just compensation, costs and expenses, which may be incurred in any condemnation proceeding deemed necessary by the United States of America or that agency, in order to perfect title to any land or interests in land, including without limitation all attorneys' fees, court costs and fees, costs of abstracts and other evidences of title, and all other costs, expenses or damages incurred or suffered by the United States of America or that agency; and consent is hereby given to the bringing of suit or other legal proceedings against the district by the United States of America or that agency, as the case may be, in the proper district court of the United States, upon any cause of action arising out of any conveyance, contract or covenant made or entered into by the district pursuant to the authority granted in this act, or to enforce any claims, damages, loss or expenses arising out of or resulting from any defect whatsoever in the title to the land or any interest therein or any claims of others in or to the land or interest therein.

SEC. 2. Section 16 of the Los Angeles County Flood Control Act (Chapter 755 of the Statutes of 1915), as amended by Section 6 of Chapter 1276 of the Statutes of 1975, is amended to read:

Sec. 16. (a) The board of supervisors of the district shall have power to make and enforce all needful rules and regulations for the administration and government of the district, and to perform all other acts necessary or proper to accomplish the purposes of this act.

(b) The board of supervisors shall have power to do all work and to construct and acquire all improvements necessary or useful for carrying out any of the purposes of this act; and the board of supervisors shall have power to acquire either within or without the boundaries of the district, by purchase, donation or by other lawful means in the name of the district, from private persons, corporations, reclamation districts, swampland districts, levee districts, protection districts, drainage districts, irrigation districts, or other public corporations or agencies or districts, all lands, rights-of-way, easements, property or materials necessary or useful for carrying out any of the purposes of this act; to make contracts to indemnify or compensate any owner of land or other property for any injury or damage necessarily caused by the exercise of the powers conferred by this act, or arising out of the use, taking or damage of any property, rights-of-way or easements, for any of these purposes; to compensate any reclamation district, protection district, drainage district, irrigation district or other district, public corporation or agency or district, for any right-of-way, easement or property taken over or acquired by the Los Angeles County Flood Control District as a part of its work of flood control or conservation or protection provided for in this act, and any reclamation district, protection district, drainage district, irrigation district or other district or public corporation or agency is hereby given power and authority to distribute compensation in any manner that may be now or hereafter allowed by law; to maintain actions to restrain the doing of any act or thing that may be injurious to carrying out any of the purposes of this act by the district, or that may interfere with the successful execution of that work, or for damages for injury thereto; to do any and all things necessary or incident to the powers hereby granted, or to carry out any of the objects and purposes of this act; to require, by appropriate legal proceedings, the owner or owners of any bridge, trestle, wire line, viaduct, embankment or other structure which shall be intersected, traversed or crossed by any channel, ditch, bed of any stream, waterway, conduit or canal, so to construct or alter the same as to offer a minimum of obstruction to the free flow of water through or along any channel, ditch, bed of any stream, waterway, conduit or canal, and whenever necessary in the case of existing works or structures, to require the removal or alteration thereof for that purpose. However, nothing in this act contained shall be deemed to authorize the district in exercising any of its powers to take, damage or destroy any property or to require the removal, relocation, alteration or destruction of any bridge, railroad, wire line, pipeline, facility or other structure unless just compensation therefor be first made, in the manner and to the extent required by the Constitution of the United States and the Constitution of California.

The board of supervisors of the district is hereby vested with full power to do all other acts or things necessary or useful for the promotion of the work of the control of the floodwater and stormwater of the district, and to conserve those waters for beneficial and useful purposes, and to protect from damage from floodwater and stormwater, the harbors, waterways, public highways, and property in the district. However, this act does not authorize the district, or any person or persons, to divert the waters of any river, creek, stream, irrigation system, canal or ditch, from its channel, to the detriment of any person or persons having any interest in such river, creek, stream, irrigation system, canal or ditch, or the waters thereof or therein, unless previous compensation be first ascertained and paid therefor, under the laws of this state authorizing the taking of private property for public uses. This act does not affect the plenary power of any incorporated city, city and county, or town, or municipal or county water district, to provide for a water supply of that public corporation, or as affecting the absolute control of any properties of that public corporations necessary for the water supply, and this act does not vest any power of control over the properties in the Los Angeles County Flood Control District, or in any officer thereof, or in any person referred to in this act. This act does not authorize the board of supervisors to raise money for the district by any method or system other than that by the issuing of bonds, the levying of a tax, or the imposition of a fee or charge in compliance with Article XIII D of the California Constitution, in the manner in this act provided, except from the sale and lease of its property as provided in this act.

NATURAL RESOURCES DEFENSE COUNCIL, INC.

v.

Douglas M. COSTLE, Administrator, Environmental Protection
Agency, Colorado River Water Conservation District, Appellant.

Nos. 75-2056, 75-2066, 75-2067 and 75-2235.

|
Argued Dec. 3, 1976.

|
Decided Nov. 16, 1977.

The National Resources Defense Council, Inc. challenged authority of the Environmental Protection Agency Administrator to exempt categories of point sources from permit requirements of the Federal Water Pollution Control Act Amendments of 1972. The United States District Court for the District of Columbia, Thomas A. Flannery, J., [396 F.Supp. 1393](#), granted summary judgment to the NRDC and the Administrator and others appealed. The Court of Appeals, Leventhal, Circuit Judge, held that: (1) legislative history shows that National Pollution Discharge Elimination System permit is the only means by which discharger may escape total prohibition of discharges from point sources found in FWPCA; (2) national effluent limitations need not be uniform as precondition for NPDES program to include pollution from agricultural, silvicultural, and storm runoff point sources, and while technological or administrative infeasibility of such limitations may warrant adjustments in permit program it does not authorize Administrator to exclude relevant point sources; (3) where numeric effluent limitations are infeasible, permit conditions may proscribe industry practices that aggravate problems of point source pollution as well as require monitoring and reporting of effluent level; and (4) a number of administrative devices, including general or area permits are available to aid EPA in practical administration of NPDES program, and FWPCA, however tight in some respects, leaves some leeway to EPA in interpretation of that statute and affords agency some means to consider matters of feasibility.

Affirmed in accordance with opinion.

MacKinnon, Circuit Judge, filed a concurring opinion.

West Headnotes (8)

[1] **Environmental Law** 🔑 **Discharge of Pollutants**

Legislative history clearly shows that Congress intended that the national pollution discharge elimination system permit be the only means by which a discharger of pollutant may escape total prohibition of discharges from point sources found in Federal Water Pollution Control Act Amendments. Federal Water Pollution Control Act, §§ 301, 301(a), 402 as amended 33 U.S.C.A. §§ 1311, 1311(a), 1342.

[33 Cases that cite this headnote](#)

[2] **Environmental Law** 🔑 **Discharge of Pollutants**

Use of word “may” in that section of Federal Water Pollution Control Act Amendment providing that the administrator may issue permit for discharge of any pollutant means only that the administrator has the discretion either to issue permit or to leave pollutant discharger subject to total proscription of statute making discharge of any pollutant by any person unlawful except as provided in Act. Federal Water Pollution Control Act, §§ 301(a), 302, 304 as amended 33 U.S.C.A. §§ 1311(a), 1342, 1344.

[17 Cases that cite this headnote](#)

[3] **Environmental Law** 🔑 **Substances, Sources, and Activities Regulated**

Environmental Law 🔑 **Discharge of Pollutants**

Existence of uniform national effluent limitations is not a necessary precondition for incorporating into the national pollutant discharge elimination system program pollution from agricultural, silvicultural, and storm water runoff point sources; technological or administrative infeasibility of such limitations may result in adjustments in permit programs but does not authorize administrator to exclude relevant point sources from program. Federal Water Pollution Control Act, §§ 301, 402, 404, 1362(12, 14), as amended 33 U.S.C.A. §§ 1311, 1342, 1344, 502(12, 14).

[63 Cases that cite this headnote](#)

[4] **Environmental Law** 🔑 **Conditions and Limitations**

Where numeric effluent limitations are infeasible, point of discharge permits may proscribe industry practices which aggravate problems of point source pollution as well as require monitoring and reporting of effluent levels contrary to claim that any limitations must be issued in terms of a numerical effluent standard. Federal Water Pollution Control Act, §§ 302(a), 402, 402(a) as amended 33 U.S.C.A. §§ 1312(a), 1342, 1342(a).

[25 Cases that cite this headnote](#)

[5] **Environmental Law** 🔑 **Discharge of Pollutants**

Federal Water Pollution Control Act Amendments merely require that point of discharge permits be in compliance with limitations section of Act and as a result the use of area or general permits is allowed. Federal Water Pollution Control Act, § 402 as amended 33 U.S.C.A. § 1342.

[5 Cases that cite this headnote](#)

[6] **Environmental Law** 🔑 **Water Pollution**

Power to define point and nonpoint sources of pollution is vested in Environmental Protection Agency under the Federal Water Pollution Control Act Amendments, and exercise of that power should be reviewed by court only after opportunity for full agency review and examination. Federal Water Pollution Control Act, § 402 as amended [33 U.S.C.A. § 1342](#).

[8 Cases that cite this headnote](#)

[7] **Environmental Law** 🔑 **Administrative Agencies and Proceedings**

Federal Water Pollution Control Act Amendments, however tight in some respects, leave some leeway to Environmental Protection Agency in interpretation and affords agency some means to consider matter of feasibility. Federal Water Pollution Control Act, §§ 1-26, 101-517 as amended [33 U.S.C.A. §§ 1151-1175, 1251-1376](#).

[Cases that cite this headnote](#)

[8] **Administrative Law and Procedure** 🔑 **Statutory Basis and Limitation**

It is not what court thinks that is generally appropriate to regulatory process, but what Congress intended.

[2 Cases that cite this headnote](#)

***1370 **148** *Syllabus by the Court*

The National Resources Defense Council, Inc. (NRDC) challenged the authority of the EPA Administrator to exempt categories of point sources from the permit requirements of s 402 of the Federal Water Pollution Control Act Amendments of 1972, [33 U.S.C. s 1342 \(Supp. V 1975\)](#). On appeal from a grant of summary judgment to NRDC, held:

1. The legislative history makes clear that Congress intended the National Pollution Discharge Elimination System (NPDES) permit to be the only means by which a discharger may escape the total prohibition of discharges from point sources found in FWPCA s 301(a), [33 U.S.C. s 1311\(a\)](#) (Supp. V 1975).
2. It is not necessary that national effluent limitations be uniform as a precondition for the NPDES program to include pollution from agricultural, silvicultural, and storm water runoff point sources. The technological or administrative infeasibility ***1371 **149** of such limitations may warrant adjustments in the permit program, but it does not authorize the Administrator to exclude the relevant point source from the NPDES program.
3. Where numeric effluent limitations are infeasible, permit conditions may proscribe industry practices that aggravate the problems of point source pollution as well as require monitoring and reporting of effluent levels.
4. A number of administrative devices, including general or area permits, are available to aid EPA in the practical administration of the NPDES program. The FWPCA, however tight in some respects, leaves some leeway to EPA in the interpretation of that statute and, in that regard, affords the agency some means to consider matters of feasibility.

Appeals from the United States District Court for the District of Columbia (D.C. Civil 1629-73).

Before BAZELON, Chief Judge, and LEVENTHAL and MacKINNON, Circuit Judges.

Opinion

Opinion for the Court filed by LEVENTHAL, Circuit Judge.

Concurring Opinion filed by MacKINNON, Circuit Judge.

LEVENTHAL, Circuit Judge:

In 1972 Congress passed the Federal Water Pollution Control Act Amendments (hereafter referred to as the "FWPCA" or the "Act"¹). It was a dramatic response to accelerating environmental degradation of rivers, lakes and streams in this country. The Act's stated goal is to eliminate the discharge of pollutants into the Nation's waters by 1985. This goal is to be achieved through the enforcement of the strict timetables and technology-based effluent limitations established by the Act.

The FWPCA sets up a permit program, the National Pollutant Discharge Elimination System (NPDES), as the primary means of enforcing the Act's effluent limitations.² At issue in this case is the authority *1372 **150 of the Administrator of the Environmental Protection Agency to make exemptions from this permit component of the FWPCA.

Section 402 of the FWPCA, 33 U.S.C. s 1342 (Supp. V 1975), provides that under certain circumstances the EPA Administrator "may . . . issue a permit for the discharge of any pollutant" notwithstanding the general proscription of pollutant discharges found in s 301 of the Act. 33 U.S.C. s 1311 (Supp. V 1975). The discharge of a pollutant is defined in the FWPCA as "any addition of any pollutant to navigable waters from any point source" or "any addition of any

pollutant to the waters of the contiguous zone or the ocean from any point source other than a vessel or floating craft.” 33 U.S.C. s 1362(12) (Supp. V 1975). In 1973 the EPA Administrator issued regulations that exempted certain categories of “point sources” of pollution from the permit requirements of s 402.³ The Administrator's purported authority to make such exemptions turns on the proper interpretation of s 402.

A “point source” is defined in s 502(14) as “any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged.”⁴

The 1973 regulations exempted discharges from a number of classes of point sources from the permit requirements of s 402, including all silvicultural point sources; all confined animal feeding operations below a certain size; all irrigation return flows from areas of less than 3,000 contiguous acres or 3,000 noncontiguous acres that use the same drainage system; all nonfeedlot, nonirrigation agricultural point sources; and separate storm sewers containing only storm runoff uncontaminated by any industrial or commercial activity.⁵ The EPA's *1373 **151 rationale for these exemptions is that in order to conserve the Agency's enforcement resources for more significant point sources of pollution, it is necessary to exclude these smaller sources of pollutant discharges from the permit program.

The National Resources Defense Council, Inc. (NRDC) sought a declaratory judgment that the regulations are unlawful under the FWPCA. Specifically, NRDC contended that the Administrator does not have authority to exempt any class of point source from the permit requirements of s 402. It argued that Congress in enacting ss 301, 402 of the FWPCA intended to prohibit the discharge of pollutants from all point sources unless a permit had been issued to the discharger under s 402 or unless the point source was explicitly exempted from the permit requirements by statute. The District Court granted NRDC's motion for summary judgment. It held that the FWPCA does not authorize the Administrator to exclude any class of point sources from the permit program. *NRDC v. Train*, 396 F.Supp. 1393 (D.D.C.1975). The EPA has appealed to this court. It is joined on appeal by a number of defendant-intervenors, National Forest Products Association (NFPA), National Milk Producers Federation (NMPF), and the Colorado River Conservation District.⁶

This case thus presents principally a question of statutory interpretation. EPA also argues that even if Congress intended to include the pertinent categories in the permit program, the regulations exempting them should be upheld on a doctrine of administrative infeasibility, i. e., the regulations should be upheld as a deviation from the literal terms of the FWPCA that is necessary to permit the Agency to realize the principal objectives of the Act.

I. LEGISLATIVE HISTORY

The principal purpose of the FWPCA is “to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.”⁷ The Act's ultimate objective, to eliminate the discharge of pollutants into navigable waters by 1985, is to be achieved by means of two intermediate steps. As of July 1, 1977, all point sources other than publicly owned treatment works were to have achieved effluent limitations that require application of the “best practicable control technology.”⁸ These same point sources must reduce their effluent discharges by July 1, 1983, to meet limitations determined by application of the “best available technology economically achievable” for each category of point source.⁹

The technique for enforcing these effluent limitations is straightforward. Section 301(a) of the FWPCA provides:

Except as in compliance with this section and sections 302, 306, 307, 318, 402, and 404 of this Act, the discharge of any pollutant by any person shall be unlawful.¹⁰

Appellants concede that if the regulations are valid, it must be because they are authorized *1374 **152 by s 402; none of the other sections listed in s 301(a) afford grounds for relieving the exempted point sources from the prohibition of s 301.¹¹

Section 402 provides in relevant part that the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 301(a), upon condition that such discharge will meet either all applicable requirements under sections 301, 302, 306, 307, 308, and 403 of this Act, or prior to the taking of the necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this Act.

The NPDES permit program established by s 402 is central to the enforcement of the FWPCA. It translates general effluent limitations into the specific obligations of a discharger. As this court noted in [NRDC v. Train, 166 U.S.App.D.C. 312, 315, 510 F.2d 692, 695 \(1975\)](#), the Act “relies primarily on a permit program for the achievement of effluent limitations . . . to attain its goals.” The comments in floor debates of Senator Muskie, the leading Congressional sponsor of the Act, makes this clear.¹²

The appellants argue that s 402 not only gives the Administrator the discretion to grant or refuse a permit, but also gives him the authority to exempt classes of point sources from the permit requirements entirely. They argue that this interpretation is supported by the legislative history of s 402 and the fact that unavailability of this exemption power would place unmanageable administrative burdens on the EPA.

[1] Putting aside for the moment the appellants' administrative infeasibility argument, we agree with the District Court that the legislative history makes clear that Congress intended the NPDES permit to be the only means by which a discharger from a point source may escape the total prohibition of s 301(a). This intention is evident in both Committee Reports. In discussing s 301 the House Report stressed:

Any discharge of a pollutant without a permit issued by the Administrator under section 318, or by the Administrator or the State under section 402 or by the Secretary of the Army under section 404 is unlawful. Any discharge of a pollutant not in compliance with the conditions or limitations of such a permit is also unlawful.¹³

The Senate Report echoed this interpretation:

(Section 301) clearly establishes that the discharge of pollutants is unlawful. Unlike its predecessor program which permitted the discharge of certain amounts of pollutants under the conditions described above, this legislation would clearly establish that no one has the right *1375 **153 to pollute that pollution continues because of technological limits, not because of any inherent rights to use the nation's waterways for the purpose of disposing of wastes.

The program proposed by this Section will be implemented through permits issued in Section 402. The Administrator will have the capability and the mandate to press technology and economics to achieve those levels of effluent reduction which he believes to be practicable in the first instance and attainable in the second.¹⁴

[2] The EPA argues that since s 402 provides that “the Administrator may . . . issue a permit for the discharge of any pollutant” (emphasis added), he is given the discretion to exempt point sources from the permit requirements altogether. This argument, as to what Congress meant by the word “may” in s 402, is insufficient to rebut the plain language of the statute and the committee reports. We say this with due awareness of the deference normally due “the construction of a new statute by its implementing agency.” [NRDC v. Train, 166 U.S.App.D.C. at 326, 510 F.2d at 706](#); see [Zuber v. Allen, 396 U.S. 168, 192, 90 S.Ct. 314, 24 L.Ed.2d 345 \(1969\)](#); [Udall v. Tallman, 380 U.S. 1, 16, 85 S.Ct. 792, 13 L.Ed.2d 616 \(1965\)](#). The use of the word “may” in s 402 means only that the Administrator has discretion either to issue a permit or to leave the discharger subject to the total proscription of s 301. This is the natural reading, and the one that retains the fundamental logic of the statute.

Under the EPA's interpretation the Administrator would have broad discretion to exempt large classes of point sources from any or all requirements of the FWPCA. This is a result that the legislators did not intend. Rather they stressed that the FWPCA was a tough law that relied on explicit mandates to a degree uncommon in legislation of this type. A statement of Senator Jennings Randolph of West Virginia, Chairman of the Senate Committee responsible for the Act, is illustrative.

I stress very strongly that Congress has become very specific on the steps it wants taken with regard to environmental protection. We have written into law precise standards and definite guidelines on how the environment should be protected. We have done more than just provide broad directives for administrators to follow. . . .

In the past, too many of our environmental laws have contained vague generalities. What we are attempting to do now is provide laws that can be administered with certainty and precision. I think that is what the American people expect that we do. ¹⁵

There are innumerable references in the legislative history to the effect that the Act is founded on the “basic premise that a discharge of pollutants without a permit is unlawful and that discharges not in compliance with the limitations and conditions for a permit are unlawful.” ¹⁶ Even when infeasibility arguments were squarely raised, *1376 **154 the legislature declined to abandon the permit requirement. ¹⁷ We stand by our previous interpretation of the Act's scheme for the enforcement of effluent limitations:

After dates set forth in (s 301(b)), a person must obtain a permit and comply with its terms in order to discharge any pollutant. The conditions of the permit must assure that any discharge complies with the applicable requirements of numerous sections including the effluent limitations of section 301(b).

[NRDC v. Train, 166 U.S.App.D.C. at 316, 510 F.2d at 696](#) (emphasis added; footnotes omitted).

We also note that all the Supreme Court decisions referring to s 402 view the permit as the only means by which a point source polluter can avoid the ban on discharges found in s 301. Strictly speaking these expressions may be dicta, for they do not touch directly on the interpretation of s 402. But they are at least a considered reading of what the Act appears to mean.

In [Train v. Colorado Public Interest Research Group, Inc., 426 U.S. 1, 96 S.Ct. 1938, 48 L.Ed.2d 434 \(1976\)](#), Justice Marshall characterized the enforcement scheme of the FWPCA as follows:

(E)ffluent limitations are enforced through a permit program. The discharge of “pollutants” into water is unlawful without a permit issued by the Administrator of the EPA or, if a State has developed a program that complies with the FWPCA, by the State. . . .

[Id. at 7, 96 S.Ct. at 1941](#) (footnote omitted).

In [EPA v. State Water Resources Control Board, 426 U.S. 200, 96 S.Ct. 2022, 48 L.Ed.2d 578 \(1976\)](#), the issue was whether federal installations were subject to state NPDES programs. Justice White's majority opinion describes NPDES at 205, [96 S.Ct. at 2025](#) (footnote omitted):

Under NPDES, it is unlawful for any person to discharge a pollutant without obtaining a permit and complying with its terms. An NPDES permit serves to transform generally applicable effluent limitations and other standards including those based on water quality into the obligations (including a timetable for compliance) of the individual discharger, and the Amendments provide for direct administrative and judicial enforcement of permits.

In *E. I. du Pont de Nemours v. Train*, 430 U.S. 112, 97 S.Ct. 965, 51 L.Ed.2d 204 (1977), the Court held that under FWPCA the EPA can set uniform effluent limitations through industry-wide regulations rather than develop them on an individual basis during the permit issuance process. But the Court, per Justice Stevens, clearly indicated ***1377 **155** that those limitations were translated into obligations of the discharger through their inclusion in an NPDES permit. *Id.* at 119-20, 97 S.Ct. 965.

The wording of the statute, legislative history, and precedents are clear: the EPA Administrator does not have authority to exempt categories of point sources from the permit requirements of s 402. Courts may not manufacture for an agency a revisory power inconsistent with the clear intent of the relevant statute. In holding that the FPC does not have authority to exempt the rates of small producers from regulation under the Natural Gas Act, the Supreme Court observed:

It is not the Court's role . . . to overturn congressional assumptions embedded into the framework of regulation established by the Act. This is a proper task for the Legislature where the public interest may be considered from the multifaceted points of view of the representational process.

FPC v. Texaco, Inc., 417 U.S. 380, 400, 94 S.Ct. 2315, 2327, 41 L.Ed.2d 141 (1974).

II. ADMINISTRATIVE INFEASIBILITY

The appellants have stressed in briefs and at oral argument the extraordinary burden on the EPA that will be imposed by the above interpretation of the scope of the NPDES program. The spectre of millions of applications for permits is evoked both as part of appellants' legislative history argument that Congress could not have intended to impose such burdens on the EPA and as an invitation to this court to uphold the regulations as deviations from the literal terms of the FWPCA necessary to permit the agency to realize the general objectives of that act. During oral argument we asked for supplemental briefs so that the appellants could expand on their infeasibility arguments. We consider EPA's infeasibility contentions in turn.

A. Uniform National Effluent Limitations

EPA argues that the regulatory scheme intended under Titles III and IV of the FWPCA requires, first, that the Administrator establish national effluent limitations¹⁸ and, second, that these limitations be incorporated in the individual permits of dischargers. EPA argues that the establishment of such limitations is simply not possible with the type of point sources involved in the 1973 regulations, which essentially involve the discharge of runoff i. e., wastewaters generated by rainfall that drain over terrain into navigable waters, picking up pollutants along the way.

There is an initial question, to what extent point sources are involved in agricultural, silvicultural, and storm sewer runoff. The definition of point source in s 502(14), including the concept of a "discrete conveyance", suggests that there is room here for some exclusion by interpretation. We discuss this issue subsequently. Meanwhile, we assume that even taking into account what are clearly point sources, there is a problem of infeasibility which the EPA properly opens for discussion.

EPA contends that certain characteristics of runoff pollution make it difficult to promulgate effluent limitations for most of the point sources exempted by the 1973 regulations:

The major characteristic of the pollution problem which is generated by runoff . . . is that the owner of the discharge point . . . has no control over the quantity of the flow or the nature and amounts of the pollutants picked up by the runoff. The amount of flow obviously is unpredictable because it results from the duration and intensity of the rainfall event, the topography, the type of ground cover and the saturation point of the land due to any previous ***1378 **156** rainfall. Similar factors affect the types of pollutants which will be picked up by that runoff, including the type of farming practices employed, the rate and type of pesticide and fertilizer application, and the conservation practices employed . . .

An effluent limitation must be a precise number in order for it to be an effective regulatory tool; both the discharger and the regulatory agency need to have an identifiable standard upon which to determine whether the facility is in compliance. That was the principal of the passage of the 1972 Amendments.

Federal Appellants' Memorandum on "Impossibility" at 7-8 (footnote omitted). Implicit in EPA's contentions is the premise that there must be a uniform effluent limitation prior to issuing a permit. That is not our understanding of the law.

In *NRDC v. Train*, we described the interrelationship of the effluent limitations and the NPDES permit program, [166 U.S.App.D.C. at 327, 510 F.2d at 707](#) (footnotes omitted):

The Act relies on effluent limitations on individual point sources as the "basis of pollution prevention and elimination." . . . Section 301(b) contains a broad description of phase one and phase two effluent limitations, to be achieved by July 1, 1977 and July 1, 1983, respectively. The limitations established under section 301(b) are to be imposed upon individual point sources through permits issued under the National Pollutant Discharge Elimination System (NPDES) established by section 402. Those permits are to contain schedules which will assure phased compliance with the effluent limitations no later than the final dates set forth in section 301(b). Section 304(b) calls for the publication of regulations containing guidelines for effluent limitations for classes and categories of point sources. These guidelines are intended to assist in the establishment of section 301(b) limitations that will provide uniformity in the permit conditions imposed on similar sources within the same category by diverse state and federal permit authorities.

As noted in *NRDC v. Train*, the primary purpose of the effluent limitations and guidelines was to provide uniformity among the federal and state jurisdictions enforcing the NPDES program and prevent the "Tragedy of the Commons"¹⁹ that might result if jurisdictions can compete for industry and development by providing more liberal limitations than their neighboring states. [166 U.S.App.D.C. at 329, 510 F.2d at 709](#). The effluent limitations were intended to create floors that had to be respected by state permit programs.

But in *NRDC v. Train* it was also recognized that permits could be issued before national effluent limitations were promulgated and that permits issued subsequent to promulgation of uniform effluent limitations could be modified to take account of special characteristics of subcategories of point sources.

Prior to the promulgation of effluent limitations under section 301, the director of a state program is instructed merely to impose such terms and conditions in each permit as he determines are necessary to carry out the provisions of the Act. Once *1379 **157 an effluent limitation is established, however, the state director and the regional EPA Administrator are required to apply the specified, uniform effluent limitations, modified only as necessary to take account of fundamentally different factors pertaining to particular point sources within a given class or category. Any variation in the uniform limitations adopted for specific dischargers must be approved by the Administrator.

[166 U.S.App.D.C. at 330, 510 F.2d at 710](#) (footnotes omitted).

Another passage in *NRDC v. Train* touches on the infeasibility problem. We noted that "(t)he statutory framework is not so tightly drawn as to require guidelines for each and every class and category of point source regardless of the need for uniform guidelines or to mandate that all guidelines be published prior to December 31 (1974) regardless of their quality or the burden that task would place upon the agency." *Id.* at 320-21, [510 F.2d at 710-11](#). In that case this court fully appreciated that technological and administrative constraints might prevent the Administrator from developing guidelines and corresponding uniform numeric effluent limitations for certain point sources anytime in the near future. The Administrator was deemed to have the burden of demonstrating that the failure to develop the guidelines on schedule

was due to administrative or technological infeasibility. 166 U.S.App.D.C. at 333, 510 F.2d at 713. Yet the underlying teaching was that technological or administrative infeasibility was a reason for adjusting court mandates to the minimum extent necessary to realize the general objectives of the Act.²⁰ It is a number of steps again to suggest that these problems afford the Administrator the authority to exempt categories of point sources from the NPDES program entirely.

With time, experience, and technological development, more point sources in the categories that EPA has now classed as exempt may be amenable to national effluent limitations achieved through end-of-pipe technology or other means of pollution control. EPA has noted its own success with runoff from mining operations:

EPA has found that in the area of runoff from mining operations, there is sufficient predictability because of a longer history of regulation and the relatively confined nature of the operations that numerical limitations can be established. Thus, consistent with EPA's position stated earlier that it will expand the permit program where its capability of establishing effluent limitations allows, appropriate limitations have been created and the permit program expanded.

Federal Appellants' Memorandum on "Impossibility" at 8.

[3] In sum, we conclude that the existence of uniform national effluent limitations is not a necessary precondition for incorporating into the NPDES program pollution from agricultural, silvicultural, and storm water runoff point sources. The technological or administrative infeasibility of such limitations may result in adjustments in the permit programs, as will be seen, but it does not authorize the Administrator to exclude the relevant point source from the NPDES program.

B. Alternative Permit Conditions under s 402(a)

EPA contends that even if it is possible to issue permits without national effluent limitations, *1380 **158 the special characteristics of point sources of runoff pollution make it infeasible to develop restrictions on a case-by-case basis. EPA's implicit premise is that whether limitations are promulgated on a class or individual source basis, it is still necessary to articulate any limitation in terms of a numerical effluent standard. That is not our understanding.

[4] Section 402 provides that a permit may be issued upon condition "that such discharge will meet either all applicable requirements under sections 301, 302, 306, 307, 308 and 403 of this Act, or prior to taking of necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this Act." 33 U.S.C. s 1342(a) (Supp. V 1975) (emphasis added). This provision gives EPA considerable flexibility in framing the permit to achieve a desired reduction in pollutant discharges. The permit may proscribe industry practices that aggravate the problem of point source pollution.²¹

EPA's counsel caricatures the matter by stating that recognition of any such authority would give EPA the power "to instruct each individual farmer on his farming practices." Federal Appellants Memorandum on "Impossibility" at 12. Any limitation on a polluter forces him to modify his conduct and operations. For example, an air polluter may have a choice of installing scrubbers, burning different fuels or reducing output. Indeed, the authority to prescribe limits consistent with the best practicable technology may be tantamount to prescribing that technology. Of course, when alternative techniques are available, Congress intended to give the discharger as much flexibility as possible in choosing his mode of compliance. See, e. g., H.Rep.No.92-911, 92d Cong., 2d Sess. 107, reprinted in Legislative History at 794. We only indicate here that when numerical effluent limitations are infeasible, EPA may issue permits with conditions designed to reduce the level of effluent discharges to acceptable levels. This may well mean opting for a gross reduction in pollutant discharge rather than the fine-tuning suggested by numerical limitations. But this ambitious statute is not hospitable to the concept that the appropriate response to a difficult pollution problem is not to try at all.

It may be appropriate in certain circumstances for the EPA to require a permittee simply to monitor and report effluent levels; EPA manifestly has this authority.²² Such permit conditions might be desirable where the full extent of the pollution problem is not known.

C. General Permits

Finally, EPA argues that the number of permits involved in the absence of an exemption authority will simply overwhelm the Agency. Affidavits filed with the District Court indicate, for example, that the number of silviculture point sources may be over 300,000 and that there are approximately 100,000 separate storm sewer point sources.²³ We are and must be sensitive to *1381 **159 EPA's concerns of an intolerable permit load. But the District Court and the various parties have suggested devices to mitigate the burden to accommodate within a practical regulatory scheme Congress's clear mandate that all point sources have permits. All that is required is that EPA makes full use of its interpretational authority. The existence of a variety of options belies EPA's infeasibility arguments.

[5] Section 402 does not explicitly describe the necessary scope of a NPDES permit. The most significant requirement is that the permit be in compliance with limitation sections of the Act described above. As a result NRDC and the District Court have suggested the use of area or general permits. The Act allows such techniques. Area-wide regulation is one well-established means of coping with administrative exigency. An instance is area pricing for natural gas producers, which the Supreme Court upheld in *Permian Basin Area Rate Cases*, 390 U.S. 747, 88 S.Ct. 1344, 20 L.Ed.2d 312 (1968).²⁴ A more dramatic example is the administrative search warrant, which may be issued on an area basis despite the normal Fourth Amendment requirement of probable cause for searching specific premises. *Camara v. Municipal Court*, 387 U.S. 523, 87 S.Ct. 1727, 18 L.Ed.2d 930 (1967).

In response to the District Court's order, EPA promulgated regulations that make use of the general permit device. 42 Fed.Reg. 6846-53 (Feb. 4, 1977). The general permit is addressed to a class of point source dischargers, subject to notice and opportunity for public hearing in the geographical area covered by the permit. Although we do not pass on the validity of the February, 1977, regulations, they serve to dilute an objection of wholesale infeasibility.²⁵

Our approach is not fairly subject to the criticism that it elevates form over substance that the end result will look very much like EPA's categorical exemption. It is the function of the courts to require agencies to comply with legislative intent when that intent is clear, and to leave it to the legislature to make adjustments when the result is counterproductive.²⁶ At the same time, where intent on an issue is unclear, *1382 **160 we are instructed to afford the administering agency the flexibility necessary to achieve the general objectives of the Act. *Weinberger v. Bentex Pharmaceuticals, Inc.*, 412 U.S. 645, 653, 93 S.Ct. 2448, 37 L.Ed.2d 235 (1973); *United States v. Southwestern Cable Co.*, 392 U.S. 157, 177-78, 88 S.Ct. 1994, 20 L.Ed.2d 1001 (1968); *Permian Basin Area Rate Cases*, 390 U.S. 747, 780, 88 S.Ct. 1344, 20 L.Ed.2d 312 (1968). These lines of authority conjoin in our approach. We insist, as the Act insists, that a permit is necessary; the Administrator has no authority to exempt point sources from the NPDES program. But we concede necessary flexibility in the shaping of the permits that is not inconsistent with the clear terms of the Act.

There is also a very practical difference between a general permit and an exemption. An exemption tends to become indefinite: the problem drops out of sight, into a pool of inertia, unlikely to be recalled in the absence of crisis or a strong political protagonist. In contrast, the general or area permit approach forces the Agency to focus on the problems of specific regions and requires that the problems of the region be reconsidered at least every five years, the maximum duration of a permit.²⁷

D. Other Interpretational Powers

[6] Many of the intervenor-appellants appear to argue that the District Court should be reversed because the categories exempted by EPA are nonpoint sources and are not, in fact, point sources.²⁸ We agree with the District Court "that the

power to define point and nonpoint sources is vested in EPA and should be reviewed by the court only after opportunity for full agency review and examination.” 396 F.Supp. at 1396. The only issue precisely confronted by all the parties and properly framed for our consideration is whether the Administrator has authority to exempt point sources from the NPDES program. We also think that we should, for similar reasons, not consider at this time the appropriate definition of “discharge of any pollutant” as used in s 402. The American Iron and Steel Institute as amicus curiae has pressed upon us the argument that the term “discharge” as used in s 402 was intended to encompass only “volitional flows” that add pollutants to navigable waters. Most forms of runoff, it is argued, do not involve volitional flows.

[7] We assume that FWPCA, however tight in some respects, leaves some leeway to EPA in the interpretation of that statute, and in that regard affords the Agency some means to consider matters of feasibility. However, for reasons already noted, we do not consider these particular contentions as to interpretation on the merits.

III. CONCLUSION

[8] As the Supreme Court recently stated in a FWPCA case, “(t)he question . . . is ****161 *1383** not what a court thinks is generally appropriate to the regulatory process, it is what Congress intended . . .” *E. I. du Pont de Nemours & Co. v. Train*, 430 U.S. 112, 138, 97 S.Ct. 965, 980, 51 L.Ed.2d 204 (1977). We find a plain Congressional intent to require permits in any situation of pollution from point sources. We also discern an intent to give EPA flexibility in the structure of the permits, in the form of general or area permits. We are aware that Congress hoped that more of the NPDES permit program would be administered by the states at this point.²⁹ But it also made provision for continuing EPA administration. Imagination conjoined with determination will likely give EPA a capability for practicable administration. If not, the remedy lies with Congress.

So ordered.

MacKINNON, Circuit Judge, concurring:

I concur in the very sound and practical construction set forth in the foregoing opinion. Any person concerned with the actual application and enforcement of laws would necessarily be concerned by the application of the relevant legislation to all point sources in agriculture and particularly to irrigated agriculture. Concern would also lie in the congressional admission that present technology is inadequate to enable our citizens to meet the standards and deadlines the Act imposes; in passing the law, Congress was relying on the future “invention (of) new and imaginative developments that will allow us to meet the objectives of our bill.”¹ In gambling parlance, Congress in enacting the law was “betting on the come.” It is relying on our citizens in the near future to develop the complex technology to meet all the law's standards and objectives on time. The difficulty with that approach is that the hopes of Congress in this respect, like that of any gambler, might not be realized. The agency in this case, however, has shown that it takes a realistic view of both the situation and the task of meeting the difficult requirements and objectives of the Act. I sincerely hope that the ability of the agency to issue section 402 permits including general area permits² will permit it to meet the present and future compliance problems posed by the Act in a practical way.

Footnotes

* For convenience the court will refer to this case hereafter as NRDC v. Costle (Runoff Point Sources).

- 1 33 U.S.C. ss 1251-1376 (Supp. V 1975). Although characterized in the official title as “amendments”, the 1972 FWPCA actually
substitutes its provisions for those of the pre-1972 Federal Water Pollution Control Act as amended, id. ss 1151-1175 (1970).
- 2 This case deals with s 402 of the FWPCA, 33 U.S.C. s 1342 (Supp. V 1975), which sets out the permitting authority of the
EPA Administrator as well as that of the states under EPA-approved state permit programs. The Secretary of the Army also
has a permitting authority in certain circumstances. Under s 404 of the FWPCA, 33 U.S.C. s 1344 (Supp. V 1975), he may
issue permits for the discharge of dredged or fill material into navigable waters.
- 3 40 C.F.R. s 125.4 (1975). See 38 Fed.Reg. 18000-04 (1973).
- 4 33 U.S.C. s 1362(14) (Supp. V 1975).
- 5 40 C.F.R. s 125.4 (1975):
The following do not require an NPDES permit:
(f) Uncontrolled discharges composed entirely of storm runoff when these discharges are uncontaminated by any industrial
or commercial activity, unless the particular storm runoff discharge has been identified by the Regional Administrator, the
State water pollution control agency or an interstate agency as a significant contributor of pollution. (It is anticipated that
significant contributors of pollution will be identified in connection with the development of plans pursuant to section 303(e)
of the Act. This exclusion applies only to separate storm sewers. Discharges from combined sewers and bypass sewers are
not excluded.)
(j) Discharges of pollutants from agricultural and silvicultural activities, including irrigation return flow and runoff from
orchards, cultivated crops, pastures, rangelands, and forest lands, except that this exclusion shall not apply to the following:
(1) Discharges from animal confinement facilities, if such facility or facilities contain, or at any time during the previous 12
months contained, for a total of 30 days or more, any of the following types of animals at or in excess of the number listed
for each type of animal:
(i) 1,000 slaughter and feeder cattle;
(ii) 700 mature dairy cattle (whether milkers or dry cows);
(iii) 2,500 swine weighing over 55 pounds;
(iv) 10,000 sheep;
(v) 55,000 turkeys;
(vi) If the animal confinement facility has continuous overflow watering, 100,000 laying hens and broilers;
(vii) If the animal confinement facility has liquid manure handling systems, 30,000 laying hens and broilers;
(viii) 5,000 ducks;
(2) Discharges from animal confinement facilities, if such facility or facilities contain, or any time during the previous 12
months contained for a total of 30 days or more, a combination of animals such that the sum of the following numbers is
1,000 or greater: the number of slaughter and feeder cattle multiplied by 1.0, plus the number of mature dairy cattle multiplied
by 1.4, plus the number of swine weighing over 55 pounds multiplied by 0.4, plus the number of sheep multiplied by 0.1;
(3) Discharges from aquatic animal production facilities;
(4) Discharges of irrigation return flow (such as tailwater, tile drainage, surfaced ground water flow or bypass water), operated
by public or private organizations or individuals, if: (1) There is a point source of discharge (e. g., a pipe, ditch, or other defined
or discrete conveyance, whether natural or artificial) and; (2) the return flow is from land areas of more than 3,000 contiguous
acres, or 3,000 non-contiguous acres which use the same drainage system; and
(5) Discharges from any agricultural or silvicultural activity which have been identified by the Regional Administrator or the
Director of the State water pollution control agency or interstate agency as a significant contributor of pollution.

- 9 Id. s 1311(b)(2)(A).
- 10 Id. s 1311(a).
- 11 Section 302, 33 U.S.C. s 1312 (Supp. V 1975), permits the Administrator to set water quality related effluent limitations or
control strategies where technology-based limitations are inadequate. Section 306, 33 U.S.C. s 1316 (Supp. V 1975), instructs
the EPA Administrator to promulgate standards of performance for new sources of pollution constructed after those standards
are proposed. Section 307, 33 U.S.C. s 1317 (Supp. V 1975), gives the EPA Administrator the authority to issue generally
applicable effluent standards with respect to toxic substances and to require pretreatment of some pollutants before their
introduction into treatment works. By virtue of s 318, 33 U.S.C. s 1328 (Supp. V 1975), the Administrator may “permit the
discharge of a specific pollutant or pollutants under controlled conditions associated with an approved aquaculture project

under Federal or State supervision.” Section 404, [33 U.S.C. s 1344 \(Supp. V 1975\)](#), gives the Secretary of the Army authority to issue permits for the discharge of dredged or fill material into the navigable waters at specified disposal sites.

12 “The Administrator of the Environmental Protection Agency is authorized to regulate discharge of pollutants through the use of an expanded permit program.” 117 Cong.Rec. 38800 (1971) (Senator Muskie) (emphasis added), reprinted in 2 Environmental Policy Div., Congressional Reference Serv., A Legislative History of the Water Pollution Control Act Amendments of 1972, at 1259 (Senate Public Works Comm. Print 1973) (hereinafter cited as Legislative History).

14 [S.Rep.No.92-414](#), 92d Cong., 1st Sess. 42 (1971), reprinted in Legislative History at 1460; U.S.Code Cong. & Admin.News 1972, pp. 3668, 3709.

15 117 Cong.Rec. 38805 (1971), reprinted in Legislative History at 1272. See also the comments of Senator Montoya on the original Senate bill.

Your committee has placed before you a tough bill. This body and this Nation would not have it be otherwise. Our legislation contains an important principle of psychology: Men seldom draw the best from themselves unless pressed by circumstances and deadlines. This bill contains deadlines and it imposes rather tough standards on industry, municipalities, and all other sources of pollution. Only under such conditions are we likely to press the technological threshold of invention into new and imaginative developments that will allow us to meet the objectives stated in our bill.

117 Cong.Rec. 38808 (1971), reprinted in Legislative History at 1278.

Podell), reprinted in Legislative History at 574.

17 The House rejected an amendment designed to avoid the problems of including irrigation return flows in the permit program. Congressman Teno Roncalio of Wyoming offered an amendment on the floor of the House that would have explicitly exempted irrigated agriculture from the NPDES permit program.

Mr. RONCALIO. . . .

I offer my amendment so that a serious omission to H.R. 11896 can be corrected before we end up with a law that would be virtually impossible to enforce. My amendment would specifically exempt irrigated agriculture from sections 301(a), 302 and 304 of the Federal Water Pollution Control Act.

I think my colleagues will agree that the type of salinity problems created by irrigation runoff are simply not as alarming as the more common pollutants discharged by industrial and municipal facilities. Substantial salinity concentrations have little effect on recreational use of water or its suitability for the propagation of fish.

My amendment is necessary, Mr. Chairman, because at the present time we could not enforce pollution control on irrigation systems. It is virtually impossible to trace pollutants to specific irrigation lands, making these pollutants a nonpoint source in most cases. Second, we do not have the technology to deal with irrigation runoff (as contrasted to industrial pollution) and if we begin making laws to control something that cannot be handled with our given technological knowledge, we will be doing many thousand farmers and ranchers a great disservice. In fact, we will be doing the Federal Government a great disservice if we actually pass a Federal water pollution control bill that cannot be fully enforced.

118 Cong.Rec. 10764-65 (1972), reprinted in Legislative History at 651. The amendment was rejected.

18 See FWPCA [s 502\(11\)](#), [33 U.S.C. s 1362\(11\)](#) (Supp. V 1975):

The term “effluent limitation” means any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.

19 As one commentator has recently written:

The Tragedy of the Commons arises in noncentralized decisionmaking under conditions in which the rational but independent pursuit by each decisionmaker of its own self-interest leads to results that leave all decisionmakers worse off than they would have had they been able to agree collectively on a different set of policies.

Stewart, [Pyramids of Sacrifice? Problems of Federalism in Mandating State Implementation of National Environmental Policy](#), 86 *Yale L.J.* 1196, 1211 (1977). The classic account of the Tragedy of the Commons can be found in Hardin, *The Tragedy of the Commons*, 162 *Science* 1243 (1968). Hardin makes the point in the context of sheep-grazing. Put simply, even over-simply, Hardin shows that if no one is authorized to set limits to preserve open pasture land as a whole, allowing sheep to graze on that land may lead to serious overgrazing, as each herdsman thinks only of his own advantage. The solution lies in some mandate, from above or by agreement, with sanctions to compel conformance.

20 In *NRDC v. Train*, this court stated:

A federal equity court may exercise its discretion to give or withhold its mandate in furtherance of the public interest, including specifically the interest in effectuating the congressional objective incorporated in regulatory legislation. We think the court may forebear the issuance of an order in those cases where it is convinced by the official involved that he has in good faith employed the utmost diligence in discharging his statutory responsibilities. The sound discretion of an equity court does not embrace enforcement through contempt of a party's duty to comply with an order that calls him "to do an impossibility."

166 U.S.App.D.C. at 333, 510 F.2d at 713 (footnotes omitted). For reasons stated in this opinion, we conclude that to require the EPA Administrator to include silvicultural, agricultural, and storm sewer point sources in the NPDES program is not to require him "to do an impossibility."

21 That Congress did not regard numeric effluent limitations as the only permissible limitation on a discharger is supported by s 302(a) of the Act, 33 U.S.C. s 1312(a) (Supp. V 1975):

Whenever, in the judgment of the Administrator, discharges of pollutants from a point source or group of point sources, with the application of effluent limitations required under (s 301(b) of the Act), would interfere with the attainment or maintenance of that water quality in a specific portion of the navigable waters which shall assure protection of public water supplies, agricultural and industrial uses, and the protection and propagation of a balanced population of shellfish, fish and wildlife, and allow recreational activities in and on the water, effluent limitations (including alternative effluent control strategies) for such point source or sources shall be established which can reasonably be expected to contribute to the attainment or maintenance of such water quality.

The emphasis has been added.

22 FWPCA s 402(a)(3), (b)(2)(B), 33 U.S.C. s 1342(a)(3), (b)(2)(B) (Supp. V 1975). EPA concedes that it has this authority. Federal Appellants' Memorandum on "Impossibility" at 14.

23 Affidavit of William H. McCredie, Director, Industrial Forestry, of the NFPA; Affidavit of Walter G. Gilbert, Chief of the Municipal Operations Branch, Municipal Waste Water Systems Div., EPA Office of Air and Water Programs.

24 In Permian Basin the Supreme Court observed:

The Commission has asserted, and the history of producer regulation has confirmed, that the ultimate achievement of the Commission's regulatory purposes may easily depend upon the contrivance of more expeditious administrative methods. The Commission believes that the elements of such methods may be found in area proceedings. "(C)onsiderations of feasibility and practicality are certainly germane" to the issues before us. . . . We cannot, in these circumstances, conclude that Congress has given authority inadequate to achieve with reasonable effectiveness the purposes for which it has acted.

390 U.S. at 777, 88 S.Ct. at 1365.

25 It is also of some, albeit limited, significance that the House Committee on Government Operations found EPA's administrative problems with applying the permit program to animal feedlots "grossly exaggerated." It was of the opinion that the Administrator did not have authority to exempt point sources from the NPDES program. H.Rep.No.93-1012, 93d Cong., 2d Sess. 15-30 (1974).

26 The Supreme Court recently reiterated this instruction in [Union Electric Co. v. EPA](#), 427 U.S. 246, 96 S.Ct. 2518, 49 L.Ed.2d 474 (1976). There the Court held that the EPA Administrator could not consider claims of technological or economic infeasibility when approving state implementation plans under the Clean Air Act Amendments of 1970, 42 U.S.C. ss 1857a-1857I (1970). Such claims were held only to be cognizable by the states in the plan design stage or by the Administrator when drawing up compliance orders. Justice Marshall, writing for the Court, emphasized that federal courts are not to ignore clear expressions of Congressional intent in order to accommodate claims of technological or economic infeasibility.

Allowing such claims to be raised by appealing the Administrator's approval of an implementation plan . . . would frustrate congressional intent. It would permit a proposed plan to be struck down as infeasible before it is given a chance to work, even though Congress clearly contemplated that some plans would be infeasible when proposed. And it would permit the Administrator or a federal court to reject a State's legislative choices in regulating air pollution, even though Congress plainly left with the States, so long as the national standards were met, the power to determine which sources would be burdened by regulation and to what extent. Technology forcing is a concept somewhat new to our national experience and it necessarily entails certain risks. But Congress considered those risks in passing the 1970 Amendments and decided that the dangers posed by uncontrolled air pollution made them worth taking. Petitioner's theory would render that considered legislative judgment a nullity, and that is a result we refuse to reach.

427 U.S. at 268-69, 96 S.Ct. at 2531 (footnote omitted). See also [Wilderness Society v. Morton](#), 156 U.S.App.D.C. 121, 171, 479 F.2d 842, 892 (1973), cert. denied, 411 U.S. 917, 93 S.Ct. 1550, 36 L.Ed.2d 309 (quoting [United States v. City and County of San Francisco](#), 310 U.S. 16, 31-32, 60 S.Ct. 749, 84 L.Ed. 1050 (1940): "We cannot accept the contention that administrative rulings such as those relied on can thwart the plain purpose of a valid law.' ")

27 33 U.S.C. s 1342(a)(3), (b)(1)(B) (Supp. V 1975).

- 28 This appears to be the position of the Colorado River Water Conservation District and the NFPA with respect to silvicultural activities, and NMPF, less obviously, with respect to small dairy farms.
We would put in the same category EPA's contention that the exempt categories are best handled under the areawide waste treatment management planning process of s 208 of the FWPCA, 33 U.S.C. s 1288 (Supp. V 1975). By its terms that section is concerned with areawide waste treatment plans that identify and control "agriculturally and silviculturally related non-point sources of pollution." *Id.* s 1288(b)(2)(F).
- 29 See, e. g., 118 Cong.Rec. 10235 (1972) (Rep. Ichord) reprinted in Legislative History at 428.
- 1 Comments of Senator Montoya, 117 Cong.Rec. 38808 (1971), quoted in court's opinion at 12, reprinted in Legislative History at 1278.
- 2 As an example, an area permit with appropriate conditions and modifications could issue for the agricultural point sources within the Grand River Irrigation District, or the watershed of the Roaring Fork River and tributaries, etc.

966 F.2d 1292

United States Court of Appeals,
Ninth Circuit.

NATURAL RESOURCES DEFENSE COUNCIL, INC., Petitioner,

v.

[UNITED STATES ENVIRONMENTAL PROTECTION AGENCY](#), Respondent,
[Battery Council International](#), et al., Respondents–Intervenors.

Nos. 90–70671, 91–70200.

|
Argued and Submitted Oct. 9, 1991.

|
Decided June 4, 1992.

Environmental group sought review of Environmental Protection Agency's (EPA's) Clean Water Act storm water discharge rule. The Court of Appeals, [Ferguson](#), Senior Circuit Judge, held that: (1) the EPA's failure to include deadlines for permit approval or denial and compliance consistent with Clean Water Act was arbitrary and capricious, although injunctive relief was not warranted; (2) EPA's definition of municipal separate storm sewer serving a population was not arbitrary and capricious; and (3) EPA rule excluding various types of light industry and construction sites of less than five acres from application of rule was arbitrary and capricious.

Petition for review granted in part and denied in part.

[O'Scannlain](#), Circuit Judge, filed an opinion concurring in part and dissenting in part.

West Headnotes (15)

[1] Declaratory Judgment  Federal officers and boards

Question of whether Environmental Protection Agency (EPA) is bound by statutory scheme set by Congress is legal one, and, thus, request for declaratory relief from EPA's failure to issue storm water permitting regulations by particular date was ripe for consideration by court. Federal Water Pollution Control Act Amendments of 1972, §§ 101–606, 101(a), 402(l, p), 502(14), as amended, 33 U.S.C.A. §§ 1251–1387, 1251(a), 1342(l, p), 1362(14).

[8 Cases that cite this headnote](#)

[2] Declaratory Judgment  Necessity, utility and propriety

Declaratory Judgment  Termination or settlement of controversy

For purposes of granting declaratory relief, court considers whether judgment will clarify and settle legal relations at issue and whether it will afford relief from uncertainty and controversy giving rise to proceedings.

[19 Cases that cite this headnote](#)

[3] Environmental Law 🔑 Regulations and rulemaking in general

Environmental Protection Agency (EPA) lacks authority to ignore unambiguous deadlines set by Congress for issuing regulations.

[1 Cases that cite this headnote](#)

[4] Injunction 🔑 Ease or difficulty of enforcement

Injunctive relief may be inappropriate if it requires constant supervision by the court.

[16 Cases that cite this headnote](#)

[5] Environmental Law 🔑 Injunction

Court of Appeals would not enjoin Environmental Protection Agency (EPA) from further extensions of deadline for permit applications for municipal and industrial discharges as to do so would require extensive supervision of EPA by Court; Court would operate on assumption that EPA would follow dictates of Congress and Court.

[3 Cases that cite this headnote](#)

[6] Environmental Law 🔑 Discharge of pollutants

Environmental Protection Agency's (EPA's) failure to include final approval and compliance deadlines for permit applications for storm water discharges associated with industrial activities in large municipalities was arbitrary and capricious exercise of its responsibility to issue regulations pursuant to Clean Water Act. Federal Water Pollution Control Act Amendments of 1972, § 402(p)(4)(A, B), as amended, [33 U.S.C.A. § 1342\(p\)\(4\)\(A, B\)](#).

[6 Cases that cite this headnote](#)

[7] Environmental Law 🔑 Discharge of pollutants

Even if Environmental Protection Agency (EPA) was failing to proceed so that regulations for approval and compliance with permit applications for storm water discharges would be in place for small systems by deadline in Clean Water Act, small systems could not be put on same schedule as medium ones, as Clean Water Act did not require regulation of small systems prior to expiration of moratorium. Federal Water Pollution Control Act Amendments of 1972, § 402(p)(1), (p)(4)(A, B), (p)(6), as amended, [33 U.S.C.A. § 1342\(p\)\(1\), \(p\)\(4\)\(A, B\), \(p\)\(6\)](#).

[Cases that cite this headnote](#)

[8] Environmental Law 🔑 Discharge of pollutants

Despite Environmental Protection Agency's (EPA's) unlawful delay in establishing comprehensive program for permit approval and compliance with Clean Water Act storm water discharge rule, EPA's schedule calling for immediate municipal system applications due six months after applications for large municipal systems was within statutory scheme in its relation to schedule for large systems and was not unreasonable. Federal Water Pollution Control Act Amendments of 1972, § 402(p), (p)(2)(C, D), (p)(4)(B), as amended, [33 U.S.C.A. § 1342\(p\), \(p\)\(2\)\(C, D\), \(p\)\(4\)\(B\)](#).

[Cases that cite this headnote](#)

[9] [Environmental Law](#) 🔑 [Sewage and sewers](#)

Environmental Protection Agency's (EPA's) definition of phrase “municipal separate store sewer system serving a population” in regulations for implementing the Clean Water Act storm water discharge rule, while complex and possibly convoluted, was not arbitrary and capricious; EPA defined phrase by considering factors such as its own workload, the incorporation status of municipalities, and urban density. Federal Water Pollution Control Act Amendments of 1972, §§ 402(p)(2), 502, 502(4), as amended, 33 U.S.C.A. §§ 1342(p)(2), 1362, 1362(4).

[15 Cases that cite this headnote](#)

[10] [Environmental Law](#) 🔑 [Substances, Sources, and Activities Regulated](#)

Environmental Protection Agency's (EPA's) rules excluding various types of light industry and construction sites of less than five acres from application of Clean Water Act storm water discharge rule were arbitrary and capricious absent support in record for assumption that industrial activity or light industry would take place indoors and generate minimal amounts of particles and emissions. Federal Water Pollution Control Act Amendments of 1972, § 402(p)(2)(B), as amended, 33 U.S.C.A. § 1342(p)(2)(B).

[7 Cases that cite this headnote](#)

[11] [Environmental Law](#) 🔑 [Substances, Sources, and Activities Regulated](#)

Environmental Protection Agency's (EPA's) exemption from Clean Water Act storm water discharge rule for construction sites of less than five acres, as increased from original proposal of exemption for sites of less than one acre, was arbitrary and capricious absent support in record for EPA's perception that construction activities on less than five acres were nonindustrial in nature. Federal Water Pollution Control Act Amendments of 1972, § 402(p)(2)(B), as amended, 33 U.S.C.A. § 1342(p)(2)(B).

[8 Cases that cite this headnote](#)

[12] [Environmental Law](#) 🔑 [Substances, Sources, and Activities Regulated](#)

For purposes of setting rules for application of storm water discharge regulations in Clean Water Act, EPA lacked agency power to make categorical exemptions where result was de minimis. Federal Water Pollution Control Act Amendments of 1972, § 402(p)(2)(B), as amended, 33 U.S.C.A. § 1342(p)(2)(B).

[7 Cases that cite this headnote](#)

[13] [Environmental Law](#) 🔑 [Sewage and sewers](#)

Environmental Protection Agency's (EPA's) exemption from permit requirements under Clean Water Act storm water discharge rule for uncontaminated runoff from mining, oil, and gas facilities was not arbitrary and capricious; conference report gave administrator discretion to determine when contamination had occurred with respect to overburden, raw materials, waste products, and other items. Federal Water Pollution Control Act Amendments of 1972, § 402(l)(2), as amended, 33 U.S.C.A. § 1342(l)(2).

[12 Cases that cite this headnote](#)

[14] [Environmental Law](#) 🔑 [Substances, Sources, and Activities Regulated](#)

Environmental Protection Agency (EPA) established substantive controls for municipal storm water discharges required by amendments to Clean Water Act as result of administrator's discretion to determine which controls were necessary. Federal Water Pollution Control Act Amendments of 1972, § 402(p)(3)(A, B), as amended, [33 U.S.C.A. § 1342\(p\)\(3\)\(A, B\)](#).

[5 Cases that cite this headnote](#)

[15] [Administrative Law and Procedure](#) 🔑 Notice and comment, necessity

[Environmental Law](#) 🔑 Discharge of pollutants

Environmental Protection Agency's (EPA's) group permit application process for industrial dischargers under Clean Water Act storm sewage discharge rules was not invalid despite its failure to provide for notice and comment, as approval of part 1 application was essentially factual determination. [5 U.S.C.A. §§ 551\(4\), 553](#).

[11 Cases that cite this headnote](#)

Attorneys and Law Firms

***1294** [Robert W. Adler](#), Natural Resources Defense Council, Washington, D.C., for petitioner.

[Daniel S. Goodman](#), U.S. Dept. of Justice, Washington, D.C., for respondent.

***1295** Petition for Review of a Rule Promulgated by the Environmental Protection Agency.

Before [PREGERSON](#), [FERGUSON](#), and [O'SCANNLAIN](#), Circuit Judges.

Opinion

[FERGUSON](#), Senior Circuit Judge:

The Natural Resources Defense Council (“NRDC”) challenges aspects of the Environmental Protection Agency's (“EPA”) recent Clean Water Act storm water discharge rule.¹ NRDC argues that the deadlines contained in the rule and the scope of its coverage are unlawful under section 402(l), (p) of the Clean Water Act, [33 U.S.C. § 1342\(l\), \(p\)](#). We grant partial relief.

I. BACKGROUND

In 1972 Congress enacted significant amendments to the Clean Water Act (“CWA”),² [33 U.S.C. §§ 1251–1387 \(1988\)](#), “to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.” [33 U.S.C. § 1251\(a\)](#). One major focus of the CWA is the control of “point source” pollution. A “point source” is “any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel ... from which pollutants are or may be discharged.” [33 U.S.C. § 1362\(14\)](#). The CWA also established the National Pollutant Discharge Elimination System (“NPDES”), requiring permits for any discharge of pollutants from a point source pursuant to section 402 of the CWA, [33 U.S.C. § 1342](#). The CWA empowers EPA or an authorized state to conduct an NPDES permitting program. [33 U.S.C. § 1342\(a\)–\(b\)](#). Under the program, as long as the permit issued contains conditions that implement the requirements of the CWA, the EPA may issue a permit for discharge of any pollutant. [33 U.S.C. § 1342\(a\)\(1\)](#).

This case involves runoff from diffuse sources that eventually passes through storm sewer systems and is thus subject to the NPDES permit program. *See National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Application Deadlines*, 56 Fed.Reg. 56,548 (1991). One recent study concluded that pollution from such sources, including runoff from urban areas, construction sites, and agricultural land, is now a leading cause of water quality impairment. 55 Fed.Reg. at 47,991.³

A. Efforts to Regulate Storm Water Discharge.

Following the enactment of the CWA amendments in 1972, EPA promulgated NPDES permit regulations exempting a number of classes of point sources, including uncontaminated storm water discharge, on the basis of “administrative infeasibility,” i.e., the extraordinary administrative burden imposed on EPA should it have to issue permits for possibly millions of point sources of runoff. *Natural Resources Defense Council v. Costle*, 568 F.2d 1369, 1372 & n. 5, 1377 (D.C.Cir.1977). NRDC *1296 challenged the exemptions. Relying on the language of the statute, its legislative history and precedent, the D.C. Circuit held that the EPA Administrator did not have the authority to create categorical exemptions from regulation. *Id.* at 1379. However, the court acknowledged the agency's discretion to shape permits in ways “not inconsistent with the clear terms of the Act.” *Id.* at 1382.

Following this litigation, EPA promulgated regulations covering storm water discharges in 1979, 1980 and 1984. 56 Fed.Reg. 56,548. NRDC challenged various aspects of these rules both at the administrative level as well as in the courts.

Recognizing both the environmental threat posed by storm water runoff⁴ and EPA's problems in implementing regulations,⁵ Congress passed the Water Quality Act of 1987⁶ containing amendments to the CWA (“the 1987 amendments”), portions of which set up a new scheme for regulation of storm water runoff. Section 402(p), as amended, established deadlines by which certain storm water dischargers must apply for permits, the EPA or states must act on permits and dischargers must implement their permits. *See* Appendix A. The Act also set up a moratorium on permitting requirements for most storm water discharges, which ends on October 1, 1992. There are five exceptions that are required to obtain permits before that date:

- (A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.
- (B) A discharge associated with industrial activity.
- (C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.
- (D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.
- (E) A discharge for which the Administrator or the State, ... determines that the storm water discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to the waters of the United States.

CWA § 402(p)(2); 33 U.S.C. § 1342(p)(2).

Section 402(p) also outlines an incremental or “phase-in” approach to issuance of storm water discharge permits. The purpose of this approach was to allow EPA and the states to focus their attention on the most serious problems first. 133 Cong.Rec. 991 (1987). Section 402(p) requires EPA to promulgate rules regulating permit application procedures in a staggered fashion.

Responding to the 1987 amendments requiring the EPA to issue permit application requirements for storm water discharges associated with industrial activities and large municipalities, the EPA issued final rules on November 16, 1990,

almost two years after its deadline (“the November 1990 rule”). 55 Fed.Reg. at 47,990. EPA issued amended rules on March 21, 1991 (“the March 1991 rule”). 56 Fed.Reg. at 12,098. It is to portions of these rules that NRDC objects.

B. Jurisdiction.

We have jurisdiction pursuant to CWA § 509(b)(1), 33 U.S.C. § 1369(b)(1). Section 509(b)(1) describes six types of actions by the EPA administrator that are subject to review in the court of appeals. Although the parties do not specify the section upon which they rely, § 509(b)(1)(F), 33 U.S.C. § 1369(b)(1)(F) allows the court to review *1297 the issuance or denial of a permit under CWA § 402, 33 U.S.C. § 1342. The court also has the power to review rules that regulate the underlying permit procedures. *NRDC v. EPA*, 656 F.2d 768, 775 (D.C.Cir.1981); cf. *E.I. DuPont de Nemours & Co. v. Train*, 430 U.S. 112, 136, 97 S.Ct. 965, 979, 51 L.Ed.2d 204 (1977). NRDC filed timely petitions for review of the final rules at issue here pursuant to CWA § 509(b)(1), 33 U.S.C. 1369(b)(1).

C. Standing.

Any “interested person” may seek review of designated actions of the EPA Administrator. 33 U.S.C. § 1369(b)(1). This court has held that the injury-in-fact rule for standing of *Sierra Club v. Morton*, 405 U.S. 727, 733, 92 S.Ct. 1361, 1365, 31 L.Ed.2d 636 (1972) covers the “interested person” language. *Trustees for Alaska v. EPA*, 749 F.2d 549, 554 (9th Cir.1984) (adopting the analysis in *Montgomery Environmental Coalition v. Costle*, 646 F.2d 568, 578 (D.C.Cir.1980)). A petitioner under *Sierra Club* must suffer adverse affects to her economic interests or “[a]esthetic and environmental well-being.” *Sierra Club*, 405 U.S. at 734, 92 S.Ct. at 1366. Intervenor are various industry and trade groups subject to regulation under the rules at issue. NRDC claims, inter alia, that EPA has delayed unlawfully promulgation of storm water regulations and that its regulations, as published, inadequately control storm water contaminants. NRDC's allegations and the potential economic impact of the rules on the intervenors satisfy the broad standing requirement applicable here.

II. DISCUSSION

A. Standard of Review.

5 U.S.C. § 706(2)(A) (1988) authorizes the court to “set aside agency action ... found to be ... arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law.” Under this standard a court must find a “rational connection between the facts found and the choice made.” *Sierra Pacific Indus.*, 866 F.2d 1099, 1105 (9th Cir.1989) (citing *Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43, 103 S.Ct. 2856, 2866, 77 L.Ed.2d 443 (1983)). The court must decide whether the agency considered the relevant factors and whether there has been a clear error of judgment. *Citizens to Preserve Overton Park, Inc. v. Volpe*, 401 U.S. 402, 416, 91 S.Ct. 814, 823, 28 L.Ed.2d 136 (1971).

On questions of statutory construction, courts must carry out the unambiguously expressed intent of Congress. If a statute is “silent or ambiguous with respect to the specific issue, the question for the court is whether the agency's answer is based on a permissible construction of the statute.” *Chevron U.S.A. Inc. v. Natural Resources Defense Council Inc.*, 467 U.S. 837, 843, 104 S.Ct. 2778, 2782, 81 L.Ed.2d 694 (1984). Congress may leave an explicit gap, thus delegating legislative authority to an agency subject to the arbitrary and capricious standard. *Id.* at 843–44, 104 S.Ct. at 2781–82. If legislative delegation is implicit, courts must defer to an agency's statutory interpretation as long as it is reasonable. *Id.* at 844, 104 S.Ct. at 2782. This is because an agency has technical expertise as well as the authority to reconcile conflicting policies. *See id.* Nevertheless, questions of congressional intent that can be answered with “traditional tools of statutory construction” are still firmly within the province of the courts. *INS v. Cardoza-Fonseca*, 480 U.S. 421, 447–48, 107 S.Ct. 1207, 1221, 94 L.Ed.2d 434 (1987).

B. EPA's Extension of Statutory Deadlines.

1. *Background.*

NRDC challenges EPA's extension of certain statutory deadlines in the November 1990 and March 1991 rules. The statutory scheme calls for EPA to consider permit applications from the most serious sources of pollutants first: industrial dischargers and large municipal separate storm sewer systems ("large systems").⁷ The statute required EPA to establish regulations *1298 for permit application requirements for these two groups by February 4, 1989; to receive applications for permits one year later, February 4, 1990; and to approve or deny the permits by February 4, 1991. Permittees may be given up to three years to comply with their permits. CWA § 402(p)(4)(A), 33 U.S.C. § 1342(p)(4)(A). Medium sized municipal separate storm sewer systems ("medium systems") (those serving a population of 100,000 or more but less than 250,000) are on a similar schedule, except that the deadlines are two years later. CWA § 402(p)(4)(B), 33 U.S.C. § 1342(p)(4)(B). The temporary statutory exemption for all storm water sources expires on October 1, 1992. CWA § 402(p)(1), 33 U.S.C. § 1342(p)(1). EPA states that discharges from municipal separate storm sewer systems serving a population of under 100,000 are to be regulated after that date.

The EPA rules at issue changed the statutory deadlines as follows:

Deadlines pursuant to			EPA
CWA § 402(p) ⁸			Deadlines ⁹
Discharge type	Deadline to issue rules	Deadline for application and approval of permits	Application deadlines
Industrial	2/4/89	2/4/90—applications due 2/4/91—approval due	See below
Large municipal systems	2/4/89	2/4/90—applications due 2/4/91—approval	Part 1— 11/18/91 Part 2— 11/16/92
Medium municipal systems	2/4/91	2/4/92—applications due 2/4/93—approval due	Part 1— 5/18/92 Part 2— 5/17/93

EPA Application Deadlines for "Industrial Activity" Dischargers

<i>Individual</i>	<i>Group</i>
due 11/18/91	Part 1—9/30/91; Part 2—10/1/92

As the chart illustrates, EPA made other elaborations on the statutory scheme in addition to extending the deadlines. Medium and large municipal systems and industrial dischargers are now subject to a two-part application process. [55 Fed.Reg. at 48,072](#). The November 1990 rules allow industrial dischargers to apply for either individual or group permits. *Id.* at 48,066– *1299 67. The March 1991 rules further extended the deadline for part 1 of the group industrial discharger permits to September 30, 1991. ¹⁰ [56 Fed.Reg. at 12,098](#). A final rule published on April 2, 1992 extended the deadline for the part 2 group application for industrial dischargers from May 18, 1992 to October 1, 1992. [57 Fed.Reg. at 11,394](#). The EPA rules at issue contain neither deadlines for final EPA or state approval of permits nor deadlines for compliance with the permit terms.

Seeking to compel the EPA to conform to the statutory scheme, NRDC asks this court:

- a) to declare unlawful EPA's failure to issue certain of the storm water permitting regulations by February 4, 1989 and EPA's extension of certain statutory deadlines;
- b) to enjoin EPA from granting future extensions of the deadlines;
- c) to compel EPA to include deadlines for permit approval or denial and permit compliance consistent with the statute; and
- d) to compel EPA to require that medium and small municipal systems meet the same deadlines as large systems.

2. Discussion.

a. Request for Declaratory Relief.

NRDC asks the court to (1) declare unlawful EPA's failure to issue storm water permitting regulations by February 4, 1989; and (2) declare unlawful EPA's extension of deadlines for submission of permit applications by large and medium systems and individual industrial dischargers.

[1] A request for declaratory relief in a challenge to an agency action is ripe for review if the action at issue is final and the questions involved are legal ones. *Public Util. Dist. No. 1 v. Bonneville Power Admin.*, 947 F.2d 386, 390 n. 1 (9th Cir.1991) (citations omitted), *cert. denied*, 503 U.S. 1004, 112 S.Ct. 1759, 118 L.Ed.2d 422 (1992). Here, the agency regulations are final. *See* [55 Fed.Reg. at 47,990](#), [56 Fed.Reg. at 12,096](#). The question of whether the EPA is bound by the statutory scheme set by Congress is a legal one. The request for declaratory relief is therefore ripe for consideration by this court.

[2] The granting of declaratory relief “rests in the sound discretion of the [] court exercised in the public interest.” 10A Charles A. Wright, Arthur R. Miller & Mary K. Kane, *Federal Practice & Civil Procedure* § 2759, at 645 (1983). The guiding principles are whether a judgment will clarify and settle the legal relations at issue and whether it will afford relief from the uncertainty and controversy giving rise to the proceedings. *McGraw-Edison Co. v. Preformed Line Products Co.*, 362 F.2d 339, 342 (9th Cir.) (citing Borchar, *Declaratory Judgments* 299 (2d ed. 1941)), *cert. denied*, 385 U.S. 919, 87 S.Ct. 229, 17 L.Ed.2d 143 (1966). A court declaration delineates important rights and responsibilities and can be “a message not only to the parties but also to the public and has significant educational and lasting importance.” *Bilbrey by Bilbrey v. Brown*, 738 F.2d 1462, 1471 (9th Cir.1984). Because of the importance of the interests and the principles at stake, we grant declaratory relief.

[3] EPA does not have the authority to ignore unambiguous deadlines set by Congress. *Delaney v. EPA*, 898 F.2d 687, 691 (9th Cir.), *cert. denied*, 498 U.S. 998, 111 S.Ct. 556, 112 L.Ed.2d 563 (1990). In arguing against injunctive relief, EPA points to cases recognizing factors indicating that equitable relief may be inappropriate. *See, e.g., In re*

Barr Laboratories, Inc., 930 F.2d 72, 74 (D.C.Cir.) (agency's choice of priorities is an important factor in considering whether to grant equitable relief), *cert. denied*, 502 U.S. 906, 112 S.Ct. 297, 116 L.Ed.2d 241 (1991); *Natural Resources Defense Council v. Train*, 510 F.2d 692, 712 (D.C.Cir.1975) (court may need to give *1300 agency some leeway due to budgetary commitments or technological problems); *Environmental Defense Fund v. Thomas*, 627 F.Supp. 566, 569–70 (D.D.C.1986) (EPA's good faith is a factor). None of these factors militates against an award of declaratory relief. They do not grant an executive agency the authority to bypass explicit congressional deadlines. The deadlines are not aspirational—Congress set them and expected compliance. *See* 132 Cong.Rec. 32,381–82 (remarks of Senator Stafford, commenting on EPA delay and the establishment of statutory deadlines as “outside dates.”) This court must uphold adherence to the law, and cannot condone the failure of an executive agency to conform to express statutory requirements. For these reasons, we grant NRDC's request for declaratory relief. EPA's failure to abide by the statutory deadlines is unlawful.

b. Request for Injunction.

NRDC asks the Court to enjoin the EPA from further extensions for permit applications from municipal and industrial dischargers. Injunctions are an extraordinary remedy issued at a court's discretion when there is a compelling need. 11 Charles A. Wright & Arthur R. Miller, *Federal Practice & Procedure* § 2942, at 365, 368–69 (1973). We decline to enjoin the EPA on discretionary grounds.

[4] Injunctive relief could involve extraordinary supervision by this court. Injunctive relief may be inappropriate where it requires constant supervision. *Id.* at 376. At issue are deadlines for the three major categories of dischargers, each of which has a two-part application. The permitting process will go on for several years. While recognizing the importance of the interests involved, we nevertheless decline to engage in the active management of such a remedy.

[5] In this situation, we must operate on the assumption that an agency will follow the dictates of Congress and the court. As noted above, the EPA does not have the authority to predicate future rules or deadlines in disagreement with this opinion. *See Allegheny General Hosp. v. NLRB*, 608 F.2d 965, 970 (3rd Cir.1979). We presume that the EPA will duly perform its statutory duties. *See Upholstered Furniture Action Council v. California Bureau of Home Furnishing*, 442 F.Supp. 565, 568 (E.D.Cal.1977) (three judge court). Because we decline to take on potentially extensive supervision of the EPA, Congress may need to find other ways to ensure compliance if the agency is recalcitrant.

c. Deadlines for Permit Approval and Compliance.

NRDC requests that the court compel EPA to revise the rules to include deadlines for permit approval or denial and permit compliance consistent with the statute. Section 402(p)(4)(A) calls for the EPA to issue or deny permits for industrial and large municipalities by February 4, 1991, which is one year after the applications are submitted, and states that “[a]ny such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of the issuance of such permit.” CWA § 402(p)(4)(A), 33 U.S.C. § 1342(p)(4)(A). The statute sets out a similar schedule for medium municipalities, except that the deadlines are two years later. CWA § 402(p)(4)(B), 33 U.S.C. § 1342(p)(4)(B).

[6] The regulations promulgated by the EPA contain neither final approval deadlines nor compliance deadlines for industrial dischargers or medium and large municipalities. 55 Fed.Reg. at 48,072. By failing to regulate final approval and compliance, EPA has omitted a key component of the statutory scheme. To ensure adherence to the statutory time frame, especially in the face of deadlines already missed, the regulated community must be informed of these deadlines. EPA's failure to include these important deadlines is an arbitrary and capricious exercise of its responsibility to issue regulations pursuant to the statute.

We see no need for additional delay while supplemental regulations are issued. Given the extraordinary delays already encountered, EPA must avoid further delay. ***1301** The regulations should inform the regulated community of the statute's outside dates for compliance.¹¹ See CWA § 402(p)(4)(A)–(B), 33 U.S.C. § 1342(p)(4)(A)–(B).

d. Timeline for Small and Medium Systems.

[7] The parties disagree on when small systems (those serving a population of less than 100,000) should be regulated. As noted above, the temporary statutory exemption for all storm water sources expires on October 1, 1992. The statute requires EPA to establish a comprehensive program to regulate point sources subject to the moratorium, such as small municipalities, by that date. CWA § 401(p)(1), (6), 33 U.S.C. § 1342(p)(1), (6).

Pointing to a perceived statutory gap, NRDC argues that small systems should be subject to the same permitting schedule applicable to medium systems, to assure that they are regulated when the permitting moratorium ends on October 1, 1992. However, the plain language of the statute prohibits this. Section 402(p)(1) forbids requiring a permit for entities not listed as exceptions (such as small municipalities) before October 1, 1992. Yet the deadline for part 1 of the application for medium systems is currently May 18, 1992. 55 Fed.Reg. at 48,072.

Even if NRDC is correct that EPA is not proceeding so that regulations will be in place on October 1, 1992, we cannot ignore the plain language of the statute by adopting NRDC's solution. The CWA does not require regulation of such systems prior to expiration of the moratorium. We therefore reject NRDC's proposal that small systems be put on the same schedule as medium ones.

[8] NRDC asks the court to put the medium systems on the same schedule as the large systems, in order to achieve closer compliance with the timeline set out in § 402(p)(4)(B). However, EPA's current schedule for medium systems, although delayed, is still within the statutory scheme in its relation to the schedule for large systems. That is, Congress placed the medium systems on a staggered permitting schedule to start two years after the large systems and industrial users. The EPA schedule now has medium municipal system applications due six months after the applications for the large municipal systems. 55 Fed.Reg. at 48,072. For this reason, the current deadline for medium municipalities does not appear to be unreasonable despite the unlawful delay.

C. Exclusion of Certain Sources from Regulation.

1. Definition of "Municipal Separate Storm Sewer System."

Section 402(p) refers to "municipal separate storm sewer system[s] serving a population" of a specified size. CWA § 402(p)(2)(C), (D), 33 U.S.C. § 1342(p)(2)(C), (D). NRDC contends that EPA's definition of this term violates the plain language of the statute, fails to take into account the statutory definition of the word "municipality" and is arbitrary and capricious because the agency considered improper factors when it defined the term. All of this, according to NRDC, results in an impermissible narrowing of the municipalities covered by the first two rounds of permitting.

The 1987 amendments to the CWA did not contain definitions of "municipal" or "separate storm sewer system," but the CWA amendments enacted in 1972 defined "municipality" as follows:

[e]xcept as otherwise specifically provided, when used in this chapter: ... (4) The term "municipality" means a city, town, borough, county, parish, district, association, or other public body created by or pursuant to State law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved ***1302** management agency under section 1288 of this title [33 U.S.C. § 1288].

[33 U.S.C. § 1362.](#)

In the November 1990 regulations, the EPA defined “municipal separate storm sewer” as: “a conveyance or system of conveyances ... [o]wned or operated by a State, city, town, borough, county, parish, district, association or other public body...” [55 Fed.Reg. at 48,065](#) (to be codified at [40 C.F.R. § 122.26\(b\)\(8\)](#)). This definition echoes the language of [33 U.S.C. § 1362\(4\)](#). However, when defining large and medium municipal separate storm sewer *systems serving a population* of a specified size, EPA brought in other factors. [55 Fed.Reg. at 48,064](#) (to be codified at [40 C.F.R. § 122.26\(b\)\(4\), \(7\)](#)). EPA defines medium and large separate storm sewer systems using two main categories:

- 1) separate storm sewer systems located in an incorporated place with the requisite population, and
- 2) separate storm sewer systems located in unincorporated, urbanized portions of counties containing the requisite population (as listed in Appendices H and I to the rule), excluding those municipal separate sewers located in incorporated places, townships or towns within such counties.¹² [55 Fed.Reg. at 48,064](#). NRDC opposes this definition for municipal separate storm sewer systems for the reasons explained below.

First, NRDC argues that according to the definitional section cited above and principles of statutory construction, general definitions apply wherever the defined term appears elsewhere in the law. See [33 U.S.C. § 1362](#) (“[e]xcept as otherwise specifically provided” the definitions apply throughout the act); [Sierra Club v. Clark](#), [755 F.2d 608, 613 \(8th Cir.1985\)](#). NRDC argues that the scope of the statutory definition of “municipality” in [33 U.S.C. § 1362\(4\)](#) and the scope of the phrase “municipal separate storm sewer system serving a population” are the same. NRDC thus proposes that the correct definition is a system of conveyances owned or operated by the full range of entities described at [33 U.S.C. § 1362\(4\)](#), (cities, towns, etc.) with populations within the ranges designated at § 402(p)(2), i.e., 250,000 or more for large systems and between 100,000 and 250,000 for medium systems.

However, we do not believe that the entire phrase used in the act, “municipal separate storm sewer system serving a population of [a specified size]” can be equated with the term “municipality” in the manner that NRDC proposes. The act contains no definition of either “system” or “serving a population.” The word “system” is particularly ambiguous in the context of storm sewers.¹³ We therefore agree with EPA that there is no single, plain meaning for the disputed words.

Because the term is ambiguous, we must look first to whether Congress addressed the issue in another way. See [Abourezk v. Reagan](#), [785 F.2d 1043, 1053 \(D.C.Cir.1986\)](#) (“ [i]f the court finds that Congress had a specific intent ..., the court stops there and enforces that intent regardless of the agency's interpretation”) (citing [Chevron U.S.A. Inc. v. Natural Resources Defense Council Inc.](#), [467 U.S. 837, 842–43 & n. 9, 104 S.Ct. 2778, 2781 & n. 9, 81 L.Ed.2d 694 \(1984\)](#)), *aff'd by an equally divided court*, [484 U.S. 1, 108 S.Ct. 252, 98 L.Ed.2d 1 \(1987\)](#). The legislative history is not illuminating. Although it explains that a purpose of the permitting scheme was to attack the most serious sources of discharge first,¹⁴ this general goal is not helpful in discerning the specific meaning of “municipal separate storm sewer system serving a population.” Without clear guidance from Congress, we turn to the agency's justifications ***1303** for its choices in the face of NRDC's objections.

NRDC claims that EPA's definition is arbitrary and capricious because EPA considered improper factors, including its own work load, the incorporation status of municipalities, and urban density. “[A]n agency rule would be arbitrary and capricious if the agency has relied on factors which Congress has not intended it to consider, entirely failed to consider an important aspect of the problem, offered an explanation for its decision that runs counter to the evidence before the agency, or is so implausible that it could not be ascribed to a difference in view or the product of agency expertise.” [Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto Ins.](#), [463 U.S. 29, 43, 103 S.Ct. 2856, 2866, 77 L.Ed.2d 443 \(1983\)](#).

EPA's final definition took into account many issues and concerns of the regulated community. *See* 55 Fed.Reg. at 48,039. EPA considered eight different options for defining large and medium municipal separate storm sewer systems. 55 Fed.Reg. at 48,038–43. EPA considered focusing on ownership or operation of a system by an incorporated place, but found that this approach did not take into account systems operated by flood control districts, state transportation systems, or concerns relating to watershed management. It instead fashioned a multi-faceted approach. This choice of approach is not unreasonable.

NRDC challenges EPA's consideration of incorporation as a factor. It claims that limiting regulation to incorporated places of the appropriate size excludes portions of 378 counties that contain over 100,000 people. NRDC essentially contends that because counties are a type of municipality, storm water conveyances in all counties with populations over 100,000 should come within the definition of either medium or large municipal separate storm sewer systems. We have already rejected NRDC's claim that the definition of regulated “systems” must include conveyances in all “municipalities.”

EPA's use of incorporation as a factor is not arbitrary and capricious or inconsistent with the statute. The agency proceeded on the reasonable assumption that cities possess the police powers needed effectively to control land use within their borders. *See* 55 Fed.Reg. at 48,039, 48,043. The first major category within the definition of regulated “systems,” municipal separate storm sewers located within incorporated places having the requisite population, is reasonable.

NRDC questions EPA's second major category, which covers storm sewers located in unincorporated urbanized areas of counties with the designated population, but excludes conveyances located in incorporated places with populations under 100,000 within those counties. The exclusion, however, has a legitimate statutory basis. The statute prohibits EPA from requiring permits for systems serving under 100,000 persons prior to October 1, 1992. CWA § 402(p)(1), 33 U.S.C. § 1342(p)(1). EPA reasonably concluded that conveyances within small incorporated places should be considered parts of small systems limited to those incorporated places, rather than parts of larger systems serving whole counties. EPA's definition attempts to capture population centers of over 100,000 (by including urbanized, unincorporated areas) without violating the congressional stricture against regulation of areas with populations under 100,000 (thus excluding incorporated areas of less than 100,000 within a county).

In arriving at its definition of “municipal separate storm sewer systems serving” a designated population, EPA investigated numerous options and considered comments from a range of viewpoints. We find “a rational connection between the facts found and the choices made.” *Motor Vehicle Mfrs. Ass'n*, 463 U.S. at 43, 103 S.Ct. at 2866.

NRDC objects to EPA's use of 1980 census data and EPA's definition of urban density. While it appears that NRDC has solid arguments as to why it would be preferable to use 1990 census figures and adopt its method of determining urban density, our role is not to determine whether EPA has chosen the best among all possible *1304 methods. We can only determine if its choices are rational. EPA chose the 1980 census data because it was the most widely available decennial census data at the time of rule formulation and promulgation. Neither this choice nor its use of the Census Bureau's definition of urbanized area is arbitrary and capricious.

EPA took agency work load into account in arriving at its definition. 55 Fed.Reg. at 48,039. NRDC objects on the basis that Congress considered the issue of work load when it developed the “phase-in” approach and allowed permit applications on a system- or jurisdiction-wide basis. However, this broad congressional scheme does not prohibit further consideration of EPA's work load as one among many factors in its attempt to fashion a workable program.

[9] In summary, NRDC's argument that the phrase “municipal separate storm sewer system serving a population” has the plain meaning NRDC proposes is not persuasive. Although EPA's definition in the face of the statute's ambiguity is complex, if not convoluted, it is not arbitrary and capricious, and we therefore reject NRDC's request that the definition be declared invalid.

2. EPA Exemption for Light Industry.

[10] NRDC challenges the portion of the EPA rule excluding various types of “light industry” from the definition of “discharge associated with industrial activity.”

Under CWA § 402(p)(2)(B), a “discharge associated with industrial activity” is an exception to the permit moratorium. In the November rule, EPA modified the statutory scheme by drawing distinctions among light and heavy industry and considering actual exposure to industrial materials. Although the statute does not define “associated with industrial activity,” the EPA definition excludes industries it considers more comparable to retail, commercial or service industries. The excluded categories are manufacturers of pharmaceuticals, paints, varnishes, lacquers, enamels, machinery, computers, electrical equipment, transportation equipment, glass products, fabrics, furniture, paper board, food processors, printers, jewelry, toys and tobacco products. *55 Fed.Reg. at 48,008*. These types of facilities need apply for permits only if certain work areas or actual materials are exposed to storm water. *Id.* EPA justifies these exemptions on the assumption that most of the activity at these types of manufacturers takes place indoors, and that emissions from stacks, use of unhoused manufacturing equipment, outside material storage or disposal, and generation of large amounts of dust and particles will all be minimal. *55 Fed.Reg. at 48,008*.

Thus, EPA considers actual exposure to certain materials or stormwater for the light industry categories, but does not consider actual exposure for the other industrial categories. After careful review of the statutory language and the record, we conclude that this distinction is impermissible.

We note that the language “discharges associated with industrial activity” is very broad. The operative word is “associated.” It is not necessary that storm water be contaminated or come into direct contact with pollutants; only association with any type of industrial activity is necessary.

There is a brief discussion of the issue in the legislative history: “[a] discharge is associated with industrial activity if it is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. Discharges which do not meet this definition include those discharges associated with parking lots and administrative and employee buildings.” 133 Cong.Rec. 985 (1987); *see also* 132 Cong.Rec. 31,968 (1986) (same). EPA argues that the words “directly related” indicate Congress's intent to require permits for only those materials that come in contact with industrial materials. *See 55 Fed.Reg. at 48,007*. However, the examples given—parking lots and administrative buildings—indicate that the intent was to exclude only those facilities or parts of a facility that are completely non-industrial.

EPA's definition follows the language quoted above: “Storm water discharge associated with industrial activity means the *1305 discharge from any conveyance which is used for collecting and conveying stormwater and which is directly related to manufacturing, processing or raw materials storage areas at an industrial plant.” *40 C.F.R. § 122.26(b)(14)*. EPA applies this definition differently depending on type of industry. EPA bases its regulation of industrial activity on Standard Industrial Classification (“SIC”) categories. For most of the industrial SIC categories (identified at *40 C.F.R. § 122.26(b)(i-x)*), the EPA definition includes all stormwater discharges from plant yards, access roads and rail lines, material handling sites, storage and disposal sites, shipping and receiving areas, and manufacturing buildings. *40 C.F.R. § 122.26(b)(14)*. However, for the “light industry” categories identified in *40 C.F.R. § 122.26(b)(14)(xi)*, stormwater must be actually exposed to raw materials, by-products, waste, etc., before permitting is required.

EPA justifies this difference on the ground that for “light industry,” industrial activity will take place indoors, and that generation of large amounts of particles and emissions will be minimal. There is nothing in the record submitted to the Court however, which supports this assumption. *See, e.g., 55 Fed.Reg. at 48,008*. Without supportable facts, we are unable to rely on our usual assumption that the EPA has rationally exercised the duties delegated to it by Congress. To exempt these industries from the normal permitting process based on an unsubstantiated assumption about the this group of facilities is arbitrary and capricious.

In addition, by designating these light industries as a group that need only apply for permits if actual exposure occurs, EPA impermissibly alters the statutory scheme. The statute did set up a similar approach for oil, gas, and mining industries. However, no other classes of industrial activities are subject to the more lenient “actual exposure” test. To require actual exposure entirely shifts the burden in the permitting scheme. Most industrial facilities will have to apply for permits and show the EPA or state that they are in compliance. Light industries will be relieved from applying for permits unless actual exposure occurs. The permitting scheme then will work only if these facilities self-report, or the EPA searches out the sources and shows that exposure is occurring. We do not know the likelihood of either self-reporting or EPA inspection and monitoring of light industries, and the regulations appear to contemplate neither for these industries. For this reason, the proposed regulation is also arbitrary and capricious.

In conclusion, we hold that the rule for light industries is arbitrary and capricious, vacate the rule, and remand for further proceedings.

3. Exclusion of Construction Sites of Less than Five Acres.

[11] NRDC challenges the exemption for construction sites of less than five acres. EPA concedes that the construction industry should be subject to storm water permitting because at a high level of intensity, construction is equivalent to other regulated industrial activities. [55 Fed.Reg. at 48,033](#). Construction sites can pollute with soil sediments, phosphorus, nitrogen, nutrients from fertilizers, pesticides, petroleum products, construction chemicals and solid wastes. *Id.* EPA states that such substances can be toxic to aquatic organisms, and affect water used for drinking and recreation. *Id.*

Following its characterization of construction sites as suitable for regulation, EPA defined its task as determining “an acreage limit [] appropriate for identifying sites that amount are (sic) to industrial activity.” [55 Fed.Reg. at 48,036](#). EPA originally proposed regulations that exempted operations that disturb less than one acre of land and are not part of a common plan of development or sale. [55 Fed.Reg. at 48,035–36](#). In response to comments by the regulated community about the administrative burden presented by the regulation, EPA increased the exemption to five acres. [55 Fed.Reg. at 48,036](#). EPA also noted that larger sites will involve heavier equipment for removing vegetation and bedrock than smaller sites. *Id.* at 48,036.

***1306** We find that EPA's rationale for increasing the limit from one to five acres inadequate and therefore arbitrary and capricious. EPA cites no information to support its perception that construction activities on less than five acres are non-industrial in nature.

[12] EPA also claims agency power, inherent in statutory schemes, to make categorical exemptions when the result is *de minimis*. *Alabama Power Co. v. Costle*, 636 F.2d 323, 360 (D.C.Cir.1979). However, if construction activity is industrial in nature, and EPA concedes that it is, EPA is not free to create exemptions from permitting requirements for such activity. See *Natural Resources Defense Council, Inc. v. Costle*, 568 F.2d 1369, 1377 (D.C.Cir.1977) (once Congress has delineated an area that requires permits, EPA is not free to create exemptions).

Further, we find the *de minimis* principle inapplicable here. The *de minimis* exemption is only available where a regulation would “yield a gain of trivial or no value.” *Alabama Power Co., supra*, at 361. Because of the lack of data, we cannot know whether exempting sites of less than five acres will indeed have only a *de minimis* effect.

The *de minimis* concept is based on the principle that the law does not concern itself with trifling matters. *Id.* at 360. We question its applicability in a situation such as this where the gains from application of the statute are being weighed against administrative burdens to the regulated community. See *id.* at 360–361 (implied authority to make cost-benefit decisions must derive from statute, and not general *de minimis* doctrine).

Further, EPA's claim that the five-acre exemption is *de minimis* is contradicted by the admission that even small construction sites can have a significant impact on local water quality. The EPA acknowledges that “[o]ver a short period of time, construction sites can contribute more sediment to streams than was previously deposited over several decades.” 55 Fed.Reg. at 48,033. Without data supporting the expanded exemption, we owe no deference to EPA's line-drawing. We thus hold that EPA's choice of a five-acre limit is arbitrary and capricious, invalidate that portion of the rule exempting construction sites of five acres or less from permitting requirements, and remand for further proceedings.

4. Exemption for oil and gas activities.

The 1987 amendments created an exemption from the permit requirement for uncontaminated runoff from mining, oil and gas facilities. See Appendix, CWA § 402(l)(2), 33 U.S.C. §§ 1342(l)(2). Section 402(l)(2) states that a permit is not required for discharges of storm water runoff from mining, oil or gas operations composed entirely of flows from conveyance systems used for collecting precipitation runoff and “which are not contaminated by contact with, or do not come into contact with any overburden, raw material, intermediate products, finished product, byproduct, or waste products”. NRDC claims that the November 1990 rule sets up an impermissible standard for determining contamination at oil and gas facilities. The relevant portion of the rule states that at these facilities, an operator is not required to submit a permit application unless the facility has had a discharge of a reportable quantity¹⁵ since November 1987, or contributes to a violation of a water quality standard. 55 Fed.Reg. 48,067 (to be codified at 40 C.F.R. § 122.26(c)(1)(iii)). A facility which has had a release of oil or a hazardous substance in excess of RQs since *1307 1987 must submit a permit application. *Id.*; 55 Fed.Reg. at 48,029–30.

NRDC claims that oil and gas operations should be subject to the stricter standards which apply to mining operations.¹⁶ It also objects to EPA's use of RQs as the only test for contamination of runoff from oil and gas storm water dischargers, claiming it is inconsistent with the legislative history. We conclude that the legislative history does not support NRDC's position.

The conference report states:

[P]ermits are not required where stormwater runoff is diverted around mining operations or oil and gas operations and does not come in contact with overburden, raw material, product, or process wastes. In addition, where stormwater runoff is not contaminated by contact with such materials, *as determined by the administrator*, permits are also not required. With respect to oil or grease or hazardous substances, the determination of whether stormwater is “contaminated by contact with” such materials, *as established by the Administrator*, shall take into consideration whether these materials are present in such stormwater runoff in excess of reportable quantities under section 311 of the Clean Water Act ..., or in the case of mining operations, above natural background levels.

H.R.Rep. No. 1004, 99th Cong., 2d Sess., at 151 (emphasis added).

[13] Thus, the EPA Administrator has discretion to determine whether or not storm water runoff at an oil, gas or mining operation is contaminated with two types of materials: (1) overburden, raw material, product, or process wastes and (2) oil, grease or hazardous substances. The report sets out factors for the Administrator to consider in determining contamination for the latter group of pollutants.

NRDC first claims that because section 402(l)(2) treats oil, gas and mining together, the EPA rule must do the same. NRDC's second objection is based on its interpretation of the language in the conference report. Because the conference report lists RQs as only one factor to be taken into consideration, NRDC insists EPA cannot make it the only factor to measure contamination for oil and gas facilities.

Both of these arguments must fail in light of the conference report, which gives the Administrator discretion to determine when contamination has occurred with respect to the substances listed in the statute, i.e., overburden, raw materials, waste products, etc. *See* CWA § 402(l)(2). The conference report states that the Administrator shall take certain factors into account, but the report is clear that the determination of whether storm water is contaminated is within the Administrator's discretion.

NRDC argues that the remarks of certain congressmen during congressional debate show that the mining, oil, and gas exemptions were to apply only if the discharges were entirely free of contaminants. We find these examples less persuasive than the clear language of the conference report. Moreover, in light of the discretion granted the Administrator in the conference report, we cannot say that the rule as promulgated is an arbitrary and capricious exercise of that discretion.

NRDC also contends that Congress intended that EPA consider reportable quantities only in determining if a discharge is contaminated with oil, grease, or hazardous substances. Other pollutants, according to NRDC, must be found to contaminate the discharge if they exceed background levels.

EPA did not, in fact, limit itself to reportable quantities in determining which oil or gas facilities must apply for a permit. The rule requires a permit for any facility which “[c]ontributes to a violation of a water quality standard.” 40 C.F.R. § 122.26(c)(1)(iii)(C). This requirement addresses contamination with substances other than oil and hazardous substances. We find no support in the statute or the legislative history for NRDC's claim that, with respect to these substances, levels above background must be considered “contamination.” The conference report quoted above requires consideration of background levels of any pollutant only with respect to mining operations.

D. Lack of Controls for Municipal Storm Water Discharge.

[14] NRDC contends that EPA has failed to establish substantive controls for municipal storm water discharges as required by the 1987 amendments. Because Congress gave the administrator discretion to determine what controls are necessary, NRDC's argument fails.

Prior to 1987, municipal storm water dischargers were subject to the same substantive control requirements as industrial and other types of storm water. In the 1987 amendments, Congress retained the existing, stricter controls for industrial storm water dischargers but prescribed new controls for municipal storm water discharge. CWA § 402(p)(3)(A), (B), 33 U.S.C. § 1342(p)(3)(A)–(B). The Act states that permits for discharges from municipal storm sewers:

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-storm water discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, *and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.*

Section 402(p)(3)(B), 33 U.S.C. § 1342(p)(3)(B) (emphasis added).

NRDC charges that the EPA regulations accomplish neither of the goals above, i.e., they do not effectively prohibit non-storm water discharges nor do they require the controls described in ¶ (iii), above. NRDC argues that Congress granted the moratorium precisely to give EPA the opportunity to develop new, substantive standards for storm water control of municipal sources and instead EPA wrote vague regulations containing no minimum criteria or performance standards.¹⁷ However, the language in ¶ (iii), above, requires the Administrator or a state to design controls. Congress did not mandate a minimum standards approach or specify that EPA develop minimal performance requirements. NRDC also claims that the testing requirements are inadequate because there is only limited sampling at a limited number

of sites. However, we must defer to EPA on matters such as this, where EPA has supplied a reasoned explanation of its choices. *See* 55 Fed.Reg. at 48,049.

NRDC's argument that the EPA rule is inadequate cannot prevail in the face of the clear statutory language and our standard of review. Congress could have written a statute requiring stricter standards, and it did not. We therefore reject NRDC's argument that EPA's storm water control regulations fail to comply with the statute.¹⁸

E. Lack of Notice and Comment on the Approval of Part 1 of Industrial Group Storm Water Applications.

NRDC objects to the lack of opportunity for notice and comment before EPA approval of part 1 of group applications for industrial dischargers. Each member of a proposed group must submit part 1 of the application.¹⁹ If EPA approves part 1, only *1309 a small subset of the member facilities need submit part 2 of the application. 55 Fed.Reg. at 48,072 (to be codified at 40 C.F.R. 122.26(e)(2)). NRDC claims that because approval of part 1 waives the requirement of filing part 2 for most members of a group, EPA's decision on part 1 is equivalent to a "rule" requiring notice and comment from the public. The issue thus presented is whether EPA's decision on a part 1 group permit application is a "rule" as defined in 5 U.S.C. § 551(4) (1988)²⁰ requiring public notice and opportunity to comment under 5 U.S.C. § 553 (1988), or is otherwise subject to the notice and comment requirement.

[15] NRDC argues that approval or disapproval of a part 1 application requires public comment because it has "general applicability" pursuant to 5 U.S.C. § 551(4) and because it will have a "palpable effect" in that it will relieve the majority of entities in the group from submitting data in part 2 of the application. NRDC cites *NRDC v. EPA*, 683 F.2d 752 (3rd Cir.1982) and *Council of Southern Mountains, Inc. v. Donovan*, 653 F.2d 573 (D.C.Cir.1981) in support of its argument. Both cases involved the postponement of regulations. *See NRDC*, 683 F.2d at 753–54, 764 (indefinite postponement of effective date of final amendments to regulations dealing with the discharge of toxic pollutants requires notice and comment because it has a substantial impact on the public and the industry); *Council of Southern Mountains, Inc.*, 653 F.2d at 575, 580 n. 28 (deferral of implementation of regulations requiring coal operators to supply life-saving equipment ordinarily would require notice and comment because it has a "palpable effect" upon the industry and the public).

We find these cases to be distinguishable. Both involve the postponement of rules of general applicability to an entire industry, or to a large class of pollutants. In contrast, although the part 1 application process will relieve some entities from the need to furnish further data, the decision is specific to a particular permit application and approval of a preliminary application will not implement, interpret or prescribe any general law or policy pursuant to 5 U.S.C. § 551(4). Rulemaking ordinarily involves "broad judgments, legislative in nature rather than the resolution of a particular dispute of facts." *Washington Utilities & Transportation Com'n v. Federal Communication Commission*, 513 F.2d 1142, 1160 (9th Cir.1975), *cert. denied*, 423 U.S. 836, 96 S.Ct. 62, 46 L.Ed.2d 54 (1975). The decision to approve a part 1 permit application, although it may affect a large number of applicants, is nevertheless focused on a specific factual question: whether the application adequately designates a representative smaller group subject to the more extensive data gathering requirements in part 2 of the application. *See* 55 Fed.Reg. at 48,028. Because the decision involves a discrete, factual issue, the better view is that it is neither a rule nor otherwise subject to the notice and comment requirement.

Because approval of a part 1 application is essentially a factual determination, we hold that EPA's group permit application process for industrial dischargers is not invalid by its failure to provide for notice and comment.

III. CONCLUSION

In summary, we grant and deny relief as follows:

1. *“Deadlines” issue.* We grant the request for declaratory relief and deny the request for injunctive relief. We deny the request to place small, medium and large municipalities on the same permitting schedule. We hold that EPA's failure to include deadlines for permit approval or denial and compliance consistent with CWA § 402(p) is arbitrary and capricious.

2. *Exclusion of Sources from Regulation.* We uphold the definition of “municipal *1310 separate storm sewers serving a population.” We hold that the exemption for construction sites of less than five acres is arbitrary and capricious and remand for further proceedings. Based on the record before us, we vacate that portion of the rule regulating “light industry” and remand for further proceedings.

3. *Other issues.* We uphold the rule as to oil and gas operations and storm water control. We further hold that EPA approval of part 1 of a group application for an industrial discharger is not a rule requiring notice and comment from the public.

Petition for Review GRANTED IN PART and DENIED IN PART.

APPENDIX A

CWA § 402, 33 USCA § 1342

(l) Limitation on permit requirement

....

(2) Stormwater runoff from oil, gas, and mining operations

The Administrator shall not require a permit under this section, nor shall the Administrator directly or indirectly require any State to require a permit, for discharges of stormwater runoff from mining operations or oil and gas exploration, production, processing, or treatment operations or transmission facilities, composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and which are not contaminated by contact with, or do not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations.

....

(p) Municipal and industrial stormwater discharges

(1) General rule

Prior to October 1, 1992, the Administrator or the State (in the case of a permit program approved under this section) shall not require a permit under this section for discharges composed entirely of stormwater.

(2) Exceptions

Paragraph (1) shall not apply with respect to the following stormwater discharges:

(A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.

(B) A discharge associated with industrial activity.

(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000 .

(E) A discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(3) Permit requirements

(A) Industrial discharges

Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and section 1311 of this title.

(B) Municipal discharge

Permits for discharges from municipal storm sewers—

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or *1311 the State determines appropriate for the control of such pollutants.

(4) Permit application requirements

(A) Industrial and large municipal discharges

Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(B) Other municipal discharges

Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(5) Studies

The Administrator, in consultation with the States, shall conduct a study for the purposes of—

(A) identifying those stormwater discharges or classes of stormwater discharges for which permits are not required pursuant to paragraphs (1) and (2) of this subsection;

(B) determining, to the maximum extent practicable, the nature and extent of pollutants in such discharges; and

(C) establishing procedures and methods to control stormwater discharges to the extent necessary to mitigate impacts on water quality.

Not later than October 1, 1988, the Administrator shall submit to Congress a report on the results of the study described in subparagraphs (A) and (B). Not later than October 1, 1989, the Administrator shall submit to Congress a report on the results of the study described in subparagraph (C).

(6) Regulations

Not later than October 1, 1992, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate.

[O'SCANNLAIN](#), Circuit Judge, concurring in part and dissenting in part:

I concur in Parts I, II.A, II.C.1, II.C.4, II.E, and much of Part II.B of the majority opinion. I dissent from Part II.B.2.c, directing EPA to issue supplemental regulations. I dissent also from Parts II.C.2 and II.C.3, in which the court invalidates EPA's exclusion of storm water discharges from certain light industrial and small construction sites from the definition of "discharges associated with industrial activity." Finally, I concur in the result, but not the reasoning, of Part II.D, holding that EPA has not acted unlawfully by failing to include specific control requirements in the permit application regulations.

***1312 I**

The majority holds that EPA has violated statutory requirements by failing to set dates for approval of, and compliance with, permits as part of its permit application program. *Ante* at 1300. Despite the holding in Part II.B.2.b that injunctive relief is inappropriate (with which I agree), the majority in Part II.B.2.c orders EPA to issue supplemental regulations setting such deadlines immediately.

I am not convinced that the statute requires EPA to set these deadlines as part of the permit application process. The provision at issue reads, in relevant part:

(4) Permit application requirements

(A) Industrial and large municipal discharges

Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(B) Other municipal discharges

Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

CWA § 402(p)(4); 33 U.S.C. § 1342(p)(4) (1988).

While the statute establishes a time line EPA must follow, it does not, in my view, require that EPA include the deadline for permit approval in the permit application regulations. I agree that, given EPA's past delays and the fact that the statutory dates for issuance or denial of permits are now long past, it is appropriate for this court to declare that the statute requires EPA to issue or deny permits within one year of the application deadline. I do not, however, see that any purpose is served by requiring EPA to issue supplemental regulations setting out these deadlines, and I doubt our authority to do so.

With respect to compliance deadlines, the statute contemplates that such deadlines will be set in individual permits as they are issued. *See* CWA § 402(p)(4)(A), (B) (“Any such permit shall provide for compliance....”). Each permit must contain a compliance deadline, which may not exceed three years from the date of issuance. Nothing in the statute requires EPA to establish compliance deadlines now, before any permits have been issued. Accordingly, in my view, NRDC's challenge to the lack of compliance deadlines in EPA's current regulations is premature. I therefore dissent from Part II.B.2.c of the majority opinion.

II

I dissent also from Parts II.C.2 and II.C.3. In my view, EPA's definition of “discharge associated with industrial activity” is a reasonable construction of an ambiguous statute, entitled to deference. While my colleagues acknowledge that we may not overturn an agency rule that represents a “permissible construction” of a statute, *ante* at 1297 (quoting *Chevron, U.S.A., Inc. v. NRDC*, 467 U.S. 837, 843, 104 S.Ct. 2778, 2781, 81 L.Ed.2d 694 (1984)), they fail to apply that axiom.

A

EPA's rule excludes from the permitting requirement certain light industry facilities at which “areas where material handling equipment or activities, raw materials, intermediate *1313 products, final products, waste materials, byproducts, or industrial machinery” are not exposed to storm water. *See* 40 C.F.R. § 122.26(b)(14). EPA determined that discharges from such facilities do not fall within the definition of “discharges associated with industrial activity.” In my view, this determination was reasonable.

The majority concedes that the statute does not define “discharge associated with industrial activity.” *Ante* at 1304. The operative phrase, as my colleagues note, is “associated with.” *See id.* For purposes of evaluating the light industry exemption, I concede that manufacturing falls within the generally accepted meaning of “industrial activity,” and that many of the facilities exempted by the EPA rule are manufacturers. Nonetheless, that concession does not compel the conclusion that discharges from such facilities are “associated with industrial activity.”

The majority concludes, without explanation, that the phrase “discharges associated with industrial activity” is “very broad.” *Ante* at 1304. Neither the plain meaning of the term “associated” nor the legislative history of the statute support

this conclusion. “Associated with” means closely related to or connected with. *See Webster's Ninth New Collegiate Dictionary* 110 (1986). To the extent it casts any light on the subject, the legislative history supports a narrow reading of the phrase “associated with.” Four members of the House, in the course of floor debates on the measure both before and after President Reagan's veto, explained that:

[a] discharge is associated with industrial activity if it is *directly related to manufacturing, processing or raw materials storage areas* at an industrial plant. Discharges which do not meet this definition include those discharges associated with parking lots and administrative and employee buildings.

133 Cong.Rec. 985 (1987) (statement of Rep. Hammerschmidt) (emphasis added).¹ The underscored language suggests that Congress intended to regulate only discharges directly related to certain activities at industrial facilities. EPA's interpretation, that discharges are “directly related” to these activities only if storm water may reasonably be expected to come into contact with them before its discharge, is eminently logical.

The majority opinion interprets the exclusion of parking lots as an expression of congressional intent “to exclude only those facilities or parts of a facility that are completely nonindustrial.” *Ante* at 1304. My colleagues' reliance on the second sentence of the statement quoted above to establish this intent, however, is misplaced. The sentence relied on cannot assist us in our search for the meaning of “associated with” because it employs that very term. Moreover, it does not pretend to establish an exhaustive list of areas excluded from regulation. Legislators listed discharges from parking lots and administrative and employee buildings as *among those* not directly related to industrial activity; no one suggested that *only* discharges associated with those structures were to be excluded.

EPA's definition is consistent with the plain words of the statute and, to the extent any intent is discernible, the congressional intent. EPA has defined the term “storm water discharge associated with industrial activity” to cover only those discharges reasonably expected to come into contact with industrial activities. A large number of facilities automatically fall within EPA's definition and are required to *1314 apply for permits. Because facilities falling within certain specified classifications under the Standard Industrial Classification manual generally conduct their operations entirely indoors, minimizing the likelihood of contact with storm water, EPA has not automatically included them within the regulations. However, these facilities *are* required to apply for permits if “areas where material handling equipment or activities, raw materials, intermediate products, final products, waste materials, byproducts, or industrial machinery at these facilities are exposed to storm water.” 40 C.F.R. § 122.26(b)(14). If a storm water discharge is in fact directly related to or associated with the industrial activity carried on at a facility falling within the light industry category, the facility must obtain a permit.²

In my view, the statute's treatment of oil and gas facilities supports EPA's reading of the term “associated with industrial activity.” Congress specifically exempted from the permit requirement discharges from oil and gas facilities and mining operations which have not come in contact with raw materials, finished products, or waste products. CWA § 402(l)(2). This section indicates a congressional intent to exempt uncontaminated discharges which have not come into contact with “industrial activities” from regulation. For oil, gas, and mining operations, Congress in this section supplied a specific, and quite limited, definition of “industrial activities.” For other facilities, that definition was left to the discretion of EPA, which has adopted a much broader definition, encompassing contact with such things as industrial machinery and materials handling equipment. *See* 40 C.F.R. § 122.26(b)(14).

I do not mean to suggest that the majority's construction of the statute is untenable. It may even be preferable to the reading chosen by the agency. Nonetheless, in my view the statute is ambiguous and the legislative history does not demonstrate any clear congressional intent. The question before this court, therefore, is not whether “the agency construction was the only one it permissibly could have adopted” or even whether it is the “reading the court would have reached if the question initially had arisen in a judicial proceeding.” *Chevron, U.S.A. v. NRDC*, 467 U.S. 837, 843 n. 11,

104 S.Ct. 2778, 2782 n. 11, 81 L.Ed.2d 694 (1984). We need only inquire if the agency's construction is a permissible one. *Id.* at 843, 104 S.Ct. at 2781. EPA's definition falls well within permissible bounds, and should be upheld.

B

Although the issue is closer, I also am not persuaded that EPA's exemption for construction sites under five acres should be struck down. EPA has not conceded that "construction activity is industrial in nature." *Ante* at 1306. In the preamble to its final rule, EPA noted that "Construction activity *at a high level of intensity is comparable to other activity that is traditionally viewed as industrial*, such as natural resource extraction."³ 55 Fed.Reg. 48,033 (1990) (emphasis added). EPA explained that it was "attempting to focus [regulation] only on those construction activities *1315 that resemble industrial activity." 55 Fed.Reg. at 48,035 (emphasis added).

Neither NRDC nor the majority point to anything in the statute or the legislative history that would require the agency to define "industrial activity" as including all construction operations. Accordingly, I believe deference is due EPA's definition, provided it is not arbitrary, capricious, or manifestly contrary to the statute. *Chevron, U.S.A., 467 U.S. at 844*, 104 S.Ct. at 2782.

In trying to determine when construction should be treated as industrial activity, EPA considered a number of possible approaches. *See* 55 Fed.Reg. at 48,035. Exempting construction that would be completed within a certain designated time frame was deemed inappropriate, because the work could be both intensive and expansive but nonetheless take place over a short period of time. Basing the limit on quantity of soil removed was also rejected as not relating to the amount of land surface disturbed. EPA finally settled on the surface area disturbed by the construction project as a feasible and appropriate mechanism for "identifying sites that are [sic] amount to industrial activity." 55 Fed.Reg. at 48,036.

Having determined that not all construction amounts to industrial activity, and that the appropriate basis for differentiation is land area disturbed, EPA then had to determine where to draw the line. Initially, EPA proposed to exempt all construction operations disturbing less than one acre of land, as well as single family residential projects disturbing less than five acres. 53 Fed.Reg. 49,431 (1988). In the final rule, however, EPA adopted a five-acre minimum for all construction projects. 55 Fed.Reg. 48,066 (1990); 40 C.F.R. § 122.26(b)(14)(x).

Admittedly, the final rule contains little in the way of justification for treating two-acre sites differently than five-acre ones, but that does not necessarily make it arbitrary and capricious. Line-drawing is often difficult. NRDC was apparently willing to accept EPA's proposed one-acre/five-acre rule. Although NRDC now challenges the blanket five-acre rule, it offers no evidence that sites excluded from the permitting requirement constitute "industrial activity." In such absence of any evidence in the record undermining EPA's conclusion on an issue squarely within its expertise, I believe the rule must be upheld.⁴

III

Finally, while I concur in the result reached by the majority in Part II.D, rejecting NRDC's claim that EPA has unlawfully failed to require substantive controls on municipal discharges, I disagree with the majority's reasoning. In my view, NRDC's claim is premature, and we should decline to address its merits.

NRDC contends that the 1987 amendments require EPA to establish substantive controls for municipal storm water discharges. In support of this argument, NRDC relies on CWA § 402(p)(3)(B), 33 U.S.C. § 1342(p)(3)(B), which provides:

Permits for discharges from municipal storm sewers—

* * * * *

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable....

This section refers only to *permits*, and says nothing about permit applications. Because EPA has yet to issue any permits, NRDC's claim on this point is premature. In the absence of any indication to the contrary, we must assume that any permit issued will comply with all applicable statutory requirements. The statute does not require that EPA detail the substantive controls to be imposed when establishing permit application requirements. Accordingly, I would reject NRDC's claim without *1316 reaching the issue of the Administrator's discretion in selecting those controls.

IV

In sum, I join much of my colleagues' opinion. However, I would not require EPA to issue supplemental regulations detailing the time line for issuance of and compliance with permits, and I would uphold EPA's definition of "discharge associated with industrial activity." Finally, I would reject NRDC's claim that EPA is required to detail control measures in the permit application regulations on the grounds that the statute requires control measures only in the permits themselves.

- 5 Senator Stafford, speaking in favor of the conference report for the Water Quality Act, noted that "EPA should have developed this program long ago. Unfortunately, it did not. The conference substitute provides a short grace period during which EPA and the States generally may not require permits for municipal separate storm sewers." 132 Cong. Rec. 32,381 (1986). Senator Chafee stated "[t]he Agency has been unable to move forward with a [storm water discharge control] program, because the current law did not give enough guidance to the Agency. This provision provides such guidance, and I expect EPA to move rapidly to implement this control program." 133 Cong. Rec. 1,264 (1987).
- 6 Pub.L. No. 100–4, 101 Stat. 7 (1987) (codified as amended in scattered sections of 33 U.S.C.).
- 7 Large municipal systems are those serving a population of 250,000 or more. § 402(p)(2)(C).

8 Since NRDC filed this action, Congress has passed certain legislation affecting some of the deadlines at issue. Congress ratified the date of September 30, 1991 for part 1 of group applications for industrial dischargers. *See* Dire Emergency Supplemental Appropriations Act of 1991, [Pub.L. No. 102–27, § 307, 105 Stat. 130](#), 152 (1991).

Section 1068 of the Intermodal Surface Transportation Efficiency Act of 1991 (“ISTEA”) clarifies the deadlines for storm water discharges associated with industrial activity from facilities owned or operated by a municipality. [Pub.L. No. 102–240, § 1068, 105 Stat. 1914](#), 2007 (1991). ISTEA deadlines are being reviewed in a separate case. Nothing in this opinion should be viewed as requiring EPA to comply with deadlines that have been altered or superseded by the ISTEA.

9 *See* [55 Fed.Reg. at 48,071–722](#) (to be codified at [40 C.F.R. § 122.26\(e\)](#)); [67 Fed.Reg. at 12,100](#) (to be codified at [40 C.F.R. § 122.26\(e\)\(2\)\(iii\)](#)). EPA changed certain of these deadlines after this case was submitted. These changes are the subject of a separate case.

The EPA rules at issue set no date for final approval or denial of applications from municipal or industrial dischargers, nor for compliance by these regulated entities. *See* [55 Fed.Reg. at 48,072](#).

10 NRDC initially claimed that this extension was unlawful because it was granted without proper notice and comment. However, Congress approved this extended deadline in a supplemental appropriations bill. Dire Emergency Supplemental Appropriations Act of 1991, [Pub.L. No. 102–27 § 307, 105 Stat. 130](#), 152 (1991). This Act moots the procedural and substantive challenge to this extended deadline.

11 In addition, pursuant to the statute, compliance deadlines applicable to each facility shall be contained in its permit.

12 The rule also permits the Administrator to include certain other systems as part of a medium or large system due to the physical interconnections between the systems, their locations, or certain other factors. *See* [40 C.F.R. § 122.26\(b\)\(4\)\(iii\)](#), (iv) and (b)(7)(iii), (iv).

13 Storm sewers located within the boundaries of a city might be part of a state highway system, a flood control district, or a system operated by the state or county. *See* [55 Fed.Reg. at 48,041](#).

14 *See, e.g.*, 133 Cong. Rec. 991 (1987) (statement of Rep. Stangeland).

15 “Reportable Quantities” (RQs) are not effluent guidelines setting up permissible limits for pollutants. Rather, they are quantities the discharge of which “may be harmful to the public health or welfare of the United States.” CWA § 311(b)(4), [33 U.S.C. § 1321\(b\)\(4\)](#). EPA has established RQs for a large number of substances, pursuant to both CWA section 311, [33 U.S.C. § 1321](#), and the Comprehensive Environmental Response, Compensation and Liability Act (“CERCLA”) section 102, [42 U.S.C. § 9602](#). *See* 40 C.F.R. Parts 110, 117, 302. The operator of any vessel or facility which releases the RQ of any substance must immediately notify the National Response Center. *See, e.g.*, [40 C.F.R. § 110.10](#).

16 Operators of mines must submit permit applications whenever storm water discharges come into contact with overburden, waste products, etc. [40 C.F.R. § 122.26\(c\)\(1\)\(iv\)](#).

17 The requirements for permit applications are set forth at [40 C.F.R. § 122.26\(d\)](#). Individual NPDES permit writers (EPA or state officials) will decide whether application proposals are adequate. Applicants must submit information on source control methods and estimate the annual pollutant load reduction to be achieved from their proposed management programs, but they are not required to achieve any specified level of reduction of any pollutants. *See* [55 Fed.Reg. at 48,070–71](#).

18 We base our holding on NRDC’s challenge to the regulations at issue. Whether a specific permit complies with the requirements of section 402(p)(3)(B) would, of course, be another matter not controlled by this decision.

19 Part I must include the identity of the group’s participants, a description of the participants’ industrial activities, a list of significant materials exposed to precipitation and the identity of the subset of the group’s members who will submit quantitative data in part 2 of the application. [55 Fed.Reg. at 48,067](#).

20 A rule means “the whole or part of an agency statement of general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy or describing the organization, procedure, or practice requirements of an agency....” [5 U.S.C. § 551\(4\)](#).

1 This statement was repeated verbatim by Reps. Stangeland and Snyder. 133 Cong. Rec. at 991–92; 132 Cong. Rec. at 31,959, 31,964 (1986). Rep. Rowland offered a slight variation on the theme:

One of the discharge categories is “a discharge associated with an industrial activity.” A discharge is not considered to be associated with industrial activity unless it is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Such discharges include [sic] those from parking lots and administrative areas and employee buildings.

132 Cong. Rec. at 31,968. Rep. Rowland apparently misspoke; he probably meant, like the other legislators who addressed the topic, to say “[s]uch discharges *do not* include” those from parking lots.

- 2 Thus, nothing turns on the assumption, attacked by my colleagues as unsupported by the record, *ante* at 1304, that industrial activities at this category of facilities will take place largely indoors. Where the assumption does not hold true, the permit requirement applies with full force. I also note that NRDC has pointed us to no evidence undermining EPA's assumption. Unlike my colleagues, I decline to assume that EPA will not carry out its responsibility to identify and to require permits of facilities where industrial activities are in fact exposed to storm water, or that such facilities will ignore their statutory duty to apply for permits. Should that occur, a lawsuit challenging EPA's failure to enforce its regulations might well be in order. An unsubstantiated suspicion that EPA may not vigorously enforce its regulations, however, does not make those regulations arbitrary or capricious.
- 3 EPA did admit that “[e]ven small construction sites may have a significant negative impact on water quality in localized areas,” *55 Fed.Reg. at 48,033*. In the absence of any indication of what EPA meant by “small,” however, that statement does not undermine EPA's exemption of sites under five acres.
- 4 Because I conclude that the rule falls within the permissible bounds of the statutory definition of “discharges associated with industrial activity,” I need not consider the applicability of the *de minimis* exception.

Opinion Amended on Denial of Rehearing by [Defenders of Wildlife v. Browner](#), 9th Cir., December 7, 1999

191 F.3d 1159
United States Court of Appeals,
Ninth Circuit.

DEFENDERS OF WILDLIFE and The Sierra Club, Petitioners,

v.

Carol M. BROWNER, in her official capacity as Administrator of
the United States Environmental Protection Agency, Respondent.
City of Tempe, Arizona; City of Tucson, Arizona; City of Mesa, Arizona; Pima
County, Arizona; and City of Phoenix, Arizona, Intervenors–Respondents.

No. 98–71080.

|
Argued and Submitted Aug. 11, 1999.

|
Decided Sept. 15, 1999.

Environmental organizations sought review of Environmental Protection Agency (EPA) decision to issue National Pollution Discharge Elimination System (NPDES) permits to five municipalities, for their separate storm sewers, without requiring numeric limitations to ensure compliance with state water-quality standards. The Court of Appeals, [Graber](#), Circuit Judge, held that: (1) organizations had standing; (2) municipal storm-sewer discharges did not have to strictly comply with state water-quality standards; but (3) EPA had discretion to require that municipal discharges comply with such standards.

Petition denied.

West Headnotes (8)

[1] **Environmental Law** 🔑 Cognizable interests and injuries, in general

For purpose of statute authorizing any interested person to seek judicial review of Environmental Protection Agency (EPA) decision issuing or denying any National Pollution Discharge Elimination System (NPDES) permit, “any interested person” means any person that satisfies the injury-in-fact requirement for Article III standing. [U.S.C.A. Const. Art. 3, § 2, cl. 1](#); Federal Water Pollution Control Act Amendments of 1972, § 509(b)(1)(F), [33 U.S.C.A. § 1369\(b\)\(1\)\(F\)](#).

[2 Cases that cite this headnote](#)

[2] **Environmental Law** 🔑 Organizations, associations, and other groups

Environmental organizations had standing to seek judicial review of Environmental Protection Agency (EPA) decision to issue National Pollution Discharge Elimination System (NPDES) permits for municipalities' storm sewers based on allegation that organizations' members used and enjoyed ecosystems affected by storm water discharges and sources thereof governed by the permits. [U.S.C.A. Const. Art. 3, § 2, cl. 1](#); Federal Water Pollution Control Act Amendments of 1972, § 509(b)(1)(F), [33 U.S.C.A. § 1369\(b\)\(1\)\(F\)](#).

6 Cases that cite this headnote

[3] **Environmental Law** 🔑 Permit and certification proceedings

Although best practicable control technology (BPT) requirement for National Pollution Discharge Elimination System (NPDES) permits takes into account issues of practicability, the Environmental Protection Agency (EPA) also is under a specific obligation to require that level of effluent control which is needed to implement existing water quality standards without regard to the limits of practicability. Federal Water Pollution Control Act Amendments of 1972, §§ 301(b)(1)(A, C), 402(a)(1), 33 U.S.C.A. §§ 1311(b)(1)(A, C), 1342(a)(1).

11 Cases that cite this headnote

[4] **Environmental Law** 🔑 Discharge of pollutants

Water Quality Act amendments to the Clean Water Act do not require municipal storm-sewer discharges to strictly comply with state water-quality standards, in order to obtain National Pollution Discharge Elimination System (NPDES) permit, but instead prescribe separate standard requiring reduction of discharge of pollutants to maximum extent practicable, in view of Act's distinction between municipal and industrial discharges. Federal Water Pollution Control Act Amendments of 1972, §§ 301(b)(1)(C), 402(p)(3)(B)(iii), 33 U.S.C.A. §§ 1311(b)(1)(C), 1342(p)(3)(B)(iii).

15 Cases that cite this headnote

[5] **Administrative Law and Procedure** 🔑 Plain, literal, or clear meaning;ambiguity

Questions of congressional intent that can be answered with traditional tools of statutory construction are still firmly within the province of the courts under *Chevron*, which governs review of an agency's interpretation of a statute.

5 Cases that cite this headnote

[6] **Statutes** 🔑 Language and intent, will, purpose, or policy

Statutes 🔑 Statute as a Whole;Relation of Parts to Whole and to One Another

Using traditional tools of statutory construction when interpreting a statute, courts look first to the words that Congress used, and, rather than focusing just on the word or phrase at issue, courts look to the entire statute to determine Congressional intent.

5 Cases that cite this headnote

[7] **Statutes** 🔑 Express mention and implied exclusion;expressio unius est exclusio alterius

Where Congress includes particular language in one section of a statute but omits it in another section of the same act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion.

5 Cases that cite this headnote

[8] **Environmental Law** 🔑 Conditions and limitations

Environmental Protection Agency (EPA) is not prohibited from requiring, under Clean Water Act, that municipal storm-sewer discharges strictly comply with state water-quality standards, but has discretion to

determine appropriate pollution controls. Federal Water Pollution Control Act Amendments of 1972, § 402(p)(3)(B)(iii), 33 U.S.C.A. § 1342(p)(3)(B)(iii).

Petition to Review a Decision of the Environmental Protection Agency. EPA No. 97-3.

Before: [NOONAN](#), [THOMPSON](#), and [GRABER](#), Circuit Judges.

Opinion

[GRABER](#), Circuit Judge:

Petitioners challenge the Environmental Protection Agency's (EPA) decision to issue National Pollution Discharge Elimination System (NPDES) permits to five municipalities, for their separate storm sewers, without requiring numeric limitations to ensure compliance with state water-quality standards. Petitioners sought administrative review of the decision within the EPA, which the Environmental Appeals Board (EAB) denied. This timely petition for review ensued. For the reasons that follow, we deny the petition.

FACTUAL AND PROCEDURAL BACKGROUND

[Title 26 U.S.C. § 1342\(a\)\(1\)](#) authorizes the EPA to issue NPDES permits, thereby allowing entities to discharge some pollutants. In 1992 and 1993, the cities of Tempe, Tucson, Mesa, and Phoenix, Arizona, and Pima County, Arizona (Intervenors), submitted applications for NPDES permits. The EPA prepared draft permits for public comment; those draft permits did not attempt to ensure compliance with Arizona's water-quality standards.

Petitioner Defenders of Wildlife objected to the permits, arguing that they must contain numeric limitations to ensure strict compliance with state water-quality standards. The State of Arizona also objected.

Thereafter, the EPA added new requirements:

To ensure that the permittee's activities achieve timely compliance with applicable water quality standards (Arizona Administrative Code, Title 18, Chapter 11, Article 1), the permittee shall implement the [Storm Water Management Program], monitoring, reporting and other

requirements of this permit in accordance with the time frames established in the [Storm Water Management Program] referenced in Part I.A.2, and elsewhere in the permit. This timely implementation of the requirements of this permit shall constitute a schedule of compliance authorized by [Arizona Administrative Code, section R18-11-121\(C\)](#).

The Storm Water Management Program included a number of structural environmental controls, such as storm-water detention basins, retention basins, and infiltration ponds. It also included programs to remove illegal discharges.

With the inclusion of those “best management practices,” the EPA determined that the permits ensured compliance with state water-quality standards. The Arizona Department of Environmental Quality agreed:

The Department has reviewed the referenced municipal NPDES storm-water permit pursuant to Section 401 of the Federal Clean Water Act to ensure compliance with State water quality standards. We have determined that, based on the information provided in the permit, and the fact sheet, adherence to provisions and requirements set forth in the final municipal permit, will protect the water quality of the receiving water.

On February 14, 1997, the EPA issued final NPDES permits to Intervenor. Within 30 days of that decision, Petitioners requested an evidentiary hearing with the regional administrator. *See* 40 C.F.R. § 124.74. Although Petitioners requested a hearing, they conceded that they raised only a legal issue and that a hearing was, in fact, unnecessary. Specifically, Petitioners raised only the legal question whether the Clean Water Act (CWA) requires numeric limitations to ensure strict compliance with state water-quality standards; they did not raise the factual question whether the management practices that the EPA chose would be effective.

***1162** On June 16, 1997, the regional administrator summarily denied Petitioners' request. Petitioners then filed a petition for review with the EAB. *See* 40 C.F.R. § 124.91(a). On May 21, 1998, the EAB denied the petition, holding that the permits need not contain numeric limitations to ensure strict compliance with state water-quality standards. Petitioners then moved for reconsideration, *see* 40 C.F.R. § 124.91(i), which the EAB denied.

JURISDICTION

[1] [2] [Title 33 U.S.C. § 1369\(b\)\(1\)\(F\)](#) authorizes “any interested person” to seek review in this court of an EPA decision “issuing or denying any permit under [section 1342](#) of this title.” “Any interested person” means any person that satisfies the injury-in-fact requirement for Article III standing. *See* [Natural Resources Defense Council, Inc. v. EPA](#), 966 F.2d 1292, 1297 (9th Cir.1992) [*NRDC II*]. It is undisputed that Petitioners satisfy that requirement. Petitioners allege that “[m]embers of Defenders and the Club use and enjoy ecosystems affected by storm water discharges and sources thereof governed by the above-referenced permits,” and no other party disputes those facts. *See* [Lujan v. Defenders of Wildlife](#), 504 U.S. 555, 565–66, 112 S.Ct. 2130, 119 L.Ed.2d 351 (1992) (“[A] plaintiff claiming injury from environmental damage must use the area affected by the challenged activity.”); *see also* [NRDC II](#), 966 F.2d at 1297 (“NRDC claims, inter alia, that [the] EPA has delayed unlawfully promulgation of storm water regulations and that its regulations, as published, inadequately control storm water contaminants. NRDC's allegations ... satisfy the broad standing requirement applicable here.”).

Intervenors argue, however, that they were not parties when this action was filed and that this court cannot redress Petitioners' injury without them. Their real contention appears to be that they are indispensable parties under [Federal Rule of Civil Procedure 19](#). We need not consider that contention, however, because in fact Intervenor have been permitted to intervene in this action and to present their position fully. In the circumstances, Intervenor have suffered no injury.

DISCUSSION

A. *Standard of Review*

The Administrative Procedures Act (APA), 5 U.S.C. §§ 701–06, provides our standard of review for the EPA's decision to issue a permit. *See American Mining Congress v. EPA*, 965 F.2d 759, 763 (9th Cir.1992). Under the APA, we generally review such a decision to determine whether it was “arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law.” 5 U.S.C. § 706(2)(A).

On questions of statutory interpretation, we follow the approach from *Chevron U.S.A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984). *See NRDC II*, 966 F.2d at 1297 (so holding). In *Chevron*, 467 U.S. at 842–44, 104 S.Ct. 2778, the Supreme Court devised a two-step process for reviewing an administrative agency's interpretation of a statute that it administers. *See also Bicycle Trails Council of Marin v. Babbitt*, 82 F.3d 1445, 1452 (9th Cir.1996) (“The Supreme Court has established a two-step process for reviewing an agency's construction of a statute it administers.”). Under the first step, we employ “traditional tools of statutory construction” to determine whether Congress has expressed its intent unambiguously on the question before the court. *Chevron*, 467 U.S. at 843 n. 9, 104 S.Ct. 2778. “If the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress.” *Id.* at 842–43, 104 S.Ct. 2778 (footnote omitted). If, instead, Congress has left a gap for the administrative agency to fill, we proceed to step two. *See id.* at 843, 104 S.Ct. 2778. At step two, we must uphold the administrative regulation unless it is “arbitrary, capricious, or manifestly contrary to the statute.” *Id.* at 844, 104 S.Ct. 2778.

*1163 B. *Background*

The CWA generally prohibits the “discharge of any pollutant,” 33 U.S.C. § 1311(a), from a “point source” into the navigable waters of the United States. *See* 33 U.S.C. § 1362(12)(A). An entity can, however, obtain an NPDES permit that allows for the discharge of some pollutants. *See* 33 U.S.C. § 1342(a)(1).

[3] Ordinarily, an NPDES permit imposes effluent limitations on such discharges. *See* 33 U.S.C. § 1342(a)(1) (incorporating effluent limitations found in 33 U.S.C. § 1311). First, a permit-holder “shall ... achiev[e] ... effluent limitations ... which shall require the application of the best practicable control technology [BPT] currently available.” 33 U.S.C. § 1311(b)(1)(A). Second, a permit-holder “shall ... achiev[e] ... any more stringent limitation, including those necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 1370 of this title).” 33 U.S.C. § 1311(b)(1)(C) (emphasis added). Thus, although the BPT requirement takes into account issues of practicability, *see Rybachek v. EPA*, 904 F.2d 1276, 1289 (9th Cir.1990), the EPA also “is under a specific obligation to require that level of effluent control which is needed to implement existing water quality standards without regard to the limits of practicability,” *Oklahoma v. EPA*, 908 F.2d 595, 613 (10th Cir.1990) (internal quotation marks omitted), *rev'd on other grounds sub nom. Arkansas v. Oklahoma*, 503 U.S. 91, 112 S.Ct. 1046, 117 L.Ed.2d 239 (1992). *See also Ackels v. EPA*, 7 F.3d 862, 865–66 (9th Cir.1993) (similar).

The EPA's treatment of storm-water discharges has been the subject of much debate. Initially, the EPA determined that such discharges generally were exempt from the requirements of the CWA (at least when they were uncontaminated by any industrial or commercial activity). *See* 40 C.F.R. § 125.4 (1975).

The Court of Appeals for the District of Columbia, however, invalidated that regulation, holding that “the EPA Administrator does not have authority to exempt categories of point sources from the permit requirements of § 402 [33 U.S.C. § 1342].” *Natural Resources Defense Council, Inc. v. Costle*, 568 F.2d 1369, 1377 (D.C.Cir.1977). “Following this

decision, [the] EPA issued proposed and final rules covering storm water discharges in 1980, 1982, 1984, 1985 and 1988. These rules were challenged at the administrative level and in the courts.” *American Mining Congress*, 965 F.2d at 763.

Ultimately, in 1987, Congress enacted the Water Quality Act amendments to the CWA. See *NRDC II*, 966 F.2d at 1296 (“Recognizing both the environmental threat posed by storm water runoff and [the] EPA’s problems in implementing regulations, Congress passed the Water Quality Act of 1987 containing amendments to the CWA.”) (footnotes omitted). Under the Water Quality Act, from 1987 until 1994,¹ most entities discharging storm water did not need to obtain a permit. See 33 U.S.C. § 1342(p).

Although the Water Quality Act generally did not require entities discharging storm water to obtain a permit, it did require such a permit for discharges “with respect to which a permit has been issued under this section before February 4, 1987,” 33 U.S.C. § 1342(p)(2)(A); discharges “associated with industrial activity,” 33 U.S.C. § 1342(p)(2)(B); discharges from a “municipal separate sewer system serving a population of [100,000] or more,” 33 U.S.C. § 1342(p)(2)(C) & (D); and “[a] discharge for which the Administrator ... determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States,” 33 U.S.C. § 1342(p)(2)(E).

***1164** When a permit is required for the discharge of storm water, the Water Quality Act sets two different standards:

(A) Industrial discharges

Permits for discharges associated with industrial activity shall meet all applicable provisions of this section *and section 1311* of this title.

(B) Municipal discharge

Permits for discharges from municipal storm sewers—

(i) may be issued on a system or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) *shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator ... determines appropriate for the control of such pollutants.*

33 U.S.C. § 1342(p)(3) (emphasis added).

C. Application of Chevron

[4] The EPA and Petitioners argue that the Water Quality Act is ambiguous regarding whether Congress intended for municipalities to comply strictly with state water-quality standards, under 33 U.S.C. § 1311(b)(1)(C). Accordingly, they argue that we must proceed to step two of *Chevron* and defer to the EPA’s interpretation that the statute does require strict compliance. See *Zimmerman v. Oregon Dep’t of Justice*, 170 F.3d 1169, 1173 (9th Cir.1999) (“At step two, we must uphold the administrative regulation unless it is arbitrary, capricious, or manifestly contrary to the statute.”) (citation and internal quotation marks omitted), *cert. denied*, 531 U.S. 1189, 121 S.Ct. 1186, 149 L.Ed.2d 103, 68 USLW 3129 (1999).

Intervenors and *amici*, on the other hand, argue that the Water Quality Act expresses Congress’ intent unambiguously and, thus, that we must stop at step one of *Chevron*. See, e.g., *National Credit Union Admin. v. First Nat’l Bank & Trust Co.*, 522 U.S. 479, 118 S.Ct. 927, 938–39, 140 L.Ed.2d 1 (1998) (“Because we conclude that Congress has made it clear

that the *same* common bond of occupation must unite each member of an occupationally defined federal credit union, we hold that the NCUA's contrary interpretation is impermissible under the first step of *Chevron*.”) (emphasis in original); *Sierra Club v. EPA*, 118 F.3d 1324, 1327 (9th Cir.1997) (“Congress has spoken clearly on the subject and the regulation violates the provisions of the statute. Our inquiry ends at the first prong of *Chevron*.”). We agree with Intervenor and *amici*: For the reasons discussed below, the Water Quality Act unambiguously demonstrates that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C). That being so, we end our inquiry at the first step of the *Chevron* analysis.

[5] [6] “[Q]uestions of congressional intent that can be answered with ‘traditional tools of statutory construction’ are still firmly within the province of the courts” under *Chevron*. *NRDC II*, 966 F.2d at 1297 (citation omitted). “Using our ‘traditional tools of statutory construction,’ *Chevron*, 467 U.S. at 843 n. 9, 104 S.Ct. 2778, 81 L.Ed.2d 694, when interpreting a statute, we look first to the words that Congress used.” *Zimmerman*, 170 F.3d at 1173 (alterations, citations, and internal quotation marks omitted). “Rather than focusing just on the word or phrase at issue, we look to the entire statute to determine Congressional intent.” *Id.* (alterations, citations, and internal quotation marks omitted).

As is apparent, Congress expressly required *industrial* storm-water discharges to comply with the requirements of 33 U.S.C. § 1311. See 33 U.S.C. § 1342(p)(3)(A) (“Permits for discharges associated with industrial activity *shall meet all applicable provisions of this section and section 1311 of this title.*”) (emphasis added). By incorporation, then, industrial *1165 storm-water discharges “*shall ... achiev[e] ... any more stringent limitation, including those necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any State law or regulation (under authority preserved by section 1370 of this title).*” 33 U.S.C. § 1311(b)(1)(C) (emphasis added); see also Sally A. Longroy, *The Regulation of Storm Water Runoff and its Impact on Aviation*, 58 J. Air. L. & Com. 555, 565–66 (1993) (“Congress further *singled out* industrial storm water dischargers, all of which are on the high-priority schedule, and requires them to satisfy all provisions of section 301 of the CWA [33 U.S.C. § 1311].... Section 301 further mandates that NPDES permits include requirements that receiving waters meet water quality based standards.”) (emphasis added). In other words, industrial discharges must comply strictly with state water-quality standards.

Congress chose not to include a similar provision for municipal storm-sewer discharges. Instead, Congress required municipal storm-sewer discharges “to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator ... determines appropriate for the control of such pollutants.” 33 U.S.C. § 1342(p)(3)(B)(iii).

[7] The EPA and Petitioners argue that the difference in wording between the two provisions demonstrates ambiguity. That argument ignores precedent respecting the reading of statutes. Ordinarily, “[w]here Congress includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion.” *Russello v. United States*, 464 U.S. 16, 23, 104 S.Ct. 296, 78 L.Ed.2d 17 (1983) (citation and internal quotation marks omitted); see also *United States v. Hanousek*, 176 F.3d 1116, 1121 (9th Cir.1999) (stating the same principle), *petition for cert. filed*, 68 USLW 3138 (Aug. 23, 1999). Applying that familiar and logical principle, we conclude that Congress' choice to require industrial storm-water discharges to comply with 33 U.S.C. § 1311, but not to include the same requirement for municipal discharges, must be given effect. When we read the two related sections together, we conclude that 33 U.S.C. § 1342(p)(3)(B)(iii) does not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

Application of that principle is significantly strengthened here, because 33 U.S.C. § 1342(p)(3)(B) is not merely silent regarding whether municipal discharges must comply with 33 U.S.C. § 1311. Instead, § 1342(p)(3)(B)(iii) replaces the requirements of § 1311 with the requirement that municipal storm-sewer dischargers “reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator ... determines appropriate for the control

of such pollutants.” 33 U.S.C. § 1342(p)(3)(B)(iii). In the circumstances, the statute unambiguously demonstrates that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

Indeed, the EPA's and Petitioners' interpretation of 33 U.S.C. § 1342(p)(3)(B)(iii) would render that provision superfluous, a result that we prefer to avoid so as to give effect to all provisions that Congress has enacted. See *Government of Guam ex rel. Guam Econ. Dev. Auth. v. United States*, 179 F.3d 630, 634 (9th Cir.1999) (“This court generally refuses to interpret a statute in a way that renders a provision superfluous.”), *as amended*, 1999 WL 604218 (9th Cir. Aug.12, 1999). As all parties concede, § 1342(p)(3)(B)(iii) creates a lesser standard than § 1311. Thus, if § 1311 continues to apply to municipal storm-sewer discharges, *1166 the more stringent requirements of that section always would control.

Contextual clues support the plain meaning of § 1342(p)(3)(B)(iii), which we have described above. The Water Quality Act contains other provisions that undeniably exempt certain discharges from the permit requirement altogether (and therefore from § 1311). For example, “[t]he Administrator shall not require a permit under this section for discharges composed entirely of return flows from irrigated agriculture.” 33 U.S.C. § 1342(l)(1). Similarly, a permit is not required for certain storm-water runoff from oil, gas, and mining operations. See 33 U.S.C. § 1342(l)(2). Read in the light of those provisions, Congress' choice to exempt municipal storm-sewer discharges from strict compliance with § 1311 is not so unusual that we should hesitate to give effect to the statutory text, as written.

Finally, our interpretation of § 1342(p)(3)(B)(iii) is supported by this court's decision in *NRDC II*. There, the petitioner had argued that “the EPA has failed to establish substantive controls for municipal storm water discharges as required by the 1987 amendments.” *NRDC II*, 966 F.2d at 1308. This court disagreed with the petitioner's interpretation of the amendments:

Prior to 1987, municipal storm water dischargers were subject to the same substantive control requirements as industrial and other types of storm water. In the 1987 amendments, *Congress retained the existing, stricter controls for industrial storm water dischargers but prescribed new controls for municipal storm water discharge.*

Id. (emphasis added). The court concluded that, under 33 U.S.C. § 1342(p)(3)(B)(iii), “*Congress did not mandate a minimum standards approach.*” *Id.* (emphasis added). The question in *NRDC II* was not whether § 1342(p)(3)(B)(iii) required strict compliance with state water-quality standards, see 33 U.S.C. § 1311(b)(1)(C). Nonetheless, the court's holding applies equally in this action and further supports our reading of 33 U.S.C. § 1342(p).

In conclusion, the text of 33 U.S.C. § 1342(p)(3)(B), the structure of the Water Quality Act as a whole, and this court's precedent all demonstrate that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

D. Required Compliance with 33 U.S.C. § 1311(b)(1)(C)

[8] We are left with Intervenor's contention that the EPA may not, under the CWA, require strict compliance with state water-quality standards, through numerical limits or otherwise. We disagree.

Although Congress did not require municipal storm-sewer discharges to comply strictly with § 1311(b)(1)(C), § 1342(p)(3)(B)(iii) states that “[p]ermits for discharges from municipal storm sewers ... shall require ... *such other provisions as the Administrator ... determines appropriate for the control of such pollutants.*” (Emphasis added.) That provision gives the EPA discretion to determine what pollution controls are appropriate. As this court stated in *NRDC II*, “Congress gave the administrator discretion to determine what controls are necessary.... NRDC's argument that the EPA rule is inadequate cannot prevail in the face of the clear statutory language.” 966 F.2d at 1308.

Under that discretionary provision, the EPA has the authority to determine that ensuring strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards. The EPA has adopted an interim approach, which “uses best management practices (BMPs) in first-round storm water permits ... to provide for the attainment of water quality standards.” The EPA applied that approach to the permits at issue here. Under [33 U.S.C. § 1342\(p\)\(3\)\(B\)\(iii\)](#), the EPA's choice to include *1167 either management practices or numeric limitations in the permits was within its discretion. See [NRDC II, 966 F.2d at 1308](#) (“Congress did not mandate a minimum standards approach or specify that [the] EPA develop minimal performance requirements.”). In the circumstances, the EPA did not act arbitrarily or capriciously by issuing permits to Intervenor.

PETITION DENIED.

Argued and Submitted Dec. 3, 2001.

|

Filed Sept. 15, 2003.

Environmental, municipal, and industry groups brought petitions for review of Environmental Protection Agency (EPA) rule mandating that discharges from small municipal storm sewers and construction sites be subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements. On denial of rehearing, the Court of Appeals, [James R. Browning](#), Circuit Judge, held that: (1) EPA had authority to impose rule; (2) rule did not violate the Tenth Amendment; (3) rule improperly failed to provide for review of notices of intent and public participation in NPDES permitting process; (4) EPA's failure to designate industrial sources of storm water pollution for permitting requirements was not arbitrary and capricious; (5) challenge to rule's exclusion of forest roads was not time-barred; (6) forestry trade association lacked standing to challenge rule; (7) EPA properly consulted with state and local officials; (8) sites subject to rule were properly designated; and (9) EPA properly retained authority to designate future sources of storm water pollution for regulation.

Petitions for review granted in part and denied in part.

[Tallman](#), Circuit Judge, filed opinion concurring in part and dissenting in part, and would have granted petition for rehearing.

Opinion, [319 F.3d 398](#), vacated.

West Headnotes (33)

[1] **Environmental Law** 🔑 Sewage and sewers

Environmental Law 🔑 Discharge of pollutants

Storm sewers are established “point sources” subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements under Clean Water Act (CWA). Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., 33 U.S.C.A. § 1251 et seq.

[4 Cases that cite this headnote](#)

[2] **Environmental Law** 🔑 Substances, Sources, and Activities Regulated

Diffuse runoff, such as rainwater that is not channeled through point source, is considered “nonpoint source” pollution and is not subject to federal regulation under Clean Water Act (CWA). Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., 33 U.S.C.A. § 1251 et seq.

[3 Cases that cite this headnote](#)

[3] **Constitutional Law** 🔑 Resolution of non-constitutional questions before constitutional questions

Court of Appeals avoids considering constitutionality of a rule if an issue may be resolved on narrower grounds.

[5 Cases that cite this headnote](#)

[4] **Environmental Law** 🔑 Discharge of pollutants

Environmental Protection Agency (EPA) interpretation of rule promulgated under Clean Water Act (CWA), whereby EPA would require that discharges from small municipal storm sewers and construction sites be subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements, was reasonable, and thus EPA acted within its statutory mandate in formulating permit program under rule; even though permitting was not included on statutory list of elements for EPA's comprehensive program to regulate small sewer systems, list was non-exclusive, and statutory language requiring imposition of permits for “municipal storm sewers” was reasonably interpreted to extend to small systems. Federal Water Pollution Control Act Amendments of 1972, § 402(p)(6), 33 U.S.C.A. § 1342(p)(6).

[9 Cases that cite this headnote](#)

[5] **Environmental Law** 🔑 Conditions and limitations

Minimum measures set forth by rule as conditions for issuance of stormwater discharge permit to operator of small municipal storm sewers did not exceed authority of Environmental Protection Agency (EPA) under Clean Water Act (CWA), as statute's list of elements for regulatory program was nonexclusive, and rule included at least one alternative to minimum measures. Federal Water Pollution Control Act Amendments of 1972, § 402(p)(6), 33 U.S.C.A. § 1342(p)(6); 40 C.F.R. §§ 122.26(d), 122.26, 122.33(b)(1), 122.34(b), (d)(1)(i).

[4 Cases that cite this headnote](#)

[6] **States** 🔑 Surrender of state sovereignty and coercion of state

Under the Tenth Amendment, the Federal Government may not compel States to implement, by legislation or executive action, federal regulatory programs. [U.S.C.A. Const.Amend. 10](#).

[1 Cases that cite this headnote](#)

[7] States [↔ Surrender of state sovereignty and coercion of state](#)

Under the Tenth Amendment, the federal government may not force the States to regulate third parties in furtherance of a federal program. [U.S.C.A. Const.Amend. 10](#).

[1 Cases that cite this headnote](#)

[8] States [↔ Powers of United States and Infringement on State Powers](#)

Protections of Tenth Amendment, whereby federal government may not compel States to implement federal regulatory programs by legislation or executive action, nor force the States to regulate third parties in furtherance of a federal program, extend to municipalities. [U.S.C.A. Const.Amend. 10](#).

[1 Cases that cite this headnote](#)

[9] United States [↔ State and local governments and agencies](#)

While federal government may not compel them to do so, it may encourage States and municipalities to implement federal regulatory programs; for example, the federal government may make certain federal funds available only to those States or municipalities that enact a given regulatory regime. [U.S.C.A. Const.Amend. 10](#).

[Cases that cite this headnote](#)

[10] States [↔ Surrender of state sovereignty and coercion of state](#)

The crucial proscribed element under the Tenth Amendment, as to federal government's ability to have states implement federal programs, is coercion; the residents of the State or municipality must retain the ultimate decision as to whether or not the State or municipality will comply with the federal regulatory program, but as long as the alternative to implementing a federal regulatory program does not offend the Constitution's guarantees of federalism, the fact that the alternative is difficult, expensive, or otherwise unappealing is insufficient to establish a Tenth Amendment violation. [U.S.C.A. Const.Amend. 10](#).

[1 Cases that cite this headnote](#)

[11] Environmental Law [↔ Validity](#)

States [↔ Surrender of state sovereignty and coercion of state](#)

Environmental Protection Agency (EPA) rule promulgated under Clean Water Act (CWA), whereby discharges from small municipal storm sewers and construction sites were subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements, did not wrongfully compel municipalities to regulate third parties under federal law as condition of receiving permit to operate, as would contravene Tenth Amendment; although one means of obtaining permit would require municipality to adopt various enforcement procedures, permit applicants retained option of applying for Alternative Permit. [U.S.C.A. Const.Amend. 10](#); Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., [33 U.S.C.A. § 1251 et seq.](#); [40 C.F.R. §§ 122.26\(d\), 122.34](#).

[1 Cases that cite this headnote](#)

[12] Constitutional Law ➡ Political speech, beliefs, or activity in general**Environmental Law** ➡ Discharge of pollutants

Environmental Protection Agency (EPA) adoption of “Public Education” and “Illicit Discharge” Minimum Measures within rules governing discharges from small municipal storm sewers and construction sites, whereby such discharges would be subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements under Clean Water Act (CWA), did not wrongfully compel municipalities to deliver EPA's political messages, and thus did not violate municipalities' free speech rights under First Amendment; requiring providers of storm sewers that discharged into national waters to educate public about impacts of storm water discharge, and to inform affected parties, including public, about hazards of improper waste disposal fell short of compelling political speech, since they did not dictate specific ideological message. [U.S.C.A. Const.Amend. 1](#); Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., [33 U.S.C.A. § 1251 et seq.](#)

[10 Cases that cite this headnote](#)

[13] Administrative Law and Procedure ➡ Notice and comment, sufficiency

In determining whether notice to interested parties was adequate under informal rulemaking strictures of Administrative Procedure Act (APA) when final regulation has varied from proposal, court must consider whether new round of notice and comment would have provided first opportunity for interested parties to offer comments that could have persuaded agency to modify its ruling. [5 U.S.C.A. § 553](#).

[3 Cases that cite this headnote](#)

[14] Environmental Law ➡ Notice and comment

Environmental Protection Agency (EPA) adoption of Alternative Permit option within rules governing discharges from small municipal storm sewers and construction sites, whereby such discharges would be subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements under Clean Water Act (CWA), properly complied with minimum notice and comment procedures required in informal rulemaking under Administrative Procedure Act (APA), since Alternative Permit option was logical outgrowth of comments received by EPA in response to proposed rule, and option contained no elements that were not part of proposed rule, even though it was configured differently. [5 U.S.C.A. § 553](#); Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., [33 U.S.C.A. § 1251 et seq.](#)

[3 Cases that cite this headnote](#)

[15] Environmental Law ➡ Ripeness

Challenge to Environmental Protection Agency (EPA) rule allowing operators of small municipal storm sewers to pursue general permit option to meet National Pollutant Discharge Elimination System (NPDES) requirements under Clean Water Act (CWA) was ripe for review, as issue did not involve merits of any specific permit but was purely one of statutory interpretation that would not benefit from further factual development; issue specifically was whether EPA accomplished the substantive controls for municipal stormwater that Congress mandated in the CWA. Federal Water Pollution Control Act Amendments of 1972, § 402(p), [33 U.S.C.A. § 1342\(p\)](#).

[11 Cases that cite this headnote](#)

[16] Environmental Law ➡ Discharge of pollutants

General permitting scheme of Environmental Protection Agency (EPA) rules governing discharges from small municipal storm sewers and construction sites, whereby such discharges would be subject to National Pollutant Discharge Elimination System (NPDES) requirements under Clean Water Act (CWA), improperly allowed sewer system operators to design storm water pollution control programs without adequate regulatory and public oversight, and thus contravened CWA, since permitting scheme did not require EPA to review content of dischargers' notices of intent, and did not contain express requirements for public participation in NPDES permitting process. Federal Water Pollution Control Act Amendments of 1972, § 402(p)(3), 33 U.S.C.A. § 1342(p)(3); 40 C.F.R. § 122.34.

[17] **Administrative Law and Procedure** 🔑 Administrative construction

Administrative Law and Procedure 🔑 Theory and grounds of administrative decision

Court of Appeals normally defers to an agency's interpretations of its own regulations, but it may decline to defer to the post hoc rationalizations of appellate counsel.

8 Cases that cite this headnote

[18] **Environmental Law** 🔑 Discharge of pollutants

Failure of Environmental Protection Agency (EPA) to designate industrial sources of storm water pollution for discharge permit program, whereby such discharges would become subject to National Pollutant Discharge Elimination System (NPDES) requirements, was not arbitrary and capricious, and thus did not violate Clean Water Act (CWA); rather than designating industrial discharge sources on nationwide basis under NPDES program, EPA sought to establish local and regional designation authority for such sources. Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., as amended, 33 U.S.C.A. § 1251 et seq.

10 Cases that cite this headnote

[19] **Environmental Law** 🔑 Accrual, computation, and tolling

Petitioners' challenge to failure of Environmental Protection Agency (EPA) to regulate stormwater drainage from forest roads did not have to be raised either when EPA initially promulgated silviculture regulations excluding certain silvicultural activities from National Pollutant Discharge Elimination System (NPDES) permitting requirements, or when EPA considered amending such regulations but chose not to do so, and challenge was thus not time-barred, to extent that present challenge was made to EPA's decision not to address forest roads under later-enacted portion of Clean Water Act (CWA) directed to municipal and industrial stormwater discharges. Federal Water Pollution Control Act Amendments of 1972, §§ 402(p), 509(b)(1), 33 U.S.C.A. §§ 11342(p), 1369(b)(1); 40 C.F.R. § 122.27(b)(1).

11 Cases that cite this headnote

[20] **Environmental Law** 🔑 Water pollution

Petitioners' comments during rulemaking process in connection with Environmental Protection Agency (EPA) rule governing municipal and industrial stormwater discharges pursuant to Clean Water Act (CWA) were not so inadequate as to preclude appellate court jurisdiction to hear petitioners' subsequent challenge to rule's failure to address stormwater drainage from forest roads; comments comprised two paragraphs, with footnotes, stating objections and providing support, EPA was aware of forest road sedimentation problem at time of rulemaking,

and EPA responded to comments without disputing that problem was serious. Federal Water Pollution Control Act Amendments of 1972, § 402(p), [33 U.S.C.A. § 1342\(p\)](#).

[2 Cases that cite this headnote](#)

[21] Environmental Law  [Organizations, associations, and other groups](#)

Forestry and paper association lacked sufficient standing to challenge Environmental Protection Agency (EPA) rule mandating that discharges from small municipal storm sewers and construction sites be subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements under Clean Water Act (CWA), since association's interest in avoiding future regulation of forest roads was not actually or imminently affected by rule at issue. Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., [33 U.S.C.A. § 1251 et seq.](#)

[6 Cases that cite this headnote](#)

[22] Environmental Law  [Permit and certification proceedings](#)

Environmental Protection Agency (EPA), in promulgating rule mandating that discharges from small municipal storm sewers and construction sites be subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements, properly consulted with state and local officials, and thus did not violate Clean Water Act (CWA); draft of first report pertaining to proposed rule was circulated to states and municipalities, EPA regional offices, professional associations and other stakeholders, and rule was revised based upon comments received. Federal Water Pollution Control Act Amendments of 1972, § 402(p), [33 U.S.C.A. § 1342\(p\)](#).

[2 Cases that cite this headnote](#)

[23] Environmental Law  [Organizations, associations, and other groups](#)

Environmental Law  [Government entities, agencies, and officials](#)

Home builders' association and municipalities possessed sufficient standing to challenge designation by Environmental Protection Agency (EPA) of municipal storm sewers and construction sites for regulation under Clean Water Act (CWA), whereby National Pollutant Discharge Elimination System (NPDES) permits would be required for discharges by such entities, since association and municipalities were able to allege procedural harm from purported lack of notice or from effects of regulation itself. Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., [33 U.S.C.A. § 1251 et seq.](#)

[Cases that cite this headnote](#)

[24] Environmental Law  [Discharge of pollutants](#)

Designation by Environmental Protection Agency (EPA) of municipal storm sewers to be subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements, according to areas defined by Census Bureau as "urbanized," was not arbitrary and capricious, as would violate Clean Water Act (CWA), since EPA articulated reasoned basis for its conclusion that Census Bureau's designation was correlated to actual levels of pollution runoff in storm water; record evidence demonstrated compelling and widespread relationship between urban storm water runoff and deleterious impacts on water quality. Federal Water Pollution Control Act Amendments of 1972, § 402(p), [33 U.S.C.A. § 1342\(p\)](#).

[5 Cases that cite this headnote](#)

[25] Environmental Law  **Discharge of pollutants**

Decision by Environmental Protection Agency (EPA) to subject construction sites disturbing between one and five acres of land to National Pollutant Discharge Elimination System (NPDES) permitting requirements was not arbitrary and capricious, as would violate Clean Water Act (CWA); record evidence included numerous studies of sedimentation from construction sites, which EPA specifically reviewed in promulgating challenged regulation, and EPA's extrapolation of data from studies involving larger sites had reasonable basis. Federal Water Pollution Control Act Amendments of 1972, § 402(p), 33 U.S.C.A. § 1342(p).

[10 Cases that cite this headnote](#)

[26] Environmental Law  **Discharge of pollutants**

Allowance by Environmental Protection Agency (EPA) of regulatory waivers for small construction sites not likely to cause adverse water quality impacts, as would exempt such sites from National Pollutant Discharge Elimination System (NPDES) permit requirements, was not arbitrary and capricious, as would violate Clean Water Act (CWA); EPA's waiver approach promoted fairness and efficiency in permitting process, and did not create presumption applicable to evidentiary hearing. Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., 33 U.S.C.A. § 1251 et seq.

[Cases that cite this headnote](#)

[27] Environmental Law  **Discharge of pollutants**

Decision by Environmental Protection Agency (EPA) to subject small construction sites to National Pollutant Discharge Elimination System (NPDES) permitting requirements was consistent with its decisions to exempt other potential storm water runoff sources from such requirements, notwithstanding alleged lack of quantifiable data regarding runoff, and thus was not arbitrary and capricious, as would violate Clean Water Act (CWA); record evidence demonstrated that construction sites of all sizes had greater erosion rates than almost any other land use, and thus were not similarly situated to potential polluters that EPA chose not to regulate. Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., 33 U.S.C.A. § 1251 et seq.

[4 Cases that cite this headnote](#)

[28] Environmental Law  **Substances, Sources, and Activities Regulated**

Language in Clean Water Act (CWA) conferring authority to Environmental Protection Agency (EPA) to regulate "a discharge" determined to threaten water quality does not preclude EPA from designating entire categories of discharge sources for regulation. Federal Water Pollution Control Act Amendments of 1972, § 402(p), 33 U.S.C.A. § 1342(p).

[4 Cases that cite this headnote](#)

[29] Environmental Law  **Discharge of pollutants**

Residual designation authority retained by Environmental Protection Agency (EPA) for subjecting storm water discharge sites to future regulation under National Pollutant Discharge Elimination System (NPDES) permitting system was not ultra vires as to Clean Water Act (CWA); applicable statutory sections authorized designation of class of discharges to be identified on case-by-case, location-specific bases by NPDES permitting authority, consistent with comprehensive program to protect water quality. Federal Water Pollution Control Act Amendments of 1972, § 402(p), 33 U.S.C.A. § 1342(p).

ORDER AND OPINION

ORDER

The opinion and dissent filed in this case on January 14, 2003, and published at 319 F.3d 398 are vacated. They are replaced by the Opinion and Dissent filed today.

With the filing of the new Opinion and Dissent, the panel has voted to deny the petitions for rehearing and the petition for rehearing en banc. (Judge Tallman would grant the petition for rehearing filed by *840 the Environmental Protection Agency.) The full court has been advised of the new Opinion, new Dissent, and petition for rehearing en banc. No judge has requested a vote on the petition for rehearing en banc. [Fed. R.App. P. 35](#).

The petitions for rehearing and the petition for rehearing en banc are DENIED. The clerk is instructed not to accept for filing any new petitions for rehearing or petitions for rehearing en banc in this case.

Each party shall bear its own costs in this appeal.

OPINION

JAMES R. BROWNING, Circuit Judge.

Petitioners challenge a rule issued by the United States Environmental Protection Agency pursuant to the Clean Water Act, 33 U.S.C. §§ 1251–1387, to control pollutants introduced into the nation's waters by storm sewers.

Storm sewers drain rainwater and melted snow from developed areas into water bodies that can handle the excess flow. Draining stormwater picks up a variety of contaminants as it filters through soil and over pavement on its way to sewers. Sewers are also used on occasion as an easy (if illicit) means for the direct discharge of unwanted contaminants. Since storm sewer systems generally channel collected runoff into federally protected water bodies, they are subject to the controls of the Clean Water Act.

In October of 1999, after thirteen years in process, the Environmental Protection Agency (“EPA”) promulgated a final administrative rule (the “Phase II Rule”¹ or “the Rule”) under § 402(p) of the Clean Water Act, 33 U.S.C. § 1342(p), mandating that discharges from small municipal separate storm sewer systems and from construction sites between one and five acres in size be subject to the permitting requirements of the National Pollutant Discharge Elimination System (“NPDES”), 33 U.S.C. §§ 1311(a), 1342. EPA preserved authority to regulate other harmful stormwater discharges in the future.

In the three cases consolidated here, petitioners and intervenors challenge the Phase II Rule on twenty-two constitutional, statutory, and procedural grounds. We remand three aspects of the Rule concerning the issuance of notices of intent under the Rule's general permitting scheme, and a fourth aspect concerning the regulation of forest roads. We affirm the Rule against all other challenges.

I.

BACKGROUND

A. The Problem of Stormwater Runoff

Stormwater runoff is one of the most significant sources of water pollution in the nation, at times “comparable to, if not greater than, contamination from industrial and sewage sources.”² Storm sewer waters carry suspended metals, sediments, algae-promoting nutrients (nitrogen and phosphorus), floatable trash, used motor oil, raw sewage, pesticides, and other toxic contaminants into streams, rivers, lakes, *841 and estuaries across the United States.³ In 1985, three-quarters of the States cited urban stormwater runoff as a major cause of waterbody impairment, and forty percent reported construction site runoff as a major cause of impairment.⁴ Urban runoff has been named as the foremost cause of impairment of surveyed ocean waters.⁵ Among the sources of stormwater contamination are urban development, industrial facilities, construction sites, and illicit discharges and connections to storm sewer systems.⁶

B. Stormwater and the Clean Water Act

Congress enacted the Clean Water Act in 1948 to “restore and maintain the chemical, physical, and biological integrity of the Nation's waters.” 33 U.S.C. § 1251(a) (originally codified as the Federal Water Pollution Control Act, 62 Stat. 1155). The Clean Water Act prohibits the discharge of pollutants from a “point source”⁷ into the waters of the United States without a permit issued under the terms of the National Pollutant Discharge Elimination System, 33 U.S.C. §§ 1311(a),

1342, which requires dischargers to comply with technology-based pollution limitations (generally according to the “best available technology economically achievable,” or “BAT” standard). 33 U.S.C. § 1311(b)(2)(A). NPDES permits are issued by EPA or by States that have been authorized by EPA to act as NPDES permitting authorities. 33 U.S.C. § 1342(a)-(b). The permitting authority must make copies of all NPDES permits and permit applications available to the public, 33 U.S.C. §§ 1342(j), 1342(b)(3); state permitting authorities must provide EPA notice of each permit application, 33 U.S.C. § 1342(b)(4); and a permitting authority must provide an opportunity for a public hearing before issuing any permit, 33 U.S.C. §§ 1342(a)(1), 1342(b)(3); cf. 33 U.S.C. § 1251(e) (requiring public participation).

[1] [2] Storm sewers are established point sources subject to NPDES permitting requirements. *Natural Res. Def. Council v. Costle*, 568 F.2d 1369, 1379 (D.C.Cir.1977) (holding unlawful EPA's exemption of stormwater discharges from NPDES permitting requirements); *Natural Res. Def. Council v. EPA*, 966 F.2d 1292, 1295 (9th Cir.1992).⁸ In 1987, to better regulate pollution conveyed by stormwater runoff, Congress enacted Clean Water Act § 402(p), 33 U.S.C. § 1342(p), “Municipal and Industrial Stormwater Discharges.” Sections 402(p)(2) and 402(p)(3) mandate NPDES permits for stormwater discharges “associated with industrial activity,” discharges from large and medium-sized municipal storm sewer systems, and certain other discharges. Section 402(p)(4) sets out a timetable for promulgation of the first of a *842 two-phase overall program of stormwater regulation. *Id.* at § 1342(p)(2)-(4); *Natural Res. Def. Council*, 966 F.2d at 1296. In 1990, pursuant to § 402(p)(4), EPA issued the Phase I Rule regulating large discharge sources.⁹

C. The Phase II Stormwater Rule

In Clean Water Act § 402(p), Congress also directed a second stage of stormwater regulation by ordering EPA to identify and address sources of pollution not covered by the Phase I Rule. Section 402(p)(1) placed a temporary moratorium (expiring in 1994) on the permitting of other stormwater discharges pending the results of studies mandated in § 402(p)(5) to identify the sources and pollutant content of such discharges and to establish procedures and methods to control them as “necessary to mitigate impacts on water quality.” 33 U.S.C. § 1342(p)(5). Section 402(p)(6) required that EPA establish “a comprehensive program to regulate” these stormwater discharges “to protect water quality,” following the studies mandated in § 402(p)(5) and consultation with state and local officials. *Id.* at § 1342(p)(6).

EPA proposed the Phase II Rule in January of 1998.¹⁰ In October, 1999, Congress passed legislation precluding EPA from promulgating the new Rule until EPA submitted an additional report to Congress supporting certain anticipated aspects of the Rule.¹¹ EPA was also required to publish its report in the Federal Register for public comment. *Pub. L. No. 106-74*, § 431(c), 113 Stat. at 1097. Later that month, EPA submitted the required (“Appropriations Act”) study and promulgated the Rule.¹²

Under the Phase II Rule, NPDES permits are required for discharges from small municipal separate storm sewer systems (“small MS4s”) and stormwater discharges from construction activity disturbing between one and five acres (“small construction sites”). 40 C.F.R. §§ 122.26(a)(9)(i)(A)-(B). Small MS4s may seek permission to discharge by submitting an individualized set of best-management plans in six specified categories, *id.* at § 122.34, either in the form of an individual permit application, or in the form of a notice of intent to comply with a general permit. *Id.* at § 122.33(b). Small MS4s may also seek permission to discharge through an alternative process, under which a permit may be sought without requiring the operator to regulate third parties, *id.* at §§ 122.33(b)(2)(ii), 122.26(d).¹³ Small construction sites may *843 apply for individual NPDES permits or seek coverage under a promulgated general permit. *Id.* at § 122.26(c). EPA also preserved authority to regulate other categories of harmful stormwater discharges on a regional, as-needed basis. *Id.* at § 122.26(a)(9)(i)(C)-(D).

D. Facial Challenges to the Phase II Rule

The Rule was challenged in the Fifth, Ninth, and D.C. Circuits in three separate actions ultimately consolidated before the Ninth Circuit.

The Texas Cities Coalition on Stormwater and the Texas Counties Stormwater Coalition (collectively, “the Municipal Petitioners”) assert that EPA lacked authority to require permitting, that its promulgation of the Rule was procedurally defective, that the Rule establishes categories that are arbitrary and capricious, and that the Rule impermissibly requires municipalities to regulate their own citizens in contravention of the Tenth Amendment and to communicate a federally mandated message in contravention of the First Amendment. The Natural Resources Defense Council (“NRDC”) intervened on behalf of EPA.

Environmental Defense Center, joined by petitioner-intervenor NRDC (“the Environmental Petitioners”), asserts that the regulations fail to meet minimum Clean Water Act statutory requirements because they constitute a program of impermissible self-regulation, fail to provide required avenues of public participation, and neglect to address stormwater runoff associated with forest roads and other significant sources of runoff pollution.

The American Forest & Paper Association (“AF&PA”) and the National Association of Home Builders (“the Industrial Petitioners”) assert that promulgation of the Rule was procedurally defective and violated the Regulatory Flexibility Act, that EPA's retention of authority to regulate future sources of runoff pollution is *ultra vires*, and that the decision to regulate discharge from construction sites one to five acres in size is arbitrary and capricious. NRDC again intervened on behalf of EPA.

We have jurisdiction pursuant to section 509(b)(1) of the Clean Water Act, [33 U.S.C. § 1369\(b\)\(1\)](#) (assigning review of EPA effluent and permitting regulations to the Federal Courts of Appeals).

II.

DISCUSSION

A. The Permit Requirements

[3] The Municipal Petitioners' primary contention is that the Phase II Rule compels small MS4s to regulate citizens as a condition of receiving a permit to operate, and that EPA lacks both statutory and constitutional authority to impose such a requirement. Because we avoid considering constitutionality if an issue may be resolved on narrower grounds, [Greater New Orleans Broadcasting Ass'n v. United States](#), 527 U.S. 173, 184, 119 S.Ct. 1923, 144 L.Ed.2d 161 (1999), we first ask whether the Phase II Rule is supported by statutory authority.

1. Statutory Authority

[4] The Municipal Petitioners assert that the statutory command in Clean Water Act § 402(p)(6) that EPA develop a “comprehensive program to regulate” small MS4s did not authorize a program based on NPDES permits. Petitioners argue that because § 402(p)(6) explicitly indicates elements that the program may *844 contain (performance standards, guidelines, etc.) without mentioning “permits,” Congress must have intended that the program exclude permitting.¹⁴

The fact that “permitting” is not included on a statutory list of elements that the program “may” include is not determinative, because the list is manifestly nonexclusive. The only constraints are that the § 402(p)(6) regulations be based on the § 402(p)(5) studies, that they be issued in consultation with state and local officials, and that—“at a minimum”—they establish priorities, requirements for state stormwater management programs, and expeditious deadlines, and constitute a comprehensive program “to protect water quality.” [33 U.S.C. § 1342\(p\)\(6\)](#). EPA was free to adopt any regulatory program, including a permitting program, that included these elements. *See Chevron, U.S.A.*

v. Natural Res. Def. Council, 467 U.S. 837, 842–43, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984) (deference to an agency's reasonable interpretation is required unless Congress expressed its intent unambiguously). It is more reasonable to interpret congressional silence about permits as an indication of EPA's flexibility not to use them than as an outright prohibition.¹⁵

The Municipal Petitioners further contend that their interpretation is supported by the structure of § 402(p), which expressly requires permits for large and medium sized MS4s in a separate section, § 402(p)(3)(B).¹⁶ However, as EPA counters, the language in § 402(p)(3) requiring permits for municipal storm sewers may be interpreted to apply both to Phase I *and* Phase II MS4s. Moreover, as respondent-intervenor NRDC notes, the mere existence of the § 402(p)(1) permitting moratorium, designed to apply only to Phase II dischargers, necessarily implies that EPA has the authority to require permits from these sources after the 1994 expiration of the moratorium.

Since there would have been no need to establish a permitting moratorium for these sources if the sources could *never* be subject to permitting requirements, petitioners' interpretation violates the bedrock principle that statutes not be interpreted to render any provision superfluous. *See Burrey v. Pacific Gas & Elec. Co.*, 159 F.3d 388, 394 (9th Cir.1998). EPA's interpretation of its mandate under § 402(p)(6) was reasonable and EPA acted within its statutory authority in formulating the Phase II Rule as a permitting program.

2. The Tenth Amendment

The Municipal Petitioners contend that the Phase II Rule on its face compels *845 operators of small MS4s to regulate third parties in contravention of the Tenth Amendment. We conclude that the Rule does not violate the Tenth Amendment, because it directs no unconstitutional coercion.

The Phase II Rule contemplates several avenues through which a small MS4 may obtain permission to discharge. First, if the NPDES Permitting Authority overseeing the small MS4 has issued an applicable general permit, the small MS4 may submit a notice of intent wherein the small MS4 agrees to comply with the terms of the general permit and specifies plans for implementing six “Minimum Measures” designed to protect water quality. 40 C.F.R. §§ 122.33(b)(1), 122.34(d)(1)(i), 122.34(b). Second, the small MS4 may apply for an individual permit under 40 C.F.R. § 122.34, which would again require compliance with the six Minimum Measures. *Id.* at §§ 122.33(b)(2)(i), 122.34(a), 122.34(b). Third, under an “Alternative Permit” option, the small MS4 may apply for an individualized permit under 40 C.F.R. § 122.26(d), the permitting program established by the Phase I Rule for large and medium-sized MS4s. *Id.* at §§ 122.33(b)(2)(ii), 122.26(d).¹⁷

[5] The Minimum Measures mentioned above require small MS4s to implement programs for: (1) conducting public education and outreach on stormwater impacts, *id.* at § 122.34(b)(1); (2) engaging public participation in the development of stormwater management programs, *id.* at § 122.34(b)(2); (3) detecting and eliminating illicit discharges to the MS4, *id.* at § 122.34(b)(3); (4) reducing pollution to the MS4 from construction activities disturbing one acre or more, *id.* at § 122.34(b)(4); (5) minimizing water quality impacts from development and redevelopment activities that disturb one acre or more, *id.* at § 122.34(b)(5); and (6) preventing or reducing pollutant runoff from municipal activities, *id.* at § 122.34(b)(6).¹⁸

*846 The Municipal Petitioners contend that the measures regulating illicit discharges, small construction sites, and development activities unconstitutionally compel small MS4 operators to regulate third parties, *i.e.*, upstream dischargers. The Illicit Discharge Detection and Elimination measure requires that a permit seeker prohibit non-stormwater discharges to the MS4 and implement appropriate enforcement procedures. 40 C.F.R. § 122.34(b)(3)(ii)(B).¹⁹ The Construction Site Stormwater Runoff Control measure requires a permit seeker to implement and enforce a program to reduce stormwater pollutants from small construction sites. *Id.* at §§ 122.34(b)(4)(i)-(ii).²⁰ It mandates

erosion and sedimentation controls, site plan reviews that take account of water quality impacts, site inspections, and the consideration of public comment, and requires that construction site operators implement erosion, sedimentation, and waste management best management practices. *Id.* The Post-Construction/New Development measure requires permit seekers to address post-construction runoff from new development and redevelopment projects disturbing one acre or more. *Id.* at § 122.34(b)(5)(ii)(B).²¹

Noting that most MS4s are operated by municipal governments, and that “[t]he drainage of a city in the interest of the public health and welfare is one of the most important purposes for which the police power can be exercised,” *New Orleans Gaslight Co. v. Drainage Comm'n*, 197 U.S. 453, 460, 25 S.Ct. 471, 49 L.Ed. 831 (1905), the Municipal Petitioners argue that requiring operators of small MS4s to implement “through ordinance or other regulatory mechanism” the regulations required by the Minimum Measures contravenes the Tenth Amendment. *See, e.g., New York v. United States*, 505 U.S. 144, 188, 112 S.Ct. 2408, 120 L.Ed.2d 120 (1992).

EPA counters that the Phase II Rule does not violate the Tenth Amendment because operators of small MS4s may opt to avoid the Minimum Measures by seeking a permit under the Alternative Permit *847 option, 40 C.F.R. § 122.33(b)(2)(ii).²²

[6] [7] [8] Under the Tenth Amendment, “the Federal Government may not compel States to implement, by legislation or executive action, federal regulatory programs.” *Printz v. United States*, 521 U.S. 898, 925, 117 S.Ct. 2365, 138 L.Ed.2d 914 (1997); *see also New York*, 505 U.S. at 188, 112 S.Ct. 2408. Similarly, the federal government may not force the States to regulate third parties in furtherance of a federal program. *See Reno v. Condon*, 528 U.S. 141, 151, 120 S.Ct. 666, 145 L.Ed.2d 587 (2000) (upholding a federal statutory scheme because it “does not require the States in their sovereign capacity to regulate their own citizens”). These protections extend to municipalities. *See, e.g., Printz* 521 U.S. at 931 n. 15, 117 S.Ct. 2365.

[9] [10] However, while the federal government may not *compel* them to do so, it may *encourage* States and municipalities to implement federal regulatory programs. *See New York*, 505 U.S. at 166–68, 112 S.Ct. 2408. For example, the federal government may make certain federal funds available only to those States or municipalities that enact a given regulatory regime. *See, e.g., South Dakota v. Dole*, 483 U.S. 203, 205–08, 107 S.Ct. 2793, 97 L.Ed.2d 171 (1987) (upholding federal statute conditioning state receipt of federal highway funds on state adoption of minimum drinking age of twenty-one). The crucial proscribed element is coercion; the residents of the State or municipality must retain “the ultimate decision” as to whether or not the State or municipality will comply with the federal regulatory program. *New York*, 505 U.S. at 168, 112 S.Ct. 2408. However, as long as “the alternative to implementing a federal regulatory program does not offend the Constitution's guarantees of federalism, the fact that the alternative is difficult, expensive or otherwise unappealing is insufficient to establish a Tenth Amendment violation.” *City of Abilene v. EPA*, 325 F.3d 657, 662 (5th Cir.2003).

[11] With the Phase II Rule, EPA gave the operators of small MS4s a choice: either implement the regulatory program spelled out by the Minimum Measures described at 40 C.F.R. § 122.34(b), or pursue the Alternative Permit option and seek a permit under the Phase I Rule as described at 40 C.F.R. § 122.26(d). Thus, unless § 122.26(d) itself offends the Constitution's guarantees of federalism, the Phase II Rule does not violate the Tenth Amendment.

Pursuing a permit under the Alternative Permit option does require permit seekers, in their application for a permit to discharge, to propose management programs that address substantive concerns similar to those addressed by the Minimum Measures. *See* 40 C.F.R. § 122.26(d). However, § 122.26(d) lists the requirements for an *application* for a permit to discharge, not the requirements of the permit itself. Therefore, nothing in § 122.26(d) requires the operator of an MS4 to implement a federal regulatory program in order to receive a permit to discharge, because nothing in § 122.26(d) specifies the contents of the permit that will result from the application process.

City of Abilene, 325 F.3d 657, provides a helpful illustration. The cities of Abilene and Irving, Texas, have populations between 100,000 and 250,000, and so were *848 required to apply for permits under the Phase I Rule, 40 C.F.R. § 122.26(d). *City of Abilene*, 325 F.3d at 659–60. Under § 122.26(d) the cities were required to submit proposed stormwater management programs. *Id.* at 660. They negotiated the terms of those programs with EPA, and EPA eventually presented the cities with proposed management permits that contained conditions requiring the implementation of stormwater regulatory programs, and potentially requiring the regulation of third parties. *Id.* But, as the Fifth Circuit noted, this did not mean that the cities had no choice but to implement a federal regulatory program. Instead:

The Cities filed comments objecting to those conditions, and negotiations continued until the EPA offered the Cities the option of pursuing numeric end-of-pipe permits, which would have required the Cities to satisfy specific effluent limitations rather than implement management programs. The Cities declined this offer, electing to continue negotiations on the management permits.

Id. The Fifth Circuit rejected the cities' contention that the resulting permits violated the Tenth Amendment by requiring the cities to regulate third parties according to federal standards. *Id.* at 661–63. Because the cities chose to pursue the management permits despite the fact that EPA provided them with an option for obtaining permits that would not have involved implementing a management program or regulating third parties, no unconstitutional coercion occurred. *Id.* at 663. The ultimate decision to implement the federal program remained with the cities.

Any operator of a small MS4 that wishes to avoid the Minimum Measures may seek a permit under § 122.26(d), and, as *City of Abilene* demonstrates, nothing in § 122.26(d) will compel the operator of a small MS4 to implement a federal regulatory program or regulate third parties, because § 122.26(d) specifies application requirements, not permit requirements. Therefore, by presenting the option of seeking a permit under § 122.26(d), the Phase II Rule avoids any unconstitutional coercion. The Municipal Petitioners' claim that the Phase II Rule violates the Tenth Amendment therefore fails.

3. *The First Amendment and the Minimum Measures*

The Municipal Petitioners contend that the Public Education and Illicit Discharge Minimum Measures compel municipalities to deliver EPA's political message in violation of the First Amendment. The Phase II Rule's "Public Education and Outreach" Minimum Measure directs regulated small MS4s to "distribute educational materials to the community ... about the impacts of stormwater discharges on water bodies and the steps the public can take to reduce pollutants in stormwater runoff." 40 C.F.R. § 122.34(b)(1)(i). The "Illicit Discharge Detection and Elimination" measure requires regulated small MS4s to "[i]nform public employees, businesses, and the general public of hazards associated with illegal discharges and improper disposal of waste." 40 C.F.R. § 122.34(b)(3)(ii)(D).

[12] The Municipal Petitioners argue that the First Amendment prohibits EPA from compelling small MS4s to communicate messages that they might not otherwise wish to deliver. They further contend that EPA's interpretation of § 402(p) as authorizing these Measures does not warrant *Chevron* deference because it raises serious constitutional issues, but that even if deference were given, the resulting rule is unconstitutional because neither Congress nor EPA may dictate the speech of MS4s. They contend that municipalities are protected by the First Amendment, *849 *Pacific Gas & Elec. v. Public Utilities Comm'n*, 475 U.S. 1, 8, 106 S.Ct. 903, 89 L.Ed.2d 1 (1986) ("Corporations and other associations, like individuals, contribute to the [discourse] that the First Amendment seeks to foster...."), which applies as much to compelled statements of "fact" as to those of "opinion." *Riley v. Nat'l Fed. of the Blind*, 487 U.S. 781, 797–98, 108 S.Ct. 2667, 101 L.Ed.2d 669 (1988).

We conclude that the purpose of the challenged provisions is legitimate and consistent with the regulatory goals of the overall scheme of the Clean Water Act, *cf.* *Glickman v. Wileman Bros. & Elliott, Inc.*, 521 U.S. 457, 476, 117 S.Ct. 2130, 138 L.Ed.2d 585 (1997), and does not offend the First Amendment.²³ The State may not constitutionally require an individual to disseminate an ideological message, *Wooley v. Maynard*, 430 U.S. 705, 713, 97 S.Ct. 1428, 51 L.Ed.2d 752

(1977), but requiring a provider of storm sewers that discharge into national waters to educate the public about the impacts of stormwater discharge on water bodies and to inform affected parties, including the public, about the hazards of improper waste disposal falls short of compelling such speech.²⁴ These broad requirements do not dictate a specific message. They require appropriate educational and public information activities that need not include any specific speech at all. A regulation is facially unconstitutional only when every possible reading compels it, *Meinhold v. U.S. Dep't of Def.*, 34 F.3d 1469, 1476 (9th Cir.1994),²⁵ but this is clearly not the case here.

As in *Zauderer v. Office of Disciplinary Counsel of the Sup. Ct. of Ohio*, 471 U.S. 626, 105 S.Ct. 2265, 85 L.Ed.2d 652 (1985), where the Supreme Court upheld certain disclosure requirements in attorney advertising, “[t]he interests at stake in this case are not of the same order as those discussed in *Wooley* [invalidating a law requiring that drivers display the motto ‘Live Free or Die’ on New Hampshire license plates] ... and *Barnette* [forbidding the requirement that public school students salute the flag because the State may not impose on the individual ‘a ceremony so touching matters of opinion and political attitude’].” *Id.* at 651. EPA has not attempted to “prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion or force citizens to confess by word or act their faith therein.” *West Virginia State Bd. of Ed. v. Barnette*, 319 U.S. 624, 642, 63 S.Ct. 1178, 87 L.Ed. 1628 (1943).

***850** Informing the public about safe toxin disposal is non-ideological; it involves no “compelled recitation of a message” and no “affirmation of belief.” *Prune Yard Shopping Ctr. v. Robins*, 447 U.S. 74, 88, 100 S.Ct. 2035, 64 L.Ed.2d 741 (1980) (upholding state law protecting petitioning in malls and noting that “*Barnette* is inapposite because it involved the compelled recitation of a message containing an affirmation of belief”). It does not prohibit the MS4 from stating its own views about the proper means of managing toxic materials, or even about the Phase II Rule itself. Nor is the MS4 prevented from identifying its dissemination of public information as required by federal law, or from making available federally produced informational materials on the subject and identifying them as such.

Even if such a loosely defined public information requirement could be read as compelling speech, the regulation resembles another regulation that the Supreme Court has held permissible. In *Glickman*, 521 U.S. 457, 117 S.Ct. 2130, 138 L.Ed.2d 585, the Court upheld a generic advertising assessment promulgated by the Department of Agriculture on behalf of California tree fruit growers because the order was consistent with an overall regulatory program that did not abridge protected speech:

Three characteristics of the regulatory scheme at issue distinguish it from laws that we have found to abridge the freedom of speech protected by the First Amendment. First, the marketing orders impose no restraint on the freedom of any producer to communicate any message to any audience. Second, they do not compel any person to engage in any actual or symbolic speech. Third, they do not compel the producers to endorse or to finance any political or ideological views. Indeed, since all of the respondents are engaged in the business of marketing California nectarines, plums, and peaches, it is fair to presume that they agree with the central message of the speech that is generated by the generic program.

Id. at 469–70, 117 S.Ct. 2130 (footnotes omitted). Here, as in *Glickman*, the Phase II regulations impose no restraint on the freedom of any MS4 to communicate any message to any audience. They do not compel any specific speech, nor do they compel endorsement of political or ideological views. And since all permittees are engaged in the handling of stormwater runoff that must be conveyed in reasonably unpolluted form to national waters, it is similarly fair to presume that they will agree with the central message of a public safety alert encouraging proper disposal of toxic materials.²⁶ The Phase II regulation departs only from the second element in the *Glickman* analysis, because the public information requirement may compel a ***851** regulated party to engage in some speech at some time; but unlike the offensive messages in *Maynard* and *Barnette* (and even the inoffensive advertising messages at issue in *Glickman*) that speech is not specified by the regulation.²⁷

The public information requirement does not impermissibly compel speech, and nothing else in the Phase II Rule offends the First Amendment.²⁸ The Rule does not compel a recitation of a specific message, let alone an affirmation of belief. To the extent MS4s are regulated by the public information requirement, the regulation is consistent with the overall regulatory program of the Clean Water Act and the responsibilities of point source dischargers.

4. Notice and Comment on the Alternative Permit Option

The Municipal Petitioners contend that, in adopting the Alternative Permit option, EPA did not comply with the minimum notice and comment procedures required in informal rulemaking by the Administrative Procedures Act (“APA”), 5 U.S.C. § 553. The APA requires an agency to publish notice of a proposed rulemaking that includes “either the terms or substance of the proposed rule or a description of the subjects and issues involved.” *Id.* at § 553(b)(3).

[13] We have held that a “final regulation that varies from the proposal, even substantially, will be valid as long as it is ‘in character with the original proposal and a logical outgrowth of the notice and comments.’” *Hodge v. Dalton*, 107 F.3d 705, 712 (9th Cir.1997). In determining whether notice was adequate, we consider whether the complaining party should have anticipated that a particular requirement might be imposed. The test is whether a new round of notice and comment would provide the first opportunity for interested parties to offer comments that could persuade the agency to modify its rule. *Am. Water Works Ass'n v. EPA*, 40 F.3d 1266, 1274 (D.C.Cir.1994).

The Municipal Petitioners argue that the Alternative Permit option is not a logical outgrowth of EPA's proposed rule because, although numerous alternatives were discussed in the Preamble to the proposed rule, 63 Fed. Reg. at 1554–1557, the Alternative Permit option eventually adopted was not. EPA counters that the proposed rule included a supplementary alternative permitting system based on concepts similar to those in the Minimum *852 Measures, including “simplified individual permit application requirements.”²⁹ EPA contends that the Alternative Permit option was a logical outgrowth of the comments it received on the proposal expressing concern that the Minimum Measures might violate the Tenth Amendment. 64 Fed. Reg. at 68,765.

[14] The Alternative Permit option passes the *Hodge* test. The proposed rule suggested an individualized permitting option to be developed in response to comments during the notice and comment period. The Alternative option contains no elements that were not part of the original rule, even if they are configured differently in the final rule. Petitioners had, and took, their opportunity to object to the aspects of the Rule that they did not support in their comments on the Minimum Measures.

B. The General Permit Option and Notices of Intent

The Environmental Petitioners contend that the general permitting scheme of the Phase II Rule allows regulated small MS4s to design stormwater pollution control programs without adequate regulatory and public oversight, and that it contravenes the Clean Water Act because it does not require EPA to review the content of dischargers' notices of intent and does not contain express requirements for public participation in the NPDES permitting process.

In reviewing a federal administrative agency's interpretation of a statute it administers, we first determine whether Congress has expressed its intent unambiguously on the question before the court. *See Chevron*, 467 U.S. 837, 842–44, 104 S.Ct. 2778, 81 L.Ed.2d 694 (“If the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress.”). “If, instead, Congress has left a gap for the administrative agency to fill, we proceed to step two. At step two, we must uphold the administrative regulation unless it is arbitrary, capricious, or manifestly contrary to the statute.” *Defenders of Wildlife v. Browner*, 191 F.3d 1159, 1162, amended by 197 F.3d 1035 (9th Cir.1999) (citations and internal quotations omitted).

[15] We conclude that the Phase II General Permit option violates the Clean Water Act's requirement that permits for discharges “require controls to reduce the discharge of pollutants to the maximum extent practicable,” 33 U.S.C. § 1342(p)(3)(B)(iii). We also conclude that the Phase II General Permit option violates the Clean Water Act because it does not contain express requirements for public participation in the NPDES permitting process. We remand these aspects of the Phase II Rule.³⁰

***853 1. Phase II General Permits and Notices of Intent**

Primary responsibility for enforcement of the requirements of the Clean Water Act is vested in the Administrator of the EPA. 33 U.S.C. § 1251(d); see also 33 U.S.C. § 1361(a) (“The Administrator [of EPA] is authorized to prescribe such regulations as are necessary to carry out his functions under this chapter.”). The Clean Water Act renders illegal any discharge of pollutants not specifically authorized by a permit. 33 U.S.C. § 1311(a) (“Except in compliance with this section and [other sections detailing permitting requirements] of this title, the discharge of any pollutant by any person shall be unlawful.”). Under the Phase II Rule, dischargers may apply for an individualized permit with the relevant permitting authority, or may file a “Notice of Intent” (“NOI”) to seek coverage under a “general permit.” 40 C.F.R. § 122.33(b).

A general permit is a tool by which EPA regulates a large number of similar dischargers. Under the traditional general permitting model, each general permit identifies the output limitations and technology-based requirements necessary to adequately protect water quality from a class of dischargers. Those dischargers may then acquire permission to discharge under the Clean Water Act by filing NOIs, which embody each discharger's agreement to abide by the terms of the general permit. Because the NOI represents no more than a formal acceptance of terms elaborated elsewhere, EPA's approach does not require that permitting authorities review an NOI before the party who submitted the NOI is allowed to discharge. General permitting has long been recognized as a lawful means of authorizing discharges. *Natural Res. Def. Council v. Costle*, 568 F.2d 1369 (D.C.Cir.1977).

The Phase II general permitting scheme differs from the traditional general permitting model. The Clean Water Act requires EPA to ensure that operators of small MS4s “reduce the discharge of pollutants to the maximum extent practicable.” 33 U.S.C. § 1342(p)(3)(B). To ensure that operators of small MS4s achieve this “maximum extent practicable” standard, the Phase II Rule requires that each NOI contain information on an individualized pollution control program that addresses each of the six general criteria specified in the Minimum Measures; thus, according to the Phase II Rule, submitting an NOI and implementing the Minimum Measures it contains “constitutes compliance with the standard of reducing pollutants to the ‘maximum extent practicable.’ ” 40 C.F.R. § 122.34(a).

Because a Phase II NOI establishes what the discharger will do to reduce discharges to the “maximum extent practicable,” the Phase II NOI crosses the threshold from being an item of procedural correspondence to being a substantive component of a regulatory regime. The text of the Rule itself acknowledges that a Phase II NOI is a permit application that is, at least in some regards, functionally equivalent to a detailed application for an individualized permit. See, e.g., 40 C.F.R. § 122.34(d)(1) (“In your permit application (either a notice of intent for coverage under a general permit or an individual permit application), you must identify and submit to your NPDES permitting authority the following information....”). For this reason, EPA rejected the possibility of providing a “form NOI” to Phase II permittees, explaining that “[w]hat will be required on an MS4's NOI ... is more extensive than what is usually required on *854 an NOI, so a ‘form’ NOI for MS4s may be impractical.” 64 Fed. Reg. at 68,764.

2. Failure to Regulate

The Environmental Petitioners argue that, by allowing NPDES authorities to grant dischargers permits based on unreviewed NOIs, the Rule creates an impermissible self-regulatory system.³¹ Petitioners contend the Rule impermissibly fails to require that the permitting authority review an NOI to assure compliance with Clean Water Act

standards, including the standard that municipal stormwater pollution be reduced to “the maximum extent practicable.” 33 U.S.C. § 1342(p)(3)(B)(iii). See 40 C.F.R. § 123.35 (setting out requirements for permitting authorities, but not requiring review of NOI); 64 Fed. Reg. at 68,764 (“EPA disagrees that formal approval or disapproval by the permitting authority is needed”).

EPA maintains that the Phase II permit system is fully consistent with the authorizing statute. It contends that § 402(p)(6) granted EPA flexibility in designing the Phase II “comprehensive program,” and notes that while the statute does not require general permits, neither does it preclude them. EPA contends that Congress delegated the task of designing the program to EPA, and that EPA reasonably adopted a “flexible version” of the NPDES permit program to suit the unique needs of the Phase II program. It disputes that the general permit program creates “paper tigers,” especially since EPA, States, and citizens may initiate enforcement actions. Finally, EPA argues that the Rule does not create a self-regulatory program, but that even if it did, nothing in § 402(p)(6) precludes such a program.

Reviewing the Phase II Rule under the first step of *Chevron*, we note that the plain language of § 402(p) of the Clean Water Act, 33 U.S.C. § 1342(p), expresses unambiguously Congress's intent that EPA issue no permits to discharge from municipal storm sewers unless those permits “require controls to reduce the discharge of pollutants to the maximum extent practicable.”

Phase II general permits will likely impose requirements that ensure that operators of small MS4s comply with many of the standards of the Clean Water Act. Thus, general permits issued under Phase II will ordinarily contain numerous substantive requirements, just as did the permits issued under Phase I. See 40 C.F.R. §§ 123.35 & 123.35(a) (“§ 123.35 As the NPDES Permitting Authority for regulated small MS4s, what is my role? (a) You must comply with the requirements for all NPDES permitting authorities under Parts 122, 123, 124 and 125 of this chapter.”); see also 40 C.F.R. § 122.28 (outlining requirements for NPDES authorities issuing general permits). And every operator of a small MS4 who files an NOI under Phase II “must comply with other applicable NPDES permit requirements, standards, and conditions established in *855 the ... general permit.” See 40 C.F.R. §§ 122.34 & 122.34(f).

[16] However, while each Phase II general permit will likely ensure that operators of small MS4s comply with certain standards of the Clean Water Act, they will not “require controls to reduce the discharge of pollutants to the maximum extent practicable.” According to the Phase II Rule, the operator of a small MS4 has complied with the requirement of reducing discharges to the “maximum extent practicable” when it implements its stormwater management program, *i.e.*, when it implements its Minimum Measures. 40 C.F.R. § 122.34(a); see also 64 Fed. Reg. at 68753 (stating EPA's anticipation that limitations more stringent than the minimum control measures “will be unnecessary”). Nothing in the Phase II regulations requires that NPDES permitting authorities review these Minimum Measures to ensure that the measures that any given operator of a small MS4 has decided to undertake will *in fact* reduce discharges to the maximum extent practicable.³²

See 40 C.F.R. § 123.35 (“As the NPDES Permitting Authority for regulated small MS4s, what is my role?”). Therefore, under the Phase II Rule, nothing prevents the operator of a small MS4 from misunderstanding or misrepresenting its own stormwater situation and proposing a set of minimum measures for itself that would reduce discharges by far less than the maximum extent practicable.

In fact, under the Phase II Rule, in order to receive the protection of a general permit, the operator of a small MS4 needs to do nothing more than decide for itself what reduction in discharges would be the maximum practical reduction. No one will review that operator's decision to make sure that it was reasonable, or even good faith.³³ Therefore, as the Phase II Rule stands, EPA would allow permits to issue that would do less than *require* controls to reduce the discharge of pollutants to the maximum extent practicable.³⁴ See *856 64 Fed. Reg. at 68753 (explaining that the minimum control measures will protect water quality if they are “properly implemented”). We therefore must reject this aspect of

the Phase II Rule as contrary to the clear intent of Congress. *Cf. Natural Res. Def. Council*, 966 F.2d at 1305 (rejecting as arbitrary and capricious a permitting system that allowed regulated industrial stormwater dischargers to “self-report” whether they needed permit coverage).

Involving regulated parties in the development of individualized stormwater pollution control programs is a laudable step consistent with the directive to consult with state and local authorities in the development of the § 402(p)(6) comprehensive program. But EPA is still required to ensure that the individual programs adopted are consistent with the law. Our holding should not prevent the Phase II general permitting program from proceeding mostly as planned. Our holding does not preclude regulated parties from designing aspects of their own stormwater management programs, as contemplated under the Phase II Rule. However, stormwater management programs that are designed by regulated parties must, in every instance, be subject to meaningful review by an appropriate regulating entity to ensure that each such program reduces the discharge of pollutants to the maximum extent practicable. We therefore remand this aspect of the Rule.

3. Public Participation

The Environmental Petitioners contend that the Phase II Rule fails to provide for public participation as required by the Clean Water Act, because the public receives neither notice nor opportunity for hearing regarding an NOI. The EPA replies on the one hand by arguing that NOIs are not “permits” and therefore are not subject to the public availability and public hearing requirements of the Clean Water Act, and on the other hand by arguing that the combination of the public involvement minimum measure, 40 C.F.R. § 122.34(b)(2), the Federal Freedom of Information Act, 5 U.S.C. § 552, and state freedom of information acts would fulfill any such requirements if NOIs were permits.

Reviewing the Phase II Rule under *Chevron* step one, we conclude that clear Congressional intent requires that NOIs be subject to the Clean Water Act's public availability and public hearings requirements. The Clean Water Act requires that “[a] copy of each permit application and each permit issued under [the NPDES permitting program] shall be available to the public,” 33 U.S.C. § 1342(j), and that the public shall have an opportunity for a hearing before an permit application is approved, 33 U.S.C. § 1342(a)(1). Congress identified public participation rights as a critical means of advancing the goals of the Clean Water Act in its primary statement of the Act's approach and philosophy. *See* 33 U.S.C. § 1251(e); *see also Costle v. Pacific Legal Found.*, 445 U.S. 198, 216, 100 S.Ct. 1095, 63 L.Ed.2d 329 (1980) (noting the “general policy of encouraging public participation is applicable to the administration of the NPDES permit program”). EPA has acknowledged that technical issues relating to the issuance of NPDES permits should be decided in “the most open, accessible forum possible, *857 and at a stage where the [permitting authority] has the greatest flexibility to make appropriate modifications to the permit.” 44 Fed. Reg. 32,854, 32,885 (June 7, 1979).

As we noted above, under the Phase II Rule it is the NOIs, and not the general permits, that contain the substantive information about how the operator of a small MS4 will reduce discharges to the maximum extent practicable. Under the Phase II Rule, NOIs are functionally equivalent to the permit applications Congress envisioned when it created the Clean Water Act's public availability and public hearing requirements. Thus, if the Phase II Rule does not make NOIs “available to the public,” and does not provide for public hearings on NOIs, the Phase II Rule violates the clear intent of Congress. EPA's first argument—that NOIs are not subject to the public availability and public hearings requirements of the Clean Water Act—therefore fails.

We therefore reject the Phase II Rule as contrary to the clear intent of Congress insofar as it does not provide for public hearings on NOIs as required by 33 U.S.C. § 1342(a)(1). However, Congress has not directly addressed the question of what would constitute an NOI being “available to the public” as required by 33 U.S.C. § 1342(j). Under *Chevron* step two, we must defer to EPA's interpretation of “available to the public” unless it is arbitrary, capricious, or manifestly contrary to the statute.

[17] EPA argues that the NOIs are “available to the public” as a result of the combined effects of the public participation minimum measures, and of federal and state freedom of information acts. This argument is unconvincing. First, the public participation Minimum Measure only requires dischargers to design a program minimally consistent with State, Tribal, and local requirements. 40 C.F.R. § 122.34(b)(2). Second, the federal Freedom of Information Act only applies to documents that are actually in EPA's possession, not to documents that are in the possession of state or tribal NPDES authorities, *see* 40 C.F.R. § 2 (providing EPA's policy for releasing documents under the federal Freedom of Information Act), and nothing in the Phase II Rule provides that EPA obtain possession of every NOI that is submitted to a NPDES permitting authority. *See* 40 C.F.R. § 123.41(a) (making information provided to state NPDES authorities available to EPA only *upon request*). Thus, under the Phase II Rule, NOIs will only “be available to the public” subject to the vagaries of state and local freedom of information acts. We conclude that EPA's interpretation of 33 U.S.C. § 1342(j), as embodied in the provisions of the Phase II Rule providing for the public availability of NOIs, is manifestly contrary to the Clean Water Act, which contemplates greater scope, greater certainty, and greater uniformity of public availability than the Phase II Rule provides. We therefore reject this aspect of the Phase II Rule.³⁵

*858 In sum, we conclude that EPA's failure to require review of NOIs, which are the functional equivalents of permits under the Phase II General Permit option, and EPA's failure to make NOIs available to the public or subject to public hearings contravene the express requirements of the Clean Water Act. We therefore vacate those portions of the Phase II Rule that address these procedural issues relating to the issuance of NOIs under the Small MS4 General Permit option, and remand so that EPA may take appropriate action to comply with the Clean Water Act.

C. Failure to Designate

We reject the Environmental Petitioners' contention that EPA's failure to designate for Phase II regulation serious sources of stormwater pollution, including certain industrial (“Group A”) sources and forest roads, was arbitrary and capricious. *See Marsh v. Oregon Natural Res. Council*, 490 U.S. 360, 378, 109 S.Ct. 1851, 104 L.Ed.2d 377 (1989).³⁶

1. “Group A” Facilities

In addition to the small MS4s and construction sites ultimately designated for regulation under the Phase II Rule, EPA evaluated a variety of other point-source discharge categories for potential Phase II regulation. One group of dischargers (referred to as the “Group A” facilities) included sources that “are very similar, or identical” to regulated stormwater discharges associated with industrial activity that were not designated for Phase I regulation for administrative reasons unrelated to their environmental impacts.³⁷ 64 Fed. Reg. at 68,779. EPA estimates that Group A includes approximately 100,000 facilities, including auxiliary facilities and secondary activities (“*e.g.*, maintenance of construction equipment and vehicles, local trucking for an unregulated facility such as a grocery store,” *id.*) and facilities intentionally omitted from Phase I designation (“*e.g.*, publicly owned treatment works with a design flow of less than 1 million gallons per day, landfills that have not received industrial waste,” *id.*).

*859 The Environmental Petitioners contend that EPA should have designated the Group A facilities for categorical Phase II regulation after finding (1) that stormwater discharges from these facilities are the same as those from the industrial sources regulated under Phase I, and (2) that such discharges may cause “adverse water quality impacts.” *Id.* Petitioners argue that these findings, and EPA's failure to provide individualized analysis regarding whether any specific source category within Group A requires regulation, render EPA's decision not to regulate any of these sources under the Rule arbitrary and capricious. They maintain that EPA's “line-drawing,” which regulates some pollution sources but leaves nearly identical sources unregulated without any persuasive rationale, is necessarily arbitrary and capricious. *See Natural Res. Def. Council*, 966 F.2d at 1306 (EPA's decision not to regulate construction sites smaller than five acres was arbitrary when EPA provided no data to justify the five-acre threshold and admitted that unregulated sites could have significant water quality impacts).

Petitioners argue that § 402(p)(6) at least required EPA to make findings with respect to individual Group A categories, and that data collected from Phase I permit applications could be used to evaluate the pollutant potential of the identical Group A sources. They contend that these findings should have sufficed as a basis for designating at least some Group A sources, and that EPA's conclusion that it lacked adequate nationwide data upon which to designate any of these sources is not supported by the record evidence. Comparing EPA's identification of the serious polluting potential of some of these sources with its statutory mandate under § 402(p)(6) "to protect water quality," they argue that EPA fails even the forgiving standard of arbitrary and capricious review in that it has "offered an explanation for its decision that runs counter to the evidence before [it]" and "is so implausible that it could not be ascribed to a difference in view or the product of agency expertise." See *Motor Vehicle Mfrs.*, 463 U.S. at 43, 103 S.Ct. 2856.

EPA maintains that it considered Group A facilities' similarity to already regulated sources as only one of several criteria that it used in designating sources for regulation under Phase II, 64 Fed. Reg. at 68,780, and that sources that appear "similarly situated" under one criterion are not necessarily similarly situated under all. EPA asserts that nothing in § 402(p)(6) implied a responsibility to make individualized findings regarding each Group A subcategory, and it maintains that it simply lacked sufficient data to support nationwide designation of the Group A facilities. EPA notes that, after failing to receive requested comment providing such data, it proposed instead "to protect water quality" by allowing regional regulation of problem Group A facilities under the residual designation authority. EPA contends that agencies must be afforded deference in determining the data necessary to support regulatory decisionmaking and that it reasonably determined the quantum of data it would need to support the designation of additional sources on a nationwide basis. See *Sierra Club v. EPA*, 167 F.3d 658, 662 (D.C.Cir.1999).

[18] We conclude that sufficient evidence supports EPA's decision not to designate Group A sources on a nationwide basis, and instead to establish local and regional designation authority to account for these sources and protect water quality. Although we are troubled by the purely administrative basis for the distinction between facilities regulated under the Phase I Rule and the Group A facilities *860 that remain unregulated under Phase II,³⁸ EPA's choice of the Phase I standard for designation is not the issue before us. Before us is whether EPA acted arbitrarily in declining to designate the Group A sources on a nationwide basis under the Phase II Rule, and we cannot say that it did.

EPA has articulated a rational connection between record facts indicating insufficient data to categorically regulate Group A facilities and its corresponding conclusion not to do so, and we defer to that decision. See *Washington v. Daley*, 173 F.3d 1158, 1169 (9th Cir.1999). In the text of the Rule, EPA explains that the process behind its decision not to nationally designate Group A sources for Phase II regulation focused not only on the likelihood of contamination from a source category, but also on the sufficiency of national data about each category and whether pollution concerns were adequately addressed by existing environmental regulations.³⁹ We cannot say that EPA relied on factors Congress had not intended it to consider, that it failed to consider an important aspect of the problem, or that its rationale is implausible. See *Motor Vehicle Mfrs.*, 463 U.S. at 43, 103 S.Ct. 2856. Nor did EPA's decision run counter to the evidence before it. *Id.* The Environmental Petitioners allege that its decision not to regulate Group A facilities runs counter to evidence that similar sources are highly polluting, but as EPA considered evidence beyond those similarities that persuaded it not to regulate, we cannot say that EPA's decision is unsupported by the record. Nothing in § 402(p)(6) unambiguously requires EPA to evaluate the Group A source categories individually, and we defer to EPA's interpretation of the statute it is charged with administering. See *Royal Foods Co. v. RJR Holdings*, 252 F.3d 1102, 1106 (9th Cir.2001).

2. Forest Roads

The Environmental Petitioners also contend that EPA arbitrarily failed to regulate forest roads under the Rule despite clear evidence in the record documenting the need for stormwater pollution control *861 of drainage from these roads. Petitioners again contend that this agency action is arbitrary, because EPA has offered an explanation for its decision that runs counter to the evidence before it.

Petitioners point to EPA's own conclusion that forest roads "are considered to be the major source of erosion from forested lands, contributing up to 90 percent of the total sediment production from forestry operations."⁴⁰ They note that both unimproved forest roads and construction sites create large expanses of non-vegetated soil subject to stormwater erosion, and argue that construction site data thus also support regulation of forest roads. Petitioners observe that EPA has cited no contrary evidence indicating that forest roads are not sources of stormwater pollutant discharges to U.S. waters, and they argue that Phase II regulation is necessary "to protect water quality," because proper planning and road design can minimize erosion and prevent stream sedimentation. Petitioners note that this court has previously held that, in the absence of such "supportable facts," EPA is not entitled to the usual assumption that it has "rationally exercised the duties delegated to it by Congress." *Natural Res. Def. Council*, 966 F.2d at 1305.

[19] EPA's response is that we have no jurisdiction to hear this challenge, chiefly because, it believes, the challenge is time-barred by Clean Water Act § 509(b)(1), 33 U.S.C. § 1369(b)(1) (providing that "application for review shall be made within 120 days from the date of [agency action]"). EPA promulgated silviculture regulations in 1976 that exclude from NPDES permit requirements certain silvicultural activities that EPA determined constitute non-point source activities, including "surface drainage, or road construction and maintenance from which there is natural runoff." 40 C.F.R. § 122.27(b)(1).⁴¹ EPA asserts that the exclusion applies to forest roads in general, not only to "construction" and "maintenance"—an assertion disputed by Petitioners—and that any challenge to the decision not to regulate forest roads should have been brought within 120 days of the promulgation of that rule. *See* 33 U.S.C. § 1369(b)(1).

EPA's argument might be more persuasive if Petitioners' contention could be understood essentially as a direct challenge to the 1976 silviculture regulations, but this is not the case. Even were we to assume that EPA exempted forest roads from NPDES permit requirements in 1976 under 40 C.F.R. § 122.27(b)(1), that would not resolve the question whether EPA should have addressed forest roads in its "comprehensive program ... to protect *862 water quality" under § 402(p)(6), because § 402(p)(6) was not enacted until 1987. Petitioners challenge EPA's decision not to regulate under the new portion of the statute, not the decision not to regulate under other provisions that were in effect earlier.

EPA argues in the alternative that Petitioners should have sought judicial review when EPA considered amending § 122.27(b)(1)—to delete the language that it asserts renders forest roads non-point sources—but then determined not to make the amendment. However, we are aware of no statute or legal doctrine providing that a party's failure to challenge an agency's decision *not* to amend its rules in one proceeding deprives the party of the right to challenge, in a contemporaneous proceeding, the promulgation of an entire new rule which could have, but did not, provide the full relief the party seeks. Assuming that EPA is correct that § 122.27(b)(1) defines forest roads as non-point sources, both the Phase II Rule proceedings and the proceedings in which the proposed amendment to § 122.27(b)(1) was considered and rejected were proper proceedings in which to raise the issue whether discharges from forest roads should be regulated. Petitioners chose to raise the issue in their comments to the proposed Phase II Rule, because they believed that Clean Water Act § 402(p)(6) mandates the regulation of forest roads. They did not lose their right to challenge the final Phase II Rule's failure to regulate forest roads simply because they did not also raise a challenge to EPA's failure to adopt an amendment to § 122.27(b)(1) that the agency initially proposed. (We note, incidentally, that it appears that even a successful challenge to § 122.27(b)(1) would likely not have achieved the objective the Environmental Petitioners sought: it would only have allowed case-by-case coverage for forest roads, and not for overall coverage.)

[20] Finally, EPA suggests that Petitioners' comments during the Phase II rulemaking process were too short to create jurisdiction in this court to hear this challenge. However, EPA exaggerates the slightness of those comments, which comprised two paragraphs, with footnotes, stating objections and providing support. We also agree with Petitioners that EPA was aware of the forest road sedimentation problem at the time of the rulemaking.⁴² Indeed, EPA responded to the comments without disputing that the problem is serious. 3 EPA, *Response to Public Comments* 8 (Oct. 29, 1999).

Rather, the agency relied on [40 C.F.R. § 122.27\(b\)\(1\)](#), indicating that it was barred from acting under the Phase II Rule by [§ 122.27\(b\)\(1\)](#).

EPA does not seriously address the merits of Petitioners' objections to the Rule in its brief to this court. Instead, EPA relies almost entirely on its assertion that we lack jurisdiction to decide this question. It does, however, strongly imply that its failure to adopt its own proposed amendment in the proceeding pertaining to [§ 122.27\(b\)\(1\)](#) relieves it of its obligation to consider including forest roads in the Phase II Rule proceedings. We reject any such contention. Petitioners' assertion that [§ 402\(p\)\(6\)](#) requires that the Phase II Rule contain provisions regulating forest roads necessitates a response from EPA on the merits.

***863** Having concluded that the objections of the Environmental Petitioners are not time-barred, and that we have jurisdiction to hear them, but that EPA failed to consider those objections on the merits, we remand this issue to the EPA, so that it may consider in an appropriate proceeding Petitioners' contention that [§ 402\(p\)\(6\)](#) requires EPA to regulate forest roads. EPA may then either accept Petitioners' arguments in whole or in part, or reject them on the basis of valid reasons that are adequately set forth to permit judicial review.

D. AF&PA's Standing

The American Forestry & Paper Association (AF&PA), a national trade association representing the forest, pulp, paperboard, and wood products industry, is one of the two Industry Petitioners asserting the remaining claims.⁴³ Before considering these challenges, however, we consider whether AF&PA has standing to raise them.

EPA argues that AF&PA lacks standing because it cannot show that it represents entities that suffer a cognizable injury under the Phase II Rule as promulgated. EPA argues that the interests of AF&PA entities might have supported standing had EPA decided to regulate forest roads as Phase II stormwater dischargers, but since EPA declined to do so, none of AF&PA's members are currently subject to the Rule. AF&PA contends that its members have a cognizable legal interest in the Rule because they risk becoming subject to regulation at any future time under the continuing designation authority.

[21] We agree that AF&PA lacks standing. A claimant meeting Article III standing requirements must show that “(1) it has suffered an ‘injury in fact’ ...; (2) the injury is fairly traceable to the challenged action of the defendant; and (3) it is likely, as opposed to merely speculative, that the injury will be redressed by a favorable decision.” *Friends of the Earth v. Laidlaw Envtl. Servs. (TOC)*, 528 U.S. 167, 180–81, 120 S.Ct. 693, 145 L.Ed.2d 610 (2000). Standing requires an injury that is “actual or imminent, not ‘conjectural or hypothetical.’” *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560, 112 S.Ct. 2130, 119 L.Ed.2d 351 (1992). AF&PA's interest in avoiding future regulation of forest roads is not actually or imminently threatened by any potential result in this case. No ripe claim about misuse of the residual authority to regulate forest road discharge, or any other kind of discharge, is before the court. Should members of AF&PA become subject to Phase II regulation through subsequent administrative action, it will have standing to challenge those actions at that time. In the meanwhile, we proceed to the merits of the remaining claims on behalf of AF&PA's co-petitioner, the National Association of Home Builders, which has established its standing to raise them.

E. Consultation with State and Local Officials

The Industry Petitioners contend that EPA failed to consult with the States on the Phase II Rule as required by [§ 402\(p\)\(5\)](#), which instructs EPA to conduct studies “in consultation with the States,” and [§ 402\(p\)\(6\)](#), which instructs the Administrator to issue regulations based on these studies “in consultation with State and local officials.” 33 U.S.C. [§ 1342\(p\)\(5\)-\(6\)](#). We conclude that EPA satisfied its statutory duty of consultation. See *Marsh*, 490 U.S. at 378, 109 S.Ct. 1851.

*864 Petitioners concede several instances in which EPA circulated drafts of the Phase II Rule to state and local authorities, but argue that these consultations were meaningless because (1) the reports were circulated too far in advance of the actual rulemaking, (2) the rulemaking wrongfully proceeded based on other sources of input, (3) standard APA notice and comment procedures could not suffice because Congress must have intended something more when it added the consultation requirements to the language of § 402, and (4) consultation at the final stage of rulemaking was inadequate because comment was sought on the final report only after it had been submitted to Congress and the Phase II Rule had been promulgated. Petitioners provide examples of state feedback that allegedly went unheeded by EPA in its promulgation of the final Rule.

EPA maintains that it consulted extensively with States and localities in developing the Phase II Rule, discharging its obligations under §§ 402(p)(5) & (6). EPA contends that the comments Petitioners cite as unheeded by EPA demonstrate that EPA *did* consult with States concerning the Rule, even if some States did not concur in EPA's ultimate conclusion, and that the final rule adopted a good measure of the flexibility sought by state representatives. EPA argues that Industry Petitioners cannot complain that consultation was inadequate simply because it did not result in the adoption of Petitioners' preferred views.

EPA also disputes Petitioners' allegation that while EPA did comply with the terms of the 1999 Appropriations Act (requiring EPA to defend the proposed Phase II Rule before Congress and then publish the final report for public comment), it demonstrated its failure to adequately consult by publishing the report for public comment *after* the Phase II Rule had been formally promulgated, rendering any subsequent public comment meaningless. EPA counters that these actions do not indicate that it failed to satisfy Congress's directive that it consult with state and local officials, because EPA had engaged in extensive consultation before Congress requested the Appropriations Act report, and Congress did not require further consultation when it conditioned promulgation of the Rule only on the submission of this final report. EPA claims that while Congress required it to publish the report after its submission, public comment on the report was not required before promulgation, and that the statutory deadline structure rendered any other interpretation impossible.

[22] We conclude that the overall record indicates EPA met its statutory duty of consultation. A draft of the first report was circulated to States, EPA regional offices, the Association of State and Interstate Water Pollution Control Administrators (“ASIWPCA”), and other stakeholders in November, 1993, and was revised based on comments received. EPA established the Urban Wet Weather Flows Federal Advisory Committee (“FACA Committee”), balancing membership between EPA's various outside stakeholder interests, including representatives from States, municipalities, Tribes, commercial and industrial sectors, agriculture, and environmental and public interest groups. 64 Fed. Reg. 68,724. The 32 members of the Phase II FACA Subcommittee, reflecting the same balance of interests, met fourteen times over three years and state and municipal representatives provided substantial input regarding the draft reports, the ultimate Phase II Rule, and the supporting data.⁴⁴ *Id.* EPA *865 instituted the Phase II Subcommittee meetings in addition to the standard APA notice and comment procedures, which EPA also followed.

The fact that the Rule did not conform to Petitioners' hopes and expectations does not bear on whether EPA adequately consulted state and local officials. Although required to consult with States and localities, EPA was free to chart the substantive course it saw fit. EPA was not required to consult with States on the Appropriations Act report. Even if EPA should have sought further comment at that late stage, failure to do so does not outweigh the evidence demonstrating extensive consultation and cooperation with local authorities on development of the Rule.

F. Designation of Certain Small MS4s and Construction Sites

The Industry Petitioners contend that, in designating certain small MS4s and construction sites for regulation under the Phase II Rule, EPA failed to adhere to the statutorily required regulatory basis and misinterpreted record evidence. We disagree.

1. Regulatory Basis

The Industry Petitioners and the Municipal Petitioners contend that EPA violated the statutory command to base the Phase II regulations on § 402(p)(5) studies. We review EPA's interpretation of its statutory authority under the *Chevron* standard, 467 U.S. at 842–44, 104 S.Ct. 2778, and affirm.

Petitioners argue that the studies mandated by § 402(p)(5) were intended to provide the sole substantive basis for the “comprehensive program” envisioned in § 402(p)(6), but that EPA also (and thus improperly) based its designation of small MS4s and construction sites on (1) public comment received in the aftermath of judicial invalidation of the scope of construction sites regulated by the Phase I Rule,⁴⁵ and (2) additional research discussed in the Preamble to the Phase II Rule.⁴⁶

EPA contends that the statute did not require it to base its designations exclusively on the § 402(p)(5) studies, and that it was in fact required to take account of information from other sources in promulgating the regulations. It argues that it based the Phase II Rule on conclusions reported in the § 402(p)(5) studies, but then appropriately supported these results with data described in the additional study requested by Congress in the Appropriations Act, comments submitted during the statutorily required notice-and-comment process, and other available information. To read the authorizing statute as limiting reliance to the § 402(p)(5) studies, EPA claims, would preclude it from relying on recommendations received through the separate, post-study requirement to “consult with State and local officials” under *866 § 402(p)(6), and through the notice and comment process mandated by the APA, 5 U.S.C. § 553(b).

Respondent-intervenor NRDC adds that the Phase II Rule is consistent with the § 402(p)(5) studies reported in 1995, and moreover, that the Industry Petitioners lack standing to raise the “regulatory basis” claim because they cannot show the requisite injury. See *Friends of the Earth*, 528 U.S. at 180–81, 120 S.Ct. 693.

a. Standing. Industry Petitioners⁴⁷ contend that they have suffered injury in fact, because their members are now either automatically regulated by the permitting requirements or subject to future regulation (under the residual authority, discussed below) that otherwise would not have been authorized, and that this is a direct result of EPA's failure to adhere to the framework of the 1995 Report, which allegedly would have precluded these aspects of the Rule. NRDC contends that the Industry Petitioners lack standing because they cannot show that being subject to NPDES permitting is the causal result of the procedural injury they urge, and because they cannot base standing on hypothetical injury that may arise in the future.

NRDC argues that the injuries Petitioners allege are not consistent with the guidelines laid out in *Friends of the Earth*, 528 U.S. at 180–81, 120 S.Ct. 693. It insists that Petitioners' only possible claims of injury from the alleged “regulatory basis” violation are purported harm to members caused by the final Phase II Rule itself or harm to members caused by EPA's alleged failure to provide adequate notice of future regulatory requirements in the 1995 Report. However, NRDC contends that Petitioners have not suffered the requisite injury, because they had actual notice that EPA might regulate small construction sites, 63 Fed. Reg. at 1583, and they can show no chain of causation linking their alleged injury from the Rule itself to the actions challenged here.

NRDC's causation argument is complex. Although the Petitioners purport to challenge EPA's failure to follow all of the 1995 Report's recommendations in the final Phase II Rule, NRDC contends, they are really challenging the subsequent proceedings through which EPA developed the final Rule. Even if there were some unlawful variance between the 1995 report and final rule, NRDC continues, the cause of that variance would have been some failure to abide by rulemaking standards during administrative proceedings that produced the text of the final Rule—not EPA's attention to sources of input other than the 1995 Report. NRDC maintains that these intervening acts of rulemaking (e.g., Phase II Subcommittee activities and the notice-and-comment process) break the requisite chain of causation between EPA's alleged failure to adhere to recommendations in the 1995 report and the flaws Petitioners allege in the Phase II Rule,

which NRDC claims would have been due to “purportedly unlawful EPA decisions on the merits during the subsequent administrative proceedings.” See *Northside Sanitary Landfill v. Thomas*, 804 F.2d 371, 381–84 (7th Cir.1986) (finding no standing to challenge EPA statements concerning the fate of a hazardous waste facility when subsequent state administrative acts, not EPA comments, would determine the facility's actual fate).

[23] We note that NRDC's standing arguments apply equally to the Municipal Petitioners, who can also assert only the *867 harms resulting to members from the Rule itself or from a lack of notice, and that we are thus not only considering the standing of the Industry Petitioners but also that of the Municipal Petitioners to raise the “regulatory basis” claim.⁴⁸ That established, we find standing for both.

NRDC essentially argues that petitioners lack standing because (1) they cannot show that being subject to NPDES permitting is the causal result of the procedural injury they urge, (2) they cannot claim any actual notice injury from the alleged procedural wrong because notice was actually given, and (3) they cannot claim standing based on hypothetical injury that may (or may not) arise from future regulation under the residual authority. We can readily agree with the latter two contentions. As discussed above, the “actual injury” requirement of Article III standing precludes judicial consideration of exactly the kind of hypothetical harm the Industry Petitioners allege may follow from use of Phase II authority for future designations of regional sources. *Friends of the Earth*, 528 U.S. at 180–81, 120 S.Ct. 693. If future Phase II designations cause identifiable injury to Petitioners, they will then be free to pursue that ripe claim. And because EPA clearly issued notice to all regulated parties that they may be subject to regulation under the proposed rule, 63 Fed. Reg. at 1568 (MS4s) and 1582 (construction), petitioners cannot show injury from lack of actual notice.

However, NRDC's causation argument is less persuasive. NRDC correctly argues that the petitioners cannot establish a definite chain of causation between the EPA's alleged failure to limit their regulatory basis to the § 402(p)(5) studies and the fact that they now must obtain permits. But this will almost always be true of petitions challenging an agency's failure to abide by statutory procedural requirements. Because all administrative decisionmaking following an alleged procedural irregularity could always be considered an intervening factor breaking the chain of causation, NRDC's interpretation of the requisite chain of causation would dubiously shield administrative decisions from procedural review.

For this reason, we have held that the failure of an administrative agency to comply with procedural requirements in itself establishes sufficient injury to confer standing, even though the administrative result might have been the same had proper procedure been followed. *City of Davis v. Coleman*, 521 F.2d 661, 671 (9th Cir.1975) (agency's failure to comply with National Environmental Policy Act's procedural requirements constituted injury sufficient to support standing of a geographically related plaintiff regardless of potentially similar regulatory outcome). In *City of Davis*, we noted that the standing inquiry represents “a broad test, but because the nature and scope of environmental consequences are often highly uncertain before study we think it an appropriate test.” *Id.* A plaintiff who shows that a causal relation is “probable” has standing, even if the chain cannot be definitively established. *Johnson v. Stuart*, 702 F.2d 193, 195–96 (9th Cir.1983) (school students and their parents had standing to challenge a statute that limited the texts that might be selected for teaching, even *868 though it could not be shown whether any specific book had been rejected under this statute or for other reasons).

The Supreme Court has also acknowledged that standing may be established by harm resulting indirectly from the challenged acts, *Warth v. Seldin*, 422 U.S. 490, 504–05, 95 S.Ct. 2197, 45 L.Ed.2d 343 (1975), and that causation may be established if the plaintiff shows a good probability that, absent the challenged action, the alleged harm would not have occurred, *Arlington Heights v. Metro. Hous. Dev. Corp.*, 429 U.S. 252, 262–64, 97 S.Ct. 555, 50 L.Ed.2d 450 (1977).

Thus, although the petitioners cannot show with certainty that the alleged “regulatory basis” violation caused them to be wrongfully subjected to Phase II permitting requirements, we hold that they have alleged a procedural injury sufficient to support their standing to bring the claim.

b. Merits. Although we resolve the standing issue in favor of the petitioners, we nevertheless affirm the Rule against their claim that EPA violated procedural constraints implied by the authorizing statute, § 402(p)(6).

Congress intended EPA to use all sources of information in developing a comprehensive program to protect water quality to the maximum extent practicable. The statute unambiguously required EPA to base its regulations both on the § 402(p)(5) studies and on consultation with state and local officials. Congress enacted § 402 with full knowledge that EPA would also be required to take account of public comments during the notice and comment phase of administrative rulemaking prescribed by the APA.⁴⁹

2. MS4s in Urbanized Areas

The Municipal Petitioners contend that the designation of small MS4s for Phase II regulation according to Census Bureau defined areas of population density (“urbanized areas”) is arbitrary and capricious. They argue that EPA has not established that the Census Bureau's designation of urbanized areas is correlated with actual levels of pollution runoff in stormwater, and that EPA adopted the designations simply for administrative convenience. We affirm, because the record reflects a reasoned basis for EPA's decision. See *Marsh*, 490 U.S. at 378, 109 S.Ct. 1851.

Conceding that the Preamble cites studies purporting to establish “a high correlation between the degree of development/urbanization and adverse impacts on receiving waters due to stormwater,” 64 Fed. Reg. at 68,751, the Municipal Petitioners nevertheless contend that the record contains no “demonstrably correlated, *quantified* basis on which EPA may reasonably have concluded that any particular population, or any population density, *per se* establishes that all urban areas having that same characteristic in gross are necessarily appropriate for inclusion as Phase II sources.” Pointing to *Leather Industries of America v. EPA*, 40 F.3d 392, 401 (D.C.Cir.1994) (rejecting as arbitrary EPA's regulation of pollutant levels in the absence of data supporting a relationship between the caps and level of risk), Petitioners argue that EPA simply assumed the relationship Congress contemplated it would establish by the § 402(p)(5) studies.

EPA responds that it extensively documented the relationship between urbanization and harmful water quality impacts from stormwater runoff, pointing to its findings that the degree of surface imperviousness in an area directly corresponds *869 to the degree of harmful downstream pollution from stormwater runoff, 64 Fed. Reg. at 68,724–27, and that it articulated a rational connection between these record facts and its decision to designate small MS4s serving areas of high population density (“urbanized areas”) to protect water quality.

[24] We treat EPA's decision with great deference because we are reviewing the agency's technical analysis and judgments, based on an evaluation of complex scientific data within the agency's technical expertise. See *Baltimore Gas & Elec. Co. v. NRDC*, 462 U.S. 87, 103, 103 S.Ct. 2246, 76 L.Ed.2d 437 (1983); see also *Chem. Mfrs. Ass'n v. EPA*, 919 F.2d 158, 167 (D.C.Cir.1990) (“It is not the role of courts to ‘second-guess the scientific judgments of the EPA....’”). We conclude that the record supports EPA's choice.

The statute simply called upon EPA to “designate stormwater discharges,” other than those designated in Phase I, “to be regulated to protect water quality.” 33 U.S.C. § 1342(p)(6). EPA did so, based on record evidence showing a compelling and widespread correlation between urban stormwater runoff and deleterious impacts on water quality. Petitioners' assertion that EPA failed to establish a “quantified” basis for its designation is inapposite. The statute did not require EPA to establish with pinpoint precision a numeric population threshold within urbanized areas that would justify regulation under Phase II. In areas implicating technical expertise and judgment, courts do not require “perfect stud[ies]” or data. *Sierra Club*, 167 F.3d at 662. EPA satisfied the *Leather Industries* standard by adopting a threshold consistent with the criterion of “protecting water quality,” and did not assume, but instead sufficiently documented, the relationship between urbanization and harmful stormwater discharge.

3. Small Construction Sites

Industry and Municipal Petitioners also argue that EPA's decision to regulate under Phase II all construction sites disturbing between one and five acres of land ("small construction sites") is arbitrary and unsupported by the record. We do not agree. See *Marsh*, 490 U.S. at 378, 109 S.Ct. 1851.

a. Record Evidence. Municipal Petitioners claim that EPA arrived at the one-acre standard based not on factual findings in the record but instead as a reaction to the earlier Ninth Circuit remand of the Phase I five-acre designation. They allege that the one-acre standard is no more based on supporting data than the rejected five-acre standard, and is thus quantitatively arbitrary.

Industry Petitioners argue that EPA's findings do not support regulation of *all* small construction sites, but indicate only that small construction sites, taken cumulatively, may cause effects similar to large sites in a given area. They contend that EPA's conclusion that adverse effects are possible under certain circumstances cannot support categorical designation of all small construction sites nationwide, and that the Rule is arbitrary because (1) it is based on an analysis that fails to take account of the frequency of negative impacts, (2) it fails to take account of acknowledged factors that determine whether small construction activities cumulatively cause harm (such as the degree of development in a watershed at any given time), and (3) EPA has acknowledged that the actual water quality impact of construction sites of all sizes varies widely from area to area depending on climatological, geological, geographical, *870 and hydrological influences.⁵⁰

Industry Petitioners further contend that the record does not support the designation of small sites, because almost all of the technical papers EPA relied on focused on larger sites or failed to take account of size,⁵¹ and because the lack of an adequate factual basis for nationwide regulation of small sites makes the Phase II Rule arbitrary and capricious. *Am. Petroleum Inst. v. EPA*, 216 F.3d 50, 58 (D.C.Cir.2000) (invalidating a solid waste rule because EPA "failed to provide a rational explanation for its decision" declining to exclude oilbearing waste waters from the statutory definition of solid waste).

EPA maintains that construction sites regulated under the Phase II Rule degrade water quality across the United States and that the administrative record unambiguously documents that harm. EPA disputes Petitioners' assertion that it failed to establish the need to regulate small sites nationwide, but also contends that it is not required to base every administrative decision on a precise quantitative analysis. See *Sierra Club*, 167 F.3d at 662 ("EPA typically has wide latitude in determining the extent of data-gathering necessary to solve a problem.").

EPA also disputes petitioners' assertions that data from studies involving larger construction sites are irrelevant to the Phase II Rule. EPA explains that discharges of sediment due to erosion are the result of the interaction of several factors including soils, slope, precipitation, and vegetation:

For construction sites that are one acre or more, none of the environmental factors contributing to sediment discharges is dependent on the size of the site disturbed. A one-acre site can have the same combination of soils, slope, degree of disturbance and precipitation as a 100-acre site, and consequently can lose soil at the same rate ... and discharge sediments in the same concentrations ... as a 100-acre site.

EPA contends that it is thus reasonable to extrapolate data about small sites from studies of larger ones—and that such an extrapolation may even be forgiving, since small sites are currently less likely to have effective erosion and sedimentation control plans.⁵²

*871 Indeed, EPA argues that although adverse water quality impacts of small construction sites have been widely recognized, effective local erosion and sedimentation control programs have not been adopted in many areas.⁵³ Though not all watersheds are currently adversely effected by small construction sites,⁵⁴ EPA notes that the Phase II Rule acts "to protect water quality" both remedially and preventively, and argues that it need not quantify the cumulative effects

of discharges from these sites or identify all watersheds that are currently harmed before acting to limit pollution from small sites.⁵⁵

[25] We reverse under the arbitrary and capricious standard only if the agency has relied on factors Congress did not intend it to consider, entirely failed to consider an important aspect of the problem, offered an explanation for its decision contrary to the evidence before the agency, or is so implausible that it could not be ascribed to a difference in view or the product of agency expertise. *Motor Vehicle Mfrs. Ass'n*, 463 U.S. at 43, 103 S.Ct. 2856. Petitioners' contention that EPA relied on factors Congress did not intend it to consider was rejected in our earlier discussion of the regulatory basis challenge. They submit no evidence that EPA failed to consider an important aspect of the problem. We cannot say that EPA's designation of small construction sites is implausible (especially given the support of twenty-some-odd studies of sedimentation from construction sites that EPA reviewed in promulgating the challenged regulations, 64 Fed. Reg. 68,728–31). We could remand this aspect of the Rule only if, as the petitioners urge, EPA's explanation for its decision to regulate small construction sites were contrary to the record evidence, and it is not.

Petitioners' primary contention is that evidence in the record suggests it is not possible to provide an explicit, quantitative link between small construction sites and an adverse effect on water quality. But even if this were so, EPA's decision to regulate preventively small construction sites “to protect water quality” is not inconsistent with the record. Petitioners contend that EPA's reliance on data from studies of large construction sites is insufficient to support EPA's designation of small sites, but EPA has adequately supported its contention that experts can reasonably *872 extrapolate projected water quality impacts from large to small sites. We apply the substantial evidence standard when reviewing the factual findings of an agency, *Dickinson v. Zurko*, 527 U.S. 150, 156–58, 119 S.Ct. 1816, 144 L.Ed.2d 143 (1999),⁵⁶ and find it satisfied here.

Moreover, EPA is not required to conduct the “perfect study.” *Sierra Club*, 167 F.3d at 662. We defer to an agency decision not to invest the resources necessary to conduct the perfect study, and we defer to a decision to use available data unless there is no rational relationship between the means EPA uses to account for any imperfections in its data and the situation to which those means are applied. *Id.*; *Am. Iron & Steel Inst. v. EPA*, 115 F.3d 979, 1004 (D.C.Cir.1997). The record indicates a reasoned basis for EPA's decision that regulating small construction sites was necessary “to protect water quality” as required by § 402(p)(6).

[26] **b. Waivers.** Industry Petitioners further contend that EPA's allowance of regulatory waivers for small construction sites not likely to cause adverse water quality impacts inappropriately supplements the permitting regulations.

Petitioners argue that EPA has the burden of establishing a comprehensive program to control sources as necessary to protect water quality, and that shifting the burden to individual contractors, businesses, and homeowners to prove they do not harm water quality falls short of meeting this statutory obligation. Citing *National Mining Association v. Babbitt*, 172 F.3d 906, 910 (D.C.Cir.1999), they argue that EPA's rebuttable regulatory presumption of water quality impact from small construction activity is unreasonable because the agency has established no scientific likelihood that any given small site will affect water quality. EPA defends the waiver approach as fair and efficient, and argues that the Industrial Petitioners are confusing arguments about the limits of presumptions in evidentiary hearings conducted under the APA.⁵⁷

EPA is correct; the Phase II Rule creates no presumption applicable to an evidentiary hearing, and a regulation creating exemptions by waiver is reviewed under the familiar arbitrary and capricious standard. The use of waivers to allow permit exemptions for small sites unlikely to cause adverse impacts is reasonable under that standard.

[27] *c. Consistency.* Industry Petitioners also argue that EPA's decision to regulate all small construction sites under the Phase II Rule is arbitrary and capricious because EPA applied a different standard in regulating small construction projects than it applied to other potential sources of stormwater runoff subject to Phase II regulation.

Petitioners contend that EPA decided not to designate other potential sources identified in the § 402(p)(5) studies because it determined that there are not “sufficient data ... available at this time on which to make a determination of potential adverse water quality impacts for the category of sources.” 64 Fed. Reg. at 68,780. Petitioners contend this standard should have been applied to small construction sites as well, but EPA opted to *873 regulate these sources despite an alleged lack of coherent data on small site impacts as a general category.

EPA counters, once again, that it did have adequate data to regulate small construction sites. It contends that construction sites of all sizes have greater erosion rates than almost any other land use, and thus are not similarly situated to the potential polluters that EPA chose not to regulate at this time.⁵⁸ These sources include secondary industrial activities (for example, maintenance of construction equipment or local trucking for an unregulated facility such as a grocery store) and other unregulated commercial activities (for example, car and truck rental facilities). 64 Fed. Reg. at 68,779. EPA reports that it decided not to categorically regulate these potential sources based both on available data about water quality impacts and on the extent to which potentially adverse water quality impacts are mitigated by existing regulations to which these sources are already subject. *Id.* at 68,780.

We find no error. See *Marsh*, 490 U.S. at 378, 109 S.Ct. 1851. EPA acted reasonably in designating all small construction sites for Phase II regulation, and Industry Petitioners point to no record evidence that the nature of pollutant contributions from small construction site discharge is sufficiently similar to pollutants from the non-regulated sources to support the analogy they seek to draw. *New Orleans Channel 20 v. FCC*, 830 F.2d 361, 366 (D.C.Cir.1987) (an agency does not act irrationally when it treats parties differently, unless the parties are similarly situated). Sufficient evidence supports EPA's conclusion that small construction sites are not similar enough to these “other sources” to support petitioner's challenge.

G. Continuing (“Residual”) Designation Authority

The Industry Petitioners argue that EPA acted improperly in retaining authority to designate future sources of stormwater pollution for Phase II regulation as needed to protect federal waters. We disagree.

The Phase II Rule preserves authority for EPA and authorized States to designate currently unregulated stormwater dischargers as requiring permits under the Rule if future circumstances indicate that they warrant regulation “to protect water quality” under the terms of § 402(p)(6). 40 C.F.R. § 122.26(a)(9). In the Phase II Preamble, EPA explains this aspect of the Rule:

Under today's rule, EPA and authorized States continue to exercise the authority to designate remaining unregulated discharges composed entirely of stormwater for regulation on a case-by-case basis.... Individual sources are subject to regulation if EPA or the State, as the case may be, determines that the stormwater discharge from the source contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States. This standard is based on the text of section CWA 402(p). In today's rule, EPA believes, as Congress did in drafting section CWA 402(p)(2)(E), that individual instances of stormwater discharge might warrant special regulatory attention, but do not fall neatly into a discrete, predetermined category. Today's rule preserves the regulatory authority *874 to subsequently address a source (or category of sources) of stormwater discharges of concern on a localized or regional basis.

64 Fed. Reg. 68,781. The text of the Rule requires a discharger to obtain a permit if the NPDES permit authority determines that “stormwater controls are needed for the discharge based on wasteload allocations that are part of ‘total

maximum daily loads' (TMDLs⁵⁹) that address the pollutant(s) of concern” or that “the discharge, or category of discharges within a geographic area, contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.” 40 C.F.R. §§ 122.26(a)(9)(i)(C)-(D).

1. Statutory Authority

The Industry Petitioners contend that this “residual” designation authority, which would allow a NPDES permitting authority to require at any future time a permit from any stormwater discharge not already regulated, is *ultra vires*. Although they concede that Congress authorized case-by-case designation in § 402(p)(2)(E),⁶⁰ they argue that this authority attached only during the permitting moratorium that ended in 1994, prior to the Phase II rulemaking. They object that EPA has impermissibly designated a category of “not yet identified” sources and preserved authority to regulate them on a case-by-case basis indefinitely into the future.⁶¹

[28] Petitioners contend that § 402(p)(6)⁶² cannot rescue the residual authority because it does not authorize case-by-case identification of discharges to be regulated, and that Congress, had it intended otherwise, would have included language in § 402(p)(6) similar to the case-by-case authority explicitly granted in § 402(p)(2)(E).⁶³ They also contend that *875 continuing authority to designate sources based on waste load allocations that are part of TMDLs exceeds the scope of authority in § 402(p)(2), which nowhere mentions TMDLs. Finally, they argue that the categorical designation authorized by § 402(p)(6) is only permissible when based on the § 402(p)(5) studies and carried out in consultation with state and local authorities, but that the Rule allows future designations based on agency discretion unaccompanied by adequate demonstration that the source itself is a significant threat to water quality.

EPA counters that § 402(p)(6) authorized the designation, made on the basis of statutorily required sources of input and in consultation with the States, of a third class of discharges to be identified on location-specific bases by the NPDES permitting authority. EPA contends that Petitioners mistake the source of its authority for continuing designations as arising only from § 402(p)(2), discounting the full scope of its authority under § 402(p)(6). EPA argues that it permissibly interpreted § 402(p)(6) as allowing the residual designation authority because its language does not expressly preclude it, and because such authority is consistent with (and arguably required by) that section's mandate to establish a “comprehensive program” to protect water quality from adverse stormwater discharges. EPA maintains that the structure of § 402(p) reflects “Congress' intent to assure regulation of all problematic stormwater discharges as expeditiously as reasonably possible—not to limit EPA to a one-time-only opportunity to designate discharges for regulation.”

[29] We review EPA's interpretation of the statute it administers with deference, *Royal Foods Co.*, 252 F.3d at 1106, and affirm this aspect of the Phase II Rule as a legitimate exercise of regulatory authority conferred by § 402(p). The residual designation authority is grounded both on § 402(p)(6), which broadly authorizes a comprehensive program to protect water quality, and on § 402(p)(2)(5), which authorizes case-by-case designation of certain polluters and categories of polluters.

While not a blank check, § 402(p)(6) authorizes a comprehensive program that allows regional designation of polluting discharges that compromise water quality locally, even if they have not been established as compromising water quality nationally at the time Phase II was promulgated. In allowing continuing designation authority, EPA permissibly designated a third category of dischargers subject to Phase II regulation—those established locally as polluting U.S. waters—following all required studies and consultation with state and local officials. EPA reasonably determined that discharges other than those from small MS4s and construction sites were likely to require regulation “to protect water quality” in satisfaction of the § 402(p)(6) mandate. EPA reasonably determined that, although it lacked sufficient data to support nationwide, categorical *876 designation of these sources, particularized data might support their designations

on a more localized basis. EPA reasonably interpreted § 402(p)(6) as authorizing regional designation of sources and regional source categories, based on water quality standards including TMDLs.

Petitioners' § 402(p)(2)(5) argument (that EPA could not draw support for the residual designation authority from § 402(p)(2)(5) because such authority expired in 1994) is contradicted by the plain language of the statute. Respondent-intervenor NRDC correctly notes that § 402(p)(1) sets forth a permitting moratorium for stormwater discharges prior to 1994, and that § 402(p)(2) exempts certain categories of sources from that permitting moratorium, including those to be regulated on a case-by-case basis under § 402(p)(2)(5). Specifically, the statute provides that the 1994 date "shall not apply" to the five categories of discharges listed in § 402(p)(2). The termination of a moratorium that "shall not apply" to the continuing designation authority under § 402(p)(2)(5) cannot rescind EPA's authority to regulate sources in that category. Nothing in § 402(p) suggests that authority to designate these sources ends at any time, and EPA remains free to designate § 402(p)(2)(E) dischargers.

Finally, although Petitioners may be legitimately concerned that a permitting authority may designate a source without adequately establishing its eligibility, this issue must be addressed in the context of an actual case or controversy. Whether a NPDES authority may impose permitting requirements on a discharger without an adequate finding of polluting activity is not yet ripe for judicial review. *Thomas v. Anchorage Equal Rights Comm'n*, 220 F.3d 1134, 1141 (9th Cir.2000) ("A concrete factual situation is necessary to delineate the boundaries of what conduct the government may or may not regulate.").

2. Nondelegation Doctrine

[30] Industry Petitioners contend that EPA's interpretation of § 402(p) to allow the residual designation authority must be rejected because it would render the statute unconstitutional under the nondelegation doctrine. We deny petitioners' claim, both because it is not properly raised and because it rests on an interpretation explicitly overturned by the United States Supreme Court.

Petitioners base their contention on *American Trucking Ass'ns v. EPA*, 175 F.3d 1027, 1034 (D.C.Cir.1999),⁶⁴ in which the D.C. Circuit remanded a regulation under the nondelegation doctrine because, although EPA had applied reasonable factors in establishing the air quality standards in question, the agency had articulated no "intelligible principle" to channel its application of these factors. *Id.* Petitioners argue that if § 402(p) authorizes a NPDES permitting authority to require Phase II permitting of any stormwater source deemed to be a "significant contributor" of pollutants to U.S. waters, then that grant of authority likewise constitutes an unconstitutional delegation of legislative authority because—as did the *American Trucking* delegation—it "leaves [EPA] free to pick any point" at which a regulatory burden will attach. *Id.* at 1037.

However, in reversing *American Trucking*, the Supreme Court rejected the notion that an agency has the power to interpret a statute so as to either save it from being, or transform it into, an unconstitutional delegation. *Whitman v. Am. Trucking Ass'ns*, 531 U.S. 457, 473, 121 S.Ct. 903, 149 L.Ed.2d 1 (2001). Whether a statute delegates legislative power "is a question for the courts, and an agency's [interpretation] has no bearing upon the answer." *Id.* Petitioner's argument to the contrary rests on the very reasoning in *American Trucking* that was overturned in *Whitman*. The relevant question is not whether EPA's interpretation is unconstitutional, but whether the statute itself is unconstitutional—a challenge Industry Petitioners do not raise.

But even if the challenge were properly raised, § 402(p) would, like the Clean Air Act standard-setting provision at issue in *Whitman*, survive constitutional review. The Supreme Court has upheld against nondelegation attacks many similar statutes establishing nonquantitative standards. *Am. Power & Light Co. v. SEC*, 329 U.S. 90, 104, 67 S.Ct. 133, 91 L.Ed. 103 (1946) (upholding statute giving SEC authority to modify corporate structures so that they are not "unduly or unnecessarily complicate[d]" and do not "unfairly or inequitably distribute voting power among security holders");

Yakus v. United States, 321 U.S. 414, 419–20, 423–27, 64 S.Ct. 660, 88 L.Ed. 834 (1944) (upholding statute giving agency power to set prices that “will be generally fair and equitable”). In *Yakus*, the Court held that a statutory command to “effectuate the purposes” of the overall statutory scheme withstood scrutiny. *Id.* Section 402(p)(6)'s directive “to protect water quality” summarizes the central purpose of the Clean Water Act, “to restore and maintain the chemical, physical, and biological integrity of the Nation's waters,” 33 U.S.C. § 1251(a). It establishes a determinate criterion of the kind the Supreme Court upheld in *Yakus* and *American Power & Light*.

3. Notice and Comment

[31] Industry Petitioners also contend that, to the extent it allows the designation of entire categories of sources, rather than individual sources, the residual designation authority violates the APA, 5 U.S.C. § 553(b)(3), because EPA did not provide public notice that it was considering such a rule. *Ober v. EPA*, 84 F.3d 304, 315 (9th Cir.1996) (invalidating EPA rule where it deviated from proposal); *Shell Oil Co. v. EPA*, 950 F.2d 741, 746–47 (D.C.Cir.1991). Petitioners contend that while the proposed rule would have allowed case-by-case designation where an authority “determines that the discharge contributes to a violation,” 63 Fed. Reg. at 1635 (proposing 40 C.F.R. § 122.26(a)(9)(i)(D)), the final rule authorizes case-by-case designation where “the discharge, or category of discharges within a geographic area, contributes to a violation,” 40 C.F.R. § 122.26(a)(9)(i)(D).

EPA notes that it had proposed to promulgate continuing designation authority in some form, and points to elements in the proposed rule that explicitly envision the categorical designation of sources at the local/watershed level.⁶⁵

*878 According to the “logical outgrowth” standard, a final regulation must be “in character with the original proposal and a logical outgrowth of the notice and comments.” *Hodge*, 107 F.3d at 712. EPA emphasized that it was considering continuing designations based on watershed data rather than designating these sources on a national basis, and invited comment regarding this proposal. 63 Fed. Reg. at 1536. This supports the necessary relationship between the proposed and final rule.

H. Regulatory Flexibility Act

The Industry Petitioners contend that the Phase II Rule will impose substantial compliance costs on their members and other small entities, but that EPA failed to conduct the analysis required by the Regulatory Flexibility Act (“RFA”), 5 U.S.C. §§ 601–11. They argue that EPA seeks to excuse its noncompliance by falsely certifying that the Rule does not have a significant impact on a substantial number of small entities. 64 Fed. Reg. at 68,800. We are not persuaded.

[32] The RFA requires a federal agency to prepare a regulatory flexibility analysis and an assessment of the economic impact of a proposed rule on small business entities, 5 U.S.C. § 604, unless the agency certifies that the proposed rule will not have a “significant economic impact on a substantial number of small entities” and provides a factual basis for that certification, *id.* at § 605; *N.W. Mining Ass'n v. Babbitt*, 5 F.Supp.2d 9, 15–16 (D.D.C.1998).

EPA did certify that the Phase II Rule would not yield “significant impacts,” 64 Fed. Reg. at 68,800, but Petitioners contend this certification is erroneous because (1) EPA treats as “not significant” costs that are in fact significant, and (2) EPA failed to account for the entire universe of small entities affected (including small home construction contractors) and all significant costs to those entities. They urge that the failure to consider a significant segment of the affected small entity community requires invalidation of the Rule, citing *North Carolina Fisheries Ass'n v. Daley*, 27 F.Supp.2d 650, 659 (E.D.Va.1998) (certification failed to comply with RFA where agency ignored several categories of affected small entities), and *Northwest Mining*, 5 F.Supp.2d at 15 (RFA was violated where improper definition of small entity excluded analysis of affected entities).

EPA maintains that its certification was appropriate, and, moreover, that it has already voluntarily followed the additional RFA procedures that the Industry Petitioners now request. EPA argues that Petitioners have incorrectly

specified the costs that the small entities they represent will bear, referring erroneously to EPA's total annual compliance costs estimates for all entities, rather than to costs estimated for small entities as defined under the RFA. EPA maintains that it did consider economic impacts on small home construction contractors who might be denied discharge permits, and that it evaluated the annual costs of Phase II compliance associated with any land disturbance between one and five acres. 64 Fed. Reg. at 68,800–01.

Respondent-intervenor NRDC contends that Petitioners' reliance on measures of the aggregate impact of the Rule on small entities to determine compliance with the threshold test under the RFA fails as a matter of law because aggregate measures are not consistent with the statutory language setting out that test. NRDC notes that the plain language of § 605(b) sets out a three-component test indicating that EPA need not perform a regulatory flexibility analysis if it finds that the proposed *879 rule will not have: (1) “a significant economic impact” on (2) “a substantial number” of (3) “small entities.” 5 U.S.C. § 605(b). NRDC contends that EPA satisfied the statutory test, and that Petitioners' interpretation, which rewrites the test to omit the “substantial number” component, is erroneous.

[33] We believe NRDC correctly interprets the statute, *Marsh*, 490 U.S. at 378, 109 S.Ct. 1851, and that EPA reasonably certified that the Phase II Rule would not have a significant economic impact in compliance with the Regulatory Flexibility Act. We also conclude that, even if EPA had failed to properly comply with the procedural requirements of the RFA, its actual assessment of the Rule's economic impacts renders any defective compliance harmless error. In granting relief under RFA § 611, a court may order an agency “to take corrective action consistent with” the RFA and APA, including remand to the agency, 5 U.S.C. § 611(a)(4)(A), but EPA has already conducted the economic analyses Petitioners seek when it convened the “Small Business Advocacy Review Panel” before publishing notice of the proposed rule. 64 Fed. Reg. at 68,801. That Panel evaluated the Rule and considered the comments of small entities on a number of issues, consistent with the procedures described in RFA § 603. *Id.* Appendix 5 of EPA's preamble to the proposed rule explained provisions that had been designed to minimize impacts on small entities, based on advice and recommendations from the Panel. 63 Fed. Reg. 1615, 64 Fed. Reg. 68,811. Modifications for small entities included alternative compliance and reporting mechanisms responsive to the resources of small entities, simplified procedures, performance rather than design standards, and waivers.

Any hypothetical noncompliance would thus have been harmless, since the available remedy would simply require performance of the economic assessments that EPA actually made. Like the Notice and Comment process required in administrative rulemaking by the APA, the analyses required by RFA are essentially procedural hurdles; after considering the relevant impacts and alternatives, an administrative agency remains free to regulate as it sees fit. We affirm the Rule against this challenge.⁶⁶

III.

CONCLUSION

We conclude that the EPA's failure to require review of NOIs, which are the functional equivalents of permits under the Phase II General Permit option, and its failure to make NOIs available to the public or subject to public hearings contravene the express requirements of the Clean Water Act. We therefore remand these aspects of the Small MS4 General Permit option so that EPA may take appropriate action to comply with the Clean Water Act. We also remand so that EPA may consider in an appropriate proceeding the Environmental Petitioners' contention that § 402(p)(6) requires EPA to regulate forest roads. We affirm all other aspects of the Phase II Rule against the statutory, administrative, and constitutional challenges raised in this action.

*880 Petitions for Review GRANTED IN PART and DENIED IN PART.

TALLMAN, Circuit Judge, concurring in part and dissenting in part:

I concur in most of the majority's opinion, but I dissent from Section II.B, which remands the Phase II Rule because its system of general permits is "arbitrary and capricious." I believe EPA's design of a system of general permits supported by notices of intent was a reasonable exercise of EPA's administrative discretion. We must give deference to EPA's interpretation of the laws it is charged with enforcing, so long as EPA's reading of those laws is permissible. Because EPA acted reasonably in designing a National Pollutant Discharge Elimination System ("NPDES") based on general permits and supported by NOIs, I respectfully dissent from the court's decision to remand this portion of the Phase II Rule.

I

As the majority concedes, we evaluate EPA's interpretation of the Clean Water Act with deference. Majority Op. 13796. If Congress's intent is unclear as to whether a system of general permits supplemented by NOIs is allowed, we simply ask "whether EPA's interpretation is permissible." *Ober v. Whitman*, 243 F.3d 1190, 1193 (9th Cir.2001).

II

As an initial matter, then, we must ask if Congress was clear in its intent concerning the propriety of a system of general permits augmented by NOIs.

Five legislative commands guide this inquiry. First, [33 U.S.C. § 1342\(p\)\(6\)](#) charges EPA with creating a system to regulate stormwater discharges. Plainly, nothing in this section speaks to whether EPA may utilize a general permit approach in regulating stormwater discharge.

Second, [33 U.S.C. § 1311\(a\)](#) makes it illegal to discharge pollutants "except as in compliance" with several sections of the Clean Water Act. Again, nothing in this section addresses whether EPA may make use of general permits reinforced by NOIs.

Third, [33 U.S.C. § 1342](#) in general (as opposed to the limited charge in [section 1342\(p\)\(6\)](#) discussed above) authorizes EPA to issue NPDES permits, provided that the permits satisfy several conditions. But nothing in [section 1342](#) prohibits the use of a system of general permits.

Fourth, the Clean Water Act mandates that "a copy of each permit application and each permit issued under" the NPDES permitting program be made available to the public for inspection and photocopying. [33 U.S.C. § 1342\(j\)](#). The Act does not elaborate on this naked requirement. There is no explanation of the manner in which NPDES permits and applications are to be made publicly available. Nor does the Act define what constitutes a "permit" that would trigger these requirements.

And fifth, the Clean Water Act authorizes the issuance of an NPDES "permit" "after opportunity for public hearing." [33 U.S.C. § 1342\(a\)\(1\)](#). The Act does not provide a definition of "permit," nor does it further detail what triggers the requirement of a public hearing.

In short, the Clean Water Act fails to address the propriety of a general permit system, or whether NOIs ought to be considered "permits." Therefore, we should uphold EPA's creation of a system of general permits buttressed by NOIs so long as it is "permissible." See *881 *Chevron, U.S.A., Inc. v. Natural Resources Defense Council*, 467 U.S. 837, 843–

44, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984). Our duty to defer to EPA in such a situation is based on sound policy. Given the overwhelming challenge and complexity of the programs administered by federal agencies today, it is sensible to trust agencies with the design of those programs so long as the programs are reasonable interpretations of congressional mandates.

The central issues regarding EPA's general permit system are whether the Clean Water Act allows such a system and whether NOIs should be considered "permits." The resolution of these issues requires a complicated weighing of policies (e.g., administrative streamlining vs. robust inquiry) that is precisely what agencies are designed to do and courts are without the resources or expertise to do. "[I]f the statute is silent or ambiguous with respect to the specific issue, the question for the court is whether the agency's answer is based on a permissible construction." *Chevron*, 467 U.S. at 843, 104 S.Ct. 2778.

III

The Phase II Rule promulgates a system of general permits. EPA contemplated that these general permits will be issued on a watershed basis, with individual stormwater dischargers then filing NOIs to operate under general permits. The federal regulations implementing this system repeatedly emphasize that "[t]he use of general permits, instead of individual permits, reduces the administrative burden of permitting authorities, while also limiting the paperwork burden on regulated parties." 64 Fed. Reg. 68,722, 68,737, 68,762 (Dec. 8, 1999).

The use of a general permit system for the administration of the NPDES system has been considered and approved before. In *NRDC v. Costle*, 568 F.2d 1369 (D.C.Cir.1977), the District of Columbia Circuit considered a challenge to EPA's regulations under the Federal Water Pollution Control Act, which was the precursor to the Clean Water Act. In *Costle*, EPA sought approval of its design for the NPDES system. EPA had issued regulations exempting broad categories of point sources from the requirement that an NPDES permit be obtained before discharging into federal waters. Part of EPA's rationale in creating the exempted categories was that otherwise EPA would be overwhelmed by the administrative burden of issuing NPDES permits. *Id.* at 1377–79. The *Costle* court affirmed the lower court's rejection of these exemptions because the legislation in question plainly required that all point sources obtain some kind of NPDES permit. *Id.* But in rejecting EPA's regulations, the *Costle* court discussed the options available to EPA in promulgating an NPDES system that was considerate of the enormous burden such a system could impose on EPA. *Id.* at 1380–81. In particular, the court recommended "the use of area or general permits. *The Act allows such techniques.* Area-wide regulation is one well-established means of coping with administrative exigency." *Id.* at 1381 (emphasis added).

Against this backdrop, EPA's creation of a general permit system was entirely permissible. And if the creation of a general permit system is permissible, then it does not matter whether NOIs are given a public airing.

The majority contends that the general permit system prevents EPA from fulfilling its duty to make sure that municipalities do not discharge pollutants in violation of the Clean Water Act. The majority reasons that by failing to require EPA review of NOIs, the Rule fails to ensure that a regulated MS4's stormwater pollution control program will satisfy the Clean Water Act requirement that the MS4 "reduce *882 discharges to the maximum extent practicable." Majority Op. 855. But the majority's analysis ignores the effects of the general permit. By filing an NOI, a discharger obligates itself to comply with the limitations and controls imposed by the general permit under which it intends to operate. EPA mandates that all permits (including general permits) condition their issuance on satisfaction of pollution limitations imposed by the Clean Water Act. 40 C.F.R. § 122.44. In particular, EPA requires permits to satisfy the restrictions imposed by Clean Water Act section 307(a). *Id.* at § 122.44(b)(1). Therefore, the *general permit* imposes the obligations with which the discharger must comply (including applicable Clean Water Act standards), and EPA's decision not to review every NOI is not a failure to insure compliance with the Clean Water Act.

The majority also objects to EPA's general permit system because it fails to allow for sufficient public participation in the NOIs. Majority Op. 856–858. The majority's position fails to give deference to EPA and imposes the majority's own wishes instead. EPA would have been justified in creating a system entirely reliant on general or area permits. Its imposition of NOIs is an indulgence to certain policy prerogatives, namely public involvement and the collection of additional information. But the power to create a general permit system necessarily implies the power to require subordinate steps for NOIs that do not quite reach the level of inquiry associated with actual permits.

IV

We function as an adjudicator of disputes, not as a policy-making body. Where an agency promulgates rules after a deliberative process, it is incumbent upon us to respect the agency's decisions or else risk trivializing the function of that agency. In this case, EPA made a permissible decision to create a general permit program supported by NOIs. Therefore, I respectfully dissent from Section II.B of the majority's opinion.

- 12 [Regulations for Revision of the Water Pollution Control Program Addressing Storm Water Discharges](#), 64 Fed. Reg. 68,722 (Dec. 8, 1999) (codified at 40 C.F.R. pts. 9, 122, 123, and 124).
- 13 The Rule also allows a small MS4 to be regulated under an individual NPDES permit covering a nearby large or medium MS4, with provisions adapted to address the small MS4. 40 C.F.R. § 122.33(b)(3).

14 The text of that section reads: “Not later than October 1, 1993, [EPA], in consultation with state and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate.” 33 U.S.C. § 1342(p)(6).

15 The lesser category of “permits” may also be implied by the inclusion of “performance standards” in the list of possible program features.

16 “Where Congress includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion.” *Bates v. United States*, 522 U.S. 23, 29–30, 118 S.Ct. 285, 139 L.Ed.2d 215 (1997).

17 The Phase II Rule also allows a small MS4 to be regulated under an NPDES permit covering a nearby large or medium-sized MS4, with provisions adapted to address the small MS4. 40 C.F.R. § 122.33(b)(3).

18 The Municipal Petitioners argue that the Minimum Measures exceed EPA’s statutory authority under § 402(p) of the Clean Water Act. We disagree. The list of elements for a regulatory program that appears in § 402(p)(6) is nonexclusive, and EPA’s adoption of the Minimum Measures represents a permissible interpretation of its authority under § 402(p)(6). See *Chevron*, 467 U.S. at 843–44, 104 S.Ct. 2778.

The Municipal Petitioners argue that EPA is not entitled to *Chevron* deference, and that the Minimum Measures must be rejected absent a clear statement of congressional intent that EPA enact the Minimum Measures. The Municipal Petitioners argue that this clear statement requirement arises because there are “significant constitutional questions” about the permissibility of the Minimum Measures under the Tenth Amendment, and because the Minimum Measures alter “the federal-state framework by permitting federal encroachment upon a traditional state power.” *Solid Waste Agency of N. Cook County v. Army Corps of Eng’rs*, 531 U.S. 159, 173, 121 S.Ct. 675, 148 L.Ed.2d 576 (2001).

As we explain, because the Phase II Rule includes at least one alternative to the Minimum Measures, *i.e.*, the option of seeking a permit under 40 C.F.R. § 122.26(d), the Minimum Measures do not present significant Tenth Amendment problems demanding a clear statement of congressional intent. Nor does the Phase II Rule alter the federal-state balance. To the contrary, the option of seeking a permit under 40 C.F.R. § 122.26(d) maintains precisely the same federal-state balance as existed prior to the Phase II Rule. See, *e.g.*, *Natural Res. Def. Council v. EPA*, 966 F.2d 1292 (9th Cir.1992) (reviewing Phase I Rule); *Natural Res. Def. Council v. Costle*, 568 F.2d 1369, 1379 (D.C.Cir.1977) (denying EPA authority to exempt MS4s from regulation under the Clean Water Act). Furthermore, even if a clear statement of congressional intent were necessary, § 402(p) of the Clean Water Act is replete with clear statements that Congress intended EPA to require MS4s either to obtain NPDES permits or to stop discharging stormwater.

19 This subsection provides that permit seekers must, “[t]o the extent allowable under State, Tribal, or local law, effectively prohibit, through ordinance or other regulatory mechanism, non-stormwater discharges into your storm sewer systems and implement appropriate enforcement procedures and actions....” 40 C.F.R. § 122.34(b)(3)(ii)(B).

20 This subsection provides that permit seekers “must develop, implement, and enforce a program to reduce pollutants in any storm water runoff to your small MS4 from construction activities that result in a land disturbance of greater than or equal to one acre.... [The] program must include the development and implementation of, at a minimum: (A) An ordinance or other regulatory mechanism to require erosion and sediment controls, as well as sanctions to ensure compliance, to the extent allowable under State, Tribal, or local law; (B) Requirements for construction site operators to implement appropriate erosion and sediment control best management practices; (C) Requirements for construction site operators to control waste such as discarded building materials, concrete truck washout, chemicals, litter, and sanitary waste at the construction site that may cause adverse impacts to water quality; (D) Procedures for site plan review which incorporate consideration of potential water quality impacts; (E) Procedures for receipt and consideration of information submitted by the public, and (F) Procedures for site inspection and enforcement control measures.” 40 C.F.R. §§ 122.34(b)(4)(i)-(ii).

21 This subsection provides that permit seekers must “[u]se an ordinance or other regulatory mechanism to address post-construction runoff from new development and redevelopment projects [disturbing one acre or more] to the extent allowable under State, Tribal or local law.” 40 C.F.R. §§ 122.34(b)(5)(ii)(B).

22 EPA and NRDC also argue that the Minimum Measures are facially constitutional, and that the Phase II Rule presents no Tenth Amendment difficulties because operators of small MS4s may avoid stormwater regulation entirely by electing not to discharge stormwater into federal waters in the first place. In light of our holding with regard to the Alternative Permit option, we do not consider these arguments.

- 23 We decline to address two further arguments raised by EPA: first, that municipalities do not receive full First Amendment protections, under *Muir v. Alabama Educational Television Commission*, 688 F.2d 1033, 1038 n. 12 (5th Cir.1982) (*en banc*) (“Government expression, being unprotected by the First Amendment, may be subject to legislative limitation which would be impermissible if sought to be applied to private expression”), and *Aldrich v. Knab*, 858 F.Supp. 1480, 1491 (W.D.Wash.1994) (holding that “unlike private broadcasters, the state itself does not enjoy First Amendment rights”), and second, that even if the First Amendment were fully applicable, the Phase II regulations would satisfy them because MS4s may avoid the compulsion to speak by seeking a permit under the Alternative option, 40 C.F.R. § 122.26(d)(2)(iv), rather than under the Minimum Measures.
- 24 As a subsidiary matter, we note that it also falls short of compelling the MS4 to “regulate” third parties in contravention of the Tenth Amendment. Dispensing information to facilitate public awareness about safe disposal of toxic materials constitutes “encouragement,” not regulation.
- 25 “When the constitutional validity of a statute or regulation is called into question, it is a cardinal rule that courts must first determine whether a construction is possible by which the constitutional problem may be avoided.” *Meinhold*, 34 F.3d at 1476.
- 26 In its most recent treatment of compelled speech, the Supreme Court held that a generic advertising campaign violated free speech where the message was specific and antagonistic to the preferred advertising message of the plaintiff, and the regulation compelling participation was not part of a broader regulatory apparatus already constraining the plaintiff’s autonomy in the relevant arena. *United States Dep’t. of Agriculture v. United Foods*, 533 U.S. 405, 410–17, 121 S.Ct. 2334, 150 L.Ed.2d 438 (2001). The court distinguished this advertising program from the one in *Glickman* on the latter point: “[t]he program sustained in *Glickman* differs from the one under review in a most fundamental respect. In *Glickman* the mandated assessments for speech were ancillary to a more comprehensive program restricting market autonomy.” *Id.* at 411, 121 S.Ct. 2334. Although the Phase II Rule is not an advertising or marketing regulation, it constitutes a “comprehensive program” restricting the autonomy of MS4s in the relevant arena of controlling toxic discharges to storm sewers that drain to U.S. waters.
- 27 In deciding the similar question of whether a regulation impermissibly compelled speech by requiring manufacturers of mercury-containing products to inform consumers how to dispose safely of the toxic material, the Second Circuit held that “mandated disclosure of accurate, factual, commercial information does not offend the core First Amendment values of promoting efficient exchange of information or protecting individual liberty interests.” *Nat’l Elec. Mfrs. Ass’n v. Sorrell*, 272 F.3d 104, 114 (2d Cir.2001). What speech may follow from the Phase II directive will not be “commercial” in the same sense that manufacturer labeling is, but it will be similar in substance to *Sorrell* to the extent that it informs the public how to dispose safely of toxins. We think the policy considerations underlying the commercial speech treatment of labeling requirements, *see, e.g.*, the Federal Cigarette Labeling and Advertising Act, 15 U.S.C. §§ 1333–39, apply similarly in the context of the market-participant municipal storm sewer provider.
- 28 The Alternative option contains a public education requirement that is similar but even less specific, and therefore even less burdensome, than the requirements in the Minimum Measures. *See* § 122.26(d)(2)(iv)(B)(6) (requiring permit seekers to propose programs to counter illicit discharges, including a “description of educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials”).
- 29 Municipal Petitioners concede that “simplified individual permit application requirements” were discussed, but they contend that the permit requirements discussed are not sufficiently similar to those promulgated to establish a logical outgrowth.
- 30 EPA argues that the Environmental Petitioner’s challenge is not ripe for review because “the question of whether some general permit somewhere might fail to assure that pollutants are reduced to the maximum extent practicable is not ripe for review.” But we are not addressing the merits of any specific permit. Rather, the question before us “is purely one of statutory interpretation that would not benefit from further factual development of the issues presented.” *Whitman v. American Trucking*, 531 U.S. 457, 479, 121 S.Ct. 903, 149 L.Ed.2d 1 (2001). Specifically, we are addressing whether EPA, in promulgating the Phase II Rule, has accomplished the substantive controls for municipal stormwater that Congress mandated in § 402(p) of the Clean Water Act. As we held in *Natural Resources Defense Council v. EPA*, 966 F.2d at 1296–97, 1308, this question is ripe for review.
- 31 Petitioners suggest that EPA should be held to the standard it espoused to procure judicial approval for the Phase I program. In 1991, responding to NRDC’s assertion that the Phase I Rule failed to set “hard criteria” for review of MS4 stormwater programs, EPA responded that “inadequate proposals will result in the denial of permit applications.” Respondent’s Brief at 67, *Natural Res. Def. Council v. EPA*, 966 F.2d 1292 (9th Cir.1992) (Nos. 91–70200, 91–70176, & 90–70671). Petitioners contend that this court relied on that representation in ruling for EPA on that issue. *Natural Res. Def. Council v. EPA*, 966 F.2d at 1308 n. 17 (“Individual NPDES permit writers ... will decide whether application proposals are adequate....”).

32 That the Rule allows a permitting authority to review an NOI is not enough; every permit must comply with the standards articulated by the Clean Water Act, and unless every NOI issued under a general permit is reviewed, there is no way to ensure that such compliance has been achieved.

The regulations do require NPDES permitting authorities to provide operators of small MS4s with “menus” of management practices to assist in implementing their Minimum Measures, *see* 40 C.F.R. § 123.35(g), but again, nothing requires that the combination of items that the operator of a small MS4 selects from this “menu” will have the combined effect of reducing discharges to the maximum extent practicable.

Nor is the availability of citizen enforcement actions a substitute for EPA's enforcement responsibility, especially because, as discussed below, the Rule does not require that NOIs be publicly available. Absent review on the front end of permitting, the general permitting regulatory program loses meaning even as a procedural exercise.

33 EPA identifies no other general permitting program that leaves the choice of substantive pollution control requirements to the regulated entity, and we are not persuaded by the analogy it urges to the traditional model of general permitting (where NOIs routinely are not reviewed), because, as we have noted, the Phase II general permit model is substantially dissimilar.

34 In its petition for rehearing, EPA argues for the first time that because the regulations require NPDES Permitting Authorities to include in general permits “any additional measures necessary” to ensure that the maximum extent practicable standard is met, 40 C.F.R. §§ 123.35(h)(1), 123.35(f) (incorporating by reference the “maximum extent practicable” requirement of 40 C.F.R. §§ 122.34(a)), 122.34(f) (requiring small MS4s to comply with additional measures), the Phase II Rule ensures that discharges will be reduced to the maximum extent practicable.

The trouble with EPA's reasoning is that the Phase II Rule defines the “maximum extent practicable” standard in such a way that no “additional measures” will ever be necessary under § 123.35(h)(1). While a Permitting Authority may impose additional measures, nothing compels it to do so because, merely by implementing the best management practices that the operator of a small MS4 has chosen for itself, that small MS4 will already have met the “maximum extent practicable” standard. *See* 40 C.F.R. § 122.34(a).

35 EPA argues for the first time in its petition for rehearing that NOIs will be publicly available under 40 C.F.R. § 122.34(g)(2). Addressing operators of regulated small MS4s, this section provides: “You must make your records, including a description of your storm water management program, available to the public at reasonable times during regular business hours.” While this section does seem to provide for the public availability of a small MS4's records, we are troubled that nothing in EPA's initial briefs indicated that EPA considered NOIs to be subject to this section. We normally defer to an agency's interpretations of its own regulations, but we may decline to defer to the *post hoc* rationalizations of appellate counsel. *See, e.g., Martin v. Occupational Safety and Health Review Commission*, 499 U.S. 144, 150, 156, 111 S.Ct. 1171, 113 L.Ed.2d 117 (1991). If EPA intends this section to provide for the public availability of NOIs—for example because it intends NOIs to be among the records subject to this section—it may clarify on remand.

36 Agency determinations based on the record are reviewed under the “arbitrary and capricious” standard. 5 U.S.C. § 706(2)(A). The standard is narrow and the reviewing court may not substitute its judgment for that of the agency. *Marsh*, 490 U.S. at 378, 109 S.Ct. 1851. However, the agency must articulate a rational connection between the facts found and the conclusions made. *Washington v. Daley*, 173 F.3d 1158, 1169 (9th Cir.1999). The reviewing court must determine whether the decision was based on a consideration of the relevant factors and whether there has been a clear error of judgment. *Marsh*, 490 U.S. at 378, 109 S.Ct. 1851. The court may reverse under the “arbitrary and capricious” standard only if the agency:

has relied on factors which Congress has not intended it to consider, entirely failed to consider an important aspect of the problem, offered an explanation for its decision that runs counter to the evidence before the agency, or is so implausible that it could not be ascribed to a difference in view or the product of agency expertise.

Motor Vehicle Mfrs. Ass'n, 463 U.S. at 43, 103 S.Ct. 2856.

37 EPA explains that the Group A facilities were not regulated with the other Phase I sources because EPA used Standard Industrial Classification Index (SIC) codes in defining the universe of regulated industrial activities: “By relying on SIC codes, a classification system created to identify industries rather than environmental impacts from these industries [sic] discharges, some types of storm water discharges that might otherwise be considered ‘industrial’ were not included in the existing NPDES storm water program.” 64 Fed. Reg. at 68,779.

38 As discussed in footnote 37, Group A facilities were not regulated with other Phase I industrial sources based on a government coding system used to distinguish different types of industry (without reference to their similar environmental impacts). *See* 64 Fed. Reg. at 68,779.

39 “In identifying potential categories of sources for designation in today's notice, EPA considered designation of discharges from Group A and Group B facilities. EPA applied three criteria to each potential category in both groups to determine the need for designation: (1) The likelihood for exposure of pollutant sources included in that category, (2) whether such sources

were adequately addressed by other environmental programs, and (3) whether sufficient data were available at this time on which to make a determination of potential adverse water quality impacts for the category of sources. As discussed previously, EPA searched for applicable nationwide data on the water quality impacts of such categories of facilities....”

“EPA's application of the first criterion showed that a number of Group A and B sources have a high likelihood of exposure of pollutants.... Application of the second criterion showed that some categories were likely to be adequately addressed by other programs.”

“After application of the third criterion, availability of nationwide data on the various storm water discharge categories, EPA concluded that available data would not support any such nationwide designations. While such data could exist on a regional or local basis, EPA believes that permitting authorities should have flexibility to regulate only those categories of sources contributing to localized water quality impairments.... If sufficient regional or nationwide data become available in the future, the permitting authority could at that time designate a category of sources or individual sources on a case-by-case basis.” 64 Fed. Reg. at 68,780.

40 *Guidance Specifying Management Measures For Sources of Nonpoint Pollution in Coastal Waters*, EPA guidance paper 840-B-93-001c (Jan. 1993), available at <http://www.epa.gov/owow/nps/mmgil/index.html> (last visited Sept. 18, 2002) (“Coastal Waters”).

41 The provision provides in full as follows:

Silvicultural point source means any discernible, confined and discrete conveyance related to rock crushing, gravel washing, log sorting, or log storage facilities which are operated in connection with silvicultural activities and from which pollutants are discharged into waters of the United States. The term does not include non-point source silvicultural activities such as nursery operations, site preparation, reforestation and subsequent cultural treatment, thinning, prescribed burning, pest and fire control, harvesting operations, surface drainage, or road construction and maintenance from which there is natural runoff. However, some of these activities (such as stream crossing for roads) may involve point source discharges of dredged or fill material which may require a CWA section 404 permit (See 33 CFR 209.120 and part 233).

40 C.F.R. § 122.27(b)(1).

42 Nonpoint Source Pollution: The Nation's Largest Water Quality Problem, EPA841-F-96-004A (“Pointer # 1”) (“The latest *National Water Quality Inventory* indicates that agriculture is the leading contributor to water quality impairments, degrading 60 percent of the impaired river miles and half of the impaired lake acreage surveyed by states, territories, and tribes.”).

43 The Municipal Petitioners join in asserting the “regulatory basis” claim at Part II(F)(1).

44 NRDC argues that this claim is not only meritless for the reasons stated by EPA, but also frivolous, since industry petitioner National Association of Home Builders, as a member of the FACA Phase II Subcommittee, participated in and affirmed that such consultation took place.

45 See *Natural Res. Def. Council*, 966 F.2d at 1306 (remanding EPA's decision to regulate only construction sites disturbing more than five acres, after EPA had initially proposed to regulate all sites disturbing more than one acre).

46 The Industry Petitioners contend that EPA lacked authority to issue the Phase II regulation of construction sites based on a process EPA itself characterized as “separate and distinct” from the development of the Report to Congress. 64 Fed. Reg. at 68,732. They add that the Phase II Rule was not “based on” the 1999 Report ultimately requested by Congress in the Appropriations Act, since EPA's report in response was released on the very day that the final Phase II Rule was published.

47 Since we have already determined that AF & PA lacks standing to raise any of its claims, see Section D above, this discussion pertains to the remaining Industry Petitioner, National Association of Home Builders.

48 Although the issue of Municipal Petitioners' standing has not been raised by the parties, we are obliged to consider it to determine whether the case-or-controversy requirement of Article III is satisfied. See, e.g., *Boeing Co. v. Van Gemert*, 444 U.S. 472, 488 n. 4, 100 S.Ct. 745, 62 L.Ed.2d 676 (1980); *Juidice v. Vail*, 430 U.S. 327, 331, 97 S.Ct. 1211, 51 L.Ed.2d 376 (1977).

49 Even if the statute were ambiguous, we would defer to EPA's reasonable interpretation. *Chevron*, 467 U.S. at 843-44, 104 S.Ct. 2778.

50 The Industrial Petitioners argue that although the Phase I authorizing statute required EPA to regulate all sources associated with “industrial activity,” Congress expressly directed that the Phase II regulatory program be focused on sources that require regulation “to protect water quality.” They assert that because EPA's rule ignores the variability of water quality impacts nationwide, the Rule is not appropriately targeted on the protection of water quality.

51 Petitioners heavily critique two studies relied on by EPA that dealt specifically with the water quality impacts of small construction sites, noting that one concludes it is impossible to generalize about the impacts of small sites, Lee H. MacDonald, *Technical Justification for Regulating Construction Sites 1-5 Acres in Size*, July 22, 1997, and that the other merely concludes that small sites “can have” significant effects if erosion controls are not implemented, David W. Owens, et al., *Soil Erosion*

from *Small Construction Sites*. Petitioners contend that the latter study was managed with no erosion controls, intentionally producing worst-case sediment runoff and unreasonable estimates of actual sediment yields for small sites nationwide. EPA vigorously defends the studies.

- 52 NRDC adds that notwithstanding the clear interest of the National Association of Home Builders (“NAHB,” one of the Industry Petitioners), NAHB’s multi-year participation in the FACA Phase II Subcommittee Small Construction and No-Exposure Sites Work Group, and NAHB’s own submission of detailed comments on the proposed Rule, NAHB failed to enter into the administrative record any study contradicting the proposition that small construction sites cause water quality problems. NRDC points to the record’s showing that NAHB had itself proposed that regulation of construction sites of two acres or greater was appropriate, and contends that this is thus not a dispute over whether small construction sites should be regulated on a nationwide basis, but instead a technical disagreement over whether EPA should establish a one-acre threshold or a different threshold on a similar small scale.
- 53 Whitney Brown and Deborah Caraco, *Controlling Stormwater Runoff Discharges from Small Construction Sites: A National Review*, Task 5 Final Report submitted by the Center for Watershed Protection to the EPA Office of Wastewater Management, March 1997, IP E.R. 633, 643.
- 54 EPA adds that operators of small sites in areas unlikely to suffer adverse impacts may apply for a permit waiver if little or no rainfall is expected during the period of construction (the “rainfall erosivity waiver”) or if regulation is unnecessary based on a location-specific evaluation of water quality (the “water quality waiver”). 64 Fed. Reg. at 68,776.
- 55 EPA also implies permission to regulate for potential cumulative impacts of small sites from the past directive of this court. When the Phase I industrial discharge regulations were challenged, we found no record data to support that rule’s exemption of construction activities on less than five acres and held that small sites did not categorically qualify for a *de minimis* exemption because “even small construction sites can have a significant impact on local water quality.” *Natural Res. Def. Council*, 966 F.2d at 1306.
- 56 The “substantial evidence” standard requires a showing of such relevant evidence as a reasonable mind might accept as adequate to support a conclusion. *Eldred v. Massanari*, 253 F.3d 1152, 1156 (9th Cir.2001).
- 57 EPA further argues that even if the waiver provision were properly characterized as an evidentiary presumption, it should be sustained because the record demonstrates that the presumed fact of the water quality impact of small sites is more likely true than not.
- 58 EPA notes that the Phase II Rule empowers regional permitting authorities to regulate local sources of these types known to be responsible for harmful water quality impacts via the continuing “residual designation” authority (an aspect of the Rule that Petitioners also challenge).
- 59 TMDLs are pollutant loading limits established by NPDES permitting authorities under the Clean Water Act for waters that do not meet a water quality standard due to the presence of a pollutant. See 33 U.S.C. § 1313(d).
- 60 This section enables a NPDES permitting authority to designate for regulation: “[a] discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.” 33 U.S.C. § 1342(p)(2)(E).
- 61 Notably, Industry Petitioner NAHB itself took the position during Phase II Subcommittee proceedings that the power to designate additional sources survived the promulgation of the Phase II Rule. In a 1996 comment letter to EPA, NAHB asserted its understanding that “[t]he permitting authority still reserves the right to designate additional sources if they are shown to be a contributor of water quality impairment.” NRDC Supplemental Excerpts of Record at 58.
- 62 The full text of § 402(p)(6), which specifically authorizes the Phase II program, reads: “Not later than October 1, 1993, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate.” 33 U.S.C. § 1342(p)(6).
- 63 Petitioners further argue that even if EPA could preserve the case-by-case authority conferred in § 402(p)(2)(E), that section confers authority only to regulate “a discharge” determined to threaten water quality, not a category of discharges. However, we agree with respondent-intervenor NRDC’s argument that § 402(p)(2)(E) does not preclude EPA from designating entire categories of sources. Petitioners’ argument follows from its reliance on the fact that § 402(p)(2)(E) refers to “discharge” in the singular rather than the plural to conclude that EPA may only designate sources meeting the § 402(p)(2)(E) description on a case-by-case basis. But all five of the § 402(p)(2)(5) categories refer to “discharge” in the singular, even in reference to discharges clearly intended for categorical regulation, like “a discharge from a municipal separate storm sewer system serving

a population of 250,000 or more.” 33 U.S.C. § 1342(p)(2)(C). The error in petitioners' interpretation is exposed by 1 U.S.C. § 1, which provides that “[i]n determining the meaning of any Act of Congress, unless the context indicates otherwise—words importing the singular include and apply to several persons, parties, or things.”

64 This case was reversed in relevant part by the Supreme Court in *Whitman v. Am. Trucking Ass'ns*, 531 U.S. 457, 476, 121 S.Ct. 903, 149 L.Ed.2d 1 (2001).

65 “[T]oday's proposal would encourage [voluntary] control of stormwater discharges ... unless the discharge (or category of discharges) is individually or locally designated as described in the following section. The necessary data to support designation could be available on a local, regional, or watershed basis and would allow the NPDES permitting authority to designate a category of sources or individual sources on a case-by-case basis. If sufficient nationwide data [becomes] available in the future, EPA could at that time designate additional categories of industrial or commercial sources on a national basis. EPA requests comment on the three-pronged analysis used to assess the need to designate additional industrial or commercial sources and invites suggestions regarding watershed-based designation.” 63 Fed. Reg. at 1588.

66 Our consideration of the issue at all may be gratuitous, since petitioners failed to submit timely comment disputing the adequacy of EPA's consideration of economic impacts on small businesses proposed at 63 Fed. Reg. at 1605–07. *United States v. L.A. Tucker Truck Lines*, 344 U.S. 33, 37, 73 S.Ct. 67, 97 L.Ed. 54 (1952) (“[C]ourts should not topple over administrative decisions unless the administrative body not only has erred but has erred against objection made at the time appropriate under its practice.”).

446 F.3d 140

United States Court of Appeals,
District of Columbia Circuit.

FRIENDS OF THE EARTH, INC., Appellant

v.

ENVIRONMENTAL PROTECTION AGENCY, et al., Appellees.

No. 05-5015.

|
Argued March 2, 2006.

|
Decided April 25, 2006.

Synopsis

Background: Environmental group petitioned for review of decision of Environmental Protection Agency (EPA) to approve certain total maximum daily loads (TMDLs) for pollutants discharged into river, alleging that disputed TMDLs, which did not limit daily discharges, violated Clean Water Act (CWA) and implementing regulations. The Court of Appeals, [333 F.3d 184](#), dismissed petitions and transferred case. The United States District Court for the District of Columbia, [346 F.Supp.2d 182](#), granted EPA's motion for summary judgment. Environmental group appealed.

Holdings: The Court of Appeals, [Tatel](#), Circuit Judge, held that:

[1] CWA unambiguously required establishment of daily loads, and therefore EPA could not approve seasonal or annual loads;

[2] EPA could not avoid literal interpretation of statutory term “daily” on grounds of absurdity;

[3] purported tension between Combined Sewer Overflow Control (CSO) Policy and TMDLs did not provide basis for interpreting “daily” to mean timeframe other than daily; and

[4] District of Columbia's recent revisions to water quality standards for river did not render action moot.

Reversed and remanded with instructions.

Inasmuch as Congress charged Environmental Protection Agency (EPA) with implementation of Clean Water Act (CWA), review of EPA's interpretation of phrase “total maximum daily load” under CWA was governed

by *Chevron* standard. Federal Water Pollution Control Act Amendments of 1972, § 303(d)(1)(C), 33 U.S.C.A. § 1313(d)(1)(C).

[3 Cases that cite this headnote](#)

[2] Administrative Law and Procedure  Plain, literal, or clear meaning;ambiguity

When court reviews agency interpretation of statute under *Chevron* standard, if Congress has directly spoken to the precise question at issue, that is the end of the matter.

[2 Cases that cite this headnote](#)

[3] Environmental Law  Daily maximum load and limited segments

Given determination by Environmental Protection Agency (EPA) that all pollutants were suitable for calculation of total maximum daily loads (TMDLs), Clean Water Act (CWA) required District of Columbia to establish TMDL for each pollutant that contributed to river's violation of water quality standards for dissolved oxygen and turbidity. Federal Water Pollution Control Act Amendments of 1972, § 303(d)(1)(C), 33 U.S.C.A. § 1313(d)(1)(C).

[3 Cases that cite this headnote](#)

[4] Environmental Law  Daily maximum load and limited segments

Clean Water Act (CWA) unambiguously required establishment of total maximum daily loads (TMDLs) for waters failing to achieve water quality standards, and therefore Environmental Protection Agency (EPA) could not approve seasonal or annual loads, notwithstanding EPA's contention that some pollutants were poorly suited to daily load regulation; if certain pollutants were unsuitable for daily load limits, EPA could reconsider its earlier regulation providing that all pollutants were suitable for calculation of TMDLs. Federal Water Pollution Control Act Amendments of 1972, § 303(d)(1)(C), 33 U.S.C.A. § 1313(d)(1)(C).

[8 Cases that cite this headnote](#)

[5] Environmental Law  Daily maximum load and limited segments

Environmental Protection Agency (EPA) could not avoid the congressional intent clearly expressed in text of Clean Water Act (CWA) simply by asserting that its preferred approach would be better policy. Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., as amended, 33 U.S.C.A. § 1251 et seq.

[2 Cases that cite this headnote](#)

[6] Administrative Law and Procedure  Plain, literal, or clear meaning;ambiguity

Court cannot set aside statute's plain language simply because agency implementing statute thinks it leads to undesirable consequences in some applications.

[1 Cases that cite this headnote](#)

[7] Administrative Law and Procedure  Plain, literal, or clear meaning;ambiguity

To avoid a literal interpretation of statute it is charged with implementing on grounds of absurdity, agency must show either that, as a matter of historical fact, Congress did not mean what it appears to have said, or that, as a matter of logic and statutory structure, it almost surely could not have meant it.

[6 Cases that cite this headnote](#)

[8] Environmental Law  [Daily maximum load and limited segments](#)

Environmental Protection Agency (EPA) could not avoid, on absurdity grounds, literal interpretation of term “daily” as used in provision of Clean Water Act (CWA) requiring establishment of total maximum daily loads (TMDLs) for waters failing to achieve water quality standards, given EPA's concession that establishing daily loads made sense for many pollutants, precluding finding that, as a matter of logic and statutory structure, Congress almost surely could not have meant to require daily loads. Federal Water Pollution Control Act Amendments of 1972, § 303(d)(1)(C), [33 U.S.C.A. § 1313\(d\)\(1\)\(C\)](#).

[4 Cases that cite this headnote](#)

[9] Environmental Law  [Daily maximum load and limited segments](#)

Purported tension between flexible approach to water quality problems presented by combined stormwater-sewer systems taken by Combined Sewer Overflow Control (CSO) Policy and allegedly rigid mandates imposed by total maximum daily loads (TMDLs) required by Clean Water Act (CWA) for waters not achieving water quality standards did not provide basis for interpreting term “daily,” as used in CWA provision requiring TMDLs, to mean timeframe other than daily; subsequent amendments to CWA requiring permits for discharges from combined systems to conform to CSO Policy did not provide context in which phrase “total maximum daily load” had to be read, and nothing in CSO Policy validated interpreting “daily” to mean something else. Federal Water Pollution Control Act, § 402(q), [33 U.S.C.A. § 1342\(q\)](#); Federal Water Pollution Control Act Amendments of 1972, § 303(d)(1)(C), [33 U.S.C.A. § 1313\(d\)\(1\)\(C\)](#).

Attorneys and Law Firms

[Howard I. Fox](#) argued the cause and filed the briefs for appellant.

[John A. Bryson](#), Attorney, U.S. Department of Justice, argued the cause for federal appellees. With him on the brief were Greer S. Goldman, Attorney, and [James H. Curtin](#) and Stefania D. Shamet, Counsels, U.S. Environmental Protection Agency.

David E. Evans argued the cause for appellee District of Columbia Water and Sewer Authority. With him on the brief was [Stewart T. Leeth](#).

[F. Paul Calamita](#), John A. Sheehan, and [Alexandra Dapolito Dunn](#) were on the brief for amici curiae Combined Sewer Overflow Partnership and National Association of Clean Water Act Agencies in support of appellees.

Before: [TATEL](#), [BROWN](#), and [GRIFFITH](#), Circuit Judges.

Opinion

[TATEL](#), Circuit Judge.

**3 This case poses the question whether the word “daily,” as used in the Clean Water Act, is sufficiently pliant to mean a measure of time other than daily. Specifically, the Environmental Protection Agency (EPA) takes the position that Congress, in requiring the establishment of “total maximum daily loads” to cap effluent discharges of “suitable” pollutants into highly polluted waters, left room for EPA to establish seasonal or annual loads for those same pollutants. The district court found EPA's contextual and policy arguments sufficiently persuasive to disregard the plain meaning of “daily,” but we do not. Daily means daily, nothing else. If EPA believes using daily loads for certain types of pollutants has undesirable consequences, then it must either amend its regulation designating all pollutants as “suitable” for daily loads or take its concerns to Congress. We therefore reverse and remand with instructions to vacate the non-daily “daily” loads.

I.

Flowing from Maryland through the northeast and southeast quadrants of Washington, D.C. and a stone's throw away from the site for the Washington Nationals' new stadium, the Anacostia River has “the dubious distinction of being one of the ten most polluted rivers in the country.” *Kingman Park Civic Ass'n v. EPA*, 84 F.Supp.2d 1, 4 (D.D.C.1999). As such, it falls far short of meeting water quality standards set pursuant to the Clean Water Act (CWA) and designed to protect designated recreational uses like fishing and swimming. 33 U.S.C. § 1311(b)(1)(C) (mandating the achievement of water quality standards); 47 D.C.Reg. 284, 284–85 (Jan. 21, 2000) (to be codified at [D.C. Mun. Regs., tit. 21, § 1101.1](#)) (establishing water quality standards **4 *143 based on uses including “primary contact recreation” and “consumption of fish & shellfish”).

For bodies of water, like the Anacostia River, that fail to meet applicable water quality standards, the CWA requires states (defined by the Act to include the District of Columbia, 33 U.S.C. § 1362(3)) to establish a “total maximum daily load,” or TMDL,

for those pollutants which the Administrator identifies ... as suitable for such calculation. Such load shall be established at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.

Id. § 1313(d)(1)(C). In 1978, EPA issued a regulation deeming “[a]ll pollutants ... suitable for the calculation of total maximum daily loads.” [Total Maximum Daily Loads Under Clean Water Act](#), 43 Fed.Reg. 60,662, 60,665 (Dec. 28, 1978) (emphasis added). This regulation remains unchanged today.

Once approved by EPA, TMDLs must be incorporated into permits allocating effluent discharges among all pollution sources, including point sources (like factories) and non-point sources (like storm-water run-off). *See* 33 U.S.C. § 1342(a)(1) (authorizing EPA to issue effluent discharge permits “upon condition that such discharge will meet ... [among other requirements] all applicable requirements under section[] 1311”); *id.* § 1311(b)(1)(C) (mandating the achievement of “any more stringent limitation, including those necessary to meet water quality standards”); *see also* 40 C.F.R. § 122.44(d)(1)(vii)(B) (requiring permitting authority to set effluent limits “consistent with the assumptions and requirements of any available wasteload allocation for the discharge prepared by the State and approved by EPA”). If pollution loads stay below the applicable TMDLs for a given body of water, then in theory the body of water should achieve its water quality standards.

This case arises from the violation of two of the Anacostia's key water quality standards. First, because the river contains many biochemical pollutants that consume oxygen, its dissolved oxygen level has sunk below the applicable water quality standard, putting the river's aquatic life at risk of suffocation. Second, the river is murkier than the applicable turbidity standard allows, stunting the growth of plants that rely on sunlight and impairing recreational use.

To remedy these violations, EPA approved one TMDL limiting the *annual* discharge of oxygen-depleting pollutants, and a second limiting the *seasonal* discharge of pollutants contributing to turbidity. *See* Letter from Rebecca Hanmer, Dir., Water Prot. Div., EPA, to James R. Collier, Chief, Bureau of Env't. Quality (Dec. 14, 2001) (oxygen-depleting substances); EPA, Total Suspended Solids, Total Maximum Daily Loads for the Anacostia River, D.C. (Mar.2002) (total suspended solids). Neither TMDL limited daily discharges.

Appellant Friends of the Earth (FoE) petitioned this court for review of the TMDL approvals, arguing (among other things) that the CWA requires the establishment of “total maximum *daily* loads,” not seasonal or annual loads. Concluding that we lacked subject matter jurisdiction, we transferred the case to the [U.S. District Court, *Friends of the Earth v. EPA*, 333 F.3d 184 \(D.C.Cir.2003\)](#), which granted EPA's motion for summary judgment, [Friends of the Earth v. EPA](#), 346 F.Supp.2d 182 (D.D.C.2004). The court held that “the text of the CWA does not **5 *144 reveal a clear congressional intent to require EPA to calculate only daily TMDLs,” *id.* at 189, found EPA's resolution of the resulting ambiguity reasonable, and concluded that the TMDL approvals were neither arbitrary nor capricious. This appeal followed.

II.

[1] [2] Because Congress has charged EPA with the CWA's implementation, we review the agency's interpretation of the phrase “total maximum daily load” under [Chevron U.S.A. Inc. v. Natural Resources Defense Council, Inc.](#), 467 U.S. 837, 842–43, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984). *See* [Natural Res. Def. Council, Inc. v. EPA](#), 859 F.2d 156, 202 (D.C.Cir.1988) (applying *Chevron* to EPA's interpretation of the CWA). Critically, if “Congress has directly spoken to the precise question at issue ..., that is the end of the matter.” [Chevron](#), 467 U.S. at 842–43, 104 S.Ct. 2778. So here.

[3] We begin, as always, with the statute's language. For waters that fail to achieve water quality standards, *see* 33 U.S.C. § 1313(d)(1)(A), the CWA provides that “[e]ach state shall establish ... the total maximum *daily* load, for those pollutants which the Administrator identifies ... as suitable for such calculation,” *id.* § 1313(d)(1)(C) (emphasis added). Because EPA has found “[a]ll pollutants ... suitable for the calculation of total maximum daily loads,” 43 Fed.Reg. at 60,665, it follows that the CWA requires the District of Columbia to establish a “total maximum daily load” for each pollutant that contributes to the Anacostia's violation of the dissolved oxygen and turbidity standards.

[4] Nothing in this language even hints at the possibility that EPA can approve total maximum “seasonal” or “annual” loads. The law says “daily.” We see nothing ambiguous about this command. “Daily” connotes “every day.” *See Webster's Third New International Dictionary* 570 (1993) (defining “daily” to mean “occurring or being made, done, or acted upon every day”). Doctors making daily rounds would be of little use to their patients if they appeared seasonally or annually. And no one thinks of “[g]ive us this day our daily bread” as a prayer for sustenance on a seasonal or annual basis. *Matthew* 6:11 (King James).

When asked at oral argument how Congress could have spoken more clearly, EPA's counsel responded that “one way it could do that ... is to say that the ... total maximum daily load shall be expressed as a quantity per day or average per day or something like that.” Tr. of Oral Arg. at 19. But a load expressed as a quantity per day is no different from a daily load, and we have never held that Congress must repeat itself or use extraneous words before we acknowledge its unambiguous intent. *See New York v. EPA*, 443 F.3d 880, 883 (D.C.Cir.2006) (refusing to require Congress “to use superfluous words”). If Congress wanted seasonal or annual loads, it could easily have authorized them by calling for “total maximum daily, seasonal, or annual loads.” Or by providing for the establishment of “total maximum loads,” Congress could have left a gap for EPA to fill. Instead, Congress specified “total maximum *daily* loads.” We cannot imagine a clearer expression of intent.

EPA urges us to read the phrase in context, emphasizing that TMDLs must “be established at a level necessary to implement the applicable water quality standards.” 33 U.S.C. § 1313(d)(1)(C). According to EPA, “[t]hat Congress took the step of elaborating on what a TMDL should be is a strong indication that it was not using the word ‘daily’ as the exclusive ****6 *145** expression of its intent on the question of how a TMDL should be established.” Fed. Appellees' Br. 26–27. This cannot be right. As written, the statute requires states to establish daily loads that *also* meet applicable water quality standards. The existence of two conditions does not authorize EPA to disregard one of them.

As additional context—albeit context appearing nowhere in the TMDL approvals themselves—EPA tells us that some pollutants are poorly suited to daily load regulation. Discharges of such pollutants, EPA explains, might not immediately affect water quality, but could instead inflict environmental damage over a longer period. For example, oxygen-demanding pollutants could deplete dissolved oxygen quite slowly, perhaps over the course of an entire year. Similarly, turbidity-increasing pollutants could impede plant growth if they block sunlight over the course of a growing season. In EPA's view, bodies of water can therefore sometimes tolerate large one-day discharges of certain pollutants without violating water quality standards or causing undue environmental harm, so long as seasonal or annual discharges remain relatively low. According to EPA, the many ways in which pollutants damage the environment call for a more flexible understanding of “daily.”

[5] Even if we assume the validity of this argument, EPA must address it to Congress, which, by using the word “daily,” settled the question of what period a “total maximum load” should cover. EPA may not “avoid the Congressional intent clearly expressed in the text simply by asserting that its preferred approach would be better policy.” *Engine Mfrs. Ass'n v. EPA*, 88 F.3d 1075, 1089 (D.C.Cir.1996). The agency's claim might have more force if, for some class of pollutants, daily load limits conflicted with the requirement that TMDLs “implement the applicable water quality standards.” 33 U.S.C. § 1313(d)(1)(C). But all water bodies can achieve water quality standards if their TMDLs are set low enough—if all else fails, they can be set to zero—and the two requirements therefore never conflict with each other.

[6] Nor can we set aside a statute's plain language simply because the agency thinks it leads to undesirable consequences in some applications. We made this abundantly clear in *Sierra Club v. EPA*, 294 F.3d 155 (D.C.Cir.2002), where EPA took a strikingly similar position to the one it advances here. There, we considered a challenge to EPA's extension of the District of Columbia's attainment deadline for achieving the Clean Air Act's ozone standards. *Id.* at 158. Justifying the extension, EPA asserted that because the District's ozone pollution came entirely from upwind states, holding the District to a strict statutory deadline would be unnecessarily punitive and run counter to the Act's purposes. *Id.* at 160. “[A]s a matter of logic and statutory structure,” EPA argued, “Congress almost surely could not have meant to require the Agency to treat the Washington Area as one of severe nonattainment merely because its attainment has been temporarily stalled due to transported pollution.” *Id.* at 161 (internal quotation marks and citations omitted).

Roundly rejecting this argument, we explained:

The most reliable guide to congressional intent is the legislation the Congress enacted and, as we have seen, the Act itself reveals no intention to allow for an extension in circumstances like those affecting the Washington Area. Similarly, it is of no moment that the extension may be, as the Agency claims, “a reasonable accommodation of ... the statutory attainment date and interstate transport **7 *146 provisions”; it is not the accommodation the Congress made.

Id. (omission in original). Here, as in *Sierra Club*, EPA advances a reasonable policy justification for deviating from an environmental statute's plain language. Our answer is the same: “[t]he most reliable guide to congressional intent is the legislation the Congress enacted.” *Id.* Just as EPA may not extend a deadline in contravention of a plain congressional mandate, the agency may not fulfill its obligation to establish daily loads by approving non-daily loads, whatever the wisdom of that “accommodation.”

We have even less sympathy for EPA's argument given that the agency's predicament is largely of its own creation. The CWA requires the establishment of TMDLs only for “suitable” pollutants, 33 U.S.C. § 1313(d)(1)(C), and although a 1978 EPA regulation provides that “[a]ll pollutants ... are suitable for the calculation of total maximum daily loads,” 43 Fed.Reg. at 60,665, EPA conceded at oral argument that nothing forecloses the agency from reconsidering that position. Given that EPA's entire justification for establishing non-daily loads is that certain pollutants are unsuitable for daily load limits, we are at a loss as to why it neglected this straightforward regulatory fix in favor of the tortured argument that “daily” means something other than daily. At any rate, EPA can change its regulation; we cannot rewrite the Clean Water Act.

[7] [8] As a fallback, EPA asks us to adopt the reasoning in *Natural Resources Defense Council, Inc. v. Muszynski*, 268 F.3d 91 (2d Cir.2001), in which the Second Circuit held that reading “daily” to mean daily would be “absurd, especially given that for some pollutants, effective regulation may best occur by some other periodic measure than a diurnal one.” *Id.* at 99. In this circuit, however, agencies seeking to demonstrate absurdity have an exceptionally high burden: “for the EPA to avoid a literal interpretation ..., it must show either that, as a matter of historical fact, Congress did not mean what it appears to have said, or that, as a matter of logic and statutory structure, it almost surely could not have meant it.” *Engine Mfrs. Ass'n*, 88 F.3d at 1089. Here, EPA has failed to make such a showing for a simple reason: as counsel conceded at oral argument, establishing daily loads makes perfect sense for many pollutants. Given this concession, we see no way to conclude that “as a matter of logic and statutory structure, [Congress] almost surely could not have meant” to require daily loads.

[9] We next consider the argument raised by intervenor District of Columbia Water and Sewer Authority (WASA), which operates sewers and wastewater treatment facilities in the District. As background, WASA explains that, as in many older municipalities, part of the District has a “combined sewer system” in which stormwater and sewage travel through the same pipes to the same treatment plants. While this system effectively minimizes pollution discharges most of the time, heavy storms cause it to overflow. When that happens, as it does with some regularity in the District, raw sewage spills from the overtaxed sewer system into nearby waters, including the Anacostia River.

Acknowledging that combined sewer systems pose delicate water quality problems, Congress amended the CWA in 2000 to provide that every permit issued “for a discharge from a municipal combined storm and sanitary sewer shall conform to the Combined Sewer Overflow Control Policy [CSO Policy] signed by the Administrator on April 11, 1994.” Consolidated Appropriations Act, 2001, [Pub.L. No. 106–554](#), app. D § 112(a) (2000), 114 Stat. **8 *147 2763, 2763A–224 (codified at [33 U.S.C. § 1342\(q\)](#)). The CSO Policy, in turn, represents EPA's effort to guide municipalities seeking to minimize effluent discharge from their existing sewage infrastructure. To that end, the CSO Policy requires municipalities with combined sewer systems to develop long-term control plans reflecting hard-nosed assessments of cost-effective ways to regulate overflow discharges. [Combined Sewer Overflow \(CSO\) Control Policy](#), 59 Fed.Reg. 18,688, 18,691–94 (Apr. 19, 1994). The CSO Policy explicitly “recognizes the site-specific nature of [combined sewer overflows] and their impacts and provides the necessary flexibility to tailor controls to local situations. Major elements of the Policy ensure that CSO controls are cost effective and meet the objectives and requirements of the CWA.” *Id.* at 18,688.

As WASA sees it, the tension between the CSO Policy's flexible approach and the rigid mandates imposed by daily loads forms part of the context within which we must interpret the word “daily.” Indeed, WASA asserts, insisting on daily loads would require the “complete separation” of the sewer system—that is, the prohibitively expensive construction of independent stormwater and sewage pipes. WASA Br. 22 (emphasis omitted). It is for this reason that WASA, like EPA, urges us to interpret the word “daily” more flexibly than normally permitted in the English language.

[10] WASA's argument suffers from at least three defects. First, we fail to see the relevance of the 106th Congress's opinion about what the 92nd Congress meant by “daily.” While we agree that we must read the phrase “total maximum daily load” in context, *see FDA v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120, 132–33, 120 S.Ct. 1291, 146 L.Ed.2d 121 (2000), the context here is the Clean Water Act Amendments of 1972, Pub.L. No. 92–500, 86 Stat. 816, not amendments enacted almost three decades later. “[P]ost-enactment legislative history,” after all, “is not only oxymoronic but inherently entitled to little weight.” *Cobell v. Norton*, 428 F.3d 1070, 1075 (D.C.Cir.2005); *see also United States v. Price*, 361 U.S. 304, 313, 80 S.Ct. 326, 4 L.Ed.2d 334 (1960) (holding that “the views of a subsequent Congress form a hazardous basis for inferring the intent of an earlier one”). Second, the tension between the CSO Policy's flexibility and the perceived rigidity of daily loads exists only if daily loads must of necessity be set so low that any storm-event discharge would violate them—a premise unsupported anywhere in the record. And third, even if the record did support the premise, nothing in the CSO Policy validates interpreting “daily” to mean something other than daily. Quite to the contrary, the policy expressly states that following it must “ultimately result in compliance with the requirements of the CWA,” 59 Fed.Reg. at 18,691, and one of those requirements is establishing daily loads for waters failing to meet water quality standards.

[11] [12] We come next to EPA's last-ditch contention—raised only the day before oral argument—that the District of Columbia's recent revisions to the Anacostia's water quality standards moot this case. *See* 52 D.C.Reg. 9621, 9628–29 (Oct. 28, 2005) (to be codified at [D.C. Mun. Regs., tit. 21, § 1104.8](#)). Both WASA and FoE disagree, as do we. The TMDLs at issue here have never been repealed or superseded, and EPA regulations require discharge permits to incorporate effluent limitations “consistent with the assumptions and requirements of *any available wasteload allocation* for the discharge prepared by the State and approved by EPA” pursuant to its authority to approve TMDLs. [40 C.F.R. § 122.44\(d\)\(1\)\(vii\)\(B\)](#) **9 *148 (emphasis added). Because we assume agencies follow their own regulations, *see Citizens to Preserve Overton Park, Inc. v. Volpe*, 401 U.S. 402, 415, 91 S.Ct. 814, 28 L.Ed.2d 136 (1971) (agencies are “entitled to a presumption of regularity”), the case is hardly moot.

III.

For the foregoing reasons, we remand to the district court with instructions to vacate EPA's approvals. *See* [5 U.S.C. § 706\(2\)](#) (providing that “the reviewing court shall ... hold unlawful and set aside agency action, findings, and conclusions found to be ... arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law”). In doing so, we

recognize that neither FoE nor EPA wants the Anacostia River to go without dissolved oxygen and turbidity TMDLs. The district court retains some remedial discretion, however, and the parties may move to stay the district court's order on remand to give either the District of Columbia a reasonable opportunity to establish daily load limits or EPA a chance to amend its regulation declaring "all pollutants ... suitable" for daily loads. See *Cement Kiln Recycling Coal v. EPA*, 255 F.3d 855, 872 (D.C.Cir.2001) ("Because this decision leaves EPA without standards regulating [hazardous waste conductor] emissions, EPA ... may file a motion to delay issuance of the mandate to request either that the current standards remain in place or that EPA be allowed reasonable time to develop interim standards."); *Nat'l Treasury Employees Union v. Horner*, 854 F.2d 490, 501 (D.C.Cir.1988) ("Because we are not in the best position to determine the shortest reasonable timetable ..., we remand the case for [the] district court to establish, in consultation with the parties, an expedited schedule for further rulemaking proceedings consistent with this opinion."); Kristina Daugirdas, Note, *Evaluating Remand Without Vacatur*, 80 N.Y.U. L.Rev. 278, 307 & n.141 (2005) (recommending as a remedial option "vacating the agency rules upon remand, but delaying issuance of the mandate for a limited period of time"). The merits of any such motion are of course the district court's to evaluate.

IV.

To sum up, nothing in this record tempts us to substitute EPA's policy preference for the CWA's plain language. While Congress almost assuredly never considered combined sewer systems when enacting the CWA, it spoke unambiguously in requiring daily loads. If adherence to this mandate leads to unintended consequences for water quality or for municipal pocketbooks, interested parties should direct their concerns to EPA or to Congress, either of which can take steps to mitigate any fallout from the CWA's unambiguous directive. We, however, have no such authority.

So ordered.

Synopsis

Background: Environmental organizations brought action against California municipal entities, alleging that they were discharging urban stormwater runoff into navigable waters in violation of the Clean Water Act (CWA). The United States District Court for the Central District of California, [A. Howard Matz, J.](#), entered a partial final judgment in favor of defendants, and plaintiffs appealed. On denial of rehearing en banc, the Court of Appeals, [673 F.3d 880](#), affirmed in part, reversed in part, and remanded. Certiorari was granted. — U.S. —, [133 S.Ct. 710](#), [184 L.Ed.2d 547](#), reversed and remanded.

[Holding:] On remand, the Court of Appeals, Milan D. Smith, Jr., held that pollution exceedances detected at monitoring stations of County of Los Angeles and Los Angeles County Flood Control District were sufficient to establish County defendants' liability as matter of law for violations of terms of their National Pollutant Discharge Elimination System (NPDES) permit.

Reversed and remanded.

In nearly all cases, a National Pollutant Discharge Elimination System (NPDES) permit is required before anyone may lawfully discharge a pollutant from a point source into the navigable waters of the United States. Clean Water Act, §§ 301(a), 402, [33 U.S.C.A. §§ 1311\(a\), 1342](#).

[9 Cases that cite this headnote](#)

[2] [Environmental Law](#) 🔑 [Reporting, notice, and monitoring requirements](#)

Pollution exceedances detected at monitoring stations of County of Los Angeles and Los Angeles County Flood Control District were sufficient to establish County defendants' liability as matter of law for violations

of terms of their National Pollutant Discharge Elimination System (NPDES) permit issued pursuant to Clean Water Act, since data collected at monitoring stations was intended to determine whether permittees were in compliance with permit, and extrinsic considerations, including Clean Water Act's monitoring requirements, also supported that conclusion; limiting permittee's responsibility to "discharge[s] for which it is the operator" applied to appropriate remedy for permit violations, not to liability for those violations. Clean Water Act, § 402(a)(2), (k), 33 U.S.C.A. § 1342(a)(2), (k); 40 C.F.R. §§ 122.26(d)(2)(i)(F), 122.41(a), 122.44(i)(1); Restatement (Second) of Contracts § 203(a).

[4] Federal Courts 🔑 [Law of the case in general](#)

Federal Courts 🔑 [Mandate](#)

Earlier judgment by Court of Appeal was not final, and it could not be considered the law of the case, since mandate in case had not issued.

[3 Cases that cite this headnote](#)

[5] Environmental Law 🔑 [Violations and liability in general](#)

A permittee violates the CWA when it discharges pollutants in excess of the levels specified in the permit, or where the permittee otherwise violates the permit's terms. Clean Water Act, § 402(k), 33 U.S.C.A. § 1342(k); 40 C.F.R. § 122.41(a).

[10 Cases that cite this headnote](#)

[6] Environmental Law 🔑 [Discharge of pollutants](#)

If the language of a National Pollutant Discharge Elimination System (NPDES) permit, considered in light of the structure of the permit as a whole, is plain and capable of legal construction, the language alone must determine the permit's meaning; however, if the permit's language is ambiguous, a court may turn to extrinsic evidence to interpret its terms. Clean Water Act, § 402(k), 33 U.S.C.A. § 1342(k); 40 C.F.R. § 122.41(a).

[13 Cases that cite this headnote](#)

[7] Environmental Law 🔑 [Discharge of pollutants](#)

A court must give effect to every word or term in a National Pollutant Discharge Elimination System (NPDES) permit and reject none as meaningless or surplusage; therefore, a court must interpret the permit in a manner that gives full meaning and effect to all of the permit's provisions and avoid a construction of the permit that focuses only on a few isolated provisions. Clean Water Act, § 402(k), 33 U.S.C.A. § 1342(k); 40 C.F.R. § 122.41(a); Restatement (Second) of Contracts § 203(a).

[5 Cases that cite this headnote](#)

[8] Environmental Law 🔑 [Discharge of pollutants](#)

One of a court's obligations in interpreting an National Pollutant Discharge Elimination System (NPDES) permit is to determine the intent of the permitting authority; thus, a court gives significant weight to any extrinsic evidence that evinces the permitting authority's interpretation of the relevant permit. Clean Water Act, § 402(a)(2), (k), 33 U.S.C.A. § 1342(a)(2), (k); 40 C.F.R. §§ 122.26(d)(2)(i)(F), 122.41(a), 122.44(i)(1).

[5 Cases that cite this headnote](#)

[9] Environmental Law 🔑 Discharge of pollutants

A court does not defer to the interpretation of CWA National Pollutant Discharge Elimination System (NPDES) permit by a regional board. Clean Water Act, § 402, 33 U.S.C.A. § 1342.

Before: [HARRY PREGERSON](#) and [MILAN D. SMITH, JR.](#), Circuit Judges, and [H. RUSSEL HOLLAND](#), Senior District Judge.*

OPINION

[M. SMITH](#), Circuit Judge:

Plaintiffs–Appellants Natural Resources Defense Council and Santa Monica Baykeeper (collectively, the Plaintiffs) filed suit against the County of Los Angeles and the Los Angeles County Flood Control District (collectively, the County Defendants) alleging that the County Defendants are discharging polluted stormwater in violation of the terms of their National Pollutant Discharge Elimination System (NPDES) permit, issued pursuant to the Federal Water Pollution Control Act (the Clean Water Act, Act, or CWA), 86 Stat. 816, codified as amended at 33 U.S.C. §§ 1251, *et seq.* The district court granted the County Defendants' motion for summary judgment, reasoning that Plaintiffs failed to prove that any *individual* defendant had discharged pollutants in violation of the Clean Water Act, where Plaintiffs' only evidence of violations was monitoring data taken downstream of the County Defendants' (and others') discharge points, as opposed to data sampled at the relevant discharge points themselves. On appeal, we affirmed the district court's judgment in part and reversed in part. *Natural Res. Def. Council, Inc. v. Cnty. of L.A.*, 673 F.3d 880 (9th Cir.2011). On January 8, 2013, the Supreme Court reversed our judgment and remanded this case to us for further proceedings. *L.A. Cnty. Flood Control Dist. v. Natural Res. Def. Council, Inc.*, — U.S. —, 133 S.Ct. 710, 184 L.Ed.2d 547 (2013). On February 19, 2013, we ordered the parties to file supplemental briefs addressing the implications of the Supreme Court's ruling. Having considered the Supreme Court's ruling, the responses of the parties in their supplemental briefs, and other matters noted ***1197** herein, we now conclude that the pollution exceedances detected at the County Defendants' monitoring stations are sufficient to establish the County Defendants' liability for NPDES permit violations as a matter of law. Accordingly, we once again reverse the district court's grant of summary judgment in favor of the County

Defendants, and remand to the district court for a determination of the appropriate remedy for the County Defendants' violations.

FACTUAL BACKGROUND

I. Stormwater Runoff in Los Angeles County

Stormwater runoff is surface water generated by precipitation events, such as rainstorms, which flows over streets, parking lots, commercial sites, and other developed parcels of land. When stormwater courses over urban environs, it frequently becomes polluted with contaminants, such as “suspended metals, sediments, algae-promoting nutrients (nitrogen and phosphorus), floatable trash, used motor oil, raw sewage, [and] pesticides[.]”¹ *Env'tl. Def. Ctr., Inc. v. EPA*, 344 F.3d 832, 840 (9th Cir.2003). This polluted stormwater often makes its way into storm drains and sewers, which “generally channel collected runoff into federally protected water bodies,” *id.*, such as rivers and oceans. Consequently, stormwater runoff has been recognized as “one of the most significant sources of water pollution in the nation, at times comparable to, if not greater than, contamination from industrial and sewage sources.” *Id.* (citation omitted).

Los Angeles County (the County) is home to more than 10 million people and covers a sprawling amalgam of populous incorporated cities and significant swaths of unincorporated land. The Los Angeles County Flood Control District (the District) is a public entity governed by the Los Angeles County Board of Supervisors and the Los Angeles County Department of Public Works. The District comprises 84 cities and some unincorporated areas of the County. The County and the District are separate legal entities.

Each city in the District operates a municipal separate storm sewer system (ms4)² that is composed of gutters, catch basins, storm drains, and pipes that collect and convey stormwater. The County also operates its own ms4 that primarily collects and conveys stormwater runoff in the unincorporated areas of the County. Each of these ms4s connects to the District's substantially larger ms4, an extensive flood-control and storm-sewer infrastructure *1198 consisting of approximately 500 miles of open channels and 2,800 miles of storm drains. Because a comprehensive map of the County Defendants' storm sewer system does not exist, no one knows the exact size of the LA MS4³ or the locations of all of its storm drain connections and outfalls.⁴ But while the number and location of storm drains and outfalls are too numerous to catalog, it is undisputed that the LA MS4 collects and channels stormwater runoff from across the County. It is similarly undisputed that untreated stormwater is discharged from LA MS4 outfalls into various watercourses, including the Los Angeles and San Gabriel Rivers.⁵ These rivers, in turn, drain into several coastal waters, including, among others, the Santa Monica Bay and the Pacific Ocean.

II. The County Defendants' NPDES Permit

[1] Section 301(a) of the CWA prohibits the “discharge of any pollutant” from any “point source” into “navigable waters” unless the discharge complies with certain other sections of the CWA.⁶ See 33 U.S.C. § 1311(a). One of those sections is section 402, which provides for the issuance of NPDES permits. 33 U.S.C. § 1342. In nearly all cases, an NPDES permit is required before anyone may lawfully discharge a pollutant from a point source into the navigable waters of the United States. See *Arkansas v. Oklahoma*, 503 U.S. 91, 101–02, 112 S.Ct. 1046, 117 L.Ed.2d 239 (1992); *Environmental Law Handbook* 323 (Thomas F.P. Sullivan ed., 21st ed.2011).

Congress has empowered the EPA Administrator to delegate NPDES permitting authority to state agencies. 33 U.S.C. § 1342(b). Pursuant to this authority, the EPA has authorized the State of California to develop water quality standards and issue NPDES permits. Pursuant to the Porter–Cologne Water Quality Control Act, California state law designates the State Water Resources Control Board and *1199 nine regional boards as the principal state agencies charged with enforcing federal and state water pollution laws and issuing NPDES permits. See *Cal. Water Code* §§ 13000 *et seq.* The

entity responsible for issuing permits in the Los Angeles area is the California State Water Resources Control Board for the Los Angeles Region (the Regional Board).

On June 18, 1990, the Regional Board first issued an NPDES permit (the Permit) regulating stormwater discharges by the County, the District, and the 84 incorporated municipalities in the District (collectively, the Permittees). The Permit has subsequently been renewed or amended several times, and the version of the Permit at issue in this litigation came into force on December 13, 2001.⁷ The Permit covers all relevant discharges that occur “within the boundaries of the Permittee municipalities ... over which [the municipalities have] regulatory jurisdiction as well as unincorporated areas in Los Angeles County within the jurisdiction of the Regional Board.”

The Permit runs to 99 pages and contains a myriad of rules, regulations, and conditions regarding the Permittees' operation of the LA MS4. However, only two sets of the Permit's provisions are particularly relevant to this appeal; those contained in Part 2, titled “Receiving Water Limitations,” and those contained in the section titled “Monitoring and Reporting Program.”

Part 2 places limits on the type and amount of pollutants the Permittees may lawfully discharge from the LA MS4. Specifically, Part 2 prohibits “discharges from the [LA] MS4 that cause or contribute to the violation of the Water Quality Standards or water quality objectives.”⁸ The Permit defines “Water Quality Standards and Water Quality Objectives” as “water quality criteria contained in the Basin Plan, the California Ocean Plan, the National Toxics Rule, the California Toxics Rule, and other state or federal approved surface water quality plans.”⁹ Succinctly put, the Permit incorporates the pollution standards promulgated in other agency documents such as the Basin Plan, and prohibits stormwater discharges that “cause or contribute to the violation” of those incorporated standards. The Permit further provides that the Permittees “shall comply” with the LA MS4 discharge prohibitions outlined in Part 2 “through timely implementation of control measures and other actions to reduce pollutants in the [LA MS4] discharges....”

The Monitoring and Reporting Program complements Part 2. Under that program, the Permittees are required to monitor the impacts of their LA MS4 discharges on water quality and to publish the results of all pollution monitoring at least annually. The primary objectives of the monitoring program include “assessing compliance” with the Permit, “measuring and improving the effectiveness” of the Los Angeles Countywide Stormwater Quality Management Program (SQMP),¹⁰ and assessing “the environmental impact of urban runoff on the receiving waters in the County.”

One of the principal ways the Permittees are required to monitor their LA MS4 discharges is through mass-emissions monitoring. Mass-emissions monitoring measures all constituents present in water, and the readings give a cumulative picture of the pollutant load in a waterbody. The Permit requires the District, as Principal Permittee, to conduct mass-emissions monitoring at seven enumerated monitoring stations located throughout the County. The District is also responsible for analyzing the resulting data and submitting a comprehensive report of its findings.¹¹ According to the Permit, the purpose of mass-emissions monitoring is to: (1) estimate the mass emissions from the LA MS4; (2) assess trends in the mass emissions over time; and (3) determine if the LA MS4 is contributing to exceedances of Water Quality Standards by comparing the monitoring results to the applicable pollution standards promulgated in the Basin Plan and similar documents.

The Permittees sited a mass-emissions monitoring station in both the Los Angeles and San Gabriel Rivers (collectively, the Monitoring Stations). The Los Angeles River monitoring station is located in a channelized portion of the Los Angeles River that runs through the City of Long Beach.¹² The San Gabriel River monitoring station is located in a channelized portion of the San Gabriel River that runs through the City of Pico Rivera. The Monitoring Stations are located downstream of numerous LA MS4 outfalls controlled by the County Defendants and various other non-party Permittees.

Between 2002 and 2008, when this case was filed, the District published annual monitoring reports that contain the data that the District collected at the Monitoring Stations. According to those reports, the Monitoring Stations identified 140 separate exceedances of the Permit's water quality standards, including excessive levels of aluminum, copper, cyanide, zinc, and fecal coliform bacteria in both the Los Angeles and San Gabriel Rivers. The County Defendants do not dispute the accuracy of the monitoring data.

PROCEDURAL BACKGROUND

Using the monitoring data self-reported by the District, Plaintiffs cataloged the *1201 water quality exceedances measured in various receiving waters in the County. Beginning on May 31, 2007, Plaintiffs sent a series of notice letters to the County Defendants informing them that Plaintiffs believed that they were violating the terms of the Permit.¹³ Specifically, Plaintiffs contended that the water quality exceedances documented in the District's monitoring reports demonstrated liability under the CWA. Dissatisfied with the County Defendants' response to these letters, Plaintiffs brought this citizen-enforcement action on March 3, 2008. After the district court dismissed certain elements of the Plaintiffs' initial complaint because notice of the Permit violations was defective, Plaintiffs sent the County Defendants an adequate notice letter on July 3, 2008.

Plaintiffs filed their First Amended Complaint on September 18, 2008. In the complaint, Plaintiffs asserted six causes of action under the CWA. Four of the Plaintiffs' claims, which the district court designated the "Watershed Claims," were initially before us on appeal. The first three Watershed Claims allege that, beginning in 2002 or 2003, the County Defendants caused or contributed to exceedances of water quality standards in the Santa Clara River (Claim 1), the Los Angeles River (Claim 2), and the San Gabriel River (Claim 3), in violation of 33 U.S.C. §§ 1311(a), 1342(p). The fourth Watershed Claim alleges that, beginning in 2002, County Defendants caused or contributed to exceedances of the water quality standards and violated the total maximum daily load limits in Malibu Creek. All of the Watershed Claims rest on the same premise: (1) the Permit incorporates water-quality limits for each receiving water body; (2) mass-emissions monitoring stations have recorded pollutant loads in the receiving water bodies that exceed those permitted under the relevant standards; (3) an exceedance constitutes non-compliance with the Permit and, thereby, the Clean Water Act; and (4) County Defendants, as holders of the Permit and joint operators of the LA MS4, are liable for these exceedances under the Act.

Early in the litigation, the district court bifurcated liability and remedy, and all proceedings related to remedy were stayed until liability was determined. On March 2, 2010, the district court denied all parties' cross-motions for summary judgment with regard to liability. *NRDC v. Cnty. of L.A.*, No. CV 08-1467-AHM, 2010 WL 761287 (C.D.Cal. Mar. 2, 2010), amended on other grounds, 2011 WL 666875 (C.D.Cal. Jan. 27, 2011). Although the district court accepted Plaintiffs' arguments that the Permit "clearly prohibits 'discharges from the [LA] MS4 that cause or contribute to the violation of Water Quality Standards or water quality objectives,'" 2010 WL 761287, at *6, and that mass-monitoring stations "are the proper monitoring locations to determine if the [LA] MS4 is contributing to exceedances" of the Water Quality Standards or water quality objectives, *id.*, the district court held that Plaintiffs were improperly attempting to use the District's self-reported monitoring data to establish liability without presenting evidence that any individual defendant was discharging pollutants that "cause[d] or contribute[d] to the violation" of the water quality standards. *Id.* The district court observed that although "the District is responsible for the pollutants in the [LA] MS4" at the time they pass the Monitoring Stations, "that does not necessarily determine the question of whether the water passing by these points is a *1202 'discharge' within the meaning of the Permit and the Clean Water Act." *Id.* at *7. Unable to determine whether any of the County Defendants' upstream LA MS4 outflows were contributing polluted stormwater to navigable waters, the district court stated that "Plaintiffs would need to present some evidence (monitoring data or an admission) that some amount of a standards-exceeding pollutant is being discharged through at least one District outlet." *Id.* at *8.

Following supplemental briefing, the district court again determined that “Plaintiffs failed to present evidence that the standards-exceeding pollutants passed through the Defendants’ [LA] MS4 *outflows* at or near the time the exceedances were observed. Nor did Plaintiffs provide any evidence that the mass emissions stations themselves are located at or near a Defendant’s outflow.” The district court thus entered summary judgment for the County Defendants on the Watershed Claims.

On June 9, 2010, the district court entered a partial final judgment on the Watershed Claims under [Fed.R.Civ.P. 54\(b\)](#). The court reasoned that an interlocutory appeal was appropriate because the Watershed Claims are “factually and legally severable” from the Plaintiffs’ other claims and “[t]he parties and the Court would benefit from appellate resolution of the central legal question underlying the watershed claims: what level of proof is necessary to establish defendants’ liability.” The Plaintiffs timely appealed.

On appeal, the Plaintiffs pressed the same legal argument they advanced in the district court: that the data published in the County Defendants’ annual monitoring reports—data which shows undisputed pollution exceedances at the mass-emissions monitoring stations—conclusively establishes the County Defendants’ liability for Permit violations as a matter of law. Like the district court, we rejected this contention and held that the Plaintiffs must submit at least some additional proof of the County Defendants’ *individual* contributions to the measured Permit violations. *See Natural Res. Def. Council*, 673 F.3d at 898 (noting that “the Clean Water Act does not prohibit ‘undisputed’ exceedances; it prohibits ‘discharges’ that are *not* in compliance with the Act.... While it may be undisputed that exceedances have been detected, responsibility for those exceedances requires proof that some entity discharged a pollutant.”).

Nonetheless, we held the District liable for CWA violations in the Los Angeles and San Gabriel Rivers because we concluded that the mass-emissions monitoring stations for each river are “located in a section of the [LA] MS4 owned and operated by the District” and that “when pollutants were detected, they had not yet exited the point source into navigable waters.” *Id.* at 899. We further clarified that “[t]he [relevant] discharge from a point source occurred when the still-polluted stormwater flowed out of the concrete channels where the Monitoring Stations are located, through an outfall, and into the navigable waterways. We agree with Plaintiffs that the precise location of each outfall is ultimately irrelevant because there is no dispute that [the LA] MS4 eventually adds stormwater to the Los Angeles and San Gabriel Rivers downstream from the Monitoring Stations.” *Id.* at 900.

On October 11, 2011, the District filed a petition for writ of certiorari, 2011 WL 4874090, which was granted in part on June 25, 2012. *L.A. Cnty. Flood Control Dist. v. Natural Res. Def. Council, Inc.*, — U.S. —, 133 S.Ct. 23, 183 L.Ed.2d 673 (2012). The Supreme Court granted review in order to answer a single question: “Under the CWA, does a discharge of pollutants occur when polluted water *1203 flows from one portion of a river that is navigable water of the United States, through a concrete channel or other engineered improvement in the river, and then into a lower portion of the same river?” *L.A. Cnty. Flood Control Dist.*, 133 S.Ct. at 712–13 (internal quotation marks omitted). The Court answered in the negative, and re-affirmed its holding in *S. Fla. Water Mgmt. Dist. v. Miccosukee Tribe of Indians*, 541 U.S. 95, 124 S.Ct. 1537, 158 L.Ed.2d 264 (2004), that “pumping polluted water from one part of a water body into another part of the same body is not a discharge of pollutants under the CWA.” *L.A. Cnty. Flood Control Dist.*, 133 S.Ct. at 711. The Court did not address any other basis for the District’s potential liability for Permit violations and instead reversed our prior judgment and remanded this case to us for additional proceedings. *Id.* at 713–14.

JURISDICTION AND STANDARD OF REVIEW

We have jurisdiction under 28 U.S.C. § 1291. We review the district court’s grant of summary judgment de novo. *Assoc. to Protect Hammersley, Eld, & Totten Inlets v. Taylor Res., Inc.*, 299 F.3d 1007, 1009 (9th Cir.2002).

DISCUSSION

I.

[2] Plaintiffs return from the Supreme Court with the same argument they have consistently advanced throughout this litigation—that the County Defendants' monitoring data establishes their liability for Permit violations as a matter of law. We previously rejected this argument, *see Natural Res. Def. Council*, 673 F.3d at 898, and the Supreme Court explicitly declined to address it.¹⁴

On remand, the County Defendants argue that we may not reconsider our earlier decision because it has become “final,” and because “reconsideration of Appellants' monitoring argument would fly in the face of the finality given to decisions of this Court after denial of rehearing or expiration of the time in which to seek such further review.” Alternatively, the County Defendants argue that our earlier disposition should be left undisturbed because it has become the law of the case. The County Defendants are mistaken on both counts.

[3] [4] “No opinion of this circuit becomes final until the mandate issues[.]” *Carver v. Lehman*, 558 F.3d 869, 878 (9th Cir.2009); *see also Fed R.App. P. 41(c)*, 1998 Adv. Comm. Note (“A court of appeals' judgment or order is not final until issuance of the mandate[.]”). Thus, we have explained that a “court of appeals may modify or revoke its judgment at any time prior to issuance of the mandate, sua sponte or by motion of the parties.” *United States v. Fournai*, 910 F.2d 617, 620 (9th Cir.1990). The mandate in this case has not issued. Consequently, our earlier judgment is not final. *Carver*, 558 F.3d at 878. Nor can it be considered the law of the case. *See id.* at 878 n. 16 (“[U]ntil the mandate issues, an opinion is not fixed as settled Ninth Circuit law, and reliance on the opinion is a gamble.” (citation omitted)); *see also *1204 Key Enters. of Del., Inc. v. Venice Hosp.*, 9 F.3d 893, 898 (11th Cir.1993) (“[B]ecause the panel's mandate had not issued, the panel's decision was never the ‘law of the case.’ ”). Put simply, we are free to reconsider the merits of Plaintiffs' argument, and we now do so.

II.

[5] Where a permittee discharges pollutants in compliance with the terms of its NPDES permit, the permit acts to “shield” the permittee from liability under the CWA. 33 U.S.C. § 1342(k). The permit shield is a major benefit to a permittee because it protects the permittee from any obligation to meet more stringent limitations promulgated by the EPA unless and until the permit expires. *See Piney Run Pres. Ass'n v. Cnty. Comm'rs of Carroll Cnty.*, 268 F.3d 255, 266–69 (4th Cir.2001); *see also The Clean Water Act Handbook* 67 (Mark A. Ryan ed., 3rd ed.2011). Of course, with every benefit comes a cost: a permittee violates the CWA when it discharges pollutants in excess of the levels specified in the permit, or where the permittee otherwise violates the permit's terms. *See Russian River Watershed Prot. Comm. v. City of Santa Rosa*, 142 F.3d 1136, 1138 (9th Cir.1998); *see also 40 C.F.R. § 122.41(a)* (“Any permit noncompliance constitutes a violation of the Clean Water Act and is grounds for [an] enforcement action”); *Nw. Envtl. Advocates v. City of Portland*, 56 F.3d 979, 986 (9th Cir.1995) (noting that “[t]he plain language of [the CWA citizen suit provision] authorizes citizens to enforce all permit conditions”); *Environmental Law Handbook* 327 (“The primary purpose of NPDES permits is to establish enforceable effluent limitations.”).

Plaintiffs allege that the County Defendants are violating the terms of the Permit by discharging pollutants into the Los Angeles and San Gabriel Rivers in excess of the permitted levels. County Defendants do not dispute that they are discharging pollutants from the LA MS4 into these rivers. Nor can the County Defendants dispute that their own monitoring reports demonstrate that pollution levels recorded at the Monitoring Stations are in excess of those allowed under the Permit. Rather, the County Defendants focus on their perception of the evidentiary burden Plaintiffs must

satisfy in order to hold any individual defendant liable for these pollution exceedances. Plaintiffs contend that they may rely exclusively on the District's monitoring reports to establish liability. County Defendants, however, argue that they cannot be held liable for Permit violations based solely on the data published in the District's monitoring reports because: (1) the mass-emissions monitoring required under the Permit was “neither designed nor intended” to measure the compliance of any Permittee; and (2) the monitoring data cannot parse out precisely *whose* discharge(s) contributed to any given exceedance because the Monitoring Stations sample pollution levels downstream from a legion of discharge points (e.g., LA MS4 outfalls) controlled by various Permittees and other non-party entities, as opposed to at the discharge points themselves.

[6] To resolve the parties' contentions, we must interpret the language of the Permit. Although the NPDES permitting scheme can be complex, a court's task in interpreting and enforcing an NPDES permit is not—NPDES permits are treated like any other contract. See *Nw. Env'tl. Advocates*, 56 F.3d at 982 (“We review the district court's interpretation of the 1984 permit as we would the interpretation of a contract or other legal document.”).¹⁵ If the language of the permit, considered in light of the structure of the permit as a whole, “is plain and capable of legal construction, the language alone must determine the permit's meaning.” *Piney Run Pres. Ass'n*, 268 F.3d at 270 (citation omitted). If, however, the permit's language is ambiguous, we may turn to extrinsic evidence to interpret its terms. *Id.* Our sole task at this point of the case is to determine what Plaintiffs are required to show in order to establish *liability* under the terms of *this particular* NPDES permit.¹⁶

A. The Plain Language of the Permit

“[NPDES permit] terms are to be given their ordinary meaning, and when the terms of a [permit] are clear, the intent of the parties must be ascertained from the [permit] itself.” *Klamath Water Users Protective Ass'n. v. Patterson*, 204 F.3d 1206, 1210 (9th Cir.1999). Plaintiffs argue that the text of the County Defendants' Permit is clear, and provides that the District's mass-emissions monitoring data will be used to assess the County Defendants' compliance with the Permit, and particularly Part 2, which prohibits “discharges from the [LA] MS4 that cause or contribute to the violation of Water Quality Standards or water quality objectives.” The County Defendants dispute this notion, and first claim that the District's mass-emissions monitoring is intended to serve only a hortatory purpose. As County Defendants state, “the mass emission monitoring program ... neither measures nor was designed to measure any individual permittee's compliance with the Permit.” This argument is clearly belied by the text of the Permit and is rejected.

The Permit establishes a “Monitoring and Reporting Program” with the stated objectives of *both* characterizing stormwater discharges *and* assessing compliance with water-quality standards. The Permit language could not be more explicit in this regard, stating that “[a]ssessing compliance with this [Permit]” is one of the “primary objectives of the Monitoring Program.” “The fact that the parties dispute a [permit's] meaning does not establish that the [permit] is ambiguous; it is only ambiguous if reasonable people could find its terms susceptible to more than one interpretation.” *Klamath Water Users Protective Ass'n*, 204 F.3d at 1210. No reasonable person could find even the slightest ambiguity in the phrase “[t]he primary objectives of the Monitoring Program include, but are not limited to: Assessing compliance with this [Permit].” Consequently, we decline to embrace the County Defendants' initial argument that “the mass-emission monitoring stations, as a matter of fact, do not assess the compliance of any permittee with the Permit....”

County Defendants' alternative argument, while more facially appealing, fares no better. Specifically, the County Defendants point to certain Permit language they claim shows that the Regional Board did not intend for the mass-emissions monitoring data to be used to establish liability for Permit violations. For instance, *1206 the County Defendants note that the Permit provides that “[e]ach permittee is responsible only for a discharge for which it is the operator.” County Defendants also cite language in Part 2 that reads: “Discharges from the [LA] MS4 of storm water, or non-storm water, *for which a Permittee is responsible* for [sic], shall not cause or contribute to a condition of nuisance.” The County Defendants read this language as precluding a finding of liability against them—or any other Permittee

—without independent monitoring data establishing that discharges from a particular entity's ms4 outfalls exceeded standards.

[7] “[A] court must give effect to every word or term” in an NPDES permit “and reject none as meaningless or surplusage....” *In re Crystal Props., Ltd., L.P.*, 268 F.3d 743, 748 (9th Cir.2001) (quotations omitted); *see also* Restatement (Second) of Contracts § 203(a) (1981) (“[A]n interpretation which gives a reasonable, lawful, and effective meaning to all the terms is preferred to an interpretation which leaves a part unreasonable, unlawful, or of no effect.”). “Therefore, we must interpret the [Permit] in a manner that gives full meaning and effect to all of the [Permit's] provisions and avoid a construction of the [Permit] that focuses only on” a few isolated provisions. *In re Crystal Props.*, 268 F.3d at 748.

The County Defendants' interpretation of the Permit ultimately must be rejected because it would create an unreasonable result. Reading the clause that “[e]ach permittee is responsible only for a discharge for which it is the operator” to preclude use of the mass-emission monitoring data to “assess [] compliance with this [Permit]” would render the monitoring provisions of the Permit largely meaningless. Under the County Defendants' reading of the Permit, individual Permittees could discharge an unlimited amount of pollutants from the LA MS4 but never be held liable for those discharges based on the results of the mass-emissions monitoring, even though that monitoring is explicitly intended to assess whether Permittees are in compliance with Part 2's discharge limitations. We are unwilling to accept such a strained interpretation. *See Mastrobuono v. Shearson Lehman Hutton, Inc.*, 514 U.S. 52, 63, 115 S.Ct. 1212, 131 L.Ed.2d 76 (1995) (holding that courts should be guided by the “cardinal principle of contract construction: that a document should be read to give effect to all of its provisions and to render them consistent with each other”). A better reading of the Permit's putatively conflicting provisions, therefore, is the one proposed by Plaintiffs. Limiting a Permittee's responsibility to “discharge[s] for which it is the operator” applies to the appropriate *remedy* for Permit violations, not to *liability* for those violations. Indeed, Plaintiffs' reading is consistent with the remedial scheme of the Permit itself. If the LA MS4 is found to be contributing to water quality violations, each Permittee must take appropriate remedial measures with respect to its *own* discharges.¹⁷ Thus, a finding of *liability* against the County Defendants would not, as defendants argue, hold any County Defendant responsible for discharges for which they are not “the operator.”

In sum, and contrary to the County Defendants' contentions, the language of the Permit is clear—the data collected at the Monitoring Stations is intended to determine whether the Permittees are in compliance with the Permit. If the District's *1207 monitoring data shows that the level of pollutants in federally protected water bodies exceeds those allowed under the Permit, then, as a matter of permit construction, the monitoring data conclusively demonstrate that the County Defendants are not “in compliance” with the Permit conditions. Thus, the County Defendants are liable for Permit violations.

B. Extrinsic Considerations

Although we believe the plain language of the Permit clearly contemplates that the County Defendants' monitoring data will be used to assess Permit compliance (*i.e.*, establish liability for CWA violations), we note that numerous extrinsic considerations also undercut the County Defendants' position.

First and foremost, the Clean Water Act *requires* every NPDES permittee to monitor its discharges into the navigable waters of the United States in a manner sufficient to determine whether it is in compliance with the relevant NPDES permit. 33 U.S.C. § 1342(a)(2); 40 C.F.R. § 122.44(i)(1) (“[E]ach NPDES permit shall include conditions meeting the following ... monitoring requirements ... to assure compliance with permit limitations.”). That is, an NPDES permit is unlawful if a permittee is not required to effectively monitor its permit compliance. *See* 40 C.F.R. § 122.26(d)(2)(i) (F) (“Permit applications for discharges from large and medium municipal storm sewers ... shall include ... monitoring procedures necessary to determine compliance and noncompliance with permit conditions....”). As previously noted, the County Defendants contend that the mass-emissions monitoring program “neither measures nor was designed to

measure any individual permittee's compliance with the Permit.” But if the County Defendants are correct, the Permit would be unlawful under the CWA. We must interpret the provisions of the Permit like any other contract and reject an interpretation that would render the Permit unenforceable. *See Walsh v. Schlecht*, 429 U.S. 401, 408, 97 S.Ct. 679, 50 L.Ed.2d 641 (1977) (noting that “contracts should not be interpreted to render them illegal and unenforceable where the wording lends itself to a logically acceptable construction that renders them legal and enforceable”); *see also Nw. Env'tl. Advocates*, 56 F.3d at 984; Restatement (Second) of Contracts § 203.

[8] Second, the County Defendants' position has been explicitly rejected by the Regional Board, the entity that issued the Permit. This is important because one of our obligations in interpreting an NPDES permit is “to determine the intent of the permitting authority....” *Piney Run Pres. Ass'n*, 268 F.3d at 270. Thus, we give significant weight to any extrinsic evidence that evinces the permitting authority's interpretation of the relevant permit. *See Nw. Env'tl. Advocates*, 56 F.3d at 985 (relying on “significant evidence from [the state permitting agency], the permit author,” to determine the proper scope of an NPDES permit).

Here, the record contains an amicus brief filed by the Regional Board in a lawsuit nearly identical to this one.¹⁸ In that suit, these same Plaintiffs sued the City of Malibu, one of the County Defendants' co-permittees, for violating the NPDES Permit at issue in this case. In its brief, the Regional Board stated its position that:

The Permit recognizes that the inter-connected nature of the system means that it may be difficult to determine exactly where [pollutants] originated *1208 within the [LA] MS4. This does not mean, however, that the Permit assumes only one permittee may be responsible. Instead, it recognizes that in such an integrated storm sewer system, one or more Permittees may have caused or contributed to violations.... Having constructed a joint sewer system that, by design, co-mingles the [Permittees'] discharges, they cannot avoid enforcement because one cannot determine the original source of pollutants in the waste stream.

[9] The Regional Board also noted that “the monitoring program that the permittees requested (and were granted) does not readily generate the permittee-by-permittee outfall data that the [County Defendants] would require as a precondition to enforcement.” As a result, the Regional Board disagreed with any construction of the Permit that would require individualized proof of a Permittees' discharges in order to establish liability. Simply put, the Regional Board indicated that it “does not agree” that the “burden [of proving Permit violations] rests upon the enforcing entity.” Although we do not defer to the Regional Board's interpretation of the Permit, *see Orthopaedic Hosp. v. Belshe*, 103 F.3d 1491, 1495 (9th Cir.1997), its rejection of the County Defendants' position is clearly instructive.

Finally, the County Defendants' arguments run counter to the purposes of the CWA, and ignore the inherent complexity of ensuring an ms4's compliance with an NPDES permit that covers thousands of different point sources and outfalls. As we have previously recognized, “[t]he NPDES program fundamentally relies on self-monitoring.” *Sierra Club v. Union Oil Co. of Cal.*, 813 F.2d 1480, 1491 (9th Cir.1987), *vacated and remanded on other grounds*, 485 U.S. 931, 108 S.Ct. 1102, 99 L.Ed.2d 264 (1988), *and reinstated and amended by* 853 F.2d 667 (9th Cir.1988). Congress' purpose in adopting this self-monitoring mechanism was to promote straightforward enforcement of the Act. *See id.* at 1492 (noting that Congress wished to “avoid the necessity of lengthy fact finding, investigations, and negotiations at the time of enforcement. Enforcement of violations of requirements under this Act should be based on relatively narrow fact situations requiring a minimum of discretionary decision making or delay”) (quoting S.Rep. No. 92–414, 92nd Cong., 1st Sess. 64, *reprinted in* 1972 U.S.Code Cong. & Ad. News 3668, 3730).¹⁹ Or, as one treatise writer has described enforcement of the Act:

The CWA is viewed by many as the easiest of the federal environmental statutes to enforce. This is because persons regulated under the act normally must report their own compliance and noncompliance to the regulating agency. For example, holders of NPDES permits must file periodic discharge monitoring reports (or DMRs), which must contain the results of all monitoring of discharges, and must indicate where those discharges exceed permit limitations.... Thus,

enforcement actions may be brought based on little, if anything, more than the DMRs and other reports submitted by the permittee itself.

Environmental Law Handbook at 357–58.

Admittedly, regulating pollution from ms4s is substantially more complicated than regulating pollution from a few defined point sources. Like the LA MS4 at issue here, municipal separate storm sewer systems often cover many square miles and comprise numerous, geographically *1209 scattered, and sometimes uncharted sources of pollution, including streets, catch basins, gutters, man-made channels, and storm drains. Faced with the difficult task of regulating millions of storm-sewer point sources, Congress amended the CWA in 1987 to grant the EPA the express authority to create a separate permitting program for ms4s. 33 U.S.C. § 1342(p)(2), (3). In enacting these amendments, Congress recognized that for large urban areas like Los Angeles, ms4 permitting cannot be accomplished on a source-by-source basis. The amendments therefore give the EPA, or a state like California to which the EPA has delegated permitting authority, broad discretion to issue permits “on a system-wide or jurisdiction-wide basis,” 40 C.F.R. § 122.26(a)(1)(v), rather than requiring cities and counties to obtain separate permits for millions of individual stormwater discharge points. This increased flexibility is crucial in easing the burden of issuing stormwater permits for both permitting authorities and permittees.²⁰

But while otherwise more flexible than the traditional NPDES permitting system, nothing in the ms4 permitting scheme relieves permittees of the obligation to monitor their compliance with their NPDES permit in some fashion. See 33 U.S.C. § 1342(a)(2) (“The Administrator shall prescribe conditions for [NPDES] permits to assure compliance with the requirements of [the permit], including conditions on data and information collection, reporting, and such other requirements as he deems appropriate.”); 40 C.F.R. § 122.44(i)(1) (establishing that every permit “shall include” monitoring “[t]o assure compliance with the permit limitations”). Rather, EPA regulations make clear that while ms4 NPDES permits need not require monitoring of each stormwater source at the precise point of discharge, they may instead establish a monitoring scheme “sufficient to yield data which are *representative of the monitored activity*....” 40 C.F.R. § 122.48(b) (emphasis added). In fact, EPA regulations require permittees, like the County Defendants here, to propose a “monitoring program for *representative data collection* for the term of the permit that describes the location of outfalls or field screening points to be sampled (*or the location of instream stations*)” and explain “why the [chosen] location is *representative*....” 40 C.F.R. § 122.26(d)(2)(iii)(D) (emphases added). Here, the County Defendants did just that. County Defendants themselves chose the locations of the Monitoring Stations, locations that are downstream from a significant number of their outfalls.²¹ And, as required by law, the County Defendants chose locations that they certified were necessarily “representative” of the monitored activity (*i.e.*, the Permittees' discharges of stormwater runoff into the navigable waters of the United States).²² Now, however, County Defendants claim *1210 that their compliance with the Permit cannot be measured using the results of the representative monitoring they themselves agreed to, that the Regional Board approved, and that the Permit itself contemplates is to be used to assess compliance with its terms. We take this opportunity to reevaluate and reject County Defendants' arguments.

CONCLUSION

Because the results of County Defendants' pollution monitoring conclusively demonstrate that pollution levels in the Los Angeles and San Gabriel Rivers are in excess of those allowed under the Permit, the County Defendants are *liable* for Permit violations as a matter of law. This case is remanded to the district court for further proceedings consistent with this opinion, including a determination of the appropriate *remedy* for the County Defendants' violations.

Footnotes

- * The Honorable [H. Russel Holland](#), Senior District Judge for the U.S. District Court for the District of Alaska, sitting by designation.
- 1 Whereas natural, vegetated soil can absorb rainwater and capture pollutants, paved surfaces and developed land can do neither. Paved facilities with particularly high volumes of motor vehicle traffic—such as parking lots, retail gasoline outlets, and fast food restaurants—are typically responsible for producing higher concentrations of pollutants in storm water runoff.
- 2 Federal Regulations define an ms4 as:
 - a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):
 - (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body ... having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity ...;
 - (ii) Designed or used for collecting or conveying storm water;
 - (iii) Which is not a combined sewer; and
 - (iv) Which is not part of a Publicly Owned Treatment Works....

40 C.F.R. § 122.26(b)(8). Unlike a sanitary sewer system, which transports municipal sewage for treatment at a wastewater facility, or a combined sewer system, which transports sewage and stormwater for treatment, an ms4 conveys only untreated stormwater. See 40 C.F.R. § 122.26(a)(7), (b)(8).

- 3 Throughout this Opinion, reference is made to both “ms4” and the “LA MS4.” The former is a generic reference to an individual municipal separate storm sewer system without regard to its particular location, while the latter specifically refers to the entire flood control and stormsewer infrastructure described *supra* that exists in Los Angeles County, and which is made up of the various interconnected ms4s that are controlled by the County, the District, and the incorporated cities within the District.
- 4 An “outfall” is defined as a “point source ... at the point where a municipal separate storm sewer discharges to waters of the United States....” 40 C.F.R. § 122.26(b)(9). It is estimated that the LA MS4 contains tens of thousands of outfalls where stormwater runoff is discharged into federally protected water bodies.
- 5 Plaintiffs originally complained about the County Defendants' discharges into four water bodies: the Los Angeles River, the San Gabriel River, the Santa Clara River, and Malibu Creek. See *Natural Res. Def. Council*, 673 F.3d at 883. On remand to this court, however, Plaintiffs only seek review of the district court's summary judgment ruling regarding the County Defendants' discharges into the Los Angeles and San Gabriel Rivers.
- 6 A point source is defined as “any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged.” 33 U.S.C. § 1362(14). Throughout this litigation, there has been confusion regarding whether the LA MS4 is a “point source” under the CWA. See *Natural Res. Def. Council*, 673 F.3d at 898 (accepting Plaintiffs' argument that “[u]nder the Clean Water Act, the [LA] MS4 is a ‘Point Source.’ ”). The LA MS4 is *not* a single point source. Rather, the LA MS4 is a collection of point sources, including outfalls, that discharge into the navigable waters of the United States.
- 7 On November 8, 2012, the Regional Board issued a new NPDES permit to the County Defendants and various other permittees.
- 8 Part 2 also mandates that “[d]ischarges from the [LA] MS4 of storm water, or non-storm water, for which a Permittee is responsible for [sic], shall not cause or contribute to a condition of nuisance.”
- 9 Under California law, regional boards are required to formulate water quality plans, called “basin plans,” which designate the beneficial uses of protected water bodies within the boards' jurisdiction, establish water quality objectives for those water bodies, and establish a program for implementing the basin plan. See *City of Burbank v. State Water Res. Control Bd.*, 35 Cal.4th 613, 26 Cal.Rptr.3d 304, 108 P.3d 862, 865 (2005) (citing Cal. Water Code § 13050(j)).
- 10 The Permit defines the SQMP as “the Los Angeles Countywide Stormwater Quality Management Program, which includes descriptions of programs, collectively developed by the Permittees in accordance with the provisions of the NPDES permit, to comply with applicable federal and state law....”
- 11 The District publishes these “Stormwater Monitoring Reports” on the internet at: http://ladpw.org/wmd/NPDES/report_directory.cfm. (last accessed August 1, 2013).
- 12 In a declaration submitted to the district court, the County Defendants described both Monitoring Stations as being located “in a portion of the District's flood control channel.” See also “Section Two: Site Descriptions,” Los Angeles Cnty. Dept. of Pub. Works, available at http://dpw.lacounty.gov/wmd/npdes/9899_report/SiteDesc.pdf (last accessed August 1, 2013). Thus, it appears that the pertinent river segments are part of *both* the LA MS4 itself *and* “the waters of the United States” that the CWA protects. But regardless of whether the mass-emissions monitoring stations are *also* part of the LA MS4, there is no dispute that the mass-emissions monitoring stations are located *within* the Los Angeles and San Gabriel Rivers, downstream of a significant number of the County Defendants' LA MS4 outfalls. We misconstrued some of the data before us when we previously held otherwise. See *Natural Res. Def. Council*, 673 F.3d at 899 (“As a matter of law and fact, the [LA] MS4 is distinct from the two navigable rivers; the [LA] MS4 is an intra-state man-made construction—not a naturally occurring Watershed River”); see also 53 Fed.Reg. 49,416, 49,453 (Dec. 7, 1988) (EPA observes that “[i]n many situations, waters of the United States that receive discharges from municipal storm sewers can be mistakenly considered to be part of the storm sewer system.”).
- 13 The CWA requires plaintiffs to provide 60 days notice to an alleged violator, the State in which the violation is alleged to be occurring, and the EPA, before filing suit. 33 U.S.C. § 1365(b)(1)(A).
- 14 See *L.A. Cnty. Flood Control Dist.*, 133 S.Ct. at 713–14 (“Under the permit's terms, the NRDC and Baykeeper maintain, the exceedances detected at instream monitoring stations are by themselves sufficient to establish the District's liability under the CWA for its upstream discharges. This argument failed below. It is not embraced within, or even touched by, the narrow

question on which we granted certiorari. We therefore do not address, and indicate no opinion on, the issue NRDC and Baykeeper seek to substitute for the question we took up for review.”).

15 See also *Piney Run Pres. Ass'n.*, 268 F.3d at 269–70; *Am. Canoe Ass'n., Inc. v. D.C. Water & Sewer Auth.*, 306 F.Supp.2d 30, 42 (D.D.C.2004).

16 The question before us is not whether the Clean Water Act mandates any particular result. An NPDES permitting authority has wide discretion concerning the terms of a permit. It could, for example, lawfully write an ms4 permit that provides that all permittees will share liability in some ratio for any measured exceedance of applicable pollutant limits. Or, as a further example, a permitting authority could lawfully write a permit providing that only the co-permittee(s) whose specific discharges are connected to a particular pollutant exceedance may be held liable for the permit violation. See 33 U.S.C. § 1342(a)(2) (“The Administrator shall prescribe conditions for [NPDES] permits to assure compliance with the requirements of [33 U.S.C. § 1342(a)(1)], including conditions on data and information collection, reporting, and such other requirements as he deems appropriate.”).

17 The relevant Permit provision states: “Each Permittee is required to comply with the requirements of this Order applicable to discharges within its boundaries ... and not for the implementation of the provisions applicable to the Principal Permittee or other Permittees.”

18 *Santa Monica Baykeeper, et al. v. City of Malibu*, No. CV–08–01465 (AHM) (C.D.Cal. Mar. 3, 2008).

19 See also 44 Fed.Reg. 32,854, 32,863 (June 7, 1979) (“Congress intended that prosecution for permit violations be swift and simple.”).

20 See 55 Fed.Reg. 47,990, 48,046 (Nov. 16, 1990) (noting that issuing individual permits to cover all ms4 discharges to the waters of the United States is “unmanageable”); *id.* at 48,049–48,050 (“Given the complex, variable nature of storm water discharges from municipal systems, EPA favors a permit scheme where the ... [p]ermit writers have the necessary flexibility to develop monitoring requirements that more accurately reflect the true nature of highly variable and complex discharges.”).

21 “Q: Does the County's ms4 outlet to any tributaries of the Los Angeles River? A: Yes. Q: Does it outlet to tributaries of the Los Angeles River upstream of the mass emissions station? A: Yes.... Q: Does [the County's ms4] outlet to the San Gabriel River upstream of the mass emissions station? A: Yes.” Pestrella Dep. 697:7–698:6, June 2, 2009.

22 “Q: Who selected the location of those stations, do you know? A: The County selected those locations for a particular purpose. And the purpose was [to be] far enough away from tidal influence *so that you would be characterizing the stormwater runoff as opposed to ocean waters*. Q: And the locations were then approved by Regional Board staff; is that correct? A: Correct.” Wamikannu Dep. 130:13–130:19, July 1, 2009 (emphasis added).

SINCLAIR PAINT COMPANY,
Plaintiff and Respondent,

v.

STATE BOARD OF EQUALIZATION, Defendant
and Appellant; DEPARTMENT OF HEALTH
SERVICES et al., Interveners and Appellants.

No. S054115.
Supreme Court of California
June 26, 1997.

SUMMARY

The trial court granted a paint company summary judgment in the company's action against the Board of Equalization for a refund of fees paid pursuant to an assessment under the Childhood Lead Poisoning Prevention Act of 1991 ([Health & Saf. Code, § 105275](#) et seq.). The trial court found that the fees were taxes, and thus they were invalid since the Legislature passed the act by a simple majority, rather than by the two-thirds majority required by [Cal. Const., art. XIII A, § 3](#) (Prop. 13). (Superior Court of Sacramento County, No. CV541310, Joe S. Gray, Judge.) The Court of Appeal, Third Dist., No. C021559, affirmed.

The Supreme Court reversed the judgment of the Court of Appeal. The court held that the Court of Appeal erred in ruling that “fees” assessed on manufacturers or other persons contributing to environmental lead contamination, pursuant to the Childhood Lead Poisoning Prevention Act of 1991, were in legal effect “taxes” required to be enacted by a two-thirds vote of the Legislature under Prop. 13. Rather, the fees imposed were bona fide regulatory fees. The act requires manufacturers and other persons whose products have exposed children to lead contamination to bear a fair share of the cost of mitigating the adverse health effects their products created in the community. The shifting of costs of providing evaluation, screening, and medically necessary follow-up services for potential child victims of lead poisoning

from the public to those persons deemed responsible for that poisoning is a reasonable police power decision. The fact that the fees were charged after, rather than before, the product's adverse effects were realized was immaterial to the question whether the measure imposed valid regulatory fees rather than taxes. Also, if regulation is the primary purpose of a fee, the mere fact that revenue is also obtained does not make the imposition a tax. (Opinion by Chin, J., with George, C. J., Mosk, Kennard, Baxter, Werdegar, JJ., and Armstrong, J., * concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1)
Property Taxes § 7.2--Constitutional Provisions--
Proposition 13.
The purpose of Prop. 13 was to assure effective real property tax relief by means of an interlocking package consisting of a real property tax rate limitation ([Cal. Const., art. XIII A, § 1](#)), a real property assessment limitation ([Cal. Const., art. XIII A, § 2](#)), a restriction on state taxes ([Cal. Const., art. XIII A, § 3](#)), and a restriction on local taxes ([Cal. Const., art. XIII A, § 4](#)). Since any tax savings resulting from the operation of [Cal. Const., art. XIII A, §§ 1 and 2](#), could be withdrawn or depleted by additional or increased state or local levies of other than property taxes, [Cal. Const., art. XIII A, §§ 3 and 4](#), combine to place restrictions upon the imposition of such taxes.

(2a, 2b, 2c)
Taxation § 2--Validity of Taxation Legislation--
Proposition 13--Fees Assessed Under Childhood
Lead Poisoning Prevention Act-- Applicability of
Supermajority Requirement:Property Taxes § 7.8--
Proposition 13.
The Court of Appeal erred in ruling that “fees” assessed on manufacturers or other persons contributing to environmental lead contamination, pursuant to the Childhood Lead Poisoning Prevention Act of 1991 ([Health & Saf. Code, § 105275](#) et seq.), which the Legislature had enacted by a simple majority, were in legal effect “taxes” required to be enacted by a two-thirds vote of the Legislature under Prop. 13 ([Cal. Const., art. XIII A, § 3](#)). Rather, the fees imposed were bona fide regulatory fees. The act requires manufacturers and

other persons whose products have exposed children to lead contamination to bear a fair share of the cost of mitigating the adverse health effects their products created in the community. The shifting of costs of providing evaluation, screening, and medically necessary follow-up services for potential child victims of lead poisoning from the public to those persons deemed responsible for that poisoning is a reasonable police power decision. The fact that the fees were charged after, rather than before, the product's adverse effects were realized was immaterial to the question whether the measure imposed valid regulatory fees rather than taxes. Also, if regulation is the primary purpose of a fee, the mere fact that revenue is also obtained does not make the imposition a tax.

[See 8 Witkin, Summary of Cal. Law (9th ed. 1988) Constitutional Law, § 784.]

(3)

Property Taxes § 7.6--Constitutional Provisions-- Proposition 13-- Assessments as Fees or Taxes:Taxation § 3--Construction.

In determining under Prop. 13 ([Cal. Const., art. XIII A, § 3](#)), whether impositions are “taxes” or “fees” is a question of law for the appellate courts to decide on independent review of the facts. The term “tax” has no fixed meaning, and the distinction between taxes and fees is frequently blurred, taking on different meanings in different contexts. In general, taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted. Most taxes are compulsory rather than imposed in response to a voluntary decision to develop or to seek other government benefits or privileges. But compulsory fees may be deemed legitimate fees rather than taxes.

(4a, 4b)

Property Taxes § 7.8--Constitutional Provisions-- Proposition 13--Special Taxes:Taxation § 3--Construction.

There are three general categories of fees or assessments involved in disputes concerning whether they are in legal effect “special taxes” required to be enacted by a two-thirds vote of the Legislature under Prop. 13 ([Cal. Const., art. XIII A, §§ 3 and 4](#)). They are (1) special assessments, based on the value of benefits conferred on property, (2) development fees, exacted in return for permits or other government privileges, and (3) regulatory fees, imposed under the police power. Special assessments

on property or similar business charges, in amounts reasonably reflecting the value of the benefits conferred by improvements, are not “special taxes.” Similarly, development fees exacted in return for building permits or other governmental privileges are not special taxes if the amount of the fees bears a reasonable relation to the development's probable costs to the community and benefits to the developer. Also, fees charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes, are not special taxes.

(5)

Property Taxes § 7.8--Constitutional Provisions-- Proposition 13-- Assessments as Regulatory Fee:Taxation § 3--Construction.

In order to show that an imposition is a regulatory fee and not a special tax under Prop. 13 ([Cal. Const., art. XIII A, § 3](#)), the government should prove (1) the estimated costs of the service or regulatory activity, and (2) the basis for determining the manner in which the costs are apportioned, so that charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity.

CHIN, J.

In 1991, by simple majority vote, the Legislature enacted the Childhood Lead Poisoning Prevention Act of 1991 (the Act) (Stats. 1991, ch. 799, § 3, amended Stats. 1995, ch. 415, § 5; see [*870 Health & Saf. Code, § 105275](#) et seq.).¹ The Act provided evaluation, screening, and medically necessary follow-up services for children who were deemed potential victims of lead poisoning. The Act's program was entirely supported by "fees" assessed on manufacturers or other persons contributing to environmental lead contamination. (See §§ 105305, 105310.) The question arises whether these fees were in legal effect "taxes" required to be enacted by a two-thirds vote of the Legislature. (See [Cal. Const., art. XIII A, § 3](#).)

Contrary to the trial court and Court of Appeal, we conclude that the Act imposed bona fide regulatory fees, not taxes, because the Legislature imposed the fees to mitigate the actual or anticipated adverse effects of the fee payers' operations, and under the Act the amount of the fees must bear a reasonable relationship to those adverse effects. Accordingly, the trial court erred in granting summary judgment to award plaintiff Sinclair Paint Company (Sinclair) a refund of the fees it paid under the Act.

We take the following statement of uncontradicted facts largely from the Court of Appeal opinion in this case. Sinclair paid \$97,825.26 in fees for 1991. After the Board of Equalization (the Board) denied Sinclair's administrative claim for refund, Sinclair filed a complaint for refund, alleging the fees assessed under section 105310 were "actually taxes imposed by the California [L]egislature in violation of Proposition 13, [Article XIII A, Section 3 of the California Constitution](#)." The court granted the request of the Department of Health Services (the Department) for leave to intervene. It also granted a similar request to intervene by Ray

Cochenour and Cardaryl Commodore, representatives of a class of children suffering from lead poisoning, and People United for a Better Oakland, an unincorporated association whose members include the Act's intended beneficiaries (collectively Cochenour).

Sinclair moved for summary judgment, claiming the Act was invalid on its face because it was not passed by the requisite two-thirds majority vote of the Legislature. The court agreed the Act imposed an unconstitutional tax and granted Sinclair's motion.

The Board, the Department, and Cochenour appealed, contending the Act involves a regulatory fee, not a tax. Appellants also argued the court erred in granting Sinclair summary judgment without compelling it to produce discovery and improperly relied on legislative history in determining the Act's constitutionality. The Court of Appeal affirmed the judgment, concluding that the Act was unconstitutional on its face and rejecting appellants' other claims. We reverse the Court of Appeal's judgment. [*871](#)

Discussion

I. The Childhood Lead Poisoning Prevention Act of 1991

When the Legislature enacted the Act in 1991, it explained the Act's background and purpose in findings that described the numerous health hazards children face when exposed to lead toxicity and declared four state "goals," namely, (1) evaluating, screening, and providing case management for children at risk of lead poisoning, (2) identifying sources of lead contamination responsible for this poisoning, (3) identifying and utilizing programs providing adequate case management for children found to have lead poisoning, and (4) providing education on lead-poisoning detection and case management to state health care providers. (Stats. 1991, ch. 799, § 1.)

The Act directs the Department to adopt regulations establishing a standard of care for evaluation, screening (i.e., measuring lead concentration in blood), and medically necessary follow-up services for children determined to be at risk of lead poisoning. (§ 105285; see § 105280, subd. (e).) If a child is identified as being at risk of lead poisoning, the Department must ensure "appropriate case management," i.e., "health care referrals, environmental assessments, and educational activities" needed to reduce the child's exposure to lead

and its consequences. (§§ 105280, subd. (a), 105290.) Additionally, the Act requires the Department to collect data and report on the effectiveness of case management efforts. (§ 105295.)

The Department has “broad regulatory authority to fully implement and effectuate the purposes” of the Act. (§ 105300.) This authority “include[s], but is not limited to,” the development of protocols for screening and for appropriate case management; the designation of laboratories qualified to analyze blood specimens for lead concentrations, and the monitoring of those laboratories for accuracy; the development of reporting procedures by laboratories; reimbursement for state-sponsored services related to screening and case management; establishment of lower lead concentrations in whole blood than those specified by the United States Centers for Disease Control for lead poisoning; notification to parents or guardians of the results of blood-lead testing and environmental assessment; and establishment of a periodicity schedule for evaluating childhood lead poisoning. (§ 105300.)

The Act states that its program of evaluation, screening, and follow-up is supported *entirely* by fees collected under the Act: “Notwithstanding the scope of activity mandated by this chapter, in no event shall this chapter be interpreted to require services necessitating expenditures in any fiscal year in excess of the fees, and earnings therefrom, collected pursuant to Section *872 105310. This chapter shall be implemented only to the extent fee revenues pursuant to Section 105310 are available for expenditure for purposes of this chapter.” (§ 105305.)

Section 105310 imposes the fees at issue here. In pertinent part, that section imposes fees on manufacturers and other persons formerly and/or presently engaged in the stream of commerce of lead or products containing lead, or who are otherwise responsible for identifiable sources of lead, which have significantly contributed and/or currently contribute to environmental lead contamination. (§ 105310, subd. (a).) The Department must determine fees based on the manufacturer's or other person's past and present responsibility for environmental lead contamination, or its “market share” responsibility for this contamination. (§ 105310, subd. (b).)

Those persons able to show that their industry did not contribute to environmental lead contamination, or that their lead-containing product does not and did

not “result in quantifiably persistent environmental lead contamination,” are exempt from paying the fees. (§ 105310, subd. (d).)

The Legislature has authorized the Department to adopt regulations establishing the specific fees to be assessed the parties identified in section 105310, subdivision (a). (§ 105310, subd. (b).) The formula for calculating fees attributable to leaded architectural coatings, including ordinary house paint, is set forth in [California Code of Regulations, title 17, section 33020](#).

II. Proposition 13

(11) In June 1978, California voters added [article XIII A](#), commonly known as the Jarvis-Gann Property Tax Initiative or Proposition 13 (article XIII A), to the state Constitution. The initiative's purpose was to assure effective real property tax relief by means of an “interlocking 'package' ” consisting of a real property tax rate limitation ([art. XIII A, § 1](#)), a real property assessment limitation ([art. XIII A, § 2](#)), a restriction on state taxes ([art. XIII A, § 3](#)), and a restriction on local taxes ([art. XIII A, § 4](#)). (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 231 [149 Cal.Rptr. 239, 583 P.2d 1281] (*Amador Valley*); see also *County of Los Angeles v. Sasaki* (1994) 23 Cal.App.4th 1442, 1451 [29 Cal.Rptr.2d 103].)

[Section 3 of article XIII A](#) restricts the enactment of changes in state taxes, as follows: “From and after the effective date of this article, any changes in State taxes enacted for the purpose of increasing revenues collected pursuant thereto whether by increased rates or changes in methods *873 of computation must be imposed by an Act passed by not less than two-thirds of all members ... of the Legislature, except that no new ad valorem taxes on real property, or sales or transaction taxes on the sales of real property may be imposed.”

[Section 4 of article XIII A](#) imposes similar restrictions on local entities: “Cities, Counties and special districts, by a two-thirds vote of the qualified electors of such district, may impose *special taxes* on such district, except ad valorem taxes on real property or a transaction tax or sales tax on the sale of real property within such City, County or special district.” (Italics added.)

As we explained in *Amador Valley*, “... since any tax savings resulting from the operation of [sections 1](#) and

2 [of article XIII A] could be withdrawn or depleted by additional or increased state or local levies of other than property taxes, sections 3 and 4 combine to place restrictions upon the imposition of such taxes.” (*Amador Valley*, *supra*, 22 Cal.3d at p. 231.)

III. Taxes or Fees?

([2a]) Are the “fees” section 105310 imposes in legal effect “taxes enacted for the purpose of increasing revenues” under article XIII A, section 3, and therefore subject to a two-thirds majority vote? Although we have found no cases that interpret the language of section 3, several California appellate decisions have considered whether various fees are really “special taxes” under article XIII A, section 4. (See also *City and County of San Francisco v. Farrell* (1982) 32 Cal.3d 47, 57 [184 Cal.Rptr. 713, 648 P.2d 935] [“special taxes” are taxes levied for a specific purpose rather than for general governmental purposes]; *Gov. Code*, § 50076 [excluding from the term “special tax” in article XIII A, section 4, “any fee which does not exceed the reasonable cost of providing the service or regulatory activity for which the fee is charged and which is not levied for general revenue purposes”].) Because of the close, “interlocking” relationship between the various sections of article XIII A (see *Amador Valley*, *supra*, 22 Cal.3d at p. 231), we believe these “special tax” cases may be helpful, though not conclusive, in deciding the case before us. The reasons why particular fees are, or are not, “special taxes” under article XIII A, section 4, may apply equally to section 3 cases.²

We first consider certain general guidelines used in determining whether “taxes” are involved in particular situations. ([3]) The cases agree that *874 whether impositions are “taxes” or “fees” is a question of law for the appellate courts to decide on independent review of the facts. (*Bixel Associates v. City of Los Angeles* (1989) 216 Cal.App.3d 1208, 1216 [265 Cal.Rptr. 347]; *California Bldg. Industry Assn. v. Governing Bd.* (1988) 206 Cal.App.3d 212, 234 [253 Cal.Rptr. 497]; *Russ Bldg. Partnership v. City and County of San Francisco* (1987) 199 Cal.App.3d 1496, 1504 [246 Cal.Rptr. 21].)

The cases recognize that “tax” has no fixed meaning, and that the distinction between taxes and fees is frequently “blurred,” taking on different meanings in different contexts. (*Russ Bldg. Partnership v. City and County of San Francisco*, *supra*, 199 Cal.App.3d at p. 1504;

Terminal Plaza Corp. v. City and County of San Francisco (1986) 177 Cal.App.3d 892, 905 [223 Cal.Rptr. 379]; *Mills v. County of Trinity* (1980) 108 Cal.App.3d 656, 660 [166 Cal.Rptr. 674]; *County of Fresno v. Malmstrom* (1979) 94 Cal.App.3d 974, 983-984 [156 Cal.Rptr. 777].) In general, taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted. (*Shapell Industries, Inc. v. Governing Board* (1991) 1 Cal.App.4th 218, 240 [1 Cal.Rptr.2d 818]; *County of Fresno v. Malmstrom*, *supra*, 94 Cal.App.3d at p. 983 [“Taxes are raised for the general revenue of the governmental entity to pay for a variety of public services.”].) Most taxes are compulsory rather than imposed in response to a voluntary decision to develop or to seek other government benefits or privileges. (*Shapell Industries, Inc. v. Governing Board*, *supra*, 1 Cal.App.4th at p. 240; *Russ Bldg. Partnership v. City and County of San Francisco*, *supra*, 199 Cal.App.3d at pp. 1505-1506; see *Terminal Plaza Corp. v. City and County of San Francisco*, *supra*, 177 Cal.App.3d at p. 907.) But compulsory fees may be deemed legitimate fees rather than taxes. (See *Kern County Farm Bureau v. County of Kern* (1993) 19 Cal.App.4th 1416, 1424 [23 Cal.Rptr.2d 910].)

([4a]) The “special tax” cases have involved three general categories of fees or assessments: (1) special assessments, based on the value of benefits conferred on property; (2) development fees, exacted in return for permits or other government privileges; and (3) regulatory fees, imposed under the police power. Although these three categories may overlap in a particular case, we consider them separately.

The cases uniformly hold that *special assessments* on property or similar business charges, in amounts reasonably reflecting the value of the benefits conferred by improvements, are not “special taxes” under article XIII A, section 4. (*Evans v. City of San Jose* (1992) 3 Cal.App.4th 728, 735-739 [4 Cal.Rptr.2d 601] [assessments on businesses for downtown promotion]; *875 *J. W. Jones Companies v. City of San Diego* (1984) 157 Cal.App.3d 745, 750-758 [203 Cal.Rptr. 580] [facilities benefit assessments]; *City Council v. South* (1983) 146 Cal.App.3d 320, 332 [194 Cal.Rptr. 110] [special assessments on real property]; *County of Fresno v. Malmstrom*, *supra*, 94 Cal.App.3d at pp. 984-985 [special assessments for construction of streets].)

Similarly, *development fees* exacted in return for building permits or other governmental privileges are not special taxes if the amount of the fees bears a reasonable relation to the development's probable costs to the community and benefits to the developer. (*Shapell Industries, Inc. v. Governing Board, supra*, 1 Cal.App.4th at p. 240 [school facilities fees]; *Bixel Associates v. City of Los Angeles, supra*, 216 Cal.App.3d at pp. 1211, 1218-1219 [fire hydrant fees]; *California Bldg. Industry Assn. v. Governing Bd., supra*, 206 Cal.App.3d at pp. 235-237 [school facilities development fees]; *Russ Bldg. Partnership v. City and County of San Francisco, supra*, 199 Cal.App.3d at pp. 1504-1506 [transit impact fees]; *Beaumont Investors v. Beaumont-Cherry Valley Water Dist.* (1985) 165 Cal.App.3d 227, 235-238 [211 Cal.Rptr. 567] [new facilities water hookup fees]; *Trent Meredith, Inc. v. City of Oxnard* (1981) 114 Cal.App.3d 317, 325-328 [170 Cal.Rptr. 685] [fees as precondition for building permits]; *Mills v. County of Trinity, supra*, 108 Cal.App.3d at pp. 661-663 [fees for processing subdivision, zoning, and land use applications]; see *Ehrlich v. City of Culver City* (1996) 12 Cal.4th 854, 898 [50 Cal.Rptr.2d 242, 911 P.2d 429] (conc. opn. of Mosk, J.).)

According to Sinclair, because the present fees have been imposed solely to defray the cost of the state's program of evaluation, screening, and follow-up services for children determined to be at risk for lead poisoning, they are not analogous to either special assessments or development fees, for they neither reimburse the state for special benefits conferred on manufacturers of lead-based products nor compensate the state for governmental privileges granted to those manufacturers. As the Court of Appeal observed, the fees challenged here “do not constitute payment for a government benefit or service. The program described in the Act bears no resemblance to regulatory schemes involving special assessments, developer fees, or efforts to recoup the cost of processing land use applications where the benefit analysis is typically applied. [Citations.] The face of the Act makes clear the funds collected pursuant to section 105310 are used to benefit children exposed to lead, not Sinclair or other manufacturers in the stream of commerce for products containing lead.”

([2b]) Appellants argue, however, that the challenged fees fall squarely within a third recognized category not dependent on government-conferred benefits or privileges, namely, *regulatory fees* imposed under the

police power, rather than the taxing power. We agree. *876

([4b]) We have acknowledged that the term “special taxes” in article XIII A, section 4, “ ‘does not embrace fees charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes.’ [Citations.]” (*Pennell v. City of San Jose* (1986) 42 Cal.3d 365, 375 [228 Cal.Rptr. 726, 721 P.2d 1111] (*Pennell*), *affd.* on other grounds *sub nom. Pennell v. San Jose* (1988) 485 U.S. 1 [108 S.Ct. 849, 99 L.Ed.2d 1], quoting from *Mills v. County of Trinity, supra*, 108 Cal.App.3d at pp. 659-660; see *City of Oakland v. Superior Court* (1996) 45 Cal.App.4th 740, 760-762 [53 Cal.Rptr.2d 120] [upholding regulatory fees charged to alcoholic beverage sale licensees to support pilot project to address public nuisances associated with those sales]; *Kern County Farm Bureau v. County of Kern, supra*, 19 Cal.App.4th at pp. 1422-1425 [upholding landfill assessment based on land use to reduce illegal waste disposal]; *City of Dublin v. County of Alameda* (1993) 14 Cal.App.4th 264, 280-285 [17 Cal.Rptr.2d 845] [upholding waste disposal surcharge imposed on waste haulers]; *Evans v. City of San Jose, supra*, 3 Cal.App.4th at p. 737; *San Diego Gas & Electric Co. v. San Diego County Air Pollution Control Dist.* (1988) 203 Cal.App.3d 1132, 1145-1149 [250 Cal.Rptr. 420] (*SDG&E*) [upholding emissions-based formula for recovering direct and indirect costs of pollution emission permit programs]; *United Business Com. v. City of San Diego* (1979) 91 Cal.App.3d 156, 166-168 [154 Cal.Rptr. 263] (*United Business*) [upholding fees for inspecting and inventorying on-premises advertising signs].)

Pennell upheld rental unit fees that a city imposed under its rent control ordinance to assure it recovered the actual costs of providing and administering a rental dispute hearing process. (*Pennell, supra*, 42 Cal.3d at p. 375.) We explained in *Pennell* that regulatory fees in amounts necessary to carry out the regulation's purpose are valid despite the absence of any perceived “benefit” accruing to the fee payers. (*Id.* at p. 375, fn. 11; see also *SDG&E, supra*, 203 Cal.App.3d at p. 1146, fn. 18; *Mills v. County of Trinity, supra*, 108 Cal.App.3d at p. 661.)

We observe that Sinclair, in moving for summary judgment, did not contend that the fees exceed in amount the reasonable cost of providing the protective services for

which the fees are charged, or that the fees were levied for any *unrelated* revenue purposes. (See *Pennell, supra*, 42 Cal.3d at p. 375.) Moreover, Sinclair has not yet sought to establish that the amount of the fees bears no reasonable relationship to the social or economic “burdens” that Sinclair's operations generated. (See *SDG&E, supra*, 203 Cal.App.3d at p. 1146; see also § 105310, subds. (b), (d); *Sea & Sage Audubon Society, Inc. v. Planning Com.* (1983) 34 Cal.3d 412, 421 [*877 194 Cal.Rptr. 357, 668 P.2d 664] [persons challenging fees have burden of establishing invalidity].) Sinclair does contend, however, that the Act is not *regulatory* in nature, being primarily aimed at producing revenue.

According to Sinclair, the challenged fees were in effect “taxes” because the compulsory revenue measure that imposed them was not part of a *regulatory* effort. The Court of Appeal agreed, relying on prior cases indicating that where payments are exacted solely for *revenue* purposes and give the right to carry on the business with no further conditions, they are taxes. (E.g., *United Business, supra*, 91 Cal.App.3d at p. 165.) The Court of Appeal held that “Placing the factors distinguishing taxes and fees along a continuum, we conclude the monies paid by Sinclair pursuant to the Act are more like taxes than fees. [¶] *There is nothing on the face of the Act to show the fees collected are used to regulate Sinclair.* Apart from mere calculation of the payment, the Department's regulatory authority involves implementation of the program to evaluate, screen, and provide followup services to children at risk for lead poisoning. The Act does not require Sinclair to comply with any other conditions; it merely requires Sinclair to pay what the Department determines to be its share of the program cost.”

Contrary to the Court of Appeal, we believe that section 105310 imposes bona fide regulatory fees. It requires manufacturers and other persons whose products have exposed children to lead contamination to bear a fair share of the cost of mitigating the adverse health effects their products created in the community. Viewed as a “mitigating effects” measure, it is comparable in character to similar police power measures imposing fees to defray the actual or anticipated adverse effects of various business operations.

From the viewpoint of general police power authority, we see no reason why statutes or ordinances calling on polluters or producers of contaminating products

to help in mitigation or cleanup efforts should be deemed less “regulatory” in nature than the initial permit or licensing programs that allowed them to operate. Moreover, imposition of “mitigating effects” fees in a substantial amount (Sinclair allegedly paid \$97,825.26 in 1991) also “regulates” future conduct by deterring further manufacture, distribution, or sale of dangerous products, and by stimulating research and development efforts to produce safer or alternative products. (Cf. *SDG&E, supra*, 203 Cal.App.3d at p. 1147, fn. 20 [emissions-based fees provide incentive to use nonpollutant fuels].)

Sinclair disputes the state's authority to impose industry-wide “remediation fees” to compensate for the adverse societal effects generated by an industry's products. To the contrary, the case law previously cited or discussed clearly indicates that the police power is broad enough to include *878 mandatory remedial measures to mitigate the *past, present, or future* adverse impact of the fee payer's operations, at least where, as here, the measure requires a causal connection or nexus between the product and its adverse effects. (See *City of Oakland v. Superior Court, supra*, 45 Cal.App.4th at pp. 760-762; *Kern County Farm Bureau v. County of Kern, supra*, 19 Cal.App.4th at pp. 1422-1425; *City of Dublin v. County of Alameda, supra*, 14 Cal.App.4th at pp. 284-285; *SDG&E, supra*, 203 Cal.App.3d at pp. 1146-1149; *United Business, supra*, 91 Cal.App.3d at p. 168; *Russ Bldg. Partnership v. City and County of San Francisco, supra*, 199 Cal.App.3d at pp. 1504-1506 [fees to pay for increased transit costs]; *J. W. Jones Companies v. City of San Diego, supra*, 157 Cal.App.3d at pp. 755, 758 [fees to defray costs of additional public facilities]; *Trent Meredith, Inc. v. City of Oxnard, supra*, 114 Cal.App.3d at p. 325 [fees to reduce growth impact of new subdivision]; see also *Western Indemnity Co. v. Pillsbury* (1915) 170 Cal. 686, 694 [151 P. 398] [police power authorizes legislation necessary or proper for protection of legitimate public interest]; *County of Plumas v. Wheeler* (1906) 149 Cal. 758, 761-764 [87 P. 909] [broad legislative discretion to regulate business, including license fees or charges]; 8 Witkin, Summary of Cal. Law (9th ed. 1988) Constitutional Law, § 784, p. 311 [“police power is simply the power of sovereignty or power to govern—the inherent reserved power of the state to subject individual rights to reasonable regulation for the general welfare”]; see generally, 6A McQuillan, The Law of Municipal Corporations (3d rev. ed. 1997) Municipal Police Power and Ordinances, § 24.01 et seq., p. 7 et seq.)

SDG&E involved regulatory fees comparable in some respects to the fees challenged here. (*SDG&E*, *supra*, 203 Cal.App.3d 1132.) There, 1982 legislation (see § 42311) empowered local air pollution control districts to apportion the costs of their permit programs among all monitored polluters according to a formula based on the amount of emissions they discharged. (See *SDG&E*, *supra*, 203 Cal.App.3d at p. 1135.) ([5]) The *SDG&E* court observed that “to show a fee is a regulatory fee and not a special tax, the government should prove (1) the estimated costs of the service or regulatory activity, and (2) the basis for determining the manner in which the costs are apportioned, so that charges allocated to a payor bear a fair or reasonable relationship to the payor’s burdens on or benefits from the regulatory activity.” (*Id.* at p. 1146, fn. omitted; see *Beaumont Investors v. Beaumont-Cherry Valley Water Dist.*, *supra*, 165 Cal.App.3d at pp. 234-235.)

In *SDG&E*, the amount of the regulatory fees was limited to the reasonable costs of each district’s program, and the allocation of costs based on emissions “fairly relates to the permit holder’s burden on the district’s programs.” (*SDG&E*, *supra*, 203 Cal.App.3d at p. 1146.) Accordingly, the *879 court concluded that the fees were not “special taxes” under article XIII A, section 4. (*SDG&E*, *supra*, 203 Cal.App.3d at p. 1148.)

As the court observed in *SDG&E*, “Proposition 13’s goal of providing effective property tax relief is not subverted by the increase in fees or the emissions-based apportionment formula. A reasonable way to achieve Proposition 13’s goal of tax relief is to shift the costs of controlling stationary sources of pollution from the tax-paying public to the pollution-causing industries themselves” (*SDG&E*, *supra*, 203 Cal.App.3d at p. 1148.) ([2c]) In our view, the shifting of costs of providing evaluation, screening, and medically necessary follow-up services for potential child victims of lead poisoning from the public to those persons deemed responsible for that poisoning is likewise a reasonable police power decision. (See also *Mills v. County of Trinity*, *supra*, 108 Cal.App.3d at p. 663; *County of Fresno v. Malmstrom*, *supra*, 94 Cal.App.3d at p. 985 [special assessments have no impact on government spending].)

The fact that the challenged fees were charged after, rather than before, the product’s adverse effects were realized is immaterial to the question whether the measure

imposes valid regulatory fees rather than taxes. *City of Oakland v. Superior Court* seems close on point. There, the court upheld city fees imposed on retailers of alcoholic beverages to defray the cost of providing and administering hearings into nuisance problems associated with the prior sale of those beverages. The court first observed that “If a business imposes an unusual burden on city services, a municipality may properly impose fees pursuant to its police powers” to assure that the persons responsible “pay their fair share of the cost of government.” (*City of Oakland v. Superior Court*, *supra*, 45 Cal.App.4th at p. 761.) The court concluded that “The ordinance’s primary purpose is regulatory—to create an environment in which nuisance and criminal activities associated with alcoholic beverage retail establishments may be reduced or eliminated. Thus, the fee imposed ... is not a tax imposed to pay general revenue to the local governmental entity, but is a regulatory fee intended to defray the cost of providing and administering the hearing process set out in the ordinance. [Citation.]” (*Id.* at p. 762.)

The court in *United Business* applied the “regulation/revenue” distinction to conclude that sign inventory fees adopted to recover the city’s cost of inventorying signs and bringing them into conformance with law were regulatory fees, not revenue-raising taxes. The court observed that, under the police power, municipalities may impose fees for the purpose of legitimate regulation, and not mere revenue-raising, if the fees do not exceed the reasonably necessary expense of the regulatory effort. (*880 *United Business*, *supra*, 91 Cal.App.3d at p. 165, and authorities cited.) Quoting with approval from an earlier decision, the court noted that, if revenue is the primary purpose, and regulation is merely incidental, the imposition is a tax, but if regulation is the primary purpose, the mere fact that revenue is also obtained does not make the imposition a tax. (*Ibid.*) Moreover, according to *United Business*, if a fee is exacted for revenue purposes, and its payment gives the right to carry on business without any further conditions, it is a tax. (*Ibid.*; see also *City of Oakland v. Superior Court*, *supra*, 45 Cal.App.4th at p. 761; *County of Plumas v. Wheeler*, *supra*, 149 Cal. at p. 763 [fee in amount greater than reasonably needed to regulate business “cannot stand as an exercise of the police power”]; *Mills v. County of Trinity*, *supra*, 108 Cal.App.3d at pp. 659-660; *City & County of San Francisco v. Boss* (1948) 83 Cal.App.2d 445, 450-451 [189 P.2d 32].)

The Court of Appeal, citing *United Business*, stressed that the challenged fees were exacted solely for revenue purposes, and their payment gave Sinclair and others the right to carry on the business without any further conditions. We see two flaws in that analysis. First, *all* regulatory fees are necessarily aimed at raising “revenue” to defray the cost of the regulatory program in question, but that fact does not automatically render those fees “taxes.” As stated in *United Business*, if regulation is the primary purpose of the fee measure, the mere fact that the measure also generates revenue does not make the imposition a tax. (*United Business, supra*, 91 Cal.App.3d at p. 165; see also *Mills v. County of Trinity, supra*, 108 Cal.App.3d at p. 660 [rejecting broad definition of “tax” as including all fees and charges that exact money for public purposes].)

Second, we find inconclusive the fact that the Act permits Sinclair and other producers to carry on their operations without any further conditions *specified in the Act itself*. As we have indicated, fees can “regulate” business entities without directly licensing them by mitigating their operations' adverse effects. Moreover, as appellants observe, the Act is part of a broader regulatory scheme by which, under various state and federal statutes, the state regulates Sinclair and other manufacturers in the stream of commerce for products containing lead. That being so, Sinclair's payment of the challenged fees did not confer the right to carry on business without any further conditions or regulation.

The Court of Appeal rejected appellants' argument invoking other state and federal regulations: “First, there is nothing on the face of the Act or the accompanying statement of legislative purpose which links the Act's programs for children at risk for lead poisoning with the cited state or federal statutes regulating lead. Second, none

of the fees collected pursuant to *881 section 105310 are used to fund those regulatory efforts.” However, it is undisputed that Sinclair and other manufacturers of lead-based products remain subject to government regulation, that payment of the challenged fees therefore does not entitle those manufacturers to operate free of regulation, and that the state must use the funds it collects under section 105310 *exclusively* for mitigating the adverse effects of lead poisoning of children, and not for general revenue purposes. (§ 105310, subd. (f).)

Under existing case law, we can reasonably characterize the challenged fees as *regulatory fees* rather than as taxes. Accordingly, we conclude the trial court erred in granting Sinclair summary judgment on the constitutional issues. Of course, Sinclair should be permitted to attempt to prove at trial that the amount of fees assessed and paid exceeded the reasonable cost of providing the protective services for which the fees were charged, or that the fees were levied for unrelated revenue purposes. (See *Pennell, supra*, 42 Cal.3d at p. 375.) Additionally, Sinclair will have the opportunity to try to show that no clear nexus exists between its products and childhood lead poisoning, or that the amount of the fees bore no reasonable relationship to the social or economic “burdens” its operations generated. (*SDG&E, supra*, 203 Cal.App.3d at p. 1146; see also § 105310, subsd. (b), (d).)

Disposition

The judgment of the Court of Appeal, affirming the trial court's grant of summary judgment in Sinclair's favor, is reversed.

George, C. J., Mosk, J., Kennard, J., Baxter, J., Werdegar, J., and Armstrong, J., * concurred.

SUMMARY

An individual filed a declaratory relief action challenging the constitutionality of a flat fee imposed by the Legislature pursuant to [Fish & G. Code, § 711.4](#), on those submitting project proposals to the Department of Fish and Game for environmental review. Plaintiff alleged the fee constituted a tax that was not passed by a two-thirds majority as required under Cal. Const., art. XIII A (Prop. 13). The trial court found that although the statute was not unconstitutional on its face, it was unconstitutional as applied to plaintiff. Before entry of judgment, however, the parties settled the matter, with the department agreeing to refund plaintiff's fees and to stop collecting the fees statewide. Employees of the department then filed a petition for a writ of mandate to compel the department to resume collection of the fees and to pursue retroactive collection. The writ proceeding and the declaratory relief action were consolidated. The trial court again ruled that the statute was unconstitutional as applied, but that, in the absence of an appellate finding that the statute was unconstitutional, the ruling could only be applied to the individual plaintiff. The trial court ordered the department to reinstate enforcement and to

retroactively collect the fees, and the settlement order in the declaratory relief action was modified to conform to the judgment in the writ proceedings. (Superior Court of Sacramento County, Nos. 95CS02523 and CV529928, Jeffrey L. Gunther, Judge.)

The Court of Appeal affirmed in part and reversed in part the judgment entered in the declaratory relief action, and, since the court concluded that the statute was a valid regulatory fee, and was therefore constitutionally enacted, plaintiff's appeal from the judgment entered in the writ proceedings was dismissed as moot. The court held that the Legislature did not violate the supermajority requirement of Cal. Const., art. XIII A, by imposing the flat fee pursuant to [Fish & G. Code, § 711.4](#), with less than a two-thirds vote, since the exaction was a regulatory fee rather than a tax. The department met its burden of showing that the amount of fees generated by [Fish & G. Code, § 711.4](#), was far less than the cost of the environmental reviews provided. Thus, the fees were not revenue raising. Although a flat fee will seldom represent the exact cost of providing a service, the evidence was sufficient to sustain the legislative determination that a flat fee system was a reasonable means to allocate the costs of environmental review. It was reasonable to assess a flat fee and thereby reduce the cost and administrative difficulty of accounting for the services provided for each individual project. Moreover, collection of a flat fee at a uniform time eased the administrative burden of collection and provided certainty to those submitting project proposals. The court further held that there was sufficient evidence to show that there was a reasonable basis for the legislative decision to charge more for the review of a negative declaration than for the review of an environmental impact report. (Opinion by Raye, J., with Sims, Acting P. J., and Nicholson, J., concurring.)

Property Taxes § 7.6--Constitutional Provisions--Proposition 13--Assessments as Fees or Taxes--Flat Fee for Environmental Review by Department of Fish and Game:Taxation § 3--Construction of Legislation.

The Legislature did not violate the super-majority requirement of Cal. Const., art. XIII A (Prop. 13) by imposing a flat fee pursuant to [Fish & G. Code, § 711.4](#),

with less than a two-thirds vote, on those who submit project proposals to the Department of Fish and Game for the environmental review necessary to protect fish and wildlife, since the exaction was a regulatory fee rather than a tax. The department met its burden of showing that the amount of fees generated by [Fish & G. Code, § 711.4](#), was far less than the cost of the environmental reviews provided. Thus, the fees were not revenue raising. Although a flat fee will seldom represent the exact cost of providing a service, the evidence was sufficient to sustain the legislative determination that a flat fee system was a reasonable means to allocate the costs of environmental review. It was reasonable to assess a flat fee and thereby reduce the cost and administrative difficulty of accounting for the services provided for each individual project. Moreover, collection of a flat fee at a uniform time eased the administrative burden of collection and provided certainty to those submitting project proposals.

[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 107 et seq.]

(2)

Property Taxes § 7.6--Constitutional Provisions-- Proposition 13-- Assessments as Fees or Taxes:Taxation § 3--Construction of Legislation.

The determination under Prop. 13 ([Cal. Const., art. XIII A, §§ 3, 4](#)) whether impositions are taxes or fees is a question of law for the appellate courts to decide on independent review of the facts. Ordinarily, taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted, and most taxes are compulsory rather than imposed in response to a voluntary decision to develop or to seek other government benefits or privileges.

(3a, 3b)

Property Taxes § 7.8--Constitutional Provisions-- Proposition 13--Regulatory Fees--Special Taxes.

Fees charged for the costs of regulatory activities are not special taxes under a [Cal. Const., art. XIII A, § 4](#) (Prop. 13) analysis if the fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and they are not levied for unrelated revenue purposes. A regulatory fee may be imposed under the police power when the fee constitutes an amount necessary to carry out the purposes and provisions of the regulation. The regulatory fee, to survive as a fee, does not require a precise cost-fee ratio. Legislators need only apply

sound judgment and consider probabilities according to the best honest viewpoint of informed officials in determining the amount of the fee. The government bears the burden of proof. It must establish (1) the estimated costs of the service or regulatory activity, and (2) the basis for determining the manner in which the costs are apportioned, so that charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity. The record need only demonstrate a reasonable relationship between the fees to be charged and the estimated cost of the service or program to be provided; that requirement may be satisfied by evidence showing only that the fees will generate substantially less than the anticipated costs.

(4)

Fish and Game § 3--Regulation--Fee for Environmental Review with Department of Fish and Game--Validity of Higher Fee for Review of Negative Declaration.

In proceedings to challenge the validity of a flat fee ([Fish & G. Code, § 711.4](#)) on those submitting project proposals to the Department of Fish and Game for environmental review, there was sufficient evidence to show that there was a reasonable basis for the legislative decision to charge more for the review of a negative declaration than for the review of an environmental impact report. A senior environmental specialist supervisor for the department testified at trial that the standard for a negative declaration is that a project must have no adverse impact on the environment. Thus, the department must ensure that the disclosure of the possible impacts is complete and to assure any mitigation measures are adequate. Often, the proposed mitigation measures are inadequate, and the department staff must work with the lead agency and with the project proponent to develop an acceptable negative declaration document. The supervisor testified that his staff probably spent more time on the review of a negative declaration than the review of an equivalent size project with environmental impact report documentation. Hence, due to project information collection costs and the time spent negotiating mitigation measures, the department's costs were generally higher for negative declarations.

COUNSEL

McNeill & Belton and Walter P. O'Neill for Plaintiff and Appellant and for Interveners and Appellants.

Robin L. Rivett, Sharon L. Browne and Anne M. Hawkins for Pacific Legal Foundation as Amicus Curiae on behalf of Plaintiff and Appellant.

Dennis F. Moss for Plaintiffs and Respondents.

RAYE, J.

In this appeal we consider whether the Legislature ran afoul of the supermajority requirement of article XIII A of the California Constitution when it imposed a flat fee per environmental review by the Department *939 of Fish and Game (Fish and Game). More precisely, we must determine whether the exactions imposed by [section 711.4 of the Fish and Game Code](#)¹ constitute a regulatory fee or a tax.

Determining whether an exaction is a fee or a tax has been a recurring chore since 1978 when the voters in California enacted comprehensive and constitutional tax reform. (Cal. Const., art. XIII A (the Jarvis-Gann Property Tax Initiative or Proposition 13).) An act to increase state taxes must be passed by two-thirds of the members of the Legislature and an increase in local taxes must be passed by a two-thirds vote of the qualified electors. (Cal. Const., art. XIII A, §§ 3 & 4.) Fees, by contrast, are not subject to the supermajority limitation of [article XIII A](#). Albert Mills, an appellant in both cases, insists the environmental review fees charged by Fish and Game pursuant to [section 711.4](#) constitute a tax and, therefore, are unconstitutional because the statute was passed by slightly less than a two-thirds majority.

It is well established that the amount of fees collected must not surpass the cost of the regulatory services or programs they are designed to support. We must decide whether there must be a direct correlation between the amount of a fee imposed on a specific payor and the benefits received or burdens imposed by the payor's activity. More to the point, is a flat regulatory fee in legal effect a tax subject to the supermajority requirement of California Constitution, article XIII A?

We conclude that as long as the cumulative amount of the fees does not surpass the cost of the regulatory program or service and the record discloses a reasonable basis to

justify distributing the cost among payors, a fee does not become a tax simply because each payor is required to pay a predetermined fixed amount. Flat fees are not in legal effect taxes. Based on the evidentiary record before us, we find that the Legislature did not violate California Constitution, article XIII A by imposing a flat regulatory fee on those who submit project proposals to Fish and Game for the environmental review necessary to protect fish and wildlife. The consequences of our ruling to the multiple parties in these consolidated cases are explained below.

Procedural Background

[Section 711.4](#), enacted by the Legislature in 1990, set a fee schedule to defray a portion of the costs incurred by Fish and Game in meeting its environmental review obligations under the California Environmental Quality Act and the Z'Berg-Nejedly Forest Practice Act of 1973. (§ 711.4, *940 subds. (a), (b), (c) & (d); [Pub. Resources Code](#), §§ 4511, 21000 et seq.) [Section 711.4](#) states in relevant part: “(a) The department shall impose and collect a filing fee in the amount prescribed in subdivision (d) to defray the costs of managing and protecting fish and wildlife trust resources, including, but not limited to, consulting with other public agencies, reviewing environmental documents, recommending mitigation measures, developing monitoring requirements for purposes of the California Environmental Quality Act ..., consulting pursuant to [Section 21104.2 of the Public Resources Code](#), and other activities protecting those trust resources identified in the review pursuant to the California Environmental Quality Act. [] (b) The filing fees shall be proportional to the cost incurred by the department and shall be annually reviewed and adjustments recommended to the Legislature in an amount necessary to pay the full costs of department programs as specified.” For projects for which a negative declaration has been prepared, the filing fee set by the Legislature is \$1,250 and for projects for which an environmental impact report has been prepared, the filing fee is \$850. (§ 711.4, subd. (d)(3) & (4).) “The county clerk may charge a documentary handling fee of twenty-five dollars (\$25) per filing in addition to the filing fee specified in subdivision (d).” (§ 711.4, subd. (e).)

Albert W. Mills challenged the constitutionality of [section 711.4](#) in a declaratory relief action he filed in July 1991. He sought declaratory and injunctive relief in a first cause of action and a refund of his fees in a second cause of

action. A demurrer was sustained without leave to amend to the second cause of action. Fish and Game sought a writ of mandate to compel the trial court to dismiss the entire complaint because Mills had not filed a claim for a tax refund. We summarily denied the petition for the writ. The trial court denied a subsequent motion for judgment on the pleadings on the same ground asserted in the writ petition.

In 1992 the Legislature amended the statute to expand the exemptions for projects for which no fees were required. The amendment passed by a two-thirds majority vote.

The case was tried in the summer of 1994 and the following spring the trial court issued a statement of decision. The court found that although the statute was not unconstitutional on its face, on the evidence received by the court, it was unconstitutionally applied. Before the statement of decision was filed and a judgment was entered, the parties settled the lawsuit. Fish and Game agreed to refund Mills's fees, to pay his attorney fees, and to cease collection of the fees statewide.

Employees of Fish and Game, however, filed a petition for a writ of mandate to compel Fish and Game to resume collection of the fees and to *941 pursue retroactive collection. Mills intervened in the writ proceedings, which were then consolidated with the declaratory relief action.

The trial court again ruled that [section 711.4](#) was unconstitutional as applied but that, in the absence of an appellate finding that the statute was unconstitutional, the ruling could only be applied to Mills. ([Cal. Const., art. III, § 3.5.](#)) The court ordered Fish and Game to reinstate enforcement and to retroactively collect the fees. The settlement order in the declaratory relief action was modified to conform to the judgment in the writ proceedings. The settlement order provides in pertinent part that [section 711.4](#) is not unconstitutional on its face but is unconstitutional as applied to Mills; Fish and Game is enjoined from collecting fees from Mills but is not otherwise prohibited from collecting fees.

Mills appeals both judgments. On appeal from the judgment in the declaratory relief action, he maintains [section 711.4](#) is unconstitutional on its face and, consequently, Fish and Game must be enjoined from collecting all fees. Fish and Game urges us to dismiss the appeal on multiple grounds: Mills lacks standing because,

under the terms of the settlement, he is not aggrieved; the constitutionality of [section 711.4](#) is moot because it was amended by a two-thirds majority; and the trial court lacked jurisdiction because Mills failed to exhaust his administrative remedies by filing a claim for a tax refund. Fish and Game also appeals. We granted the Pacific Legal Foundation's request to file an amicus curiae brief echoing Mills's constitutional attack on the statute.

For the reasons discussed herein, we affirm in part and reverse in part the judgment entered in the declaratory relief action. Because we have concluded that [section 711.4](#) is a valid regulatory fee, and was therefore constitutionally enacted, Mills's appeal from the judgment entered in the writ proceedings is moot. That appeal is dismissed.

Discussion

I *

.....

II

Before we apply the ever-growing body of case law involving post-Proposition 13 fees and taxes, it is essential to understand the statutory world *942 in which Fish and Game lives and [section 711.4](#) was born. The language of these statutes resolves some of the issues raised by Mills and provides the necessary background to analyze others.

([1a]) Mills argues that Fish and Game does not operate a regulatory program and, therefore, the fee is not regulatory in nature. We disagree. Fish and Game is only one small part of a huge regulatory system in place in this state to protect and sustain the environment, but it plays a vital regulatory role under the California Environmental Quality Act (CEQA). ([Pub. Resources Code, § 21000](#) et seq.) CEQA guidelines specifically list Fish and Game as a trustee agency, a status which imposes certain obligations. Fish and Game must be consulted before a determination is made as to whether a negative declaration or an environmental impact report is required for a particular project. ([Pub. Resources Code, § 21080.3](#), subd. (a).) If an environmental impact report is required, Fish and Game must comment as to the scope and contents of this document. ([Pub. Resources Code, § 21080.4](#), subd. (a).) Later in the process, Fish and Game may be required to submit a proposed program to monitor the mitigation measures. ([Pub. Resources Code, §](#)

21081.6.) The same obligations are imposed by documents which function as environmental assessment documents such as timber harvest plans. (*Environmental Protection Information Center, Inc. v. Johnson* (1985) 170 Cal.App.3d 604, 626 [216 Cal.Rptr. 5022].) *Fish and Game Code section 1802 also requires Fish and Game to consult with lead and responsible agencies.*

Fish and Game also has comparable obligations under the Forest Practice Act. (Pub. Resources Code, § 4511 et seq.) Like the responsibility conferred on it under CEQA, Fish and Game must review the impact of a timber harvest plan on fish and wildlife. The Department of Forestry and Fire Protection cannot approve a timber harvest plan until it has consulted with Fish and Game. (Pub. Resources Code, § 4582.6.)

Under both CEQA and the Forest Practice Act, Fish and Game is an essential link in a comprehensive attempt to safeguard the environment. The fact that Fish and Game does not operate an independent regulatory program with a correlative accounting system does not detract from its regulatory role. The law is not so narrowly drawn. In a similar vein, the court in *Sinclair Paint Co. v. State Bd. of Equalization* (1997) 15 Cal.4th 866 [64 Cal.Rptr.2d 447, 937 P.2d 1350] observed: "From the viewpoint of general police power authority, we see no reason why statutes or ordinances calling on polluters or producers of contaminating products to help in mitigation or cleanup efforts should be deemed less 'regulatory' in nature than the initial *943 permit or licensing programs that allowed them to operate. Moreover, imposition of 'mitigating effects' fees in a substantial amount ... also 'regulates' future conduct by deterring further manufacture, distribution, or sale of dangerous products, and by stimulating research and development efforts to produce safer or alternative products." (*Id.* at p. 877.)

Having charged Fish and Game with the responsibility to manage and protect fish and wildlife through the environmental review process, the Legislature enacted a fee statute to fund Fish and Game's review functions. There are two parts of section 711.4 which are germane to the constitutional question before us.

The Legislature expressly addressed proportionality. Section 711.4, subdivision (b) states: "The filing fees shall be proportional to the cost incurred by the department

and shall be annually reviewed and adjustments recommended to the Legislature in an amount necessary to pay the full costs of department programs as specified."

Although the Legislature mandated a flat fee financing mechanism, it also provided an exemption for those projects with a de minimis impact on fish and wildlife. Section 711.4, subdivision (d)(1) provides: "For a project which is found by the lead or certified regulatory agency to be de minimis in its effect on fish and wildlife, no filing fee shall be paid, whether or not a negative declaration or an environmental impact report is prepared pursuant to the California Environmental Quality Act." In fact, 68 percent of the projects are found to be de minimis and a fee is not required.

In sum, the Legislature has given Fish and Game a critical regulatory role in the complex regulatory structure created to safeguard precious environmental resources. At the same time, the Legislature created a flat fee system to finance Fish and Game's environmental review. That system, by statute, must be proportional to the overall cost of environmental review, but only those who propose development projects which have more than a de minimis impact upon fish and wildlife are required to bear the cost of review. We must determine whether the Legislature violated the Constitution by establishing such a fee system with less than a two-thirds vote.

III

In 1991 the Legislature enacted the Childhood Lead Poisoning Prevention Act to provide evaluation, screening, and follow-up services for children who were at risk of suffering lead poisoning. The program of screening and treatment under the act was to be paid entirely by fees paid by those who *944 contributed to lead contamination. In *Sinclair Paint Co. v. State Bd. of Equalization*, *supra*, 15 Cal.4th 866, the Supreme Court concluded the act imposed bona fide regulatory fees, not taxes.

Sinclair is the first published case in the post-Proposition 13 era to consider whether a state, rather than a local, fee is in legal effect a tax. "Section 3 of article XIII A restricts the enactment of changes in state taxes, as follows: 'From and after the effective date of this article, any changes in State taxes enacted for the purpose of increasing revenues collected pursuant thereto whether by increased rates or changes in methods of computation must be imposed by

an Act passed by not less than two-thirds of all members ... of the Legislature, except that no new ad valorem taxes on real property, or sales or transaction taxes on the sales of real property may be imposed.' ” (*Sinclair Paint Co. v. State Bd. of Equalization*, *supra*, 15 Cal.4th at pp. 872-873.) By contrast, there have been an abundance of cases in which courts have struggled to characterize a local exaction as a fee or a “special tax” under [California Constitution, article XIII A, section 4](#). In *Sinclair*, the Supreme Court announced that “[b]ecause of the close, 'interlocking' relationship between the various sections of [article XIII A](#)” the [section 4](#) cases “may be helpful, though not conclusive” in deciding cases under [section 3](#). (15 Cal.4th at p. 873.)

([2]) The court also reiterated the fundamental principle that “whether impositions are 'taxes' or 'fees' is a question of law for the appellate courts to decide on independent review of the facts.” (*Sinclair Paint Co. v. State Bd. of Equalization*, *supra*, 15 Cal.4th at p. 874.) Ordinarily, “taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted” and “[m]ost taxes are compulsory rather than imposed in response to a voluntary decision to develop or to seek other government benefits or privileges.” (*Id.* at pp. 873-874.)

Sinclair was particularly helpful in identifying three very different kinds of fees or assessments, viz. special assessments, development fees and regulatory fees. (See also *Isaac v. City of Los Angeles* (1998) 66 Cal.App.4th 586, 596 [77 Cal.Rptr.2d 752].) As the court pointed out, special assessments are based on the value of benefits conferred on property, and development fees are exacted in return for permits or other government privileges. Regulatory fees, enacted under the police power, are an entirely different animal. The parties have failed to distinguish between these types of fees and, consequently, have extracted general principles from cases involving one type of fee and applied them to cases involving a completely different type of fee. We have focused our research on those cases, like *Sinclair*, involving regulatory fees. *945

([3a]) General principles have emerged. Fees charged for the associated costs of regulatory activities are not special taxes under an [article XIII A, section 4](#) analysis if the “ ‘ ’ ”fees do not exceed the reasonable cost of providing services necessary to the activity for which the

fee is charged and [they] are not levied for unrelated revenue purposes.“ ‘ ’ ” (*Sinclair Paint Co. v. State Bd. of Equalization*, *supra*, 15 Cal.4th at p. 876; *Townzen v. County of El Dorado* (1998) 64 Cal.App.4th 1350, 1359 [76 Cal.Rptr.2d 281].) “A regulatory fee may be imposed under the police power when the fee constitutes an amount necessary to carry out the purposes and provisions of the regulation.” (*San Diego Gas & Electric Co. v. San Diego County Air Pollution Control Dist.* (1988) 203 Cal.App.3d 1132, 1146, fn. 18 [250 Cal.Rptr. 420].) “Such costs ... include all those incident to the issuance of the license or permit, investigation, inspection, administration, maintenance of a system of supervision and enforcement.” (*United Business Com. v. City of San Diego* (1979) 91 Cal.App.3d 156, 165 [154 Cal.Rptr. 263].) Regulatory fees are valid despite the absence of any perceived “benefit” accruing to the fee payers. (*Pennell v. City of San Jose* (1986) 42 Cal.3d 365, 375 [228 Cal.Rptr. 726, 721 P.2d 1111], *affd.* on other grounds *sub nom. Pennell v. City of San Jose* (1988) 485 U.S. 1 [108 S.Ct. 849, 99 L.Ed.2d 1].) Legislators “need only apply sound judgment and consider 'probabilities according to the best honest viewpoint of informed officials' in determining the amount of the regulatory fee.” (*United Business Com. v. City of San Diego*, *supra*, 91 Cal.App.3d at p. 166.)

The government bears the burden of proof. (*Beaumont Investors v. Beaumont-Cherry Valley Water Dist.* (1985) 165 Cal.App.3d 227, 235 [211 Cal.Rptr. 567].) It must establish (1) the estimated costs of the service or regulatory activity, and (2) the basis for determining the manner in which the costs are apportioned, so that charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity. (*Id.* at pp. 234-235.) “Courts [look] to a variety of evidence in determining whether the agency has satisfied that burden, not all of it prepared before the adoption of the ordinance.” (*City of Dublin v. County of Alameda* (1993) 14 Cal.App.4th 264, 282 [17 Cal.Rptr.2d 845].)

City of Dublin v. County of Alameda, *supra*, 14 Cal.App.4th 264, provides guidance on the quantum of proof necessary to establish the requisite fee-cost ratio. By initiative, the voters in Alameda County enacted a comprehensive recycling plan. Under the law, the plan was to be funded from a recycling fund created by a \$6 per ton surcharge on materials dumped in the county landfills. The issue presented was whether the evidence before the trial court established that the surcharge would

not exceed the reasonably *946 necessary costs of the programs it would fund. The Court of Appeal considered both the estimated costs of the programs and the basis for determining the apportionment of those costs.
